Well-balanced opinion, unerring judgment, and conscientious reasoning on the subject at hand, may be some of the arguments either audibly or inaudibly advanced. Behind this expression of self-estimate one may look with pride at an array of ancestors whose exceptional independence of opinion is not to be forgotten, and who seem lined up to settle all doubts as to their unquestionable wisdom. Encased in such an attitude of thought, one may petulantly wonder why the healing truth of Christian Science so long delays its tender ministry, how one who is humble, ignorant so far as knowledge of the world's ways is concerned,—how he can rise with glowing face at a Wednesday evening meeting in some Christian Science church and so simply and effectively tell of God's healing power, the light of which even yet rests upon his face and wipes away what yesterday may have been toil-earned lines. Perhaps even farther astray as to the real reason for delayed blessings, the unhappy listener is apt to return home and once more wrap himself in his tatters of pride and prejudice,—these two assets from which he is not yet ready to part.

In Science and Health (p. 201) our Leader says: "We cannot fill vessels already full. They must first be emptied. Let us disrobe error. Then, when the winds of God blow, we shall not hug our tatters close about us." We should let go our foolish, false self and find the healing that is surely here for every one of God's children. Above all, let us not send a call back across the ages to bring forth more of what can only hinder, but rather turn fearlessly to the new promise that today has dawned in Christian Science.

The writer recalls an impressive picture which was a living

Digitized by Google

scene. In it a woman stood alone. For months and years she had fed her hopes upon the power to succeed which she felt was her independent possession. There was no God in this woman's thought. Her own matchless energy, her cleverness, must and would pave the way for her to a brilliant future. Time, strength, and money she poured into her self-appointed task. Then the day came when she realized that only the ashes of charred hopes remained to tell of her exuberant self-sufficiency. All of the human will lay bent and crushed before the desolation in which she was surrounded. Error was disrobed; not even "tatters" hung on the still, desolate figure. In the hour when all of self was renounced, when it was seen in its poverty and weakness, the "winds of God" blew. Timidly she sought entrance into the sacred place where so much of the tired hope of this age has gained life and strength. No physical healing was asked, none hoped for, though the need here too was great. The desire had suddenly grown intense to know what might be the meaning of the gleam of peace which she had seen on the face of a student of Christian Science.

A pitiful beggar indeed had crept to the feet of the Master. A happy woman rose up there, bathed in heaven's light. It is not difficult to understand that hers was an instantaneous healing, that the reading of Science and Health alone severed her, almost in a flash, from every vestige of physical debility, and restored to her the birthright of mental poise and peace. Here was soil bared for the seed. No human opinion or self-will cropped up to argue or delay; no pride of intellect or stubborn prejudice was left in the riven heart.

Another case of instantaneous healing that came under the writer's attention was brought about simultaneously with the willingness upon the part of human sense to let go the things that intrude between a man and his freedom. This was a case of almost blindness. The eyes were terribly inflamed and dark glasses were worn, yet the sufferer was not ready for Christian Science, or rather he did not know that he was ready, although he proved to be. Meeting a student of this teaching, he began a lengthy and stubborn argument. Christian Science might be all right for nervousness, but when a long list of specialists had in nine months of constant effort been unable to bring him relief,—in fact when day by day, in spite of all their earnest ministry, conditions had grown steadily worse,—why expect Christian Science, even so much as remotely, to reach such a case?

The answer to the question awoke the chord that set the sufferer's life in tune. "Cling to your doctors and your medicine as long as you have faith in them," was the quiet rejoinder. Silence fell, then presently out of the stillness came a small, humble voice, "But I have no faith in them." The man had laid down his pride and self-sufficiency, and with them his specialists and medicine-chest. A week later, when the Scientist again saw him, she was surprised to find a creature whose joy could be seen in every line of his figure, even as he came into view a block away. "What did you do?" he whispered in awed humility as he reached her side. "I did nothing," was the reply. "It was only that you let go your old stubborn beliefs, and divine Love was present to bless to the uttermost."

How long it does take us to learn that the pride of intellect which sees not its own need for wisdom, the arrogancy of self which recognizes not its pitiful weakness, are as unlighted lamps along life's highway! Should we not give heed to the counsel of our Leader as found on page 249 of Science and Health: "Let us accept Science, relinquish all theories based on sense-testimony, give up imperfect models and illusive ideals; and so let us have one God, one Mind, and that one perfect, producing His own models of excellence."

Selected Articles

The Philadelphia *Press* in its usual Saturday discussion of the International Sunday School Lessons recently made some interesting comments on the subject of healing as set forth in the ninth chapter of Acts, and as the views expressed therein are far in advance of those more commonly given out in explanation of these so-called miracles, we are glad to republish the article in full.—EDITOR *Sentinel.*

Lesson II, April 9, 1916. Æneas and Dorcas. The Golden Text—"In all things showing thyself a pattern of good works."—Titus ii. 7. Text of Lesson, Acts ix. 32-43.

Much happens in this ninth chapter of Acts. The first part of it deals with the remarkable conversion of Saul. Continuing right on comes the lesson for tomorrow, which deals with two very remarkable miracles performed by Peter. For years it has proved to be a pretty difficult problem for some of our critics and commentators to explain many things in the good "Old Book." This is one of them. The lesson is apt to open up the entire question of divine healing and the so-called miracles performed by the disciples and leaders in the early church.

The matter of these healing miracles is so dangerous a one for an ordinary layman to handle that the writer runs the risk of getting into deeper theological discussion than is wise. But in this, as in all interpretations of Holy Writ, may we not approach the subject from a common sense viewpoint without being set down as heretics and being cast out of the orthodox fellowship? The entire subject of miracles is too broad to permit of a full discussion here. Let us deal only with the two which are mentioned in our lesson. Here was a man bedridden for eight years with the palsy. The names of the healer and the healed are given; the case is briefly stated; the formula of healing is short, and the results are instantaneous: "He arose immediately." Bible students all agree that miracles were wrought in the early days of the church. That much we agree on. Then they are apt to go a step too far and say that the day of miracles has passed, but just why seems to be a matter that they fail to explain. Had Christ alone performed the wonderful cases of healing, we might feel that he alone possessed the secret of their proper performance. But Christ Jesus very distinctly declared to his disciples, "Greater works than these" shall ye do. And they did perform many very wonderful cures. They healed all manner of diseases, and even raised the dead. An example of this occurs in our lesson for tomorrow. Now, when did the power cease? Was the ability to heal withdrawn by God at a certain time and period? Christ mentioned no time limit; and we learn that God "is the same yesterday, and today, and forever."

Is it not reasonable and fair to judge that Jesus understood some great law or principle whereby his so-called miracles were wrought? He declared that he came to fulfil the law. If he did, then certainly we must admit—from the same evidence that we have of his own miracles—that for some years after his withdrawal his followers also performed equally marvelous cures. The same Bible that tells of his great works tells us of those of his followers. They must have understood the same law or principle, which worked in every case.

We are forced to admit, if we reason logically, that the law which would work once, and oftener, would work always if it were properly invoked. The law of mathematics is a fixed law. Any problem worked by that law brings right results. If we fail to get the right answer every time, the fault is not with the law but with our working out of that law. The

Digitized by Google

mistake is ours; the fault lies not with the law. You recall there were many times when we were trying to master the fundamental laws of arithmetic that we felt there was something wrong with the law because we could not get the answer. But the law was always there, and always gave the right answer when properly applied. As we grew older we learned that the fault was always with us, not with the law.

Now, when we come to matters spiritual we fail to apply the same common sense. If that law worked with Christ and with his early followers, why should it not work today, and always, when properly applied? It is not enough for the thinking man to be told by the theologues that "the day of miracles is past." Every day that fallacy is being disproved. All along from the foundation of the earth the law of Hertzian waves has been operative; only recently have we discovered that we may send messages for miles without the use of wires. Electricity was a force from the beginning; but we were in ignorance of it until Franklin stumbled upon the discovery of this great force.

Certain deep thinkers have applied the same reasoning to God's laws in the realm of healing, and the world is waking up to the discovery that those very laws which the Christ knew so well, and which his disciples applied so successfully, are fundamental laws. They may be used as well today as in the days of Peter. If the results are less wonderful, the fault lies with our application of the laws, not in the laws themselves. Not only have these thinkers worked out the problem theoretically, but today the world is "sitting up" and trying to explain some wonderful cures that are being effected by a large and growing group of thinkers who have discovered or at least are touching the hem of the garment of Truth, and are demonstrating the great law that divine healing is within reach of all who properly apply that rule.

This matter will not be easily downed. Some of the ministers, realizing that the great thinking public will no longer be satisfied with mere falling back on the preaching of our fathers and the narrow beliefs of the dark ages, are trying to explain away these evidences. . . . Who are we to judge? Let us be fair enough to allow these investigators to proceed unhindered. What a great boon to humanity it would be if, after all, they should be right, and the days of sin and sickness and disease should be proved to be a wrong state of thinking, easily amenable to a great law of God,—that He made everything "very good;" and that if we find things otherwise, it is because we are wrongly applying the great law of perfection.

✧

[Charles W. J. Tennant in *Cornish Guardian and County Chronicle*, Bodmin, England]

A clergyman preaching in the St. Austell Parish Church is reported to have said, "The so-called Christian Science of today could never have come into existence at all if the members of Christ's church had had the faith in his power to heal that they should have had." Rather should he have said, "If the early Christians and those who followed them had unswervingly held to the teaching of Jesus, 'confirming the word with signs following,' there would not have arisen the necessity for the discovery of Christian Science by Mrs. Eddy in the nineteenth century."

The clergyman further states that "Christian Scientists make use of prayer and faith, but make the great mistake of denying all medical and surgical skill, though that skill could only come from Christ the healer." Does he really imagine for a moment that medical and surgical skill comes from Jesus Christ? Then why did our Master not use drugs or perform operations? He healed all manner of disease, organic and functional, and raised the dead, but without material means. His method is the correct one. Has our critic forgotten the case of the woman who had spent all her living on physicians and was no better but rather worse, but who was healed merely by touching the garment of Jesus? He also forgets that an impure infidel may be a skilful doctor or surgeon, but one has to have the Mind of Christ to heal through Christian Science. Jesus described his method as follows: "If I cast out devils by the Spirit of God, then the kingdom of God is come unto you." Christian Science is proving to the world that the Christ, Truth, can heal today without any so-called material aids whatever.

✧

[Thomas E. Boland in *Pottsville* (Pa.) *Republican*]

In a report of the sermon of an evangelist at Port Carbon, reference is made to Christian Science as being a "new-fangled gospel," on which I would ask the courtesy of brief comment. The month of February, 1916, marked the fiftieth anniversary of Mrs. Eddy's sudden and remarkable restoration to health from the effects of a fall. While in a very serious condition physically, she called for her Bible and her eyes fell on the account of the healing by Jesus of the palsied man. Mrs. Eddy has said of this experience: "The lost chord of Truth (healing, as of old) I caught consciously from the divine harmony, vibrating its own sweet music. It was to me a revelation of Truth,—God; and Science, explaining the Principle of this divine harmony, enabled me to understand it, and to systematize and demonstrate Truth" (*The Christian Science Journal*, June, 1887). She perceived she was healed, arose, dressed, and presented herself to friends who had gathered fearing at any time to hear the worst from the sufferer's bedside.

This was a half-century ago; not long, it is true, in the world's history, and yet long enough for Christian Science to have been tested and tried in the fierce heat of the world's melting-pot. Its growth has been the religious marvel of the age and is conclusive proof of its value. Mrs. Eddy's words as quoted above, however, show her thought that she had simply discovered something, "the lost chord of Truth," which healed as of old, healed as in the time of Jesus. And that is what Christian Science is,—the primitive, spiritual healing practised by Jesus and his disciples and followers for nearly three centuries after Jesus had left the earth.

It will, however, be remembered that Jesus spoke in this way of his spiritual self: "Before Abraham was, I am," meaning that the truth he brought to the world antedated Abraham and was in fact, from its very nature, eternal. The body of truth about God and man in God's likeness, for which the title Christian Science stands, is like all truth, eternal; and it is found now, as this truth always has been found, regenerating the sinful, healing the diseased, and giving hope to the discouraged, through its message of efficacious, divine, healing Love.

✧

[Robert S. Ross in *The Recorder*, Amsterdam, N. Y.]

In reply to a letter in a recent issue, permit me to point out that if healing as Jesus taught and practised it had depended upon his personal presence and influence, it would necessarily have ceased in the year thirty-three; but we have abundant proof that it did not cease then. History records that Christian healing continued for at least two hundred years after the crucifixion. That this healing was based on a divine Principle understood, is indicated by Jesus' own words. On one occasion he said, "He that believeth on me, the works that I do shall he do also." On another occasion he said, "These signs shall follow them that believe," and then he enumerated what these signs would be, included among which was the healing of the sick.

Digitized by Google

In addressing himself to his disciples in the words just quoted, Jesus did not say "you," but "he" and "them," meaning, of course, that those in the ages to come who should understand divine Principle, would be able to do the healing work. "It is not well to imagine," Mrs. Eddy writes in Science and Health (p. 494), "that Jesus demonstrated the divine power to heal only for a select number or for a limited period of time, since to all mankind and in every hour, divine Love supplies all good." Furthermore, let us not forget that Saul was not a student of Jesus, but a persecutor of Jesus' followers until the divine Principle of Christian Science was revealed to him, after which Saul, then known as Paul, not only healed the sick but raised the dead. Gibbon records that Christian healing was common up to the third century in Rome, which indicates that Paul, during his imprisonment in the imperial city, must have taught others to practise this Science.

The most conclusive proof, however, that the power of Christian healing did not originate or end in a human personality is presented by the numberless cases of moral and physical healing that have taken place since the discovery of Christian Science. Through the study of the Bible in the light of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, it is now possible for all who will to understand and to practise Christian healing. The critic may be interested to learn that the Christian Science text-book is not a "substitute" for the Bible, but a commentary on it. Furthermore, a religious system that is the offspring of the Bible and that cannot be practised without consecrated Bible study must of necessity be in accord with the Scriptures.

✧

[Thomas F. Watson in *Mountain View* (Cal.) *Register-Leader*]

A writer in the *Signs of the Times* has criticized Christian Science because it conflicts with his concept of God. He admits that "cures are performed," but, he tells us, "the devil . . . can perform wonderful cures," and a "hypnotist may convince a patient whose ills are largely imaginary that the disease is gone." The many thousands who have been healed in Christian Science, however, were benefited morally and spiritually, as well as physically, and this shows the superiority of Christian Science healing over other systems which only improve one physically. Moreover, the majority of cases healed through Christian Science prayer had been previously given up by regular physicians, therefore they could not very well be said to be "imaginary" from the standpoint of *materia medica*.

The Bible tells us that God is Spirit, and John, the beloved disciple, defined God as Love. Paul said, "In him we live, and move, and have our being." This God, who is "our refuge and strength, a very present help in trouble," "the same yesterday, and today, and forever," who knows all things, cannot be less than supreme, infinite intelligence; and this is just how Christian Science defines God,—as infinite Mind. This teaching is the opposite of pantheism, which, according to Webster, teaches that "the universe, taken or conceived of as a whole, is God." A religion which heals the sick and reforms the sinner, and thus reinstates primitive Christianity, as this Science has done, has proved itself rightly named the Science of Christianity, or Christian Science.

Our critic has tried to disprove Christian Science by wresting a few short statements from their context; but this is so manifestly unfair that it proves nothing. He scoffs at the idea that Truth can heal a boil, yet the Master said, "Ye shall know the truth, and the truth shall make you free," and healed all manner of disease and raised the dead through the power of Truth. He also said, "He that believeth on me, the works that I do shall he do also."

There is nothing in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, opposed to bathing or cleanliness, as the critic intimates; in fact, Christian Science insists not only upon bodily cleanliness but upon a cleansing of the inner thoughts as well. On page 383 of Science and Health we read, "We need a clean body and a clean mind,—a body rendered pure by Mind as well as washed by water;" also, "The mind must be clean to keep the body in proper condition."

The only "curative agents" which Jesus authorized were faith in God as the great Physician, and a knowledge of Truth, which he said "shall make you free." He used no material remedies, nor did he recommend any. The fact that certain well-known writers have not readily understood and accepted Christian Science is no argument against it. The rabbis, who were the great scholars and theologians of that day, did not understand the Master or the scope of his work, but this did not hinder him from going about his Father's business, nor keep him from establishing Christianity on the basis of works, not mere words.

✧

[M. I. Whitcroft in *Cheltenham* (England) *Chronicle*]

The sermon on the effect of the war on religion, as reported in your paper, contains the following sentence: "Christian Science has provided nothing for the soldiers." Now it is scarcely charitable and more than a little unwise for any one, more particularly one holding the office of a clergyman, to make a public statement regarding a religious denomination which he is quite unable to substantiate. The statement having been made, however, and published, I trust you will allow me to show that Christian Science has provided far more for the soldiers and others affected by the war than the world at large has any conception of.

Our critic may be interested to learn that Christian Scientists in America have already subscribed something like fifty thousand pounds for the relief of those in distress owing to the war in the countries affected, irrespective of creed. Of this amount fifteen thousand pounds has already been distributed throughout the British Isles, and many cases in this county, including the neighborhood of Cheltenham and Bristol, have been helped. Also Christian Scientists, individually and collectively, have subscribed to the Red Cross fund, and many of them have turned their private houses into convalescent homes. Sailors and soldiers at home, training or on active service, and the wounded in the hospitals, have had hundreds of thousands of periodicals and newspapers sent to them free, and grateful letters of appreciation have been received by those entrusted with this work. The uplifting influence of Christian Science, the sense of protection in the midst of danger, and of that "peace of God, which passeth all understanding," manifested by those who follow its teaching, has helped to cheer and encourage many of their comrades and made them desire to know more of this practical religion. This, though mentioned last, is not least in the good that Christian Science is doing for our soldiers and sailors.

✧ ✧ ✧

You are not guilty because you are ignorant, but you are guilty when you resign yourself to ignorance. You are guilty whenever—although your conscience whispers that God did not give you faculties without imposing upon you the duty of developing them—you allow the faculty of reflection to lie dormant within you; whenever—although you know that God would not have given you a love of truth without giving the means by which to attain it—you yet despairingly renounce every effort to discover it, and accept as truth, without examination, the assertion either of temporal powers, or of him who has sold himself to them.—MAZZINI.

Editorial

Sowing and Reaping

PERHAPS never was the growth of the Christian Science movement in the last three decades more graphically portrayed than at this year's annual meeting, when the new President of The Mother Church in contrast sketched so vividly the first service of this church which he attended, thirty-four years ago—then the only church. One could easily picture that group of earnest students in our Leader's home, listening eagerly to the new-old gospel to whose world-wide promulgation she had consecrated her every effort; and looking on the audience gathered in the magnificent edifice dedicated just a decade ago,—typical of an unnumbered host of the church body,—would exclaim, as did Mr. Frye, "What wonders has God wrought through our beloved Leader's devotion to our cause, which she held in mind beyond all other things!"

Only one whose prophetic sense had been quickened by spiritual enlightenment, whose vision was broad enough to span the horizon of the coming years, could have so courageously entered the lists against error as did Mrs. Eddy. Like the shepherd lad of old her declaration of faith was, "I come to thee in the name of the Lord of hosts;" and it was vouchsafed her to prove that "there is a God in Israel," for the sick were healed with the word of Truth—the divine ever-presence demonstrated. She gives us a hint of the conditions in those early years, when she says, "I saw before me the awful conflict, the Red Sea and the wilderness; but I pressed on through faith in God, trusting Truth, the strong deliverer, to guide me into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged" (Science and Health, p. 226).

In this sentence Mrs. Eddy has given us at once the secret of her triumph and the fearful odds against which it was won. Hers was the courage of one who knows of a surety the invincibility of truth and the nothingness of error before it. Day after day and year after year she gave herself to the work to which her hand had been set, the work in which Christian Scientists as her followers are today privileged to share, —the final overcoming of error. Joy and gratitude for the past year's progress in the varied activities of the church of our Leader's founding can but be proportionate to the share each one has had in its accomplishment. If we have healed the sick, if we have held the cup of living water to thirsting lips, we surely have a right to thank God and take courage. The laurel wreath of victory rests only on the brow of him who armed with "the sword of the Spirit" has wrestled with the enemy in the open.

Mrs. Eddy's achievement was the working out of that inexorable law which declares, "He which soweth bountifully shall reap also bountifully." Her field was the world, and like the sower in the parable she gave out the word of Truth with an unsparing hand. The farmer knows that his harvest will be according to the quality of the seed and the soil in which it is to come to fruition; that he must be generous in his sowing if he would reap abundantly. Mrs. Eddy had no doubt of the seed, and she gave herself assiduously to the task of preparing the ground for its reception, that under the care of Him who "giveth the increase" it might bring forth many fold. Her great desire was that the truth she had discovered might be preserved in its purity, and on page 462 of Science and Health she says, "Whoever would demonstrate the healing of Christian Science must abide strictly by its rules, heed every statement, and advance from the rudiments laid down."

The Master's promise was that they who believed on him should do not only the works which he did, but even greater ones. Through the labors of Mrs. Eddy Christian Scientists have been able to prove the first part of this proposition; the proving of the second part is contingent on their faithfulness to the teachings of the Leader who through storm and sunshine followed bravely on to the goal of them that sow to the Spirit,—even "life everlasting." The faith that is without works is the seed that profiteth nothing to the husbandman, and the records in the coming year of the sick who have been healed, of those dead in trespasses and sins who have been awakened to a new life, will witness alike to the truth of the seed and the faithfulness of the sowing.

ARCHIBALD MCLELLAN.

Quick Decisions

IT is very well known that attempts are often made to defeat the ends of justice by bringing about delays, when all except those vitally concerned lose their interest. Thus decisions are left in large measure to chance, unless there are some who hold steadfastly by the right until it is demonstrated. On page 463 of Science and Health Mrs. Eddy says, "To decide quickly as to the proper treatment of error —whether error is manifested in forms of sickness, sin, or death—is the first step toward destroying error." It is true that Christian Science has already wrought great changes in this respect in the thought of those who are its students, but it is not possible to be too keenly alert to the necessity for treating all the suggestions of error with prompt dismissal. Of old the requirement made of the children of Israel was, "Choose you this day whom ye will serve." They were not to wait even until the morrow to decide whether it were better to serve God or mammon, Spirit or matter. No, they were bidden to "decide quickly," and we read that their prompt decision was, "We will serve the Lord."

No one would deny that a temptation to sin should be dismissed at once, on the ground that evil has no place in the consciousness of man as God's likeness, and no power over him. This is an eternal fact, whether it come quickly or slowly to the human sense. If it come quickly, the decision to abide by it is of tremendous importance to all concerned, for it means that the individual who has made this choice is standing upon the Rock of ages. It is however seldom seen by those outside of Christian Science that in the matter of sickness the individual decides his own case; that is, he either accepts the verdict of mortal mind, which is often hopeless and at best uncertain, or he accepts the supreme decision of the divine Mind, which reads, "Deliver him from going down to the pit: I have found a ransom." This merciful and unalterable decision may be disputed by error, but it cannot be set aside, since it is the decree of infinite wisdom and Love.

The trouble with all material methods of dealing with sickness and sin is that mortal mind does not know reality, hence it judges by appearances, which are always deceptive, and then waits, forever waits to see what will happen. Physicians often advise delay until conditions develop which will enable them to decide upon a patient's chances for recovery, whereas a quick decision from the standpoint of spiritual law means more to a despairing sufferer than all the decisions that were ever handed down from earthly tribunals. Such a decision is authoritative, for it expresses the will of Him who said, "Why will ye die, O house of Israel? For I have no pleasure in the death of him that dieth, saith the Lord God."

Once the Master said, "Ye will not come to me, that ye might have life," and this clearly implies a wrong decision on the part of humanity, which so sorely needs what the

Digitized by Google

ever-present Christ has to give. The familiar saying that "delays are dangerous" may well be recalled here, for one who dallies with a temptation to sin is sure to yield to it. If one temporizes with the insidious belief that there is more than one power, that material methods may do more for him than the unseen realities of Spirit, he needs to be aroused to see the truth and at once decide to place unwavering faith in what divine Principle can do for him.

The temptation to doubt in any wise the divine power and willingness to save us from every phase of evil must be resolutely dealt with, for otherwise we may come to be classed with those who make shipwreck of their faith. The final decision in all questions must come from God, but we can at this very moment decide to abide by that decision, even if it strip us of some measure of worldly pleasure; and we can always rest assured that it will never doom us to sin, sickness, or death. If justice and judgment are the habitation of God's throne, we cannot too soon decide to take shelter therein and dwell safely in the presence of divine Love.

ANNIE M. KNOTT.

Handling Error

NOTHING is more certain, amid the uncertainties of mortal existence, than this: that unless humanity learns to destroy evil, evil will destroy humanity. Christian Scientists have been taught by the writings and the example of their Leader to destroy evil by handling it as error and thus gaining the final mastery over it. There is no joy comparable to that of seeing error melt away before Truth as revealed by Christian Science, but the process entails first of all the unmasking of evil as such, so that it may not continue to deceive any by its pretense of being good.

Mrs. Eddy, in referring to her experience in unmasking "the metaphysical mystery of error," says, "I shall not forget the cost of investigating, for this age, the methods and power of error" (Miscellaneous Writings, pp. 223, 222). The only way in which this labor of love on her part could be made of no avail for humanity's salvation and healing, would be through any unwillingness on the part of Christian Scientists to continue to unmask "the methods and power of error" with truth, until there is no evil left to be destroyed. The chapter "Animal Magnetism Unmasked" in Science and Health and the articles entitled "Mental Practice" in "Miscellaneous Writings," and "Ways that are Vain" in "The First Church of Christ, Scientist, and Miscellany," are among those parts of Mrs. Eddy's writings in which "the metaphysical mystery of error" is fundamentally and finally laid bare; and every practical Christian Scientist is using this unmasking to protect himself and his work from the secret assaults of the enemy.

A profound sense of gratitude must pervade the ranks of all enlightened Christians at this hour, that the seeming mystery of iniquity, thanks to Mrs. Eddy's supreme labor of love, is no mystery at all. The pretended powers of mesmerism or hypnotism, the superstitious claims of esoteric magic or necromancy, periodically unmasked by the Christian Science Lesson-Sermons, cannot deceive those who are faithfully and loyally following the prescribed order of handling evil as error.

We read in the Scriptures that "God saw every thing that he had made, and, behold, it was very good." The danger inherent in any unwillingness to handle the subtler forms of evil would naturally arise from the fact that unless such forms are consciously relegated to the realm of error, they may succeed in establishing in human consciousness their claim to be part of God's creation, and hence be accepted at their own valuation as "very good." Under the monotonous repetition that all is good, evil might prevail upon humanity to admit it into the same classification as good. But the willingness to draw the line between good and evil prevents such a catastrophe, and keeps even the most pretentious and the subtlest forms of evil where they belong,—on the side of error, nothingness, and not of Truth, spiritual reality.

That this willingness demands self-sacrifice and moral courage goes without saying. Jesus declared, as we read in Luke's gospel, "Suppose ye that I am come to give peace on earth? I tell you, Nay; but rather division." This division between truth and error can only be made by the spiritual understanding which is Christian Science; and the peace which is earned by this willingness is not an earthly peace, not "a false, convenient peace" (Miscellany, p. 211), but the peace which passeth mere human understanding.

This work of handling error with truth has its supreme rewards; it saves the sinner and heals the sick and underlies all spiritual progress. It maintains man's full individuality and his mental alertness; it is the cure for sense-intoxication and stops the drift down-stream into the sea of error. It enables the scientific Christian finally to be among those who can sing praises to omnipotent Truth, because they have learned to "stand on the sea of glass," on the sea of human belief, which has become transparent to them, and therefore can no longer conceal the deceptions of erring mortal sense, which are destroyed in the consuming fire of divine Love.

WILLIAM D. MCCRACKAN.

A Letter from Mr. Willis

In announcing the retirement of Mr. Willis as one of the associate editors, the Directors wish to express their thanks to him for his long years of faithful service, and their earnest good wishes for the continuation of his usefulness.

Boston, Mass., June 1, 1916.

Christian Science Board of Directors, The First Church of Christ, Scientist, Boston, Massachusetts.

Dear Brethren:—For fourteen consecutive years, in response to our Leader's call, it has been my privilege and joy to serve this great cause as an associate editor and member of the Bible Lesson committee, and during this time I have been encouraged and stimulated by the many assurances of attendant good which have come to me. Of late, however, I have felt the need of increased time for the study and practice of the Word, that I might be equipped for greater efficiency in contributing to the preparation of the Lesson-Sermons, the importance of which steadily grows upon my thought, and I am therefore led to tender you herewith my resignation of the associate editorship.

The memory of unnumbered kindnesses shown me by my fellow workers during these years of intimate association will always awaken a deep sense of gratitude and be an inspiration to nobler endeavor.

Yours very sincerely,

J. B. WILLIS.

Mr. McCrackan Elected an Associate Editor

Announcement is made of the election of William D. McCrackan, C.S.B., of New York City, as an associate editor of the *Journal*, *Sentinel*, and *Herold*, to fill the vacancy caused by the retirement of Mr. Willis. Mr. McCrackan has long been known to the field not only through his services on the board of lectureship and his prior term as first reader of The Mother Church, but as a regular contributor to the periodicals for many years.

Among the Churches

Current Notes

OMAHA, NEB.—Third Church of Christ, Scientist, will be organized in the northern part of the city some time soon, according to a unanimous decision made by the members of the denomination at a meeting of First Church of Christ, Scientist. Although no definite site has as yet been selected, it was decided that the new church should be located north of Lake Street. About one hundred members now attending First or Second Church will go over to the new church, and this will relieve the crowded conditions which prevail at present in the two older churches.—*Omaha Bee.*

OLYMPIA, WASH.—In November, 1912, a few Christian Scientists here who were members of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., assembled at a private residence and organized the Christian Science Society. Meetings were held in a small cottage on Adams Street, near Ninth, until the attendance became too large for the building. Since then they have been held in the Woman's Club House, Tenth and Washington Streets. The society has grown so that it is planning the erection of a church edifice in the near future.—*Olympian.*

CAMBRIDGE, MASS.—First Church of Christ, Scientist, which now holds its services in Brattle Hall, has recently paid in full the mortgage on the property at 1582 Massachusetts Avenue, purchased some time ago as a building site at a cost of twenty-seven thousand dollars. Furthermore, owing to a kindly bequest and the generous giving of the church, it has something over ten thousand dollars on hand in its building fund toward the erection of an edifice.

The Cambridge Tribune.

BLOOMINGTON, IND.—It is the intention of the local Christian Science people to repair their newly acquired building and then to occupy it for a year or more until the congregation is ready to erect a church edifice. The property is on the corner of Washington and Seventh Streets, and cost forty-two hundred dollars.—*The Telephone.*

SALIDA, COL.—First Church of Christ, Scientist, is raising money to build a new church edifice. The fund has already grown to a sum sufficient to warrant a beautiful structure.

Salida Mail.

THOMASVILLE, GA.—A portion of the old Young's College property has been purchased, on which it is planned to erect a Christian Science church.—*The Macon Telegraph.*

The Lectures

Notice

The appointment of Edward A. Merritt, C.S.B., 3422 Euclid Avenue, Cleveland, Ohio, to the board of lectureship of The Mother Church is announced. Mr. Merritt's appointment is to fill the vacancy caused by the resignation of William D. McCrackan, C.S.B., who has been elected an associate editor of the *Journal*, *Sentinel*, and *Herold*.

Yonkers, N. Y.

Frank Bell, who lectured on Christian Science in the Warburton Theater, was introduced by Mrs. May N. Hatheway, second reader, who said:—

Many of us, no doubt, are familiar with the sacred song which has this well-known refrain: "Earth has no sorrow that heaven cannot heal." It might not occur to us to question the value of these words until, finding ourselves in circumstances where we long to prove their truth, we are led to ask, How can heaven be brought near enough to earth to heal its sorrow? The Galilean Prophet said to his hearers, "The kingdom of God is within you," a statement which conveys unquestionably the idea of a mental realm, a kingdom of mind, wherein all heavenly qualities reign.

Right thinking has not always been recognized as a sure means of attaining this desirable state of mind, but we are coming to know that systematic thinking along the lines of peace and harmony brings richest blessings into every human experience. We learn that to think in accord with Truth is truly to live, that to live means to love, and that when we love, heaven comes so near to earth that its sorrow is comforted, its sickness healed, and its sin forgiven. Then we have the newer refrain, "Earth has no sorrow that Love cannot heal."

Our lecturer is going to tell us this afternoon something of what Christian Science is doing to make these ideals possible here and now, and of the place which Christian Science is occupying in the world today as a regenerating and healing influence.—*Correspondence.*

Edinburgh, Scotland

In introducing Clarence W. Chadwick, who lectured on Christian Science, H. Wallace Smith, first reader, said in part:—

In these troublous times, when the world seems so full of disaster and disease, there must be many people in our city who are in great need of something that will assuredly save and free them from illness and want and misery of every sort. The Christian Science movement is offering to humanity today a divine message full of hope, encouragement, healing, and freedom, and is indeed making it possible for thousands to experience in a practical way all kinds of lasting benefits and blessings in their daily lives. This Christian Science message is bringing to the individual consciousness the Christ, Truth, with its spiritual healing power, and by its means all manner of sin, sickness, and disease is being healed; passions, vices, and false appetites are being overcome and cured, and multitudes are being relieved and delivered from poverty and distress.—*Correspondence.*

Peru, Ind.

Judge Walter C. Bailey, introducing Prof. Hermann S. Hering, the Christian Science lecturer at the Wallace Theater, said in part:—

That you may not be misled I desire to say that I am not a member of the Christian Science church, but I am a friend to any church or society seeking to make people better citizens. That Christian Scientists are in fact making the world better by their mode of living and by their teachings cannot be questioned, and it is indeed a pleasure and an honor to have been asked to introduce the speaker of this evening.

The Christian churches and ministers throughout the world aver that the New Testament is the inspired word of God, and that it is the solemn duty of all believers in the Christian faith and all followers of the meek and lowly Nazarene to pursue, as an object of desire, the example set by him as the highest ideal of human excellence. I cannot understand why the Christian churches and their ministers should assail the work of the Christian Science church in attempting to do

Digitized by Google

what the Christian Bible says they can and shall do in the name of the Master. If the New Testament is inspired, as all professing Christians claim to believe, there is abundant authority given the followers of the Christian religion to heal the sick, restore sight to the blind, cure the deaf, and cast out devils.

There is room in this world for all of us to do good to our fellow man, but there is not room for any of us to assail our friends and brothers because they do not see the solution of the problem of the future as we see it. I have met the people of the Christian Science faith many times and in many places, and am compelled to say, in justice to them, that they are among our most intelligent and learned people. They are, as a class, law-abiding, temperate, charitable, and peace-loving people, and their daily walk in life is an inspiration to all lovers of law and order to emulate their example.

Peru Journal.

Tonawanda, N. Y.

Frank K. Sutley, superintendent of schools, in introducing Jacob S. Shield, who lectured on Christian Science in the High School hall, said:—

Several years ago in this hall, and under the auspices of the Christian Science Society of Tonawanda, I listened to a delightful lecture by one of your speakers. He made very clear to me many of the features of your religious belief which I did not understand, and since that time I have taken at least a more intelligent interest in the work of the Christian Science Society. Two or three things have impressed me as being strong points in favor of your belief. In the first place, Christian Scientists always seem to know what they believe; they are always ready and willing to enlighten others concerning their faith, and to help them if possible. Then they are sincere; their faith seems to enter into their very hearts, and judging from many friends who are professed Christian Scientists, they live their religion.

Many churches would find it difficult to secure such an audience as this to listen to a doctrinal lecture. I think it goes to show that Scientists are enthusiastic in their belief, and anxious to help others to understand the Principle on which this great church is founded. Whether we are members of the Christian Science Society or not, we have all come here tonight with one purpose, and that is to learn more about this great institution which is doing so much good in the world.—*Correspondence.*

Lectures to be Delivered

CALIFORNIA—Yreka: Dr. Francis J. Fluno, Peters Theater, Miner Street, 8 p.m., June 27.

CANADA—New Westminster, British Columbia: Prof. Hermann S. Hering, Royal Theater, 8 p.m., June 25.

Vancouver, British Columbia (First Church): Prof. Hermann S. Hering, Orpheum Theater, 3 p.m., June 25.

Victoria, British Columbia: Clarence W. Chadwick, Pantages Theater, 3 p.m., June 25.

COLORADO—Fort Collins: Hon. Clarence A. Buskirk, Empress Theater, 3 p.m., June 25.

ENGLAND—London (First Church): John W. Doorly, Town Hall, Kings Road, Chelsea, S.W., 8 p.m., July 6.

London (Third Church): John W. Doorly Church Edifice, Curzon Street, Piccadilly, W., 8 p.m., July 10.

IDAHO—Coeur d'Alene: Bicknell Young, Rex Theater, 3 p.m., June 25.

Kellogg: Bicknell Young, Auditorium, 8 p.m., June 24.

Nampa: Hon. Clarence A. Buskirk, Christian Church, Thirteenth Avenue and Fourth Street, 8 p.m., June 30.

St. Anthony: Bicknell Young, Grey Opera House, 9 p.m., June 22.

Wallace: Bicknell Young, Grand Theater Building, Fifth and Cedar Streets, 8 p.m., June 27.

IOWA—Manchester: Frank Bell, Court House, 8 p.m., June 29.

Spirit Lake: Frank Bell, Opera House, 8 p.m., June 27.

KANSAS—Beloit: Virgil O. Strickler, Church Edifice, 8 p.m., June 26.

Manhattan: William R. Rathvon, Wareham Opera House, 3:30 p.m., June 25.

Testimonies of Healing

About seven years ago what little I knew about Christian Science I ridiculed, as is the custom of some people who have never studied it. I seldom went to church, because I could not interest and content myself, but since coming into Science it has been a great pleasure to attend all the services. I soon learned that God is Life, Love, Truth, doing good in every way, always ready to help in time of trouble. I came to Christian Science for the physical healing, but that is a very small part of the good I have received, for although I did not know it, it was ushering me into a new life.

In lifting some heavy cases I strained myself, and this soon developed, according to physicians, into a bad case of lung trouble. I had to quit work and was under the care of a doctor for six weeks, but instead of getting better I grew worse. I was very weak, and the doctor told me I must leave this climate; but I fought against it vigorously, for I was full of fear. Two other doctors were consulted, and they told me I could live here just as well; but not being satisfied with the treatment which was proposed, I took up Christian Science on the advice of my uncle. I went to St. Louis on Wednesday morning, saw a Christian Science practitioner in the afternoon, went to church that night, and came back home the next day.

On Friday I went to my employer and told him I would be back Monday. The work was taken up under great difficulties, as my employer was full of fear; he even went so far as to enforce some very strong rules against me. The rest of the employees were not Scientists either, so I had a great problem to work out; but I went at it in earnest, doing the same work as usual and gaining in weight and strength continually. I took absent treatment for a while, and later had treatment with a local practitioner. In a very short time I was feeling and looking better than ever before. In six months I was advanced as traveling salesman, and continued on the road for five and a half years for the same firm, making drives through the country in all kinds of weather.

I am more than grateful to Mrs. Eddy for this increased understanding of Truth and more and more thankful to God, in and through whom we have life.

HARRY E. RENETZKY, Springfield, Ill.

✧

As I did not seek Christian Science for physical healing, my demonstrations of the great truth it teaches are over many of the so-called lesser ailments. Through the study of the Lesson-Sermons and the honest endeavor to give up material beliefs and practices, I have overcome very severe chronic headaches, which material remedies had entirely failed to reach, and attacks of a throat affection which occurred annually. By treatment from a practitioner, malaria of a malignant type, and at another time a heavy cough, accompanied by anemia, were cured. Of these ailments I have medical proof. While I was suffering from anemia, a physician friend who examined me said, "I am glad you are having Christian Science treatment, for medicine can do nothing for this trouble." By simple gratitude to God, and rejoicing that I know the truth which makes me free from material laws, I have been able instantly to heal numerous cuts, bruises, and burns.

Words poorly express my thankfulness for the physical healing, and still less adequately tell of the mental and spiritual improvement. The relief of overcoming the belief in the reality of the pains of matter cannot be compared to the joy of losing the love of the pleasures of the material senses. I greatly rejoice that I am more and more able to find my pleasures in the infinite resources of Soul.

I praise God daily, and thank our dear Leader that it is now possible for this great truth to be applied by so many people all over the world to their every-day problems, great and small.—HARRIET KATE HELMAN GRAY, Palo Alto, Cal.

✧

One morning, while reaching up to a shelf for a bottle of toilet ammonia, I accidentally tipped the bottle over, and the ammonia poured down into my eyes and throat; but with the slight understanding I then had of Christian Science I treated myself, knowing and declaring that God is "a very present help in trouble." In a very few moments I was able to open my eyes and all the burning sensation had left my throat. I had breakfast with the family and there was not a trace of the accident. Shortly afterward I took a few Christian Science treatments and was healed of a trouble for which our doctor had said there was no cure unless I underwent an operation.

I am very grateful for these healings, and that Christian Science fulfils the promises in the Bible. Many people say, "When I am healed, then I will rejoice and be grateful," forgetting the Master's words to Thomas: "Because thou hast seen me, thou hast believed: blessed are they that have not seen, and yet have believed." In Christian Science we find it is necessary to deny the evidence of the senses, recognize and rejoice in God's ever-presence and in man's eternal likeness to God.

GERTRUDE M. BUTLER, Douglaston, Long Island, N.Y.

✧

[Translated from the German]

A few months ago one of my fingers began to trouble me; but I paid little attention to it and went on with my work, all the time endeavoring to know that I could not be hindered from doing so. As the pain grew more severe, however, I complied with the wish of my relatives and consulted a physician. When he saw my hand he declared the case to be a serious one, and said that an incision must be made the whole length of the finger else blood-poisoning would set in and mean the loss of my hand. I did not have the incision made, but instead went to a Christian Science practitioner and asked her to take up treatment. The same day there was an improvement, followed by complete healing a few weeks later, without medical aid having been resorted to.

I am now able to do any kind of work without experiencing inconvenience. I thank God from the depths of my heart for the help received in this instance, and I am grateful to our Leader, Mrs. Eddy, for having shown us the way to Truth and how to attain the right knowledge of God.

FRAU MARIA RATH, Stuttgart, Germany.

✧

I was led to investigate Christian Science by a statement to which I turned when Science and Health was handed to me. It was this: "Sorrow has its reward. It never leaves us where it found us" (p. 66). I instantly saw that much tribulation had not left me where it had found me, for I was broadened in thought, and even the best in human character had been refined. I was healed quickly of intense agony by Christian Science, but it was fully seven months before an ailment left which for four years had caused severe suffering. By clinging closely to the only hope left for relief, however, I gradually found myself improving. That was in 1903, and the healing has been permanent. I had consulted many able physicians, but they had been unable to diagnose the case. As far as could be ascertained from a medical standpoint the

Digitized by Google

ailment was taking the form of locomotor ataxia. I am grateful to these physicians for their kindly efforts in endeavoring to alleviate my suffering.

At the time I sought the services of a Christian Science practitioner I was healed of chronic bowel trouble, stomach disorder, and severe attacks of biliousness, also of a structural defect of the eyes, being able to give up glasses after wearing them for many years. My eyes were healed after reading a few pages in Science and Health. I am most grateful for the elimination of a deep sense of sorrow and for the understanding that "man's happiness is not . . . at the disposal of physical sense" (Science and Health, p. 304).

While gratitude fills my heart for the physical healing, I value far more the glimpse I have caught of this great truth by reading and studying the Bible and the works of our Leader, for I have been enabled thereby to discern somewhat of the Christ. Divine Love has indeed wiped away many tears, as I have worked alone with God, happy and contented, in the little town in which I live. The very fact of being left alone proved a blessing, for being out of the reach of so-called antagonism, censure, and misjudgment, I was given time and opportunity to work out the deeper problems and to prove scientifically that joy, peace, love, happiness, companionship, —all are spiritual and cannot be lost for an instant. The power of divine Love has lessened every adverse condition, and I know that as I am worthy I shall receive yet greater benefits.

I deeply appreciate the untiring efforts of The Christian Science Publishing Society, for every periodical brings to me as to unnumbered others a healing message. Their work is a mighty one, and should receive the loyal support of every honest Christian Scientist. My sincere regard for the Discoverer and Founder of Christian Science, Mrs. Eddy, cannot be expressed in words, for the enlightenment found in her works has made my path plain; and my gratitude to God for many blessings can only be put in the words of David: "I will extol thee, my God, O king; and I will bless thy name for ever and ever."—Fannie M. Bangs, Elko, Nev.

✧

I am grateful for the healing received through Christian Science about four years ago, and herewith send a few words of gratitude which may be of benefit to others who are seeking the truth.

I was healed of the drink habit after all human efforts had failed, including a well-known "cure." Christian Science not only healed me, but it revealed to me the living God, divine Truth. It gave me peace and happiness, harmony, and a common sense religion. Christian Science rightly understood and demonstrated is a priceless treasure.

R. O. Eaton, Lancaster, Pa.

✧

I am sincerely grateful for Christian Science. For years it has been my only help in bringing up a family, and during that time it has overcome many inharmonious conditions. I am especially grateful for the complete and perfect healing of a broken bone. One morning while sitting at a desk in an office where I expected to remain until noon, I had occasion to rise quickly to walk across the room, and in doing so one foot caught in the cord of the telephone, the other doubling under me. I was thrown violently to the floor, and the pain was terrible, though I declared the truth instantly. Fortunately I was alone at the time, and in a few minutes I could draw myself to my knees by the desk, still declaring aloud that in Truth there are no accidents, nor is there any pain. Soon I raised myself to the chair and attempted to stand, but I discovered that there was some trouble just above the ankle. I telephoned to a Christian Science practitioner, who said she was about to take a car, but would call me from her office in half an hour to find out what was needed.

Immediately I began to work for myself in earnest, to realize the truth, and before the practitioner called the fear and trembling ceased. When I told her the conditions, she asked if I wished to have a surgeon set the bone; but it did not seem to me necessary, so none was called. She gave me a treatment, and soon all pain stopped and I was able to finish my work and stay quietly at my desk till noon. When my husband came in and I told him what had happened he could hardly believe me, as he had not perceived that anything unusual had occurred.

I was taken home, and remained in bed that day and part of the next, when I dressed and ate Thanksgiving dinner with my family. A few nights afterward I was lying quietly awake and without pain, when suddenly something in my foot snapped and I was able to move my ankle and toes, which I could not do before. I had not realized that there was a dislocation, and was overwhelmed with gratitude and thanksgiving as I understood what pain and trouble I had been spared by not having a surgeon. The healing was rapid, and in a few days I could rest the foot on the floor. In three weeks a friend drove me to church, and I walked from the sidewalk into church, afterward to the automobile again. The next week I walked to church, a distance of five blocks, and in eight weeks walked two miles without inconvenience or fatigue. There was comparatively little pain throughout the healing, and a distressful mental condition was overcome at the same time. Since then I have been able to walk long distances without fatigue.

I am grateful to God for giving us Mrs. Eddy, and to Mrs. Eddy for bringing us Christian Science.

Mary N. Overman, Santa Barbara, Cal.

✧

I first turned to Christian Science to find relief from sorrow. Through reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, and with help from a kind practitioner, thoughts of grief, doubt, fear, and the like, were replaced by hope, faith, and trust in God. That great uplift of thought from death to life will always be remembered as a beautiful proof of the power of Christian Science. In the intervening years many physical ills have been healed and faults of disposition corrected through the application of the truth.

. Claire L. (Wilkinson) Williams, Salmon, Idaho.

✧

I am indeed thankful for the privilege of expressing my gratitude to God for sending His beloved Son, Christ Jesus, to show us that we too are His children. I am also grateful to our dear Leader, Mrs. Eddy, for what she has given to the world through her clear understanding of the Christ.

I took up the study of "Science and Health with Key to the Scriptures" in connection with the Bible, and had not been reading long before I began to see that the mental healing meant much more to me than the healing of so-called aches and pains. Prior to reading Science and Health I sometimes had headaches and other slight ailments, but I did not think much about them, although they would unfit me for business. After reading this book for a short time, I realized that they had gone to their native nothingness—that they were no part of me. Then I began to put into practice that which I gained daily, and found, as our Leader has told us, that it was the way to gain more.

Like most if not all who take up this wonderful study, my great desire was to help others to realize their at-one-ment

Digitized by Google

with God. Then the tempter came, trying to tell me that I did not have time to read enough to get the necessary understanding. Just before retiring, after a very busy day, I decided to read a little in Science and Health, and on opening it I read (p. 368), "When we come to have more faith in the truth of being than we have in error, more faith in Spirit than in matter, more faith in living than in dying, more faith in God than in man, then no material suppositions can prevent us from healing the sick and destroying error," which comforted and encouraged me.

My sincere desire is to follow our Wayshower, Christ Jesus, so far as I am able to take the steps that come to me in God's way, never doubting that His way is the only one, and trying to realize at all times that "perfect love casteth out fear." I want to thank all who have helped me to a better understanding of Christian Science, for it means everything to me.

HENRIETTA L. PRICE, Chicago, Ill.

✧

We are instructed to rejoice always, and through the study of Christian Science we soon learn to do so, not only at all times but under all circumstances and conditions. Often the effort to rejoice even in the face of seeming discord and distress brings to us untold blessings of which we were entirely unaware, though they had always belonged to us as children of God. At times when the way has seemed dark and unpromising, while the clouds of sense seemed to hide spiritual realities, I have endeavored to count my blessings and rejoice, and am glad to testify that I have always found relief and comfort through these efforts to understand and live in accordance with Truth and Love.

The Christmas season marks an anniversary in my experience in Christian Science, for on Christmas day the first treatment was received, and the reading and study of the Bible, together with the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, was begun. This momentous day proved to be a turning-point in my life, the stepping-stone from discord to harmony. I have received many proofs of the healing power of divine Love. A disordered functional condition from which I had suffered for about seven years, and for the relief of which I had continually taken medicine without being healed, has entirely disappeared. The swelling and severe pain from a badly wrenched ankle were permanently removed during my study of one of the Lesson-Sermons. Toothache has been quickly overcome, not only for myself but for others in the family, and it has not returned. Many disagreeable features of disposition have been eradicated, and though there is much work yet to be done, I am grateful for some improvement and rejoice in the good already accomplished.

I am deeply grateful for the pure, unselfish life of our Leader, for the blessings which come while assisting in a small way in the activities of church organization, and for a clearer understanding of the truth, which enables me more fully to appreciate and enjoy the great value of all our literature as well as our lectures, services, and reading-rooms. I am striving to know a little better each day the truth of our Leader's statement (Science and Health, p. 199), "The devotion of thought to an honest achievement makes the achievement possible."

PERCY HUNT SWEETSER, Medford, Mass.

✧

It is with deep gratitude that I give my testimony of healing in Christian Science. I suffered for two and a half years from heart trouble, and during that period there were three months at a time when I was unable to go down-stairs. Our family doctor said the trouble was valvular disease of the heart and I was never again to take a quick step. I was advised to try Christian Science, so took treatment from a faithful practitioner, with the result that I am now doing my own housework and going around just as any other member of the family does.

For this healing and for the understanding of this saving truth I cannot find words to express my gratitude. I have not had any return of the old trouble or one sick day, but have kept in good health.

MRS. ANDREW ALLAN, Winnipeg, Canada.

✧

I wish to express my deep gratitude to God for His truth as revealed to us through the teachings of our beloved Leader, Mrs. Eddy. Before becoming interested in Christian Science I had been a church-member for eleven years and had taken an active part in all church work. Like many others, however, I was not entirely satisfied with my religion, and finally lost interest in the church, although still clinging to my belief in God. There seemed to be more regard for the material than for the spiritual in the churches, and discord appeared to reign instead of harmony.

When Christian Science was presented to me by a dear relative, I saw in it a religion of love, and words are inadequate to express my thankfulness for the spiritual uplift which has come from the earnest study of the Bible together with Science and Health. We have had many demonstrations of Truth's healing power. Numerous problems have arisen, both physical and mental, but all have been quickly solved by the scientific application of the divine Principle and rule of Christian Science. At times we have needed treatment from a practitioner, and we are grateful for the help which has been given so lovingly.

We are also thankful for having been accepted as members of The Mother Church, and are striving to live in such a manner that we may be worthy to be called Christian Scientists. The daily study of the Lesson-Sermon is a great help in our work. We appreciate the periodicals as well as all our other authorized literature, and enjoy the privilege of passing these on to others who are becoming interested in this Science. I can truly say that Christian Science is the greatest blessing that has come into our lives.

ETHEL M. POOS, Easton, Kan.

I too want to be one among the many who testify in the columns of the *Sentinel*, and to express my gratitude to God for the benefits received through Christian Science. Although we did not come into Science directly for any physical healing, we have had many demonstrations which prove to us beyond a doubt that Christian Science is the real panacea. I myself have been healed of a disease of the spleen, which for a time seemed very troublesome and threatening. Many other hard problems have been solved in Science, and we are truly grateful to Mrs. Eddy and the church for this system of overcoming human ills.

The Bible had always seemed to be more or less beclouded by mystery and superstition, but when Christian Science was presented to us, its light so illumined the Book of books that it statements now seem very reasonable as a chart of life.

JOHN F. POOS.

✧

This testimony is given with a feeling of deep gratitude to God, also with the hope that it may help some one. It was while seeking a religion that I first heard of Christian Science, and was speedily convinced that it was the religion I wanted. That was about sixteen years ago. I purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and although I did not seem able to understand

Digitized by Google

much of it then, still I felt sure it contained the truth. There were no Christian Scientists where I lived, and I had met only one person who knew anything about this teaching. She had just experienced a wonderful healing through Christian Science, of which she told me.

Four years later our little girl was troubled with worms. I wrote to a Christian Science practitioner forty-five miles away asking for treatment, and in a very short time the child was perfectly healed. In the fall of the same year both our children had whooping-cough, the baby being only six weeks old. Although I understood very little of Christian Science I tried to help them, but as the baby grew worse, I wrote again to the practitioner for treatment. After a week he was still getting worse, and it seemed as if he were passing on; there were times when we did not know whether he was alive or not. I then took him to the practitioner, who met us at the station. When we arrived at the hotel, the baby had another spell, when it seemed as if he were passing on. I gave him to the practitioner, and she walked away from the crowd which had gathered. In a few minutes she came back, but words cannot describe the change in the baby or myself. I will only say that he has never had another of those spells, although he coughed a little for a short time. Since then many other ailments have been overcome through Christian Science, such as croup, measles, and colds.

Our youngest child, now seven years old, was born under Christian Science treatment, and I was relieved of much suffering at the time. Thus has been proved the truth of Mrs. Eddy's statement in Science and Health (Pref., p. vii), "To those leaning on the sustaining infinite, today is big with blessings." I am truly grateful for the periodicals, also for the Lesson-Sermons, which enable all to make continuous progress in Christian Science. Even though we do not have the opportunity of going to church, we have everything we need; there is no good thing withheld from us.

We indeed have much for which to thank Mrs. Eddy. I am profoundly grateful for the physical healing which has come to me, but even more grateful for the knowledge I have gained of God.—Ida Babcock, Ryegate, Mont.

✧

[Translated from the German]

Words are inadequate to express my deep gratitude to God for all the blessings I have experienced through Christian Science, since through it I was led on the way of Truth, whereby my life has been transformed and I have become a new woman. I have been freed of frequent attacks of severe headache, besides being completely healed of a stomach trouble from which I had suffered since childhood. Chilblains also disappeared, and I was enabled to discard glasses which I had been obliged to wear for sixteen years. I have also been gradually freed from a sense of want through the understanding that our Father-Mother God is the source of all supply, that He giveth to all His children bountifully and from the fulness of His love. The spiritual knowledge which I have gained enables me to lean more and more on the infinite Father and to seek His guidance.

I am filled with a wonderful sense of peace and the joy of living, and with the desire to know more of God's nature and of the truth of being. My endeavor shall be to prove my gratitude through right living, through showing greater love by my actions, and through learning to love my neighbor as myself. My thanks are also due to our revered Leader, Mrs. Eddy, who through her book "Science and Health with Key to the Scriptures" and her other writings has shown us the way leading unto Christ, Truth.

Hedwig Zerbe, Berlin-Steglitz, Germany.

From Our Exchanges

[Rev. H. T. Knight in *The Church Family Newspaper*]

Has the church got a message for the world? Has she a message from God at all? Is it true that God has spoken to humanity? On what evidence does the church base so tremendous an assertion? What is the authority to which she appeals? And is it of a kind that is able to withstand the solvent of modern investigation? Again, what is the gospel that the church is preaching? Is it the gospel that Christ preached, the glad tidings of the kingdom of God, the good news of the advent here upon earth of a spiritual organism through which the moral order of the world is being restored? Can the church's gospel be described as the gospel of the redemption of the world from evil, or only of the redemption of individuals from the evil that is in the world? Is the church simply intended to be a haven of refuge for little groups of faithful souls, or has she in the mind of Christ a duty to discharge toward the social order and the moral progress of humanity? What is the nature of her function as the prophetic organ of God's kingdom? Has she a vision of the divine ideal of society? Does she know herself to be indeed the heavenly Jerusalem, the city of the living God, established by Christ's death and resurrection and endowed with his living spirit, in order that she may guide human civilization onward to its destined goal?

Ah, these are indeed great questions. But they are the very questions that are being asked us today, and they have got to receive some kind of answer within the next twenty years. All around us there are people, professedly Christian, who are either storming at God or drifting farther and farther into doubt and despondency and despair. And our task is to build up again from the very basis the content of faith in Christ.

[*The Advance*]

God was in Christ reconciling the world to Himself. God and Christ represent not opposite but identical interests in sacrifice. God is not the implacable creditor, with Christ as the endorser of a defaulted obligation. God is not the relentless judge, sentencing His own Son instead of the real culprit, and then pretending to have forgiven the sin. God does not represent justice and Christ mercy; God is both just and merciful, and Christ embodies both the goodness and the severity of God. God and man are at-one in Christ. Christ's interests are absolutely those of God, yet one with those of men. He is therefore the mediator of a new covenant, in which men realize in him their at-one-ment with the God who is at-one with Jesus our Saviour.

[*The Christian Work*]

Whatever else our age needs—and its needs are manifold—its supreme need is that movement of the individual and the public will toward the ways of God which induces a change of mind and results in a change of life. Grief for the transgression of the people rather than for its shame or publicity, a grief which reviews the past with such intensity as to make an actual cleavage in human history, should be the occupation of every devout soul. Then conscience can resume its authority and hurl passion and pride from the seats they have usurped.

[Rev. Arthur Pringle in *The Christian World*]

To be contented, to shake hands with life as an all-sufficient friend, is to be dead. Only they are "blessed," because only they are living, who "hunger and thirst." The higher we have climbed, the farther seems the sky; the more we learn,

Digitized by Google

the more impossible our ignorance; the better we are, the more burning our sense of defect,—all of which explains the paradox that it is the saints who have most enriched the vocabulary of penitence, and that a man who has made a great fight for goodness may still count himself "less than the least." In spite of all the stress we lay on them, "winning" and "losing" are relative terms that ought only incidentally to touch our real attitude to life. However far we outdistance others, there will always be more doors to open, heights to scale, goals to reach; until we at last realize that all the time we are runners-up to the ideal leading us ever nearer to God. Out of this naturally comes the second truth that life is worth living and our share in it is worth doing, apart from all questions of competition or prominence and obscurity. The closer we get to the grand reality of things the less will such questions concern us; and assuredly the spirit of Christ will be as a fire burning them to nothingness.

[Rev. L. George Buchanan, M.A., in *The Record*]

It is safe to say that never for centuries has there been such a "divine discontent" among the clergy as there is now. In every part of the country, in the superior and in the inferior clergy, there is a distinct if undefined feeling that all is not as it should be, either with themselves or with the church at large. Circumstances of today have impressed this on all of us as nothing else could, as certainly no one voice of preacher or prophet could have done.

One is convinced that the war has brought home to almost every social worker the fact that a mere material basis of the reconstruction of society is doomed. Now is the chance for a sympathetic church to say, "Here is the true basis—a love of men based on the love of God; a holier social condition based on the Spirit of holiness." The fact is that the war has "scrapped" the old objective, "the happiness of the greatest number." It is for the church to supply the new motto, namely, "the holiness of the greatest number." To do so, however, she must herself be not only sympathetic but holy; not only full of love to man but full to overflowing with the love of God. So it comes back to the original point,—that if we are to set right what is wrong in the nation we must begin with the church; and if we are to set right what is wrong within the church we must begin with ourselves.

[*The Christian Register*]

Can you perceive the highest qualities in the lowest man? Can you have faith in the existence of the divine in the depraved, and know that from its slime may rise the lily of purity? Do you have faith to believe that every man, however distant and alien he may be in all that constitutes the affinities of life, is worthy of your respect and love? Can you in the midst of humanity's hatefulness and strife still have faith in the human heart? If you can, you have risen to the highest.

[*Baptist Monthly*]

The great truth which all need to grasp is that a successful life does not lie in doing this, in possessing that, or in going somewhere else; it lies in the quality of the daily life. We were meant to be kings,—to lead royal, noble lives, governing them, and refusing even for a moment to let them govern us; kings, obedient, as is the sun, to the great King of all.

[Rev. C. C. B. Bardsley in *The Guardian*]

Our great need today is a rediscovery of Christ. Every generation in turn has to discover Christ for itself; we inherit creeds, but we cannot inherit the knowledge of Christ. It is at once a revelation and a discovery,—a revelation on God's part, a discovery on our part. Only in the light of such discovery can men give fresh and living witness.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new French pamphlet, "Foi et Générosité" (Faith and Generosity), has just been issued and is now on sale. This pamphlet contains the following articles: "The Lord Thy Confidence," "The Closed Hand," and "Continuity of Right Thinking."

Christian Science: A Religion of Love (Christian Science: En Kjærlighetens Religion), a lecture by Virgil O. Strickler, has been translated into Norwegian and is now published in pamphlet form with the English and Norwegian versions on opposite pages.

"Law and Work" is the title of a new pamphlet containing the following articles: Love Fulfils Law, The Logic of Christian Science, Undisturbed, God's Law of Adjustment, Authority.

"Christian Science: Man's Dominion over Evil," a lecture by Edward A. Kimball, C.S.D., has been translated into Russian, Norwegian, and modern Greek. Pamphlets in these three languages have been published with the English version opposite the translation and are now on sale at prices of our regular pamphlets as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $5.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the case of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to page four in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for the year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year of two years previous, cloth, $3.25; half calf or half morocco, $4.00. On earlier volumes write for prices.

Items of Interest

Detroit, Mich., and all American and Canadian cities on both sides of the Detroit River from Lake St. Clair to Lake Erie have received notice of the recommendations of the engineer for the international joint commission, composed of representatives of the governments of the United States and Canada, that sewage purification plants be built to eliminate pollution of the boundary waters between the United States and the Dominion. To carry out the recommendations will require an expenditure of approximately ten million dollars by Detroit, Windsor, and six small villages that line the two shores. Other recommendations are made for the construction of purification plants at Port Huron, Mich., Sarnia, Ont., and three other small Michigan towns on the St. Clair River. These last named recommendations, however, are not made with a compulsory intent, as are those regarding Windsor, Detroit, and the cities below those two towns on the Detroit River. The engineer estimates that the plant for Detroit, one to care for a city of 950,000 persons, would cost $5,932,024. To protect the city, the Detroit council appropriated $15,000 for the retention of an engineer to make a survey of its contribution to the pollution of the waters, and the city is expected to proceed without demurring in carrying out the recommendations, because the report of its own engineer tallies so nearly with that of the commission's expert.

A forest products laboratory is maintained at Madison, Wis., by the United States Government to promote efficiency in the lumber industry by the reclamation of part of the present waste. The National Lumber Manufacturers' convention, which came there to inspect the plant following the recent Chicago convention, were treated during their visit to biscuits made with a cheap baking powder, a sawdust product, instead of the usual tartaric acid baking powder. Improvements have been made in the methods of converting mill waste into artificial silk, and last year silk socks to the value of $5,500,000 were produced. The laboratory is also turning sawmill waste into binding twine, rope, woven furniture of the woven willow type, milk bottles, woven matting rugs, the strongest paper made from the waste of southern pine, grain alcohol, acetic and other standard acids and chemicals. The national association has asked Congress to add $75,000 to the present $140,000 appropriation for the laboratory.

The all-year schools of Newark, N. J., are commended in a special report by the specialist in city school administration of the Bureau of Education, Department of the Interior. He finds that time is saved and street loafing is largely prevented by eliminating the long summer vacation. The children in Newark who have attended school for the past year or two on the all-year school plan, speak enthusiastically of it. The bureau investigator asked the pupils in the seventh and eighth grades to write compositions telling why they attended school during the summer. Nearly all the pupils stated that the schoolroom was much cooler than the streets and their rooms at home; that they were glad to have something to do besides running in the streets, and that they hoped to gain a grade or two by the time they were old enough for their work certificates. Parents who were interviewed favored the plan, because their children were able to get more schooling than otherwise was possible.

A machine which plants from ten to fifteen thousand forest tree seedlings a day is now being used in the Letchworth Park Forest and Arboretum, in Wyoming County, N. Y. Previously the planting has been done by hand at the rate of twelve to fifteen hundred trees each day per man. The machine was designed to set out cabbage and tomato plants, but works equally well with trees. It is about the size of an ordinary mowing machine and is operated by three men and two horses. It makes a furrow, in which the trees are set at any desired distance, and two metal-tired wheels push and roll the dirt firmly down around the roots. It can be used on any land which has been cleared and is not too rough to plow and harrow.

Since one third of all the silver in the world today has come from the mines of Mexico, the metallurgic history of that country has fully justified Humboldt's famous description of it as the "treasure house of the world," according to a bulletin issued by the National Geographic Society of Washington, which says: "A close contender with the United States for the first place in the production of silver—the two having produced nearly 70 per cent of the world's output in 1914—and ranking fifth as a gold producer, Mexico is easily maintaining its position as one of the world's richest nations with respect to minerals, a position it has held since the Spanish conquistadores first began to extort gold from the vanquished Aztecs."

A firm of aniline dye manufacturers of Manchester, England, have developed their enterprise so that they are today making one half the quantity of the dyestuffs formerly imported to that country from Germany, and are manufacturing nearly seventy highly complicated intermediate products. The firm, it is said, employs eight hundred men, of whom forty-five are chemists, and has over half a million of money invested in the works.

Imports into the United States of linens for the nine months ended in March, amounted to 88,547,244 yards. Of this total, mills of the United Kingdom furnished 36,980,142 yards. The aggregate compares with 50,609,879 yards for the previous like period. Formerly flax was raised in the United States primarily for seed to make linseed oil. The seed was planted thinly, so that each plant would branch out to produce as much seed as possible. In order to secure flax for fiber purposes the seed has to be sown thickly, so that the straw will grow as long as possible without joints. Owing to this the farmer found that it was not possible to raise flax for both seed and fiber in the same season, and found more profit in growing the flax for the seed.

A so-called Chinese farm is no larger than what in America would be called a good-sized garden, and the methods of cultivation are of the most intensive sort. In Manchuria there are vast stretches of land open to cultivation on a much larger scale than in China proper. These tracts are generally worked by hired farmers, who come in hundreds of thousands from the more densely populated sections of China to spend the short farming season in northern regions, returning again when the cold weather makes further labor in the fields impossible.

Li Yuan Hung, vice-president of the Chinese Republic, succeeds to the presidency, filling out the term of the late president, Yuan Shi-kai, which would have expired in October of next year. The new president was mainly instrumental in arranging for the Shanghai peace conference, and after the abdication of the Manchus was elected vice-president of the republic and appointed chief of the general staff. He was made a general, and in October, 1913, was reelected vice-president.

Louis D. Brandeis took the oath of office at noon, June 5, as an associate justice of the United States Supreme Court, to fill the vacancy in that body. An assemblage of distinguished public men, including members of both houses of Congress, witnessed the administration of the oath. The ceremony took place immediately after the justices, in full robes, filed into the court chamber to hand down the regular Monday decisions.

The general education board announced recently that at its annual spring meeting this year it made appropriations amounting to $789,980 for educational and research work. Since its organization in 1912 the board has appropriated $18,386,968, including its gifts this year, toward educational and research work in the United States.

Imports of diamonds and other precious stones at the port of New York during May made a new high record. Their value was set at $5,623,626, against $1,453,552 in the corresponding month last year, and $2,629,555 in May, 1914. Total imports of gems of all kinds, including pearls, to June 1 for the year, were officially estimated at $21,714,827.

The first shipments of logwood from the Dominican Republic for many years were made in April. The cost of cutting and bringing it to the seaboard made the transaction unprofitable before the present era of high prices. Large quantities of logwood, especially in the interior, formerly were burned under boilers and also made into charcoal.

According to the recently published report on mines and quarries in the United Kingdom during 1915, the output of coal from mines under the coal mines act was 287,411,869 tons in 1913, and declined to 253,179,446 in 1915. The number of persons employed at the mines was 953,642.

It is estimated that there is enough waste from the sawmills of the South alone to produce twenty thousand tons of paper a day.

Utah in 1915 mined 3,108,715 short tons of coal, valued at $4,916,916.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII June 24, 1916 No. 43

"What is written in the law"

JUDGE FREDERICK C. HILL

At some time in the journey of life a man becomes interested in the phenomena expressed around him and concerned about the problem of human existence. Sooner or later the thought of eternal life enters his consciousness, and Job's question, "If a man die, shall he live again?" occupies his thought. He ponders the to him unknown, and instinctively turns his attention to the consideration of God and man's relation to Him, to the doing of some act or the observance of some form or ceremony whereby he hopes to establish his heirship to Him, and his right to share in the estate of the Father, that thereby eternal life may be his by right of inheritance. Christian Science enables each one to learn who he is and whence he came, and draws mankind up to at-one-ment with God. On page 18 of Science and Health we read: "Atonement is the exemplification of man's unity with God, whereby man reflects divine Truth, Life, and Love."

In Luke's gospel we are reminded that men were then, as now, concerned about this same problem, for it is there related of Jesus that "a certain lawyer stood up, and tempted him, saying, Master, what shall I do to inherit eternal life?" While there may be some uncertainty regarding the words "eternal life" as used by the lawyer, the expression "inherit" would indicate that he held the universal belief regarding this subject. The American Standard Version reads, "A certain lawyer stood up and made trial." The motive that prompted him to make trial of Jesus by his query is quite apparent. In striking contrast thereto is the wisdom, understanding, and tact displayed by the Master in dealing with this subject and with his inquirer. This, with the truth voiced by the lawyer in the following verses, is worthy of the serious consideration of every one, for therein is found a positive statement regarding this universal question, "What shall I do to inherit eternal life?"

The lawyer, a scribe no doubt, familiar with the writing of judicial decrees, versed in the theories of rabbinical law, accustomed to propounding questions and the discussion thereof, and perchance a teacher, would engage Jesus in argument. Contrary to his expectation and quite at variance with the mode of human procedure, Jesus, knowing that God was the Father of all, looked upon this man as a brother, and in love and compassion inquired in simple words, "What is written in the law? how readest thou?" He thus shifted upon the inquirer the burden of establishing the issue raised, thereby bringing him face to face with the fact that man as God's likeness can know God's laws and be subject and obedient thereto. The reply of the lawyer, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself," brought forth the rejoinder from the Master, "This do, and thou shalt live," making final solution of the problem.

A careful study and consideration of this narrative must reveal to the earnest searcher after Truth these facts: that law is the most common, and to mortals the least understood, of all things in the world; that divine law never changes, is never repealed or held unconstitutional; that it is universal and ever operative in its adaptation and application to mankind; that it is the same yesterday, today, and will be throughout all time, even as it was before Abraham. It must be apparent that as God is the only lawgiver, His laws alone must govern throughout the universe, must be expressed through His idea, man, and that man must be obedient thereto, loving the lawgiver, and therefore his neighbor as himself. It is made clear that eternal life as understood by Jesus is not an estate of future expectancy, not a projection of mortal existence throughout eternity and beyond the human experience called death, but on the contrary is a state of present realization now and here of endless and eternal communion with God, and is experienced through obedience to that contained within the law: "This is life eternal, that they should know thee the only true God" (Rev. Ver.).

It must be further apparent that our failure to experience this present state of communion with God, this realization of eternal life, is due to the intervention in human consciousness of some condition not emanating from or in obedience to divine law, but wholly outside the realm of divine government; that some self-constituted authority has assumed to become a creator, a lawgiver. Mankind is thus face to face with a claim of power, of law, opposed to God, imposing the decree of sin, disease, and death upon everything within its realm. This self-constituted authority is the carnal mind, or as designated by Mrs. Eddy, the mortal mind.

It must therefore be quite evident that as mortal mind has no cause or creator, no law or authority within itself constituting it a reality, it cannot become a creator, a lawgiver, and every so-called law, judgment, or decree pronounced is accordingly null and void for want of constituted authority. It follows that man as God's idea exercises dominion by right of divine law over the witnesses of mortal mind, and is possessed with full authority to nullify every so-called law, to reverse every judgment and stay the execution thereof, and to cause mortal mind to pay the final penalty of its own decree, to wit, annihilation.

Christian Science brings to humanity the only reasonable and logical way of interpreting and applying God's laws to our earthly experiences, and assures mankind that whatever has been accomplished through the application of divine law in the past is possible now, and is conclusive proof of its availability at all times. It brings to humanity a positive and practical method of attaining man's birthright, "dominion," and offers the key whereby all men, whatever their earthly experience, may search out and find the hidden treasures contained within the law and experience health, happiness, and harmony.

Christian Science brings the Christ-spirit into the world and into every phase of human activity, and is the message of peace on earth to all mankind, individually and collectively. To all nations now engaged in war and strife, and to the whole world, it is the good news of salvation which will sooner or later bring the realization of the prophecy of Isaiah: "They shall beat their swords into plowshares, and their

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

spears into pruninghooks: nation shall not lift up sword against nation, neither shall they learn war any more," and also that of the prophet Habakkuk: "For the earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea."

✧

Our Text-book

PERCY PHILLIP VYLE

NOTHING more clearly illustrates the complete reversal of thought which confronts the student of Christian Science, and the necessity of unlearning many things believed necessary in his material education, than a comparison of the educational value of "Science and Health with Key to the Scriptures" by Mrs. Eddy with the thousands of text-books which attempt to solve the riddle of the universe while maintaining the reality of sense-evidence. Through the spiritual ideas expressed in this book the mystery surrounding God and His creation, including man, is solved, order is brought out of chaos, and the rule stated for demonstrating the truth of being.

Scientifically speaking there has always been a rhythm and not a riddle of the universe. Mortal, misty thought created its own riddle and then side-stepped the issue. Our national library institutions are overflowing with books which attempt to peep behind the cloud of a material creation, of life in matter, and the ephemeral nature of these works is forcibly emphasized by the rebuke God gave to Job when he asked: "Who is this that darkeneth counsel by words without knowledge? . . . Where wast thou when I laid the foundations of the earth?" Had mankind applied the lesson to be learned from this rebuke, it would not have relied as it has upon material philosophy for an answer to its questions.

It was not until Mrs. Eddy startled the world with her ringing declarations, "The fading forms of matter, the mortal body and material earth, are the fleeting concepts of the human mind," and "All is infinite Mind and its infinite manifestation" (Science and Health, pp. 263, 468), that thought was turned from a material sense of creation to a spiritual creation. Instead of demonstrating the truth of the discovered idea and attuning itself thereto, mortal mind has attempted to cling to its "words without knowledge;" but it was too late, for the provable statements in Science and Health compelled consent to the truth of the allness of God, Spirit, and spiritual causation began to permeate philosophy. Savants began to recognize the mental nature of all things, and during recent years the falsity of the human mind has been admitted in circles hitherto emphatically opposed to everything which did not spring from a materialistic basis. As Mrs. Eddy has said in "Miscellaneous Writings" (p. 361), "Christian Science has overshadowed all human philosophy, and being is understood in startling contradiction of human hypotheses; and Socrates, Plato, Kant, Locke, Berkeley, Tyndall, Darwin, and Spencer sit at the feet of Jesus."

With the exact statement and explanation of the Science of being contained in Science and Health, a man may learn something definite and understandable about God, man, and the universe, for this book makes a clean sweep of the speculative conclusions of material research and scientifically establishes man's oneness with his creator. In view of the attention paid to metaphysics by the popular magazines, as well as by the philosophical monthlies and quarterlies, in which various discoveries are claimed to have been made in the treatment of disease by mental means, it is well for the student of Christian Science to remember that the acceptance of something seemingly easier than absolute Science is an attempt to climb in by some other door, and those who with unquestioned sincerity attempt to prevent the advance of the Christian Science movement by so-called destructive criticism of Science and Health, have merely come short in their apprehension of this teaching. Too often is it forgotten that truth must always be "spiritually discerned," as Paul tells us.

We have, then, the remarkable situation that for metaphysical and pure scientific research a vast accumulation of ancient and modern philosophical and experimental psychological books, predicating their premises on life in matter and affirming a riddle of the universe, have passed the acme of their conjectural service to mankind. The lesson to be deduced by us, if we earnestly desire to keep our thought undimmed, is that our studies must be along the narrow way. There is only one elucidation of God and the universe, including man; namely, the spiritual. There is only one scientifically demonstrable Principle by which to work out the many problems involved in human experience. It is because the teaching of our text-book, when clearly apprehended and honestly applied, has enabled the student to do the works of the Master, that it is justly entitled to recognition as the "Key to the Scriptures."

✧

Love's Activity

FANNIE BAKER BONNER

ONE of the most beautiful truths which came to the writer after she began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, was that at last one could find out how to obey the command of Jesus to love not only our friends but our enemies. In common with others she had discovered that no matter how much one wished to be loving and kind, there seemed to be no way of really loving everybody, because there were, as supposed, so many disagreeable people in the world who seemed to treat one badly. The old religious teaching enjoined love, but when one tried to practise it there seemed no way of filling the measure demanded.

The first light on this question came from reading the article "Love Your Enemies," beginning on page 8 of "Miscellaneous Writings." This reading was repeated many times, and many tears were shed before there came the willingness to see what the only enemy was and is. On page 10 we read, "Even in belief you have but one (that, not in reality), and this one enemy is yourself—your erroneous belief that you have enemies; that evil is real; that aught but good exists in Science." During the succeeding years this article has stood by the writer in many a dark hour when evil seemed to make itself real as personality.

What to do, how to love, was the question. One often hears it said: "Well, I do not need to love these persons so long as I do not hate them; I am simply indifferent. I let them alone because they are so hateful." But is this indifference sufficient? Love is active, and will a passive attitude be a fulfilling of the command to love? In the first epistle of John we read, "He that loveth not his brother abideth in death." We all know that the sin of omission, the failure to do something we ought, is a serious offense. The Bible confirms the fact that love must be active, and to love the brother must mean active loving.

In the old way of thinking this might have meant that one must go to see a brother, and perhaps do something for him in a material way, and this alone. In Christian Science we are learning that love's activity does not always mean the old way, but may mean simply loving in the right way. To do that we must separate in our thought the seeming self from the real man, so that nothing shall come before that but God and His image and likeness; and of course we wish to love God's idea. When the thought of the brother

Digitized by Google

fore hated or feared enemy comes to mind, instead of indifference one must at once actively know that the real man is perfect, and that there is in truth no other man. We can then dismiss the offending personal sense from consciousness. To dwell at length on the sense of person either for good or ill would perhaps be as wrong as to hate, because the very kindest thing one can do, especially to a fellow Scientist, is to let him alone in thought, alone with God to work out his problem, except in the one instance when treatment is asked for.

In this connection comes to mind the too frequent request to hold others in a good thought all day. This may seem to be an activity of love, and a good and helpful activity, but it is instead a mistaken sense of love and leads to confusion of thought. Mrs. Eddy has repeatedly counseled us to mind our own business. (See The First Church of Christ, Scientist, and Miscellany, p. 276.) She distinctly tells us to do so, and if we obey her loving advice in this line we shall escape learning it through suffering.

The true activity of love consists in minding our own business and keeping the first commandment. When Jesus was asked by the lawyer what he should do to inherit eternal life, he made him answer his own question by repeating the command, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself." The reply of Jesus comes with great force to us: "This do, and thou shalt live." Obedience to this command will lead us to understand the true activity of love, and in obedience we shall find peace.

Universal Love

NINA SEYMOUR KEAY

SOMETIMES the teaching of Christian Science as to universal love presents a seeming difficulty to the beginner, clinging fast, as mortals do, to a false sense of love as mere personal regard. At first sight the impression received may be that the realization of universal love would in some way detract from the closeness of human relationships and friendships. This impression is subsequently proved to be quite incorrect, and only arises from a mistaken view of the nature of love. To the human mind in general, love and friendship are apparently dependent upon their individual objects and to some extent evolved by them, so that love and friendship partake of the many limitations which are to be seen in any merely mortal concept. Human love is so largely compounded of fear, jealousy, so-called "sensitiveness," and the like, that it is quite open to question whether, as the poet puts it,—

> It is better to have loved and lost,
> Than never to have loved at all.

In fact, it is only to the degree that love partakes of the spiritual that it brings real happiness.

The effect of Christian Science is to spiritualize thought in every direction, so that the false human sense of love is exchanged for the true understanding of it as having its source in God and not in any individual. In the first epistle of John is the statement, "Herein is love, not that we loved God, but that he loved us," which shows love as the radiance of "the true Light, which lighteth every man that cometh into the world." The light of a lamp cannot single out certain objects and exclude others within its radius, for that would be contrary to the nature of light. On page 13 of Science and Health Mrs. Eddy says, "Love is impartial and universal in its adaptation and bestowals;" and again on page 266, "Universal Love is the divine way in Christian Science." This way is found, not by crowding more individual objects into the radius of a still inadequate lamp, but by increasing the power of the light, so that the objects already within its radius will be better illumined, while others that were previously obscure will be revealed.

A clearer view of the universal nature of love may be obtained from the way people regard flowers, even better than from their human relationships. A flower lover does not love some individual rose or violet to the exclusion of other flowers, but loves all roses or violets. In like manner, though less generally, the genuine lover of animals loves all animals to some extent, not alone one for its individual merits. But the tendency of mortal thought begins to show in the singling out of individual objects for special affection.

The effect of a more spiritual idea of love is to lift the human relationships above the limitations imposed by material sense. It is a leveling up, not down, so that it increases instead of diminishing the wealth of human affection. The universality of Love was wonderfully expressed by Christ Jesus, and this is why all men who love good, love and reverence the Master.

The Waterless Desert

JOHN O'BRIEN

AN incident that occurred while a land-surveying party was at work in central Australia serves to illustrate the ever-presence of divine Love. This party, consisting of an officer and an aboriginal black boy, started on the return journey, but they soon found that many water-holes upon which they were depending for renewal of supplies had gone dry, and disaster seemed imminent.

Riding along over the arid land, driven almost to despair by thirst, the officer noticed as they approached a tree that the native boy had slipped off his camel and run up to the tree, where he was vigorously digging into the ground with his tomahawk. The officer concluded that suffering had caused his companion to become demented, and so dismounted to render assistance. He found the boy busily cutting tree roots out of the ground. After he had severed them into short lengths, he put one end of each into his mouth, at the same time elevating the other ends into the air, and began to suck the roots. He motioned to the officer to do likewise, and on doing so the latter found that the roots yielded up clear, fresh cold water freely, so he accordingly cut enough roots fully to satisfy his thirst. They then filled a vessel with these short roots, and gravitation caused the water to run out in sufficient quantity to enable them to proceed on their journey in safety.

In pioneering days an exploring party set out from Melbourne to cross the continent, then an unknown land. When they had reached the extreme northern boundary and were returning homeward, they had to traverse a waterless tract, which at last compelled them to give up in despair. These brave men laid down their mortal sense of life because they believed water was unprocurable. It is obvious that every tree is a potential gatherer of water. The little rootlets, seeking out moisture stored up in the hard earth, send it along marvelous channels to feed the tree, and some species freely give up supplies when tapped. This fact had evidently long been known to the primitive inhabitants, so that when no water was visible to the senses they were able to supply their needs in the way described. Now if some one had come to the perishing explorers and had said to them, "My friends, why are you in such a plight when all that you need is right beside you?" (perchance they lay under one of those very trees), they would have replied, "Why do you mock us? we have searched and no water exists." Yet it was literally true that relief was at hand, if they had but been in command of the knowledge possessed by the aboriginals.

Digitized by Google

For many weary years the writer wandered about in the waterless desert of mortal existence, seeking among philosophies, religions, and hygienics for some definite plan that would guide to health and happiness; but alas! the longer the search the more hopeless seemed the chances of reaching the longed-for goal. When sickness, despair, and financial worry, apparently proving evil to be greater than good, suggested the hopelessness of continuing the fight, a friend pointed out that the tree of life was available to mankind because of a discovery made by a great and good woman. Then "Science and Health with Key to the Scriptures" by Mrs. Eddy was purchased, and a marvelous thing happened. A few months' study proved to the writer that at last he had indeed found his way to the fountain of living water, for disease, despair, and financial embarrassment vanished and freedom was won. For seven years no other guide, philosopher, or friend has intervened to separate him from this glorious truth. The lesson was learned that the waterless desert was a dream of the deceiving senses, and that the land of promise was nigh, even at the very door.

Truth Substantial

EDWARD E. DANIELL

SUBSTANCE is defined by our dictionaries as that which underlies or is the basis of all visible manifestation. This is quite the opposite of the mortal sense of substance, and never more so than in the case of supply, or money. Since mortals are always manifesting something, according to this definition they must be expressing what they believe substance to be. Substance is not money, food, clothes, but rather that understanding or intelligence, expressed, which enables one to earn the money necessary to exchange for what appears to be a real need. It is the understanding of God as all-power which lifts one above the sense of the reality of a negative power. Since Christian Science defines substance as "Spirit, the synonym of Mind, Soul, or God" (Science and Health, p. 468), the requirement is to manifest more of Spirit,—Life, Truth, Love. Life is expressed on the human plane in right desire and activity; Truth in honesty, purity, carefulness; Love in kindness, charity, gentleness, justice.

Some years ago, after having been interested in Christian Science for a time, I found myself out of work and in financial need. I had often read of the revelation of Truth that came to the worthies of olden time, and to Christian Scientists at the present day, freeing from sin and want and suffering. I needed such a revelation, and with this in thought I lay down on a couch to wait for light upon my pressing problem. After lying there for a while, the thought came as though spoken, "Get up, and go to work."

Over and over these words made their appeal, and finally I got up to test this demand, for I had learned that the truth as taught in Christian Science is demonstrable. Looking around to see what to do, I found a desk in dire confusion. There was an opportunity for a start, and with this in view all the old letters and accumulated rubbish were cleared out; all my belongings in turn were inspected and set to rights, what was worthless being discarded. Then I went down-stairs to see what could be done for those with whom I was living. Not an opportunity was neglected to do for some one else and do it thoroughly. All the time I seemed to be rowing up-stream against the evil suggestion, "How foolish! This is getting you no money." During the next few days a bit of money would occasionally be received for a service rendered, and this provided for the immediate need. Board and lodging, which were furnished on trust because of the evident sincerity manifest, were soon after paid for entirely.

One day a telephone call came. A lady had seen a little picture which I had presented to some friends for their kindness to me. She wanted me to paint a decoration for her, and told me the size and other requirements. The price set was satisfactory and would mean a great deal to me. Full of joy for this answer to prayer, I returned to my room; but evil again became a talking serpent, saying: "Why, you cannot paint a picture of that size. You never have, and besides, you have no paint or brush to cover the surface, and no way to obtain materials even if you could do the work." Conquering this suggestion and sitting down to meditate, the thought became clear that only one step at a time was required. The first thing was to submit a sketch. After making several the last one was shown, and it was accepted.

A friend offered the use of his studio and a large piece of ordinary brown wrapping-paper of the required dimensions. Putting this on the floor, it was cross-sectioned in proportion to the sketch. Then into the larger squares were drawn the lines corresponding to those in the smaller squares of the sketch. Each step was taken only by patiently and persistently turning from the voice that argued, "You cannot do this," or, "How will you do that?" In a remarkably short time the work was complete, although but a small brush had been used, with a little help from a sponge in covering large plain spaces. It was delivered and proved satisfactory.

This incident has proved of great value in making clear the nature of revelation and substance,—that which underlies and upholds all that is real. What needed to be overcome in this particular consciousness was shiftlessness, carelessness, impatience. Selfishness also had been overcome in parting with the little picture referred to, for it was greatly prized by the artist and to give it away truly expressed his gratitude.

The Divine Will

JOSEPH G. ALDEN

UNDERLYING the whole field of the gospel narratives is a precious vein wherein the diligent searcher, intent upon finding the gold, may discover rich deposits to reward his industry and application. The story of the healing of the leper, told in the fifth chapter of Luke's gospel, reveals a gleaming gem and affords a striking view of a great metaphysical truth. It is recorded that this unfortunate man in deep humility "fell on his face" when he saw Jesus, and besought the Master to heal his affliction. "Lord, if thou wilt, thou canst make me clean," he cried. Swift and authoritative was the reply, "I will: be thou clean." And we read that "immediately the leprosy departed from him."

At first view it would appear that Jesus here acknowledged his own ability to perform the healing, but this incident cannot be isolated or considered apart from others of its kind, nor can the words Jesus spoke be dissociated from other utterances which make up the whole of his public teaching. Upon a great occasion, when his authority to perform the healing works was openly challenged, he said, "I can of mine own self do nothing;" and when pressed by the Jews for a statement of the source of his power he replied, "The Father that dwelleth in me, he doeth the works." Continually he disclaimed any underived authority or power, and he laid no claim to a special dispensation in his own behalf. He simply affirmed by his spoken words, his outward acts, his simple bearing, and his conduct before men, that he was the humble instrument of a higher power, to which he yielded full obedience.

The Master's reply to the leper at once reminds us of the Old Testament name for God which was born out of Moses'

Digitized by Google

clear understanding of the Supreme Being,—"I AM THAT I AM." Such an ascription signified the patriarch's vision of the never-ending, always-existing, unchanging nature of God. Jesus had gained this same exalted view. He could say to the leper, "I will," because he knew the omnipresence of the healing Principle. The leper's prayer, in fact, had been answered before it was uttered. It had, strictly speaking, been answered "from the foundation of the world." The attitude of the "I AM" could never by reason of its perfection be aught but "I will" toward the yearning desire of a humble and contrite heart.

"I will" is the eternal answer to every sincerely aspiring human cry. It is idle to ask God to do what He has already done. The healing Principle never turns away from true prayer. It never varies from the perfect attitude. It is and always has been complete. It can receive no accretions of power, for it is perfect from the moment of creation. It can grant no special dispensations or privileges, since, as our Leader tells us (Science and Health, p. 13), it is "impartial and universal in its adaptation and bestowals." It can offer no less than its full power, for it is incapable of division. "I will" is the assertion of unchanging divine Love, the eternal guaranty of God's finished work. In the case of the leper —and this case is identical with all healing events—there was nothing remaining for God to do. The healing of the discordant human condition rested upon the unfortunate man's faith and Jesus' understanding of the healing Principle; and when these spiritual elements conjoined they were able to surmount what to human sense was an impossible obstacle and bring an instantaneous cure.

"I will" is the perpetual reply of Truth to every call upon it to banish error. It is the unfailing assurance of the ability of divine Principle to right every wrong, to dispel evil with good and darkness with light; to establish the reign of harmony whenever and wherever through exalted faith and spiritual understanding its benign power is brought to bear upon erroneous human conditions. It is the inevitable answer to "Thou canst." The call of faith always has brought and always will bring its swift and sure reply. The leper, turning for the moment from the contemplation of his physical infirmity, caught a glorious glimpse of revealed truth, which immediately banished for him the false claim of leprosy, and which establishes in human consciousness the reign of eternal harmony.

Consecration

EVELYN SYLVESTER KNOWLES

OH may I keep my thought so clear, so fair,
That angels, with their fingers pure as light,
May trace the will of God unhindered there.

Whene'er my feet shall carry me abroad
May they tread softly, lest some bruised reed
They break that might have proved a budding rod.

Whene'er my hands essay to sow the seed
May they move wisely, lest too widely flung
It blow away and fail the world to feed.

May wisdom's words that freight my well-ruled tongue
Fare forth to heal the world of all distress,
Till all men shall the angels dwell among.

Then, Love divine, may I such love express
That like a stream Thy life may flow through me
The highest and the lowliest to bless!

Selected Articles

[Avery Coonley in *Bureau County Republican*, Princeton, Ill.]

In his recent lecture as reported in the *Republican*, a physician paid his respects to Christian Science. In undertaking to discredit its healing record he did not do credit to his fairness, although it is not difficult to understand why. Having been trained to look to medicine, serums, and the knife as sources of relief from serious disease, physicians find it hard to credit the ability of something so wholly unlike them to accomplish healing. In spite of this, however, quite an imposing list of medical practitioners have become Christian Scientists through recognizing the superiority of Christian Science in the healing of disease. But if Christian Science had been obliged to wait until the doctors approved it before healing disease, hundreds of now happy people would be in their graves. In fact Christian Science has to its credit the cure of not merely hundreds but thousands of cases which the doctors had pronounced incurable, and they include well authenticated cases of cancer, tumor, tuberculosis, rheumatism, locomotor ataxia, pneumonia, and the entire list.

Again, our critic is mistaken as to the modus of Christian Science healing. He ascribes it to empty faith, in short to mere superstition; but such diseases could not be reached by superstitious faith, nor could those who have no faith have been healed, and countless cases of the latter class are on record. Moreover, Christian Scientists include persons in all walks of life, among them the most educated people, such as members of the bench and of the United States Senate, to whom superstition would not appeal. There is just one power capable of bringing such healing results as are accomplished through Christian Science, and that is the power of God, which Jesus applied in that very way. If this is what the doctor condemns as "musty religion," Christian Scientists will be obliged to differ with him, for they have proved its availability today as promised by Jesus.

✧

[Thorwald Siegfried in *Clarkston* (Wash.) *Republic*]

The letter from a clergyman in a recent issue makes it quite plain that the minister does not think well of Christian Science. He is, of course, entitled to his own opinion about it, but when he announces in print that his hostility to it is based upon its supposed failure "to produce one single case of healing which will correspond with the work of Jesus and the disciples," he simply attempts to give the lie to overwhelming proof, which is gathering volume every day.

The Christian Science Journal, the *Sentinel*, and the *Herold* print a considerable number of verified testimonies of healing, proofs of which are available to an inquirer. In the Wednesday evening testimony meetings speakers give audible proof of the healing of sin and sickness of every kind. Any listener may learn by personal inquiry from the givers of the testimonies who they are and how the healing was wrought, and in each case he will learn that Christian Science does not heal by the human will, "the prince of the devils," but by "the finger of God," the understanding of the divine Mind. Senator Works delivered a speech in the United States Senate in which there were given fifty-seven proofs of the healing of thirty-six different diseases, all of which gave the names and addresses of the ones healed.

Our brother says that the "bottomless pit" is not a figure of speech used to denote nothingness and extinction, but that "the Bible says the bottomless pit is somewhere." Most of us have been long in this bottomless pit of torment and pain without knowing that we were in it, and some of us have learned from Christian Science that we are in it in belief only.

Digitized by Google

Not stopping there, Christian Science has shown us how to abolish this belief, and how to displace it with the knowledge that God is indeed the only power. Having eradicated the belief that the pit is a physical entity, or place, we are free to cast down "imaginations, and every high thing that exalteth itself against the knowledge of God," and bring "into captivity every thought to the obedience of Christ." This great boon is available to any one who will apply the teachings of Christian Science as revealed in the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

✧

[S. T. Downs in *Princeton* (Ind.) *Clarion-News*]

The denunciation of what the critic erroneously thinks to be Christian Science includes an unjust, unwarranted, and unchristian attack upon Mrs. Eddy, a very noble woman, the Discoverer and Founder of Christian Science. She has been acknowledged to be one of humanity's greatest benefactors by thinkers and men of wide experience who had no selfish interest to promote. At the time of her passing, a few years ago, newspapers and periodicals of all kinds were unanimous in their praise of her achievements and her wonderful character, and judging by the fruits of her labors, every word of commendation was fully earned, and more.

Christian Science is Christian because it is based on the teachings of Christ Jesus as set forth in the New Testament, and it has healed all manner of diseases as a sign following "them that believe." (See Mark xvi. 15-18.) There is nothing in the Bible that says, and no logical construction can be placed on the Master's words to indicate, that healing the sick was to be limited to his immediate hearers or to the apostles, or for any period of time. It is a well-known fact, on the other hand, that the disciples and the Christians during the first three centuries performed the healing works demanded by our great Teacher, and Christian Science has restored this healing as one of the fruits of the gospel.

It should be understood, however, that physical healing is not the primary object of Christian Science any more than it was of the mission of Christ Jesus; but the healing of sickness follows the destruction of sin,—the very proof by which the Master said we should know "them that believe." Christian Science has furnished indisputable proof that it is Christian by healing, through prayer and reliance upon the omnipotence and omnipresence of God, every disease to which flesh is heir, including cancer, tumor, tuberculosis, broken bones, and organic and functional diseases. It should be remembered also, that a large portion of these healings have been accomplished after material means of treating disease had been exhausted and failed. The earnest investigator need have no difficulty in securing proof of such healings, because it will be readily given by those of whom one would rightfully expect to get such information—Christian Scientists.

Christian Science is scientific because it sets forth the method by which the destruction of sin and the healing of sickness is accomplished. It instructs human consciousness how to distinguish between the material fable and the spiritual fact, and raises human consciousness above the false beliefs of mortal mind, which St. Paul termed the "carnal mind." This may not accord with the ordinary acceptance of the meaning of the term scientific, but it should be remembered that Christian Science sets forth God's laws, which are not material but spiritual. The science of Christian Science is proved further by the fact that each individual may test it for himself, and Mrs. Eddy sets forth in her writings that each of us not only may but must test and prove it for himself. Those who have tested this teaching sincerely, persistently, and diligently, are never found among those who try to tear it down, even though they may not have become active in its promulgation.

A student of Christian Science who has made a reasonable effort to learn what it teaches would not claim that it is psychic suggestion, because Christian Science is the direct opposite of suggestion, and the two are as opposed as is light to darkness and heat to cold. Christian Science teaches that God is infinite Mind, and that man is the image and likeness of God and can express and be like nothing but Him. This teaching sets forth further that God, infinite Mind, is the only cause or creator, and that the real man—not the physical, erring mortal misnamed man—is governed by divine Mind, in whom "we live, and move, and have our being."

Mental suggestion, on the contrary, is based on the belief that each person is a distinct mental unit (a human mind), existing separate and apart from God, and that the stronger human mind governs the weaker. The most enthusiastic advocate of suggestion, which is but another name for hypnotism and mesmerism, must acknowledge that it may be and is used in an attempt to accomplish evil purposes. Christian Science can be used only to produce good, and it destroys the effects of suggestion. The utter impossibility of Christian Science having any relation to psychic suggestion, hypnotism, or mesmerism, is set forth in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and especially in the chapter entitled Animal Magnetism Unmasked.

He who investigates sincerely, to learn what Christian Science teaches, and not to prove or disprove any preconceived notions, will learn that Christian Science is the antithesis of suggestion. The "Standard Dictionary of Facts" says: "Hypnotism, mesmerism, spiritualism, theosophy, faith-cure, and kindred systems, are foreign to true Christian Science. Those practising these beliefs are denied admission to the Christian Science church."

✧

[John M. Tutt in *Profitable Farming*, St. Joseph, Mo.]

The very able contribution in a recent issue on "The Gospel of Power," contains an unfortunate reference to the Christian Science teaching on the subject of sin,—unfortunate in that the statement while true does not when taken alone adequately present what Christian Science really teaches regarding sin. This statement is, "The Christian Scientist vows that sin is all an error of mortal mind."

It will probably be conceded that sin is erroneous in its nature; it will also be granted that the all-creative God is not the author of sin. Since, then, the divine Spirit, or Mind, did not produce the error called sin, it lacks a divine origin. Now Christian Science, consistent with the Scriptural premise that "all things were made by him; and without him was not any thing made that was made," concludes that since sin, or error, is not good,—that is, not the product of God,—it lies wholly outside of reality, hence should be properly classed as delusion, or erroneous concept of mortal mind. St. Paul declared that the carnal or mortal mind "is enmity against God." It is therefore quite clearly the procurer of all evil. St. James teaches to the point as follows: "Every [mortal] man is tempted, when he is drawn away of his own lust, and enticed. Then when lust hath conceived, it bringeth forth sin: and sin, when it is finished, bringeth forth death."

But, you say, how does all this help one to be saved from sin and its consequences? If sin is a delusion of the carnal mind, as Christian Science proves it to be, then it is possible for the sinner to awake from the delusion, hence from the suffering it causes, by the process of learning the truth. Awaking from the delusion, he will turn from it, since no man can continue to be deceived by a lie after its erroneous

Digitized by Google

nature is apprehended. This was the mission of Christ Jesus, he said, and this is the mission of Christians today,—to "bear witness unto the truth."

Jesus proved the unreality (untruthfulness) of sin, disease, and death, thus providing a practical basis for every man upon which to work out his own salvation. This is the gospel and this is its power,—that no lie can stand before Truth, Christ. Its personal applicability was wrought out in Jesus' demonstration, whose atonement must ultimately be also yours and mine. The power of the gospel lies in its spiritual nature, which reveals the essential unity, at-one-ment, of God and His offspring, man.

✧

[Thomas F. Watson in *Jewish Times*, San Francisco, Cal.]

A writer in the *Jewish Times* has recently taken occasion to condemn that which he believes to be Christian Science, but it is quite evident to any one who has any understanding of the subject that he is speaking from hearsay, rather than from any actual knowledge of Christian Science. He mistakenly asserts that it is a religion for the well-to-do and not for the poor, while the fact is that Christian Science, being demonstrable truth, appeals to all classes,—the rich and the poor, the high and the low, the illiterate and the scholar; in a word, all honest seekers for Truth.

Christian Science does not try to "convince a hungry man that he is not hungry," as the critic states; rather does it impart the understanding which enables him to be fed both materially and spiritually. Nor does Christian Science seek to make people believe anything which is not demonstrably true, for it rests not upon blind belief but upon spiritual understanding. It was Moses' understanding of the law of God which enabled him to lead the children of Israel out of Egyptian bondage; and the understanding of God as taught in Christian Science to this age has delivered many thousands from bondage to sin, sickness, poverty, intemperance, and other false beliefs of the carnal mind. It is true that many Jewish people have availed themselves of the healing truth of Christian Science. Truth is for all; "God is no respecter of persons."

Christian Science, far from being a passing fad, as the gentleman avers, has proved to a waiting world the efficacy of a demonstrable knowledge of God as a present help in time of trouble. Mrs. Eddy has said: "Ages pass, but this leaven of Truth is ever at work. It must destroy the entire mass of error, and so be eternally glorified in man's spiritual freedom" (Science and Health, p. 118). Christian Science should be judged by its fruits,—the healing of sin, sickness, and all evil; and this healing is "not supernatural, but supremely natural," as we read on page xi of the Preface of Science and Health, "the sign of Immanuel, or 'God with us.'" The prophecy of Isaiah is fulfilled: "The Lord hath made bare his holy arm in the eyes of all the nations; and all the ends of the earth shall see the salvation of our God."

✧

[John L. Rendall in *The Estherville* (Iowa) *Enterprise*]

What the world demands today is a practical religion which meets the needs of humanity in sickness and in health, and which gives to mankind a higher and better concept of God and man, of man's indestructible relationship with God. Christian Science is filling this need.

That Christian Science disagrees with some of the ordinary concepts of religion, and with some of the interpretations of Scripture retained by scholastic theology, is true. It disagrees because it finds these interpretations unreasonable, illogical, and undemonstrable for the greater part. Christian Science, however, does not in the least disagree with the spiritual interpretation of Scripture, for that is its very essence. It is because of the better understanding of Scripture gained by the reading of Science and Health and the other writings of Mrs. Eddy that Christian Scientists are able to prove for themselves the certainty of God's promises to man.

A careful study of our critic's entire article leads me to the irresistible conclusion that he does not in the least understand the Christian Science viewpoint. If he did understand it, he would find himself unable to make the statements he has made. He infers that this viewpoint is not understandable; but that is mere opinion, for the fact remains that it is understood and demonstrated by hundreds of thousands of intelligent people, who, notwithstanding the intimation to the contrary, are at least up to the ordinary standard of intelligence among people in the various denominations called Christian.

To enter into a dissertation upon the "nothingness of matter" would require more space than is possible in this article. Suffice it to say that the discoveries of natural scientists concerning the nature of matter fully sustain the Christian Science teachings with regard to it. In contradiction of the statement made by our critic I will say, Christian Science does not teach, in any such sense as he means it, that "there is no sickness or disease." Science and Health reads as follows (p. 460): "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being."

It is no new thing in Christian history for ecclesiasticism to object to teachings which are contrary to its own beliefs. We do not find that Jesus' teachings met with marked favor with those having ecclesiastical authority during his time. In fact, the priests incited the populace to demand his crucifixion. Ecclesiasticism has not changed much except in its methods. There is the same intolerance, the same conflict between the material sense of things and the spiritual understanding which brings out the real. Only to the extent that materialism yields to a more spiritual understanding of God and man can there be any reconciliation between the ordinary concepts of religion and the teachings of Christian Science.

✧

[Thomas E. Boland in *The Scranton* (Pa.) *Times*]

The evangelist now campaigning in our city is quoted to the effect that there might be a convert "to Mrs. Eddy and not to Jesus Christ." In making such an assertion the gentleman simply manifests his entire ignorance of the position Mrs. Eddy held toward mankind and in relation to Christian Science. In a communion message to the members of her church in 1899 (The First Church of Christ, Scientist, and Miscellany, p. 129) Mrs. Eddy wrote: "Lean not too much on your Leader. Trust God to direct your steps. Accept my counsel and teachings only as they include the spirit and the letter of the Ten Commandments, the Beatitudes, and the teachings and example of Christ Jesus." In her Message to The Mother Church for 1901 (p. 34) Mrs. Eddy said, "Follow your Leader only so far as she follows Christ," which admonition was specifically repeated in a similar message the following year.

Thus it will be seen that Mrs. Eddy pointed all men directly to the Bible and to the Saviour's words, as well as to the significance of his works, for guidance in their spiritual progress. Her consistent effort was to take out of religious teaching the elements of human personality, popularity, opinion, and leadership, so that there might remain only "pure religion and undefiled." That her wise work in this direction has borne fruit is evidenced by the remarkable progress Christian Science is making, progress based on the healing and regenerating work it is doing.

Editorial

Integrity

Some one has wisely likened integrity to a well-provisioned fortress, and men to its garrison. So long as the fortress remains intact, so long are its inmates safe from the enemies who would overwhelm them. Webster has defined integrity as "moral soundness; honesty; freedom from corrupting influence or practice; . . . uprightness; rectitude," and Mrs. Eddy must have had this definition well in mind when she wrote as follows: "The man of integrity is one who makes it his constant rule to follow the road of duty, according as Truth and the voice of his conscience point it out to him;" "We are in the Valley of Decision. Then, let us take the side of him who 'overthrew the tables of the moneychangers, and the seats of them that sold doves,'—of such as barter integrity and peace for money and fame" (Miscellaneous Writings, pp. 147, 270); also, "The exercise of will brings on a hypnotic state, detrimental to health and integrity of thought," and "Evasion of Truth cripples integrity, and casts thee down from the pinnacle" (Science and Health, pp. 446, 448).

From these sayings we realize that integrity must of necessity be predicated upon divine Mind; that it is a divine idea, the bulwark of all those spiritual qualities which go so far toward the making of the saint, the martyr, the righteous man, the Christian; a something to be fostered, guarded, and maintained under all conditions and at all times. Without integrity men would be but human driftwood, the sport of circumstances, and subject to every temptation and "every wind of doctrine." Fortunately, however, there have been in all ages men of integrity, men who have been endowed with spirituality and courage sufficient not only to withstand the evils which encompassed them round about, but also to help others to this same end. This has been manifest through the lives of judges, kings, prophets,—holy men of Israel,—through whom we have received the older Scriptures, men who walked so close to God that they were enabled to foresee the coming of the Messiah and to keep alive the hope which was to find fruition in the advent of Christ Jesus, the establishment of Christianity, and the healing ministry which set at naught the materiality of the prevailing beliefs about God and man.

Since the establishment of the religion of Jesus Christ there has been a continuous line of men and women of integrity, who have kept burning the fire of Christian zeal—sometimes bright, sometimes smouldering—which finally found full expression through Mrs. Eddy in the revelation of Christian Science. This revelation has given mankind a clearer understanding of God, of man's relation to Him, and of prayer as the means of demonstrating the at-one-ment of God and man. It has been the means through which many thousands of men and women have been healed of disease and saved from sin. It has welded these thousands into one grand brotherhood, given them courage and understanding to master the myriad temptations of mortal existence, established them in integrity and brought heaven to earth.

Christian Scientists of today have a great responsibility resting upon them, not only that they shall preserve their own integrity, but also that they shall preserve the integrity of that which has been committed to their charge. Jesus said that they who believed on him should do the works which he had done, and even greater works. That these works may be done and continue to be done requires that the scientific knowledge of God—Christian Science—shall be perpetuated in its purity and integrity. To this task all Christian Scientists must bend their energies with diligence and understanding, and with firm reliance upon the might of omnipotent Mind, who has promised, "Blessed is the man that endureth temptation; for when he is tried, he shall receive the crown of life."

Archibald McLellan.

Spiritual Warfare

Mere human goodness, if uninstructed by the Science of being, is surprisingly helpless in the hour of spiritual warfare. In the advance from depravity to better beliefs humanity reaches the stage of goodness, but this goodness is transitional and must reach the degree of understanding before it can be considered safe from the assaults of perversion or reversal. Thus honesty is a good human quality, but if it is uninstructed by scientific Christianity it is constantly exposed to the danger of becoming dishonest.

This may be illustrated by the hypothetical experiences of two men,—one who enjoys the respect of the community and whose word, as we say, is as good as his bond, and the other a forger whose misdeeds have finally put him into prison. At this stage of their mutual experience they both believe in the reality of evil as constituting part of the truth of being. From the spiritual point of view this is a dishonest position and breaks the first commandment. During his prison term the forger through some means hears of the gospel of Christian Science, and learns that evil is essentially false and therefore cannot be real. At that moment the first beam of spiritual honesty dawns upon his consciousness. The man who enjoys the respect of the community, however, continues to believe in the reality of evil. Therefore at this second stage of their mutual experience which of the two men is nearer the kingdom of heaven, or the consciousness of Truth, —the one who is rated as humanly honest but is spiritually dishonest, or the one who has been pronounced dishonest but is being redeemed by the spiritual sense of honesty?

Unenlightened human goodness generally displays great unwillingness to draw the sword in spiritual warfare, or to gather the tares to be burned before the wheat can be harvested. There is no short cut, no royal road in spiritual progress,—every foot of the way must be earned. The spiritual warfare typified by the angel Michael must precede the tender peace characteristic of the angel Gabriel. Commenting on Jesus' admonition to Peter, "Put up thy sword," Mrs. Eddy in an article thus entitled and to be found in "Miscellaneous Writings," states, "My students are at the beginning of their demonstration; they have a long warfare with error in themselves and in others to finish, and they must at this stage use the sword of Spirit" (p. 215). Due order must characterize spiritual growth, and it would be worse than futile to attempt to circumvent demonstration by forcing a fictitious advance.

As soon as the absolute truth of being comes to human consciousness, the process of transformation begins. Spiritual pride (so called) and pride of intellect, self-justification, self-importance, and their corollaries, self-condemnation and self-pity, begin to be exposed, and the human goodness which believes in the reality of evil receives a series of severe shocks. If all of the evil which is thus uncovered in human consciousness by absolute Truth were real, the situation would seem appalling, if not desperate.

The heavenly aspirant is forced to reconsider the whole situation before he can advance. He confers with the divine logic of Christian Science, and using the weapons of reason and revelation he boldly enters into the spiritual warfare

Digitized by Google

against evil. Out of an apparently hopeless situation there begins to define itself the saving truth that evil is not part of the Science or truth of being, is not of divine origin, is not supported by the law of God, is not necessary or essential to God's scheme of the universe, has neither presence, power, nor identity, and in reality has never accomplished anything, is hence void of authority or actuality and therefore need not be feared. Then comes the moment of complete assurance, when the sword can be temporarily put back into the sheath, to remain there until the sound of battle calls it forth again—and again. Before the seventh day of victory must come the six days of alternating evenings and mornings, the days of gloom and light in humanity's spiritual warfare.

WILLIAM D. MCCRACKAN.

Testing Times

WE are all familiar with the phrase "trying times," but very few pause to consider that this means in the strictest sense testing times. It is also too seldom remembered that all who would graduate with honor from earth's school of experience must be well prepared for the highest tests of their faith and understanding. We may be sure that none can evade these trials, and that none can pass muster until the human problem has been marked perfect. In the third chapter of Revelation we find everything to inspire and strengthen the one who has entered the glorious contest, the purpose of which is to prove against all opposing evidence the supremacy of good as revealed in Christian Science. Can we ask more than is here offered: "Because thou hast kept the word of my patience, I also will keep thee from the hour of temptation, which shall come upon all the world, to try them that dwell upon the earth." This testing time must undoubtedly come upon men and nations alike, and it implies the purpose of divine Love to fit all mankind for citizenship in God's kingdom on earth.

On page 251 of "Miscellany" Mrs. Eddy says, "What God gives, elucidates, armors, and tests in His service, is ours; and we are His." Then she adds (p. 252): "Have one God and you will have no devil. Keep yourselves busy with divine Love." The assurance that "we are His" calls for unceasing obedience to this requirement, and we must not forget that not only ourselves but the things around us are being tested, and unerring wisdom will tell us whether we are to continue with patience and thankfulness in our present earthly surroundings, or obey the command, "Come out from among them, and be ye separate." This bidding may mean that we are to give up the delusive and blinding pleasures of sense and its equally unreal pains, but in any case the readiness of our obedience will be tested by its results. Well may we in times of trial—at all times, indeed—heed the angelic warning: "Be watchful, . . . for I have not found thy works perfect before God," and nothing less than perfection will pass the bar of Truth.

Whatever be the requirement of the hour, it is vain to plead the right or wrong influence of another, for the test is individual, and this gives high dignity to the one who truly meets his test. Nothing apart from one's own unfaithfulness can in the final sense mar his problem. The one who was given two talents was not blamed at the final test because he did not bring back ten. No, he received the same commendation as the one who had doubled the five talents given him. Having proved what it means to master self through "endless toil and endeavor," the faithful servants were each ready to be made "ruler over many things;" and even more than this, each received the gracious invitation, "Enter thou into the joy of thy lord."

In the epistle to the Hebrews we are told many times of the tests imposed upon the humanity of Christ Jesus, each one higher than the last and more conclusive in its results for the whole race. It is no doubt difficult for us to recognize the element of joy in our testing times, but unless we do, the trial of our strength is apt to be prolonged and the final result may even seem uncertain. If we would grasp the heroism which springs from omnipotence, we must run our race with patience, "looking unto Jesus . . . who for the joy that was set before him endured the cross." Paul tells us this lest we grow "wearied and faint," and the end and aim of all our testing is that we may bring out in thought, word, and deed spiritual sonship, which itself means joy, as Christian Scientists discover.

If we would glimpse the full measure of joy which is to result from the testing of men and nations, we have but to read the closing chapters of Revelation, which tell of tears all wiped away; of sin, sorrow, and death blotted out; of the "glory and honor of the nations;" all things and all men measured and tested by the angel, by God's thought. This lifts us up to strive after the whole-hearted service of those who see the Father's face and have His character reflected in their foreheads.

ANNIE M. KNOTT.

Among the Churches

Current Notes

JONESVILLE, MICH.—The Christian Scientists will hold their first service Sunday [March 19] in the pleasant residence property recently purchased, corner of Park and East Streets, the interior having been changed and redecorated to accommodate their present needs.—*Jonesville Independent.*

RICHMOND, CAL.—First Church of Christ, Scientist, has purchased two lots on the corner of Nevin Avenue and Twelfth Street adjoining the property of the Richmond Club. These lots have a frontage of 50 feet on Nevin Avenue, are centrally located, and the surroundings are all that could be desired for church purposes. The purchase price was twenty-five hundred dollars.—*Richmond News.*

SOUTH BEND, IND.—Plans for a new Christian Science church have just been approved. Ground will be broken in April. The organization recently acquired the vacant lot just north of the present little vine-covered church at the corner of Main and Madison Streets. There is now an entire frontage of 132 feet on Main Street.—*South Bend Tribune.*

LOS ANGELES, CAL.—The Christian Science Society of Van Nuys has purchased a lot on East F Street, and plans are being considered for the construction of a bungalow church within a short time.—*Van Nuys News.*

PALO ALTO, CAL.—First Church of Christ, Scientist, of Palo Alto will soon erect a church building on the northwest corner of Bryant Street and Forest Avenue.

Palo Alto Times.

PARIS, ILL.—The foundation for the Christian Science church has been completed and workmen are now [April 6] engaged in putting up the frame.—*Paris News.*

EL SEGUNDO, CAL.—Dedication services for the new Christian Science chapel on the corner of Mariposa Avenue and Concord Street were held Sunday, March 12.

El Segundo Herald.

Digitized by Google

OAK PARK, ILL.—On Sunday [April 30] First Church of Christ, Scientist, will dedicate its new edifice at Oak Park Avenue and Ontario Street. First Church was organized at a little studio meeting on April 12, 1908, with twelve persons in attendance. On the following Sunday the register was opened with a charter membership list of one hundred names. Meetings were first held in the Warrington Opera House, subsequently in Unity Church, and later in the Masonic Temple. The membership has steadily grown. The new building has a seating capacity of nine hundred and four and the Sunday school room seats five hundred and fifty.

Chicago Journal.

JANESVILLE, WIS.—The reading-room maintained by First Church of Christ, Scientist, was removed Feb. 1 from the rear of the church edifice to a suite of two attractively furnished rooms on the fifth floor of the Jackman Block. The new location is in the most desirable part of the business district. Much good has resulted from keeping the room open during the noon hour.—*Correspondence.*

NEVADA.—The literature distribution committees of the Christian Science churches and societies of Nevada, aided by individual Christian Scientists in other places in the state, have just given to the battleship "Nevada" two copies of each of the following books: "Science and Health with Key to the Scriptures," "Miscellaneous Writings," "The First Church of Christ, Scientist, and Miscellany," "The Life of Mary Baker Eddy" by Sibyl Wilbur; also two subscriptions to the *Monitor*, and one each to the *Sentinel* and the *Journal*.

Correspondence.

TOLEDO, OHIO.—Second Church of Christ, Scientist, organized in the fall of 1915, is to erect an edifice at Collingwood Avenue and Bancroft Street. The ground has been purchased for fourteen thousand dollars. The lot has a frontage on both streets and it is 109 by 130 feet.

Toledo News-Bee.

HERMOSA BEACH, CAL.—The contract has been given for the repair work to be done on the Hermosa Beach Christian Science church. The building will be enlarged to accommodate the rapidly increasing congregation.

Hermosa Beach Review.

HOBOKEN, N. J.—The first service of First Church of Christ, Scientist, in the new home of the congregation at 414 Hudson Street, will be held next Sunday morning [April 30].

Jersey City Inquirer.

The Lectures

Notice

The address of William W. Porter of the Christian Science board of lectureship which in the list of appointments was given as 206 West Eighty-sixth Street, New York, New York, has been changed to 200 West Seventy-second Street, New York, New York.

Clarence W. Chadwick will not be available for engagements in the United States and Canada between July 5, 1916, and Feb. 14, 1917, because of lectures to be delivered by him in South Africa, Australia, and other far-off countries.

✧

Asheville, N. C.

The Hon. Clarence A. Buskirk delivered a lecture on Christian Science to a large audience at the Majestic Theater. He was introduced by George S. Powell of the local church, who spoke in part as follows:—

The speaker brings to us this afternoon a message of love and confidence, telling how thousands throughout the civilized world are finding freedom from the bondage of sin and disease through the application of divine law to their individual needs, as taught and practised by Jesus and as left to his followers in all ages in that memorable promise, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Accepting this and many other similar promises, why should it be thought strange that one who has "the mind of Christ" is able through prayer to overcome sin and disease?

Much has been written in the attempt to show that the healing works done through Christian Science are the effect of some other cause than divine law, and the lecturer this afternoon might well say with St. Luke: "Forasmuch as many have taken in hand to set forth in order a declaration of those things which are most surely believed among us, . . . it seemed good to me also . . . to write unto thee . . . that thou mightest know the certainty of those things."

The Asheville Citizen.

✧

Jersey City, N. J.

Willis F. Gross, lecturing on Christian Science in the Bergen Lyceum, was introduced by Fred E. Tilden, Past Grand Master of Masons of the state of New Jersey, who said:—

I presume there are many in this audience who, like myself, are not identified with Christian Science, having but a superficial knowledge of the subject; and yet from ideas gleaned from the public press and from other sources we have become imbued with the belief that a religion which is attracting to its standard hundreds of thousands of intelligent men and women possesses merits with which it will do us no harm to become acquainted. Even its detractors must admit that its object is intended to be wholly beneficent to humanity, and we cannot therefore afford to ignore the claims of this great institution, which seeks through the power of the Supreme Being to alleviate human suffering and minister to mankind's spiritual needs. We are therefore glad to have the opportunity of listening to one who is so ably qualified to communicate to us the fundamentals of Christian Science, that we may the better comprehend that which is bringing so many people within the sphere of its influence and ministrations.—*Correspondence.*

✧

London, England

J. S. Braithwaite in introducing Clarence W. Chadwick, who lectured on Christian Science for First Church of Christ, Scientist, in Queen's Hall, said:—

The subject of our lecture this afternoon cannot fail to be of absorbing interest to any one who listens with an open mind. Especially is this so at a time like the present, when so many seem to be asking the question, Has Christianity failed men in the moment of their dire extremity? It must be admitted that the answer to this question can only be correctly given when we have the answer to another question, Has man availed himself of Christianity, the Christianity taught by its Founder? A consideration of the facts will convince any thinking person that it is not Christianity that has failed man, but man who has not yet succeeded in his application or demonstration, of Christianity. Do we not hear, through the mist of the centuries and above the turmoil of nations, those solemn words, spoken as if to each one of us today: "Heaven and earth shall pass away, but my words shall not pass away," and "He that believeth on me, the works that I do shall he do also."

Digitized by Google

The claim of Christian Science to be reiterating these words understandingly and repeating these works practically, seems to be well substantiated by the many thousands of well-authenticated cases of healing and regeneration; and it is because Christian Science comfortingly proclaims the whole message of Christianity, and not merely part of it, that the lecture to which we are about to listen has a message full of import for each one of us, whatever his denomination may be. On page 556 of Science and Health Mrs. Eddy writes of her teaching, "Christian Science may absorb the attention of sage and philosopher, but the Christian alone can fathom it."—*Correspondence.*

✧

Wausau, Wis.

A lecture on Christian Science was given at Mount Sinai Temple by Jacob S. Shield. In introducing the lecturer Alexander Archie spoke as follows:—

It is hardly possible that any one can thoughtfully read the New Testament without soon realizing that Christianity to Jesus and his disciples was a very practical religion. It healed the sick and the sinning, fed the hungry, comforted the sorrowing, raised the dead. It was, indeed, a proclamation of good news to all the afflicted and the spiritually hungry who came within its influence. I believe the greatest misfortune that ever befell humanity occurred when the wonderful works of Jesus and his early followers were accepted as miraculous and spiritual healing was no longer regarded as a necessary element of Christianity. Its results are a divided and vitiated religion, loss of faith in God, in good, as a positive factor in human affairs, and the strengthening of reliance upon material means and force to gain desired ends, the fruits of which reliance we are now witnessing in the European horror.

If the loss of spiritual healing was a great misfortune, its discovery and reestablishment in Christian Science as an active force among men is surely a great blessing, since its possibilities for good are as limitless as divine Love. The world owes a great debt of gratitude to Mrs. Eddy, the gentle, loving, exalted woman, whose spiritual receptivity made this great blessing possible in our time.—*Wausau Pilot.*

✧

Sheridan, Wyo.

The remarks of Judge W. S. Metz in introducing Dr. Francis J. Fluno at a lecture on Christian Science were as follows:—

This is an age of investigation and research, and especially is this true in the matter of religion. The Christian Scientist agrees with that Scriptural writer who said, "Prove all things; hold fast that which is good." To my mind, every thoughtful and unprejudiced person who will read the history of the Christian religion will be convinced that it is not only a saving but a healing religion. There has lived in the world only one really successful physician, and he was Jesus the Christ. He healed "all manner of disease." He never failed in any case. This fact proves to me that the Christian religion is a science. The results of its teachings in the hands of one who knew and understood its great truths were certain and absolute. Jesus knew and understood God. He said to the woman of Samaria, "God is a Spirit: and they that worship him must worship him in spirit and in truth."

The Christian Scientist believes and understands what Jesus said. Moreover, one of the fundamentals of Christian Science is, that "Spirit is God, and man is His image and likeness. Therefore man is not material; he is spiritual" (Science and Health, p. 468). Through the scientific understanding of the Christian religion Christian Scientists have freed unnumbered thousands from suffering and sickness. Christian Science in a few years has gone into every civilized country on the globe. Its adherents do not criticize any other church; they rejoice in the good that is found in all churches.

Correspondence.

✧

San Diego, Cal.

That Christian Science is attracting the attention of earnest thinkers was again demonstrated when Assembly Hall, Eighth and F Streets, failed to accommodate all who desired to hear William D. McCrackan lecture upon that subject for Second Church of Christ, Scientist. The speaker was introduced by Edwin F. Hammond, first reader, in the following words:—

Before I became a disciple of Christian Science I thought I was opposed to it,—and sometimes vociferously so. But when I did finally make up my mind to study into it, and learn just what I was condemning, the very first sentence in its textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, impressed me deeply: "To those leaning on the sustaining infinite, today is big with blessings" (Pref., p. vii). This is correlative to St. Paul's statement in his second epistle to the Corinthians: "Behold, now is the accepted time; behold, now is the day of salvation." I found that Christian Science does teach us to rise above the disappointments and grievances of yesterday, to eliminate the fears and doubts and worries and anxieties about tomorrow, and to recognize and appreciate and enjoy the blessings of today.

The Evening Tribune.

✧

Elkhart, Ind.

At the lecture on Christian Science given by Virgil O. Strickler for First Church of Christ, Scientist, Miss Georgia H. Reynolds, first reader, made the introductory remarks, which were as follows:—

Several years ago there appeared in one of the popular magazines an article in which the statement was made that the entire thinking world was expectantly looking into the future, awaiting another revelation,—awaiting a new beacon-light, a new avenue leading to other fields and toward a new world,—and the question was asked, "What nation shall produce this, and who is the revelator to be?" The author of the article was evidently not aware that the desired revelation was a present reality; that the nation to produce it was the United States of America, and the revelator a woman.

Mrs. Eddy had not made the discovery of a new revelation or of another world, but with the key of spiritual understanding had unlocked a door revealing to humanity this world in its true environment, with its glorious possibilities. Mankind seem never to have imagined that they were endowed with the capacity to overcome every discordant condition, but with the advent of Christian Science the whole world is waking to its privilege, and people are investigating and applying in their individual lives its demonstrable truth.

Testimonies of Healing

About twenty-one years ago my first baby was born, and when she was four weeks old I took a severe cold. For two weeks I was unconscious, apparently hovering between life and death. I finally rallied, and after a few weeks was able to attend to my household affairs, but was very nervous and suffered from severe headaches, which seemed at times unbearable. These attacks finally developed into what the physicians pronounced hystero-epilepsy, which as the years passed gradually grew worse. I tried many physicians and went through two or three serious operations, none of which effected a cure.

At this time I was in such a state of invalidism that I was obliged to have a companion with me constantly. One physician who was consulted prescribed an opiate in response to my request for something to relieve me, and I used it for two years whenever the attacks occurred. I then consulted a noted specialist on nerve diseases. Through him I gave up using the opiate, but was left with a very weak heart, which the physicians called a valvular lesion, and several times was given up to die. I was still suffering from the nervous attacks, which finally two well-known physicians pronounced epilepsy, and for which they stated there was no cure.

After a time my general health improved, but I continued to have these attacks, which left me very weak. All medicine had been given up except a stimulant when these spells came on; but I was very much discouraged and feared this illness would end in insanity, as each attack lasted longer than the previous one. About three years ago, just after a bad attack which had lasted three hours, a woman whose husband had been healed of a so-called incurable spinal disease begged my husband, with whom she was doing business, to have me try Christian Science; but he scoffed at it, as I would have done, and said it was the work of the devil. She did not, however, become angry, but reasoned with him; and after my husband talked it over with me, I decided to try Christian Science, although I had no faith that it would help me. I now know it is the work of God, as I have never since the first treatment had an attack of this trouble and am now a healthy woman.

I gladly write this testimony as one who has found Christian Science a help in every time of need. I am truly grateful for this healing religion, also to its Founder, Mrs. Eddy, but most of all thankful to God, who inspired her to give to suffering people the message of emancipation from sickness. There have been several recurrences of the symptoms of this ailment, but they were quickly overcome by Christian Science, and I feel that I have been permanently cured of this illness, which was of eighteen years' standing.

NELLIE J. WALKER, Portland, Maine.

I cheerfully concur in the testimony given by my wife. It is all true, but she has told only half of the pain and anguish endured by both of us.—GEORGE A. T. WALKER.

✧

I am eager to express my gratitude for the many blessings received through Christian Science in the past fifteen years, for it has sustained me through sickness, grief, and loss. When it was recommended to me as a healing system I refused to accept it, thinking it a very erroneous teaching. The "still small voice" had, however, awakened me, and I could not banish it from my thoughts, so finally I yielded; but it was merely because of a very sick body and an aching heart. I was a slave to physicians, to medicine, to fear, indeed to almost every ill to which mortal thought could be heir; was broken down physically and well-nigh mentally, a nervous wreck from fear of total blindness, a mortal sentence placed upon me by two well-known eye specialists as well as a nerve specialist. I was also in bondage to rheumatism and sleeplessness.

In my distress I cried out to God to show me the true way to live my life here, also to give me the strength to live it in patience and aright, and with this cry I fell asleep and slept peacefully until morning. The day following, a woman with whom I had a slight acquaintance placed a copy of Science and Health in my hand, telling me I could keep it for a few hours. I read the chapter on Prayer, and the wonderful illumination that came to me on reading it and the love awakened in my consciousness will never be forgotten. The book was loaned to me again on Thursday evening, when I was told to keep it overnight. I read it the greater part of the night, and a few days later called on a Christian Science practitioner for help. Within an hour I was so gently led to see God in all His goodness and perfection, with love toward His creation, that there was not a doubt of the healing power of His word left in my thought. I asked for treatment, at the same time removing my glasses, from which I had not been separated an hour for some years, excepting when they were broken, and then I suffered until they were returned to me. I have never put them on since that day, fifteen years ago, and I use my eyes in very close application to my work as a dressmaker and also read and write hours after nightfall.

After two weeks' treatment the physical ailments disappeared. There were many mental problems to be worked out; but although there were times when the human sense cried out in bitter agony over unhappy conditions, I worked on, praying for more light and understanding. Now I am most grateful to say that every discord, physical, moral, and financial, has been overcome, and my health is good. The nervous trouble has entirely disappeared, while the sense of financial need has been most wonderfully met.

My deepest affection goes out to our beloved Leader, through whom this legacy was given to the world to redeem, to uplift, and to heal. I am very grateful for all the Christian Science literature, as well as for our church services and lectures.—ELIZABETH A. BELL, Chicago, Ill.

✧

For three years I have been enjoying splendid health and greater spiritual understanding, and therefore feel that I must give to the world, in some measure at least, my gratitude for what Christian Science has done for me. I had suffered from rheumatism affecting the heart, neuralgia of the spine (which three doctors said could not possibly be outgrown until I was twenty-one), and many other ills. I have been free from both these difficulties since coming into Christian Science, although not yet quite twenty years old. I have been healed of an ailment which troubled me each winter for many years and caused me much distress; also of hay-fever, from which I had suffered for six years, but have not had a trace of it for the past three years. I have also been healed of bilious attacks and of the smoking habit.

When taking up the study of Christian Science I had been very weak for some time, and the doctor had just said that I was suffering from lung trouble of a quickly developing nature, supposed to be hereditary. With the aid of Christian Science treatment and an unswerving allegiance to the truth in so far as I understood it, I was healed in eleven weeks. In eighteen weeks I was back at my work with a certificate from the same doctor stating that I was fit to resume my occupation. I have since then passed a medical examination in connection with my business, and am in perfect health.

Digitized by Google

I am deeply grateful for these healings, also for the replacing of a material sense of God with a more spiritual and a far more demonstrable knowledge of Him as Truth, Life, and Love, omnipotent and ever present. My thoughts reach out in thankfulness and praise to God, the giver of all good and perfect gifts, for His wonderful love, to Christ Jesus the Wayshower, and to our dear Leader, Mrs. Eddy, for her noble life and work; likewise to all the Christian Scientists who have in many ways strengthened and uplifted my thought in time of need. My great desire is to live more nearly as I pray and to be so led by divine Principle that I may prove my gratitude by fulfilling the command of our Master to preach the gospel and heal the sick.

DONALD M. SOUTHWART, Halifax, England.

I gladly testify to the accuracy of the preceding testimony by my son. I know that the better understanding of the truth as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy, in connection with the Bible, and the faithful work of the practitioner, healed my son, and I am truly grateful for this healing.—MARTHA A. SOUTHWART.

✧

It is with a heart full of gratitude to God that I give this testimony as to the comforting and healing efficacy of Christian Science. I had suffered from chronic bronchitis for about thirty-five years, as well as from severe stomach trouble and bilious headaches, having several attacks every month which confined me to the house for a day each time. These ailments have been entirely removed by Christian Science treatment. Since then any discordant condition has been quickly overcome by the knowledge of the truth that man is God's child, created in His image and likeness, and therefore must be harmonious; that as God is all powerful and the only power, sin, sickness, and discord have no power.

I also wish to express my gratitude to Mrs. Eddy for her great gift to the world in "Science and Health with Key to the Scriptures."—S. A. KEERS, Toronto, Canada.

✧

So many blessings have come to our little family of three in the last few years that I hardly know where to start to tell of them. First our boy was healed of croup, which he had every winter, also of mumps and several so-called bilious attacks. The last healing was of scarlet fever, which was overcome in three treatments. The skin peeled off all over his body, but never once did he lose his appetite. This to us was wonderful, for every time in the past when he had even a slight fever he would not eat. My husband was cured of bowel disorder in a few treatments, after having taken medicine every night for ten years. Rheumatism and intemperance have also been overcome. My brother-in-law was healed of rheumatism and a fear of eating anything containing acid.

To say we are grateful to God is to put it mildly. We revere Mrs. Eddy, and are trying to live Christian Science every day, and gain that peace "which passeth all understanding."—ANNA B. WEST, New York, N. Y.

✧

I would like to express my gratitude for Christian Science and what it has done for me. I did not become interested in it for the physical healing, but while reading some of the literature wonderful truths unfolded to me, even as the petals of a flower are opened, and it seemed almost too beautiful to be true.

I attended services, bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, began to study it, and soon found it to be just what I had been wanting all my life. For years I was an active worker in church and Sunday school, but never felt satisfied, nor gained the peace that "passeth all understanding." Since beginning to study Christian Science I have had several proofs of its healing power. In one instance an injured ankle was healed after I had been told that crutches must be used for seven weeks. I was up and about my duties each day, and at the end of two weeks laid the crutches aside entirely. I have also been quickly healed of severe headaches, bilious attacks, and bronchitis.

I have enjoyed the privilege of class instruction, and since then have had many convincing demonstrations of the power of Truth. An abnormal growth on the head, which had been growing larger for a number of years, entirely disappeared in about two months. In July, 1914, I severely hit and bruised a joint of the middle finger on my right hand. It often troubled me in my work, for I could not bend the finger; then one morning in August the finger was found to be almost doubled in size and there was pain up to the elbow. I at once began to declare the truth, and next morning there was nothing left to remind me of the trouble. Later, while moving a piano, my left arm was caught between it and the door casing, so that to mortal sense it was much bruised and very painful. I silently worked as we are taught in Christian Science, and next morning every trace of discoloration had disappeared. The most important of my healings, however, was the overcoming of a sense of deep sorrow, out of which I have been lifted into newness of life. I am certainly grateful for Christian Science and know that therein is to be found the "pearl of great price."

LOUISE TOUVÉ, Bloomington, Ill.

✧

I gladly testify to the efficacy of Christian Science treatment for the healing of both sin and disease. For many years I was bitterly opposed to what I thought Christian Science to be, but finally extreme nervousness, restlessness, discontent, and serious physical disorders compelled me to seek relief outside of material remedies, and I turned to Science. I had suffered from violent headaches since childhood. These attacks are becoming less and less frequent, and I know that my fear of them is being destroyed. Internal inflammation was so bad that one of the best physicians in Los Angeles told me I could not expect to have any health without an operation; but this trouble was one of the first to be perfectly healed in Science. I have also been permanently healed of annual attacks of influenza, of bronchitis, and of a cough of a serious and distressing nature, from which I suffered every year.

In reviewing the blessings of physical healing I feel that I cannot be grateful enough. It means much to have been transformed from a complaining, irritable, always fatigued and half-sick being, into one whose health may be called perfect; but I have found treasures that mean even more to me than this physical wholeness. I have found that I do not have to fret and worry, since a knowledge of Principle has been given me whereby every problem and trial can be mastered. Through my study of the Bible in connection with "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have learned that God, good, is All, is Spirit, and is the only power, presence, or reality. This realization is destroying the belief of a stormy and tempestuous disposition and of so-called ungovernable temper, so that my consciousness is being filled with some measure of divine Love, and a harsh and critical attitude toward mankind in general is giving way to Christian charity.

I once thought that my earnest study of Christian Science would protect me from the trials I saw people all around me

Digitized by Google

passing through, but these same trials have come to me to purge my thought of hatred and satisfaction in matter, and to establish in my consciousness a right concept of God. I found that my old concept of God was wrong, and that it brought me suffering and torment; now the right understanding has brought me healing of mind and body. I long to bring health and happiness to others, and this I can do by trying daily to live the precepts of the Master.

Words cannot express my thankfulness to God the Father, and to Christ Jesus the Wayshower, or my gratitude to our beloved Leader, Mrs. Eddy, for the countless blessings that Christian Science has brought me.

STELLA BAIRD HASTAIN, Los Angeles, Cal.

✧

Christian Science came into my life in April, 1911, and I consider the physical healing but a small part of the good it has brought to me, compared with the practical knowledge it has revealed in the working out of my salvation. Ever since early childhood I had suffered from severe attacks of bleeding at the nose, and they were very weakening. My eyes also caused me much pain and trouble; in fact, for more than ten years I had been unable to find a remedy that would permit me to read or write, as glasses fitted by specialists gave no relief. With all this I had lost in weight, and generally speaking was almost a wreck. The whole world, as far as I was concerned, was one of despair and discouragement.

From the first Christian Science treatment I have been able to read without any discomfort whatever, although for the first few weeks Science and Health was the only book I could read. This proved to me from the start that Christian Science is the truth. Gradually, as I was honest in my study, the other ailments vanished.

I am very grateful for the physical healing, but even more so for the spiritual awakening, which has freed me from all desire for liquor and gambling, as well as from many other evil tendencies that make for destruction. Christian Science has given me the strength to resist the would-be destroyer and a firm desire to be useful, to serve God in the only practical way. I am grateful to God for His perfect creation, and to our dear Leader, Mrs. Eddy, for making it possible for us to free ourselves from the sins of the world. I have received many more blessings through the application of the truth in Christian Science.

JAMES R. DIXON, Ely, Nev.

✧

[Translated from the German]

A sense of gratitude and joy induces me to testify that Christian Science has brought me a better understanding of God, and that through it I have been freed of much disease and suffering. Before I became acquainted with the teachings of Christian Science I was afflicted for over twelve years with a most distressing nervous pain, which manifested itself in various ways,—in the feet, arms, and other parts of the body. As time went on a very serious and supposedly incurable abdominal complaint set in, and although I followed all the prescriptions which the physicians believed might have a salutary effect, they proved of no avail. The troubles grew worse, and at last sleeplessness was added, which left me in a state of utter despair. However, God sent His light, and I was led to people who knew of Christian Science and drew my attention to it.

To hear that it is not God's will that human beings should suffer, and that He is "of purer eyes than to behold evil," meant deliverance and salvation to me. On the third day after this normal sleep returned, but the nervous conditions seemed to be intensified for five or six weeks. Then when I returned to my home and attended a Christian Science meeting for the first time, every ill and pain was taken away during that hour as if by an invisible hand. I did not ask a practitioner for help, but from then on I attended the services, read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, the Bible, and the *Herold*, and after a year had elapsed all sense of an abdominal trouble was eliminated from my consciousness.

Gradually ailments disappeared which I formerly thought I would willingly bear if I were only freed of the more serious ones. A journey by either railway or steamer would invariably bring about a condition which necessitated my staying in bed, and even a short ride in a street-car or in the subway caused nausea. Of all this I have been completely freed through Christian Science. I used to have a weak memory, but this is no more the case, and I have been in good health and in a happy frame of mind for the past four years.

In the summer of 1914 a few symptoms of my former troubles began to manifest themselves, and being unable to overcome the sense of fear that there might be a return in full of former conditions, I applied for and received treatment from a Christian Science practitioner, with whose assistance both the fear and the pain were dissolved into nothingness. During the present struggle between nations I derive peace and strength through the understanding of true being, finding comfort therein, and holding fast to the words of Jesus, "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life." Thus I am enabled to see all error, all discord, as unreal, and rejoice in the apprehension that God, infinite Love, draweth unto Himself and uniteth all men.

SOPHIE HUSSONG, Charlottenburg, Germany.

✧

It is with a joyful heart and a deep sense of gratitude that I testify to the good which has come to me through Christian Science. For five years I had worn glasses and was unable to read over half an hour at a time, but after reading Science and Health for three weeks my eyes were perfectly healed and the glasses were discarded. I can truthfully say that I never knew what it was to have good health before taking up the study of Christian Science. For eighteen years I had taken medicine for bowel trouble, but I am thankful to say I was also healed of this disorder and of rheumatism by reading, and I have not taken any medicine since I turned to God.

While I am very thankful for the physical healings, I am much more so for the spiritual uplift received through Christian Science. I can say with the psalmist, "He sent his word, and healed them, and delivered them from their destructions." Christian Science does meet our every need, and I am thankful to God, and grateful to our dear Leader, Mrs. Eddy, who has given us this Christ-teaching that makes free.

MAY THOMPSON, Crookston, Minn.

✧

Christian Science has healed me of a disease for which the doctors said there was no cure. Having heard of this healing truth through a friend, I finally told my family I would try Christian Science. After three treatments I felt much better; but a member of the family said if prayer could not help the first time it would not at all, and not understanding anything of Christian Science I stopped taking treatment. Then my suffering returned with more severity than before; but as I had been relieved a good deal through Christian Science at the time of treatments, I decided to see what had helped me, so started to study Science and Health with the Bible. After

Digitized by Google

studying for some time I had a little glimpse of the relation between God and man, and said to myself that if this were true I did not need to be sick. Then there came over me such a longing for understanding that I said, "O God, let me understand it," and I was healed that same evening.

We have had many other proofs of healing in our family, and words fail to express my gratitude for Christian Science. I wish to thank the dear friends who are always ready not only with words but also with loving deeds. I am very thankful to God, and grateful to our dear Leader, Mrs. Eddy, for this wonderful truth.

CAROLINE FRITZ, Chicago, Ill.

I was brought into Christian Science through my mother's wonderful healing, and was myself healed a few years ago of a tendency to have bad colds every winter. Barely a winter passed that I did not have at least half a dozen attacks, and generally finished the season with a severe case of influenza. I was also freed from intense pain in the back and sides, these attacks coming on every six months and being almost unbearable. I have found that the truth will not only help us in time of sickness, but is a great help in business or wherever we are, if rightly applied.

I am unable to express in words my thankfulness for having found this truth, and my daily prayer is that I may be worthy to be known as a Christian Scientist.

AMALIE FRITZ.

✧

With a feeling of happiness and deep gratitude to Christian Science for the wonderful healing I have received, this testimony is given. For more than two years I was troubled with rheumatism, and in that time every known material remedy was tried without avail. I then traveled for eight months to different parts of this country, thinking a change of climate would help me, and also took treatment at Hot Wells, Texas; but returned home sick and discouraged. Two weeks later Christian Science was recommended to me by my uncle, although he was not a Christian Scientist. After ten visits to a practitioner I was healed and able to return to work, and since then have not been absent from work a day on account of illness. Before coming into Christian Science I was subject to throat trouble every winter, but since seeking this truth, which has made me free from this and many other material errors, I know that fear has been cast out, for the place where I am employed has a high temperature, and yet the change from that to the outside air has no effect on me.

I am very thankful to God for the many blessings I have received, also for the spiritual uplift, and deeply grateful to our Leader, Mrs. Eddy, and to those who helped me to seek this truth.—ARTHUR LEVI, New York, N. Y.

✧

I have received so much help spiritually and physically through Christian Science that I am sending this testimony in the hope that it may help some one who has almost given up hope of ever being well again, as I had done. I had been under the care of doctors and specialists for about four years, owing to what was diagnosed as hardening of the arteries of the heart, rheumatism, and other ailments to which a condition of this kind leads. My suffering was intense and I was thoroughly discouraged. Finally, in 1914, I went to a Christian Science practitioner, and through her treatment and loving guidance in the study of this saving truth I have been healed. I feel that I have been made over and have a new hold on life, and am gaining a more perfect understanding of the ever-present, loving, heavenly Father.

SARA B. LAMPKEN, Mount Vernon, N. Y.

From Our Exchanges

[*The Advance*]

We learn from the Word of God that the at-one-ment is more than atonement for sickness; most Christians have yet to learn that it is more than atonement for sin. Does the Bible say so? It does say so, and that repeatedly. It says that where sin abounded, grace did abound much more exceedingly—did abound, doth abound, shall abound. How can this be possible? It is possible because the atonement is more than an atonement for sin. It is atonement for spiritual growth. It is at-one-ment with God. The sacrifice which is eternal in the heart of God and revealed in the cross of Christ will redeem men in such numbers and into such fulness of life that those large words of Scripture will be justified in which it is said that God willeth not that any should perish and that all shall come unto Him and live. We cannot say that there will be no exceptions to the rule. We cannot promise that no man will succeed in persistently defying God. But we may be sure that God will leave nothing undone that God can rightly do for the saving of all men; and that Christ will see "of the travail of his soul, and shall be satisfied."

[Rev. E. W. Barnes in *The Church Family Newspaper*]

Jesus was of the common people; he preached to the common people. It was they who heard him gladly; it was they who gave him his simple Palm Sunday triumph; and it was because he appealed to the simple, primitive, good instincts of common men that his message won its way. The enduring vitality of that message depends on the response which unsophisticated men and women can always be trusted to give to an appeal to the sense of brotherhood rooted in love; for Christ's ideal is brotherhood rooted in the love which God shows to all men and demands from all men. For him it is brotherhood which is the final expression of service to God. For him brotherhood is the solvent of all human discords, finding its basis in God's scheme of creation and redemption. This is the message which Christ preached to the poor and derelict of Palestine; this is the teaching which all who by position or temperament are close to the great realities of life will instinctively accept.

[*The Christian Register*]

To have the language of religion, its range of ideas, its motives and appeals, its representations and principles, all out of relation with the way people think and speak and act in all their living, is to pull religion out of life and make it continually less likely to be understood and appreciated. A good many of the usual expressions, a good deal of the usual ideas, of well-meaning loyalty are totally unmeaning, when they are not positively repugnant, to clear and honest minds. If the crowds on a city street were to be stopped and told what is being said in the churches they pass, they would not know what the speakers were talking about. That is why the crowds are on the street instead of in the churches,—they are not told about religion so that common sense and ordinary reason can assimilate it. It must be modified, or the churches which depend on the support of public intelligence and faith will die of malnutrition.

[*The Christian Work*]

In politics we have the fetish of public opinion, as if what the man in the street thinks must be good policy, and the opportunist statesman swings tremulously to catch the popular breeze. He has no burning convictions, no immovable principles. In art also the world wants only clever adaptations and repetitions, the reproduction of past triumphs.

Digitized by Google

In religion especially this temptation abounds. We have heard with our ears, our fathers have told us, and we accept unthinkingly the past record. How much of our faith is taken by us on trust, a matter of hearsay? Men repeat catch phrases, which have gathered a certain sacredness from antiquity. How seldom we hear a real live, original voice, that is not merely an echo of some one else! In spite of what we have admitted as to the place of authority in education, the true education after all is tested by what we say and do and think of ourselves, and not because others have told us. Though it is not given to every one to be a pioneer of truth, yet truth is little to us until we have absorbed it and made it our own,—so much our own that it has practically ceased to be derivative and becomes personal. In religion, tradition must have become experience before anything is achieved. We must walk by faith and not by custom; we must live by insight and not by prescription.

[*American Lutheran Survey*]

The criterion of the value of any doctrine or philosophy of life lies in its results. Christ challenges the pragmatist, who accepts nothing as true unless it works. He judges of the value of a theory by its workableness, its effects in actual practice. Christ says, Apply the principle of pragmatism to Christianity, see how it works in every-day life, individual and social, and judge of Christianity by its fruits. Christ was anxious that men should "try out" his doctrine in practice and conduct themselves according to his teachings. If they could not believe in him, then he would have them "do the will of God" and they would know that his doctrine was of God and thus come to believe on him. Doing the will of God, living according to the principles of Christianity, will teach men the intrinsic value of Christianity, its transcendent truth and faith-compelling reason.

[Rev. Robert A. Ashworth as reported in *Milwaukee* (Wis.) *Free Press*]

When men begin to understand that they do not suffer at the end of this life some great and miraculous change that makes all wrong right, but that the life to come is but the continuation of this present life, then daily conduct takes upon itself a new significance. And seen in the light of eternity our daily conduct receives a new value. When we know that the joy of the life to come consists not in golden streets or jeweled harps and crowns, but in a new and nearer relationship to God, then men will be more eager to enter into that relationship here and now.

[Rev. W. E. Orchard D.D., in *The Christian Commonwealth*]

Love enables us to discern the real man as he was created in the mind of God, and to see behind the fallen, the impenitent, the man wedded to evil, the man as he was meant to be. This discernment enables you to play off the best in every man against his worst, to divide him against himself and to win him over bit by bit to his better self. It gives one the power to say that magic word which will suddenly penetrate between the joints of his armor and stab his spirit broad awake.

[*The Methodist Times*]

Faith is always creative. Its upward and its forward look are one and the same. It is always converting the reality of eternity into the order of history. Faith discharges this creative function just because it is blended with hope. It gives substance to "things hoped for." Hence the man of faith is filled with the unbounded energy of exultant joy. He lives in the heavenly reality that is to become the triumphant achievement of time. Because of this, the attitude of faith is that of transcendent satisfaction. It lives in the certainty and prospect of the kingdom of God.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new French pamphlet, "Foi et Générosité" (Faith and Generosity), has just been issued and is now on sale. This pamphlet contains the following articles: "The Lord Thy Confidence," "The Closed Hand," and "Continuity of Right Thinking."

Christian Science: A Religion of Love (Christian Science: En Kjærlighetens Religion), a lecture by Virgil O. Strickler, has been translated into Norwegian and is now published in pamphlet form with the English and Norwegian versions on opposite pages.

"Law and Work" is the title of a new pamphlet containing the following articles: Love Fulfils Law, The Logic of Christian Science, Undisturbed, God's Law of Adjustment, Authority.

"Christian Science: Man's Dominion over Evil," a lecture by Edward A. Kimball, C.S.D., has been translated into Russian, Norwegian, and modern Greek. Pamphlets in these three languages have been published with the English version opposite the translation and are now on sale at prices of our regular pamphlets as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $5.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in [illegible] or more at quantity prices may include both [illegible]h and [illegible]erman editions, and different styles of binding.

Miscellaneous Writings. A book of [illegible]ges, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

There are more than forty-eight thousand sawmills in the United States, and their output of waste in the form of sawdust, shavings, slabs, and other wood refuse is estimated as thirty-six million cords per year. This is equal to over four and a half billion cubic feet of waste, which is the capacity of a bin half a mile high, with a base covering a forty-acre lot. Perhaps one half of this so-called waste product is not strictly speaking wasted, but serves a useful purpose as fuel under the boilers. Much of the remaining 18,000,000 cords not only serves no useful purpose, but in most cases is a source of inconvenience and danger. Sawmill waste is disposed of in various ways. Some goes to the local fuel market, some to pulp mills or to wood distillation plants. Shavings and log cuttings, as well as other mill waste, are sometimes used to fill low places in the yard. However, the most common method of getting rid of waste is by burning either in an open fire-pit or in a burner enclosed on all sides and having a spark-arresting screen at the top and a fire grate.

The municipal savings bank scheme initiated by the lord mayor of Birmingham, England, Alderman Neville Chamberlain, was recently discussed at a meeting of trade union leaders and officials. The lord mayor said he believed there was only one way of helping people to save, and that was by getting them to have the money deducted from their wages before it reached them. That, of course, involved bringing in the employer. Under the scheme, while the employer made the deductions, and gave the workman a coupon representing the amount of the deduction he made, he did not keep any books, and he had no idea what the workman was taking out. The employer would have no notion whatever of the transactions that would take place between the man and the bank, and he believed that so far as it was possible to overcome that objection it had been done by this scheme. With regard to facilities for withdrawal, the lord mayor said there was only one check upon the man getting his money out, and that was seven days' notice before withdrawal.

California is building a system of good roads on a grand scale. It started four or five years ago with a bond issue of $18,000,000, of which all but about two million dollars has now been expended. In connection with the state work the counties have spent between fifteen and sixteen million dollars. To continue the work, the last legislature voted a new bond issue of $15,000,000, and this goes before the people at the election in November. Public sentiment is strongly in favor of good roads. Roughly, the California plan is for two long roads extending the length of the state, one along the coast and the other through the valley, with cross connections between the principal cities. Already 1490 miles of road have been built, and 2280 miles have been surveyed. Concrete is used extensively.

The New York City police force, which had already been augmented by a juvenile police force, has again been strengthened by the "mother police force," made up of East Side women who are mothers of children. Here are some of the things the mother police hope to abolish: False weights and measures; "blinds" for disreputable houses; objectionable dance halls, moving picture places and vaudeville houses; cigar stores selling cigarettes to minors. Employment for girls, the girl stranger, and the immigrant, will be the special charge of the police mothers. The organization was brought about through the efforts of a young East Side attorney, who is responsible as well for the juvenile police boys and girls.

The Porto Rico sugar crop, which will be finally gathered during the latter part of June, will be the largest ever harvested in the history of the land, according to a recent estimate made by the secretary-treasurer of the Sugar Planters' Association. The estimate covers the sugar manufactured from Dec. 1, the beginning of the season, to May 1, together with the estimated sugar in the cane still to be ground. The 1914-15 crop totaled 845,154 tons, and that of this crop-year will exceed four hundred and sixty-three thousand tons.

The four public employment bureaus established by the state of California last February have more than fulfilled the expectations of the promoters of the idea. Over ten thousand positions have already been filled, whereas when the matter was before the legislature the advocates of the plan thought that the venture would be eminently successful if employment could be found for that number of persons in one year.

Relation of the press to improved highways, the future of the newspaper woman, foreign advertising, the Associated Advertising Clubs of the World, the teachers of journalism, trade journals, the country daily, whether or not it pays to construct a building for a newspaper plant, and simplified spelling were some of the subjects discussed by the delegates to the thirty-first annual convention of the National Editorial Association in New York City.

The new $1,350,000 Y. M. C. A. hotel at Wabash Avenue and Eighth Street, Chicago, was dedicated a few days ago, at special exercises, to the purpose of providing a temporary home at low cost to the young man starting life in Chicago, through which he can find good associations and come in contact with the city's best agencies. The hotel is nineteen stories high and has 1821 rooms, which are to be rented at thirty, forty, and fifty cents a day.

With bids for furnishing wire to the United States Forest Service recently advanced 45 per cent, and prices on other equipment considerably increased, material curtailment of the program for telephone line construction in the national forests this summer is said to be in prospect. There are over twenty thousand miles of telephone in the national forests, and approximately two thousand miles of new line was planned for the coming season.

What is said to be the largest garden in the world given over to the cultivation of a single flower is situated at Sarcoxie, Mo. Sixty-seven acres of peonies were in bloom at the flowering season at the Wild Brothers' nurseries. Approximately a million blooms were shipped this year to florists in all parts of this country.

The people of Oregon celebrated the dedication, on June 7, of the Columbia River Highway, which has been declared by experts in road engineering to be one of the greatest highways ever built to meet the conditions of modern traffic. The scenic attractions along this road are said to be unsurpassed by those of any highway in the world.

A summary of the general results of the 1914 census of manufactures with respect to the gas industry has been issued by the director of the Bureau of Census, department of commerce. Returns were received from 184 establishments in 1914, the total products of which for the year were valued at $220,237,581.

There are probably fifty thousand sewing machines sold in China every year. Practically the entire business is done on an instalment basis and under much the same arrangements as in the United States. The guarantor, who is generally a shopkeeper, indorses the instalment contracts.

On April 13 the city council of Sydney, New South Wales, Australia, decided to impose all its taxation, or rates, on the value of land apart from all improvements. This reform has been demanded for years. At the recent city council elections a majority in favor of it was elected.

Receipts of Manila hemp from the interior of the Philippine Islands to the shipment ports on the coast of the United States from Jan. 1 to June 5, 1916, amounted to 549,000 bales, as compared with 496,000 bales in the corresponding period a year ago.

The Canadian Gasoline Corporation is being organized with a capital of $3,000,000. It has acquired the Canadian patents for the Greenstreet process of gasoline manufacture, and it will operate as a subsidiary of the Gasoline Corporation of the United States.

Fire losses in 1915 decreased $52,755,000, as compared with the 1914 record for the United States and Canada. The total losses by fire last year were only $182,836,000, as compared with $235,591,000 the previous year.

The department of agriculture in its June crop report estimates the crop of spring and winter wheat at 715,000,000 bushels, oats at 1,250,000,000 bushels, and barley at 189,000,000.

The $200,000,000 proposed merger of automobile concerns has been abandoned because of the lack of cash, according to the president of the Willys-Overland Company.

Massachusetts Institute of Technology's great celebration in connection with the dedication of the "New Tech" across the Charles River occurred during the week of June 12.

Water and fire proof barrels will be made in Hawaii from bagasse, a sugar mill by-product, for use in exporting sugar and importing potash.

The value of the annual orchard products of the United States reaches a total of $1,000,000,000.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII July 1, 1916 No. 44

Saved by Grace Alone

ALFRED FARLOW

THE Scripture admonishes us to "grow in grace, and in the knowledge of our Lord and Saviour Jesus Christ." This admonition includes the two salient requisites of spiritual advancement. Mrs. Eddy has given to the world a demonstrable knowledge of the Christ, Truth. Briefly stated, it includes a spiritual understanding of God, an understanding of His very nature and essence, and of His creation as the perfect, harmonious expression of perfect Mind. Upon this scientific basis it is ours to grow steadily by the use of the talents and opportunities given us, until, as St. Paul commands, "we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

Grace signifies favor. Christians merit divine favor as they walk in the way which Christ Jesus pointed out and as their lives conform to the ideal manhood which Christian Science defines. In "Christian Science versus Pantheism" (p. 10) our Leader refers to the "grace of God" as "the effect of God *understood*." It is that exalted statement of goodness which comes from first knowing the right, then putting it into practice. In "Miscellaneous Writings" (p. 205) Mrs. Eddy further says that "mortals who on the shores of time learn Christian Science, and live what they learn, take rapid transit to heaven."

To him whose life conforms to the demands of Truth, good becomes the only reality, while evil becomes unreal and thereby loses its power to influence one. By this process the individual merits divine protection. He grows in favor with God, emerges into the light wherein there is no darkness. He eliminates the materiality in his consciousness which makes it possible for him to be influenced or afflicted by error. It is one's materiality, not his spirituality, which is subject to affliction; hence the importance of putting off, as Paul says, "the old man with his deeds," and putting on "the new man, which is renewed in knowledge after the image of him that created him."

The Master of Christianity was an example of that character of manhood which is too good to be sick. In our present stage of development we vibrate more or less between harmony and discord because of our immature, fleshly condition, and we find ourselves more or less needfully exercising our faculties to overcome the discords of mortal experience which overtake us. As we continue to improve spiritually we become less and less subject to the intrusions of error, until we finally reach that zenith of spirituality wherein the very aroma of our thought will dispel the discord without an effort, even as the light unconsciously dispels the darkness, and this constitutes the ultimate, the climax, of Christian Science demonstration.

If one were to name a prevailing fault among Christian Scientists, it would be that they depend too much upon the dynamic power of truth and not enough upon the grace of God as a protection from evil and as a means of healing the sick. It is well that we keep awake to the subtleties of error and that we employ essential and effective arguments of truth, that we work and pray according to Christian Science methods, but we should also give earnest heed to the better part, to the reflection in all we say and do of the divine character with spiritual grace and gentleness. We should be obedient to the Master's command to seek "first the kingdom of God, and his righteousness," which means that we should seek spiritual advancement, Christian consciousness, as a means of overcoming evil, knowing as we do that mere resistance of evil is not sufficient. We are admonished to "overcome evil with good."

Moreover, nothing gives so clear and so correct an understanding of the subtleties of evil as a clear consciousness of their opposing good. What might be termed an "up-to-date Christian Scientist" is one whose spiritual advancement keeps pace with his understanding of the letter. It has been erroneously said that it takes a rogue to catch a rogue, but Christian Science demonstrates the fact that he who possesses the clearest consciousness of good is the best detective of evil, even as the purest and whitest garment is most sensitive to the presence of uncleanness. It is well to be watchful and faithful in our mental work, in our striving "to enter into the kingdom of God," "the secret place of the most High," to awaken to the spiritual truth of being; but meanwhile we should advance by spiritual growth toward that condition of thought to which the Master referred when he said, "The prince of this world cometh, and hath nothing in me."

If we find we are not healing the sick so readily and easily as we once did, it is well that we meet the growing opposition to Truth with the understanding that there is but one power; but if we depend upon our mental work exclusively and neglect the growth in goodness which is necessary to place us where evil cannot seem real to us, and thus avail ourselves of divine grace, thus merit divine protection, we may find ourselves too much in the habit of going from student to student to find out how to treat sickness, instead of humbling ourselves and divesting ourselves of wrong as a means of gaining a new and more effective meaning than that which we already have. Fearless self-analysis will always do much for us, as it lets the light of Truth break through the dark illusions of mortal sense. Then we are ready for greater growth in grace and also for the spiritual advance which is inseparable from it.

Our understanding of the best way to deal with evil is improved by the same growth which clarifies our understanding of God, good. Under the light we see all things as they are, whether they be good or bad. An understanding of the true constitutes a correct view of the false and how to demonstrate its unreality. We must learn the worthlessness of error through suffering, unless we are willing to learn it through our understanding of the worth of Truth. In Science and Health (p. 480) our Leader says, "When the substance of Spirit appears in Christian Science, the nothingness of matter is recognized."

Evil grows less real to one's consciousness as his life con-

forms to the reality of good; hence the wisdom of the Scriptural declaration, "Blessed are they that do his commandments." The real blessing does not come merely from having learned what one should do, but from the actual doing. We are saved by grace alone. We are absolutely and truly safe only as we win the grace of God through that Christian conduct which constitutes the abandonment and consequent dissolution of all error in one's self. The foe without, which one is obliged to meet in his Christian Science warfare, is vanquished by the same practice which destroys the foe within.

Friendship

LUCY HAYS REYNOLDS

THERE is no one who may not have a friend; and that there should have been so many heart-breaking experiences in the loss or lack of friends is due to ignorance of what constitutes friendship and to the mistaken foundation upon which it is so often placed. Generally speaking, one expects to find his friends among those who have the same social or business interests, like experiences or religious beliefs; but when based upon personal association and attachment, or confined within the narrow limits of human relationship, friendship all too often decays and is lost. In "Retrospection and Introspection" (p. 80) Mrs. Eddy says, "There are no greater miracles known to earth than perfection and an unbroken friendship."

Is our desire to have a friend prompted by what that friend will mean to us? Too often we love in proportion as we are loved. "You be a friend to me and I'll be a friend to you," selfishness bargains. Yet true friendship possesses no element of self and makes no personal demands. When the Master asked Peter if he loved him, the only proof he required had nothing to do with himself. "Feed my sheep," he pleadingly urged. If we would have a friend, we need first to learn how to be one, for the motive of friendship is to bless, to give, not to get, and it is known by its fruits. Lavishly though wisely, then, let us reflect love, asking nothing in return save a closer acquaintance with God, and we shall discern that true friendship is the reflection of divine Love.

All students of Christian Science speedily learn that friendship is not a question of persons but of consciousness, and true friendship is always under the government of spiritual law. Such friendship is expressed in the impulses of kindness, tenderness, and self-forgetful love. These are the elements of spiritual affection; and how they enrich and enlarge our lives! Generously exercised, they nourish immortal cravings, unfold and protect spiritual individuality, and establish the heart in divine Principle, where we find that which we can love, praise, and adore.

True friendship is universal, impartial, all inclusive. Being a state of consciousness and dealing with ideas, it can never be clamped by personality nor circumscribed by national boundaries, but includes all that is good in universal thought. If one is abiding in a state of friendship, every good thought that knocks at his door finds hospitality, even though it be an idea that upsets all previously entertained opinions and notions. There is but one good, and if, therefore, we love justice and truth and purity, we will love them wherever found. Some one in whom I may have no personal interest may yet express a great deal of these divine qualities, to which I must be true so long as I am true to good. We are one with all the attributes of good, regardless of personal differences, hence we should not deprive ourselves of any sweet friendliness.

Pride, conservatism, and custom rob us of the nobler realizations of friendship. Worth of character, however, is always able to level cliques and overcome the personal. Meeting on the plane of conscious worth, our friends are endeared to us, not because of similar human opinions and interests, but because of the same goal, the same standard of good. "He that receiveth a righteous man in the name of a righteous man shall receive a righteous man's reward," the Master promised. Neither creed, temperament, nor nationality (all of which are incidental) will be able to interdict our being friends to all mankind as we learn that good is our only friend and our only friend is good.

It is through communion with God that the higher friendships are always formed. No mortal sense can know the experience. As individual natures perceive God's ideas they find in their mutual love for these ideas their unity and love for each other. Such friendship is pure and strong, refined and true. It lifts human affection above impulse and emotion: it inspires and ministers; it radiates and never absorbs. It enables us to express our higher capacities; it leads us to look away from material sense, beyond personality, beyond even the best in human character, and fix our gaze upon the fulness of spiritual individuality. Such friendship is endowed with power; it works wonders among nations as well as individuals. It is not at the beck and call of human congeniality; it never mingles with mere sentiment or indulges ecstatic adoration. Built upon the foundation of good, true friendship is established in spiritual at-one-ment.

Turning from mortal sense, we find that a bodily presence or absence has very little to do with maintaining friendship. Although at first Mary could not behold her beloved "Rabboni," he was present at the tomb before he appeared to her in outward form. Not proximity, but similar states of mentality, bring about love and understanding. People living under the same roof for years often do not know each other so well as those who may be miles apart. If we seek love outside of corporeal sense, then do we find and know our own, and draw out the hidden beauties of their nature. If we would more earnestly seek to realize our true individuality and its goodness, the barrenness and mechanicalness of daily association would be healed. Then it would no longer be said that "familiarity breeds contempt," but rather that it reveals spiritual selfhood. Let the hungry, lonely heart, starving for love and yearning to be understood, turn from personal sense with its likes and dislikes, and seek the spiritual selfhood which waits recognition at its very side, then relationships that now seem unbearable will be transformed, lost separated friends reunited, wounded hearts healed, and association among those with whom we live will become sweet and enduringly attractive.

Distance no more than familiarity can separate friends. Those who are taking the same journey heavenward, who are experiencing similar struggles, are many; and whether or not we know them personally, these friends of similar experiences bring us the comforting assurance that we are never alone so long as we are seeking to attain friendship with good. If we are patient, these friends come to us sooner or later by unknown and unsought paths, through valleys of humility, across planes of spirituality, and over the hills of faith, for neither space nor time can interfere with the unity of hearts that are seeking God. Humanity is in sore need of the demonstration of a true concept of friendship, and none can meet this need so well as Christian Scientists, knowing as they do that God's word is the friend of all; yea, as Moses said to the children of Israel, this "word is very nigh unto thee, in thy mouth, and in thy heart, that thou mayest do it." Thus the opportunity of being and having a friend is never lacking.

One of these opportunities is found in the church foyer after the services. Here the heavy laden, the lonely, the hun-

Digitized by Google

sick, and the stranger are gathered within our gates. Yearning for a friendly touch, do they look upon our happy faces and, unnoticed, feel apart? Do we pass them by in our eager greetings of those whom we personally desire to see? "Woe unto you, Pharisees! for ye love . . . greetings in the markets," and to be "seen of men," said humanity's dearest friend. With a heart forgetful of self and overflowing with love let us give out only the aroma of Spirit, making "each smile a hymn, each kindly deed a prayer," as Whittier says. So will the mask of personality be torn asunder and we behold the sage in the child, substance back of the superficial, and the heart behind the cold exterior. Then will the Christ-idea, no longer a stranger, be recognized and loved in every one. Then will formalism be whipped out of the temple, greetings will be exchanged on the plane of righteousness, and the sweet friendliness of primitive Christianity be manifested in healing thoughts and loving words.

True friendship makes mighty demands upon us, even the laying down of mortal attachments to find satisfaction in the divine. In this transitional stage the affections may experience a crucifixion, but in their ascension Soul will transfigure them with the love that worketh miracles. Are we then not willing to carry the cross, turn from the beaten paths of personal sense to find our friends on the basis of Christianity, regardless of family, sect, or caste? Cleansed of jealousy, obsession, and fleeting fancies, our affections respond to the Christ and rest satisfied in divine Love.

In our ascending steps toward this goal does the way seem lonely? Do we need a friend? Let us remember that true friendship is a matter of unfoldment and can never be forced, for it is one of the blessings added unto us through seeking first the kingdom of heaven. Then will we discover our own, draw them to us, and demonstrate here on earth the miracle of perfect friendship.

Apathy Overcome

SADIE LITCHFIELD KELLER

Apathy might be defined as sluggishness of thought regarding what one should do. Its tap-root is in mortal mind, that arch-enemy of God and man. In Science and Health (p. 218) Mrs. Eddy says, "The human mind is the sinner, disinclined to self-correction." In fact, we find that mortal mind is busy about anything rather than self-improvement. Self-correction would destroy mortal mind, and so manifest a counterfeit would not knowingly attempt self-destruction. Having evolved itself from supposition, it would seem to direct every effort toward keeping up the farce, maintaining that man and the universe are identified with matter and evil. It says, therefore, that man, the image and likeness of God, cannot be perfect; and this in the face of Jesus' command, "Be ye therefore perfect, even as your Father which is in heaven is perfect," and his complete proof of man's ability to demonstrate sonship in God.

But men are finding out today in Christian Science that the apostle John said the truth when he proclaimed, "Beloved, now are we the sons of God," and are setting to work to prove the statement in their every-day living by applying the rules laid down in Christian Science. They are becoming healthier, happier, purer, more prosperous; they are enjoying increased longevity, and in a measure experiencing the kingdom of heaven right here on earth in the ever-increasing reign of harmony within them.

Christian Science is as far from apathy as it is from mortal mind, for it teaches men self-correction first of all. It shows them that they need to see what should be done, and then to go diligently, patiently, and persistently about doing it. They learn that they are to repudiate as utterly unreal, and therefore as no part of themselves or any man, all that is unlike God, and to maintain stoutly the allness and oneness of Deity, forever expressed, and that this expression is man, as Christ Jesus taught and demonstrated.

Since apathy is part and parcel of the supposition that life, substance, and intelligence are something apart from God, it is rejected along with kindred errors. The student of Christian Science learns to establish the fact that God is not manifest in sluggishness, inertia, or dreamy absent-mindedness, but in alertness, mental activity,—the ability to think and to act divinely. Far from being apathetic, spiritual sense is constantly and consciously awake to man's true being, alive to its joys and triumphs. So clear is its reflection of the all-Life and Love, that sin, disease, and death disappear before it. It is the operation of this consciousness in the world today which is leavening the whole lump of mortal thought, and which will continue because it is God's law, until all evil has vanished from the experience of men.

"The focus of ideas"

LAWRENCE THOMPSON

One sunny day, while watching a boy who was focusing the rays of the sun through a glass on to a piece of paper, the writer noted that the paper speedily began to smolder and was soon in flames. This simple occurrence brought to mind the statement of Mrs. Eddy on page 504 of Science and Health, that "the rays of infinite Truth, when gathered into the focus of ideas, bring light instantaneously, whereas a thousand years of human doctrines, hypotheses, and vain conjectures emit no such effulgence." Meditating upon these lines it became clear that the power of Truth, operating in human consciousness, can be effectively concentrated, and his eyes were opened to an error which may sometimes be responsible for failure, namely, lack of true humility, and consequently an unwillingness to undergo necessary mental discipline.

When we are faced with what appears to be a failure, instead of yielding to the suggestions of discouragement we should approach the problem scientifically and gather the rays of infinite Truth "into the focus of ideas." The student of Christian Science sooner or later learns the necessity for pressing on from belief to faith, and thence to spiritually scientific understanding. Spiritual understanding lifts thought above the material and shows us what reality means. Christian Science teaches that God is Mind, or Principle, and is manifested through His ideas. These ideas reflect the nature of God in life, truth, and love, and they are eternal, revealing the very presence of God, and consequently manifest divine power. St. John evidently knew this, for in the first chapter of his gospel we read, "In the beginning was the Word, and the Word was with God, and the Word was God."

When "the rays of infinite Truth" are gathered into the focus of ideas and brought to bear on any material belief which declares a presence or power apart from God, the result is that the false belief loses the appearance of reality, because that from which it derived its support has been destroyed through the realization of the nature of true being, and it is discovered, as we are told on page 151 of Science and Health, that "all that really exists is the divine Mind and its idea, and in this Mind the entire being is found harmonious and eternal."

It would sometimes seem that because the fundamental truths of Christian Science are so simple some individuals are disposed to fancy that they know all about them before their knowledge of Truth has been applied to the various human

Digitized by Google

problems with which they are brought in contact. This belief, however, is swept aside when the one holding it is brought face to face with the demand for evidence of his understanding, namely, the healing of the sick and the overcoming of sin by the divine Principle of Christian Science, and no other proof is of any real value in showing that the student understands this Science.

Another cause of failure is referred to by Mrs. Eddy on page 149 of Science and Health as follows: "If you fail to succeed in any case, it is because you have not demonstrated the life of Christ, Truth, more in your own life,—because you have not obeyed the rule and proved the Principle of divine Science." There is no doubt that this is at the root of all our limitations and difficulties, and the realization of this fact should arouse us to greater consecration in our efforts to demonstrate the truth of being.

Surely the world owes a debt of gratitude to God for the life of our Leader, through whose spiritual clear-sightedness has been revealed the way to heaven,—universal harmony.

Love That Never Faileth

JOSEPH B. BAKER

In describing her solitary research along new lines of thought the Discoverer and Founder of Christian Science says, "The Scriptures were illumined" (Science and Health, p. 110). Every sincere student of this Science has a similar experience of the illumination of the sacred pages, and particularly in the New Testament he recognizes Christ as "the power of God, and the wisdom of God," overcoming the false beliefs of the flesh.

To the Christian Scientist the gospel accounts of the mighty works of Jesus are full of meaning and help. "A true witness delivereth souls," says the proverb; and Christian Scientists learn humility and efficiency from their study of the Master's faithful and persistent work and his willingness to leave the result to God. Jesus declared the truth of being, and the fearless testimony that he gave in a world of fear, ignorance, and sin was twofold in effect. It established the new dispensation called Christianity in confirmation of his triumphant declaration, "Heaven and earth shall pass away, but my words shall not pass away," while it reformed the sinning and healed the sick in many immediate instances.

In the healing of the impotent man at the pool of Bethesda, as recorded in the fifth chapter of John, we see a highly instructive example of the direct and effective work of the great Wayshower, marked by insight, compassion, wisdom, and authority in the truth. Among the multitude of "impotent folk" that lay about the pool the Master accosted one man who was ready to receive that more abundant life which it was his mission to impart; one who was responsive to his impressive manifestation of the Godhead. It is narrated that "when Jesus saw him lie, and knew that he had been now a long time in that case, he saith unto him, Wilt thou be made whole?" The student of Science notes the significance of the man's reply,—a response which shows the same receptivity as that of the centurion, as that of the woman who touched the hem of the Master's garment, as the vigorous declaration of Peter, "Thou art the Christ, the Son of the living God," and as that of the many others in this day of the world-wide practice of Christian Science. He also notes the operation of the same unerring insight on the part of the great Metaphysician in reading the thought which lay behind the eager words.

In that heart-searching analysis, the thirteenth chapter of 1 Corinthians, Paul wrote, "Love never faileth" (Rev. Ver.). The Master's healing work was unfailing because it was based upon divine Love. His treatment on this occasion was successful because Love absolutely ruled the situation. His question was certainly one not to be put lightly to a chronic sufferer. Had it been dictated by mere human sympathy, so called, it would have been officious and impertinent, to say the least; but as a matter of fact it was asked by one who was there on business, the Father's business. What a depth of compassion it must have stood for, to elicit the response that came! What tenderness and kingly authority must have been there, that this "impotent man" yet found power to answer to the gleam of omnipotence which was reflected in the bearing of the meek Nazarene! No matter though his outrushing words revealed hope long deferred, hardening into bitterness and despair, as though he said, Here I have lain for all these years, unregarded; others have friends ready to aid them at the right moment, but no one cares anything at all about me. Even while he was speaking the self-imprisoning belief was destroyed, the dross consumed away by Love, leaving only the real, that which expressed an unfaltering trend toward good, an immortal faith in God.

It was this reality, and this alone, which Jesus saw, even as Mrs. Eddy has written (Science and Health, p. 476), "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals." And how beautifully, how clearly the words that follow show to the scientific understanding how Christ Jesus dispelled the false notion that no one cared! The record gives only the loving command which left error without a foothold and affirmed the truth of being. But can we not see the outstretched hand, the reassuring smile? Does not this mighty work of the great demonstrator of Truth illustrate the very core of the meaning of salvation, as given on page 593 of the text-book, "Life, Truth, and Love understood and demonstrated as supreme over all; sin, sickness, and death destroyed."

Healing the Multitudes

FLORENCE CLERIHEW BOYD

At a business meeting in one of the branch churches the question of properly seating people at the services was earnestly discussed, and it was suggested by some that the church-members occupy front seats, so that late comers might be easily seated. One of the members, in giving prayerful thought to the subject at home, came to the conclusion that for the members to occupy any seats to the exclusion of others would not be conducive to harmony. Should all the members be seated in front, the stranger would be apt to go away unwelcomed. This led to the thought that the chief duty at the church services is to the stranger within our gates. Each member has his own part and place in the service, if the hungry and thirsty are not to go away as needy as they came. If each member would know that he was ready and glad to sit where he could best do his God-given work, where he could best supply the need that it was his business to supply, there would be no confusion, no selfish preempting of comfortable seats, but each one would be in the right place and comfort and order abound for all.

In demonstration of this thought the member went to church knowing that God governed and directed, and that no mortal thought could prevent His guidance from being manifested. She found herself seated beside two visitors who had never before attended a Christian Science service and who were eager to know where the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, might be procured. In the succeeding weeks she found that every time she sought God's guidance and went to church with the thought of giving, she found herself near some one who needed help.

Further consideration led to the realization that it is

Digitized by Google

business as church-members to go to church not so much to get as to give. We should go not only expecting to be fed, but understanding how best to help those who have never known the healing power of Truth. We should take with us a clear consciousness of the presence and power of divine Love, deep gratitude for blessings received, unselfed purpose, each "seeking his own in another's good," as our Leader says (Science and Health, p. 518). Going with such intent, could any return unblessed?

Mrs. Eddy once said to a student that she longed for the day to come when no one could enter a Christian Science church, no matter how sick or how sorrowing that one might be, without being healed, and that this day can come only when every member of the church studies and demonstrates the truth contained in the Lesson-Sermon, and takes with him to the service the consciousness thus prepared. Were every member to take with him the unselfed love which our Leader called for, then it would be said of our churches as it was of Jesus' ministry: "And his fame went throughout all Syria: and they brought unto him all sick people that were taken with divers diseases and torments, and those which were possessed with devils, and those which were lunatic, and those that had the palsy; and he healed them."

Only through unselfed love can our Leader's hope be realized. When divine Love fills our churches to the exclusion of self, the multitudes will throng them as they thronged Jesus, and they will be healed of their sorrows and their sufferings. The fulfilment of this vision rests with us as adherents to and exponents of her teachings.

Unfoldment

MARY LLOYD MC CONNEL

THERE was a small community of Christian Scientists meeting in a humble "upper chamber." None were rich in this world's goods, but all were eager that everything pertaining to the services should reflect beauty and harmony. Although no rule was made, a tacit understanding existed that little expenditure was to be incurred for flowers, as funds could be employed to better advantage in furthering the cause of library and distribution work. At the beginning of each season a list was made of the women attending the services, and each one was to be responsible for one Sunday's floral offering.

Through this channel came to one woman an unlooked for opportunity in the practical development of her own garden. She had relied upon the periodical visits of a gardener, and so long as things looked neat she had remained content to imagine herself too busy in other ways to spare time or attention for out of doors. However, as the weeks went by she began to wonder what her garden would produce by the time her name appeared upon the "flower list." In looking around she discovered greater possibilities than she had known to exist, and soon found that the more she cut and gave away the more profusely her flowers bloomed, and that in sharing her garden with friends and neighbors she was learning to enjoy it as she had never done before.

When the Saturday came on which it was her turn to decorate the Christian Science room, she found her heart was as full of love and gratitude as her hands were full of flowers, —"hieroglyphs of Deity," as Mrs. Eddy calls them (Science and Health, p. 240). Once again Christian Science had demonstrated in her life that "every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning."

Selected Articles

[Thomas E. Boland in *Lebanon* (Pa.) *News*]

The adherents of the Christian Science church have but one Bible, the old book we all know. To say that Mrs. Eddy's book, "Science and Health with Key to the Scriptures," which is in fact a commentary, is the Bible of Christian Scientists, is like saying that the key which unlocks a treasure is the treasure itself. We are thankful for the key because of the treasure it opens to us. Christian Science emphatically does not teach that a perfect, immortal, loving God made miserable, sinning, suffering mortals, or that He made sin, sickness, and death. God's creations must be like Himself,—spiritual, perfect, and good. Hence, unless we are prepared to accept the conclusion that there is more than one creator, we must admit that what is so unlike God must be untrue, unreal, or a lie, if you please.

Christian Scientists are altogether law abiding, and they observe with scrupulousness all legal health and quarantine regulations. In common with many outside the ranks of Christian Science, they do not believe the body is benefited by constantly thinking about it, worrying over it, and fearing for it; they endeavor to be mindful of Paul's words, "Rather to be absent from the body, and to be present with the Lord." No one can read the beautiful chapter on Prayer in the Christian Science text-book and get from it as a whole anything like the distorted meaning our friend attempts to portray by using a number of disjointed phrases. Some of the quotations made use of, when separated from necessary contexts, hardly come nearer the correct teaching of Christian Science than would be the case were we to say that the whole message of the great Nazarene was conveyed by the words "Jesus wept."

Christian Science numbers among its adherents judges, lawyers, doctors, dentists, teachers, successful business men in many lines, and vast numbers of intelligent, cultured people; therefore it may not be lightly swept aside simply by designating it as "unreasonable" or "nonsensical."

[S. T. Downs in *Kokomo* (Ind.) *Tribune*]

Mrs. Eddy was and is the Discoverer of Christian Science, and it is a matter of common knowledge that she, and she alone, wrote originally and authoritatively on this subject. She gave the name Christian Science to her discovery, and authorized the use of the term by the cause she founded for the purpose of promulgating, protecting, and maintaining the purity of her teaching.

A very large number of books have been published which are devoted to the discussion of this great teaching, some of which are very friendly and only approximately accurate in their statement of the letter of Christian Science, while others purport to be friendly but are inaccurate in statement. These books at their best are but commentaries on the works of Mrs. Eddy. It would be as unjust to call these publications Christian Science literature, even though they bear the title Christian Science, as it would be to designate a commentary on Emerson's works as Emerson's writings; and it is no less unfair to hand a commentary on Christian Science to an inquirer for works on Christian Science at a public library than it would be to hand a discussion of Emerson's essays to one who asked for the essays themselves.

The cause which Mrs. Eddy founded does not ask that any literature be excluded from public libraries, but simply requests that the literature be so classified that the public may be able to distinguish between authorized literature on Chris-

Digitized by Google

tian Science and merely a commentary on or a discussion of the subject. The classification "Authorized Literature of The First Church of Christ, Scientist, in Boston, Mass.," was adopted by the librarian of the Congressional Library at Washington, and also by a large majority of the public libraries in all parts of the country. In most instances a further distinction has been made by cataloguing all other literature on this subject as "Christian Science, Unauthorized and Critical." These classification furnish the only means by which the average person may know whether he is receiving genuine or spurious Christian Science literature, and is a protection that the public has a right to expect.

✧

[W. D. Hinchsliff in *Guthrie* (Okla.) *Leader*]

Christian Science asks no favors, but it demands justice, and grants to every one the right to worship God according to his greatest light. The weary and heavy laden are turning to Christian Science and are losing their burdens in the effulgence of a spiritual consciousness that transcends mortal concepts. Love, Life, and Truth, when understood, dispel the clouds of discord and doubt, and in their place leave the sunshine of peace, power, and prosperity. It is no mere theory, but a demonstrable fact, that when the love of good comes into consciousness, it leaves no room for its opposite. Ignorance and superstition are dispelled in proportion as the knowledge of God and His kingdom comes into the hearts and lives of men and women, and Christian Science is supplying every need by its revelation of the divine Mind as the source of all being. Thus it is freeing the world of its time-worn superstitions and dogmas, and in their place is giving the water of life that flows from the throne of the infinite, eternal God.

Christian Science is founded on absolute truth, and everything that does not measure up to that standard is not Science. Christian Science does not depend upon belief, but is demonstrable and practical. It does heal the sick and it does reform the sinner. It teaches its followers to accept the whole gospel and to practise as well as preach, to love God supremely and to love their neighbors as themselves. Christian Scientists revere their Leader, Mrs. Eddy, for the wonderful good she has done and is doing for the world through her teachings. Christian Science makes men and women better morally, spiritually, and physically, as each sincere seeker for truth can verify for himself.

The Christian Science God is good, and His kingdom is good, and it may be established in the hearts of His children here and now instead of in a far-away future heaven. The Christian Science heaven is spiritual and perfect. It is revealed to the thought of those who come in childlike humility and who are hungering and thirsting for righteousness. To such it unfolds the unity and beauty of the Scriptures as nothing else does; it smooths out the rough places, and instead of the former heartaches, it gives the "oil of joy" and a satisfying concept of life that is enriched with the conscious presence of our loving heavenly Father.

✧

[Warren O. Evans in *The Narragansett Times*, Wakefield, R. I.]

It is with some little interest that I have read an editorial in a recent issue of your paper. As your kindly reference to Christian Science is apt to convey a wrong impression as to what Christian Science really is, I am sure you will permit me to add just a word.

It is indeed true that, as Jesus declared, "a man's foes shall be they of his own household;" that a disturbed mental condition does cause a disturbed body. But that which causes such difficulties cannot of itself cure, for, as the great Master also declared, "if a house be divided against itself, that house cannot stand." In other words, it is the false human mind which, directly or indirectly, causes all the ills of the human race; while the divine Mind, God, or the Mind "which was also in Christ Jesus," is the only true healer of all human discord. It is this understanding, or knowledge of God, which Jesus commanded, which Christian Scientists are endeavoring to attain.

Christian Science is not mere optimism, nor is it the endeavor mentally to manipulate anything or anybody, but it is the utilization of divine law, a law which is applicable in every detail of the daily life. It is the understanding of God as Mind; and since God is infinite, then Mind is infinite, and therefore there is but one Mind.

On page 251 of "Science and Health with Key to the Scriptures," the text-book of Christian Science, Mrs. Eddy puts it all very clearly in these words: "We must learn how mankind govern the body,—whether through faith in hygiene, in drugs, or in will-power. We should learn whether they govern the body through a belief in the necessity of sickness and death, sin and pardon, or govern it from the higher understanding that the divine Mind makes perfect, acts upon the so-called human mind through truth, leads the human mind to relinquish all error, to find the divine Mind to be the only Mind, and the healer of sin, disease, death."

✧

[Thomas F. Watson in *Berkeley* (Cal.) *Gazette*]

While we appreciate the very kindly attitude of the clergyman in his discourse on Christian Science as a "Contribution to Our Common Christianity," in which he acknowledged that Christian Science contains certain "great values which all of us need," yet the assertion in his second sermon on the "Philosophy of Christian Science" that "there is a mingling of light and darkness, of truth and error," is rebuked by Bible teaching. Jesus said, "Doth a fountain send forth at the same place sweet water and bitter? . . . so can no fountain both yield salt water and fresh." The Master taught that "if a house be divided against itself, that house cannot stand;" and he also declared, "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." A religion which heals the sick and reforms the sinner, as Christian Science has done, cannot be said to be a "mingling of light and darkness, of truth and error," for Jesus said, "By their fruits ye shall know them."

Mrs. Eddy never claimed Christian Science to be a "message which God had kept to be announced through her to men." Jesus unfolded the same message over nineteen hundred years ago when he said, "Ye shall know the truth, and the truth shall make you free." He taught his followers to heal the sick through understanding the law of Spirit, and the early Christians continued this healing work for about three hundred years. Mrs. Eddy discovered this Christ Science, and no one who believes in the spiritual truth and authenticity of the Bible can consistently oppose her teaching, since it is founded upon the Word of God. Christian Science does not rest upon the negation of matter, but is founded upon the omnipotence of good, Spirit, which necessarily implies the impotence of evil, or matter. Moses declared, "The Lord he is God; there is none else beside him;" and the Master said, "It is the spirit that quickeneth; the flesh profiteth nothing."

Our friendly critic commends the teaching of the supremity of Mind over matter, but is not yet prepared to let go of matter as a real entity. Yet many of the leading physicists of today tell us that matter is a mental concept; that it is a form of energy;" that "matter can only be explained by ex-

Digitized by Google

plaining it away." One of the greatest chemists of today has declared that matter is "only a thing imagined, which we have constructed for ourselves, very imperfectly, to represent the constant element in the changing series of phenomena." The great Master demonstrated the allness of Spirit and the nothingness of matter when he healed the lepers, walked on the water, and appeared through closed doors.

Mrs. Eddy does not claim that Christian Science is "higher, clearer, and more permanent than the revelation through Jesus himself," as our critic is reported as declaring. In the Manual of The Mother Church (p. 17) she says that the Christian Science church is "designed to commemorate the word and works of our Master, which should reinstate primitive Christianity and its lost element of healing." Also in "Miscellaneous Writings" (p. 21) she says, "As the ages advance in spirituality, Christian Science will be seen to depart from the trend of other Christian denominations in no wise except by increase of spirituality."

✧

[Ezra W. Palmer in *The North Fork Times*, Hotchkiss, Col.]

An evangelist preaching in your city has devoted a portion of his time to attacks upon Christian Science and its Discoverer and Founder, Mrs. Eddy. The great Teacher in whose name the evangelist is presumed to come, commanded his followers to "preach the kingdom of God." Christ Jesus gave no instructions for any of his followers to attack and malign other disciples. On the contrary, he administered on one occasion a sharp rebuke to his disciples because they had taken upon themselves to stop the work of another, since, as they said, "he followeth not with us." Jesus said, "Forbid him not: for he that is not against us is for us." It is apparently difficult for some worthy people to see that genuine Christianity can be lived otherwise than according to their particular brand of theology.

To assert, as this evangelist is credited with saying, that Christian Science denies the existence of sin, or that it denies the divinity of Christ, is to display a profound ignorance of the subject he attempts to criticize. Christian Science teaches that sin exists to the human, corporeal senses, and will continue to exist so long as mortals believe in pleasure and pain in matter, and in a material existence apart from God. But Christian Science repudiates the false doctrine that God created sin or permitted it to exist, or that it is identified in any manner with divine reality, the kingdom of heaven. Jesus' prayer, "Deliver us from evil," proves the omnipotence of God and the consequent impotence of the mortal sense of evil. Christian Science teaches the divinity of Christ, and accepts the New Testament teachings that Christ Jesus is the Son of God. So clearly do Christian Scientists believe (understand) that Christ Jesus is the Son of God, that they follow his commands and prove his divine oneness with the Father, both in preaching the kingdom of God and in healing the sick.

✧

[John M. Tutt in *The Howard County Advertiser*, Fayette, Mo.]

An evangelist, speaking at the Christian Church, characterized Mrs. Eddy as among "the false prophets that have arisen to foretell the end of the world." Mrs. Eddy rarely indulged in prophecy of any sort, and certainly she never attempted to fix a calendar date for the ending of the world. Her teaching was metaphysical, and agreed with Scripture in repudiating the false theory of a material universe as the creation of God. She believed with St. John that "all that is in the world . . . is not of the Father, but is of the world. And the world passeth away, and the lust thereof: but he that doeth the will of God abideth forever."

Mrs. Eddy taught that the world of spiritual reality is revealed to the individual just in proportion to his abandonment of the illusion of a matter world and his acceptance of the allness of the divine Mind (God and His spiritual creation, man and the universe). The "end of the world," therefore, is a continuous process of destruction of erroneous concepts through replacement with right ideas. These ideas, she taught, are real, present, and permanent. They are forever expressed by the creative, infinite Mind, God, and so are held eternally. These infinite ideas constitute man and the universe, not material, but mental, spiritual, and indestructible. Christ Jesus said, "The hour cometh, when ye shall neither in this mountain, nor yet at Jerusalem, worship the Father." "Now," declared St. Paul, "is the accepted time; behold, now is the day of salvation." Expounding this Scripture, Mrs. Eddy wrote in Science and Health (p. 39), "Now is the time for so-called material pains and material pleasures to pass away, for both are unreal, because impossible in Science." She could not have been an enemy to Christianity, as this evangelist avers, who taught consistently the worship of God as Spirit and sought to obey the evangelistic command of the Master to "preach the gospel to every creature" and to "heal the sick."

✧

[Willis D. McKinstry in *McPherson* (Kan.) *Republican*]

From the fact that Christian Science demonstrates the Master's mission, "On earth peace, good will toward men," it would be impossible for its teachings to "lessen in the slightest degree the love" Jesus expressed for mankind. Christian Science maintains that the wonderful work of the Master, the healing of sickness and sin, no less than the agony of Gethsemane and the struggle on Calvary, established Christ Jesus as the mediator between God and man.

Our critic says, "Sin is real, . . . and God hates sin." But Habakkuk declares that God is "of purer eyes than to behold evil," and cannot "look on iniquity;" while the Biblical account of creation states that God made all that was made, and "it was very good." Webster defines as real that which is fixed, permanent, immovable. Jesus' overcoming of "the world, the flesh, and the devil" proved conclusively that these conditions do not exist as entities or facts; hence their appearance, being purely suppositional, is destructible.

Christian Science makes plain the words and works of our Lord and Master by revealing a demonstrable understanding of his teachings which awakens consciousness to the fact that man is perfect even as his Father in heaven is perfect.

Morning

EDITH L. PERKINS

As when across the waking east there shows
  The first faint flush of dawn, whose latent beams
  Portend the coming of the light that teems
Triumphant till the earth no shadow knows;
So in the heart where now but faintly glows
  The presence of the Christ, these quickening gleams
  Give promise of release from earthly dreams
When Spirit's light the consciousness o'erflows.

O patient Love, with tenderness untold,
  Protecting, guiding all the upward way,
Undimmed Thy purity would we behold,
  Thou source of light, revealing endless day!
Thy perfectness our model would we make
And in Thine image glorified awake.

An Offering of Love

Chicago, Ill., June 9, 1916.

The Christian Science Board of Directors, Boston, Massachusetts.

Dear Friends:—At a special business meeting of the members of Twelfth Church of Christ, Scientist, of Chicago, held Wednesday evening, June 7, 1916, by unanimous action of the members present the sum of one thousand dollars ($1000) was donated to the memorial fund of our revered Leader, Mary Baker Eddy. We rejoice and feel profoundly grateful that this demonstration has been made, which has enabled us to give this little token of love and reverence to our Leader.

With renewed assurances of love and loyalty to your Board of Directors for their faithful labors and strict adherence to Principle, we are,

Very sincerely yours,

BOARD OF DIRECTORS,
Twelfth Church of Christ, Scientist.
MRS. P. M. GRUSCHOW, Clerk.

✧

Some Interesting Statistics

IN view of the vast amount of publicity that within the past half-decade has been handed out by word of mouth and through the press as to the necessity for and the value of preventive medicine in general and the antitoxin treatment in particular, it is interesting to read certain authentic statistics which throw light upon the actual workings of this much-vaunted phase of medical practice. We quote from a news item in the *New York World* as follows:—

A special inquiry by the department of health shows that the discovery and wide-spread use of diphtheria antitoxin since 1907 has not materially reduced either the prevalence of the disease or the percentage of deaths, particularly in the last five years.

In the whole city, in 1907, there were 15,298 reported cases of diphtheria, as against 15,279 in 1915. The number of reported deaths in 1911 was 1281, as against 1278 deaths in 1915. The total number of reported cases in the nine years was 138,042, and the deaths were 13,435, or 9.7 per cent. The percentage of deaths in 1915 was 8.2, as against 8.7 in 1914.

In the same nine-year period the number of reported cases of scarlet fever, also a children's ailment, for which there is no antitoxin, has decreased from 15,811 in 1907 to 9879 in 1915. The reported deaths from scarlet fever were 291 in 1915, as against 796 in 1907. The average mortality was 4.7 per cent.

From these figures it will be seen that in the disease for which antitoxin is administered as both preventive and curative, practically the same number of cases were reported in 1907 as in 1915 and that the percentage of fatal cases was but one and one half per cent less in 1915 than the percentage for the nine years as a whole. On the other hand, in the disease for which there is no antitoxin, there has been a large falling off both in the number of cases reported and in the number of fatal cases. It would seem therefore that not so much has been gained by the use of antitoxin as has been promised. In fact we might be justified in saying that the practice of medicine is not more certainly curative in the disease in question today than it was nine years ago. And yet, in the face of these figures, if a single child succumbs to this disease while under Christian Science treatment, more often than not testimony will be offered, if the case is brought into court, that the child might have been spared if a physician had been called and antitoxin administered in season!

Another interesting item bearing upon the so-called efficacy of "preventive medicine," clipped from the editorial columns of the *Philadelphia Public Ledger*, is as follows:—

The statistics brought forward in the weekly reports of the United States public health service with regard to sickness in the army are not reassuring. For the calendar year 1914 the average daily number of disabled persons per thousand in the army, by the reports of the surgeon-general, was 23.7. Figures collected from about two hundred labor unions in a bulletin of the New York department of labor give 12.6 per thousand as the average for 132 days of those in industrial employment. The discrepancy is especially perturbing in view of the fact that the men in the army are carefully selected for their physical condition and those who are persistently unwell are excluded. To the ubiquitous official investigator a new field of research apparently suggests itself through the comparative tabulation.

When we stop to consider that the men in the army not only are "selected for their physical condition," but also are subject to the administration of "preventive medicine" in the form of serum treatment, the contrast becomes more striking. Not only is a new field of research opened to the "ubiquitous official investigator," but there also is raised a serious question as to the wisdom of enacting laws which would place the health of the people as a whole entirely in the hands of those who apparently have nothing more certain to offer than is indicated by these statistics.

Is it any wonder the sick and the helpless still echo the cry, "Is there no balm in Gilead; is there no physician there?" And the answer must be in the negative until mortal mind, wearied and despairing, turns from the material to the spiritual, from the experimental to the absolute,—to the truth that "the human mind alone suffers, is sick, and that the divine Mind alone heals" (Science and Health, p. 270). Christian Science is both preventive and curative of disease, as its hosts of adherents are daily and hourly proving for themselves and others, and no serum or antitoxin can ever equal in efficacy the omnipotence of Truth in the healing of every phase of sickness and sin.

ARCHIBALD MCLELLAN.

Enlarged Patriotism

IT should not seem surprising if out of the present world struggle there comes an enlarged sense of patriotism, an ideal vast enough to include all men and nations in the purpose to establish righteousness with its attendant harmony the world over. All reforms must of course begin with the individual, but if they are genuine they will quickly extend, just as the radiation of light dispels darkness.

When the master Christian first sent out his disciples to preach the gospel and heal the sick, he bade them confine their ministrations to the "lost sheep of the house of Israel," and this not because his sympathies were not large enough to embrace all humanity, but doubtless because his followers had not yet risen above the narrowing tendencies, political and religious, which inhere in the belief in one's own country. This was much in evidence when, in answer to the sorrowful appeal of the Syrophenician woman, they said to Jesus, "Send her away." It even seemed for a moment as if he too was touched by racial feeling, but in quick response to the faith that would not be denied, came the reflection of the Love that knows not race nor clime, and after Jesus' resurrection his command to his followers was, "Go ye . . . and teach all nations."

Christian Scientists all desire to be obedient to the divine will, and it is simply astonishing to see how Mrs. Eddy's teachings sweep aside the artificial distinctions set up by mortal mind, even while showing us that in order to obey we must first understand God, then ourselves and others. On page 340 of Science and Health we are told that "one infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars." Christian Science does not teach that indifference to the welfare of one's own country is a virtue. On the contrary it makes a demand for the most

Digitized by Google

exalted patriotism, springing from the recognition of divine law as binding upon all men and unceasingly operative.

The student of Christian Science knows that nothing less than deep spirituality can make one a real patriot. After the apostle Peter had risen above his fear of priestly power he boldly proclaimed his loyalty to Christ, which means loyalty to the truth that destroys both sickness and sin. Later we find him going to the house of Cornelius, a Roman centurion, and there renouncing all racial prejudice while declaring that "God is no respecter of persons: but in every nation he that feareth him, and worketh righteousness, is accepted with him."

Again we find Paul with his shipwrecked companions on the island of Melita, where, he says, "the barbarous people showed us no little kindness." Although others were suffering from the perils of the sea, besides the cold and the rain, Paul's heart was aglow with divine Love, so that even the viper's sting did not harm him and he was ready to enter upon the work of healing the sick, doubtless thankful that there were no restrictive laws to hinder him, as there had been in Jerusalem. It is good to dwell upon the gratitude of these simple islanders, who in return for their healing honored Paul greatly, and loaded him and his companions with "such things as were necessary."

If we would linger over that enlarging sense of patriotism which seeks in every land to find "God's country," we have but to read the greetings of the apostles to the people of other nations where they sojourned betimes. Paul tells the Romans that the truth taught by Christ Jesus is to be "made known to all nations for the obedience of faith." To the Corinthians he says, "My love be with you all in Christ Jesus." While in Rome he sends greetings to the Colossians from "the saints . . . of Cæsar's household."

Here in America, while we rejoice that a large measure of freedom lays deep and sure the foundations of patriotism, we should remember that the redeemed are from "all nations, and kindreds, and people, and tongues," coming up indeed out of great tribulation, but being purified and made thereby fit for the service of God and humanity.

ANNIE M. KNOTT.

Suppression Is Not Cure

REFORMERS of various kinds, religious, social, political, or economic, frequently make the mistake of supposing that the suppression of evils is their cure. The outward evidences of evil having been driven from the field, the assumption has been in these cases that the evils themselves have disappeared. In practice this method has only made the belief of evil more subtle. Merely to send evil into hiding through the agency of fear, actually results in postponing the final, necessary destruction of it. In the mean time evil tends to assume new forms, designed to baffle pursuit. Therefore to suppress outward evidences of sin, and yet leave sin itself untouched, is to perform a doubtful service for mankind, or rather no service at all.

To cover over the evidences of disease instead of healing it, is to expose the patient to an outbreak in some other quarter. To store up in consciousness some grievance, even though this may seem justified according to human reasoning, is to pave the way for some latent trouble which may burst forth in malignant mental, moral, or physical conditions. Many a so-called incurable condition has arisen from this tendency of the human mind to retain in secret the evil thoughts which ought to come to the surface for extinction. Individuals should have the moral courage to face bravely all forms of false thinking and to destroy them before they have a chance to take root in consciousness and become settled habits. The attempt to force an outward peace upon a discordant organization or upon the world at large, before the seeds of fratricide latent in human consciousness have been uncovered and their destruction has been undertaken, merely results in suppressing tendencies which must eventually burst forth in some more subtle form.

The clamor for "peace, peace; when there is no peace," proceeds from a desire for ease in matter, in error; from an abhorrence, on the part of the flesh, of being disturbed. The evil thinker cries out, "Let us alone; what have we to do with thee, thou Jesus of Nazareth?" The basis of all such cries for a false ease in matter is to be found in the belief that life is resident in matter. This belief is opposed to the understanding that God is the Life of man. Truth will not let error remain at peace. Truth is constantly disturbing false beliefs, and moving them off. Truth and error will never be at ease with each other; they can never proclaim a mutual peace. Not even an armistice can be concluded between them. It is a fight to the annihilation of the error.

On page 450 of Science and Health Mrs. Eddy writes, "The Christian Scientist has enlisted to lessen evil, disease, and death; and he will overcome them by understanding their nothingness and the allness of God, or good." The sooner the spiritual warrior appreciates this fact, the sooner will he be satisfied to keep his sword unsheathed and ready for action. On the front page of the *Christian Science Sentinel* are emblazoned Jesus' words, "What I say unto you I say unto all, Watch." It is better to be on the alert and prepared for action, so as to forestall error, than it is to allow one's self to be attacked in sleep and be obliged to pass through the terrible experiences of the inevitable awakening.

It happens not infrequently that the spiritual warrior is surprised in a moment of weakness; though struggling loyally with the weapons at his command, nevertheless he is observed to be fighting at a disadvantage. He may even be wounded because fear has momentarily lowered his shield of faith and exposed him to the thrust of the enemy. What would be the right conduct on the part of a good comrade at such a crisis, —to stand aside and denounce the struggling one, because of the wounds inflicted by mortal mind and made manifest as sin and sickness? to act the Levite, or the Samaritan? Loyalty to Truth involves loyalty to those fighting in the ranks of Truth. Following the "good shepherd" implies readiness to find the lost sheep, to save the straying lambs. Therefore the loyal Christian Scientist not only stands ready to correct his own faults, but also holds out a helping hand to those whom the carnal mind seems temporarily to have disabled, — knowing full well that suppression is not cure.

WILLIAM D. MCCRACKAN.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services (during July and August): 10:45 a.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston Street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk Streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon Street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

Digitized by Google

CAIRO, ILL.—Plans for a Christian Science church are proceeding, and the edifice may be erected before the end of the year on lots recently purchased by the trustees at Twenty-sixth Street and Washington Avenue. The building probably will be arranged to seat between two and three hundred persons. The lots on which the building will stand and which were purchased for a consideration of eighteen hundred dollars are 95 feet on the south side of Twenty-sixth Street, with a frontage of 50 feet on the west side of Washington Avenue.

Cairo Bulletin.

MINNEAPOLIS, MINN.—Fourth Church of Christ, Scientist, which was organized about a year ago, has outgrown its present quarters and will hold its Sunday services [beginning April 23] in the New Franklin Theater, 1021 East Franklin Avenue, and its Wednesday evening meetings in the Oster Building, 1035 East Franklin Avenue.

Minneapolis Tribune.

NEWCASTLE, IND.—The Christian Science Society of Newcastle has purchased land and will probably erect a church before the end of this season. The lot has a frontage of 105 feet on Indiana Avenue, between Twelfth and Main Streets, and a depth of 118 feet. The consideration for the lot is stated to be thirty-five hundred dollars.

Newcastle Times.

PAINESVILLE, OHIO.—Plans are ready for the new Christian Science church to be built on the site of the structure used for several years by the Christian Scientists. This site occupies a commanding position on the park and is just north of City Hall.—*Painesville Republican.*

LANCASTER, N. H.—The Christian Science Society of Lancaster has arranged for remodeling the Unitarian church, which recently came into its possession. It is planned to expend considerable money on the alterations, and work will begin at an early date.—*Lancaster Democrat.*

❖ ❖ ❖

The Lectures

Lecture Arrangements

In accordance with Sections 2, 3, and 4 of Article XXXII of the Manual of The Mother Church, all invitations to the board of lectureship must be initiated by the church or society desiring to give the lecture. The board of lectureship can initiate nothing, and cannot for that reason be directed by a central bureau. Consequently the board does not keep a record of the whereabouts of its members and can give no information on that subject. Its individual members, however, are receptive to invitations and hold themselves in readiness to respond to calls that originate with the churches and societies advertised in *The Christian Science Journal*. Such invitations, therefore, should be addressed directly to the lecturer desired, and to his address. The right to initiate lecture arrangements is so vital to the life of the church that it never should be vacated or abrogated. The true spirit of democracy, however, guarantees the right of a church to delegate that authority, under certain restrictions, to a board of directors acting for the membership, to a lecture committee, or to a central committee arranging a joint lecture for two or more churches in the same city, without in the least impairing its sovereign rights.

The initial step in arranging for a lecture, whether taken by the membership as a whole or by some delegated authority, is to choose a lecturer. The education and training of a Christian Scientist turn his thoughts directly to divine guidance. He recognizes a local problem that needs to be healed, and while his human judgment may err in the selection of the right messenger for that time and problem, by giving scope to the spontaneity of divine action he has started aright from Principle.

There is a right time to begin in the selection of a lecturer, and that is directly after the announcement of the annual appointments. The reason is obvious, as one may observe the opportunity it affords in the orderly routing of tours and the consequent saving in traveling expenses. Furthermore, a lecturer selected from the operation of Principle and at the right time, can, by the operation of the same law, invariably accept the invitation. When that mutual consideration and activity is continued in all subsequent arrangements, it will be found comparatively easy to adjust the selection of a date to meet the local needs. Such a system of choosing lecturers and arranging dates is the only feasible method for giving full scope to the spontaneity of divine action. Actual experience is proving more and more each year that it is increasingly effective. Therein is observed its scientific aspect, and it carries out fully the provisions of Section 2 of Article XXXII of the Manual.

Without doubt it is becoming increasingly difficult in some centers to provide for the ever-growing public interest in Christian Science. This is particularly apparent in regard to lectures, and it is evident that in many places Christian Scientists must individually do more to meet this difficulty. Possibly we as church-members need carefully to consider our position and duty. Though we may belong to this or that Christian Science church, we are at every lecture the hosts of the occasion. With all the other Christian Scientists we have come there primarily to serve, for we have so enlisted in this movement. We should remember this, especially when audiences are overflowing and we are tempted to attend the same lecture upon successive occasions, irrespective of conditions.

There is a public feeling more or less widespread and growing, to the effect that it is useless in large cities for the outsider to attempt to go to a Christian Science lecture, because the Christian Scientists themselves fill the hall at an early hour, regardless of the invitations they have given to the public. It is desirable that the Christian Scientists, as the hosts, should attend the lecture, but it is not desirable that they should do so to the exclusion of those guests who are not Christian Scientists and for whom the lecture is primarily given. When confronted by such a problem, the Christian Scientist does not forget that whatever is right to do can always be done, and in the right way.

Now it is obvious that a difficulty so serious, and involving the great body of Scientists in any given center, cannot be met by some action on the part of church officers or by any rules they may make. It demands individual attention and can be taken care of only through individual demonstration. It is well to remember that after an audience is assembled a request that Christian Scientists who are seated should give their places to others who are outside, is more or less disquieting, sometimes confusing, often futile, and may be utterly inconsiderate and unjust. Frequently those outside are not even asking to come in. Often as not they also are Christian Scientists, who came late purposely upon the chance that there might be vacant seats. When through such a request they file in and take the seats of those who perhaps with much difficulty and sacrifice came early, the spectacle approaches the ludicrous. To ask Scientists to stay away from the lectures is so clearly the wrong way, from the standpoint of metaphysics, that to have it work disastrously when tried should not appear strange. What is primarily a matter

Digitized by Google

physical point cannot be met otherwise than by Christian Science; and if it be so met, then, and then only, are visible ways and means of overcoming the difficulty revealed and made available.

Perhaps we have not been fully awake to our ability to provide more church buildings, so that frequent lectures in local districts could be given, as well as adequate accommodations made for our Sunday and Wednesday services. Community lectures, arranged by the joint action of the churches in any one city, have worked well thus far, especially when the Christian Scientists attend the lecture only in their own locality, and do not go from place to place, so as to fill up the halls to the exclusion of people living in those localities. If the regular congregation in any locality is sufficiently large to fill the hall, the lecture may be repeated a sufficient number of times to assure the stranger that he will find ample welcome and accommodation. Lectures delivered on weekday afternoons, and briefer ones given during the noon hour in business centers, reach many who would not otherwise be in a position to attend. These methods are presented on the supposition that the best results may be obtained in the smaller halls.

Mrs. Eddy gave to the world an infinite Science. In historical importance her discovery is second only to the profound spiritual events constituting and involved in the dawn of the Christian era. This Science is founded upon infinite Principle, and its destiny is commensurate with its fundamental nature. Therefore we need not be surprised at these demands upon us, for the prophecy of Isaiah is being fulfilled before our very eyes: "And it shall come to pass in the last days, that the mountain of the Lord's house shall be established in the top of the mountains, and shall be exalted above the hills; and all nations shall flow unto it."

The board of lectureship issues a circular designed to answer all questions concerning lecture arrangements, and thus to avoid unnecessary correspondence with the board. These instructions are not intended to be arbitrary. They are purely recommendatory,—the outgrowth of experience. The circulars for the ensuing year have already been mailed to the clerks of all churches and societies advertised in *The Christian Science Journal*, with the request that they be distributed to the church officers. Attention is particularly called to the necessity of promptly sending to the Editorial Department of the *Sentinel* full details of the arrangements for the lecture as soon as they are completed, if it is desired that the notice shall appear at the proper time under the heading "Lectures to be Delivered;" and later, a written report or a newspaper clipping giving the remarks of the person who introduces the lecturer. While space limits will not permit the publication of all or even a majority of these notices, the representation will be made as general as possible.

BLISS KNAPP,
Secretary to the Board of Lectureship.

✧

University of Minnesota, Minneapolis, Minn.

Bicknell Young delivered a lecture on Christian Science for the Christian Science Society of the University of Minnesota in Folwell Hall. He was introduced by Prof. Ernest G. Lorenzen, who said in part:—

It is the duty of university students and teachers in particular to be constant searchers for the truth that shall make this world a better place to live in and its inhabitants a more perfect and happier people. The insufficiency of mere intellectual truth, so called, to accomplish this result is admitted by all thinking persons; and if any proof were needed, Europe at the present time would furnish the most conclusive instance. There is but one truth that can save mankind from the conditions in which it has found itself since the beginning of recorded history, and that is the truth which Jesus taught, the truth referred to in the eighth chapter of the gospel according to St. John: "Ye shall know the truth, and the truth shall make you free." This truth implies a correct understanding of God and His creation.

Unfortunately for the progress of the world, the true meaning of our Master's teaching was lost early, and was not discovered until 1866. Thanks to Mrs. Eddy and to her wonderful book, "Science and Health with Key to the Scriptures," the spiritual interpretation of the Bible and the true import of the teaching, practice, and life of our great Exemplar, Jesus the Christ, may now be comprehended by all who are eager to learn. The understanding thus gained results today, as it has always done, in the banishment of poverty, sin, and disease, in the destruction of all discordant conditions, and in the reign of harmony, peace, joy, and good will among men.—*Correspondence.*

✧

Keokuk, Iowa

A lecture on Christian Science was given in the Elks club room by Clarence W. Chadwick. He was introduced by E. C. Weisman, who said:—

Although I am not a member of the Christian Science church and my knowledge of Christian Science is decidedly limited, I know that it makes no claim to be based upon anything other than the pure, complete religion taught, lived, and demonstrated by Jesus Christ. It is a known fact that Christian Science has made more Bible students than any other movement of modern times. It is teaching people all over the world to study the Scriptures with interest and understanding, and with the purpose of making practical application of them in every-day life. The result of this applied truth is shown daily by the many thousands of testimonies of wonderful healings and other benefits received. The purely constructive character of Christian Science should recommend it to impartial observers and deep thinkers.—*The Gate City.*

✧

Seattle, Wash.

Dr. Francis J. Fluno, who delivered a lecture on Christian Science for First Church of Christ, Scientist, in the Moore Theater, was introduced by Arthur R. Priest, dean of men in the University of Washington, who said in part:—

When the man who had been born blind had his sight restored to him at the pool of Siloam, the Pharisees began to ply him with questions. Finally he said to them, "One thing I know, that, whereas I was blind, now I see." The Pharisees with all their questioning and with all their guile could not shake his confident faith, because he knew that he had been healed. He had put Jesus to a test that convinced him more than could all the theories of his questioners.

So today the basic truths of Christianity are being put to the test, and men and women are learning through the teachings of Christian Science that sin and sickness are not God-given and therefore are not real. Men and women who have been freed from long-standing affliction of one type or another are testifying today, "One thing we know, that, whereas we were sick and sinning, now we are well." Modern criticism with all its learning is powerless. It may point out to these men and women the impossibility of their healing; but they are healed, and they are grateful for their healing and ready and eager to give credit to the truth that brought them relief. The presence of this audience here this afternoon is silent proof of the efficacy of Christian Science.—*Correspondence.*

Testimonies of Healing

Christian Science came to me at a time when I was greatly in need of spiritual succor, for I was indeed far away from God. I did not seek it because of any physical disability, but accepted it as a religion, because I believed it was right, and because I was tired of sin and of living the life of a miserable outcast, since to my mind that is what I was. When one believes in God other than as a God of love, when he believes in a vengeful God who sends failures, sickness, and misery as punishment, he is far away from the true God. But I thank God for Christian Science; it has taught me that He is ever present and just, and knows no evil,—no sin, sickness, or death.

I was living in darkness and was on the most intimate terms with sin when the first ray of light became visible to me. I used profanity of the most depraved kind and was an inveterate smoker. Drinking was also on my list of faults, and was the evil that was most reluctant to leave me; but I am indeed happy to state that by the persistent and conscientious study of Christian Science and the Bible these habits, as well as dishonesty, have gone completely out of my life.

I want to tell of another great healing which has come to me through the knowledge of God as the one and only power, —that of a deep-grown belief in the power of hypnotism as a cure of disease and for other purposes. While I had accepted Christian Science as a religion, I did not fully agree with Mrs. Eddy as regards her thought of hypnotism, having become imbued with the notion that possibly she did not fully comprehend the scientific quality of the subject, and therefore underrated its value.

This condition of thought naturally brought about dire results. It became necessary for me to consult a Christian Science practitioner as to my mental as well as physical condition, for I was having such severe attacks of pain in my head that it seemed as if I would become mentally unbalanced. It was made very clear to me by the practitioner that I could not serve two masters, that there was no other power besides God, and that hypnotism was erroneous malpractice and not in accordance with Christian Science; that if I loved God I could not truly believe in any other power. It is needless to say that I was awakened. The barrier that had been retarding my progress was revealed, and it is with a grateful heart I say that from then on the trouble with my head ceased and my progress has been most rapid.

Words are inadequate to express my great love for Christian Science and Mrs. Eddy, and for the knowledge of God as Love. It is with an overflowing heart that I now acknowledge God as supreme—the only power that is or can be.

JESSE E. SCHOONMAKER, White Plains, N. Y.

✧

When Christian Science found me, evil was to me the predominating power, the only sure thing, and the name of God was an offense. I was without hope; discouragement greeted me in the morning and my daily work was a battle. I attended the Christian Science church at intervals, also read Science and Health, but with the conviction that some day I would detect a flaw in it. I am thankful to say that my search was in vain.

It was not until after I was healed of a severe case of stomach trouble and nervousness, to which I had been subject from childhood and which had increased greatly in strength and perseverance during the time I was searching for flaws in Christian Science, that I was willing to recognize God as the only power, the giver of all good, and evil as nothingness. My healing was instantaneous. When I called up a Christian Science practitioner I had no hope of ever seeing another day, and the last thought I had before falling unconscious was a good-by to everybody; nevertheless in twenty minutes I awakened to find myself like one new-born. I was free physically and my thoughts were entirely changed. That was two and a half years ago, and there has been no return of the old painful condition.

The practitioner has lovingly responded to my call for help when obstacles of different types have barred the way for me on my up-hill climb, and I have been taught to search for God, good. Each day now gives proof of the ever present love and power of our Father-Mother God and of our limitless supply. Fear of lack and failure has vanished, and I have learned to love my neighbor and see him as he really is, the child of God. I have felt the truth of Mrs. Eddy's words. "To those leaning on the sustaining infinite, today is big with blessings" (Science and Health, Pref., p. vii). I am surely grateful for all the blessings I have received in Christian Science, and hope I may be allowed to help some other struggler out of the pit of darkness into the light of Truth. I am daily gaining a better understanding of God as Life, Truth, and Love, and am trying to live in accordance with the teachings of Christian Science.

ANNA M. FREDERICK, Chicago, Ill.

✧

I wish to give this testimony to the healing and regenerating power of Christian Science. With the loving help of a practitioner our little girl was healed of acute lung trouble inside of twenty-four hours. To me the beautiful thing in Christian Science healing is that there need be no thought of slow convalescence, as in the old way. I am indeed thankful to God, and grateful to Mrs. Eddy for showing us the way in this truth that does heal, and for all that Christian Science has done and is doing for me.

HETTIE V. TURNER, Santa Ana, Cal.

✧

[Translated from the German]

It is with a sense of deep gratitude that I relate how I was healed through reading the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. In August, 1913, I became very ill. According to the statement of the physician whom I called in, it was a case of heart trouble. I left no means of relief untried and after a few months consulted a "nature-cure" physician. There was an improvement at first, but three months later I had a stroke of paralysis, and from that moment things went on from bad to worse. The attacks of heart trouble occurred once in two or three days, then daily. I lost the faculty of speech and felt that the end was near. Then I settled my accounts with life, made my will, and took the holy communion.

It was at this juncture that a copy of *Der Herold der Christian Science* was received from a friend, and disregarding the physician's advice that I avoid all reading, I looked the periodical over. I had never heard of Christian Science until then, but during the reading my attention was caught by the name of the text-book, and I asked my friend to let me have it. I do not believe I have ever read anything with greater interest than this book by our beloved Mrs. Eddy. The day after I had my first glimpses of it a thorough change began to take place within me, and I told an acquaintance who called that I expected to arise and take up my work when I had read the book through. Although a few made fun of me, I did not allow this to affect me. When three days later I came to the end of the book, I got up and, as I had foretold, attended to my occupation in the garden, where I did work

Digitized by Google

which filled some around me with surprise, while it caused others to marvel.

Truth has not only helped me in a physical way, but through the spiritual uplift which I have experienced has made of me a new man. The truth as taught by Mrs. Eddy has awakened me to new life. It often seems to me like a dream that after an illness of six months, when I was near the confines of death, I should have been thus raised to health within a few days. I thank God from the depths of my heart for the help received, and I am equally grateful to our dear Leader, Mrs. Eddy, for Christian Science.

GUSTAV FRITZ, Stuttgart, Germany.

✧

The greatest of all the blessings that have come to me in Christian Science is the understanding of the Bible, which was before unknown to me. On the first visit of a Christian Science practitioner, I was told that I should always study the Bible in connection with Science and Health, and I am so grateful for that. Christian Science has done much for me; indeed all my problems are solved by realizing the truth as revealed to this age through Mrs. Eddy.

I turned to Christian Science in great tribulation, after having been in the hospital, where I underwent a major operation that was supposed to cure me, but instead I became steadily worse and in a year was a nervous wreck. The suffering was so great that I could not bear to see the sunshine or hear sounds, and for months was unable to walk on the street; but with the patient work of a practitioner, in three months I could go to her home. The complete healing was slow, but when tempted to be discouraged I would look back, and always found I had gained in some way. I took treatment four years before I could go along by myself. The *Monitor* was my daily cheer, for the Christian Science article on the Home Forum page always met a need and helped to uncover something in me to be destroyed. I am sure there are none who would be without the *Monitor* if they knew how helpful it is. I cannot express in words my gratitude for all our literature.

During my slow healing there was financial distress in my home. I however always desired to pay my debts promptly and fully, and by relying on divine Love I was able to pay for my treatments and take the literature. This testimony is sent with deepest gratitude to our dear Leader, Mrs. Eddy, for showing me the way to the Bible, and with the hope that it will bring encouragement to some one going along slowly but surely. I was often told my way would grow brighter unto the perfect day, and it surely has.

LILLIAN FRANK, San Francisco, Cal.

✧

It is about five years since I was attracted to Christian Science, and I wish to put on record my gratitude to Mrs. Eddy for having made plain to our erring feet the way that leadeth to everlasting Life. A dear friend, after medical science had exhausted all its resources in vain, was called back to life and health and strength after a month's Christian Science treatment, and this impelled me to find out for myself what Christian Science taught. At first I could not understand even the most elementary statements of Science and Health, but I continued to study it with an honest desire to find the truth, if truth it contained.

Gradually things became clearer to me, especially the chapter on Prayer, and I began to put into practice the little I could grasp. I had worn spectacles for over forty years and never ventured out of the house without them, but when I learned that sight, spiritually understood, is a faculty of Mind, I discarded the glasses at once and have never worn them since. I am perfectly comfortable without them, and though not what is called long-sighted I can always see anything which it is important for me to see. As I have progressed in understanding, and more especially since I have had the inestimable help of class instruction, I have been able to demonstrate the truth as it is taught in Christian Science by the healing of various ailments in my family and household and the establishment of peace and harmony where friction and worry had been the usual conditions. A hand badly bitten by a horse, a severe burn, an apparently serious case of sunstroke, as well as broken wind in a horse, were all quickly cured when they were recognized as only erroneous beliefs. Since the declaration of war in 1914 the question of supply has become pressing, but always a way out has been shown me when to mortal mind there was "no thoroughfare," and the supply is at all times sufficient for my actual need.

For this help I am most grateful; but far more precious is the spiritual uplift, the peace "which passeth all understanding" that comes with the realization of the presence here and now of divine Love. For these and all His other blessings I humbly give thanks to God, and I hope that some weary traveler reading this testimony may be induced to "taste and see that the Lord is good."

KATHARINE BALDWIN, Lingfield, England.

✧

I wish to testify to the benefits I have received from the healing power of Truth. Four years ago, when I first took up the study of Christian Science, the drink and tobacco habits left me through the reading of the literature. I have been healed of influenza accompanied by the fear of acute lung trouble, of stomach disorder, the effects of poison-ivy, and also of gum trouble. The dentist told me if the gums did not heal I would lose all my teeth. While attending a Christian Science lecture I was instantaneously healed of an ulcerated tooth. For these benefits and all the blessings I am daily receiving through Christian Science, I am indeed very grateful.—HERBERT A. HALL, Pittsburgh, Pa.

✧

In August, 1913, a bee expert was helping me to transfer some bees from a skep into a frame hive. We had completed this part of the work and I had taken off my veil, when a bee stung me on the forehead. In a few minutes I was hardly able to breathe and felt very ill, but I staggered into the house and asked my wife to help me. I knew no more for about an hour and a quarter. It was over two hours before I was able to think for myself, and four and a half hours before I felt quite well again. I had a thorough night's rest and arose the next morning as though nothing unusual had happened.

Words can never express my thankfulness to God, and my gratitude to our Leader, Mrs. Eddy, who has enabled us through the teachings of Science and Health to have a clearer understanding of the words of Jesus, "Ye shall know the truth, and the truth shall make you free;" also, "I am the resurrection, and the life: he that believeth in me, though he were dead, yet shall he live." I am also deeply grateful to my dear wife and daughter, both of whom stood firm and fought bravely until the victory was won, and Life, Truth, and Love realized to be the only power. My earnest desire is that I may grow to live more worthy to be called a Christian Scientist.—JOSEPH HOWARD, London N.W., England.

My gratitude to God for my husband's healing is great, more than I can find words to express. On Saturday, Aug. 23, 1913, we were a happy party of five, watching and helping a bee expert at work with our hive of bees. When nearly all was finished my husband came into the house and asked me

Digitized by Google

to treat him. I saw that he needed help and got him on to a couch; then I called my daughter to come quickly. She sat down beside him and together we worked as we are taught in Christian Science. He was quite unconscious and his body very cold. He dropped his head and hands lifelessly and stopped breathing. I thought he was gone, but my daughter, noticing the same condition, said with emphasis, "He is not gone," and called to him, but he remained the same. I said, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). We knew that God is the only Life and that man, being the reflection of that Life, could not die. We went on working for a few minutes, and then my daughter said, "Thank God, he breathes." After a little while we made him more comfortable on the couch, but he seemed very lifeless and was still unconscious. As we stood by him my daughter said that we must not look at the evidence of the senses, so she turned and walked toward the window, still working to know the truth. Then we sang the hymn "All power is given unto our Lord" and two others, the last being one of my husband's favorites, "In heavenly love abiding."

After this my husband said he was all right. My daughter read to him from Science and Health for some time, and then we agreed to go to the dining-room. My husband said he would come with us, so we helped him, and he sat in an arm chair and took some drink, but he did not eat anything. After that we read the Lesson-Sermon for the week and sang some hymns, in which he joined. At a quarter past nine he walked up-stairs to go to bed, and my daughter read to him from "Unity of Good" while I went out. He had a good night's rest and was up in the morning as usual, quite himself.

For this demonstration of the power of God, Truth and Love, I am most grateful. Words cannot tell how much we owe to our dear Leader, Mrs. Eddy, for giving us this truth that makes us free.—Emily Howard.

✧

I am glad to tell of some of the benefits derived from four years' study of Christian Science. The unfoldment has been gradual, and has not included sudden illuminations. I am very grateful for the protection, guidance, and comfort of the light I have had. The silent, unlabored energy of Spirit has purified desire, lessened fear, and purged motives. From the chaos of this so-called life the facts of existence are emerging, for I am learning that Spirit is the only substance, Love the only force, Truth the only reality. Turning promptly, resolutely, courageously to the light, destroys the false claims of mortal mind. I am grateful for the admonition in Science and Health (p. 407), "Let the perfect model be present in your thoughts instead of its demoralized opposite."

Many times I have proven that God is a present help in time of trouble. Soon after beginning the study of Science my mother called me down-stairs one night during a severe storm. While reading in the Bible my thought was arrested by the words from Isaiah, "My people shall dwell in a peaceable habitation, and in sure dwellings, and in quiet resting places; when it shall hail, coming down on the forest." The application of the lines was realized, and peace reigned in the home. On another occasion, as I was about to read a paper before a club, I found myself the victim of stage-fright. By promptly denying the reality of matter and mortal mind, and affirming the existence of the one Mind, and good as the only presence, I was able to read my article. The delivery was complimented by friends, and also my lack of self-consciousness.

Recently, as I stepped from beside a table to a desk chair, it turned, throwing me on to my knees on the floor. I limped for three steps; but almost without conscious argument I realized the truth of being and the next step was painless. Error whispered that it was not anything, anyway. That night, however, on removing my shoe there was a discolored, swollen place on the foot. I declared, "Well, it was something." A week or so later I wondered why the discoloration and swelling did not disappear as the pain had; then I realized that mortal mind had been holding the error as real, and with this uncovering the foot became normal. Again, while traveling one summer a younger sister had her thumb crushed between the door and the casing of a sleeping-car. She was suffering intensely when another sister brought her to our section and asked me to read to her from Science and Health while she did the mental work. The suggestion came that I did not know what to read, but immediately it was reversed by declaring the existence of only one Mind. I then opened the book at page 397, and read the "remedy for accidents." So quickly was the situation controlled that a brother in the same car did not know of the accident until the following winter.

One evening in the summer of 1914, while camping with some friends, we went down the lake in a launch to get supplies. As we went along I was trying to realize the all-pervading presence of God, infinite harmony, as I had asked for treatment from a practitioner. On our return we were in the path of the search-light of an approaching steamer. Human reason and the physical senses declared the boat to be still distant, when it loomed up directly over us, and in the confusion of the moment the launch was turned squarely across the path of the steamer. The steamer swung around at almost a right angle, so that instead of its riding us down our launch slightly damaged its bow, and thus a more serious accident was prevented. As the boats crashed, I found myself declaring the harmony and allness of God, and to me the experience was an exalting, glorious proof of His love. There was no sense of shock, my consciousness being filled with a sense of gratitude for the deliverance, and in my joy, as in my times of need, I found I desired to read Science and Health.

Christian Science has given me a reasonable, satisfying explanation of life, a Bible I can use, and a God I can know. I am indeed deeply grateful for the knowledge of "the secret place of the most High."

Jeannette E. Maltby, White Horse, Yukon, Canada.

✧

I wish to add my testimony to the many others given in gratitude for blessings that have come through Christian Science. I did not take up this study for the healing, but with a desire for a better understanding of God and man's relation to Him, and I have found a God of love, "who forgiveth all thine iniquities; who healeth all thy diseases."

I was instantaneously healed of sciatic rheumatism through absent treatment. The attack came on suddenly, and the pain was so severe that it was impossible to help myself. While a Christian Science practitioner was giving me treatment I went to sleep for about ten minutes, and on awaking the pain was gone. I arose and walked to a chair, then asked for something to eat, as I had not been able to retain food. This was a complete healing, for the following day I was about the house as usual. I was healed of deafness after having been deprived of hearing for many months. Absent treatment was given me for three weeks, when suddenly the hearing was restored as I sat reading after returning from one of our church services. I could hear the ticking of the clock across the room, and my heart went out in thanks-

Digitized by Google

to God for His goodness, and in gratitude to our dear Leader for this beautiful truth. I am grateful not only for the physical healing, but even more for the spiritual understanding and the proof that our Father is abundantly able to supply all our needs.—Sarah A. Burr, Seattle, Wash.

✧

I would probably have studied Christian Science sooner had I thought I needed it physically, for I did not then recognize it as anything but a means of healing disease. My mother had been healed of a fever about twenty years before, and I thoroughly believed in the healing efficacy of Christian Science. I did not, however, understand it, for the very good reason that I had not taken the trouble to read Science and Health or any other Christian Science literature.

When my little girl was old enough to go to Sunday school, I saw very clearly that I must decide whether she should have Christian Science teaching or go to another Sunday school of which I had been a member. By this time I had gained enough understanding of Science to know that I would not be satisfied to have her taught in the old way, so I decided to take up the study of Christian Science in earnest and send her to that Sunday school. It is about seven years now since I began the study of this teaching, and my only regret is that I did not take it up a great deal sooner. It has proved a help in all times of need, restoring harmony in every case, whether physical illness or merely the every-day trials that seem to come to all housekeepers.

I am indeed grateful for the understanding of the one Mind that governs all things harmoniously. Through the application of this Science of Christianity, stomach trouble, coughs, colds, measles, and other minor diseases have been overcome. As a child and young girl I was never considered strong, but now, through my small understanding of the truth that sets one free, I am able to do whatever comes to me to do. I want also to express my appreciation for the Christian Science periodicals, which always come at the right time with helpful thoughts.—Lila V. Strong, Campbell, Cal.

✧

[Translated from the German]

I am indeed grateful for the blessings which I have experienced through Christian Science and would like herewith to testify to that effect. For six years I had been troubled day and night with asthma and a distressing cough. During the summer-time I experienced relief in a measure, followed, however, by an aggravated condition in the winter. The four physicians whom I consulted in succession all diagnosed the trouble as chronic catarrh of the lungs, but their efforts to help me proved inadequate. Upon their advice I went to several health resorts, thereby getting rid of my money though not of my trouble,—indeed it seemed to grow worse. Of course I felt the stress mentally also, especially as we had had several heavy trials in the family.

While in this condition my attention was called to Christian Science through a friend. Treatment was given with much love and patience, and it came to pass that my trouble disappeared, the proof thus being afforded that in God's kingdom there is no such thing as a chronic disease. One of my former physicians told me later that he would never have believed that I could recover strength as I did, for I had been a very sick woman, in fact more so than I myself knew at the time. I am thankful to God for my restoration to health and for the spiritual uplift which I have experienced through Christian Science, also grateful to our beloved Leader, Mrs. Eddy.

Fraülein Marie Riffel, Chur, Kt. Graubünden, Switzerland.

From Our Exchanges

[Rev. Joseph Fort Newton, D.Litt., in *The Christian Commonwealth*]

The author of the epistle to the Hebrews—one of the most subtle and beautiful minds among all the writers of the New Testament—tells us that Christ was made perfect through suffering, and that he was made what he was by the power of an endless life. What is that endless life which by an incredible magic gave to a brief life lived long ago the power not only to endure and increase but to stir and exalt us today as no other power known among men? He himself told us when he said, in that sublime, ineffable prayer at the close of his earthly ministry, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Truly here is a truth which we have not enough considered, one worthy of a long pondering and attuned to all the sweet hopes and memories of this day,—the revealing, redeeming, and constructive power of an endless life.

Manifestly by the endless life is meant something more than extent of time, though there is a grandeur and a terror also in that outlook. That there is no escape from life, no hiding in death; that life will pursue us forever; that there is no rest till we learn to live nobly,—that is a thought to fill us with awe. But mere extent of time, in itself a colorless illusion, has no power except what we bring to it and put into it. In time, it is true, man amasses truth, trains his choices, and learns to beautify his days; but each day brings to us only what we bring to it.

[*The Christian Work*]

If one must choose between so-called orthodoxy and suspicion of other Christians, or so-called heterodoxy and fellowship with other Christians, the day is at hand when hosts in all communions would not hesitate to cast their lot with the latter rather than the former. The church must be Christianized before it can Christianize the world, and the fundamental step in the Christianizing of the church is the scourging out of its portals the suspicion that Christians entertain against one another. It narrows prayer; it lowers the standard of Christian living; it makes the church incompetent to fulfil the task for which Jesus established it and commissioned it. There can be no definite progress until suspicion on the part of one Christian of another is put away as one boldly struggles to put away those sins that are robbing him of communion with God. The poison of suspicion has smitten the church like a scourge.

[Rev. Robert P. Doremus in *The Christian Register*]

Jesus did not wish to discourage the life-builders when he bade them first count the cost. He simply did not want them to follow him under any illusion, thinking the gospel he preached a light and easy gospel, thinking its values came cheaply, thinking the doors of the kingdom of life opened wide without any admission price. It cost to get in and keep in, and he wanted men and women to realize that cost. It had cost him a great deal to be true to his ideals. It had cost him home and kindred. It had cost him friends. It had cost him popularity. He had paid for it in physical hunger and weariness, in discouragement, in a great loneliness of spirit. He was yet to pay more dearly for it still,—with his very life. Yet he saw that it was well worth the building, this tower of a man's character, after the pattern shown on the mount of the spirit, the towering strength of a personality built out of struggles and hopes and faith; that it was even more worth while to have a part in the building of the larger tower, the spiritual building, fit temple for the living God, an ennobled

Digitized by Google

humanity, infinitely worth while. Worth while, yes, but it cost. You will have to pay for your share in this, is what he would say. The building material is costly. Are you willing to pay the price?

Is it not so with all our plans and hopes and wishes, whether for ourselves or others, for our world? We want these things; but do we want them enough to pay for them, pay for them ourselves, make some sacrifice that they may be realities?

[Rev. Henry Kingman, D.D., in *The Biblical World*]

The element in our civilization of today that cheers us most of all, in spite of every appearance to the contrary, is the fast-growing spirit of brotherhood, that will not allow a conscientious man to look coldly or indifferently upon his neighbor's welfare. The demand for justice first of all, and then for something more than justice, in the relations between different classes and between capital and labor, is a part not only of awakening class-consciousness but of an awakening response to the old, old teachings of Jesus. Millions of men in the past have read his story of the good Samaritan with as honest a purpose to be true to his spirit as has any reformer of today; yet how incredibly slow were they to perceive some of its most obvious implications. But in our day the quickened interest in the personality of Jesus has led to a wider and more thoughtful study of his social teaching, and his spirit has gripped men's hearts and consciences in such wise that there is a new vision among them of what the kingdom of God on earth should be, and a new dedication to its service.

[*The Independent*]

The world is becoming, not a group of unrelated and isolated communities, but more and more a single vast community. The brotherhood of man connotes a brotherhood of nations. The brotherhood of man will never be realized so long as each individual feels free to shut himself up within the walls of his own selfish interests and to let his neighbors severely alone. The brotherhood of the world will never be realized so long as each people on the earth feels free to circumscribe its duties and its responsibilities within its own national confines and to let the world go its way.

[Rev. L. George Buchanan in *The Record*]

The church must demand a spiritual ideal, and must supply it largely herself. Symbolically she has always done so; the village church nestling amid the surrounding houses is really beautiful to those who have the eye to see. But the twentieth century wants more than symbolism; it wants the reality as well. Can the church so influence the civic and national life that Christ's ideals will have a real chance of getting home?

[*The Christian Intelligencer*]

The spirit of prayer, aptitude for prayer, should run all through the daily life of the Christian. What a conspicuous factor it was in the life of our divine Lord! And surely if he had need to pray often and much, his disciples had more. Prayer fits into life so grandly and beautifully. In our conscious needs it brings God to us in all-sufficient fulness and helpfulness.

[*Pacific Christian Advocate*]

The world awaits a Christlike interpretation of the gospel. We must not interpret Jesus in terms of East or West, but in terms of world-wide human need. He is God's answer to the heart hunger of universal man. His gospel is that of a heavenly Father whose rains fall upon all with divine impartiality. Jew and Greek, cultured and barbarian, are alike to him.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new French pamphlet, "Foi et Générosité" (Faith and Generosity), has just been issued and is now on sale. This pamphlet contains the following articles: "The Lord Thy Confidence," "The Closed Hand," and "Continuity of Right Thinking."

Christian Science: A Religion of Love (Christian Science: En Kjærlighetens Religion), a lecture by Virgil O. Strickler, has been translated into Norwegian and is now published in pamphlet form with the English and Norwegian versions on opposite pages.

"Law and Work" is the title of a new pamphlet containing the following articles: Love Fulfils Law, The Logic of Christian Science, Undisturbed, God's Law of Adjustment, Authority.

"Christian Science: Man's Dominion over Evil," a lecture by Edward A. Kimball, C.S.D., has been translated into Russian, Norwegian, and modern Greek. Pamphlets in these three languages have been published with the English version opposite the translation and are now on sale at prices of our regular pamphlets as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ARTHUR H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

Digitized by Google

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week; payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

CHRISTIAN SCIENCE: ITS PRINCIPLE AND METHOD. By BICKNELL YOUNG. Printed in French and Swedish.

PRICE, POSTPAID: Single copy 5 cents; twelve copies to one address 55 cents; fifty copies $2; one hundred copies $3.50. Orders for above pamphlets may be assorted as desired.

For table of English, German, Swiss, and French money equivalents, see inside front cover page.

Miscellaneous

A Catalogue of Selected Bibles will be furnished upon application, and quantity rates on other items specified below will be found in the current catalogue in *The Christian Science Journal*.

BIBLES. 01483 x. Clarendon Brevier, heavy-faced, distinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.75.

01440 x. Brevier, light-faced type; self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.50.

Morocco slip case to hold pocket edition of Science and Health, *Quarterly*, and Bible, $1.25.

Two other sizes of slip case listed in the current issue of the *Journal*.

Covered morocco case with handle and purse on outside, $3.50; without purse, $3.25.

01683 x. Large type Bible, 10¾ x 8 inches, bound in Alaska seal. Specially adapted for use of second readers, $9.25.

The Improved Index will be added to any Bible listed in our catalogue for an additional charge of 35 cents. Catalogue No. 22 of selected Bibles will be mailed free upon application.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. 132 pages with index. Paper covered, 15 cents; cloth binding, 85 cents.

THE LIFE OF MARY BAKER EDDY. By Sibyl Wilbur. 424 pages. Cloth, $2. Edition de luxe, $5.

"PERSONAL CONTAGION" and "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Paper cover, 10 cents.

THE MOTHER CHURCH. By Joseph Armstrong. A history of the building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated, 107 pages. Cloth, $1.50.

CHRISTIAN SCIENCE: ITS LEGAL STATUS. By Judge Clifford P. Smith. 128 pages, paper covered, 10 cents.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, $1.15; half morocco, $1.40; full morocco, $2.50; levant, $3.50; pocket edition, size 4⅝ x 6⅝, $3.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission, have been set to music as follows: "The Mother's Evening Prayer," 75 cents; "Christ, My Refuge," 75 cents; "Love," 40 cents; Communion Hymn—"Saw Ye My Saviour?" (Johnson), 50 cents; "Blest Christmas Morn," 27 cents; "O'er Waiting Harpstrings of the Mind," 27 cents; "Shepherd, Show Me How to Go," 27 cents; "Saw Ye My Saviour?" (Root), 27 cents. The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing. 8-inch (mount 12 x 16), $1; 12-inch (mount 15 x 20), $2; 16-inch (mount 21 x 29), $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18 x 24 inches, $5; on India paper without remarque, $3. Smaller reproduction, size 11 x 14 inches, on Japanese vellum, $1. Photogravure post-cards, reproduction of the picture of the Church Edifice and Publishing House, 5 cents.

QUARTERLY COVERS in black morocco, $1.15; with purse, $1.40.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially indexed. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to page four in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for the year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.25; half calf or half morocco, $4.00. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

The use of a steadily increasing amount of wood waste in the manufacture of pulp is indicated by figures compiled by the forest service. Approximately three hundred and thirty thousand cords of waste, with a value of $1,400,000, were utilized by thirty-five of the two hundred pulp and paper-mills of the United States in 1915.

The Canadian pulp industry has, it is stated, had a vigorous growth during the last few years, and the greater portion of its product is marketed in the United States. An average cost of about six dollars and a half the cord, as compared with ten to sixteen dollars the cord which many manufacturers in this country are paying for pulpwood, is the reason given for the growth. It is pointed out that the development of the supplies of spruce in the national forests of the West and in Alaska, together with the abundance of cheap water-power, will eventually attract the paper industry to locate in those regions. Suitable pulp timber can be delivered to desirable mill sites for the next twenty to forty years at prices of about two dollars and a half to four dollars the cord, say experts of the forest service. It is thought that the low price of material and power will more than offset the higher freight rates on the product to the eastern markets.

An attack upon the method of public building construction is being directed against the United States Congress by the combined forces of the treasury department and the American Institute of Architects. The architects deplore the absence of real art, while treasury officials are more concerned about elimination of waste and placing buildings where they are most needed. "Since 1896," says the assistant secretary of the treasury, "not less than $180,000,000 of public money has been wasted in 'pork' on public buildings."

By an order issued June 29, 1915, the secretary divided public buildings into five classes, based on postal receipts. Class A buildings were to be constructed only in cities having first-class post-offices, with annual receipts exceeding $800,000; class B buildings, in cities having from $60,000 to $800,000 postal receipts; class C, postal receipts $15,000 to $60,000, and class D less than $15,000. "We are finishing a building every four days," says the secretary, "and cutting off $4000 to $50,000 on every building, despite the protests of local congressmen. We are putting buildings where we are obliged by the law to put them, but in many cases where they should not be. But we are not wasting as much money on them as the law allows."

The Quebec bridge, which is to span the St. Lawrence River, is about nine miles above Quebec, and will require for its construction about sixty-five thousand tons of steel. The north-shore arm was completed last fall; the south arm is expected to be completed about September, when the bridge will be ready for the floating in and placement of the suspended span, also under construction. This span will be 640 feet long and 88 feet wide, weighing approximately five thousand tons. The floating in of this span and linking it up with the two lateral cantilever spans will complete a structure of monumental proportions, forming a link in the third of Canada's great transcontinental systems. The total cost of this bridge will be not much less than twenty million dollars.

Thorough tests of devices to prevent fish from entering irrigation ditches are to be made by forest service officers, who say that thousands of the trout placed in western streams by the Government perish through being carried into the ditches and washed out on the fields. There are not less than twelve hundred irrigation projects on or near the national forests, and in many places the loss of trout is very heavy. A number of devices for screening the ditches are in use, and while two or three have been found to be fairly effective, most of them are said to be unsatisfactory. It is asserted that this subject presents an excellent opportunity for inventors, since a successful screen will be widely used.

The Fiume paper-mill is the oldest paper-mill in Hungary, and for some time it was the largest on the continent of Europe. It occupies a narrow strip of land over one mile long on both sides of the river Recina. The mill was established in 1824 by private parties. Part of the buildings in use were a Dominican monastery, erected in the fifteenth century, and very little change was made in the original buildings when they became a commercial enterprise. About twelve years ago the descendants of the original founders sold the mill to the Budapest Fatherland Branch for approximately one million two hundred thousand dollars. This concern owns three other mills in the interior.

A writer in the July *American Magazine* says: "Several years ago the Canadian government decided that it wanted the largest telescope in the world, to be set up in the clear air of Vancouver for photographing thousands of stars that had never been photographed before,—stars almost inconceivably distant. . . . A gigantic parabolic mirror—the largest ever made in one piece—was cast in France. It weighed in the rough 4968 pounds and was seventy-three inches in diameter. . . . When it is completed and mounted the telescope will weigh more than five hundred tons."

United States District Judge Hand has sustained the Government's suit against the so-called glucose and starch trust and ordered dissolution of the combine, which, it was alleged, controlled 60 per cent of the business in starch and glucose. The suit was against the Corn Products Refining Company, the National Starch Company, the Novelty Candy Company of St. Louis, and others. The decree, as announced by the court, leaves to the federal trade commission the details of dissolving the combine.

The committee of the Birmingham (England) Municipal Savings Bank, to which reference has previously been made, on receipt of the report from the lord mayor on the progress of his negotiations with respect to the establishment of a municipal savings bank, decided to await a more favorable opportunity to carry out their scheme. The plan was to have the bank open to men and women employed in any factory, shop, or office in the city, and to associations or societies approved by the corporation.

The output of petroleum in the Appalachian field, which includes the areas of oil production in New York, Pennsylvania, West Virginia, Kentucky, and southeastern Ohio, was 22,948 barrels in 1915. The average price of this oil at the wells was $1.55 a barrel, and the total market value was $35,168,973. A total of 5197 wells was completed, of which 296, or 56 per cent, yielded oil, 1254 were classed as gassers, and 1038 were barren.

The Griffin bill, for a retirement system for all civil service employees in the United States postal service, has been favorably reported to the House of Representatives by the post-office committee. It provides that city and rural letter-carriers, railway mail clerks, and others in the postal classified service, who are sixty-five years old and have been twenty-five years in the service, shall be retired on not exceeding six hundred dollars annual pay.

Railroads are among the largest users of water in the country. The current issue of the *Engineering Record* gives the figures of the superintendent of the water department of the Illinois Central Railroad. The daily water consumption is placed at 1,950,000,000 gallons, at a daily expense of $100,000.

A bulletin on cotton production in the United States shows the American cotton crop of 1915, amounting to 11,191,820 equivalent 500-pound bales, to have been the smallest since 1909.

The establishment of bird sanctuaries along the Lincoln Transcontinental Highway is the principal object of the National Bird Sanctuary Association recently incorporated in New York state.

Imports of bananas into the United States amount to more than forty million bunches yearly, creating a commerce amounting to more than one hundred and five million dollars.

The Government of New Zealand is building a five-mile tunnel at a cost of nearly five million dollars, to give close connection between the east and west coasts of South Island.

There are 190,600 automobiles in California, and one half of the receipts from registration fees that is available for highway maintenance yields about one million dollars.

Official figures put Russia's petroleum production last year at about sixty-nine million barrels, a gain of two million barrels in a year.

Gifts aggregating almost three million dollars have been received by the University of Chicago during the past year.

Distributions by life insurance organizations in the United States and Canada amounted to $783,700,000 in 1915.

For the year 1915 the copper smelting in Russia amounted to 29,800 short tons, against 36,480 in 1914.

Vol. XVIII July 8, 1916 No. 45

Spiritual Awakening

SAMUEL GREENWOOD

In reading Science and Health one cannot fail to be impressed with the importance which Mrs. Eddy attaches to the recognition and acknowledgment that error, or evil, is unreal, as the essential correlative of the allness of God. The reason is obvious, for error cannot be overcome so long as it is believed to be true. On page 353 we read, "When we learn that error is not real, we shall be ready for progress."

While mortals are willing enough to admit that error in the abstract is not real, they are not so willing to admit its falsity in the concrete; that is, as expressed in physical man and material law, for matter to them represents the source and substance of their existence. It should be taken into account, however, that it is this so-called physical sense and nothing else through which evil claims to reach mankind, and by which it is believed to be seen and felt, a fact which absolutely separates it from God, and shows it to include and constitute all that makes human salvation necessary. The dominion of material law would leave no escape from mortality, so that Jesus' declaration, "Ye shall know the truth, and the truth shall make you free," points unmistakably to material sense as the enslaving error, and to the spiritual sense of being as the emancipating truth.

Again in Science and Health we read, "The history of error is a dream-narrative;" also: "The five corporeal senses cannot take cognizance of Spirit. They cannot come into His presence, and must dwell in dreamland, until mortals arrive at the understanding that material life, with all its sin, sickness, and death, is an illusion" (pp. 530, 543). Mrs. Eddy's position respecting the unreality of material sense experience is undoubtedly Scriptural, and it is proved to be scientific in the successful treatment of human ills on the basis of Christian Science. Throughout the Bible we find numerous calls to awake from the mortal dream of a life separate from God. Paul says, "It is high time to awake out of sleep;" and again he says, "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light."

Jesus said, "Our friend Lazarus sleepeth; but I go, that I may awake him out of sleep." In other words, Lazarus was bound by his belief in death. Knowing this, and that man's only life is God and cannot die, Jesus awakened him from this dream, this subjection to false sense. To use a simple illustration, the writer dreamed that he was awakened in the night by the noise of an automobile passing the house, and that on going to the window he saw the automobile preceded by a motor-cycle going swiftly along the street. It was bright moonlight, and he watched them for some distance, wondering at their reckless disregard of a certain dangerous place in the road. The scene was startlingly realistic, but on awakening from the dream the utter unreality of the whole thing was at once apparent.

Now, as every one knows, the things that happen in dreamland are purely mythical. No one builds the houses or paves the streets or plants the flowers that appear in dreams. As a matter of fact we know there is nothing there to be seen. The writer did not really hear the automobile or see the moonlit street. What then did hear and see these things? What paints dream pictures so vividly as to be recalled in after hours? Clearly the same mortal sense that takes part in waking dreams and sees these pictures in the daytime. Here the question arises, If the persons and things of one's dreams are not there, is any one there to see them? If such things are not cognizable to real intelligence, can there be any fictitious intelligence taking account of them? It is certain that one cannot see anything if it is not there to be seen, and it logically follows that, since there is no actuality in one's dream to be seen and no one there to see it, the dreamer and his dream are one and the same illusion.

The dream of the night serves to illustrate the false nature of all material experiences, whether waking or sleeping, and it is thus used not infrequently in the literature of Christian Science. What is called life in matter is nothing but the dream of a life apart from God, the dream of another creator, of "marrying and giving in marriage," of men appearing in birth and disappearing in death,—a dream of time, of sin and suffering, of hatred and selfishness and sorrow. But in the light of Christian Science, which reveals the infinity of good and spiritual reality, it is seen that God does not cease to be omnipotent and omnipresent that evil things may be true, nor does infinite Spirit become finite in order that the belief of life in matter may be real and men and women become sinning and dying mortals.

But, one may ask, where do the phenomena of mortal existence take place? Evidently where the phenomena of night-dreams take place, namely, in illusion, since there is no other place for them, and that only in a suppositional sense. Because mortal man sees himself as a part of the belief of matter, he insists that it is real; but the truth that man lives, moves, and has his being in God, infinite Mind, makes it impossible that material conditions, either as good or bad, should exist for any one, or that any one is taking part in them. Truth is eternal, and fills all space and time, consequently error has no time or place; it is without power to act or intelligence to make itself known, and is nothing but its own illusion. The false sense of a power besides God is all there is to such a power, and that which obeys it, fears it, and suffers from it, has no existence or consciousness separate from that false sense.

The nothingness of error was proved in the healing works of Jesus, and this proof is being repeated in the healing works of Christian Science. To the sufferer, mortal sin and disease are terribly real, but when awakened by the truth of Christian Science he begins to understand that they never were anything, and that he never truly experienced them. The carnal senses and their products are surely but as the hallucinations of dreams, because they feel no touch of love or goodness or any divine attribute; and that which has no kinship with the things of God has no place in His universe, which means that it does not exist at all. Error cannot come into the presence of Truth, the realm of reality, any more

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

than darkness can invade the domain of light. Where then, it may be asked, can it abide but in the realm of nothingness?

The only way to overcome the evils of a false sense, like the pains of a dream, is to awaken from that false sense. Disease is not something to be seen or felt, because God is not its author; hence no one is seeing or feeling it. Errors about ourselves or others are not things that one can lay hold of, nor persons that one can battle with; they have no substance or form, no law of action, and are but the disordered imagery of human belief. The truth about God and man is all that is present anywhere, and we have only to become conscious of that. God, or good, is where evil seems to be, and though its appearance may take on vast proportions, the only truth about it is its nothingness. Our salvation is to awaken to spiritual being, and let good alone define our consciousness, for to spiritual sense God is All, and there is no evil thing to destroy.

Mortals may believe there is an opposite to Truth, to God and His idea, and a false sense may apparently see this belief made manifest; but that does not make error real, any more than the phantasmagoria of human dreams make dreams real. Unreality never merges into reality, for when the truth appears to human consciousness the unreal stands self-revealed never to have been anything or any one at all. There is only one God and what He makes manifest; and divine intelligence, reflected in His image and likeness, has never dreamed the dream of mortality or wandered into the delusion of sickness and sin. What other position than this accords with Christianity and its demonstration?

✧

Continuity of Good

FLORIA A. MOCATTA

THE law of continuity is the law of Spirit, which by reason of Spirit's ever-presence and perfection holds no suggestion of cessation or flaw. Human laws are the result of human opinions and are essentially fragmentary and spasmodic, being perpetuated or destroyed by the fluctuating tide of human thought. Mortals, ignorant of divine Principle, are at the mercy of these uncertain currents; for mortal concepts of good and evil entail the framing of illogical laws, imposed on a world in bondage to the mesmerism of belief in matter.

Here and there in the history of humanity occurs a revolt against these misconceived mandates which causes a holocaust of suffering, for human conception grasps imperfectly the calm continuity of Spirit, where any diminution of eternal good is unimaginable. But through the gradual revelation of God's allness the irregular and unreliable action of mortal law becomes apparent, and men turn to Truth, which alone enables them to shake off the slavery of false belief, in which, deeply rooted, is the habit of expecting a preponderance of evil in human experience. Job's utterance, "The thing which I greatly feared is come upon me," customarily expresses the mood of mortals, unless they are consciously governed by the knowledge of infinite good.

Though we may admit as an abstract proposition the ever-operative power of Life, Truth, and Love, yet through inability practically to apply spiritual facts to the problem of our own lives, we submit sleepily to error's influence and suffer the consequences. Never for one instant does good falter in its "unlabored motion" (Science and Health, p. 445); never for a second can Spirit be less than perfect. Yet with what slow reluctance humanity accepts this fact! Continuity is the root law, the very foundation of preservation. Fear, however, seeks to hinder the knowledge of Love's omniscience, but fear will ultimately be cast out of human consciousness by Truth's irresistible propulsion.

The dream of life in matter is a succession of ups and downs, wherein the only semblance of certainty seems to be fluctuation. This is the antithesis of spiritual being, where, from the ever-flowing fountain of good, thought receives and radiates uninterruptedly all that is real, life giving, and joyous. The devil's aide, discouragement, could never assume a shred of reality did we more consistently realize the absolute continuity of good, wherein is no "shadow of turning." Every human mistake may be traced to some apprehension of cessation in good. The history of mortal man from the beginning—when Adam through wrong thinking, expressed in wrong action, banished himself from his dream of paradise—betrays mortal man's failure to understand the continuity of good; and error then, as now, claims its inevitable victim. The "last enemy" and the first enemy alike can only be met and conquered when the fear of breaking false law is reduced to nothingness and divine Principle is looked for, listened to, and obeyed.

Mortals cherish a mistaken sense of continuity in certain phases of human belief. They believe, for instance, that accepted hypotheses, miscalled facts, hoary with time and superstition, are firm fixtures, whose removal is not only impossible but undesirable. Yet Jesus said, "Heaven and earth," mortal man's conception of good and evil, "shall pass away, but my words shall not pass away." This generation is destined to see the coming of a higher ethical ideal or better human belief, than any which has preceded it. Such ideals will be universally welcomed as heralds of that day which the prophets foreshadowed and Christ Jesus affirmed: for human footsteps in rising transcend the trembling footsteps of their predecessors, and the mountains of materiality which seem to be immovable will some day "be made low," disclosing the snowy chain of pure, unadulterated Truth, whose crowning summit is eternity.

Periods which mortals loosely classify as "the past" are merely accumulated records of phantasmagoria, chronicles of houses "built upon sand," beside the ebbing and flowing sea of erroneous belief. These fleeting mortal concepts disappear as we learn to understand something of eternity and seek the wider vista of endless Love. Mrs. Eddy describes this vivifying process of expansion in Science and Health (p. 261) when she says, "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts." To be expectant of good is, in effect, to demonstrate the continuity of Spirit. Not to do so is to make the fundamental mistake of ignoring the ever-flowing stream of Truth, and thus through fear prepare the way for error's suppositional activity.

Those who are not striving to roll away the stone from the cave's mouth of their own difficulties, cannot hope to help others who are struggling with that problem. If effort on our own behalf grows sometimes slack, an earnest desire, however humble, to further universal salvation will stimulate energy anew. Thus, and thus only, "is the mount of vision won," and as we look down from some point of vantage already gained, though we may have climbed but a little of the way, we shall invariably witness the struggles of weary humanity bound in the thongs of unreality and ignorance. Then we shall long, as our Leader longed, to loosen the chains which mortal belief has forged and show mankind how to free themselves from their prison-houses.

It is well to remember often the ephemeral nature of all unlike God, good, and constantly to refresh thought in the knowledge of Truth's unceasing activity, and so recognize the seamless robe of Christ's vesture as immortal, in contrast with the flimsy patchwork of human invention. True spir-

Digitized by Google

ituality brings unceasing comfort and peace to the suffering, but the uncontrolled spasms of materiality exhaust themselves in aimless effort.

On all planes of thought the prize is always to the persistent. A capacity for painstaking work has been defined as genius, in comparison with the unstable effort of lesser minds. Christian Science is the only practical pathway pointing out how to win and wear the crown promised "to him that overcometh," for from the beginning of the Scriptures, veiled in allegory or hidden in historical anecdote, we are admonished not to be "weary in well doing." The life of Christ Jesus radiates abundant lessons of loving patience, even under the most cruel circumstances; the continuity of his spiritual attainment never halted in its pursuit of the one goal, the reflection of omnipresent Love. The cheerful, patient, and persistent labors of our beloved Leader bear ever-multiplying, golden fruit, which hungering humanity culls with increasing eagerness. Had discouragement succeeded in clouding vision, had error been able to paralyze effort, the world would not have awakened as it has awakened, and unnumbered lives would not have been won to good through her incessant labors for mankind.

Let us know now and ever that thought lifted to conscious harmony with good can never receive aught but good. So multitudinous are the illusions which follow in the wake of the estimation of good as a transient and occasional visitant, without Principle or permanence, that they cannot be catalogued; but the question of age in the light of illusive materiality presents perpetual problems in human affairs. Age is a measure of limitation which human thought unremittingly applies, and so narrow are the barriers this fallacy creates, that human opinion assigns to youth as well as to age a period of relative mental and moral ineptitude, leaving one but a brief interval during which his faculties are supposed to operate effectively. This falsity is destroyed by understanding the false premises on which the argument is based; we learn, as Mrs. Eddy says in Science and Health (p. 246), that "man, governed by immortal Mind, is always beautiful and grand," and that we must "shape our views of existence into loveliness, freshness, and continuity." As Whittier says in one of his poems:—

Man who walketh in a show
Sees before him, to and fro,
Shadow and illusion go;
All things flow and fluctuate,
Now contract and now dilate;
In the welter of this sea
Nothing stable is but Thee,
In this swirl of swooning trance
Thou alone art permanence.

Our Gratitude

WILLIAM H. HOWARD

In reading or listening to Christian Science testimonies one readily concludes that gratitude is the dominant motive which prompts them. It is therefore pertinent to inquire, What is gratitude? Metaphysically considered it may be said to be one of the fairest flowers blooming in the garden of Soul, and nourished by the affections it matures and unfolds as a rose in the atmosphere of Love, and is known by its fragrance of rejoicing.

If this is an acceptable definition of gratitude as a sense of obligation for good received, it cannot be expressed or measured in finite terms. As an experience of the heart it is incapable of complete outward manifestation. Its magnitude is in Mind; its domain is in thought; its activity is found in good works. One's sense of gratitude enlarges with each succeeding experience, and ever keeps pace beyond the power of words to portray or deeds to betoken. Thus it is of common occurrence at our testimony meetings to hear Christian Scientists remark that words can but feebly convey their sense of gratitude for blessings that have come to them. To the Christian Scientist gratitude is a religious sentiment born of a desire to bear glad tidings to others. It is the first step toward the fulfilment of that Scriptural injunction, "Freely ye have received, freely give."

In expressing gratitude to our Leader, Mrs. Eddy, for benefits received through Christian Science, we are sometimes misunderstood. This is usually due to the supposition that we regard her as the source of the good which comes to us in our daily experience, whereas we acknowledge God as the only source of all good. Her interpretation of the Scriptures has revealed to human consciousness the availability of that good and that divine protection which we learn in Christian Science have always been just at hand. So Christian Scientists recognize her not as the source but as the channel, for through her unselfish and unceasing devotion to the Father's business humanity is enjoying boundless blessings today.

In bequeathing to the world the rich legacy of her career, as the fruition of her own healing through divine means, Mrs. Eddy has probably come nearest to expressing the full measure of gratitude. Not the least important or significant of the recorded works of Christ Jesus was the feeding of the five thousand. In a larger sense his whole ministry was a breaking of the bread of Life to hungry humanity, and hers also was a veritable breaking of that same bread for the feeding of the ever-increasing multitudes of our own time.

As our Leader through divine guidance labored so nobly for humanity, we too may find satisfaction in living and laboring to carry forward the various activities she so wisely established, for each one of them is meeting some human need, and all are of such a nature and so organized as to give every Christian Scientist something to do, for which we are all grateful. Some of the duties incident to these activities are performed by special individuals, while others may be participated in by all, a notable instance being that of church building. Every church represents in a measure the composite gratitude experienced by those who welcome the opportunity to have a hand in its erection, and the way we meet the problem of church building furnishes a fair index of the manner in which we are meeting our other Christian duties. The more perfectly the outward manifestation of a church symbolizes the beautiful, the pure, the good, and the true, the more surely have these qualities become fixed influences for good in the lives of its members.

Even in solitude every moment has its opportunity, and every activity its avenue, for expressing gratitude. For our Leader's wonderful achievement in establishing Christian Science on an abiding foundation, for the richness of its literature, for its splendid means of disseminating the teachings of the Master in their spiritual import throughout the world, and for its healing and regenerating influences, every Christian Scientist is profoundly grateful. We are grateful for the privilege of being identified with such a movement, and also that we are in a position in a modest way to follow our Leader's wish in breaking the bread to others, in bearing the cup of cold water to those in need. We are grateful for the lessons we are learning, for the better understanding that is coming to us concerning our right relationship to God and to our fellow man. We are grateful that the sense of fear, doubt, envy, jealousy, malice, hatred, revenge, disease, and sin vanishes from consciousness as we lay hold of the verities of eternal Truth through divine Love, which heals, purifies, uplifts, and saves.

Digitized by Google

Though words may fail or occasion should never come to do an act commensurate with our own sense of gratitude for the blessings that are ours, the opportunity still is present to try honestly and earnestly to live the life that plumbs and squares with the teachings of Jesus the Christ, to the end that we may also have in us that Mind which was in him. This can be our hope, and when realized will attest our fidelity to Principle and the sincerity of our gratitude.

✧

"Through the waters"

AGNES E. LOCKE

In the book of Isaiah we read, "When thou passest through the waters, I will be with thee." This promise of Love as always present to guard and guide in ways comprehensible to human thought was wonderfully fulfilled in a bygone experience. This circumstance was an almost literal illustration of the words quoted, and it occurred during the period when the truth about God and man as taught in Christian Science was dawning upon consciousness.

In many ways the new understanding of Immanuel, "God with us," had been proven in the healing of physical and mental discord, but the true import of Mrs. Eddy's teaching and example, by which she demonstrated that thought must be purified and spiritualized in order to discern God's spiritual creation, had not been fully apprehended. In the light of a clearer understanding of God's ways of revealing Himself to those who are seeking to know Him, what was at one time recalled as an instance of preservation from danger has grown to be a constant reminder and reassurance that absolute reliance upon the Principle of all good in times of stress and fear never fails to bring deliverance, even if the struggle is seemingly prolonged and overwhelming.

A party of girls had gone to bathe in the river at some distance from the station homestead in the afternoon of a very warm summer day. The river, like many others in the subtropical districts of New South Wales where the occurrence took place, was subject to sudden floods from heavy rainfall, and treacherous holes and shifting sands made this one unsafe on account of recent "freshes." As only one or two of the party were able to swim at all, and the current was running strong, the ford was crossed to find a suitable bathing place. For protection from the sun while in the water, straw hats were pinned on.

After the bathing was started the writer, turning quickly to go to the aid of a younger girl who was getting out of her depth and into the strong current, found herself submerged, lost control, and was carried into a deep hole in the river. The water-logged panama hat tightly pinned on kept her under water, and all effort to regain the surface seemed unavailing. Although the struggle appeared interminable, something was telling her that she could not drown, and it was not until a sense of utter exhaustion came that hope faded out and fear crept in; but in the stillness coming over conscious thought, a letting go as it were, there came a sudden realization of God's presence, and that instant will never be forgotten. The thought of God aroused the human faculties, and the possibility of swimming under water presented itself, then memory failed. There was no sense of direction in which to swim, but God did indeed "bring the blind by a way that they knew not."

Later it was learned that after several unavailing efforts to effect a rescue by those girls who could swim, or to find some one who could help, hope had been abandoned. Then a non-swimmer once more urged another attempt, and two girls ventured out again. It was at this point that they noticed by the hat that the swimmer was unconsciously coming toward them,—right to the rescuing hands held out,—and so the bank of the river was safely reached. Although for some time there seemed little hope of restoration, the saving power of Truth was fully demonstrated, for when consciousness did return it brought strength to recross the ford, to dress and walk home through the bush paddock. Those who witnessed the occurrence declared that only Providence could save in such a manner, not understanding the power of Christian Science to save "to the uttermost." Except for a trying cough which lasted throughout the night, no ill effects were afterward experienced. Here it should be said that no harm came to any of the party.

Gratitude for the revelation of Christian Science could only be expressed in the determination to seek a higher understanding of Immanuel, and this through steadfast faith in the unerring guidance of divine Mind whenever the surging, troubled waters of error seemed to confuse and overwhelm. At such times, whatever the circumstances, the moment always comes when the light of Love breaks up the darkness and reveals the unreality of the terrifying dream. Then the truth is proved that matter is not a lawgiver, and that evil is not a power to be feared, but a false sense of the absence of God, good, which sooner or later must submit to the omnipotence of ever-present Truth, with whom evil is unknown.

✧

God's Presence

ERASMUS W. BRINKER

Knowing the trend of the false beliefs of materiality, Jesus cautioned his disciples not to be troubled when they heard of "wars and rumors of wars," for "these things must come to pass" until God's presence is everywhere recognized. War has come to be generally understood to mean a conflict between nations, wherein armies are pitted against armies until the downfall of one or more of the nations involved is accomplished. Now a nation is but an aggregation of individuals, and the national thought which is manifested in a desire to overthrow and destroy another is but the collective thought of the individuals composing the nation. Whether the strife is waged between organized bodies or between individuals, the moving cause exists only in the false consciousness of mortal man, and the remedy lies in changing the individual thought.

Abraham recognized this great truth, and when strife broke out between his herdmen and those of his kinsman, he said to Lot, "Let there be no strife, I pray thee, between me and thee, and between my herdmen and thy herdmen; for we be brethren." Abraham realized that if one would express harmony he must begin with himself and change his own thought before undertaking to bring to another a correct view of man as brethren and of the harmonious relation of man to God: he also knew that the herdmen in their strife but reflected the thoughts of all mankind.

All who read Mrs. Eddy's writings gain a clear apprehension of the warfare to which St. Paul so often stimulated his readers, wherein false beliefs set themselves against spiritual facts; and this must result in the destruction of the former, because spiritual facts alone are real and eternal. The assuring words of the Master, "Let not your heart be troubled," come to us again and again, and we see that evil, so called, is a negation, no matter what may be the form in which it would have us accept it as a reality. Continued study of these writings enables the reader to apply the truths taught in the Bible to the problems of his individual consciousness and to discover the falsities which are lurking there, unobserved as it were, seeking to destroy every pure and holy purpose and to establish themselves as facts of

Digitized by Google

being. Had Abraham listened to the pride, selfishness, and covetousness of mortal sense, he might not have spoken to Lot as he did. Abraham was, however, conscious of God's presence, and by his example has shown us that we must examine into each motive and know whether it is real, whether it proceeds from the "throne of God" or whether it should be instantly banished from consciousness.

In Science and Health (p. 407) we read, "Let the perfect model be present in your thoughts." If we do this it will transform thought until nothing but good is present to be manifested. Evidences of God's presence are all about us, and we need but to consider them to find conclusive proof that God is ever-present and unchanging good. Take the rays of the sun: they unceasingly bring light, warmth, and cheer to all mankind; not alone to the man who recognizes God's presence and who acknowledges Him in all His ways, but also to the man who seeks his happiness and contentment in chasing the butterflies of materiality. These same rays of the sun purify and sweeten the musty corners, dispel darkness, and cause vegetation to spring forth and come to fruitage.

In God's presence is light, not darkness; truth, not falsity; love, not uncharitableness; and it is only by the understanding of this that the darkness of materiality can be dissipated. "Let us come before his presence with thanksgiving," the psalmist says, for "God is our refuge and strength, a very present help in trouble."

✧

"Joy of the whole earth"

INEZ KOCH

THE student of Christian Science finds valuable lessons in the experiences of each day and rejoices to see the upward trend of thought in so many directions. The writer remembers attending a pageant of South African history which took place at the foot of the majestic Table Mountain at Cape Town. The beauty and grandeur of the surroundings made an unforgettable impression on the spectator, but the last scene of the pageant proved to be so uplifting in its spiritual meaning that it seems worth special mention. It was an allegorical presentation of recent and current events, in which the troubles and sorrows of war between contesting nations were represented by draped figures in black hovering in the deep shadow cast by the setting sun. Then in the glory of the sun's last rays appeared a troop of little children clad in silver, who with boughs of silver-leaf ran after the somber figures and with happy smiles of childish glee drove them away, till they disappeared from sight.

This scene was obviously symbolical of good overcoming evil, of love overcoming hate, and to the student of Christian Science it was doubly significant, since our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, teaches "that joy cannot be turned into sorrow, for sorrow is not the master of joy; that good can never produce evil; that matter can never produce mind nor life result in death" (p. 304). It is the understanding of this, gained through the study of Science and Health, which uplifts thought to see the city which "lieth foursquare," and which the psalmist describes as "the joy of the whole earth."

Christian Science is truly "the joy of the whole earth," for it contains not even the shadow of sorrow; it is the glorious light of apprehension of God's ever-presence, the allness of good. Divine Truth heals all wounds and effaces the scars that tell of mortal strife, and it is significant that it is the childlike thought which, as in the allegory, is necessary to destroy evil beliefs. It is the joyous happiness and trust in the Father's presence and loving care, which safely guides us all.

Selected Articles

[Charles W. J. Tennant in *Occult Review*, London, England]

Mrs. Eddy has not failed to discriminate between "mind and the spirit of life," if what your contributor means by "the spirit of life" is the same as that referred to by Paul when he said, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." This "Spirit of life" is the divine Mind, and Mrs. Eddy has drawn the distinction between this Mind and the carnal or mortal mind as no one before her has ever done.

The healing which results from Christian Science treatment is brought about in the same manner as that wrought by Jesus and his disciples, both being the practical application of the spiritual laws of divine Principle. Naturally it is only those who have sufficient spiritual understanding of these laws to demonstrate them who are in a position to say how the healing is done. When Mrs. Eddy says (Science and Health, Pref., p. x), "No intellectual proficiency is requisite in the learner" of Christian Science, does she not mean exactly what Jesus meant when he said, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven"?

Jesus did not heal by the use of animal magnetism, nerve force, or nerve energy, as the critic asserts. He defined his method thus: "If I cast out devils by the Spirit of God, then the kingdom of God is come unto you." It was the absolute spiritual truth which Jesus knew that enabled him to destroy the discordant conditions of error, just as a mathematician would correct a mistake in computation by his knowledge of the science of numbers. Jesus healed at a distance just as easily as at hand, and Christian Science heals though the practitioner and patient may be thousands of miles apart, which proves that nerve force or animal magnetism has nothing whatever to do with the process.

Our critic says the assertion that "the human mind is not a factor in the healing work of Christian Science" (see Science and Health, Pref., p. x), is nothing but "high-sounding jargon." The carnal or human mind is referred to in Romans as "enmity against God." Does he suppose that beneficial results can proceed from "enmity against God"? Christian Scientists heartily agree with the saying of Jesus, "God is a Spirit: and they that worship him must worship him in spirit and in truth." This is precisely what they are endeavoring to do, with "signs following."

✧

[Robert C. Love in *The Times-Picayune*, New Orleans, La.]

In reporting an address given in the Touro Synagogue your paper quotes the speaker as comparing Christian Science to mysticism. If we accept the definition of mysticism as a "knowledge unattainable by the natural intellect and incapable of being analyzed or explained," then the comparison appears to be a lack of understanding of the teachings of Christian Science on the part of our esteemed critic. If there is any mystery about its teachings and practice, it is the mystery found in the declaration, "Hear, O Israel: The Lord our God is one Lord;" in interpreting the first commandment to apply to human interests and needs; in cultivating greater love and dependence upon God, "who forgiveth all thine iniquities; who healeth all thy diseases."

Any mystic philosophy about God contrasts strikingly with a practical rule of right thinking and doing in daily living. Salvation is not a multitudinous problem so much as an individual working out of one's own environment of evil influences, which make for unhappiness, sorrow, sickness, and sin. In the degree that each one assimilates the truth

Digitized by Google

that makes free from temporal wickedness, will he be able to give expression to this in daily living, and gain his reward in a contented mentality which dispels speculation about God, inspires confidence, and unfolds a knowledge which is impartial in its beneficent influence and is available to all mankind.

✧

[W. D. Kilpatrick in *Charlevoix* (Mich.) *Courier*]

Christian Science has stimulated the reading of the Bible, and has created a desire for a more complete and demonstrable understanding of this holy book to a degree far beyond that of any other contemporaneous religious movement. It can safely be asserted that no religionists are today such earnest and honest and thorough students of the Bible as are Christian Scientists. Furthermore, their study of the Bible is teaching them that Jesus meant exactly what he said when he advised all who believe on him to do the works that he did. Because the critic fails to understand how Jesus healed the sick, and therefore fails to understand how every one who understands his teachings can do likewise, should he hold up to ridicule those who are attempting to follow the example of the Nazarene in the way of his appointing?

In his sermon the gentleman has much to say about "science" and the relation of matter thereto; but I imagine it would be a difficult task for him to explain from his point of view the passage of the Israelites through the Red Sea, how Elijah provided the meal and the cruse of oil for the widow of Zarephath, how the three Hebrew young men emerged unscathed from the fiery furnace, how Jesus turned the water into wine, fed the multitudes with the loaves and fishes, healed the sick, raised the dead, overcame the grave and finally all materiality for himself. Christian Scientists believe that these are examples of spiritual power due to a correct understanding of God and His creation, and that it is as necessary today for mortals to be able to follow these examples before they can possess the kingdom of heaven as it was in the time of Jesus.

The early church was noted for its healing work for three hundred years or more after the time of Jesus. The disciples established the churches on the foundation of the healing of sickness and sin as taught by Jesus, and there is no authority throughout the entire Scriptures for the abandonment of these exponents of the understanding of the Christ. Gross materialism, the usurpation of pure spirituality by convenient creeds and dogmas, and the erroneous teachings of scholasticism, are the causes of this wide deflection from the true path pointed out to us by the Master.

The critic consumes considerable time and effort in ridiculing the understanding which Christian Scientists have of God, and then proceeds to state that he conceives God to be in the shape of a man with all the mortal attributes, because in certain places in the Bible God is spoken of in a manner which to the unenlightened might make Him appear as humanly circumscribed. But interpreted spiritually the Bible leaves no question as to its teachings concerning God. Because the Bible says, "The Lord's hand is not shortened, that it cannot save," the gentleman should not assume that God has hands as conceived of by mortals; and because it says, "He shall cover thee with his feathers, and under his wings shalt thou trust," the gentleman should not get the idea that God in this instance has taken the shape of a fowl or bird with feathers. Jesus declared that "God is a Spirit," and that is what Christian Science teaches. John said, "He that loveth not knoweth not God; for God is love."

Inasmuch as the gentleman has found so much fault with the Christian Science idea of God, permit me to quote from the Westminster Confession of Faith, which constitutes part of his religious creed: "There is but one only living and true God, who is infinite in being and perfection, a most pure spirit, invisible, without body, parts, or passions, immutable, immense, eternal, incomprehensible, almighty, most wise, most holy, most free, most absolute, . . . most loving, gracious, merciful, long-suffering, abundant in goodness and truth, forgiving iniquity, transgression, and sin." Could any one describe a more impersonal and spiritual God?

If the gentleman has any doubt that it is a Christian's duty to heal sickness, and eventually to overcome death without material means and as Jesus directed, let him familiarize himself with the Bible. The Bible is the sole authority for Christian Science. The two are indissolubly connected, and any attempt to disprove the one must be an attempt to disprove the other. The best test for any religion is that of "works." James says, "Faith without works is dead," and while Christian Scientists lay no claim to having achieved that degree of understanding to which they are striving, yet they do affirm that as the result of the practice of Christian Science mankind has been given a remedial agency for all its ills far surpassing anything the world has seen since the time of Jesus, and that they are in a degree following the advice of the Master found in the tenth chapter of Matthew, where he says, "As ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils."

In his statements about the teachings of Christian Science concerning Jesus and the Christ the critic has grossly erred. On page 332 of Science and Health Mrs. Eddy says: "Jesus was the son of a virgin. He was appointed to speak God's word and to appear to mortals in such a form of humanity as they could understand as well as perceive. Mary's conception of him was spiritual, for only purity could reflect Truth and Love, which were plainly incarnate in the good and pure Christ Jesus." On the next page she states, "Christ expresses God's spiritual, eternal nature."

Christian Science has been one of the most potent agencies against sin the world has ever known, because it teaches, as Jesus taught, that sin brings suffering. It also teaches that every vestige of sin in the mind of each individual must be finally conquered before that state of consciousness can be reached which is explained by Jesus as "the kingdom of heaven," and that this final overcoming of all sin can be accomplished only through momentary watchfulness, constant prayer, self-immolation, and the understanding that sinful conditions and sin are not created by God, are not God-sent, and therefore have no reality in Truth.

✧

[Frank C. Barrett in *Portland* (Maine) *Express-Advertiser*]

In a recent issue of your esteemed paper there appeared the following: "Since Christian Science and other cults claim the power of healing, its teachers take the place of the professional healers." "The Emmanuel movement does not profess to practise medicine. It regards such a claim as the height of folly and ignorance."

Christian Scientists do not give medical treatment, medical advice, diagnose physical ills, recommend medical, dietetic, or hygienic theories or practice. If Jesus and his immediate disciples were on earth today, they probably would "take the place of the professional healers" to some extent, but they most assuredly would not practise medicine. Christian Scientists are endeavoring to follow the Master's command by perpetuating his words and works in accordance with his declaration: "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." That the doing of these works was not to be confined to his immediate disciples is also clearly indicated in the statement.

Digitized by Google

"Neither pray I for these [the disciples] alone, but for them also which shall believe on me through their word."

In Psalms we read of the redeemed that God, Spirit, "sent his word, and healed them, and delivered them from their destructions." It was this same "word of truth" which Jesus understood and practised and taught more than a thousand years later. Since the "word" remains unchanged, the correct understanding of it makes possible the right healing effect in every age. Christian Science elucidates the truth contained in the Bible, and while this teaching may differ from that of some other religious teachings of today, it in no wise departs from the theology and practice of Christianity as taught by Jesus. This is proven by the beneficial effects produced by the prayerful application of the "word of truth" by Christian Scientists in healing sickness and sin. Thus it is very clear that the Christian Scientist's prayer for the sick and the sinning by no means constitutes or is related to the practice of medicine.

While Jesus did not practise medicine, he healed the sick and the sinning by the same process, as indicated when he said to the scribes, "For whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" Then turning to the sick of the palsy he commanded him to arise, "and he arose, and departed to his house." Thus it does not appear that the Master regarded the healing of sickness as the exclusive or rightful function of a class set apart to practise medicine, or that his religion was to be used exclusively for moral and mental regeneration without regard to the healing of physical ills, either functional or organic.

✧

[William C. Kaufman in *Anaconda* (Mont.) *Standard*]

Your valued paper published an article entitled, "How to Keep Well." The writer is most insistent upon physical examination, and Christian Science, as well as other methods, comes in for its share of criticism. As far as physical examination by a physician is concerned, we believe that it is every one's privilege to have a physical examination if he so desires, but we do not believe that it should be a matter of compulsion. People who turn to Christian Science for healing have as a rule been thoroughly examined by physicians and their cases diagnosed, but they were not cured through medicine. Many of these people are healed through the power of the Word as taught in Christian Science, and the majority of them have continued in good general health.

The "policy" which is criticized is the one which was recommended by the greatest physician, Christ Jesus. He healed and taught others to heal by the power of the Word. The approximation of spirituality as manifested through the Word of God was so clearly comprehended by the apostle John that he said: "In the beginning was the Word, and the Word was with God, and the Word was God. . . . And the Word was made flesh, and dwelt among us, (and we beheld his glory, the glory as of the only begotten of the Father,) full of grace and truth." It is certain that it is not the purpose of cultured physicians and governments to take away anything from individuals who have grasped the teachings of Christ Jesus sufficiently to take him at his word and let his words abide in them, thus enabling them to realize the ability to abstain from all medical methods and to keep themselves well through his word.

✧

[J. F. Bixby in *Omaha* (Neb.) *World-Herald*]

Christian Scientists, like their predecessors in the realm of religious discovery and righteous endeavor to promote man's moral and spiritual welfare, have had their full share of ridicule, slander, and vilification. Condemnation of anything in utter ignorance of the ennobling facts involved, does not get us anywhere. The man who makes abuse an argument, refusing to investigate, "hath faculties that he hath never used, and thought with him is in its infancy." Unprejudiced inquiry into all matters that appear of importance is the demand of the hour on all people. Investigation is the source of proper education. Such education leads us into the light and the truth, and the truth alone will eventually make us free,—free from superstition, free from false ideas, free from "beliefs" that handicap the world in its struggle to progress.

It was evident that the lecture on Christian Science given recently in Omaha made a deep impression on the audience. I heard many words of commendation and approval. It is safe (and sane) to say that such serious, sensible, logical, and convincing talks on the subject of religion will result in far greater abiding good to Omaha and her citizens than expensive spasmodic affairs that appeal to prejudice rather than reason. I beg the privilege of the columns of the *World-Herald* to suggest a fair and honest investigation concerning the teachings of any cult, denomination, or organization that clearly makes the love of God, good, paramount, that is emphatically for the Christ-love, the love of humanity, the pure life out of the home and in the home, the obliteration of evil in every form, and the relegation to oblivion of superstition.

✧

[Ezra W. Palmer in *Grand Junction* (Col.) *News*]

In an issue of the *Western Colorado Evangel* appeared an article entitled "True Science and Christian Science," in which *materia medica* was extolled as the true science which saves mankind from disease and death, while Christian Science, which teaches reliance on God alone for healing the sick, was scoffed at. Christian Scientists have no criticism of physicians or of those who use drugs or other material remedies. They thoroughly believe that each one should have the freedom to use such means for overcoming physical infirmities as he deems best. Christian Scientists rely on Christian Science because they have received more benefits from this teaching than from drugs or physicians. In fact many of them were healed after material remedies had failed.

To claim that *materia medica* is a science is to fly in the face of logic as well as of experience. No system can claim to be a science unless it is founded on a fundamental basis and develops logically from that basis. This, *materia medica* does not do, for it has no fundamental basis; it is purely empirical. The drug or system employed yesterday is discarded as useless today, and this constant flux has been characteristic of *materia medica* from Hippocrates to the present time. Christian Science, however, is scientific, since its basis is the allness of God, and from this basis flows all its conclusions and results. Christian Science heals by means of scientific, exact knowledge of God, which is the same yesterday, today, and forever. Jesus healed instantly, without drugs, because he had a clear, demonstrable knowledge of God, the only genuine healer of men.

The critic seeks to convey the impression that Christian Science would be powerless to aid the soldier on the field of battle. He might just as well have disparaged the Christianity which Christ Jesus brought to the world and have declared it valueless to save men from the horrors of war, since Christian Science follows implicitly the teachings of the Master both in healing sickness and in destroying sin. Wars are the result of the refusal of men and nations to follow the teachings of the Founder of Christianity. When Christian Science, which reinstates primitive Christianity, is accepted by mankind, wars will cease, and sin and disease will be conquered.

Editorial

"Of a good conscience"

MANY persons use the word "conscience" in a way which indicates that they believe it to be the name for a moral code as definitely expressed as is the Decalogue and upon which all men agree. Webster's definition of this word is: "Sense or consciousness of the moral goodness or blameworthiness of one's own conduct, intentions, or character, together with a feeling of obligation to do or be that which is recognized as good . . . Hence, a faculty, power, or principle, conceived to decide as to the moral quality of one's own thoughts or acts, enjoining what is good." One of the rules adopted by Washington when but a lad was, "Labor to keep alive in your breast that little spark of celestial fire,—conscience." All this is good as far as it goes, yet to understand conscience to be in itself a defined moral code, is of course largely to misunderstand it. If all mankind were to act upon this misunderstanding there could but ensue the greatest possible confusion, because human opinion, while agreed upon the wrong of what might be called the principal or outstanding sins, is largely at variance as to the right or wrong of many other things which are done or left undone by those who believe themselves to be entirely conscientious and thoroughly awake to every moral requirement.

In Mrs. Eddy's writings the word "conscience" appears many times, but in no instance does she posit conscience as the final arbiter of right and wrong. She does, however, hold that it must be the guide to our actions when once we arrive at a decision as to what is right and what is wrong. For instance, on page 147 of "Miscellaneous Writings" she says, "The man of integrity is one who makes it his constant rule to follow the road of duty, according as Truth and the voice of his conscience point it out to him." In other words, conscience is the watchful monitor, reminding us, if we will but heed its warning, to follow the dictates of Truth.

From the study of Christian Science we may infer, therefore, that the monitions of conscience are not in themselves a sufficient guide to action, unless they are what Mrs. Eddy has termed "the dictates of enlightened conscience" (The First Church of Christ, Scientist, and Miscellany, p. 168). An enlightened conscience in its truest and infinite sense must be the absolute reflection of God. To Christian Scientists, right is that mental and moral condition which absolutely reflects God, divine Mind, Principle, and wrong is the outcome of erroneous beliefs which do not reflect Him, and therefore have no Principle and no reality or permanency. Wrong is simply a negative condition, the absence of right, just as darkness is merely the absence of light. If this definition is true, then it is not conscience, as it is commonly understood, which finally decrees what is right. It is God who does this, and to know right from wrong we must first understand who and what God is.

Mrs. Eddy has defined God as "incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love." She also declares that these terms are synonymous, and that "they refer to one absolute God. They are also intended to express the nature, essence, and wholeness of Deity" (Science and Health, p. 465). God being supreme and infinite, He is of course the only creator; and being inherently good, it necessarily follows that His creation is good, and that He is the origin and Principle of all right ideas. Just to the extent that conscience is founded upon and governed by right ideas, to that extent is conscience a safe guide and a means by which mankind are kept awake to righteous activities. This is the function of conscience, and as it performs this function men are enabled to withstand temptation and to rise above evil and its attendant suffering.

The teachings of Christian Science, when understood and put into practice, unerringly lead us to the right decision in every question with which we are faced, no matter how abstruse or complicated this question may be, because these teachings establish within us that condition which Paul described to Timothy in his first epistle, namely, "Now the end of the commandment is charity out of a pure heart, and of a good conscience, and of faith unfeigned."

ARCHIBALD MCLELLAN.

The Word "Impersonal"

IT should be significant to every student of Christian Science that the word "impersonal" does not occur in the Christian Science text-book. Therefore, if this word is used at all in connection with the practice of Christian Science, it deserves to be closely scrutinized. Has it any place in a correct description of that practice? Can we speak of impersonal healing, for example? This expression, "impersonal healing," does not occur in any of the published writings of the Discoverer and Founder of Christian Science. A little examination will show that at least two persons are always requisite in the *modus operandi* of healing. There is at least some one to bring the healing and some one to receive it, and as a matter of practical experience there may be many persons contributing to the final healing. All the activities of the Christian Science church are founded upon the recognition that the Christ, Truth, comes to save and to heal persons, to induce them to reject some of the materiality associated with the term person and to accept the spiritual qualities characteristic of the man of God's making. The process involves the coming of Spirit to the flesh, of divinity to humanity, of the absolute to the relative.

Suppose a case of healing to which the term "impersonal" may seem applicable upon first consideration, namely, that of a sinner, or a sick man, or of some one bowed down by grief, who attends a Christian Science service and is healed of his besetting sin or disease or grief. He goes away from that service and tells no man, and no man knows of his healing. Is his healing therefore impersonal? There was in the first place his own person which needed to be healed, then there were the persons denominated as readers who announced the healing Truth, and there may have been other persons connected with the service who contributed to the splendid result. Or, take one of those frequent cases in which a person is healed at a Christian Science lecture. Can it be said of such a case that it is impersonal healing, when the person of the one healed and the person of the lecturer were both connected with the case? Every saving and healing article which appears in the Christian Science periodicals is written by some one. Every correction of a misconception of Christian Science which may appear in the public press is made by some one. The patient goes to a practitioner and the pupil to a teacher. A librarian has charge of the Christian Science reading-room.

But far transcending these examples in importance is the fact that Christian Science itself came to Mary Baker Eddy. Some one was found sufficiently prepared, pure enough, and morally courageous enough, to receive the revelation of Christian Science and to place it on a sure basis by giving it to the world in the form of a book the text of which does not even contain the word "impersonal." Mrs. Eddy writes in that

Digitized by Google

book, "It may be said, however, that the term Christian Science relates especially to Science as applied to humanity" (Science and Health, p. 127); and in her latest work, entitled "The First Church of Christ, Scientist, and Miscellany," she considers it necessary to warn her followers against "the introduction of pure abstractions into Christian Science without their correlatives" (p. 218). Indeed the attempt to practise Christian Science without making an application of it would necessarily be futile. Christian Science is neither theoretical nor academic; it is practical. It requires both a subject and an object in order to be effective.

In the absolute truth of being there is of course no person to be saved or to be healed; there is no conflict, no evil of any kind, no injustice, no necessity to choose between truth and error. In the absolute there is nothing "that defileth, neither whatsoever worketh abomination, or maketh a lie." But in human experience the Christ, Truth, the Word that heals, must invariably come to a specific person, so that no case of Christian Science healing can seem to be a mere abstraction but must necessarily be a glorious experience, an application of the absolute to the relative.

WILLIAM D. MCCRACKAN.

Charity

THE deeper meaning of the word charity is seldom thought of by people in general, most of whom regard it as something which it were better not to be in need of. It is true that advancing spiritual understanding, as well as the Revised Version of the New Testament, has given to the thoughtful a nobler concept of what charity really means. That wonderful thirteenth chapter of Paul's first epistle to the Corinthians offers to each sincere truth-seeker the means by which he may unfailingly test himself in order to learn how much of a Christian he is. As Mrs. Eddy says of St. John's vision (Science and Health, p. 571), this chapter "furnishes the mirror in which mortals may see their own image," and if honest contrast the spiritual ideal therein presented with the material counterfeit which begins and ends with a false concept of God, man, and everything—including charity.

In this chapter the apostle begins by uncovering the false sense of charity,—that which is material, and which consequently does not spring from love, indeed is not even related to it. Now charity which is real, according to Paul's criterion, is purely spiritual; hence it must spring from the infinite Love that is Spirit, and must be expressed spiritually. Could aught less than spiritual sense unfold the charity, or the love, which "suffereth long, and is kind," which "seeketh not its own," and which is "not provoked" (Rev. Ver.)? When we are further told that this charity "never faileth," we see a most urgent reason why we should be so well acquainted with it that failure on our part to express it would be impossible.

On page 231 of "Miscellany" Mrs. Eddy says, "'Charity suffereth long, and is kind,' but wisdom must govern charity, else love's labor is lost and giving is unkind." The Christian Scientist knows that his first duty in every case is to seek "first" that clear sense of man's relation to God which alone can illumine the path of duty and show when it is right to give and when it is right to withhold outward help. Christ Jesus did not send away the hungry unfed, nor did he seek provision for them from any material source. Through his marvelous understanding of spiritual law he opened wide the channels of divine bounty and all were fed; yet little would have been accomplished if the lesson of that hour had not passed the boundaries of material sense, if those fed had failed to see, as we read on page 206 of Science and Health, that Spirit, not matter, was "the source of supply." If those who partook of that scientifically prepared food saw it only as "the meat which perisheth," they surely deserved the Master's reproach, "Ye seek me, not because ye saw the miracles, but because ye did eat of the loaves, and were filled."

The Master's boundless love for humanity would fain have given to all men the faith which would in every exigency seek first the things of God's kingdom, assured that all needed by advancing human sense would then be "added." The wise man tells us that "the blessing of the Lord, it maketh rich, and he addeth no sorrow with it." If our giving be under divine guidance, no regret can follow the bestowal. If charity begins and ends with the material, it can only be characterized in Paul's words, "It profiteth . . . nothing." When the trembling culprit in the Adam allegory complained of his nakedness, Truth demanded of him, "Who told thee that thou wast naked?" God's likeness is neither hungry nor naked, and the deepest, truest charity is to help a brother to know himself as such.

In her earlier years of work in Christian Science our revered Leader not only taught the indigent, but she supplied their temporal needs. In later years, with a more spiritualized concept of charity, she showed others, both by precept and example, how the world's great need can best be met. It is no crime for a child to speak "as a child," to think and act as a child, but when manhood in Christ is attained, when the veil of sense is taken away and we see Love face to face, we shall express the charity which serenely rises Spiritward from a basis of faith and hope.

ANNIE M. KNOTT.

Among the Churches

Current Notes

CONNEAUT, OHIO.—Tomorrow [April 23] First Church of Christ, Scientist, will celebrate the dedication of its church home on State Street. A year ago last January the church decided to buy the property, and the members have just experienced the gratification of completing the payment of the full purchase price of fifty-five hundred dollars.

Conneaut News-Herald.

SAN BERNARDINO, CAL.—The building which is being torn down on E Street just north of Seventh, to make way for the new Christian Science church, is the oldest Protestant church in San Bernardino, having been erected in 1866 by the Methodist Episcopal Church, South.

San Bernardino Sun.

BISMARCK, N. DAK.—Members of the Christian Science Society are rejoicing over the completion of a modest church edifice on the corner of Fourth Street and Avenue C. The investment, including a choice plot of ground 50 by 140 feet, aggregates about three thousand dollars.—*Correspondence.*

GOSHEN, IND.—The liberal gift from the Trustees under the Will of Mary Baker Eddy more than covered the indebtedness on the property of First Church of Christ, Scientist. The property was purchased in April, 1914.

Goshen Daily Democrat.

DIXON, ILL.—The Christian Scientists have purchased a lot on Second Street and Highland Avenue, where it is planned to erect a church.—*Dixon Telegraph.*

MORRISON, ILL.—Dedicatory services of First Church of Christ, Scientist, were held yesterday [April 9].

The Whiteside Sentinel.

Digitized by Google

ANCON, CANAL ZONE.—The new meeting place of the Christian Science Society of Ancon and Balboa, which consists of the old Ancon Circuit Court House removed and reerected on the Ancon-Balboa road at a cost of forty-five hundred dollars, will be opened for the first time next Sunday morning [May 7]. The Christian Science movement in the Canal Zone dates back to Jan. 1, 1906. Meetings were held in a private home until permission was granted in September, 1907, to use the Union Church in Gorgona. In July, 1913, the society removed to Empire, where Sunday morning services were held in the Y. M. C. A. Building. When the permanent force was transferred to Ancon and Balboa the society decided upon Ancon as its permanent location.

Owing to increased attendance and interest in the work, the necessity for another society at the North End became apparent. The members living in Cristobal and Gatun withdrew in July, 1914, to form the Christian Science Society of Cristobal. The remaining members, through the continued courtesy of the Y. M. C. A., met for three Sundays at Pedro Miguel. In August, 1915, the judge of the Ancon circuit court granted the society the use of the court room for Sunday services, and later on extended this privilege, making it possible to hold Sunday school and Wednesday evening meetings. The building contains an auditorium with a seating capacity of three hundred, a Sunday school room, and a reading-room.—*Panama Star and Herald.*

WINNIPEG, MANITOBA, CANADA.—The Christian Science structure on River Avenue at Nassau Street will be opened for public worship on Sunday, May 7. No dedicatory services will be held then, as further extension operations are planned. The church was constructed at a cost of one hundred thousand dollars. The lower portion was built five years ago, necessitating an outlay of forty thousand dollars. The upper section was commenced in July last, and the final work has just been completed. The edifice is 100 feet long, has a similar width, and is 56 feet high. The seating capacity is ten hundred and sixty.—*The Winnipeg Tribune.*

OKLAHOMA CITY, OKLA.—Christian Scientists are contemplating the erection of a larger and more convenient church on the site of their present home at Robinson and Eleventh Streets. At a meeting in the church Friday night [April 28] it was unanimously voted that a new edifice is necessary to accommodate the increase in membership, and the building committee submitted a report to the effect that a seventy-five thousand dollar structure, capable of seating one thousand people, is required.—*Oklahoma City Times.*

SAN ANTONIO, TEXAS.—About May 1 the congregation of First Church of Christ, Scientist, will move into its new home at the corner of Avenue D and Fifth Street. Last fall the old structure on this site was wrecked and work was begun on the new building.—*San Antonio Light.*

The Lectures

Topeka, Kan.

A lecture on Christian Science by Bicknell Young was delivered at the Grand Opera House. Prof. R. W. Coppedge in introducing the lecturer said:—

A certain philosopher has said that the proper study of mankind is man. All the effort which has been and is being expended on this subject by the philosophical and scientific world is deserving of better results than have been produced so far. The whole difficulty, however, is that in its researches and investigations humanity has left out the most important factor in the problem. Colleges and universities have dissected, sectioned, and examined with delicate instruments and powerful microscopes the physical body, considering this man. When I was in the university one of my fellow physical scientists spent three years sectioning grasshoppers, in trying to answer the question, What is man? His successor in office spent three other years cutting up crickets with the same laudable purpose in view; but neither one came any nearer the solution. Not that they thought man was either a cricket or a grasshopper, but they believed both man and grasshopper were material, and that the answer to the momentous question was to be found in matter.

Mrs. Eddy, however, has stood for the inspiring fact that man is a creation of Spirit, the reflection of divine Mind, God. With this as a beginning we are able to answer this question which has perplexed the scholars of all times. Through the realization of this great fact of being, humanity not only is relieved of all the ills to which from time immemorial flesh has been heir, but is offered a perfect salvation, physical, mental, and moral. Notwithstanding the wonderful possibilities offered by this new concept of man, some have been inclined to reject it. This does not prove, however, that the statement is incorrect, but only that they do not grasp the meaning and full significance of the proposition; for we know from experience that if a person gets any conception of the real thought of Christian Science, he either accepts it or at least becomes friendly to its teachings.

The Topeka Capital.

Santa Monica, Cal.

At a lecture on Christian Science delivered by William D. McCrackan at the Woman's Club House the speaker was introduced by Attorney Harris Taft, who spoke as follows:—

Christian Science deals simply and directly with life, love, truth, with the fundamentals of being. Ordinarily that which is simple and direct is easy of explanation. Such does not seem to be the case with Christian Science, probably by reason of the fact that human beings from birth constantly confront opposing material and seemingly real objects, conditions, and sensations; and therefore the explanation of a simple matter to a mind so confused becomes as difficult as the explanation of a complicated situation to a simple mind. The realization of these fundamentals of being, according to Christian Science, is in direct proportion to the understanding and knowledge of the doctrines of this religion.

Santa Monica Bay District Sun.

Wakefield, England

A lecture on Christian Science was delivered by John W. Doorly at the Institute of Literature and Science. The introductory remarks by Ernest A. Ridge, first reader, were in part as follows:—

Nineteen centuries ago "The Prince of Peace" came into the world to bring redemption from sin, sickness, and death: to teach the understanding of the truth which was to make men free, and to declare the love of the Father for His children. These glorious revelations are the fundamental teachings of Christian Science today; and surely all will be agreed that the lecture we are about to hear is most appropriate at a time when the whole world is in a state of great upheaval, and when people are inquiring if there is a God, and if so, why He allows the present state of affairs to exist.

Digitized by Google

The beloved disciple John says in his first epistle, "God is love; and he that dwelleth in love dwelleth in God, and God in him." Habakkuk says that God is "of purer eyes than to behold evil," and cannot "look on iniquity." Humanity is suffering for its own sins and misdeeds, and because it can not or will not discern the true, spiritual relationship between God and man, as stated in the first chapter of Genesis.

Christian Science reveals a divine Principle, and blesses, heals, purifies, and uplifts those who strive to understand and to demonstrate its teachings. In the book of Proverbs we read, "Wisdom is the principal thing; therefore get wisdom: and with all thy getting get understanding." Fifty years ago our revered Leader, Mrs. Eddy, by the guidance of divine wisdom and spiritual understanding, with much patience, love, and unselfishness, discovered the lost healing power taught and practised by Christ Jesus and his disciples, and by the apostles of the early Christians for about three hundred years after our Lord's ascension.

Thousands upon thousands of men, women, and children have had cause to glorify God and bless the name of Mrs. Eddy for their emancipation from sin, sickness, sorrow, and suffering; but Christian Science has often been misrepresented, misinterpreted, misunderstood, and even scoffed at. In consequence, these lectures are given to correct these mistakes and to give to the public some idea of the teachings of this Science, or truth, which injures no one but blesses all.

It has been said of Christian Scientists that they do not believe in prayer, probably because with the exception of the Lord's Prayer they have no fixed forms; but there is no religious body today which gives a more prominent place in its teachings to the true idea of prayer than they do. It was the chapter on Prayer in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, that led to my study and acceptance of Christian Science.

Correspondence.

✧

Princeton, Ind.

A lecture on Christian Science was given by Willis F. Gross in the Star Theater. He was introduced by Judge H. A. Yeager, whose remarks were in part as follows:—

I am neither an advocate nor an opponent of Christian Science. I am not sufficiently advised of its teachings to be the former, and am too broad-minded, I hope, to be the latter. Most of what little knowledge I have of this subject has been gleaned from observation. I have seen that the practices of this Science have converted apparently permanent invalidism into robust manhood and womanhood; that its people dwell together in a unity not seen elsewhere; that its advocates become kind-hearted, sweet-tempered, and void of unkind and uncharitable speech about others. If, then, the teachings and practices of Christian Science can and do convert weakness into strength, bitterness into sweetness, evil tendencies into purity of thought and speech, hate and anger into good will and love, division into unity of thought and purpose, and bring men and women into one broad, universal brotherhood, then I am frank enough to say these accomplishments compel my admiration.—*Correspondence.*

✧

Sheboygan, Wis.

Frank Bell held the attention of a large audience in a lecture on Christian Science at the edifice of First Church of Christ, Scientist. He was introduced by Miss Anna Schissler, first reader, who spoke in part as follows:—

In these eventful days so much of our time is occupied by the struggle for existence that little is left for the pursuit of higher and better things. The spirit of the age, our ambitions molded thereby, fierce competition, and the demands of a rapidly advancing civilization,—all conspire to force us to give a very large measure of time to the pursuits of ordinary life. So generally true is this fact found to be, that the ordinary business man finds it impossible to keep pace with the march of advanced thought.

Christian Science has been found by thousands of our fellow men to fill a human need, and this is the reason for its extraordinary growth. As a system of religion it is one of the most revered, and at the same time one of the most ridiculed and condemned, of all the various creeds and sects throughout the civilized world. It is revered and most zealously followed by its adherents, because it furnishes a sure rule of conduct in all the various walks of life. Every problem, whether it be one of business or of a social nature, whether mental or physical, political or religious, is promptly met and promptly solved.—*The Sheboygan Telegram.*

✧

Summit, N. J.

Clarence C. Eaton delivered an address on Christian Science in All Souls' Church. He was introduced by Dr. F. C. Doan, who in presenting the speaker spoke in part as follows:—

I am glad to accept the invitation of my Christian Science friends to introduce their lecturer this evening, because it gives me an opportunity to express what I hold to be the spirit and purpose of this church in which you are meeting. All Souls' Church has no other business in Summit than to serve the largest and best interests of the whole community. To this end we are ready at all times to open the door of this church edifice to a hearing of any just cause and to a discussion of any important public question. In this place we are afraid of nothing except intolerance and the attempt to suppress the truth.

Of all the newer movements in religion Christian Science is probably the most misunderstood and misjudged. The average outsider thinks of it as nothing but a method of healing diseases. It is that of course; but it is a great deal more than that. The soul of Christian Science, as I understand it, is expressed in its firm belief that goodness and Love are at the heart of this universe. If the whole world believed in this eternal goodness and really held this eternal Love in its daily thoughts, what a transformation this self-deceived humanity of ours would undergo!—*The Summit Herald.*

✧

Kansas City, Mo.

In introducing William R. Rathvon, who lectured on Christian Science for Third Church of Christ, Scientist, Miss Anna Carkener said:—

Throughout all the ages man has been longing for a savior; not a savior who would redeem him at some future time or in some future state, but one who would here and now rescue him from the ills and sorrows which seem to make up the sum of human existence. Jesus the Christ is that Saviour, and for a time men understood his message and followed his precepts; but as the centuries passed this redemptive Christ-principle became obscured, and once more poor humanity fell back into the old way of looking for future salvation. But God's work is perfect and complete. This healing, saving truth, once revealed, has remained here to be discerned by any one spiritually minded enough to perceive it. Mrs. Eddy was such a one, and she has restated this way of salvation so simply that even a little child can understand it, and yet so profoundly that the wisest has not begun to sound its depths.—*Correspondence.*

Testimonies of Healing

As Christian Science has been a great blessing to me, and Mrs. Eddy a true Samaritan, I feel it is only just to acknowledge her word and works. My knowledge of the existence of divine Principle, Love and Truth, came unexpectedly. About six years ago business failure, mental worry, and the death of my wife, completely wrecked my health. Having been treated by all the doctors within range of where I was located, I finally gave up all hope of ever being of any service to the world or of value to my children. By mere chance I picked up a copy of the *Sentinel* in the hotel at which I was a guest, and idly glancing at one of the articles I read two sentences that impressed me in some way, so I wrote them in a memorandum book. The first was, "God is love;" the second, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). I had never before seen or read a line of Christian Science literature.

Some three weeks later when the errors and mistakes of my life seemed to overwhelm me and there appeared to be no possible way to overcome the difficulties in my path, these quotations came to mind. I pulled the book out of my pocket and after reading the lines regained my equilibrium. Having observed some of the books at the library, I at once began to read all I could find, and I paid my last five dollars for a copy of Science and Health. Meantime I began to attend church services regularly, studying the people and asking those I met for information about Science. As a result of my study, strength of mind and body has been regained and the many blessings received since are too numerous to mention. The Bible has become a new book to me, and all my troubles are being overcome as I learn to look to the true source for help and strength.

Christian Science has never failed to meet all demands, and my fervent prayer is that I may continue to grow in the grace and knowledge of the truth. I am truly thankful for the good it has done for me, and grateful to Mrs. Eddy for the patient love and the sacrifices she made in giving Science and Health to the world.—Tom M. Barnes, Bonham, Texas.

✧

I realize that the time has come for me to express some of the gratitude I feel for the help Christian Science has been to our family. At first I was very dishonest over it. Though knowing Christian Science was the only thing that could help me, it looked as though I should have to give up various wrong desires which seemed to have an attraction for me, and I did not want to do so; but gradually the truth broke down my opposition, and consequently I have received untold blessings in the destruction of sin as well as of sickness.

I wish to tell of an experience we had when our boy, now nearly ten years of age, was a baby. When he was about seven months old and a big, sturdy child, one day I placed him in his perambulator outside the door for his afternoon nap, strapping him in, also putting up the hood as an extra protection. Somehow he wriggled out and fell head first on the tiles which edged the asphalt walk, crushing his head in just above the temple. He was not stunned by the fall but screamed loudly. At once we began to declare the truth for him, but when my husband brought the child up to me the appearance was very terrifying, so he at once went to find a Christian Science practitioner. At that time the nearest one lived half an hour's journey from us, but my companion, who was a Christian Scientist, and I worked and read aloud to each other.

We did not look at the child again, but I just held him with his face against my shoulder. He soon became quiet and in about half an hour suddenly started to chuckle at his reflection in the mirror behind. We then looked at him and found the depression on the head, which had been quite deep, was only half as deep, and when my husband got back about half an hour later the place was almost normal. All the broken skin healed over that night, and in six days no mark was left which an ordinary observer would notice. There was never any inflammation, no bruise or discoloration.

A doctor friend, who heard of the case and came up about three weeks later to see the child, said he could tell that the injury had been of a very serious nature. He told us plainly that there would have been no hope for my son under *materia medica*, that even had he lived under that treatment, which was very doubtful, he would have been a hopeless idiot. The boy is now at boarding-school and is perfectly normal in every respect. We have had many other cases of healing, such as weak heart, scalds, croup, and influenza, but one feels more and more that the physical healing is only one of the "signs following," and that the real mission of Christian Science is the healing of sin.

I can never express in words my gratitude for this wonderful teaching that has come to us through our beloved Leader, Mrs. Eddy, and rejoice that I am privileged to know something of the truth which makes free.

M. Violet Woodhead, Manchester, England.

✧

I lovingly give my testimony as to the power of Christian Science to heal. Four years ago I was in a most dangerous condition. After some years of the most trying experience I had reached the place called "man's extremity." I was in such a condition mentally and physically that I wondered if ever again I could be useful to any one. With this unhappy mental condition came a complete physical collapse. Three physicians were called, two of them among Chicago's eminent specialists, and all stated that an operation was imperative as soon as I was strong enough to undergo one.

At this point I made a new friend, a Christian Science practitioner. I was convinced of the truth of Christian Science because of its reasonableness, for it appealed to me as being logically true. I asked this friend for help, and never before had I known such loving-kindness as I received from her. It meant healing to me. I began to realize what it was to become as a little child and learn humility. I saw clearly that, until I was healed of resentment I would never get well.

From the first treatment my health began to improve. I was not in bed a day after that, but in two months was able to do the work which came to me to do and which required strength. Today I can joyfully say that Christian Science does heal. I thank God that I did not have the operation performed and that I accepted Christian Science. I am learning that it is the quiet thought which hears the voice of Truth, and always there comes from my heart endless gratitude to God, and to our Leader, Mrs. Eddy.

Mabel Barrows Gorder, Evanston, Ill.

✧

I owned a copy of Science and Health for twelve years prior to my healing, but only occasionally looked at it. I sent my five children to the Christian Science Sunday school, thinking it was the best place for them, but never went to church myself and did not know much about the Bible. When any one became ill the family physician, a good man and a friend, was sent for; and so we jogged along until one day I succumbed to a nervous breakdown. I had three friends who were nervous wrecks, and had been so for years, and the thought that I would be sick like these women, perhaps for years, drove me almost frantic.

Digitized by Google

We sent for a doctor who was a professor at the university, and he called every day for three months. At the end of that time he told my husband he could do nothing more for me, that it would be wasting money to have him call any more. I knew something had to be done, but would not have another doctor, as I knew he was as good as any. My husband then spoke of Christian Science. I had wanted Science but would not say so, as I thought my husband was opposed to it. Now when he said, "Go ahead and get a practitioner," I did so at once.

I began to improve rapidly, and in two months was well enough to help pack things and move to California. It took me a year to get wholly well. I had a practitioner the entire time, and often called her in the night when I could not sleep. During this period I was also completely healed of hemorrhoids and, I may add, of self-pity and resentment. I am very grateful to God, also to Mrs. Eddy for showing us how to find God, good.

MATILDA TINKLER, San Francisco, Cal.

✧

It is with a deep sense of gratitude to God, and also to Mrs. Eddy, that I send this testimony, in the hope that it will help some other seeker after Truth. I did not come into Christian Science for physical healing, and for a few years failed to take the subject very seriously. Finally, however, I was compelled through physical need to do so. After undergoing an operation I was in as bad condition as before; but this is slowly but surely being overcome through a knowledge of the truth, and I am in better health, mentally and physically, than ever.

I used tobacco and occasionally liquor for several years, but these false appetites have been entirely destroyed. I also wore glasses. The oculist had told me that however much any doctor should advise to the contrary, I would be compelled to wear glasses for the rest of my life, and that my eyes should be refitted at least yearly. Through the study of Christian Science, however, I can now use my eyes as much as is necessary, without wearing glasses and with no ill effects. One demonstration that impressed me especially was the growth of a tooth. After having considerable trouble with a hollow molar, I had it extracted; but although the dentist told me he did not expect to get the tooth out without shattering it, it was removed in one attempt, and I suffered no pain. In less than one week a new tooth had forced its way through the gum, and it is now perfectly sound.

Several months ago, while working with some acid, a quantity got into my eyes. Momentarily I was blinded; but I immediately began to affirm the truth, and in a few minutes was able to open my eyes and resume work. Except for slight inflammation and sensitiveness there was no trace of the occurrence, and by the next morning these had entirely disappeared. For all these healings, and many others, I am deeply grateful, and for the spiritual uplift which has accompanied them my gratitude is beyond expression.

EUGENE P. COLLINS, Chicago, Ill.

✧

[Translated from the German]

Two years have elapsed since some dear relatives called my attention to Christian Science, to that glorious teaching which includes the understanding of divine, omnipotent Love, the truth which leads us all to the attainment of health, contentment, and true happiness.

For eleven years I was in bondage to a very serious nervous condition, a heart trouble, and bowel complaint. I suffered distressing pain every day, and it was often accompanied by very alarming symptoms. To this was added pain in the back, which gradually extended to the rest of the body and grew worse with every day. I was surrounded by the loving care of my people and no desire was left unfulfilled, but everything had ceased to afford me joy. Withal, I was constantly tormented by the fear that death might be near. Still I set all my hopes on the physicians' skill, and everything possible was done for me; but neither the means employed nor the hygienic recommendations which I followed brought relief or improvement, and I was sometimes on the verge of despair.

After all medical means had failed I was taken in a hopeless condition to a sanitarium for nervous diseases, but here also everything remained unavailing, and the professor informed me that there was nothing he could do, that I must expect the condition to last the rest of my life. I now submitted to the disease without further struggle, there being no hope of recovery for me, or at least no hope of complete recovery, according to the physicians' statement. And yet how I longed to live and be well, despite the fact that I seemed every day to be drawing nearer to death. I had become apathetic and misanthropic; the laughter, talk, and walking about of others caused me to feel deeply unhappy and to suffer bitterly. But how I envied these fortunate ones! I had no appetite; whatever I took was taken under compulsion, and I became more and more wasted, besides having new troubles added. For years I had been unable to walk without assistance.

Happily while in this pitiful condition I caught a glimpse of divine light. Surely "man's extremity is God's opportunity." As if by chance my parents heard of Christian Science, and being at once filled with new hope that there might be help for me, I took a trip to Hannover in company with my father and sister, and there applied for help to a Christian Science practitioner. He took up treatment at once, and from that time there was an improvement daily. My trust was rewarded and my hope fulfilled according to the promise, "They that wait upon the Lord shall renew their strength." Now I am able to attend to all the work both at home and on the field. I have become a different woman since turning to Christian Science, for I now see how much good we receive daily from God, and know that we are under His guidance and protecting care wherever we are, that He is our help, and that we may rely on Him. I thank God from the depths of my heart for these proofs of divine Love and goodness, and also remember our revered Leader, Mrs. Eddy, with a sense of profound gratitude. My endeavor shall be to assimilate more of the nature of divine Truth.

LUISE FEHSE, Kolonie Weddendorf b. Albisfelde, Germany.

✧

In this my first testimony my humble prayer is that some materially bound and burdened consciousness, such as mine was before accepting Christian Science, will be illumined thereby and thus led to prove the power of Truth. For years I was like a ship without a rudder, a life without hope. I longed and prayed for death as a means to set at rest a materially tortured consciousness. Longing for something unseen, unknown, I was never satisfied unless traveling and filling my mentality with sights unseen before.

Notwithstanding I had a good home, a noble father, a brother, sisters, and a saintly mother, that incessant craving and unrest at last made me desperate; but my extremity proved to be God's opportunity, and two years ago the door that God "openeth, and no man shutteth; and shutteth, and no man openeth," opened to me, and at last I was satisfied. I had found rest for my weary consciousness, and drank deeply of divine Love, Life, Truth, the peace that passeth understanding completely filling my thoughts for months.

Digitized by Google

I bow my head in thankfulness while glorifying God's everlasting power and allness.

To the God-sustained woman who has made divine Truth understandable and available through her pure, spiritual receptivity and undaunted efforts throughout many years of self-denial, I feel sure we can best reflect our gratitude and love by daily living Christ Jesus' teachings; by affirming the allness of God, Truth, and denying error; by reflecting brotherly love, gentleness, kindness, reverence, and charity one to the other. The pure, uplifting thoughts extended to hungry humanity by the Christian Science literature and lectures are again feeding the multitudes as they were fed in the days of our Saviour.

Besides the mental healing, I was instantaneously healed of an intense pain in the side that for years would come and go every few weeks. I have had beautiful demonstrations over seeming injustice, also over fear, indifference, and lack of patience. I am grateful for seeming trials, as they prove wherein we place our trust, whether in the unreliability of the pleasures and pains of matter or in the almightiness of God, the ever-present, loving Father of all.

JULIA DALLIMORE, Los Angeles, Cal.

✧

Words are inadequate to express my gratitude for the blessings I have received through Christian Science. I had been in ill health for a number of years, and in February, 1912, reached a state where doctors could do nothing for me. At this time, on account of my condition, I had a severe attack of throat trouble, and although two doctors attended me I received no benefit and continued to grow weaker. When hope seemed almost gone I was led to consult a Christian Science practitioner for help, and also procured a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. From then on I gained in strength, and have been away from work only one day in nearly three years on account of sickness.

When I contrast this with my condition at the time I had to give up a good position, and not only was unable to work at all but could get no help from doctors, my gratitude can easily be understood. Whereas in those days the shelves in one room at our house would not hold all the medicine bottles, now there are none. I am thankful that the way has been made so clear, and for the health and peace received in Christian Science.—T. B. HENSON, Sacramento, Cal.

✧

Words cannot express my gratitude to God, and my thankfulness to our Leader, for the joy and peace that Christian Science has brought into my life and for the speedy healing of abdominal and stomach trouble. After being an invalid for ten years I turned in desperation to Christian Science. I had been under the care of sixteen doctors, some of them specialists, had been in nursing homes, and undergone operations, but had received only temporary relief from pain. I prayed to God continually for health which never came, and it puzzled me how a God of love, as the Scriptures declare Him to be, could afflict me so and expect me to be resigned. I once stayed with a Christian Scientist in Paris, but at that time was too prejudiced to make inquiries about it, thinking it was something contrary to Bible teaching.

Later on a friend was healed, and four years ago she lent me her copy of Science and Health, but I only glanced through it. Six months afterward I again consulted a London specialist who had treated me before. I was so tired of life that I begged him to operate, thinking things might be thus settled, but he would not do so as he thought there was small chance of my pulling through the operation. We therefore left the place where we had been spending some months, and went to London to undergo a milder treatment at the hands of a physician; but as there was a Christian Science church close to the place where we were staying, I went to a Sunday service instead of going to the physician. The following day I consulted a practitioner, and by the end of the week my ailments, which were many, had vanished. It seemed almost too good to be true, and I would like to prove my gratitude by helping others. I am very thankful for the Lesson-Sermons and for all our literature, which always contains a message to suit the hour; also for the knowledge that God is a very present help.

S. ANNIE M. EDGHILL, Colwyn Bay, England.

✧

I turned to Christian Science after all material means resorted to had failed. I had been reared by devoutly religious parents and had tried to live consistent with their teaching and example; nevertheless, I had in time lost all respect for their concept of God, and refused to worship a Supreme Being who permitted, even if He was not the direct author of, the ills of mankind.

As a child I was attacked by whooping-cough and lung fever at the same time, with the result that I was left in such a serious condition that both the physician and my family declared it would be impossible for me to reach man's estate. Owing to their constant fears for me I suffered from the various diseases which are supposed to attack a weak child. I continued to live, however, and finally grew to manhood, but well-nigh every organ of my body was diseased, the more prominent trouble being with lungs, throat, and head. There was a serious catarrhal condition, which in time attacked all the chest and abdominal organs, also filled the nasal passages, so that an operation had to be performed, including the removal of the septum and a large section of the hard palate. My entire system was poisoned to such an extent that I lost half my weight. Every known remedy was resorted to, but only temporary relief was received. During the last three years of this experience Christian Science was brought to my attention many times, but I was prejudiced against it as well as against all things called Christian, so turned from it, as I wanted nothing further to do with God.

As time passed, the hearing of one ear was lost and the bowels could be moved only by mechanical means. As a final climax there began a rapid loss of eyesight, which in a few weeks incapacitated me for all work and rendered me practically helpless. Several specialists were consulted, but the trouble was pronounced incurable. However, I was not willing to give up *materia medica*, so went to another city to consult a specialist. On arriving there I called on a friend to whom I told my latest trouble; and his reply was, "Why don't you try Christian Science?" For the moment this question angered me, but my friend seemed so earnest and gave such excellent reasons for his acceptance of it, that I was induced to go at once to a practitioner. When treatment began I had not the slightest faith in it, but was willing to accept the truth, come from whatever source it might. The result was that the structure of skepticism I had reared about me toppled and fell, engulfing me in a mass of mental débris out of which I could not see in any direction. Then, as God, there soon came a stream of light which revealed the utter chaos of that which is built upon human reason and the harmony of that based on the divine Mind. Following this came the rapid return of my eyesight.

I never shall forget this influx of divine light and Love; words fail to give utterance to the joy it brought. My whole nature was changed, so that I was enabled freely and fully to forgive one who had greatly wronged me. Then came the

Digitized by Google

healing of the so-called cancerous condition of the ear, with which I can now hear perfectly; the opening of the bowels and the healing of the carious bones; also complete freedom from stomach trouble of the most serious type with its attending agonies. I am now normal in weight. For these healings and many more I praise God, "who satisfieth thy mouth with good things; so that thy youth is renewed like the eagle's."

My gratitude for all these things is beyond my power to express, yet they are secondary to the spiritual uplift which sees God as all good, all Life, Truth, and Love, the one and only power, and man in His image and likeness. Mankind owes a great debt of thanks to Mrs. Eddy for what she has done for the race in rendering available the teachings of the master Christian.—HORACE P. EATON, Lima, Ohio.

✧

[Translated from the German]

Words can but imperfectly express my gratitude to God for the healing through Christian Science of a serious physical difficulty, as well as for the blessings which this religion has brought me in all circumstances of life. For three years I was afflicted with a most trying bowel complaint. There seemed to be complete inactivity of the system, and I went through the same distress daily. Believing as I did that the use of medical means was the only way to counteract the trouble, I had recourse to all manner of drugs and observed many rules; but at best these efforts were attended by temporary relief only, as after a time the condition would be the same as before.

While in a state of great discouragement I first heard of Christian Science and of the wonderful facts of being as revealed and made demonstrable through its teachings. My interest was at once aroused, since I had long felt a yearning for greater clearness in religious matters and for a truer knowledge regarding the nature of God. I began to read the *Herold*, and thereby experienced such a spiritual uplift that I became convinced that the light of Christian Science had come to me from God in response to my innermost yearning.

Mrs. Eddy makes it clear in a wonderfully simple way that the saving power is not in the personality of Jesus, as is believed to this day by many, but that it inheres in the Christ-idea, in the unity of God and man and the clear recognition of omnipresent divine Love. I hesitated at first to ask for treatment in Christian Science, as wrong material concepts, for which the material senses seemed to furnish so much evidence, time and again regained the upper hand. However, when to this trouble there was added oppression of the heart and difficulty in breathing, I decided to apply to a Christian Science practitioner for help and wrote her to that effect.

Treatment was taken up at once and great kindness shown to me. Upon the practitioner's advice I secured a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and soon regarded it as a storehouse of inexhaustible wealth. A week had hardly elapsed when I began to experience a measure of relief. After a long period of despondency a hopeful, happy mood prevailed, and at the end of about four weeks the complete healing of all my troubles of years' standing, some of which were so distressing, was an accomplished fact.

I feel certain that God's power has been manifested in my case, and glory and praise be unto Him! I am most thankful that through Mrs. Eddy the way of Truth has again been shown to us. May suffering humanity understand and accept the inspired teachings of Christian Science, for thereby it will experience help in every need, and the recognition of our heavenly Father's love will make for a better race.

MATHILDE FISCHER, Gotha (Thuringia), Germany.

From Our Exchanges

[*The Biblical World*]

We shall never fully understand Jesus until we stop looking at him through the atmosphere of a conventional piety. We have so veneered his thought with theological terms and confessional formulas that we have failed to look at it with the same objectivity—if academic patois may be permitted—with which we look, for example, at the teaching of Socrates. As a result we too frequently have failed to grasp its essential sanity. In consequence we have underrated the good sense of Jesus. Sometimes this has resulted from our blind disregard of conditions in the midst of which his teachings were given and the persons to whom they were addressed. We have erected his directions for particular needs and particular tasks and particular persons into general principles. When we have not been ready to follow the results of treating his words in this fashion, we have injured our consciences by casuistical evasions of our own conclusions; and a man's integrity is always at stake when he tries to make unwelcome moral ideals appear to be illegitimate.

The man who recognizes the authority of Jesus should see that he actually knows what the teachings of Jesus are. Exegesis is an admirable handmaid for piety. Prejudice and practice are enemies of good sense in the case of Jesus as in that of other teachers. History has so built words and practices into the life of the world as to make it difficult to understand Jesus except as a divine idealist introducing ideals fit for heaven but impracticable on the earth. There could be no more serious mistake.

[Louis Wallis in *The Standard*]

The great social awakening, which now sweeps like a tidal movement over the churches of the nation, means that the world is at last beginning to catch up with the Bible,—not a work of man, but a work of God, breathing a new life into the churches at the very time when men were becoming discouraged about the prospects of organized religion. Thus, while the movement goes on around us, men feel its grip and acknowledge its power, and yet ask in bewilderment, "What is the social awakening?"

Jesus and the Hebrew prophets lead to the new day when they tell us about "the weightier matters of the law," whereof the foremost is justice. By the supreme test of Jesus and his forerunners are all religious leaders, teachers, and authorities now being judged. He shall "set justice in the earth; and the isles shall wait for his law." Such was to be the historic work of the Christ, as foreseen in the most exalted vision of Hebrew prophecy. "Let justice roll down as waters," was the cry of Amos. If religious leaders fail to put justice at the center of their message and at the focus of their perspective, the Bible sits in judgment upon them.

[Roland Ringwalt in *The Living Church*]

Bishop Butler considered that our ideas of what is natural, what is in accordance with the orderly government of the universe, would expand with our knowledge. He believed that to creatures higher than ourselves the whole course of prophecy and revelation might be as natural as the development of an ordinary mind may seem to us. It may be that the word "supernatural" is less frequently on our lips than on those of our fathers, yet our moments of awe may be no less frequent, and our raptures may soar to no less a height than those of saint or seer.

We feel that it is God "that hath made us, and not we ourselves," that "we are the clay" and He the potter, that

Digitized by Google

"he giveth to all life, and breath, and all things." Daily conscious of the superhuman, we may not venture to hold anything supernatural. What can be above nature if God "maketh the clouds his chariot," and if the sacred tongues of inspired Scripture use the word "wind" to express the name of the Spirit?

[Rev. T. Rhondda Williams in *The Christian Commonwealth*]

The Lord's Prayer is a social prayer. There is nothing in it that a man can ask for himself alone; every petition is for others as well as himself. And yet Jesus was an individualist in the best sense. Those lonely nights of prayer on the mountain show us how his life was fed; and he dealt with individuals, too, because he knew how important they were. He knew the difference between the pressure of the multitude and the touch of the one who came in need and in faith. The truth is that our social service will never be what it should be unless our own hearts are baptized in the fountain of eternal truth. There is a weakness in the social message which does not flow from the spirit that is consecrated to Christ. The nearer you get to him the more precious you will be to your fellows. When we have learned to listen at the inner shrine and hear the divine voice, then we shall have something to say to men; if we would lead others, we must faithfully follow; we must have the ear of the learner if we would know how to teach, and the peace of God must be a great restfulness in our own hearts if we would be healers of the world's sorrow.

[*The Christian Work*]

The spirit of every man in direct contact with the spirit of God is the New Testament conception of religion. Now all this is opposed to the spirit and practice of the world, the natural inertia of the ordinary state of things. Society works incessantly at eradicating spiritual originality. It keeps reducing men to the level of things,—a dead level,—cutting all to pattern, rubbing off corners. We know how society looks askance at the original and the eccentric, and has hard names of crank and fanatic for all who run counter to social custom and prejudice. One must not speak strongly, or think freely, or act individually. There is of course good in this; for it pulls up as well as rubs down, and it is a useful deterrent to parade of singularity. The genius of society aims at collective action and molds all to one type of life. The sway of custom is strong in everything, and mere protest against custom may be only conceit or antisocial feeling. Still, it is this conventionality which makes for mediocrity, and for the prosaic in every line of life. Genius is always more or less of an affront, either not recognized or hated or feared.

[Rev. J. Clifford Banham in *The Christian*]

The greatest need of the church today is for human agents through whom the divine resources of grace and power may flow to supply the needs of the world. There is no failure with God. God is still the same. The reservoirs of grace are not empty. He is still almighty. But what He needs is the human agent through whom He can work upon the world.

[*The Record*]

Our Lord came proclaiming that the kingdom of heaven was at hand—a kingdom with higher claims and severer judgments than the Jews could tolerate. It claimed a spiritual perfection instead of a legal one, an obedience of the heart instead of a mere compliance in external acts; it penetrated into the secrets of the conscience.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new French pamphlet, "Foi et Générosité" (Faith and Generosity), has just been issued and is now on sale. This pamphlet contains the following articles: "The Lord Thy Confidence," "The Closed Hand," and "Continuity of Right Thinking."

Christian Science: A Religion of Love (Christian Science: En Kjærlighetens Religion), a lecture by Virgil O. Strickler, has been translated into Norwegian and is now published in pamphlet form with the English and Norwegian versions on opposite pages.

"Law and Work" is the title of a new pamphlet containing the following articles: Love Fulfils Law, The Logic of Christian Science, Undisturbed, God's Law of Adjustment, Authority.

"Christian Science: Man's Dominion over Evil," a lecture by Edward A. Kimball, C.S.D., has been translated into Russian, Norwegian, and modern Greek. Pamphlets in these three languages have been published with the English version opposite the translation and are now on sale at prices of our regular pamphlets as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18 point) on Oxford India Bible paper, bound in leather. Size 10¼ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 641 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 61 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.35.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under those titles in this price list.*

Items of Interest

An application to buy all the bark of black birch on a large watershed in one of the national forests in the Southern Appalachians has been received by officers in charge, who say that the bark will be used by the mountaineers to make sweet birch oil, a substitute for oil of wintergreen. Sweet birch oil has been made in this country for many years, and is obtained from both the wood and the bark of the black birch. The oil is a product of steam distillation plants, where, in addition to the twigs, bark, and young sprouts of the birch, the entire tree is sometimes used. By primitive methods about twenty-two bushels of bark are used for every run, and it is said that this amount yields approximately four pounds of oil.

The forests in the East purchased by the Government are reported to contain large quantities of birch and are expected to become an important source of supply. The foresters say that the birch is not a very desirable tree in the southern mountains. It can seldom be sold for lumber, and it occupies ground which could support more valuable timber; consequently they are glad of an opportunity to dispose of it. The officials state that provision will be made to utilize the tree more closely than has been done in the past, and to regulate the cutting in such a way as to provide for a future supply.

The Carnegie Foundation for the Advancement of Teaching has made public a plan of wide scope for insurance and annuities for college professors in the United States and Canada. The pension system which the foundation adopted when it was established ten years ago, and which has consisted largely in the granting of retiring allowances to aged professors in certain colleges, has, it is declared, been found "unsound," and it is proposed to do away with it. The faults of the present system and the features of the new plan were set forth in a report by Dr. Henry S. Pritchett, president of the foundation. While the new plan has not yet been adopted, the report in favor of it has been issued with the full authority of the trustees of the foundation, and some time during the year they will consider the question of putting the scheme into practice.

An archeological expedition supervised by the Smithsonian Institution and the University of Utah will be conducted into southeastern Utah this summer for the purpose of studying and preserving the ruins of the ancient inhabitants of Utah and the Great Basin. The ultimate purpose of the expedition will be to create a sentiment among the residents of the state and the West for the permanent preservation of the prehistoric features of southeastern Utah. The work of the expedition will include a thorough investigation of the country in the vicinity of the San Juan and Colorado Rivers. Not only will the ruins of the habitations of the cliff-dwellers be examined, but the natural formations, the flora and fauna of the districts, and the geological and climatic conditions, will be studied.

Concerning the fact that the great continent of Atlantis may once have existed, Pierre Termier, of the French Academy of Sciences, remarks in a recently published separate section of the Smithsonian Annual Report: "No affirmation is yet permissible, but it seems more and more evident that a vast region, continental or made up of great islands, has collapsed west of the Pillars of Hercules, otherwise called the Strait of Gibraltar, and that its collapse occurred in the not far distant past. In any event, the question of Atlantis is placed anew before men of science."

Samples of fiber-producing leaves of the pita floja of Honduras may be inspected at the United States Bureau of Foreign and Domestic Commerce or its district offices. This plant yields one of the strongest plant fibers. It is very abundant in many localities from southern Mexico to Panama. The fiber is cleaned by hand in limited quantities for domestic use, for no machines have yet been found that will clean it successfully, and it is not produced in sufficient quantities to be used commercially.

It has been proposed by the Hoosier Motor Club of Indiana that the Dixie Highway be improved from Mackinac, Mich., to Miami, Fla., by the planting, along the right of way, of flowering shrubs and hardy perennials. Inasmuch as Indiana automobile people started the Dixie Highway project, it is regarded as likely that the proposition will be adopted. It is tentatively planned to employ yellow as the basic color, each state from Michigan to Florida contributing its natural yellow flowers and shrubs, so that the highway may be golden from end to end.

Word has been received by the Office of Markets and Rural Organization, United States department of agriculture, that the official cotton standards of the United States have been adopted by the Clarksdale, Greenville, Greenwood, and the Yazoo City cotton exchanges of Mississippi. A total of thirty-one cotton exchanges and associations now have adopted the official standards.

The output of bituminous coal in the United States during the first six months of 1916 was the greatest ever recorded in any half-year period. Estimates indicate that the production during this period was 261,000,000 tons. The output of beehive coke has increased from about 11,250,000 tons in the first half of 1915 and 16,250,000 tons in the second half of 1915 to more than 18,000,000 tons during the last six months. The manufacture of coke in by-product ovens has also increased as new ovens have been completed and put in commission.

A continued expansion of ship-building in American yards is shown by builders' returns to the Bureau of Navigation. The records show the number of steel merchant vessels building or under contract to be built in private plants of the United States on June 1 as 372, with a total aggregate gross tonnage of 1,147,531.

There are about one hundred and ninety-one million domestic animals in the United States, and they are worth approximately six billion dollars. There are also about twenty-one million horses in the country, representing an investment of $2,800,000,000. The mule represents $560,000,000.

Missouri, following the lead of Kentucky originally, and of sixteen other states later, has decided to try the plan of the "moonlight school." The object is to provide educational opportunity for the rural adult population during the moonlight nights of the month.

So far in this session Congress is committed to expenditures in excess of $1,500,000,000, carried in pending bills, including ordinary expenditures and such miscellaneous items as good roads, a nitrate plant, rural credits, and the ship purchase bill.

Without the formality of a roll-call the House of Representatives passed the army appropriation bill, the biggest budget of its kind in the history of the United States. The measure carries approximately one hundred and eighty-two million dollars.

A laboratory for research work in the possibilities of coal-tar products is to be established at Johns Hopkins University, with the cooperation of gas companies of Philadelphia and Baltimore. The purpose is to develop the aniline dye industry.

During the year ended Oct. 31, 1915, 60 cooperative banks were formed in Massachusetts, increasing the number of these institutions to 179. The total assets were increased by $10,761,847, making an aggregate of $35,547,317.

The annual report of the National Bible Society of England for the year 1915 records a circulation of 3,581,909 Bibles, Testaments and portions of the Scriptures, being an increase of 819,293 over 1914.

Gold mined in the United States during 1915 amounted in value to $101,035,700. The quantity was 4,887,604 fine ounces. The production of silver was 74,691,075 fine ounces, valued at $37,397,300.

Cottonseed crushed from the crop of 1915 in the United States totaled 4,201,962 tons. Linters obtained numbered 930,469 equivalent 500-pound bales.

The movement for the construction of a tunnel under the English Channel has been revived, and the question is to be discussed in the House of Commons at an early date.

By-product coke plants, representing an investment of $60,000,000, with yearly products valued at $25,000,000, are now in course of construction in the United States.

Total gifts to Yale during the past year increase the funds of the university by over one million seven hundred thousand dollars.

Spain produces more than three quarters of the world's supply of olive oil.

Taking Up the Cross

REV. JAMES J. ROME

THOSE who have come to Christian Science for physical healing and have received the relief they sought, are apt to feel that since that which seemed to be their chief difficulty has been met, the rest of the way will be smooth and easy going. They soon discover, however, that what they thought was so momentous a transformation was but an initial step in the journey from sense to Soul. The physical healing is really a mental development which opens to their vision views of life of which they had never before conceived. There are two ways open to them. On the one hand is the temptation that since they have gained such physical freedom they are able to indulge in many of the material and sensuous pleasures from which their former infirmities debarred them. The other way is that of opportunity and activity, which is discovered when, on turning away from the gratification of the senses, their attention is devoted to the attainment of a better understanding of Truth. These two ways will continually confront them, and they must constantly be making their choice between them.

It is apparent that these ways lead in opposite directions, one toward matter and the other toward Spirit. One presents itself to our mortal sense as pleasant, innocent, easy, and attractive, and its choice is supported by many quite plausible arguments; as, for instance, that it gives one a sense of freedom to do what he wishes, and that Christian Science means freedom. To mingle with others in social enjoyments and entertainments is to express a spirit of kindness, liberality, and love for one's neighbor. To enjoy the bright and happy side of life will evidence that Scientists can enjoy themselves, and so attract the thought of others to it. But freedom does not mean the indulgence of fleshly desires; kindness does not mean concession to the erroneous demands of society; and to seek happiness in the ways and modes of the world is rather a poor indication that one has found higher joys. This way always leads toward matter, and following it one is led to an attempt to mingle the material with the spiritual, which of course is impossible. Moreover, this tends to obscure and confuse spiritual vision with attendant discord and disappointment. On page 156 of "Miscellaneous Writings" Mrs. Eddy says, "It is their *materiality* that clogs the progress of students, and 'this kind goeth not forth but by prayer and fasting.'"

The other way is not so attractive to mortal sense. Of it Mrs. Eddy says in Science and Health (p. 324): "The way is straight and narrow, which leads to the understanding that God is the only Life. It is a warfare with the flesh, in which we must conquer sin, sickness, and death, either here or hereafter,—certainly before we can reach the goal of Spirit, or life in God." Willingness to follow this way is the test which decides between the true and the untrue Scientist. This is the way of conflict with carnal desires, grappling with difficulties, overcoming obstacles, and treading on the head of the serpent that bites the heel. But it is the way of exalted purpose, demonstration, and triumph.

Jesus said, "If any man will come after me, let him deny himself, and take up his cross daily, and follow me." Now taking up the cross means more than simply undergoing hardships or struggling with difficulties that we have brought on by our own neglect or carelessness. It means willing service; it means standing for Principle and meeting without flinching the many evil influences that would tend to hinder spiritual advancement. It means self-immolation.

Not infrequently the student in Christian Science makes the discovery that he has some pet theory, personal opinion, or sentiment which is not in keeping with the higher sense of Principle he has gained. Usually a struggle ensues, and if loyalty to Principle overrules self-will and self-pride, then the cross is taken up and the Christ-idea is being followed. The fact should never be lost sight of that Christian Science does not justify or even admit the indulgence or gratification of mere personal tastes or desires. There is but one objective permissible, and that is the gain of spiritual understanding. Whatever is found to be without advantage in this direction should instantly be discarded, no matter what the sacrifice may seem to be. When anything is given up for spiritual gain, however, it is discovered that there is really no sacrifice.

Sometimes to take up the cross means to stand firm by our convictions of right in the presence of opposition in the thought of others. To hold to views that conflict with the honest opinions of those we love is not generally a pleasant or an easy task, but it is only when we stand fast in our position because it accords with our highest conception of Principle, and not merely in defense of opinion, that we are taking up the cross. Self-justification has no place in cross-bearing. Steadfastness in our understanding of right may be misunderstood, our motives be misjudged, and our actions and words misconstrued. Only by bearing this cross in meekness and patience can we outlive these wrong impressions, but if we are faithful and true in our adherence to Principle there is no need for fear or doubt as to the outcome.

To quote once more from the Christian Science text-book (p. 254): "If you launch your bark upon the ever-agitated but healthful waters of truth, you will encounter storms. Your good will be evil spoken of. This is the cross. Take it up and bear it, for through it you win and wear the crown. Pilgrim on earth, thy home is heaven; stranger, thou art the guest of God."

From Bondage to Freedom

REGINA B. M. NASH

IN the twelfth chapter of the Acts of the Apostles is chronicled a remarkable incident, that of Peter's imprisonment and the manner in which he was released. From this narrative Christian Scientists may glean many valuable lessons. Though all appeared dark and the prison walls impenetrable, yet the faithful band of Christians, "of one mind," united in prayer for Peter's deliverance. We read that they prayed "without ceasing." Doubtless Peter too was realizing the truth, his freedom in divine Mind, and thus naturally when

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

the angel-message of life and liberty appeared to his consciousness he was able to receive it; for he had been cleansed of wrong thinking, and his thought was permeated by rays of spiritual light. In the ninety-first psalm we read, "He shall give his angels charge over thee, to keep thee in all thy ways," and this was completely demonstrated in this instance.

Without any hesitancy Peter in obedience and confidence arrayed himself in garments of faith and sandals of trust, and followed, not losing sight of this message of Love, though he saw but dimly, for he thought it a vision and knew not at first that he was free. Perhaps he was dazzled and overpowered for a time by such a sudden, wonderful revelation of angelic presence; nevertheless, by following and obeying he was enabled to see clearly, to know the truth, and to realize his freedom.

Now what did Peter do? He knew it was right to express his gratitude and at once declare what omnipotent good had done for him. He went to the house where many of the Christians had gathered in prayer for him. In all probability he went to tell them of the demonstration made and express his thankfulness for the work done. It seems that Rhoda, the damsel who came to the door in answer to Peter's knock, was the first and only one who instantly perceived the truth sufficiently to realize that the demonstration had been made; for it is said of her, "And when she knew Peter's voice, she opened not the gate for gladness, but ran in, and told how Peter stood before the gate." When, however, she told those on the inside, they considered her mad, but after Peter's continued knocking, his endeavor to make them see the truth brought them to the door,—"and when they had opened the door, and saw him, they were astonished."

Why should these Christians have been astonished when after declaring the truth they found that their demonstration was made? Peter succeeded in making them perceive the truth clearly enough to know they had brought into demonstration the manifestation of him as a free man; for after beckoning unto them with the hand to hold their peace, he "declared unto them how the Lord had brought him out of the prison." He then commissioned them, "Go show these things unto James, and to the brethren." However, he did not tarry with them, but went elsewhere to teach and heal the sinful, the sick, the weary, and the heavy laden.

At times we have all been imprisoned and manacled by false beliefs, and suffer until our thought is open to the inspiration of Truth; hence the importance of always obeying the gentle admonition given by Mrs. Eddy on page 392 of Science and Health, "Stand porter at the door of thought." We should never admit an intruding wrong belief, but always keep our consciousness "clad in the panoply of Love" (p. 571). If this is true of us, then all prison-bars must fall and all fetters melt into nothingness. Then heartfelt gratitude should always be expressed in love and loyalty to infinite good. Thus are we qualified to go forth to tell the good news and to heal the sick.

The demands of Truth are to be obeyed implicitly, and with as much confidence and obedience as Peter exhibited when he followed the spiritual visitant out of prison. Sometimes we may become dazzled and confused by a mighty inrush of truth and see but dimly, as "through a glass, darkly;" but keeping our eyes fixed steadfastly on the light, we become accustomed to its pure illumination, and see clearly and know that our demonstration is made.

At a Wednesday evening service, heart-sore and troubled, one pinioned by false belief, who had worked earnestly and had sought relief without any apparent results, listened to the various testimonies of gratitude and healing; but her need did not seem to be met until a lady began to tell how the songs in the Christian Science Hymnal appealed to her when she first came into Science, especially quoting a stanza of a well-loved hymn, found on page 71, that had awakened her to a realization of the truth after long and seemingly fruitless effort to grasp it. The words were these:—

When obstacles and trials seem
Like prison walls to be,
I do the little I can do,
And leave the rest to Thee.

When the speaker finished repeating this stanza, the one so wearied and anxious was healed. Trials and obstacles all vanished. She knew that the demonstration was made, in fact had been made all the time, ever since the work commenced. She saw too wherein she had erred, like those Christians who had prayed for Peter and then, because they had failed to trust sufficiently, could not see that the demonstration was made until they were shown. She had kept on with her declarations of the truth perfunctorily, until it seemed as if the work might be in vain, and all because of incomplete trust and an unwillingness to confide the outcome to divine wisdom. Had this been done she would have been able to rejoice in the knowledge that her work was complete and the demonstration consummated, and could have sung praises unto God as did Paul and Silas when in prison, at midnight. Had this duty and privilege been performed aright, not only might she have been healed, but perhaps another, even as was the keeper of the prison where Paul and Silas were confined.

In many lands are to be found faithful, consecrated Christian Scientists devoted to Principle, working harmoniously in the one Mind for the liberation of those confined in the prison-cells of material sense and bound in the false shackles of sin, disease, and death. These tireless workers know that their prayers are never in vain, and that when they do their work faithfully and trust the outcome to divine Love, they are amply rewarded. As each individual consciousness awakens and is open to receive the light of Truth, he is healed, born anew, and becomes a free man.

Joy in Doing Good

STOKES ANTHONY BENNETT

In his epistle to the Galatians Paul writes: "Let us not be weary in well doing: for in due season we shall reap, if we faint not. As we have therefore opportunity, let us do good unto all men;" and on page 192 of Science and Health Mrs. Eddy writes: "Your influence for good depends upon the weight you throw into the right scale. The good you do and embody gives you the only power obtainable."

The joy of doing good cannot be adequately portrayed in human terms. It is indeed that experience of life which the heart alone knows best, and which the heart cherishes above all else. He who does good to the best of his ability loves and honors good supremely. He who makes good his constant companion and guide walks in the straight and narrow way of righteousness and peace, the way to heaven, harmony. Such a one is enabled to glimpse the eternal reality of things and gradually to rise above that which would tend to hinder and burden and enslave. He is enabled to discern the truth of being and therewith work out his own salvation, at the same time letting his light shine among men.

It might be said that the highest tribute ever paid to Christ Jesus was by the writer of the book of Acts, who affirms that the Master "went about doing good." We have but to examine the career of this mighty Man of Galilee—hearkening to his words and beholding his works—to catch the full import of this statement. The great Teacher came

Digitized by Google

understood his mission on earth. In Luke's gospel we read that at the age of twelve years Jesus remarked to his mother, who for the moment at least seemed quite apprehensive of his personal welfare, "How is it that ye sought me? wist ye not that I must be about my Father's business?" And the record goes on to state that "they understood not the saying which he spake unto them." Later on, at the beginning of his public ministry, the Master repeated in substance this utterance of his earlier years by declaring, "I seek not mine own will, but the will of the Father which hath sent me."

In order to understand the Father's business, or the will of the Father, it is necessary to understand the Father Himself. Jesus plainly pointed the way to this understanding when at the well of Sychar he said, "God is a Spirit: and they that worship him must worship him in spirit and in truth." To be about the Father's business, then, and to do His will, means to be in constant possession of a spiritual knowledge of Him and to demonstrate this knowledge. It means to see and to know God as omnipotent, omnipresent Spirit, or Mind, and His universe, including man, as spiritual, harmonious, and perfect.

It was through this exact or scientific knowledge of the verity of being that our great Exemplar performed his mighty works, which, as we are aware, embraced the healing of both the sick and the sinful, the overcoming of so-called matter and its laws, and the raising of himself and others from the dead. In this connection we read on page 25 of Science and Health, "Jesus taught the way of Life by demonstration, that we may understand how this divine Principle heals the sick, casts out error, and triumphs over death."

Christian Science is a religion of doing good. It counsels its followers to be ever about the Father's business, as was their faithful Master. It reminds them that opportunities are always at hand in which they may help and uplift both themselves and others. In the language of Scripture it says, "The harvest truly is plenteous, but the laborers are few." Affording a spiritual interpretation of the Bible, and particularly of the New Testament account of the sayings and doings of Christ Jesus, Christian Science emphatically declares that the works which were done in patriarchal and apostolic times through God's power can be done now and always, provided His power is correctly understood and applied, as it was by the Master.

God is "the same yesterday, and today, and forever," and He is "no respecter of persons;" therefore those who believe on Him and His Christ aright can win blessings and success such as were won centuries ago. The demonstrations of Christian Science, each one of which is based upon the omnipotence and omniactivity of God, good, of divine Spirit, divine Mind,—thus disclosing the nothingness, the powerlessness, of whatever would seem to be unlike or opposed to God and His perfect creation,—are making plain to the world the ever-availability of spiritual goodness and love to heal and save and redeem mankind.

In "The First Church of Christ, Scientist, and Miscellany" Mrs. Eddy writes (p. 252): "Keep yourselves busy with divine Love. . . . Rest assured that the good you do unto others you do to yourselves as well." What a grand thing it is to be busy with divine Love,—to do the will of Love upon every occasion! What a grand thing it is to know that in doing good unto others we do good to ourselves also,—are blest in our deeds! He who obeys the behests of Love obeys God, for God is Love. He it is who walks and talks with God,—proves his unity or at-one-ment with Him,—and is endowed with God's power. Such a one is indeed a Christian, a true follower of him who lived and labored for the salvation of all humanity.

What a happy world this will be when mankind universally shall have learned to do good, and only good, and to love as Jesus loved! What a happy world this will be when all discord and dissension, all war and woe, shall have been put aside through a correct understanding and application of God's power, and all tears have been wiped away! Then there will be no weariness in well-doing, no hesitation or difficulty in meeting the divine demands, for the Principle of righteousness will have transformed the hearts of men and have made them Christlike.

[Translated from the German]

What Is a Demonstration?

SOPHIE ARGELANDER

MANY who have turned to Christian Science and secured the assistance of some one who, as they think, has gained a better understanding of its teachings, are confronted sometimes, when the visible sign of physical betterment seems long delayed, by the question whether Christian Science really offers the means for deliverance from all the evils to which mortals are subject. In order to arrive at right conclusions premises must be right, and it is important, therefore, in every case of Christian Science treatment, that both the helper and the one seeking help gain a clear view with regard to what constitutes a demonstration in the sense which Mrs. Eddy has attached to this word.

In Science and Health (p. 262) Mrs. Eddy says: "We cannot fathom the nature and quality of God's creation by diving into the shallows of mortal belief. We must reverse our feeble flutterings—our efforts to find life and truth in matter—and rise above the testimony of the material senses." A superficial knowledge of what is termed "demonstration" in Christian Science is likely to prove an occasion of stumbling, in that the student may either speak of demonstrations in cases where that term cannot be applied with propriety, or else may become discouraged when that which he believes to be the chief demonstration, namely, material improvement, the sign visible to the senses, is not manifest within a short time. A correct sense of the word "demonstration," such as is conveyed in Mrs. Eddy's definition of it as "Immanuel, or *God with us*" (Science and Health, p. 34), would prevent such mistakes and keep us from being self-deceived and discouraged.

When through Christ, Truth, the true knowledge of God and of His perfect spiritual creation is revealed to consciousness, when we realize the fact of God's omnipresence, the false claims of mortal mind must disappear, no matter under what form they may have asserted themselves in thought. When we realize that God is with us, that is, that man reflects the divine presence, we can but express health, holiness, and purity; and mental states such as disease, sin, and impurity cannot continue. Any one who has observed the activities of divine Principle in their effect in the healing of disease and sin, has had abundant proof of the fact that honest, spiritual endeavor to lift one's self above sin and sickness must needs be followed by physical freedom. In the record of all cases in which healing was wrought by our Master, faith is spoken of as a condition which must precede the answer to prayer, the "signs following." The Master said to Thomas, "Blessed are they that have not seen, and yet have believed;" and this makes it apparent that demonstration is largely dependent on a condition of faith in the individual's thought. Spiritual discernment of omnipresent good is something of which dense material sense is incapable, and Mrs. Eddy speaks of having been able to discern the mental sign of improvement in the patient before the patient realized the change (see Science and Health, p. 169).

Digitized by Google

In John's gospel we read, "The true worshipers shall worship the Father in spirit and in truth." God is Spirit, therefore He cannot speak to us through the medium of matter. He speaks through spiritual sense only, which is born of Him, for this sense alone is able to hear and to understand the voice of Truth. Mrs. Eddy also says that "metaphysics resolves things into thoughts" (Science and Health, p. 269); hence the importance of gaining a true sense of what constitutes demonstration. In Christian Science we cannot speak of a demonstration of things material, and we should be careful to clothe our thoughts in fitting words, lest we convey to others a wrong impression. Demonstration is essentially a spiritual revelation of Love, of good, of the presence of God in consciousness, which registers effects in terms of material betterment. Our endeavor should be to rise and help others to rise to the apprehension of demonstration in its spiritual significance, and to watch that we may not become entangled in the enticing nets of error by seeking the truth for the sake of the loaves and fishes.

The honest and alert Christian Scientist realizes what our Master meant when he said, "I am come that they might have life, and that they might have it more abundantly." He seeks this fulness of life in the one true substance which man reflects as an idea of God, and the more clearly he discerns the fulness of spiritual good, the more will it become manifested in the material realm through the harmonious adjustment of conditions. Thus the prayer of Jesus, "Thy will be done in earth, as it is in heaven," is being fulfilled.

Authorized Literature

SAMUEL E. HOSTETTER

Every voluntary association of persons that desires permanency must be so organized and governed as to possess the character and qualities of order, system, and cohesion. This is no less true of organized Christian Scientists than of others. There must be a properly constituted authority, and we should be faithful not only to the fundamental teachings of Christian Science, but also earnest in our efforts to sustain the hands of those who have been selected to guide and direct the affairs of the organization and its activities, so long as they are acting within their designated powers.

Mention is sometimes made of the restrictions and limitations placed upon those who desire to express their views in our periodicals, upon the conduct of the activities of the church and upon questions relating to Christian healing. It would be manifestly absurd to say that every one who considers himself competent to put forth an exegesis on the Science of being should have his views accepted as a correct expression of the laws of divine healing and demonstration. This would soon result in the loss of Christian Science by dilution and adulteration. When our form of expression is criticized, or when articles contributed to the periodicals are not accepted, it would seem to be wise to acquiesce lovingly in the decision of those to whom the determination of this matter was committed by Mrs. Eddy, the Discoverer and Founder of this Science. Likewise the question as to whether literature is authorized or unauthorized is governed by the Manual of The Mother Church (Art. XXV, Sect. 8), and as it is obvious that the determination of this question, and the power to decide what shall be published as authorized literature and what shall not, must be lodged somewhere, we should be grateful for the wise ruling which vests this determination and power in The Christian Science Publishing Society.

The writer has had not a little experience with people who claimed to have been Christian Scientists for many years, and yet they were so filled with human opinions, so-called psychology, and the like, that it seemed a very difficult task to extricate them from errors into which they had fallen. Much of this erroneous thought is propagated by inexact statements denominated "aids" or "helps to Christian Science." A recent experience along this line with one who said he had been studying Christian Science and so-called auxiliaries for a long time, brought into my consciousness anew the value and necessity of reading and giving out in this connection only the literature issued by The Christian Science Publishing Society in Boston, and to my mind this is the only course which Christian Scientists can safely pursue.

Service in Our Cause

WILLIAM ROE CONNER

One of the greatest gifts of Christian Science is the opportunity it offers for service, the added ability to help one's fellow men, for such is truly service to God. The usher in a Christian Science church should realize that in his work he serves the cause of Christian Science, and through this channel is enabled better to serve God, to be about his Father's business. He should come to a realization that the seating of the audience is but a small part of his work. Like all the activities of the Christian Science movement his work is really one of healing, though it may be done indirectly, impersonally, unconsciously.

A gentleman recently remarked to an usher: "I always feel better as soon as I enter this church and see your face. If I am weary, tired, depressed, or suffering from a sense of sickness, I find an expression of love, peace, and assurance there which brings me immediately to the realization of the truth, and I am healed." Not infrequently does the newcomer get his first impression of Christian Science in this way; hence the usher should have all worldly thoughts put out of his consciousness, so that he may reflect only love, peace, and spirituality. If his heart is right, his head and hands cannot go astray, for he knows that his work, rightly understood, is as metaphysical as the treatment of disease. In knowing the truth about God and man the usher becomes a potent factor for good in the church. It is as essential that he should understand the true meaning of church as given by Mrs. Eddy on page 583 of Science and Health, as it is that he should know the hours and the order of service.

Furthermore, ushering should be considered not merely a duty but a privilege, and our only regret should be that there are so few occasions upon which we can thus serve the cause of Truth. The usher should realize that there is a right place for each person, and that "God is not the author of confusion, but of peace." He should never lose sight of the fact that he is not working as an individual, serving a selfish purpose, but that as a servant of Truth and Love he is working for the good of the cause, and he should always be ready to give a cup of cold water in Christ's name.

One has little to give in return for all the blessings he has received, and it behooves him to give his best endeavor to any duty assigned him. Nothing should interfere with the usher's regular attendance at all meetings, and he should form the habit of being ready to take his station promptly at the appointed hour, not because he is afraid his regular place will be assigned to some one else, but because he knows it is his duty and that irregularity lessens his efficiency. Realizing the necessity of punctuality in business, he should say to himself, Is the Father's business any less exacting than my own? To become proficient one must learn to depend more upon divine Principle for guidance and less upon one's own

Digitized by Google

sense of ability or one's desires or opinions, realizing that in Science there can be no confusion, no discord, no disarrangement. He should know that each individual comes as a weary wanderer, seeking the truth, and that the usher is one of the channels through which he can find it.

Especially should an usher carefully weigh the question of the fitness and consistency of his habits outside the church. Fortunately the public is coming to look on the Christian Scientist as one with higher aspirations than ordinary men, and it is necessary for each of us to justify the distinction and to cause the public to realize that during seven days of the week the true Scientist is all he professes to be. The usher should ask himself if his daily habits reflect to the public what he would have it believe Christian Science teaches and what Christian Scientists really are. Merely to ask himself, Is it right for me to do this? or, Would it hurt me to do that? is not enough.

As an illustration it may be well to mention an incident which occurred recently. Two Scientists met on the street and enjoyed a friendly chat, during the course of which the younger of the two dropped this remark: "I was very much surprised a few days ago to see an usher of our church, one who has given good testimonies, whom I had always looked up to and respected, walking along the street smoking, and somehow his value went down in my estimation about fifty per cent, try as hard as I could to know the truth about him." Now this is each individual's problem, and we cannot doubt that this brother, whoever he is, as well as others, will work it out sooner or later in the right way.

We are reminded of the closing words of Mrs. Eddy's first address in The Mother Church (Miscellaneous Writings, p. 110): "Beloved children, the world has need of you,—and more as children than as men and women: it needs your innocence, unselfishness, faithful affection, uncontaminated lives. You need also to watch, and pray that you preserve these virtues unstained, and lose them not through contact with the world. What grander ambition is there than to maintain in yourselves what Jesus loved, and to know that your example, more than words, makes morals for mankind!" It is certainly the duty of every Christian Scientist to be honest and just, true to himself and to God, for it is written, "No man can serve two masters."

✧

[Written for the *Sentinel*]

"The mighty God"

MABEL GORDON-INGLIS

CAN we essay to circumscribe the Mind,
Creative source of all that is, and was,
And is to be? Searching, we cannot find
Its breadth, depth, height. Infinity
Knows none of these; for broader than the sea,
And higher than the stars that gleam by night,
God's purpose dawns on sight
Clear, steadfast, glorified, in His own might
Upris'n, to glimpse creation in its cause.

Sheltering beside the brooklet in the dell
The humble violet lifts her tender face,
Clothed in a majesty no words can tell,
Gained from th' eternal Mind where all is well.
The radiant stars declare their glory bright
Is but reflection of a borrowed light.
The living sunbeams gladly quote the same,
And myriad dewdrops with one voice acclaim
The wisdom, power, and love outspanning space.

Selected Articles

[Thomas F. Watson in *Santa Cruz* (Cal.) *Surf*]

In one issue of your paper was an article enumerating the medical graduates for the last three years, according to statistics from the *Journal of the American Medical Association*, and showing the steady decrease as compared with previous years. That the writer of the article attributed this decrease to the widespread influence and teachings of Christian Science is indicated by the title, "Progress of Christian Science."

That there is a growing sentiment against the use of drugs is evident to all, and this because it has been proved conclusively that drugs do not heal, that at best their effect is only palliative, not curative. While the physicians have been for centuries dealing with results as manifested in diseased bodily conditions, Christian Science deals with causation, which is found to be mental—in a word, wrong thinking, such as fear, worry, anxiety, and other undesirable mental qualities. Thoreau has said, "There are a thousand hacking at the branches of evil, to one who is striking at the root."

The many cases pronounced incurable by our best physicians and afterward healed in Christian Science have proved its efficacy, and this accounts for its wonderful growth. The Bible teaches that it is God who healeth all our diseases. The Great Master, Christ Jesus, healed without drugs, and taught his disciples to do likewise. According to history the early Christians for about three centuries after the resurrection were healers, and this through spiritual means alone.

Christian Scientists do not oppose the physicians in any way, or those who look to them for help. On page 81 of "Miscellaneous Writings" Mrs. Eddy, the Discoverer and Founder of Christian Science, says, "Let each society of practitioners, the matter-physicians and the metaphysicians, agree to disagree, and then patiently wait on God to decide, as surely He will, which is the true system of medicine."

✧

[John M. Tutt in *Joplin* (Mo.) *News Herald*]

That Christian Science makes bad citizens good and good citizens better, and that it has done so in Joplin, an evangelist critic did not attempt to deny. He did not even question the faith in God and the consecration of Christian Scientists. But despite all this he attacks Christian Science, calling it an evil, and associating it with the works of the devil. The mere assertion that Christian Science is "of the devil" is unconvincing. Jesus said, "If I do not the works of my Father, believe me not." Christian Science asks only to be judged by the Christian standard set by Christ Jesus; at the last it will be known by its fruits. Can good fruit come from an evil tree? But the public will be interested in observing that Christian Scientists arouse evangelistic ire because they refuse to be frightened by a hoof-and-horns Satan, or a geographical gehenna existent as such only in theology's "chambers of imagery."

Christian Scientists are not responsible for the hopeless literalness of the western mind, which fails to consider the word-picturing of the Oriental. Even Jesus spoke not "without a parable." Christian Science does not deny that sin is existent to the sinner, but rather seeks lovingly to save him from error through overcoming evil with good, even as taught by Jesus. Christian Scientists are not afraid of evil; they fear only to do evil. Christian Science tears the mask from evil and leaves it powerless. Our critic would personalize evil, give it power, and then call upon men to fear an illusive being which they can neither locate nor see.

Mrs. Eddy's exposition of the Scripture is exact, con-

Digitized by Google

sistent, illuminating, and the truth of her teaching is demonstrated in the healing and regeneration of the sick and sinning. Critics are invited to present more impressive evidence of the truth of their own understanding of Christ. Again our critic asserts that Christian Science mistakes physical healing for Christianity. The following quotation from Science and Health (p. 150) disproves this allegation: "The mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

Finally, a word concerning the critic's statement, "I believe that Christian Science often permits people to die when medicine would have saved them." In so far as comparative achievement is concerned, Christian Science is content to be weighed in the balance with any therapeutical system of medicine. Even in their present stage of practice Christian Scientists heal a far greater proportion of cases treated than any other system of cures, notwithstanding the indisputable fact that Christian Science practitioners are called upon to take, for the most part, chronic cases unrestored by medical methods. Christian Science is the last resort of the hopelessly incurable, and it would be remarkable indeed if its practitioners never failed. The world has discovered what Christian Science is by the infallible test of what it does, and thus judged Christian Science has taken its place as a recognized force for good in the betterment of the race mentally, morally, and physically.

✧

[William C. Kaufman in *Helena* (Mont.) *Independent*]

A short time ago an evangelist made an attack upon Mrs. Eddy, the revered Leader of the Christian Science movement. It is quite generally conceded that the world needs to be evangelized, but the methods of this preacher could hardly measure up to those of the gentle Nazarene. To evangelize means to preach the gospel, and the original spelling of gospel was godspell, meaning good story.

Jesus and his followers confined themselves to teaching the truth about God and man, and emphasizing and confirming this teaching through physical healing as well as reformation from sin. Jesus prophesied the coming of that "Spirit of truth" which will "guide you into all truth." Christian Science is the fulfilling of Jesus' prophecy. It came to Mrs. Eddy as a revelation, through the reading of the Bible, after she had been instantaneously healed of a physical injury from which she was expected to die. After proving her discovery she gave us the result of her approximation of the Science of being in the Christian Science text-book, "Science and Health with Key to the Scriptures."

Students of Christian Science realize that Science and Health has been to them a key to the Scriptures, because it has given them a spiritual interpretation of the Bible that has enabled them to grasp its deeper meaning and prove this understanding by healing the sick without drugs or hypnotism. There should be no objection because the Christian Science text-book has been designated a key to the Scriptures, since nearly all religious denominations have a commentary on the Bible. At the time of Jesus' ministry the Old Testament was read in a perfunctory manner. We are told by Luke, "Then opened he their understanding, that they might understand the scriptures."

Christian Science does not wink at sin. It teaches that sin and its penalty exist as long as sin is indulged. However, when the mortal repents and turns away from sin and follows that which is good, he ceases to be a sinner and there ceases to be sin to him. When every individual has demonstrated over sin in his experience, sin will cease to exist in a universal sense. At present few understand the influence of Mrs. Eddy's teachings on science, theology, and medicine in this age; that this spiritual mentality has injected into them the Science of Christ. The spiritual leaven is at work, and this accounts for much fermentation in these systems.

When the *New York Herald* made a misstatement regarding Mrs. Eddy's spiritual leadership, she furnished the following statement, which it published: "What I am is for God to declare in His infinite mercy. As it is, I claim nothing more than what I am, the Discoverer and Founder of Christian Science, and the blessing it has been to mankind which eternity enfolds" (Pulpit and Press, p. 74).

✧

[W. D. Kilpatrick in *Saginaw* (Mich.) *Courier-Herald*]

Your columns contain an account of an attack on Christian Science by an evangelist holding services in your city. It seems to be quite common with some religionists to endeavor to fill their churches by resorting to the very unethical and unchristian practice of holding other people's religious convictions up to criticism and ridicule. A favorite method of such critics in their unsuccessful attacks on Christian Science is to remove from their contexts different passages of the Christian Science text-book, and endeavor thereby to make unfavorable comparisons between Christian Science and the Bible. It is no difficult task to take any book and by severing passages therefrom so to distort and pervert their meaning as completely to obscure their true intent.

If nothing else, Christian Science is first and last in strict accord and unity of meaning with the Scriptures; it is the outcome of a devout, unceasing, and prayerful study of the Bible, and is based on nothing else. On page 126 of Science and Health Mrs. Eddy says: "I have found nothing in ancient or in modern systems on which to found my own, except the teachings and demonstrations of our great Master and the lives of prophets and apostles. The Bible has been my only authority. I have had no other guide in 'the straight and narrow way' of Truth."

The question as to whether Christian Science contradicts or denies the Bible is one on which the evangelist's hearers need not be influenced by mere opinion. It is one that may be decided by an honest comparison of the Christian Science text-book and other Christian Science literature with the Bible, and this comparison is one which Christian Scientists are ever glad to have made.

✧

[S. T. Downs in *South Bend* (Ind.) *News-Times*]

In a sermon reported in your paper the attempt was made to couple Christian Science with various systems of religious belief, the statement being made that only those who do not understand the Bible are followers of those teachings. Since there has been a persistent effort on the part of some public speakers to establish a relationship between Christian Science and certain other movements, it will be well to state that there is no connection between them or association with them. Christian Science has restored the works commanded by Christ Jesus and performed by the early Christians, and on that account it must be the highest type of Christianity. Our critic shows by his statements that he is not informed as to the personnel of the Christian Science church. A very large percentage of those prominent in the ranks of the movement have been active workers in

Digitized by Google

older churches, and they were students of the Bible a great many years before they turned to Christian Science, although there are many others in the ranks who did not know the Bible formerly.

A student of Christian Science who is not a Bible student is an impossibility. A fact known and acknowledged by many people who have observed the onward march of the Christian Science church is that the former Bible student becomes a more diligent one the instant he turns to Christian Science; the indifferent Bible reader becomes a searcher after the truths of the Bible; and those who have never read the Word become eager to learn its spiritual treasures. That the writings of Mrs. Eddy have revealed the spiritual truths of the Scriptures to all classes of students is proved beyond all question, in that the sinner is reformed, the sick are healed, and the kingdom of heaven is declared unto all mankind.

✧

[Daniel M. Ely in *The Dispatch*, Hillsboro, Ohio]

Judging from the excerpts of a sermon, the preacher's attack is not on Christian Science but on his own concept of it. Christian Science eschews all forms of suggestion, occultism, or magnetic influence, and depends entirely upon a spiritual understanding of God's law. In it there is to be found nothing of the heathen religion of India. It is not based, as the preacher declares, "on the statement that God is everything and that matter is an illusion of mortal mind."

Christian Science teaches that God is Life, Truth, and Love; that He is All-in-all, and only those things which emanate from Him and partake of His nature are real and eternal. It teaches that because God is Spirit, His creation, man and the universe, must of necessity be spiritual and not material. This teaching is in accordance with the first chapter of Genesis. Christian Science does not teach that "the way to be rid of sin is to believe there is no sin." On page 327 of Science and Health its author in speaking of sin says: "The way to escape the misery of sin is to cease sinning. There is no other way. Sin is the image of the beast to be effaced by the sweat of agony."

The man to whom Mrs. Eddy refers as incapable of sin is not the material, mortal man, who, as David says, was shapen in iniquity and conceived in sin, but the real or spiritual man created in "the image of God." Christian Science does not make "liars of people" when it denies those things which are unlike God. Jesus declared that he came to destroy the works of the devil, whom he defined as one who "abode not in the truth, because there is no truth in him."

In Science and Health Mrs. Eddy points out that the Sermon on the Mount is the essence of Christian Science (see p. 271), and Christian Scientists are also taught to be obedient to the Scriptural injunction to "judge righteous judgment." The great growth of this movement is interesting and most significant, and can best be accounted for by its fruits,—the healing of sickness and sin.

✧

[Warren O. Evans in *Providence* (R. I.) *Journal*]

In a recent issue of the *Journal* there appeared an article entitled, "The Medical Value of Pain." Owing to the fact that the writer of the article touches on the subject of Christian Science, I feel called upon to say just a word at this time. In the course of the article, after reference is made to various conditions and methods, the statement occurs that "undoubtedly some Christian Scientists, under the spell of religious zeal, are able to efface their sensations."

Inasmuch as the great body of Christian Scientists is made up of those who are credited with having at least a fair amount of intelligence and common sense, it is but natural that they should object to being referred to as under a "spell," or to the inference that their "zeal" is without knowledge. To be sure Christian Scientists are "zealous of good works," like the people of whom we read in Titus; but these good works are by no means obtained by any such ridiculous method as the attempt to ignore "sensations" or to efface them through any action of the human will or human mind. On the contrary, the Christian Scientist enters upon or takes up the seeming problem of pain or human discord with an assurance based on understanding; and this understanding is obtained only as he is "willing rather to be absent from the body, and to be present with the Lord," as St. Paul tells us in II Corinthians, and also in endeavoring to obtain that Mind "which was also in Christ Jesus," as we read in Philippians.

Christian Science is absolutely scientific, based upon a right premise, with every conclusion logically drawn. The healing work in Christian Science is not in any way associated with human effort, but is based on spiritual law, a law inapprehensible to the material thought but perfectly clear and plain to spiritual consciousness. And this spiritual consciousness, which it is so necessary to attain in order to apprehend this law, is gained only as one begins to catch a glimpse of what God really is,—Life, Love, Truth.

Of the many definitions which Mrs. Eddy has given as to what Christian Science really is, this one will perhaps be of interest (The First Church of Christ, Scientist, and Miscellany, p. 160): "To live so as to keep human consciousness in constant relation with the divine, the spiritual, and the eternal, is to individualize infinite power; and this is Christian Science."

✧

[Thorwald Siegfried in *Wenatchee* (Wash.) *World*]

One of the first protests which Christian Scientists will enter against our critic's methods is based on his use of the title "evangelist" to cloak an attack on followers of Christ Jesus, to whose teachings he also vows allegiance. The word evangelist means a bearer of good news, and if this cleric's statements are true then his title is a misnomer. Thousands upon thousands of people are finding health and happiness in Christian Science. Christian Scientists are not forsaking, but rather following, Bible precept and practice, and what alarms our critic is cause for great rejoicing.

Christian Scientists will bear witness to the statement which this critic quotes from page 497 of "Science and Health with Key to the Scriptures" by Mrs. Eddy: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." In the study of Christian Science the Bible becomes indeed "the chart of life, where the buoys and healing currents of Truth are pointed out" (Science and Health, p. 24). In revealing the everlasting ministry of Love, as recorded in the Bible, Christian Science has opened to its many adherents what has been too long a closed, misunderstood book.

When he comes to consider man, this evangelist spurns Mrs. Eddy's characterization of man on page 69 of Science and Health as "not of the earth earthly but coexistent with God," and contends for the reality of a material man formed "of the dust of the ground" by Jehovah, as recorded in Gen. ii. 7, in preference to the spiritual man created in the image and likeness of God, Elohim, as recorded in Gen. i. 27. It would require a curious answer indeed to reconcile such a concept of man with the statement in the twelfth chapter of Romans, "So we, being many, are one body in Christ, and every one members one of another."

The Christian churches which have preceded Christian Science have done much for humanity in making the Bible a universally known book, and all humanity, including Christian Scientists, owe them a debt of gratitude for that service.

Editorial

A Sacred Ministry

In the thirteenth chapter of St. Luke, the fourteenth verse, there is more than a hint of the mistake which was made by a Hebrew religionist in regard to Jesus' ministry. It is well worth while for Christian Scientists to ponder this verse, so that they may not fall into the same mistake, not only in regard to the Master's work but also as to their own. This is the chapter in which is related the healing of the woman "which had a spirit of infirmity eighteen years, and was bowed together, and could in no wise lift up herself." After this daughter of Abraham had been healed and had given voice to her gratitude, it is related that "the ruler of the synagogue answered with indignation, because that Jesus had healed on the sabbath day, and said unto the people, There are six days in which men ought to work: in them therefore come and be healed, and not on the sabbath day."

From this statement it is easy to see that this man utterly failed to grasp the significance and the source of Jesus' healing ministry, and likewise the spiritual power and import of his teachings, which were the basis of this ministry. To the finite sense of this master in Israel the healing of this woman, although it transcended all material possibilities, was nothing more than the day's work of an itinerant stroller who was earning his living by such exhibitions of healing power. That the healing was through the grace of God, and that it resulted from the understanding of God which Jesus possessed and preached, seems not to have entered his thought. Had he realized the divine character of the healing which had been done before his very eyes, he would have seen that it was not only as appropriate to the Sabbath day as it was to the other days of the week, but also that it was inevitable whenever and wherever God was understood. No doubt he believed, as did other of his coreligionists, that our Master healed through Beelzebub, the prince of devils, and that in some way his motive was personal aggrandizement; hence that his was not a divine or religious ministry, but a trade or profession at which he worked for personal gain.

The lesson which Christian Scientists will do well to take from this incident is that mortal mind has changed but little in the succeeding nineteen hundred years, and that a large part of the world now regards them and their ministry as Jesus and his ministry were regarded by this ruler of the synagogue. The divine nature of their work is denied, their sincerity and good faith are impugned, and they are looked upon as persons who have no higher aim than to obtain what the world considers a good living without manual labor. That this is a misconception of the ministry of Christian Scientists need not be said to any one who has really felt "the power of the Word" (Miscellaneous Writings, p. 398), but every Christian Scientist who knows anything at all of the alleged power of mortal mind knows that it is necessary for him at all times to keep himself "clad in the panoply of Love" (Science and Health, p. 571), so that he may withstand the temptations which would impel him to accept mortal mind's estimate of Christian Science as his guide to practice.

Mrs. Eddy has said, "In order to cure his patient, the metaphysician must first cast moral evils out of himself and thus attain the spiritual freedom which will enable him to cast physical ills out of his patient" (Science and Health, p. 366). She also says: "A Christian Scientist occupies the place at this period of which Jesus spoke to his disciples, when he said: 'Ye are the salt of the earth.' 'Ye are the light of the world. A city that is set on an hill cannot be hid.' Let us watch, work, and pray that this salt lose not its saltness, and that this light be not hid, but radiate and glow into noontide glory" (p. 367).

The practice of Christian Science is not a trade or a means of livelihood. It is a sacred ministry, a demonstration of the Christ-principle which heals the sick and is the very presence of God in human experience.

Archibald McLellan.

Facts and Fancies

From the Christian Science standpoint facts are eternal realities, which survive the storm and stress of mortal experience and which are untouched by any and all misconceptions of their nature and possibilities. It is true that every great idea has ofttimes to suffer rude shocks from the selfish strivings of self-seeking mortals, but the fundamental truth which it expresses makes more insistent demand for recognition when mankind is even temporarily deprived of its light. Next to the fact of divine fatherhood comes the brotherhood of man, which will continue to make its appeal to the race until its true meaning is understood and demonstrated. Long ago Paul, in his famous discourse on Mars' hill, said that God "hath made of one blood all nations of men for to dwell on all the face of the earth, and hath determined . . . the bounds of their habitation;" but even when Paul spoke there was no true knowledge of God, hence no true sense of brotherhood.

It is indeed startling to read that at the very dawn of material history, in the first family, brother rose up against brother and put him to death. Envy seemed to be the immediate exciting cause of this crime, but on page 541 of Science and Health Mrs. Eddy says, "The erroneous belief that life, substance, and intelligence can be material ruptures the life and brotherhood of man at the very outset." No one can deny that there is a fundamental error at the basis of all human strife, and that were it not for gleams of spiritual reality the essential facts of being would be displaced in mortal sense by the fables and fancies of belief in a life separate from God and wholly unlike Him. Men read with horror the story of Cain's crime and then rouse themselves to a frenzy in dwelling upon what Shakespeare calls "the pride, pomp, and circumstance of glorious war!"

What, it may well be asked, is there in war that any should glory in it? Christ Jesus truly foretold "wars and rumors of wars," but it was he who said, "All they that take the sword shall perish with the sword." It is absolutely certain that if brotherhood were understood as the inviolable relation of all God's children to each other, the beauty and strength of this spiritual bond and its limitless possibilities would dawn upon the race with new and holy hopes. Even the dependence of mortals upon each other, when seen in this light, means much more than material cooperation. It points out a wonderful pathway of discovery along which one's own capabilities for good may be found, tested, and applied in service to others. The next step is the discovery of a brother's divinely bestowed capacities, and their utilization through the faith which seeks and finds God's likeness everywhere. Until this is recognized there is not any cooperation worthy of the name, much less companionship.

In a crowded city one may be as lonely as was Crusoe on the desert island until a brother man appeared. One is not truly conscious of himself until he finds a brother and loves him because they have a common Father, but this consummation is not attained until spiritual sense reveals the great facts of existence. The way of Truth is a way of unceasing discovery,—God's ideas appearing to the enlarging vision as the clouds of sense are dispelled. We gladly claim as our brothers all great thinkers and workers. For them "remain

Digitized by Google

nor place nor time," to quote the poet's words, and why should brotherhood ever be circumscribed by any earthly bounds? It certainly will not be when the present clouds have rolled away,—when the long Adam-dream is broken and men are awake in Christ, Truth.

Paul was right in saying that "the sufferings of this present time are not worthy to be compared with the glory which shall be revealed in us;" thus we await in "earnest expectation" the coming of brotherhood, "the manifestation of the sons of God." He also says that "we are saved by hope," and how great and glorious is the divine idea which inspires all human hope, we but faintly perceive. The fact itself, however, is much nearer realization than when Burns wrote:—

> It's comin' yet for a' that,
> That man to man, the warld o'er,
> Shall brothers be for a' that.

ANNIE M. KNOTT.

The Word "Neutrality"

DOUBTLESS many a student of Christian Science has asked himself what particular application the word "neutrality" can have in the teaching and practice of his beloved Science. The natural impulse, when a question of this kind presents itself, is to turn to the two concordances which record all the words contained in the writings of the Discoverer and Founder of Christian Science. It may have been a surprise to many students to find that neither "neutrality" nor "neutral" is even mentioned in those writings. This absence is very significant, in view of the constant use which is being made of these words in public and private discussion.

Turning to Webster's Collegiate Dictionary we find "neutrality" defined as "quality or state of being neutral; indifference." This definition would indicate a passive or negative condition of thought, wherein the mental activities of discernment, differentiation, and judgment between good and evil must be in abeyance. The conviction quickly forces itself upon one's thought that such a mental condition of inertia can have no place in practical, operative Christian Science, which is a religion of works and cannot be held passively. In Science and Health (p. 143) Mrs. Eddy once coupled the two adjectives "inert and unintelligent," and she also states (p. 253), "Matter is inert, mindless." Inertia is then unmasked as a characteristic of matter. Hence it is comprehensible that according to the teaching of Christian Science an inert, passive, indifferent, or neutral state of mind is also materially inclined, and lacks the spiritual perception which is always active and spontaneous.

In Mrs. Eddy's Message to The Mother Church for 1900 we read, "Mental idleness or apathy is always egotism and animality" (p. 8). From this it would appear that animal magnetism, or the false belief of life in matter, finds the mental condition of neutrality or indifference a most propitious environment for its supposititious influence. This becomes even clearer when we remember that another name for this same false belief of life in matter is hypnotism, a word derived from the Greek *hypnos*, meaning sleep. To be mentally asleep is to be carnally minded, to be absent from that Mind "which was also in Christ Jesus," and which is positive and intelligently active in good works.

The word "neutrality," used in a diplomatic or international sense, implies an abstention from war. In the absolute truth of being there is of course no war, because there is no false belief, no wrong to be righted, no necessity to choose between good and evil. In absolute Science divine Love alone governs, and man is recognized as made in God's image and likeness. In the relative, however, in that supposititious state of existence which is called the Adam-dream, or human existence, there is much evil to be destroyed, and there is war. An attitude of neutrality, defined as indifference and unmasked as animality, will never cause wars to cease. In the Adam-dream there has never been an impersonal war. Every war that has ever been waged has been started by some person, or by groups of persons,—though the perpetrators of the crime have not always been detected. Such persons can never be delivered from the temptation to repeat the offense unless the ways and means of their tempting are uncovered to human apprehension by the understanding of God, who is Truth, divine Love, and Principle. Any unwillingness to let God accomplish this necessary uncovering amounts to an unwillingness to save the sinner from his sin, the sick man from his disease, and the nations of the earth from war.

Yet how exquisitely tender is the saving grace of Christian Science when this willingness has once been established. The compassionate Christ, Truth, comes to the perverted mind which is planning and scheming to precipitate war in order to serve its tyrannical ends; the ruthless purpose yields to the divine touch, and human will-power, cooperating with brute instinct, pauses; the light of primal good displaces artificial evil, and love and justice unite in the song of nations redeemed from the belief of war.

WILLIAM D. MCCRACKAN.

Among the Churches

Current Notes

MICHIGAN.—At no time in the history of the Christian Science movement in Michigan has interest in this subject been more apparent. Evidences on all sides point to a generally friendly feeling toward the movement, and the gradual growth in all branches of the Christian Science work and in membership of churches and societies of the state is gratifying and reassuring. Wherever there is a branch church or society having a card in *The Christian Science Journal*, the work of the committee on publication is aided by an assistant committee on publication appointed by the local church or society. At other places where there are Christian Scientists this committee is aided by a correspondent whom he selects. At the present time there are sixty assistants and eighty-four correspondents in the state, totaling one hundred and forty-four as compared with one hundred and thirty-one reported a year ago.

During the past twelve months 542 books and subscriptions to the Christian Science periodicals have been placed in libraries throughout the state. Outside of the distribution of Christian Science literature carried on by the various churches and societies, the publication committee has distributed 34,859 pieces.—*Committee on Publication.*

SYRACUSE, N. Y.—A meeting of the congregation of First Church of Christ, Scientist, will be held Friday evening [April 21] in the church auditorium, 704 East Fayette Street, to consider the question of erecting an edifice on the three lots owned by the church on East Jefferson Street and Forman Avenue. The present quarters are too small to house the congregation and two meetings have been necessary Wednesday evenings, as well as a double service Sundays. The present auditorium seats three hundred and fifty and is owned by the Christian Scientists.—*Syracuse Post-Standard.*

GALVESTON, TEXAS.—At a meeting of the members of First Church of Christ, Scientist, last night [April 6] plans and specifications for a thirty thousand dollar house of worship for this congregation were formally accepted. Work is to

Digitized by Google

be commenced at once on this church, the site of which, the southeast corner of Twenty-seventh Street and Avenue O, was acquired some time ago. The Sunday school room on the first floor will seat four hundred, while the main auditorium will have a seating capacity of eight hundred.

Galveston Tribune.

MANITOWOC, WIS.—By a deal closed this afternoon [April 11] First Church of Christ, Scientist, came into possession of the residence and property at the northeast corner of North Seventh and Park Streets, facing Union Park. It is understood that the purchase price was in the neighborhood of seven thousand dollars. The interior of the house will be remodeled for church purposes. The lot on which it stands is 72 feet on Park Street and 120 feet on North Seventh Street.—*The Manitowoc News.*

RIVERSIDE, CAL.—Incorporation papers for First Church of Christ, Scientist, of Riverside, have been filed in the office of the county clerk. This consolidates two churches, First Church of Christ, Scientist, organized July 1, 1897, and Second Church of Christ, Scientist, organized April 18, 1903.

Riverside Press.

DENVER, COL.—Second Church of Christ, Scientist, South Grant Street and Bayaud Avenue, will hold its first service in the new auditorium of the church on Easter Sunday, April 23. For some time it has been holding services in the foyer of the church, while awaiting the completion of the auditorium.

Denver News.

BRAWLEY, CAL.—The Christian Scientists received incorporation papers from the secretary of the state this week [March 31] and will make plans for the erection of a church building upon their property.—*Brawley Star.*

❖ ❖ ❖

The Lectures

Pocatello, Idaho

Prof. Hermann S. Hering, who delivered a lecture on Christian Science at the Methodist Church, was introduced by Mrs. Maude C. Garretson, first reader of the local church, who said:—

We come to you tonight with the same message that nineteen centuries ago came to the "shepherds abiding in the field, keeping watch over their flock by night," when the angel said, "Fear not: for, behold, I bring you good tidings of great joy,"—a message of health, hope, and happiness, of Life, Truth, and Love. We come declaring again the power of God to heal sickness as well as sin. This power is given each one of us in proportion to our understanding and application of spiritual law. We come not to proselyte, not to criticize, not to quarrel with others, but to listen to the message of Truth, to hear something of what Christian Science is and of what it does. This message is nearer its realization today than at any other time since these glorious words were uttered by the heavenly messengers hovering over the Judæan hills on the glad occasion of Jesus' birth: "Glory to God in the highest, and on earth peace, good will toward men."

Correspondence.

❖

Portsmouth, N. H.

A lecture on Christian Science was delivered in the United States Naval Prison, Navy Yard, Portsmouth, N. H., by Frank Bell. Half of the inmates, together with some guards and other enlisted men, and also some members of the Christian Science churches in Portsmouth and Dover, made an audience of about one hundred and fifty attentive listeners to this second of the two lectures authorized by The Christian Science Board of Directors to be given in connection with the regular services that have been held in the prison and on board the detention ship "Southery" during the past two years. In introducing the lecturer, Commander John Blish, a retired naval officer, said in part:—

Some five years ago I was invited to a dinner-party by a good friend who was the captain of a scout-cruiser then lying at the Boston yard, but some pressing work to be done prevented my acceptance of his cordial invitation. Meeting my friend a few days after the dinner, I voiced my regret at having missed that treat, and he replied, "You will be glad to know that during our dinner the topic of conversation turned upon Christian Science, and each and every one of my guests related some healing of a friend or acquaintance of his through Christian Science. I told them of my own brother's healing and how that he is now an earnest Christian Scientist in Chicago."

I feel sure that in the five years since that time the captain and his guests know of many more who have been healed and saved by Christian Science, since its growth is so rapid and its spread is over the whole earth.—*Correspondence.*

❖

Mankato, Minn.

Willis F. Gross delivered a lecture on Christian Science at the Mankato Theater. He was introduced by A. E. Francis, whose remarks were in part as follows:—

Millions of men and women are adherents of the different ethnic religions, and some of the founders of these religions have claimed to be inspired by revelation from God. Some of them give promise of the freedom and healing brought about by the great Nazarene, Christ Jesus, who was the greatest teacher and healer ever known to mankind. These two things are found only in the Christian religion. Jesus said, "Ye shall know the truth, and the truth shall make you free." The word free, perhaps next to the word love, is the most popular in the English language. Who among us has not at some time desired to be freed from some phase of sin, sorrow, sickness, and the many other ills that beset the human race? Jesus commanded his disciples to go "into all the world, and preach the gospel," also to heal the sick, saying, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

It is because we as Christian Scientists believe that Jesus did the things he is said to have done and said the things he is credited with saying, as recorded in the gospels, that we have invited you here tonight to hear what Christian Science is and what a study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, has done and is doing for mankind.—*Mankato Free Press.*

❖

Oklahoma City, Okla.

The remarks of W. B. Harrison in introducing Bicknell Young, who lectured on Christian Science at the Overholser Theater, were in part as follows:—

Christian Science hardly needs to tell what it can do, for thinking men and women are finding out what it has done and is doing. But the world is asking how Christian Science does these things, and the world has a right to know. One beautiful feature of this religion is, that contrary to impressions held by many it is the very essence of simplicity, and is

Digitized by Google

the good it embodies is available to any one who will honestly study and apply it. Although Christian Science is very simple, we should remember that the Bible teaches us that spiritual things can only be discerned spiritually; they cannot be learned through the human intellect. On that rock scholastic theology has wrecked the barks of millions of honest seekers after truth. Spiritual ideas are the impartations of the divine Mind, God, and we grasp them only as we put ourselves in an attitude of humble receptivity to God's message.

Christian Science comes to you and to me offering a full salvation for every ill in the name of the master Christian. It does not picture a beautiful, far-away heaven that can be reached only through sorrow and death, but it offers harmony and peace, and all that heaven typifies to each of us here and now. It does not erect an altar to an unknown God, but it defines and proves God to be an ever-present, loving heavenly Father, before whose brightness the clouds of material darkness disappear. It does not ignore the sin and suffering, the wretchedness and woe in which the world is writhing, but it shows us how, through an understanding of our true selves, we and all humanity can rise out of the miasma of material beliefs into the sunshine toward which through long ages men have blindly struggled. Surely such a message is well worth heeding, and worth heeding well.—*Correspondence.*

✧

Littleton, N. H.

Edward J. Cummings, attorney, in introducing William D. McCrackan, who lectured on Christian Science, said in part:—

It is with pleasure that I comply with the request to perform the service of introducing the speaker of the evening. I do this not as a Christian Scientist, but as one deeply interested in full and free discussion of all questions tending to promote the public well-being. We are all agreed as to results sought by religious teachings, and differ only as to ways and means. To my mind, intolerance is a sign of bigotry or of fear for the safety of our own cause; and it is the mark of a broad-minded person to give sincere and sympathetic consideration to the methods of those who differ from us, for after all it may be that their way is better than our own.

I know that Christian Science has successfully withstood the attacks of malice, prejudice, scorn, hatred, ridicule, and even worse; that its effect is universal, touching the rich and poor, the intelligent and educated, teaching all to think. I know that something in Christian Science brings happiness and peace to the heart and mind of the true believer. Christian Scientists constitute a body of good citizens, and this is a real asset to the progress and prosperity of any community. They have earned the right to be heard.

Correspondence.

✧

Hanford, Cal.

Dr. Francis J. Fluno delivered a lecture on Christian Science at the Woman's Club House. He was introduced by David Murray, president of the Hanford Merchants Association, who spoke as follows:—

I am disposed to believe that most of you who are present tonight are here like myself from an earnest desire to learn something of Christian Science, and it appears that there has never been a time in the history of man that this knowledge has been more desirable. We are today living in the most momentous period of human history. The human mind seems to have reached its greatest development and each day brings us greater inventions and greater achievements. Yet with all this wonderful progress in the sciences and the industrial arts, humanity seems no nearer happiness than in the days of Job.

With nearly the entire Christian world in a state of strife and turmoil, and the discovery of new diseases, new sins, and new discords, we are prompted to ask, Who shall deliver us from these problems of human misery and grief? There are, however, a great many who do not entertain this concept of human existence, and from the testimonies of thousands of Christian Scientists in all parts of the earth we learn of their deliverance from sin, disease, and misery.—*Hanford Sentinel.*

✧

Toledo, Ohio

F. P. Kennison in introducing Charles I. Ohrenstein, who lectured on Christian Science for Second Church of Christ, Scientist, said in part:—

We have just observed the anniversary of the birth of one who has been called "the great emancipator," Abraham Lincoln. By virtue of the authority vested in him as President, he issued the Proclamation of Emancipation, a document which struck from the hands of thousands the shackles of one form of human slavery. Centuries ago that greatest emancipator, Christ Jesus, gave to the world a proclamation of emancipation which struck from the hands of all mankind the shackles of every form of human slavery. This proclamation consists of the statement: "Ye shall know the truth, and the truth shall make you free." It was given to Mary Baker Eddy, the Discoverer and Founder of Christian Science, a woman of deep spiritual insight, with a passion for humanity, out of a life of self-surrender to reveal in all the significance of its practical application to every need of our modern complex life, this message of truth to a world bound in the slavery of sin and disease.—*Correspondence.*

✧

New York, N. Y.

The introductory remarks of Warren C. Klein, first reader, to the lecture on Christian Science given by Virgil O. Strickler in Second Church of Christ, Scientist, were as follows:—

It is now fifty years since Mrs. Eddy discovered Christian Science, for it was in February, 1866, that she first became acquainted with its Principle, rule, and demonstration. The intervening time has been big with events. The truth about God and man is being made known in every part of the world, and primitive Christian healing, as practised by the Master, Christ Jesus, is being permanently reestablished; religion is becoming more spiritual; science is being studied from the point of view of Mind rather than of matter; mankind is being convinced more and more of the truth of the sacred Scriptures, and in consequence is being regenerated and healed by the genuine balm of Spirit, of Life, Truth, and Love.

Christian Science makes Christian Scientists; they do not make Christian Science. Hence Christian Scientists do not felicitate themselves upon the manifest progress; rather do they thank God for it, and look forward to that happy day when all mankind will share the blessings which have come to them through this new-old understanding of the Christ and his operative Christianity.—*Correspondence.*

Testimonies of Healing

I first learned of Christian Science through the healing of a sister twelve years ago. I was suffering from throat trouble, and the physicians had not helped me; indeed I seemed to get worse. My sister, who came to visit me, looked well and happy, and she could hardly wait to tell me of God as Love and as unwilling for any of His children to suffer or be sick. I was healed as she talked to me, and a lump under my chin vanished to its native nothingness. It has since then been my privilege and joy to prove my faith by my works, and so lead others to know more of God as divine Love and "a very present help in trouble." I am deeply grateful to our Leader, Mrs. Eddy, for Christian Science. It restored my faith in the Bible and gave me a God I could love, who doeth all things well. I am also grateful for the Christian Science periodicals.

In my family of five children Christian Science is the only remedy. When I was still young in Science my two year old boy fell, one hand going into a kettle of scalding water. I picked him up, and after wrapping the hand in cotton took him up-stairs and declared the truth as well as I understood it, and he was soon quiet. That night the child slept well, and he was playing around happily the next morning. The hand healed rapidly. All the children are quickly healed by reading Science and Health.

I had a great fear of going to the dentist, and so when it became necessary to have a number of teeth extracted I asked a practitioner to help me. The thought that Love fills all space was with me, and the operation was painless. It was a beautiful experience, and it led a sister who was with me to take up Christian Science.—Nora J. Horner, Knox, Ind.

✧

I desire to express my gratitude for the many blessings received by me and mine through the study and application of Christian Science. After suffering from rapidly failing health and great physical weakness for over a year, in December, 1912, I collapsed completely and became seriously ill. A doctor was called in, but for many weeks I suffered dreadfully and for six weeks was confined to bed with what was pronounced a malignant growth. I was also afflicted with sleeplessness, nervousness, physical weakness, and a stomach disorder for which I dieted until little food was allowed other than bread and milk, but I became steadily worse. Heart weakness too seemed very real to me, and fear became so intense that several times I nearly passed on.

In March, 1913, the attending physician called in a surgeon for consultation, with a view to removing the growth by an operation. On examination, however, the doctors decided that an operation would prove fatal, and very feelingly they broke this news to me, at the same time pronouncing me incurable. Thus when a few days afterward some Christian Science literature was sent to me by Christian Scientists whom I did not then know but who had heard of my need, a dark cloud of despair hung over my home. I knew nothing of Christian Science up to this time; it had been simply a name to me, and so I read the literature without supposing that there was any power in the world to meet my great need. But I was soon to prove the truth of Mrs. Eddy's statement (Science and Health, p. 494), "Divine Love always has met and always will meet every human need."

When a little later I was invited to the local Christian Science church I went, hoping to find some help but not thinking it possible to be cured. The sincerity and love I saw there, however, impressed me very much, and the note of gratitude in the testimonies filled me with hope. Yet it seemed all like a dream, a beautiful dream that might presently vanish; but I was soon to prove that it was real in all its beauty, and that the sense of suffering and sorrow was the dream. I asked for help from a practitioner, and it was lovingly given, with the result that in four days after taking up treatment I was enabled to resume my occupation, and in three weeks the malignant growth disappeared. The other discordant conditions were soon overcome and my normal weight returned. Since then Christian Science has met all my needs and those of my family. The past few years have been to me a time of overcoming, and the truth has healed and is healing me every day,—morally, mentally, and physically.

For all these healings I am indeed deeply thankful to God, also grateful to His messenger to this age, Mrs. Eddy, for her brave and unfaltering devotion to Principle which has made all this possible. I am most thankful, however, because Christian Science has given us the truth about God and man's relationship to Him, and for the peace which that knowledge brings to us,—a knowledge which we can daily prove by demonstrating its healing power in the varied experiences of life just in proportion to our faithfulness to Principle. I had for many years been restless and dissatisfied in my thought, but now, thanks to Christian Science, the old religious beliefs are gone and I am learning to know God "and be at peace."

I am today in normal health, stronger both physically and mentally than I have been for many years, and happier than ever before, because Christian Science is teaching me instead of giving way to fear and worry to cast all my care upon God.—John A. Fairbridge, Halifax, England.

✧

About two years ago a goiter started to grow on my neck and caused me considerable worry. I had been advised to have something done, but as I had known friends with the same trouble whose only hope was an operation, the future did not look very bright. The growth finally became so noticeable that I decided to do something, and so went to a Christian Science practitioner in our city for treatment. Help came immediately, and in a very short time my neck was normal in size. I am very thankful for this healing, as it has saved me much suffering, also for the spiritual uplift gained through the study of Christian Science.

A few years ago an abscess on one of my heels caused me a great deal of inconvenience and pain. I was kept from school for over a week and could not wear a shoe for more than two weeks. This winter I had the same trouble, but wore my shoe every day, and the abscess caused me very little annoyance. I walked about eleven blocks to work each day without difficulty.

I am thankful for all I have gained through this wonderful truth. By reading Mrs. Eddy's book, "Science and Health with Key to the Scriptures," I have been relieved of headache and toothache, also have been helped in many other ways.

Bessie M. Libbey, Fergus Falls, Minn.

✧

Christian Science found me a number of years ago in a state of discouragement at a time when my outlook on life seemed dark and hopeless. I had turned from a religion which I had cherished, but which had failed to satisfy my longing for something better, to worldly pleasures, but these afforded no real joy or happiness. Failure seemed to beset me on every side and I knew not where to turn.

While I was in this condition a copy of Science and Health was placed in my hands. I little realized at the time that it contained a message of hope,—the Christ, Truth,—but as I pondered its pages life began to assume a nobler and brighter outlook. As I studied it, together with the Scriptures, a de-

Digitized by Google

ferent concept of God was gained. I had at last found a God whom I could love and adore, because He had been revealed to me as a God of love, omniscient, omnipotent, and omnipresent. I began also to learn something about man as God's image; and as this realization unfolded in my consciousness, bad habits and false appetites left me as shadows flee before the light, and they have never returned. Soon I began to enjoy more freedom and better health, and then I experienced that true happiness, the peace which passeth all human understanding.

Christian Science has brought many blessings into my life, and I am not unmindful of the debt of gratitude due its Discoverer and Founder for having revealed the Christ, Truth, to this age. Through the application of its Principle and rule I have been healed many times, not only of physical ailments and suffering, but of lack, despondency, and sorrow. It has enabled me to overcome anxiety, worry, and fear. It has made me more unselfish, more tender and patient, more forbearing and charitable; it has given me better health and morals, more endurance, greater mental alertness and perception, better judgment, and a higher sense of justice and integrity. In fact, it has brought me not only greater freedom but also an enlarged capacity to do and accomplish whatever is right.

The way has not always been easy; it has oftentimes been beset with trials and temptations, but these have only given an opportunity to prove more of God's power and protecting care. I have always been grateful for the experiences which have come to me in Christian Science, because they are waymarks which indicate progress on my journey from sense to Soul. I rejoice that through Christian Science God's power and presence is again manifest to humanity, and that I am privileged "to follow in some degree the example of the Master by the demonstration of Truth and Life, of health and holiness" (Science and Health, p. 37). I know too that as I am faithful to this trust, the way will grow brighter and brighter "unto the perfect day."

GEORGE CARLTON EWING, Kansas City, Mo.

✧

[Translated from the German]

A few years ago, having experienced severe reverses, upon the recommendation of a friend I sought the advice of a Christian Science practitioner, who showed much kindness in explaining things to me. I derived so much comfort from what I heard that I was enabled, while facing the crucial moment, to grasp the oars of my life-boat with a strong sense of courage and trust, and to steer it alone thereafter. From then on I became an eager reader of *Der Herold der Christian Science*, and later of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I also attended the Christian Science services, where through the beautiful Lesson-Sermons the way from sense to Soul was made clear.

While I believed myself to be religiously inclined, I felt God's nearness only when alone on the mountain tops or in the deep woods; when back in town amidst the misery which I had to see all around me, I would often put an interrogation mark after the word God. I failed to understand that all this should be His will. On several occasions I made an attempt to read the Bible, but found in it much that seemed contradictory; besides, to my sense it was all so incomprehensible and incoherent that I laid it aside feeling quite vexed. However, after hearing the interpretation of the Bible through the Lesson-Sermons at the Sunday services, it became illumined. My interest was aroused, and I took up the study of Christian Science in earnest.

I went through a hard struggle with error of all kinds, but through the gradual realization of the ever-presence and omnipotence of divine Love, and as the meaning of divine Principle unfolded to me, I was enabled to overcome error. I now feel like a new being, both physically and mentally. I used to be ailing constantly, but now am in good health and able to perform all the duties incumbent upon me. Divine Love through Christian Science has helped me greatly in every way, and I am profoundly grateful to God. My daily prayer is that all men may be led to find the way of Truth. I also think of our beloved Leader with a sense of gratitude and love for the great work which she has accomplished in bringing again to light the simple, life-giving gospel of Christ Jesus in its fulness.

FRAU EMMA KOCH, Kilchberg near Zurich, Switzerland.

✧

I am truly grateful for the opportunity of finding out what Christian Science really is. Our little boy, three and a half years old, while playing one day was hit in the nose with a sharp piece of rock and the nose was badly lacerated. Not being able to reach the practitioner, I declared the truth for myself and the child, and turning to God, found Him "a very present help," for the child was free from pain in a short time. Absent treatment was given later in the evening, and the bleeding was checked at once. The boy was restless during the night and his breathing heavy, but he was given another treatment in the morning and was out playing during the day without any bandage on the nose. Within a few days there was not even a scar left. People who watched the results thought the healing wonderful. The children were also healed of chicken-pox in three days; even the baby two months old had the ailment. Besides this, measles, mumps, coughs, and many other ills have been overcome with a few treatments.

A baby was born to us lately and a hemorrhage was overcome in two hours. Where weakness was, strength was given me. This was all done through absent treatment. I surely am very grateful to Mrs. Eddy, who has given us a better understanding of the Bible and of Christ Jesus' teachings. Christian Science means everything to us in our home and business. We apply it for all problems, and it has brought us peace, harmony, happiness, health, and prosperity. I cannot find words to express my gratitude for this great truth, and my thankfulness to God for His loving-kindness and the protection we are getting daily.

EMMA BLANEY, Portland, Ore.

✧

I am glad to tell of the many blessings which Christian Science has brought to us. A few years ago my husband was taken with severe lung trouble, and as one of his brothers had passed on with this disease our fear was very great. His physician said there was no medicine that could help him and advised him to go to Arizona. He did so, but while there contracted a severe cold, and after a trip of six weeks returned home much worse than when he left. Our need was very great when Christian Science was brought to my notice and I began to study the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. My husband was finally persuaded to try Science and was healed in one treatment.

Many times the power of Truth has healed our five children, and we can truly say God is our only help in times of trouble. I have been healed of discontent and a sense of gloom over financial affairs. My disposition has also been changed, and there is a joy in my heart and a song on my lips all the day. My great desire is to help others to know of this glorious truth that sets men free. The more I study the life of Mrs. Eddy the more I appreciate what it meant to

Digitized by Google

give us this religion of love, and I am grateful to her, as well as thankful to God, for Christian Science.

LILLIAN CLARK, Glendale, Cal.

I wish to add to my wife's testimony, as I have been healed of tubercular disease of the lungs, also of smoking and the social glass habit. I am indeed very thankful for Christian Science, which has taught me to read the Bible and to understand God as Truth. For the healing of the physical ills I am grateful, but for the spiritual uplift I am even more so. I thank God for the many blessings that have come into my life and home.—W. D. CLARK.

✧

In September, 1913, I was taken with typhoid fever, and was miserable practically all winter. The fever left me with ulcers of the bowels, and the physician said that as I was not very strong he did not think there was much chance of my ever getting over this trouble. Some of my friends told me that they had known of people who had never recovered from this difficulty, so I was very much discouraged. In the spring a Christian Science practitioner moved to our city and I became much interested in Christian Science. I began not only to study "Science and Health with Key to the Scriptures" but also to attend the meetings, and in a short time, as a result of reading the text-book, I was entirely free from my suffering. I have also been healed of rheumatism and neuralgia of long standing. The healing of these ailments has meant a great deal to me, and I am very thankful for Christian Science.—MAUDE LIBBEY, Fergus Falls, Minn.

✧

I am one of the many thousands who have been blessed by the truth as revealed in Christian Science, and I hope my testimony will serve to encourage those who are dwelling in a false sense of life in matter to turn toward the light and be free. As God was revealed to me, bringing peace and health and happiness, I know that every one can be made "every whit whole," for the Love that heals and regenerates is free and immeasurable.

For ten years I suffered from a malady that baffled many physicians to whom I applied for help. Some of them pronounced it a nervous intestinal affection, while others said the trouble was caused by adhesions of the intestines. I was operated on by one of the most noted surgeons in the United States, but neither the operation nor any of the many systems of medical treatment that I constantly tried gave me the slightest relief, and I grew morbid and despondent. One physician told me that if I were alive five years from that date I would be a physical wreck. Another said he could find no physical cause for the disease and therefore concluded it must be mental. He recommended a change of scene, and acting in accordance with his advice, I sought a change of scene and found Christian Science. A friend told me that God is the only Mind, that He did not send sickness, that He knew nothing of it, and as my true selfhood was an expressed idea of that Mind I need not, in fact could not, experience anything unlike God.

From the day I began to study the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, my healing began. As my understanding grew the attacks of pain became less frequent and less severe, until finally they vanished altogether. It took long and patient study, as I had no practitioner for this trouble, only the Bible and Science and Health, but what I learned in those months is more precious than everything else in the world, for I learned of the one and only God.

Some time after my healing was accomplished it was revealed to me most clearly that physical suffering is the direct consequence of wrong thinking. I remembered that this disease laid its hold upon me almost immediately after I had allowed resentment, anger, hatred, and revenge to govern me. Those who knew no better encouraged me to believe that righteous indignation was perfectly justifiable in my case, and it swayed me to the bitter end. When through the study of Christian Science I learned to know God and man as made in His image and likeness, and that in loving God I loved my fellow man, the joyful sense of forgiveness and the peace that passeth understanding took possession of me, and I was perfectly well.

I am thankful for every experience that forced me to this higher understanding and apprehension of God and His spiritual creation. I now know that our only enemies are they of our own household, and that to whom we yield ourselves servants to obey, his servants we are. My greatest desire is that my life may attest the gratitude I feel to God, whose "mercy endureth forever," and to Mrs. Eddy, whose unselfed love made the truth of being a demonstrable fact.

EDNA S. MONAGAN, Dallas, Texas.

✧

I know that Christian Science is the truth, that it does heal the sick and reform the sinner. When Christian Science found me I was a critic of this religion and a sinner of the world. In December, 1909, I listened to two sermons preached by a critic against what he thought Christian Science to be. After hearing the first one I quarreled with my wife on the way home, upholding the remarks of the speaker; but after the second one I decided to investigate the subject. A friend advised me to read "Science and Health with Key to the Scriptures" by Mrs. Eddy and directed me to the Christian Science reading-room.

I had never before looked into a Christian Science book of any kind, and I now realize how unfair it was to criticize from a standpoint of hearsay only. I completely lost myself in the text-book for about three hours, with the result that I was instantaneously healed of the strong drink habit, of smoking, and of the use of profane language, also of criticizing Christian Science. My father was a distiller, and to make a long story short I had gone the limit in the above habits; but since my first reading of Science and Health I have never had a desire to indulge in any of them. At this time I was under diet by order of the physician, who expected to perform an operation for stomach disorder. I have never seen the physician since and can eat anything that is put before me. With the help of a practitioner I have been healed of spinal trouble, kidney trouble, and lame back, besides chilblains in the worst form, a mean disposition, sensitiveness, and jealousy so extreme that I would not let my wife talk to a man or a woman unless I heard the conversation.

While reading "Unity of Good" by Mrs. Eddy the following words, found on page 5, caused me to pause and think: "No stubborn purpose to force conclusions on this subject will unfold in us a higher sense of Deity; neither will it promote the cause of Truth or enlighten the individual thought." I had worn a truss for rupture for thirteen years and was trying to force the healing by human will, but after reading the above words I asked for help from a practitioner. This treatment unfolded to my consciousness that I was holding envy, hatred, malice, revenge, and personal feelings against one with whom I had business relations. I was making evil personal, fastening it upon this person and fearing him. When I realized the truth, saw this man as God's child, and had love in my heart, the rupture was healed. That was three years ago, and I have never worn the support since.

Space will not allow me to tell of the blessings received through Christian Science. Our boy had a dislocated shoulder,

Digitized by Google

and at another time a dislocated elbow, put back into place by one treatment. He suffered no pain or inconvenience from either accident.

For the physical healings I am sincerely thankful, but no words can be found to express my joy for the spiritual uplift and right concept of God which the study of Christian Science has given me. To say that I am deeply grateful to God, also to our beloved Leader, Mrs. Eddy, is putting it mildly. I know that real gratitude can be expressed only through acts and deeds, and my endeavor will be to let my light so shine before men that they may see my good works and glorify our Father which is in heaven. I am grateful for class instruction, which gave me absolute confidence in God and a clear thought of the Principle and rule of Christian Science.—Heath H. Sims, Los Angeles, Cal.

✧

I consider it a great joy and privilege to express my love and gratitude for the many blessings the truth of Christian Science has unfolded to me. Out of Egyptian darkness and despair God called me to His glorious light, and He is lovingly leading me to know my true relation to Him and freeing me from belief in sin, sickness, and death. Christian Science has taught me many lessons and has given me a sweet and certain understanding that God is Love, a God at hand who is my God. From the study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I am learning the all-important lesson to refuse to listen to the testimony of the physical senses.

The first healing came to me through the spiritual uplift gained by reading Science and Health, which has indeed proven a key that has unlocked the Scriptures for me. Many sickly and sinful thoughts were so heavy and so noticeably wrong that I was willing to part with them, others left I knew not when; but many times the way seemed obstructed by ignorance or misunderstanding, which only study and growth day by day could overcome. I well remember one time working for months for freedom from a false sense of conditions. Then one day I began to count the blessings this one problem had brought me; needless to say the freedom came at once with this gratitude and changed attitude of thought, for all the time I had been trying to avoid working out this problem instead of being glad for the opportunity to cancel the false sense with the true.

The physical healings have been many and wonderful, but the freedom from their bondage is small compared to the joy in knowing that God and His idea, spiritual man and the spiritual universe, coexist. After having so many gods in medical nursing and a highly educated sense of responsibility for the sick, looking no higher for cause and effect or healing than non-intelligent material help, and knowing no healing for the sinning, words fail to express the love and gratitude I owe to God and to Christ Jesus our Wayshower, also to Mrs. Eddy, our beloved Leader, and to all who helped me to awaken from the dark dreams of material sense to know God, good, as our Father-Mother God.

Carrie Swope Ford, Oakland, Cal.

✧ ✧ ✧

Life is the tuning-time, complete
Alone when every chord is sweet
Through sacrifice. No untried string
Can music bring:
No untried life
Has triumphed, having passed the strife.
True living
Is learning all about the giving.

George Klingle.

From Our Exchanges

[*Pacific Christian Advocate*]

It is a striking revelation of the imperfection of the race to find it needful to have men who make it their work to defend the truth and to plead for its acceptance. One would think that all persons would gladly receive it and loyally obey it. On the contrary there is truth that is rejected, beauty that is refused, goodness that is renounced, and divinity that is mocked. Why should it require persuasion to secure allegiance to the good? With all the argument and entreaty which the ages have experienced on behalf of right, the fealty won is but partial and imperfect.

To every such inquiry there is an answer within the inquirer, and the fault of the race sometimes is a judgment against ourselves. To know ourselves is to know why other men are indifferent to these highest interests. In the human heart there are prejudice and passion and an unwillingness to part with habits of thought and methods of living. There is a mental inertia which prevents one from readily accepting a principle at the expense of another already in possession of the mind. Mental riches are as real as those which are seen and handled: they have been dug from the quarry of opportunity, and with toil placed in the recesses of the mental treasury.

[Lyman Abbott in *The Outlook*]

It must suffice to say here that there is scarcely any title which the apostles give Jesus which they do not also give in a modified form to his disciples. He is the Son of God, and we are sons of God. He sits upon the throne and reigns, and we reign with him. He is the light of the world, and we are to be lights in the world. He is the good shepherd, and we are appointed to shepherd the sheep entrusted to us. He is the temple in which God dwells, and every Christian is a temple in which God dwells. He is clothed with divine power, and we are bidden to be clothed with the whole armor of God. He is holy, and we are called to be holy as he is holy. He forgives sins, and we are told that whosesoever sins we forgive, they shall be forgiven. He is one with the Father, and he prays for his disciples that they may be one with him and the Father. In him dwells "all the fulness of the Godhead bodily," and we are directed to pray that, "being rooted and grounded in love," we also may be "filled with all the fulness of God."

[Robert H. Gardiner in *The Living Church*]

The enthronement of love by separated churches as the ruling principle of life will teach us humility. When we love our brethren, whose errors are now all that we can see, we may find in them some pearl of faith which perhaps we do not ourselves possess. We shall see that only God the Holy Spirit can guide us into the perfect truth, and that our wills are powerless so long as they are not freely surrendered to the supreme will of God, creator, redeemer, sanctifier. We shall see that we cannot even of ourselves make that surrender, for only the grace of God will enable us to make our wills wholly His. And then we shall give ourselves to that prayer which we have forgotten or postponed,—prayer which shall be the expression and the source of that burning, transforming, soul-compelling desire for unity with God which shall set His love and grace free to make us truly His and so wholly one in Him.

[Charles Stelzle in *The Continent*]

There is need for downright seriousness in church work today. Why should Protestantism be stigmatized, not only by certain other sects but by plain "outsiders," as a religion

Digitized by Google

which has lost its passion in a vain desire to "attract" men through vaudeville methods? This does not mean that the minister and the church should not be wholesome and human, but it does mean that the church should teach men that it still stands for the great big facts of the Christian religion, for the fundamental truth of the sacrificial life and death of Jesus, which in a measure at least should be imitated by every true disciple of Jesus. There is no doubt that there are occasions and circumstances which justify unusual methods of work or startling methods of stating the gospel message, but there are two basic principles which should always be given due consideration: first, the preacher should always be a gentleman,—Jesus was never anything else; second, nothing should be said or done which will bring reproach upon the gospel message.

[Rev. R. J. Campbell in *The Christian Commonwealth*]

Today is a day of judgment, a summoning of the nations to an august tribunal, and a passing of sentence by our divine Lord upon the ideals for which they have been living. It is not Christianity that has failed, but the hopes and dreams of our materialistic civilization; these are tested and found wanting. Christianity stands where it did. Are we as Christians ready for the renewed moral witness which the church is called upon to make to a world in ruins, a humanity prostrate in grief and tears? Solemn and awful is the responsibility laid upon us, deep and real our need of preparedness.

[*The Living Church*]

Few of us are satisfied with the condition of the Christian church in view of its inability to prevent the war. We have failed, in the nations generally, to create that sense of universal brotherhood which would be the highest distinction of a truly normal Christianity, and which would exercise a restraining force upon the virtue of patriotism. Truth and tolerance,—neither the church nor the world has yet learned how to correlate them successfully. In all humility let us try to discover the secret.

[*The Christian Register*]

One man may give his adherence to thirty-nine or to one hundred and thirty-nine articles of belief, and another man may prefer that glorious starry "Outline of Belief" which adorns many of our Unitarian churches and Sunday schools. So let it be. "By their fruits ye shall know them." How does each man's statement of faith affect his life? What are its fruits in his words and deeds? That is a sound test to apply, as we seek for the truth and value that underlie doctrinal statements.

[*New-Church Messenger*]

Behind the instruments of peace must be justice, truth, love to the neighbor, the love of God. Even truth without love has no power. The Lord conquered by the power of love. Love is the saving power of the world. May it be the great lesson impressed upon the world by the present war, that the war arose because love failed, and that the world's peace will be secured in that love which wishes other nations the same good that one desires for his own.

[*The Christian Work*]

What the world is hungrily waiting for is not an erudite discussion of the problems of postexilic or preexilic prophecy, but a message of salvation,—a message that feeds souls, cleanses hearts, bursts old fetters, makes new lives.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new French pamphlet, "Foi et Générosité" (Faith and Generosity), has just been issued and is now on sale. This pamphlet contains the following articles: "The Lord Thy Confidence," "The Closed Hand," and "Continuity of Right Thinking."

Christian Science: A Religion of Love (Christian Science: En Kjærlighetens Religion), a lecture by Virgil O. Strickler, has been translated into Norwegian and is now published in pamphlet form with the English and Norwegian versions on opposite pages.

"Law and Work" is the title of a new pamphlet containing the following articles: Love Fulfils Law, The Logic of Christian Science, Undisturbed, God's Law of Adjustment, Authority.

"Christian Science: Man's Dominion over Evil," a lecture by Edward A. Kimball, C.S.D., has been translated into Russian, Norwegian, and modern Greek. Pamphlets in these three languages have been published with the English version opposite the translation and are now on sale at prices of our regular pamphlets as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

At a recent meeting of the Geological Society in Johannesburg, South Africa, a number of diamonds which had been obtained from the Simmer Deep mine were exhibited. Referring to these stones, the president of the society said that diamonds had now been found in the conglomerates of the Witwatersrand system in the Klerksdorp district, in the central rand, in the Germiston area, and on the East rand. When it was considered that for every stone recovered thousands were destroyed in motor-boxes, and that only one group of conglomerates—the Main Reef zone—had been extensively exploded, it became apparent that vast numbers of diamonds must be locked up in the Upper Witwatersrand beds. The stones that had hitherto been found all presented sufficient identity of feature—their color was invariably green—to warrant the assumption that they had been derived from the same source. Investigations indicated that this source lay to the northwest, and that the diamonds had been brought to their present resting-place through the agency, at some remote period of the earth's history, of a great river, which it was hoped future investigations would disclose.

A congressional measure, which is a compromise agreed upon by conference committees of the Senate and House of Representatives, carries a Federal appropriation of $75,000,000 to be expended, with a like amount to be raised by the various states within a period of five years. This money is to be expended upon arterial roads selected by the highway authorities of the forty-eight states, subject to the approval of the secretary of the department of agriculture. The bill requires the maintenance of the roads after construction by the states, under penalty of a discontinuance of further Federal funds. The Federal distribution is to be made on a basis of area, population, and rural delivery and star routes. The largest amount of Government money will go to Texas, whose apportionment is $4,515,750. New York is next with $3,877,500, Pennsylvania third with $3,585,750, and Illinois fourth with $3,132,000.

A supplement to the bill gives an additional $10,000,000, to be expended at the rate of $1,000,000 a year on roads within or adjacent to Federal forest reserves, the money to be repaid ultimately out of the sale of timber and from other sources of revenue. The western states were particularly interested in this phase of the question and successfully contended that the national Government should protect and develop its own property.

A committee has been appointed to judge the competition plans for Dublin, Ireland. The plans were originally to have been adjudicated on Sept. 1, 1914, but action was postponed because of the war. The competition is of international interest because of the fact that those participating are from many countries. On account of the necessity of rebuilding the central sections of Dublin, destroyed in the recent disturbances, it has been decided to go ahead at once. The prize of $2500 for the most acceptable plan was offered by Lord Aberdeen when he was viceroy of Ireland.

The plans are to be comprehensive in their character, covering communications by road, railway, and canal system, main thoroughfares and streets, both central and suburban housing, and metropolitan improvements. The public buildings include the proposed government and administrative buildings, a modern art gallery, national theater, and other structures of public and semipublic nature, aside from parks, gardens, parkways, and boulevards.

In connection with the effort to introduce the best methods of handling all classes of livestock on the national forests, a study of the goat industry has been inaugurated by officials in charge, who say that in parts of the Southwest large numbers of Angora goats are raised for their hair. In 1915 over fifty thousand of the animals were grazed on national forests in six states. The goats raised in the West feed mostly on brushy undergrowth. On this account the forest service officials say that in many places the goats are really desirable, as they thin out the dense brush and allow grass to get started. In a number of instances, it is stated, new cattle ranges will thus be provided.

A tabulation of idle farms in eastern Canada and the throwing open of farming tracts in the West for the benefit of returning soldiers, is being undertaken by the Canadian Pacific Railroad. It is the purpose of the company to be of service in placing those who have been at the front on lands close to their original environment. The establishment of one thousand homes by the railroad in British Columbia is expected to give employment to many hands, not only in getting out the timber in the forests, but in laying out the homesteads, building the houses, and fencing the lands.

In parts of the West the forest service is cooperating with the weather bureau in distributing weather forecasts to the settlers. By the use of forest service telephones many isolated sections are reached which could not otherwise receive the reports. Sheepmen will be particularly benefited, as the warnings enable them to get their sheep under shelter and avoid the losses sometimes caused by late spring storms.

The high prices of cotton and cottonseed have encouraged farmers in the cotton belt to increase their acreage this year substantially over last year's area, resulting in a total of 35,994,000 acres. The condition of the crop on June 25 indicated that the total production of lint this year will be about 14,266,000 equivalent 500-pound bales.

Beginning July 1 the Delaware & Hudson Railroad excluded the sale of alcoholic liquor on its dining cars. The Lehigh Valley and the Buffalo, Rochester & Pittsburgh Railroads do not permit its sale. The Erie does not sell liquor on its dining cars in most states west of New York, and in New York only with meals. The Lackawanna does not sell it in New Jersey or Pennsylvania, but does on trains in New York.

Four states—New York, Pennsylvania, Illinois, and Massachusetts—paid more than $50,000,000 of the $124,867,429 in income taxes turned into the national treasury during the fiscal year 1916, which ended June 30. New York alone paid $45,280,679, Pennsylvania $13,162,134, Illinois $10,745,841, Massachusetts $8,762,017, Ohio $6,043,935.

In the fiscal year ended June 30, the Interborough Rapid Transit of New York City carried 683,742,805 passengers. It earned approximately 26 per cent on its stock, which means an addition of more than two million dollars to profit and loss after payment of a regular 20 per cent dividend.

The chairman of the Senate military committee has reported the army appropriation bill with recommendations for the appropriation of the total of $328,000,000 in the current fiscal year. As passed by the House of Representatives the bill carried a total of $267,000,000.

Skamania County, Wash., just across the Columbia River from Cascade Locks, is making an excellent automobile road of about 5 per cent grade east and west along the river. A bond issue of $210,000 is being spent this year on forty-three miles of highway.

Bids were opened recently for the construction of approximately one hundred and twenty miles of roads in thirty-three counties of Ohio. The work is covered by thirty-nine contracts and the estimated cost is in excess of $1,200,000.

The use of osage orange for making dyes promises to be extensive. The Forest Products Laboratory is making a census which shows that the supply of the wood is more than ample to meet present needs.

Experiments with jack-pine have shown that it is well suited for making kraft paper. On some of the national forests this tree is used to plant land which is too poor to grow other timber.

A forest ranger in California has invented a new fire-fighting tool, which consists of an interchangeable hoe and rake. It is said to be the best tool of the sort yet devised.

Immigration at the port of Boston for the fiscal year ending June 30 totaled 19,013 persons, as compared with 32,581 persons the previous fiscal-year.

The quantity of petroleum marketed in the United States during the first half of 1916 is estimated at 140,000,000 barrels.

Of the 935,000,000 acres of arable land in the United States only 400,000,000 are under cultivation.

The Russian Duma has passed a bill conferring upon the peasant the same rights other classes possess.

About seven hundred million feet of timber was cut on the national forests in 1915.

North Dakota has $64,000,000 worth of land set apart as school endowment.

There are 3,500,000 acres of land in Spain devoted to the culture of olives.

The Even Balance

JUDGE SEPTIMUS J. HANNA

In the book of Job we read, "Let me be weighed in an even balance, that God may know mine integrity," and in Proverbs it is written, "A false balance is abomination to the Lord: but a just weight is his delight." In the sixth chapter of Revelation we are told of one who holding "a pair of balances in his hand," said: "A measure of wheat for a penny, and three measures of barley for a penny;" and who also gave to men the warning, "See thou hurt not the oil and the wine."

This Scripture has no doubt both a literal and a figurative meaning. The literal relates to the material, the figurative to the spiritual. The even balance figuratively implies that spiritual equipoise which keeps the individual as it were in the middle of the scales of understanding and demonstration, so that he turns the weight neither too far beyond his present understanding of the divine nor too far on the side of the human; or so that he is not too short either in his measure of the absolute or in his measure of the relative.

If prematurely one should lose his balance on the side of the divine, he may become overwrought and self-deceived, or perhaps self-righteous, and so incapable of judging either himself or others righteously. If he should lose his balance on the side of the relative, or human, he may so far lose sight of the divine as to be equally unfit to judge himself or others rightly. Either condition may unfit the individual for the true spiritual vision. Had not Jacob's perception been well balanced, he could not have seen in his dream both the bottom and the top of the ladder which led to heaven, nor "the angels of God ascending and descending" thereon. An uneven balance might have so warped his power of vision that he believed he saw the top of the ladder and overlooked the intervening rungs; or else he might have seen only the lower rungs and stood aghast at the necessity for climbing to the top. His vision was manifestly clear enough so that he took in the full scope of the demonstration necessary to spiritual wholeness.

So it must be with all in the journey from sense to Spirit. The steps cannot be omitted. "Heaven is not won at a single bound." Mortality cannot be put off in a moment. He that attempts to climb up in a way not pointed out by the great Wayshower, becomes thereby, however unwittingly, "a thief and a robber;" and he may rob himself or steal from himself even more than he robs others or steals from them, for in the end he is the greatest sufferer.

The failure to keep the even balance leads to the state of mind depicted by Mrs. Eddy on page 552 of Science and Health: "Thought, loosened from a material basis but not yet instructed by Science, may become wild with freedom and so be self-contradictory." Such a sense of freedom is of course a form of self-deception which becomes hurtful, for like any other phase of error it must be destroyed by reaching through demonstration the true individual poise or balance.

The way out of mortal error into divine Truth implies a new birth. On page 15 of "Miscellaneous Writings" Mrs. Eddy says: "The new birth is not the work of a moment. It begins with moments, and goes on with years; moments of surrender to God, of childlike trust and joyful adoption of good; moments of self-abnegation, self-consecration, heaven-born hope, and spiritual love." As we read these cautionary but inspiring words, let us especially emphasize in our thought the "childlike trust and joyful adoption of good," for thus may we avoid the suffering which must inevitably come from a resisting or unwilling passage from fleshly sense to the spiritual birth.

It aids us greatly to hold our balance if we are always alert to the line of distinction which our Leader in all of her writings uniformly observed between the divine and the human, the spiritual and the material, or what has come to be a common phrasing in our literature, the absolute and the relative. If we are thus alert we cannot but see how wisely careful she was to follow an absolute declaration with its correlative, and *vice versa*. Observing this method, we shall avoid falling into the error she so tersely points out in the article "A Correction," republished from the *Sentinel* on page 217 of "The First Church of Christ, Scientist, and Miscellany": "The introduction of pure abstractions into Christian Science, without their correlatives, leaves the divine Principle of Christian Science unexplained, tends to confuse the mind of the reader, and ultimates in what Jesus denounced, namely, straining at gnats and swallowing camels."

Heeding this admonition and keeping this even balance, we maintain our integrity, give "a measure of wheat for a penny, and three measures of barley for a penny; and . . . hurt not the oil and the wine."

Voices in the Wilderness

LOUISE SATTERTHWAITE

It was early on a summer morning that one just awakening from sleep heard through an open window the faint, soft song of a wood-thrush from a leafy covert some half a mile distant. Remote yet clear, it fell upon the heart like the chime of bells, or like waters falling into a forest pool. After an interval of a few minutes it was repeated, its purity and sweetness like a benediction.

Years before this occurrence the listener had found Christian Science, that most precious of all things, so that the waking thought was always one of rejoicing and of thankfulness. On this occasion, as the bird's voice spoke again and again, somehow it seemed to epitomize all of the hidden beauty, the secret joy, the never-failing spring of delight which had been known since the demonstrable knowledge of God, as it is taught in Christian Science, had been found. Then there came to thought these words of the prophet Isaiah, referring to John the Baptist: "The voice of him that crieth in the wilderness, Prepare ye the way of the Lord, make straight in the desert a highway for our God." A voice crying in the wilderness! Such was indeed the thrush; yet out upon the world, as the light grew clearer, it carried to all listening ears its message of peace and joy and purity. Safe and secure, quite alone, around it only silence and cool-

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

ness, it trilled forth from the fulness of its heart just its own song of thankfulness; and echoing perhaps in many hearts, its message found response and evoked in them love and joy and peace, which in their turn would uplift and cheer the world wherever reflected.

Is not each Christian Scientist a voice crying in the wilderness, whether his place is in the shop, the mart, or the workroom? The wilderness—the worse than wilderness of material life—claims to surround him with all of its uncleanness, its rush and roar, its grime, its contention. To be loving and grateful, to strive toward purity, to labor to think aright just where he is, is to utter that voice which though faint and small will surely cry in the wilderness with a sound that is heard more than the clangor of brazen trumpet. Such a one, though he may seemingly be alone and neglected, nevertheless is doing good, and his song of right thinking and right endeavor will rest and refresh many weary hearts far and near, more than he himself can know. Day by day as he is grateful, as he strives to conquer fear, to have more love, that song will be more sweet, more clear, more helpful; and he as well as those he helps will be more blessed.

In his beautiful "Ode to a Nightingale" Keats longs to know of that bliss which is voiced by the singer; longs to drink of a "draught of vintage" that he might—

> leave the world unseen,
> And with thee fade away into the forest dim:
>
> Fade far away, dissolve, and quite forget
> What thou among the leaves hast never known,
> The weariness, the fever and the fret
> Here, where men sit and hear each other groan;
>
> . . . . . .
>
> Where but to think is to be full of sorrow.

Later he says in his apostrophe to the voice, "Thou wast not born for death, immortal bird!" And indeed in Christian Science we know that no voice, no tone, no color which is of the real essence of beauty, existing in Mind, was ever born for death, nor can it ever die.

Mrs. Eddy tells us (Science and Health, p. 247) that "beauty, as well as truth, is eternal." The message of the wood-thrush is of that reality of good, of peace, and of joy which dwells eternally in the bosom of the Father; and that same message which all who cry in the wilderness of the world utter in making straight the way of the Lord,—that too is of the same imperishable lesson which bids men look up from their sordid dream of life in matter to that real life, which is life indeed, life in reality, the service only of good.

Gratitude of the Traveler

MARGARET R. BURLINGAME

I HAVE learned with gratitude what it means while traveling to find a Christian Science church in the different cities and towns. All tourists and travelers should be doubly grateful for the church that bids them welcome when they are away from the home circle, for it manifests the loving spirit of the Master when he said, "I was a stranger, and ye took me in." For a church in a tourist or resort city to care for its guests means much, since these organizations, many of which are very small, some being just societies, are confronted with several problems that are the direct result of the transient congregations. The increased size of the congregations during the resort season makes it necessary to secure larger quarters for the entire year than the actual membership or ordinary visiting congregation requires, as well as larger and more elaborate reading-rooms and consequently greater expense for literature, *Quarterlies*, and Hymnals.

During a recent conversation with the president of the board of a small Christian Science church in one of the southern Florida cities, the remark was made that the many Scientists who are able to travel to the pleasant playgrounds of the South must very materially help in the financial matters of the church; but upon analysis it was found that just the opposite is true. The visiting Scientists seem either to be forgetful of the problems of the little church whose services and love they enjoy, or else they feel that because they are contributing at home they are exempt from any responsibility when away, other than an indifferent contribution of money.

Visitors undoubtedly do not realize what pioneer work means. For the few courageous workers it always means an expenditure not only of money, but of time, labor, and love. It is indeed a universal love which makes these workers in gratitude give so lavishly of their gifts in order that not only the home Scientist, but the stranger within their gates may find a place of rest and peace. These churches remind one of Mrs. Eddy's words to First Church of Christ, Scientist, Chicago, Ill., found in "The First Church of Christ, Scientist, and Miscellany" (p. 182): "May the wanderer in the wilderness of mortal beliefs and fears turn hither with satisfied hope. May the birds of passage rest their weary wings and the fair foliage of this vine of His husbanding, find shelter from the storm and a covert from the tempest."

Those of us who travel owe much to any church whose services we attend and whose love we share. A peculiar form of gratitude should be ours, and it should manifest itself in an active and tangible desire to help. Our gratitude for "the love that doth us all embrace" should make us feel it a duty and a privilege to be part of so loving a work; and our contributions should attest our appreciation of what is being done for us.

✧

Value of a Smile

JOHN H. HISTED

WE cannot overestimate the value of the smiles usually seen on the faces of those who are advanced in the understanding of Christian Science, for the smile of a Christian Scientist reveals his recognition in a greater or lesser degree of the ever-presence of God and of man in His image and likeness. Mrs. Eddy tells us in Science and Health (p. 36) that God is "the Principle of all happiness, harmony, and immortality." Such a smile is therefore the manifestation of an exalted and happy state of consciousness. It is, so to speak, a most effective testimony. The purpose of a testimony is to point out to others the result of a correct application of spiritual law by giving evidence in some way of the benefits we have derived from an understanding of it: the motive should be gratitude and a desire to share our blessings with others. Is there any form of testimony which will convey these messages to human consciousness more thoroughly than the silent eloquence of a radiant countenance?

It is an established fact that a great number of people have become attracted to Christian Science by the happy faces of those who faithfully practise its teachings, and their own urgent need for better health and harmony arouses a desire to know the cause of this unusual joyfulness of disposition. Here I would like to give my own experience as an illustration, for it was the smile of a Christian Scientist which first awoke my interest in this subject. About seven years ago I was employed by a concern the president of which was a Christian Scientist, and he had the most peaceful, happy, and kindly expression I had ever seen. His face shone with the light of spiritual understanding, the consciousness of God

Digitized by Google

Every time I saw him I caught a glimpse of man's true being as God's reflection or idea, although I had never heard of Christian Science and did not know that he was one of its adherents; but in his presence I always felt a deep sense of lack, for there was the undeniable evidence that, as the result of some inspiring influence which I did not then comprehend, he was a healthier, happier, and far better man than I was. Thus a good seed was sown in my heart by a man to whom I was almost a stranger and with whom I had never had any conversation.

Some time afterward, when I heard that Christian Science was a new religion based on the teachings of a woman who claimed she had discovered the Science governing the miracles of Christ Jesus, and learned that this gentleman was one of her followers, I was convinced, through the strong though silent proof he had given, that there must be something vital in a religion which had such a beneficent and uplifting effect. This interested me, and I determined to learn more if the opportunity presented itself. Three years passed, and I met another Scientist, who spoke to me of Christian Science and asked if I would like to read Mrs. Eddy's book, "Science and Health with Key to the Scriptures." The memory of that smile, and the fact that there was a similar expression on the face of the one who was speaking, prompted me at once to admit that I would like very much to read the book. This lady has been a true friend ever since, and although I learned that she had all her life been thrown on her own resources, under most trying circumstances, her lot having been an unusually hard one according to human estimates, yet her sunny smile and cheerful disposition brightened the lives of all who came in contact with her.

After this introduction to Science and Health I read it through twice from beginning to end, and I am becoming more devoted to the study of Christian Science with every succeeding year. As I have progressed in the understanding of the truth I have been brought not only to know what it was that caused the illumination of the faces of those already mentioned, but have been able to avail myself of the same power to overcome a very moody and irritable disposition, which I seemed to have before becoming interested in Christian Science. The disagreeable expression has been replaced by a happy, smiling one, much to the astonishment of friends who knew me as I used to be, and who have noticed the remarkable and sudden change. We may well ask ourselves how we can be conscious of God's goodness and love and know that His universe is beautiful and perfect, and at the same time have an unpleasant expression.

It is easy to see how important it is, for our own sake and that of others, to cultivate the good cheer which our Master so often called for. The closer we cling to Truth and the more faithful we are, the more valuable our smile will be to our beloved cause as powerful evidence that the real spiritual man is putting to silence the false material concept of man. We must not forget that a smile is the manifestation of that which can be perceived by the spiritual senses only, and it should be the natural and spontaneous sequent of a consciousness aglow with Truth and Love. There is not the power behind a forced smile, assumed from a sense of duty (although this may be a step in the right direction), that there is in one which is the result of the realization of God's ever-presence. This is the smile that cheers all who come within its hallowing and healing radius. When our faces show that thoughts of love, joy, courage, confidence, contentment, freedom, gentleness, health, happiness, kindness, purity, power, and wisdom control us, it always has a more or less healing effect on all and helps to dispel from human consciousness the illusions of anger, hate, discord, and worry. Why? Because these true thoughts are real and eternal, reflected only by the spiritual man, not by mortal man, and the presence of reality banishes unreality from consciousness. None of us will believe a lie after we have learned the truth, and mortals would certainly rather be happy than unhappy.

The object of the Christian Science movement is to preach the gospel of Truth to all the world, something which the world sorely needs. Important positions are filled by those who by growth and experience are best fitted for them, but the real strength and power of the cause lies with the individual. All the wisdom and strategy of the chief of staff of an army is useless unless each officer and soldier faithfully and obediently performs his particular duty. Abiding by the rules and regulations given in the Manual, written and instituted by our Leader, Mrs. Eddy, it is the privilege of each one of us to do our share in spreading the "good tidings of great joy," and we should diligently consider the best ways of doing our part in this great work. It is not always wise to speak to people about Christian Science until they are prepared to receive it, but it is always right to show by our happy faces that we are abiding in spiritual consciousness. The truth that we wish to share and unfold will be more readily understood by humanity through a true example of the improvement and change that comes to human character from a knowledge of Christian Science, than through audible argument or explanation at the wrong time. Thus we shall draw all men to acknowledge the might of Mind.

Christian Scientists the world over are bound together by ties of mutual understanding and endeavor. Our Lesson-Sermons and the periodicals help us to realize that we are all children of one loving Father-Mother God. In all the authorized Christian Science literature articles and testimonies are written and read by people of every race and clime. What a rich bond of fellowship! What an opportunity for both giving and receiving help! Our Leader says: "The rich in spirit help the poor in one grand brotherhood, all having the same Principle, or Father; and blessed is that man who seeth his brother's need and supplieth it, seeking his own in another's good" (Science and Health, p. 518). While rejoicing in these blessings ourselves, let us remember poor weary humanity, seeking yet not finding either home or rest. Let us draw them, as I was drawn, to find a home in divine Love by a simple, true reflection of this Love. Let us give them a smile that will reveal to them a new world, "the kingdom of heaven," here and now.

Gratitude

GRACE P. LIPPITT

In Christian Science much stress is laid upon the need of expressing our gratitude. In the opening chapter of "Science and Health with Key to the Scriptures" (p. 3) Mrs. Eddy says, "We plead . . . for a liberal outpouring of benefactions. Are we really grateful for the good already received?" In the Bible we are counseled over and over again to give thanks and rejoice, and the seeker after true happiness wonders why this is so important; what are the results of ingratitude and of the opposite state of mind?

The consequences of ingratitude are many, and they may be illustrated by the following incident. One Fourth of July a three year old child greatly admired the flags displayed and desired one for her own. That evening a friend gave her a tiny flag, but she absolutely refused to say "Thank you" for it. As this was unusual, the mother later asked her why she was so impolite. "I wanted a bigger one!" was the answer. The small flag was the right size for her baby hands, and all the beauty of color and design was there, but joy was

Digitized by Google

taken out of the possession because the child imagined a larger flag better than hers.

How often do we "children of a larger growth" feel the same way concerning the gifts and opportunities our Father sends! Some problem is before us, an opening appears, but it is put aside as too insignificant, and thus we lose for the time being the joy of conquest and of growth. We forget that as our hand (the symbol of power) becomes larger, the work and the joy of reward as well will be greater. May that not have been the trouble with the man who received but one talent? It is ours to make good use of the talents God gives, and it matters not whether they be one or twenty.

Ingratitude robs one of much joy in living; it stunts his growth spiritually,—closes his heart and narrows his powers. It shows clearly that the one influenced by it does not recognize God as the author of good and as all wise. On the other hand, if we realize that our true selfhood is a thought of God, perfect in divine Mind and becoming manifest to the world as a perfect idea, will we not know that an all-wise God has put us where we may grow and may help others if we but open our eyes to our opportunities? Will not this, if realized, make us truly grateful and eager to find our true selves, to take hold of the nourishment Love has provided, and to grow into oneness with the divine will?

If we do realize this, we shall know that even our small talent will bless one who needs just that help. Then we shall be eager to help others. Our outlook on life will be changed when we feel that we are in the place where God meant us to be and doing the work He designed us to do. By their intelligent exercise our powers will develop. We shall find songs of melody swelling in our hearts, and there will ascend to God the "perfume rare" of gratitude for His loving care.

✧

"Living witnesses"

JESSIE B. RICHMOND

On page 150 of "Miscellaneous Writings" Mrs. Eddy says that if God be with us "the wayside is a sanctuary, and the desert a resting-place peopled with living witnesses of the fact that 'God is Love.'" Among the many privileges that come to a member of a Christian Science church, there is none the writer prizes more than the opportunities afforded of beholding the manifestations of Love as reflected among those who meet there from week to week. In gathering up the fragments of this feast of neighborly kindness and fellowship, one finds a multitude of "living witnesses" crowding upon the thought. On many a Wednesday evening there rises a song of gratitude that through Christian Science some one has learned to know the joy of loving his neighbor as himself. What cannot be told in public is how this is being worked out in practice; yet it is being done, and instances of it can be seen on all sides.

The church of which the writer is a member is situated in a large city, and in connection with the summer vacation there have come to light examples of unselfishness and of a sincere desire to help the neighbor to a holiday, even at the expense of one's own. One lad, a pupil in the Sunday school, visited the mother of a fellow pupil to ask if he might share his seaside holiday with her son, as the first lad was working and could pay for it, while the other had otherwise little chance of getting out of the city. Many have given up their holiday, or else shortened it considerably, to relieve men called to special duties. Some have sacrificed leisure and comfort to be with those who needed their care. Others have looked out for lonely and neglected acquaintances and taken these along with them, thus sharing with them the best they had to give,—their holiday happiness. Others again have offered their homes and gardens to those who could not go very far afield. Brotherly helpfulness has made it a pleasure rather than a task to take up the duties of another when asked. These kindly deeds occur among those who, till they met in church, were strangers to each other.

It is a common thing to hear it said that people get to know one another very readily in a Christian Science church. This may be because the things they have in common are the vital things in their life experience,—the unseen things which are eternal. In this practical way they are learning what Jesus meant when he said that they who did the will of the Father were his mother and sister and brother. Every overcoming of self opens up a new activity of thought and a new desire for service. This speedily leads to recognition of present opportunity for giving to the neighbor according to one's own having, in quiet ways which bring a blessing both to the giver and to the recipient, for Mind, unerring and supreme, is acknowledged as both prompting and executing the act.

No wonder that strangers coming to a Christian Science service express their surprise at the warmth of the welcome they receive, and the evidences of genuine happiness and good will they witness there. This kind of love does not talk of sickness, but heals it by knowing its nothingness. Thinking no evil, it silently rebukes sin by its own purity. Many a life history, almost too sacred for speech, is shared with a comparative stranger, solely with the purpose of pointing the way by which the narrator was led from darkness to the light of Truth. Seldom indeed is this generous thought imposed upon, for as the Master said, "wisdom is justified of all her children."

Whatever may be the tumult and conflict without, we find here an atmosphere of peace. This is not because Christian Scientists fail in devotion or in service to their country and community, but rather because they know that the best service is rendered by living above strife and confusion in an atmosphere of divine Love, where they can rest assured that divine Truth is the world conqueror. Amid trouble or sorrow their peace returns to them, and it is this peace which they have to offer the wayworn traveler who enters their gates. The practice of Truth and Love goes on continually, and this practice, as is proved in every field of experience, makes perfect.

This is in a simple way a foretaste of the new heaven and the new earth, where all shall know the Lord, from the least to the greatest, for Love reflected in its idea is in very deed the Lord, to whom every knee shall bow. There is no surer way than this to demonstrate the unreality of matter. It is quicker and more direct than puzzling over atoms and electrons, or contrasting the theories of Darwin, Berkeley, or Plato,—

> For, where self-seeking turns to love
> That knows not mine or thine,
> The miracle again is wrought,
> Life's water changed to wine.

✧

Obstacles Removed

FRED C. PUTCAMP

When a mere boy the writer was given the task of plowing for the first time a field which had been cleared of its timber. The stumps of the trees were numerous, many of them of immense size. The task was a difficult one, as there did not appear to be much soil which could be prepared for the seed, since the roots extended several feet in all directions and seemed to have a firm grip on the earth. Nevertheless, as

Digitized by Google

a period of patient labor the field was made ready, and then came a sense of satisfaction that the task was finished; but time proved that it had only been begun, for every year the work had to be repeated. It was a great joy, however, to find that the task was growing easier, for at each plowing some of the smaller stumps would loosen their hold and could be pulled out and burned, and it was found possible to get nearer the larger ones as the roots decayed and began to give way to the plow. This process continued for several years, until it was noticed that only a few of the numerous stumps remained. It was also observed that each time one of them was removed, the grain grew more luxuriantly there than elsewhere, so much so that in looking over the field in harvest-time, one could distinguish the exact spot where the old landmark had stood.

Years later, when the study of Christian Science was taken up, the lesson of the stumpy field proved a valuable one. In the first attempts at studying Science and Health it was found that many obstacles stood in the way of understanding, and a sense of doubt and discouragement as to the possibility of ever raising a crop of spiritual good from such a field took possession of the reader. But our Leader says, "It is certain that the divine Mind can remove any obstacle" (Science and Health, p. 424), and Love whispered, "Let patience have her perfect work." So with renewed energy and hope the reading was taken up and continued for years, and now the field is beginning to promise a more abundant harvest at each reading.

As in the material field, so in the study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, each time a mortal mind concept is removed a higher growth of grain (spiritual understanding) is attained, and the very spot where the obstruction seemed to be contains a richness of soil that brings forth a greater harvest of spiritual food. This is due to the fact that error of every kind seems real only to mortal belief, and when the soil is cleared the seed of Truth springs up and gives a rich harvest.

It is with a great sense of gratitude to God that the writer looks back over those years of struggle for spiritual understanding, and as the cultivation of mortal thought goes on through the study of the text-book, there comes each day a greater sense of joy and peace, with "gladness to leave the false landmarks and joy to see them disappear" (Science and Health, p. 324). Then too we have the promise that the time will come when every testimony of the physical senses will be rooted up and the perfect man, made in the image and likeness of God, will be seen and acknowledged, for we read in the prophecy of Jeremiah, "They shall all know me, from the least of them unto the greatest of them, saith the Lord."

✧ ✧ ✧

I say to thee, do thou repeat
To the first man thou may'st meet
In lane, highway, or open street,

That he, and we, and all men move
Under a canopy of love
As broad as the blue sky above.

. . . .

And ere thou leave him, say thou this:
Yet one word more: they only miss
The winning of that final bliss

Who will not count it true that Love,
Blessing, not cursing, rules above,
And that in Him we live and move.

ARCHBISHOP TRENCH.

Selected Articles

[Henry Van Arsdale in *The Monrovia* (Cal.) *News*]

In a communication on the subject of Christian Science recently appearing in your paper, the writer, after saying some kindly things about the importance and truthfulness of the teaching of Christian Science as explained in a lecture given in your city under the auspices of the Monrovia Christian Science church, made objection to Christian Science because it does not in some things agree with his own beliefs. This is to be expected, for the reason that the writer of the communication referred to has confused the creedal and doctrinal statements of a medieval theology with the gospel as preached and practised by Jesus the Christ.

Christian Science has come to restore this saving and healing gospel in all its purity, power, and simplicity, and it is accomplishing its work because it is based upon the spiritual meaning of the Bible. This spiritual interpretation of the Scriptures, as given to the world by Mrs. Eddy in her book "Science and Health with Key to the Scriptures," is provable and practical. Its results have evidently impressed your correspondent, as the reason he gave for attending the lecture was that he "wished to learn the secret of their [the Christian Scientists'] work and influence." Whatever work Christian Science is accomplishing, and whatever influence for good it exerts, is entirely because it adheres strictly to the inspired spiritual truths of the Bible. It is therefore necessarily out of agreement with all man-made methods based on doctrinal and denominational distortions of these truths and on creedal compromises of disagreeing divinity doctors,—compromises adopted in church councils by narrow majorities, as for instance the vote which fastened the Nicene creed on Christendom.

Christian Science views the account of the creation of man from the dust of the ground by Jehovah (Lord God), as given in the second chapter of Genesis, as untrue, because it cannot be reconciled with the account of the creation by God (Elohim) of man in His image and likeness, male and female, as given in the first chapter. These two chapters belong to different documents or books, were written by different authors, and perhaps a lapse of several hundred years occurs between the dates of authorship. All Bible scholars are agreed as to this, and most are agreed as to the fact that the two accounts are irreconcilable. Christian Science has proved the record of creation found in the first chapter to be correct.

Jesus of Nazareth came into a world overburdened with ritualism, formalism, and sacerdotalism. He brought and taught and wrought the spiritual message of the great spiritual thinkers who had preceded him, messages recorded in what we call the Old Testament. There had been revealed to the spiritual understanding of the unknown author of the 107th psalm, and it had been used by the worshipers of true monotheism a thousand and more years before Jesus' time, this truth: "He [God, Spirit] sent his word, and healed them, and delivered them from their destructions." It is this "word" that Christian Science is again explaining to mankind as Jesus the Christ explained and illustrated it. All questions as to rites and sacraments and beliefs, whether of atonement, or baptism, or salvation, or election, or the Eucharist, or the divinity of Christ Jesus, are satisfactorily answered, and healing of mind and body follows as inevitably now as it did in Galilee and Judæa in the first century.

In closing his communication your correspondent was led into making a most unkind and unchristian remark, which I am sure he has since regretted. He wanted the reader to infer that because Christian Scientists use the words "Father-

Digitized by Google

Mother" in reference to God, that by this term they mean to include Mrs. Eddy. Nothing could be farther from the truth, or from Mrs. Eddy's use of the term. If there is a more expressive name than the one which in the English language is covered by the word mother, the writer does not know of it. If the human mind, whether of adult or child, can entertain higher, holier, purer, sweeter thoughts than those which cling about this name, the poetry and prose of ancients and moderns have failed to give them voice. If Christian Scientists and others find that the thought of mother enlarges and quickens their apprehension of God, they are not to be ridiculed or maligned or misrepresented for it; and they will not be by the thoughtful.

✧

[S. T. Downs in *Marion* (Ind.) *Leader-Tribune*]

In a sermon delivered during the Methodist conference and reported in a recent issue of your paper, a clergyman said that he had made a study of Christian Science, and yet he adds, "In the system [Christian Science] there is no Saviour, and no one to be saved." It seems incredible that one could have made even a limited investigation of Christian Science without determining beyond all question that it declares Christ Jesus to be the Saviour. Mrs. Eddy so refers to him and his mission a number of times in Science and Health and her other writings, while the article entitled "The Saviour's Mission," in her book "Unity of Good," shows the utter impossibility of our critic's statement being correct. It seems equally impossible for one to have pursued a very extensive investigation of Christian Science without learning that its mission is to heal mankind of sin, sickness, and death — exactly the mission upon which the great Master sent his followers for all time.

In Christian Science the word real is used to designate that which is of God, and therefore eternally true and incapable of destruction, although it is recognized that sin seems very real to the human consciousness. Since sin and the suffering that results from sin were destroyed by the great Teacher, and his followers were commanded to continue their destruction, we know that he could not have regarded them as real. God's creation will exist throughout all eternity, unchanged and unchangeable as the Father Himself, and Christian Science declares His creation—all good, all Life, Truth, Love—to be the only real one.

✧

[Avery Coonley in *The Echo*, Prophetstown, Ill.]

A search of the Scriptures, and especially the life of the Master, will show that works rather than words is the essential characteristic of the religion he founded. Among the recorded works of the great Exemplar a very large proportion are those of healing, and it was to these among other evidences of divine power that he referred when he declared, "These signs shall follow them that believe." With the command to preach the gospel he coupled the command to heal the sick, and his followers, both before the crucifixion and for several hundred years thereafter, healed the sick as a part of the exercise of their religion until the church was demoralized with materiality and formalism.

In view of these facts, Christian Science, the one branch of the Christian religion which assigns to works of healing through God's presence and power the importance which Jesus attached to them, and which, though in lesser degree by reason of lesser understanding, heals sickness together with sin and sorrow as the Master did, cannot be read out of Christianity. It is in fact furnishing the proof not only that God is able to keep us against that day, but able to save us here and now, that He is indeed a God "who forgiveth all thine iniquities; who healeth all thy diseases."

That God is personal in the sense of a material bodily personality, Christian Scientists deny, basing their conviction upon the Bible. There are innumerable statements in the Scriptures precluding the theory that God is a material personality, and none that require such a conception. I call the attention of your readers to Jesus' statement on this point to the Samaritan woman, "God is a Spirit."

✧

[John L. Rendall in *Waterloo* (Iowa) *Courier and Reporter*]

Under the caption "Signs of the Times," a clergyman took occasion to refer to Christian Science and other religious teachings as "travesties upon the Christian religion."

As a matter of fact each religious teaching must stand or fall, not by what some one else says about it, but because of its own intrinsic value and utility; because of what it may be doing or leaving undone for the betterment of humanity. Jesus said, "By their fruits ye shall know them."

If this standard is still acceptable as the criterion, then Christian Science is far from being a "travesty" upon religion, for the reason that its fruits are manifold. Its teachings emphasize the highest Christian ideals. By reason of them hundreds of thousands of people have been immeasurably helped and benefited, raised from beds of sickness, and their lives redeemed from sin and despair. Whereas many of them seemed to be without God and without hope in the world, they have found a present savior, and have awakened to the realization that the Christ is the Saviour of the world today as in Jesus' time; also that God's laws are just as operative in the healing of the sick and in the redemption of the sinner at this time as when Jesus proved the certainty of these healing laws on the shores of Galilee.

If our reverend friend will consider these points, he will find that the word "travesty" as applied to Christian Science is altogether inappropriate and unjust.

✧

[Robert S. Ross in *North Tonawanda* (N. Y.) *News*]

A clergyman criticizes Christian Science because it teaches that inasmuch as God, Spirit, is All-in-all, matter, Spirit's opposite, is necessarily unreal. The critic may not know that physical scientists now admit that matter in its last analysis is indefinable. Indeed, only a short time ago Mr. Balfour declared that scientists are explaining matter by explaining it away. Centuries ago the understanding of the truth about God and man enabled Jesus to see the unreality of matter. He set at naught every known material law, commanding those who understood his teachings to do likewise. Knowing that spiritual truth is the only reality, Jesus said, "Heaven and earth shall pass away, but my words shall not pass away."

The critic also criticizes Christian Science because it teaches that sin and sickness are unreal in the sense that God is not their author. The best possible proof that God is not their author is indicated by the fact that Jesus destroyed these errors. He said, "I came . . . not to do mine own will, but the will of him that sent me." If sin and disease were of God they would be indestructible and eternal. It would therefore have been impossible for Jesus to destroy them. Furthermore, in trying to destroy them he would have been working contrary to the will of God.

Let the critic attempt to cure disease by so-called "faith healing," and he will readily find how inadequate finite methods are to meet the needs of suffering humanity. On the other hand, a demonstrable understanding of Christian Science would enable him to meet every disease as its master. His claim that Christian Science is untrue because its followers do not unfailingly demonstrate its Principle, is not

Digitized by Google

argument. On page 461 of Science and Health Mrs. Eddy writes: "Christian Science must be accepted at this period by induction. We admit the whole, because a part is proved and that part illustrates and proves the entire Principle." From the third century until the advent of Christian Science, history does not show that healing as Jesus taught it was understood in its Principle. When Christian Scientists understand the Science of Christ as fully as Jesus understood it, they will be infallible practitioners, but not until then.

Christian Scientists heartily agree with the critic that the aim of Christianity is to destroy sin. All discord is the result of erroneous thinking, be it sickness or sin. If the sick person would be well, he must abandon sickly thinking. If the sinner would stop sinning, he must abandon sinful thinking. Jesus recognized this when he said to the palsied man, "Son, be of good cheer; thy sins be forgiven thee." Accused of blasphemy for presuming to forgive sins, Jesus turned on the scribes and said: "Wherefore think ye evil in your hearts? For whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?"

The promises of the Bible are true, and as available today as they were two thousand years ago. Those of your readers who are in bondage to sickness or sorrow or sin of whatever nature, and desire to be free, can be free by making a conscientious study of the Bible in the light of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Christian Science may not be any more acceptable to some theologians today than the teachings of Jesus were to the theologians of the first century. It is, however, established on earth never to be disestablished. Christian Science is the Comforter, or "Spirit of truth," which was promised by the Master.

✧

[Thomas E. Boland in *Lititz* (Pa.) *Express*]

Many of your readers will doubtless wonder why a clergyman should apply the adjective "Christless" to Christian Science, a religion which is not only teaching the necessity of returning to primitive Christian healing, but is actually exhibiting the "signs" which Jesus declared should "follow them that believe." It would appear to an unprejudiced observer that a church teaching and demonstrating how Jesus' full mission of both healing and preaching may become a part of the daily life of men today, with the unnumbered blessings this includes, ought to receive its warmest welcome at the hands of other churches.

The student of history will, however, look back along the line of reformers and find that in introducing something different from the then prevalent opinion they encountered opposition and persecution. In sacred history the most conspicuous example of this is Christ Jesus himself, whose persistent persecutors were not the "common people," for they "heard him gladly." Mrs. Eddy was aware of this condition in mortal thought, for on page 28 of "Science and Health with Key to the Scriptures" she has written, "The trials encountered by prophet, disciple, and apostle, 'of whom the world was not worthy,' await, in some form, every pioneer of truth." The fact that prevalent modes take exception to something not in every respect in agreement with their doctrines, need not then be taken as evidence of the error of the later comer.

The fact is, no one can read the Christian Science text-book with an unprejudiced mind without seeing that Christian Science is founded directly on the Bible, with particular emphasis on the mission of Christ Jesus. Christian Science brings not only the words but the works of Jesus into understandable relation to daily living, and makes Christian healing—the predominant factor in the Saviour's earthly career—not only a present possibility but a present experience. Of Christian healing there is no monopoly. Any one on earth is free to acquire the knowledge of God which Jesus used to bring about this much to be desired result, but this knowledge is gained by sincere, unprejudiced seeking—not by criticism.

✧

[Ezra W. Palmer in *Littleton* (Col.) *Independent*]

Had our clerical critic attended any of the recent lectures on Christian Science he would doubtless have been impressed by one significant fact, that no other church, denomination, or sect received a word of criticism or abuse throughout these lectures; the charity that "suffereth long, and is kind," and that "envieth not," prevailed.

The teachings of Christian Science unfold the beauty and power of the word of God, and its adherents have found that this word of God is sufficient of itself to heal the ills of men. Criticism of other religious bodies is therefore out of place in the activities of the Christian Science church and of its adherents. No fact of history is more patent than that religious recriminations and controversies have not advanced men one iota in the understanding of God, but rather have darkened their thoughts and filled their minds with bitterness and hate instead of the love of God, which alone can heal and save them. "Thou shalt love the Lord thy God with all thy heart, . . . and thy neighbor as thyself," was the inspired command of the Founder of Christianity, and this command Christian Scientists are faithfully endeavoring to follow.

This clergyman is also reported to have stated that another reason which induced him to attack Christian Science was, that Christian Scientists "proselyted." If by this term the critic means to imply that Christian Scientists urge their religious convictions upon others for the purpose of gaining adherents to Christian Science, he has a distorted view of the subject. Christian Scientists have a scrupulous respect for the religious convictions of others, and believe thoroughly that the golden rule should govern the relations of churches as well as of individuals. Christ Jesus, however, commanded his followers, "Go ye into all the world, and preach the gospel to every creature." This command Christian Scientists obey the same as they obey other commands to heal the sick and free the sinner. The preaching of the gospel is a legitimate function of the Christian church and of the Christian, and it is far removed from the offensive partizanship implied in the remarks of this brother.

The burden of the discussion of this critic was the attempt to discredit the Discoverer and Founder of Christian Science, Mrs. Eddy, and to belittle the benefits which have accrued to mankind from her consecrated labors. The life of Mrs. Eddy is known to the world. Clear and unbiased judges proclaim her one of the world's greatest women. Measured by the achievements she has accomplished for humanity, she deserves the world's praise, because she unlocked the treasures of the Bible which were hidden under the accumulated rubbish of ages of dogma and creed, and made available its healing and saving power. Today there is hardly a village or hamlet in the civilized world where a witness to the regenerative power of Christian Science cannot be found. To assume, as this critic is reported to have done, that Christian Science does not genuinely heal the sick by prayer, is to repudiate unimpeachable testimony from countless thousands of witnesses in every walk of life.

Editorial

No Compromise

CHRISTIAN SCIENCE practitioners sometimes find themselves in a quandary as to what their course of action should be in cases where persons have asked for Christian Science treatment, and then, after this treatment is commenced, display an unwillingness to abandon the medical treatment or the material remedies which they had heretofore relied upon to relieve them of their ills. It must be clearly understood in such cases, however, that there can be no compromise—the patient must choose between Spirit and matter, between the power of Truth and the supposititious ability of an inert drug to heal "a mind diseased."

Unquestionably, if the case is not being met, the appeal to the practitioner's sympathy is quite strong, and no doubt the temptation to accede to what the patient believes to be the best course for him to take is very great; but cool judgment, based upon an understanding of the Principle of Christian Science, should come to the rescue, and indicate the course which is best for both patient and practitioner. On page 413 of Science and Health Mrs. Eddy has stated in clear and unmistakable terms the duty of Christian Scientists under such circumstances. "If patients fail to experience the healing power of Christian Science," she writes, "and think they can be benefited by certain ordinary physical methods of medical treatment, then the Mind-physician should give up such cases, and leave invalids free to resort to whatever other systems they fancy will afford relief." Throughout her writings, indeed, Mrs. Eddy makes clear the reason for such a stand as she here advises. This reason is entirely at-one with the teachings of our Master, who "did not many mighty works" in certain places "because of their unbelief," and who said that "if a house be divided against itself, that house cannot stand."

On pages 51 and 53 of "Miscellaneous Writings" Mrs. Eddy touches again upon this same subject, but from a somewhat different angle. Here she answers two questions which ask in effect whether in some cases the practitioner shall initiate an effort to combine the use of drugs and Christian Science in the treatment of disease. The first of these questions is, "Are both prayer and drugs necessary to heal?" and the second is very closely allied to it, namely, "Do you sometimes find it advisable to use medicine to assist in producing a cure, when it is difficult to start the patient's recovery?"

In her answer to the first of these questions Mrs. Eddy says, "Whosoever understands the power of Spirit, has no doubt of God's power,—even the might of Truth,—to heal, through divine Science, beyond all human means and methods." Her answer to the second is: "You only weaken your power to heal through Mind, by any compromise with matter; which is virtually acknowledging that under difficulties the former is not equal to the latter. He that resorts to physics, seeks what is below instead of above the standard of metaphysics; showing his ignorance of the meaning of the term and of Christian Science." These answers should leave no uncertainty on this subject in the thought of the careful student of Christian Science, and certainly no excuse for any attempt to mingle two systems which are as opposite to each other as the poles.

No one is under any obligation to take Christian Science treatment, and no sensible person would expect to influence any one against his will in so important a matter. Christian Scientists are always ready to give a reason for the faith that is in them, and to lend such aid as they can to those who desire their ministrations, but they know so well the futility of trying to mix Spirit and matter, that they can do nothing but step aside when the patient and his friends insist upon having medical treatment or using some material remedy as an aid to Christian Science. This they will do in the most kindly and sympathetic spirit, but with the firm resolve which is based upon the dictates of "a good conscience," and which ever has in view the ultimate good of all concerned.

ARCHIBALD MCLELLAN.

❖

The Word

JOHN tells us that "the Word was with God, and the Word was God," thus declaring that the Word is of the same quality as God. This Word, or Logos, is described in "Science and Health with Key to the Scriptures" by Mrs. Eddy as "demonstrably Christian Science, the natural law of harmony which overcomes discord" (p. 134). How important then that the Word should not be counterfeited in human thought! The Logos understood and practised is equal to every emergency. It destroys secret sin, unwinds the cords of habitual evil, exterminates the subtlest pretenses, dissolves hardened misconceptions, pricks the growths of pompous pride, sets free the enslaved senses, cures distracted mentalities, and operates better than any surgeon's knife upon diseased physical organs. Moreover, this same Logos stands ready to save nations as well as individuals from the necessity of further chemicalization through the application of lawful and disciplinary activity.

The student of Christian Science is familiar with the metaphysical phenomenon of words perverted from their true meaning and so used to perpetrate further evils. What havoc in human experience has not been caused by the misuse of such words for instance as love, church, state, organization, body, peace, heaven, and the like! As the military methods of today have uncovered the deliberately planned intent to destroy human life by poisonous gases, so prevailing mental struggles have unmasked batteries sending forth perverted words to asphyxiate the unwary and somnolent. Words represent thoughts, and a poisoned word stands for a poisoned thought. Among such poison-carriers the scientific Christian will do well to watch with special care the word neutrality. Used as equivalent to "apathy," this word has been projected into human consciousness, and has seemingly produced the intended effect of inducing millions of human beings to believe that they cannot tell the difference between right and wrong.

Mrs. Eddy states, "Sleep and apathy are phases of the dream that life, substance, and intelligence are material" (Science and Health, p. 249). This dream of materiality is the outcome of the material or mortal mind, which is further defined in Christian Science as animal magnetism. Of the operation of this suppositious force we read in Science and Health (p. 102), "So secret are the processes methods of animal magnetism that they ensnare the age in indolence, and produce the very apathy on the subject which the criminal desires." Thus the perverted sense of the term neutrality, which induces men and nations to believe that they do not know the distinction between good and evil, goes one step further and becomes agnosticism, or that state of mind which keeps declaring in constant and vain repetition, I do not know. Now agnosticism is the negation of Science.

The cure for the debased use of words is obviously the right use of them, and this right use can only be di-

Digitized by Google

by spiritual understanding, by the true Word which was in the beginning and without which was not anything made that was made; in short, by Christian Science. Herein lies salvation in this momentous hour from the false meaning of words cunningly devised, from the letter that killeth, and the organized conspiracies of evil using as their readiest weapons both perversion and reversion. By this sign does the Christian warrior conquer, with this Word he routs the foe, and all the enginery of long-planned mental manipulation, the loud noises of organized propaganda, the attempted prophecies of its self-will, and the poison of its noxious misuse of innocent words,—all these attempts are made of none avail through the saving Word.

Instinct with power and intelligence, irresistible with divine logic, the Word overturns the best laid plans of the carnal mind. Its bugle-call awakens slumbering humanity. Then behold, evil no longer appears one with good, the chaff is sifted from the wheat, salt water does not seem to pour forth with the sweet from the same fountain! Behold the stupor of apathy and agnosticism is gone, and the fumes of *soi-disant* neutrality are spent, for the Word reigns!

WILLIAM D. MCCRACKAN.

"Midnight" or "Cockcrowing"

AT the present time all Christians have need to study and ponder the words of Christ Jesus, as found in the first two gospels, respecting what Mrs. Eddy calls "the breaking up of material beliefs" (Science and Health, p. 96). As we read the twenty-fourth chapter of Matthew and the thirteenth chapter of Mark we may well be appalled at the dark pictures of sin and suffering therein presented, all of which show that complete victory over mortal error is not gained until the unreal foundations of false belief are uncovered and overthrown. It is noteworthy that this discourse followed a boastful remark made by one of the disciples respecting the splendor of the material temple at Jerusalem. To this Jesus responded by saying of these great buildings, "There shall not be left one stone upon another, that shall not be thrown down." The temple was intended to typify a divine idea, but since its services failed in this particular, they must give place to a purely spiritual worship, whatever the cost to human sense in the decisive struggle between truth and error, at any period in human history.

As we read the foreshadowing of these struggles we need not wonder that the disciples asked when their end would come. To this sorrowful though natural inquiry the Master answered that only the Father could tell this, but he did intimate that the evil days would be shortened "for the elect's sake." The one thing he insisted upon was watchfulness on the part of his followers in any age and, what is too often forgotten, the "authority" bestowed upon them in defending the rights of man as God's image and likeness. He made it clear that "the Son of man," God's idea, is the rightful master of the house, and that in the suppositional absence of this master "the porter" must watch. Mrs. Eddy warns us against admitting to our consciousness any usurping belief of discord, whether sin or disease. She says (Science and Health, p. 392): "Stand porter at the door of thought. Admitting only such conclusions as you wish realized in bodily results, you will control yourself harmoniously." This same rule as to watchfulness would of course apply to all discordant conditions, whether individual or national, and if all the professed followers of Christ Jesus observed it faithfully, human history would tell of steady progress toward the realization of God's kingdom on earth.

There is, however, another side to this question. Not only should the porter guard against the admission of evil under any guise, but he must also be ready to admit "the master of the house" whenever he may come. When a Christian Science practitioner is called to a case, he finds usurpers seemingly in control,—disease beliefs, so-called health laws, and the false gods of mortal mind holding sway. These are to be cast out, their baseless assumption of authority over man exposed. The most important thing, however, is the unceasing watchfulness which listens untiringly for the voice of the master, eager to respond to the authority which destroys all evil. How easy it seems, to mortal sense, to miss this voice, alike in sickness or in the loud clamor of war and social strife, and to hear only what Whittier calls "the harsh noises of our day."

Jesus said, "Ye know not when the master of the house cometh, at even, or at midnight, or at the cockcrowing, or in the morning." It thus appears that divine Truth may come to prove to all mankind its supremacy, in the deepest darkness, or when the first heralds of dawn are sounding forth a call to men to prepare for sunrise. When the master of the house, the eternal Christ, is seen as the arbiter of every human question, then we may know that the end of error is at hand, even though the sun of materiality be darkened and the moon no longer give its light. This is exactly what the old prophets foretold, but it only means that men are to walk in the light of divine Mind, and then shall we grasp the full meaning of Isaiah's prophecy: "The Lord shall be thine everlasting light, and the days of thy mourning shall be ended."

ANNIE M. KNOTT.

Among the Churches

Current Notes

LONG BEACH, CAL.—The distribution work at this place has shown remarkable growth the past year. During the months of January, February, and March, 1916, the following literature was given out: 3439 *Sentinels*, 347 *Journals*, 10,334 *Monitors*, 66 *Heralds*. There have also been distributed 2418 local papers containing lectures on Christian Science. Until the middle of March a committee supplied all boats docking at San Pedro with the literature, but since that time there has been cooperation with other committees in this work. There are a number of free subscriptions for the fire stations, apartment-houses, hotels, the jail, and the rest-room at the high school.—*Correspondence.*

QUINCY, MASS.—Active work has been commenced on the foundation for the church to be erected on Greenleaf Street for First Church of Christ, Scientist. The building will be over 100 feet long and 60 feet in depth. The estimated cost of the structure is thirty thousand dollars.

The Quincy Patriot.

WOODLAND, CAL.—Plans for a new Christian Science church building are now under way. The old J. K. Smith property, at the corner of Elm Street and Lincoln Avenue, has been selected as the site, and the sale is to be officially recorded within a few days.—*Sacramento Union.*

SAGINAW, MICH.—Perhaps the most unique exhibit of the Pure Food Show is that of *The Christian Science Monitor*, a Boston (Mass.) newspaper, whose booth carries the striking characterization of this newspaper, "Pure Food for Thought."—*Saginaw Courier-Herald.*

Digitized by Google

SYDNEY, NEW SOUTH WALES, AUSTRALIA.—First Church of Christ, Scientist, which some years ago purchased a block of land in Riley Street, a few yards off Oxford, one of the principal streets of the city, has now entered into a contract for the erection of a church edifice and Sunday school room thereon, the contract price being thirty-one hundred and fifty pounds. The work has been started, and the corner-stone was laid on May 6. The building will accommodate seven hundred and ninety-six worshipers, and according to contract is expected to be ready for occupancy in October next.

Correspondence.

MILWAUKEE, WIS.—On May 7 the Sunday school of Second Church of Christ, Scientist, was assembled in the main auditorium of the church edifice for the purpose of listening to an organ recital and hearing the report of the Sunday school superintendent, who announced that the pupils had finished raising the sum of ten thousand dollars, which amount paid for the organ of that church. The Sunday school had volunteered to pay for the organ, and contributions have been received for that purpose since its inception in November, 1909. *Correspondence.*

DETROIT, MICH.— Work is rapidly progressing on the new edifice of First Church of Christ, Scientist, now being erected at the southwest corner of Cass and Hancock Avenues. The seating capacity will be fifteen hundred. The main floor will seat twelve hundred, and a semibalcony will seat three hundred. The church will cost about one hundred and seventy thousand dollars when completed. The corner-stone was laid last Saturday [May 27], and the edifice will be finished about Nov. 1.— *Detroit Journal.*

NEW BEDFORD, MASS.— The new edifice of First Church of Christ, Scientist, at the corner of Mill and County Streets, was informally opened yesterday [May 28]. The dedication will take place at a later date. The auditorium seats four hundred and fifty.— *The Standard.*

WHITE PLAINS, N. Y.— First Church of Christ, Scientist, has purchased a lot 120 by 52 feet at the northeast corner of Maple and Mamaroneck Avenues for a church edifice, and plans for the structure are being prepared.

New York Herald.

SAN BERNARDINO, CAL.—The Christian Science booth in the industrial section of the orange show is the only booth maintained there by a church organization. Thousands have partaken of the hospitality of the members of First Church of Christ, Scientist. *San Bernardino News.*

BUCYRUS, OHIO.— The formal opening of the church edifice of First Church of Christ, Scientist, at 309 South Walnut Street, will take place next Sunday, May 14. The entire cost of ground and building will be a little more than seven thousand dollars.— *Bucyrus Forum.*

JUNCTION CITY, KAN.—This morning [May 25] at six o'clock the corner-stone for the new edifice of First Church of Christ, Scientist, was set in place.

The Junction City Union.

LOS ANGELES (VAN NUYS), CAL.—Services in the new Christian Science chapel, located at 240 East F Street, were held for the first time Sunday, May 7.—*Van Nuys News.*

The Lectures

Los Angeles, Cal.

A lecture on Christian Science, under the auspices of the Christian Science Society, was given by William D. McCrackan at Whitson Hall. He was introduced by Judge Lewis R. Works, who said in part:—

Preach the gospel, heal the sick, were two of the cardinal commands of our beloved Master, Jesus the Christ. The first of these has been generously obeyed, in form at least, and nineteen centuries have listened to a persistent preaching of the gospel. Christendom cannot boast an equal degree of obedience to the command to heal the sick. For sixteen or seventeen of the centuries mentioned, and up to the time of the discovery of Christian Science by Mrs. Eddy, the healing of the sick was no part of the practice of the Christian religion. This lapse from the example furnished by the early Christians was so uniform, so complete, that the dictum was continually announced that the command to heal the sick was only intended for the immediate followers of Jesus.

The incorrectness of this statement may be demonstrated by three methods. In the first place, the book of Acts records many healings by those who were not Jesus' immediate followers, notably in the case of Paul, who never saw the Master. In the second place, profane history teaches us that the dead were raised for more than a century and the sick were healed for more than two centuries after the ascension, by the early Christians. The third proof of the untruth of the statement lies in the discovery of Christian Science. Mrs. Eddy and her followers have demonstrated that the sick may be healed today, as a part of the practice of the Christian religion, as they were by Jesus and the early Christians.

Chicago, Ill.

Prof. Hermann S. Hering lectured on Christian Science for Eleventh Church of Christ, Scientist, in Logan Square Auditorium. He was introduced by Herman Blitz, who said:—

One question uppermost in the mind of the seeker for health is, How does Christian Science heal without the use of drugs or other material remedies? It is by the application of the same Principle by which Jesus healed nineteen hundred years ago. That Christianity has lost sight of this Principle does not prove that the Principle has failed, but rather that Christianity has for centuries overlooked one of the most important of Jesus' missions. The Master came to heal the sick as well as to reform the sinner, and he said, "He that believeth on me, the works that I do shall he do also."

✧

Kansas City, Mo.

Bert M. Whisner in introducing Bliss Knapp, who lectured on Christian Science for Second Church of Christ, Scientist, said in part:—

The Bible teaches faith in God. "Trust in him at all times," the psalmist says; "pour out your heart before him; God is a refuge for us." This statement of the psalmist was not generally accepted in his day, any more than it is in ours, for many refused to believe that "God is a refuge for us" in time of trouble. Christ Jesus taught his disciples to heal the sick and the sinful through prayer. When they

Digitized by Google

failed to heal a certain case he told them that it was because of their unbelief, or lack of faith. Tenderly and compassionately the Christ is speaking today through Christian Science, and is saying as of yore to the storm-tossed and sin-burdened of the earth, There is help in God, "God is a refuge for us." This is the gospel, or "good news," which Christian Science presents to a waiting world.

✧

Oak Park, Ill.

In introducing Jacob S. Shield at his lecture on Christian Science in Warrington Theater, A. H. Flanegan said:—

Christian Science may be called the religion of accomplishment, and because of what it has done for them Christian Scientists feel that they can lovingly recommend this religion to their fellow men. The lowly Nazarene restored the sight of the blind man, healed the one sick of the palsy, raised Lazarus from the dead, fed the five thousand, and did many other wonderful works, regarding which he said, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also."

Through sin, neglect of Jesus' precepts, and erroneous teaching, mankind was led into the belief that these mighty works of Jesus were in contravention of God's law, instead of in fulfilment of the mission for which Jesus said he came to earth, namely, to do the will of the Father. However, man's blindness could not and did not change or forever hide the fact that the healing and regenerative works of Jesus were performed in accordance with a divine rule that when understood can be demonstrated by Jesus' followers as he promised.

It was the revered Leader of Christian Science, Mrs. Eddy, who discovered and made clear to human apprehension the Principle of the Christ-healing; and it is those who have in some degree mastered this rule, and are conforming their lives to its holy requirements, who are today casting sin and disease out of themselves and others and are called Christian Scientists. A right apprehension of Christian Science is important, for it brings unnumbered blessings to mortals, and these come through understanding, not belief.

✧

Leytonstone, England

J. S. Braithwaite, first reader of First Church of Christ, Scientist, London, at the lecture on Christian Science by John W. Doorly at the Public Baths, introduced the lecturer in the following words:—

It is sometimes a matter of wonderment and surprise on the part of those who know nothing of Christian Science except what they have heard said about it, how it is that so much interest is taken in these lectures; and the splendid audience tonight is a case in point. I think if we were to set about giving an explanation, most of us here would say that our interest in the subject of Christian Science was primarily aroused by the undoubted works which it is accomplishing,—the healing of the sick and the regenerating of the sinner. Later on came the interest in its teachings. When we become interested in what a man is doing, it is only a question of time when we shall take an interest in what he is thinking, what he is believing. A man's works must always be the best evidence of his faith, whatever he may say, or even think, that he believes.

A careful study of the gospels reveals to us the fact that the Master was not trying merely to make good men of his disciples or students, as the world counts goodness. No, he was trying to make them into knowers of the truth, because he realized that it is only when a man becomes a knower of the truth that he cannot fail to be a doer of good, and thus help both himself and his brother men to what they need more than anything else in the world,—a better understanding of God. Christian Science is making its students into knowers of the truth, and as they become knowers of the truth they undoubtedly become doers of good also, and thus a daily increasing number are led to seek and to find a better understanding of God.—*Correspondence.*

✧

Three Rivers, Mich.

A good-sized audience greeted Charles I. Ohrenstein at the Opera House, where he gave an address on Christian Science. Miss Margaret Linsley introduced the speaker, saying:—

We are all—some by one path, some by another—seekers after the truth, attempting to find some answer to the riddle of life. But how are we to know when we have found the answer, found the truth? In every science we have some way of checking our results, that we may know whether we have applied rightly or wrongly what we have already learned of the subject. In the Bible we are given such a check for our religious life. Jesus says, "By their fruits ye shall know them;" and in the last chapter of Mark he also says, "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

In so far as signs follow we know that we are on the right track and are encouraged to persevere. Every so-called discovery of every age has been simply the uncovering and application of a fundamental truth which has always existed. Such is Christian Science.—*The Daily Commercial.*

✧

Richmond Hill, N. Y.

Frank Bell lectured in the Garden Theater on the subject of Christian Science. He was introduced by Charles E. von Heitman, who said:—

When one stops to consider the growth, strength, and influence attained by Christian Science, it seems almost inconceivable that so much should have been accomplished within the comparatively brief period of fifty years. While the world may look with wonder upon the rapid expansion of the Christian Science movement, those familiar with its teachings and practice realize that it is due to the fact that in Christian Science humanity has found a practical and demonstrable religion. Realizing as did Mrs. Eddy, the revered Founder and Leader of this movement, that preaching without practice and theory unsupported by demonstration could avail nothing in the way of permanently bettering the conditions of mankind, she insisted that a correct understanding of the Science of Christianity could be measured by nothing less than a readiness on the part of its students to obey the command of Christ Jesus to preach the gospel and heal the sick. As a result of her teachings and efforts the Principle of divine Science, as laid down almost two thousand years ago by the Founder of the Christian religion, is being made manifest today in the healing of all manner of sickness, sorrow, and sin, to which fact thousands of dependable individuals from all walks of life daily bear grateful testimony.

Testimonies of Healing

There has long been a great desire in my heart to express gratitude for Christian Science and all it has brought into my life since it first came to my attention five and a half years ago. At that time I seemed weighed down with care and anxiety, for my husband was suffering from a so-called incurable organic disease of long standing, which might prove fatal at any moment. There was a constant dread of the worst happening, and if he was a few minutes later than usual in returning home, I was filled with fear. Only those who have lived under a similar cloud can realize my great joy when after studying for about a month the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I found myself freed from this bondage of fear, which at times had seemed unbearable. As more understanding of God as Love came to me, I began to expect only good, and the ninety-first psalm helped me very much.

The first Christian Science service I attended will never be forgotten. As we sang these words of the first hymn, "Bright skies will soon be o'er me," I remember thinking, Oh, if this could only be true! Since then the promise has been proved true, for not once during the years we have been studying Christian Science has my husband had a return of the old trouble, and today instead of being a semiinvalid he is enjoying the best of health. Words cannot express the great difference this has made in our home. I had always believed that all things were possible to God, and this greatly helped me after learning of Christian Science, but there was a lack of understanding of man's relationship to Him. Christian Science has since imparted this understanding through its spiritual interpretation of the Bible; it has also helped me to overcome all manner of discords and given me many proofs of the power of divine Love to heal.

Frequent attacks of throat trouble, which under medical treatment meant a week in bed, have been overcome; also sudden and long attacks of bleeding at the nose, though their disappearance had not been noticed until some testimonies given at a Wednesday service telling of the demonstration of Truth over these errors brought to mind how they had once troubled me. In March, 1913, I had to take to my bed, and was too ill to realize the truth for myself. Although my desire was for Christian Science treatment, to satisfy the demand of relatives who were caring for me a doctor was called in, who diagnosed the case as an abnormal condition of the kidneys and other internal troubles. An operation was considered necessary as soon as my strength was sufficient, but in the mean time a surgical belt was to be fitted to me. I was told never to get it out of position, as this was most important, and was not allowed to get up without it.

Of course I denied all this, clearly recognizing it as an illusion of mortal mind, and tried to realize instead the presence of God, which fills all space, but at the same time it seemed to me wise to ask the help of a practitioner. A month's treatment brought no improvement, and so for seven months I tried to work out the problem myself. No relief resulted, however, until there came the realization that I was not doing justice either to Christian Science or to myself. I had no faith in *materia medica* and felt that Christian Science alone could cure me, so in November, 1913, the help of another practitioner was asked. The treatment covered in all three weeks, but the whole condition gave way in one treatment. The belt mentioned above was discarded, and all the duties entailed in the management of a home have since been performed without the slightest sense of discomfort or fatigue, though I had been told that it would always be necessary to "take things easy."

Words cannot express my deep gratitude for the following further proof of God's love. One morning in December, 1914, our little boy awoke seemingly very ill. As he had not retained food for two days and I was not able to overcome the trouble, probably owing to the sense of fear and human affection, the help of a practitioner was sought. The vomiting kept up two days after treatment began, although on the second day the child seemed much brighter and showed a desire to move about. On the third day he retained his food, and in a week was quite well again; in fact, he has seemed better than ever before, reflecting perfect harmony. I feel daily grateful that this better understanding of God's protecting power has come into my life in time to spare him much suffering. Christian Science has never failed us when it has been faithfully applied.

I am deeply grateful for all these physical blessings, but more especially for the spiritual awakening which comes with each demonstration. Added to my thankfulness to God and gratitude to Mrs. Eddy, my loving thoughts go out to those who so patiently pointed the way to this great truth which does indeed make free. My great desire is that I may have more of that Mind in me which was in Christ Jesus.

Mrs. Joyce Burley Baxter, Bristol, England.

✧

I wish to express my gratitude for the many blessings experienced since becoming interested in Christian Science. In June, 1914, I met with a serious accident on the beach, so that I was unable to walk without help and could not turn over in bed; but after two treatments in Christian Science, I could walk as usual. This was very remarkable at my age, which was then a little over eighty-nine. The following February a severe attack of lumbago was overcome with two treatments. Later on an attack of paralysis, for which one absent treatment was given, yielded in less than two hours. One day I told some people about the accident at the beach and the next morning was unable to walk across the floor. After having two treatments and helping myself, however, I was all right, and there has been no return of the trouble.

I have been interested in Christian Science only a short time, but my gratitude goes out to Mrs. Eddy for having shown us the right way to worship God and love one another. My endeavor is to do everything that Christian Science teaches us to do, and to be patient, loving, and kind.

I have recently celebrated my ninety-first birthday, and am now well and happy and able to help my daughter in her household work. For all these blessings I am thankful to God.—Pauline Dubiee, San Francisco, Cal.

✧

I have attended Christian Science churches for nine years and have demonstrated the power of Truth over error, having been healed of acute lung trouble, fever, catarrh, the liquor habit, and sin in multitudinous forms. My mode of life has been so changed that it seems as though the old man had been entirely forgotten and the new man put on. I have found this truth which makes free through the study of "Science and Health with Key to the Scriptures" by our dear Leader, Mrs. Eddy. Her words of truth and love will never cease to give consolation and joy and peace to those who are seeking for the truth. I cannot thank God enough for sending the light to me and opening the windows of heaven to my once blind eyes.

I am a constant reader of all the Christian Science peri-

Digitized by Google

odicals and take great pleasure in them. When it seems necessary to rest I read and study Science and Health, the *Sentinel*, and the *Journal*, and soon am quiet and at peace again, for they all reflect Love, and perfect Love casts out fear and inharmony. What more can we ask than to know that God is Love, that He answers prayer at all times and under all circumstances? I hope this testimony may reach some appreciative heart that needs the tender care and love of the Father-Mother God, the all-present help in time of distress, and that it may help such a one to walk in the Master's footsteps and find the rest promised two thousand years ago by our Saviour, Christ Jesus.

EUGENE S. WEAVER, Chicago, Ill.

✧

About nine years ago I was suffering from what the doctors called neurasthenia, being unable to eat or sleep or to attend to my household duties. On the advice of the doctor who was attending me I was taken to a nerve specialist in New York, but he said he could do nothing for me and advised me to go to a sanitarium. I did so, but was too weak to take any of the treatments given there. I therefore consulted a prominent specialist of New York, whose diagnosis was severe stomach trouble and an abnormal condition of the kidneys, for which he advised an operation. I then saw another well-known specialist, and in accordance with his advice again went to a sanitarium.

When I had been at this institution about three months the doctor told my husband he did not think I would ever be any better. A friend heard of this, and on remarking that there must be something which would help me, she was asked if we had tried Christian Science. She had never heard of this teaching before, but began to investigate and to inquire concerning it. Although at first refusing to have treatment, as it seemed to me that everything possible had been done for me, I finally consented. The practitioner nearest the sanitarium was called and treatment was begun. At the end of a week she told me I must leave the sanitarium, as she could not treat me if my remaining there would bring me under the doctor's care and orders.

My husband having rented a cottage opposite the sanitarium for the summer, so that my three children could be near me, I was advised to go there, although the doctor said a nurse must go with me, as it had been necessary that one should be in attendance day and night. The practitioner, however, said a nurse was not needed; that she would take care of that. Treatment was continued for about three months, and my healing came gradually, as the truth was revealed to me. I am now well, and can do more work than I ever did before coming into Christian Science.

I am deeply thankful to God, and grateful to Mrs. Eddy for giving us "Science and Health with Key to the Scriptures."—ANNA M. VOLK, Hoboken, N. J.

Since the healing of my wife there have been many cures effected in our family through the healing power of Truth. For some time I suffered with diabetes and catarrh, and both these ailments had assumed serious conditions in spite of constant medical aid. Through Christian Science treatment, however, they were entirely overcome in about ten days. Nearly three years later carbuncles appeared on the neck. The first one was neglected until it became quite serious, and as I had not become an avowed Christian Scientist, as well as for other reasons, it was thought that it would be better to have our former physician open it. The physician said immediately that it was a result of the diabetes of years before and that the disease was still in the system, but on examination he found no trace of it.

During this same week several carbuncles appeared, but Christian Science treatment disposed of them in their beginnings. About this time too my sight began to fail. I had no special treatment for this trouble, but decided to get some glasses. My eyes were therefore tested and the glasses were to come in a few days. On mentioning to a Christian Scientist that I had ordered them, permission was asked to give treatment, and it was granted. When the glasses came it was impossible to read either with them on or off; but treatment was continued, and soon I was able to read without them and have continued to do so ever since.

A severe attack of ptomaine poisoning was overcome in two days, although the resulting weakness lasted for over a week. In November, 1914, I was suddenly taken very ill with delirium and all the symptoms of a bad case of erysipelas. The condition was such that constant attention was needed both day and night, and so a Christian Science nurse had to be called as well as a practitioner. It was a hard struggle, but Truth triumphed, for the fever finally left and I was on the road to recovery. My old friend, the physician of former years, was watching the case, and when I was out again once more asked the privilege of making an examination for the old-time diabetes; so to gratify him I granted his request. Soon afterward he called at my office and left a note saying he found no trace of this trouble.

I certainly have great reason to be thankful for Christian Science. When one goes so near to "the valley of the shadow of death" and comes again into health and strength and peace, a lifetime of devotion to Christian Science is but a small way by which to express gratitude.—ANTHONY J. VOLK.

✧

With a heart full of thankfulness I acknowledge a demonstration which was made for me some time ago. One morning soon after my husband had left for the office I went to the back door of our apartment, and the instant my foot touched the step I shot out on to the sidewalk, falling backward and striking my head with full force against the edge of the stone step. For a few seconds I seemed stunned, and then to mortal sense there was great pain. At first I was unable to rise, but soon with difficulty crawled up-stairs to a neighbor who has a telephone and asked her to call for Christian Science treatment. After she had done so I had her look at my head, and as the blood was flowing freely she thought a doctor should be called, so this was done. All sense of pain had left, however, and it did not return, even when the stitches were taken. The wound gave me no trouble and healed quickly.

I have had many demonstrations as a result of my own work and that of others, but this to me seems the most wonderful. I am thankful to God for His many mercies, and grateful to Mrs. Eddy for expressing this saving truth in Christian Science.—ELISA CAMPION, Omaha, Neb.

✧

[Translated from the German]

In gratitude for the great help which has been received through Christian Science, and with much joy, I submit the following testimony. In 1909 I fell and sustained such a serious injury of the back that soon afterward I had to be taken to the hospital, where I stayed almost four years. For two years I lay in a plaster cast, and the physicians declared the case to be one of inflammation of the spinal marrow and the dorsal vertebræ. The spine was broken, and in consequence five vertebræ protruded. At the Zurich Cantonal Hospital, where I was taken in October, 1912, the physicians stated that a tubercular condition existed which was incurable, and that there was nothing they could do for me.

Digitized by Google

I wrote to an acquaintance and told her of my pitiful condition, whereupon she called and brought me a copy of *Der Herold der Christian Science*, saying that I could be helped. What she told me regarding this new teaching at once made me feel very confident as to its message. I read several copies of the *Herold* diligently and experienced great relief. In April a Christian Science practitioner was asked to take up treatment, and from that time the healing progressed rather rapidly, so that in June I was able to walk without assistance. In September the celluloid corset which had been worn for the support of my back was discarded. A chronic affection of the lungs of years' standing, as well as an ear trouble and other ailments, have completely disappeared. In August, 1913, I left the infirmary of my native place, and when later on I presented myself for examination to the physician of that institution and then to the doctors of the Cantonal Hospital, they had to acknowledge that I was completely healed.

Wonderful though my healing has been, I prize yet higher the inner peace and comfort which has come to me through Christian Science, and my sole endeavor is to be not only a hearer but a doer of the word. Next to God I am most deeply grateful to Mrs. Eddy for this glorious teaching.

Bertha Utzinger, Bachenbülacht, Kt. Zurich, Switzerland.

✧

Many years ago I was a sufferer from a disease of the jawbone, from melancholy, lameness, and many other ailments. After having been under the care of many physicians without relief, I tried Christian Science, and was helped at once by reading Science and Health; while in eleven months I was cured of very painful attacks in the head and face. The healing has been permanent, and discontent, doubt, fear, malice, and many other conditions have also been overcome. I am therefore indeed grateful for the regenerative power of Christian Science, and know that in proportion to my obedience to the truth I will receive the blessing.

Pauline Geyer, Brooklyn, N. Y.

✧

Words cannot express my gratitude for all the benefits I have received in Christian Science since it first came to my notice in February, 1909. I was in a very weak condition owing to a nervous breakdown, and suffered greatly after partaking of food.

For four months I was confined to the bed, growing weaker and weaker. In the mean time two doctors and a specialist were called, and they advised an operation, after diagnosing my trouble as "dilated stomach." Arrangements were made for me to go into a nursing home, but the doctor who was to perform the operation was going away on a holiday, so for five weeks I stayed with friends in the country to try to gain a little strength, and was taken out in a bath-chair every day. My weakness was so great that I prayed to be released, and am convinced that if the operation had been performed I would not have recovered.

The week after my return home a lady called and told my sister about Christian Science, but my sister, being disheartened, said we had tried every conceivable remedy without relief. The lady asked permission to bring some Christian Science literature to us, and then brought some copies of the *Sentinel*. I read them all through and thought how beautiful it would be to be healed as were the people who gave the testimonies. At my request my sister asked the lady to come to see me, and she did so two days later. She talked to me of Christian Science, and the following day took me to a practitioner.

I was better after the first Christian Science treatment, and could eat with the family without suffering any ill effects. From that time on the gain in health and strength was rapid, and after three or four days I walked a mile and a half to the practitioner's house. Since then no material remedies have been taken, but God has met all my needs. For twenty years I was a slave to medicine of all kinds, and the least exertion laid me up for days. Christian Science has healed me, and I now enjoy better health than ever before. I am indeed grateful for the understanding of God as Love, and also for the help received from friends.

Sarah Humphreys, Oldham, Lancashire, England.

✧

From a heart filled with gratitude this testimony is given, in the hope that some one who is struggling along the road from sense to Soul will derive comfort from it. I have been a student of Christian Science for the past five years and have had numerous proofs that God is an ever-present help in trouble.

When I was very young in Science a seemingly great trouble came upon me, and at times the strain was almost unendurable. Other difficulties were added to the first one until it seemed I could bear no more. Then from excessive worry over these things I was stricken with severe nervousness, and would have dreadful headaches, accompanied by extreme dizziness and vomiting. These spells occurred as often as twice a week for more than two years. None of my family were interested in Christian Science and much inharmony was manifested. No material remedies were used, however, for it was my desire to be healed by Christian Science; and though the healing was slow, I can now say that it has been accomplished.

All these burdens have been very hard to bear, but it has been proved that they were needed, for not otherwise would I have turned to God. There are still many problems to work out, and some of them seem most difficult of solution, but I realize that they are only stepping-stones to higher hopes. Since becoming interested in Christian Science my path has by no means been strewn with roses, in fact it has seemed even rougher than before; but I have not become discouraged, for each rough place has given me a better understanding of how to work out all my daily problems. The Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, are my daily guides.

My heart is filled with deepest thankfulness to God and gratitude to our dear Leader, and my desire is to follow in the path that has been marked out for us, the path that follows in the footsteps of Christ Jesus.

Ellen A. Robinson, Boise, Idaho.

✧

In September, 1907, I bought transportation for my daughter and myself to Washington, D. C., by way of Memphis, Tenn. We arrived in Memphis on Sunday and had to wait there for seven or eight hours. Hanging on the wall of the waiting-room was a rack containing Christian Science literature. I took a *Sentinel* and began to read it, then asked my daughter if she knew anything about Christian Science. She said she did not, except that she had heard it was a discovery by Mrs. Eddy and that she and her students were healing disease the same as Jesus and his apostles did nineteen centuries ago.

Going on with my reading, I noticed that in the different articles and testimonies reference was made to "Science and Health with Key to the Scriptures," and remarked that if there was a key to the Scriptures whereby one could get an

Digitized by Google

understanding of the Bible, I should very much like to have it. My daughter told me to put the *Sentinel* in my grip and when we got to Washington we could buy the book. I then took a *Journal* from the rack, and after reading it for a few minutes placed it with the *Sentinel*.

On the next day these periodicals were read and reread, and when we got to Washington I secured a copy of Science and Health. The reading of this wonderful book healed me in six months of a stiff joint in my right elbow, caused by being thrown from a buggy twelve years before. The power of Truth as revealed in Christian Science also healed me of a fascination for gambling, which I had followed as a profession for over twenty-four years.

One other healing, for which I am more grateful than anything else, was the overcoming of the tobacco and liquor habits of over twenty-seven years' standing. During these years of dissipation and trouble my wife for many nights would not close her eyes until I came home, and at times it would be five or six o'clock in the morning. I can never be thankful enough to God for His goodness and His loving-kindness, or grateful enough to Mrs. Eddy for giving to the world Science and Health. Shortly after coming into Christian Science I had a bad attack of acute lung trouble, but was completely brought out of it by the aid of a practitioner. Two friends who were said to have had the same trouble, passed out under medical treatment.

My wife and daughter have become interested in Christian Science, and each has her own Bible and copy of Science and Health. Personally not a drop of medicine has been taken in over seven years, and for the past four years my family have relied absolutely on the power of God as revealed in Christian Science for their healing. I belong to The Mother Church and a local church, and have also had class instruction, which with the Christian Science literature has greatly illumined the study of the Bible.

This testimony is sent with the prayer that it may lead those who are in the "slough of despond" to investigate Christian Science for themselves, and that every Christian Scientist after reading the periodicals will take them to the reading-room, in order that they may reach the distribution committee and fall into the hands of those who are hungering for the truth.—Thomas A. Cook, Oklahoma City, Okla.

✧

[Translated from the German]

About three years ago I suffered with a painful abdominal trouble, which caused me to feel very despondent. The physician gave me no hope of regaining my health except through an operation, to which, however, I could not make up my mind to submit. It was then that a friend told me of Christian Science and its healing power, and I immediately applied to a practitioner, who lovingly made me acquainted with its teachings. From that moment on I earnestly endeavored to hold steadfastly to what I recognized as truth, the result being that I was healed within a short time.

I feel impelled to state here that I am most deeply grateful for the benefits which I have received both in a physical and in a spiritual way through Christian Science. I also wish to acknowledge with a grateful and joyful heart that peace has displaced disharmony in my home and that I have repeatedly experienced wonderful proofs of the efficacy of the divine power in cases of financial need. I give thanks to God, the dispenser of all good, and am grateful to Mrs. Eddy, our revered Leader, and to the one through whose help I have gained some understanding of the healing power of Truth.

Frau Bertha Mayer, Geneva, Switzerland.

From Our Exchanges

[*The Christian Work*]

Whether we know it or not, just so far as we live the life which we recognize as the good life, we are living in God. This is the life which Jesus Christ alone has adequately revealed and incarnated; and we make our statement clearer when we say that when we live the life which Jesus Christ lived we are living a life which the mighty river symbolizes in its perennial and exhaustless movement, a life which will no more fail than the river will cease to flow. Jesus himself calls it the eternal life. He says that those who are one with him are living the eternal life; not that they shall have the eternal life bequeathed to them somewhere else, after they die (what a pitiful belittling of his thought that is!), but that they share it here and now; they have entered into life. And it ought not to be incredible that the sources of this life are unfailing.

[*Zion's Herald*]

Even the best of men are at times discouraged with themselves—and if they are not, it must be because they are not making any real moral progress. Our view of our own attainments will largely be affected by the ideal on which the eye is fixed. If that ideal be too low or too near, our moral attainment may appear to be rapid; but if it be distant or lofty, the ground we cover day by day will seem small indeed. It is dangerous to remain perfectly contented with one's self. Such complacency is the mood not of a prevailing warrior, a growing genius, or an arriving saint, but of an inexperienced recruit, an arrested thinker, and a belated pilgrim. We grow by seeing more and more, day by day, to grow to; we arrive ultimately at the highest, or heavenly, goal by considering all present attainments but as way-station stops.

[*The Biblical World*]

The church of Jesus Christ is indeed in a period of crisis. Its leaders may not have gone into the mountain of God, but too many of its members—including many an Aaron and Miriam—are dancing about the golden calf. And the dance of prosperity is deadly. The songs of prosperity are raucous. Respectability is not holiness. Absence of war is not always peace. The silence of prophets is not invariably testimony to holiness. The song of a church that neither wins nor loses is a rag-time parody on the psalms of David.

Religion is a serious thing, and never more so than in a day like ours, when an entire world is rejudging its spiritual beliefs. It need not be morose or pietistic, but it ought at least to be in deadly earnest. A church that has no revivals, religious leaders who care nothing about conversions, are spiritual liabilities. Amusements may be necessary, but they are not means of grace. Entertaining children is not making them into children of God. A church devoted to sociability is not of necessity devoted to moral idealism. Afternoon teas in the interest of getting Christians acquainted and rewarding them for attendance at prayer-meeting are not the birthplaces of apostles and martyrs. You cannot warm religion into heroism on kitchenettes in church parlors.

[Lyman Abbott in *The Outlook*]

It is one thing to say that Jesus Christ was like other men; it is quite another thing to say that other men may become like Jesus Christ. No interpretation of the character, life, and mission of Jesus Christ conforms to either his teaching concerning himself or the teaching of the apostles concerning him and his disciples which does not recognize the truth that

Digitized by Google

God's ideal for His children is that explicitly affirmed by Christ's beloved disciple, "As he is, so are we in this world."

The way to learn whether the life and character of Jesus are divine or not, is by an endeavor to live that life and to attain that character.

[Dr. J. H. Jowett in *The Christian World*]

If we try to see as the Lord sees and to will as the Lord wills, we shall come to feel as the Lord feels. We shall share His tastes; we shall drink of the river of His pleasure; we shall like what He likes; His joy will be our joy; "the joy of the Lord" shall be our strength. We shall come to love what the Lord loves and . . . His word will be in our mouth as honey—yea, sweeter than "honey and the honeycomb." One in vision and one in will, we shall surely come to be one with Him in heart. What a union! What a fellowship! What a friendship! And through such blessed union His grace will pass, like the ceaseless passing of treasure across frontier lines where the last tariff-barrier has been removed. Eye to eye, will to will, and heart to heart! That communion shall be far more intimate than the fellowship suggested by the mystic ladder in the patriarch's dream, with angels ascending and descending in never-tiring ministry; much more intimate than that, I say, for it shall be the immediate and glorious embrace of the soul with her Lord.

[*The Christian Register*]

The church first and foremost is a spiritual institution. It was founded on the soul-side of man. It ministers, or should, to the craving of the religious nature, for the bread and water of the higher life, such as Jesus has defined it. The ideal of a successful church based entirely on commercial principles would soon reduce it to the status of a club for people who are benevolent, kind, well-wishing to the poor and destitute, the sick and neglected, but entirely devoid of the mystical aura which surrounds a true church and unites the people in reverence, awe, and worship. When the day comes that the church abandons its great, its holy mission of awakening and stimulating the spiritual nature, religion as now understood will be in a decline; all the elevating influences that spirituality feeds through inspiration will seek other outlets,—the church of the present will have performed its mission, to give place to other and perhaps higher functions.

[*Western Christian Advocate*]

Man feels his way "as birds their trackless way." He has within him an unerring instinct which, if he will accredit and follow, cultivate and encourage, will never lead him astray. This has been called the "homing instinct." It is man's sense of destiny and God. He has found the upward way through the centuries because an increasing number are responding to this lead. At the present time, when much darkness is in the sky and uncertainty is felt on every hand, let those who know the Lord speak often one with another of His bounty and providential care. This is not the day for faith to hide her face; rather this will prove faith's exaltation. Never has the world been thrown deeper into the abyss of defeated human hopes, and we predict that its rise to faith and Christian loyalty will surpass the highest devotion ever known.

[*The Continent*]

Whoever fights a successful fight with temptation is forever thereafter finer and nobler. And character is a genuine property. Character more than all else can afford a man a contented mind in every state, confidence in every peril, hope in every distress, superiority to every hazard, a wealth that outlasts time,—the wealth of a soul. It is true. The only thing for which the world is perfectly fitted is the development of moral character in men.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new French pamphlet, "Foi et Générosité" (Faith and Generosity), has just been issued and is now on sale. This pamphlet contains the following articles: "The Lord Thy Confidence," "The Closed Hand," and "Continuity of Right Thinking."

"Christian Science: A Religion of Love" (Christian Science: En Kjærlighetens Religion), a lecture by Virgil O. Strickler, has been translated into Norwegian and is now published in pamphlet form with the English and Norwegian versions on opposite pages.

"Law and Work" is the title of a new pamphlet containing the following articles: Love Fulfils Law, The Logic of Christian Science, Undisturbed, God's Law of Adjustment, Authority.

"Christian Science: Man's Dominion over Evil," a lecture by Edward A. Kimball, C.S.D., has been translated into Russian, Norwegian, and modern Greek. Pamphlets in these three languages have been published with the English version opposite the translation and are now on sale at prices of our regular pamphlets as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 65 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 61 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to page four in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for the year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.25; half calf or half morocco, $4.00. On earlier volumes write for prices.

Items of Interest

Unusual commencement exercises were held recently at the Kansas penitentiary at Lansing. Thirty-one inmates of the big prison became graduates of the Kansas Agricultural College and received the same diplomas from the college that the boys and girls had received at Manhattan a week previous. For many years a night school has been conducted at the prison for those who cared to devote their evenings to actual study work. Two years ago the agricultural college offered to supply the prisoners with the complete home correspondence courses which it maintained for students unable to spend the time actually in residence at the college. More than one hundred men availed themselves of the opportunity offered. The thirty-one students who were graduated recently were students in steam and electrical engineering, carpentry, blacksmithing, agricultural and motor engineering. They have done practically the same work that would have been required of them had they been students at the agricultural college in these courses. Wherever possible these men were given practical training in the power plant and on the farm of the prison.

In an address before the Southern Forestry Congress at Asheville, N. C., recently, the chief forester of the United States emphasized the importance of the timber supply of the South and pointed out methods by which it may be perpetuated. "Nowhere in the whole United States," said he, "can the naval stores industry or the protection of hardwood timber be carried on with the same natural and economic advantages as in the Southeast. Forests occupy more than half the total land area of the South. Southern pine is the principal softwood used in fully two thirds of the country east of the plains. Backed by a supply of some 325,000,000,000 feet of yellow pine and about 20,000 sawmills, the pine industry holds today a commanding place in the country's lumber market. By their very magnitude the forest problems of the South command attention.

In addition to the value of the timber the southern pineries furnish annually about $35,000,000 worth of turpentine, rosin, and the like. This income is in danger of being entirely lost through failure properly to care for and perpetuate the forests. "The turpentine industry of southern France," said the chief forester, "is a man-made industry. A century ago the barren sand dunes could be bought at any price one was willing to pay. Today the poorest pine land covered with two-year seedlings sells for $9. Stocked with 30-year old pine it is worth $80, and with 50-year old $160 an acre. In this country the turpentine industry has had the advantage of a great natural forest. Instead of being founded and preserved by the diligence of man, its destruction will be brought about unless steps are taken to perpetuate it. The growing of timber for turpentine purposes is a profitable undertaking at present."

The museum of the University of Pennsylvania makes public a report from its expedition to Egypt. This report tells of what appears to be the discovery that Mineptah had in his palace at Memphis an archæological museum something like those of the present day. The Mineptah was the son of Rameses the Great, and by many is identified as the Pharaoh of the oppression described in the book of Exodus.

The palace was discovered early in the present year, the report said. It was large and elaborately decorated, was about 180 feet long and 100 feet wide, and contained about twenty rooms. The throne room was a magnificent chamber of about 60 feet by 40 feet. In describing this room the museum announcement stated that "it is probable that this throne room, if not the same one, is similar to the one in which Moses and Aaron confronted the Pharaoh, demanding that the people of Israel be permitted to go. The authorities in Egypt admit that a great discovery has been made."

The agricultural bill carries an appropriation providing $3,000,000 for Appalachian forest purchases under the Weeks law during the next two fiscal years. This is a reappropriation of money authorized by Congress six years ago, but which became unavailable because of the impracticability of making purchases during the first two years of the law's operation. Congress originally appropriated $11,000,000,—$1,000,000 the first year and $2,000,000 each succeeding year for five years. Because of the difficulty of organizing the work and building an administrative machine, the national forest reserve commission appointed by President Taft to execute the law could not use the authorized appropriations of the first two years.

An effort is being made by the Dominion & Atlantic Railroad Company and the Boston & Yarmouth Steamship Company to increase the production of strawberries and blueberries in Nova Scotia by developing a larger market for these products in New England. There were 118,000 quarts of strawberries, valued at $12,000, and 800,000 quarts of blueberries, valued at $75,000, shipped from Yarmouth to Boston last season. It is estimated that about two hundred and fifteen acres were planted with strawberries last year, while blueberries are found extensively and grow practically uncultivated. The strawberry season begins about July 5 and continues about six weeks. The season for blueberries begins about August 1 and continues until the last of September.

An important report has been issued by the development of resources committee of the South African Institute of Electrical Engineers on the possibilities of establishing in South Africa, on a commercial basis, certain electro-chemical industries. Agriculture and mining, taken together, now require annually more than £2,000,000 worth of chemicals, all of which are imported in the form of fertilizers, cyanide, and nitrates. Cheap electricity, abundant coal, limestone, and the necessary labor—essential elements for producing these compounds—all exist in South Africa.

A decided movement is developing in Nevada toward the breaking up of large holdings of land for farming and the adoption of more intensive methods on smaller acreage. It used to be said that no one could support a family on less than one hundred acres, but the European farmers who have settled in various parts of Nevada have shown that this is a long way from truth. A notable example of the intensive method is that of a Belgian, who on a single acre of land near Reno has for eighteen years made an average annual net profit of more than seventeen hundred dollars, while rearing and educating a family of eight children.

A committee of thirty, appointed in 1913 to study the question of storage of flood waters on Kings River in the San Joaquin Valley, Cal., has made its report. It says that a great quantity of water is annually going to waste during flood stages of Kings River, damaging land along its course; that there is abundant storage capacity available for the conservation of more than six hundred thousand acre-feet at a cost of about $10 an acre-foot, and that this would furnish ample irrigation for more than a million acres of land.

The Midvale Steel & Ordnance Company has closed a contract with the Russian Government for 350,000 tons of 67½ pound steel rails, deliveries to begin in September and to extend until June of next year. The price received for the rails was $52 per ton, so that the amount involved in connection with the transaction is in the neighborhood of eighteen million dollars. It is understood that the United States Steel Corporation also received an order from the Russian Government for 240,000 tons on the same terms.

The withdrawal of German synthetic indigo from competition in the markets of the world has revived the natural indigo industry in India. Probably not more than a dozen factories were at work throughout Behar when the war broke out, as contrasted with the picture of twenty years ago, when indigo held its own with jute as one of the most important exports from Calcutta. The general outlook for natural indigo is decidedly favorable at the present moment.

Upon the recommendation of Secretary Lane of the department of the interior, the President has restored to entry 1,892,468 acres of land in northern and northeastern Montana, heretofore included in coal withdrawal. A large part of this area has been entered under the homestead and other non-mineral land laws, but in the entries patented since the withdrawals in 1910 reservation has been made to the United States of all underlying coal.

In 1905 there were 48,000 motor-cars, including commercial vehicles, in the United States, according to the registration statistics assembled by the division of road economics of the United States office of public roads and rural engineering; in 1915 there were 2,445,664.

More than ten thousand miles of macadam roads have been ordered built in Afghanistan since the ruler of that country became the owner of an automobile.

Religion Made Practical

CLARENCE W. CHADWICK

THE very first evidence of sincerity in religion is the practical application of it. A theoretical Christian, one who professes belief in God but who does not spiritually understand the Science of being, must fail to convince the multitudes of the practical nature of Christianity. He believes, but he does not know, that God is Love, and that Love is therefore the only real power of the universe. He believes that there is an opposite power to Love, and right here he breaks faith with practical Christianity.

So the student of Christian Science soon learns that he must be practical or else renounce his right to be called a member of the household of a demonstrable faith. The teaching that "Truth is demonstrable when understood" (Science and Health, p. 323) is what has awakened him to the truth of Christian Science. He may have spent years in studying the Bible, yet if his research was from the standpoint of the reality of sense-testimony, he cannot establish the fact of his being an authorized representative of the Master's teachings, because he has failed to grasp the practical or saving import of the Scriptures, failed to see that the power of God to heal is just as operative today as in the past. This very failure may have caused him to declare that he did not even believe in God's willingness or ability to heal. Let us analyze this condition of thought.

Would not such an admission immediately brand the student of Christian Science as an unreliable witness or representative of his Father? If he did not know that God's power is practically available to do what Jesus and his apostles did through an understanding of it, would he be in a position to bear reliable or trustworthy testimony in the court of Spirit? If he were thinking and acting simply from the standpoint of blind faith or belief, would he not be bearing false testimony as to the nature of God and of His spiritual universe? Even though he were honest and humble enough to say, "Lord, I believe; help thou mine unbelief," this of itself would be of no practical benefit to mankind. It is not what any one believes about God, but what one knows and can prove, that is going to reform the world. It is not preaching about God but the proving of God's power that makes Christianity an efficient faith.

The apostle James did not justify any vain or boastful belief in God when he said: "Thou believest that God is one; thou doest well: the devils also believe, and shudder. But wilt thou know, O vain man, that faith apart from works is barren?" (Rev. Ver.) What would belief or faith in the multiplication table avail without any application of such faith? Would it work out any mathematical problems? Not one. Would faith in a gold mine be of any practical value unless the mine were worked and the gold made available? Would faith in the ability of a ship to carry one across the Atlantic avail anything unless one placed himself in a position to make the passage? The writer entertained such a belief for many years, coupled with more or less dread of the water, and only a few months ago was his faith made practical in actually taking an ocean voyage. Once having put his faith to this practical test, he found that many others as well as he were greatly helped by the experience, and the unity of faith and demonstration was cemented in a most satisfactory manner.

One might express faith in the efficacy of electricity to light his house; but suppose the usual necessary means of transmission were ignored and the belief were entertained that instead of copper wire, rubber or wood could be used to conduct the electric current into the house,—would there be any light to dispel the darkness? In the same ignorant fashion one might believe that God has power to heal, but instead of allowing Him to do it in His own way insist that this healing power be made manifest through the medium of matter. Would any healing take place? None whatsoever.

Here it is proper to state that what professing or theoretical Christians believe in regard to matter as a healing agency is what prevents their faith from soaring above and beyond the limitations of sense-testimony. Just so long as they imagine that matter forms any connecting link between God and man, there will be no works to evidence any practical understanding of God. The ability to be practical, to prove that there is a God in Israel who is abundantly able to will and to do "above all that we ask or think," is effectually annulled by assigning power and reality to matter. We are not undertaking here to explain away the mortal phenomenon of matter, but rather to emphasize the fact that there is a way of escape from all that would separate man from a practical understanding of God, if he is not too apathetic or indifferent to investigate this subject in the light of Christian Science.

Mortals generally are quite boastful of their ability to use good common sense. They even go so far as to think that their concept of it and Christian Science are one and the same thing. But let them not be deceived! Good common sense is greatly to be desired, but what the world terms common sense usually has very little to identify it with Christian Science. Worldly common sense would say that if you are sick you should by all means send for a physician to diagnose the case, and then if he fails to dignify the trouble with a name that is perfectly satisfactory to you, be sure to send for a physician who will tell you something entirely different. If this second diagnosis comports with your expectations, this same common sense would insist that you by all means accept the verdict as a fact, and not for one moment think of it as a possible mesmeric or mental condition from which you could be freed without the use of material remedies.

The nobler common sense of Christian Science would endorse the adoption of spiritual means from the very start, and if the ounce of prevention were vigorously applied in the incipiency of the trouble, in a very short time there would be nothing to diagnose, to name, or to treat; the patient would be quite well. Christian Science admonishes us to be practical Christians. Disbelief in God's power to heal shows a pronounced lack of good common sense. Advocates of *materia medica* may argue that unless you do something for your patient you are not exercising good common sense, but

just here ordinary common sense and good common sense are at variance. Doing something for a friend or for an enemy is not giving him a dose of lifeless, non-intelligent matter, but is proving to him that God, good, is an ever-present help at all times.

Knowing or understanding, made appreciable to humanity in demonstration, is practical or common sense Christianity. Believing, without the ability to prove one's faith by one's works, is the lack of practical common sense. It is that mental state described in Scripture as "ever learning, and never able to come to the knowledge of the truth," because of unwillingness to be taught something contrary to the world's concept of what is practical.

✧

The Practical and the Ideal

SADIE KIEKINTVELD

PRACTICAL views of life and the ideal have long been considered irreconcilable, and the dreamer and idealist often has his faith in humanity sadly shaken; but to spend time bemoaning one's disappointments is a narrow and selfish course of action. Often the cause of the disappointment lies in one's own consciousness, and a truly noble nature will refuse to condemn others, but rather seek to find wherein it has failed. When we are ourselves so often in need of forgiveness, we should treat others with the same generosity.

A great deal is said about the disillusions experienced in advancing years, but the truth of the matter is that the first fair vision of a world of good is the real, and all that evil would bring up to contradict this eternal fact is the illusion. "God saw every thing that he had made, and, behold, it was very good," is the simple and sublime statement of the inspired writer. All that appeared afterward was a mist and an illusion. This philosophy of living, emphasized in Christian Science, enables one to hold thought fast to the good, and at the same time deal in a common sense, kindly way with things as they seem. This ideal is no misty abstraction, but an inspiration to practical goodness. It transforms the every-day world, and gives to its loyal adherents here and now as much of heaven as they earn.

Among the most common causes for cynicism are the misunderstandings between friends which arise from a lack of perfect honesty. No two people, however well intentioned, have exactly the same way of going about things, and when perfect confidence does not exist between them a small error can magnify itself to such proportions as to hide all that is good and true. The name which Jesus gave to evil was "a liar, and the father of it;" therefore the slightest deviation from the truth is to be avoided. Any course of conduct, however well meant and conventionally excusable, in which words and actions are made to belie thought, is likely to bring down on the person practising it far greater troubles than the ones he seeks to avoid. For one thing, it arouses curiosity and often brings down censure where none is due.

It is the nature of error to hide itself, but truth need not and should not adopt the methods of evil. If one's motives are right he should stand by them loyally and faithfully. The Bible injunction is to speak the truth in love; and love and perfect sincerity in thought, word, and deed, are our safest protection from evil. This does not mean that one need tell all he knows or voice every wayward thought that comes to him, but it does mean that for the upright man there are just two courses open, silence or truth. The quiet dignity which refuses to gossip is in perfect keeping with the frank sincerity which has nothing to conceal.

Another thing which frequently beclouds one's ideals is, that material sense and self gets in like a shadow between man and God. Self-will is wont to attempt to seize the government out of God's hands and take it in its own. The outcome is always disastrous. Surely we should trust infinite wisdom and Love to guide our affairs better than we can. Often all that is needed for a harmonious adjustment of a difficulty is the withdrawal of human will and a willingness to let the divine Mind govern.

Self-pity grieves over its woes and shuts off the healing currents of divine compassion. Doleful resignation to error is a mistake. To allow any circumstance to keep us miserable is a sign of weakness and selfishness. There is always some one with a harder problem than the one we face, and in working for their liberation we find our own. The text-book of Christian Science, "Science and Health with Key to the Scriptures," teaches very clearly that there need be no suffering except for wrong-doing. When our hearts are right with God we can meet our difficulties with such brave cheer that they vanish. There is no hell for the one who persistently rejoices in the goodness of God. This disposition has in itself the secret of victory; like the sunshine, it purifies the dark places of earth. It proves even now that for those who walk in the light of God's love there is no night there. Mrs. Eddy's poem "Christ and Christmas" closes with these lines:—

No blight, no broken wing, no moan,
Truth's fane can dim;
Eternal swells Christ's music-tone,
In heaven's hymn.

✧

The Key to the Kingdom

JULIA S. KINNEY

WE have in the word "Key," in the title of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, an example of our Leader's accurate use of words. Had she employed the term commentary, she would have left the half untold, for while her work is a commentary, since it makes comments on the Scriptures, it is much more than this, because it reveals the divine Principle through the apprehension of which the miracles recorded in the Bible were performed, so that conscientious students of this book may gain the power to overcome sin, disease, and discord by the same method as that which was employed by the Master.

Mrs. Eddy does not claim that the study of her works can be substituted for the study of the Scriptures. On the contrary, the first tenet of Christian Science (Science and Health, p. 497) very plainly states, "As adherents of Truth we take the inspired Word of the Bible as our sufficient guide to eternal Life." All that she does claim, a claim that cannot well be denied in the face of the multitude of witnesses ready to support it, is that the study of her book gives a new interest in and a practical understanding of the Scriptures. A key without the lock it fits is of as little use as are treasures locked in a safe to which there is no access. The little word "Key" in the title of the text-book expresses the dependence of right understanding upon the spiritual exposition, while at the same time denoting that spiritual power accompanies this right understanding.

The Scriptures bear record to the power possessed by Abraham, Jacob, Joseph, as well as other patriarchs and prophets. Jesus, whose works were even more marvelous than theirs, constantly reiterated the assertion that those who understood his teachings would possess the power possessed to cast out the evils of disease and discord. Pondering the Scriptural records, Mrs. Eddy reached the conviction that if God is indeed omnipotent and omnipresent then in reality evil can have neither place nor power.

Digitized by Google

also saw that material sense evidence, which declares for sin and disease, must be unreliable and untrue. By taking a firm stand on the side of God's omnipotence and against the false evidence of these senses, she was able to unlock the seemingly lost treasures of the Bible and restore its healing power.

On page 171 of Science and Health we read, "Through discernment of the spiritual opposite of materiality, even the way through Christ, Truth, man will reopen with the key of divine Science the gates of Paradise which human beliefs have closed." This very lucid statement shows that God does not bar man from the kingdom, but that the material senses shut the door of harmony upon those who trust in and are misled by their evidence. Mortals forfeit their hope of heaven by believing in the reality of matter. Redemption consists in giving up these false beliefs and acknowledging God's allness.

With this key of spiritual apprehension Moses was able to divide the waters of the Red Sea so that the children of Israel could go in the midst of the sea on dry land. Had his faith faltered, had he accepted the evidence of the senses that the waters were impassable and despaired of making further progress, the doom of the Israelites would have been certain. With this key of knowledge Jacob and Joseph, Daniel, Elijah, and Elisha unlocked for many the doors of disease and death which seemed to shut them in, so that the Scriptures supply ample evidence of the power of righteousness in all the eras of religious history.

In every-day experience we learn to keep at hand such keys as we constantly need to use, and we take great care not to misplace or lose them. In like manner the Christian Scientist is watchful to keep the key to the kingdom in readiness for use. In minor matters, as well as in the greater, he is careful to keep the truth uppermost in his thought. He realizes that he cannot admit the reality of matter one moment and the next moment expect to prove its unreality. He knows that the material senses which have closed the gates of Paradise will of their own accord never open these gates, but he also knows that "through discernment of the spiritual opposite of materiality" one may at any time enter God's kingdom; therefore he keeps himself in readiness for spiritual progress.

Jesus never allowed the mesmerism of belief in material evidence to overpower him, but was faithful in applying the key to the kingdom to every problem which confronted him. For those who allowed the material so to preponderate over the spiritual in their thoughts that they lost sight of the spiritual reality, Jesus had this severe censure: "Woe unto you, lawyers! for ye have taken away the key of knowledge: ye entered not in yourselves, and them that were entering in ye hindered." No one desires to obstruct the path to heaven, and today there is little excuse for so doing, since the Discoverer and Founder of Christian Science has given to the world the "Key to the Scriptures" which when properly applied opens the way to their treasures.

Daily Blessings

HENRIETTE BALLU

Mrs. Eddy's opening words in the Preface of Science and Health, "To those leaning on the sustaining infinite, today is big with blessings," were a revelation to me. It gradually dawned upon me that to lean "on the sustaining infinite" was a present possibility. I knew that I had found the "pearl of great price," and after studying this sentence I continued to read, commencing at eight o'clock one Sabbath morning and not closing the book until eight o'clock in the evening. Is it to be wondered at that it seemed divinely natural to find myself healed the following day of a so-called incurable disease, which I was supposed to have inherited?

One afternoon, long before I knew anything about Christian Science, in jumping from a high carryall I struck my heel upon a stone, jarring the spine, and this resulted in my being confined to my room for months. Physicians agreed in the verdict that I would be crippled for life, if indeed I were able to survive the injury, which was extremely problematical. I had always been self-reliant, refusing assistance from any one who offered to help me; and not until I became helpless did it occur to me that God is "a very present help in trouble." I did not then understand that self-will, pride, and intolerance were the cause of my suffering. I realize now, however, that when I was willing to trust God this mental state brought about the physical healing; but I did know that I was healed, and when I suddenly appeared at the table where my father was dining alone, his astonishment was so great that he forgot to bid me welcome.

Among the many who have been healed of physical ailments by trusting in God, our beloved Leader alone succeeded in finding the rule for the Christ-healing, and she has given it to a waiting world. For this Science of healing, which differs from all other systems of mental healing in utilizing the divine Mind to the exclusion of all dependence upon the human mind for help, mankind owes her both homage and gratitude.

Quite recently I had a recurrence of the trouble above referred to. Upon attempting to rise, the old symptoms seemed to reassert themselves, and immediately the thought came to me that Jesus said of the woman who could in no wise lift up herself, that Satan had bound her. I knew that God's child, made in His image and likeness, could not be bound in any way whatsoever by error, and the healing was instantaneous. When that old serpent reappeared it was handled, and I saw how unnecessarily I had suffered all of those months. I also saw how quickly an evil suggestion yields to Christian Science treatment.

In his second epistle to the Corinthians Paul makes the statement, "I am become a fool in glorying." This might imply that Paul's "thorn in the flesh" had its origin in vainglory, and when he ceased to be vain of his own knowledge and glorified God only, he was able to testify, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." Protracted healing in Christian Science sometimes provokes the inquiry, Why do some people find surcease from pain more quickly than others who are afflicted in like manner? The answer may possibly be found in the fact that while those who received their healing instantaneously were yearning for more of God, good, others simply wanted to be relieved of physical pain without the change in consciousness which was necessary in order to make them whole.

Christian Science is rapidly assimilated by the child-thought. The rule of Christian Science is "that man shall utilize the divine power" (Miscellaneous Writings, p. 69). This is what children do naturally and unquestioningly; hence the immediate answer to the prayer of these little ones. A small Christian Scientist of my acquaintance often applies Mrs. Eddy's admonition: "Keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them. It is plain that nothing can be added to the mind already full" (The First Church of Christ, Scientist, and Miscellany, p. 210).

A private school, with whose methods of instruction the writer is quite familiar, finds *The Christian Science Monitor* an ever-increasing source of interest, and both faculty and

Digitized by Google

students find useful material in it. Pupils studying history, ancient and modern, political and industrial topics, as well as most subjects taught in the curriculum, will find at this school classified clippings from the *Monitor* ready for the next term. In the reportorial work of this school the *Monitor* is held up as a model for clean journalism. The world is learning to appreciate what it means to have a newspaper which may be safely placed in the hands of the youngest member of the family. So we say, All hail! to this messenger of good will which brings to us daily the thoughts of mankind divested of their dross. This "healed newspaper," as it has been called, makes it possible for us to read of the turmoil of the Old World without bitterness, and with an added sense of gratitude to Mrs. Eddy, who taught us how to utilize the promises found in the ninety-first psalm.

Gratitude Freely Expressed

J. LOUISE CARTER

THERE are some who know that they have a demonstrable understanding of Truth, that they can clothe it in appropriate language, and can then write or voice it in such a manner that every reader or hearer may be thereby benefited. To those who are thus constituted, it will be admitted by all that to relate an experience in Christian Science does not seem a task, but rather a joy and a privilege. Daily and hourly do we participate in the beneficial effects of Christian Science, and we tell of it gratefully in the privacy of our homes. Is there, then, some occult power, singularly active on Wednesday evenings between the hours of eight and nine o'clock, which ties our tongues and glues us to our seats? Every Christian Scientist knows that there is no such mystical power to work evil with him and paralyze the willing effort to share with others "what God has given him of experience, hope, faith, and understanding" (Miscellaneous Writings, p. 149). He also knows that God, good, governs all, and that "right motives give pinions to thought, and strength and freedom to speech and action" (Science and Health, p. 454).

The rich feast at our Thanksgiving day service is an object-lesson to us all. For the preceding days there is provided a Bible lesson dealing with gratitude, and this persistent turning of thought toward this spiritual quality opens up a natural fountain of gratitude; fear is lost in self-forgetfulness, in the desire to be of use to our fellow men, and testimonies spring forth on every side. Was there ever a Thanksgiving service long enough to include them all?

Back of a Wednesday testimony meeting at which the selected reading requires but a few minutes for its performance, or back of a Lesson-Sermon which has been studied by Scientists all over the world and which requires but a half hour, or less, for its delivery, are undoubtedly years of earnest thought and experience. Likewise, preceding the Christian Science testimony, which in itself may seem of small moment to the listener, there may have been the overcoming of bitter prejudice against what one thought Christian Science to be, and perhaps prejudice toward Mrs. Eddy, its Discoverer and Founder; the overcoming of states and stages of sin, suffering, poverty, grief, or many another illusion, seemingly very real to the deceived sense of the speaker; and last, though not least, years of overcoming of that most common enemy, fear, which is cast out by love, and which "hath torment" just so long as it seems to exist.

Every sincere utterance of truth in a Christian Science testimony meeting, whether descriptive of physical ills destroyed or spiritual blessings gained, witnesses to the glorious effects of the old though newly discovered Science of healing, which heals not alone the individual, but numbers of individuals of their ignorant, unjust, and merciless hatred toward labor, capital, race, or sex, by substituting therefor the recognition of the fact that men are, and should enjoy the liberty of, the sons of God. The capacity to become a witness for Christ, Truth, is innate, and because of this its achievement is our privilege and our joy. In the words of our Leader (Manual, Art. VIII, Sect. 24), "it scales the pinnacle of praise and illustrates the demonstration of Christ, 'who healeth all thy diseases.'"

Preparation

PETER B. BIGGINS

IN all departments of human activity the need of careful and thorough training is evident, and such training usually involves considerable self-denial and mental discipline. This is true regarding the practice of Christian Science, which is finding its followers in every walk and station of life. Oftentimes the student is perplexed to know what his immediate course should be, and it is sometimes asked whether it is not better to devote one's entire time to Christian Science than to engage in business pursuits. This query itself indicates that some preparatory steps are still needed.

We read in Matthew's gospel that before Jesus entered upon his three years' mission of preaching and healing, he was "led up of the spirit into the wilderness." He had been divinely led every step of the way during the previous thirty years. His preparation was fully tested, and it proved to be thorough and complete. When material sense tempted him to depend upon matter for his supply, to demonstrate the truth in order to win popular applause or for the purpose of gaining wealth and material power, error's allurement was rendered powerless by his clear perception of the imperative demands of divine Principle.

Each individual passes through experiences corresponding in some degree with those of the Master. With the dawn of a clearer understanding of Truth and the advent of increased spiritual power there may also come the temptation to use this power for selfish advancement. This suggestion may not be distinct enough to display its nefarious nature and base origin, but as the result of patient scientific work and self-examination the error will define itself and so be self-destroyed. At each step of spiritual progress we must consecrate our new-found treasures of Truth to divine Love, from whom these spiritual riches come. In this way only can we maintain our position and advance to higher understanding.

Like the Master, we must be led by God in every step we take; like him too, we must be wide awake to detect the subtle tactics of the one evil, which is bent on trying to undo whatever the truth does to bless mankind. By uncovering and destroying error in this way one proves his worthiness for the higher work to which he has been called. On page 176 of "Miscellaneous Writings" Mrs. Eddy asks: "Are we duly aware of our own great opportunities and responsibilities? Are we prepared to meet and improve them, to act up to the acme of divine energy wherewith we are armored?"

While the Master's preparation lasted thirty years, this is no indication that his followers should wait this length of time before they engage in the healing work. His immediate disciples, crude and untutored as most of them were when they first met him, left all immediately to follow and be taught by him. It is to be noted that they, like their Master, followed the leading of Truth.

The student of Christian Science who has caught a clear

Digitized by Google

glimpse of the allness of Spirit, and who has proved by experience the nothingness of materiality, cannot find abiding satisfaction in mere material pursuits. In the mean time, however, while he is approaching nearer "unto the measure of the stature of the fulness of Christ," his seemingly material tasks may afford abundant opportunity to demonstrate Christian Science. A material sense of duty is simply a limited concept of one's normal spiritual activity. Wherever one is placed he can begin at once to realize the absolute truth of being. This includes the truth about himself, his place, and his work. The truth of being is unchanging. Even while one seems to be occupied with material duties his spiritual selfhood is perpetually expressing the perfect activity of infinite Mind. As our concepts are broadened and elevated through spiritualization of thought, our opportunities for service naturally increase. Thus we see, as Keats so well expresses it, how—

> The trivial round, the common task,
> Will furnish all we ought to ask,—
> Room to deny ourselves, a road
> To bring us daily nearer God.

One who perceives the truth in the Science of being will not neglect to fit himself for the highest possibilities in his present work, although he will naturally discriminate between essentials and non-essentials. Truth is essential; error is non-essential, because in Science error is non-existent. One who has the opportunity and many inducements to follow some other profession, but chooses the practice of Christian Science instead, may be criticized by the worldling and upbraided for neglecting his opportunities. The carnal mind reasons from its own erroneous, limited standpoint. It cannot appreciate the possibilities of a life consecrated to the demonstration of eternal Truth.

Needless to say, he who chooses the practice of Christian Science is improving his opportunities in a far higher degree than he who pursues the quest for mammon. The best way to improve time and talent lies in the momentary effort to realize and demonstrate the truth that God is All-in-all and that man is simply God's perfect idea. The thirst for material wealth, position, or power is thus replaced by the hunger and thirst after righteousness. This insures rapid progress in the true understanding of Life, God, the one thing needful for real prosperity, abiding happiness, and higher usefulness.

The work of preparation is a natural, continuous, unceasing process. The final destination is spiritual perfection, and the mile-stones reached and passed along the way are encouraging evidences of progress. Our usefulness to our fellows is proportionate to our diligence in this work. In view of the great benefit which this spiritual activity brings to ourselves and to others, nothing should be allowed to interfere with it. "When the destination is desirable," Mrs. Eddy writes in Science and Health (p. 426), "expectation speeds our progress."

❖ ❖ ❖

Sunshine everywhere!
I have no care—
Nor do I pine
For rays that on my brother shine;
For all is mine
With sunshine everywhere!
'Tis but—lo here, lo there—
To study close another's lot;
And to compare
With his what thou hast got;
Each has his share
With sunshine everywhere!

KATHERINE T. PORTER.

Selected Articles

[Editorial in *Mount Kisco* (N. Y.) *News*]

The editor was asked one day if he was a Christian Scientist. On giving a negative reply he was propounded a second question, "Do you believe that a Christian Science practitioner ever effected a cure?" This question we answered affirmatively, when a third was asked, "How do they do it?" This time we could only answer the questioner by calling his attention to the fact that a man who was blind from birth, after his sight was restored by Christ Jesus, was asked by his friends the very same question, and he replied, "One thing I know, that, whereas I was blind, now I see." The knowledge of how a cure can be effected has not been given the writer, but from the statements made by those who have been healed we believe a cure was had, and we have no more right to question the word of a person who declares he was healed by Christian Science than we have to dispute the gospel story of the blind man who was healed.

When we approach a Christian Scientist and ask for an explanation, he points out that God is the source of all good, that the absence of good is evil, sin, and that sin results in death. Define darkness, analyze darkness, and the result is absence of light. This is an incontrovertible fact. We do not necessarily align ourselves with the Christian Scientist when we declare that we do not know; at the same time we realize that man is but the creature, and it would be presumptuous for the creature to attempt to circumscribe the power of the creator; and if the creator has revealed Himself and His plan more vividly to some searching mind than to us, we dare not say that such a one is not in harmony with his conception of the power and majesty of the author of all good. Who am I that I should judge the thoughts of my neighbor?

Therefore, gentle reader, when you see in the columns of the *News* articles taken from *The Christian Science Monitor*, just congratulate yourself that the *News* has not abrogated to itself the right to dechurch a single soul who would serve and obey the impulses of love and truth. If we are blind in this respect we should seek to be healed; we should try to see.

❖

[Charles M. Shaw in *The Blackburn* (England) *Times*]

The criticism that "Christian Science is neither Christian nor scientific" is as old as the Christian Science movement, which nevertheless survives the scathing impeachment and indeed thrives vigorously. The foundation-stone of Christian Science is the allness of God, His omnipotence, omnipresence, and omniscience. For this reason Christian Scientists take the Bible promises literally. When the promise runs, "God is . . . a very present help in trouble," and when it is declared that God "healeth all thy diseases," the true Christian Scientist relies upon Him alone. Is this unchristian? The fact is that Christian Science is only primitive Christianity revived and applied to modern conditions, and all unbiased investigators will verify this.

Christian Science is not a modern invention of Mrs. Eddy; it is the Science of God and of His divine creation, the Science which Jesus revealed and demonstrated, which medieval scholasticism and ecclesiasticism almost blotted out, but which Mrs. Eddy discovered and demonstrated. The only science there is is the Science of reality, and God and His creation alone constitute reality. This judgment is confirmed on the one hand by the uncertainty and changeableness of so-called natural science, and on the other by the innumerable healings of sin and sickness which Christian Science is achieving in all parts of the world.

Digitized by Google

Then our critic is reported as saying, "It could be said in fairness to Christian Science that it had reasserted the old truth that mind could and should control the body." This attempt at fairness, however, completely misrepresents the position of the Christian Scientist. The belief that the human mind "could and should control the body" opens the door to hypnotism, suggestion, and other occult pretensions which, if believed in, are detrimental to human happiness and progress. They are in fact the very antithesis of Christian Science, which teaches that in the degree men "put off the old man," that is, the carnal or mortal mind, and put on the "mind of Christ," in that degree can sin and sickness be healed.

✧

[Virgil H. Clymer in *Syracuse* (N.Y.) *Post-Standard*]

Your account of a professor's lecture on archæology in Lyman Hall, Syracuse University, makes him state in effect that many of the inscriptions unearthed at Epidaurus "sound strangely similar to the writings of Mrs. Mary Baker Eddy;" that wonderful healings are described on the inscriptions unearthed, and so on.

Inasmuch as the teachings of Jesus and Christian Science are identical, and inasmuch as Jesus said he came to fulfil the law, it must have been the same laws of God which enabled both the ancient Hebrew prophets and Jesus to do their wonderful works, and it would not be at all strange, therefore, if other ancients also knew something of God's laws of healing. The Bible tells us that God is "the same yesterday, and today, and forever," and likewise His laws are unchangeable. Everybody knows that two plus two would equal four in any age, ancient or modern. Whether or not the unearthed inscriptions referred to by the professor are really like Christian Science teaching, or anything like it, I cannot say, but the fact that Christian Science and Christianity are one needs emphasis, for the professor or your reporter, like many other people, seems to think that Christian Scientists regard their beliefs as something new. God's laws may be new to our consciousness, but the laws themselves cannot be new; they have always existed. Nobody pretends that the law of gravitation did not exist before its discovery by Newton.

✧

[Warren O. Evans in *The Providence* (R. I.) *Journal*]

There appeared in a recent issue of your paper a review of "A History of American Literature Since 1870," in which reference was made to Mrs. Eddy, the Discoverer and Founder of Christian Science. In the review a quotation is made in which a parallel is drawn between Walt Whitman, the poet, and Mrs. Eddy, in that they "both were mystics."

To say that Mrs. Eddy was a mystic or entertained the doctrine of mysticism is very far from the truth. While those who may have held such views were no doubt above the average, and sincere and honest in their convictions, yet there is no association between mysticism and the teachings of Christian Science. A superficial reading of Christian Science literature might possibly give one such an impression, but to one who has given the matter any serious thought and study there is no connection whatever. The mystics were men of high ideals and of great faith, but their faith was blind and without understanding.

Christian Science is based upon the simple yet profound teachings of Jesus. It begins with the faith of a little child and goes on to understanding, so that a Christian Scientist is as sure of himself in the working out of his life-problem as is the mathematician. If God is Spirit, as Jesus said, and God is All, then all must be Spirit; and if so, where is matter? It is on this positive statement that "to infinite Spirit there is no matter,—all is Spirit, divine Principle and its idea" (Science and Health, p. 475), that Christian Science stands; and such is very far from mysticism or the doctrine of the mystics, who were very sure that man was matter.

In one of her published works known as "Unity of Good," Mrs. Eddy sums up the whole situation in these very clear words (p. 9): "Material and sensual consciousness are mortal. Hence they must, some time and in some way, be reckoned unreal. That time has partially come, or my words would not have been spoken. Jesus has made the way plain,—so plain that all are without excuse who walk not in it; but this way is not the path of physical science, human philosophy, or mystic psychology."

Mrs. Eddy not only "set about to accomplish" but actually did discover that divine or spiritual law which Jesus so well understood, and which he said it was possible for every human being to know and to understand and to utilize. And with this knowledge or understanding of God, eternal life begins to dawn upon the human consciousness, healing the sick and bringing that peace and happiness which the world cannot give, neither can it take away. The great Master declared, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

✧

[W. D. Kilpatrick in *The Hesperia* (Mich.) *Union*]

In the columns of your paper is given a report of a sermon against Christian Science by a local minister which, in justice to this religion and to those interested in knowing the truth about it, requires some correction. In the first place, let me state that Christian Science is strictly Scriptural; that is, it is founded on the Scriptures exclusively, agrees with the Bible in its spiritual import from beginning to end, and in addition offers to sick, sinning, and suffering humanity ample proof of its divine authority in its exemplification of the teachings of the Master in healing the sick, casting out sin, and comforting the sorrowing.

The Christian Science movement has grown and is growing in a manner unparalleled in religious history, simply because it proves itself to be true, and in so doing proves the Bible to be true. All the religious theory and speculation of the ages comes to naught unless followed by proof, and herein lies the explanation of the success of Christian Science,—it proves itself. The Bible teaches that God is infinite, is Love, Life, and Spirit; and it would seem an impossibility to conceive of God as infinite and at the same time confine our concept of Him to that of an embodied or circumscribed personality. Jesus said, "God is a Spirit: and they that worship him must worship him in spirit and in truth." In the light of this saying the contention of our critic that Christ Jesus was both person and Deity is a contradiction in itself. Christian Science teaches that Jesus was the son of Mary as the Bible declares, or as Mrs. Eddy puts it on page 589 of Science and Health, he was "the highest human corporeal concept of the divine idea, rebuking and destroying error and bringing to light man's immortality." It further teaches that the Christ is that truth which Jesus taught and demonstrated by "signs following," that Comforter which he said should remain with us forever. Nothing in the Bible could possibly be construed to convey the impression that Jesus was God or even so considered himself.

Christian Science teaches that the real man—the man created in the image and likeness of God—is incapable of sin, and that God is not the creator and author of sin, sickness, or death. Christian Science does not teach that the so-called mortal or carnal man is incapable of sin, but that sin brings

Digitized by Google

suffering to those indulging in it, and that so long as mortals believe in the pleasure of sin they will experience the painful consequences thereof. Christian Science teaches that prayer without ceasing, watchfulness, self-forgetfulness, and recognition of God and God alone as the Father of all, are the means whereby mortals may escape from sin and sickness and thereby come "unto a perfect man, unto the measure of the stature of the fulness of Christ," whereby they may put off the old man and put on the new.

In the work of Christian Science for the good of all humanity probably none come so naturally and thankfully to the realization of the ever-protecting care of a loving Father as do children, and the writer, speaking from an experience with children both in and out of Christian Science, can bear witness to the fact that complete reliance on God by the little ones as taught in Christian Science is one of the greatest blessings both physically and morally which time has ever bestowed upon a bewildered world.

Christian Science is an explanation with accompanying proof of that Principle of being which has existed throughout all time, the Principle of existence which Jesus taught and said should make men free, that Principle which if understood and followed will bring health and joy and that peace which "passeth all understanding" the same today as it did twenty centuries ago when the humble Nazarene walked and taught among the hills of Galilee.

[George A. Law in *New Haven* (Conn.) *Journal-Courier*]

A letter published in your paper contained the following statements: "I have a hearty admiration for the Christian Scientist who can actually make himself believe there is no pain when his body is racked by it. He is either heroic or self-hypnotic."

Notwithstanding that this was intended to be commendatory, it reveals the somewhat prevalent mistaken impression that Christian Science and hypnotism are akin to each other, when in fact they are in no way allied. Hypnotism is "of the flesh," the human, mortal mind, while Christian Science is "from above," spiritual. Hypnotism is the exercise of will-power, the mortal, or carnal mind as St. Paul termed it, and is capable of evil, all evil. Christian Science on the contrary is the operation of infinite intelligence or divine Mind, from which only good emanates. From this explanation it is readily discerned that there is no similarity between hypnotism and Christian Science.

The caption of the letter in question is "Anent Sickness," and the writer forcefully points to the unprofitableness which results from allowing sickness to occupy the thought, and the unpleasant experiences which follow discussions upon disease. The implied recommendation is to look away from the dark side of things, cultivate cheerfulness and optimism, talk health not disease, and strive to eliminate fear from the thought. Christian Science furnishes the scientific rule for accomplishing this. In "Science and Health with Key to the Scriptures" (p. 582) Mrs. Eddy says of believing, that it is "not a faltering nor a blind faith, but the perception of spiritual Truth;" she also says (p. 167), "If we rise no higher than blind faith, the Science of healing is not attained."

Christian Science is based upon spiritual understanding, the absolute truth regarding man's being, the truth respecting his relation to God. This basis, the spiritual sense of existence, operates to liberate mankind from the effects of erroneous human belief, from fear, sickness, evil, and the like. It is the Mind "which was also in Christ Jesus" active in human consciousness. It is God governing, and results in bringing into man's experience health, happiness, and peace.

[Carl E. Herring in *Kearney* (Neb.) *Times*]

Perhaps the principal cause of our reverend critic's failure to understand Christian Science is found in his inability to perceive the difference between the real and the unreal, and as this distinction constitutes the groundwork of Christian Science teaching, it is well worth our while to consider it. This pastor is not alone in regarding the teaching of the non-existence of evil, sickness, and sorrow as an absurdity, and often the earnest searcher after something better than the husks he is feeding upon is diverted from a study of Christian Science at the outset, because pain and sin seem to him not only real, but so real that a denial of their existence is an indictment of the sanity of the whole teaching of Science.

In the first place let us approach the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, with a view to seeing what it actually teaches and not for the purpose of finding a spot which will seem to justify us in throwing it down and declaring the whole thing an absurdity. If Shakespeare's works had to undergo the grilling process to which Science and Health has been subjected, the bard of Avon would wish that Bacon had indeed been the author of his plays.

At the outset an author is entitled to have attached to words the meaning he gives them, especially when, as in the case of Mrs. Eddy, such meaning is in accordance with the usage of the best authors and lexicographers. Therefore, when she uses the words substance and reality it must be understood that these words mean, as Webster's dictionary says, "that which underlies all outward manifestations." She is not writing a treatise on botany or zoology, in which words may be loosely used and yet convey the meaning for the subject under discussion, but she is writing on the subject of God and man, and constantly with reference to things in their relation to eternality.

Starting with the basic proposition of life, which is an existent fact we are sure of or else we are sure of nothing, we are confronted with two questions: first, What constitutes life? and second, What is its duration? Space will not permit a discussion of the second question except from Bible authority, and the eternality of life is therein fully revealed. Our first question then becomes, What constitutes eternal life? The champion for the reality of sin, sickness, and death is now asked to catalogue death. Is it a component part of life, or is it an independent thing having its own eternality? If death destroys life, then man is mortal, life is unreal, and death the real. Our question no longer relates to eternal life, but to eternal death, for the moment we admit that death can put out life we have forever barred the way to man's immortality; but the Bible says the last enemy to be overcome is death.

The whole question is one of adjustment of our thinking, and is merely preliminary to the foundation upon which the healing process of Christian Science is based, for it will be conceded that if Mind is to destroy sin, sickness, and death, we cannot begin by giving to death a power superior to life, health, and purity. To say that Christian Science does not recognize the phenomena of evil and disease is as absurd as to say that the mathematician does not recognize the phenomenon of the schoolboy adding two and two and making five, else why do those who have been healed from sickness, sin, and discouragement, in gratitude unite to carry to others the gospel which healed them? The fact that they were healed from the plagues which possessed them does not make these plagues real and eternal any more than the blunder of the boy makes the statement two and two are five the principle of mathematics.

Editorial

The "whole gospel"

THAT Christian healing is an essential part of Christian ministry is certainly, even if slowly, being recognized in the churches. Perhaps the most striking evidence of this was afforded by the article "Must Protestantism Adopt Christian Science?" from the pen of a priest in the Protestant Episcopal church, which appeared in the December, 1913, issue of *The North American Review*. According to the editor of that periodical the writer of the article reached the conclusions it embodied through "his work among his own people and his observations of those outside his communion;" therefore it was first-hand evidence. Within a few weeks still another clergyman of that denomination, the Rev. Henry B. Wilson, has voiced his views in an article which appeared in *The Living Church*. We quote from this article as follows:—

> The steady increase in the interest of Christians in all parts of the country in the ministry of healing marks one of the most deeply important religious movements of the present generation. In certain quarters the subject may appear to be of little moment; but that is due partly to the fact that the church has worked off her first excitement attendant upon the phenomenal rise of Christian Science, and partly because there is a waning of the early popularity of the effort made, within the church, to offset Christian Science by counter-attractions in the form of psychotherapy. The attacks made upon Christian Science, while perhaps theologically satisfying, have had no results in quenching the desire of Christians for a healing ministry. More especially is this true in that, after such attacks were made, nothing was offered in their place, and the hearers found themselves where they were when they started, *i. e.*, without a healing ministry. They were told that Christian Science was "all wrong," but they were not told what was "all right." Nothing from nothing does not leave very much.
>
> Thus the Christian Science sect and the healing cults had a free field with their religion of health and their steady record of drugless cures; while the orthodox Christian church-member was left with a theology which not only connected the hand of God with every illness, but also attached to it some mysterious purpose said to be in accordance with His divine will. It is little wonder that under these circumstances the healing cults were able to draw their recruits most largely from those who were born and reared in the churches. It is estimated that fully nine tenths of the members of these sects today were formerly members of Christian bodies from which they departed because of the total neglect or the erroneous presentation of this aspect of religion. The greater part of the increasing membership is still being drawn from the same source. The missionary work that is being carried on by these cults everywhere is most devoted and persistent, and the propaganda most lavish. Friends and former church-members are adept at introducing the subject, and a call is invariably followed by the receipt of several very attractive pieces of literature. Thousands of copies of the article "Must Protestantism Adopt Christian Science?" by a clergyman of the church, have been circulated gratis in the homes of all Christians, but most largely of course among those of the church's faith.
>
> The losses in some congregations are by no means a small matter. Many rectors are astonished to learn that some one has gone into Christian Science, when they did not suspect the person was even interested in the subject. An investigation shows that the work and study and influence has been going on for a year or more, and that it is too late to reclaim the departing one. If any clergyman seeks solace with the comment that "the person was, after all, a very weak and rather useless church-member," he may find himself pursuing a phantom consolation. He would be surprised, perhaps, to know that the one whom he had looked upon as "dead wood," for a year or two, had, under a different environment, taken on a new life; had risen to higher levels in daily living, had become an enthusiastic worker, was a regular attendant at the mid-week services in addition to the regular Sunday services of the new sect, and was contributing more money in a month than he or she had given in a year while a member of his church. I do not present this in extenuation of the departing church-member. I write it as a fact, and it is worth serious thought. It is not the exception. It is a picture of the average case.
>
> One cannot, of course, blame the clergy for all the deflections from the church, but when one considers that the majority of these people leave because they are longing for an aspect of religion which Christ taught, and which the apostles practised, and which pervades the New Testament, it is sufficiently serious to cause one to question whether the clergy are really presenting the *whole gospel* and also whether they are practising it. Even among Christians who are so strongly rooted in the faith that they could not desert their communion for the attractions of Christian Science, there is the deep longing for the ministry the church fails to provide. I have many touching letters from devout saints who are almost in despair over the deadness of the churches generally on this subject. It is a sad revelation of the distance many Christians have drifted from their original anchorage.

The need for Christian healing within the church is here frankly and urgently set forth. Not the least important statement made by this writer, in presenting the subject to his fellow workers, is that in which he characterizes the situation as "sufficiently serious to cause one to question whether the clergy are really presenting the *whole gospel* and also whether they are practising it." This is of course a question which, in so far as it relates to the particular church of which the clergy referred to are a part, is not one for us to discuss. We can simply say that quite a large portion of the New Testament is given over to the record of healing done by Christ Jesus and the earliest Christians, also that he unmistakably commanded his followers to do this work. Mrs. Eddy's contribution to the world was the Science or true knowledge which based our Master's teachings, as well as the demonstration of this Science by herself and her followers in a "steady record of drugless cures."

Forty years ago Mrs. Eddy, discussing this very subject, wrote (Science and Health, p. 131): "As aforetime, the spirit of the Christ, which taketh away the ceremonies and doctrines of men, is not accepted until the hearts of men are made ready for it." That day is surely dawning, for in the face of existing conditions none will deny that humanity is crying out for the healing truth which alone can still mortal unrest and satisfy the hungering heart. Then it is for every Christian Scientist so to be true to his professions, so to demonstrate that the Christ Science discovered by Mrs. Eddy is the "*whole gospel*," that this age may be privileged to see the fulfilment of her prophecy (Pulpit and Press, p. 22): "Christ will give to Christianity his new name, and Christendom will be classified as Christian Scientists."

ARCHIBALD MCLELLAN.

Reflection

A VERY significant statement by Mrs. Eddy is to be found on page 301 of Science and Health, where she says: "Few persons comprehend what Christian Science means by the word *reflection*." To this she adds that "the immortal, spiritual man . . . reflects the eternal substance, or Spirit, which mortals hope for." It is true that the spiritual sense of reflection is presented in the first chapter of Genesis, where we are told that the original, divinely created man was God's image and likeness, which of necessity means a likeness in nature and character, for the children of Israel were forbidden to worship God as fashioned after any corporeal concept, or any "manner of similitude" that mortal sense could outline. He was known and worshiped by the Hebrews as the author of law, and also as the Father of all men; at times was spoken of as merciful and loving, and again as unmerciful toward those who incurred His displeasure.

Throughout the Old Testament, and indeed in the New, if materially interpreted, we find little hint of man's likeness to God in a purely spiritual nature. Rather does the belief prevail that while God is sinless, man is sinful; that although God is Spirit, man is material; that God is immortal, but man mortal. Thus the great scientific fact of reflection, expressed through spiritual law, has been almost wholly lost sight of, to humanity's great loss. It is, however, perfectly clear that Christ Jesus taught it, and so we find Peter, in his second epistle, declaring for the possibility of our becoming "partakers of the divine nature." We also find in the

Digitized by Google

third chapter of Paul's second epistle to the Corinthians this remarkable passage dealing with reflection. The Revised Version reads: "Where the Spirit of the Lord is, there is liberty. But we all, with unveiled face reflecting as a mirror the glory of the Lord, are transformed into the same image from glory to glory, even as from the Lord the Spirit." It is made very clear in this chapter that the veil to be taken away is material sense, which hides from mankind the spiritual sense of God, man, law, and gospel.

It is true that some deeply religious thinkers have caught glimpses of the meaning of reflection, but it remained for Mrs. Eddy to discover and state its practical relation to the Christ-healing. Professor Drummond says in "The Changed Life," "All men are mirrors . . . One of the aptest descriptions of a human being is that he is a mirror." Then he goes on to say that men reflect to a large extent the beliefs, opinions, and habits of all with whom they come in contact. Unfortunately this is too true of mortal man. He mirrors the mortal beliefs of sin, disease, and death, but from the Christian Science viewpoint this is no true reflection. A shadow is not a reflection, and the mortal law of reflection is at most a counterfeit of the real, which reveals only what is beautiful, good, and true; in brief, godlike. Our revered Leader says (Science and Health, p. 3), "The Divine Being must be reflected by man, else man is not the image and likeness of the patient, tender, and true, the One 'altogether lovely.'" This shows the possibility of instantaneous healing, for the likeness or reflection of God cannot be marred by sin or disease, and if the obscuring beliefs of the carnal mind are removed, we see God expressed.

In the first chapter of Genesis we are told that God, the creative Mind, was pleased with the reflection of His own nature as seen in the spiritual universe,—above all in man, whose consciousness compasses all reality. Through the long centuries of material belief, however, we look in vain for the perfect reflection, until at Jesus' baptism the divine voice proclaimed: "This is my beloved Son, in whom I am well pleased." The promise given at the close of each Sunday service in our churches may well inspire us all to press on, for it gives full assurance that we too shall be like the Father when human consciousness is purified so that it reflects the glory of the divine character.

ANNIE M. KNOTT.

No Real Resistance to Truth

WHAT is this apparently instinctive resistance to truth so often exhibited by human beings? Why is there seeming need for sad experience and for the trials of time? The Jews, for example, both ignorantly and maliciously labored to reverse the healing of the man born blind by reviling him and finally casting him out. Christian Scientists observe similar attacks made upon their healing works. Whence do such strange and evil efforts spring? Let us put this resistance to the test and unmask the hidden methods lying latent in mortal consciousness.

Tell the proverbial man on the street, wholly uninstructed in Christian Science, of a case of physical healing by this spiritual method and what will be the probable result? He will most likely deny the healing altogether. It may be that politeness will prevent him from uttering this denial, but at least he will be inclined to think it. This is done instinctively by mortals, but this instinct proceeds from the supposititious arch evil which induces the denial; namely, from that counterfeit of the divine Mind which Mrs. Eddy has so aptly termed mortal mind, and which Jesus without circumlocution called a liar. It is original sin, or the belief of life in matter, alias mortal mind, which thus speaks its denial of truth through the *persona* or mask of a mortal; therefore the scientific Christian is not surprised at this attempted maneuver of reversal. He recognizes that it springs from the very nature of supposititious fundamental evil. He is aware of the intent of mortal mind to save itself and its works by denying the potency of Truth, and he handles this error of so-called reversal with certainty by realizing God's omnipotence.

But we have not yet finished with our hypothetical man on the street. There is apparently also a maneuver number two. Desirous of persuading him that Christian Science does indeed heal the sick, and feeling that some effort should be made to put him in possession of this invaluable fact, we hasten to supply him with such evidence of the healing as would be conclusive before any court of law. What will be the next move which original sin will try to induce him to make? Will it not urge him to say, or at least to think, that the disease is not really healed, but will return; that the patient will have a relapse? Thus maneuver number two is unmasked, that maneuver which in the parlance of war is called a counter-attack and in the nomenclature of metaphysical evil figures as the attempted return of a false claim.

But here again the practical scientific Christian is on the watch and forestalls error. He understands that what God has not sanctioned, cannot have reality or actuality; hence that disease is not true, that it has neither power nor intelligence; that it has no locomotion, that it never came and therefore cannot return. To mortal mind's subtle argument, pleading for a reversal of divine Mind's healing verdict, the Christian Scientist can reply in the words of Balaam to Balak, "Behold, I have received commandment to bless: and he hath blessed; and I cannot reverse it."

Evil thinking is of two sorts, conscious or unconscious, ignorant or malicious; but both sorts would seem to make use of attempted reversal and return, because mortals instinctively lend themselves to such perversions under the influence of error. We read on page 120 of Science and Health the comforting words, "Science reverses the false testimony of the physical senses, and by this reversal mortals arrive at the fundamental facts of being." God's activity blesses His creation permanently. No artifice of perversion or reversal, no attempt to cause the return of evil beliefs, no effort to bring about a relapse from spiritual healing can stem the tide of His resistless goodness. Never ceasing, never tiring, His glorious power protects and cherishes His own. Into His kingdom evil cannot enter, nor can the faintest taint of error's poison penetrate the atmosphere of divine Love, where good alone is real, and has being, presence, and law.

WILLIAM D. MCCRACKAN.

Among the Churches

Current Notes

DANVILLE, ILL.—Payments for the purchase and remodeling of the new church home having been completed, First Church of Christ, Scientist, of this city will hold two dedicatory services at the church edifice, 429 North Walnut Street, today [May 7]. In 1898 a small group of ladies who were earnestly studying Christian Science, met each week to read the Bible, and "Science and Health with Key to the Scriptures" by Mrs. Eddy. As others began to be interested, it was decided to hold Sunday services, and the first service was held July 24, 1898. In April, 1901, the society rented the Woman's Club room for Sunday morning and Wednesday evening services. In September, 1905, First

Digitized by Google

Church of Christ, Scientist, was organized, with thirty-four charter members. At the annual meeting in September, 1907, it was decided that the board of directors be given authority to obtain options on lots suitable for a church building, and a lot on Vermilion Street was decided upon.

The Danville Press.

DES MOINES, IOWA.—Because its membership has grown to such an extent that it cannot be accommodated at the edifice of First Church of Christ, Scientist, 927 West Eighth Street, another church, to be known as Second Church of Christ, Scientist, was organized last night [May 25]. Second Church will hold services at the Hoyt Sherman place until sufficient funds have been raised for a building of its own. The initial services of the new church will be held Sunday, June 4. First Church was organized in Des Moines about twenty years ago. Its membership has shown a steady increase each year, and several years ago a church edifice was erected to accommodate the congregation.

The Register and Leader.

LANCASTER, OHIO.—The edifice of First Church of Christ, Scientist, was dedicated May 14. A building fund was started in 1902, and in 1909 the property was purchased. The building occupying the lot was remodeled, and the church moved into it July 4, 1909. In the spring of 1914 it was decided to build. Work was begun in August and the corner-stone was laid Oct. 1. On Dec. 20 the first service was held in the Sunday school room, but the formal opening service was not held until January, 1915.—*Lancaster Eagle.*

CHICAGO, ILL.—Thirteenth Church of Christ, Scientist, has begun the construction of its church edifice on the lot owned by the organization on Longwood Drive, just south of 103d Street. It is expected that the placing of the structural steel will be commenced before the end of May. The building will be eighty feet wide by well over a hundred feet long. The auditorium will seat between seven and eight hundred people, and the Sunday school room below the auditorium will seat an additional five hundred.—*The Weekly Review.*

WHITEWATER, WIS.—On Sunday [April 16] occurred the formal opening of the new home of First Church of Christ, Scientist. Some time ago the members purchased the residence on the corner of Franklin and Janesville Streets. Changes were made in the exterior, and complete alterations were planned and carried out inside. The auditorium has a seating capacity of about seventy-five.

The Whitewater Register.

GREELEY, COL.—At a congregational meeting yesterday [May 21], following the regular morning services, the Christian Scientists voted to build a ten thousand dollar church edifice on the lot recently purchased on Eighth Avenue and Fourteenth Street.—*Greeley Tribune.*

OMAHA, NEB.—Seventy-five members of First Church of Christ, Scientist, met Monday evening [May 15] and organized Third Church of Christ, Scientist. The new congregation is made up of church-members living north of Lake Street.—*Omaha World-Herald.*

FITCHBURG, MASS.—Papers were passed today [May 19] whereby First Church of Christ, Scientist, takes title to a lot of land on which to erect a new building for its use. This is on Oliver Street near Adams Street.—*Fitchburg News.*

The Lectures

Redondo Beach, Cal.

William D. McCrackan, who lectured on Christian Science at the Pavilion Auditorium, was introduced by E. C. Thomas, general agent of the passenger department of the Pacific Electric Railway, who said in part:—

For many years, especially in my more youthful ones, it was a mystery to me why the promises of olden days were not effective now; why the power available to the disciples was not available now. Many times it has come to me that there should be a reason for this, but the theology of those days offered no reason or solution. In one place in the Scriptures we are told that "these signs shall follow them that believe," and many things are enumerated that could be accomplished. In Acts we read, "For the promise is unto you, and to your children, and to all that are afar off, even as many as the Lord our God shall call." It strikes me that these promises are definite, and secular history tells us that they were operative for about three hundred years after the ascension.

During the last few years the benefits received from Christian Science in my own family have led me to investigate it for myself. Years ago Mrs. Eddy discovered Christian Science, and in 1875 gave "Science and Health with Key to the Scriptures" to the world. This healing religion was met at that time, as new ideas have since been met, with scorn and ridicule; and that has been its lot many times, even until the present. In my ignorance I have also ridiculed it, only to awaken to find more truth in it than I thought existed.

Correspondence.

Dallas, Texas

Dr. Francis J. Fluno, lecturing on Christian Science at the Dallas Opera House, was introduced by Fred W. Indermille, who said:—

Many centuries ago David said, "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases." It is sad, however, that this wonderful promise of the sweet singer of Israel, proclaiming the healing and redemptive power of the word of God, was forgotten by almost all the world, and poor humanity struggled on in the darkness of materialism until one of the lineage of David, Jesus of Nazareth, appeared healing the sick, redeeming the sinner, and raising the dead. Thus again it was proved that the spiritual understanding of the word of God is the savior of mankind.

Jesus, in turn, left a wonderful promise to all who should understand his mission, in these words: "He that believeth on me, the works that I do shall he do also," and for three hundred years this healing was practised by the early Christians. Then humanity was again submerged in the deepest materialism, until just fifty years ago this same power of God to heal and to save was discovered by Mrs. Eddy, who named her discovery Christian Science. Since that time an ever-increasing multitude has been proving that these promises are available today when they are spiritually understood.

The Dallas News.

New York, N. Y.

On the occasion of a lecture on Christian Science by Virgil O. Strickler for First Church of Christ, Scientist, the introductory remarks of Campbell MacCulloch were as follows:—

In the performance of what to many of you must be an unnecessary function on this particular occasion, I wish to

Digitized by Google

take this opportunity of passing on to you a statement made to me by a gentleman who has spent many years on the Christian Science battle front. He told me he was convinced that Christian Science had passed what the world called its experimental stage, and had now taken its proper place as a vital factor in the affairs of mankind.

This statement gains force when it is considered that fifty years ago there was but one Christian Scientist in all the world and today there are millions; that thirty years ago there was no Christian Science church edifice and today there are many hundreds; that then Christian Science was hardly known outside of Massachusetts and today it is known in every country on the face of the globe. This growth has been made possible because Christian Science, the greatest religious movement in the history of the world, offers facts before faith, proof before preaching. It makes its demonstrations first and explains them afterward. One of the channels by which this truth is spread is its board of lectureship, a group of men who travel about the world explaining what Christian Science can do and is doing.

Correspondence.

✧

Baker, Ore.

Before a large and interested audience at the Baker Theater William R. Rathvon delivered a lecture on Christian Science. He was introduced by Attorney W. S. Levens, who said in part:—

The religion of Christian Science as practised by the followers of Mary Baker Eddy is the science of living in accord with the divine law. It is not exactly a new discovery, but it presents some of the truths of the Bible which for so many years had apparently been overlooked by the students of that wonderful work. It is, if I understand correctly, a religion of how to live rather than how to die, one of its fundamental teachings being that if we live right we need have no worry about death. It is constantly seeking the truth, and ever reminding us that fear is a foe to knowledge. It criticizes no sect, attacks no creed, desecrates no altar, and profanes no sanctuary. It is a religion that ever holds out a helping hand, and it therefore finds a welcome in the hearts of a grateful humanity. It teaches us to love one another, and its message is one of hope.—*Baker Democrat.*

✧

Joplin, Mo.

The introductory remarks of the Rev. Charles Franklin, pastor of the First Congregational church, upon the occasion of a lecture on Christian Science by Bliss Knapp, were in part as follows:—

We may approach the problems of life with a philosophy or with an experience. Our philosophy is apt to be pure assumption, our conception of things as they ought to be, to which we try to make the facts and experiences of life conform. This has been humanity's chief intellectual blunder. By it the progress of scientific discovery has been delayed, and theology has never been able to extricate itself from confusion. But the facts and experiences of life are primary, and upon the basis of these we must formulate our theories. We cannot get along without these mental concepts, because by the use of working formulas we can in some measure direct and hasten our unfolding life.

But though we may build our philosophy upon the infallible basis of fact, the human mind has never proven itself able to make infallible inductions. Time and experience have always proven our formulas more or less inadequate. Life is constantly outgrowing our philosophies. The old bottles will not hold the new wine. Around the solid facts of life, the broken fragments of inadequate philosophies lie scattered in profusion. Thus theology is ever in need of amendment. The largely outgrown and inadequate theology of the Christian churches today is positively hampering life and alienating many of our best and brightest people from the churches. But we must recognize that in experience and in consciousness lies the unfolding wisdom of humanity, and our concepts of truth must always be open to amendment.

What Christian Scientists have experienced is of value to the race. To the degree that they have enriched human experience, achieved in consciousness a more vivid realization of God, made the world happier with better health, filled humanity with more faith and hope, increased the world's belief that God is good, to that degree we welcome their ministry to our common life. And we will even admit that their philosophy is true to the extent that it ministers to life. After all, humanity is pragmatic; and just to the extent that Christian Science brings values into life will your organization thrive. We believe that the true attitude of mind is "intellectual hospitality." We therefore not only appreciate the vital character of your religious experience, but we welcome your contribution to philosophy, knowing that in the laboratory of life experience will reduce all philosophies to the simple essence of truth.—*Correspondence.*

✧

South Santa Anita, Cal.

The remarks of G. F. Hills in introducing Bicknell Young, who lectured on Christian Science in the church edifice, were in part as follows:—

Jesus said, "I will pray the Father, and he shall give you another Comforter, . . . even the Spirit of truth;" also, "When he, the Spirit of truth, is come, he will guide you into all truth." And again, "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth." The Master in these words promised that man should arrive at the knowledge of all truth and indicated the method by which the knowledge should be attained. Has the promise been fulfilled? Has the Comforter come? Have any of his disciples been found so pure in heart and so faithful in the study of the Word that the truth has been revealed as Jesus said?

Christian Science answers "Yes" and points the way whereby all may share the glorious revelation. Mary Baker Eddy, the Discoverer and Founder of Christian Science and author of its text-book, "Science and Health with Key to the Scriptures," not only attained the knowledge of God and man, but left us this golden "key," which through its spiritual interpretation of the Scriptures will lead every earnest seeker for truth to the knowledge of God.—*Correspondence.*

✧

St. Louis, Mo.

A lecture on Christian Science was given in Fourth Church of Christ, Scientist, by Clarence C. Eaton. He was introduced by W. E. Morgan, who spoke in part as follows:—

The gospel of Christian Science is the gospel of an available God, whose power may be invoked here and now in the destruction of sin and disease. Wherever it has been proclaimed it has met with willing acceptance, and the multitude of testimonies from men and women of various races and climes as to benefits received from the application of its teachings, prove it to be a gospel, both in substance and in form, that meets the needs of humanity everywhere.

Testimonies of Healing

For ten years before hearing of Christian Science I wore glasses for headache. A trip to the oculist and a change of lenses was necessary every year, but each time the pain was only temporarily alleviated, and then the suffering would increase. The best oculists in Cleveland were consulted and did all they could, but at the end of the ninth year I was told there was only one lens stronger than the one I was using and after that nothing further could be done. This seemed a pretty hard sentence, as with the constant pain I had become very irritable and unhappy. I also suffered from rheumatism and chronic throat and bronchial trouble.

The healing of a friend, who was cured in four weeks of stomach disorder of many years' standing, led me to investigate Christian Science, and I was told that through reading "Science and Health with Key to the Scriptures" by Mrs. Eddy I would surely receive aid. Lack and limitation seemed a big thing at that time, so I asked God to help me, for I wanted that book above everything else. Three days later I received from a relative a letter with five dollars in it. I hastened to buy the text-book and fairly hugged it all the way home, at the same time thanking God, for I knew this book was to teach me about Him.

As a child and young woman I had gone to church regularly, but what I was taught there did not satisfy, and for ten years I had not been to service, although I always prayed to God as I then understood prayer. I read Science and Health every day, and was so happy in learning about Life, Truth, and Love that the thought of healing was pushed into the background. Three weeks from the day I began the study, while reading on page 253, "Do not believe in any supposed necessity for sin, disease, or death, knowing (as you ought to know) that God never requires obedience to a so-called material law, for no such law exists," I became conscious of the fact that I had not suffered pain in the head for three days, and this was to me a wonderful experience. I took off the glasses and have not worn them now for ten years. The rheumatism and bronchial trouble likewise disappeared. My husband also began to read Science and Health, but we waited two months before venturing to church. Then one Wednesday evening we slipped into a rear seat, and when the invitation was given to "unite in silent prayer, followed by the audible repetition of the Lord's Prayer," I was satisfied and felt that I wanted to go often.

The physical healings have been too many to enumerate, but we have far greater cause for gratitude in the awakening to some understanding of the "inspired Word of the Bible" (Science and Health, p. 497). The belief of lack and limitation was overcome later by earnestly trying to realize our inheritance as God's children and that we had our rightful place in the "Father's house." When an opportunity came to my husband to enter a new line of business in another city, we left home and friends, never doubting that we were following the leading of Principle; and so it has proven.

LUELLA WILSON, Rochester, N. Y.

✧

In the hope of encouraging others I send the following account of my first experience of healing in Christian Science. I was desperately ill with internal inflammation and a chronic bowel difficulty, and the last doctor I consulted said he could not do anything for me; but if the drug which he had prescribed alleviated my suffering, to continue to use it. His words, coupled with the alarming symptoms which I then had and the sense of desperate illness which was upon me, were a death-knell, and I felt that if the doctors could do nothing for me there was indeed no hope. One day shortly after this, while I was lying on the sofa, these words of the psalmist suddenly came to me: "I shall not die, but live, and declare the works of the Lord." I marveled at this, and closing my eyes kept repeating the words, until I fell asleep. On awaking I felt a peace never known to me before.

The next day I read a short account of a lecture on Christian Science, and at the end of this account the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, was mentioned; so I immediately wrote for a copy. The opening words of the Preface riveted my attention: "To those leaning on the sustaining infinite, today is big with blessings," and with the exception of the time spent in eating and sleeping I continued ceaselessly to read. At the end of three days I was healed, and so convinced was I of the fact that I threw away all my medicines. From that moment, nearly eleven years ago, divine Mind has been my all-sufficient healer.

While I am grateful beyond expression for the physical healing, the spiritual understanding fills me with even deeper gratitude. Through many and varied experiences God has been proved to me all sufficient, whether the need has been physical, mental, moral, or spiritual. I am especially grateful for the transformation in character that is going on every day, as the selfish, limited sense of love which possessed me before hearing of Christian Science is yielding to a broader, purer understanding of divine Love.

Our Leader's beautiful words in "Pulpit and Press" (p. 3) are a continual inspiration to me: "Know, then, that you possess sovereign power to think and act rightly, and that nothing can dispossess you of this heritage and trespass on Love." In these latter days, when men's hearts are "failing them for fear, and for looking after those things which are coming on the earth," one does indeed rejoice that the healing and saving power of Christian Science is for each and all, regardless of nationality or religion.

EVELYN G. BROWNING, Richmond, England.

✧

Several years ago I had an experience which convinced me of the power of Truth, as set forth in the writings of Mrs. Eddy, to heal mortal ills. At that time I was a passenger conductor in the service of one of the large railway companies and had for many years run on one of its heaviest passenger trains to and from a division station about three hundred miles west of here in Kansas.

My train arrived in Kansas City several hours late one stormy day in midwinter, and I retired soon after reaching home. On attempting to get up the next morning, I found myself unable to do so. One half of my body was helpless: I had no use, no control of it. As the condition had not improved after a few hours, a Christian Science practitioner was called in and treatment began at once. Improvement was noted in a few days, and in a few weeks I was able to walk. In about two months I went back to work, and continued to perform all the duties of a hard-working passenger conductor for about six years, running as regularly as any of my fellow conductors. In October, 1912, the company retired me on my seventieth birthday, that being the age limit of its employees.

There has been no return of the illness, and I am strong, vigorous, and active, for which I am very grateful. During the time that I was under Christian Science treatment four different physicians examined me, at the instance of an accident insurance company in which I then had a policy. They named the ailment and pronounced it a permanent disability.

Digitized by Google

from which partial recovery was possible but not probable, and added that recurrences were liable to follow at any time, some one of which would prove fatal.

This healing has given me great cause for gratitude to God, but greater than the healing is the peace that has followed the better understanding that "in him we live, and move, and have our being." It has brought into my life a practical reliance upon the Christ, Truth, which Jesus taught and demonstrated; a reliance upon it as a perpetually operative Principle that is just as active today for the uses he made of it as when Jesus healed the sick, raised the dead, and sent forth the twelve "to preach the kingdom of God, and to heal the sick." I am grateful for Christian Science, and for all the benefits received.

SAMUEL B. LIGHTCAP, Kansas City, Mo.

✧

I first came in contact with practical Christianity several years ago. I had been away for about five years, and upon returning to my home city to visit friends found that one of them had been healed in Christian Science of a physical ailment of fourteen years' standing and by several schools of medicine considered incurable. This physical healing was to me wonderful; but more wonderful was the spiritual regeneration and enlightenment. Being very cynical and critical, I would not acknowledge even to myself that I could ever change my conception of God and man, but this glimpse of the results of a fuller and more far-reaching religion planted the seed of hope which later bore fruit, for I was not much longer satisfied with the husks. Eight months afterward I borrowed a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy from a public library, and read almost all day and half the night for some time.

My first healing was the laying aside of glasses, which had been worn constantly for six years. I simply forgot to put them on and read all day without them. They have never been used since, although the specialist who fitted me with glasses after treating my eyes said I would never have normal sight again, and that the lenses would have to be strengthened about every six months. I then calmly accepted this verdict and followed his advice, but now my eyes are in a perfectly normal condition and I use them constantly in many kinds of work.

I did not come to Christian Science for any specific healing, although I was a very frail woman, so slight and miserable that it seemed as if a strong wind would blow me away. The many minor ailments for which I had taken medicine almost daily, simply slipped away from me without specific treatment, and I have never been tempted to use material means since my first reading of Science and Health. When I recall the years of torture and mental darkness, with a desire to end my life, I feel that freedom from this is the greatest blessing which has come to me. My life for many years was one round of disappointments and loss of confidence in everything and everybody. Only my great love for my children and an intense desire to train them for usefulness kept me from ending my life. Four times I had provided myself with a drug to end the struggle, and four times mother-love was stronger than the cowardly desire. I could not say when my healing came in Christian Science, but one bright day I fully realized that I wanted to live, and with a thankful heart the many sayings of the Master came with new meaning.

The physical healing brings to me a high sense of gratitude, but it fades into insignificance when compared with the spiritual awakening. It is to me only one of the signs following a higher understanding of God and of man's relation to Him. I am sincerely grateful to that noble woman who was so spiritual as to see the grand verities of life, brave enough to express them, and courageous enough to live them and teach them. To this woman, Mrs. Eddy, the world knows not its debt, but we who are trying to put into practice what she taught may well remember that "he that receiveth a prophet in the name of a prophet shall receive a prophet's reward."

As the mother of four children Christian Science is a great help to me. I have found the way to train them for real usefulness. I was never able to heal my children in Christian Science until I began to see their relation to God. Mrs. Eddy defines God as "Father-Mother" (Science and Health, p. 16), and this turning from the material to the spiritual parenthood has healed many diseases among them. I wish to express my thankfulness for this full and complete religion, which teaches that God is infinite Love. Christian Science is so broad and deep that it can be gained only in the appointed way,—"Precept upon precept, precept upon precept; line upon line, line upon line; here a little, and there a little." My prayer is that I may practise the little I have gained of the knowledge of God.—CAROLINE M. COX, Dallas, Texas.

✧

Several years ago I was healed through Christian Science of tubercular disease of the stomach, and also of typhoid fever. I had known of Christian Science about four years before my healing took place; had attended services and read a great deal of the literature, as we had the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, in our home; but I did not understand that God is my life. Each day I grew worse and my life seemed to be slipping away. Finally the time came when I was unable to get up, and when my husband said something must be done, I said I was going to take up Christian Science in earnest. I then realized as never before that I was God's child, and that His was the only power which could take care of me. I called a practitioner from the couch where I lay, as the telephone was at hand, gave her my name and told her I needed help. As she did not hear from me for two days she came to see me, but I was unconscious, and remained so for three weeks. Through it all God was guiding me to a better understanding of Life, although to mortal sense I seemed to be passing on.

My brothers, who knew nothing of Science, thought we ought to have a doctor, so my husband called the family physician, who had attended me for about twelve years. He diagnosed the case and then told my husband I was getting the best care I could have, but he did not think I would last through the night. I was still the same in the morning, however, and for several days afterward, but the seeming condition had no power with God, and I was brought back from "the valley of the shadow of death" and placed on the firm foundation of Truth. In about two weeks after becoming conscious I was able to be propped up, and after working as best I could with the help of the practitioner and my sisters and mother, who were Scientists, also my husband, who was very brave although he knew little of Science at that time, we overcame the various conditions which arose and seemed to put me back. Today I am in perfect health.

Since this healing God has been my only physician, and I have never been in bed a whole day on account of sickness. I have a little daughter nine years old who is able to overcome many childish ailments with her understanding of Truth. I have also seen my husband go down to the gates of death; but when error tried to tell me there was fear, I would declare that "perfect love casteth out fear . . . He that feareth is not made perfect in love," and hold steadfastly to God, good. He had a beautiful healing. I saw our home broken up

Digitized by Google

through sickness and we passed through all kinds of financial difficulties, but we knew that God was our only supply, and by holding fast to all that is good we are rich in the truth. We can truly say that our home is built on the foundation of Christian Science.

We can prove our great love for God only by trying to live it in our daily lives and to let our light so shine that we may be able to help some one who is struggling in the dark. I am trying to prove myself worthy to be called a Christian Scientist, and I can truly say that my heart overflows with gratitude first to God, and then to Mrs. Eddy, for leading us into this saving truth.

ELLA BELLE KEEN, Oxford, Ohio.

✧

I was healed by Christian Science of what was pronounced a leakage of the heart, and of partial paralysis of the right hand and arm, the result of an attack of gastric fever. The hand has filled out so that it is the same as the other, stomach trouble has been corrected, and I can eat anything that is set before me without any ill effects. If only for the correction of erroneous thoughts, which before my understanding of Christian Science would lodge in my consciousness, I am very thankful.

My mother has been healed of severe headaches that used to keep her in bed three days at a time; indeed they were so severe she would not know whether she was going to live through them. My father has been healed of the liquor habit of years' standing. It has been nearly seven years since he has tasted stimulant in any form, and he has no desire for it. As we now know, Science corrects all inharmony. Where there was separation and discord, there is now peace. For all this we are very thankful.

ALBERT C. SHREWSBURY, Kirkland, Wash.

✧

It is several years since I came to Christian Science for help for our little boy, who was suffering from what was called a diseased condition of the mastoid, after having a gathering in each ear. He also had a throat affection, although both tonsils and adenoids had been removed. I visited a Christian Science practitioner the day before he was to be operated on for the ear trouble, and he slept soundly all night, something he had not done for several weeks. The doctor pronounced him so much improved the next day that he did not operate. After about a week's treatment all soreness to touch left entirely and he seemed to be absolutely well, but at the end of two weeks a large swelling suddenly appeared behind the ear, and the family became greatly alarmed; consequently he was immediately taken to the physician, a well-known specialist of San Francisco, who operated at once. His own statement of the case told how the work had already been done, a small hole having been bored (as it were) in the bone behind the ear, through which the secretion had escaped, running down between the skins of the neck and thus causing the swelling which so suddenly appeared.

Christian Science treatment was begun again after the operation, and the dressings of the wound, which to material sense would have been very painful, were accomplished without any suffering, much to the wonder of the physician. Today the little fellow is well and strong, and is learning to help himself through his understanding of Science. He has overcome for himself a disordered stomach, which lasted about three days, asking me only once for help, which was given him. Other than that he did his own work, I being careful to keep my thought free from any sense of fear or anxiety.

I am sincerely grateful for every trial that is bringing me nearer to the understanding of God, infinite good, for trials seem to make us work the harder to know God, though we can learn to know Him without being forced to do so through tribulations. I have found from experience that if we are earnestly trying to know God, through the study of the Bible with the help of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, no matter what comes to us it will prove a blessing. In seeking God through these channels every ideal is being purified and fulfilled. The greater love, harmony, peace, contentment, and freedom realized in the home cannot be adequately expressed in words. To know that our real home is in ever-present good, we must gain a right understanding of God, so that we may always know what is good thinking and keep our consciousness so filled.

Only in a small way am I beginning to appreciate the complete devotion of Mrs. Eddy's thought to God, good, letting that Mind govern in her which was in Christ Jesus, and which enabled her to do the work before her so well that all the world is benefiting by the teaching of Christian Science. I am grateful for every right thought that is mine, be it ever so small.—DORA C. MIETH, Palo Alto, Cal.

✧

Christian Science was brought to my attention by a friend. Our youngest daughter had been ill for some time, and we had anxiously tried the most able medical authorities without avail. They all pronounced her case incurable and said that we would have her with us only a little while. Then this dear friend came with a heart full of love and begged us to try Christian Science. We grasped at it without faith, but nevertheless our daughter began to improve and in a few months was entirely healed. Today she is a living testimony of health and prosperity.

By this wonderful demonstration of divine healing I was brought to see the light clearly. I now know no God save the Father of all light. Our beloved Leader has shown us that Truth spiritually discerned heals all error, and our Father has placed this law in our hearts. My physical healings have been numerous, yet I esteem them lightly as compared with the wonderful spiritual uplift received. My daily prayer is to be permitted to lead those by the wayside to see the truth.—B. ANNA L. COPE, Los Angeles, Cal.

✧

[Translated from the German]

I am very glad to be able to tell my fellow men of the many benefits which I have received through Christian Science. A stomach trouble of twelve or more years' standing caused me great distress, the attacks at times assuming a very serious character, so that medical help had to be secured. On one occasion the severity of the attack necessitated the joint attendance of two physicians, who both expressed their concern with regard to my life. For years nothing had seemed to do me any good, and I suffered pain, despite my strict observance of all kinds of diet. My mode of living was extremely simple, and I had given up many things which formerly gave me enjoyment, but finally bilious complaint was added.

It was then that one of my sons, who was living in America and had turned to Christian Science, called my attention to this subject. I felt some hesitancy at first, as I believed that at my age it would be impossible ever to recover full health; but I soon changed my opinion after I began reading *Der Herold der Christian Science* and its many testimonies in which divine or spiritual healing had been wrought. Toward the end of May, 1914, together with my wife, who was also very much in need of help, I applied to a Christian Scien-

Digitized by Google

practitioner for treatment, and assistance was given in such an understanding way that from the first I gained full confidence in the efficacy of spiritual means as the cure of disease. From that time on I ate my meals without discriminating, having ceased to believe in any possible ill effect as having been caused by food.

A few weeks later my healing was complete. Many inharmonious conditions under which my family and I were laboring, such as anxiety, fear, worry, and discontent, were destroyed by the workings of this wonderful Science. I am profoundly grateful to the creator for the infinite love which He bestows upon us, and I know that I owe Mrs. Eddy, the Discoverer and Founder of Christian Science, a debt of gratitude for having again shown mankind the straight way which leadeth unto God, Truth divine.

BERNHARD HEMPEL, Dresden, Germany.

✧

About four years ago I was healed in Christian Science of a very obstinate disease of the stomach, bowels, and kidneys, after suffering untold agony for eighteen months and being bedfast the greater part of that time. I have since been able to overcome many minor ills to which I was subject before coming into this wonderful truth.

Christian Science not only has been a sovereign panacea for material ills but has given me mental joy, peace, and harmony, which human words are inadequate to express. In years gone by I was a slave to despondency, sometimes having spells that would last for days at a time. Now I only have to know that God is ever-present harmony and peace, and I am free and happy again. My gratitude to God and to Mrs. Eddy cannot be expressed in words, but I hope to prove my sincerity by my daily life.

FRANCES I. TERRILL, San Francisco, Cal.

✧

Words are inadequate to express my gratitude for what Christian Science has done for me, but I know that each word spoken for Truth's sake will help some one still in bondage to sickness or sin. I have been freed from gall-stones, severe headaches, stomach disorder, and numerous other ailments, but these healings seem small when compared with the understanding, gained through the study of Christian Science, of how to overcome sick thoughts, which are the cause of all discord.

Whenever error of any sort manifests itself now, I am so grateful to have the remedy right at hand, God's ever-presence, for it never fails when we let ourselves get close to God in silent communion. Christian Science has changed my thoughts toward my fellow men, overcoming likes and dislikes, and I now see only God's idea. I have the understanding to think twice before I speak once, and try to put it into practice, for this enables me to consider my brother's feelings as well as my own. Christian Science has taught me that when conditions do not yield readily I should try to put self out of consciousness and trust God to show me how to work out the problem.

When I realize my true relation to God every vestige of evil or error disappears. For every problem that has presented itself to me I am grateful, as each one has been a stepping-stone to a higher understanding, a larger proof of God's omnipotence. When there is a cross to bear, I just stop and think that it is nothing to compare with what Jesus bore for me. By being patient, humble, considerate, self-sacrificing, and true to the teaching of Christian Science, I will try to be numbered among the laborers in the Master's vineyard.—HELEN VENEMAN, Chicago, Ill.

From Our Exchanges

[*The Continent*]

"Without faith it is impossible to be well pleasing unto him [God]: for he that cometh to God must believe that he is, and that he is a rewarder of them that seek after him." Now plainly enough the apostle who wrote the epistle to the Hebrews, in which this verse appears, was right in saying that a man can never come into contact with God without at least that much faith. If a man does not think there is a God, what reason could he have for trying to get in touch with Him? And if one does not have confidence to believe that God will respond when a soul seeks to find Him, what could prompt any effort to search for Him?

So far then from being a discouragement, a straight look at the text affords something wonderfully encouraging in the very simplicity and reasonableness of the proposition. The cheering thing is that the two principles thus stamped as necessary—that there is a God and that He will open up the way to Himself whenever He sees a soul looking to find Him—are such self-evident and instinctive ideas that a normal man does not at all need to have them proved to him.

[*The Christian Commonwealth*]

There is only one master-key, and we shall never release the full glories of the Scriptures until we understand that they are the hot product of first-hand belief. The wisest among us find it hard, and the average find it almost impossible, to shake off the idea that early Christian faith was made by the New Testament, whereas in fine reality the New Testament was made by early Christian faith. The first Christians believed, and therefore they spoke—and the speech was instinct with life and passion and unimaginable possibilities. The New Testament is, in short, primarily and above all the expression of belief at first hand. What one writer says, all in varying degree might say, "That which we have seen and heard declare we unto you."

The point, one would suppose, is plain beyond need of emphasis; yet it is hardly too much to say that the whole course of Christian theology has suffered through its being underestimated, where it has not been altogether ignored. Think, for example, what loss there has been in treating Paul as though he were a systematic theologian or a calm appraiser of academic theories, whereas his ruling ideas are scorched by burning conviction, and, as Dr. Lyman Abbott puts it, words "crack" under his use of them. How unintelligent and profitless to analyze such utterances in cold blood, and especially how beyond excuse to freeze them into a doctrinal scheme! How inspiring, on the other hand, to recognize that even where their significance escapes us or makes no appeal to our needs, they once meant not only something but everything to a man living his own life and fighting his own battle, just as we have to do!

[*The Christian Work*]

The profoundest fact of human life is that for every one the real, the only true life, is lived in the realm of the spirit. The actual difference between people is not that some are religious and some are not, that some attend church and many more do not, that some believe certain things about God or the Bible or salvation while others do not; the fundamental difference between people is that some clearly and frankly recognize that the "real life" is an inner spiritual thing, while others have not yet become conscious of what their true life actually consists. From the beginning the great seers and sages and poets of the race have borne witness to

Digitized by Google

this supreme fact. It has been their mission to awaken in the lives of others that which has already come to consciousness in themselves.

[Pres. W. H. P. Faunce, as reported in the *Chicago* (Ill.) *Herald*]

Christianity exalts the silent virtues, which rely not on bayonets or battleships, but on that irresistible spiritual energy which overcomes evil with good. John Morley speaks of the "volcanic elements that slumber in the Sermon on the Mount." Those volcanic, cataclysmic elements are to be found all through our Lord's teaching. The national leaders around him were not deceived as to the danger. They were disciples of the *status quo* and Jesus was not. They wanted to prolong; he wanted to regenerate. They wanted more statutes, more obedience; he wanted more achieving, victorious life. Christian virtue passive? It is the most active, restless, aspiring, achieving type of virtue the world has ever seen!

[*The Jewish Chronicle*]

Of one thing we may be certain,—that the whole purpose and order of the world must have some relation to our lives, and our lives some relation to the whole purpose and order of the world. We are here—must it not be?—as parts of this great creation, to fill our place in it as faithfully as we can, to contribute to the development of its purpose by bringing our individual life with all its peculiar endowments and opportunities, relations, and interests, into correspondence with that purpose; to work in harmony with the power, the wisdom, the goodness, which most manifestly pervade the world and are slowly building it up into strength and beauty.

[*The Christian Register*]

We call it the foolishness of the young that they do not take life seriously; it is a good deal more foolish of the aged that they do in the way that they do. They do not seem to understand what they mean when they chant, "The earth is the Lord's, and the fulness thereof; the world, and they that dwell therein." One suspects—who does not confess that he knows?—that the feeling they really have is the feeling that the world and they that dwell therein are resting on them, and that the earth, with the fulness thereof, is piled into their poor souls.

[*Zion's Herald*]

"Tarry till"—the rest will be filled out in due time. The essential thing is to get into the line of prospective blessing, to assume, without presumption, the attitude of spiritual expectancy, to pray without ceasing, and then, when the call comes, to progress without flinching. First comes the preparation of power, and then the execution of duty through the application of heavenly energy to earthly problems. It is never lost time to get ready, or temporarily to go into bivouac to recruit strength and to receive more careful instruction in the order of march or battle.

[*The Christian Intelligencer*]

Life is always worth while if we come within the sweep of the spiritual law that "all things work together for good to them that love God." Life is worth while in the midst of peril, toil, and pain if we recognize the sinister conditions as fruitful soil for the culture of character. Life is immeasurably great if we allow God to have His way with us and if times of trial reveal the radiance of triumphant faith. Life is joyously and gloriously worth while if we live in the assurance that nothing "shall be able to separate us from the love of God, which is in Christ Jesus our Lord."

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new French pamphlet, "Foi et Générosité" (Faith and Generosity), has just been issued and is now on sale. This pamphlet contains the following articles: "The Lord Thy Confidence," "The Closed Hand," and "Continuity of Right Thinking."

"Christian Science: A Religion of Love" (Christian Science: En Kjærlighetens Religion), a lecture by Virgil O. Strickler, has been translated into Norwegian and is now published in pamphlet form with English and Norwegian versions on opposite pages.

"Law and Work" is the title of a new pamphlet containing the following articles: "Love Fulfils Law," "The Logic of Christian Science," "Undisturbed," "God's Law of Adjustment," "Authority."

"Christian Science: Man's Dominion over Evil," a lecture by Edward A. Kimball, C.S.D., has been translated into Russian, Norwegian, and Modern Greek. Pamphlets in these three languages have been published with the English version opposite the translation and are now on sale at prices of our regular pamphlets as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 32 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under those titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to page four in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for the year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.25; half calf or half morocco, $4.00. On earlier volumes write for prices.

Items of Interest

President Wilson has signed the rural credits bill. This bill provides for the establishment of a system of land mortgage banks to handle long-time loans to farmers. This is regarded as one of the major measures enacted during the Sixty-third and Sixty-fourth Congresses, evolved from diligent study over a period of years by the members of both houses who have had the matter directly in charge. A trip to Europe and inspection of rural credit systems in various countries was made in 1913 by the special rural credits commission, and a detailed report was transmitted to Congress. The purpose of the bill is to bring together the small farmer who wants to borrow money and the small investor who has some savings to be loaned on reliable security. It provides machinery for giving the farmer long-time loans that can be paid in instalments at a reasonable rate of interest, and for offering to the investor of moderate means a secure negotiable real estate bond of small denomination at a good rate of interest. It divides the country into twelve districts, with a land bank in each district, and establishes in Washington, D. C., a Federal farm loan board to supervise the operation of the system. It provides for local farm loan associations composed of prospective borrowers, and for the organization of corporations known as joint-stock land banks. Under the operation of the system a member of a farm loan association may borrow from his association, giving a mortgage on his land as security. The association in turn borrows the money from the local Federal land bank, and the land bank raises the money by issuing farm loan bonds. Each association has a limited liability for the loans of its members, so is careful to see that the security is good. The bonds are strong, because issued against the collective security of all the real estate on which the individual loans are made.

Department store selling of lumber on the basis of "short lengths for odd jobs," at a few cents a stick, is spreading throughout the entire country, and is proving to be a means of disposing of odd-length lumber by retail lumber dealers to the stores in their vicinity, both department store owner and lumberman making a profit on sizes that otherwise might be waste. A western company specializing in this distribution has succeeded in placing lumber departments in thirty-eight cities. The first installation of a "department store lumber yard" was in Portland, Ore.; the second at Seattle, Wash. The matter furnished is suitable for any ordinary household repairs, but especially adapted to manual training school purposes, and plans are furnished for its various uses.

The Russian Council of Ministers has approved the project of the minister of finance and the minister of ways of communication concerning the construction of the Ob-Ural-Biclomorsky Railway. The total length of this railway will be about one thousand miles. As this projected line will pass through the dense forests of the basins of the Mezen, Pechora, and Ob, it will facilitate the exploitation of these forests and will increase the revenue of the forestry department as well as promote the export trade in timber. It will also provide a cheaper route for the exports of raw material from Siberia, chiefly Siberian grain. It will connect the mining districts of the northeastern slopes of the Ural with newly discovered rich deposits of iron ore and mineral fuel, and makes accessible a country rich in natural resources.

Sixty-one per cent of the present hardwood supply of the country is located in the South. Many of the most important hardwoods are supplied wholly by the southern forests. The Appalachian region now produces about 50 per cent of the hardwoods used in the country, and forms the chief remaining source of supply. At the present rate of cutting the existing supply of high-grade hardwood timber will not last many years. Under proper methods, however, the southern Appalachian region alone can be made to grow four fifths of the hardwood timber which we now require.

Local tanneries in the Philippine Islands turned out approximately $900,000 worth of leather of all classes during the past year. At the same time the importations of leather amounted to $1,274,802, as against $1,557,324 in 1914. There is a marked annual increase in the use of leather goods of various kinds in the islands, though leather cannot be produced in large quantities, even with a vast improvement in the methods of tanning, on account of the scarcity of cattle.

The development of two million horsepower of electric energy below the Niagara Falls without disturbing the Horseshoe and American Falls, and the expenditure of $100,000,000 in the work, are proposed in a scheme submitted to the Dominion Government for approval. The scheme proposes a dam in the rapids below the falls to raise the water one hundred feet. The Government will appoint a commission of engineers to look into the scheme.

The general dam bill favored by the conservationists, as against the Shields bill, has passed the House of Representatives by a vote of 51 to 17. President Wilson has given assurance that he will veto any bill that may be presented to him which does not adequately conserve the public interests, but he expects that the Senate will accept the House bill in substantial form.

Extensive use by lumbermen and woodworking factories of the wood waste exchange conducted by the United States Forest Service is reported by officials who have just completed a short field study to determine the extent to which the opportunities offered are being taken advantage of. The exchange was established in 1914. It consists of two lists of manufacturers, which are sent out quarterly to persons desiring them. One lists "Opportunities to Sell Waste," the other, "Opportunities to Buy Waste."

The state of New York, its counties, cities, towns, and villages, must now insure under the workmen's compensation law, in the same manner as private employers, all of their employees who are engaged in work enumerated in that law, according to an opinion rendered by the attorney-general. Previously the state, counties, and municipalities held that as they were not engaged in the business for gain, they did not come under the terms of the law.

The Associated Cooperage Industries of America has been formed by the amalgamation of the Slack Cooperage Association, Stave Manufacturers of America, Tight Stave Manufacturers Association, National Cooperage Association, and the Allied Cooperage Industries of America. The financial value of the annual output of the combined organizations is estimated at more than $150,000,000.

There were built in the United States and officially numbered during the fiscal year ended June 30, 1916, 1030 vessels of 347,847 gross tons, compared with 1266 vessels of 215,711 gross tons during the fiscal year ended June 30, 1915. The seaboard yards have built thirty-five large steel merchant steamers, aggregating 191,859 gross tons, the largest merchant steel output in their history.

A determined effort is being made to develop the growing of sisal in the Philippines. Exporters of fiber are backing the project. It has been found that the plant does exceedingly well in the islands and that the fiber produced from it is of excellent quality.

Earnest effort on the part of the intelligent and progressive element in Ecuador has resulted in the adoption of a resolution by the council of public instruction establishing a course in agriculture at the Central University.

Members of the Prairie Club of Chicago and others interested in the sand dunes along Lake Michigan between Gary and Michigan City, have given impetus to the movement for the creation of a national park in this region.

The manufacturers of wooden boxes have announced that the totals of damage claims paid by American railroads in 1914 because of improperly shipped merchandise amounted to $34,000,000.

Usually about 75,000,000 acres are sown to rice annually in India, 32,000,000 acres to wheat, 26,000,000 to cotton, and only 3,000,000 to jute.

It is the opinion of the Kansas growers that the total yield of wheat in the state will be around ninety million bushels.

The Canadian grain crop prospects for the season of 1916 indicate a crop around two hundred million bushels.

The good roads bill, carrying appropriations of $85,000,000, has been signed by President Wilson.

American sheep-raisers, it is estimated, will receive about $75,000,000 for this year's wool crop.

China imports nearly two hundred million gallons of kerosene a year.

Scientific Healing

ROBERT NALL

How do we define health? What mental concept presents itself as we think of health? What are the criteria by which we judge of its nature and quality? To be free from physical trouble, to be blessedly exempt from medical attention, from the need of any of the remedies catalogued in the pharmacopœia,—this, the average man claims, entitles him to be classed as healthy. That is where the Christian Scientist was before the scales fell from his eyes and he awoke from his material dream. He now has a wider vision; his perception and his realization of health have broadened into the manifestation of the activity of good, into the operation of divine Principle.

It is a tribute to the divine authenticity of Christian Science that while in its demonstration it is ready to give us all we need, it deprives us of nothing that is of any worth. The mental faculties, when clarified by the metaphysical process, present many things in a new light; these are cognized from a different viewpoint. Life itself takes on a richer hue, and the present, in contrast with the past and the future, assumes its rightful paramount place in the daily and hourly recognition of Truth's rule over error.

If we have arrived at this point in our understanding of Science, it is quite certain that we are establishing what Mrs. Eddy calls "the scientific sense of health" (Science and Health, p. 373), and we are privileged to interpret this in the most comprehensive way. "Wilt thou be made whole?" is a question that Truth submits to every one at some time or other. It is the voluntary offer of divine Love to the physical sufferer, to those in despair, to every victim of mortal passion, to all who are unconsciously adding to their torments by the fear of a score of things that never happen.

Christian Science in its expression of divine Truth by its very nature cannot discriminate in its blessings. Mortal thought alone discriminates; it cannot do otherwise. It holds that matter is the arbiter of life, which dictum covers the scope of its provision for man's welfare; and matter being but a mental phenomenon, without power or reality, it is the acme of futility to depend upon it for health. Whether you think of health in its narrowest or in its broadest meaning, it is never a product of that which has no place in the divine economy. If, therefore, we are not healed by God, as our Leader over and over again emphasized, then we are not healed at all.

But with the enlarged understanding which follows the apprehension of spiritual truth, it is seen that physical health takes a subordinate place in the great redemptive work of divine Principle, although popular thought erroneously credits Christian Science with giving it the primary place. God taught humanity through Christ Jesus, and is still teaching men through Christian Science, that all healing, whether physical, moral, or spiritual, is the result of the mental transformation which attends the advent of the Christ-consciousness.

There is a wholesome lesson to be learned here. No one wants to limit acceptance of God's royal bounty. Therefore the Christian Scientist can testify by both precept and example, in the measure of his spiritual perception and his mental grasp of the truth, that it is the emphatic mission of Christian Science to restore the spiritual selfhood, to bring to light "the new man, which after God is created in righteousness and true holiness." The world largely thinks otherwise, even when confronted by demonstrable facts. The only way to convince the world that it is wrong is to go on demonstrating; to show that in the whole gamut of error's desolating sway, in the long list of moral wrecks that strew the path of evil's influence, there is no erroneous mortal condition so hopeless or desperate that it is not amenable to the healing potency of Truth.

To rely wholly and absolutely on God for everything; to give thanks to Him for everything; to present infallible evidence that the prayer of faith, that is, of understanding, has healing efficacy; to attest by the overcoming of disease and the destruction of sin, by unmistakable ethical effects, and by a spiritual change which reveals the impersonal idea of good, —to do all this as showing that the divine purpose is being fulfilled in each one of us as we come to a right understanding of God and surrender gladly to His will, is to take a noble part in the ministry of scientific healing. And can the recipient of Love's healing balm do otherwise? "A faithful ambassador is health," said the wise man of old; or, to put it in another way, he that rejoices in some conception and expression of the divine wholeness, which is his real being in truth, will be, to quote the marginal reading of the text above quoted, "an ambassador of faithfulness."

But are there not Christian Scientists who lament that their practical application of the truth does not attain within even measurable distance of their ideals? This mental attitude, if unduly maintained, may become a burden and a hindrance, that is, in belief. Then it is time to ask ourselves whether we are really seeking to conform to divine Love's standard, whether our faith has so grown into knowledge, and our knowledge into understanding, that spiritual law is as available and operative now as it was when Jesus demonstrated it. A prayerful and spiritual study of the supreme purpose of the life and work of Jesus, and a closer knowledge of the gradual unfoldment of the truth to our Leader, often serve to dissipate the mists of fear, doubt, and discouragement which seem to encircle the upward path. Mortal thought obscures and debases. Spiritual or scientific thought enlightens, teaches, and elevates. Its healing lies not only in the purity of its design, embodied in the reconciliation of man to God, but in its direct simplicity.

What can be clearer than the declaration in "The First Church of Christ, Scientist, and Miscellany" (p. 349) that "a scientific state of health is a consciousness of health, holiness, immortality—a consciousness gained through Christ, Truth"? Here is the entire gospel of salvation. It is the basis and the perfect ideal alike of all human redemption. If one has therefore not grasped hitherto what scientific

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

healing is, he will know it as he learns that it embraces and establishes all that is godlike, real, and eternal. It excludes nothing which is worth possessing. It is the rising of the healing "Sun of righteousness" on the human mind. It is Truth reflected in spiritual understanding. A scientific state is a spiritual state. It is the reversal of every mortal concept. It is the saving faith of conscious relation to and communion with our Father-Mother God. The retention of even one of the idols of false material sense is not only a mental embarrassment but a self-imposed barrier, shutting out Love's healing streams.

The measure of our self-immolation is the measure of our spiritual receptiveness; and the more spiritually minded one is, the more he reflects the infinite idea. Therein lies the essence as well as the practice of Christian Science treatment. It is the function of the spiritual law to heal. It is within the power and it is the privilege of the spiritual man to comprehend that law; therefore "a scientific state of health" is that state wherein God is seen to dwell with men as divine Principle and man is recognized as His perfect image and likeness. Is not this what Mrs. Eddy meant in her Message for 1902 (p. 9), when she wrote, "The unity of God and man is not the dream of a heated brain; it is the spirit of the healing Christ, that dwelt forever in the bosom of the Father, and should abide forever in man."

"Flood-tides of Love"

FLORENCE STRATTON WEAVER

On page 201 of Science and Health Mrs. Eddy says, "The way to extract error from mortal mind is to pour in truth through flood-tides of Love." The Christian Scientist soon learns that truth is his only way, his only chart and compass. He also finds, however unpleasant the experience, that dislike, distaste, a human sense of justice and judgment, or wrath, only weave a thicker web about him, and erect a barrier in his path which can only be removed by these flood-tides.

The writer is reminded of an incident which illustrates this. A young Christian Scientist was living for a time in a country town, and she evinced a "zeal . . . but not according to knowledge" in acquainting those around her with her new-found faith. Gradually it dawned upon her that she was being shunned. Even in shops she felt the cold shoulder, and it was so apparent from her neighbors that she was dismayed and hurt. She yearned as never before to leave the town and go back to her beloved home city, but the door seemed closed and there was no way out. Then she remembered Christian Science, and gladly retreated to her sanctuary of thought to examine present conditions in the light of this blessed truth. Almost instantly came the illumination, and she saw that the aloofness arose from persecution against Christian Science through ignorance of the subject. Then came Mrs. Eddy's admonition, above quoted, "to pour in truth through flood-tides of Love," and the way and means and method flashed forth to lead and to rejoice her.

This young Scientist began at once to realize that she loved every one in that town, because, as we are told in Science and Health (p. 467), "all men have one Mind, one God and Father, one Life, Truth, and Love." Each day some little opportunity presented itself by which she could illustrate this love to her neighbors. They were little, simple tributes, but they seemed sacred to her, for she knew that she was grasping and putting forth the one great Life-principle. The result was that in less than a week love answered love. The whole atmosphere was changed, and the change was just as perceptible as the estrangement had been. All those whom she met gave evidence of Truth's activity. What seemed most wonderful and sacred was that invitations to this and that began to flood our young friend, even from families whom she had never met. It was as though the whole town had opened its heart to her; then, just when love was at full tide in her own consciousness, the way suddenly opened for the return to her home city.

Precedent in Healing

R. STANHOPE EASTERDAY

When the patriarch Samuel set up his Eben-ezer "between Mizpeh and Shen," on the occasion of a signal victory over the Philistines, he not only commemorated God's ability to help, but foreshadowed a willingness to do so, and intimated large possibilities in this direction throughout all time. Thus in his significant statement of remembrance, "Hitherto hath the Lord helped us," he rebuked prevalent faithlessness, and established in the form of irrefutable logic a comprehensible foundation for wholesome faith in Deity in all ages. The admission that God has ever helped, carries with it the inevitable conclusion that He will continue thus to help in every hour of need.

When David, an unarmed shepherd boy, eschewing the armor of Saul, went boldly forth to face a fully armed giant, he reassured himself as well as Saul with the retrospective argument, "The Lord that delivered me out of the paw of the lion, and out of the paw of the bear, he will deliver me out of the hand of this Philistine." He was thus able both to declare and to prove that "the battle is the Lord's." On another occasion in the experience of God's chosen people, when their attention was definitely directed to the task of subduing the "seven nations" which were said to be "greater and mightier" than themselves, they were reminded, "Thou shalt not be afraid of them: but shalt well remember what the Lord thy God did unto Pharaoh, and unto all Egypt.

Bringing the lesson definitely home to ourselves, present-day dependents upon divine power, it has been reasonably determined that in the personnel of the twelve disciples, including along with these the great "apostle of the Gentiles," there were represented the various types and tendencies of universal humanity, among them, for instance, the impetuous Peter, the doubting Thomas, and the loving John. That there are to be found reasonably in the history of the apostles, in their lessons and their overcomings, numerous examples calculated to make practical in present-day Christian experience the argument of precedent. Coupling with this the fact made so clear in Christian Science, that the world's Saviour by virtue of his having been "in all points tempted like as we are, yet without sin," is literally and absolutely the Wayshower, we have ample justification for Mrs. Eddy's contention in her epitome of "Mental Practice" as found on page 220 of "Miscellaneous Writings," that the mental declaration "You are well, and you know it," may be effectually and always supported by "audible explanation, attestation, and precedent."

In order, however, to round out the full scope of spiritual healing we ourselves must, on the basis of such legitimate argument of precedent in our own experience or in that of others, forge toward and finally attain the goal of spiritual understanding and divine power characterized by that true knowledge of the divine nature which is foreshadowed in its correlative to our "scientific statement of being" (Science and Health, p. 468) in the words of the beloved disciple, "We shall see him as he is." Our Leader clearly points this fuller spiritual sense when on page 454 of Science and Health she says

Digitized by Google

"Remember that the letter and mental argument are only human auxiliaries to aid in bringing thought into accord with the spirit of Truth and Love, which heals the sick and the sinner;" and she points the better way also on page 411 of the same book, urging the ideal of Christian Science practice in instantaneous healing, that *ipso facto* which characterized the healing ministry of the master Metaphysician, who compassed the boundless precedent of universal good and divine promise in his declaration, "Before Abraham was, I am."

✧

Importance of a Right Standpoint

FRANK H. SPRAGUE

So accustomed are mankind to accepting without question the testimony of the physical senses, that many an inquirer, when confronted with the truth revealed in Christian Science, is moved to exclaim like Nicodemus, "How can these things be?"

Recognizing in the mighty works of Jesus the credentials of a prophet, Nicodemus no doubt thought to supplement his store of rabbinical knowledge by inquiring into the Master's teaching. How great was his astonishment, therefore, when our Lord, instead of proceeding to expound some new doctrine, advanced a point of view which upset the basis not alone of Judaic interpretations but of all material rationality,—"That which is born of the flesh is flesh; and that which is born of the Spirit is spirit." In other words, the carnal type of thought and material rationale of existence have nothing in common with things spiritual.

If, as Jesus declared on another occasion, "God is a Spirit," it follows that His kingdom, that which emanates from Him and is embraced within the divine consciousness, must be like Himself in quality; that is, it must be spiritual. Whence, then, comes "the flesh,"—matter, mortality, evil, error? Of what is it "born"? It would almost seem that the very simplicity and directness of the Master's answer to the question in this colloquy had led men to overlook the point which he brought home with such force to the "man of the Pharisees,"—"Except a man be born again, he cannot see the kingdom of God."

To acknowledge God as the only cause and creator is to concede that that alone which is comprised in His kingdom, in other words that which is spiritual, really exists. Furthermore, if we are to know the universe as God constitutes and knows it, we must regard it from the divine standpoint; we must apprehend it spiritually. Clearly, then, there can be no right and legitimate standpoint but the spiritual; any other must be purely suppositional and erroneous, and any effects arising therefrom would be correspondingly unreal. On page 301 of Science and Health we read, "Delusion, sin, disease, and death arise from the false testimony of material sense, which, from a supposed standpoint outside the focal distance of infinite Spirit, presents an inverted image of Mind and substance with everything turned upside down."

That which from a mortal, material standpoint seems to exist, is flesh, mortality, matter; and as the standpoint is untrue, so likewise must be the effects for which it is responsible. If this is the case, how can the carnal, mortal, material type of thought, which is itself nothing more than an erroneous effect derived from an illegitimate standpoint, testify to the truth of God's creation or detect its own falsity? Jesus said to Philip, "He that hath seen me hath seen the Father," implying that God is seen through spiritual sense in His reflection "in the Son." Spiritually to grasp his standpoint was, therefore, to gain a knowledge of God.

Now if a standpoint coincident with that of divine Mind is the only true and normal one, and if it embraces only that which is godlike, perfect, harmonious, and imperishable, then whatever else may seem to be, is in the nature of illusion; and an illusion can be dissipated only by losing the false point of view which perpetuates it. That Nicodemus apprehended this for the time being, is evident from the tenor of his exclamation, "How can a man be born when he is old?" How can one break away from a standpoint, suppositional and false though it be, which education and experience have sanctioned and confirmed from time immemorial?

Who or what is it, then, that argues from a material standpoint and demands to know how error originated, where matter came from, why God permits evil, what makes man mortal? Is it anything else than a self-deceived sense developed, in belief, from a point of view which is the suppositional antithesis of that of divine Mind, and which must therefore become obsolete in order that the truth may appear?

To seek for the origin of matter or evil is to seek for the origin of a standpoint which does not exist in Truth. Such a quest is as useless as it would be to study the inverted images on a camera glass and then wonder why trees grow downward. The difficulty, in the one case as in the other, lies in the way of looking at the question. The illusion disappears only as the standpoint which fathers it is lost. Rebuking the deluded thought of the Pharisees, Jesus said, "Ye are of your father the devil," who, he added, "abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it."

Divested of oriental symbolism the declaration amounts to this: That error—mortality, evil, matter—is a lie, a falsification, an imposition, because there is no truth in the standpoint from which it is conceived. If a material standpoint is wrong, whatever seems to be from that standpoint—imperfection, sin, suffering, woe, disease, death, all erroneous manifestation—must collapse and disappear with the passing of the standpoint. If evil is but an effect from an ungodly standpoint, it is clear that God could not know evil, since the divine Mind does not include a standpoint from which evil could appear.

Every one recognizes that the delusions of insanity are due solely to an erratic point of view, since they do not express the Principle of order and harmony. Along the same line, the demonstrations of Christian Science prove that phenomena which testify to evil, discord, imperfection, arise from a standpoint apart from the deific; for adherence to the spiritual or deific standpoint causes such phenomena to disappear or diminish in an increasing degree from human experience.

Suppose it were to come about suddenly that every one should cease to entertain or even recognize any other standpoint than that exhibited in the reflection of divine Mind,—where would matter and evil be found? Can it be claimed truthfully, then, that such mortal phenomena are real under existing conditions? And if not, why rate them in the category of truth or fact? Christian Science shows why Jesus the Christ laid such stress on healing works as the test of genuine discipleship. It proves that such occurrences are natural effects of a point of view which is in agreement with that of divine Mind; just as a perfect image registered on the finder shows that the camera is in focus.

Why, then, it may be asked, do not all phases of erroneous manifestation vanish when once the true perspective is gained? Even though the realization of that standpoint be complete, it requires specific and constant application before the belief of reversal is wholly overcome. Far more than a passing glimpse of truth is necessary to rescind decrees which, in belief, have held sway over mankind for ages. A crooked tree cannot be made to grow straight by merely bending it into

Digitized by Google

place. The demonstration of truth must be a progressive experience.

On page 322 of Science and Health we read: "When understanding changes the standpoints of life and intelligence from a material to a spiritual basis, we shall gain the reality of Life, the control of Soul over sense, and we shall perceive Christianity, or Truth, in its divine Principle. This must be the climax before harmonious and immortal man is obtained and his capabilities revealed."

Brotherhood and Our Daily Newspaper

HELEN HOAG ROGERS

A CRITICISM of Christian Scientists, once very common, was after this manner: "They are provincial; they never talk about anything except Christian Science. They do not know and evidently do not care to learn about anything else." At one time this was perhaps not wholly unwarranted regarding many Christian Scientists. If a man suddenly finds that the ground he stands on is like quicksand and may at any moment sink beneath him, he is mightily interested in finding out where and how to find safety. This is what occurs in the consciousness of the young student of Christian Science, especially if he is seeking relief from seemingly hopeless suffering. He finds that none of the various phases of material life and human philosophy will save him in the day of trouble, and he simultaneously makes the all-important discovery that Christian Science, if earnestly studied and practised, will show him where to gain a firm footing and will give him a wonderful sense of security and peace.

Is it strange, then, or altogether blameworthy that the Christian Scientist should feel an all-consuming interest in his religion, which gives him daily proofs that good is becoming an undeniable fixity in his experience? It is indeed necessary that he preserve his desire for God and the keeping of His commandments as the supreme motive power of his life, for in this way only can he destroy all belief of evil as power for himself and others who come to him for help. It is right, however, that those who profess the Science of Christianity be not provincial, for divine intelligence knows no narrowness; it is an all-embracing, all-pervading interest and love. It therefore becomes the duty of the Christian Scientist to avoid both the Scylla of walking in the clouds and being unable to see his human brother, and the Charybdis of trying to keep one foot on the quicksands of material pleasure and the other on the rock of scientific demonstration.

Just here *The Christian Science Monitor* has a distinct mission. In any issue of this paper will be found articles of interest and value to every member of the community. One who had lived in South America for years said that since his return to the United States he had learned from the pages of this newspaper more interesting and unusual things about that country than he had learned during all his long stay there. There are articles for the business man and the housewife, for the mature thinker and the child, for the athlete, the traveler, and the financier, for the college student, the family circle, the merchant, the farmer, the lawyer, and in addition an advertising medium which proclaims the truth about wares we may need.

Through reading the *Monitor* one gains an insight into the interests of the many, a better understanding of their viewpoints, so that he begins to realize that all have a common interest and welfare. In a word, this paper gives a nobler vision of the brotherhood of man; it broadens one's interest beyond the petty self, and begets an intelligent and kindly interest in every one, everywhere. Mrs. Eddy thus states its purpose, "The object of the *Monitor* is to injure no man, but to bless all mankind" (The First Church of Christ, Scientist, and Miscellany, p. 353). Although space is devoted to all the important fields and interests of human activity, hatred, revenge, evil doing, and evil thinking can find no corner where they may flaunt themselves or their wares. Because the whole basis of the *Monitor* is good, its readers are educated in the realm of good and naturally acquire that habit of expecting and knowing good which brings into their experience more of the brotherhood of man.

The fact that the *Monitor* is devoted to so high an ideal makes possible this attitude of love and non-partizanship, and no Christian Scientist should allow himself so to get in his own light as to believe for an instant that the *Monitor* is under the control of a personal or partizan spirit. Every faithful reader of this paper will grow into a firmer understanding of government by divine Principle and a broader understanding of infinite Love. Thus all Christian Scientists may unite in the joy of realizing that God has given them through this channel a means of overcoming all narrowness and of gaining each day an increasing love for and interest in all humanity.

"Ye were strangers"

HARRY L. RHODES

As the patient shepherds saw the star that gave them hope of a savior, so disappointed travelers, the earth weary and heavy laden, are today finding that same star of hope in this new light of Truth which our beloved Leader, Mrs. Eddy, has given to the world, the purpose of which is to establish "on earth peace, good will toward men." The invitation has gone forth to peoples and nations of all climes who are in bondage to false beliefs, to "accept the 'glorious liberty of the children of God,' and be free!" (Science and Health, p. 227.)

"Be not forgetful to entertain strangers," wrote Paul to the Hebrews, "for thereby some have entertained angels unawares." How wondrously this was demonstrated in the experience of the two disciples in the walk to Emmaus! We read that they asked their wonderful guest to "tarry with them," and when "their eyes were opened" they said one to another, "Did not our heart burn within us, while he talked with us by the way, and while he opened to us the scriptures?" To the children of Israel who were about to enter the promised land Moses said, "Love ye therefore the stranger: for ye were strangers in the land of Egypt." This may remind us that at one time we were all strangers to this new-old religion of Love. The dictionary defines hospitality to be the "kind and generous reception and entertainment of strangers or guests," and there is no place where this friendly attitude may be better manifested than toward the stranger within our gates.

In the twenty-fifth chapter of Matthew we find in the Master's parable of the last judgment a strong demand for true hospitality. The words are, "I was a stranger, and ye took me in." Then follows the stern condemnation of those who did not thus fulfil the law of Love. Today there is a stronger desire for the realization of universal brotherhood, which can be realized only in reflecting more of the "sweet amenities of Love, . . . in true brotherliness" (Manual, Art. VIII, Sect. 1). If this reflection of Love is aglow in our hearts, its rays are felt by all who come within the range of our influence. If we seek the scientific and true sense of brotherhood, this obligation will not bear heavily upon us as a duty, but will be welcomed as an opportunity to serve God by reflecting Love, for the ability to reflect Love will be found to be a part of man's true consciousness and cannot be lost or even limited.

The weary wanderer and simple seeker has found Christ

Digitized by Google

Science to be "the shadow of a great rock in a weary land." Shall we welcome him to the Father's house, or shall our attitude impress him as one of cold indifference? Shall we not profit by the lesson set forth in the parable of the prodigal son, who found, after turning from the husks and being willing to humble himself by going home and asking forgiveness in order that he might satisfy his hunger with the servants' portion, that his elder brother murmured and "was angry"? Would it not be better to put to silence every suggestion of criticism and know that the false belief which would make us a stranger never was a part of real spiritual identity, but only a suggestion that evil is a part of man?

The Christian Scientist has been variously called an apostle of happiness, a scientific optimist, a preacher of the gospel of peace, the salt of the earth. If these virtues are reflected and expressed at all times, the stranger will find at our church services an atmosphere of peace and rest. Such mental rest is an inspiration to the man with a problem. The prodigal may come to the "house of prayer" and find himself delivered from the mesmerism of a false sense, for nothing "that defileth, . . . or maketh a lie," can enter such an atmosphere. The anxious mother may come to learn that God, who careth for the sparrow's fall, is to be found within the temple gates as well as everywhere else in the universe. The practitioner may feel his seeming responsibilities suddenly removed and be reminded again that God is omnipresent and omnipotent. The earnest student may rise into purer realms of thought, and even the little child may find himself relieved of a mother's anxiety and hear the voice of the loving Master saying, "Suffer the little children to come unto me."

[Written for the *Sentinel*]

"Res Pulchrissimae"

GWENDOLYN THOMAS

WHAT are the very fairest things that be?
  Asks a wise poet of the olden days.
Not gem, or sky, or temple high, or sea,
Or pearl, or rose, nor garden in which grows
A pear tree blossoming where sweet water flows:
  The very fairest are God's laws, His ways.

But how shall my poor thoughts to God's be raised,—
  Ah me, to very heaven? How shall I see
The laws that gentle poet rightly praised:
Their radiancies, their sweet felicities,
Their constancies surpassing all of these,—
  Flower, gem, sky, garden, temple, wave, or tree?

I will have all sweet things now tell of Him,
  When I behold their inmost beauty rare;
And they my feet shall lead, like cherubim,
Up the thought pathway, till all heaven is nigh.
For symbols slight when seen with Spirit's eye,
  Can bring to one a glimpse of the All-fair.

Me shall the Shepherd of the East first teach
  (For best of all he knew the secret way)
The vision of those heavenly laws to reach.
He in the mountains heard the Father's voice,
All law and love, bidding the world rejoice,
  Nor ceased this vision rare to promise each.

ENVOY

But, gentle lady of the happy book,
God's law of Love 'twas thou who didst invoke.
And without thee I should be silent now and sad
Among the shadows in my sorrows clad.

Selected Articles

[From *The Recorder*, San Francisco, Cal.]

[On March 17 the supreme court of California rendered a decision construing the constitutionality of the medical practice act, which had been attacked upon the ground that it was class legislation, inasmuch as it did not require all kinds of practitioners to pass the examinations. The following is an extract from the opinion written by Judge Melvin on an appeal from the superior court.—EDITOR *Sentinel.*]

Defendant was charged with the commission of a misdemeanor in that, without having a valid, unrevoked certificate from the board of medical examiners authorizing him so to do, he engaged in the practice of a system or mode of treating the sick and afflicted. Upon trial he was convicted as charged in the information. He prosecutes this appeal from the judgment and an order denying his motion for a new trial.

Appellant insists that the act under which he was convicted violates certain constitutional provisions in that it is discriminatory in exempting from its provisions a certain class of drugless practitioners, namely, those who resort to prayer as a means of treating persons afflicted with bodily ills.

Clearly the purpose of the law is to protect both the individual and the public from the dangers and evils which might result from treatment by those not possessing the knowledge and skill requisite in the treatment of diseases with which mankind is afflicted. It is likewise clear that the degree of knowledge and skill, as well as the character thereof required, depends upon the treatment in the practice of which the practitioner engages. Thus, different qualifications are prescribed for those engaging in practice as physicians and surgeons from those designated as drugless practitioners; the intention as to each class being that they shall qualify as possessing the knowledge and skill deemed necessary for the practice of the treatment in which the individuals of each class engage.

The physician and surgeon is required to possess a knowledge of many subjects which it is not deemed necessary that the drugless practitioner shall possess. By reason of the different treatment, there is a rational and intrinsic distinction which clearly justifies the classification. Coming to the exempted class of drugless healers, namely, those who treat by means of prayer, here too there exists an obvious ground for the classification. The treatment practised by many, though not all, of the drugless practitioners is by manipulation of the bones and kneading of the muscles and tissues of the person treated. It is apparent that without a proper knowledge of the human body, its organs and functions thereof, or lack of skill, grave consequences to the patient might follow as a result of their treatment. Not so, however, as to one who in prayer invokes divine power to afford relief to one afflicted by disease. The possession of the prescribed knowledge and skill, without which the chiropractic, osteopath, or neuropath is denied the right to practise his treatment, in no wise renders the prayers of one thus treating bodily ills more efficacious in the curing of disease; nor can it be said the prayer of an illiterate person may, in the consequences to the subject thereof, be more productive of harm or less beneficial than that of one possessing the learning and skill of an educated physician.

To our minds, it is obvious that no reason exists for requiring the class engaged in treatment by prayer to possess the knowledge and skill required of others engaged in drugless treatment. The ground for the classification is as

Digitized by Google

obvious as is the distinction between physicians and surgeons on the one hand, and drugless practitioners on the other, and as to each of which classes a different rule applies. That the legislature has the right to establish such classification and exempt one class from the operation of a general law, where the same is founded upon some natural, intrinsic, or constitutional distinction, is too well settled to require citation of authority therefor.

In *Ex parte* Bohannon, 14 Cal. App. 321, the question before the court was as to the validity of an act which concluded with the provision: "Provided that nothing herein shall be held to apply or to regulate any kind of treatment by prayer." It was there claimed, as here, that the exemption so made rendered the whole act unconstitutional and void by reason of giving immunities to those who treat physical ills by prayer. The court in its opinion said: "If prayer can be regarded as practising medicine and as an immunity, the act allows every person—man, woman, or child—such immunity, and the right to pray for the sick and afflicted, and that is the only way that disease can be treated by prayer. Whether such treatment avails anything or not is not for us to say; but the privilege of practising such treatment or such supplication is granted and allowed to all."

The Scripture abounds with instances which, if accepted, tend to show that prayer in the treatment of disease was deemed efficacious and helpful. In the epistle of James it is said: "Is any sick among you? let him call for the elders of the church; and let them pray over him, anointing him with oil in the name of the Lord." To assume that treatment by prayer is less efficacious or more dangerous or harmful to the subject of the prayer by reason of the fact that the supplicant has failed to devote two hundred and sixty hours to manipulative and mechanical therapy, or has neglected to study elementary bacteriology for a period of sixty hours, does violence to all legal or religious teaching. It is clear that it was the legislative intent to omit from the operation of the statute that class of persons engaged in the healing of the sick by the instrumentality of prayer; and, to our minds, it is likewise clear that a natural, intrinsic, and reasonable ground exists for making the exemption.

We feel that there is little which we can profitably add to the discussion quoted above, but as it is argued that the act is discriminatory because the prohibitory words thereof make it unlawful for any one of those who fall within its description to "diagnose" disease, we will further consider this contention. It is impossible to dissociate diagnosis from the practice of the art of healing by any physical, medical, mechanical, hygienic, or surgical means. It is therefore competent for the legislature to permit only those persons who are proficient and who have been found to be educated up to certain standards to "diagnose" ailments.

The objection that those who profess to treat bodily afflictions by prayer are not required to be proficient in diagnosis and that their exemption, under the law, is the extension of a favor to them which is withheld from others, is met by the obvious answer that diagnosis is no part of such treatment. Those who believe that divine power may be invoked by prayer for the healing of the body, believe also that God is all powerful. Patients receiving their ministrations know this, and therefore no fraud or injury may be practised upon such persons by reason of any lack of skill by the healers in determining the nature of the diseases to be treated. But those who elect to depend upon some other system of treatment have a right to protection by the state from the ministrations of unskilful, uneducated persons. For example, a sufferer from a fever who summons a licensed physician holding himself out to the public as one qualified to treat the sick, is entitled to the services of a doctor who has been taught to discriminate between typhoid and smallpox. In other words, the right to practise medicine should carry with it some assurance to the public that the licensed practitioner possesses reasonable proficiency in the technique of his profession.

[F. Elmo Robinson in *The Oregonian*, Portland, Ore.]

In a brief extract from a sermon which was reported in a recent issue of *The Oregonian*, it would seem that the clergyman was attacking that system of religious thought which denies the reality of sin, sickness, and death; and further, that he was attempting to show that such denial is contrary to Jesus' teachings. As Christian Science is the only system of religious thought since the days of primitive Christianity that denies the reality of sin, sickness, and death, it is quite evident that the reverend gentleman refers to Christian Science, although he avoids mentioning it by name.

Now Christian Scientists have no quarrel with those who differ from them as to the method of overcoming sin and disease. They have no harsh word for clergymen or physicians, nor do they deny to any the right to accept and practise that system which seems to them to offer the greatest promise of relief from physical and moral disorder. "The Christian Scientist," to use the words of Mrs. Eddy (Science and Health, p. 450), "has enlisted to lessen evil, disease, and death." In order to accomplish this important end Christian Scientists are preaching the gospel and healing the sick in the way which, as they have demonstrated to their own satisfaction, is bringing forth the best results. They deplore persistent misrepresentations of their motives, teachings, and practice, not for their own sakes alone, but for the sake of those who may be temporarily misguided by these criticisms.

As an indispensable step toward the understanding of what is meant in Christian Science by the denial of sin, disease, and death, it is important for one to have clearly in mind the sense in which Mrs. Eddy uses the words reality and unreality. That which God has caused, that which God sustains, and hence that which is eternal and indestructible, Mrs. Eddy has designated as real. That which has no origin in God, that which is unsupported by the divine Mind, and therefore is temporary and destructible,—an experience of the carnal or mortal mind,—she has designated as unreal. In Christian Science it is not denied that all the varying phases of human discord seem real to erring mortal sense, neither are these manifestations ignored; but the fact that they are daily being eliminated from human experience by the application of the teachings of Christian Science, proves that they are errors, not facts, which are to be corrected by an understanding of the truth.

Christ Jesus, the greatest physician the world has ever known, healed all manner of sin and disease, and even raised the dead, without recourse to material means. He required no physician's diagnosis and made no physical diagnosis of disease himself. His perfect understanding of the law of God enabled him to destroy the destructible—the unreal. While the Master did not ignore sin, disease, or death as human beliefs, he refused to give them place, power, or reality. He addressed the one sick of the palsy, not as though disease were a fixed condition but rather as though it were an illusion. He said, "Arise, take up thy bed, and go unto thine house." Had the thought of Jesus relative to this man been the same as the thought of those who carried him to the Master for healing, the man could not have been healed. They saw him as a child of the flesh and disease as real. The Master saw man as unfettered by so-called laws of matter, sin, and death. Of the daughter of Jairus, who

Digitized by Google

human sense was dead, Jesus said emphatically, "The maid is not dead, but sleepeth." Furthermore, he indicated unmistakably that his works were to be repeated by all who believed on him; that is, they were to employ the same law which he employed. He said, "He that believeth on me, the works that I do shall he do also."

Hundreds of thousands of not "credulous" but intelligent people throughout the civilized world, who have tried in vain material methods for relief, have turned for help to Christian Science and been healed of organic as well as functional diseases. In other words, these people have chosen to turn for aid to those who are students at the feet of the world's greatest physician.

Our brother refers to the "many incompetent persons" who "enter the field and call themselves 'healers.'" The Master gave the best rule for determining one's competency in any line of religious endeavor. He said, "By their fruits ye shall know them." Competency, then, is to be determined by results alone. The volume of unimpeachable evidence of the efficacy of Christian Science in the treatment of both sin and disease is such as should engage the kindly and thoughtful consideration of all who are striving for the betterment of mankind.

✧

[William C. Kaufman in *Anaconda* (Mont.) *Standard*]

The speaker before the Butte Theosophical Society made a kindly reference to Christian Science. It is necessary, however, to point out the difference between Christian Science and mental science, mind-reading, and the like, which she mistakenly thought were similar. She was of the opinion that Christian Science, like mental science and mind-cure, is the influence of one human mind over another.

Christian Science recognizes but one Mind, and that one infinite and divine, and it regards this divine Mind as God. The term "divine Mind" is intended to express infinite good, the only power, presence, law, cause, and spiritual force which leads mankind away from imperfection to perfection. It holds, as Paul says, that "the carnal mind is enmity against God." For this reason it takes the position that the human or carnal mind is not a healer. Therefore from the standpoint of Christian Science the transference of thought, known as telepathy, is no benefit to the human race. If, however, all mankind expressed that consciousness known as divine Mind, then there would be unity of thought and action, and this would lead men heavenward.

Christian Science teaches that since the source of sickness is in the human mind, it must find a remedy outside of itself. A wholly ignorant mentality cannot teach another mentality equally as ignorant. In like manner the ills of one human mind cannot be cured by another human mind which believes in these ills as real. Only the truth about a lie can destroy a lie, whether it be a lie about sin or about sickness. The truth about God and man, and man's relationship to God, reveals man's perfection.

✧

[H. R. Colborne in *Australian Christian World*, Sydney, Australia]

That which is absolute truth never was in reality new, but it is new to the consciousness of any one when first perceiving the same, just as any mathematical problem, however simple, is new to the consciousness of the schoolboy when first tackling it. Our Master came to "destroy the works of the devil," whom he described as "a liar, and the father of it," and the New Testament is full of accounts of the destruction of sickness, sin, and even death itself. There is no more reason for describing as an illusion the healing effects of Christian Science than there would be for stating that the woman who was healed of an issue of blood, or blind Bartimæus, whose sight was restored, or any of the others who were healed by Jesus and his followers in the first three centuries of the Christian era, suffered from a delusion when health had been established.

The real question to be considered is, Are Christian Scientists healing in accordance with the law of God as Jesus and his apostles did, or are they not? Jesus said, "By their fruits ye shall know them," and this is the standard by which Christian Scientists desire to be judged. Christian Scientists make practical the words of St. Paul, "All things are yours; and ye are Christ's; and Christ is God's," by knowing through experience, to some extent at least, that every good and perfect gift, such as holiness, health, happiness, harmony, peace, and good will, cometh down from God, and that the real man as the child of God, made in His image and likeness, can and does express Him; or to quote from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy (p. 518), "All the varied expressions of God reflect health, holiness, immortality—infinite Life, Truth, and Love."

That some persons seem at present unable to perceive any relation or relevancy between the passages of Scripture and the passages of the Christian Science text-book read at the Christian Science services, does not in any way prove that these are not related or relevant, but that such persons have as regards Christian Science not yet understood its teaching. Tens of thousands of persons in all parts of the world, as a result of their study of the Scriptures and of Mrs. Eddy's writings, particularly the text-book, have attained to a greater spiritual understanding and increased love of the former, and have been healed of all manner of diseases and all manner of sins, and they are constantly ready to testify thereto.

✧

[Thomas E. Boland in *Norristown* (Pa.) *Herald*]

A local evangelist, as reported, is attacking a religion which differs from his own principally in that it teaches and practises the Christian healing so remarkably exemplified by Jesus, while his own does not.

If Christian Science were not actually healing the sick, restoring the diseased, releasing victims of bad habits, replacing misery with happiness, sorrow with joy, and bringing hope to multitudes, no criticism would be heard of it. If this faith simply theorized and used fine rhetoric and was careful not to do anything practical, all would be serene and no fault found. But because Christian Science insists that Jesus really meant for the whole world his declaration to his disciples, "He that believeth on me the works that I do shall he do also," and proceeds to show by deeds that this Christian healing is presently possible, then attack straightway begins.

If religion is to accomplish the salvation of men it must be made practical, something usable day in and day out to meet the problems of life. Jesus used his spiritual knowledge to meet the condition confronting him, whether it was healing a leper or feeding the multitude. When religion is made practical through the correct understanding of God, men will be ready and willing to turn to it and live by it, for they will be able to see that it contains unlimited possibility of good here and now, as well as in the hereafter. Christian Science makes God indeed "a very present help in trouble," and also makes available for present-day need the understanding of God which Jesus so wonderfully used. It is therefore at once apparent that this religion, instead of leading people "away from God," is leading them directly to Him in the most reasonable and natural way.

Editorial

"Our Father"

A WRITER in *The Christian Commonwealth* recently said: "The Lord's Prayer is a social prayer. There is nothing in it that a man can ask for himself alone; every petition is for others as well as himself." The truth of this statement is so patent to all who really study the model prayer our Master gave his followers, saying, "After this manner therefore pray ye," it seems almost unnecessary that attention should be called to it.

It is a fact, however, that to many who from time to time or even daily repeat this prayer, it means nothing more than a personal appeal to Deity in behalf of the supplicant alone, just as extemporaneous prayer in so many instances conveys no other thought than that of personal benefit, asked for or demanded by the one who speaks. To such a petitioner "our daily bread," "our debts," and "our debtors" is just a modest avoidance of the first person singular, like the "we" behind which the editorial writer shelters his individual opinion—it is always the personal equation, the personal problem, that is foremost in his thoughts. This false concept of prayer arises from a false concept of God, a concept which regards Him as personal in an anthropomorphic sense, instead of being, as He is, "infinite *Person*," in the sense in which Mrs. Eddy describes Him on page 116 of Science and Health. God is truly "our Father," tender, loving, wise, and just, but not a kindly, benevolent personage who attends to the petitions addressed to Him just as an earthly parent listens to the child's plea for some favor and grants or refuses it as his supposedly superior wisdom dictates.

It may seem almost a platitude to say that the first requisite of prayer is that men shall understand God aright,—who and what He is; yet this knowledge of God, that knowledge or understanding which Jesus declared is "life eternal" to him that attains it, is something so largely ignored that it needs to be emphasized whenever prayer is thought of. Human sense swings clear of the Scylla of a "personal God" only to ward off from the Charybdis of a vague power which it recognizes as superior but cannot define; a "something" to which it can voice only a blind appeal. To pray to an "unknown God" is to pray to some deity whom men "ignorantly worship;" and this is just as useless today as Paul saw it to be when he said to the people who had gathered on Mars' hill to hear his doctrine, "Ye men of Athens, I perceive that in all things ye are too superstitious."

There is but one God, He that "made the world and all things therein," and on page 465 of Science and Health Mrs. Eddy has defined Him as "incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love." Again, on pages 13, 31, and 64 of the same book, she refers to Him as "the Father of all," thus placing all men in exactly the same relation to Him. This was the teaching of our Master, and in emphasizing this teaching Mrs. Eddy has done much toward restoring Christianity to the simple basis upon which Christ Jesus placed it.

Every prayer in Christian Science is a prayer for the blessing of all mankind. For it to be true prayer it must be addressed, not to a God who is a respecter of persons, who grants favors to one petitioner and not to another, but to God "the Father of all," who has created all men in His own image and likeness. It is a prayer which deals with the truth of being, a prayer by which men lay aside false beliefs of a material creation and realize the protection and infinity of God's creation. Such a prayer as this cannot be a mere appeal for the granting of some transitory or even permanent favor to the petitioner. Its result is that he realizes the infinity of good, is reconciled to God, and shares in all the riches of the divine bounty, the free gift of God to all mankind. By this prayer is accomplished that great transformation which Paul enjoins when he says, "Be not conformed to this world: but be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God."

Not the Lord's Prayer alone is social, in the sense which the writer in the *Commonwealth* uses this term, but all true prayer is in the same sense social, because all true prayer unveils the brotherhood of man and establishes the kingdom of God in the hearts of men. It must eventually, as Christian Science teaches (Manual, p. 41), "enrich the affections of all mankind, and govern them."

ARCHIBALD MCLELLAN.

Catching the Thief Procrastination

WITHIN the word "procrastination" hides another, which pretends to be insignificant because it is so small, but actually is a thief that needs to be caught, for the good of men and nations. This little Latin word is *cras*, meaning tomorrow. Procrastination, therefore, uncovers that familiar and deplorable human tendency to put off until tomorrow what had better be done today. The most expeditious manner of catching the thief "tomorrow" is to set the word "today" upon its heels; *i. e.*, to convert tomorrow, whether it will or no, into today, into the eternal now. This conversion is no more important in the general affairs of men than it is in religious life. Prevalent theology is full of procrastination and postponement, but the apostle declares, "Behold, now is the accepted time; behold, now is the day of salvation."

Commenting on this in Science and Health (p. 39) Mrs. Eddy writes, "Not that now men must prepare for a future-world salvation, or safety, but that now is the time in which to experience that salvation in spirit and in life." Now is the time to distinguish between good and evil, and so to relegate the latter to the realm of the unreal. Now is the time to correct that bad habit, to heal that chronic disease, to stand up for the Christ, Truth, to establish a willingness to take the human footsteps leading to divine heights. Procrastinated salvation argues a postponed heaven. If healing and regeneration must wait on heaven, and that heaven is a locality, then death and dissolution must precede salvation, and those who believe themselves alive are estopped from harmony. How different from this doctrine of despair are the teaching and practice of Christian Science, in which there is no doctrinal procrastination or postponement of good things, but on the contrary an ever-ready and ever-present hospitality to the divine bounty which brings its priceless treasure into human experience today.

On page 19 of her published sermon, "Christian Healing," Mrs. Eddy writes: "Tireless Being, patient of man's procrastination, affords him fresh opportunities every hour; but if Science makes a more spiritual demand, bidding man go up higher, he is impatient, perhaps, or doubts the feasibility of the demand." A little sincere self-examination would doubtless uncover the lurking error of procrastination in most of us. It is sad to notice the extraordinary ingenuity which can be exercised to invent excuses in the face of a divine demand, and the startling shifts to which mankind can be put in arguing the utter impracticability of certain imperative calls, obedience to which is altogether inevitable and sure to bless.

An historic instance of attempted procrastination is offered by Moses, when his highest perception of good urged him to deliver the children of Israel from the land of Egy

Digitized by Google

The dialogue between the divine mentor and the human procrastinator in Moses' consciousness is set forth with considerable elaborateness, and certainly for the guidance of the untold multitudes who find their daily food in the Scriptures. First there was the familiar objection, "Who am I, that I should go unto Pharaoh;" then the excuse that the children of Israel might ask for the name of the divine sender; then the doubt was expressed whether the Israelites would consider Moses properly accredited; then the self-depreciating statement about being "slow of speech, and of a slow tongue." At length, however, the divine mentor overcame procrastination with the weapon of the everlasting now, and Moses obeyed God. Pharaoh's own experience in procrastination, when called upon to let go the children of Israel, should stand as a tragic warning to all mankind.

Jesus said to his disciples on one occasion, "Say not ye, There are yet four months, and then cometh harvest? behold, I say unto you, Lift up your eyes, and look on the fields; for they are white already to harvest." Thus the Master opposed the word "already" to the concept of a suppositious future. In like manner Christian Science offers in place of the prevalent tomorrow of procrastination a today of salvation and heavenly harmony.

WILLIAM D. MCCRACKAN.

Gratitude and Gladness

WE are often reminded that the right of all men to "the pursuit of happiness" is claimed in the American Declaration of Independence. Happiness itself, however, cannot be secured by any legal means, and the failure to realize this blessing shows that it must be sought otherwise. There is unfortunately a prevailing fiction that happiness is very elusive, and that mankind seldom get beyond its pursuit; but even this affords a stimulus to human effort of which it were a mistake to lose sight. We should indeed never abandon the pursuit of happiness until the radiant reality of the divine ideal is attained, for our heavenly Father assuredly means that His every child shall possess it. The word happiness does not occur in the Bible, but gladness, which expresses the same idea, is to be found very often. On page 57 of Science and Health Mrs. Eddy tells us that "happiness is spiritual, born of Truth and Love." This being admitted, we shall never find what all desire, if we seek it through materiality.

It is too seldom seen that gladness and gratitude are very closely related, so much so, indeed, that we cannot retain the one without the other. The student of Christian Science has started on a voyage of discovery, on which are revealed in numberless ways how good God is and always has been to him. Past, present, and future contribute to awakened spiritual perception their quota of good, and at each discovery we should reverentially pause to give thanks for the good which God bestows, but to which we were oblivious until in our search for happiness we found a never appreciated divine gift. Then comes a flood of light which renders fresh discoveries possible. At every step of the way it is true that with more gratitude there is more light, and with the light more gladness. The psalmist says, "At midnight I will rise to give thanks unto thee." In so doing he makes a discovery and declares that God's law "is better . . . than thousands of gold and silver." Who indeed would exchange happiness for all the riches of earth?

Christ Jesus never forgot to give thanks, whatever the occasion might seem to human sense. He did so when he fed the thousands in the wilderness, and no less did he the same at the last sad supper with his disciples. Paul did likewise in the presence of crew and passengers when the wreck of their ship seemed inevitable. The effect of his thanksgiving was that all were "of good cheer," and although the ship was doomed not a man was lost. The abiding gladness, the deep joy of this great Christian hero, must have been contagious, and in proof of its spiritual origin we find it expressed at once in healing work. As gratitude begets more gratitude, the people of Melita knew no bounds to theirs for the Christ-healing, and its outward manifestation extended both to Paul and his companions.

Luke tells us that when the aged prophetess Anna saw the child Jesus brought into the temple, she "gave thanks," recognizing at once the divine idea. We also read that she spoke of him to all in Jerusalem who "looked for redemption,"—for freedom from sin, disease, and death. This truly foreshadowed the experiences of those who today see through Christian Science the eternal Christ and give thanks, as well they may, when they exchange sickness and sadness for the "oil of gladness." In the twenty-ninth chapter of II Chronicles we read that in the first year of his reign King Hezekiah "opened the doors of the house of the Lord," and commanded the Levites to "carry forth the filthiness out of the holy place." When this was done and the sacrifices offered, we read that the people "sang praises with gladness."

Again and again are we bidden in the Bible to be glad, and if any are in doubt as to how this command may be obeyed, Christian Science furnishes the answer, and it is this: Be grateful. Our revered Leader asks (Science and Health, p. 3), "Are we really grateful for the good already received?" Then she adds, "We shall avail ourselves of the blessings we have, and thus be fitted to receive more." Thus we shall have perpetual joy and gladness.

ANNIE M. KNOTT.

Board of Education

Members of The Mother Church who are eligible for admission to the next Normal class of the Board of Education and who wish to be considered for it, may obtain a blank form of application by addressing the Christian Science Board of Education, Falmouth and St. Paul Streets, Boston, Mass. The requirements for admission are stated in Article XXIX, Section 2, or Article XXX, Sections 6 and 8, of the Church Manual.

Only those applications will be considered which have been received since Dec. 1, 1913, together with applications which may be filed before the next class is selected. This selection is necessarily made some time before the class meets in December, so that ample notice may be given to the persons chosen. It is requested that all applications be filed before Oct. 1, 1916. Normal classes are held only for the purpose of providing authorized teachers of Christian Science.

✧

Gratitude for Relief

The following translation of a letter, dated June 2, from a beneficiary of the war relief fund contributed by Christian Scientists in the United States, is typical of the many expressions of gratitude received by the distributing committees:—

"I have just received your letter, as well as the gift of two hundred and fifty francs which the Paris committee of The First Church of Christ, Scientist, in Boston, has so kindly put at my disposal. I will not tarry one moment to ask you to kindly be the interpreter between me and those for whom my children, my wife, and myself shall preserve from this day on a deep feeling of gratitude.

"The fact that without knowing us, simply on ground of our apparent need, caused by this war, you came to our rescue, has given us not only the material aid, but also a

Digitized by Google

meral uplift which is perhaps more precious than the former, for it gave us the proof that one never needs to despair; that God sees us and helps us on our paths, however hard they may seem to be.

"I hardly know how to thank you, and also wish to thank Mr. and Mrs. ——, who have been so kind to my wife on the occasion of her two visits, so that this reception alone was a great help. I would also ask you to transmit to our committee in Paris, and to The Mother Church in Boston, the expression of our deep gratitude."

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services (during July and August): 10:45 a.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston Street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk Streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon Street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

INDIANAPOLIS, IND.—Announcement is made of the final organization of Third Church of Christ, Scientist. This completes a movement which began about a year and a half ago, or some six months after Second Church occupied its new home at Delaware and Twelfth Streets. This building was designed to meet a need far in excess of that manifest at the time, yet congestion developed and it soon became necessary to make arrangements for the overflow. For months at the Wednesday evening and Sunday morning services the large auditorium of Second Church has been insufficient to accommodate the congregation.

At a meeting of the members of Second Church a few months ago, the situation was discussed and initiative left with the individual groups. Petitions for withdrawal were presented from four or five parts of the city, but that from the "north side," or from the territory east of Senate Avenue and north of Twenty-fifth Street, was accepted. Accordingly, between one hundred and fifty and two hundred members living in the territory designated, withdrew and formed the nucleus of Third Church.—*Indianapolis News.*

✧ ✧ ✧

The Lectures

Chicago, Ill.

John W. Doorly delivered three lectures on Christian Science for Fifth Church of Christ, Scientist. Oscar J. Duke, first reader, in introducing him at one of these said:—

On page 10 of her book "No and Yes" Mrs. Eddy says, "The two largest words in the vocabulary of thought are 'Christian' and 'Science.'" These words are ordinarily used in the sense of a title only, without much thought as to their real significance; but inasmuch as we are about to give thought to this subject, it is interesting to note how they are defined in the dictionary. The word Christian is defined briefly as "pertaining to Christ or his religion," and the word science as "comprehensive, profound, or philosophical knowledge, classified and made available in work, life, or the search for truth." Combining the two we have this authoritative definition of Christian Science: Comprehensive, profound, or philosophical knowledge pertaining to Christ or his religion, classified and made available in work, life, or the search for truth.

When John the Baptist sent two of his disciples to Jesus with the query, "Art thou he that should come?" he answered, "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them." In like manner does Christian Science answer the question, "Is the definition given true?" by pointing to works which are being done in every land today through its healing power. Any inquirer may prove for himself, by study of the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, that Christian Science does heal the sick, and that it is indeed available in work, in life, and in the search for Truth.

✧

Sacramento, Cal.

George Shaw Cook lectured on Christian Science in the Tuesday Club House. He was introduced by Mrs. Clara F. L. Breuner, who said in part:—

There are undoubtedly among us many who at some time in their lives have earnestly yearned for the presence of Jesus of Nazareth, believing that such presence might be the means of relieving them of many ills. There are also those who have thought, and many who yet believe, that the so-called miracles of his time are present-day impossibilities. Imagine then the joy of those entering upon the study of Christian Science when they find that the truth taught by Christ Jesus nearly twenty centuries ago is as vital today as then; that it is as practical and applicable now in all walks of life and under all circumstances, if the student will only obediently follow the teachings set forth in "Science and Health with Key to the Scriptures" by Mrs. Eddy. There are many who, storm-tossed and tempest-driven, with hope gone, have grasped at Christian Science, and have found therein renewed hope, new life and strength to cope with the world and its problems; and so marvelous has been the healing of thought and body as almost to border on the miraculous.

Correspondence.

✧

Salt Lake City, Utah

The tenets of the Christian Science faith were expounded by Virgil O. Strickler in a lecture delivered at the Salt Lake Theater. Every seat was taken and a number of persons had to stand throughout the entire lecture. The lecturer was introduced by W. A. Overbeck, first reader of First Church of Christ, Scientist, who said:—

Many of you are here, no doubt, in response to a desire to learn something about truth in so far as it concerns man's relation to God. It must be a fact that the truth about everything exists, and since it does exist it must be ascertainable. Because the truth about the multiplication table exists it is ascertainable; when ascertained it can be understood, and when understood, proved. It necessarily follows that if this is true about the multiplication table it must be true of everything, and consequently it is true of God and of man's relation to Him.

We learn through the study of Christian Science that the truth about God does exist, and because it exists it is ascertainable, and when ascertained it is capable of being understood and demonstrated. We also learn through this study

Digitized by Google

who, what, and where God is. This is a question that comes to each and every person at some time or other, and it must be answered by each and every one of us if we are to enter into the kingdom of heaven, which, Christ Jesus declares, is within us.—*The Salt Lake Herald-Republican.*

New York, N. Y.

The introductory remarks of Warren C. Klein to the lecture on Christian Science given by Prof. Hermann S. Hering at Third Church of Christ, Scientist, were as follows:—

It is undeniable that every one of us has some desire for the good and the true. It was this same desire for the good and the true that led Mrs. Eddy to discover Christian Science in the year 1866. Christ Jesus, the master healer and the Wayshower, had proved centuries before that right desire, or prayer, coupled with the spiritual understanding of God, Life, Truth, and Love, was powerful, and could heal the sick, regenerate the sinful, and raise the dead. He taught his disciples to heal and to save in a general way, but he left no definite rule for the accomplishment of these works. It remained for Mrs. Eddy to discover and state the Principle and rule of divine healing in Christian Science, and reduce them to human apprehension.

Many people ask, "Why did Mrs. Eddy discover Christian Science? Why did not some one else discover it?" There is only one answer to that question, and it is simply that God chose the one who was best prepared to do so. Why did Columbus discover America? Why did Sir Isaac Newton discover the law of gravitation? Simply because these were the men who were ready. The man or woman who is ready is the man or woman who is called to make great discoveries. Mrs. Eddy was the one in our time who was spiritually ready for the message of Christian Science. Therefore she was the one who was called to discover it.—*Correspondence.*

Sanford, Maine

In introducing Bliss Knapp, who lectured in the Town Hall on Christian Science, Vincent W. Canham, former editor of the *Sanford News*, said in part:—

About two years ago I began the study of Christian Science. I studied the people in the society here, and in the beautiful new church in Portland I saw many substantial business men and women; again in Gardiner and Lewiston I saw the same,—honest, upright business men and women, faithful adherents to this new-old religion, living in their daily lives the teachings of Jesus. I decided that there was something for me in Christian Science, and have found it. I am frank to confess that after years spent in church work I failed to find a practical religion; failed to find the convincing satisfaction that has since been found in Christian Science. You are well able to judge for yourselves, without any words of mine, the merits of this new-old religion, for its followers may be known by their fruits.

Using Christian brotherliness in your investigation, remember as I did the words of Gamaliel, spoken nineteen hundred years ago, when he with other Pharisees and Sadducees criticized the same religion that is today called Christian Science, and said: "If this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God." I used to wonder, and do now, why I was told that the religion of Jesus was not a practical religion for today; that sin could be healed but not sickness. I fail to find in Jesus' teachings any authority for this, but I do find that his followers were to continue his works of healing sin and disease, and that is what is being done today in Christian Science.

In honesty I must confess to have found that Christian Scientists do rather more practising than preaching, and this is certainly commendable. My investigations have shown me that they live up to their belief. They live daily according to their "Rule for Motives and Acts" found in their Church Manual (Art. VIII, Sect. 1), which says: "A Christian Scientist reflects the sweet amenities of Love, . . . in true brotherliness, charitableness, and forgiveness. The members of this Church should daily watch and pray to be delivered from all evil, from prophesying, judging, condemning, counseling, influencing or being influenced erroneously." The last tenet of The Mother Church, found on page 497 of Science and Health, says: "We solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure." Surely living up to such a code of religion as this must make better men and women, and the influence of such a religion can bring only good in any community.—*Correspondence.*

Testimonies of Healing

In the spring of 1907 I was first told of Christian Science and advised to read Science and Health. I at once felt it would be wonderful and beautiful to be healed by God, but while never doubting that others were healed, I was sure I was not good enough for God to help me.

In the early summer I was taken with a high fever; our family physician was called, and I was removed to the hospital, as I needed constant attention day and night. I took the medicine he prescribed and was under his entire charge, but the only thing that really quieted me in my ceaseless tossing was this line from the twenty-third psalm: "The Lord is my shepherd." After this illness I struggled along all summer, having terrible attacks with my stomach as well as other difficulties, and the suffering was intense at such times. Medicine had no effect whatever, and the physician said I might pass on during one of these attacks.

In the fall one of the friends who had told us of Christian Science, and who had been a physician, saw my need of this healing truth and gave me a copy of "Retrospection and Introspection" by Mrs. Eddy. Afterward I bought a copy of the text-book, "Science and Health with Key to the Scriptures," and began to read it. I did not expect physical healing, but felt that if there was anything in the book to help me to be better it was my privilege to have it. To test this new method of healing I left off taking medicine, and since then, the fall of 1907, have never taken any or felt the need of it, for Christian Science has solved every problem more quickly and efficaciously than any other means had ever done. Through the study of Science and Health, together with the Bible as it has been illumined through this book, becoming a veritable "Book of Life" to me, I have been healed of chronic stomach trouble, supposed to be hereditary, and of inflammation of the bladder, from which I suffered for at least ten years, often for months never having a free day.

Many people had told me I would never be well. When there seemed nothing else left to do, I was sent to Battle Creek by a physician, for I was on the verge of a nervous breakdown from years of sickness and suffering. At the sanitarium I was sent to the surgical ward for treatment, and the nurse who attended me said nothing could cure me. After five or six weeks I came home somewhat improved in appearance, but suffering just the same and very much discouraged. I can remember only one return of the bladder trouble since my healing through the reading of Science and Health, and that was about four years ago, a short time before the birth of our son. This was relieved in an hour or less through the work of a practitioner. A chronic throat affection also disappeared.

One of the greatest blessings to come with restored health is our boy, who came to us after eighteen years of waiting. God's protecting care during this experience was very beautiful to me. While my family and friends and physicians feared the outcome, I came through splendidly, with a heart full of gratitude to God. The boy has always been strong and well, and has never had medicine, although when he was about two weeks old our former family physician, the one who had attended me at the birth, in his kind solicitude told my husband the baby had jaundice and should have medicine. My husband thanked him, and on reaching home telephoned the practitioner. The next day the nurse was surprised at the baby's improved condition.

I could enumerate many experiences which have proven to me beyond question that God is "a very present help in trouble." For all the physical healings I am thankful to God, and grateful to our revered Leader, who has given to this age a working basis for proving God's promises. I am also thankful for the privilege of class instruction. Through a recent sad experience, when a loved one passed on, the teaching of Christian Science helped me to see the light of God's presence still shining, even in the darkest hour, and to know that "Life is God and God is All," and that "man cannot be separated for an instant from God" (Science and Health, pp. 366, 306).

We know that Jesus' words must be true: "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Far more to me than the physical healing is the spiritual understanding, and the teaching that God is Love and man is His image and likeness. In this way only can we learn truly to love God and our fellow man. I give this testimony earnestly hoping it may help some weary pilgrim, as I have often been helped and encouraged by the testimonies of others.

BEULAH B. GUENTHER, Owensboro, Ky.

✧

[Translated from the French]

Last year, after a medical examination at school, my little boy was declared deaf in one ear, and the physicians pointed out the necessity of taking him to a specialist. I did so, though without the child being benefited. It was then that I was led to Christian Science, whereupon my child was healed with a few treatments.

I experienced a beautiful demonstration of the power of divine Love in the case of my eldest son, when he fell from a tree last year in the mountains. The accident occurred in the afternoon, and it was utterly impossible for him to walk, as his ankle was very much swollen, so we had to carry him home, where I at once called up a Christian Science practitioner who had helped us faithfully on previous occasions. There was great excitement around us, and every one advised a different remedy. As for me, I looked for help elsewhere and trusted the knowledge that there are no accidents with God's children, and that He is our great Physician. My boy spent a very quiet night, and by the next morning there was not the slightest trace of the swelling, and he was able to go to school without assistance. From then on conditions were harmonious.

Both these cases of healing, as well as innumerable demonstrations of all kinds, are to us proofs of the love of our Father-Mother God, the ever-present help. Praise be unto God, and thanks to our beloved Leader, Mrs. Eddy, for having revealed this great truth! Thanks also to the devoted workers who consecrate their lives to this beautiful and glorious cause. How comforting it is to know that God is Love!—MADAME PH. COQUILLOT, Geneva, Switzerland.

✧

This testimony is given in deep gratitude for the proof of the power of Truth as revealed in Christian Science. I was born with a peculiar repulsion to food; it would be impossible to describe what I suffered in this way. I was ravenously hungry, yet the odor of food only added to the suffering, as an attempt to eat would produce a feeling of nausea which would prevent my doing so. I gave up my position in the middle of December, 1914, owing to a physical breakdown, and asked for help in Christian Science. Thirteen days later I suddenly realized that I was free, and from that hour I have been able to eat heartily of everything set before me without experiencing any trouble, and that after practicing a lifetime of fasting.

I took up the study of Christian Science in August, 1907, and since then have experienced the instantaneous healing

Digitized by Google

a sprained wrist and a badly scalded leg. Besides this, glasses have been laid aside. All these proofs encouraged me to hold on. Before my healing I could hardly walk, but now I can skate, as well as play baseball and tennis. Can any one wonder that I am thankful to God, and grateful to Mrs. Eddy for her discovery, which has made the healing power of divine Love, as taught by Christ Jesus, available now as it was when that other boy who was lame from his birth was released over nineteen hundred years ago? I can recommend Christian Science as a cure for every human ill.

WILL S. STEBBINS, Houghton, Mich.

✧

I can no longer withhold my testimony of what Christian Science has been to me for the last seven years. I became interested in it through the ministrations of two aunts, who brought me the truth when I was in sore need, as I had been forced to give up a position on account of weakness caused by constant standing. At the same time I was passing through a trying mental trouble, so that seemingly I had no interest or desire to live; I was morbid with self-pity, self-condemnation, self-love, and my aunts had to display much patience. Finally Truth reached the condition and healed me, bringing peace and hope and joy again. Physically I was healed completely, so that I was able to return to my work and stand sometimes fourteen hours continuously without ill effects. As the truth dawned upon my consciousness, material affairs gradually shaped themselves harmoniously, and I have since seen Christian Science successfully applied to every kind of problem. Recently under Science treatment I passed through a most trying period with little discomfort. My baby was beautifully healed of infant colic in one treatment. Best of all, the old belief of morbid self-condemnation and self-pity has been replaced by the knowledge that there is no condemnation to those who love God.

I am deeply thankful for Christian Science, and that the light of Love is transforming the darkness of mortal belief as fast as what I learn of God as Mind is put into practice.

FLORA THOMAS FULTON, Meeker, Col.

✧

One of the joys following obedience to divine Principle is found to be a state of thought prepared to meet greater demands on one's faith, capacity, and love, which after all resolve into greater proofs of God's care. An experience over a year ago marked plainly the value of being prepared to take the next step. A party of us were crossing the English Channel in the usual small ship. As I had never become convinced of being a wholly reliable sailor, the evidence of the turmoil of the sea that day insisted that I rise quickly above the fear of seasickness. The need of caring for a child and her governess (both of whom seemed to have succumbed to the disturbance) urged me to greater effort, and my faith rose to a higher understanding, for during this passage the tendency to seasickness was overcome.

Several months after this the same child and myself returned to the United States. This time I had the entire charge of her, and I knew we must depend more than ever on Principle and not on personality for protection, guidance, and strength. The sea was very rough, but on this occasion we were fully prepared, for we had held to the truth as best we knew how during the previous experience, and we remained free from seasickness, passing the time on shipboard normally. The illustration remains pertinent as to the value of taking the next step—of being keen and alert, dissipating through our understanding of God's unquestioned, unfailing presence and power the evidence of the limiting senses, whenever and however presented.

For many years I have had the great privilege of knowing Christian Science to be an ever-available and prompt aid in correcting the mistakes that may occur in our daily existence. In the healing of sickness and grief I have had many proofs of this. When physical weakness once seemed to be a necessary result of illness, the marvelous strength of Christian Science sustained me, and capacity greater than ever replaced the weakness.

Best of all, as we conquer our own misgivings and mistakes through knowing that good is the only power right here and now, we learn that we are helping to correct the mistaken universal belief that mental, moral, or physical discords are real. This is the splendid inspiration to work that Christian Science brings to each earnest inquirer and exponent.

FLORENCE F. WHEELER, Santa Barbara, Cal.

✧

[Translated from the German]

On Aug. 8, 1914, I joined a Bavarian cavalry regiment as a volunteer, and thirteen days later sustained a fracture of the left upper arm and of a bone in the shoulder. Being a soldier, I had to go to a military hospital and have medical treatment. Word was sent from home that I should submit to it, though not with the thought that I would be healed thereby, but should maintain a Christianly scientific attitude of mind, as the case had been put into the hands of a Christian Science practitioner. Two weeks later I became aware that I could move my arm inside the plaster cast, which had become slightly loosened.

On Sept. 9 the nurse upon my request asked the chief surgeon when the bandage could be removed, and he said not for quite a while. The attending head physician said that if it was removed a new one would have to be applied, and that I might as well keep the first, as it fitted properly. On Sept. 17 the bandage was taken off and I was able to move my arm, though not with absolute freedom. Two days later the physician informed me that I would have to stay one more week at the military hospital, and after dismissal would require further treatment at the barracks under the instructions of the physician of our company. However, as room was needed I was dismissed in three days. Then the physician said that the arm must be massaged every morning, but as this was not insisted upon I did not take the treatment. After a short time normal strength returned, and I was able to use the arm with absolute freedom.

By way of contrast to a former fracture of my arm, when Christian Science was not resorted to, I would like to mention the following points: In this latter experience I clearly felt after the first two weeks that the arm was healed; after the bandage was removed no orthopedic exercises for the prevention of stiffness and the acquiring of perfect freedom of motion were required, as were resorted to for weeks in the former case; and while there were two fractures, the injury thus being more serious than in the first experience, the healing process was of shorter duration.

EHRHART HUSSONG, Berlin, Germany.

✧

Ever since an inspiring demonstration which occurred some time ago I have been eager to express my gratitude for Christian Science. I was connected with a stock company, so that I had very little leisure, my time being absorbed in studying, rehearsing, and playing. For one or two days I was conscious of a painful sensation near my mouth, but I contented myself with trying to realize the truth and paid no further attention to the pain. However, on the third day an abscess developed, so I called up a Christian Science practitioner and asked for absent treatment. She said she would work for me

Digitized by Google

at once, but I was to do my share by realizing that as God made only good there was no place for error, and that it was necessary for me to assert my dominion over it.

The other members of the company were full of sympathy and most solicitous, constantly inquiring if there was much pain. They said that my make-up would get into the wound and poison it when the abscess broke, but I remembered God's power and felt no fear. The next morning the swelling was larger than ever and I was suffering great pain. A relative asked me if I would not allow a doctor to lance it, but I said no, for I was putting my faith in God and not in a doctor. Perhaps this test was just what was needed, for ten minutes later the abscess broke on the inside of my mouth, and the swelling began to recede immediately.

My mouth was exceedingly tender where the wound was, so that it hurt me to eat, and when I called up the practitioner to tell her of my gratitude I said I could eat nothing which had to be chewed. She asked why, and when I explained she told me something that I shall always remember: "Whenever error tells you to do a certain thing, do the opposite and rob it of its power." For luncheon I ate steak and chewed it on that side of the mouth, even though it hurt a little; but after that the wound closed entirely and left me without a scar. This surprised every one who had no knowledge of the great power of divine Love. Christian Science has been a great help to me many times in my profession. I am indeed grateful for all its blessings, and for all the goodness of Mrs. Eddy.

Dorothy Foster, Mount Vernon, N. Y.

✧

A number of years ago I became interested in Christian Science through the healing of a friend. I at once went with her to a practitioner's home to ask for treatment, as I had the same physical complaint, although it had never affected my health to any extent. I went rather to investigate something new. In four treatments the condition was overcome for the time; but it returned, as I was not ready to study and apply the little understanding I had gained. When I look back and see how disobedient I was in those days in not applying the truth, I see why my progress has been so slow and know that all that time I might have been as happy and free from fear and worry then as I have during the past few years.

My demonstrations have been over wrong mental conditions rather than over physical difficulties,—over fear and indecision; over a sense of worry and discouragement in my work in the schoolroom, which had become such a burden that it could not have been endured but for what I had learned through Christian Science. I should like to tell of one demonstration, every step of which was so clear that I could not doubt the ever-presence of the divine Mind. I needed a certain sum of money, and was saving toward it. One evening I remarked to my sister that I had enough for my purpose, when like a flash came the thought as to whether a certain bill had been paid. Investigation showed it had not, and so most of the money had to go for this purpose. I managed to save enough money again, but when school closed I did not see my way clear to live for two months without anything coming in; yet I trusted and would not hold a thought of borrowing.

Later in the same month, however, it seemed to me that unless some money came in the next few days I could not go on without borrowing, but that very afternoon I was notified that in a contest for the naming of a new subdivision in the adjoining suburb I had been awarded the second prize, fifty dollars in gold. This experience was told to some friends interested in Christian Science, and one of them called one day when I happened to be away from home. Before she left she put fifty dollars into my sister's hand, saying, "Take this to help you out." Of course we repaid the money to this friend as soon as we could, but her act, which indeed proved the worth of true friendship, was more appreciated than any offering of money could be, and we have never ceased to feel grateful.

I have so much for which to be thankful, so much in my every-day life to make me happy, so many dear and kind friends, that it makes me ashamed to think I am ever disheartened or disinclined to be mentally alert to the errors to be overcome. I can truly say that without the understanding I have gained of Christian Science, life would be little worth while.—Evelyn M. Loucks, Oak Park, Ill.

✧

It is nearly five years since I found this wonderful truth which has made me free. Medical doctors had said that nothing more could be done for me, as I had three incurable diseases,—diabetes, Bright's disease, and chronic bowel trouble. How I rejoice that they were mistaken. Through the revelation of divine Love, the truth that Jesus proclaimed would make free, I have been healed. When Christian Science came to my rescue, I was a confirmed invalid, an old man, partially bent and drawn over by disease, hobbling along by the aid of a cane. When first reaching the home of the Christian Science practitioner I was so racked with pain that I could not talk until after I had been seated some time. Then I managed to make my troubles known. Today I am one of the happiest of men, and thankful for the great blessings which have been wrought through the teachings and demonstrations of Christian Science. I was a complete slave to drugs for years, always taking medicine; now I depend wholly on God, infinite divine Love, for my health and happiness. All thanks be to God, and gratitude to our revered Leader, Mrs. Eddy.—Edgar Love, Tucson, Ariz.

✧

In August, 1912, a cousin who had become a student of Christian Science the previous year, offered to treat me for a structural defect of the eye and a slight squint, from which I had suffered for about twelve years and for which a specialist had told me I would be obliged to wear glasses all my life. I gladly accepted the offer, without however thinking much about the matter beyond feeling that it would be very nice to leave off wearing glasses which only partially met my needs, although I had had most careful attention from two London specialists and from others.

Very soon after my cousin began treatment I found that I could do better without the glasses than with them; and though the final healing is not yet absolutely apparent, my sight is much improved. I never wear glasses of any sort and am much more comfortable than I ever was with them. My eyes used to ache almost incessantly, but that difficulty is entirely overcome. For a time after treatment I wore glasses when reading small print, but my sight has improved since I threw them away.

I have not taken any material remedy for over three years. A very clear demonstration was given us over the apparent lack of supply. In 1914 an aunt who makes a quarterly addition to our income had forgotten to send us the usual September check, and we did not like to ask for it. We waited until Nov. 20, and then as we were greatly in need of money I went to a Christian Science practitioner, who enabled me to escape from my sense of fear and showed me that as God's child I cannot lack any good thing. I went home much comforted, and found that in my absence a friend

Digitized by Google

had sent us her usual Christmas present early and in the form of a liberal check. Then two days later my aunt wrote to say that on the evening of the very day on which I had been to the practitioner she had been making up her accounts and had found that our check had been forgotten. She enclosed it, and told me not to hesitate to remind her should she ever forget it again.

I have had other proofs of the allness of divine Love since taking up the study of Christian Science, and the great kindness of Scientists in helping me on my way has touched me very much. Some of my problems have worked out quickly, while others have seemed to take a long time; but it is everything to know that the solution of apparent difficulties is always at hand, even though through lack of understanding one cannot always make the demonstration so quickly as might be wished. Through the loving-kindness of friends the *Sentinel* has been sent to me for two years, and I am very thankful not only for this but for the fact that I have been able to pay this year's subscription myself. We prize the *Sentinel* and the *Journal* very much, and are most grateful for the lectures that we have been able to attend.

I send this testimony in gratitude for all that Christian Science has done for me, and because I would like, if I can, to help others on their way to that Life which is God, good.

BEATRICE BIDDLE, Wimbledon S.W., England.

✧

It is with love to God and gratitude to our dear Leader, Mrs. Eddy, that I give my testimony of mental surgery. When quite a young girl I sprained an ankle badly. The surgeon said it was worse than a broken bone, and it was several weeks before I had the use of the foot. A few years later I sprained the same ankle again, and was confined to the house for several weeks. Some years after that the ankle was broken, and the surgeon attending me said it would be a year before I could walk on that foot, as the ankle had become very weak, and that I would always have to wear a high shoe and be very careful.

In the course of time I was persuaded to try Christian Science, as I was blind; and not only were my eyes perfectly healed, but the ankle also became strong and well. After several years in Christian Science, however, the ankle was again broken; but immediately springing to my feet I repeated over and over from Science and Health (p. 402) the statement, "In Science, no breakage nor dislocation can really occur," and I said to a friend who was with me that as I had had such sad experiences in *materia medica* with this ankle, I should now trust to God alone. I treated myself, as we are taught in Christian Science, realizing the allness of God and the nothingness of matter. That night the foot turned black and was very painful, but the bone which was protruding from the side went back to its place.

I used the ankle from the first, though not without limping considerably, depending upon the truth taught in Science and Health on the page referred to, "The material body manifests only what mortal mind believes, whether it be a broken bone, disease, or sin." I realized that as God's idea I could not have a broken bone, and on the fourth day walked a long distance and climbed a flight of stairs. The bone was not set by a surgeon, nor did I at any time consult with one, yet in four days was accomplished what a surgeon had declared on a previous occasion would take a year. That was nine years ago, and the ankle has remained strong and well ever since.

I can never express enough gratitude for all Christian Science has brought into my life.

FANNY CARSTARPHEN BRADY, Los Angeles, Cal.

From Our Exchanges

[*The Methodist Times*]

The gift of the Holy Spirit on the day of Pentecost is the supreme event in the history of the church. In that gift the work of Christ finds its spiritual culmination. By it the church was constituted. Its spiritual inheritance was conveyed to it, and the lines of its advance were clearly marked out. Through the gift of the Spirit the church as a whole entered into the conscious enjoyment of the new relationship to God in Christ Jesus. This new consciousness brought its possessors into a state of permanent spiritual uplifting and enlargement, affecting alike the mind, the affections, and the will through the reenforcement of sanctified personality.

The gift was corporate, conferred on the whole body of the church; it was also personal, as coming to individual believers who through the divine gift were made members one of another. Unhappily these two qualities of the gift—its social and its personal nature—have seldom been seen in their true relationship to one another. From this failure has sprung the greater part of the mistakes, the lapses, and the confusion of subsequent church history. The time seems to be approaching when the fuller recognition both of the social and of the personal meaning of the gift of the Holy Spirit may lead to the reconciliation of many differences and to the promotion of the real unity of Christ's church.

[*The Jewish Chronicle*]

Some of us, as we read those charming stories that have come down to us from the distant past, from what has been beautifully called "the childhood of the world," in which angels appear in human form and talk face to face with some highly favored individual, may wonder why we have no such experiences, and may be inclined to think these days of ours sadly deficient in tokens of divine interest in us and divine aid furnished us. Yet if we but reflect for a moment we shall convince ourselves that this is not the case. Our angel visitants are really innumerable, and they come to us every day, every hour, and they come to every one of us.

In those Biblical narratives angels are represented to us as only coming at rare intervals, on some very exceptional occasions, and at best only to some highly favored person. And even that highly favored person is not always aware that his visitor is an angel of the Lord; nay, is hardly ever aware of it until he has gone, or is disappearing from his gaze. Too many of us are only too like them in this particular; nay, are worse than they, and do not recognize at all the divine messengers that come to us, that God sends us at every moment of our lives, and pay no heed to their message. May this not be said with perfect truth of most of us? How few of us think that the heavens and the earth, the beneficent ministry of the sun, the glory of the moon, the splendor of the stars, the joy of summer and of winter, the opening beauty of the spring, the golden fulness of autumn, have all for us some divine message, are all angels of the Lord, bringing to us some revelation of Him, some glad tidings of His love for us, His care over us, His will with us!

[J. G. Beaumont in *The Christian Commonwealth*]

We do not need great opinions, but great principles, if life is to be filled with music. The sunbeams in the "merrie month of May" kiss the petals of the little primrose into beauty with the same subtle potency with which they call to the oaks and beeches to unfold their glories. The great spring song of life may be heard by the simple no less than by the wise. Only the unresponsive souls fail to hear music in the

Digitized by Google

mighty silences of spring. To them the flowers give no fragrance, the birds no music, the sunshine no hope; they are self-centered, and therefore self-exiled from the world, which brings such infinite pleasure to others.

The message of the spring is that this world is God's. He writes His thoughts in its flowers, and His will in good men's hearts. His strength is the secret of the daisy's glory and His power beyond the tide-drawn seas. This world is God's. He fashioned it and made its laws. Every revelation of science is but another letter in the alphabet of God, of which creation was but the beginning. The Hebrew prophet said the Lord was "not in the earthquake," but in the "still small voice." The old sage was wiser than some men of today. It is always in the unobserved, the commonplace, and the hidden that nature teaches her greatest lessons.

[*The Continent*]

What a man is called on to do when the summons reaches him to cultivate a spiritual communion with God, is, in plain language, to put himself in such attitudes toward the things of religion that God may work in him, more and more often and ever more deeply, these convictions which lift him above the fluctuating motives that debase life and the wavering questions that agitate it. And this, being further translated into terms of habit and practice, means that a man should open every door in his life by which he believes God can enter into him. "Practising the presence of God" is then not trying to work up a state of unearthly transport or to develop high-tension raptures, but simply to live day by day in the realization that spiritualities are the true realities.

[*The Christian Intelligencer*]

Solomon craved wisdom. His request was granted. And in addition there were added riches, honor, power, and vast dominion. But Solomon has rightly been called the greatest castaway of the Bible. From the standpoint of the divine requirement and expectation Solomon's life was a tragic failure. The reason is that Solomon lived only for self. The horizon of his life was filled with one obtrusive figure, and that figure was his own image. No matter how many and how great our gifts and possessions and achievements are, the worship of self poisons all and curses life. "One is your Master, even Christ." Only as Christ fills the horizon will life be deep and broad and high and move on into ever deeper usefulness and joy.

[*The Christian Advocate*]

Evidently prayer was an important factor in the daily program of Jesus. His service as teacher of men's minds and healer of men's bodies was of very high value, but back of that service was the supreme fact that "he withdrew himself into the wilderness, and prayed:" and at a time after he had "healed many that were sick of divers diseases, and cast out many devils," it is declared that "in the morning, rising up a great while before day, he went out, and departed into a solitary place, and there prayed."

[Prof. John Reid Shannon, S.T.D., Ph.D., in *Zion's Herald*]

The thing, the one thing, the only thing that can redeem our petty, personal lives from littleness, from inefficiency, from nothingness, is to feel that we are a part of some divine plan that moves through the ages out of the darkness of the past into the light of the future, that we can unite ourselves with and cooperate with some mighty sweep of the forces that are leading and lifting and saving the world.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new French pamphlet, "Foi et Générosité" (Faith and Generosity), has just been issued and is now on sale. This pamphlet contains the following articles: "The Lord Thy Confidence," "The Closed Hand," and "Continuity of Right Thinking."

"Christian Science: A Religion of Love" (Christian Science: En Kjærlighetens Religion), a lecture by Virgil O. Strickler, has been translated into Norwegian and is now published in pamphlet form with English and Norwegian versions on opposite pages.

"Law and Work" is the title of a new pamphlet containing the following articles: "Love Fulfils Law," "The Logic of Christian Science," "Undisturbed," "God's Law of Adjustment," "Authority."

"Christian Science: Man's Dominion over Evil," a lecture by Edward A. Kimball, C.S.D., has been translated into Russian, Norwegian, and Modern Greek. Pamphlets in these three languages have been published with the English version opposite the translation and are now on sale at prices of our regular pamphlets as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $5.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to page four in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for the year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.25; half calf or half morocco, $4.00. On earlier volumes write for prices.

Postage required for remailing this copy: 1 cent domestic and Canada; 2 cents other countries.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

Ninety per cent of the registration and license fees paid in the United States in 1915 by automobilists to the different states, or $16,213,387, was spent for the building and maintenance of county and state roads. In all 2,445,664 motor vehicles were registered in that year, and their owners paid a total of $18,215,713 for registrations and drivers' and dealers' licenses. Automobile fees now defray nearly 7 per cent of the total amount spent on rural road and bridge building, whereas in 1906 the income from this source was less than three tenths of 1 per cent of the total expenditure. The relation between cars and road mileage varies widely in different sections. There is only one motor-car for every six miles of rural road in Nevada, but nearly six motor-cars for every mile of such road in New Jersey. There is an average of one motor-car registration for every forty-four persons in the United States. Iowa apparently leads, however, with one motor-car for every sixteen persons, while one for every two hundred persons is registered for Alabama.

One of the provisions of the Federal aid road bill, which was signed by the President on July 11, appropriates $1,000,000 a year for ten years to be spent by the secretary of agriculture for the construction and maintenance of roads and trails within or partly within the national forests. The bill provides that upon request of the proper officers of the states or counties the money shall be used for building roads and trails which are necessary for the use and development of resources upon which communities within or near the national forests are dependent. The work is to be done in cooperation with the various states and counties, and not more than 10 per cent of the value of the timber and forage resources of the national forests within the respective county or counties in which the roads or trails will be constructed may be spent. Provision is made for the return of the money to the treasury by applying 10 per cent of the annual receipts of the national forests in the state or county until the amount advanced is covered.

A writer in the *World Outlook* says: "You think of Bolivia as a little country. It is as big as Germany, Austria, and England. Peru is as large as all the United States from Nova Scotia to Indiana, from Canada south to the Gulf. Argentina equals all the United States west of Omaha. Brazil is a United States with another Texas added. The resources of that vast area are in keeping with the bigness of the continent. You know, at least vaguely, of the minerals,—gold, silver, tin, copper, vanadium, bismuth, tungsten, the diamond mines of Brazil, and the emerald mines of Colombia. Chile and Bolivia have been selling $130,000,000 worth of nitrates every year to fertilize the sugar-beet fields of Germany. The black, rich alluvial soil of Brazil, Argentina, and Uruguay is as good as the best in Illinois and Iowa. Corn grows seventy bushels to the acre; wheat, fifty bushels; alfalfa, six crops a year.

The clock-tower which the British community in Argentina erected in Buenos Ayres in commemoration of the first centennial of Argentine independence, was formally presented on May 24 to the President of the Argentine Republic. The tower stands in a plaza recently named Plaza Britannica, facing the newly constructed Argentine Central Railway station. Its height is 200 feet from the ground to the three-masted ship that serves as a weather-vane. The tower itself is square in form and supports an octagonal drum and cupola, the latter covered with copper and surmounted by a vane.

An agreement for the development of the Taochung iron mine in Anhui province, China, has been made by Japanese interests. This mine is said to contain 60,000,000 tons of ore containing 65 per cent of pure iron against 60 per cent usually contained in Taya ores. Negotiations which have been carried on since 1914 with the Chinese authorities by the Sino-Japanese Industrial Development Company have recently been concluded, and the rights to work the mine have been definitely conceded.

Approximately one million acres of agricultural lands of the Oregon and California land grant will be thrown open by the United States Government in the fall to entry and settlement. These lands, which were granted to the Oregon and California Railroad Company, have been in litigation for years, the company having refused to carry out the terms of the grant. The Government sued to enforce the terms and won the case in the United States Supreme Court.

The area under cotton in India is immense,—25,000,000 acres in 1914, or two thirds as much as the whole American area,—yet the crop is barely one third of the American. That India can grow good cotton of about inch staple and equal to ordinary American in quality has been amply proved by the success of such varieties in practically every province, but especially in the Punjab, in Sind, in southern Bombay, and in Madras.

Yucatan recorded in the past year the largest export business in its history, and sold in the United States approximately 300,000 bales of sisal in excess of any previous annual output. Including unfilled orders on hand at the first of the present calendar year, the Comision Reguladora, a semiofficial selling agent, has sold to American manufacturers since January, 1,019,581 bales of sisal, valued at approximately $30,000,000.

Receipts from national forests for the fiscal year 1916 reached the high-water mark of approximately $2,820,000. This is $341,000 above the 1915 total, which in turn exceeded any previous year. There was a decided growth in the revenue from all sources, the largest being that of $203,000 in timber sales. Grazing fees showed a gain of $77,000. Receipts for water-power development were over $12,000 more than for 1915. Sales of turpentine privileges and charges for special uses were both considerably in excess of the previous year.

President Wilson has signed a proclamation excluding 588,520 acres from the Dixie National Forest in Arizona. Three fourths of this area will be subject to settlement under the homestead laws from July 12 to and including August 8, and thereafter to disposition under any public land law applicable thereto. The excluded lands lie in the northwestern part of the state and are chiefly valuable for grazing.

President Wilson has created by proclamation the Sieur de Monts National Monument on Mount Desert Island, Me. The lands included in the Sieur de Monts National Monument have never formed a part of the public domain. The present owners presented them to the United States. The tract comprises about five thousand acres of rugged mountain land.

The Panama canal is practically completed, according to an announcement from the Isthmian canal offices. The great work has so far cost $400,000,000, and the commission has $16,800,000 more to spend on perfecting details and for permanent equipment, outside of an additional $4,500,000 for fortifications.

The state department of South Dakota, from sales of school lands during the fiscal year just closed, has obtained $1,095,737, which has been paid into various educational funds. The common schools received $993,463 of this amount and the remainder went to endowed institutions.

Information received from the growers of lichee nuts in Kwangtung province, China, indicates that the total annual production approximates twenty to thirty million pounds. It is estimated that the total value of the crop is between one and one and a half million dollars.

The Dominion Government of Canada has made an arrangement for the restoration of the Parliament buildings which were burned last February. It is assumed that it will take at least two years to complete the work, and the cost is limited to $5,000,000.

The plans for making the railway system of Japan a broad-gage system, recently announced by the railway board, it is estimated will take until 1948 for completion and will be carried out at a cost of approximately 1,408,000,000 yen ($701,184,000).

On May 20, 1916, the gold reserve in the Bank of Spain amounted to $179,903,160. According to law, the bank is obliged to have a metallic reserve of $102,600,000.

Steel merchant vessels building or under contract to be built in private American shipyards at the beginning of the new fiscal year, July 1, 1916, numbered 385 of 1,225,784 gross tons.

China has increased its telegraph lines to a total of about thirty thousand miles, of which the Government owns more than one half.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII August 12, 1916 No. 50

"Always follow the kindest course"

REV. WILLIAM P. MC KENZIE

THE words of the Bible have become familiar to the ears of Christian men and women through constant repetition. The rhythm and phrasing of some passages is so well known that literary artificers sometimes seek for transient attention to their own platitudes by imitation of their form; as, for example, when humorous admonitions are phrased in the manner of the Ten Words, or attempt is made to parody the Beatitudes. This familiarity with the sound too often implies the hearing ear, and not the understanding heart. Men of historic cruelty have made familiar speech of the language of the Bible, yet somehow its essential meaning escaped them. Their lives were not delivered by its teaching from the control of mortal mind, and set free to obey the order, rule, and gladness of the kingdom of heaven.

It happens sometimes also that people who assemble regularly to hear the words of the Bible read, may even while hearing the words be as absent in thought as the business man at the opera,—recipient only with his ears while he listens to the singer's effort and the orchestra's din. Meanwhile he is absorbed in his own dream, thinking of the plans he has which will employ the labor of thousands of men and establish him as a captain of industry. Upon smaller things, unfortunately, do the minds of auditors too often dwell while words of truth come to their ears. In a poetic way Ezekiel describes the condition: "They come unto thee as the people cometh, and they sit before thee as my people, and they hear thy words, but they will not do them: for with their mouth they show much love, but their heart goeth after their covetousness. And, lo, thou art unto them as a very lovely song of one that hath a pleasant voice, and can play well on an instrument: for they hear thy words, but they do them not."

There is a familiar passage in Thessalonians wherein the translators indicate by their italics that the word man is supplied, which without this addition would read, "See that none render evil for evil unto any; but ever follow that which is good, both among yourselves, and to all." What the apostle says is exactly this: Take good care lest any one pay back what is unfavorable to any one in return for what is bad (that is, unfit, useless, ill done on his part), but always follow out what is advantageous for others and for all. The descriptive phrasing, "always follow the kindest course," gives a fresh and pertinent expression of the meaning of the admonition. This phrase is given in the Twentieth Century New Testament, a translation into modern English from the Westcott and Hort Greek text.

"Always follow the kindest course." The Christian Scientist is continually called upon both for example and precept in regard to conduct, and this phrasing in the light of its meaning becomes both a guide for conduct and a precept for the preceptor. But as it was possible to postpone the acceptance of advice in one case by the retort, "Who is my neighbor?" so in this case the thoughtless are sure to reply, How shall I know the kindest course?

There are tales enough of some wise judge who from each claimant in a suit heard what he thought the other litigant should do to bring out justice. Each demanded such doing by the other as would make his own life pleasant and satisfied. All the judge had to do was to call upon each man to carry out the program he had devised and arranged for the other party, and so put into operation the Master's rule, "As ye would that men should do to you, do ye also to them likewise." One may learn the kindest course by examining his own heart and honestly determining what he would consider just, liberal, and friendly were he the recipient, and then turn around and become the giver.

It is always well to be liberal as the giver in this way. "There is that scattereth, and yet increaseth; and there is that withholdeth more than is meet, but it tendeth to poverty." This is true of seed grain, but more vividly true in the realm of thought. The statement, "God is not mocked: for whatsoever a man soweth, that shall he also reap," is often quoted as if it were entirely minatory and condemnatory; as if it were a threatening, flashing over the heads of sinners. But is it not the assurance of blessing as well to the wise sower that he shall reap what he has sown, and no one can make a mock of the Principle which establishes this order? It is true that the whole philosophy of mortal mind denies the value of altruism; self-interest alone it knows, because in all its thoughts there is no God (no Principle forever giving good). Consequently the self must be endlessly devising how to get good; that is, to take it away from others.

Christianity vigorously opposes this materialism. "Give," said Jesus, "and it shall be given unto you; good measure, pressed down, and shaken together, and running over, shall men give into your bosom." What if the cynic says that "sowing seeds of kindness" means waste and failure and disappointment, and that every man should look out for himself alone, and let evil catch the weary and lagging ones. The fact is that "God is not mocked" by any such traversing of law. The seed produces after its kind. When, therefore, the sower carries good will, patience, consideration, and appreciation with him, the word of the Preacher may be accepted as the best of advice: "In the morning sow thy seed, and in the evening withhold not thine hand: for thou knowest not whether shall prosper, either this or that, or whether they both shall be alike good."

Mrs. Eddy spoke about Christian Scientists sometimes as if the ideal had arrived, thereby making clear what it is. For instance, she says that "they are too occupied with doing good, observing the Golden Rule, to retaliate or to seek redress," and declares that "philanthropists, and the higher class of critics in theology and *materia medica*, recognize that Christian Science kindles the inner genial life of a man, destroying all lower considerations" (Message for 1901, p. 30). That those who are named Christian Scientists are in earnest with desire to fulfil this ideal, is made manifest by what might be called the popularity of the article "Taking Offense," in "Miscellaneous Writings," which shows how to avoid being offended. There are those who in times of stress have read it over many times a day, studying the Sermon on the Mount

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

between times, until they regained their geniality and equipoise. In this article we are bidden by our Leader to face life "with a temper so genial that the friction of the world shall not wear upon our sensibilities; with an equanimity so settled that no passing breath nor accidental disturbance shall agitate or ruffle it" (Miscellaneous Writings, p. 224). This of course means ability to direct the lives of others into ways that are sunlit and genial, and brings both comfort and reward, for "a man shall be satisfied with good by the fruit of his mouth: and the recompense of a man's hands shall be rendered unto him."

✧

Giving Testimony

KATE HOLT

At first the healing of disease is the most noticeable effect following one's acquaintance with the new-old truth called Christian Science. That the world may know that God does heal now the same as when Christ Jesus healed the sick and the sinning, our beloved Leader wisely included the giving of testimonies as a part of the Wednesday evening service in Christian Science churches, and the publication of written, signed, and certified testimonies in the weekly and monthly periodicals, the *Sentinel*, *Journal*, and *Herold*. Such a voluminous mass of the evidences of Christianity has never before been presented to the world.

Among those who attend the Wednesday evening meetings are people who have been recently healed and who are but babes in Christ; others have been beneficiaries of this healing truth for many years; some have been reared in the knowledge of Christian Science and have never known any other method of healing or any other manner of life; still others are present for the first time and for the sole purpose of learning what Christian Scientists have to say concerning the faith that is in them and its results in their lives. These last, strangers within our gates, should be accorded hospitality, for we "were strangers in the land of Egypt," and we must give them, as our Leader bids us (Science and Health, p. 570), "a cup of cold water in Christ's name."

Some who have experienced Christian Science healing are eager to testify to its benefits. They feel it to be a debt which must be paid to a waiting world. Others have not yet overcome a fear of the sound of their own voices, and attend Wednesday evening meetings for a long time before they are able to tell what great things God hath done for them. In this connection the writer desires to give a word of encouragement to any one who has been healed but still has a belief in his inability to be a witness for God by word of mouth.

Before the knowledge of Christian Science came to me, much time was given to club work, and although the work was enjoyed and lengthy papers were written and much committee work was done, it was almost impossible to read the papers or to give an intelligent verbal report of work accomplished. A strange, unreasoning fear reduced the would-be speaker to one large tremble. After studying Science and Health for some time and receiving great benefits physically and spiritually, courage rose to the point of attending the church services. The obligation to give a testimony was felt, but club experiences rushed into remembrance and almost drowned the aspiration. Then the argument of error came like this: It would not make any difference if you did testify; nobody knows you, and people want to hear testimonies from persons who are well known, or at least from those whom they know. Glancing across the church at this point, my wandering gaze fell upon a person whom I had not seen for a long time and who had lived in the same house with me when I was almost a confirmed invalid, and thus the argument of error was proven false. My first testimony was then given without fear, and ever since it has been a constant joy to bear witness to the truth.

We can never know where the seed may fall or what fruit it may bring forth. Some months ago a business letter came to me from a lady now residing in a distant state, in which she stated that she had been helped repeatedly by a testimony which was given by me several years ago. This brings the thought that the testimony might benefit others. Having a stubborn belief of physical inharmony which did not yield readily to treatment, a sense of discouragement was creeping in, when a member of the family whose work at that time was in land titles, said that it was an extraordinary fact that there were people in our supposedly enlightened county who had been "bluffed" out of their property. These persons were ignorant of legal procedure and afraid of it, although they had titles to land which could be defended and established. Unscrupulous persons had, however, told them lies; that their claims were not valid, that a certain length of time had elapsed and their titles were therefore forfeited, and so on. The real owners had believed these lies and had allowed their property to slip away from them, or had ignorantly signed away their rights.

Instantly the thought came to me, Are you being "bluffed" out of your inheritance as a child of God, heir to health and holiness, joy and immortality? Why do you believe these specious lies that material sense is trying to force upon you? Are you even more ignorant of divine law than your fellow citizens are of man-made legal enactments? Will you make no effort to establish your title to your own place and your own right activity among God's ideas? Who or what is there to fear if God be with us? Then courage returned, fear fled, Love triumphed, and the sickness went back to its native chaos.

Shall those of us, then, who have proved the all-power of Truth and Love keep silent when the needy all about us are waiting to hear of what Christ, Truth, is doing in the world today?

✧

"Go, wash"

WILLIAM LLOYD

There is a wonderful lesson to be learned in studying the ninth chapter of John's gospel, where we are told the story of the blind man who was healed by Jesus. Having "spat on the ground" and "made clay of the spittle," evidently to show symbolically his utter contempt for matter and material aids, the Master "anointed the eyes of the blind man with the clay" and said to him, "Go, wash;" and the record tells us that he went "and washed, and came seeing."

Upon examination, this short account is really filled with amazing information. The man was just as materially blind after the clay was placed on his eyes as before, but at the same the operation had opened his "spiritual discernment" (Science and Health, p. 586). His need of cleansing was now apparent, even to himself. Then came the command, "Go, wash." Jesus did not tell some sympathetic bystander to lead this poor man to the pool and wash his eyes, but the command was given to the man himself; it came sharply and incisive, and was followed by immediate obedience.

It does not require much imagination to picture this blind sufferer inquiring and groping his way to the pool of Siloam, but he achieved the task and his sight was restored. Certainly Jesus had made the man's filthy condition apparent to himself, then followed the demand for obedience and self-purification. When one considers the man's mental condition, his instant obedience, his ready acceptance of the demand,

Digitized by Google

purification, and, once having seen the Christ, his noble and unfaltering stand for Truth, is it any wonder that his healing was perfect? Is it any wonder that having gained "spiritual discernment," physical sight should follow?

The writer has learned from this, especially with respect to what seems delayed or "slow" healing, to drop all anxiety and worry; to stop searching for the cause of either the disease or the delay; to cease wondering and thinking about his own physical condition or that of others, and instead thereof to strive earnestly to obey the command, "Go, wash." He knows that if he cleanses his thought from all unclean things,—and these include hate, malice, envy, selfishness, greed, impatience, injustice, and the like,—he will some time obtain such "spiritual discernment" that he too will see the Christ; and if one can see the Christ-idea, all other things will be added.

✧

Man's Birthright

WILHELMINA LEFFLER

JESUS said, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." A glorious promise indeed, and one which is available to every one here and now. Man as the reflection of divine intelligence is free to bring into his life everything which is good, true, and beautiful; but how, one may ask, is this to be accomplished? The answer is found in the condition Jesus attached to the promise, also in Paul's words, "Let that mind be in you, which was also in Christ Jesus." The Master operated according to the law of divine Mind, never admitting as true the suggestions of limitation, failure, disease, or death. Again, one may argue that we have not the understanding which Jesus had, but have we not the statement that "God is no respecter of persons," and the Master's promise, "He that believeth on me, the works that I do shall he do also"? The one who holds to this will be able to demonstrate with scientific certainty that God is supreme and that all good is within man's reach.

Gloomy forebodings never solved any problem; it is only through the activity and influence of the Mind which never fails that we can gain the realization of the glorious promise spoken of. Is one in search of health? Then hear again the truth declared of old,—"Put off thy shoes from off thy feet, for the place whereon thou standest is holy ground." One must remove the sandals of doubt, despair, ignorance, and fear, and learn that God is present just where he is. God created man in His image and likeness, spiritual, immortal, and whole, sinless and free. Then hear again the voice of the Christ calling, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." On page 14 of Science and Health Mrs. Eddy says: "Become conscious for a single moment that Life and intelligence are purely spiritual,—neither in nor of matter,—and the body will then utter no complaints. If suffering from a belief in sickness, you will find yourself suddenly well."

Harmony is here because God is here, and because it is the manifestation of a sound mind. We need only to accept this truth to find it so. Ill health is a self-imposed condition, the result of wrong thinking, a belief that health obtains in the bodily organs and functions, hence at the disposal of them. When we realize that health is a spiritual fact and in the keeping of God, we find that health never was lost but simply misapprehended. Our work then is to draw nearer to God, to reflect more of the divine Principle which is the source of all activity, and thereby learn that sickness is only an illusion, a belief, since man can never be separated from divine Mind, as St. Paul tells us.

Is one in quest of happiness? Then let him know that happiness is here; for joy is a spiritual fact and cannot be destroyed; hence we need only repudiate the thought of sorrow as a suggestion to believe in a power apart from God, to find that "sorrow is not the master of joy" (Science and Health p. 304), but that joy is the natural outcome of Love, which is the only power.

God gave man dominion over the whole earth, and when conscious of that dominion, we can lack no good thing. It is ours to reject the belief that material conditions can affect man's happiness, and thus prove that God's man is untouched by sorrow, because the harmony of his being is never disturbed. Plenty exists because God exists, and it is a divine idea, hence available to all God's children. It is right for us to attain unto the fulness of life and to be righteously and profitably employed. Limitation is not legitimate; we should hope for whatever is right and expect to see the fulfilment of our desire. The divine Mind governing man means health, joy, plenty, and boundless opportunity; but we have work to do, for our heavenly Father requires righteous activity of every individual. Inaction has no place in the kingdom of God, and every man shall receive according to his deserving. In Revelation we read, "He that overcometh shall inherit all things; and I will be his God, and he shall be my son."

✧

"A way in the wilderness"

SAMUEL JOHNSTONE MACDONALD

UPON a Sunday evening in August three friends, on their way to a Christian Science church, boarded a surface car at one of the busy transfer points in New York City. One of the three was a Christian Science practitioner, while the others were earnest students. All were very happy in the joy of loving fellowship and in the ever-expanding horizon of spiritual understanding.

When the car reached the corner of the street where the church was located and the friends got off, a stranger also alighted, and stepping up to the practitioner said, "You are going to a Christian Science church, are you not?" Upon being answered in the affirmative he added: "I was sure of it. I am a stranger in the city, having just arrived this forenoon, and did not know where to find a Christian Science church; but I saw you on Thirty-fourth Street and was sure that you were a Christian Scientist, and that if I followed, you would lead me to a church." Four friends now, instead of three, pressed forward gladly to "enter into his gates with thanksgiving, and into his courts with praise," as the psalmist says.

In pondering on this incident later, one of the students began to see clearly that the occurrence was "not supernatural, but supremely natural" (Science and Health, Pref., p. xi). He saw and understood how it was the necessary and natural result of right thinking, and not a mere happening. It was not chance or good fortune through which this stranger upon the crowded streets of a great city could unerringly find the one who would guide him aright. It was as inevitable as is the operation of all other of God's laws.

In Proverbs we read, "In all thy ways acknowledge him, and he shall direct thy paths." This is not a mere poetic utterance, a priestly mandate; it is the scientific statement of an unvarying law, the same law which the prophet Isaiah declared as follows: "Thus saith the Lord, which maketh a way in the sea, and a path in the mighty waters; . . . I will even make a way in the wilderness, and rivers in the desert." Having been in obedience to this law, the pilgrim from the West was sure, and must have known that he was sure, of guidance in the great city. He must have been calmly con-

Digitized by Google

fident that divine Love would make a way for him in the wilderness, through the mazes of mortal mind.

The other party to this little incident must also have been in obedience to divine law, as a result of which he became worthy of being a beacon upon the way, becoming one of the witnesses that "divine Love always has met and always will meet every human need," as Mrs. Eddy says on page 494 of Science and Health. In Isaiah we read, "Ye are my witnesses, saith the Lord, that I am God;" and Christ Jesus stated the same truth in his own memorable manner when he said to his disciples, "Ye are the light of the world." This also is a law. A disciple who is lovingly and unceasingly striving to let that Mind be in him "which was also in Christ Jesus," becomes a light which "cannot be hid," even in a great city, and the spiritual discernment of the faithful wayfarer will unerringly reveal to him every needed beacon and guiding light.

Mrs. Eddy says (Science and Health, p. 367): "A Christian Scientist occupies the place at this period of which Jesus spoke to his disciples, when he said: 'Ye are the salt of the earth.' 'Ye are the light of the world. A city that is set on an hill cannot be hid.' Let us watch, work, and pray that this salt lose not its saltness, and that this light be not hid, but radiate and glow into noontide glory." Rejoicing that these manifestations of divine Love are now seen to be "supremely natural;" that through the clear light of Christian Science we are enabled to recognize and understand the unvarying law which manifests and controls them; that one single-hearted woman had the clarity of vision, the self-sacrifice, and the loving courage to lead the way; and that an ever-increasing number of disciples are reflecting the light of Life, Truth, and Love, gratitude and praise are ceaselessly overflowing unto Him who makes for us "a way in the wilderness."

It is also worthy of being noted, in order fully to complete this brief record, that the Scripture reading in the church that evening was from the forty-third chapter of Isaiah, as this indicates the working together for good of all things.

✧

Divine Justice

MARGARET MONROE

In referring to attacks upon Christian Science and its Discoverer and Founder, Mrs. Eddy says, "When these things cease to bless they will cease to occur" (The First Church of Christ, Scientist, and Miscellany, p. 143). These words of our Leader came to me with healing comfort at a time when I seemed to be suffering an injustice. I saw that it was my privilege to reflect Truth, to dwell in the presence of God, and to know that He is All, for the consciousness that is swept of error must be occupied by Truth. There is no reason for resentment when we know that God is omnipotent and that He has provided for all.

It is not true that God is unjust and loves some of His children more than others. This belief must be destroyed. God is just. If houses and lands were good in themselves, if material power were good in itself, then God might be considered unjust, for some have these possessions and others have not. If God is just, He gives Himself, including all real things, to all. If only an earthly priesthood may know God, then He would be unjust. We must know also that God is just today, not merely that He will be so in the future. His justice is such that He gives all good to every one, and possession by one does not rob another, even as the pansy does not rob the violet of sunshine. "All things are yours," said the apostle, and all real things are ours every moment. Love, Truth, and Life are ours now by reflection, else there would be no truth in the Bible, in the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, or in the consciousness of man to make him believe in and love justice.

Is it well to accept the belief that wealth is a power in itself and attempt to adjust one's human life to this belief? Man controlled by Spirit would not so choose; he would prefer the real to the temporal. The Christian Scientist does not condemn others for their beliefs, but he knows that goodness, which is based on spiritual understanding, is the only power, and this power is derived from God. If in harmony with His eternal laws, we have a true sense of life. "Acquaint now thyself with him, and be at peace," is the declaration of Holy Writ.

Are we to think of God's gifts as the reward of personal merit? No, because the human sense of goodness, purity, intelligence, kindness, and the like, is the result of spiritual unfoldment. It is the product of this unfoldment, not a reason for divine favor and reward. The great Teacher and Exemplar said, "I can of mine own self do nothing." There is none good but God, and His universe is so perfect that all His children have access to God and all His creation, and each reflects the truth.

✧

"Let your light so shine"

WALTER C. LANYON

THE Master's command to let our light shine is imperative; it does not ask us to produce the light, but rather informs us that the light already exists, and that it is ours to furnish a transparency in order that the light may shine. The command takes away any personal sense of effort in connection with letting the light shine, and brings out what Mrs. Eddy calls (Science and Health, p. 445) "the unlabored motion of the divine energy."

To let our light shine does not imply casting our pearls before swine or giving "that which is holy unto the dogs." It does not imply that we are to rush out into the storm of night with a lighted candle, seeking some lost ones calling for help, and thereby possibly having the tiny flame of faith snuffed out by their unbelief and our own lack of protection. Some one may ask, How then can we let our light so shine that it will be a help to men and at the same time be safe from the devastating storms of mortal mind, of hate, jealousy, revenge, and unbelief; be safe from the torrents of material belief that would drench and beat everything to the ground? Let us take for an illustration the lighthouse which stands in the midst of a raging sea, with its clear, strong light shining and warning men from the dangers of the rocks, yet in no danger of extinction by reason of the mighty blasts and storms. How does it do this? Naturally one would answer, By keeping its light protected.

Here, then, is our working basis if we are going to be like lighthouse keepers. On page 571 of Science and Health Mrs. Eddy says, "Clad in the panoply of Love, human hatred cannot reach you." What is it to be clad in the panoply of Love? Is it not an unselfing process which constantly says, "I can of mine own self do nothing," and listens for the "still small voice" of Truth to guide and direct? Is it not to know that all things are possible to God, and to realize that the "everlasting arms" are underneath and around us? It is to rest under the shadow of His wing and to lean on divine Love.

Once clad in this panoply, a thousand night birds (suggestions, malicious animal magnetism, fear) may dash blindly against our refuge, only to fall before the divine light sent forth from it. No matter how the gusts and blasts of sickness, lack, and limitation sweep over one, they are

Digitized by Google

no effect in destroying our light, hence the children of light are safe. Paul says that "having done all," we should "stand." The lighthouse does not go out to search for ships in distress, but it stands on a great rock, its light guiding into its rightful haven each ship that passes its way. In other words, it fulfils its own mission, and being impartial with its light, it is a blessing to all who come within its radius; therefore it obeys the command, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

✧

Divine Protection

JULIA RUNGE

In August, 1915, at Galveston, Texas, there were assembled five members of a household, all students of Christian Science, and the experience through which they passed during three days was a test of their faith in the omnipotence of God, good; but a gratitude which words inadequately express filled their hearts for the revelation of Truth to this age, the understanding of which enabled them in the midst of raging elements to have the peace that passeth understanding. Wind from ninety to one hundred and twenty miles an hour was whistling around the house, a frame building on brick pillars, and the water was rising with great rapidity, but all this did not frighten the right thinkers.

During this experience these lines from our Leader's hymn "Christ My Refuge" (Poems, p. 12), were recalled:—

And o'er earth's troubled, angry sea
I see Christ walk,
And come to me, and tenderly,
Divinely talk.

Thus Truth engrounds me on the rock,
Upon Life's shore,
'Gainst which the winds and waves can shock,
Oh, nevermore!

The louder the wind howled, the more certain, positive, and steadfast were the declarations of truth. In the midst of outward confusion there was perfect serenity of thought, and trust in God as all power. There was quick and intelligent response to the appeals for help from other Christian Scientists exposed to wind, water, and fire, so long as telephone communications were possible. We were not oblivious of the imminent danger of losing our lives, that is, to the human sense, and each was prepared to meet any emergency presenting itself. The things necessary to preserve property were done quickly, quietly, and wisely.

The courage of a mother in our midst was true heroism. She had one son, a lieutenant in the United States Army, on duty, caring for the men entrusted to his charge, breasting the waves in efforts at saving soldiers who were still in their tents, and another son with us, who at the time was unable to use his lower limbs; yet throughout the entire time there was a heroism shown which will ever be an inspiration to those privileged to be with her. Her cheerfulness was contagious and most helpful; indeed each member of the household had a mission in reflecting godlike qualities, and the whole was a full diapason of harmony.

Divine Love's protection and provision for us during this experience has indeed been abundant, and we feel uplifted and eager to have more of divine good unfolded to our consciousness, that "in quietness and in confidence" we may breast all the storms of mortal experience with perfect assurance of their powerlessness to hurt or to harm, because we know that "the Lord God omnipotent reigneth."

Selected Articles

[Albert W. Le Messurier in *The Star*, Guernsey, Channel Islands]

Two correspondents have ventured to set forth personal criticisms of Christian Science. The first seems to think, judging from the tone of the letter, that the fires of Smithfield and the methods of the Inquisition are still active, but he may rest assured that the world is advancing in kindlier thought. Surely in these days, when Christian Scientists are fighting in the trenches and using their protective spiritual understanding side by side with members of other denominations, it is no time for newspaper controversy, especially as Christian Scientists scrupulously refrain from attacking other religions and are not in the habit of urging any one to adopt their views, being satisfied with extending courteous invitations to lectures and services. They are, however, always ready to give a reason for the hope that is within them, and it is evident from the spread of Christian Science that its students are amply satisfied with the benefits received.

It will be useful to point out that there is exactly the same need for a sick man to be in the right attitude to be healed as there was in the case of the man at the pool of Siloam. Out of all the sick people there, he was the only man whom Jesus healed; the rest were apparently too contented with their own opinions to detect the truth when it came near them. If the God in whom your correspondent believes is not capable of healing him or of keeping him well, it would be advisable for him to find out wherein he errs in his concept of God.

Your second correspondent ventures to warn your readers against his mistaken notions of Christian Science. He advances three astonishing statements which he gives as the "fundamentals of our Christian faith." Not one of these "fundamentals" so much as mentions the name of God. It would appear as though "God is not in all his thoughts." The first and third statements are pleas for the reality of sin and of a personal devil. The second statement is an untrue assertion, because Christian Science does not deny the atonement; on the contrary, it lifts it out of the mystery and quarrels due to the conflicting views of the present day. Your correspondent knows, or ought to know, that the members of his church are in a state of unrest over these very "fundamentals" he so superficially sets forth. Under the circumstances, I shall briefly state the position of Christian Science and leave the matter to the sane judgment of your readers, who may safely be left to think for themselves.

Now, beyond question the basis of all Christianity is God, Spirit, infinite Love, and man made in His image and likeness. This is precisely what Jesus insisted upon in the two commandments upon which "hang all the law and the prophets." On page 18 of "Science and Health with Key to the Scriptures" by Mrs. Eddy this understandable and demonstrable definition of the atonement is given: "Atonement is the exemplification of man's unity with God, whereby man reflects divine Truth, Life, and Love. Jesus of Nazareth taught and demonstrated man's oneness with the Father, and for this we owe him endless homage."

Christian Science, carrying the basic truth to its logical conclusion, denies a personal devil, and to plead on behalf of a personal devil is not Christly. "Do not I fill heaven and earth? saith the Lord." There is one, and only one, definition of the devil, the evil one, or the one evil, that Christian Scientists accept, and that is the one laid down for all time by Jesus,—"He is a liar, and the father of it." Obviously a lie is the opposite of the truth, and has only as much power as we give it. The only possible refuge from an untruth is

Digitized by Google

the truth which frees us from the belief in the lie. Truth never gives freedom from a lie by making the lie true, but by destroying the lie in whatever form of sickness or sin the lie may assume. Again quoting from Science and Health (p. 339): "A sinner can receive no encouragement from the fact that Science demonstrates the unreality of evil, for the sinner would make a reality of sin,—would make that real which is unreal, and thus heap up 'wrath against the day of wrath.'" Limitation of the Christ-power to destroy a false mortal or carnal mind, and to bring man into unity with his Maker, is a sin that punishes the belief in such limitation.

Christian Scientists are eager to be kept from "science falsely so called," because they know that the Science of Christianity, or Christian Science, is the truth about the God who is omniscience. The right understanding of this omniscience enabled Christ Jesus to work the works of God and to command those in all ages who should believe on him to go and do likewise.

✧

[Avery Coonley in *Maywood* (Ill.) *Press*]

A communication from "A Reverent Believer" takes issue with the declaration of Christian Science that Jesus was not God, and submits Scriptural quotations which this gentleman feels sustain his contention that Jesus was God. Christian Science points out the necessity of differentiating between the conceptions of Jesus the man and Christ the divine idea. On page 482 of "Science and Health with Key to the Scriptures" Mrs. Eddy says, "Jesus was the highest human concept of the perfect man. He was inseparable from Christ, the Messiah, - the divine idea of God outside the flesh."

Christian Science bases its conviction that Jesus was not God upon all the statements of the Bible bearing upon his nature, but principally upon the statements of Jesus himself. Jesus was born of woman, and he very frequently spoke of himself as the "Son of man." God certainly is not the "Son of man." James said, "God cannot be tempted with evil," but Jesus was "tempted like as we are." To be correctly understood, such a statement as "I and my Father are one" must be considered in connection with such statements as "My Father is greater than I" and "Why callest thou me good? there is none good but one, that is, God." Jesus said nothing which requires the conclusion that he was God; but he did say many things like the above which preclude that idea.

The truth about Jesus takes nothing from the incomparable career of the Founder of Christianity, but on the contrary is essential to its right understanding. Christian Scientists revere him and undertake to put into daily practice his injunction to heal the sick just as they do his other injunctions to preach the gospel and to redeem the sinner, with the result that they are demonstrating today the validity of his promise that "these signs shall follow them that believe," a fact which confirms their confidence in the correctness of Mrs. Eddy's interpretation of the Bible.

✧

[John Ashcroft in *The St. Louis* (Mo.) *Republic*]

It is almost incredible in these days of world-wide recognition of the results of the teachings and practice of Christian Science that any one should make the statement attributed to one of the professors of the St. Louis University in an issue of the *Republic:* "Christian Science is a good example of dogmatism. They can't prove anything and they believe everything." One of the things we do not believe is that our critic really thinks we are as foolish as the remark implies!

The definitions of the word dogma and its derivatives range all the way from "arrogant assertion" to "doctrine, especially a religious doctrine, asserted and adopted on authority." In the latter sense Christianity itself is dogmatic, for its Founder specifically declared, "My doctrine is not mine, but his that sent me," and he assured his critics that "if any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself."

Men do not "gather grapes of thorns, or figs of thistles" today any more than they did in the dawn of the Christian era; and in the fruitage of Christian Science is to be found the best evidence of its derivation from and conformity to the teachings of the great Nazarene, who said, "He that believeth on me, the works that I do shall he do also."

✧

[John M. Tutt in *Poplar Bluff* (Mo.) *Republican*]

That Christian Science is making headway in Poplar Bluff is evident. When two ministers simultaneously and from pulpits theologically at variance unite in attacking Christian Science, there can be no doubt as to the exciting cause. But one naturally wonders why preachers of the gospel, themselves holding divergent opinions as to the teaching of Christ Jesus, and unable to agree upon Bible interpretation, should seek to destroy the faith of those who have found satisfaction in another Christian denomination. It must be patent to these critics that humanity is not yet ready to become of one mind in the matter of religion. Both John Wesley and Alexander Campbell furnished expositions of Scripture and founded denominations which have greatly aided in advancing the cause of Christianity. Yet these men were traduced and their doctrine declared anti-Christ by the "orthodox" churches of their day.

Mary Baker Eddy gave to the world the spiritual interpretation of Scripture and restored to Christendom the lost element of healing taught and practised by Christ Jesus. Christian Science has healed the sick, brought salvation to the sinner, and given the world a spiritual impetus. Yet religionists have been Mrs. Eddy's strongest opponents, and at the hands of Christian ministers her system has been misunderstood and she herself aspersed. Notwithstanding this, Mrs. Eddy has written in "Miscellaneous Writings" (p. 111), "I love the orthodox church; and, in time, that church will love Christian Science."

Our reverend friends affirmed, and it is to be noted that the two sermons were strangely alike, that God is a person. Now as an expression of opinion, any one is entitled to say that God is a person, but when he undertakes to bolster up such an opinion by Bible references his difficulties begin, even as they do if he attempts to apply reason to substantiate such a concept of God. Christian Science does not object to defining God as infinite, incorporeal person. It is the anthropomorphic sense to which Christian Science objects in the so-called personality of Deity. Our critics affirm that "God is a person,—a material body and spiritual body," which is pure pantheism, neither rational nor Scriptural.

Objection is made to Mrs. Eddy's employment of the word Principle as a synonym of Deity. It must be noted here that Christian Science does not teach that God is a principle, but that He is the infinite and only Principle. Employment of this capitalized word Principle is based in part on the fact that God is "the great First Cause," the source of all, the original substance, creator. Thus used the word Principle does not refer to one of a number or series. God is not a principle nor a spirit, but the infinite Principle, Spirit, Soul, Mind, omnipresent, omnipotent, and omniscient.

The attempt of our critic to prove that St. John did not mean what he said when he defined God as Love was unsuccessful, deprive one of his clearest and dearest concept of the heavenly Father. "'God is Love.' More than

Digitized by Google

cannot ask, higher we cannot look, farther we cannot go" (Science and Health, p. 6).

Objection is also made to Mrs. Eddy's repudiation of matter's claim to reality. Here our critics array themselves against the best of our physicists, the greatest philosophers, and even against the Bible itself. Jesus said, "Heaven and earth shall pass away, but my words shall not pass away." Is that which shall pass away God-created reality, or is it a fleeting, sensuous mortal concept? Jesus also said, "The flesh profiteth nothing," and "nothing" is not very real. In I John we read: "All that is in the world . . . is not of the Father, but is of the world. And the world passeth away, and the lust thereof."

Christian Science teaches that nothing is real save God and the spiritual universe of God's creating—"All is infinite Mind and its infinite manifestation" (Science and Health, p. 468). Nothing is lost and everything is gained by viewing man and the universe as the spiritual idea of the infinite Mind, God. These ideas of God are the heaven and the earth of Scriptural record, and they are real, substantial, and eternal; moreover they are comprehensible. Erring human material concepts of these ideas are passing away in the experience of every genuine Christian Scientist, and he rejoices in the daily proof of St. John's assurance that they that do the will of God abide forever.

The conclusion that "man [mortal man] would be incapable of sin, as matter and evil are unreal," is not logical. Counterfeit money is not real, and yet men may use it criminally as money. The Government both apprehends the counterfeiter and destroys his false handiwork. Christian Science holds the sinner fully liable, requiring first that sin be acknowledged as such; secondly, that repentance or change of mind toward sin be experienced; and thirdly, that reformation cancel the transgression. Forgiveness of sin is the elimination of it from human consciousness. The unreality of sin and disease is the sole basis upon which error can be eliminated from human experience, for the sovereign remedy for all lies in Christ, Truth, and "there is none other name under heaven given among men, whereby we must be saved." Christian Science relates divine Truth to human interests, thus healing the sick and reforming the sinner.

✧

[Harry I. Hunt in *Atlantic City (N. J.) Review*]

Our critic classifies Christian Science as a "female religion," whereas many intelligent observers have expressed surprise at the large percentage of men to be found in congregations of Christian Scientists. Indeed he will find plenty of "real, red-blooded men" in attendance at Christian Science services, if he cares to look for them, many of whom have been brought back from the edge of the grave by the healing religion which he assails. St. Paul, who was a good example of strenuous manhood, up to the time at least that he took a certain famous journey to Damascus, declared later in his Christian experience that "flesh and blood cannot inherit the kingdom of God;" and Jesus, near the conclusion of that wonderful discourse called the Sermon on the Mount, made it clear that it is what a man does, not what he says or seems to be, that brings him into the kingdom. The Master said, "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven."

Our critic declares in substance that a man can dispose of sin by believing that it did not happen, and thinks that is a Christianly scientific statement. On the contrary, Christian Science shows that it is the beliefs of the human or carnal mind which are responsible for sin and its correlatives, disease and death. Christian Scientists understand that God is good, just as all Christians believe. They understand that God is the only creator, just as all other Christians believe. All that God has created, therefore, is like Himself, good. Now sin, disease, and death were destroyed by Christ Jesus, who declared that he came not to destroy but to fulfil the law. His destruction of these items of human experience, as recorded in the gospels, proved for all time that they are unlawful, not of God, and hence that they are wholly the product of that mind of the flesh which St. Paul says "is enmity against God."

The antidote for sin is clearly set forth by the same apostle in his letter to the Romans: "Be not conformed to this world: but be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God." This transforming mind is, as he puts it, that Mind "which was also in Christ Jesus." It is that Mind unto which every Christian Scientist is striving to attain.

✧

[Thomas F. Watson in *Red Bluff (Cal.) News*]

The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is not regarded as a substitute for the Bible, but is, as its name indicates, a key to it. Most religious sects have commentaries on the Bible, and the Christian Scientists have theirs in Science and Health. That this book illumines the Scriptures is testified to by thousands who since studying Science and Health have learned to understand and love the Bible, which had previously been to them a sealed book. A study of Science and Health in connection with the Bible has healed many thousands of the drug and liquor habits, and of diseases which had been pronounced incurable by reputable physicians.

Any one who has ever read Science and Health knows that Christian Science acknowledges the divinity of Christ. The second tenet, as given on page 497 of this book, is as follows: "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness." Language could not be more explicit, and all who will may learn what Christian Science teaches, for Science and Health is to be found in most of our free public libraries.

Mrs. Eddy's teaching in regard to sin is equally clear. She states: "The way to escape the misery of sin is to cease sinning. There is no other way;" and again: "We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal. But the belief in sin is punished so long as the belief lasts" (Science and Health, pp. 327, 497).

Christian Science invites honest investigation; but to seek to learn the truth concerning Christian Science from criticisms written at various times regarding it, would be like inquiring of an advocate of allopathy as to the worth of homeopathy. The Master commanded his followers to preach the gospel and to heal the sick, and this is just what Christian Scientists are endeavoring to do; and that they have obtained some degree of success is indicated by the crowded condition of the Christian Science churches and the throngs of happy faces to be found therein; not because Christian Science offers a "road strewn with roses," as our critic has facetiously stated,—far from it, for it is true that "there is no royal road to learning." Mrs. Eddy has truly said (Science and Health, p. 322): "Mortals may seek the understanding of Christian Science, but they will not be able to glean from Christian Science the facts of being without striving for them. This strife consists in the endeavor to forsake error of every kind and to possess no other consciousness but good."

Editorial

The Danger of Exaggeration

How the fears of the people are played upon, and almost a panic created, is well illustrated in the newspaper reports and press despatches which for some weeks past have given prominence to the alleged epidemic of poliomyelitis, or infantile paralysis, which is said to be prevailing at the present time in New York City and its suburbs. While it is commendable that every reasonable precaution should be taken to guard against this and every other form of disease, it is not right that the danger should be exaggerated as has been done in this instance. On this phase of the situation in New York the *Times* of that city very pertinently says:—

> Indeed, one of the dangers of the situation, and far from its least, is that, in exaggerated fears of this one malady, great numbers of children may be subjected by their frightened mothers to restrictions and seclusions the effect of which would be a greater increase of the juvenile death rate than poliomyelitis itself is liable to produce.

The *Brooklyn Standard-Union* says:—

> In every epidemic the number of sufferers from the disease itself is small compared with those who suffer from fear without good cause. . . . It is illustrated most lamentably in the agony of mind of hundreds of thousands of mothers who have been led to believe their loved ones are in extremely urgent danger.

As a matter of fact investigation shows that the number of cases of this disease is very small when compared with the immense number of children in Greater New York, and the fear that has been stirred up is entirely out of proportion to the gravity of the situation. The responsibility for this fear rests somewhere, and perhaps the *Morning Telegraph* is right in its estimate, which follows:—

> While we have no wish to discount the seriousness of infantile paralysis, or any other malady that marks as its victims the children of a community, it occurs to us that the local press is pursuing a course that does not tend to mitigate the visitation in any way. The doctors, too, might better be employed in combating the disease all the time, instead of giving out long interviews for publication. As a matter of truth the death rate has not yet been high enough to justify such expressions as "plague" and "scourge." It is hardly an epidemic, for figures show that not one child in a thousand has been stricken, and hardly one in five thousand of the population has died. The situation is serious enough, and it is a real tragedy for homes that have been visited, but as a matter of truth probably as many children died of stomach trouble last week in Greater New York as of infantile paralysis.
>
> If the newspapers would abandon their campaign to frighten parents, and devote more space to advice as to cleanliness and sanitation, it would be better for the peace of mind as well as for the health of the community.

Four days later the *Telegraph* again said editorially:—

> The sensational press of New York is complaining that outlying towns have erected a quarantine against this city, shutting out those children whose parents would take them to the country. The charge is true, and New York has a perfect right to protest as a people; but it does not lie in the mouths of those New York editors who have fed the rural districts with alarmist reports, to censure them for the course they have taken. There is no "plague" in New York, and yet virtually all the afternoon newspapers and most of the morning journals refer to the visitation of infantile paralysis as the "plague." Can country people be blamed for taking alarm? Can we censure them for refusing to open their doors to "refugees" from a "plague" stricken city?
>
> There is not even an epidemic of infantile paralysis in Greater New York, and yet reporters seem to have been instructed to "play up" the fact that there are a large number of cases as compared with former years, and make the most of conditions. Is the average country official to be blamed for becoming excited, when we ourselves go clean daft over a relatively unimportant increase in the infantile death rate? It is a terrible calamity to the household that has been visited, as no sane person of human sympathies will deny; but in the cold light of science, with the personal equation altogether absent, it is possible that lives will be saved in the long run as the result of the tuition in sanitation and cleanliness that has been enforced.
>
> If the newspapers will return to reason, if they will combat the idea of a "plague" or a "scourge" as diligently as they have spread the impression that New York is at present a sort of pest house, it will be better not only for ourselves, but for our neighbors. A case has come to our attention which illustrates the extremes to which communities as well as men will go in times of excitement. A woman with her children was not permitted to stop at Rutherford, N. J., and yet if Rutherford had a single case—just one—of infantile paralysis, there would be as much justification in saying her people were in the grip of a plague, as there is in saying New York is a stricken city now.

The attitude of Christian Scientists at such times as these must be based upon a genuine absence of fear, not mere bravado; and this intelligent absence of fear can be predicated only upon a scientific understanding of the truth about disease and its cure. That disease is healed by Christian Science practice is too firmly established to be gainsaid at this time, and the reason that it is healed by this practice is very concisely stated by Mrs. Eddy on page 6 of "No and Yes" in these words: "On the theory that God's formations are spiritual, harmonious, and eternal, and that God is the only creator, Christian Science refutes the validity of the testimony of the senses, which take cognizance of their own phenomena,—sickness, disease, and death."

This was the basis of the healing work done by Christ Jesus, and when this is fully realized it will be impossible to precipitate the conditions of fear and panic which have been prevalent on such occasions as the present.

ARCHIBALD MCLELLAN.

Restoration

THE spiritual idea embodied in the word restoration is of tremendous significance, whether we take it in its many Scriptural settings or in the writings of our revered Leader, Mrs. Eddy. It is noteworthy that in both of these it is most frequently used in relation to health; indeed many of the Scriptural promises along this line would be included by Christian Scientists in the assurance of restored health, since health is a very inclusive word in Christian Science. Thus we find the psalmist praying, "Restore unto me the joy of thy salvation." Without health there can of course be no joy, nor can there be the dominion granted to man by virtue of his likeness to God. This does not mean that those who have not yet realized complete physical health are thereby deprived of joy; far from it. With the first dawn of light in Christian Science, the spiritual idea of health, joy, and dominion is revealed,—the eternal fact which mortal belief can neither give nor take away, even if it requires some time to "work out" this glorious idea on the human plane.

Among the many beautiful passages of Scripture which deal with the idea of restoration, these inspiring words of the twenty-third psalm stand out with great prominence: "He restoreth my soul." This, as understood in Christian Science, means the restoration of the spiritual sense, which knows only harmony, and which knows no fear even in "the valley of the shadow of death." When Soul is understood as the eternal divine Principle governing man, the psalmist's declaration of truth explains the process of healing in Christian Science. If one reads the whole of the psalm with this understanding of Soul in view, he will see how it is possible to say, "I will fear no evil." In Isaiah also we find the promise that God will heal even one who had been wayward. The passage also reads: "I will . . . restore comforts unto him."

In the wonderful story of the transfiguration, as given in Matthew's gospel, Jesus responds to the questioning of his disciples by referring to the prophecy in Malachi, and saying, "Elias truly shall first come, and restore all things," not some things, be it noted, but "all things." Here we will be greatly helped by reading Mrs. Eddy's definition of Elias as found on page 585 of Science and Health: "Prophecy; spiritual evidence opposed to material sense; Christian

Digitized by Google

ence, with which can be discerned the spiritual fact of whatever the material senses behold; the basis of immortality." Well might the Master say to his followers: "Elias is come already."

As we read the thrilling record of the Master's healing work, we can see that it was all done on the basis of restoring to humanity the true idea of God and man. Never once did he intimate that his work was in any wise apart from divine law and order, even when he declared that Jairus' daughter was not dead. Those who scorned this declaration firmly believed her to be dead, and doubtless believed, as so many do today, that God's law was responsible for her death; but Christ Jesus restored the maiden to her parents, and restored to her the lost sense of life by knowing that God is the only Life, and that man in His likeness never dies. And so it was at every step of the Master's journey on the plane of material belief, when in place of this belief he restored the spiritual fact to those who would see and hear; and it is for this that Christian Scientists love and reverence his name, his work.

In our day there was truly great need that a prophet should arise who would bring back to the human race the full import of the Master's teaching, and this with the "signs" which he said should "follow them that believe." Too often was it admitted, even while it was deplored, that "faith had fallen asleep." The signs had seemingly failed in mortal experience, because material belief obscured for mankind the spiritual fact from which our Master wrought. Now, however, after a half-century of the demonstration of the "divine Science of man," revealed through Mrs. Eddy, we gladly endorse her declaration on page 242 of Science and Health: "Inspiration restores every part of the Christly garment of righteousness."

ANNIE M. KNOTT.

Two Ways

ACCORDING to human apprehension there are two ways,—one of the flesh, the other of Spirit. These ways are not equally good or true or real. The way of the flesh naturally brings forth the works of the flesh; the way of spiritual understanding, the fruits of Spirit,—"love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance: against such there is no law." Mrs. Eddy, in a wonderfully comforting description of the two ways, writes on page 55 of "Unity of Good": "'The way,' in the flesh, is the suffering which leads out of the flesh. 'The way,' in Spirit, is 'the way' of Life, Truth, and Love, redeeming us from the false sense of the flesh and the wounds it bears." Humanity has the choice between these two ways, and Scripture assures us there is no law against the fruits of the better way. The way of the flesh tears itself a passage through human experience and eventually reaches an open space of hopeless satiety, which must again become the starting-point for further journeyings. There is no real advance but by the way of Spirit.

Christian Scientists have chosen the way of Spirit as the better way. They have hailed the Messiah of their deliverance, the Christ coming "with healing in his wings." This way is safeguarded by the law of God. It requires much sacrifice of self, which brings its daily reward, and in the end reaps life everlasting. Some of self-surrender is already obviously joyous. Sickness is a phase of self, and is it not a joyous experience to surrender sickness? The crux of the whole matter would lie in the law. Is there a law which makes continued suffering and wounds necessary during spiritual progress? Christian Science, the Comforter, holds out the reasonable hope that obedience to Principle dissipates any such necessity, that progress can be made without inevitable suffering, and can be placed under the ægis of a compassionate Science, "redeeming us from the false sense of the flesh and the wounds it bears."

Christian Scientists therefore are able to rejoice in the new way of Science, which means deliverance from the belief in the desirability, attractiveness, or power of sin, from any supposed validity inherent in disease, and from the inevitableness of death. Christian Science, teaching that mankind suffers only from its false beliefs, proves that the substitution of right ideas for these false beliefs likewise delivers from the penalty of suffering. Since resistance to truth plays the largest part in this supposed necessity for suffering, it only remains for mankind to be willing to surrender the beliefs of the flesh in order to be exempt from the suffering of the flesh.

When, therefore, through reason and revelation mankind begins to let go the false in order to accept the true, it finds that there is no law which requires suffering. The final relief comes with the recognition that there is and can be only one real way of deliverance for man; that God is one; and that while humanity may seem to personal sense to be a mixture of good and evil, the real man is altogether good and spiritual, and ever expresses Life, Truth, and Love. The next step after this recognition follows naturally, namely, that in reality there can be only the way of Spirit as sufficient for salvation, and that this way cannot be penalized according to the law of suffering.

A hymn of genuine rejoicing arises from the assembled hosts who realize that their redemption is nigh, not only from the false beliefs of evil, but even from any supposititious need for resistance to truth or for suffering. If suffering comes in human experience, it can be met and mastered with the assurance that it is not of divine origin; hence neither lawful nor legitimate, and wholly unnecessary. Mrs. Eddy on page 224 of Science and Health has thus referred to the nature of true progress: "Every sensuous pleasure or pain is self-destroyed through suffering. There should be painless progress, attended by life and peace instead of discord and death." Is not this the way of our choosing?

WILLIAM D. MCCRACKAN.

Among the Churches

Current Notes

BELLINGHAM, WASH.—Announcement is made today [May 20] by the officials of First Church of Christ, Scientist, that work will immediately start on the first unit of a thirty thousand dollar edifice to be erected on the southwest corner of Forest and Maple Streets. Plans for the imposing structure have been prepared, and the contract for the building of the initial unit, to cost in the neighborhood of seventy-five hundred dollars, will be awarded early next week. When completed the church will have a frontage of 90 feet on Forest Street and will be about 100 feet in depth. The first unit will have the full frontage on Forest Street and 45 feet in depth. The front section of the church will be completed in the initial contract and will be used as the auditorium until the final unit is built. Three hundred persons can be comfortably seated in the temporary auditorium.

Bellingham Herald.

BALTIMORE, MD.—During the twelve months ending Oct. 31, 1915, 64,240 pieces of Christian Science literature, including two copies of Science and Health, also *Sentinels, Journals, Heralds, Monitors, Quarterlies,* and pamphlets,

Digitized by Google

besides two Bibles and 2320 copies of Senator Works' speech, were given out by the literature distribution committee. As the need arose four new subcommittees of the literature distribution committee have been formed, one to procure subscriptions to the Christian Science periodicals; another to take charge of the free distribution at Second Church of Christ, Scientist; a third to procure and card-index classified lists of individuals throughout Maryland to whom may be sent marked copies of the *Monitor* containing articles of special interest; a fourth to procure Christian Science literature, for use by this committee, from subscribers to the periodicals, attempting to impress upon them the fact that the demand is constant for clean, fresh literature. Also during the year there were secured fourteen new places which accepted wire racks to be kept filled with Christian Science literature, including lunch rooms, theaters, and factories, while only eight places were dropped. At the end of the year about fifty places were being regularly supplied with packages of literature. Four subscriptions to the *Monitor* were sent to the city jail last year.

Last summer there was started an interesting work which will doubtless bear much fruit. A member of First Church of Christ, Scientist, allowed his launch to be used for the distribution of Christian Science literature among the boats in the harbor, and he assisted very materially in this work. The foreign pamphlets published by The Christian Science Publishing Society were found very useful, as they could be put on foreign boats. Between two and three thousand pieces of literature were thus distributed. There were 6524 *Monitors* sold on the news-stands during the year.

For two weeks in September a booth was maintained at the "Made in Baltimore" Exposition and Pure Food Show at the Fifth Regiment Armory, for the free distribution of the *Monitor;* other Christian Science literature was given if desired. In all, 6605 *Monitors*, 33 *Sentinels*, 10 *Journals*, and 3 *Heralds* were distributed in this way. Those in charge of the booth noticed a more friendly feeling toward Christian Science than in previous years, and many visitors told of friends who had been helped by Christian Science, while others asked questions concerning it and were glad to have the literature. At the end of the year forty-nine places, including hotels, lunch rooms, reading-rooms in stores, barber shops, dentists' offices, clubs, and other places, were receiving the *Monitor*, *Sentinel*, or *Journal* regularly, through subscriptions given by this committee; also 6526 pieces of Christian Science literature were distributed from the free literature racks in the Baltimore churches during the year.

Literature Distribution Committee.

SPRINGFIELD, MO.—The splendid church edifice erected on Center Street by the Christian Scientists of Springfield was dedicated with appropriate ceremonies yesterday [June 4]. It cost thirteen thousand seven hundred dollars. The auditorium has a seating capacity of four hundred. On Nov. 14, 1914, the site on which the church now stands was purchased, and on Sept. 1, 1915, the corner-stone of the building was laid. The work was completed in December, and the first service in the new building was held Sunday, Jan. 2, 1916.

In June, 1901, First Church of Christ, Scientist, was organized under a charter obtained from the state. Services were held in the Baldwin Theater Building until June, 1903, when the church building on the corner of Market and Walnut Streets was rented for the Sunday and Wednesday services. From November, 1907, to December, 1915, services were held in the recital hall in Masonic Temple.

The Springfield Leader.

CHARLEVOIX, MICH.—With the expectation of building a suitable place of worship within the next three years or so, the controlling board of First Church of Christ, Scientist, has acquired a 77-foot frontage on Clinton Street, which includes the house and lot known as the Hawkins property. Since the organization of the church in 1909 it has had a wonderful growth in membership. Originally there were nine charter members, it then being known as the Christian Science Society. At the semiannual business meeting, Jan. 3, 1916, the name was changed to that by which it is now known.

Charlevoix Courier.

The Lectures

Billings, Mont.

Prof. Hermann S. Hering delivered a lecture on Christian Science in the edifice of First Church of Christ, Scientist. He was introduced by C. M. Dickinson, who said:—

Mankind's age-long desire for the peace that passeth all understanding was fulfilled in Jesus of Nazareth nearly twenty centuries ago. He realized that man is created in the image and likeness of God, and that God is Spirit and Love. It was through the complete understanding of the Principle of being that he was able to break all the so-called laws of the material world by healing the sick, feeding the multitude, and commanding the wind and waves. In the three centuries following, this concept of Deity dwelt with and was made manifest by followers of Jesus, and while the Principle has always been available to mankind for its use, yet man deliberately or ignorantly closed his consciousness to this truth and reverted to the unsuccessful struggle for happiness, peace, and health through material means.

Fifty years ago a New England woman, prostrated upon a bed of suffering, discovered that a true understanding of God and of our relation to Him would set aside the man-made laws of physical and medical science and heal the sick. Thus was born again in human consciousness the Christ, and in the past fifty years more and more earnest men and women have had this truth, or Science of Christianity, come into their lives to make them healthier, happier, and holier. A dim perception of this wonderful discovery makes each of us long for a clearer understanding, and that is the reason for this gathering today.—*Billings Gazette.*

✧

Denver, Col.

Two lectures on Christian Science were delivered by Bicknell Young in the theater section of the Denver Auditorium. They were given under the auspices of First and Fourth Churches of Christ, Scientist, and the audiences filled the auditorium to the doors. The lecturer was introduced the first evening by Charles A. Swift, first reader of Fourth Church, who spoke as follows:—

Throughout all time the thing most greatly admired by mankind has been happiness, but where to find it and how to acquire it has been a mighty problem. The acquisition of wealth does not insure happiness, and long life may be robbed of its pleasure by sickness or accident. Where then are we to look for it? In speaking of God's law the psalmist said: "Thou wilt show me the path of life: in thy presence is fulness of joy; at thy right hand there are pleasures for evermore." Hundreds of promises in the Scriptures teach that when we understand and obey God's law we shall have all things whatsoever we need. Christian Science gives to mankind the understanding of this law as set forth in the Scriptures, and teaches them how to apply it here and now in their daily problems.

Digitized by Google

The lecturer was introduced the second evening by former Mayor Robert W. Speer, who said in part:—

I have had some glimpses into the Christian Science garden. I know but little of the work within, although I have seen some of its beauty by reflection; but no soil other than Truth could produce such flowers of health, hope, and happiness. We are living in a practical age, and results speak louder than words. The removal of physical pain seems to be a natural forerunner of mental preparedness. The personal knowledge of a power to dissolve bodily ailments creates a desire to try the same power for spiritual uplift and successful living. Christian Science is growing everywhere, because it meets a common want in this life and lifts the fog of fear from the next.

The Rocky Mountain News.

✧

Woodbridge, N. J.

William T. Ames, president of the First National Bank, in introducing Virgil O. Strickler, who lectured on Christian Science under the auspices of the Christian Science Society of Sewaren, said:—

We are met together this afternoon to hear something about a subject that is of interest to many people today. Some time ago, when a lecturer opened his remarks by stating that he had never known any one who was opposed to Christian Science, I thought his acquaintance must be very limited. However, he went on to explain that he had met many who were opposed to what they thought was Christian Science, but had never known any one who knew what it was to be opposed to it. Many think that Christian Scientists do not study the Bible. Although I am a member of an orthodox church, yet my intimate association with Scientists has led me to believe that they wear out more Bibles from actual use than the members of any other denomination.

Correspondence.

✧

Pine Bluff, Ark.

A lecture on Christian Science was delivered by Willis F. Gross at the Shriners Temple, Judge W. B. Sorrells in introducing the lecturer said in part:—

They say it is the aim of Christian Scientists to do all the good in this world that they can. You will remember that over nineteen hundred years ago there was one who had the same divine aim and purpose. The psalmist says, "I have been young, and now am old; yet have I not seen the righteous forsaken, nor his seed begging bread." I have never seen a Christian Scientist apparently forsaken, and if there are any pessimists among them, they do not show it in the radiance of their smiles or the joy of their songs. They all seem to be very happy and healthy.—*Correspondence.*

✧

Aberdeen, Wash.

Clarence C. Eaton, who lectured on Christian Science, was introduced by James A. Hood, who said in part:—

A few years ago, when a Christian Science lecture was announced, a great majority of the people evinced no interest. The members of the church under whose auspices the lecture was given were there; a few others who had read or heard something of Christian Science went from a desire to learn more about it; a few there were who went to scoff or criticize, and a great many attended merely to gratify idle curiosity. Today, however, with Christian Science churches in nearly every civilized country in the world and more than fourteen hundred in the United States alone, when a lecture is to be given in one of the larger cities we find that interest has been aroused to such an extent by the marvelous growth and the wonderful results of the teachings of Christian Science, that it is difficult to find a building large enough to accommodate all who desire admission. And what has been the cause of this unusual interest? Why are so many intelligent people so intensely interested in Christian Science? What has been the cause of the marvelous growth Christian Science has made in the last few years? The answer to these questions is that there is a world-wide demand for a reasonable religion; a religion of love instead of a religion of hatred and revenge.

Correspondence.

✧

New York, N. Y.

The introductory remarks by Mrs. Ella T. Taliaferro, second reader, at a lecture on Christian Science by Frank Bell in Second Church of Christ, Scientist, were as follows:—

The Master met all the needs of the human heart through his demonstration of two brief statements of truth: "Thou shalt have no other gods before me;" "Thou shalt love thy neighbor as thyself." Centuries later this basic truth of the Scriptures, as taught and demonstrated by Christ Jesus, illumined the consciousness of Mary Baker Eddy, and revealed to this age the healing and redemptive power of divine Love through Christian Science.—*Correspondence.*

✧

Kansas City, Mo.

John W. Doorly, who lectured on Christian Science for Third Church of Christ, Scientist, was introduced by Mrs. Ella Celeste Belden, who said:—

At this period of the world's history the question is being asked in all quarters, "Has Christianity failed?" Christian Science is here to answer that question in the negative, to assure humanity that the Christ of whom the Bible tells us in the words, "Lo, I am with you alway, even unto the end of the world," has not failed, nor ever will fail. The Science of the Christ is "the same yesterday, and today, and forever." It needs but to be understood as the Master taught it, to be understood and practised. Christian Science is the expression of this Science of Christ, reviving again the words and works of the Master and his disciples, giving a healing and purifying gospel to this present age, with "signs following."—*Correspondence.*

Testimonies of Healing

It is time for me to express my gratitude for what Christian Science has done for me, as I owe to it my life and all that is worth living for. I bitterly opposed this teaching when it was brought to my notice by my daughter, who so lovingly tried to have me read Science and Health. I could see nothing in it that appealed to me and thought my old church good enough; yet I knew nothing about God and man's relation to Him. The Bible, which I now love dearly, was a closed book to me. God seemed far off and not to care for me, for my prayers were apparently never answered. In the Christian Science church I have found love and harmony, together with the knowledge that God is not far away but ever present. I had to pass through deep waters before I could know the goodness which God had prepared for me in giving to the world, through Mrs. Eddy, "Science and Health with Key to the Scriptures" and her other writings.

In an accident which nearly cost me my life, my right hip was fractured and there were internal injuries. I suffered untold agony. Then I asked for Christian Science treatment; and although the physicians declared I would never walk again, except perhaps with the aid of crutches, and then not for a year on account of my age, which was over sixty-seven, in less than two months I walked over a mile and up a long flight of stairs to our church. For twenty years I had been afflicted with headaches, which would confine me to bed for a week, also with neuralgia, and every winter I would expect to have three or more attacks of pleurisy. I suffered a great deal and doctors could not cure me. These ailments, together with many others too numerous to mention, are now things of the past, thanks to Christian Science treatment. The study of the text-book will help others as it has helped me.

One Sunday after coming from church I sat down to study the next Lesson-Sermon and went through it all. Then I reached up to take off my glasses, and behold, they were not there. I had not done without them for a great many years, but they have not been used since. Although in my eighty-third year, I am well and happy.

It is a great joy and comfort to be physically free, but the spiritual uplift means even more to me. I am deeply thankful for the help received in Christian Science. I dearly love all the writings of Mrs. Eddy, and can hardly wait for the periodicals to come. I am trying to interest others.

HARRIET E. DAVIS, Everett, Wash.

I wish to corroborate my mother's testimony, given in her own handwriting. Her remarkable activity (she does her own housework), her constant attendance at the church services and lectures, her bright mentality, and her sole dependence on Christian Science is very comforting and encouraging to others.—ROSE D. HASKELL, Everett, Wash.

✧

Some years ago I met with an injury to my back, and the pain increased so much that within a few hours it was impossible to lift my foot even a few inches without great suffering. Finding my own understanding of Christian Science unequal to the need, I called upon a practitioner and told her what had happened. She most lovingly gave me treatment at once, and in about half an hour all pain had gone. I was free and could have run down the street if necessary. A similar case known to me was years in the same condition and was not healed.

One morning, two years after this experience, I caught my shoe in the stair carpet and fell five steps, injuring both ankles. The intense pain at first caused great fear, but I was just as quickly enabled to realize the truth in the lines on page 468 of Science and Health: "All is infinite Mind and its infinite manifestation, for God is All-in-all." My daughter ran to my assistance and helped me up the stairs. I studied Christian Science all day, resting my feet, and next day walked about the room a little.

The following day it was my duty to be at a charity house by noon, so I got to work to destroy fear, then walked downstairs. Keeping well in thought that "all is infinite Mind," I reached the street without any difficulty, and as there was no conveyance in sight, I just walked on, my ankles growing stronger all the time. The business with the institution done, the return journey was started in the same way with the same results. The distance was about two and a half miles, but never a twinge of pain was felt, nor have I since been reminded of the accident. That was nine years ago. Before knowing anything of Christian Science I sprained one ankle and was laid up for three weeks, and could only limp about with the help of a stick.

These are but two instances of healing out of numbers of them, but the spiritual uplift is far greater and more to be desired. Daily the truth as taught in Christian Science unfolds to us the glorious fact of perfect being and boundless good. Only those who have felt its power can understand how inadequate are words to express our thankfulness. I am deeply grateful to our loving Father-Mother God, and to Mrs. Eddy for the many blessings showered upon me through Christian Science.

MARY A. M. CAMERON, Melbourne, Australia.

✧

No words can express the happiness I have experienced through my understanding of Christian Science and my love for Mrs. Eddy, who has opened the way for such a wondrous good to be placed before the world.

During the past fifteen years my ankles have been badly injured,—not once or twice, but six times. On the first occasion I was confined to a cot for seven weeks, the pain being too intense to allow me even the comfort of having the foot on a level with the body, as it was necessary to prop it up to an elevation higher than my head. Another time I was laid up for five weeks. I had heard but little of Christian Science, had even been so narrow-minded as to mock at it, and was not ready for such a revelation as it eventually proved itself to be.

On the occasion of the sixth sprain, which was far more severe than any previously experienced, I was in the company of a Christian Science practitioner with whom I had been acquainted but a short time. We had just entered the auditorium in our city to listen to a lecture on Christian Science, and were preparing to settle ourselves in our seats, when I stepped from an elevation above on to a slanting foot-rest. In order to prevent a fall I threw my entire weight on the other foot, turning the ankle entirely over and severely wrenching the ligaments. As I thought of my past experiences I wondered how I should ever be able to leave the hall without being carried out; but the practitioner came to my rescue. On ascertaining the nature of the error that had gripped me, she directed my thought in a gentle way to where I must look for relief. She talked, I listened; and before the speaker had begun (only about fifteen minutes having elapsed) I had entirely forgotten the pain and was ready to hear the lecture.

Suffice it to say, I walked from the edifice down a long flight of stairs and then several blocks to my home. The following morning I jumped from bed and walked half across the room before my experience of the previous evening came to mind.

Digitized by Google

When I examined the ankle I found a slight swelling still visible, but it disappeared before the dawn of the next day, and the pain had already gone. I have not had the least trouble with the ankle since this remarkable healing. Prior to that time it had been my misfortune to wrench it when stepping carelessly on even the smallest pebble, but since then the ankle has seemed like a new one, as strong as though it had never been injured. The healing is complete, and I shall never again know the fear that I experienced prior to taking up Christian Science.

This, my first demonstration in Science, has taught me the value of such a knowledge. I can never find words fully to express my thankfulness for even my little knowledge (which I hope some day to call big) of the truth.

A. L. D. Barnard, Coulterville, Cal.

✧

With the help of a Christian Science practitioner I passed through the period before childbirth with remarkable strength, doing unusually heavy work with no ill effects. At the birth I suffered no pain and was up in a short time. In four days a severe bowel disorder was overcome for the child and there has been no return of it; indeed, a happier baby we never saw.

I have also been healed of heart disease, supposedly inherited, for I never knew what regular heart action was till I came into Christian Science. A little son was stung by bees, so that to mortal sense he was a dreadful sight, but after two treatments he was all right. An attack of croup yielded in an hour after I asked for help. My daughter, thirteen years old, has been healed of a kidney disorder which had troubled her all her life.

For these healings and many blessings we are very grateful; in fact, words cannot express our gratitude for the blessings we have received in Christian Science.

Mrs. E. N. Patterson, Nampa, Idaho.

✧

[Translated from the German]

It is with a sense of deep joy and gratitude to God, and also to our revered Leader, Mrs. Eddy, that I would like to testify herewith to the many blessings which have come to me through the power of Truth. My mother drew my attention to Christian Science three years ago, at a time when I was suffering from rheumatism affecting the head, and more especially the neck. I had been afflicted with this trouble for quite a while. The physician whom I consulted believed that a cure might be effected by using electricity, and also told me not to regard the condition lightly, as it might lead to a disease of the brain.

I however perferred to trust in God, and started to read *Der Herold der Christian Science* diligently. It became clear to me that God is not the author of sickness and sin, and that divine Mind can create only that which is good. I applied to a Christian Science practitioner and asked for treatment, which was readily taken up, and the disease was soon overcome. When some time later it manifested itself again as the result of fear, I once more asked for help, and supported the work to the best of my knowledge, the result being that within a short time complete healing took place. Since then I have enjoyed good health and an increased sense of joy.

Two years ago our youngest son was taken ill with jaundice. We had him treated absently, and in one week's time he was healed completely through the power of divine Truth. Also our eldest son, who for many years suffered from heart trouble and later on from catarrh of the bowels, was entirely freed of these troubles within a short time through Christian Science treatment. Whereas gymnastics and swimming were prohibited by the physician, he now indulges in these exercises freely.

I cannot begin to tell of all the proofs which we have had of the power of divine Love, but will close by adding that through Christian Science we have been enabled to overcome readily difficulties in a business way, and that our endeavor is to gain more and more understanding of the nature of God as divine Principle, and to live in accordance with the spirit of Christian Science.—Sophie Beyer, Hannover, Germany.

✧

When I first became interested in Christian Science I was greatly in need of reformation, both mentally and physically, and I am indeed thankful to state that this reforming process has taken place in the degree that I have gained a clearer understanding of the truth as revealed by Christian Science. I have been healed of stomach trouble, from which I suffered for about ten years and which was believed to be hereditary, and also of what is termed "tobacco heart." The smoking habit was overcome by Christian Science after I had tried many times to overcome it by will-power, but without success.

Prior to taking up the study of Christian Science I was fettered by many erroneous beliefs, and when I recall how these have gradually but surely been corrected by the changing of my mode of thinking from a material basis to the spiritual, I find it difficult to put into words my deep sense of gratitude for what the Founder of Christian Science has done for me in giving to the world a demonstrable, practical religion. On page 293 of Science and Health Mrs. Eddy writes, "Christian Science brings to light Truth and its supremacy, universal harmony, the entireness of God, good, and the nothingness of evil." During the past eight years I have been learning the truth of the foregoing statement, and although there have been trials not a few, I can now give thanks for them, since they have led me to rise above the belief in their reality to an understanding of their nothingness.

For the many benefits that have come to me through Christian Science I am most grateful, and my desire is to show my appreciation by living in accord with its teachings.

Floyd E. Miller, Chicago, Ill.

✧

Mrs. Eddy says: "Become conscious for a single moment that Life and intelligence are purely spiritual,—neither in nor of matter,—and the body will then utter no complaints. If suffering from a belief in sickness, you will find yourself suddenly well" (Science and Health, p. 14). While reading these words I was healed of a distressing illness that had lasted for eighteen years. I had tried several schools of medicine, and had also been taken to health resorts, where I would revive for a time, only to fall back again into a hopeless state of invalidism. I became so prostrated that I could not walk even a few steps without having a sinking spell. My only nourishment was liquids, with occasionally an egg and hard-baked bread. I could sleep but little, and was becoming unable to bear the exertion of talking or even of hearing others converse. I was indeed a pitiable object, a burden to myself as well as to my family, and the physicians had given me up. Then suddenly the light of divine Science dawned for me and I was well.

I can never forget the spiritual illumination that came to me as I read for the first time those words in Science and Health; I felt the presence of God. The change in my physical appearance was at once so marked that my husband and children as they came into my presence said, "You are better," and I replied, "Yes, I am better." I was really healed, but I could not believe the whole truth at first. When,

Digitized by Google

however, I found myself in two days sitting at the table with my family, eating a hearty meal, and soon afterward walking wherever I wanted to go and able to take up my duties again as mother and homemaker, I knew that I had found the truth and the truth had made me free. My one desire was to know more of Christian Science, and I read one by one each of the books written by our beloved Leader. I subscribed to the Christian Science periodicals, had class instruction, and took up the work as it came to me.

It is now nearly fifteen years since I was healed, and during that time Christian Science has been my healer, my comforter, and my supply. Sometimes the way has seemed dark, but by holding steadfastly to the truth that God, Spirit, is All, and there is no matter, I have overcome every error that has presented itself, even when evil tried to reverse my healing about ten years afterward,—tried for a year to overcome the truth. It was a hard battle, but with the patient and loving help of several practitioners and my own knowledge of Christian Science the battle was won for Truth.

On one occasion, when I broke my arm just at the wrist, I immediately went to a Christian Science practitioner, and before leaving her office my hand was in place. The next morning, when the arm was examined by an osteopathic physician (this was done because my husband and family required it), he said the bone was already set and was knitting together.

I find that each experience has helped me to climb one round higher on this ladder toward Truth and Love. My heart wells up in gratitude that our dear Leader was still enough, spiritually, to hear God speak to her, and that He gave to us, through her, that inspiring book "Science and Health with Key to the Scriptures," wherein we find that we are all one family in love and unity, and that God is our Father-Mother, all-harmonious.

Anna M. Shrewsbury, Muskogee, Okla.

✧

[Translated from the German]

I desire to give public expression to my gratitude for the great blessing which I have received through Christian Science. In 1912 I became afflicted with attacks of very weak heart action, and it was believed that the end might come at any time. My nurse having called my attention to Christian Science, we asked a practitioner for treatment, and it was readily given. My healing took place in a short time, and I am enjoying good health today. In the case of my child, error yielded through the spiritual, truthful thoughts which I held.

For these great blessings I am deeply thankful to God, and grateful for having found those who helped me to gain a measure of spiritual understanding. I hope that through reading the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I may progress and be able to realize more and more our oneness as children of God, divine Love. Thus with the psalmist I can say: "Bless the Lord, O my soul: and all that is within me, bless his holy name."

Frau Anna Seeger, Marbach a. Neckar, Württemburg, Germany.

✧

In 1914 I was obliged to seek the aid of Christian Science for a foot trouble known as weak arches, from which I had suffered torture for more than two years. I had tried special shoes, arch supporters, and the like, but had received no help. Finally I could not stand to dress, and for more than a year was unable to stand long enough to shave. Oftentimes when within a couple of squares of my hotel or office I would have to sit on the curbstone for rest, and the picture constantly before me was of the day when I would have to be wheeled about in a chair.

I had been told of Christian Science eight months before I reluctantly called on a practitioner. That morning I was unable to make a complete step with my left foot, and the pain in my legs was so intense that I could not bear to sit down. I went to the practitioner feeling that possibly after a year of hard study I might get some relief, but to my amazement I arose the next morning without a sign of this dreadful trouble that had made life almost unbearable for more than two years. I took three other treatments, covering a period of two weeks, and again to my great surprise I found that the taste for tobacco, indulged for eight years, had completely left me; also something told me that I did not need to wear glasses, so I left them off, and my eyes have not given me a bit of trouble since.

I was completely healed in one treatment of influenza, which had been a life-long enemy; and one night, after being in dreadful pain for several hours with an acute attack of stomach trouble, I telephoned to a practitioner and in forty minutes was perfectly well. When I had a similar attack before coming into Science, I could only get relief by taking a hypodermic, and it was fully a week before I felt right again. It is impossible to be thankful enough to God for these wonderful blessings, and to our dear Leader, Mrs. Eddy, for her devotion to mankind in bringing to us this saving truth, which surely sets men free.

A. S. Harley, Reading, Pa.

✧

In recognition of the comforting, healing message revealed to me during the time I have known and studied Christian Science, these lines bear grateful testimony. "Precept upon precept; line upon line," I have tested this truth, which has been my only physician for a number of years. Headache, stomach disorder, hay-fever, acute rheumatism, and other ailments have disappeared as a result of its divine ministration. I have also received wonderful proof of its efficacy in the freedom of the singing voice, for many medical laws on that point have been overcome by "the law of the Spirit of life in Christ Jesus."

Class instruction has revealed to me the demonstrable basis by which we know and experience "the glorious liberty of the children of God." In the passing on of several near relatives, immortality and God's loving care as taught in Christian Science have shone like stars in my consciousness. A sense of immeasurable gratitude is present with me for our Leader's consecrated life and its rich legacy to the world,—our Christian Science literature and church organization.—Elizabeth Brown-Hawkins, Minneapolis, Minn.

✧

With a heart overflowing with thankfulness to God, the giver of all good gifts, I will try to tell what Christian Science has done for me and mine during the past twelve years. At different times and in many ways I have been able to overcome evil with good, through the understanding of God as ever-present good and an ever-loving Father. Error has at times seemed to manifest its illusive power, and the outlook has been dark indeed; but by steadfastly clinging to God as Love and as All, I have always awakened to a higher understanding of what God is and of man's relation to Him.

About seven years ago, while living in another state, I was taken with a severe attack of illness. I read the Bible together with Science and Health, and tried to apply the truth taught therein; but continued to grow worse, until I was very sick. I then wrote to a Christian Scientist in another part of the state, and was soon better, but not entirely free

Digitized by Google

until about three days later, when I received a letter from her saying she was sorry I had seemed to suffer, but asking why I had to write to her in order to find God. This question aroused me to the realization that the healing influence is everywhere present, and I was perfectly healed. I had been ill for two or three weeks with the same symptoms at previous times before coming into Christian Science.

Words fail to describe the sense of peace and joy that comes into our lives through the study and practice of Christian Science. The physical healing has given us a larger thought of God as good, but the spiritual insight and regeneration has given us eternal life, and this is more than all else.—SAREPTA COTTRELL, Berkeley, Cal.

✧

Several years ago, while suffering from organic trouble, I went to Nice with my mother. Before leaving England I underwent a slight operation, performed by one of the best London surgeons, who also treated me for some weeks thereafter; but as no benefit resulted at the end of that time, I hoped the change abroad would restore me to health. At Nice I became acquainted with a Christian Scientist, who lent me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and after reading it I applied to a Christian Science practitioner in Paris for help. I had absent treatment for about four months and received a little benefit, but was not healed. After traveling on the continent for two years, I visited Florence and again applied for Christian Science treatment, which was continued for three months, and since then I have gradually found my healing. There was much to uproot in me, for I had certain extreme ecclesiastical views, from which I am thankful to be released; but it was a long, hard struggle, and I feel deeply grateful to Mrs. Eddy for explaining the truth so clearly.

Christian Science was a great comfort to me when my dear mother passed on, and I shall not forget the loving help I received from a practitioner. I seemed lifted out of myself and was able to undertake everything with perfect calmness. My healing is permanent, and I am deeply grateful for it.

ALINE MUZIO, Kilburn, London N.W., England.

✧

For about two years I was under the care of eminent surgeons, some of whom were personal friends, for a condition of one leg called by them tubercular. During that time I was operated on twice, but the leg was worse after each operation. I then turned to Christian Science, with the result that I am today completely healed. At one time the leg was drawn backward until it was almost doubled under me, and had also wasted away until it became about half its normal size; but under Christian Science treatment it gradually straightened and became normal in size.

Most of this change took place while I was employed in a position which required me to be on my feet constantly and walking the greater part of the day, so the healing efficacy of Christian Science was proved to me. Had I received no more than the physical healing, I would have every reason to be thankful to God; but this is the least that Christian Science has done for me. It has brought me life by teaching what God is, and has shown me the real man by giving me a vision of the Christ, Truth. It has taught me to think right thoughts about my neighbor, and has revealed to me the spiritual universe by recognizing God's ideas, reflecting Him everywhere. Could I ask for more?

I have only gratitude for our dear Leader, Mrs. Eddy, who was pure enough to rise to that plane of consciousness where she could recognize this truth, and who was unselfish and brave enough to give it to the world.

JOHN H. TOBIAS, New York, N. Y.

From Our Exchanges

[*Northwestern Christian Advocate*]

It matters everything that man should think soundly. He may not think as other people think, he may not think as his teachers think, but he must think right thoughts or his life goes all awry. Some tell us that creeds are nothing, that the only necessary virtue is sincerity. But one may be sincerely wrong, and wrong thinking on cardinal things is fatal, while wrong thinking on anything is injurious. Wisely is it said that as a man thinketh so is he; it is his thinking that determines specific acts and courses of conduct. A man's thoughts often show in his face; they always show in his conduct.

[Virginia Percival Gwyn in *The Living Church*]

There is a phrase of good Sir Thomas More that has been continually repeating itself to one for many years,—"merrie in God." The response to this phrase is often seen. Those urbane souls who live in the radiancy of God's love have a charming mirthfulness in all the situations of life, as if there were ever present to their minds the words, "He that sitteth in the heavens shall laugh." They seem to have an unalterable gaiety and enviable repose, equanimity. Their souls, like that of St. Francis, go out in a burst of tenderness and blessing to everything,—bird, beast, and flower; water, sun, and sky; child and sufferer. They know the sorrows of nature as well as its joys; they live at the heart of human suffering in this wonderful world—and yet they are blissful. That does not imply that they are comfortable, for in aspiring to perfect happiness their only wish is that they may be with God. Such merry souls are free, unhampered, cheerful amid any imperfection, any setback, for they realize that the saints are the sinners who have kept on trying.

Contrast with such the fretfulness, the dour self-consciousness, of some Christians, those who are always taking their moral temperature—and yours too—and their spiritual pulse. Theirs is a deliberate rigidity of piety. Their excellence is stiff, starchy; it crackles, and so makes a noise that forces your attention to them, for they want to have their "say" to you.

[Dr. J. H. Jowett in *The Christian World*]

Who are the poor in spirit? They are the people who feel poor because they have seen something exceedingly rich. They have looked upon something better than themselves. They have gazed upon something inexpressibly glorious, and they have become profoundly conscious of their own want. They have contemplated the unattained, and what they have attained has dwindled to almost nothing. Their eyes have ranged over an entrancing continent, and now they find they are only in possession of an inch. There is no pride about them; that untrodden prospect is destructive of all their pride. There is no vanity about them; large vision is always deadly to small vanity, and their vanity lies prone in the dust. There is no self-satisfaction about them, for their eyes are filled with radiant wonders which make all their personal triumphs seem dim. The poor in spirit are rich in the sense of want.

But there is more than this. There is not only a sense of want, there is a sense of hunger. They are contemplating an unfolding spiritual glory, and they are filled with aspiration to possess it. They are poor in attainment, but they are rich in prospective triumph. Yes, they have want plus hunger. They have poverty plus ambition. They feel the limits of the inch, but they aspire to the conquest of the mile. They realize the limitations of the mile, but they reach forward to the possession of the league. And so the poor in

Digitized by Google

spirit are the people who lack and yearn for the things of the spirit. They never feel so rich in possession as they are in prospects. There is always something ahead which makes all their present attainment seem poor. Whatever treasure they hold is dulled by the treasure which yet invites them. They are poor in spirit, and the Master gives this conscious sense of want the place of first beatitude.

[*The Christian Register*]

There is no danger that the search-light of truth will be kept out of the pulpit. The prophets as a race are not extinct. The commercial, material spirit has not penetrated so far as we sometimes imagine. Denunciations directed toward the totally depraved are deemed useless, because the world is coming to believe there are none such. It is health, not hysteria, that is demanded of the teachings of the church. A church we know may be slowly dying, though it looks prosperous and flourishing on the outside. It is like a blooming fruit that has a worm at the center. Such a church shields and protects the evils that are secretly eating out its heart. It will not allow the probe to enter and do its work. Pathetic is the case of a man who feels it his duty to probe deeply into the secrets of the human heart and touch the sensitive nerve of sin and awaken it to pain and aching that may bring it regeneration through an awakened conscience, and yet who finds all surfaces smooth and unresponsive to his efforts. It is a holy task, and the world is not worthy of such a true apostle. What will it profit a church if it gain the world and lose its soul?

[*The Methodist Recorder*]

We see now what human ambition, human sin, can produce, —a veritable hell of misery. Can we not hope that this is the dense darkness that precedes the dawn of a better day? If a new spirit inspires the nations, born of their great anguish, we may hail even now the daybreak. But it must be a spirit of deep penitence and humble confession before God. That this result may be achieved, the church of Christ must play the part of the suffering servant of Jehovah. She must take the suffering of this time into her soul; must seek to understand it, and interpret its meaning to the world. Taught by the agony of the age, she must proclaim unfalteringly the moral causes of all human disasters, and emphasize the spiritual nature of the things that belong to the nations' peace. Thus shall even the stern discipline of war become God's great instrument for the abolition of war.

[*The Christian*]

Creeds and doctrines, however tenaciously held and zealously propagated, are but poor substitutes for the living Christ, who was never more alive than now, when the failure and breakdown of materialistic civilization is bringing once more into general consciousness the world's great need of a Saviour and a Lord.

[*The Christian Work*]

When we read the words of Jesus in the Sermon on the Mount we know that there is nothing ephemeral or contemporaneous in them; we cannot conceive that they were any truer when they were spoken than they are now, or that they will be any less true twenty centuries from now than they are today.

[*The Sunday School Times*]

Blessings come soonest to those who rejoice most without them. We postpone a needed blessing if we are anxious over its delay.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Publishing Society

A new French pamphlet, "Foi et Générosité" (Faith and Generosity), has just been issued and is now on sale. This pamphlet contains the following articles: "The Lord Thy Confidence," "The Closed Hand," and "Continuity of Right Thinking."

"Christian Science: A Religion of Love" (Christian Science: En Kjærlighetens Religion), a lecture by Virgil O. Strickler, has been translated into Norwegian and is now published in pamphlet form with English and Norwegian versions on opposite pages.

"Law and Work" is the title of a new pamphlet containing the following articles: "Love Fulfils Law," "The Logic of Christian Science," "Undisturbed," "God's Law of Adjustment," "Authority."

"Christian Science: Man's Dominion over Evil," a lecture by Edward A. Kimball, C.S.D., has been translated into Russian, Norwegian, and Modern Greek. Pamphlets in these three languages have been published with the English version opposite the translation and are now on sale at prices of our regular pamphlets as shown on the opposite page.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¼ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 47 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under those titles in this price list.*

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

The Argentine minister of agriculture is about to present for congressional approval a project providing for the issuing of 16,000,000 pesos in bonds to be used in the exploitation of the Comodoro Rivadavia oil fields. The bonds are to be negotiated locally, and the money is to be utilized in necessary extensions and machinery and in purchase of two more oil-tank steamers for conveying petroleum to the city of Buenos Ayres, where the chief consuming market is found. The oil fields as now exploited by the Argentine Government are located in the territory of Chubut, where a reserve of 5000 hectares has been set aside for this purpose.

Under a law enacted in 1910, a general board for the supervision and administration of the oil fields was created. Since the board took charge of the work, twenty-five wells have been bored, in all of which petroleum and petrolific gases were found. Comparing the production per well per day with the Russian fields of Grosny, it is found that the Argentine wells produce 20 tons per day for the old wells, and 13 tons per day for the new wells, whereas the Grosny wells produced only 12.50 tons for the old wells, and 6.31 for wells in course of construction. The average yield of the wells in California, where the yield is richest, according to a recent report from the United States, does not exceed three tons per well per day.

When District Judge Bledshoe recently handed down a decision which gave the United States Government title to 160 acres in the Maricopa fields of Kern County, valued at $10,000,000, the Government gained its greatest victory in the California oil land cases. This suit was brought under the Taft withdrawal order of 1909. The Government contended that the defendants did not discover oil or petroleum gas and did no development work prior to the date of the President's withdrawal order. One million dollars is said to have been spent by the detendant companies in developing the properties. The case will be appealed. There are many similar cases yet to be tried.

Efforts to foster the domestic rice industry are being continued by the Argentine ministry of agriculture. The principal varieties of Chinese, Japanese, Italian, and Spanish rice have been experimented with. The reports received indicate an excellent yield for 1916. The area devoted to rice in the three provinces of Tucuman, Salta, and Jujuy is stated to be five times that under the cereal in the same region in 1915. According to *La Nacion*, Buenos Ayres, the output of rice in the province of Tucuman was 4,190,000 pounds in 1913, 7,120,000 pounds in 1914, and 15,130,000 in 1915.

When the three and a half million dollar bridge of the Paducah & Illinois Railroad over the Ohio River is finished, next year, according to the *Manufacturers' Record*, a great railroad route will be completed, connecting up a territory reaching from Norfolk on the Atlantic coast and New Orleans on the Gulf of Mexico to Portland, Seattle, and Vancouver on the Pacific coast. It will link the Atlantic Coast Line and Louisville & Nashville Railroads with the Chicago, Burlington & Quincy Railway and the Great Northern Railway, and will realize a transportation dream of many years.

By decree dated June 20, 1916, the time officially used throughout Chile was regulated from July 1, 1916, in accordance with the meridian of the National Astronomical Observatory at Santiago, instead of the meridian 75 degrees west of Greenwich, as established by the decree of Dec. 24, 1909. The advance in time is approximately sixteen minutes.

The new million dollar bridge across the upper harbor between Portland and South Portland, Maine, has just been opened to the public. Construction of the bridge was authorized by the legislature in 1913 and the survey was begun in March, 1914. The structure is of steel and reenforced concrete, with a roadway 60 feet in width. It is 4000 feet long and has a draw span 266 feet in length.

Four hundred and twenty-three buildings, valued at $61,700,000, have been acquired by the Young Men's Christian Association of North America during the last sixteen years. More than seven million boys and young men are on the membership rolls; nearly one hundred thousand have enrolled in vocational evening classes.

Maine's corn-producing territory covers in all about sixteen thousand acres, and of this area there have been planted this year, owing to unfavorable conditions, only about eleven thousand acres. Under normal conditions Maine puts up 15,000,000 cans of corn annually. This year's canning will not exceed 11,500,000, according to canners.

The Russian Government has decided to reconstruct the Duke of Wurttemberg waterway system, connecting Archangel with Petrograd, so that it will accommodate vessels of large size. An effort will be made to have the enlarged waterway ready for use in the first half of the navigation season of 1917.

The United States bought 7,386,080 pounds of plantation rubber from Java in 1915, and maintained for the whole year its rank as the island's best customer. Great Britain was second, with purchases of 4,818,240 pounds, and the Netherlands third, with 2,885,120 pounds.

Negotiations for a loan to China by American bankers who were members of the six-power group formed four years ago to finance the requirements of China, have failed, as the proposed loan seemingly could not be arranged on satisfactory terms.

One hundred and thirty thousand maps of the national forests will be distributed to tourists this summer. These maps show the best camp sites, good hunting and fishing grounds, roads, trails, and telephone lines, and give directions how to reach points of interest.

During the first six months of the current year the United States produced 8290 tons of concentrated tungsten ore valued at $9,000,000, more than ever before mined in twelve months. The unprecedented demand was caused by need of tungsten to temper high-speed machine tools.

The Government of Argentina has approved the budget of the Central Norte and Argentino del Norte (state) railway lines for 1916. The estimates provide for a total expenditure of $6,767,818, of which $4,562,955 is for salaries and $2,204,863 for general expenses.

An investigation of the integral method of waterproofing concrete has been undertaken by the United States Bureau of Standards in cooperation with manufacturers of compounds, and with societies, engineers, and others interested in this problem.

All of the twenty-eight counties of Utah contain portions of national forests, and consequently all share in the 25 per cent of the national forest receipts which is paid over to the road and school funds. This is true of no other state.

In India the total area under rape and mustard is reported to be 6,347,000 acres, and the total yield is estimated at 1,081,000 tons. The total area under linseed amounts to 3,317,000 acres, and the total estimated yield is 473,000 tons.

Experts of the forest service estimate that the farm wood-lots of the United States contain from two hundred to three hundred billion board feet of lumber and from one to one and a half billion cords of wood.

Reports of the International Institute of Agriculture indicate that the world's crops this year will be less abundant than last, but the harvest prospects are better than the average in the five-year period of 1909-13.

Foreign trade of the United States closed its greatest year in history June 30, with a balance of $2,186,000,000 in favor of American exporters. The year's exports aggregated $3,834,000,000.

From July, 1915, to June, 1916, inclusive, 2,211,899 pounds of Roquefort cheese, valued at $777,856, were invoiced through the St Etienne consulate for shipment to the United States.

There are 592 consumers of tannin in the United States who use annually 625,000 cords of hemlock bark, 290,000 cords of oak bark, and 880,000 cords of chestnut wood.

The total crop of currants produced in Greece for the period ended May 31, 1916, was 138,600 tons. Of this amount the exports have totaled 95,255 tons.

Official forecast of India's 1915-16 wheat crop places the area sown at 30,143,000 acres, and the total yield is estimated at 8,512,000 tons.

For $7,000,000, it is reported, Japan has acquired from Russia seventy-five miles of the main line railroad through southern Manchuria.

In West Virginia the output of coal in 1915 was the greatest on record, amounting to 184,069 short tons, valued at $74,561,318.

Coniferous timber has been found to be better suited than any other for the production of ethyl alcohol.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII August 19, 1916 No. 51

The Mediator

WILLIS F. GROSS

Jesus of Nazareth is generally accepted as the world's foremost religious instructor. He presented a more spiritual concept of God and man than did any of his predecessors, and he was more successful in demonstrating the truth of his doctrine. The application of his teachings was broad enough to convince the thoughtful person that the truth, as he presented it, is equal to every reasonable demand that can be made upon it. On page 315 of Science and Health Mrs. Eddy says that "Jesus was the mediator between Spirit and the flesh, between Truth and error." If his teachings are not scientifically understood, the purpose of his works is not fully comprehended, and there is a vague and indefinite belief as to how much he accomplished for the salvation of mankind. It is believed by some that he did all that is necessary, and it only remains for humanity to accept him as their Saviour. Others regard him as the Wayshower, the one who came to point the way and make it possible for men to work out their own salvation.

In his first epistle to Timothy Paul writes, "There is one God, and one mediator between God and men, the man Christ Jesus." These words of the apostle are variously interpreted, and the interpretation placed upon them by an individual very largely determines that individual's conception of the Master's life-work and the purpose of his mission. If it is believed that Jesus appeased the wrath of God and thereby affected a reconciliation between God and man,—and this is the view entertained by many,—it would seem that his work was that of an arbitrator rather than a mediator; but Paul declares that he was, or rather is, the "mediator between God and men." There is a vital difference between an arbitrator and a mediator, as the word is here used.

An arbitrator is one who endeavors to settle disputes between those who fail to agree in matters pertaining to the welfare of themselves and others. When trouble arises, each party naturally believes himself to be the victim of injustice. It is a fact too apparent to admit of argument, that at such times all who are in any way concerned in the matter are inclined to a selfish view of things, and while contending for their own rights, as they conceive them, they fail to give due consideration to the rights of those whom they believe to be responsible for the trouble. If at all times the rights of others were recognized and appreciated, it can be safely said there would be little need of the services of an arbitrator.

At the very outset of his work the arbitrator assumes there may be faults on both sides, and he hopes to find an intermediate ground whereon the contending parties may be willing to take their stand. In all matters settled by arbitration both sides are called upon to make concessions, and a higher sense of human justice is brought out than would be the case if one party were required to concede everything. The human sense of right is not absolute, and it is not wise for any mortal to be so convinced of the justice of his position that he will give no consideration to another's viewpoint. The errors of mortal sense must be recognized, and there must be a willingness to correct them. The arbitrator endeavors to present the situation in such a manner that both parties will see wherein they are at fault and be willing to make such concessions as may be necessary to restore harmony.

Jesus the Christ was the mediator between God and man, but he was not an arbitrator. To the extent that a demonstrable understanding of Jesus' teachings is gained, a reconciliation is effected between God and man, but this reconciliation is due to no change or concession on the part of God. Right here is where the atonement as taught in Christian Science is vitally different from the belief entertained by many. In Science and Health we read (p. 19): "It was therefore Christ's purpose to reconcile man to God, not God to man. . . . Jesus aided in reconciling man to God by giving man a truer sense of Love, the divine Principle of Jesus' teachings, and this truer sense of Love redeems man from the law of matter, sin, and death by the law of Spirit,—the law of divine Love."

Wherein there is need of a reconciliation between God and man, it is because humanity has lost sight of the true idea of both God and man. Man as humanly conceived has wandered far from the Father's house, and is subject to that triad of evils,—sin, sickness, and death. God has not changed; He is the same loving Father that He was in the beginning. Nothing that man can do or leave undone can change God, who is Love. Humanity can do nothing to make Him more loving, compassionate, just, or merciful. All that is needed is for humanity to awake to the realization of what God is. When this is done the reconciliation will be complete.

Jesus understood the truth of being, and he realized how great is humanity's need; he knew that nothing but divine Love can supply that need. The sole purpose of his mission was to teach humanity the way to God, and in fulfilling this mission he was the mediator, or Wayshower. Salvation as Jesus taught it means salvation from all evil. To human sense man is not in harmony with his creator, because he believes in the reality of that which is not the manifestation of the divine will. All evil must be overcome. Sin, sickness, and even death itself, must be destroyed before man's unity with God can be fully realized. Jesus' teachings and works show that evil is overcome only through obedience to divine law. In this way man is reconciled to God and the work of the mediator is accomplished.

✧

Love's Protecting Power

LOUISE KNIGHT WHEATLEY

While Christian Scientists are always grateful for the relief from inharmonious conditions which comes to them through their application of metaphysical treatment to physical disease, it is a question well worth considering whether we are always equally appreciative of that divine protection which in times of danger prevents these inharmonious conditions from manifesting themselves. For instance, after a so-called epidemic has swept the country, visiting perhaps house after house on our very street but leaving our own

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

home untouched, do we always gratefully acknowledge that our immunity lay in our understanding of God and of His perfect laws, or do we carelessly go on our way, glad of course because we are well, but—perhaps unconsciously—holding to the thought that "it just happened so."

Christian Science teaches that nothing just happens so. There is always a reason for everything. There is always a cause back of every effect, and although we do not always recognize this cause as wholly mental, this does not in the slightest degree alter the fact. It does not just happen that "the pestilence that walketh in darkness" enters into some houses and not into others. It goes where it finds the door open. It enters because it can. It is looking for a congenial mental atmosphere to invite its coming and upon which it may thrive and grow. The Christian Scientist keeps it out because he has learned how. He shuts it out by right thinking. He guards the entrance to his mental home, and when this is done he knows that his material home, so called, will take care of itself.

But is he always grateful enough for this ability to avail himself of Love's protecting power? To material sense we live in the midst of danger. We are continually at the mercy of something. When one type of disease plays itself out, another starts in. Many years ago Mrs. Eddy wrote (Miscellaneous Writings, p. 7), "Looking over the newspapers of the day, one naturally reflects that it is dangerous to live, so loaded with disease seems the very air;" and times have not appreciably changed since then. Do we always remember to give God thanks for the things which do not happen? What of the exposure to cold followed by no bad results? What of the slippery sidewalk on which we did not fall? What of the abrupt change of food, water, climate, or altitude, which inconvenienced others but affected us not at all? What of the unusual amount of work accomplished without fatigue? What of the exposure to contagion forgotten the next day? What of the sudden desperate emergency in which we did not lose our coolness or our courage? Did all these things just happen so?

A party of Christian Scientists once made a trip together, during which there was not the slightest cloud to mar the pleasure of the occasion. Years afterward it was learned from one of the trainmen that the train this party had been on had narrowly escaped going into the ditch. It was a special, running at unusual speed, and a serious accident had been averted, as he expressed it, "by a miracle." Unconscious of the danger, happy and care free, the little party had gone their peaceful way, never dreaming that they had just escaped a tragedy. Was it indeed a miracle that they were protected? No. It was simply the natural and necessary result of right thinking. If all in that party were true Christian Scientists, their mental work each day must have included in some measure a grateful acknowledgment of the protecting power of divine Love. Then how can any one reasonably say that it was not these clear, earnest, simple declarations of truth which saved the train?

We do not have to know of an impending danger in order to be delivered from it. The party on the train did not need to know of the open switch to pass it by in safety. The finite mind can never really grasp or understand the ineffable goodness of God, or know how many, many times His protecting arm is outstretched in our behalf. We do not need to know. When the good shepherd gathers the tired little lamb in his arms, the lamb does not have to peer out from beneath the soft folds of the shepherd's cloak to watch for pitfalls along the way; the shepherd is attending to all that. There are many things to be encountered before the sheepfold can be reached, things fraught with terror to a baby lamb. There are stones to cut its tender feet, swift streams which might carry it away, thorns and brambles to tear its fleece, crevasses in which to fall, four-footed enemies to seek its life; yet not one of these brings terror to the heart of the shepherd. He just goes steadily on, sure-footed, fearless, confident of his way, ever patient and untiring in his care for the flock; and all the little lamb has to do is to rest in his arms, quiet and content.

Even so does that great Shepherd, divine Love, care for all of us. In His protecting arms He bears us on through dangers which might frighten us, if we knew, but which cannot frighten Him, because to divine Mind danger does not exist. Mind sees only its own perfect, spiritual creation, where all is love and light, peace and beauty, harmony and joy. Then let us rest secure in Love, quiet and content. Let us look away from false sense-testimony to behold that glorious universe of Spirit, wherein all is not only good, but "very good." In this realm of the real there is no stone, no bramble, no swiftly running stream, no enemy in ambush. There is only the sheepfold, wherein the sheep already lie at peace, gathered "together into heavenly places in Christ Jesus," protected, watched over, guarded, and cared for by "the angel of His presence."

Then let us rejoice. The only danger there ever is or ever can be is our own belief that there is danger, and our forgetfulness of Love's protection. And this belief is easily dispelled; for how can anything unlike God exist, when He is All-in-all?

Sorrow Overcome

LESTER B. MC COUN

In Science and Health (p. 304) our Leader has said: "This is the doctrine of Christian Science: that divine Love cannot be deprived of its manifestation, or object; that joy cannot be turned into sorrow, for sorrow is not the master of joy; that good can never produce evil; that matter can never produce mind nor life result in death." This statement, emanating from one whose purity of thought and whose love for God and humanity were sufficient to give her work the vitalizing impulse and responsiveness so necessary to those who realize divine aid alone to be their recourse, is as a beacon-light in times of sorrow.

Like any other inharmony, grief is based on ignorance of God, on the supposition that in some instances divine Love either is not operative or else is effective in a different degree than in other situations. Only sense-testimony supports the contention that there is an unknown influence existing in opposition to God which can check legitimate endeavor, and only ignorance supports the contention that God, the Life of the universe and man, has decreed that life is an undefined something to be projected or withdrawn according to the changing view of the creator. The seeming helplessness engendered by such admissions is corrected by the understanding, established through the study of Christian Science, of the universal activity and supremacy of divine Love as unchanging Principle, the infinite Life.

In Christian Science, individual achievement of good is seen to be the manifestation of the divine nature. What is recalled, therefore, as the love and loyalty of those whose companionship we once enjoyed, is more than memory, it is the evidence of the immortality of good,—and can we doubt the unfailing purpose of God to care for His own? God's idea has not changed. Immortality is not a vague, visionary belief, too sublime and vast to be comprehended, relating to time and chance and to be experienced in a manner yet unknown. Immortality includes the complete and ever-present

Digitized by Google

expression of God's allness, the realization of and full dependence on self-sustaining omnipotence. Grief cannot withstand the joy which rises in a heartfelt prayer of gratitude to God for the light which reveals His tender love and care for those removed from our sight.

Evil undertakes to include with the belief of death certain conditions calculated to cripple the capacity of those remaining behind, so as to secure a widespread acknowledgment of "the last enemy." Strange as it may appear, onlookers who are not in possession of the truth of being unwittingly pass sentence upon themselves by contending in favor of the claims of evil and directly against the efforts of those who have suddenly assumed unusual responsibilities. To prove through Christian Science that these evil prophecies are not fulfilled, is to overcome "the king of terrors" now, for these predictions with reference to the living constitute a part of the illusion of death.

Instead of starting with the admission that evil has anything to do with the conditions under which Truth is to be demonstrated, it is proper to recognize that Truth creates its own conditions and requires adherence thereto. Love and Truth are everywhere, and man in God's image can be depended upon to reflect Him; hence man can have no unsupplied need. Supported by God's omnipotence, the Christian Scientist rises in righteous rebellion against the claim that death can deprive some of life and simultaneously create circumstances to hang as millstones about the necks of others. By living close to Christ, Truth, the way is illumined, and the privilege of proving the adequacy of Christian Science to provide tangible comfort and assurance is accepted.

Christian Science frees the thought from the impulses and emotions which like "a thief in the night" may have previously deprived one of the true appreciation of loved ones. It is not too late to love God supremely and our neighbor as ourselves, and this we are always called upon to do. The purification of self is necessary to silence grief. The realization of God's omnipotence, the recognition of our own individuality and opportunity as made clear in Christian Science, the willingness to stand squarely before the world on the platform of righteousness and all that this implies,—this supplies evidence of the fact that death and sorrow are overcome now by the right understanding of Life.

Demonstration

GRACE E. ADAMSON

At a Wednesday evening meeting in a Christian Science church a testimony was given by one who had been a sufferer from seasickness, to the effect that on the first occasion of having to take a sea journey after becoming a Christian Scientist the water was so calm that there was no fear of inharmony. On the second occasion the sea was rough, but through the understanding gained from the study of Christian Science all fear was overcome and no seasickness experienced. To one listener the question arose, Which constitutes the clearer demonstration of the power of God, a change in one's own sense of a certain phenomenon, or a change in the phenomenon itself? And much thought was given to the subject before a satisfactory conclusion was reached.

In "Unity of Good" (p. 8) Mrs. Eddy says, "Everything is as real as you make it, and no more so." It will be readily acknowledged that a circumstance which would cause great fear to one person would have no ill effect on another. While one person fears the water, another fears certain conditions on land. To a lion-tamer the threat to be placed in a lion's den would not convey the same intent as to a Daniel. In studying this experience of Daniel one cannot fail to see that Daniel's aim was not to avoid being thrown into the den, but to resist every temptation to rely on aught but God; in other words, his one aim was to remain true to Principle, to stand firmly for Truth. To have counted the human footsteps leading up to this wonderful demonstration would have been to court discouragement, for did not every step appear a failure, regarded from the standpoint of a human sense of safety? Daniel was relying on God, and yet to all appearances God had deserted him and every step led to the fulfilment of the threat of human hatred. But Daniel never faltered. He knew he could confidently leave the results in God's hands; his part was to remain faithful.

Here came the answer to the question raised by the testimony mentioned above. It is not for us to outline the result of our work. Our standpoint must be that of faithfulness to our highest understanding of Principle, and our prayer, "Not my will, but thine, be done." Then we can confidently leave results in God's hands, knowing that each step of the way will reveal a brighter unfolding of the divine will, which holds in store nothing but good for Mind's divine expression, man. It is possible to be so busily employed in mentally outlining the way in which relief from certain conditions may or may not come, that there is danger of becoming deaf to the "still small voice" which says, "This is the way, walk ye in it, when ye turn to the right hand, and when ye turn to the left." We know that every demonstration of the power of God to destroy fear or any other sense of evil in the experience of the least disciple of Christ contributes to the ultimate destruction of all evil.

Jesus' understanding of the protecting power and peace of God was so real and deep that not only could he rise above all sense of storm and danger for himself, but he could demonstrate its unreality to his disciples—those to whom it appeared real enough to threaten the destruction of life—by actually changing the phenomena of the "vapid fury of mortal mind—expressed in . . . wind, wave," as Mrs. Eddy says in Science and Health (p. 293), with the word of spiritual authority, "Peace, be still."

Mrs. Eddy also says (Science and Health, p. 261), "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts." Therefore when all men obey this injunction no phenomena of evil will remain; the evidence as well as the consciousness will be changed for all, since there will be no mortal mind or mind of mortals to believe the lie.

Not Death, but Life

FRANCIS M. MCGEHEE, A.B.

In the course of a sermon a clergyman said he had once witnessed a very pathetic scene. A lady had died, and her daughters, who belonged to some peculiar sect, tried to console themselves by saying, "There is no death," although there was the casket and in it lay the body of their dear mother. He added that several years before these people had belonged to his church, but now they could not even ask him to pray for them, and to him this was very pitiful.

Looking at the subject from the gospel standpoint, we remember that Jesus said, "Our friend Lazarus sleepeth; but I go, that I may awake him out of sleep." At this his disciples said, "Lord, if he sleep, he shall do well." They had not yet learned that the material sense of existence is but a dream from which we need to be awakened, and that "death is but another phase of the dream that existence can be material" (Science and Health, p. 427). Jesus then told

Digitized by Google

them that Lazarus was dead, that is, to material sense, but he by no means left the problem there. On the contrary, he went to Bethany, and in spite of unbelief and denial on the part of all, at his command he that was dead four days came forth from the tomb.

Jairus besought the Master to restore his daughter to life, and when Jesus came to the house there was great tumult, both weeping and wailing. He however asked them, "Why make ye this ado, and weep? the damsel is not dead, but sleepeth." Then we are told that "they laughed him to scorn," but his sweetly spoken "Talitha cumi" awoke the maiden, and she arose and walked.

Like the disciples, and like those who wailed and wept for Jairus' daughter, this minister did not understand. The daughters of whom he spoke, however, knew their mother was not dead, and that if their eyes had been spiritually opened they would have the visual demonstration of the life-giving power of Truth, as in Jesus' ministry. Again we read that when Jesus restored to the widow of Nain her son, he simply said, "Young man, I say unto thee, Arise." Then we are told that the young man "sat up, and began to speak," and Jesus "delivered him to his mother." Once more it was, "Not dead, but sleepeth." How much stronger even are the cases of Enoch and Elijah against the belief in death. They did not even "sleep," but "Enoch walked with God," and "God took him." We are told that Elijah went up by a chariot of fire into heaven.

God is no respecter of time, place, or person, and whenever we arrive at the same degree of spiritual understanding possessed by these men, and above all that of the Master, then there will be for us "no more death." In Science and Health (p. 426) Mrs. Eddy tells us: "Sin brought death, and death will disappear with the disappearance of sin. Man is immortal, and the body cannot die, because matter has no life to surrender. The human concepts named matter, death, disease, sickness, and sin are all that can be destroyed."

Jesus the Christ not only "abolished death," but proclaimed, "If a man keep my saying, he shall never see death." God did not create death, and Jesus said that He "is not a God of the dead, but of the living: for all live unto him." Paul declares that "the last enemy that shall be destroyed is death." With the overcoming of all sin the last enemy will be destroyed, and Enoch-like we shall walk with God and through spiritual understanding enter upon eternal life.

Crooked Places Made Straight

MARGARET MACKAY CREIGHTON

In reading the Bible, both in the Old Testament and in the New, we occasionally meet the word stumbling-block, which is defined by lexicographers as a difficulty or impediment. Taken figuratively, it might mean a wrong interpretation. For instance, a Bible verse separated from its context might be used to prove opposite conditions, whereas with its context it could not well be wrongly interpreted.

The same rule applies to the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have in thought a fair-minded critic who refused to pronounce unreasonable any statement in Science and Health until he understood the basis from which it was made; he would not pass an opinion on the book until he had read it through to get the author's meaning. In all fairness to our Leader, it should be said that any one who seeks to gain her viewpoint, can have no quarrel with her teaching. The affirmations stand through all time. Good and evil do not mix; whatever opposes itself to absolute good is a negation.

A newspaper recently published an item to the effect that no intelligent clergyman now believed in a future Hades; that in the old country, at least, such views had not been held for a generation. In commenting upon this change in scholastic theology, it was remarked that the doctrine came into existence through a wrong translation of the Bible, as it was not in the original manuscript. Since a corrupt translation of the Bible is credited with being the stumbling-block which has caused years of controversy and generated an uncontrollable fear of evil both here and hereafter, how grateful we should be that the world has received Christian Science at first hand!

Since time began, each reform in religion has done something to remove the stumbling-block which has in mortal belief separated humanity from divine Principle. The tribal God of the Old Testament has given way to the perfect Father of the New. Christian Science explains the character of the Father as divine Principle, Life, Truth, and Love, and in proportion as this is understood and practised, the miracles wrought by Jesus are seen as a divinely natural result of his sonship with God.

In "The First Church of Christ, Scientist, and Miscellany" (p. 117) Mrs. Eddy asks: " 'What went ye out for to see?' A person, or a Principle?" Through the explanation of divine Principle, the one divine Mind, or the same Mind that was in Christ Jesus, she has purified the mental atmosphere of the personal opinion of many minds. Through familiarity with Christian Science, and through the study of Science and Health, the former view of heaven as a country is changed. "Thy kingdom come" is no longer a mere theory or a future possibility. In Christian Science heaven means harmony, and we recognize a measure of this heavenly harmony in every demonstration over discord.

The late Prof. Henry Drummond, widely known as the author of "The Greatest Thing in the World," writes in his "Tropical Africa," that in crossing the veld he remarked to the guide that if the path was straight they would reach their destination much sooner. The guide replied that the crooked condition was due to the natives. When they were going across country, if a branch of a tree or a stone lay in the way they never picked it up, they simply went around: the next man went around too, until by and by there was a permanent bend in the road. The natives never thought of or did anything in the interest of the man who came after. Professor Drummond likened this condition to the world Jesus found when he came to make the crooked path straight.

In "Retrospection and Introspection" Mrs. Eddy relates her experience with the old relentless theology, and tells of final freedom in her early years; while in Science and Health (p. 226) she explains the motive, the inspiration of her life-work, her unselfish interest in the larger humanity. Through heroic effort and difficulties overcome, and through her voluminous writings on Christian Science, she has been able to encourage others to know God, and thus rise out of the educated fear of evil, both here and hereafter.

In founding the Christian Science movement, its Discoverer lifted many stumbling-blocks out of the straight and narrow way of truth. In 1909 some newspaper editors were criticizing her leadership and the propaganda of the Christian Science organization. One of them said: "Nothing detrimental can get into the ranks of Christian Science. Mrs. Eddy has sentinels placed all along the line; at the first signal of danger they flash a search-light." In Zechariah we read: "And one shall say unto him, What are these wounds in thine hands? Then he shall answer, Those with which I was wounded in the house of my friends." It is ours to watch

Digitized by Google

and pray that Christian Science may not suffer also in the house of its friends.

When Jesus said, "Search the scriptures," there was only the Old Testament. The Master left no writings; his spiritual individuality may be said to have constituted the New Testament. The four gospels were written from memory, under divine inspiration. The disciple Peter must have foreseen the possibility that the account of the teaching and miracles of Jesus would be personally misconstrued, for he said, "No prophecy of the scripture is of any private interpretation." Jesus' test of his disciples' affection was this: "If ye love me, keep my commandments." He also said, "Ye are my friends, if ye do whatsoever I command you," and elsewhere we read that the divine commandments are not grievous.

Mrs. Eddy says, "Those who look for me in person, or elsewhere than in my writings, lose me instead of find me" (The First Church of Christ, Scientist, and Miscellany, p. 120). To know the Discoverer of Christian Science through her writings would entail the earnest study of her books. When all her writings were bound uniform with the pocket edition of Science and Health and I was the happy possessor of the series, my gratitude knew no bounds. Hitherto, I could not keep the collection intact, as friends borrowed the smaller books to read when traveling, so that my library was temporarily depleted.

Any paragraph in Science and Health furnishes a text for much thinking, yet the book is complete in eighteen chapters under separate caption. In providing the Manual of The Mother Church as a guide to the Christian Science organization, stumbling-blocks of personal opinion have been lifted out of the path of many, and obedience to its loving counsel would do much in the interest of those who come after. This may recall our Leader's words in "Miscellaneous Writings" (p. 93): "Beloved students, *so* teach that posterity shall call you blessed, and the heart of history shall be made glad!"

✧

"We are well able"

ROBERT L. SAWYER

JOSHUA the son of Nun, and Caleb the son of Jephunneh, alone of the twelve sent to investigate the promised land by Moses, returned a verdict true to the law of progress, as stated by Caleb when he said, "Let us go up at once and possess it; for we are well able to overcome it." It is interesting to note the given parentage of these two men who stood firm in their fidelity to the leading of God; and it is equally helpful to find that, although their progress seemed to be temporarily retarded, patience brought victory and final entrance into the land of their hearts' desire.

That to which Mrs. Eddy refers on page 141 of Science and Health as "spiritualized man," and the student's understanding gained by demonstration, unite in bringing to each seeker in Christian Science, at the right time, a clear realization of the truth of being. On page 39 of our text-book, "Science and Health with Key to the Scriptures," we read, relative to the promised hope of salvation, "Now is the time in which to experience that salvation in spirit and in life." If we are willing to do our Father's will, to leave the flesh-pots and materialism of Egyptian bondage behind, without backward longing, in our eagerness to cross the Jordan River of discernment, then He who has led us through the wilderness of human hope will continue to guide, and we may well join in the angelic declaration, "Now is come salvation, and strength, and the kingdom of our God, and the power of his Christ: for the accuser of our brethren is cast down."

Selected Articles

[Editorial in *St. Joseph* (Mo.) *Gazette*]

The suggestion of the American Medical Association for a Federal "board of medical licensure" should be carefully gone into by the people generally. Whatever measures intended to regulate medical practice may be enacted by state or national legislatures are of deep interest to the public, for it is the public which is affected. Even the wisest of medical practitioners may not be trusted to plan always those things for the people which the people desire.

We are taking precious little medicine these days. The doctor sells none at all, and the druggist only a small part of what his professional brethren of a generation ago disposed of yearly. The people are taking air and exercise in large doses, and nostrums by the absent treatment chiefly. The people, moreover, are feeling very well in these latter days.

So they do not need such "protection" from medical practitioners or non-practitioners as the esteemed profession of doctoring sometimes seeks to have us believe. Ordinarily, the citizen who can earn his own living and be prepared to care for others, participate intelligently in election, pay taxes, be subject to military duty, and otherwise discharge the obligations of modern life, is capable of deciding what sort of treatment he desires for the conserving of his health. He is not, moreover, incapable as a rule of likewise choosing how his children shall be healed of their real or fancied ills. So care should be exercised to the end that friendly and self-sacrificing medical practitioners shall not take upon themselves the burden of deciding these matters for all the people.

Congress is being urged just now to enact legislation more or less stringent in its requirements under the guise of health measures. Some of the proposed laws are doubtless well enough; others need to be tabled promptly. Whatever is today done by legislative bodies with respect to regulating public health conditions should have as its basis the recognition of the inherent right of every individual to the exercise of his own will in caring for himself so long as such freedom does not interfere with equal rights of others. This generation demands such independence as never before.

✧

[Editorial in *The Inquirer*, Philadelphia, Pa.]

Some one has written to this journal asking it to advocate a quarantine by Atlantic City against children coming from New York.

We refuse to enter into any such brutal scheme.

The quarantining against New York by all sorts of communities, because a few hundred children of that city have been attacked by what the doctors call infantile paralysis, is the product of ignorance, foolishness, and contemptible fear. There is no sense in it. There is no reason in it. There is nothing in it but abject cowardice.

There are tens of thousands of children in New York who are perfectly well. What would these panic-stricken save-themselves-at-all-price town authorities do? Condemn every child of New York City to remain cooped up in a hot city? Prevent the charities from giving their summer outings to weary mothers and suffering children? Shall there be no day by the sea or a week in the country for the little ones?

The senselessness of this quarantine movement is beyond all intelligent belief.

The word fear is without doubt the most detestable one in language. Or rather it defines a quality of the human mind that is responsible for about every evil that exists. Petty town officials and so-called boards of health have succumbed to fear. Perhaps it is not strange when we read in the *New York Sun*:—

Digitized by Google

"To the health authorities of New York themselves these reflexes of their own blundering conduct are directly attributable. They started the panic; they filled the minds, first of dwellers within the city, and then of the population outside, with fear; they are responsible for the exaggerated idea of danger from infantile paralysis that obtains today over so wide a territory."

We do not doubt it. The New York authorities have but followed the modern method of trying to build up health by scaring everybody to death. It is a happy individual indeed who can escape from the clutches of this scheme of preaching disease from the cradle, through the schools, and into manhood. The New York authorities have given an overdose of the new-fangled remedy with the result described by the *Sun*.

What is this infantile paralysis? Nobody knows. Like every other ill that afflicts mankind, its cause is said to be some sort of a germ. But it is such a tiny little germ as to escape the doctors. Because they are not acquainted with it they are at sea. And because they are at sea and cannot account for the growing number of cases, they have talked of contagion or infection or both. Yet one of their number the other day reported that it was rare that more than a single case occurred in one family, which would seem to knock the contagion theory in the head, while the United States health service has found that out of two thousand and seventy persons exposed by residence in the same houses and in the same families with patients, only fourteen "developed the disease in frank paralytic form."

But because of the campaign of frightfulness inaugurated by the health authorities of New York, fear has taken possession of the parents of New York, of Brooklyn, and of cities and towns too numerous to record. These New York health people have done far more harm than they have done good.

It is to be hoped that none of this cowardly foolishness will find its way into Philadelphia. Sanity has prevailed here thus far. Indeed the best comment on the situation that we have yet seen from a medical source was that of this city's chief medical director, Dr. A. A. Cairns, who said:—

"I can call to mind only three rules, and they are applicable to the fight against all other diseases as well as infantile paralysis. They are: Cleanliness, fresh air, and good food."

Excellent, worthy doctor, excellent. And if you had added a word about the eradication of fear, you would have strengthened your good advice.

✧

[R. Q. Grant in *Cheyenne* (Wyo.) *Leader*]

Our critic has confused the latest theories of natural science with the teachings of Christian Science, and thereby results the "wild nonsense" of which he complains. Closer study of the authorized lecture on Christian Science would show him that Christian Science does not teach that electrons have anything to do with Life or the divine Mind. The reason electrons were referred to in the lecture was to show that from the standpoint of the natural scientist, who has abandoned the atom as the basis of matter and now clings to the electron, so called, as that basis, nothing is really known as to the nature of matter. So, as one has said, "until some one can tell us what matter is, no one will know that matter is."

The Christian Scientist is not interested in the theories pertaining to atoms and electrons, except so far as in attempting to explain matter they explain it away. The Bible says that God is Spirit, and God is All-in-all, which is the basis of Christian Science, or the Science of Christianity. However, this does not mean that God exists in or is a part of an animal or of a tree, as our critic infers. Such teaching is pantheism, to which Christian Science is directly opposed. The principle of mathematics is available everywhere, but does not occupy space; neither does Spirit, God, occupy physical space, although infinite and ever present. The Christian Science God is not "a principle" but is the divine Principle, Love, the supreme governing intelligence, or Mind, of the universe, including man. Our critic is disturbed by the thought of Mind being able to speak. It may be asked, Did matter ever speak?

The fundamental teaching of Christian Science is that God is the only cause or creator. He made all that was made, and it was very good. Jesus says in John's gospel, "I can of mine own self do nothing;" also, "The Father that dwelleth in me, he doeth the works." Christian Scientists accept Jesus as their Wayshower and Exemplar; hence they claim no power in and of themselves, but rely absolutely on God as the only healing and saving power. The Bible states that God is Spirit, and that "in him we live, and move, and have our being;" thus it follows that man's real existence is spiritual and not material. The term spiritual or mental does not mean that man's existence is imaginary, as the critic seems to believe.

As to the existence of evil and sin, Mrs. Eddy, the Discoverer and Founder of Christian Science, in her Message to The Mother Church for 1901, says (p. 14): "Do Christian Scientists believe that evil exists? We answer, Yes and No! Yes, inasmuch as we do know that evil, as a false claim, false entity, and utter falsity, does exist in thought; and No, as something that enjoys, suffers, or is *real*. Our only departure from ecclesiasticism on this subject is, that our faith takes hold of the fact that evil cannot be made so real as to frighten us and so master us, or to make us love it and so hinder our way to holiness. We regard evil as a lie, an illusion, therefore as unreal as a mirage that misleads the traveler on his way home." Christian Scientists, with other Christians, are striving toward the same goal, namely, the overcoming of sin and suffering, though they employ different methods. Like Paul, they count not themselves "to have apprehended," but are pressing "toward the mark."

✧

[James D. Sherwood in *The Dallas* (Texas) *Times Herald*]

I have read the communication of a correspondent that appeared in a recent issue of the *Times Herald*, and appreciate his complimentary remarks concerning the work of Mary Baker Eddy, the Discoverer and Founder of Christian Science, and author of "Science and Health with Key to the Scriptures," the text-book of Christian Science; but I am somewhat surprised to find that, after admitting that "this extraordinary doctrine of Christian Science purports to revive, explain, and practise the lost power of divine healing," the correspondent adds: "Christian Science church-members will probably understand it. No one that we know of pretends to understand it." His statement that no one pretends to understand Christian Science, is discredited by the fact that there is in the city of Dallas and in well-nigh every other city and town in the state a Christian Science church or society where testimonies of healing are publicly given every Wednesday evening. It is a recognized fact that the healing is an accompaniment of a demonstrable understanding of God, and that the healing accomplished in Christian Science practice is performed in strict accord with the teaching and practice of Christ Jesus and his disciples.

That Christian Science successfully explains and practises "the lost power of divine healing" is becoming very generally admitted today, and proof of the healing is shown in the expressions of gratitude that come from all parts of the world from persons who have been healed of all manner of diseases and sins through Christian Science practice. While many

Digitized by Google

others are still seeking salvation by resorting to material means and traditional beliefs, the Christian Scientist is daily adding to his understanding of God, of the ideal man, and of the spiritual universe, and in consequence of this improved mental state he is enjoying an increased measure of the fruits of the Spirit.

It is obvious that one who believes that God is a person instead of the divine Principle, and that matter instead of Spirit is substance, does not comprehend divine metaphysics, where God is understood to be infinite divine Mind, and His creation is understood to be wholly spiritual. St. Paul wrote in his first epistle to the Corinthians, "The wisdom of this world is foolishness with God." Deductions that are made from a material basis are opposed to divine metaphysics. A Christian Scientist is not inclined to invite debate, or to indulge in argument over doctrines and creeds. He prefers to give as a reason for the hope that is within him, a manifestation of improved health and morals as the natural result of his growth in spiritual understanding.

The correspondent mentions that Moses "understood spiritual mind and performed according to its dictates." This fact is quite evident from the many wonderful works that Moses accomplished; but Moses despaired of making his mission fully understood by his followers, and we read in Deuteronomy that he prophesied of one who should come after him, saying, "Unto him ye shall hearken," and in due season this prophecy was fulfilled. Christ Jesus appeared, revealing God as the Father of man and teaching them that truth understood is the way of salvation from all evil. Christian Science is based upon the teachings and practice of the great Metaphysician.

The incident of the woman who remained young in appearance after she had attained unto seventy-four years of age was first published in a London medical magazine. (See Science and Health, p. 245.) Mrs. Eddy refers to the fact to show that it is possible for one to continue youthful in appearance where no thought is taken for the body. Christ Jesus admonished his followers to take no thought for the body, and it was shown in the case of the woman mentioned by Mrs. Eddy that obedience to this admonition brings favorable results, while the opposite mental action hastens the effects that are seen in forms of old age and death.

✧

[B. W. Oppenheim in *Idaho Statesman*, Boise, Idaho]

A doctor endeavored, as reported, to belittle Christian Science by picturing it after fifty years from its discovery as a melancholy failure, "waiting, hoping for the dismal, hopeless afterwhile." The doctor's apparent mental picture of a personal God granting special dispensations to favored individuals, is so at variance with the concept of God as taught in Christian Science, that it but illustrates how difficult it is for the indoctrinated devotee of one school fairly to judge another denomination, except by its fruits.

Christian Scientists, being in the world, have not attained the perfection of the ideal man, but they gratefully acknowledge the assistance of the perfect Science which Christ Jesus taught and proved in aiding them to overcome the problems of the world which it is their lot to meet; in other words, to solve the individual yet universal problem of salvation. In this hopeful struggle they are encouraged by the faith and sure knowledge taught in Christian Science, with the injunction to make it practical, not only that all things are possible to God, but that all men may here and now directly and individually benefit from the goodness of the ever-present divinity to whom each bears the relation of a child. If Christian Scientists await with patience the manifestation of greater works as the result of their increasing apprehension of God's nearness and power, it is no disparagement of their present attainments. Any picture of a dismal afterwhile for Christian Science is not drawn with a just appreciation of its rise and development.

It takes time for men educated by centuries of false theory and practice to turn from the contemplation of what they have regarded as real in sin, sickness, and catastrophe, to an understanding of the fundamental truth of immortality,—that only the good, the godlike, is real. But this process of transformation is not an argument for the reality of evil, as the doctor seems to imply, nor does it establish any inconsistency in Christian Science practice. Christian Science differs from some other religious beliefs in that, instead of admitting the application of the truths underlying immortality only in some future state, it acknowledges the necessity and practicability of their present application. Hence its insistence on meeting present human need by healing sickness as well as overcoming sin.

The development of Christian Science as a world-wide movement, with its revival of divine healing, is so well known that a court of law would be compelled to take judicial notice of it as an established historical fact, better known and more fully established than the historical record of such healing during the two or three centuries immediately following the ministry of Jesus. No amount of skepticism can refute the truth of the continuous record of healing of all sorts of physical ailments and human troubles through Christian Science during the past fifty years.

With respect to the doctor's attempt to prove that Christian Scientists do not accept the Bible, it is sufficient to say that they do not accept his interpretation of the Bible. They do most emphatically believe in and read the Bible, and they cheerfully submit their interpretation of it to the test of practical living. It is not profitable to enter into an argument on matters of Biblical interpretation, since each person is entitled to place his own interpretation on a matter which so vitally affects his conscience.

No one can successfully refute the proposition that Christian healing is in consonance with the Bible. The doctrine of Christian healing, which Christian Scientists say is reasonable, universal, and divinely natural, has been stated for them in modern scientific language in "Science and Health with Key to the Scriptures" by Mrs. Eddy. That the practice of Christian healing is possible is being proved by the earnest daily endeavors of Christian Scientists. That these endeavors are meeting with success is shown by the remarkable development of the Christian Science movement within the last fifty years, with its attendant spiritual revival of divine healing comparable only to the development of primitive Christianity.

[Written for the *Sentinel*]

"Come unto me"

CHARLES C. SANDELIN

O THOU that ploddest day by day
Along earth's weary, stony way,
Whose heart is bowed with sorrow, care,
Come, rest—behold Truth's vista fair!

For as with downcast eyes and gaze
Thou seest but the earth, upraise
Thine eyes to holy heights and see
Love's joys and Love fore'er with thee.

Thou knowest not, yet one is near
To lift the veil of care and fear,
To wash thy feet, anoint thy head,
To give thee drink and strengthening bread.

Editorial

Divine Principle

It is almost an axiom that everybody would accept and conform to truth, if they really knew it to be the truth. In the same way Christian Scientists believe that all mankind would accept Christian Science as the truth, if they really knew it to be true. As a matter of fact the whole propaganda of Christian Science is based upon the theory that every man, woman, and child is desirous of knowing the truth which Christ Jesus said makes free, and only to the extent that Christian Science can be shown to possess this vital element is it of value to mankind.

In this work both the healing of the sick and the preaching of the Word through the Christian Science lectures and through the literature have a place, and it is essential that in each there shall be an appeal which is either the truth demonstrated, or statements capable of scientific demonstration. Hundreds of testimonies have been given of sickness healed by the reading of Science and Health, and likewise many persons have been healed while listening to the authorized lectures on this subject, or while in attendance at the church services, all of which is proving that Christian Science is the truth; or, as Mrs. Eddy has defined it, "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1).

On the same page of this book Mrs. Eddy answers the question, "What is the Principle of Christian Science?" as follows: "It is God, the Supreme Being, infinite and immortal Mind, the Soul of man and the universe. It is our Father which is in heaven. It is substance, Spirit, Life, Truth, and Love,—these are the deific Principle." To Christian Scientists, therefore, divine Principle stands for infinite, unchanging good. Human theories fail us in time of need, friends desert us and foes betray us; but divine Principle faileth never, it is sure and steadfast, whatever mortal sense may argue against it. To those who oppose Christian Science because they do not understand it, the use of the word Principle by Mrs. Eddy has given more or less offense; but this is because they have not fully comprehended its meaning and had in mind some limited sense of it.

Reference to any dictionary will establish the right to use this word in precisely the way in which the author of Science and Health has used it, and the understanding thus gained should sweep away every sense that Principle is a term too cold to be applied to the tender, loving Father whom Christ Jesus revealed and interpreted, or too ambiguous to describe the one and only God of Moses and the prophets. Webster's definition is, "Source, or origin; that from which anything proceeds; fundamental substance or energy; primordial substance; ultimate element, or cause."

Certainly God is the source or origin of all that is good, and being the only creator He is that from which all that is real and good proceeds. As Spirit He is the fundamental and primordial substance or energy of all that really exists, the only element or First Cause. Through the use of the word Principle Mrs. Eddy has enlarged the common concept of God and more firmly established Him in the minds of men as omnipotent, omnipresent, and omniscient,—as "Spirit possessing all power, filling all space, constituting all Science" (Science and Health, p. 110). In "No and Yes" Mrs. Eddy writes: "The two largest words in the vocabulary of thought are 'Christian' and 'Science.' The former is the highest style of man; the latter reveals and interprets God and man; it aggregates, amplifies, unfolds, and expresses the All-God. The life of Christ is the predicate and postulate of all that I teach, and there is but one standard statement, one rule, and one Principle for all scientific truth" (p. 10).

Through its various agencies Christian Science is bringing the truth to the apprehension of all who are ready to receive it, and that many are receiving it is manifest in the greatly increasing number who, in accordance with the tenets of this teaching (Science and Health, p. 497), are taking the Bible as their "sufficient guide to eternal Life," and finding therein the peace that passes all understanding, even the peace of God, the Father of all.

Archibald McLellan.

Control of the Sea

In the great readjustment of world affairs now going forward, the control of the sea must eventually ensure the control of the earth. This has been apparent for some time to enlightened observers. Now in proportion as the sea and the earth are believed to be material, the problem of controlling them seems to devolve upon physical force. Christian Science, however, has long since relegated matter to the realm of belief, and what is called physical science is reluctantly following this lead. As a matter of fact, therefore, both sea and earth can be recognized as belonging to the realm of metaphysics,—to beyond-physics,—and, as mental concepts, to be amenable to right mental control through spiritual understanding. The psalmist sang, "The Lord on high is mightier than the noise of many waters, yea, than the mighty waves of the sea." The Galilean Prophet, realizing the sea of Galilee to be a mental concept, illustrated his control over it by walking upon it and stilling its storm.

Referring to the Apocalyptic angel who "had in his hand a little book open: and he set his right foot upon the sea, and his left foot on the earth," Mrs. Eddy on page 559 of Science and Health describes the sea as "elementary, latent error, the source of all error's visible forms;" whereas the earth is described as "visible error and audible sin." Thus the sea is likened to the source of all evil and the earth to the manifestation of evil. Metaphysically considered, therefore, to control the sea is to control evil at the source, and consequently also in its effects. The teaching in the "little book" which Christian Scientists identify symbolically with the revelation of Truth, enables humanity to learn the lesson of standing upon the sea, *i.e.*, of putting latent, and, as a result also, manifest error under its feet. Those who have overcome evil and seen through its false pretenses, find it to be a "sea of glass," quite transparent to spiritual perception. The sea, as the source of evil, can no longer deceive them. It has no terrors and no mysteries for those enlightened by the revelation of Truth.

Now evil cannot be permanently controlled by diving into its depths, navigating its dark recesses, or prying into its secrets out of mere curiosity. This aggressive method always finds itself baffled and its purpose frustrated. The rays of Truth reflected from above give ample light for the exposure and destruction of all error, whether latent or visible. It is a common habit among seafaring folk to wish that which is disagreeable to the bottom of the sea, and a famous litterateur, who was also a liberal-minded physician, once rendered the opinion, "I firmly believe that if the whole *materia medica* could be sunk to the bottom of the sea, it would be all the better for mankind and all the worse for the fishes." There can be no harm in putting evil effects back to their source, and coincidently protecting "the fishes" that swim in the sea

Digitized by Google

The control of the sea will therefore be reserved for those men and nations who will have learned metaphysically to walk upon the waters of error. The freedom of the sea will be equivalent to the freedom to overcome error with Truth. This freedom is even now established, and Christian Science reveals the way of its maintenance throughout time and into eternity. In the Apocalypse we also read, "And there was no more sea." The source of all evil will eventually pass away, and carry with it into the realm of nothingness "visible error and audible sin." Referring to this passage in the Apocalypse Mrs. Eddy on page 536 of Science and Health defines the sea as "a symbol of tempest-tossed human concepts advancing and receding." These fluctuating concepts will stop their futile seesawing altogether, along with the sin, sickness, and death which they engender. Pure consciousness will survive, and man's unity with divine Love will make physical measures for controlling the sea obsolete. In the mean time let humanity learn to rule the earth by controlling the sea.

WILLIAM D. MCCRACKAN.

✧

Trying and Doing

ONE of the meanings of the verb to try is to attempt, or to put forth an effort, and it is simply astonishing how often trying is made to take the place in human experience of actual doing. It is possibly a step in advance of the position of those who "say, and do not," and who for this reason were severely censured by Christ Jesus; but those who merely "try" to do what God's law requires, need to arouse themselves for truer effort. If there is any doubt on the part of a sincere follower of Truth as to what he can accomplish, he has but to recall the assuring words of St. Paul, "I can do all things through Christ which strengtheneth me." The apostle undoubtedly reached this conviction by pressing on from trying to doing, from attempt to achievement.

When Moses was bidden to lead his people out of captivity, he did not even say that he would try. Like the men in Jesus' parable of the great supper, he began to make excuses, but one by one these were set aside by the divine Mind,—by Him who speaks and it is done, who commands and His decree stands fast. When Moses pleaded his own lack of eloquence, he was told to go to Egypt and speak to Pharaoh, and God said: "I will be with thy mouth, and teach thee what thou shalt say." God did not demand of him results, for these were dependent upon omnipotence; but unwavering obedience was called for, and Moses soon learned that aught less than this would interpose a barrier between the divine will and its activity on the human plane.

After Moses had gone to Egypt and had done all that divine wisdom required of him, he was ready at the command of Truth to bid the children of Israel "stand still," or "go forward," ready himself to obey, despite their outcries and reproaches. A path through the Red Sea was then prepared, and guided by Mind's symbol, "the pillar of fire and of the cloud," they safely reached the shore. Soon thereafter the command was given to Moses and his people to hearken diligently to the voice of God, then to "do that which is right in his sight," and with this dual command came the promise of exemption from disease, accompanied by the divine declaration, "I am the Lord that healeth thee."

Some years ago Mrs. Eddy was talking with one of her students respecting steps to be taken in the advance of the Christian Science movement, and she asked the student to do certain things which to the one addressed seemed as difficult as that which was required of Moses. The student however said she would "try," but was at once told that this was not sufficient. "Will you do it?" was the question which followed, and no lengthy process of reasoning was needed to make it clear that unhesitant obedience to what was obviously the call of Truth must be yielded, and so there was a prompt "I will." The lesson of the hour, however, was the difference between trying and doing, and it was never forgotten.

Usually when one says he will "try," the possibility of failure is to him a definite element of the situation, which means that one is, perhaps unconsciously, thinking of himself as an "independent" worker (see Science and Health, p. 263). It goes without saying that God cannot fail, nor can the divine purpose fail. "None can stay his hand, or say unto him, What doest thou?" was the conclusion reached by Nebuchadnezzar, who learned the utter folly of attempting to resist the divine will. On page 249 of Science and Health we read: "Either there is no omnipotence, or omnipotence is the only power." If on our part we are "workers together with him," with God, the mortal sense of heaven and earth shall pass away, but the results of our doing shall never pass away. Some there are who see only failure in the work of Christ Jesus, but the one who sees spiritually witnesses daily to its complete success as he presses on in the light of Christian Science, remembering the Master's words, "Ye are my friends, if ye do whatsoever I command you."

ANNIE M. KNOTT.

Among the Churches

Current Notes

SPRINGFIELD, MASS.—A congregation of about eight hundred attended the first service in the completed Sunday school room of the new edifice of First Church of Christ, Scientist, at State and Orleans Streets, yesterday morning [June 25]. The occupation of this basement story of the new structure meets for the time being the demand of the church for larger seating capacity, a need which has been felt for several years. It was the outgrowing of the old building which occupied the same site that led primarily to the formulation of plans for the new one. A seating capacity of twelve hundred is planned for the auditorium of the finished church. The Sunday school room, which is 78 by 60 feet, contains seven hundred and sixty-six fixed seats. As it stands now, the building represents an expenditure of fully fifty-two thousand dollars, with money in sight to meet all bills when due.

The Springfield Union.

KEARNEY, NEB.—A beautiful new church edifice is to mark another epoch in the growth and activity of the local Christian Science church, according to the completed arrangements announced yesterday [May 18] by officers of the local organization. The new building will take the place of the one now used by First Church of Christ, Scientist. The lot on Twenty-third Street and First Avenue on which the present church is located was purchased many years ago, and the building has been used since that time.—*Kearney Times.*

SAN DIEGO, CAL.—Maintained at the Exposition by the Christian Scientists of the state, extending a welcome to all earnest seekers after truth, on the north balcony of the Foreign Arts Building will be found a room especially furnished and designed, where the Bible and all authorized liter-

Digitized by Google

ature of the Christian Science movement may be studied. Directly across the street, in the Pan-Pacific Building, there has recently been installed a booth where Christian Science literature is on exhibition and is freely given to all those who evince a desire for it. These two reading-rooms, the comforts and conveniences of which are offered to the public "without money and without price," are made possible because of the gratitude which those people feel who have been brought under the beneficent influence of Christian Science, which Mrs. Eddy defines on page 1 of "Rudimental Divine Science" as "the law of God, the law of good."—*San Diego Union.*

SAN ANTONIO, TEXAS.—The congregation of First Church of Christ, Scientist, will attend the first service in the new structure at Fifth Street and Avenue D at eleven o'clock Sunday morning [May 7]. The edifice, with the exception of the installation of the big pipe-organ and a number of minor details, will have been completed by Saturday evening. The structure, which cost about thirty thousand dollars, not allowing for the material in the old building which was utilized, is one of the handsomest in San Antonio and will seat eight hundred persons.—*San Antonio Light.*

OMAHA, NEB.—The first meeting of Third Church of Christ, Scientist, was held yesterday [June 4] in Druid Hall, Twenty-fourth Street and Ames Avenue. This church was organized recently by those former members of First Church of Christ, Scientist, who live in the northern part of the city. The hall was crowded beyond its capacity at the church service and two sessions of the Sunday school had to be held to accommodate the children who came. It is believed that a larger place than Druid Hall will have to be secured.

Omaha Bee.

MARTINEZ, CAL.—With the closing of negotiations for the lot in Mellus Street which was sold to the Christian Science Society, contracts were entered into by the society for the building of a church home at a cost of three thousand dollars. Ground is to be broken Wednesday [June 7]. The church will be on the Swiss bungalow type, 35 by 83 feet, and will have a seating capacity of about two hundred and fifty persons.—*Martinez Gazette.*

ROCHESTER, N. Y.—Members of First Church of Christ, Scientist, hope to be in their new building, now nearing completion at East Avenue and Prince Street, some time in August. There will be pews in the auditorium to seat about eleven hundred persons comfortably, while the total seating capacity of the Sunday school will be over five hundred.

Rochester Democrat-Chronicle.

MCGREGOR, IOWA.—A lot has been purchased by the Christian Scientists, and they are to build a church on it later in the year. The structure will have a seating capacity of about one hundred and will cost approximately three thousand dollars.—*North Iowa Times.*

The Lectures

Evansville, Ind.

Bicknell Young, who gave a lecture on Christian Science in Evans Hall, was introduced by Mrs. L. J. Plummer, who said:—

Christian Science is founded upon the fundamentals taught and practised by Christ Jesus, who came to redeem mankind from the bondage of sin and the blinding influence of cere-monial worship. He proclaimed no new truth. From Genesis to Matthew is a reiteration of the truth that God is the one God; that He is a God of love; that He heals our diseases; that sin, calamity, and suffering are results of disobedience to divine law; that sin has its origin in vain, unhallowed thought; and the Bible continually promises the highest spiritual and temporal blessings—all that makes life desirable—to those who have no other gods before Him.

Christ Jesus introduced Christianity, but he formulated neither doctrine nor creed. He healed the sick, cleansed the leper, cast out devils, restored sight to the blind, made the lame to walk, the dumb to speak, and triumphed over death. He bequeathed to all future generations the heritage of his glorious example. He said: "I am the way, the truth, and the life: no man cometh unto the Father, but by me." "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." As stated in Science and Health (p. 473): "Few . . . except his students understood in the least his teachings and their glorious proofs,—namely, that Life, Truth, and Love . . . destroy all error, evil, disease, and death;" but Mrs. Eddy, our revered Leader, a woman of pure, exalted thought, dwelling "in the secret place of the most High," was able to give to the world so clean and simple an interpretation of Christ's teachings as to make it possible for all to understand.—*Correspondence.*

✧

St. Louis, Mo.

The introduction of Virgil O. Strickler by Willard P. Heath of Fifth Church of Christ, Scientist, at the lecture given under the auspices of the five churches in St. Louis, was in part as follows:—

Nearly two thousand years ago Jesus the Christ came preaching spiritual preparedness for all eternity. In the atmosphere of Love which he reflected he taught mankind the gospel of "on earth peace, good will toward men." He did not come to teach men how to die; he said, "I am come that they might have life, and that they might have it more abundantly." Now in this our age and time Christian Science, following in the footsteps of the Master, for more than forty years has been proclaiming anew throughout the world this gospel of spiritual preparedness that Jesus taught,—the gospel of the fatherhood of God and the brotherhood of man, which, when once established in the consciences and in the hearts of men, will forever dispel every seeming cause for war or conflict between men or nations.—*Correspondence.*

✧

Ossining, N. Y.

A lecture on Christian Science was delivered at Sing Sing Prison by Bliss Knapp. In introducing the lecturer, Warden Kirchwey spoke as follows:—

This is the first time that I have had occasion or opportunity to appear before you in connection with a religious service. I welcome the opportunity to do it, however, because I want you to understand, and through you I would like to have every man in this institution understand, how important is the religious influence in prison or out of prison in the remaking of men.

When I came here a few weeks ago as your warden, the first thing I felt and said was that I had rarely ever seen anywhere such a poverty of the religious life as here,—so little intelligent effort to lift the life of this community through the inspiring and elevating influence of religion. Then I discovered (I shall confess to my surprise) that nowhere in the institution was there any more effective religious work being

Digitized by Google

done than by this little congregation of men and women who gather here to carry on the work of purifying and elevating the soul through Christian Science. I am not myself an adherent of the Christian Science church, but I have, almost from its beginning many years ago, had many close friends in that church, and have known much of the regenerating work which that church has done. I have come to regard its work with pronounced respect and admiration, and feel that wherever I am I must encourage it in its great mission, especially here where we so much need the help of this spiritual influence, which, in prison or out of prison, it is so hard for us to keep dominant in our lives.

"The world is too much with us," said the poet Wordsworth; the world outside and the world inside are too much with us, and that other world of which we too are citizens, the world of the Spirit, which Christ Jesus called "the kingdom of heaven"—in that we also live and move and have our being, if we only know it. So I welcome every influence which comes to us, and reminds us from time to time that we are citizens of that greater world, of that more beautiful city, and that we may by constant effort live in that more beautiful city of the Spirit.—*The Democratic Register.*

✧

Pittsburgh, Pa.

The introductory remarks of Frank T. Ostrander in presenting John W. Doorly, who lectured on Christian Science in First Church of Christ, Scientist, were as follows:—

Whenever a discovery in physical science is made it is accepted almost immediately by the world at large. The discovery or restatement of a spiritual fact is more often received with incredulity. This is a natural result of centuries of thinking from the point of view of purely physical phenomena. Christian Science reveals spiritual law, and proves that an understanding of God is superior to any so-called physical law. The Bible abounds in references to the power of Spirit, but we prove this only as we make it a part of our daily life. Today the scoffers at Christian Science are few. Too many have seen the sick restored to health, the sinning regenerated, hate and jealousy replaced by love and kindness. The great truth of the relationship of God and man, which is responsible for this change, is not something set apart for a chosen few, but free to all who seek.

Correspondence.

✧

Fayetteville, Ark.

A fair-sized and very attentive audience gathered at the Ozark Theater to hear a lecture on Christian Science by Clarence W. Chadwick. He was introduced by Charles T. Walker of Springdale, who said in part:—

Christian Scientists believe that in following the admonitions and in emulating, even in a small way, the deeds of Christ Jesus the Wayshower, they are following in the footsteps of Truth, and upon this belief they have founded their church. I am not a member of the Christian Science church, but for some time have been an earnest and, as I hope, a consistent student of its teachings. Some one has truthfully said, "There is nothing new under the sun," and if there be present any who consider this a new religion, permit me to assure them that so far as I know Christian Scientists do not claim it to be a new religion, but rather a revival of primitive Christianity.

Christian Science is a demonstrable religion. To those possessed of an understanding of it, its problems are as easily and as accurately solved as are the problems of mathematics when the proper rules are applied. It is a religion of love, of joy; a religion of peace. It is at war with no other religion. It grants to every man the right to worship God as his conscience dictates, and asks for its followers only a similar privilege. Through its kindly ministrations untold thousands have been raised from beds of suffering to perfect health and happiness; untold thousands of broken hearts have been healed and made whole; and thousands whose sins were as scarlet find indwelling in their consciousness today purity, honesty, and right thinking.

Christian Scientists believe that every word of the Master was intended to be heeded, and they lay particular stress upon his commands: "Go ye into all the world, and preach the gospel;" "Heal the sick, . . . freely ye have received, freely give."—*Correspondence.*

✧

Ogden, Utah

Clarence C. Eaton gave a lecture on Christian Science for First Church of Christ, Scientist. He was introduced by Mrs. Bertha B. Woods, second reader, who said:—

In the tenth chapter of St. John Jesus says, "I am come that they might have life, and that they might have it more abundantly." In the sixteenth chapter he says, "It is expedient for you that I go away: for if I go not away, the Comforter will not come unto you; but if I depart, I will send him unto you." Again, "When he, the Spirit of truth, is come, he will guide you into all truth: for he shall not speak of himself; but whatsoever he shall hear, that shall he speak: and he will show you things to come." This "Comforter," spoken of and promised by Christ Jesus, we "understand to be Divine Science" (Science and Health, p. 55); and through the study and application of this demonstrable Science as taught in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, mankind today is proving the words and works of Jesus to be the truth about God and man.—*The Ogden Standard.*

✧

Long Beach, Cal.

A large audience assembled to hear a lecture on Christian Science by Prof. Hermann S. Hering. He was introduced by Frank H. Downs, who said in part:—

Men have no quarrel with truth, but are sometimes skeptical as to just where or how to find it, and doubt their ability to know it if they should find it; yet all the while Truth is challenging, "Prove me now herewith." We have with us tonight one who is authorized and ably fitted to tell us something of the truth of what Christian Science has accomplished and will accomplish.—*Long Beach Telegram.*

Testimonies of Healing

My first experience with Christian Science was in June, 1907, when I was taken suddenly ill with typhoid fever. One of the best doctors of Oklahoma City, where we were living at the time, was called in, but his medicine did me no good, so a neighbor who was interested in Christian Science asked us to try it. We concluded to do so, and accordingly called a practitioner, with the result that I was soon a well man. I thereupon took up the study of Science and Health, and it has made the Bible a new book to me.

We are now living in the Ozark country of Arkansas, a long way from any Scientists, as far as I know; but God is here, and we find Him an ever-present help. Our son was on the road as traveling salesman for several years, and my wife asked a practitioner if it would be all right to put him in God's care. Her answer was, "Certainly; if you put him absolutely in God's care it will be the best thing you can do." We were indeed glad to do so, with the result that he never was in a railroad accident, but there were many that he missed by being detained or by taking a train earlier than planned. I am truly thankful for the many blessings received through Christian Science, and for Mrs. Eddy's writings.

E. L. Hopkins, Oakland, Ark.

The greatest desire of my heart is that my words may help some person groping in darkness. The Lesson-Sermons do us much good every day in the week, and on Sunday we go over them just at the time the churches do and find that Truth is always with us.

One night about nine o'clock I was taken with a severe attack of influenza, so that I was unable to sleep, and the next morning I was no better. As my husband's business necessarily took him away from home, he wanted to call a practitioner; but I said it was time we took a stand for ourselves, since our heavenly Father was always present, the best physician any one possibly could have, and by holding fast to the truth I would be all right. I was too ill to hold a book to read, and when my husband came home at six o'clock I was still no better; but I carried the thought all the time that God would help me, and through the night the work was done. I got up in the morning feeling well, and was indeed happy to have found such a loving heavenly Father. I am trying so to live that I may be worthy to be called a Christian Scientist.—Mrs. E. L. Hopkins.

✧

[Translated from the German]

A sense of deep gratitude to God impels me to testify to the many blessings which have come to me through Christian Science. In my earliest childhood I sustained a fracture of the frontal bone, as the result of which I suffered for nearly fifty years with the most severe headaches, and these at times would grow almost unbearable. Of late years the attacks were of more frequent occurrence, and although I tried many means of obtaining relief, they all proved of no avail.

A few of the many physicians whom I consulted then advised an operation in order to remove the nerve in the head which was said to have been injured. I could not make up my mind, however, to take this step, first because the physicians neither could nor would give any assurance of certainty with regard to the elimination of the trouble, and second because I had gone repeatedly through discouraging experiences in connection with very serious abdominal operations, which I would rather not deal with further. I felt that I had had more than my share in that direction. I was ailing almost continuously, never felt free from pain, and often became weary of life. The thought of having become a burden to my husband and children caused me keen suffering; in short our beautiful, harmonious family life seemed to have been destroyed.

But "man's extremity is God's opportunity." Although the teachings of Christian Science were not unknown to me, I had not until then given the subject serious attention. Finally, however, I decided to apply to a Christian Science practitioner, and he declared himself ready to give me his assistance. His patient and simple explanations greatly helped me in becoming familiar with this glorious teaching. The understanding of true being, of divine Love,—the only power,—enabled me to realize the healing for which I had longed, and with it returned the domestic happiness which I believed had gone.

Worry and fear have been removed from my life, and it is with a sense of deep gratitude that I feel the truth and the vital import of the Scriptural words dawn upon me: "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." May these teachings, based upon Christ, Truth, find new adherents every day, and may God's word and love enrich and govern all mankind! (See Manual, Art. VIII, Sect. 4.) Also may the opponents of the one truth be led to see in a growing measure that evil is at no time greater than good, disease never more powerful than God, and that infinite strength may overcome our weakness and redeem those that are sick and of a contrite heart.

When the hours seem darkest, the dawn is at hand. When discouragement and fear would overpower us, we must cling more firmly to the truth that God is unchanging good and will always be found by those who seek Him in righteousness. "If therefore thine eye be single,"—in other words, if thou art ever striving to serve God in the way acceptable unto Him, and the endeavor is to express love and purity,—"thy whole body shall be full of light."

Marie Horstmann, Tangermünde, Bez. Magdeburg, Germany.

✧

The summer of 1912 found my wife and myself in the deepest distress, for our son, then twenty-seven years of age, was suffering from a malady which had been pronounced incurable by several of the most eminent specialists of the state. At the same time our daughter, three years younger, was so ill that we feared for her life. As these were our only children, our despondency can better be imagined than described.

Through the blessed instrumentality of a faithful Christian Science practitioner both these cases were quickly and permanently healed. If these had been the only benefits which had come to us from this source, we should feel that our earthly lives would be all too short a time in which to express our sense of gratitude to God for these demonstrations of the power of divine Love, and our thankfulness to our beloved Leader, Mrs. Eddy, for her great discovery of Christian Science and its presentation to the world. But we have, in addition to these, received many other blessings, both physical and spiritual. I have been healed of a badly sprained ankle, of chronic catarrh of long standing, besides other ailments, and of the tobacco habit, after having been a heavy user of the weed for about forty years. My wife too has enjoyed many physical evidences of the beneficent effects of Christian Science.

We began the study of this teaching when we first sought help for our children, and our lives have undergone a great change for the better on that account. We have found such a wonderful unfolding of the teachings of the Scriptures through the text-book, "Science and Health with Key to the

Digitized by Google

Scriptures," and other writings of Mrs. Eddy, and through the Christian Science publications, that we feel as she did when she declared in the Preface of Science and Health (p. ix) that "though rejoicing in some progress," she still found herself "a willing disciple at the heavenly gate, waiting for the Mind of Christ."—JOHN M. BAILEY, Stoughton, Wis.

✧

As I have received so much from Christian Science, I must express my gratitude. The healing which stands out most clearly in my thought and which made me first realize the power of Truth, was that of a severe attack of throat trouble. The ailment appeared while I was on my way to visit friends who lived a few miles from home, and before my destination was reached my throat became very painful. By the next day I could not swallow anything but water and there was a high fever. My friends became alarmed and wanted to call a doctor, as they were not Christian Scientists; but I asked them to send for a Christian Science practitioner, and they did so. The practitioner came that evening and gave me treatment. Although barely conscious of her presence, the next morning I realized that I had gone to sleep before she left and had slept all night. In two days I was completely healed and could eat anything; in fact I looked better than I had for weeks. Always before, when I suffered from these attacks, it would be two or three weeks before my complete recovery.

My progress in Christian Science, though seemingly slow, has been a blessing, for it has made me study and enabled me to demonstrate over all problems arising in my daily life.

LU DEEN CHRISTENSEN, San Diego, Cal.

✧

My healing in Christian Science has been slow, but I most joyfully bring my "tithes," as I have been much encouraged by reading the testimonies of others. Christian Science has brought me innumerable blessings, but I am especially grateful for having learned to know and love the Bible, for the inexpressible sense of mental comfort I have never failed to find, however difficult earthly conditions have seemed, and for the continual joy of freedom from material law. Although the way is often up-hill and long, I do not grudge the waiting, for I have now learned to rejoice in the "daily bread" and never to think about the future.

I have always had a great fear of chest and lung trouble, but under Christian Science treatment relief has been found almost instantly, and the attacks have been much less severe. I have also been able to overcome colds by myself in a day. Some time ago, while staying with friends who were not Scientists, I had an attack of acute lung trouble. There was a sense of great weakness, so that I could not sit up in bed, but on the second day of absent treatment I was able to get up and go about the house as usual, the difficulty of breathing and the pain having entirely gone. The next day, in wet weather, I walked five miles. The cough was overcome in five days, and there was no relapse of any sort. During this time I was not able to read or work for myself, but I held to the thought, "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." In the summer of 1914 I was healed within a week of an internal injury, which made it impossible for me to walk or move without pain; but on this occasion I was able to do my own Science work.

When in Paris, alone and unacquainted with any one, I greatly appreciated the services and reading-room of First Church of Christ, Scientist, also the friendliness of the Scientists. While there I had a wonderful experience. I was with a Scientist friend, waiting to get into a tram, when a van came quickly around the corner on the wrong side. I was struck on the shoulder by the shaft and seemed to be falling under the wheels, when I heard my friend say, "There are no accidents in divine Mind," and in a flash these words from Deuteronomy came to me: "Underneath are the everlasting arms." I was enabled to realize this so literally that I recovered my balance and escaped the wheels, being quite unharmed save for a stiff shoulder and a slight sense of shock, both of which were overcome that evening.

The privilege of being, or trying to be, a Christian Scientist, is in itself so great that it seems to outweigh everything else. I find great comfort in Jesus' command, "Preach the gospel to every creature," or, as Mrs. Eddy puts it, "Speak the truth to every form of error" (Science and Health, p. 418), because if this command is followed I know that there is no place or time when Christian Science will fail us and that we have indeed "the whole armor of God."

LILY G. H. LAMBART, Harefield, Middlesex, England.

✧

For several summers prior to the fall of 1907 I was afflicted with malarial fever. As a result of the alternating chills and fevers I grew very thin, and the discomfort became almost unbearable, even to such an extent that death would have been welcome. The kind family physician had exhausted his means to relieve me, and as a last resort I was sent to a sanitarium for mineral baths, but these only robbed me of what strength I had. While I was there a friend advised that I give Christian Science a trial. She had previously talked to me about Science, but being atheistic in my beliefs I was naturally antagonistic. My dire extremity was God's opportunity, however, and I asked for treatment. I was completely healed in one week, and my whole thought was seemingly rearranged, so that I was receptive to the "still small voice" of Truth. Since then I have learned to love God with all my heart, and my dependence upon Him is now constant.

In the last seven years there have been many demonstrations in the home, and above all there has been a comforting sense of peace and harmony. I have also felt the protection of divine Love in my travels. During the summer of 1914, while in charge of an important expedition into Asia Minor, I placed absolute dependence upon divine Mind, and in spite of all the disorder there, was able to overcome several serious predicaments and bring the party into safety.

I am grateful for Life, Truth, and Love, and happy to know that God is worthy of the greatest love and gratitude.

RAYMOND S. BLATCHLEY, Champaign, Ill.

✧

Several years ago I obtained a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read it attentively, not so much for physical healing but because I was hungry for the truth. About this time I was suffering from rheumatism, and on applying to a Christian Science practitioner for help, was quickly healed, although the doctors had failed to give me any relief. Yet in spite of this convincing proof of the healing power of Christian Science, I was still skeptical; I laid the book away and went back to the old beliefs, though I know now that God was leading me all the time.

I withdrew from my old church and for quite a while was without a church home. Then Love led me one day into a Christian Science church in our neighborhood, and I afterward attended it faithfully for three years. I am now a member of both The Mother Church and a branch church. Recently I have been enabled to lay aside glasses, after having worn them for many years. I feel that God has led me through a wilderness of doubt and fear, as were the children

Digitized by Google

of Israel, and has planted my feet on a rock. I am deeply grateful to Mrs. Eddy for pointing the way, and also for the light her teaching has thrown on the Bible.

MILDRED F. PEMBERTON, New Rochelle, N. Y.

The preceding testimony of my mother reminds me that I have not yet made just this kind of public acknowledgment of the many blessings which Christian Science has brought to me; yet surely if any one has cause for gratitude it is I. My mother has always lived with me, and I saw the struggle she was having in turning from the old beliefs, yet found myself powerless to aid her, as I was so deeply engrossed in worldly matters. I never opposed Christian Science and was glad to have my little daughter placed in a Science Sunday school at the age of three. I felt that between mother and child surely they could work out my salvation and I might be allowed to continue the unending pursuit of material pleasures without hindrance. On page 240 of Science and Health Mrs. Eddy says, "Remember that mankind must sooner or later, either by suffering or by Science, be convinced of the error that is to be overcome." Certainly I chose the way of suffering, although I can truthfully say that I am grateful for every pang, since it was through these very experiences that I saw the nothingness of matter beliefs, and I know that there is nothing to go back to.

I turned to Christian Science to find peace and happiness, and I have gained them. Although there were many diseased conditions of the body, yet I never seemed to have time to speak of these inharmonious physical conditions to the Science friend who so lovingly helped me over the rough places; but as I read and worked on, endeavoring each day to learn more of God, good, and striving to put into practice what I was studying, I found myself free of first one and then another ailment. Mrs. Eddy says, "Look away from the body into Truth and Love" (Science and Health, p. 261), and it was exactly this which brought the healings.

MARY PEMBERTON ERKINS, New Rochelle, N. Y.

✧

I would like to express my gratitude for the beautiful demonstration made some time ago for my sister's daughter, then only ten months old. The child had been suffering all day from a swelling behind one ear, and would not eat or let any one touch her. At first her mother wanted a doctor, but after talking with me for a few minutes she decided to give Christian Science a fair trial. I immediately called up a practitioner, and within less than an hour the child felt better and went to sleep, while to her mother's surprise the swelling had entirely disappeared. For this demonstration, and many others, I am indeed grateful to Christian Science.

E. B. MCCORMICK, San Francisco, Cal.

✧

As the result of my study of Christian Science for the past seven years, I have experienced a wonderful restoration of mental and physical activity, and this after two medical doctors had induced me to abandon my occupation because in their opinion my health was rapidly declining on account of constant mental effort on my part since the days of the Crimean War. My health has not always been perfect during these years, since blood-poisoning, lumbago, bronchitis, and varicose veins have had to be overcome; but the application of the sunlight of Truth removed them quickly as they appeared, so that I have not been confined in bed even for a day during this time. A birth-mark, protruding on my neck and expanding annually during the fruit season, recently disappeared entirely in two days under Christian Science treatment.

It is impossible for me to express in a few words my thankfulness to God for His blessings, and my gratitude to Mrs. Eddy for the revelation of this glorious truth which has revealed the Bible to me in a new light, brought happiness into my home, and convinced me beyond any doubt that right thinking and living, combined with a correct understanding of God, prevents men from being feeble and decrepit during the period of their existence which is called old age.

SAMUEL MOORES, London, England.

✧

I wish to express my gratitude for the healing that has come to me through Christian Science. After ailing for some time, I finally became very ill and was taken to the hospital to be operated on. My condition, however, was so serious that the operation was postponed, and accordingly I was taken home to gain sufficient strength for the ordeal. Two of the best physicians in the city said I had an abnormal growth and could never be well until the operation was performed. They also said if it was not done at once, they would not take the case; but having always been opposed to operations, I objected very much to this one. Then one evening my husband, on coming home from his office, met a friend who spoke to him of Christian Science. We discussed the matter, and as I preferred anything to an operation, after thinking it over for about a week we sent for a Christian Science practitioner. In about twelve treatments I was entirely healed. Life is now different in every way since the terrible fear has been removed and has been replaced by the understanding of Love and Truth.

MRS. F. W. BARNES, Portland, Ore.

✧

I am happy to express my gratitude for the spiritual and physical help our family have found in Christian Science. While playing on the high school foot-ball team, in November, 1912, my son's foot was injured and became badly swollen and inflamed. As his father was very fearful and thought we should have a physician to diagnose the case, we did so. The doctor said that poisoning had set in, and that not only was the foot infected but the leg also, up to the groin. He had been our family physician before we came into Science, and as he regarded the case so seriously we left it in his care for three weeks, but during that time my son constantly grew worse. The pain and swelling increased and three deep abscesses formed in the heel, so that we all, including the doctor, became very anxious.

At this point my son asked for Christian Science treatment, and we immediately called in a practitioner, who treated him that day. The next morning, while we were eating breakfast, he came running down-stairs and said he was healed. He put on his shoes and kept them on all day, though he had not been able to stand on his foot for three weeks. The next day he went down town, and has never complained of the foot since. We can never express our gratitude for having seen such a wonderful demonstration of the power of Truth.

On March 29, 1913, my little girl, seven years old, was playing at a neighbor's, and while swinging very high slipped out of the seat and was dragged along a rough floor. A splinter five inches long was forced through the fleshy part of her thigh. As she has always attended the Christian Science Sunday school and relied entirely on Christian Science, she cried out constantly, "God is Love, God is Love," and told her little friend's mother to pull the splinter out. The mother tried to do so but could not, as it had pierced the thigh and broken off, leaving about three inches of it buried in the flesh, with both ends projecting about an inch

Digitized by Google

outside. They sent for me, but before going I called for a Christian Science practitioner, who accompanied me, and together we took my little girl home.

The lady at whose house the accident had occurred had called a doctor, and he was at our home when we arrived. The practitioner took charge of the case, and the doctor removed the splinter without cutting; this was all he was allowed to do, as we relied entirely on Christian Science for healing. The doctor and the people who saw him remove the splinter said they had never witnessed anything so wonderful, for the child never so much as flinched, nor did she say a word, except to declare that God is Love. The next morning the neighbors were amazed to see her running about and playing. That afternoon we drove about forty miles in the automobile and she did not once complain of any discomfort. There was no inflammation at all, and the wound healed up beautifully.

For this healing and many other blessings we have received through Christian Science I am very grateful.

ELMA V. DUNKLEY, Chicago, Ill.

[Translated from the French]

It is with a heart full of joy and gratitude to God that I acknowledge the many benefits received through Christian Science. About ten years ago an operation was performed on my right eye, and after six months' treatment I was fitted with special glasses, which I had to wear constantly. When in 1913 the trouble became aggravated, I underwent six weeks' treatment, which, however, failed to benefit me. A second physician pronounced my case a serious one, and I was very much afraid of losing my sight altogether.

I was in a state of despair, but a friend told me of Christian Science, and I called on a practitioner, who received me with much kindness. After a few treatments there was a complete change in my mental condition, and my sight had so improved that I did not need to use the glasses during my daily occupation; indeed the fear of losing my sight had been destroyed. I used to be left-handed in all I did, but after I began to understand and to apply the Principle of Christian Science I learned to use my right hand as well.

For all this, and for having been led to Christian Science, I am profoundly grateful. How great is my happiness to know that God is All-in-all and that He is my light! I am deeply thankful to God for all the blessings I have received, and grateful to Mrs. Eddy for having shown us the way leading to Truth.

CAROLIN SCHAERER, Geneva, Switzerland.

[Written for the *Sentinel*]

Love Rules

F. MARION RALSTON

LOVE rules! Let that suffice
To ease thy pain,
And afterwhile, what good thou'st seemed to lose
Thou'lt find again.

'Tis but because the wills
Of mortals reign
That God is not perceived forever, now,
With vision plain.

Love rules! Oh, drop the load
That mars thy peace!
The Father doth from sin, disease, and death
Thy thought release.

From Our Exchanges

[Rev. John A. Hutton, D.D., in *The Christian World*]

Christ came to contradict the notion that what one has done in the past must of necessity entangle him forever and hold him in its thrall. He came to give freedom to those that were bound. He came to say that it was possible, and to make it possible, for every one, in spite of any kind of previous history, to break away from its thraldom and to rise above even its shadows. He came to seek and to save that which was lost—lost, that is, according to the wisdom and opinion of the world. He came in order to lift the soul, by one sheer dead lift, clean out of its old surroundings,—out of the gloom and the distress and the fatal drift in which the souls of men go down. That surely is the gospel on its practical side, as it bears upon you and me.

It is possible to begin again. By the mercy of God no one is quite undone. Just in front of you, so to speak, there is buried this gem of infinite value. I cannot gather it for you. It is a gem which every one must find for himself or herself. There is a power, I mean, which every one may find with Christ in God, and by it he may step out today with unsoiled feet upon a fresh, new world. Perhaps that is the supreme truth. It is possible in this life of ours—which lives and moves and has its being in God—for one who has sinned even grievously to make a clean break with his past, to die to his sin, to go down into the cold waters of moral pain, to go down into a very grave and be alone—and then to rise, fresh and clean and new-born, raised by the hands of Christ.

[*The Christian*]

How hard it would be to deduce from observation of the activities of the modern church that her divinely appointed work is that of winning men to the faith and following of Christ! Yet this is the interpretation of her endowments and the conditioning cause of her Lord's promises. "As my Father hath sent me, even so send I you," is his unrevoked direction; that is, with the same objective and in the same strength. Is it not an unwarrantable presumption which appropriates the blessing while departing from the commission? And yet is it not the case that Christ's passion for souls is conspicuously absent from current Christian life, and that his travail finds little recognition in the ordering of much so-called Christian work today? Is it not true that the church as a soul-winning institution—declaring a living gospel of redeeming love, going out after the lost until they are found and borne home rejoicing, knowing none after the flesh, and subordinating every other concern to her own burning love for the salvation of men—is almost unknown in our midst?

[*The Church Times*]

If conscience be the oracle of God, it means that God speaks diversely, and even contradictorily. Who can believe this of God? So to believe is to believe, not in one God, but in many gods. The complainants can escape from this conclusion only by pretending that all who differ from them either have no conscience in the matter at all, or have stifled conscience with deliberate perversity; they themselves, and they alone, are conscientious; they alone have the oracle of God and hear its voice. But who can tolerate such arrogance? Do they intend it? Probably not; but they are caught into the current of an erroneous idea, and it carries them to absurdity.

Conscience is not the voice of God; it is a purely human faculty. It is knowledge of right and wrong. Like all knowledge, it is the fruit of learning. There is a well-informed conscience and an ill-informed conscience. That is

Digitized by Google

why men's conscientious judgments differ: one man is better informed than another. In so far as conscience is concerned with the oracles of God, it is nothing else but knowledge, more or less imperfect, of what God has revealed concerning His moral judgments. What a man knows of right and wrong, or indeed what he believes himself to know, should be his guide in action; for his mistakes he will suffer; his honest error should be respected, but he is responsible for the exercise of his natural faculties, and for his use or neglect of the illumination of divine grace.

[Rev. Joseph Fort Newton, D.Litt., in *The Christian Commonwealth*]

It is not an accident that the geography of faith is a mountain range. From Sinai to Olivet we may trace the peaks of the mountains of God, because there are mountains in the soul, and he who climbs them finds the quiet waters and the large outlook. Then he sees life from above, in true perspective, and its petty cares and gossipings are known to be little and of little worth. And with this comes an intuition of union with the divine life, a sense of unity with our fellow souls, in which the awful separateness of the lower levels of being vanishes. This is the experience of all who seek the highest good faithfully and with honest hearts. To such fine issues our mortal life with all its baffiements ascends, when it is lived nobly and with true intent to find its worth. The gold mines of wisdom are in the mountains of God. There the climber breathes the air of freedom and vastness, and the serenity of the great, still spaces, and learns that in quietness there is joy.

[*The Christian Intelligencer*]

If the voice of the divine mercy has found response in our souls, and if the Holy Spirit has made us alive in Christ, the only critical issue in human experience has been gloriously solved. The eternal destiny of our immortal souls is the big thing. If we are freed from the law of sin and of death, what have we to fear? Why should we fail to rejoice? It is a wonderful mercy to be a child of God, a son and heir in God's kingdom. There are many lines of cleavage in society; but all distinctions pale before the glory of those of whom it may be said, "Blessed is the people that know the joyful sound."

[Rev. Henry Kingman, D.D., in *The Biblical World*]

There is no true Christianity save that of actual fellowship of spirit with him who made love, mercy, and forgiveness the primary conditions of discipleship. And one needs only to consider for a moment the uncompromising demands of the Master, to recognize how essentially anti-Christian, rather than un-Christian, are the pride and arrogance and love of power that grow rank as tropical verdure in any class to which the pride of war is as the breath of its nostrils.

[*The Jewish Chronicle*]

We can think the creator's thoughts, be conscious of His purpose. Let us not cherish any mean conception of what we can do; nothing is so fatal to high endeavor. It is our disciplined faculties we must bring to Him if we are to be His fellow workers. It is not to idle and empty minds but to fully exercised and informed minds that His inspiration comes. He needs us, and He needs us at our best.

[*The Methodist Times*]

The spiritual forces that make for progress are always childlike in temper. Simplicity, sincerity, trustfulness, and the spirit of heroic venture mark them all. The spiritual forces that make for reaction are always childish. They stand for the revival in the adult life of the church of a superseded stage.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new French pamphlet, "Foi et Générosité" (Faith and Generosity), has just been issued and is now on sale. This pamphlet contains the following articles: "The Lord Thy Confidence," "The Closed Hand," and "Continuity of Right Thought."

"Christian Science: A Religion of Love" (Christian Science: En Kjærlighetens Religion), a lecture by Virgil O. Strickler, has been translated into Norwegian and is now published in pamphlet form with English and Norwegian versions on opposite pages.

"Law and Work" is the title of a new pamphlet containing the following articles: "Love Fulfils Law," "The Logic of Christian Science," "Undisturbed," "God's Law of Adjustment," "Authority."

"Christian Science: Man's Dominion over Evil," a lecture by Edward A. Kimball, C.S.D., has been translated into Russian, Norwegian, and Modern Greek. Pamphlets in these three languages have been published with the English version opposite the translation and are now on sale at prices of our regular pamphlets as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1888 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

The new Erie barge canal, 446 miles long—one of the world's greatest feats of engineering—will be entirely completed and in operation by 1918, according to the state engineer and surveyor. Of the 446 miles traversing New York state 400 miles are completed, and most of the canal will be in operation during the present year. The canal is ten times as long as the Panama canal, has more engineering works, and includes some of the most notable locks in the world. The total cost of this latest enlargement, borne entirely by the state of New York, will be about one hundred and fifty million dollars. The canal extends from the Hudson River near Albany and Troy to Buffalo on Lake Erie, a distance of 339 miles. Its branches are the Champlain, 61 miles long, extending from Waterford on the Hudson north to Lake Champlain; Oswego canal, 23 miles long, branching from the Erie canal near Syracuse north to Oswego on Lake Ontario; and the Cayuga-Seneca canal, 23 miles long, a branch from the Erie south to connect Lake Cayuga and Seneca. The old canal, opened in 1825 by Gov. DeWitt Clinton, was 4 feet deep and 42 feet wide; the new barge canal has a minimum depth of 12 feet, will be 125 feet wide in earth sections, 94 feet wide in rock cuts, and 200 feet wide in rivers and lakes through which it runs. The tow-paths in use for ninety years on the old canal will be dispensed with on the new one, making necessary either electricity or steam in propelling the barges. There are fifty-seven locks built of concrete and operated by electricity. They are 328 feet long and 45 feet wide, and will lift from one level to another at one time six boats, such as are in use on the canal.

The Bavarian Canal League recently met at Kelheim for its second annual meeting since the outbreak of war to discuss the canal schemes which have rapidly developed during the war from practically a Bavarian to an imperial enterprise. The ideal scheme proposes three main systems: first, the central canal connecting up all the navigable waterways which flow into the North Sea and the Baltic between the Rhine and the Vistula; secondly, the establishment of a navigable connection between the Rhine, the Danube, and the Black Sea by way of the Danube-Ober canal; and thirdly, the extension of that connection by means of the canalization of the Main and the construction of a new Ludwig canal. With these waterways forming the main arteries from west to east and from north to southeast, a very extensive subsidiary canal system has been planned.

The new Kansas oil field promises to be the heaviest oil producing section of the entire country. The field known now is 40 miles long and 16 miles wide. Geologists have pointed out that the prospects of a much larger territory are so good that nearly seven million acres are under gas and oil leases. There are five distinct oil sands and two strata of gas sands already discovered in the field around Augusta and El Dorado. The first sand has been found at 675 feet, producing a fair quality of crude and with an initial flow of 16 to 30 barrels of oil a day. One thousand feet below this is the next oil sand, and there are four distinct strata of oil sand from 1685 feet to 3364, the deepest well now in the field. Between 1200 and 1500 feet there are two distinct strata of gas sand, and the wells produce from 3,000,000 to 28,000,000 cubic feet a day. There is no gas in the oil sands.

A deputation from the Royal Scottish Arboricultural Society waited on Scottish members of the House of Commons recently and demanded the immediate creation of a separate department of forestry in connection with the board of agriculture for Scotland, in order to foster the planting of large areas in that country with timber trees, and thus provide a new source of employment for settling men, and particularly retired soldiers, on the land. This project, it was pointed out, would also give the country a supply of home timber, of which it stands in great need. What is required at the present time, it is pointed out, is the survey of likely districts, followed by state purchases and plantings of, say, 100,000 acres a year for the first ten years, and thereafter of areas diminishing annually by 10,000 acres to a steady 30,000 acres a year.

Spain, which lagged conspicuously behind other countries in the adoption and exploitation of electricity, has made remarkable advance in recent times. There are now in that country 992 factories making electric light, and electric light plants are installed in 978 factories, workshops, and private houses for their exclusive use. There are 123 works for the production of electricity for motive power, five for the production of electric lamps, four for the production of metallic tubes and electrical conductors, 361 establishments for the installation of electric light, and 119 retailers of electric energy.

Announcement is made by the Lake Carriers Association that the recommended loading depth for boats to Lake Erie and Lake Michigan has been raised to 20 feet 10 inches, an increase of 11 inches for boats going to Lake Erie. It is estimated that this increase in depth of channel will enable some 400 boats to carry larger cargoes by 800 tons of ore each. It is also estimated that at least an average of seventeen trips will be made by each ship before the season closes. The total extra freight thus to be carried is estimated at 5,440,000 tons of ore.

In preparation for an exhaustive report on markets for construction materials and machinery in South America, a representative of the Bureau of Foreign and Domestic Commerce is to spend the next three months visiting the principal cities of the United States and conferring with manufacturers. He will then make a tour of all the southern republics for a thorough study of conditions in this branch of trade.

The development of the water-works systems of Canada is represented by an increase in the number of plants from seven in 1867 to 528 in 1916. These have been built at a total cost of $123,725,633. There are 206 plants supplied from springs or wells, and 322 from lakes or streams. In 72 of these the water is filtered, and in 21 it is treated with hypochlorite. The municipally owned plants number 396.

Figures compiled by the Indian department of statistics from accounts rendered by mill owners and covering the output of cotton spinning and weaving mills in British India and the native states show an 11 per cent increase in the amount of yarn spun during the year ended March 31, 1916, as compared with the production in the fiscal year 1914-15, and one of 27 per cent in the quantity of woven goods manufactured. In pounds the output was: Yarn spun, 722,425,000; woven goods manufactured, 352,255,000.

Arrangements have been made for the establishment of a Portland cement factory in the Province of Buenos Aires. A group of New York capitalists have furnished a fund of about two million dollars and have obtained a six-year concession for the exploitation of certain land in the Sierras Bayas district. It is expected that cement will be produced by the latter part of 1917.

The crushing of cottonseed, as an industry, is still in its infancy in India. An increasing quantity of the seed is being exported, but by far the greater proportion of the Indian product is given as food to cattle. Four factories are engaged in making cottonseed oil in India.

Acting Secretary of State Polk has announced that the treaty with Denmark for the purchase by the United States of the Danish West Indies has been signed in New York City by Secretary of State Lansing and by the Danish minister, Constantin Brun.

The annual statistical report of the city of Frankfort-on-Main, Germany, states that 104,731,494 persons were carried by the municipal street railways during the fiscal year 1914-15. The total income from all sources amounted to $2,149,468.

At the last meeting of the town council of Glasgow a deputation from the convention of royal burghs urged the claims of the proposed Forth and Clyde ship canal. The convention represented the major part of the people of Scotland.

Engineers of the Denver & Rio Grande Railroad have made estimates of the cost of electrification of the Utah lines. Electrifying the heavy grades is favored, in order that faster time may be made with freight trains.

The declared value of the exports from the Amsterdam consular district to the United States during the first six months of 1916 was $21,522,542. Of this sum diamonds represented $10,166,915.

The estimated acreage of various crops in the Province of Alberta, Canada, this year is 3,429,054.

Christian Casuistry

JOHN B. WILLIS

SPIRITUAL progress is realized only as one meets with and masters the unnumbered issues of individual experience. It calls for the recognition of the Christ-ideal as the standard of excellence, and for unfailing loyalty thereto, however large or small the question or event. When spiritual sense presides at this court of casuistry, those moral determinations are reached which honor divine Principle, and which are considerate for logical consistency, for conscience, one's highest concept of duty, and for every requirement of good. However seductive the pleas of mortal belief and selfish desire, those judgments are maintained which are in keeping with the beneficent exactions of Truth and Love. When, however, material sense is permitted to preside at this court, those tragedies inevitably result which constitute so large a part of human history, and which find such graphic portrayal in the case reported by Mrs. Eddy on pages 430 to 442 of Science and Health.

Here one's cultivated tastes and pet weaknesses, his educated bias and unconscious prejudices, are sure to put in an appearance, and the way in which they make their pleas sometimes ensnares the very elect. Here sophistry becomes serpentine. With clever insidiousness it always appeals as it did to Eve, in the name of good, and to an unwary ear it at once becomes daringly assertive in its efforts to shape decision. Here the spiritual welfare of many is imperiled, and here we have all compromised character in greater or less degree, and lost our footing perchance a thousand times.

Prevailing custom, the fact that "everybody does it," is an effective pleader in many a case. So too is the suggestion that the satisfaction of selfish or sensual desire is in keeping with our nature,—that we have been made as we are, and it must therefore be legitimate to consent to natural impulse, instead of maintaining a wearisome and apparently useless fight against it. This is a well-nigh ubiquitous situation, and even the casually observing will have no difficulty in noting the ever-shifting aspects of the struggle in the lives of others if not in their own.

Yet another suggestion of the tempter, and one which has shaped the determinative counsels of powers and authorities in many an unreported instance, is the argument that truthfulness and honesty are not practicable under given circumstances; that a larger ultimate good will be conserved by a present consent to deception; that to perpetuate the ignorance of the many in the interests of an established and assumedly necessary order, is diplomatically legitimate; in a word, that an assuredly good end justifies the means of its attainment,—all this has brought blight not only to political, but to much ecclesiastical history, and the end of the rule of this evil is not yet.

Alert Christian Scientists are far better prepared than are the many to resist all this subtler mesmerism, and first, because they have come to know that no element of human sense which proves inimical to the spiritual life belongs to men or is worthy of their consideration, since it is not ordained of God. Moreover, they have learned that there is no material good; that from first to last material testimony is, as the wise man discovered, altogether vanity and its outcome vexation of spirit; that sugared evil, while the more deceptive, is none the less baneful in its effects. Nevertheless, in one respect at least they are subject to a peculiar temptation, because they may speak truly in the absolute and at the same time deceive the non-elect, whose thought is innocently absorbed in the relative.

To illustrate: A student of Christian Science recently took an examination for a desirable position and was given a high mark of approval. She was questioned, however, as to her age, and it was found that she had just passed the entry limit. On telling the truth regarding this matter, she was regretfully turned down, though fully qualified to meet every other requirement of the position, because the rule in this particular was inexorable. To be thus debarred when she had met all the other demands of the place and was really wanted, was a keen disappointment, and in speaking of it with a friend, the remark was made, "You look young, and there is no truth in age anyhow; why didn't you express yourself in the absolute, and thus secure the opportunity which would have enabled you to do and to get great good?" He who would seek to effect a demonstration of asserted good by such a procedure would surely place himself under the condemnation expressed on page 105 of Science and Health, namely, "Whoever uses his developed mental powers . . . to commit fresh atrocities as opportunity occurs is never safe."

Such casuistry could never be consented to, much less commended, by one who has gained even a meager sense of the moral demands of Christian Science. Though recognizing the progressive nature of spiritual growth, Mrs. Eddy distinctly defines it as a natural coming into Spirit "through better health and morals and as the result of spiritual growth" (Science and Health, p. 485). Elsewhere she declares that "a moral offense is indeed the worst of diseases" (p. 395). To separate good morals from good health is impossible in Christian Science, but considerations for material self-interest are and ever have been a stimulus to unchristian casuistry. Circumstances may arise when to tell all the truth may not be wise, but purposely to convey a wrong impression is the essence of falsehood. The only right course is that of strict, old-fashioned honesty. It may oftttimes be best to be silent, but for any one to use double-meaning phrases in order to lead thought away from the truth, is to throw moral discrimination to the winds and do violence to the most ordinary ethics.

After citing the ways of those who were "destitute of the truth," St. Paul appealed to Timothy, his "own son in the faith," in these stirring words: "But thou, O man of God, flee these things; and follow after righteousness . . . Fight the good fight of faith, lay hold on eternal life, whereunto thou art also called, and hast professed a good profession before many witnesses." This counsel of the great apostle is peculiarly pertinent to every professed Christian Scientist.

Standing before men as the exponent of the highest idealism, and for the practicability and redemptive power of the exalted ethics of the great Galilean, the Christian Scientist who does not impress his fellow men with the unimpeachableness of his integrity, the sincerity of his devotion to truth and purity and uprightness in every least test, has come far short of profiting by his privilege, of fulfilling his obligations, and hence of honoring his asserted faith. The true Christian Scientist is seeking to be exemplary in both the little things and the large.

Music

MARGUERITE D. KITCHEN

DESIRE to help bring out a more intelligent and hearty singing of hymns in a Christian Science Sunday school led the writer to give the subject of music some earnest thought in the light of Christian Science. A study of the numerous references to music and song in the Bible and in the writings of Mrs. Eddy brought the inspiration which lifted thought out of a limited, material preconception to discern a higher, spiritual viewpoint.

In Science and Health (p. 304) Mrs. Eddy writes: "To be master of chords and discords, the science of music must be understood. Left to the decisions of material sense, music is liable to be misapprehended and lost in confusion. Controlled by belief, instead of understanding, music is, must be, imperfectly expressed." She also says (p. 126), "All Science is divine. . . . Human belief has sought and interpreted in its own way the echo of Spirit, and so seems to have reversed it and repeated it materially; but the human mind never produced a real tone nor sent forth a positive sound."

Since God is the divine Principle of all that really exists, we perceive that Mind, God, is the source of every right idea, hence the origin of all real music. The melody of this music is the unceasing song of joy and praise which has been going forth ever since "the morning stars sang together, and all the sons of God shouted for joy." Its harmony is the expression of one infinite Mind governing its ideas in perfect accord, divine Love correlating its own ideas. Its rhythm is the harmonious, unlabored action of divine Mind expressed by man, the obedient idea, moving under divine direction. Music then does not concern just the few, but all, since music in the true sense is universal and should be universally expressed.

Recently, while hearing and studying some of the world's noblest music, the writer was impressed with the fact that the Christian Science Hymnal includes many tunes that would be legitimately named great. Far more than affording mere sensual pleasure or intellectual stimulus, such tunes, inseparable in our thought from the words with which they are associated, are playing a humble but mighty part in the salvation of the world today, accomplishing in their office something which is of positive value to mankind. It is the experience of almost every Christian Scientist that at times when for the moment confusion or doubt seems to rob him of the power of scientific, orderly thinking, one of these oft-sung melodies will sing its way again into consciousness, bringing to mind the words of some hymn, and as these healing thoughts quietly unfold themselves in time with the flow of the music, the clouds are quickly dispelled by the sunshine of praise and rejoicing. Thus inspiring songs, wherever associated with right ideas, become in their gentle ministry weapons "mighty through God to the pulling down of strong holds."

The Scriptures, which admonish us repeatedly to "sing," "rejoice," and "be glad," testify many times to this power of rejoicing to destroy the claim of a power apart from God. A striking example of this which comes readily to mind is the experience of Jehoshaphat and the people of Judah when an army of allied enemies came upon them. At first fear overcame them, until Jahaziel, a descendant of Asaph, who was the musician and leader of David's choir, remembered and declared the oft-proven goodness and power of God; then confidence was restored, and with joy they went out to battle with only the weapon of song and praise. As they stood still before their enemies, singing their thanks to God for His care and protection, the alien armies fell upon each other and were utterly self-destroyed. It will be recalled, too, how the walls of Jericho fell before the Israelites when in obedience to divine direction they compassed the city, relying not upon their material weapons, but sounding their trumpets and shouting with one voice.

Joy in the realization of the power of divine Love to break the illusion of the senses, when expressed by Paul and Silas as they prayed and sang praises in prison at midnight, not only released them from bondage to error, but others as well, for the Bible tells us that "the foundations of the prison were shaken: and immediately all the doors were opened, and every one's bands were loosed." Even the keeper of the prison waked out of his sleep, and the light of Truth dawned upon him and "all that were in his house." And we read in conclusion that he "rejoiced, believing in God with all his house."

When with the advent of Jesus of Nazareth the Christ-idea appeared to human consciousness, it was received with song. Zacharias, whose tongue had been mute, burst into praise and prophecy when he recognized his son John as "the prophet of the Highest," the herald of the Christ-appearing. Mary's gratitude was expressed in her wonderful hymn of praise, magnifying God, and angels and shepherds followed with their thanksgiving. Prayer and thanksgiving became one to Jesus, who prayed, "Father, I thank thee that thou hast heard me." That he recognized the value of song in hours of trial is shown never more clearly than when, in the narrative of that last supper in the "upper room," as he endeavored to make his disciples understand that he must leave them, and prior to that night of struggle in the garden of Gethsemane, we read the simple words, "And when they had sung an hymn, they went out into the mount of Olives."

Music and song played an important part in the service of the temple. David, who sought divine direction in all that pertained to this service, appointed certain priests—at one time four thousand—whose sole duty was to sing psalms and play upon instruments which he had had made for the continual praise of God in the temple. At the dedication, when all the musicians and singers were as one voice in thanksgiving to God, the glory of the Lord filled the house and fire descended from heaven and consumed the burnt offering, and when the people perceived this manifestation of divine power they too joined in the song.

This is not without significance to us in our service of prayer and praise today. We all unite in prayer, our communion with God, and we should be equally united in our praise, our thanksgiving to God, for never in the history of the world has there been more cause for gratitude. Christian Science is singing the new song in the new tongue. We are told to "make a joyful noise unto the Lord," to "serve the Lord with gladness," to "come before his presence with singing," to "enter into his gates with thanksgiving, and into his courts with praise." Isaiah says, "Thou shalt call thy walls Salvation, and thy gates Praise," and prophesies that when the Christ-idea comes to human consciousness it will give the "garment of praise for the spirit of heaviness."

The singing of hymns in the spirit of true devotion and in expression of our rejoicing in this new-found truth, is

Digitized by Google

of the most important parts of our church services and Sunday school exercises, and it will be fittingly safeguarded from interruption and intrusion in the degree to which we have come to realize that the vocal expression of our address to God is an inspiring form of prayer. The music in the Sunday school has been well called "the praise of innocence." The hymns thus learned by the pupils will prove a rich legacy in later times, and never can the habit of rejoicing always be acquired more surely than in childhood, when the thought is receptive and pure. Jesus once rebuked the priests by asking them, "Yea; have ye never read, Out of the mouth of babes and sucklings thou hast perfected praise?" Children who learn thus early the true function of rejoicing, will probably not be heard in later years to say, "I love the hymns, but cannot sing them at our services, for I do not sing." And the adult Christian Scientist need not suffer long from this deprivation, for he has learned how to oppose every belief of limitation with the understanding of Truth which brings freedom and harmony.

As we learn to understand better and love more the source of all harmony, God, we will cease to utter discordant sounds of any nature, either in speech or song, but will find restored to us the true "echo of Spirit," no longer "reversed" by human belief. Music finds its springs in joy, and a song in the heart cannot help but be on the lips. Song then is always possible to the selfless thought. When mortal self-consciousness is put away we shall all sing the new song, leaving with God, its divine Principle, all concern for the musical effect.

Christian Science today is echoing the celestial strain of the angel voices, "Glory to God in the highest, and on earth peace, good will toward men." Through its beneficent activity the discords of sense are being hushed and the primeval harmony of Spirit is again heard of men. As Mrs. Eddy has said in Science and Health (p. 568), "A louder song, sweeter than has ever before reached high heaven, now rises clearer and nearer to the great heart of Christ; for the accuser is not there, and Love sends forth her primal and everlasting strain."

Taking a Right Stand

J. M. JACKSON

On various occasions I have felt impelled to relate the following facts. For several years my business brought me in contact with men of all sorts and kept me on the street much of the time. The majority of these men frequented the saloons pretty regularly, and although intoxicating drinks never were palatable to me, and I usually chose a cigar or a mild beverage, yet it seemed impossible to remain in the business and not continue to frequent the saloons. Being a young student of Christian Science at the time, the matter was one to which I gave considerable thought, but was not able to see my way out.

Not to relate all the intermediate steps, I may say that in the course of time I was elected to a certain position in the church of which I was then a member. Feeling the position to be an honored one and that it should be maintained with dignity and credit, it came home to me one day that to patronize the saloons even nominally was not compatible with the standard which should be maintained by me as an official in a Christian Science church. Then and there I decided that this would have to cease.

Now here is where the surprising part of the demonstration came in. Having come to this decision, I expected considerable difficulty in carrying it out, knowing the frequency with which I was invited and the persistence which was often exercised to induce me to enter the saloons,—efforts which were frequently by no means easy to resist without, as it seemed to me, impairing my usefulness and prospects in a business in which geniality and good-fellowship, as they are popularly understood, are considered valuable assets.

Nevertheless, although I did not know it then, the battle was really fought and won when I took the stand mentally and decided to frequent the saloons no more. Events proved this to be the case, for strange as it sometimes seems to me even yet, I was asked into saloons on only a very few occasions after coming to that decision, and found no difficulty in declining, while soon afterward circumstances led me out of that branch of the business, thus to a large extent removing the disagreeable prospect from my path.

Many times since, on reviewing this experience, I have been impressed with the truth of Scripture that God's ways are not our ways; indeed, our Leader tells us that "higher far than the heavens above the earth is His wisdom above ours" (Miscellaneous Writings, p. 158). In any predicament or emergency we have nothing to do except to follow our highest sense of what is right, leaving the result with God, who is abundantly able to work out the answer.

Honesty

JOSEPH F. HIBBARD

Dictionaries define honesty as fairness, candor, truth, and to be honest as to be upright, just, equitable, fair in dealing with others, free from fraud, frank, sincere, unreserved, according to truth. Mrs. Eddy says, "Honesty is spiritual power" (Science and Health, p. 453). Honesty, or truth, expressed in all our human relationships, is the positive affirmation of good, and is the opposite of all evil. If honesty is truth, its opposite, dishonesty, is a lie. Honesty is the bright sunlight of reality; dishonesty is the darkness of unreality, in which lurk all forms of evil, among which are found arrayed falsehood, hypocrisy, envy, uncharitableness, malice, hate, revenge.

How evident it is that the broad foundation-stone of Christian Science is honesty, and how imperative that every student and every disciple should cultivate this quality and wage unceasing and uncompromising warfare against dishonesty. On page 15 of Science and Health Mrs. Eddy says, "We must resolve to take up the cross, and go forth with honest hearts to work and watch for wisdom, Truth, and Love." On page 21 she also says that if the disciple is honest, "he will be in earnest from the start."

Hypocrisy and deceit have no place in Christian Science, and the Christian Scientist will not give room to either in his consciousness. Jesus commanded, "Let your communication be, Yea, yea; Nay, nay: for whatsoever is more than these cometh of evil." We are commanded to declare the truth, and the truth only, and the declaring of truth is not alone by vocal utterance, but by every motive and act of our lives. We declare the truth when we deal honestly and justly with our fellow men.

Nowhere can warrant be found for any discrimination in the application of honesty to either the large or the small affairs of life; nor to persons, or things, or conditions, or times, or seasons. The command without condition or modification is inexorable, to be honest,—honest in the large affairs of business; honest in the small affairs of every-day life; honest with our neighbor; honest with ourselves; honest in our professions; honest in our endeavors.

We are commanded not only to refrain from dishonesty

Digitized by Google

but to have a care how we impress others,—to "abstain from all appearance of evil." The church and the cause with which we are identified must not be discredited by dishonest association. None but honest persons should be received into the membership of any Church of Christ, Scientist, and great care should be taken in the selection of all those who are to become representative in official capacity or are to participate in its activities. The finger of scorn is ever ready to point out anything which would discredit a worthy cause. How often do we hear the uncharitable declare that there are hypocrites in the churches. We may well believe that opportunities are not unsought, in like manner, to discredit Christian Science.

Honesty leavens the whole lump of human thought and prepares it for the apprehension of spiritual truth, the preparation needful to perceive the new heaven and the new earth revealed in Christian Science. Preparatory to rendering full obedience to the Master's command, "Be ye therefore perfect," it is well that we should heed the admonition, Be ye therefore honest.

Correct Solutions

NINA F. WINN

Not only the young student of Christian Science but the older as well often labors under the impression that he has failed to demonstrate the truth in some particular problem because that which he wanted to bring to pass failed to manifest itself. This tendency of the human mind to decide what is best for it is often spoken of in Christian Science as outlining, and is something we should guard against most carefully. The unwisdom of it is clearly stated by Paul when he says, "Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him," because, as Mrs. Eddy writes, "in league with material sense, mortals take limited views of all things" (Science and Health, p. 255). Through a lapse of time we may, however, come to see and know that that which to material sense we considered a failure was a demonstration, and we then clearly recognize how we were protected by Love. Such, at least, has been the experience of the writer.

The problem of knowing when a result is a "demonstration" seems difficult only because mortal mind is so certain of the things that are good for one, whereas the truth is that it knows nothing about the things prepared for them that love God. This whole matter was made so clear by an experience in the schoolroom that I repeat it in the hope that it may bring a little light to others.

A seventh-grade class was working in percentage, and one morning when a certain problem was called for every one in the class raised his hand to indicate that he had obtained the right answer; but later on in the recitation, when the pupils were asked to explain the problem, not one of the boys and girls in the class could give the right explanation. Upon a careful study of the problem, the teacher discovered that the numbers were in such relation to each other that when worked wrongly they still gave the answer in the back of the book. The answer obtained by the class was not the correct solution to the problem, and it seemed almost impossible to get the pupils to see their error because of the apparent correctness of the answer. They had failed to apply the basic rule of mathematics, which was the only reason for the problem being given to them, and there was not seemingly the willingness to go back and seek an understanding of it, although the unwisdom of depending on the answers and constantly referring to them had been pointed out repeatedly by the teacher.

Mrs. Eddy says on page 93 of the text-book, "Humanity advances slowly out of sinning sense into spiritual understanding; unwillingness to learn all things rightly, binds Christendom with chains." So in the solving of any problem, whether it refers to business, home, school, or to financial or physical conditions, it is for us to seek an understanding of Principle as revealed to us in Christian Science, apply it, and leave the result with God, divine Life, Truth, and Love. Our only concern about the answer is to realize that the correct solution always follows a correct application of Principle.

In this application of the truth there will be a constant realization of God's allness and ever-presence, and an effort to shut out material longings so that we may hear God's voice and do His will as it is done in heaven, for God has revealed His will unto us through the Spirit.

Sunday School Teaching

WILLIAM R. BEST

Both city and state make the child their first care, and for this reason money is freely spent so that the child may obtain a solid foundation upon which the future man or woman may stand. Much serious thought and consideration are given to this subject by cultured people, because it is recognized that without the proper foundation good citizens cannot be developed. Although perfection has not yet been realized along these lines, still behind all this effort and experiment lies a motive which is good, and which is resulting in the unfoldment of good individually and collectively.

Recognizing the same need, the churches attempt to instruct their children about God. Thus it is that the Christian Science church, through its Sunday school, is striving to give to its children the right foundation, for upon the child depends, among other things, the sustaining and upbuilding of the cause of Christian Science in the future. The question, therefore, which comes to every earnest Christian Scientist, and especially to every one who has accepted the sacred office of Sunday school teacher, is this: Are the children being shown the true foundation? By this foundation is meant the fundamental truth upon which the whole of the Christ teaching is built.

No two teachers of mathematics pursue the same course in imparting their knowledge, yet the foundation is the same. Students of the many are able to answer the question of the one, thus proving that although the method of instruction may be along individual lines, the foundation remains the same. For instance, one could think of many different ways of proving to children the fact that three times three equals nine; yet the majority of them, although instructed from different viewpoints, when asked the result of three times three would give the correct answer.

Two instances in the life of our Master may here be recalled. At one time he gathered his disciples together, and after placing a little child in their midst said to them plainly, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." Again when a lawyer, tempting him, asked, "What shall I do to inherit eternal life?" Jesus first asked him, "What is written in the law?" When the lawyer replied in the words of the first commandment and its correlative, man's duty to his neighbor, our Master said, "This do, and thou shalt live;" that is, Be obedient, and live.

Where can we look for a foundation for the teaching in the Sunday schools, and where find authority for this? Most certainly in the words of Mrs. Eddy in the Manual of The Mother Church. Here, in Section 3 of Article XX, we have

Digitized by Google

direct and unmistakable instruction as to the method of procedure; and strict adherence to the letter of this by-law at once lays the first stone in the foundation of spiritual building, namely, obedience. To obey is Christlike, and, as our Leader tells us (Miscellaneous Writings, p. 117), "obedience is the offspring of Love." Since God is Love, obedience is an expression of the power, presence, and Science (or understanding) of God.

According to the instructions in this by-law, the children are to be taught first, the ten commandments; second, the Lord's Prayer, with its spiritual interpretation by Mrs. Eddy as given in Science and Health (p. 16); third, the beatitudes; fourth, the Lesson-Sermons found in *The Christian Science Quarterly*. In other words, they are to learn first, God's will; second, true prayer, the desire to do the Father's will; third, the expression or outcome of that desire (for let it be remembered that in the beatitudes we find all the Christly qualities that underlie the stature of manhood in Christ); fourth, the science or application of these qualities, thus bringing to light the spiritual consciousness which has dominion. Is not this scientific? Surely it can be proved to be so!

We read on page 575 of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, of the "sacred city," the four-sided city and its foundations, the four sides in their allegorical sense meaning "the Word, Christ, Christianity, and divine Science," and also that "this city is wholly spiritual, as its four sides indicate." Two pages farther on we read, "This spiritual, holy habitation has no boundary nor limit." Let us take this and apply it to what we have found in the Manual. First, the Word, the law respecting man's duty to God, man's duty to man; second, the Christ, the true idea, the desire to obey and to do the Father's will, the Lord's Prayer; third, Christianity, the practice of this desire which unfolds the Christ-qualities, as found in the beatitudes; fourth, divine Science, the understanding reached through the application of the first three in the study of the Lessons, which as it unfolds brings us into the full realization of the kingdom of heaven, harmony.

That this statement is true can be proved by the rule of reversal. Here we strike the keynote of unity, for although the instruction may be from individual standpoints, the foundation remains the same, thus bringing each teacher into a proper relation with every other teacher and with every child, for all have the same desire and are reaching out for the same end,—to know and to obey the Word or law of God.

What is the mission of Christian Science? Is it not to bring to the understanding the true relationship between God and man? Character-building is plainly the mission of Christian Science, and the unfolding of character constitutes the true sense of healing. Character, being based upon obedience to the law of God, is therefore the presence, power, and Science of God, before which sin, disease, and death must finally disappear.

Right mental development begins from the child's first instruction along these lines, and manifests itself in intelligence, accuracy of statement, patient application, alertness, obedience, the desire to know, self-control, and the like. Let no one think that the teacher is not growing all along the way, for patience, self-discipline, activity, impartiality, gentleness, meekness, are constantly being unfolded, and we find the bond of unity, Love, expressed in these attributes.

Our Leader tells us that "to understand God is the work of eternity" (Science and Health, p. 3), and so character-building, the unfolding of God's image and likeness in human consciousness, is an eternal joy.

Selected Articles

[H. W. Carr in *The Bombay* (India) *Chronicle*]

My attention has just been drawn to one of your "Notes of the Day" on an American novel from which a quotation is made to the effect that Christian Science is the "special invention" of Uncle Sam and is "based upon physical benefit."

An acquaintance with the teachings of Christian Science will reveal that there is no foundation for either of these suggestions, for Christian Science lays no claim to being an invention. It is engaged in restoring primitive Christianity with "signs following," and is making it possible for the world to gain a demonstrable understanding of the gospel of the Man of Nazareth. As in his day, however, many cannot believe except for the "works' sake," for it is the physical healing alone that appeals to them; but, as Mrs. Eddy says on page 150 of Science and Health, "the mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

✧

[W. D. Kilpatrick in *Jackson* (Mich.) *Patriot*]

The article by a clergyman on the subject of Christian Science indicates that the gentleman not only has a mistaken sense of the teachings of Christian Science on some of the points mentioned by him, but that he has also allowed his interpretation of the Scriptures to be considerably influenced by an education evidently based on the teachings of man-made creeds and dogma.

The statement made in an authorized Christian Science lecture, that "no reference can be found in the Scriptures wherein Jesus ever claimed to be God," is not only distinctly true from a reasonable interpretation of the Scriptures, but it is also true that the quotations from the Bible given us by the reverend gentleman in no particular controvert the statement just quoted. In his interpretation of those parts of Scripture pertaining to the relations of Jesus the Christ to God, the gentleman has failed for some reason or other to discover the distinction made in the Bible between "Jesus" and "the Christ."

Nowhere throughout the New Testament can it be found that Jesus claimed to be God, and in the light of Jesus' teachings such a contention is untenable. Jesus called himself at times the "Son of God," and in other instances it is recorded that he referred to himself as the "Son of man." If Jesus had never uttered any other words than "I and my Father are one," we might find, without giving spiritual significance to his works, excuse for the temporary delusion that Jesus was God; but taking the words and works of Jesus together in their entirety, it could not by any possible perversion be deduced that Jesus meant to convey the impression that he was God. Take, for instance, his words in the tenth chapter of St. Mark in reply to the question, "Good Master, what shall I do that I may inherit eternal life?" when he said, "Why callest thou me good? there is none good but one, that is, God." Furthermore, it should be evident that any one claiming to be God could have only the characteristics of God, and therefore must necessarily bear none of the characteristics of a mortal. Jesus himself said, "God is a Spirit." No one would contend that the man Jesus was a spirit. In connection with this it is well to consider the words

Digitized by Google

of Jesus in the gospel of John: "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit."

On page 361 of "Science and Health with Key to the Scriptures" Mrs. Eddy, speaking of the unity indicated in Jesus' declaration, "I and my Father are one," says, "That is, one in quality, not in quantity. As a drop of water is one with the ocean, a ray of light one with the sun, even so God and man, Father and son, are one in being." And on page 332 is found the following: "Jesus was born of Mary. Christ is the true idea voicing good, the divine message from God to men speaking to the human consciousness. The Christ is incorporeal." Had Jesus considered himself God, to what or to whom would he have had occasion to look in prayer, for it is constantly stated in the New Testament that Jesus prayed. Consider the opening words of the Lord's Prayer given to us by Jesus, wherein he taught us to pray as he prayed: "Our Father which art in heaven;" and again his words, "I go unto my Father."

The position taken by Christian Science on the subject of sin, sickness, and death is not one which would lead to the conclusions drawn by the gentleman,—that these conditions are ignored by Christian Scientists or are not considered conditions with which it is necessary to cope. The Christian religion as established by Jesus in its primitive purity, and as revived and perpetuated in Christian Science, finds its necessity in the prevalence with mortals of the belief, fostered by a palpably erroneous understanding of God and of man's relation to Him, that these conditions are God created and God sent, and consequently are to be considered real. Christian Science teaches, through its strict adherence to the fundamentals of Christianity laid down by Jesus, that these conditions are not of God, and as the true man is created in the spiritual image and likeness of God, they have no power or authority over God's children.

It was through the understanding that sin, disease, and death are unreal that Jesus was enabled to overcome all these conditions, and it is through this understanding that mankind sooner or later must follow the injunction of Jesus embodied in his declaration, "He that believeth on me, the works that I do shall he do also." Jesus taught most distinctly and incontrovertibly that death is an enemy, and not an open sesame to an unknown condition which theology has been pleased to call "the kingdom of heaven." He taught that the kingdom of heaven is a divine state of consciousness when he said: "The kingdom of God cometh not with observation: neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you." He made it very clear both in word and in precept that this divine state of consciousness is not reached through a belief of death or while one believes in the necessity of death. Jesus overcame both sickness and sin in the same manner, namely, metaphysically, and he taught us to do likewise.

✧

[Robert S. Ross in *Brooklyn* (N. Y.) *Eagle*]

On page 140 of Science and Health Mrs. Eddy writes, "Worshiping through the medium of matter is paganism." Christian Science proves beyond cavil that Spirit is not in its opposite, matter, any more than light is in darkness. Furthermore, Christian Science teaches that if God were available in certain localities and through certain persons only, He would be finite. If God were corporeal, it would be impossible for Him to be everywhere. But God is infinite; He is everywhere present and always available. Only that which is mental or spiritual can be infinite. The Bible tells us that God is Spirit, and that He must be worshiped spiritually, through the understanding of divine Principle, Love.

Christ Jesus laid great stress on physical healing as proof of one's understanding of Christianity. He not only told his disciples that they would be known by their ability to heal, but when John the Baptist sent his followers to inquire if Jesus were the Christ, Jesus pointed to the healing he had done. Then he told John's messengers to return and tell their master what they had seen. Jesus knew this proof would convince John. It is as necessary for one to be able to heal the sick in order to prove that he understands Jesus' teachings, as it is for one to compute in order to prove that he understands mathematics.

When mortals understand that God is good, that He is the author of all that is, that this "all" is spiritual good, and that sin, disease, and death being evil have no foundation in fact, they will understand in a measure at least what Jesus meant when he said, "Ye shall know the truth, and the truth shall make you free." There is nothing mysterious about Christian Science healing. It is based on divine Principle, and this Principle is no less demonstrable here and now than is the mathematical truth that two and two equal four. Principle is changeless, "the same yesterday, and today, and forever."

✧

[Willis D. McKinstry in *State Journal*, Topeka, Kan.]

While the teaching of Christian Science disavows the need of any material means as a healing agency, yet it grants to every one the fullest freedom to choose for himself whatever system or method of healing he desires; and this same rule of individual liberty applies to all the affairs of human experience. Christian Science emphasizes and makes plain the rules of life given us by the Master, and these rules are not subject to degrees of change to suit the whims and wishes of any person.

As Christian Science is a religion of love, its very nature is to unite and cement more closely the affections of those who live it. Divine Love is expressed in charity, and Christians never criticize or condemn those who have accepted the Christ as their ideal and high goal, although they may make mistakes in the application of his teachings.

✧

[Thomas E. Boland in *West Chester* (Pa.) *Local News*]

Among a number of definitions of the word "Christianity" is the following: "The system of doctrines and precepts taught by Christ. Practical conformity of one's inward and outward life to the spirit of the Christian religion." With no thought of boasting, it may be said that Christian Scientists are endeavoring not to omit any of the Christian duties Jesus assigned to his followers, and especially are they endeavoring to carry out that part of Jesus' command which he illustrated so convincingly and unceasingly in his own work—healing the sick.

Again, Jesus named as one of the signs which "shall follow them that believe," that "they shall lay hands on the sick, and they shall recover." That the sick are being healed through Christian Science there is a volume of evidence. United States Senator John D. Works, in a speech in the Senate chamber in January of last year, gave fifty-seven carefully authenticated cases of healing through this means, including cases of tuberculosis, drink habit, drug habit, kidney disease, cancer, tumor, organic heart disease, locomotor ataxia, diabetes, Bright's disease, blindness, deafness, epilepsy, and so on, covering a total of thirty-six distinct diseases.

For many years the Christian Science periodicals have been weekly and monthly printing verified reports of healing, these amounting to certainly more than fifteen thousand

Digitized by Google

cases; in addition to all of which, in each of the Wednesday evening meetings of the more than fifteen hundred Christian Science churches scattered over the world, may be heard weekly an average of at least five cases of healing. Several years ago it was estimated Christian Science had at that time healed a million cases of sickness. In the light of these facts Christian Scientists believe they are fully entitled to be classed as Christians.

✧

[John L. Rendall in *The Gate City*, Keokuk, Iowa]

A clergyman undertakes to prove that Christian Science differs from the fundamentals of Christianity. What he really means is that it differs from his particular ideas as to what constitutes fundamental Christianity. This we readily admit.

In "Science and Health with Key to the Scriptures" (p. 138) Mrs. Eddy states: "Jesus established in the Christian era the precedent for all Christianity, theology, and healing. Christians are under as direct orders now, as they were then, to be Christlike, to possess the Christ-spirit, to follow the Christ-example, and to heal the sick as well as the sinning." The average Christian would doubtless consider the above statements to be fundamental to Christianity and to its right practice. He might possibly object to the thought of healing as being fundamental, and yet if the Bible teaches anything in a positive way it certainly teaches that the power of God is sufficient to heal the sick as well as to reform the sinner at all times and under all circumstances.

On the same page of the Christian Science text-book we read: "Our Master said to every follower: 'Go ye into all the world, and preach the gospel to every creature! . . . Heal the sick! . . . Love thy neighbor as thyself!' It was this theology of Jesus which healed the sick and the sinning. It is his theology in this book and the spiritual meaning of this theology, which heals the sick and causes the wicked to 'forsake his way, and the unrighteous man his thoughts.' It was our Master's theology which the impious sought to destroy." If the life and example of Christ Jesus is the accepted criterion, and we naturally assume that it is, the question at once occurs, Why omit from Christian practice that which Jesus gave as positive proofs of Christianity in his statement: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

We read in the Bible of a certain woman who had "suffered many things of many physicians, . . . and was nothing bettered, but rather grew worse." This woman found healing through the spiritual understanding possessed by Jesus. We also read of many instances in Jesus' healing ministry wherein he was persecuted by the Pharisees and those in ecclesiastical authority during his time. They even said of him, "He hath Beelzebub." Thus we find that the criticism and misrepresentation of Christian Scientists finds its prototype throughout all the ages, when the intolerance of ecclesiastical despotism is allowed to assert itself.

Hundreds of thousands of people who believed themselves to be without God and without hope in the world, have through the beneficent teachings of Christian Science and its revelation of the Christ, Truth, found surcease from their sufferings. They have found happiness, health, and peace because they too, like the woman above referred to, have touched the hem of Christ's robe in its spiritual significance and have thus proved the verity of the statement, "Jesus Christ the same yesterday, and today, and forever." It is a sad commentary on scholastic theology that this denial of the possibility of Christian healing is accompanied by abuse of those who earnestly seek to practise it. Of such Jesus said: "Woe unto you, . . . for ye have taken away the key of knowledge: ye entered not in yourselves, and them that were entering in ye hindered."

Christian Scientists have no apology to offer because of the difference which exists between the teachings of Christian Science and those of scholastic theology. Many Christian Scientists were formerly members of various other churches. Some of them were ministers of Christian denominations. They have, one and all, proved to their complete satisfaction that Christian Science is logical, reasonable, satisfactory, and consistent with the highest ideals of Christianity as taught and practised by Christ Jesus and his disciples. They are satisfied that Christian Science is a demonstrable religious teaching; that it is meeting the needs of humanity in sickness and in health, and that because of its teachings their lives have been immeasurably benefited.

For these and many other reasons the cause of Christian Science has continued to grow, notwithstanding persecution and misrepresentation upon the part of its critics.

✧

[G. S. Paine in *Elko* (Nev.) *Independent*]

Your kindly reference to Christian Scientists in your editorial on "Grippe and Religion" may have led some of your readers to ask themselves what the Christian Scientist does to protect himself, for instance, from a grippe epidemic. For their benefit I would like to explain that the protection comes, not from any unreasoning belief or mere human denial of disease, but from the understanding of how divine intelligence expresses itself in right activity. As one turns sincerely to and sees something of the law of divine intelligence, he becomes conscious that this law is operative for him, and begins therefore really to experience more of orderly and intelligent activity in place of either seeming inactivity or overaction. Hence he remains free because, knowing that the divine consciousness which manifests itself in orderly activity is the only true consciousness, he has refused to accept as consciousness any suggestion of the opposite.

The practice of Christian Science is thus entirely metaphysical, and of course radically different from other systems which, whether they admit it or not, rely in any way on the human mind, for help or confuse this human mind and its counterfeit sense of things with the true and unlimited consciousness which is God, continuously present and harmonious. As Mrs. Eddy says on page 67 of Science and Health, "Spiritual, not corporeal, consciousness is needed."

✧

[S. T. Downs in *South Bend* (Ind.) *News-Times*]

It will have to be admitted by every fair-minded investigator that Christian Science has attracted people of intelligence and education to its fold; that within practically half a century it has become known to all parts of the world; and that the works performed through its ministry are matters of universal and common knowledge. To say, then, as was said in a reported sermon, that Christian Science is a humbug, shows either a wilful determination not to give credit where credit is due, or that the clergyman failed properly to inform himself before attempting to criticize. Whether or not all investigators would agree with us that Christian Science is the restoration of primitive Christianity, could not be determined by argument, but it is an indisputable fact that hundreds of thousands of suffering, sin-sick mortals have proved its power to heal all manner of disease, to free the slave of false appetite, and to awaken a desire to be more godlike.

Editorial

A Genuine Revival

Of late years a good deal has been talked and written about the need for a great religious revival. No doubt this need is pressing, but those who write and talk about it simply do not realize that the greatest religious revival of the centuries, since the advent of Christianity, has been in progress for the past fifty years. Just half a century ago Mrs. Eddy discovered the Science of Jesus' teachings, and later she promulgated this Science for the benefit of all mankind. The result of this has been a genuine revival of primitive Christianity, which has enriched the lives of hundreds of thousands of people and rescued them from all manner of disease and sin. Not only has this revival been participated in by those who in their extremity had blindly sought God in an almost helpless way, but also by many who, hopeless and unbelieving, had said in their hearts, "There is no God!"

Not the least valuable lesson of this particular revival has been the marked absence of spectacular propaganda. There has been from the platform and in the literature no studied or frenzied appeal to the emotions, no preaching of eternal damnation, no playing upon the fears of excited or discouraged men and women, no denunciation of persons or classes, no bitter arraignment of other religions. On the contrary, there has been a quiet and confident statement of the omnipotence and omnipresence of God, the reality of good, the immortality of man in the image and likeness of God, the divinity of the Christ, the fatherhood of God, and the brotherhood of man.

Not only has this statement of Christianity been made to the ear and eye, but also, combining precept with practice, its truth has been demonstrated in the healing of the sick and the reform of the sinful. Jesus said that certain signs should follow them that believe, and that these signs have been manifest in the practice of Christian Science is now too firmly established to be contradicted successfully. Surely this is a revival that is worthy of the name, and one in which all men would willingly join if they but appreciated its far-reaching effects.

There are those, however, who love to discourse of Christian Science and its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, in a critical way. To such critics, of course, the revival has not yet come, even though they apparently see much to commend in the lives and character of Christian Scientists. To them Christian Scientists are good people despite their religious beliefs, and it has not yet dawned upon them that Christian Science is the foundation of whatever goodness they see displayed in the daily walk and conversation of these people. Mrs. Eddy must have had such critics in mind when she wrote the article entitled "The Christian Science Textbook," commencing on page 109 of "The First Church of Christ, Scientist, and Miscellany." In this article she says:—

"Christian Science teaches: Owe no man; be temperate; abstain from alcohol and tobacco; be honest, just, and pure; cast out evil and heal the sick; in short, Do unto others as ye would have others do to you. Has one Christian Scientist yet reached the maximum of these teachings? And if not, why point the people to the lives of Christian Scientists and decry the book which has molded their lives? Simply because the treasures of this textbook are not yet uncovered to the gaze of many men, the beauty of holiness is not yet won. . . . Is it too much to say that this book is leavening the whole lump of human thought? You can trace its teachings in each step of mental and spiritual progress, from pulpit and press, in religion and ethics, and find these progressive steps either written or indicated in the book. It has mounted thought on the swift and mighty chariot of divine Love, which today is circling the whole world."

To this statement every Christian Scientist will say, Amen!

Archibald McLellan.

✧

Fatherhood and Motherhood

Those unacquainted with Mrs. Eddy's teachings are sometimes puzzled, if not disturbed, because of her distinct teaching that God should be regarded not only as Father but also as Mother; yet the Scriptures distinctly present the quality of motherhood as an essential element of the divine nature. The first chapter of Genesis shows that the divine nature finds complete expression in the masculine and feminine qualities. In the prophecy of Isaiah the question is asked whether a mother can forget her infant child, and the answer comes from the divine side, "Yea, they may forget, yet will I not forget thee." Here we have infinite tenderness contrasted with mortal frailty and selfishness, yet in this very rebuke we have a perfect model for our human relationships, and as we gain an enlarged sense of the divine nature, the spiritual sense of the Lord's Prayer as given on page 16 of Science and Health dawns upon us, and we address our heavenly Father as "Our Father-Mother God, all-harmonious."

With its habitual short-sightedness mortal mind thinks of fatherhood and motherhood as represented by the material and physical nature, when this is far from being true; indeed it is only as the metaphysical or spiritual concept of being is gained, that any human relation becomes truly harmonious. A great thinker of recent times referred to the mere "accident of birth," and this phrase is capable of quite extended application. The physical parent may and frequently does forsake his or her child, or, what is even more serious, may bring to the child a perverted sense of all things, a sense which wholly ignores the moral and spiritual. The one who fails in this latter respect is, from the viewpoint of Christian Science, no parent at all. On the other hand, the one who aids in the right development of a child's character, who awakens the consciousness of what true living means,—and how glorious are its possibilities,—he or she, in reflecting the divine nature, becomes in the truest sense both father and mother, although no physical relationship may exist.

Let no one suppose for a moment that Christian Science ignores the grave responsibilities and sacred obligations of the human parent. On the contrary, it arouses in all who seek to demonstrate its teachings, indeed in all who feel the healing influence of divine Truth, a quickened and ever-increasing sense of the demands of God's law; but far from being irksome, this responsibility brings with it the real joy of living. As the law of Love is understood and obeyed, new opportunities to be and to do good present themselves, every one of which is an avenue to new joys. We, however, must guard with the utmost vigilance our spiritual treasures, for our Master, who never lost sight of the kingdom of God, insisted that we "watch and pray" lest we enter into temptation and thus be robbed of the joys which belong to us as children of the all-loving, all-wise Father-Mother God.

It goes without saying that parenthood implies childhood, and that only the child nature can understand a child. It is, however, of little avail for us to go back in thought to the days of physical childhood, with its rainbow-colored hopes which are too often overcrowded with sick-

Digitized by Google

ness, sin, and sorrow. It was a far better ideal of childhood than this which Christ Jesus presented when he bade us become as little children. This means that we must each of us, whatever the measurement of our years, awaken from the dream of life in matter at the "Talitha cumi" of Christ, Truth, and learn to know our own true selfhood and also know our heavenly parent, guarding with infinite tenderness each and every child.

Jesus said, "O righteous Father, the world hath not known thee: but I have known thee." We rejoice that through Christian Science we are coming to know the Father as the source of all love, truth, healing, happiness; as ever with us, and in whom "we live, and move, and have our being."

ANNIE M. KNOTT.

"Human footsteps"

ON page 253 of Science and Health Mrs. Eddy writes, "The divine demand, 'Be ye therefore perfect,' is scientific, and the human footsteps leading to perfection are indispensable." Christian Scientists ought to be able to speak in terms of absolute truth, or of human experience, without being misunderstood or having the two confounded the one with the other. Absolute truth alone is real and indestructible; human experience, unless guided by the divine, slumbers in the dream of unreality, in that which seemeth to be and is not. In Science man is perfect, but according to mortal verdict he appears to be a thing of a few days, the helpless victim of material beliefs. Rightly understood, man is the idea of divine Mind, manifesting the qualities of God; falsely considered, he is the product of an original liar and is himself a lie. Mrs. Eddy counsels us, "When needed tell the truth concerning the lie" (Science and Health, p. 448). The present would seem to be an excellent time for telling as much of this truth as the age can hear.

In ordinary conversation the word person is used to signify an individual human being. It is so defined in Webster's dictionary. Dogmatic theology has used the word person to designate God, and Mrs. Eddy has been willing to apply this word to Deity when it is capitalized. She has, however, generally added the adjective infinite, thus defining God as infinite Person. Now the person or human being of ordinary conversation needs to be saved, to be delivered from personal sense, from the dream of unreality, and transformed into the substantial likeness of God's man. This can only be accomplished by the coming of Christ, Truth, to human apprehension; and so salvation involves the necessity for taking "human footsteps."

When the vision of the Christ first comes to the individual, the refulgence is frequently so glorious that the transformation seems immediately complete; but tests and trials soon reveal the necessity for human endeavor, in order to consolidate every gain as it is made. Mrs. Eddy was not too proud to take these footsteps herself. They are definitely recorded in her human history and in her achievements. Christian Scientists can well afford to follow her example as closely as possible. Every great reformer, every personal revelator, has been willing to take the necessary steps to bring a particular reform or revelation to human apprehension. Jesus, the God-anointed, did not disdain the baptism of John, or the payment of tribute to Cæsar, or the trial on the cross. How else can humanity be saved except by passing under divine guidance through the ordeal of temptation and false suggestion?

It is no sin to be tempted, else Jesus would have been a sinner; yet we are assured that he was "tempted like as we are, yet without sin." The sin lies in yielding to temptation, but the individual can be saved even after he has yielded; therefore there is hope for the whole of humanity. In the mean time the work of church organization is carried on with the help of those who have hope of being saved. Jesus generally spoke of himself as "the Son of God," yet occasionally he referred to himself as "the Son of man," and in a notable passage, speaking of God delegating powers to the Son, he declared, "And hath given him authority to execute judgment also, because he is the Son of man." This accords with Mrs. Eddy's profound analysis on page 25 of Science and Health, "The divinity of the Christ was made manifest in the humanity of Jesus." If the Son of God come not to the Son of man, then are our prayers in vain and salvation is a myth.

But see the day-star of our utmost expectation dawning upon the half-light of mysticism and occultism! The truth which saves is, that in reality man is saved, for salvation is a human necessity which has no *raison d'être* in the kingdom of absolute being. God, infinitely good, is now; and His image is necessarily like Him. Let this supreme verity come to humanity and cheer its "indispensable" footsteps!

WILLIAM D. MCCRACKAN.

Among the Churches

Current Notes

PORT CLINTON, OHIO.—Our society has completed the erection of a small chapel at the rear of the lot, corner of Second and Fulton Streets, the building facing on Fulton Street. It is the purpose of the society to have the building moved off the lot eventually, so as to erect a church. The little chapel, 22 by 34 feet, with a vestibule, has been well built, and has a seating capacity of about one hundred. This society had its start when a few neighbors met in a little study to read the Lesson-Sermon according to the Church Manual. Soon others asked to join them, and they moved out into the large living-room. Then others requested the privilege of having the meetings held in their homes, so for two years they met a month at a time in three homes. Finally it was seen that more public meetings should be held, and thus it was that they were led to organize into a Christian Science Society. The charter membership was eighteen, eleven of whom had already joined The Mother Church. It was then recognized that, owing to real-estate conditions, if they were ever to have a church in the center of the town, in the best residential district, it would be wise to secure the land for it. Accordingly a beautiful lot, 50 by 100 feet, was purchased for fifteen hundred dollars. The chapel was completed and occupied Sunday, June 18, with an attendance of fifty.—*Correspondence.*

SIOUX CITY, IOWA.—Growth of Second Church of Christ, Scientist, has made necessary the movement of that body from City Hall to new quarters on the fourth floor of the Motor Mart Building, where the first services were held last Sunday [May 14]. In spite of the fact that the day was rainy, more persons attended than could have been accommodated in the old quarters. A seating capacity of nearly three hundred has been provided for. This month marks the fourth year of Second Church in Sioux City.

The Sioux City Tribune.

BOWLING GREEN, KY.—The Christian Science Society has just purchased the building and lot at the corner of Eleventh and Center Streets, whereon rests the old Central Baptist Church. The lot is about 150 by 200 feet, and the building is a substantial brick structure, which with some repairs will

Digitized by Google

be one of the neatest of the smaller churches of the city. It has a seating capacity of about five hundred. This society, while having a small membership, has a growing congregation, and has long felt the need of more commodious quarters. The building is centrally located for both the business and residential sections. The repairs will be completed in about two weeks, when the congregation, which has been holding services temporarily in the Council Chamber, will move into the new quarters.—*Bowling Green Messenger.*

CEDAR RAPIDS, IOWA.—The new church edifice of First Church of Christ, Scientist, was completed about a year ago, and services have been held in it ever since that time. As it is now completely paid for, it is to be dedicated [June 4], and the total amount of the collections taken at the morning and evening services will be forwarded to the special war relief fund which has been established by The Mother Church, The First Church of Christ, Scientist, in Boston, for the purpose of assisting in relieving the distress of all those in the different European countries affected by the war.

Cedar Rapids Republican.

CLEVELAND, OHIO.—Members of Second Church of Christ, Scientist, corner Euclid Avenue and East Seventy-seventh Street, are planning to erect a new church edifice at a cost of about two hundred thousand dollars. The church property has 168 feet frontage in Euclid Avenue and is 190 feet deep. The trustees said the present white frame building, erected fourteen years ago, had become inadequate to accommodate the increased attendance.—*Cleveland Leader.*

INDEPENDENCE, IOWA.—Local Christian Scientists have reason to feel proud of the improvements they have made in and about their church edifice. Not only have they brought about a radical change in the appearance of the interior of the auditorium, but they have also improved the second floor and the lawn.—*Bulletin-Journal.*

PITTSBURGH, PA.—Having outgrown its present quarters in the Boylan-Welsh Building, Beechview, Third Church of Christ, Scientist, has found it necessary to purchase a lot and erect a temporary building. The location is on one of the high points on the South Hills, at Baltimore and Neeld Avenues.—*Pittsburgh Sun.*

MINNEAPOLIS, MINN.—The interior of Fifth Church of Christ, Scientist, 308 Twelfth Avenue S.E., will be completed immediately. Members have been attending services in the basement of the church for the past few months. The work will cost fifty thousand dollars.—*Minneapolis News.*

NEWBURGH, N. Y.—Attendance at Christian Science services in Newburgh has about doubled in the past two or three years. The services are now held in the former Masonic banquet hall in the Academy of Music Building.

Newburgh Telegram.

The Lectures

Oakland, Cal.

William R. Rathvon delivered a lecture on Christian Science to a large and attentive audience in the Municipal Auditorium. The lecture was given under the auspices of First Church of Christ, Scientist. In introducing the speaker the second reader of the church spoke as follows:—

When the children of Israel came out of the land of Egypt, when they seemed hemmed in on all sides, the only answer God gave to Moses was, "Speak unto the children of Israel, that they go forward." This command comes with equal force to us all. With the mighty hand of God were they delivered from the Egyptians. And if we wish to escape from the bondage of injustice, oppression, sin, sickness, sorrow, and poverty, and reach the kingdom of heaven, harmony, or right consciousness, then the movement must ever be onward and heavenward, rising ever higher in the spiritualized thought, where God is revealed. As our revered Leader, Mary Baker Eddy, says in our text-book, "Science and Health with Key to the Scriptures" (p. 509), "The periods of spiritual ascension are the days and seasons of Mind's creation, in which beauty, sublimity, purity, and holiness—yea, the divine nature—appear in man and the universe never to disappear." Then to know God is to be in His kingdom, which heals and saves. And "of his kingdom there shall be no end."

Oakland Tribune.

✧

Lisbon, N. H.

Frank Bell delivered a lecture on Christian Science in the Empress Theater. He was introduced by C. H. Shipman, as follows:—

My father passed from this life without having any knowledge of Christian Science. After his departure my mother found written on the fly-leaf of his Bible concordance the following inscription: "I believe the Bible to be the Word of God, which will stand when earth and heaven shall have passed away. Lord, give us the key that imparts a true interpretation of the words of this book."

We believe that the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is the key which my father so much desired, and my mother found it to be of great help and comfort in after years. An experience of nearly thirty years in my own family in the study of this text-book in connection with the Bible confirms us in the opinion that it is a veritable "Key to the Scriptures." It helps us not only to understand the Bible better, but to love it more. It helps us in many ways and gives us a more cheerful outlook upon life.—*Correspondence.*

✧

Baraboo, Wis.

A. C. Kingsford, superintendent of schools, in introducing Bicknell Young, who lectured on Christian Science, said in part:—

Though I am not one of them, this I will and can say of Christian Scientists: They seem to me incorrigible optimists. They do not believe that there is any necessary relation between godliness and dolefulness, between piety and a long face. They seem to make a virtue of happiness. However dark the clouds, they believe that somewhere the sun is still shining, that always "God's in His heaven," as Browning says, "and all's right with the world." I have observed too that they are apt to cover with an ample mantle of charity the shortcomings and failings of their fellow men; and that while they are enthusiastic for their religion, they do not show any hostility toward those of other faiths. If these characteristics are the outgrowth of their fundamental beliefs, those beliefs are worthy of our study and attention, and we do well to spend an hour listening to their exposition by one who has given his life to their study.—*Correspondence.*

✧

Pittsburg, Kan.

Clarence C. Eaton, who lectured on Christian Science at First Church of Christ, Scientist, was introduced by Joseph Fletcher of Frontenac, who said in part:—

My knowledge of Christian Science is decidedly limited, but what I do know is altogether to its credit. I like its disavowal

Digitized by Google

of fear, and I like the emphasis it places upon love and service to humanity. Above all, I like its people. I like their sincerity, their enthusiasm for their own religion, and their tolerance for other religions. I also like that great, clean newspaper, *The Christian Science Monitor*, as well as the *Sentinel* and *Journal*. The growth of this new religion has been phenomenal, and has been the wonder of the religious world. What its teachings have contributed to encourage kindness, gentleness, cheerfulness, and patience, and what it has done to discourage vindictiveness and evil speakings entitles it to the respect of everybody.—*The Sun.*

Massillon, Ohio

An appreciative audience listened to a lecture on Christian Science given in the High School Auditorium by George Shaw Cook. He was introduced by Prof. Hermann O. C. Kortheuer, who spoke in part as follows:—

There was a time in my life when I ridiculed Christian Science. I called it an enormous wholesale example of hypnotism, humbug, and what not; but since understanding somewhat of its teaching I find this conclusion entirely erroneous. Tonight in humility and sincere gratitude to Almighty God I stand before you in full possession of health, strength, and energy, a living witness to the efficacy of this new-old religion that does heal. During the many turbulent years of my life I took seven so-called cures for alcoholism, all of which failed.

Through obedience to this false god, alcohol, I was reduced to the deepest extremity. Then an angel of the Lord, as it were, gently led me to Christian Science. It was the right way, the way opened to us through Mrs. Eddy's right apprehension of the Scriptures. The Father sent His word, and the truth made me free and re-created me. The Lord, the Father of all, is as omnipotent and as all powerful today as when Jesus the Christ was on earth performing his healing mission. The healing I have experienced in Christian Science is an invincible, absolute certainty, and as a result new life, a new world, perfect joy, and perfect love spring up within me.—*Correspondence.*

Thompson Falls, Mont.

Prof. Hermann S. Hering delivered a lecture on Christian Science at the Purple Ray Theater. He was introduced by Attorney A. S. Ainsworth, who said in part:—

I am not supposed to be a Christian Scientist, but I believe, nevertheless, that Christian Science is the true interpretion of the words of that great Teacher, the Nazarene, "He that believeth on me, the works that I do shall he do also." These words of the Master are the foundation of Christian Science. Thus, through an understanding of this Science of right living, sin and suffering are dispelled, for we know that "there is no life, truth, intelligence, nor substance in matter" (Science and Health, p. 468), and that God created man in His own image and likeness.

The Sanders County Ledger.

Michigan City, Ind.

Virgil O. Strickler, who delivered a lecture on Christian Science, was introduced by Louis H. Knapp, who said:—

There is without doubt no thought more welcome to the hearts of humanity today than that of peace. "On earth peace, good will toward men," was the message and the mission of Jesus nineteen centuries ago. Before we as individuals can realize this peace, we must know more about God, the divine Principle, the creator of all good, the creator of the universe. Christian Science teaches us that God's law is the only power, and His law does heal.

Michigan City Dispatch.

Fresno, Cal.

Max Cahn, in introducing John W. Doorly, who gave a lecture on Christian Science before a large audience at the White Theater, said:—

To become a student of Christian Science means to become a student of the Bible, for without a knowledge of the Bible it is impossible to be a Christian Scientist. It means also that we must accept all the teachings of Christ Jesus and gain a demonstrable knowledge of what he taught, for he said, "He that believeth on me, the works that I do shall he do also." In the tenth chapter of Matthew we read that Jesus sent forth his twelve disciples with this command: "As ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."—*Fresno Herald.*

Lectures to be Delivered

AUSTRALIA—Brisbane, Queensland: Clarence W. Chadwick, Oct. 10.

CANADA—Nelson, British Columbia: Dr. H. Walton Hubbard, Church Edifice, Kootenay and Victoria Streets, 8 p.m., Sept. 5.

Toronto, Ontario (First Church): Virgil O. Strickler, Church Edifice, St. George Street and Lowther Avenue, 8 p.m., Sept. 2, and 3 p.m., Sept. 3.

COLORADO—Boulder: John Randall Dunn, Curran Opera House, 3 p.m.; Sept. 3.

Cripple Creek: Ezra W. Palmer, Eagles Hall, 8 p.m., Aug. 31.

ENGLAND—Bournemouth: John W. Doorly, King's Hall, Royal Bath Hotel, 7:45 p.m., Aug. 31.

London (First Church): John Sidney Braithwaite, Town Hall, Chelsea, S.W., 8 p.m., Sept. 14.

ILLINOIS—Atkinson: Virgil O. Strickler, Princess Theater, 8:15 p.m., Sept. 8.

Chicago (Eighth Church): John Randall Dunn, Church Edifice, Michigan Boulevard and Forty-fourth Street, 8 p.m., Sept. 7 and 8.

Chicago (Twelfth Church): Charles I. Ohrenstein, Temple Sholom, 3760 Pine Grove Avenue, 8 p.m., Sept. 4 and 5.

IOWA—Cedar Rapids: Virgil O. Strickler, Church Edifice, 1242 Second Avenue, 8 p.m., Sept. 4.

KANSAS—Topeka: Ezra W. Palmer, Grand Opera House, 8 p.m., Sept. 8.

NEBRASKA—Alliance: William R. Rathvon, Phelan Opera House, 8 p.m., Sept. 8.

Scottsbluff: William R. Rathvon, Opera House, 8 p.m., Sept. 7.

MICHIGAN—Jonesville: Charles I. Ohrenstein, Theater, 8 p.m., Sept. 8.

MINNESOTA—Virginia: George Shaw Cook, Socialist Opera House, 8:15 p.m., Aug. 31.

Willmar: Frank Bell, Church Edifice, 8:15 p.m., Sept. 8.

NEW YORK—Saratoga Springs: Bliss Knapp, The Casino, 8 p.m., Sept. 5.

OHIO—Wauseon: William W. Porter, Court House, 3 p.m., Sept. 3.

PENNSYLVANIA—Erie: Charles I. Ohrenstein, Park Opera House, 3:30 p.m., Sept. 3.

SOUTH DAKOTA—Rapid City: Ezra W. Palmer, Elks Theater, 3 p.m., Sept. 3.

UTAH—Ogden: John Randall Dunn, Church Edifice, Twenty-fourth Street and Monroe Avenue, 8 p.m., Aug. 28.

WASHINGTON—Bellingham: George Shaw Cook, Grand Theater, 8 p.m., Sept. 8.

Colville: Dr. H. Walton Hubbard, Odd Fellows Hall, 8 p.m., Sept. 7.

Spokane (First and Second Churches): Dr. H. Walton Hubbard, Auditorium Theater, 3 p.m., Sept. 3.

WESTERN AUSTRALIA—Perth: Clarence W. Chadwick, Literary Institute, Hay Street, 3 p.m., Oct. 1.

Testimonies of Healing

Nearly four years ago it was intimated to me by two good friends that what I was looking for was Christian Science. This was said in answer to a wearied complaint on my part that sermons and addresses were no good, and that I was tired of books and talk. I went, therefore, to the Christian Science church, and found in the interval for silent prayer an indescribable atmosphere of peace and rest; it was good to be there. Afterward I bought a copy of Science and Health and asked a practitioner for help. As the weeks went by my health visibly improved, so that friends and acquaintances noticed how much better and happier I looked. Since that time physical difficulties have appeared that would have caused me to ask for medical help before knowing of Christian Science. These have been overcome without drugs, or any treatment but scientific prayer; and with the physical healing the treatment has always brought great peace of mind.

My deepest thankfulness to God is for the power that comes with Christian Science to overcome wrong in one's self. All my life I have wanted to be good, but have struggled in vain with a morbid self-conscious temperament and a constant sense of failure. Christian Science is showing me the way out of this. I am learning how to look away from self and to find rest and hope in God; also am learning more every day of what God is and of what man is. The Bible is full of new and vital meaning to me. I am lovingly grateful to the woman who was selfless enough to discover the key to the teachings of Jesus.

EMILY FOLLOWS, Manchester, England.

✧

A new world opened up for me after reading the chapter entitled Prayer in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had heard of one person who was healed by reading this book, and that seemed very strange to me. Another spoke of having investigated Christian Science thoroughly and found nothing in it. Accordingly I determined to find out for myself, so before retiring one night I read the book with the thought that if I could only have a proof of its truth I would gladly accept it.

In the morning I found myself free from a disease of ten years' standing which was making my life miserable, and which was believed to be hereditary. The healing seemed too good to be true, and three days passed before I was perfectly convinced of its truth and threw away all my material remedies. In the ten years that have followed, I have never had any need of them. Severe headaches, rose cold, and neuritis have also been overcome. I coughed most of the time and my family feared lung trouble, but this all disappeared when I learned of the truth that makes free. Children are a joy in the home when one does not fear for them continually. I used to be always apprehensive of trouble in some form coming to them, but that is now changed and replaced with a peace that is enduring. Whooping-cough, mumps, measles, and nasal growths have been beautifully overcome by turning to the great Physician, who healeth all our diseases.

Actively to give out to others is the only way I can show my gratitude for all the good that has come into my life.

ALICE E. CARPENTER, Rutland, Vt.

✧

Having received in dark hours so much encouragement from reading the testimonies in the *Sentinel*, I send this one as a token of gratitude, with the hope that it will be of help to some sufferer. That it is never too late to turn to God is evident from the following experience.

In 1911 my little boy, aged six years, became ill. He was in bed for a fortnight, during which time we had two physicians, who both failed to diagnose the ailment. A third one was called in, who declared the trouble to be appendicitis in its most severe form, and said the patient had only a few hours to live. The boy was at once taken to the hospital, where an operation was immediately performed. For some time I had been studying Christian Science, but my husband was averse to having Christian Science treatment for the boy. As I was convinced, however, of the power of Truth, a practitioner was telephoned to just before the operation was to take place. She lovingly quieted my fears and promised to take up treatment at once.

After the operation the doctor told me there was practically little hope, as the case was so complicated. He expressed the fear that there could not be a natural passage through the bowels, and said if my son's life was spared he would have a long illness. Every material law was, however, overcome. The boy was not aware that the operation had been performed, but thought he had only been examined. The first night he slept without any drugs the whole night through. The following days he had hardly any fever at all, and this was pronounced a most remarkable thing, as very high fever was expected. The fourth day there was a natural movement of the bowels.

The following incident, however, seemed most wonderful of all. On the fifth day the wound was to be dressed for the first time, and this is considered a most painful ordeal. The boy himself seemed nervous, and wondered why they should take him into the operating room again. I then put all my trust in God and said to the boy: "Have I ever told you a thing that was not true, or have I ever deceived you? You must think it over well before you answer me." He was silent for some moments, then he said, "No." I continued, "If I now tell you that there is nothing to fear and that nothing can hurt you, do you believe me or not?" He answered, "I believe you." He was then taken away. I must confess that during the time he was gone I had to struggle against anxiety and fear, for if he should have pain he could never trust me again. But I had not trusted God in vain, for when the boy at last came back I marveled to see his rosy, happy face. The doctor said to me, "You have a son who is a Spartan; I have never seen anything like it." The nurse who assisted told me that the doctor had asked the boy if he had no sensation at all in his body, and the lad had replied that he did not feel anything. The wound closed in a normal way, and it is to Christian Science I owe the recovery of my child.

MARIA LINDSTRÖM, Stockholm, Sweden.

✧

I am very thankful for what Christian Science has done for me. On the sixteenth day of November, 1912, I had to leave my work on account of what seemed to be backache. That evening I called on my doctor, and after an examination the trouble was pronounced sciatic rheumatism. He treated me for some time, but instead of getting better I grew worse, so changed doctors. The next one said I had hip disease, but as his treatment met with no better results, after nine weeks I changed again. The new doctor sent me to a hospital to have an X-ray picture taken, and after seeing the plate he decided to put me in a plaster cast from the armpits to the knees. He did not tell me what the trouble was, but told my mother it was tubercular disease of the spine.

About this time a friend lent me some Christian Science literature, including a copy of Science and Health. I started to read from the first about half of the time, as I could not lie in bed more than four hours consecutively on account of the cast. While reading one night, I came to the passage in

Digitized by Google

Science and Health where it reminds us that one cannot serve two masters, both God and mammon. This must have been just what I needed, as it decided me at once. I got a knife and started to cut off the cast. It took about an hour, but I felt much better when it was off. I then had treatment from a Christian Science practitioner. The first time I called on her I was using two crutches, the next time only one, but one foot was drawn up. The next time I could walk with a cane. At the end of two weeks I decided I could treat myself, and in one week more, or three weeks from the time I first called the practitioner, I returned to work completely healed.

After I had been reading Science and Health for about a week, headaches, and a bowel difficulty with which I had been troubled for fifteen years, entirely disappeared. I have read the book through six times. For all the demonstrations I have had I am deeply grateful to Christian Science.

W. Barton, Philadelphia, Pa.

I wish to add my testimony to the above. I was healed in one week's treatment of a severe throat affection, which was so bad that I could not talk or eat. Our son was healed of whooping-cough in two weeks without the aid of a practitioner. For all these blessings I am truly grateful.

Mrs. W. Barton.

✧

Several years ago I was healed in less than a week of swelling of my legs, and the healing came through Christian Science treatment. I had received medical treatment for this trouble on two previous occasions, both times being laid up with it and the doctors pronouncing it a very serious case. Since my healing in Science I have had a slight attack, but am glad to say it was overcome in four treatments.

One day I ran a crochet hook deep down into my second finger, and the pain was so severe that I called to my daughter to help me get the hook out, but she was unable to do so. After asking her to help me declare the truth, I repeated the "scientific statement of being" (Science and Health, p. 468), and that "God is a very present help in trouble," with the result that in a short time all pain left. I was able to remove the hook easily, without experiencing any pain, and not a drop of blood showed.

For the help I have received in Christian Science I am more than grateful. I am deeply thankful to our Father, and also grateful to Mrs. Eddy.

Mary A. Kloess, Los Angeles, Cal.

✧

I am so grateful and happy that I would like to tell others what Christian Science has done for me, what a wonderful change it has made in my life.

In the spring of 1914 I was taken suddenly ill one Saturday, and the following day a doctor was called. He said I was a very sick man, and the next day pronounced the ailment a severe case of acute lung trouble. On Wednesday he said he had done all he could for me, and told my wife to call in another physician to hold a consultation. Being then asked if I would accept Christian Science treatment, I said I would, so a practitioner's help was sought. The next morning I was able to get out of bed and have breakfast at the table. When the doctor called he was surprised to see such a change, but said I should not have gotten out of bed, as my heart was very weak. I did not take any more medicine, although the doctor called until Sunday, when he examined me and said that my heart stopped beating at times and I was liable to drop dead at any minute; that if I would not obey his orders he would give up the case; which he did.

Christian Science treatment was continued and the gain was rapid, so that within a few weeks I was able to go back to business. Through this healing I was also freed from the drink and tobacco habits, to which I had been subject for thirty-five years. Christian Science has helped me wonderfully in my daily work. My prayer is that I may always be led to realize the truth of what Jesus said to his disciples, "Whatsoever ye shall ask in prayer, believing, ye shall receive." I am thankful to God and grateful to Mrs. Eddy for this saving truth.—Emil Russ, Hoboken, N. J.

✧

My parents were members of an orthodox church, trying to live good Christian lives and to bring up their family of six little ones to know and love God. In 1871 a little brother passed on. Then we suffered great loss by fire. Less than two months afterward my mother passed on, and two weeks later the little brother born the day before mother's death. Although I was only five years old at the time, never will I forget the terrible passion of my father when told by those who were supposed to know, that God had brought it all about for a punishment, or for some good purpose that would be revealed to him later on. He told them he wanted nothing to do with such a God, and forbade us to look into the Bible or to pray to such a God.

The dark years that followed need not be described, but it was a weary tramp through intense darkness, with a longing that was never satisfied. I did not dare to pray to God, but would cry out to my mother day and night for an understanding of the God she had loved and trusted. Words cannot tell of the agonies I endured until after my marriage at the age of twenty-three. Then I began to study the Bible and attend the different churches. I would ask the minister of each one to tell me of a God that I could know for a positive fact was God, but could get no satisfaction; I could not find the God my mother had taught me was Love, all good.

Finally my husband and I were offered a good chance on a farm, and as I was in a delicate condition we decided to move at once. On Monday morning we loaded our goods on a lumber wagon and started, I riding with him on his wagon. On going down a steep place the wagon gave a lurch and I was thrown on to one of the wheels. For a few minutes the pain was severe, but as we had only a few miles farther to go, we went on, arriving at the farm between three and four o'clock. The rest of the day and that night I seemed dazed at times, not conscious of my surroundings, but in the morning my suffering was intense. A doctor was called, and when he came I was in agony, and at ten o'clock of the second night the child was born. Then followed sixteen months of the worst misery I think any mortal was ever forced to bear. During that time we had five of the best doctors we could find, but each one, after doing all he could, would say to get some one else, as he could do no more.

At last my husband was told to telegraph to my sister, for I could not possibly live twenty-four hours longer, and as he had to send the telegram, he called a lady living near by to stay with me while he was gone. When she came she brought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. After talking and reading to me a while, at my request she gave me a treatment, during which I went to sleep. Upon awakening I realized that I was healed, for I felt like a different woman. How my heart sang for joy, for I had found the true God that healeth all our afflictions. The child then born is now a woman twenty-four years old.

The doctor had said that it would be as well that I pass on, since I would never be able to walk again; but, "thanks be to God, which giveth us the victory," I have never worn a support for a moment since the healing, yet can walk all day

Digitized by Google

and not be weary. Often in my work for the Master I am busy all day and sometimes until the wee small hours of the morning.

My husband, daughter, and I are striving each day to prove our love for God, and our gratitude to Mrs. Eddy, by being obedient to the teaching of the Master as shown us in the Bible and Science and Health.

JULIA C. ODREN, Lincoln, Neb.

✧

Several years ago I was taken ill with acute lung trouble and complications, which developed into a serious stage of tuberculosis. The left shoulder and hip became deformed, my voice grew faint, and the condition was so offensive that it was impossible to have any one around except when absolutely necessary. Little did I think of trying God's power; I wanted something that could be tasted, handled, seen. Two physicians treated me, and finally a specialist from another city was called in, but they only sentenced me to pass on within a few days.

Christian Science was then mentioned to my father and he began at once to investigate the subject. By consulting a Christian Science practitioner he soon found out that it is God who doeth the works. I began to take treatment and started to improve right away. By standing fast by the truth I had learned about God, and realizing that it was true, we were all enabled to see the salvation of the Lord. I was freed from all these conditions, and am now a witness to that truth which Jesus said would make free. Not only am I grateful for this healing, but for other daily proofs of God's power, and of His ever-present help in trouble if we only follow the Scriptural injunction, "Trust in the Lord with all thine heart; and lean not unto thine own understanding."—RUBY WILKERSON, Shelbyville, Ky.

✧

After almost four years of earnest study of Christian Science I can joyfully testify to its regenerating and healing power in the cleansing of consciousness from much of self-love, fear, worry; a tendency to judge hastily and to criticize others; discouragement, envy, and discontent. A kindred brood of physical ills have also disappeared, including stomach and bowel trouble, headache, nasal catarrh, rheumatism, corns, and ingrowing nails. It is now over three years since I discarded glasses, which I had used for a number of years when reading or sewing, and the more of truth I am enabled to apprehend the clearer my vision becomes.

Through the study and application of the teachings of Christian Science I find God an ever-present help. Work which was once looked upon as distasteful drudgery is now a pleasure, since I realize that all right action is but the reflection of the harmonious activity of the one Mind.

I am thankful to God, and grateful to Mrs. Eddy for Christian Science, for what it has done, is doing, and will continue to do for all mankind; for our Leader's writings and all the Christian Science literature, which I find so full of help and comfort.—KATHERINE R. FRANCKE, Robe, Wash.

✧

Christian Science came into my life through the healing of my voice. I was about to give a recital of twenty-one numbers, when at five o'clock on the day of the concert my voice became very hoarse and seemed about to leave me altogether. As the recital was to be given in my home city the hall was sold out, so to find myself in this dilemma, quite unfit for the evening's work, made me sick at heart. I thought of going at once to a throat specialist, but remembering that doctors had never in the past been able to help me in any hour of need such as this, I gave up the notion entirely, with the feeling that no earthly power could help me.

That "man's extremity is God's opportunity" was clearly shown to me at this point, for on the recommendation of a friend I had treatment from a Christian Science practitioner, who was in a position to know that man's voice is in reality a manifestation of divine perfection and harmony. The result was that when I stepped out on the stage I experienced a glorious sense of freedom, my voice flowed forth with a marked ease, and the farther I went with my program the easier the task became. It was a beautiful experience, one that will not soon be forgotten. Instead of the expected night of hoarseness, fatigue, and limitation, came the dawn of happiness and success.

Since that time, eight years ago, I have been wonderfully helped on many such occasions by the great, never-failing Physician, of whom we learn in Christian Science. I am sure Truth will never fail me in the hour of need if I have faith even as "a grain of mustard seed." I am thankful for the opportunity to spread the glad tidings of what the knowledge of God, as understood in Christian Science, will do for all mankind.—GEORGE DIXON, Toronto, Canada.

✧

Christian Science was brought to me about nine years ago, and at that time, although I knew nothing about this teaching, I was healed in seven treatments of a trouble for which three physicians had told me an operation was the only remedy; yet I did not become an earnest student of Christian Science until three years ago. Having been brought up in another church and having sisters who were married to ministers, I was slow in leaving the old church, until I found I could not serve two masters. In the past three years divine Truth has been my only physician, and never fails if its rules are applied rightly.

Some time ago, while living in Louisiana, I was taken with pain in the back. I could not stand up straight, and the first thought that came to me was that I was not near a practitioner. I worked faithfully, however, and a friend, the only one near who was interested in Science, helped me to know the truth. That same day I was free from pain, and on the following day was able to take a boat ride.

I am always glad to get the *Sentinel* and the *Journal*, and whereas the Bible was formerly a closed book, now, together with Science and Health, it has become my daily bread. I am not a member of the Christian Science church, but am trying to live so as to be worthy to be called a Christian Scientist. I am grateful for the physical healing, but much more so for the spiritual uplift; indeed, words cannot express my gratitude.—BERTHA L. DE GUINES, St. Louis, Mo.

✧

Loving care was taken of me when a child, for I was always considered delicate and several doctors thought I might not live to grow up. As time went on I suffered from constant headaches, which were often almost unbearable. Innumerable remedies were tried, but with only temporary relief. Shortly after Christian Science came to my attention a dear relative was taken with an illness from which she did not recover. While sitting beside her I read through my recently purchased copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, but did not realize the help I was getting from the truth contained in the book until afterward. Although nursing constantly day and night for three weeks, with very little time for sleep, I had no headache.

It is over nine years since this experience, and during that period I have relied entirely on Christian Science. Except on

Digitized by Google

rare occasions, when slight headaches have been quickly overcome, I have been quite free from them, and in every way my health is better than it ever was before this great blessing came to me. I have had many other proofs of the power of Truth, and naturally am truly grateful for Christian Science, and for the devotion our dear Leader displayed in giving it to us.—MARY MUNDEY, London, England.

✧

I wish to express my gratitude publicly for the many blessings which have come to our family through Christian Science. For about fifteen years I had worn glasses constantly for structural defect of the eyes, but after reading "Science and Health with Key to the Scriptures" by Mrs. Eddy for several months, I decided that by wearing them I was giving power to matter, so I took them off at once and have never needed them since. My husband was recently healed almost instantaneously of a painful attack of stomach trouble by the realization that "there is no power apart from God" (Science and Health, p. 228). These are only a few of the many physical blessings for which we are grateful. Words cannot express our gratitude for the spiritual enlightenment which has come to us through Christian Science.

FLORENCE L. HAMNER, Memphis, Tenn.

✧

[Translated from the German]

It is with a sense of deep gratitude and joy that I wish to testify to the healing which I have experienced through Christian Science. Three years ago I was taken ill with heart trouble, to which were added a nervous condition and catarrh of the chest and stomach. After three months of medical treatment the catarrhal conditions improved, while the heart trouble became aggravated, so that my family was prepared for the worst. At that time acquaintances called my attention to Christian Science and gave me some literature on the subject, the reading of which soon inspired me with trust and induced me to apply for help to a Christian Science practitioner. With a few treatments my condition improved, and several weeks later I gradually became able to take up all my occupations. Relatives and acquaintances marveled at my recovery but believed it to be merely temporary. I however have grown stronger ever since.

For this instance of help received I am grateful to God, and thankful to our Leader and to all who have helped me to gain an understanding of Truth.

OTTO WÄLTI, Bern, Switzerland.

✧

It is ten years since a dear friend, in an hour of sorrow, told me of Christian Science. As I have read "Science and Health with Key to the Scriptures" by Mrs. Eddy and tried to work out in daily life the truths contained in it, this truth has for me become a solution for all life's problems and a cure for all physical illness, including what is commonly called tuberculosis, as well as scarlet fever, appendicitis, burns, and colds. It has brought me from sorrow into peace, from a sense of lack into plenty, from discord into happiness. My husband, three children, and myself have not taken medicine for several years, but quite often we have had to ask for help from a Christian Science practitioner.

My thankfulness goes out to God for giving us through Mrs. Eddy this new-old religion, and I shall always be willing to bear witness to what it has done for me. All I have and all I am is due to my understanding of God through Christian Science.—KIRSTINE M. HANSEN, White Bear, Minn.

From Our Exchanges

[*The Continent*]

There is no greatness in anything pretended. Pretense is of itself a proof that the man is not as big as the size he covets. He "stretches himself overmuch" in order to reach what he would like to be. Ambition rears a hollow front of appearances to conceal his actually trifling stature. But the really great man has no ambition except to give himself at just what he is worth to the needs of his times. Being great, he knows he is worth something, and that worth is what he wants to put to use. But he fears to defeat the value of what he really is by representing himself to be anything which he is not. Any suspicion, therefore, that a man is playing a part—dealing doubly with intent to capture an esteem that would not naturally fall to him on his own merit—is equivalent to a denial of that man's greatness.

[Rev. Joseph Fort Newton, Litt. D., in *The Christian Commonwealth*]

When men put theories aside and listen to the voice of Christ, they hear the eternal calling them in words the sweetest, the profoundest, and the most simple ever molded by human lips. So it is with me at least, and I feel that it will be so with any man who will let his heart have its way.

My only hope for the future of the race, and the ultimate reign of purity and justice, is in Christ. Everything may fail, but not Christ. Often enough the church has failed, by folly or default, but he has come to the rescue with his reviving and reclaiming wonder. This is his world, and he will yet have his way with it. . . . In the crises of individual souls, in the strange vicissitudes of history, over and over again when it seemed that men had done with him, "then came Jesus, the doors being shut, and stood in the midst." And there he stands today, a challenge to the heart and conscience of mankind. No earthly barrier can hinder his presence in the lives of men or the story of nations. He rolls away the great stones from all sepulchers and takes new forms and assumes new glories as the ages go by,—"the same yesterday, and today, and forever." He is the divine Life. He must increase. And his victory is as sure as the flow of the tides and the march of the stars.

[*The Christian Work*]

The modern world cares very little for what men in the past have said about Jesus, but they are intensely interested in what Jesus said himself. This age of ours is seriously bent on finding reality in religion, as well as everywhere else. We have grown tired of empty formulas and meaningless phrases. We have less and less interest in the Christ of the old dogmas, *i.e.*, the Christ as interpreted by men of an age that is past and gone. But the Christ who in his own personality revealed a life of reality, who in his teachings disclosed the way to that reality, and who also believed that every man could find that "way" and walk therein,—it is to this Christ that the hearts and minds of thoughtful people are turning everywhere.

[*The Independent*]

The vision of service, the call of the harvests waiting for the sickle, and the prospect of the triumph of the gospel applied to the social life of the world, give the thrill of inspiration, the strength of cohesion, and the courage of victory. Divisions are accentuated by dwelling on the past. They are forgotten in the enthusiasm inspired by the hope of the future and the determined assumption of the tasks of the present. The road to union lies not in clearing up the mists and misunderstandings of bygone days, but through generous

Digitized by Google

cooperation and common planning for moral conquests yet to be made. Religious unity is not a base of operations to which we must return for needed supplies, but a spiritual goal to be achieved by joint campaigns for society's salvation.

[*Northwestern Christian Advocate*]

The object of religion is to mature sound character, and sound character is the basis of the happy life. Not every one thinks so. A prevalent disposition is to make happiness depend upon material circumstance,—a large bank balance, an imposing residence, an enviable equipment, social distinction, a round of holiday making, illimitable pleasure excursions, and unceasing gaiety. There is plenty of evidence in favor of the apostle Paul's contention that the highest happiness is quite independent of material circumstance. In a letter to the disciples at Thessalonica he sets forth in a very beautiful and discriminating way the fundamentals of the nobly serene and happy life. Among these he notes the "work of faith and labor of love and patience of hope" which every disciple may and should have "in our Lord Jesus Christ, before our God and Father."

[*The Christian Advocate*]

Down in the human heart lies the desire to know God and to do the things that are well pleasing unto Him. God's program for the individual requires the exercise of faith, full obedience to His laws, and a readiness of purpose to serve Him. With the recognition and acceptance of these conditions there comes into the soul a sense of the presence and power of God, an illumination of mind concerning divine things, an implantation of spiritual knowledge, such as cannot be secured through any merely human channel. These things are the fruits of faith, and these fruits do not grow upon any material tree. They are the gift of God, and by them one renders himself well pleasing unto Him.

[*Zion's Herald*]

Simon Peter as he came down the mountain (following Jesus still) could take his "good . . . to be here" with him, and keep on saying it in the presence of demoniacs, or when plodding along dusty highways of evangelism. And so today it is good to be wherever Christ calls us, or duty challenges, or opportunity is offered for a Christian service. After all, happiness is a life, not a locality; it is yielded by the doing of the right thing, rather than by a frantic effort to get somewhere else where more glory will beat upon us. Just where God places us and where Jesus smiles upon us it is best to be.

[*Western Christian Advocate*]

The Bible proclaims the supremacy of the things of the Spirit. These are accounted as more valuable. They are pointed out as more powerful. They are proclaimed as having greater permanence. In fact, they are the only abiding things. The things of material life pass away; the things of the Spirit are alone eternal. No Scriptural writers make this more clear than the prophets. Their concern was for the supremacy of the Spirit. They hoped for a nation which was led by the Spirit. Zechariah voiced this spiritual sentiment, characteristic of all the prophets, when he wrote, "Not by might, nor by power, but by my spirit, saith the Lord of hosts."

[Rev. J. Collings Caton in *The Christian Register*]

The world needs today the character of Jesus to assuage its pain and restore its peace. If there be any mission which is above another in life, it is the mission of a true life. Jesus calls for genuineness. His gospel is the message of sincerity and downright loyalty.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A copy of the Index to Volume XVIII of the *Christian Science Sentinel* will be sent free of charge to any subscriber upon request, but will not be enclosed with No. 52 (the issue for Aug. 26) as in previous years.

"Christian Science: Man's Dominion Over Evil," a lecture by Edward A. Kimball, C.S.D., has been translated into Italian and is now published with the English version opposite the translation. The new pamphlet is on sale at price of the regular pamphlets as shown on the opposite page.

A new French pamphlet, "Foi et Générosité" (Faith and Generosity), has just been issued and is now on sale. This pamphlet contains the following articles: "The Lord Thy Confidence," "The Closed Hand," and "Continuity of Right Thought."

"Christian Science: A Religion of Love" (Christian Science: En Kjærlighetens Religion), a lecture by Virgil O. Strickler, has been translated into Norwegian and is now published in pamphlet form with English and Norwegian versions on opposite pages.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 16 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to
