aspiration and faith, is therefore as indispensable as it is inevitable. The wide-spread prejudice against theology is chiefly due to two misunderstandings. It is not perceived that no theology can be final, that as the spiritual life develops it will be constantly interpreted in new and more adequate ways, so that ancient interpretations gradually cease to be satisfactory and come to have only an historical interest. We may reject in whole or in part the theologies of former generations, but we cannot do without a theology of our own; and when we pass through the period of revolt we also find that we cannot think successfully in isolation, that although we must assuredly do our own thinking, it will be most fruitful and free from mistakes when it is done in the light of other men's thoughts.

[*The Universalist Leader*]

The point of the whole matter is that the church, making an appeal for integrity of life, must itself stand for integrity; it cannot profess one thing and preach another; it cannot suffer old views to fall from sight while still holding them as official standards. But more than this, no church can in this day "gather grapes of thorns, or figs of thistles." It is not possible to win to a loving Father and find a vindictive God. It is not possible to proclaim total depravity and appeal to universal brotherhood.

Today the world is moved as never before by the conception of the fatherhood of God and the brotherhood of man, and any theology which violates this conception must submit to amendment and adjustment. Here in this conception is the key to every movement for human uplift, here the motive to every service, here the source of the splendid spirit of brotherhood, here the solution of every problem of evil, personal, social, economic, international.

[Alfred Williams Anthony in *The Standard*]

The spiritual life certainly must be a life of growth. In it no man can properly say, "I have apprehended;" he must still "reach forth" unto the things which are before. He has not comprehended all truth; he has not acquired all virtue; he has not assimilated all the excellences of the divine pattern; he has not yet attained unto perfection. Perfection must still be his goal. Any doctrine of sanctification which permits stagnation, or mere marking time, lacks vindication in Scripture and experience. . . . Spirituality must be vital, acquisitive, in a state of growth, a process rather than a product.

[Mary E. Woolley in *The Christian Work*]

To have a part in the world's work is not simply or chiefly to discover new applications of natural forces, to promote industry, to develop material resources; it is concerned also with the discovery of intellectual and spiritual forces and their application to daily living, with the promotion of earnest purposes and high ideals, with the development of the resources of the mind and of the heart. The really vital things come within the teacher's province. Society can exist without great wealth, enlarged industries, invention, discovery; it cannot long stand without integrity, honor, truth, purity, idealism.

[Canon J. G. Adderley in *The Christian Commonwealth*]

We cannot live by looking at truth, even in a new way. We have got to live it and help others to live it in a new way. The life of the church has never really been due to mere creedal acceptance. It has always been that men have found in their creed something by which they lived. Often they have talked as if they lived by intellectual belief, but they did not really do so.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition" size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

A new pamphlet, "What went ye out for to see?" is now on sale. This pamphlet contains the four following articles, republished from the Christian Science periodicals: "Principle Not Person"; "Jesus of Nazareth"; "Jesus the Christ"; and "Jesus and the Christ."

The pamphlet, "Causation," by Frederick Dixon, has been translated into Norwegian "Skapende Kraft," and is now published with the English and Norwegian versions on opposite pages.

The pamphlet, "Fulfilling the Law," has been translated into Danish, "Lovens Fylde," and is now published and on sale. This new pamphlet has the English version printed opposite each page of the translation.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with *Key to the Scriptures.*"

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 65 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under those titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

The rapidly increasing consumption of Asiatic raw silk by American manufacturers has resulted in a definite movement on the part of the producers in China to obtain information regarding ways in which the trade between China and America in raw silk may be increased. Kai Fu Shah, Chinese minister to the United States, a few days ago made a special trip to New York City to attend a conference with manufacturers and importers and to witness a demonstration at the laboratories of the United States Conditioning and Testing Company. This was to illustrate some of the difficulties encountered in working China and Canton raw silk. The quality of the silk cocoons grown in China is excellent, but much of the reeling is done by primitive methods, and this results in many mechanical defects. It has been estimated that if the Canton silks received during the fiscal year 1914-15, amounting to 2,300,000 pounds, had been reeled according to the American standard, it would have meant a saving to the American buyers of about $500,000. The defects from primitive methods interfere vitally with the manufacture of silks by the swift and efficient winding, warping, and weaving machinery used by American manufacturers. A saving in waste of $6,500,000 has been made since 1903 through the adoption of the standard skein in Japan silks.

A recent issue of *Der Bund* of Berne, Switzerland, contained an account of the general meeting of the union for the promotion of navigation between the Rhone and the Rhine. Despite the war, it was stated, attempts have been made to arrange for the transportation of goods along the Aar between Biel and Solothurn, and the enterprise is to continue, while the general meeting also referred the study of various questions to a central commission. Herr Autran, an engineer, gave an address on the scheme for the establishment of a navigable waterway between the Rhone and the Rhine, from which it appeared that it was not proposed to form a private company to carry out the project, but to secure the cooperation of the Federal council and the cantons. The preliminary survey has already cost 150,000 francs, and the total cost has been estimated at 150,000,000 francs.

Secretary Lane of the department of the interior of the United States has completed plans and signed contracts for hotel, camp, and transportation concessions in the Yosemite National Park which insure its future along lines of development commensurate with its scenic and recreational value and in response to the new attitude of appreciation on the part of the American public toward their national parks possessions. It is expected that half a million dollars will be spent in the Yosemite during the coming year in realizing these purposes. All the undertakings will be under strict Government supervision as regards rates. One of the department's most cherished objects is to make the Yosemite available for the use and enjoyment of people of moderate income, and the rates will be kept as low as is consistent with good service and a reasonable return on the investments of the various concessioners.

The Stevens price maintenance bill, which is to come before the next Congress, is unfair legislation, economically unsound, and essentially unconstitutional, according to a statement of the field secretary of the National Retail Dry Goods Association, for it would help a few thousand manufacturers to the impairment of the business of a million retailers and at the ultimate expense of 100,000,000 consumers. The bill is designed, it is said, to legalize the fixing both of the resale and the retail price, allowing markdowns only when the merchant is going out of business, when he is in bankruptcy, when his business is in the receiver's hands, or when goods are damaged, deteriorated, or soiled, and aims to legalize the price fixing that has been found illegal in several Supreme Court cases.

The rice crop of California this year is a record breaker. The yield is estimated at 125,000,000 pounds, or 1,250,000 bags. It is only three years since this cereal began to be a commercial crop in the state. The only variety grown is the Japanese, the crop consisting of about 90 per cent of this variety. Eastern cities are taking this crop in great quantities, while a large tonnage is being shipped to Cuba, Porto Rico, and South America. In 1912 the acreage devoted to rice was only 1,400, but this was increased in 1913 to 6,000, and in 1914 to 16,000. This year the acreage has been largely increased.

An address of much significance was made by Doctor Prado on the occasion of his inauguration recently as rector of the University of Lima, Peru. He pointed to the glorious past of Peru and to what he regarded as the unsatisfactory present. The country's shortcomings, he said, were not due to lack of natural resources or to an incapable population, but rather to an inexcusable habit of inadvertence and disorganization on the part of the people. The faults were susceptible of correction, he continued, and to that end more thorough and efficacious methods of education were needed, indeed were indispensable.

The United States board of road commissioners for Alaska has been in existence since May 15, 1905. During this period there have been constructed and maintained 901.8 miles of wagon road, 577.5 miles of winter sled road, and 2216.5 miles of trail. In this work the board has expended $3,089,413.83. The board gives the following figures as the average cost of the different classifications of roads and trails: $3,000 for wagon road, $325 for winter sled road, and $100 or less for trail. This includes surveys, maintenance, and all overhead charges.

Berlin recently celebrated the five hundredth anniversary of the day on which the first member of the house of Hohenzollern to rule in Brandenburg received the homage of his people in the "hohes Haus" of the Brandenburg margraves, which still stands in the Klosterstrasse in the midst of the busy industrial life of modern Berlin. The city was decked with flags, and large crowds streamed along Unter den Linden and the Sieges Allee with its double line of statues of the Hohenzollern rulers of Prussia.

Complete plans are announced for the first international road congress, which is to be held in Worcester, Mass., at the Hotel Bancroft, Dec. 14-17, under the auspices of the Worcester Chamber of Commerce and the patronage of the state highway commission and the Federal Government. Dec. 14 will be "international day;" Dec. 15, "road builders' day;" Dec. 16, "country and city day;" Dec. 17, "automobile day."

It will take ten months, at a cost of $3,000,000, to remove about ten million cubic yards of dirt and free the Panama Canal from slides, according to an estimate made by Major-General Goethals, governor of the Canal Zone. On Oct. 6 the length of the channel that was blocked was 1,300 feet; this length has been reduced since then to 700 feet, but continued movement prevents breaking through the closure in the vicinity of Station 1787.

The Senate of Peru has passed unanimously a bill that was the counter proposal of opponents of the small banknote measure; it provides for the monthly coinage of £20,000 in sols and fractions of a sol, until the present situation is normalized. There are various stringent provisions made under this act to safeguard the present coinage and prevent hoarding of or speculation in silver.

Pensions amounting to $674,000 were distributed to 445 professors or widows of professors by the Carnegie Foundation in the last year. The general endowment is now $14,382,000, and the income for the year $712,000. The foundation in ten years has made allowances at a total cost of $4,225,000 to 505 professors and 134 widows, representing 157 institutions.

Very nearly a quarter of a billion dollars was spent in highway construction and maintenance in the United States during the year 1914. There are now 247,490 miles of hard-surfaced roads in the United States out of a total of 2,273,000 miles of public roads, or 10.9 per cent. Last year 6,805 miles of state roads and state aid roads were built.

The most important feature of the recent carnival week at Delaware City, Del., was canal day, devoted to speeches favoring the purchase and improvement of the Chesapeake and Delaware Canal by the United States. The project is a very old one. The canal would be a link in the proposed inner waterway along the entire Atlantic coast.

Secretary Lane announces the approval of an order designating over 1,875,000 acres of land in California under the enlarged homestead act, which permits the entering of 320 acres of land where heretofore only 160 acres have been enterable.

Judge Hough of the Federal district court of New York, holds that the Government has a right to make a temporary use of any device on which it has granted a patent, and that the patentee cannot secure an injunction.

Yale College will receive more than a million dollars, according to the terms of a will just filed for probate at New Haven.

True Courage

WILLIAM D. MC CRACKAN, M.A.

No valid excuse for discouragement exists in God's universe. No element of failure, disappointment, or limitation can find lodgment therein, for harmony and spiritual satisfaction characterize His creation. Discouragement could only arise from a mistaken sense of the reality of evil. The admission that evil has power, law, being, force, or execution must necessarily discourage the pilgrim on the road from sense to Soul; whereas the spiritual perception of evil's essential unreality encourages the wayfarer to persevere and rejoice. Christian Science is a mighty power in behalf of courage for humanity. Where else except in the pages of the Bible and of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, can the modern man and woman find assurance that God governs and that He is wholly good?

The Bible message of good cheer is intelligible, but it needs to be spiritually discerned in order that the suggestion of a seeming power opposed to the divine Mind may be dispelled. The Christian Science text-book is needed in conjunction with the Bible in order that God may be realized as the maker of good, and of good only. This is one of the many benefits rendered humanity by Christian Science, that it discloses the hidden treasures of the Bible and makes its history, prophecy, and precept available for individual uplift and salvation. Nothing, for instance, can be more discouraging to the Christian than to be told that he must follow in the footsteps of the great Master and be assured at the same time that Jesus was endowed with special miraculous powers which ceased with his disappearance from the earth. The Christian so taught naturally asks how he can possibly emulate the Galilean Prophet if the latter's equipment for spiritual warfare was designed for himself alone. This teaching has reacted upon his would-be followers and has discouraged them from trying to obey his command to "heal the sick, cleanse the lepers, raise the dead, cast out devils." Christian Science, by proving his works to be normal and scientific, encourages Christians to imitate them as best they may, and thus fit themselves to carry out the Master's injunctions.

On occasions the best schooled human being is betrayed into showing discouragement, unless he is supported by spiritual understanding. If the passing show of human activity, experience, sorrow, suffering, or fictitious joy is viewed dispassionately, the reasons for discouragement seem far to outweigh those for gratitude and rejoicing. So far as mere material existence is concerned, it presents only spasmodic moments of satisfaction, and such moments are apt to be quickly superseded by periods of doubt and depression. There is little to stimulate the joy of living when human life is conceded to be exposed to the assaults of numberless foes. The material body is recognized as a most complicated and easily deranged piece of machinery. The so-called mind within the cranium has a precarious place of residence, and quickly shows signs of being unbalanced when subjected to exceptional strain. Most of the occupations by which humanity seeks to feed and clothe itself are exposed to sudden disturbances. Frequent alarms pass through human consciousness as to its own safety, and bring in their train epidemics and mysterious diseases of the physique as well as of the mentality.

Every new danger conjured up by material medicine, by health laws (so called), and by pseudo-science tends to make human life less worth living and adds to the list of the disheartened and the discouraged. To counteract this evil tendency, Christian Science unfurls the banner of spiritual freedom emblazoned with Truth. It teaches the eternal nature of good and the unreality of evil. It encourages sick, sinning, and sorrowing humanity by the assurance that there is a way out of every difficulty, a cure for every disease, a relief from every burden.

True courage can proceed only from spiritual understanding. Sense-testimony does not furnish good and sufficient reasons for courage. Mere optimism is skin deep, and in the presence of danger reveals itself as insufficient. Only the understanding of the truth of being, of reality, can save humanity from the pretense to power claimed by error and unreality. Christian Science reveals the fact that God is the only Mind and that He is the absolute good. Moreover, this wholly good Mind operates as law, and with it man can speak to sin and sickness as one having authority. As though this were not reason enough for encouragement, Christian Science also affords the proof that the realization of Truth brings the kingdom of heaven to earth, makes heaven truly at hand, so that every problem, individual or collective, is capable of solution here and now, without waiting for a future state of existence.

A peculiar case of temporary discouragement is that of Elijah as recorded in the first book of Kings. Although the great prophet had received striking proof of God's ever watchful care in causing the ravens to feed him by the brook Cherith, and although the widow's cruse of oil had not failed him; although through the power of God he had been enabled to raise her son from the shadow of death and to conquer the priests of Baal; yet when Jezebel, the wicked queen, sent a threatening message to him, he yielded to bitter discouragement, fled "into the wilderness, and came and sat down under a juniper tree: and he requested for himself that he might die; and said, It is enough; now, O Lord, take away my life: for I am not better than my fathers."

He who had braved the anger of Ahab, the perils of starvation, the presence of death, and the fanaticism of the four hundred and fifty prophets of Baal, quailed before the curse of an evil woman and for a while was under the seeming spell of hypnotic sleep, oblivious of good and of his duty to God. Not until the "still small voice" came to his rescue did Elijah fully awaken and take up once more the work of divine prophecy. Many an earnest Christian has nobly mastered the more obvious temptations of evil only to fall a seeming victim to the subtle suggestions of malice, hate, and revenge. Natures which are proof against open attacks

need to steel themselves against the secret influences against which Mrs. Eddy has warned the world in her chapter on Animal Magnetism Unmasked, in the Christian Science text-book.

It behooves the practical Christian Scientist to guard against experiences similar to those of Elijah. He must learn to draw the line between Truth and error, Life and death, Love and hate or fear, so closely that the unreal cannot reach the real, nor the false the true in his experience. Elijah had delivered a telling stroke at the carnal mind. He had met and mastered the priests of idolatrous worship. In so doing he had incurred the displeasure of Jezebel, a woman of evil intent and revengeful character. The life of the faithful Christian Scientist is exposed to similar experiences, for it is his profession and career to help good uncover evil when the latter seeks to disguise itself as good, and then to stand and see the fire of the Lord consume (make unreal) the wood and the stones and the dust of material belief, thus reducing evil to nonentity. This process requires moral courage of a very high order, and discouragement would naturally attempt to palsy the hand and paralyze the intelligence which annihilates evil.

Referring to a symbol in the Apocalypse, Mrs. Eddy writes in Science and Health (p. 514): "Moral courage is 'the lion of the tribe of Juda,' the king of the mental realm. Free and fearless it roams in the forest. Undisturbed it lies in the open field, or rests in 'green pastures, . . . beside the still waters.'"

Alertness versus Fear

NATHAN H. WEIL.

THE writer was healed in Christian Science, and one of the most stubborn conditions to yield was a morbid sense of fear. During the intervals he often wondered how one would be able to differentiate between fear and taking due thought for an impending danger, and the conclusion was reached that at the proper time, if necessary, it would be clearly shown. On page 128 of Science and Health Mrs. Eddy speaks of the great help which Christian Science gives to business men. She says that an understanding of Christian Science "enhances their endurance and mental powers, enlarges their perception of character, gives them acuteness and comprehensiveness and an ability to exceed their ordinary capacity." This has been proved true by many.

It was my duty one morning to deposit as usual the weekly funds, and in order to do so I left home for the building where they are kept. When I was about half-way down the street, my attention was directed to two men who were standing at the curb apparently eying me very critically. Needless to say I took a good look at them likewise, and instantly it occurred to me that everything was not right; but after giving the matter a little more thought, I dismissed it from my mind.

After leaving the building with the deposit, which among other things included a large bag of silver, I was led to look straight down the street, whereupon I saw the larger of the two men making a hasty entrance into the area-way of one of the residences. Crossing the street diagonally, I was again impelled to stand still and look ahead, and I saw the smaller of the two men walking slowly toward me, while right beside me was a man in mechanics' dress walking very slowly. For a moment a slight sense of confusion crept in and I made another attempt to walk down the street, but again the inward voice bade me retrace my steps and reenter the building. This I did, and at once telephoned to the police station to send an officer to escort me to the bank.

I am as certain that a hold-up was frustrated as I am of my own existence, and this incident was conclusive proof to me of the protecting power of God and that one may be able to discern between good and evil as they present themselves to human sense. My gratitude to God for Christian Science is unbounded.

Protection

OLIVE ALLISON

THE Bible gives many instances of God's protecting power made manifest to His children. Shadrach, Meshach, and Abednego were miraculously delivered from the fiery furnace into which they had been cast. God saved the children of Israel from the plagues, guided them through the Red Sea, and protected them from their foes until they were brought into Canaan. Daniel, through the jealousy of rivals for the king's favor, was thrown into the den of lions; but the king's prophecy, "Thy God whom thou servest continually, he will deliver thee," was fulfilled.

Like those of olden time we need protection from trials and afflictions as we journey from Egyptian darkness and bondage to the land of light and freedom. Like Daniel we need salvation from the lions of material sense. Whence shall come deliverance? Where shall we find security? Too often have we thought that safety was to be found in matter instead of in Spirit. We have trusted the inanimate drug to deliver us from sickness. Immunity from poverty, so we have thought, depended upon a large bank account. In our journeys across the sea we have placed our confidence in the strength of the ship; traveling by land, we have relied upon the care, judgment, and intelligence of mortal man. Yet drugs have failed to heal; banks have failed to meet their obligations; strong ships have sunk; the so-called intelligence of mortals has been insufficient to protect from accident. With reliance placed in materiality we have been assailed by dangers and calamities of all kinds.

Christian Science teaches that failure to secure protection always results from ignorance of God and of the true laws governing man and the universe. We must grow out of this ignorance and gain a higher understanding of God and His laws. God is not the author of disaster, for He is the creator of good alone, and His laws must express the activity of that infinite Love which blesses with holiness, health, and life. The realization of this protects us from sin, disease, and death. We must think lovingly about God and man. The Bible says, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself." Thus doing we merit protection. That Daniel served not only his God but his fellow man continually is shown by his words to the king, "Before thee, O king, have I done no hurt." Our thought too must be that of constant service to both God and man. To serve God continually is never to admit that there is a power apart from God; to recognize His ever-presence; and above all to prove that we do so by placing absolute reliance upon Him in every hour of need.

We serve our fellow men continually when we are active channels to help and protect each other, thus reflecting God's desire to bless His children. This does not mean that we are to protect error. True protection is the destruction of error and the conservation of good. We help our brother to work out his salvation by being free from all prejudice, unjust criticism, or condemnation, and by recognizing ever the real and perfect man. On page 210 of "The First Church of Christ, Scientist, and Miscellany" Mrs. Eddy writes: "Good thoughts are an impervious armor; clad therewith you are

Digitized by Google

completely shielded from the attacks of error of every sort. And not only yourselves are safe, but all whom your thoughts rest upon are thereby benefited."

As we grow in understanding, we find that because God is changeless, infinite, and eternal good, divine protection is an eternal law. Good, which is one with God, is as eternal as God; while evil, not being of God, has no protection. Consequently it will destroy itself, and the supremacy and omnipresence of infinite good will be manifested. We are told in Psalms that "he that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty." This "secret place" is the consciousness of good, the realization of the allness of God and the consequent nothingness of evil. As we dwell there, fear, poverty, sin, sorrow, disease, and accident are no longer in our thought or experience. We recognize our unity with God and "abide under the shadow of the Almighty."

Journey of the Wise Men

PAUL R. HOLDEN

THE experiences which befell the wise men on their journey from the East to Jerusalem, as related in the second chapter of Matthew, is of special interest to Christian Scientists, since they too pass through strikingly similar experiences on their way from sense to Soul. The Orient, where the wise men abode, was then the seat of all material learning, whence it has spread over all the earth. It is of interest to note that the wise men turned away from all this learning and the splendor of material sense and achievement. They turned their backs upon it, as it were, and set out to find the Christ-idea, that which was to reflect to the world spiritual light, and lead on spiritual progress.

We are usually quite content with that which fully satisfies us, and no longer look about for something in its stead. Wise men indeed were they to realize that merely human learning and human possessions, no matter how wonderful, can never really satisfy. We too, as we start out in our search for the priceless realities of Spirit, must begin like them by turning away in our thought from a material sense of life; from a belief in its claim to be that which is true or powerful or satisfying. Having believed for so long in this material sense of life, which Christ Jesus designated as "darkness," our perception of Spirit, Truth, is at first very faint, merely a star-gleam, as it were, in our "night of error," as Mrs. Eddy calls it in that wonderful first paragraph of the Preface to Science and Health. As the wise men faithfully followed the faint gleam of spiritual light which had dawned upon their consciousness, it led them on, nearer and nearer to that which they had started out to find and which they so longed to reach,—to that spiritual attainment which alone satisfies. To material sense they beheld a little babe, but their spiritual perception, which had grown fuller and deeper as they obediently followed the leadings of Truth, recognized in him, as Mrs. Eddy goes on to explain, "the human herald" of the Christ, the "light of the world."

Among the vicissitudes incident to the journey was an experience which is common to us all. The wise men met and were detained for a while by Herod. This king was, as we read, both wicked and powerful, and however unjust, his mandates were law to those over whom he ruled. Indeed his career seems to have made him a fitting symbol of all that is evil and fear inspiring. As the wise men were confronted by this apparently overwhelming embodiment of jealous pride, so we in our effort to follow the light of Truth find ourselves confronted by unjust and cruel material laws, discordant conditions, fears and trials, which seem overwhelmingly great and powerful to us. Nevertheless, if we depart from the material sense of things, we too shall again behold "the star." They could not see the star, the light of Truth, nor further follow its guidance, while their attention was fixed upon the darkness typified by Herod. Neither can we see the spiritual light which will destroy our sense of mental darkness with its fears and discords, so long as we stand listening to what error would say to us. Like the wise men, we must depart, turn away from error, if we would retain our vision of Truth.

The happiness of the wise men when they had left Herod we also may experience, and like them rejoice "with exceeding great joy" when consciousness is filled only with Truth and Love. And when we have "come into the house," when we have finally grown into a consciousness of the abiding presence, here and now, of Truth's immortal idea, the ever present Christ, we likewise will bring forth our treasures and consecrate them to its service.

Frankincense and myrrh symbolize that spirit of prayerful and sincere devotion which lays its all upon the altar of God. Even the succeeding steps in the journey of the wise men we must also take. Like them, when we have once discovered error to be error, we must not return to it. When once we have seen the truth, we can never go back to the old, false human sense about it. As the wise men "departed into their own country another way," so do we take up our lives right where the truth has been revealed to us, and again take up our problems, our duties, and perchance our trials, but in another spirit; and where once we would have met criticism perhaps with resentment, now we meet it with love. Where once under given conditions we gave place to fear or doubt or discouragement, now we face them bravely, knowing that since God, good, is ever with us, evil is powerless, unreal,—only a false mental picture about Life, a picture which we no longer believe in or consent to, since now we have found the Christ, Truth.

Wonderful indeed was Mrs. Eddy's understanding of the deep significance of this journey of the wise men, and wisely and clearly does she unfold it to us on pages 164 and 320 of "Miscellaneous Writings."

Giving

IRENE ELLIS POOLE

To those of us who sometimes feel hampered with the sense that we have nothing at all to give, Peter left a splendid example. When the lame man "whom they laid daily at the gate of the temple which is called Beautiful" asked alms of him, Peter did not say he was sorry that he had nothing to give him. Rather did he say, "Silver and gold have I none; but such as I have give I thee: In the name of Jesus Christ of Nazareth rise up and walk." Then we are told that "immediately his feet and ankle bones received strength. And he leaping up stood, and walked, and entered with them into the temple, walking, and leaping, and praising God." What gift of gold could have meant so much to the lame man as this great healing word? It set him free physically, as free as any other man to earn his own living, and above all it must have given him a priceless sense of the presence and power of God.

As Christian Scientists we are never without something to give, any more than Peter was, for this same healing truth compasses all time and fills all space. If we are reflecting the divine Mind as we should, there will never be a time when we have not some helpful thought or cheering word to give to another. No matter in what form sin, sickness, or lack may confront us, we have the right to declare, mentally at

Digitized by Google

least, that "the enslavement of man is not legitimate," and that "there is no power apart from God" (Science and Health, p. 228). Besides giving the right thought to every situation, let us be awake to what we have to share with others, if we only pass on our Christian Science literature. In our church work we have much besides money to give. There is a great need for us to give to others the proofs which have come to us that Christian Science does heal. If we realized what an opportunity we have to share our blessings with all mankind, there could never be a pause in our Wednesday evening meetings. We can never know how much the giving of one testimony may mean to some one else.

An experience proved to me that when the need is for financial support, the earnest desire to give will do much. One night a business meeting was called in our church edifice for the purpose of considering the needs of another Christian Science church then being built in our city. I went with the feeling that I had nothing but my presence to give in support of the meeting, but I left the church with a deep desire to do some kind of work which would enable me to give to this cause. My opportunities for work seemed very limited, but I tried to rise above this sense of limitation, knowing that if my desire to give was sincere, the way would be opened up; and an opportunity for work came to me almost immediately. I could not have planned work for myself which would have brought me so much pleasure in the doing. To me it was a beautiful proof of what Mrs. Eddy says on page 1 of Science and Health: "Desire is prayer; and no loss can occur from trusting God with our desires."

The desire to give is a sign of true awakening in a Christian Scientist, for our Master said: "Give, and it shall be given unto you; good measure, pressed down, and shaken together, and running over, shall men give into your bosom. For with the same measure that ye mete withal it shall be measured to you again." Let us then be ever ready to say with Peter, "Such as I have give I thee."

More Love

INEZ KOCH

Often the cry rises from our hearts, "How shall I love more,—how shall I manifest the Love which is God?" This is a desire which comes especially to the student of Christian Science as he begins to grasp the importance of the great commandment of our Master: "That ye love one another; as I have loved you, that ye also love one another."

The human sense of love, with its doubts and fears and many fluctuations, is so inadequate to fulfil this demand that thought is naturally turned to seek a higher meaning. In John's gospel we find Jesus saying to his disciples, "Greater love hath no man than this, that a man lay down his life for his friends." It has been generally considered that this meant deeds of heroism in which one man lost his life for another. Although this may be the highest human concept of self-sacrifice, it is not so in Christian Science. It means something wholly joyous, something so beautiful that all sense of giving up is entirely forgotten in the realization of an unutterable love, such as only the knowledge of absolute Truth can give.

To understand the text in its more spiritual signification, it is necessary to study what Jesus meant by life. He taught that God is Life. Therefore it cannot be the Life which is God that we are to give up, but a false sense of life. What Christian Science means by a false sense of life is a material sense, for did not God, Spirit, make all that was made? What authority, then, has matter to claim for itself life? Is it not what Mrs. Eddy calls mortal mind which claims intelligence and life in that which has neither origin nor cause to support it?

How gladly we discard these false claimants for our true friends, the right ideas. When these are established in consciousness God is indeed with us, and since they emanate from and are based on their divine Principle, infinite Love, they can take part in nothing unlike Love. It is clear, then, that as false beliefs about life and substance are laid down for the true ideas of Life and Love, these become operative for good in all our activities and relations to mankind, with infinite blessings to all concerned. Thus Love is shown to be one with Truth or Principle, than which there is no greater, the God "who forgiveth all thine iniquities; who healeth all thy diseases."

Gratitude

ROBERT PARKINSON

Nothing could purchase the blessings and comfort which I have experienced since coming into Christian Science. I think one of the most wonderful things which has been revealed to me through its teachings is the power of thought, and that the importance of right thinking cannot be overestimated. In Proverbs we read, "In all thy ways acknowledge him [God], and he shall direct thy paths."

I would like to mention an experience with regard to getting my son into a bank, and to show what an important part Christian Science played in the matter. The boy had to present a certificate from the principal of the college, one from a doctor, and one from a clergyman. He did not, however, have one from the last, as we were not acquainted with one. The certificates from the schoolmaster and the doctor were sent to the local bank manager, but when he discovered that there was nothing from a clergyman, he telephoned to the schoolmaster and asked him the reason, in reply to which he was told that the boy was following the teachings of Christian Science. When the bank manager heard this, he told the schoolmaster that he was afraid it would be of no use to send in an application to the head office in London. The following morning he sent for me. I went up to the bank and had an interview with him, in the course of which he brought up the question of Christian Science, saying he felt sure it would be of no use to send in an application to headquarters; that he considered the following of Christian Science by my boy would debar him from taking the examination prior to receiving an appointment in the bank. When I asked him why, he said that Christian Scientists were looked upon as peculiar people. After about a half-hour's conversation, he concluded by remarking that unless my son could say that he was quite willing to give up Christian Science and would follow the teaching of another church instead, he felt it would be of no use to send in the application.

I gave my boy this message and said that he should decide for himself. In no way did I influence him. The following morning he told me that he felt he could not give up Christian Science, knowing what a help it had been to us for so many years. I replied that if the bank was his place, no obstacle could keep him from getting in. Mrs. Eddy says in "Science and Health with Key to the Scriptures" (p. 379), "The real jurisdiction of the world is in Mind, controlling every effect and recognizing all causation as vested in divine Mind." The boy was interviewed by the local bank manager again, and after questions had been put to him similar to those which were put to me the previous day, he again said that he did not wish to give up Christian Science.

Digitized by Google

The next day the bank manager sent for me, and after a short interview asked what was to be done. I requested him to send in the application to the head office, and to state that my boy was an adherent of Christian Science. He decided to do so, but at the same time doubted its acceptance. After my last interview, I called upon a Christian Science practitioner and related the matter to her. She kindly offered to help me to realize the truth about the whole affair, and not once did I fear or doubt the result. The following week a communication from the local bank manager was received, notifying me that my son's application had been accepted by the directors at the head office, and that he had to be ready to take an examination in London shortly afterward. The examination at which he sat was held in 1913. At the end of the following week another communication was received, stating that my son had passed, and that he was to take up duties immediately at a seaside resort on the east coast. This was to us a beautiful demonstration of the omnipresence of divine Mind, and showed me that absolute reliance on God brings success.

The following experience may be of help to some who are young in Science. It is with regard to the importance of doing one's own work when we understand the teachings of Christian Science sufficiently. After having been in Science a little while, there may be a tendency with some to get slack, and when inharmonious conditions present themselves, instead of tackling them, they are likely to seek the help of a practitioner. My experience was as follows: I had been quite deaf in one ear for over a year, and could not understand the reason for such a condition. While it did not inconvenience me much, it was very noticeable when serving in my business. At last I decided to go for help, and had several treatments from a practitioner, but without any apparent result. A week or so later I sat down one evening after returning from business and tried to find out the reason why my hearing did not respond to the treatment. It then dawned upon me that this was my own work; that I had been mentally lazy. I therefore commenced doing my duty by becoming active in the truth, with the result that my hearing became quite clear on the second day. This was four years ago, and I am thankful to say that there has never been any further trouble experienced in this respect.

In conclusion I would say that the word "gratitude" in its highest significance best conveys my appreciation of the blessings Christian Science has brought into my life.

[Written for the *Sentinel*]

It Is Well with the Child

MYRTLE B. S. JACKSON

I know not where my loved one may be lying.
In field or forest, or by town or sea,
Whether on earth or in the gray clouds flying—
I only know he cannot come to me.
But looking upward through the night of weeping
I hear a voice call like a silver bell:
"Love's stars are out, and God His watch is keeping.—
All's well! All's well!"

I know not what the future may be sending,
What little store of wisdom, wealth, or rest:
So long to wait, the strife so never-ending,
Wrong so enflamed, and right so sorely pressed.
But looking onward through the night of sorrow,
Still rings the music like a silver bell:
"Love's stars are out; God governs the tomorrow.—
All's well! All's well!"

Selected Articles

[John L. Rendall in *Clinton* (Iowa) *Herald*]

Our critic again takes occasion gratuitously to attack and misrepresent the teaching of Christian Science. Christian Scientists are not worshipers of Mrs. Eddy, but of the one living and true God. They respect and esteem Mrs. Eddy for her wonderful gift to humanity in "Science and Health with Key to the Scriptures." It was, however, her constant effort to turn thought away from her personality to the living Principle which her writings reveal.

The Christian Science church has been established in each and every community on the basis of actual results in the overcoming of sin and sickness and in the betterment of all conditions among those who have embraced its teachings. That it differs from orthodox theology in many respects is true, and, from the standpoint of Christian Scientists, therein is its value. It does not, however, differ from any of the fundamentals of Christianity as taught by Christ Jesus and his disciples. It recognizes God as the one infinite creator, Christ as the divine idea of God, and man as God's image and likeness, as the Bible affirms, and it emphasizes the absolute necessity for righteousness.

The critic's statement to the effect that Christian Scientists say there is no resurrection is simply part of his general misconception of the subject. The resurrection is referred to twenty-two times in Science and Health, and on page 317 we read as follows: "Our Lord and Master presented himself to his disciples after his resurrection from the grave, as the self-same Jesus whom they had loved before the tragedy on Calvary." This is a very positive and definite statement as to the Christian Science attitude in this respect.

Christian Science as a religious teaching is progressive and constructive. Its adherents attend strictly to their own business and are endeavoring to build up the cause of Christ in their own way and without interference with any one else, and certainly without the attempt to tear down the religious beliefs of another. There is one proof of the value and utility of Christian Science which is incontestable, namely, the proof given by Jesus: "By their fruits ye shall know them."

[Ezra W. Palmer in *The Star-Journal*, Pueblo, Col.]

Objection is made by our critic because Mrs. Eddy was the Discoverer and Founder of Christian Science. Through study of the Bible, through prayer, reason, and revelation, the truths of Christian Science were made clear to her. In a time of need it became clearly evident to her that current religious doctrines were unavailing to do the works the Master commanded his followers to do. She therefore retired from society and studied the Bible until the divine mode of healing the sick and sinning employed by Jesus, the prophets, and the apostles, was revealed to her. This she gave to the world under the name of Christian Science. That her interpretation of the Bible is correct is proved by the results which have followed.

Mrs. Eddy made no attempt to confine her writings and teachings within the bounds of scholastic and traditional theology. To do so would have defeated her life-purpose, which was to bring to this world the healing power of Christ Jesus which for centuries had been explained away and ignored by this same scholastic theology. However, to assume that the teachings of Christian Science are at complete variance with great religious thinkers of all ages is a mistake, since all genuine seekers after God have seen more or less clearly the omnipotence of God and what it means, even if

Digitized by Google

they have not grasped it sufficiently to make it available in healing the sick through spiritual understanding, as Mrs. Eddy has done for the modern world.

"The man in the street" would hardly expect a Christian minister to argue that a religion was wrong because it does not conform to "the accepted philosophies of this and past ages." And yet this critic gravely advances this proposition against Christian Science. Seriously, now, would this critic expect a religion based on the Bible to be based on anything else but the Bible or to conform to any teaching but that of the Bible? Christian Science is based on the Bible. If the philosophies of this and other ages interpret and support the teachings and proof of Jesus and the apostles, well and good; if not, this lack is merely an evidence that philosophies based on human reason do not attain to that spiritual insight which alone gives true and lasting views of God and His universe. In Science and Health (p. 126) Mrs. Eddy says: "I have set forth Christian Science and its application to the treatment of disease just as I have discovered them. I have demonstrated through Mind the effects of Truth on the health, longevity, and morals of men; and I have found nothing in ancient or in modern systems on which to found my own, except the teachings and demonstrations of our great Master and the lives of prophets and apostles. The Bible has been my only authority."

The gentleman next complains that Christian Science teaching is in contradiction of the laws of hygiene. The critic is reminded that Jesus gave no approval of the so-called laws of hygiene which this critic deems so important. Laws of hygiene are merely human, mortal opinions, fluctuating and unstable as the wind. What yesterday was hygienic is today unimportant, and the hygienic laws of today may be cast aside tomorrow. Jesus warned his disciples against the systems of his time, which merely cleaned the outside of the platter. He insisted that the cleansing of thought was the essential thing.

Christian Science teaches with Jesus that purity of thought is vital. This gained, the body and the environment will be kept in order, pure and clean. Christian Science is in "direct contradiction of the accepted science of the day," declares this critic, and puts this forward as evidence that Christian Science is non-Christian. Material or physical science is what this critic evidently refers to. Would he be willing to test his own religious convictions by the converse of this statement,—that they are true only so far as they harmonize with physical science? Physical science starts primarily with the world as presented by the physical senses. Christianity as Jesus presented it transcends the mortal and physical and deals with the divine. St. Paul presented this distinction clearly when he said, "The things which are seen are temporal; but the things which are not seen are eternal."

Our critic, however, is greatly mistaken when he infers that the conclusions of natural scientists are opposed to the teachings of Christian Science. Christian Science teaches that matter is not the creation of Spirit, but is "the subjective state of what is termed by the author *mortal mind*" (Science and Health, p. 114). Arthur J. Balfour, former prime minister of England, at the London Congress of Natural Scientists of Great Britain, is reported to have said, "The material sciences are now explaining matter by explaining it away." John Fiske said, "All the qualities of matter are what the mind makes them, and have no existence as such apart from the mind." Huxley wrote: "After all, what do we know of this terrible matter except as a name for the unknown causes of states of our own consciousness." Other eminent physical scientists could be quoted, but the above quotations are sufficient to show the support given Mrs. Eddy's views by modern scientific thought.

Complaint is next made because Science and Health calls attention to the use in Genesis of the terms Elohim and Jehovah, and the critic declares that this proves that Mrs. Eddy is "in accord with rationalistic infidelity." The terms Elohim and "Lord God" were introduced by the writer of Genesis, not by Mrs. Eddy. What Mrs. Eddy did was to make clear that the term Elohim gave a clearer concept of God than the term Lord God or Jehovah, the latter being used to present an anthropomorphic concept of Deity. According to the first chapter of Genesis, Elohim created man spiritually; according to the second chapter, man was created out of the dust of the ground. The critic's contention is evidently not with Science and Health, but with the writer of the book of Genesis.

In his attempt to make God the author of material, mortal man, the critic commits himself to the proposition that God created man both spiritually and materially. This of course makes God the author of the material universe, and therefore responsible for all evil, sin, pestilence, poverty, sorrow, and death. But Habakkuk declared that God is "of purer eyes than to behold evil," and cannot "look on iniquity." Paul said, "Flesh and blood cannot inherit the kingdom of God;" and Jesus declared, "It is the spirit that quickeneth; the flesh profiteth nothing." Christian Science teaches that God is Love, as St. John declared. His creation is spiritual, like Himself; therefore He is not the author of mortal man, of sin, sickness, and death.

✧

[W. D. Kilpatrick in *Alma* (Mich.) *Record*]

The *Record* reports some unkind criticisms against Christian Science by an evangelist holding services in your city. Christian Science is based exclusively on the Bible, and the followers of this religion are undoubtedly as close Bible students as it would be possible to find among the followers of any religion. Christian Science is in strict accord with the spiritual import of the Scriptures at every point, and through its beneficent teachings vast multitudes have come to love the Bible as one of their dearest friends. Just why a minister of the gospel would deem it his duty to attack a religion which has saved so many people from the bonds of sin and sickness it is difficult to understand.

Christian Science has encircled the globe with its "good tidings of great joy," and has experienced a growth unequaled in religious history. Its adherents comprise all classes of people, from the high government official to the lowliest laborer, and all are devoutly grateful for this truth which has opened to them the Bible and given them just cause for rejoicing in a demonstrable understanding of the teachings of the Master. To a student of the Bible there is little question that from beginning to end its purport is to outline to mankind the divine Principle of existence, in demonstration whereof we are freed not only from sin but from all the besetting ills of the flesh.

The Scriptures throughout give us instances of the healing of sickness as a result of the understanding of this divine Principle of existence, and the crowning work of the Master's career was his complete overcoming of "the world, the flesh, and the devil." He not only healed the sick and the sinner, but taught that we should do likewise. Hear his words: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do;" also, "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not

Digitized by Google

hurt them; they shall lay hands on the sick, and they shall recover." Christian Scientists believe that Jesus meant just what he said, and the early Christian church was noted for the healing of the sick for several centuries after his death. This healing work was continued as a part of the religion of the early church until materialism crept in and blinded men to the truths of Spirit.

✧

[Carl E. Herring in *Beatrice* (Neb.) *Sun*]

The writer does not for a moment think that our clerical critic and others who are following the evangelistic calling are wilfully misrepresenting Christian Science, but rather that their utterances and illustrations arise from ignorance as to the teachings of Christian Science; and if this be true, this ignorance extends to a failure to grasp the message left by Jesus of Nazareth. Surely no one can read the story of blind Bartimæus, the healing of the centurion's servant, Jairus' daughter, those sick with the palsy, the lepers, the blind, and the deaf, and attuned to the divine message read the Master's promise, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father," and then make light of a great body of devout, sincere people who are earnestly endeavoring to obey the Master's command to "heal the sick, cleanse the lepers, raise the dead, cast out devils," and thus claim the promises, "These signs shall follow them that believe; In my name shall they cast out devils; . . . they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover;" "If a man keep my saying, he shall never see death."

Now there is a great body of people who do not believe that Jesus healed the sick, and of course they do not believe that he commanded his followers in all ages to heal the sick. They sometimes even go so far as to ridicule Jesus and his disciples, although generally this class is tolerant and charitable of others' belief.

But our critic does believe that Jesus healed the sick and that he commanded us to heal the sick, and therefore his criticisms relate back to their primal source, namely, to the works of Jesus, for it was Jesus himself who sent this word to John by the men who had brought his message, "Go . . . tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised."

Christian Scientists have no desire to interfere with any one else's religion, for as the critic says, there are plenty of sick to be healed who are coming into Science,—those sick in body, sick of heart, sick of the teaching which is offering promises of a vague heaven somewhere in the ethereal space, and of a literal, burning hell-fire, while in fact they need surcease from sorrow here and now, and a heaven which has its foundation in man's consciousness of the eternality of the divine order, governed absolutely by the one eternal Principle.

✧

[Ralph W. Everett in *Tulsa* (Okla.) *World*]

In a recent editorial Christian Science is spoken of in such a way as to lead one to believe that to practise Christian Science is to use will-power. Mrs. Eddy's teaching on this subject, as found in her book "Science and Health with Key to the Scriptures" (p. 490), is as follows: "Will-power is but a product of belief, and this belief commits depredations on harmony. Human will is an animal propensity, not a faculty of Soul. Hence it cannot govern man aright. Christian Science reveals Truth and Love as the motive-powers of man. Will—blind, stubborn, and headlong—cooperates with appetite and passion. From this cooperation arises its evil. From this also comes its powerlessness, since all power belongs to God, good." Man is the image and likeness of God; therefore he must express the qualities of his creator. "God is a Spirit," consequently His image and likeness must express spiritual not material qualities.

Instead, then, of lulling into a self-satisfied condition, Christian Science arouses its students to a more active realization of the necessity of overcoming mortal mind, as Mrs. Eddy has termed it, or the carnal mind to which Paul referred when he said, "For to be carnally minded is death; but to be spiritually minded is life and peace." The study of Christian Science brings one to the realization of the possibility and the desire to reach that state of perfection here and now which men have hoped for in a future world salvation. This can be reached only by putting off the old man, which is purely the product of human will, and putting on the new, in having the Mind "which was also in Christ Jesus."

It is mortal mind, or human will, that has lulled men into a state of seeming contentment, for the reason that no means of escape from its results was known. Christian Science presents the way of escape from these conditions, and awakens man to his real spiritual being, thus showing him that he cannot be content with less than the highest expression of right activity,—the activity of the divine Mind.

✧

[Robert S. Ross in *Brooklyn* (N. Y.) *Eagle*]

When Jesus made his triumphal entry into Jerusalem the populace gladly acclaimed him as the longed for spiritual deliverer. The priesthood, however, and others in authority opposed him, charging that he stirred up the people. Failing to discredit him, they then accused him of desecrating the Sabbath when he healed a man of a physical deformity. Still unable to accomplish their evil purpose, they charged him with having a devil; finally they crucified him.

Jesus incurred the hostility of his enemies, surely not because he was a menace to the morals and health of the community, but because he came preaching that which was contrary to the beliefs and practices of entrenched religious and medical systems. A clearer understanding of the truth of being would mean the mental and physical freedom of the people through individual demonstration, but this the rulers did not want. They had been so accustomed to order the lives of others that they would resist to the very limit anything that threatened to lessen their time-honored control.

Thus it will be seen that history repeats itself. Pioneers of progress in all ages have been misrepresented and abused for truth's sake. But opponents, individually and collectively, who thoughtlessly or deliberately attack the truth, instead of dethroning the true idea or impeding its onward march, merely kick against the pricks of freedom and progress. The steady and irresistible advance of the race out of darkness into light furnishes abundant proof of this. Resistance to truth is futile.

Thus our critic, whose sermon was recently reported in the *Eagle*, can attack Christian Science by referring to it as "darkness" and classifying it with more or less discredited systems; but this in no wise logically disposes of the subject to his audiences, nor satisfactorily explains to them what there is in Christian Science that enables its students, with the help of the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, to destroy sin and sickness in every form. Christian Scientists may be pardoned for believing that they are more consistent than some of the Christian critics if they can heal the sick and their critics cannot, especially since Jesus declared that healing was one of the "signs" that would follow them that understand his teachings.

Editorial

"In sacred confidence"

It is well understood by most persons that there is a confidential relationship established between lawyer and client, physician and patient, clergyman and parishioner, which precludes the lawyer, physician, or clergyman from disclosing to other persons the information communicated to him in the course of this relationship. In fact the law so regards the confidential nature of such information as not only to free the person receiving it from the necessity of disclosing it, but also positively to forbid him to disclose it, even on the witness-stand. Both the reasonableness of this provision for safeguarding such confidential relations, and the necessity for its establishment and enforcement, are so apparent to thinking persons that they never question its propriety. Without such assurance it would be impossible to expect that persons in distress would be willing to talk freely to those of whom they naturally should seek advice and assistance.

In the very nature of things the relationship which is established between a Christian Science practitioner and his patients becomes of the same character and necessitates the same confidence as that which exists between the lawyer and his client, the physician and his patient, the clergyman and his parishioner, and it is because of this confidential relationship that practitioners should be especially careful in their conversation, even though the communications made to them may not be under the same protection of the law as are those made to the professional men referred to. We do, however, hear of practitioners who are careless in this regard, and it is because of this that we call attention to the by-law on this subject in the Church Manual.

We also hear of practitioners who think it necessary on taking a case for treatment to require the patient to lay bare his whole life history and confess all the sins he has ever committed, whether these sins be quite recent or far in the past; repented of and turned away from, or unrepented and continued in. Just why this is done, no one seems able to say, but that such is the practice of some practitioners appears to be quite well known. It is no wonder therefore that in the course of time those who have accumulated so much in the way of information about the personal affairs of others should find themselves unable to keep this information from bursting forth and being blown to the four winds, notwithstanding the very definite wording and unmistakable meaning of the first paragraph of Section 22 of Article VIII of the by-laws of The Mother Church. This paragraph reads as follows:—

"Members of this Church shall hold in sacred confidence all private communications made to them by their patients; also such information as may come to them by reason of their relation of practitioner to patient. A failure to do this shall subject the offender to Church discipline."

Even if there were no by-law covering this point, it would seem that love for the "golden rule," and the innate good taste which governs most of us, should keep us from making a misstep of this kind. There is, moreover, no precedent, either Scriptural or otherwise, which in the first place sanctions or authorizes an unwarranted and uncalled for intrusion into the personal history of a patient,—an endeavor to impute some offense of the moral law as the occasion for every case of physical discord. It is well to remember the Master's rebuke when the disciples sought to place the responsibility for the man blind from his birth by attributing sin either to him or his parents. Neither had sinned, the Master declared, but here was an opportunity to make manifest the power of God; and without further ado the loving, compassionate Saviour opened the eyes of the blind.

"Out of the abundance of the heart the mouth speaketh," and the poor suffering heart will as a rule voluntarily reveal all that the truly wise practitioner needs to know in order rightly to bring to bear upon the case the omnipotence and omnipresence of divine Love, which heals sickness and sin by one and the same process. On page 365 of Science and Health is this admonition: "If the Scientist has enough Christly affection to win his own pardon, and such commendation as the Magdalen gained from Jesus, then he is Christian enough to practise scientifically and deal with his patients compassionately." Let the practitioner first measure himself by this standard, and he will find in the work for his patient that, as Mrs. Eddy goes on to say, "the result will correspond with the spiritual intent."

Archibald McLellan.

Wherewithal Shall We Be Fed?

Many of those who seek relief from suffering through Christian Science find that the understanding of Truth transforms human experience, makes all things new. There are none who would object to this change if it meant that nothing which is valued by the human sense was to be given up, but they soon learn that thought must be detached from the material, which is so real to mortals, in order to lay hold upon the imperishable things of God's kingdom. If Christ Jesus laid emphasis upon one thing more than another, it was that we must cease to think about materiality and give ourselves unreservedly to the realization and demonstration of the spiritual. This does not however mean that humanity's needs will be unprovided for in the transitional period, for we are told on page 442 of Science and Health that "Christ, Truth, gives mortals temporary food and clothing until the material, transformed with the ideal, disappears, and man is clothed and fed spiritually."

The present age has witnessed a gigantic struggle on the part of men and nations to grasp and hold more of the material than was ever before laid hold of by mortals, and with some measure of success if we take into account the colossal fortunes which have been accumulated. It cannot be denied, moreover, that this struggle to gain material wealth has brought some remarkable results, in the way of mental development, which were worthy of a better cause than the mere acquisition of perishable things. But the question remains, To what extent is the individual really benefited by his efforts, to say nothing of mankind as a whole? If one has bravely striven to ameliorate mortal wretchedness and to establish justice and judgment in the earth by being himself just, and has succeeded in the face of adverse conditions, he is truly a great man and is worthy of all the good that may come to him, including the lands and houses of which the great Nazarene Prophet spoke. It is however likely that he will have to take with them the persecutions which come to all who have the courage to assail entrenched wrong and stand by the demands of divine Principle, and it takes more than a moral weakling or a mere self-seeker to maintain a position like this.

We cannot too often remind ourselves of the Master's clear and unequivocal teaching with respect to the best way of meeting our human needs. He certainly did not say we should ignore them, as some mistakenly suppose, probably from a superficial reading of his counsel to take no thought as to what we should eat, drink, or "put on." He did not deny that these things were needed by humanity, but he pointed in unmistakable terms to the only sure way of gain-

Digitized by Google

ing the good we desire. Jesus insisted that our thought-taking along material lines is not only needless but wrong, inasmuch as it directs attention away from the divine purpose and potency and closes the door upon the Father's abundant supply for all His children.

Students of Christian Science soon learn that it is well-nigh impossible to heal the sick who refuse to lift thought above the body and material means of cure, but in dispelling the illusion of lack the same logic is not so readily applied. In the case of the sick, spiritual freedom means health, and in the case of poverty this is no less true. In both cases thought must be lifted from mortal conditions into close acquaintance with our heavenly Father, who requires not earthly toil to supply His children's needs. The Father works, however, so Jesus said, and the demand is that we work with one end in view, namely, to give first place in all our thought and activity to "the kingdom of God, and his righteousness."

The thought which seeks "first" material food gains nothing; that which seeks, finds, and demonstrates spiritual reality has all things, enough and to spare; for the one who feeds upon the living bread gains strength daily to wrestle with mortal wrong and prove it powerless. Our Leader's words, "May thought soar" (The First Church of Christ, Scientist, and Miscellany, p. 131), should inspire us to rise above the material and find in divine Love all we can ask or desire.

ANNIE M. KNOTT.

"Our refuge and strength"

On page 366 of Science and Health Mrs. Eddy has written: "The Christian Scientist will be calm in the presence of both sin and disease, knowing, as he does, that Life is God and God is All." Just now the world is filled with deeply troubled hearts. No thoughtful man in any land can remain unmoved by the vastness of the issues which the present world catastrophe has precipitated, and that for the entire human race. Moreover, he can but be impressed by the manifest moral and spiritual unpreparedness of organized Christian sentiment to cope with the situation, and he will thus be brought face to face with the tremendously serious question, What is the call of God to me at this juncture?

In the presence of war's threatened extermination of states and peoples, and most serious disaster to all mankind, we do well to turn to the pages of "the Book of books" and read again, in the seventeenth chapter of I Samuel, a story which has ever been regarded as one of the finest epics of literature, and which as spiritually interpreted in Christian Science cannot fail to bring us the wisdom and inspiration, the confidence, courage, and repose we so greatly need. Now as in David's time reliance upon assertive militarism threatens the peace of all, and the sense of human weakness makes men "sore afraid." So too now as then safety hangs upon the apprehension of the truth of being, the active presence and availability of Him who is "our refuge and strength."

Now as then, however, sad to say, preparedness for the assault of evil is thought of by the great majority, even of religious people, "the children of Israel," only in terms of physical force. The inquiry is, How many mighty men have we to meet this Goliath? What of our armor and equipment, our armies and engines of war? Hence now as then we need to remind ourselves hourly of this significant word of Truth: "Not by might, nor by power, but by my spirit, saith the Lord of hosts," that we may understand and yield ourselves to divine law, the government of God, so that we may be able calmly and knowingly to declare, with the son of Jesse, "Thou comest to me with a sword, and with a spear, and with a shield: but I come to thee in the name of the Lord of hosts, the God . . . whom thou hast defied." Our readiness for the struggle with error is always measured by the clearness of our apprehension that safety lies in our reliance upon spiritual truth, the word of God.

While the many are unwilling, because unprepared, to entertain and act upon a higher confidence, and therefore naturally look to their material munitions (and this attitude is in large part the logical outcome of an educated sense for which they are not responsible), the spiritually discerning will perceive the true nature of the issue and rejoice in the modest but mighty appearing of the divine idea, the David of true deliverance, demonstrably efficient faith in God. The sword of Saul will again be proffered, yes, urged in solemn conclave of authorities, upon the spiritually relying; and yet what Christian believer can question that the final vanquishment of the enemy hinges upon Israel's devotion to the demonstration of the sovereignty of Truth, expressed in human affairs.

In this exigency, therefore, as in every other, the mandate of God to you and me is clear,—"Ye shall know the truth." False self-estimate is ever insisting upon our incapacity, but conscious adherence to the ever present Christ converts the simple shepherds of human sense into veritable St. Michaels of spiritual power. Spiritual understanding had not been counted upon by Goliath, nor by Saul and his trembling cohorts; all the same it was the determining factor in the terrifying problem of their day, even as it must be in that of ours. To anxious, troubled hearts in many lands Christian Science is bringing the deeper, richer, and more practical significance of these words of the youth who so valiantly and successfully met his Goliath in the valley of Elah: "Wait on the Lord: be of good courage, and he shall strengthen thine heart: wait, I say, on the Lord."

JOHN B. WILLIS.

A New Concordance

The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

The publisher is now ready to receive orders, and shipments will be made as promptly as possible. Single copy, $6.00; in lots of six or more to one address, each $5.50.

Address Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Massachusetts.

Among the Churches

Current Notes

BERKELEY, CAL.—Having outgrown its present location at Athens Hall, 2740 College Avenue, Third Church of Christ, Scientist, will hold services in the Twentieth Century Club House, 2716 Derby Street, beginning next Sunday [Oct. 3]. The church was organized last December, and Athens Hall, with a seating capacity of three hundred, was secured for the services. The Twentieth Century Club House will accommodate six hundred people.

Second Church of Christ, Scientist, was organized less than two years ago, holding services the first year at the Hillside Club. Last January, when it was necessary to secure larger quarters, the High School auditorium, seating twelve hundred, was leased, and the lease has been renewed for 1916.

Digitized by Google

First Church of Christ, Scientist, occupies one of the finest church structures in the city, costing sixty thousand dollars, at the corner of Dwight Way and Bowditch Street. The organization of Second and Third Churches was made necessary by the large congregations at First Church.

Both Second and Third Churches plan to erect church edifices in the future, although no immediate plans for building have been made.—*Berkeley Gazette.*

SPRINGFIELD, MASS.—A new edifice for First Church of Christ, Scientist, of this city, is to be erected at the corner of State and Orleans Streets and will rank among the large churches of this denomination throughout the country. The auditorium is planned to seat twelve hundred comfortably, and the Sunday school room to accommodate eight hundred children. The church plans to build immediately the basement or Sunday school portion of the new edifice, with a seating capacity of eight hundred, and it will be used for regular church services until the main auditorium is completed. It is estimated that the completed structure will cost about one hundred thousand dollars; the part to be constructed at present, about forty thousand dollars.

Although the building project has long been under consideration, it took more definite form last August, when the Christian Science Society, organized in October, 1912, and set off from the church by vote of that body, voted to disband and reunite as individuals with the older church. Shortly afterward a building committee of ten members was appointed to take up the task and forward it.—*Springfield Union.*

The Lectures

Kingston, N. Y.

Dr. Francis J. Fluno lectured on Christian Science before a large audience at Kingston Opera House. Judge Jenkins in introducing the lecturer said in part:—

Jesus said, "Ye shall know the truth, and the truth shall make you free." Free from what? Fear, envy, jealousy, hatred, and pain. To sum it all up in one phrase, free from the bondage of sin. "What is truth?" Pilate asked, and would not wait for an answer. We who are not professedly Christian Scientists have observed the body of men and women who seem to be free from the ordinary vicissitudes of life, notwithstanding they are living under circumstances that we would deem adverse, and notwithstanding they are suffering from what we call afflictions. They seem to be able to rise above the clouds and the smoke of battle to a place of clear vision, where they preserve their serenity while others are confused. They tell us they can do these things because they are free, and the reason they are free is that they know the truth. Then we ask with Pilate, "What is truth?" but unlike Pilate we remain for an answer, which will be given this afternoon by the lecturer.—*Kingston Express.*

Geneva, Ohio

A good-sized audience heard William R. Rathvon speak at the Armory on the teachings of Christian Science. The lecturer was introduced by Glenn C. Webster, president of the Chamber of Commerce, who said in part:—

Although I am not a member of the Christian Science church, I am, and always have been, an earnest seeker after truth, and interested in progress along any line. For that reason I am interested in Christian Science, because it has been demonstrated to me that there is a vital Principle which, if rightly understood and applied to the problems of human life, offers a solution for them. Regardless of the profession or the particular creed or denomination to which he subscribes, every man is looking for happiness,—seeking relief from some discordant condition in his life. Having been thoroughly convinced that Christian Science offers such relief to the world, I am glad to have the opportunity of introducing one who will, I know, if we are fair and open-minded, convince us that Christian Science is a religion of love, that it can be put to practical use every day, in every walk of life, and that it does offer to the world health, hope, and happiness.—*Geneva Free Press-Times.*

San Francisco, Cal.

Bicknell Young delivered a lecture on Christian Science in Dreamland Rink to an audience that filled this large building to overflowing. The lecture was given under the auspices of Fifth Church of Christ, Scientist, and Mrs. Gertrude S. Slocum, second reader, introduced the speaker as follows:—

All men desire good, and they have persistently sought this good outside of themselves—in the pursuit of material things—ever since Eve yielded to the voice of the serpent and thought to find health, wisdom, and happiness through eating the forbidden fruit of the tree of material knowledge. Through literature and art this elusive pursuit is interminably depicted—men and women struggling toward this El Dorado of satisfaction in materiality, only to find that material good once grasped, the satisfaction so earnestly desired and painfully sought disappears through opened portals, whither they are unable to follow.

Weary humanity is slowly awakening from its illusion and turning to find out if there is not another road by which it may obtain this longed for good. There is such a way. Two thousand years ago Jesus the Christ taught and demonstrated the way to health, happiness, holiness, and peace. In our day another, a woman of our own land, Mrs. Eddy, has given us the Science of this way to good,—Christian Science, "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony," as she herself defines this way of Life on page 1 of "Rudimental Divine Science."—*San Francisco Examiner.*

Exeter, Neb.

A lecture on Christian Science was delivered by Prof. Hermann S. Hering at the Auditorium. He was introduced by Supervisor D. Songster as follows:—

I am not a member of the Christian Science organization, but I cannot help being attracted by the high class of intellectual people in all communities who compose this organization. Whatever may be our prejudice or indifference, we must admit that Mrs. Eddy, who founded the organization, was the most remarkable woman of modern times. Whether we are Christian Scientists or not, we all believe in the brotherhood of man and the fatherhood of God. We are all striving for the same object in life,—health, happiness, and prosperity.—*Fillmore County News.*

New York, N. Y.

When introducing William D. McCrackan, who lectured on Christian Science for First Church of Christ, Scientist, Campbell MacCulloch, first reader, said:—

In the history of the last twenty centuries two great parallel events stand forth prominently as remarkable evidences of the power of Truth to overcome the dislike of man-

Digitized by Google

kind for change, that state of the human consciousness which has come to be known as the closed mind. These two events were the spread of Christianity in the first century and the speedy acceptance of Christian Science in the nineteenth and twentieth centuries. Both movements were unlike anything that had ever gone before, for both made their appeal to the closed mind in the only way in which such an appeal can be made successfully; that is, by evidential proof. When Jesus was questioned as to his claim to the Messiahship, he referred his questioners to the healing works he had done. When Christian Science preaches its gospel, it stands ready to substantiate every statement with the offer of demonstrable proof. In a word, it practises what it preaches, and usually furnishes the practice first.

Early Christianity made its way into every quarter of the then cultured world. Today Christian Science has penetrated into almost every country of the civilized globe, and is daily driving home the vitalizing truth that the solvent for all evil is to be found in a practical, working understanding of God, an understanding that not alone heals all diseases, but eliminates all the discords which enter into human experience.—*Correspondence.*

Lectures to be Delivered

CALIFORNIA—Oakland (Seventh Church): Dr. Francis J. Fluno, Church Edifice, Harrison Boulevard, between Twenty-third and Twenty-fourth Streets, 8 p.m., Dec. 20 and 21.

CONNECTICUT—Danbury: Frank Bell, Odd Fellows Building, 18 West Street, 8 p.m., Dec. 21.

GEORGIA—Columbus: Clarence W. Chadwick, Dec. 16.

IDAHO—Boise: Prof. Hermann S. Hering, Pinney Theater, 3 p.m., Dec. 19.

Pocatello: Prof. Hermann S. Hering, Methodist Church, 8 p.m., Dec. 21.

ILLINOIS—Bloomington: Jacob S. Shield, Irvin Theater, 3 p.m., Dec. 19.

Chicago Heights: Charles I. Ohrenstein, Masonic Temple, 8 p.m., Dec. 20.

De Kalb: George Shaw Cook, Church Edifice, Third and Oak Streets, 8 p.m., Dec. 20.

Paris: Willis F. Gross, Shoaff's Opera House, 8:15 p.m., Dec. 20.

Springfield: Charles I. Ohrenstein, First Christian Church, Sixth and Cook Streets, 8 p.m., Dec. 21.

INDIANA—Bloomington: Willis F. Gross, Crescent Theater, North College Avenue, Dec. 21.

Elkhart: Virgil O. Strickler, Bucklen Opera House, 3:15 p.m., Dec. 19.

IOWA—Anamosa: Clarence W. Chadwick, Opera House, 8 p.m., Dec. 21.

Humboldt: Willis F. Gross, Church Edifice, 8 p.m., Dec. 17.

Perry: Clarence W. Chadwick, Grand Opera House, 3:30 p.m., Dec. 19.

MARYLAND—Baltimore (First and Second Churches): Frank Bell, Lyric Theater, Mt. Royal Plaza, 3:30 p.m., Dec. 19.

MASSACHUSETTS—Cambridge (Society of Harvard University): Bliss Knapp, Emerson Hall, 4:30 p.m., Dec. 20. (Open only to members of the University.)

Framingham: Bliss Knapp, Gorman Theater, 3 p.m., Dec. 19.

Melrose: Bliss Knapp, Memorial Hall, 7:30 p.m., Dec. 19.

Merrimac (auspices Amesbury): Bliss Knapp, Sargent Hall, 8 p.m., Dec. 17.

MICHIGAN—Alma: Hon. Clarence A. Buskirk, Wright Opera House, 3 p.m., Dec. 19.

Bellevue: Hon. Clarence A. Buskirk, Baptist Church, 8 p.m., Dec. 23.

Paw Paw: Hon. Clarence A. Buskirk, Colonial Theater, 8 p.m., Dec. 21.

MINNESOTA—Albert Lea: George Shaw Cook, Church Edifice, Adams Avenue and Clark Street, 8 p.m., Dec. 23.

Fairmont: Willis F. Gross, Church Edifice, 222 East Blue Earth Avenue, 3:30 p.m., Dec. 19.

MISSOURI—St. Louis (First Church): Prof. Hermann S. Hering, Church Edifice, Kingshighway and Westminster Place, Friday evening, Dec. 10, and Columbia Theater, Saturday noon, Dec. 11.

MONTANA—Anaconda (First Church): Prof. Hermann S. Hering, Margaret Theater, 9 p.m., Dec. 20.

NEBRASKA—Hastings: George Shaw Cook, Kerr Opera House, 8:30 p.m., Dec. 16.

NEW JERSEY—Cranford: William D. McCrackan, Church Edifice, Springfield Avenue and Milne Street, 8:15 p.m., Dec. 20.

Dover: William D. McCrackan, Play House Theater, 8:15 p.m., Dec. 19.

Hoboken: Frank Bell, Auditorium Public School No. 1, 8:15 p.m., Dec. 20.

Newark (First Church): Charles I. Ohrenstein, Shubert Theater, 568 Broad Street, 3:30 p.m., Dec. 19.

Orange: William D. McCrackan, Central School Auditorium, 8 p.m., Dec. 21.

NEW MEXICO—Artesia: Hon. Clarence A. Buskirk, Carrington College, 8 p.m., Dec. 14.

NEW YORK—New Rochelle: William D. McCrackan, Loew's Theater, Main Street, 3 p.m., Dec. 19.

Fort Edward: William D. McCrackan, Methodist Episcopal Church, 8 p.m., Dec. 23.

Testimonies of Healing

The eighth of January, 1888, is the most memorable day in my life, for it was then that I purchased "Science and Health with Key to the Scriptures" by Mrs. Eddy. Previous to this time I had borrowed the book for a few days and read it in a cursory manner, but it was not until I owned a copy of it myself and made a careful study of the contents that Christian Science became to me the most intensely interesting subject I had ever investigated.

For years I had been afflicted with a supposedly inherited throat trouble, and a noted specialist had told my father that I would die with lung trouble of a quickly developing nature. After a severe mental struggle I had turned away from the Puritanic teachings of my childhood in regard to God. It had become clear to me that if God was the only power and knew all about these discordant earth conditions, He must be the cause of all our miseries. If this was true He was a cruel God, instead of a God of love, and I could no longer worship Him. Then came this great light shining on every page of our text-book,—a new, wonderful, perfect idea of God and my relationship to Him as His child. It engrossed me completely. I was no longer hopeless, but the days were filled with peace and joy. At that time there were comparatively few Scientists. Our literature was limited to Science and Health and *The Christian Science Journal*. I had never heard that the reading of Science literature sometimes brings healing, but after a few weeks of such reading it dawned upon me that I was a well woman.

With this healing came a great desire to help all my friends to see this light. Impulsively I wrote to my old classmates, feeling sure that when they knew of my healing they would all accept the truth at once. They not only rejected Christian Science but did not believe in my healing. Indeed, all but one dropped me as a correspondent, and this one intimated in her letter that she wished to hear no more on the subject. This was a severe but helpful lesson, as it taught me that Christian Science was not to be discussed without due deliberation.

Christian Science is the fruit of Mrs. Eddy's selfless life. There has never been a doubt in my mind since I was healed that it will ultimately become the universal religion. Any one can understand it if he will prayerfully read the Christian Science literature and put its teachings into every-day practice.—Frances Mack Mann, Denver, Col.

✧

I came into Christian Science about three years ago through the healing of an illness which the doctors called a serious stomach and bowel disorder, and also a severe head trouble from which I had suffered for years, and for which every material remedy brought to my notice had been tried, as well as several doctors. No relief was experienced, however, from material means; on the contrary I continued to get worse. When I heard of Christian Science I decided as a last resort to give it a trial. Before going to the Christian Science practitioner I had been unable to eat anything except light food, but after the first treatment I was able to eat a hearty meal, and have done so every day since. With six treatments all the other ailments disappeared. From the day of the first treatment I have not used any medicine or applied any material remedies. Christian Science has brought me back to health, peace, and joy, and more than that, it has given me a God who is with us at all times in all places and is always a God of love. It has also taught me the value of right thinking.

While I have not yet worked out my full salvation, I have received many blessings and have made many demonstrations in my own family and for others. I have had to do a great deal of mental work for myself; however, I found that fear was the origin of the discord. One by one I have had to master its different phases, knowing that "he that feareth is not made perfect," for divine Love is all, and there is no room for fear in thought. I shall never forget how the fear was first cast out of my consciousness, and how under all the trouble and human anxiety there was a note of joy. Truly, as Mrs. Eddy says, "the effects of Christian Science are not so much seen as felt" (Science and Health, p. 323).

The physical healing was indeed wonderful, and is much to be grateful for; but the spiritual light, joy, and peace which I experienced at the same time is beyond words to express. My prayer is that by more willing obedience to Truth each day I may prove my thankfulness to God, the giver of every good and perfect gift, and my love for our dear Leader, who brought us this Science.

Almira Jones, Hagerstown, Ind.

✧

Over a year ago I was taken ill with severe pains in the stomach and back. These attacks had occurred before, but they always wore off in a few hours and I had never had treatment of any kind for them. This time, however, the suffering became so intense that I asked my husband to call a Christian Science practitioner. He wanted me to have a doctor, but I preferred a practitioner, so one was called, and absent treatment was given me that afternoon.

The pain was relieved, and after retiring that night I slept quite soundly until about eleven o'clock, when I awoke in great pain. I prayed aloud to God in my distress, and then my sister advised me to have a doctor and find out what was the matter. By this time I was almost gasping for breath, and it seemed to me that I must get relief soon or pass on, so I said I did not care what was done so long as no time was lost. A doctor who was called, upon examination said I had gall-stones, and that he could do nothing except give me an opiate. I had already grown easier, but he administered the drug and then left. The next day I wrote to the same Christian Science practitioner, telling him my experience, and asked him to treat me again. After two weeks' treatment I felt that all fear of the trouble was gone, and it has never returned.

I have had numerous demonstrations of Truth's healing efficacy, and it has brought comfort and strength in many a trial. We have two little children, and although my knowledge of Science is limited, it is a great help in overcoming my fears for them. My thankfulness to God for this truth as taught by Mrs. Eddy is unbounded.

May Buchanan, Montgomery City, Mo.

✧

I must speak of the love I have for Christian Science with its wonderful teachings. The first time its healing efficacy was proved to me was when my niece was ill with typhoid fever. She was under the doctor's care but refused to take medicine, so the doctor himself recommended Christian Science after he had given up all hope. As our entire family knew nothing of this teaching, some were doubtful, others were willing. A practitioner was called, and in one treatment the child was sitting up and asking for food. In a short time she was entirely healed. This made a deep impression on me and I longed to know more of Christian Science.

Three months later the longing was gratified in the healing of a terrible burn on my little girl. I was dressing her, when in some manner she fell, with one arm on a hot stove close

Digitized by Google

by. Her screams were pitiful, and the thought came to me to try Science. My husband rushed to the nearest telephone for help. In ten minutes the child was peacefully sleeping and the burn caused no suffering, while in three weeks it was perfectly healed, and today no one would know the arm had ever been burned.

Since then the blessings we have had are countless, and we are all thankful for this saving truth, which we use constantly. The text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, speaks like something which once heard is never forgotten, and we hold a loving gratitude to its author for bringing this great spiritual light to humanity.—JESSIE WARE, Stockton, Cal.

It is seven years since I turned to Christian Science, and during that time no material remedies have been used. I began the study of this religion for physical healing, having been a sufferer for many years from intestinal disorders. Even an operation left me no better in health, and I was greatly worried and discouraged. Then I obtained a copy of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, from a practitioner, and after reading it diligently for two days I decided to try Christian Science. I well remember the evening that I destroyed several kinds of medicine and earnestly began the study of this truth. There was a steady gain in health from the first, and the fear of eating certain kinds of food was soon destroyed. I was very glad to be released from this bondage. Then bowel trouble was overcome, and again I was thankful. Thoughts of envy and jealousy have also been eliminated.

During these years I have many times been able to prove the healing efficacy of Christian Science. One experience in applying my understanding of this teaching stands out in memory very plainly. While working for a mining company in the southern part of the state of Sinaloa, Mexico, I was sent to the nearest port to receive a shipment of mining machinery. After finishing this business, I started on the return trip, and as it was a journey of two or three days, I had to stay overnight in a small Mexican town. In the evening I was suddenly taken with a severe fever and felt very ill; a feeling of loneliness came over me too, but I at once applied my understanding of Christian Science, and after a few hours' work went to bed and to sleep. When morning came I awoke entirely free. For this demonstration I was very thankful, as it proved to me that divine Love is an ever present help. Even if I had wanted to do so, I could not have sent to any one for help; but herein lies the blessedness of Christian Science, that at any time or in any place we can apply our understanding of its teachings.

I rejoice in the peace of mind gained from the study of this healing truth. I am thankful to God, and grateful to our dear Leader, Mrs. Eddy, for this wonderful religion, which is daily freeing all mankind from bondage.

CHARLES M. ISAACSON, Orange, Cal.

Through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was healed of so-called paralysis of the left side of the body. This was done without any help from a practitioner. During eight years twenty-one physicians had tried to cure me. I had always been exceptionally well, until I began to have pain in the head so constant and excruciating that I could not even sleep, except for a few moments at a time. Physicians called the trouble meningitis, and it lasted in its severity for twenty-seven months, when it was followed by so-called paralysis.

During those eight years under *materia medica* I became well enough at times to walk about four blocks and could use the arm on the afflicted side a little better than the leg; but I was left so bound down by medical and material laws and limitations that I was practically an invalid, with the desires of one in the twenties but physically like one in the eighties. I finally became convinced that physicians could not cure me, and it was then that I began the reading of Christian Science literature which brought about my healing. For more than two years I have daily gone up and down stairs as I wished, whereas when under *materia medica* a half dozen steps taken occasionally, not daily, kept me chair-bound. Now, no matter how long I am standing or walking, I feel no discomfort, either at the time or afterward, while formerly the least exertion caused great pain for a long time. This was only one of numberless limitations resulting from the so-called paralysis from which Christian Science freed me.

This healing took place about four years ago. Since then I have relied entirely on Christian Science and am still perfectly well. It has been proven to me that just to the degree that I both understand and apply this interpretation of the Bible all my needs are met. My husband has been in Science for two years, and has received immeasurable help and healing, physically, financially, and morally.

Words cannot express the boundless gratitude in my heart for Mrs. Eddy.

ELEANOR THOMSON GULLETTE, Chicago, Ill.

If my best friend had told me a few years ago of the possibility of the newness of life which came to me in February, 1913, through an appeal to Christian Science for physical healing, I would have scoffed at the idea. I had suffered for fourteen years from a severe intestinal trouble which had baffled the skill of eight good physicians, the last to whom I applied saying the disease was one of the most difficult to heal with which doctors had to contend, and that drugs would be of no benefit. I was grateful for his honest opinion, but left his office with tears in my eyes and sadness in my heart at the seeming hopelessness of my condition. Eight years previous to this time I had submitted to an operation, on the advice of two physicians, and was in the hospital for five weeks, but after returning home much reduced in strength I soon found that the cause of the trouble had not been removed. As before, I was seldom free from pain, and therefore became so discouraged that many times I longed for death, which I thought might bring release or oblivion, although I possessed every earthly comfort which heart could desire except health.

I had once remarked to a woman doctor, who had tried persistently to relieve my condition by electrical and vibration treatments, that the only remedy remaining for me to try was Christian Science. We both made light of the idea at the time, but about a year later she wrote: "Why don't you try Christian Science? I know of many who have been healed." She then mentioned a practitioner, and I finally went to her, thinking it would at least do no harm. When the practitioner asked what I knew of Science, I truthfully replied that I knew nothing whatever about it; and when she asked what was my idea of God, I suddenly realized that my idea of the Supreme Being was indeed vague, and that what He was, and where, I knew not. I had attended church the first thirty years of my life, but illness and lack of strength prevented my later attendance. The practitioner said she would like to have me read the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I thought it would probably be uninteresting and difficult to read, like the Bible, which I had never understood,

Digitized by Google

but I took the book home, and after reading it nearly all of one day, was more loath to discontinue the reading than I had been to begin it.

I continued to read Science and Health at every opportunity for about four weeks, the practitioner in the mean time giving me treatment. I did not by any means understand all that was written in the book, but beautiful glimpses of Truth came to me, and the very presence of God was revealed. I lost all sense of time and space, and pain and disease vanished. I had hardly looked at the Bible for twenty years, but in childhood I had committed to memory many of the best passages. These all came to me with a fuller and truer meaning, and I realized that "every word of God is pure." All was reasonable and clear as the understanding came to me that God or good, the only power, is Mind, the perfect Love which removes all fear, the Truth which makes us free, and the abundant Life which knows no death.

I am so happy in knowing that God is ever present divine Principle, by which we can solve every problem of life. I am truly thankful for the Christ-love which was shed abroad in the heart of our Master, and grateful to Mrs. Eddy, who through her purity of thought has shown us "the way, the truth, and the life." My earnest prayer is that the Spirit, not the flesh, may be manifested in me.

ALICE B. KEENEY, Somersville, Conn.

Early in 1912, when suffering from a throat affection, a friend induced me to have Christian Science treatment, with the result that in two days I was perfectly well. Beginning then to realize to some extent the power of Truth, I secured the help of the same kind practitioner for our son, six years old, who had very little appetite and seemed to be suffering from a general anemic condition. After a few treatments we were very happy and grateful to see a decided change in his actions and appearance. His appetite returned, and he soon looked like a normal, healthy boy.

Since then we have continued the study of Christian Science and have found it of increasing interest and profit. Many seeming inharmonies have been destroyed in our home. Though certain things have not yet been overcome, we are sure the demonstration will be made, and it is with a deep sense of thankfulness to God for blessings received that I write this testimony.—ADDIE C. RICHARDSON, Denver, Col.

It is five years since I first heard of Christian Science, and since then I have received a great deal of help, as have also members of my family. I am now able to prove the power of Truth myself, and I trust my experience may be of benefit to others. I have been healed of blood-poisoning of long standing and also of stomach trouble. All one summer I was unable to walk or eat much, but by applying the truth, as well as reading the Christian Science literature and daily studying the Bible, and "Science and Health with Key to the Scriptures" by Mrs. Eddy, this has been overcome. I am thankful for the peace and harmony that comes to each of us, and for the understanding that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

MARGARET B. STEDMAN, Good Ground, Long Island, N. Y.

Six years ago I was healed through Christian Science of lung trouble in one of its worst forms. In 1908 I caught a severe cold, which finally settled on the lungs. The doctor did all he could for me, but I steadily grew worse. On account of continual coughing and severe pains in the left side I was unable to lie down, so I had to be propped up with pillows to get a little rest. My parents were worried, but when a trip to Florida was spoken of the physician said that it would be of little use, as one lung was already gone and the disease had settled in the other, and that I could not live more than a few weeks. My parents were, however, determined to go South, and we left in January for St. Augustine. I now realize that divine Love was leading me.

I was not benefited by the ten weeks that we spent in Florida, but when we were about to return home, a lady with whom we had become acquainted placed the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, in my room with the request that I read it, and I did so. When I returned the book, she told me her daughter had been healed through the study of it. I became deeply interested, realizing that at last I had found something that would help me. She gave me the name of a practitioner, and after the first treatment I felt as though I never wanted to see medicine again. We started for home in about a week, and on my way I stopped over at Cincinnati to place myself in the hands of a practitioner whom I had formerly known outside of Christian Science. Through her help and occasional visits I was greatly benefited, but when winter came again the fear returned, and also the cough.

As we were new in Science and had not sufficient faith in Truth, we started for the South again. At Tampa I became associated with a number of Christian Scientists, and they helped me in my studies. Finally, through a more persistent study of the text-book I lost the belief that my health was dependent on climate, and when I went home I felt like a different person and knew I was healed. Since then I have spent the winters in my home town and am healthier and happier than ever before, all of which proves that God is not confined to a locality but is everywhere.

My eyes, which had been very weak, were also healed through Christian Science, and glasses which had been worn continually for about fifteen years have been abandoned. I now see perfectly. I am thankful to Mrs. Eddy for giving us Christian Science and hope this testimony will be of benefit to others.—ANNA MAE HOPPE, Foster, Ohio.

Several years ago, while living in a mining-camp out on the Mohave Desert, I read some criticisms of Mrs. Eddy's writings. Up to that time I had never investigated her writings and had no thought of doing so, for I believed that I was already in possession of as clear an understanding of God's plan of salvation as it was possible for me to have this side of what I then believed heaven to be; but after reading these criticisms I thought it only fair to investigate for myself before passing judgment. I therefore borrowed the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, from a friend, and I had not read many pages before I became convinced of the truth of what I had read. When I grasped the thought that "all is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468), and that man as God's image and likeness is not material but spiritual, I was compelled to accept it, for divine Love bore witness to the truth unfolded, and my healing or conversion to Christian Science was practically instantaneous. From that hour Truth has been our only physician, for my dear wife accepted Christian Science at the same time. Through this correct understanding of God and man we have overcome what to mortal sense was a severe case of ptomaine poison, as well as bilious fever, rheumatism, and other false beliefs of mortal mind, including the tobacco habit.

I am truly thankful for the truth revealed in Christian Science, for its simplicity and completeness, and I am more

Digitized by Google

than grateful to Mrs. Eddy for unfolding to this age the understanding of how to pray aright, how to be still and know that the nearest thing to man always is his divine Principle, Love, and that it is the "recognition of infinite Love which alone confers the healing power" (Science and Health, p. 366). We know that this truth of being is unfolding more and more each day in the consciousness of all sincere seekers after Truth, and that it will continue to unfold until we lose all sense of evil and know only good.

SALT L. KAIN, Los Angeles, Cal.

Having enjoyed the benefits and privileges of Christian Science for almost eight years, I am glad to testify to numerous healings in that time. One Saturday evening in lifting a heavy object my ankle received a severe blow. For a minute the pain seemed unbearable, then I promptly forgot all about the incident.

About two hours afterward the ankle began to swell and became inflamed, so that I could not touch the foot to the floor. It was very painful during the early part of the night, and although I kept working mentally as we are taught to do in Christian Science, there did not seem to be much improvement, and I wondered if it would be necessary to call some one over the telephone for help. Then I thought and declared immediately that I did not need to go anywhere or get anybody for help, for my help was right there. The Bible says that God is "a God at hand," and not afar off. With a few other thoughts along the same line I began to feel quieter and could rest my foot in one position, which I had not been able to do before, and shortly afterward fell asleep. In the morning I could not get to church, but Sunday afternoon I was able to go down-stairs by leaning on something. The next day I could get around without any support, and that evening walked eight or ten blocks with members of my family. By Wednesday all traces of the injury had disappeared. Having suffered for weeks with a similar injury before coming into Christian Science, I realized anew what a great blessing spiritual healing is.

I am sincerely grateful for all sources through which added understanding is coming to me each day, and especially so to Mrs. Eddy, our faithful and courageous Leader through whom these were all made possible. Christian Science has been our only stay through many trials and difficulties, and it has never failed us. I trust this testimony will be helpful and encouraging to other seekers for Truth.

FRANCES H. SNOWELL, Chicago, Ill.

[Written for the *Sentinel*]

Mary Magdalene

FRANCIS C. GEORGE

'TWAS not a hurt, reproachful friend who spoke
To that brave woman standing by the tomb,
Seeking to pierce the early morning gloom
Before the less indebted ones awoke;
For she had dared to be herself, to go
As her untutored richness led, to love
The best she knew, though he seemed far above
Her, lying shamed by those who made her so.
As his forgiveness brought her then to see
God's child upright and self-condemned no more,
So now his "Mary," sharp, decisive, clear,
Awoke her to a higher ministry.
"Master," she cried, then swift his message bore,
For Love had dried the unavailing tear.

From Our Exchanges

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

It is not Christianity that has failed, or the churches either, whatever their faults and shortcomings; it is civilization that has failed, or rather that ideal of civilization which is concerned wholly with material progress and has made mankind to be absorbed in that to the exclusion of almost everything else; it has blinded the vision of the race, and we see the result. Having rejected Christ's way and chosen another, whatever may be laid to the charge of churches and preachers the so-called civilized world is having to pay the price. What we are witnessing and enduring is the inevitable outcome of a wrong view of life and its possibilities to which civilization has stood committed. We see now, or ought to see, the utter futility of trying to put the world right by multiplying our possessions and increasing our command of the resources of nature. Nothing will save us but a change of heart, and that will never be effected by swords and guns, not to speak of the whole background of deplorable assumptions and convictions out of which commercialism and militarism arise.

[William T. Foster in *The Christian Register*]

If religion is to be based on authority, either spiritual or temporal, and summed up in fixed creeds, dogmas, and observances, with no problem of adaptation to man's increasing knowledge of nature and power over her forces, then all thought must be banished that is at variance with the accepted authority. But such religions are rejected by increasing numbers of men and women. These people appear to be the immediate problem of religious education. If they are to have any religion at all, it must be one that grows as they grow, enlarging its scope with their enlarging conception of the meaning and joy of life, growing most powerfully with their own passion for seeking truth with their own free expressions of their love of their fellow men in definite, immediate, practical acts. But such a religion can be acquired only by men who think, and retained only by men who continue to think. This, above all, is the need of intellectual enthusiasm in schools and colleges.

[Alfred Williams Anthony in *The Standard*]

A realization of the unseen, at least some comprehension of spiritual presences, marks the spiritual man. He does not walk alone. There are at least glimmers of light in the night. He feels an undergirding arm. He may not understand all the ministrations of the Holy Spirit; he may scarcely understand the functions of the Spirit; but he enters into a divine fellowship. He becomes able, in a measure at least, "to practise," as the ancient schoolmen used to say, "the presence of God." Increasingly does God become to him a real person, ever present. There may be a touch of mysticism in his experience, but John the apostle was a mystic; and Jesus the Christ was a mystic, having in his soul direct communion with God.

[Rev. Frank N. Riale, Ph.D., D.D., in *The Christian Work*]

If any nation in these darkest war days of the world had sought to be its brother's keeper in place of its conqueror; if any people had looked upon the things of other nations as it looked upon its own; if any nation had been big enough at heart to have turned the left cheek when it was struck upon the other; if any nation would have loved its enemies to the death and stood still in holy confidence, saying, "The Lord rebuke thee;" if any nation had actually believed what it had all along in its religious ritual professed, "Vengeance is mine; I will repay, saith the Lord," and would thus have fed its enemy

Digitized by Google

with the angels' food which Emerson says all men are made to partake of,—there would have been and there could have been no "great war," which has blasted and blighted the heart of humanity in this nothing but the most brutal conflict that the world has ever seen. Oh, what foul crimes have been done in the name of justice—mock justice—that might have happened never, forever, had the spirit of the forgiving and nonresisting Christ filled the hearts of the combatants, in place of the spirit of retaliation, of "an eye for an eye, and a tooth for a tooth," the old Jewish law that Jesus came to wipe out of the statute books of humanity forevermore!

[*Northwestern Christian Advocate*]

"Seek good, and not evil, that ye may live: and so the Lord, the God of hosts, shall be with you. . . . Hate the evil, and love the good, and establish judgment in the gate: it may be that the Lord God of hosts will be gracious unto the remnant of Joseph." This thought of the prophet Amos is especially timely for our day; for with us, as with Israel of old, there is a tendency to offer religious ceremony for religious conviction. This is an age-long tendency. Amos confronted it in his day as Jesus did in his. The parable of the barren fig-tree is a symbol of warning to all ages. It is not so much that the tree has no fruit as that in putting forth leaves it makes a show of having fruit when there is no fruit. Open wickedness one knows how to deal with. We may deplore it, but there is no hypocrisy about it. It is when one confronts injustice in the disguise of religious scrupulousness and heartlessness posing as orthodoxy that one's gorge rises. Upon the Pharisees who could devour widows' houses while ostentatiously making long prayers Jesus, the gentlest and most patient of men, pronounced his swiftest and most unsparing condemnation.

[*The Universalist Leader*]

In spite of all evidence to the contrary, the message of the Christian religion is taking a deeper hold upon the heart of men and things. It may be that some churches and ministers are becoming worldly, but it is none the less true that a good many worldly men and things are becoming religious. It is startling to note how universally statesmen who are worthy of the name feel that they have not touched the heart of things unless they work a good deal of the gospel into their speeches. No man would dare go before the people for support today who did not make his plea on high principles rather than expediency.

[J. J. Knap, D.D., in *The Christian Intelligencer*]

The eye of faith sees differently than the eye of flesh; it sees better and more clearly; it sees the truth and the reality. The eye of faith turns away from the things of earth in order to look up on high and, like St. John, through an open door to gain a glimpse into heaven. Here below the peoples are shaken as dice in a cup, but up yonder faith perceives the Lamb as it had been slain, in the midst of the throne, having in his hand the book with the seven seals, and engaged in breaking these seals one by one.

[*American Lutheran Survey*]

Beauty is by no means the despicable, negligible thing some of our sterner moralists would have us believe. The creator of the universe was the creator of a million beautiful things; and so universally did He stamp beauty on the face of His handiwork that they are irreverent, no doubt unwittingly, who speak of beauty as being a thing to be ignored and scorned. The fact that beauty has been pressed into the service of evil, moving Solomon to say, "Favor is deceitful, and beauty is vain," does not dispose of beauty as a desirable element in our life and experience.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition" size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

A new pamphlet, "What went ye out for to see?" is now on sale. This pamphlet contains the four following articles, republished from the Christian Science periodicals: "Principle Not Person"; "Jesus of Nazareth"; "Jesus the Christ"; and "Jesus and the Christ."

The pamphlet, "Causation," by Frederick Dixon, has been translated into Norwegian "Skapende Kraft," and is now published with the English and Norwegian versions on opposite pages.

The pamphlet, "Fulfilling the Law," has been translated into Danish, "Lovens Fylde," and is now published and on sale. This new pamphlet has the English version printed opposite each page of the translation.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 286 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 286 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, largesized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Oxford India Bible paper edition, with stiff morocco cover. Single copy, $6.00, six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities, please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post office as second-class matter.

Items of Interest

His Excellency the Governor-General, Sir Ronald Munro Ferguson, on his first official visit to South Australia, took the opportunity to become acquainted with the conditions in the state as regards afforestation. As a recognized authority on the subject, he said: "I have been much impressed with the variety of the hard woods grown in Australia. They are really wonderful, and I believe that here in Australia you have a larger variety of the best hard woods than exists in any other country in the world; but the trouble is that they have been wasted to a large extent. By that I mean that in many instances these hard woods have been used when cheaper and softer timber would answer the same purposes. This country has an advantage in timber growing, for a forest matures in thirty years, whereas it takes sixty years to reach the same stage of maturity in Europe. The people should realize that practically all the timber now imported from the Baltic, Canada, and Japan can be grown equally well in Australia, with its three million square miles." The total area reserved for forests in South Australia on June 30, 1914, was 154,232 acres.

Ernest Thompson Seton, naturalist and writer of books on nature, has announced his resignation as chief scout of the Boy Scouts of America, because of a gradual change toward policies to which he is opposed and for which he blames the present chief scout executive. "Militarism now comes first, and woodcraft, the original purpose of the movement, second," according to Mr. Seton, who has announced the formation of the Woodcrafts League, inviting members of the Boy Scouts to join it. "When Baden-Powell and I organized the Boy Scouts of England in 1908 and the Boy Scouts of America in 1910," he says, "our purpose was to make all young people of America outdoor children by teaching them the joys of outdoor life. As originally formed the Scouts of America was to be a message of conservation and brotherhood. The study of trees, flowers, and nature is giving way to wig-wagging, drills, and other activities of a military nature, thus destroying the symbolism of the organization. As it stands now, militarism comes first and woodcraft second."

Dr. Thomas H. Norton of the department of commerce of the United States proposes a plan for furnishing more and cheaper power from the Niagara Falls. "The project," Doctor Norton says, "contemplates the construction of a dam about half a mile above the falls, where the river is a mile wide. The dam I propose would have a maximum height of 40 feet and a length of a mile and a quarter, reaching the shore contour 600 feet above sea-level. Provision would be made for the simultaneous closing and opening of a series of gates controlled by electricity. It would cost about six million dollars to build and equip this structure. The total cost of the project would reach $100,000,000. The manner of manipulation would be about as follows: At eight o'clock in the evening the entire series of gates on the dam would simultaneously close. The volume of water passing the American falls would falter and diminish until the falls would be practically dry. This same result would be obtained all the way across the river to the Canadian shore. At ten o'clock in the morning the water would be turned on."

The Panama-Pacific International Exposition at San Francisco, Cal., closed Dec. 4. A salute of twenty-one guns at sunrise that day opened a carnival which lasted until midnight in celebration of the success of the fair. The exposition opened Feb. 20, and the attendance passed the seventeen million mark on Nov. 19. The last report, covering the period from Feb. 20 to Oct. 31, showed a net cash income of $1,410,876, out of a gross income of $6,048,129. During the life of the exposition more than eight hundred congresses and conventions were held in San Francisco and the bay cities. These were meetings of national and international organizations representing social, political, fraternal, industrial, economic, religious, medical, agricultural, scientific, and various other associations.

The validity of contracts for advertising in Sunday newspapers has been upheld by the Missouri supreme court. The decision was written by Chief Justice Woodson. The case at issue was a suit of a publishing company for payment on a contract for Sunday advertising. The defense argued that the publication of a newspaper on Sunday was a violation of the state labor law. The St. Louis court of appeals decided against the publishing company, which appealed to the supreme court. The opinion of the chief judge of the supreme court says: "The only question presented for determination is whether the publication of the great daily papers of the country on Sunday is a work of necessity."

Experiments have been made by the United States bureau of standards to develop a method of accelerating the hardening of concrete, in order that the material might be used in revetment work in place of the willow mats that have been used in the past along the Mississippi River. The bureau finds that 4 per cent of calcium chloride added to the mixing water increases the strength of the concrete at the age of one day 100 per cent or more. In some cases the concrete thus treated attained a strength in two days equal to 75 per cent or more of the strength normally obtained in one month.

The invention of a new type of adjustable wireless tuner, which greatly simplifies the present intricate and costly apparatus used to receive European messages in this country, is expected completely to revolutionize the wireless industry, according to Henry C. Gawler, United States radio inspector for the New England district. The instrument is simple in construction and small. With it and an aerial 50 feet high and 225 feet long, messages from Germany can easily be picked up and correctly recorded, it is said.

Conclusions regarding what most needs to be done for American agriculture were summed up by the third national conference on marketing and farm credits at its final session in Chicago last week, in the adoption of resolutions strongly endorsing to Congress rural credit legislation, recommending various means to improve marketing, and establishing a national organization society to encourage local cooperative groups of growers. The recommendations advise that in irrigation sections the states, or the nation and the states, loan money to settlers to aid in the preparation of public land for cultivation, or in the purchase of privately owned land to be resold to settlers.

As vindication of an irrigation policy involving millions of dollars and much labor, western Canada has just held the biggest irrigation congress in its history in Bassano, Alberta, the town which sprang into existence with the construction there of the gigantic dam and irrigation system. The convention included a trip of inspection over the Canadian Pacific's huge Bassano dam, Brooks aqueduct, and the $17,000,000 irrigation system, now the largest on the American continent.

On the ground that a part of the act is an unwarranted interference with personal and property rights, the full bench of the supreme judicial court of Massachusetts declares unconstitutional a statute in the acts of 1914 which provides that employees in and about a steam railroad shall not be engaged at labor more than nine hours out of ten and which also provides that the extra hour shall be allowed as a lay-off.

A new road, the Jackson Highway, running from the Great Lakes to the Gulf of Mexico, is being advocated. Beginning at Buffalo and Chicago on the Great Lakes, it is proposed that the eastern and western divisions of the highway shall unite at Louisville on the Ohio River and thence southward be a single great thoroughfare by Nashville to New Orleans, on the gulf.

Steamship "Clan Buchanan" arrived in the port of Boston the other day with a full cargo of jute from Calcutta, consisting of 34,285 bales, valued at approximately five hundred thousand dollars. It is said to be the largest and most valuable cargo of jute ever brought into the port.

Judge Hough upholds in the Federal district court of New York the constitutionality of the "three mates law" which requires all steam vessels of United States register of more than one thousand tons, gross burden, and sailing a voyage of more than four hundred miles, to carry three licensed mates.

The matter of a Denver-Grand Canyon automobile cut-off, saving hundreds of miles over the present roundabout route and bringing thousands of additional tourists to Colorado, is being taken up by business men of Colorado, and will soon be laid before New Mexico and Arizona authorities.

The public works committee of the Senate of Uruguay, South America, has returned a favorable report on the bill to tax advertisements posted in the streets and other public places.

Receipt of contributions amounting to nearly one hundred and ten thousand dollars was announced at the recent meeting of the president and fellows of Harvard University.

The Japanese naval estimates for 1916 total about $50,000,000, a decrease of $3,000,000 from the 1915 budget.

True Forgiveness

CLARENCE W. CHADWICK

"To err is human, to forgive divine," Pope said, and he was right. It is the so-called human or carnal mind that errs, because it is "enmity against God," while the Mind that inspires with forgiveness must be capable of destroying all enmity. Mrs. Eddy tells us that "the destruction of sin is the divine method of pardon" (Science and Health, p. 339). In Christian Science pardon and forgiveness are one. Outside of Bible usage the word pardon is often used in a more limited sense. Thus "the executive may pardon, but has nothing to do officially with forgiving," says Fernald. God's forgiveness of any error must be the absolute destruction of the error, leaving nothing to be pardoned or condoned, since the infinite decree is, "I am God, and there is none else."

The prerequisite of forgiveness is the surrender of self-will. Until human will is silenced the divine does not find expression in individual consciousness, and only the action of the divine can destroy a false sense. Hence the need of expressing the divine nature if one would reflect the right idea of forgiveness. Human nature is burdened with erroneous theories and beliefs, with wrong thoughts, all at enmity with God, or good. It does not know what forgiveness means. There was a remnant of this false human nature in the consciousness of Peter when he said to his Master, "Lord, how oft shall my brother sin against me, and I forgive him? till seven times?" and Jesus answered, "I say not unto thee, Until seven times: but, Until seventy times seven." From the reply of the Master it is evident that he wanted to make it very clear to Peter that forgiveness was a constant and not a variable quality. Then he went on to bring out the lesson that it must be "from the heart" and not alone from the lips. Forgiveness must be felt within the affections, else it is not genuine.

According to Webster's dictionary, to forgive is "to cease to feel resentment." Here is a sure sign of the spirit of forgiveness, to cherish no bitterness. The Master's mental attitude toward those who were nailing him to the cross silences all excuse-making on the part of those who would avoid complying with the terms of true forgiveness. He said, "Father, forgive them; for they know not what they do." This is an example worthy of emulation! Could this spirit of the Master permeate the affections of men today, there would be no more wars, no more bitter envyings and strife, no more of "man's inhumanity to man."

One's motives need to be very critically analyzed when there is the least inclination to judge or condemn others. Unless the spirit of true forgiveness is felt, one may rest assured that the Father's forgiveness is not available for him. "Forgive, and ye shall be forgiven." "But if ye forgive not men their trespasses, neither will your Father forgive your trespasses." Many a case of protracted healing hinges upon this very point. Some lurking prejudice or taint of ill feeling is often the binding cord which would hold thought in the clutches of self-will and self-justification.

One who is of a forgiving disposition, not inclined to personalize error but to see it for what it really is, a suppositious lie, arrogantly claiming to be something and somebody, is usually quickly healed. Lord Herbert once said, "He that cannot forgive others, breaks the bridge over which he must pass himself; for every man has need to be forgiven." All men need God's forgiveness, the destruction of error in consciousness, and when destroyed therein nothing remains of error to find outward expression. One's conduct toward his fellow man will usually betray one's inward feelings. Love, to find expression, must be felt. Love as a passive belief never heals or forgives. It was Mrs. Eddy's discovery of Christian Science which opened a way for Love's activity upon the human plane, thus reinstating primitive Christian healing, so that our gratitude to God and to her must find expression in the practical healing of sickness and sin.

Until the Principle of Christian healing is understood one cannot truly forgive an enemy. One must know the true nature of God and man's relationship to Him before he can establish such relationship in his own consciousness. Until he can do this, it would be impossible for him to entertain the right concept of his fellow man. All righteous conduct is based upon the oneness of God and His idea, man. Any teaching which separates man from his Maker is anti-Christian and would render it impossible to forgive in the true sense of the word. Thought which cannot rise above the belief that man is mortal and sinful would find it difficult to impersonalize error, but this must be done as an essential of true forgiveness.

Since error "is neither person, place, nor thing" (Science and Health, p. 71), it must be so understood if one would forgive, that is, cease to impute sin to his neighbor. The test of one's discipleship largely depends upon this one point of impersonalizing error. Until one can clearly see that all error, under whatever guise it may appear, is to be imputed to the one evil and not to any man or woman, one may feel somewhat as did the apostles of old after the Master had said to them, "If thy brother trespass against thee . . . seven times in a day, and seven times in a day turn again to thee, saying, I repent; thou shalt forgive him," and they said, "Increase our faith." It requires the right kind of faith, "the faith of God," as designated in Scripture, to forgive and to continue to maintain a Christianly scientific attitude of thought. The pressure of what the world calls personal animosity, injustice, lawlessness, and persecution may test one's faith, so that an increase of faith in divine Love would seem necessary in order not to yield to the temptation to personalize error.

Further, we are in duty bound to forgive, regardless of the mental attitude of the one forgiven. If the latter is not truly repentant, is not willing to exchange his material concept of man for the spiritual, then there is no reconciliation. The forgiver's mental attitude, in order to be right with God, must remain constant, not only "until seven times," but "until seventy times seven." A woman once went to a Christian Science practitioner for help. She had said many unkind things about Mrs. Eddy and Christian Science, consequently was very much in doubt whether God would forgive her. She

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

was assured that the unkind thoughts expressed through her were not in reality her thoughts, nor did they come from God, and that if she felt repentant, God's forgiveness was near at hand. Needless to say, she was quickly healed and became a stanch advocate of Christian Science. What she really found out was that she should forgive herself, that is, gain the right idea of herself as a child of God. When this was accomplished, she needed no other forgiveness, since God's goodness and mercy are "the same yesterday, and today, and forever."

So it is with all mankind when, as Shakespeare puts it, they

> Cleanse the stuff'd bosom of that perilous stuff
> Which weighs upon the heart.

When they have found out that the divine forgiveness simply means that they dispense with their mistaken concept of man, then they will no longer impute to him one single thought that does not come from God. When one can say and feel it in his inmost consciousness, "I forgive and quite forget old faults," he may catch the meaning of that sentiment so beautifully expressed, "Forgiveness is the perfume which the trampled flower cast back upon the foot that crushed it."

If there is any doubt in the mind of any one as to what a forgiving attitude involves, let him ask himself how he would administer Christian Science treatment to one who had said "all manner of evil against" him falsely, should such a one come to him for help and say, "I repent." The answer to this question will leave him in no doubt as to what is required of him if he would be a consistent, loving, and merciful Christian Scientist.

Our Leader's loving admonition always comes to our rescue, and even if at the eleventh hour, we can well afford to heed it. In "Miscellaneous Writings" (p. 12) she says, "If you have been badly wronged, forgive and forget: God will recompense this wrong, and punish, more severely than you could, him who has striven to injure you." Let us not lose sight of the fact that the only right attitude of thought toward our fellow man at all times is one of true forgiveness.

Kinship

KATE W. BUCK

One of the hardest lessons for mortals to learn is the one which deals with human relationships. Mankind are so entangled and bound about with human ties (and sometimes it would seem hopelessly so) that there is often a sense of bewilderment and restriction where all should be freedom and independence. Lives which should be lived side by side, each in its individual place and with individual work to do, are frequently crossed one by another. Not content to work out our own salvation, we strive to work out another's for him, to the confusion and unhappiness of both. Here, as in many other instances, Christian Science points the way to freedom and adjustment, because it is founded upon the words and example of Jesus the Wayshower. To quote from page 114 of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, "It shows the scientific relation of man to God, disentangles the interlaced ambiguities of being, and sets free the imprisoned thought."

The "scientific relation of man to God" is the relation which was made so plain in the words of Jesus when he said, "Call no man your father upon the earth: for one is your Father, which is in heaven;" and again, "Who is my mother? and who are my brethren? . . . whosoever shall do the will of my Father which is in heaven, the same is my brother, and sister, and mother." To do this will, and so be brother and sister to him who never failed in his allegiance to our heavenly Father, means much. It means self-forgetfulness, constant striving to know God's will and readiness to do it, the denial of any other will or mind, and joyous readiness to drop and cast aside as worthless all things that do not tend to strengthen one's ability to understand and serve the one Father of us all. The wise man says, "Take away the dross from the silver, and there shall come forth a vessel for the finer." Those who are eager to render the best possible service for God and humanity count everything as dross that detracts from or weakens the efficiency of that service, and gladly let it go that the silver may shine forth in its unalloyed purity.

It is evident that to Christ Jesus the only actual kinship was with God, to know Him as All-in-all, as Father-Mother, friend, companion, and thus corelated with Him, to reflect and express His attributes. When each individual seeks for a realization of what man really is, and what his parentage, and endeavors to seek this first, he awakens to a glorious sense of freedom, of having a breathing space all his own, of being subject to but one Mind, one will, and that one good. Then he will be so busy about his "Father's business" (his own by right of inheritance) that he will find little time to plan the way for another, and will come to realize that all others must sooner or later recognize the one relationship too, and be left as free to do so as he himself would be. If another seems to be traveling by a circuitous route and we feel that we could show him one that is more direct, the effort brings only entanglement again. We cannot make laws for another, we cannot plan or coerce; the responsibility is not ours. How needlessly we load ourselves with cares which we were never meant to carry, sometimes to the neglect of vital and important work which we need to do for ourselves, and which the Father has over and over again bidden us do, but which, in our zeal to have somebody else do the right thing at the right time and in the right way, we have blindly neglected.

"Mind your own business," though a homely rule, would, if literally followed, prevent many a heartache; and surely every man has his hands full in trying to live up to it. To lift the phrase to a higher plane and meaning, let us say, Mind your Father's business, listen and attend to His bidding, obey His voice, follow His commands. Then indeed one has occupation for every hour of every day. Not that these commands are burdensome, but they are compelling and absorbing, if one would honestly forget the counterfeit he has for so long heeded, and know continually God's idea, the perfect likeness of the perfect original, which has always stood untouched by the falsities presented in its stead. So shall one lose himself materially to find himself spiritually.

Sometimes we think we have a right to dictate to some one because, perchance, he is related to us; yet first and foremost he is God's child, as we are, and, also like us, subject only to His dictation and guidance. We exact, demand, and expect so much of others because we are related, and in duty bound, as we think, to be subservient to them, and then if these same plans and expectations of our own making are not realized, we are apt to sulk, feeling grieved and hurt because the beliefs about the obligations of relationship have been violated. The law of heredity also stands a ghost in the pathway of many, because of the thought of blood-relationship, a law by which numberless mortals are dwarfed, repressed, and handicapped from the start. Sometimes it is an unspeakable relief heartily to thank God that as His children we were not born in a certain place, and that therefore traits, tendencies, and peculiarities associated with a material sense of kinship are no part of us.

Fully to recognize God as the real source of our being, that we in reality inherit only what He has given us and that His

Digitized by Google

traits and qualities are eternally good, tends toward liberation. This simple recognition and thanksgiving brings such a sense of joy and freedom as, accepted and literally applied, makes the claimant of his true and only kinship feel that he can then and there "mount up with wings as eagles." When humanity acknowledges this spiritual relationship, there will be an awakening to the fact that we are in Truth most wonderfully related,—children of the one Father, members of the same household, brothers and sisters in God; all privileged to have the same tender counsel, be governed by the same laws, actuated by the same purpose, wistfully looking to the same model.

Intently studying the model and following its lines, each child will naturally give nothing but love and gentleness and kindness one to another, while envy, jealousy, strife, and interference will be known no more. In that glad day we shall "love as brethren," and be one in the sense the Master meant when he said, "That they all may be one; as thou, Father, art in me, and I in thee, that they also may be one in us." This is the very highest type of love and kinship that one can possibly need or ask, a largeness and breadth of affection in which pettiness has no place. It is to "be kindly affectioned one to another with brotherly love; in honor preferring one another," marching shoulder to shoulder, heart to heart, and rejoicing that we are subject only to His laws who "doeth all things well."

Side by side we do indeed walk toward the shining goal of universal freedom and peace, and there is no conflict on the way, because the distressing attempts to interlace and interlock our life-lines are forever abandoned. There is but one obligation for each individual, and that is his obligation to God. Fulfilling that, he need feel no anxiety as to his attitude toward another. That will adjust itself; for a consciousness which knows nothing but good can manifest nothing else in any relation, environment, or circumstance. To leave all for Christ does not imply sacrifice, but gain, the gaining of those things which are eternal in a consciousness which knows itself one with God, and which nothing can sweep away. When we awaken sufficiently to know that material things, however attractive they may seem for a time, can never satisfy, that the one and only thing needful is to seek and find our true relationship to God, we will be grateful for these words of Mrs. Eddy on page 264 of Science and Health: "When we realize that Life is Spirit, never in nor of matter, this understanding will expand into self-completeness, finding all in God, good, and needing no other consciousness."

"Oil out of the flinty rock"

ARTHUR L. WATERHOUSE

To those students of Christian Science who find themselves confronted by what seem to be insurmountable difficulties, there may be found much comfort in the thought of the spiritual advantage to be gained under such circumstances, for the more difficult the material condition may seem, the more obvious is the need of greater spiritual understanding; the darker the way the more need of light. In Deuteronomy there occurs this passage: "He made him to suck honey out of the rock, and oil out of the flinty rock." Taken in connection with the definition of oil in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, this statement will, when spiritually understood, prove a "lamp" indeed unto one's feet. The definition reads: "Oil. Consecration; charity; gentleness; prayer; heavenly inspiration" (Science and Health, p. 592).

When the Christian Scientist is opposed by what portends to be an evil power, stubbornly barring further progress, he may know that this is his opportunity to get "oil" from "the flinty rock;" to gain a higher spiritual understanding, a clearer sense of divine Truth and Love, which will add immeasurably to his treasure. He will surely gain from such a contest a higher "consecration," a "charity" that is ever kind, "gentleness" that pours itself into the wounds of the discordant, "prayer" that is ever more effective, and the "heavenly inspiration" that fills consciousness with peace. In the words of Haggai, "I will fill this house with glory, saith the Lord of hosts."

Faults Proven False

MARGARET V. PEARMAN

In Shakespeare's "Measure for Measure," Isabella in pleading for the life of her brother asks the deputy to condemn the fault and not her brother. The deputy replies:—

> Condemn the fault, and not the actor of it?
> Why, every fault's condemn'd ere it be done.

In the great performance called human life, wherein "all the world's a stage," as the same poet states, "and all the men and women merely players," more serious thought is given today to the question of right and wrong doing, or acting, than at any other period in the world's history. On the stage of materiality, with its varied scenes of mingled success and failure, joy and sorrow, hope and despair, a large number of its actors are participating in the differing experiences characterized as sin, sickness, and the limitations of discord; even mighty wars are being enacted at this hour.

With human opinion arrayed in pride, scorn, or indifference for an audience, there is always a general readiness thoughtlessly to condemn the so-called actor in the thrall of error's manifestation, rather than the fault of his dilemma; or perhaps, with no certain means of correction thereof, to excuse the actor merely in the weary hope, maybe, that the latter process may prove to be the less difficult manner of riddance of the fault and its entailed embarrassment, suffering, or misery. Both of these methods, however, fail to accomplish any lasting benefit for either the actor or his audience. Leaving him as they do, as closely related to the fault as before, he is obviously more liable than ever to be the subject of error's method of repetition, through the inability of the so-called human mind to overcome the fault of its own creating. Blind humanity thus struggles along under its commanding rod in its zigzag course amidst shameful blunders, sorrowful mistakes, or tearful trials, and finally drifts into the belief that real being consists of these very experiences and conditions, or that they are natural or unavoidable; and very often, which is most regrettable, that God is their author.

Only through the application of the compassionate, soothing, and comforting truth of Christian Science can one truly condemn or destroy the fault and free the so-called actor from it. To do this one must know the actor and the fault in their exact relation to each other. Through the teaching of Christian Science the understanding of Life as God is revealed and the perfection of God and man is seen. God being Spirit, man is spiritually created, and his relation to God, Life, is made plain. It is beyond contradiction that in that which is perfect no fault is to be found; hence the perfect being the real, that which claims to be an imperfection is a fault, and being the opposite of that which is real, is false; thus it is no part of God or man, and is in no way related to the activities of life.

With the prevailing belief that Adam and Eve were the

Digitized by Google

first parents of man, and that God is corporeal, and man corporeally created, with intelligence residing within the limits of his corporeal structure, claiming the ability to decide its own standard of right doing or acting and its like capability of deviating therefrom, the natural result is that the basis of such activity is imperfect, hence at fault, or false. Consequently to one educated thus, and believing too in the law of heredity, the manifestation of the parent or ancestral traits of character should not seem surprising, nor should it occasion hasty condemnation of the so-called actor. This is, however, too often the case, and in many instances it is the means of increasing rather than lessening the influence of the error over him.

To an individual governed by this false belief of his origin and being, plunged into the depth of error's woe, the fault or blame for this condition may readily attach itself,—no matter what form or phase it may assume, or what circumstance or condition is incident to its appearance on the scene of his affairs,—leaving him the pitiful victim, perhaps, of severe self-condemnation or harsh criticism. What an opportunity lies here, within the reach of those more fortunate, to lift this brother's thought to the recognition of the eternal perfection of man and the falsity of evil's claim upon him. Again, through fear of punishment, stubborn resistance to acknowledgment of same, or ignorance of the ability to annul its claim through honest acknowledgment thereof, the fault may rest itself upon some other person, oftentimes unexpected and unannounced. Even this does not warrant the condemnation of the actor, but instead calls for more confidence in the power of Christ, Truth. The declaration of this power "is designed to rebuke and destroy error," as we read on page 233 of Science and Health.

In his nakedness and fear Adam, his fault exposed, hid himself, and upon being required to answer therefor, not only placed the blame upon the woman, but found fault as well with his creator, complaining that the woman whom "thou gavest" was responsible, implying thereby that she not only was responsible (at fault), but was created thus; while Eve's answer, "The serpent beguiled me, and I did eat," disposed quickly of the burden thrust upon her so unexpectedly, and placed the fault where it rightfully belonged, that is, on the serpent, false material sense.

In Science and Health (p. 533) Mrs. Eddy speaks of the actor and the fault in the first scene of this interesting drama on the world-stage of materialism, built of the lumber from the tree of the knowledge of good and evil, as follows: "Truth, cross-questioning man as to his knowledge of error, finds woman the first to confess her fault. She says, 'The serpent beguiled me, and I did eat;' as much as to say in meek penitence, 'Neither man nor God shall father my fault.' She has already learned that corporeal sense is the serpent. Hence she is first to abandon the belief in the material origin of man and to discern spiritual creation."

As thought yields to the touch of Truth as revealed by the teaching of Christian Science, this human sense, or material belief of existence and things pertaining thereto, is discovered to be false, and only through the willing abandonment thereof is one able to discern spiritual creation, the real and true origin of man, and through spiritual understanding ascend to the plane of man's real being, man in the likeness of his Maker, spiritual and perfect, as asserted in the Scriptural statement, "God created man in his own image, in the image of God created he him."

Here the standard of all right activity is established by divine intelligence, and is eternally perfect. Man can never deviate from it, for the source of this activity being perfect God, the only natural experience of man is the expression of Him who is perfect; and as God is good, He cannot be the author of anything unlike His own nature. Consequently even the possibility of God's man performing an evil or wrong act does not exist, nor does the necessity of his avoiding such performance, according to the further positive declaration of Scripture, "God saw every thing that he had made, and, behold, it was very good." This fact is emphasized as well in our Leader's words (Science and Health, p. 539): "God could never impart an element of evil, and man possesses nothing which he has not derived from God. How then has man a basis for wrong-doing?"

In their daily demonstrations over false belief, their obedience to divine Principle, Christian Scientists everywhere are rejoicing in the approval of God, instead of relying on changeable human opinion. They are placing the mistakes and wrongs of humanity where they belong by regarding them not as "my fault," or "your fault," but instead simply as falsity, and therefore not the truth of man's being, and by their very nature having no real existence or manifestation. Let us then strive to keep ever before us the thought conveyed by the apostle's words, "Now unto him that is able to keep you from falling, and to present you faultless before the presence of his glory with exceeding joy, to the only wise God our Saviour, be glory and majesty, dominion and power, both now and ever. Amen."

Truth versus Mental Aggression

CLAUDE A. S. FROST

"Lo, this only have I found, that God hath made man upright; but they have sought out many inventions." This quotation from Ecclesiastes does not mean that the man created by God has fallen, but clearly the drop in thought from the use of the generic term "man" in the first instance, to the plural pronoun "they," shows the latter to mean the sons of men, termed by Mrs. Eddy "mortals." To one who is attempting to apply his understanding of the Principle of Christian Science in his daily walk and conversation, there sometimes comes the unwelcome sense of mental opposition that he cannot see or account for as emanating from any material place or personality. To such the message contained in the verse just quoted may come as a light and a warning.

Many indeed are the inventions of mortal mind, but always it is the same material concept in new or old guise. In Bible times the Adam-name of this opposer was variously spoken of as "devil" or "Satan;" and the children of Israel, who worshiped the one God, were warned to beware of "wizards that peep, and that mutter." More recently the names given the activities of this so-called mentality opposed to good have been legion,—mesmerism, hypnotism, autosuggestion. Each time it is the same wolf in the clothing of a different sheep, but easily recognizable according to its works.

Surely the material "knowledge" here displayed constitutes no small measure of the "many inventions" described in our text. In his epistle to the Corinthians the apostle Paul said of such so-called wisdom, "Whether there be prophecies, they shall fail; whether there be tongues, they shall cease; whether there be knowledge, it shall vanish away." Thereby we know that all false knowledge is nothing, and not something, because the Science of Christianity taught by Jesus, and demonstrated by Mrs. Eddy, shows us that anything which ultimately is seen to fail, cease, or vanish away into nothingness, is seen already to be nothing; for a lie once

Digitized by Google

proved to be a lie, is seen always to have been a lie, and never to have been the truth.

We need not fear, therefore, to face this unseen foe in the understanding of the Christ Science. Students of Christian Science at this time, whether they are members of a church or only attendants at the services, cannot be too loyal to the loving guidance of the Church Manual; cannot cling too closely to the study of the text-book, "Science and Health with Key to the Scriptures;" and cannot bar their thought too carefully or watchfully from mental aggression. One likes to think of the final answer to this age-old problem in the words of one of our hymns (Hymnal, p. 39),—

High in the heavens, eternal God!
Thy goodness in full glory shines;
Thy truth shall break through every cloud
That veils and darkens Thy designs.

Love's Prophecy Fulfilled

CASSIUS M. LOOMIS

RING out, ye silvery chimes, this Christmas morn!
Once more on earth a Bethlehem babe is born.
The night is spent—a shadowy night of fear;
Love's mighty hosts in robes of white are here.
Ring out, ye bells of sinless joy, the word
Of Truth with gladdening songs of praise is heard.
Today, the "now" in history's page most dear,
Has dawned at last, mid sunshine bright and clear!

Yea, tell us of the night—the manger where
The babe was born—the wise men! were they there?
The shepherds, came they not to worship as of yore?
Pray tell us of the night that went before.
'Tis well ye ask. Though angels many came
And sang their songs of comfort in his name,
It was withal a night of shadows deep,
An hour when faithful hearts their vigils keep,
And, knowing God would hear, prayed on till morn;
The world had yet to know the Christ was born.
The shepherds? Yes, they came, and saw, and wept
For very joy. While mammon's hosts had slept
Love's warming glow had filled the mother's breast;
Her tireless faith in God had stood the test.

The wise men? Yes, they came; indeed, 'twere they
Whose shafts of boasted reason led the day.
Still, on the mother heart in secret fell
That wooing word of comfort, "All is well!"
The wise men came, but not as they of yore—
The learned wit, the scribe of fabled lore,
The careworn scholar and the lawyer keen,
Staid preachers many with their college dean—
No gifts of myrrh or frankincense brought they;
No Bethlehem star had led them on their way.

Ah, well, forgive them all! The sunlit east
Portends a day of thanks and joyous feast.
This Christmas morn the hosts of heaven shall hear
Our prayers of gratitude and songs of cheer.
The critic's day of arrant phrase is o'er;
The heart bowed low in grief shall weep no more;
The sick are healed, the sinful heart shall be
From error's hidden snares forever free.
Like sunshine golden on a desert sand
The Father gives to all with lavish hand.
His bounteous truths, with healing touch profound!
Have spread with onward march the whole world round!

Selected Articles

[Duncan Sinclair in *The Kilsyth* (Scotland) *Journal*]

From the report of his sermon it would seem that our critic devoted himself chiefly to an attack on Mrs. Eddy and to a criticism of what he thinks Christian Science is. With regard to the former, one may remark that it has ever been the lot of those who have benefited humanity to have had the world's sting thrust at them. There has never been a reformer of any note who has not had to stand the jeers and invective of, let us say, misunderstanding. Mrs. Eddy had these in full measure hurled at her even while she was among us; but she met them all with the grace that characterizes true Christian womanhood, and the humility which is never separate from genuine goodness. When she passed away, one who knew her intimately, after referring to her as "the gentlest, sweetest, and most refined lady I have ever known," added, "Yet with all her gentleness she possessed the fire of a great reformer; with all that sweetness she was none the less the deepest of thinkers; while her innate refinement did not prevent her from being the foremost leader of men in the world-battle of good against evil."

In "Science and Health with Key to the Scriptures" (p. 465) Mrs. Eddy defines God thus: "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love." From this it will be seen that "Principle," to which our critic refers, is one of the synonyms for God. All of these synonyms serve the useful purpose of conveying a fuller understanding of some phase of the nature of the infinite Being whom we call God. Thus one may say that God is the Principle of good, the Principle of love; in fact, that God is the divine Principle of all reality.

What has undoubtedly attracted multitudes of people to Christian Science has been the healing work it has accomplished. It is a well established fact that Christian Science treatment has healed all manner of sickness, including those diseases generally declared incurable by the ordinary medical schools. And to heal the sick in Christian Science practice is but to follow the commands of the Master, Jesus the Christ, for it will be remembered that when he sent his followers into the world to preach that "the kingdom of heaven is at hand," he instructed them to heal the sick also, in proof of their spiritual understanding of his gospel.

Our critic says that "the Christian church has not yet entered into the full knowledge and possession of the truth of the Holy Ghost." And it never will until it declares and adheres to the infinite nature of God. When Christian Science affirms that God is infinite, it means what it says. It means that since God is infinite and good, in reality good is omnipotent and omnipresent. The corollary is that evil is unreal, because there can be no place for it in infinite good. Evil is false belief, strictly analogous as such to the fallacy that two times two are five. But Christian Scientists are quite aware of the power mortals themselves give to evil and how they believe in it and practise it to their own detriment.

Christian Science teaches that the metaphysical understanding of the allness of God, good, and the unreality of evil, enables one to heal, in a measure strictly in proportion to one's understanding, all forms of evil, including sin and disease.

✧

[F. Elmo Robinson in *The Telegram*, Portland, Ore.]

Christian Scientists recognize that their one supreme endeavor should be to lessen the sum total of human misery, want, and woe, and they well know that this can be accomplished only through an exact, scientific knowledge of God

Digitized by Google

and His divine Christ. Therefore I am not writing in the spirit of controversy, nor am I asking space to attack the religious beliefs of the several writers whose letters relative to Christian Science appeared in *The Telegram*. These writers seem to feel called upon to explain to your readers what they think Christian Science is, and to sound a warning note against it, that is, against their conception of it.

Christian Scientists are quite willing that their religious neighbors shall believe what they choose. In these days of multiplicity of sects, it is well that a spirit of tolerance and brotherly kindness should characterize the attitude of all professed followers of Christ Jesus toward one another. Each religious system should be permitted to stand or fall on its own merits. Critics of Christian Science would do well to remember the admonition of Gamaliel, uttered nineteen hundred years ago, "If this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

It is not maintained that the large and intelligent following of Christian Science is, in and of itself, any evidence of the divine nature of this Science, neither did the wonderful growth and spread of primitive Christianity necessarily prove its divine character; and yet it is repeatedly said of the Master that great multitudes followed him. The assurance of Christ Jesus was, "And I, if I be lifted up from the earth, will draw all men unto me." It is the vision of the Christ, as presented in Christian Science, which is drawing the multitudes. Christian Science, like primitive Christianity, has been making bad people good and good people better. It has been making sick people well and healthy people stronger and happier. Sinning, suffering, dying mortals naturally hail with delight the coming of their deliverer, hence the numbers that are turning to Christian Science.

The writer of this article grew to manhood in one of the so-called orthodox churches and entered the ministry. For about eight years he continued to teach and preach the Bible as he then understood it. There was a time when he entertained many of the popular misconceptions of Christian Science, and as a result was filled with hatred for Mrs. Eddy and what he believed she taught. This hatred was intensified by the reading of numerous books and articles written by those who defined and explained Christian Science in their own way and according to their own erroneous beliefs. Just here the writer would like to say that after many years' experience in the old church, after reading almost every critical book and article on Christian Science available, and after a most searching investigation of Mrs. Eddy's teachings, he has yet to find the first critic who has correctly stated these teachings.

The opposition of these critics has never been to Christian Science, but rather to their own faulty conceptions of it. The results of the writer's acceptance of Christian Science, briefly stated, are as follows: his faith in every fundamental teaching of the Bible has been increased rather than diminished; he has been healed of numerous physical diseases; he has been healed of a sense of intolerance for those who differ from him religiously, and today cherishes no bitterness toward any human being or his religion. For this he is deeply grateful.

✧

[Willis D. McKinstry in *The Great Bend* (Kan.) *Tribune*]

Instead of Christian Science denying that the Bible is inspired, it makes the spiritual truths contained in this Book of books the fundamental basis of its teaching. The first of a series of religious tenets taught in Christian Science declares: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). Many times the question has been asked, How do we know that the Bible is true? This question can only be answered through a scientific knowledge and demonstration of Biblical teaching. Christian Science imparts this clear understanding of Holy Writ and enables those who possess it, as did the prophets, apostles, and early Christians, to prove its truth and thereby witness the operation of God's law in meeting the daily needs of those who trust Him.

Christian Science teaches, and its adherents most firmly believe, that Christ Jesus knew precisely what he was saying and the truth of what he was teaching when he declared that he was not God, but the Son of God; and furthermore, his words and demonstrations are for all people throughout all time. Hence, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." The fulfilment of this promise comes to all who enter into the fulness of the stature of perfect manhood, possessing the Mind that was in Christ Jesus, truly knowing God, man, and the universe. The work of the Christ is made manifest to this age through an exact scientific knowledge of spiritual law expressed in cause and effect.

Truth is "the same yesterday, and today, and forever." There may be innumerable opinions and beliefs about Truth, but there is but one truth or fact about it, and only those who possess this fact have any knowledge or understanding of Truth. God is Truth, and Christian Science is the spiritual revelation of Truth. Unnumbered thousands from all walks of life and all nations have been physically and spiritually benefited by Christian Science.

✧

[John M. Tutt in *Warrensburg* (Mo.) *Star-Journal*]

The implication that Christian Science teaches the ignoring of sin, and that this would mean the indulgence of it, must arise from grave misunderstanding of what Christian Science really does teach concerning sin. In "Science and Health with Key to the Scriptures" (p. 71) Mrs. Eddy says: "Evil has no reality. It is neither person, place, nor thing, but is simply a belief, an illusion of material sense." The mental nature of sin is further affirmed by Solomon, who said of a wicked man, "As he thinketh in his heart, so is he." The moot question is not therefore as to the nature of sin, since it is plainly an erroneous state of mind and wholly bad. The gravest importance is attached to the question as to whether sin is to be recognized as a reality of creation, or to be attacked as delusive, a falsity not bearing God's sterling mark of genuineness.

Christian Science affirms the latter, but does not, however, deny the seeming reality of sin, nor its hideous nature as a part of human experience. Indeed, the broadest recognition and unveiling which sin has had since Jesus' scathing denunciations of it, has come from Christian Science. Through it the very fountain of sin has been uncovered, as springing from the human mind itself. The essence of sin is found in the activities of the carnal mind, which Paul defined as "enmity against God." The real man, then, is not represented by the fleshly mind, but misrepresented by it, for the man God made in His image and likeness is not at enmity with his creator. The old man of sin is put off, and the new or real man is put on, in the measure that sin is overcome.

To ignore sin would be as erroneous as sin itself, and would indeed tend to blunt the sense of sin. To fight sin on the ground of its destructibility is wisdom. Jesus declared the prayer of justification to be, "God be merciful to me a sinner," and this is the prayer of every true Christian Scientist, for to be convinced of sin is the first step toward reformation. The forgiveness of sin involves the destruction of it, and the remedy is always the Christ-spirit,—the understand-

Digitized by Google

ing that sin is no part of real being, that God did not make it, indulge it, countenance it, or permit it. Because sin does not exist in the Mind which is God, it has no proper place or indulgence in His creation, man and the universe.

Christ came not to save sin, but to save men from sin. If sin were as real as God and His creation, it would be indestructible, good, and a component part of God's creation. Christ came destroying sin, disease, and death,—"the works of the devil." The destruction of reality would be an absurdly impossible achievement, namely, destruction of truth; and yet our critic avers: "Sin is a fact. You cannot get away from it. It is there, and it is eating like a cancer at the very heart of humanity." Christian Science speaks of "the mirage of error" (Science and Health, p. 244), and we know that its deceptions, its alluring promises of pleasure, and its awful realizations of pain, will disappear when the Christ, Truth, reveals to the repentant heart the unreality of the lie. The way of salvation is the way of overcoming the errors of the human mind through acceptance of the Mind "which was also in Christ Jesus." This is true repentance, as the word itself in the Greek text indicates, namely, change of mind. The will of God in our lives does indeed save from sin, and this divine will is the Mind of Christ.

✧

[E. W. Osterhoudt in *Kingston* (N. Y.) *Freeman*]

Personally I have had some experience with Christian Science,—enough, at any rate, to know that it has no connection whatsoever with the species of mesmerism or aggressive mental suggestion described in your editorial as related to it. It is important for all your readers to understand this, because whatever their individual religious or medical theories might be, they naturally would not desire to misjudge any system of religious thought which has spread in such an amazing fashion over the world and which is claimed by so many people to have been of great benefit to them. The healing effect of Christian Science is due to its teachings concerning the omnipresence and omnipotence of God, who is understood to be all-inclusive divine Love, or divine Mind, and the practice of Christian Science has nothing to do with the exercise of human will-power, neither is its effect ever to deprive one of his individual intelligence or rights of conscience.

Your article points out quite correctly that Christian Science, as such, is not new, but that its basic teaching was known and relied upon centuries ago. The superiority of spiritual over material means was recognized by many Bible characters, and it is one of the central facts of all Bible teaching. It certainly was expressed in the career of Christ Jesus, whose words and works illustrate the Principle upon which Christian Science is founded. When, therefore, today Christian Scientists endeavor to perpetuate the practical value of this Science, it is certainly a subject for serious and friendly interest.

✧

[M. I. Whitcroft in *Cheltenham* (England) *Chronicle*]

May I be allowed to correct the false impression of Christian Science conveyed in a critic's remark that "one need not be a Christian Scientist to know that a man with a strong effort of will can stave off a cold or influenza."

Now a Christian Scientist knows, as Mrs. Eddy writes on page 445 of Science and Health, that "Christian Science silences human will, quiets fear with Truth and Love, and illustrates the unlabored motion of the divine energy in healing the sick. . . . The human will which maketh and worketh a lie, hiding the divine Principle of harmony, is destructive to health, and is the cause of disease rather than its cure." Surely this bears out Jesus' teaching, and his declarations: "I can of mine own self do nothing: . . . I seek not mine own will, but the will of the Father which hath sent me;" "The Father that dwelleth in me, he doeth the works."

Christian Scientists are daily proving that in proportion as they subjugate the human will to the divine and strive to let that Mind be in them "which was also in Christ Jesus," they can overcome sickness and sin in themselves and others, thereby demonstrating the divine law of harmony.

✧

[Ezra W. Palmer in *The Fort Collins* (Col.) *Courier*]

An evangelist holding services in your city is reported to have alluded to Christian Science as "a substitute for Christ's religion." In this sermon, "What Is the Matter with the Church?" the evangelist complained that the church was not reaching the people. Christian Science churches have no such complaint. Their churches are filled, many of them to overflowing, with a happy people rejoicing in the saving and healing power of God. Christian Science has proved that when the whole of the teachings of Christ Jesus are given to the people, the people gladly respond. Jesus said, "And I, if I be lifted up from the earth, will draw all men unto me." If therefore any church is not drawing men unto the spiritual life which Jesus lived, that church had better examine itself to see if it is teaching creed instead of pure and undefiled Christianity.

Christian Scientists strive to follow all the commands of the Master, both to heal the sick and to save the sinner through the grace of God. Judged by the standard set up by Christ Jesus for the guidance of all Christians, their religion is the reinstatement of primitive Christianity, which points to works not words as evidence of its genuineness.

[Written for the *Sentinel*]

Christmas Bells

FRANCES A. HALDANE

THE merry bells at Christmas-tide
Fling out their golden chimes of cheer,
While all the earth a moment stays
Its toil, in happiness to hear.

And high and low, and far and near,
The echoes catch the glad refrain:
"Glory to God—glory to God—
Good will—good will on earth again."

Still bright in every darkling sky
There shines the Star to guide our way,
Irradiant to the wise in heart,
Far from the noisy marts of day;

And, as of yore, the angel throng
Still holds its watch above the earth,
While yet the wondrous glory gleams
When Christ in some lone heart hath birth.

Then ring ye out, sweet Christmas bells,
Ring far across the earth your cheer,
For Christ is come again to bless
The seeing eye, the hearing ear.

And low and sweet, or high and clear,
Earth's watchers hear the happy strain:
"Glory to God—glory to God—
Good will—good will on earth again."

Editorial

"Doers of the word"

"Be ye doers of the word, and not hearers only," was the counsel of the apostle James to the early Christian church, counsel that is equally applicable to professed Christians in all ages and which if heeded would have revolutionized the world long since. Christian Science is emphatically a religion of works, and it is because of this important difference from so many other religions that it is making such headway in extending and enlarging the world's concept of God and of man's relation to Him.

There are very many, however, who have been healed through Christian Science, who thoroughly believe in it, and yet seem unable to understand that it is a religion which requires much more from them than a mere acquiescence in and enthusiasm for what they suppose is its creed or doctrinal beliefs. Because of this mental attitude they have utterly failed to understand that there is a necessity for individual activity. As a consequence they have continued in a mere passive state of receptivity, and thus missed the blessing which comes from demonstrating Christian Science, not only for one's self in one's own personal distresses and problems, but also for others who are in need of and wish to receive the help which this Science can give them. Whenever these people are sick or in trouble they depend upon some practitioner for help, and in so doing deprive themselves of the greatest boon that could come to them, namely, the opportunity to work out their own salvation.

That Christian Science is a religion of works rather than of words, has been amply proved by the healing of sickness and the salvation from sin to which many have borne testimony, and those who would receive all it has in store for mankind must be inspired by our Leader's call to action which is so clear to all who have grasped the import of her words, "The song of Christian Science is, 'Work—work—work—watch and pray'" (Message for 1900, p. 2). The duty of the practitioner is, of course, to help those who come to him for healing, but it is not his duty to do this year in and year out without trying to awaken in his patients a desire to work for themselves, a desire to understand Christian Science rather than merely to believe in it.

Those practitioners are most successful in the healing work who follow Mrs. Eddy's instructions on page 417 of Science and Health: "Explain audibly to your patients, as soon as they can bear it, the complete control which Mind holds over the body. Show them how mortal mind seems to induce disease by certain fears and false conclusions, and how divine Mind can cure by opposite thoughts. Give your patients an underlying understanding to support them and to shield them from the baneful effects of their own conclusions. Show them that the conquest over sickness, as well as over sin, depends on mentally destroying all belief in material pleasure or pain." For the further benefit of both practitioner and patient she has said, "To avoid being *subject* to disease, would require the understanding of how you are healed" (Miscellaneous Writings, p. 39), and throughout her writings she has endeavored to inspire every one who comes to Christian Science to acquire this understanding and apply it.

Preaching without practice has been the bane of all religious life, and Christian Scientists should see to it that they do not fall into this error. Nothing will so convince the world at large of the truth of Mrs. Eddy's teachings as the same proof the Master offered the messengers from John: "The blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached." That Christian Science is doing these works is amply witnessed to in our periodicals and in the Wednesday evening meetings,—the "signs" which the Master declared should "follow them that believe" are manifested. The time has not yet come, however, when we can relax our efforts, but rather the more diligently work, watch, and pray, for today even as in the time of the Master we find that "the harvest truly is plenteous, but the laborers are few."

Archibald McLellan.

"The only begotten Son"

Nothing witnesses more surely to the nobler nature, the higher possibilities of a man, than the fact that he is made happier and better when he comes into the presence of a little child. Response to the appeal of beauty, innocency, and sweetness—in a word, of good—discloses an instinctive attachment to the ideal, and this constitutes one of the greater values of the Christmas-tide.

The significance of this discovery is deepened when we remember that the Bethlehem babe came to maturity without losing any of his power to gladden and inspire. He always retained his winsomeness, and it is thus made to appear that the thing in him which attracts is character, the soul of goodness; that the most radiant and irresistible thing in the world is godlikeness, a quality of thought and bearing in which Christ Jesus stands quite alone, but yet which aspiring human sense instantly recognizes and claims for its very own. A man's redemption is complete when he really finds himself, and the philosophy of salvation thus comes to be easily understood. The remembrance of him whose birth is songfully celebrated in the hearts of men of every race, caste, and condition today, has always ministered to human need with gentle yet compelling helpfulness. Divinity has come to its own, Love is reflected, and a glimpse of man has been gained.

It is in the power of the Master's words and deeds to illumine and to uplift, to make men see what they truly are and ought to be; and it is here that we are brought face to face not only with the one wholly redemptive personality of history but with the supreme event of revelation. Here too we come upon the great theme of Christian Science, the forever appearing of the Christ to dispel the darkness of false sense, and thus to save the world by establishing in consciousness a perpetual Christmas-tide, the reign of Truth and Love. In the chapter on Atonement and Eucharist the student of Science and Health will find a portrayal of the character and mission of Christ Jesus which interprets more adequately than ever before the Scripture phrase, "the only begotten Son of God," and which gives a meaning to Christmas, the Christ-coming, that is of inestimable value to all mankind, since when clearly apprehended it heals both sickness and sin.

Napoleon was quite right in saying that "comparison is impossible between Christ Jesus and any other being who ever lived," and the universality of this recognition of his isolated greatness is one of the most distinctive things about him. The greatest men of all times have laid their tributes at his feet, and their characterizations range all the way from St. Paul's declaration that in him dwelt "all the fulness of the Godhead bodily," to the English poet's that he was "the first true gentleman that ever breathed." The things which we find here and there in men and women to admire, esteem, and love, are found to the full in him, and unmarred by any lapses into the commonplace. His birth into being was consummated as that of none other; he was "the only begotten Son," and this accounts for the unblushing naturalness and inoffensiveness of his sublime egoism. He was so grandly great as to be unaffected by its recognition. In his self-identification as the "Son of God," and in the unhesitant

Digitized by Google

daring with which he challenged criticism of his life and teaching,—"Which of you convinceth me of sin?"—he was wholly unique.

So too in the compass of his wisdom, his freedom from doubt, from all sense of mystery and limitation, and from mental reserve in affirming the truth, Jesus stands quite alone. He knew God, and he knew men without having shared their weaknesses. He was master of every situation, of every problem, of his human self; hence he never failed or proved inadequate. Further, though adamant to the assaults of error, his heart was tenderness itself, his arms were opened to every prodigal, his love was all-enduring, divine. Well has our Leader named him "that Godlike and glorified man" (Science and Health, p. 54), and with her, all true Christian Scientists are ever sitting at his feet. Their sense of indebtedness to him ever impels them to purity and to gently heroic deeds, and his praise should ever be upon their tongues.

JOHN B. WILLIS.

How to Think

CHRISTIAN SCIENCE teaches people in a wonderfully instructive way how to think rightly and to some purpose about themselves and others, indeed about all things. On page 270 of Science and Health we read: "Mortals think wickedly; consequently they are wicked. They think sickly thoughts, and so become sick." In the prophecy of Jeremiah we read, "I know the thoughts that I think toward you, saith the Lord, thoughts of peace, and not of evil." The promise which follows this declaration is to the effect that when men come to think as God thinks, He will hearken unto their prayers and be found of those who search for Him with all their hearts.

Before Mrs. Eddy's discovery of the Science of being, given to the world in Science and Health and her other writings, little was known of the power of thought upon the human body as well as its influence upon the whole of one's human experience. People certainly did think sickly thoughts "without let or hindrance," even with a mistaken sense that the habit was beneficial, just as it was considered proper to think frequently upon death. In view of this it is little wonder that sickness was so prevalent in spite of the measures taken to repress or cure it; indeed all material methods of cure are so closely related to disease that thought cannot very well be lifted above it while these are pursued.

Christian Science has brought a tremendous change in this respect, and it is one which calls for entire loyalty and obedience to the teachings of Christ Jesus. He commanded his followers to take no thought for the body, as if health were dependent upon food and clothing, but to lift thought to spiritual things, which he named "the kingdom of God, and his righteousness." He also told them to take no thought for their own defense in times of persecution, but to depend entirely upon infinite Love and wisdom to speak through them. This was wonderfully illustrated in Peter's eloquent defense of himself and John before the Sanhedrin, when they were charged with the offense of healing a lame man without material means but in the name of Christ, and again when Paul pleaded his case before Agrippa. It is surely clear that if these apostles had entertained thoughts of doubt or self-pity they would not have been ready for the influx of divine inspiration which was poured out in their deathless words.

Paul makes it very clear in his second epistle to the Corinthians that if we would use fearlessly and effectively the weapons provided for our spiritual warfare, so as to cast down "every high thing that exalteth itself against the knowledge of God," be it sin or disease, we must bring our every thought into obedience to Christ. Writing to the Hebrews he declares that the word of God is "a discerner of the thoughts and intents of the heart;" in other words, our inmost thoughts must be tested and tried by the word of God.

The Master once said to some who were mentally criticizing his healing work, "Wherefore think ye evil in your hearts?" They should have been filled with gladness and gratitude in witnessing the restoration of a helpless sufferer to health and strength, but their attitude proved true the charge against mortal man given in Isaiah's prophecy, "My thoughts are not your thoughts, neither are your ways my ways, saith the Lord." In Christian Science we are taught that this should not be so, indeed that it cannot be so with God's man, His image and likeness, who reflects all the activities of the divine Mind, and we should begin to trace our likeness to God by examining ofttimes our thoughts to see if they express that purity without which we cannot see God, and that love for God and our neighbor which means the fulfilling of the law.

On page 545 of Science and Health our revered Leader says that "mortals should so improve material belief by thought tending spiritually upward as to destroy materiality." The result of this uplifting of thought is at once made manifest in improved conditions, better health, with a steady gain of mental and physical strength, until we at length tread with unwearied steps the path of Life divine, wherein we shall "walk, and not faint."

ANNIE M. KNOTT.

A New Concordance

The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

The publisher is now ready to receive orders, and shipments will be made as promptly as possible. Single copy, $6.00; in lots of six or more to one address, each $5.50.

Address Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Massachusetts.

Among the Churches

Current Notes

WASHINGTON.—Tents for the purpose of distributing Christian Science literature at the Thurston and Skagit county fairs, held from Oct. 12 to 16, were maintained by the Christian Scientists of those communities. During this time 130 *Sentinels*, 20 *Journals*, 9 *Heralds*, 192 *Monitors*, 68 English pamphlets, 25 foreign pamphlets, and 23 copies of Senator Works' speech in Congress were given away. Reports also show that the attendance was good each day. A complete set of Mrs. Eddy's works in each binding was on display at the Thurston tent. The Christian Science societies at Anacortes, Mount Vernon, and Sedro-Woolley are contemplating the erection of a permanent structure on the Skagit fair grounds to be used for this purpose each year.

Correspondence.

TAFT, CAL.—The Christian Science Society has sold its building on Asher Avenue, and will in the future hold services in Odd Fellows Hall at the regular hours. This move on the part of the Christian Scientists was brought about by a desire to have their meeting-place more centrally located.

Midway Driller.

DES MOINES, IOWA.—During the state fair held in this city in the latter part of August, our literature distribution committee maintained a reading-room on the grounds. Two hundred copies of the *Monitor* were ordered for the first day, and as early as possible one of the members of the committee was on the ground, distributing the papers through the stock pavilions, machinery halls, show tents, and similar places; in fact, giving them wherever they were desired. Fifty copies were ordered for each of the following seven days and were distributed in the same way, but as many more could have been used to good advantage.

As the result of the first day's work, the committee obtained a list of fifty-four people desiring copies of the paper for Sept. 2, 3, and 4. Other literature given out from the reading-room comprised 350 pamphlets, 181 *Sentinels*, 55 *Journals*, 1 *Herold*, and 50 subscriptions to the *Monitor* of one month each.—*Correspondence.*

ROANOKE, VA.—Christian Scientists have completed the remodeling of their building at Church Avenue and Fifth Street S.W., and will move from their present rented property into the new quarters on Monday, Nov. 1. They bought it last September, and have had such improvements and rearrangements completed as will make the building a comfortable temporary church home. The obligations of the venture have not yet been fully met, but the congregation are working steadily on that phase of the matter and hope soon to have their title free. In due time, as conditions require, the plan is to replace the structure with an up to date building.—*The World-News.*

The Lectures

Boston, Mass.

Willis F. Gross delivered a lecture on "Christian Science: the Christ-method of Healing," under the auspices of The Mother Church, The First Church of Christ, Scientist, in Boston, in the church edifice, Falmouth, Norway, and St. Paul Streets, on Friday night [Dec. 3]. The lecturer was introduced by H. Cornell Wilson, first reader, who said:—

The Christian Science movement in its character and development is so unusual, and the nature and testimony of its accomplishment are so remarkable, that there has been aroused in men and women of all shades of belief a feeling of earnest inquiry which reaches out to understand the teaching that lies back of all this manifestation. Recognizing the spirit of this inquiry, Mrs. Eddy, the Founder of the Christian Science movement, instituted the Christian Science board of lectureship. The members of this board, carrying out the plan inaugurated by our Leader, present the subject of Christian Science publicly through their lectures. They expound the teachings of Christian Science, characterize and illustrate its service to mankind, and correct erroneous views held or promulgated regarding it.

The Christian Science Monitor.

✧

Winnipeg, Manitoba, Canada

Col. William E. Fell delivered a lecture on Christian Science before a large audience at the Walker Theater. He was introduced by Mayor Waugh, who said in part:—

I am not a Christian Scientist. I am told, however, that Christian Science is founded upon love. Any religious belief which is founded upon love deserves consideration and admiration. Love of God and love of humanity are surely the science of Christianity, no matter what name you may give it. We do not need to die to go to heaven. If we cannot find some heaven on earth, we are wasting a lot of time. Surely we can engage our thoughts in doing some good to those who are less fortunate than ourselves. We can all do our part to make this world a happy place.—*Winnipeg Free Press.*

✧

Vancouver, British Columbia

The Hon. Clarence A. Buskirk delivered two lectures on Christian Science for First Church of Christ, Scientist. The introduction by M. E. Schaefer, principal of the Sir William Van Horn School, was in part as follows:—

Today thousands of people are asking Christian Scientists, What makes you so keenly interested in your religion? Why are you generally so optimistic? Why do you as a rule avoid in your conversation the common topics, sickness, sorrow, and such like? To these inquiries, and many others of a similar character, Christian Scientists, while they are ready always to give a reason for the hope that is in them, usually feel they cannot do better than say, "Come and see."

I. N. Miller, president of the American Club, in introducing the speaker at the second lecture, said:—

Personally I lay no claim to being a Christian Scientist, within the deepest meaning of that term, although during the past few years I have given Christian Science considerable study. I have also come into close contact with the organization and the people who support the doctrine, and have had many proofs presented to me as to the efficacy of its teachings. Any new ideas, hopes, or teachings which serve to make us better men or women, physically, mentally, or morally, should be gladly welcomed; and if in the demonstration of Christian Science we receive an additional ray of light, then the world will be better for the establishment and maintenance of this movement.

All of us, I think, whether we are members of the Christian Science church or not, have been impressed with the remarkable growth of this religion in the past few years; and I have personally had occasion to take note of it during my travels through some eighteen foreign countries. What Christian Science has accomplished in the number of believers and in adding to the sum of human happiness entitles it to the respect and earnest consideration of all thinking people.

Correspondence.

✧

Longmont, Col.

The Rev. Monroe Markley, pastor of the First Congregational Church, in introducing Clarence C. Eaton, who lectured on Christian Science before a large audience at Dickens Opera House, said in part:—

The Lord and Master of us all declared, "Ye shall know the truth, and the truth shall make you free." Never were there so many men engaged in the quest for truth as today, and never were men seeking so earnestly. More and more we are realizing that no one church has a monopoly of the truth; each has a portion of it, and the sum total of all present truth and all truth yet to be discovered is the element of religion which shall forever endure.

Generous indeed has been the contribution of Christian Science to this great whole. Christian Scientists are endeavoring to fill the world with good things, that evil may have no room. They are endeavoring to teach the world that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). I am not a Christian Scientist; but although there are some things upon which I differ with Christian Scientists, there are more upon which we agree; and the few points upon which we differ should not prevent us from loving one another, and living and working together for the glory of God and the good of men. At one time John

Digitized by Google

said for the disciples, "Master, we saw one casting out devils in thy name; and we forbade him, because he followeth not with us." But Jesus said, "Forbid him not: for he that is not against us is for us." The truth and vitality of religion depends upon its ability to cast out devils and save men; and in so far as any religion does this we have no right to oppose it. A religion, however new or however old, that casts out devils from men and makes men more godlike, is a success, while a religion which does not do this is a failure.

In my study of Christian Science and my fellowship with Scientists I have learned many things, among them that the idea most people have of Christian Science is an erroneous one, and that the thing so often attacked as Christian Science is not Christian Science at all.—*Correspondence.*

✧

Billings, Mont.

A splendid audience heard the lecture on Christian Science by William D. McCrackan, at the Babcock Theater. He was introduced by Judge Edmund Nichols, who said:—

Today and at this moment one desire and one prayer is in the heart and upon the lips of all humanity. Upon every sea and in all lands; in palace and hovel; from the heads of the imperial governments to the man in the trench; from the captain of industry to the humblest laborer; from the strong and weak alike, there is one longing to be satisfied, one hope to be cherished, one imperative need to be realized. It is expressed in one word, peace.

The healing and uplifting influence which peace affords, can alone give to a discordant world surcease from all the bitterness, hatred, and cruelty of its wars; from the contention and strife of its industry; from the greed and avarice of its wealth, and from all the ills of mind and body. It will be admitted as axiomatic, that until there exists a clear understanding of the true relation of one man to all men, and of man to God, no permanent harmony of either individuals or nations can be expected. Nor can a true conception of man's relation to his fellows be had until we first understand our relations to infinite God. There have appeared here and there in the world's history a few who lived above the temporal and material, and whose vision therefore was so clear that they were able to know the truth about man. Some of them expressed this truth. Christian Scientists not only claim to have this knowledge, but to have demonstrated it individually beyond all doubt.—*Billings Tribune.*

✧

Smith College, Northampton, Mass.

Prof. Hermann S. Hering, who lectured for the Christian Science organization of Smith College in Carnegie Hall, was introduced by Miss Katharine R. Vermilye, chairman of the organization, who spoke in part as follows:—

A Christian Scientist often feels that he can never adequately express his gratitude for Christian Science. But because it means so much to him, does so much for him, he is always more than glad to tell those who wish to know about this religion. The Christian Science organization of Smith College, therefore, welcomes you here tonight to hear one who is well qualified to explain what Christian Science is and what it does for mankind.—*Correspondence.*

Testimonies of Healing

I am truly grateful for what Christian Science has done for me. All the good that I reflect, all the good that I possess, I owe to the understanding of the Christ, Truth, as given to us in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

About thirteen years ago Christian Science found me not only a physical wreck (having been an invalid or semiinvalid for the greater part of seventeen years) but suffering from melancholia. Our only child had passed on, home and business had been swept away, and it seemed as if I had nothing to live for. The mental suffering was far greater than the physical, and I turned to Christian Science for comfort, never expecting to be healed of two so-called incurable diseases. I soon found that Christian Science means reformation,—a turning from the material sense of things to the spiritual, learning to think right about God and His spiritual creation, including man. At once I became an earnest student, applying its rules, and with the help of practitioners I was lifted out of the depressed mental condition and healed of one so-called incurable disease in about three months, and of an abnormal growth in a year and a half. Gradually I was freed not only from the mental and physical diseases, but also from unpleasant home surroundings and financial difficulties, and I became a more helpful woman and a willing worker in the Master's vineyard.

I should like to tell of the goodness of God in an hour of great need. I had been a Christian Scientist about six years when I met with a severe accident, being thrown violently from a carriage. The medical verdict was that one leg was badly broken and the ankle so injured that, according to the dictum of several surgeons, I would be a cripple the rest of my life, and the period of convalescence would cover many months on account of a severe hemorrhage. Besides these conditions, the collar-bone was broken, the spine was injured, and there were other injuries less severe. I was taken to the hospital and was on the operating-table a little over two hours, but I took no anesthetic, as there was no pain. It was six days before all the bones were put in place. I was taken to my home the day after the accident and attended by two surgeons. I asked a Christian Science practitioner for treatment, which was lovingly given, and instead of lying in bed three months, as was predicted, I was out the third week. The sixth week I was walking with the aid of two canes, and at the beginning of the eighth week (while the practitioner was with me) the realization of man's birthright, freedom from all disease, came to the human consciousness, and I walked free with the exception of a slight lesion, which soon passed away.

This healing took place under the most trying circumstances, but by constantly holding to the truth of being, and remembering the promise, "Lo, I am with you alway," I knew that "though an host should encamp against me, my heart shall not fear." The truth as pointed out by our revered Leader did not fail me; every prediction on the part of the physicians was overcome, again proving the power of the Word of God made manifest to the flesh. During this time I never allowed a suggestion of resentment to enter my consciousness, although the accident was caused by the carelessness of the driver. A great sense of gratitude for the little understanding I had of Christian Science, and the assurance that Truth eliminates all that is unlike God, good, filled my thought. I was grateful for the skilful care of the surgeons, the loving attention of the matron and nurses in the hospital, and the faithful adherence to the truth on the part of the practitioner. Many became interested and are Christian Scientists today through this demonstration of the Christ-healing.

My heart is filled with thankfulness to God for all these blessings, and I gladly acknowledge my indebtedness to our revered Leader, who was able to prove the healing power of this truth as demonstrated by the great Wayshower, Christ Jesus.—Ella Helen Hoyt, Syracuse, N. Y.

✧

We wish to express our gratitude to Christian Science for the many demonstrations of healing in our family, but more especially for the healing of our little boy, five years old, of a most severe case of infantile paralysis. He was taken ill on Monday night, and it was not until Tuesday morning that we realized what the trouble was. By this time he was unconscious, and the little body was drawn and twisted. We at once called for help in Christian Science, but he apparently grew steadily worse. In the evening a medical friend, who asked to see him, said our boy was dying, that it would probably be only a few hours before he would pass away, but that if he did live he would be a cripple and probably an idiot all his life. Nevertheless we clung to the truth, knowing that as God's child he could not be anything but strong and well. All this time the practitioner was working for him, and about two o'clock Wednesday morning he sank into a natural sleep and his color became normal. He slept nearly all day, only rousing to take food,—the first he had retained since Sunday. The limbs straightened out and the paralysis of bowels and muscles left him. On Thursday he walked down-stairs to lunch, and the following Monday morning started to school entirely healed. He was examined by a physician and the school nurse and pronounced absolutely well.

To us this was a most wonderful demonstration of the allness of God, and we are deeply thankful to Him, also grateful to Mrs. Eddy, who has enabled us to know Christian Science and its glorious message.

Mr. and Mrs. W. C. Laughery, St. Paul, Minn.

✧

I wish to express my thankfulness to God for the inspired thought of Mrs. Eddy, who through her labor of love has brought healing, happiness, and peace to unnumbered thousands.

I came to Christian Science for relief from physical ailments, having been sentenced to a surgical operation, to which I was very ready to submit on account of my intense pain; but as both my husband and mother entertained great fears for me the operation was delayed. About this time a friend asked why I did not try Christian Science, as she had just been healed of a very severe ailment through absent treatment. I decided to do so, and from the first treatment began to improve. In a few weeks I was perfectly healed. The study of Science and Health was then begun, and it filled a long felt need in my life. It has helped me to learn to understand and love the Bible. The other members of my family have all had wonderful demonstrations of healing, and there has been no material remedy used in our home for over eight years, while prior to that time we had been constant users of all sorts of medicines.

For all these blessings I am more than thankful, but most of all for the change of thought, the consciousness of spiritual being that is ever present, for the knowledge that God is always with us, ready to help in all our problems. I am also grateful for the Lesson-Sermons and our other literature, to none of which we ever turn without receiving comfort and help. My prayer is that I may go on and up, never

Digitized by Google

faltering; that I may prove to be a help, if ever so little, to my brother man; and that I may have that Mind in me "which was also in Christ Jesus," and thus prove my appreciation of the sweet gift of love that has been given to this generation by God through His faithful servant, Mrs. Eddy.

AUGUSTA DAHLEM, Chicago, Ill.

[Translated from the German]

In submitting the following account regarding my severe illness, and subsequent recovery through Christian Science, I would like to say that I am ready to subscribe to any of my statements and willing to give more specific information if so desired. My case was one of gout in the severest form. As my father had suffered greatly with this trouble, the physicians under whose care I put myself repeatedly declared that in view of the seriousness of the affliction, which was a hereditary one, I had little chance of complete recovery. The first severe attack, which kept me in bed for about three weeks, occurred around 1884, and from then on, at intervals of longer or shorter duration, I had increasingly severe attacks. In 1900 I was laid up for three months, suffering intensely, and during almost the entire time could not move a limb and had to be fed, and lifted from one bed to another. As soon as I was able to be moved, I was taken away, and during the following ten years, when I was not laid up at home, I visited sanitariums, watering-places, and health resorts for weeks and months every year. During the period intervening between the first attack and the year 1910 I was successively under the care of about thirty physicians, and in my endeavor to get rid of my trouble I tried practically every means known to *materia medica*.

While the physicians' endeavors remained unsuccessful, I cannot but acknowledge their zeal and devotion. The last physician once more informed me that the trouble was hereditary and that medical treatment could not heal me, though it might make life more tolerable. He added that I should take opiates to lessen the pain and enable me to sleep. This physician has since passed on, but the accuracy of the above statement may be corroborated by Privy Counselor Gaede of the Supreme Court, in Hamm i.W.

Toward the end of 1910 I broke down completely. My son-in-law, who is a physician in Essen, told my wife that I could not last much longer. A few weeks previous to this an aunt of mine had written my wife that we should give Christian Science a trial, if medical help proved of no avail. She also sent a copy of *Der Herold der Christian Science* which contained a testimony relative to the healing of a severe case of gout. Although my wife did not grasp the thought of Christian Science, not having the slightest knowledge of the subject, her feeling of distress caused her to hand me the periodical. For thirty years I had believed myself to be a materialist and atheist, hence an "enlightened person." The copy of the *Herold* therefore flew from my bed across the room, for at that time I considered it beneath me to try to investigate such queer theories concerning God. The aforementioned lady, though not a member of the Christian Science church, did not allow herself to become discouraged by my wife's declinatory answer, but in her desire to help she continued her endeavors, and finally interested my second little daughter, who was staying near her at the time. The latter then wrote to her mother that even though she did not believe in Christian Science, she should let me come to Hannover for her (my daughter's) sake; that I could not possibly come to harm by giving Christian Science a trial. I fully subscribed to the latter remark, though I added that it was just as impossible that I should be benefited.

Believing myself to be nearing death rapidly, I thought that I should not resist my child's entreaties by refusing the last wish which I might be able to fulfil, and accordingly in the company of my wife I left for Hannover, where I had Christian Science explained to me. What I heard there was logical, assuming a belief in the existence of God; but this, as I said before, was not the case with me. Still, I thought that during my last days I would try to investigate the subject in an unbiased state of mind. We then returned to Hamm i.W., but before leaving, my wife requested a Christian Science practitioner to take up treatment for me. Despite my unbelief I did not object to this, as I took it for granted that any detrimental effect was out of the question, though the determining factor was the consensus of medical opinion, according to which all material means had been exhausted. The next few days following our arrival home were spent in an invalid's chair with my wife reading to me from the Christian Science literature which she had brought with her. The strange thing now occurred that, instead of moving downward speedily toward the grave, there was a rapid upward rise back into blooming life. A few weeks after the first talk on Christian Science with subsequent treatment, the invalid-chair was discarded and I walked with my children to a neighboring place about three and a half miles away and back again without experiencing any bad effects. Treatment had been continued by the practitioner in Hannover. Then I saw that if the *modus operandi* of Christian Science was effective.—and it was proven to be so,—distance, which in this case was between Hamm and Hannover, was not to be reckoned with.

I would like to mention that incidental to the Christian Science treatment was the complete disappearance within two weeks of abnormal growths of the size of peas or beans which for the past fifteen to twenty years had formed back of my ears as a result of the gout. I have also been healed of another very serious affection which was related to the same trouble, but the foregoing statement will suffice to show the efficacy of Christian Science treatment.

EMIL KÜPPERS, Hannover, Germany.

It is about three and a half years since I experienced healing in Christian Science. After having been in bed for seven months, suffering untold agony from what was pronounced an organic trouble, for which the doctor had said an operation was absolutely necessary, the thought came to me to try Christian Science. Up to this time I knew nothing of it except through criticism which I had heard and which had made anything but a favorable impression on me; but a practitioner was sent for, and the first treatment was given about five o'clock that afternoon. Twenty minutes after she left I ate a hearty meal, the first solid food I had retained in all those months. I then went to sleep and slept like a little child all that night without the aid of an opiate, which had been my only relief up to this time. The next morning I walked down-stairs and out on the porch. The trouble had been instantaneously healed through Christian Science, and from that day to this I have had no return of the pain.

After this a dropsical condition manifested itself, and apparently grew much worse instead of better, until one night my husband became so alarmed that he called in a doctor. What I went through for a few weeks under the doctor's care was certainly torture, and at the end of that time in my room in a hospital I was crying aloud for Christian Science. Then I was brought home, a Christian Science nurse and a practitioner were engaged, and I am happy to say that once more this wonderful truth met my need. I had reached the last stage of dropsy and was unable to breathe

Digitized by Google

lying down, and the time had come for me to prove whether I had more faith in God than in man. On the night I was absolutely healed, conditions manifested themselves in their very worst form, and my husband again called in a doctor, who merely turned to my husband and said: "If Science is any comfort to you or your wife, keep right on with it. I can do nothing for her; she will never see daylight." It is needless to say that he was mistaken, for in twenty minutes from this time I was healed. I know if ever I touched the hem of Christ's garment I did then. Four days later I walked three blocks to a Christian Science church.

Words cannot express my thankfulness to God for these wonderful proofs of His unlimited love for His children, and I earnestly hope and pray that I may, if only in a small degree, be able to show some of the gratitude I feel by striving to apply what knowledge I have so far gained of this healing truth. Though at times I may stumble along the way, I know that if I but trust God implicitly, He will lead me gently on. I also want to express my gratitude to our Leader, Mrs. Eddy, for unfolding this truth to us, and making it so practical that we can apply it to our daily lives. Sooner or later, if it is honestly applied, our lives will certainly bear witness.

The little understanding I have gained has helped me through many seeming dark hours of fear with my little ones, and I know that it is only as I realize the ever-presence of God and that He has given His angels charge over them that I shall be able to rise above this worst foe of a mother and see plainly the nothingness of it. I know that God will give me the strength to do it, and that afterward I shall come out a better, stronger, truer mother and wife. I earnestly hope and pray that this testimony may be the means of helping some brother or sister along the way.

MARION L. PACKARD, Chicago, Ill.

✧

For twenty-five years I drank and smoked, and at times to an excess that cost me my position. The last time this occurred was on Aug. 6, 1906, and supposing that I had lost the respect of all my friends, I determined to end the struggle. I had signed temperance pledges and promised ministers and friends, as well as my wife, that I would let the stuff alone, but could not. On the morning of Aug. 7 I made all preparations to end my life, and at eight o'clock telegraphed to that effect to my wife at New Rochelle, where my family were staying for the summer. I returned to my apartment, and going into the bath-room, turned on the gas full force, then sat down on a chair and read the morning paper all through. I sat there from a quarter past eight until eleven o'clock without even feeling sleepy, but the tenants and the landlord of the apartment were hunting for the leaking pipe. At eleven o'clock I became disgusted with the attempt, threw open the window, and went out into the dining-room, where I lay down on a lounge and slept until between three and four o'clock, when my son and a neighbor, sent down by my wife to see what had become of me, awoke me by opening the hall door. I got up and talked to them, and that night went home with my boy, where I learned why the gas had been powerless to harm me. A few minutes after eight, when my wife received my telegram, she had called up a Christian Science practitioner, and together they worked to know that my life was not mine to surrender, and I could not lay it down at will; that God is man's Life, and so the gas was rendered powerless.

The next day, at the earnest solicitation of my wife, I went to the same practitioner and received treatment for the drink habit, and was healed that day, no drop of liquor having passed my lips since. I have also given up smoking, laid off eye-glasses, and been healed of chronic bowel trouble as well as many minor ailments. Besides this, I soon secured a better position than I had ever held.

Before coming into Science my concept of God was that He is a God of hate as well as of love, punishing the wicked and rewarding the righteous. At the age of eighteen I had united with a church, and for twenty-five years was an active worker, taking part in revival services and temperance reform movements; but during all this time I never understood the Bible, did not know God or know what was my relation to Him, and did not know how to pray aright. "Science and Health with Key to the Scriptures" by Mrs. Eddy has explained to me the seeming deep mysteries of the Bible and taught me how to pray effectively, and thus to work out my own salvation.

I united with The Mother Church in June, 1907, also with First Church of New Rochelle in July of the same year, and have been honored in the intervening years by being permitted to serve the cause in many capacities. My experience has been wonderful. What Christian Science has done for me it can do for others, and they will be as grateful as I am to Mrs. Eddy for what she has given us, enabling us to realize and understand what God has done and is doing for mankind.

GEORGE DEV. CLARK, New Rochelle, N. Y.

I take pleasure in affirming that this is a true statement of facts regarding the attempt at suicide with gas and my husband's subsequent healing.—MRS. GEORGE DEV. CLARK.

✧

[Translated from the German]

A friend told me of the wonderful teachings of Christian Science, and my interest being aroused, I often attended the Wednesday evening meetings. Furthermore, the opportunity was soon to present itself for me to become convinced of the truth contained in these teachings.

Our little boy, then old enough to go to school, was afflicted with scrofula, which manifested itself on the ear-laps and around the nose and mouth; besides, there were hard and very painful spots on his throat. One day the school physician informed us that we were expected to have the child treated on account of contagion, whereupon I asked a Christian Science practitioner to take the case. This was readily done. We then went through a hard testing time, as the child seemed to grow very ill; but the consciousness that God is Love, the only and ever present power, enabled me to maintain a serene attitude. The effect of the truth upon the child was seen in the yielding of the trouble. Much impurity was expelled from the system through coughing and vomiting, and malignant abscesses on the throat and legs broke, but healed almost without pain. This condition lasted about six weeks, after which the recovery of the child was complete; and now he is a big, strong boy.

We have had a similar experience in the case of our daughter. She often complained of having headaches, and I endeavored to realize the truth for her; but when a great many small pustules formed on her scalp, I asked a practitioner to take the case. Absent treatment was given; the pustules disappeared, and on the back of the head there formed a large swelling, which opened, and much impurity passed from it daily. The child was very patient and firm in her trust that God is ever present and that disease has no power. A bald place formed on her head about as large as the palm of a hand, but through continued treatment in Christian Science the discharge ceased completely, and there was a new crop of hair.

Both these cases, as well as many minor instances, caused me to understand the teachings of Mrs. Eddy better and

Digitized by Google

appreciate them more. I am striving to assimilate more of the truth which they contain, and I thank God for having been led upon this road.

FRAU MAGDALENA SCHNEIDER, Seifersdorf, Schlesien, Germany.

✧

Since taking up the study of Christian Science I have been freed from a number of physical ailments, and am glad to testify that whatever improvement has been accomplished in that or any other direction is due entirely to this agency. I have learned that Christian Science not only heals the sick and cleanses the sinner, but it also makes plain the exact way in which the good work is done, so that a Christian Scientist always has in his possession an ever present help for each problem.

When this study was taken up in a fair and open-minded manner, it was observed that associations began to assume a more pleasing aspect, and the tendency to become angered, and to submit to those other emotions and impulses which have never brought anything but sorrow and suffering to humanity, became less and less frequent. Simultaneously with the disappearance of these false witnesses, physical suffering vanished, giving place to health and peace. While the physical condition was the one thing in mind which seemed to need correction, and it was for this purpose that Christian Science was taken up, yet there was a blessing in store which has proved to be all and more than was expected. While *materia medica* was being given a fair and unprejudiced chance to bring relief physically, orthodox theology was also being given a fair chance to answer those questions which are sure to come when one is honestly searching for God. Even at that time I was not willing to accept the husks, and not until the first Christian Science treatment did I have any thought that at last the answer was to be received, although confident that the truth would some day appear.

It is just to say that those who tried to direct me spiritually, before I sought help in Christian Science, as well as those who tried through material means to heal me physically, made a sincere and honest effort according to the light they had, and there can be no doubt of their desire to do good. But, apparently in proportion to the degree of sincerity and honest endeavor on their part, the conclusion was convincingly brought home to me that they did not have the exact knowledge which the world has accredited to them. I am glad to acknowledge now, as a Christian Scientist, a sufficient sense of love for all those who tried to help me.

Christian Science has given me health, and it has given me a knowledge of God as an ever present, loving Father-Mother. Mrs. Eddy is revered and loved by all who appreciate the vast significance of her unselfish efforts for humanity, and I am glad to be numbered among those who have made some progress in that direction.

LESTER B. MCCOUN, Omaha, Neb.

✧

A year ago I suffered greatly from a form of stomach disorder which made it impossible to eat any solid food. After dieting for weeks and finding myself no better, I went to a Christian Science practitioner. To my great astonishment I was able to eat a regular meal after the first treatment. As the treatments were continued, however, and my understanding of the truth grew, the mental change meant even more than the physical. Since then Science has been everything to me. In time of need it has been my unlimited supply. When conditions have been such that I should ordinarily have been utterly cast down, divine Love has indeed met every need and made my way one of happiness, health, and sunshine.

CORA E. BATMAN, Sioux City, Iowa.

From Our Exchanges

[American Lutheran Survey]

Aside from purely racial or reasoned sympathies and antipathies, the Christian realizes that for him, as well as for our Government, there is a spiritual attitude toward the many issues arising through concrete circumstances which is strictly in harmony with the Word of God and therefore pleasing to God, as there also is an attitude which violates the plain revelation of God and justifies it on the ground that religion and politics must be kept separate. This idea, by the way, that we must keep our religion out of our politics, is radically false. God requires of us that we be Christians in our personal politics as well as in our business and other human relationships.

There can be no issue of public moment, no problem of either national or international politics, which is not capable of being solved according to the fundamental principles laid down in the Word of God. And although the issue may seem dissociated from Christianity and entirely separated from Christian thinking as a purely secular matter, the Christian will not rest before he has clearly seen the issue in all its aspects through the medium of God's revealed will. He must keep his conscience blameless, and in order to do this he will study public problems in the light shed upon his intelligence and his conscience by God's Word.

[The Advance]

Mortality among the gods has been large in recent generations. Atheism is dead. It died because the minds of men could not be content with mere negation. Men must seek an adequate cause for the phenomena which they behold about them. Agnosticism is dead. It died because men could not remain perpetually satisfied without at least attempting to know the eternal truths, even though these truths are so vast that men might be compelled to confess them unknown, and sometimes to think of them as possibly unknowable. Materialism is dead or dying, for matter itself, solid and tangible as it seems, appears to be a form of energy. "That which is born of the flesh is flesh;" that which is born of matter is material; that which is born of the Spirit is spiritual; and if the universe is fundamentally spiritual, then the Spirit is the final fact in the religious life of men and of the world.

[The Christian Intelligencer]

We should be very grateful that to this world, rocked by the breaking up of old ideals, of accustomed safeguards, and of age-long conventions, and benumbed by a paralysis of faith and trust in the living God, there has come a revelation of the instability of all human philosophy, and culture, and material power, and intellectual pride, and a compulsion, which is becoming more powerful with each passing day, to return to a more stalwart and primitive faith, a more honest and earnest reliance upon God, a more profound distrust in all human safeguards and foundations, and a more wide-spread conviction that only upon the basis of a truly spiritual life rooted and grounded in a living faith can there be erected any permanent or enduring institution of human society or individual life.

[The Congregationalist and Christian World]

"Have ye offered unto me sacrifices and offerings in the wilderness forty years, O house of Israel?" The clear implication of this query is that in the mind of this prophet of the eighth century before Christ the elaborate ritual outlined in the Pentateuch was not in operation or in existence when

Digitized by Google

the Hebrews wandered for forty years in the wilderness. In those early beginnings of the Jewish church men did not undertake to purchase the mercy and favor of God by the gifts of bullocks and rams. The free, unpurchased and unpurchasable mercy of God was openly bestowed upon the needy, penitent Israelites as an act of divine grace. This sturdy prophet views the whole system of legalism which had grown up to obscure the great evangelical truth of the divine compassion seeking out the guilty objects of His redemptive purpose, as a thing graven by man's device. It was putting in the place of God a faulty picture which was not God.

Where religious observances are not accompanied by clean and unselfish living, we may be sure that the divine judgment will fall upon them. Where a man brings his song or his prayer to the altar and there remembers that his brothers have much against him because of his unsocial conduct, let him leave there his worship before the altar and set himself in right relations with his fellow men. Then let him come and offer his worship. The poor and the needy are more precious in God's sight than all *Te Deums* and genuflections. Inasmuch as we have shown equity and kindliness in our dealings with them, we have already honored Him whose precious children they are. "If ye have done it unto the least of these ye have done it unto me."

[Rev. Paul Revere Frothingham in *The Christian Register*]

Conceptions as to the Master and his mission may undergo a change, churches may require readjustment, faith may seek new formulas; but when all is said that can be said in such connections, and the last suggestion has been made, the one important and convincing fact remains,—that religion is a living and undying instinct of the human soul. Human customs change, but there are human convictions which never can be shaken. New needs arise, but certain old needs still remain unanswered. Human nature is not going to outgrow the church, for the church has grown out of human nature. Worship is not likely to cease suddenly, because people cannot possibly cease from setting up something which they worship. Human beings are not destined to forget how to pray, because when they forget themselves, prayer springs up in their hearts if not upon their lips.

[Robert F. Horton, D.D., in *The Christian Work*]

Wherever men are there are some men with the vision, there are some men with the voice, there are some men with the power to explain and to assert that God is in all things and over all things. And when we say, reverently and confidently, that the greatest revelation of God is Jesus Christ, we say what is manifest to all: that in the human person of Jesus, in the mind of Jesus, in the thought of Jesus, there comes the revelation of God as the Supreme Being that is governing and ordering affairs and directing everything toward the object that He has appointed.

[*The Universalist Leader*]

The one vital need of the hour is more Christianity, and yet more Christianity,—not as a theology, not as a theory, but as a working program of men and nations. Until we have that, we shall have war. When we have that as a dominating fact, it will bring peace.

[*Zion's Herald*]

Let your life be of the right kind, keyed to a supremely spiritual note, and through the linking of life into life adown the successive generations your example will remain effective forever.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition" size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

A new pamphlet, "What went ye out for to see?" is now on sale. This pamphlet contains the four following articles, republished from the Christian Science periodicals: "Principle Not Person"; "Jesus of Nazareth"; "Jesus the Christ"; and "Jesus and the Christ."

The pamphlet, "Causation," by Frederick Dixon, has been translated into Norwegian "Skapende Kraft," and is now published with the English and Norwegian versions on opposite pages.

The pamphlet, "Fulfilling the Law," has been translated into Danish, "Lovens Fylde," and is now published and on sale. This new pamphlet has the English version printed opposite each page of the translation.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, largersized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $1.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 361 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $1.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Oxford India Bible paper edition, with stiff morocco cover. Single copy, $6.00, six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

The Wisconsin-Minnesota Light & Power Company is putting in a great dam for hydro-electric purposes at Wissota, Wis., on the Chippewa River. There will be from six hundred to one thousand men employed for a year and a half, and a town has to be built to care for the working people. This gives the power company a chance to control the situation, and the first rules laid down are that Sunday shall be observed, that there shall be no liquor sold in the camp, and that no objectionable games shall be tolerated. The company provides a motion-picture show house in which the best educational films shown in the greater cities will be presented, and has taken other steps, beginning with the installation of complete water, sewer, and electric light systems, and strong regulations making for cleanliness. The company is undertaking the construction of a sixty foot dam for hydro-electric purposes that will develop 45,500 horse-power, will be sixty feet high and a mile long, and will cost $2,000,000. The waters held back by the dam will, by their sixty foot fall to the turbines, develop 7,500 horse-power each on the six electric generators, or an aggregate of 40,000 kilowatts of electric capacity. The electrical energy produced at this plant has already been marketed. Most of it will be conveyed over a transmission line to St. Paul, seventy-four miles distant.

Franklin K. Lane, secretary of the department of the interior, says in his annual report: "No one can survey the physical condition of the United States without being impressed and almost overwhelmed with the magnitude of the work that must be done in keeping our rivers within bounds and putting them to use. It is the largest task that the Government must undertake sooner or later. No one can take the yearly toll of our rivers without realizing that the people of this country cannot regard themselves as owning this land, really possessing it, until they have brought these waters under subjection. And in doing this they will literally create new land by the millions of acres, land that will support millions of people as against the thousands which live upon it today. How these great works can be carried on calls for constructive thought, not merely on the engineering side but more immediately upon the financial side, as to those ways and means by which the lands reclaimed shall be made to bear in some degree the burden of the expense."

Telegraph operators all over the United States employed by the Western Union Telegraph Company are rejoicing over the news that after the first of next year all traffic employees will receive annual vacations with pay. The announcement reads: "All regularly assigned employees who have been in the service of the company for two years or more will receive two weeks' vacation, and those who have been in the service continuously for one year will receive one week's vacation." Operating employees who have not been regularly assigned, but who have worked for the company the equivalent of full time for each period, will also receive vacations. It is stipulated that the vacations shall be employed for rest and recreation and not used in other employment. The cost to the company is estimated at $2,000,000.

The first bank to be incorporated under the Massachusetts farm land bank law of 1915 has filed papers. It will be known as the Massachusetts Farmland Bank, with headquarters in Springfield and branch offices in every county in the state. The object of the bank is to lend money to farmers who have difficulty in getting credit from ordinary banking institutions. Under the law the new bank, which enjoys special privileges, can invest only in farm land mortgages. Money will be loaned at 6 per cent and then on the security of the mortgage taken bonds will be issued at 5 per cent. Both stock and bonds are tax exempt, and the bonds are legal investment for savings banks, trust companies, trustees, insurance companies, and public funds. The money obtained from these bond sales will be loaned to the farmers.

Vermont has begun a suit in the United States Supreme Court against New Hampshire to settle a boundary dispute dating back to colonial grants. The land lies on the west bank of the Connecticut River for about two hundred miles. Under the agreement by which "the Hampshire Grants" were set apart from New Hampshire as the state of Vermont, the west bank of the Connecticut River was made the line of demarcation. New Hampshire insists that the division placed land on the west side of the river within its borders, and some of this property is taxed to New Hampshire today. Vermont, claiming that its borders extend to the low-water mark, is also seeking to obtain the taxes on this land.

The United States coast and geodetic survey has been working the eastern shore of Bering Sea from Nunivak Island to Nushagak, one of the most unfrequented parts of Alaska's coast line. For the last five seasons a steamer of the survey has been engaged on the field work connected with the charting of the approach and entrance to the Kuskokwim River, completed the past season by the steamer "Yukon." A reconnoissance survey was made inland from Bethel, the head of deep sea navigation, 550 miles to McGrath, the main settlement on the upper river. As some previous positions were found as much as fifty miles in error, a new map of the river will be made.

The legislative council of China, after a final examination of votes of citizens' representatives, found the entire 1,993 in favor of a constitutional monarchy with Yuan Shih-kai as first Emperor. A despatch was then sent to the President, asking him to ascend the throne. Yuan Shih-kai at first refused, expressing the view that his ability was insufficient for such an exalted position, but replying to a second despatch he consented on condition that the form of government should be unchanged till next year. The Chinese residing in the United States on the Pacific coast are perfecting organizations and plans to prevent the complete overthrow of republicanism in China.

The national forest reservation commission has decided upon the purchase of a very important tract of land in the White Mountains. The tract contains only 5,500 acres. It is situated upon the slopes of the Presidential Range and includes the summits of Mt. Webster, Mt. Jackson, and Mt. Clinton. Its acquisition will give the Government practically complete control of all the peaks of the Presidential Range, Mt. Washington, Mt. Jefferson, and other northern peaks having already passed into the hands of the United States. This purchase brings the Government's holdings in the White Mountains to more than two hundred and seventy thousand acres.

The plans of Sir Adam Beck regarding Niagara Falls power development, which are under consideration by the Ontario Government, include the diversion of Chippewa Creek from its present outlet in Niagara River, above the falls, to a point about one mile above Brock's monument. It is stated that this scheme to provide additional power for the hydro-electric system will cost about ten million dollars. By the diversion it is calculated that a total head of water of 500 feet will be obtained.

Governors of all states in Mexico have been asked to report at once on the measures they have taken to carry out the agrarian reforms provided for in the decree issued by General Carranza last January. A recent official visit to Medeling, state of Vera Cruz, where old community lands were apportioned eight months ago, showed that the new owners of the land had harvested great crops.

Good roads advocates from the Mississippi Valley states and the Canadian province of Manitoba met recently in New Orleans, La., to organize the Jefferson Highway Association, through which it is proposed to construct an international thoroughfare from New Orleans to Winnipeg. Two routes for the proposed highway are under consideration.

A new million dollar building is to be added to the Smithsonian Institution at Washington, D. C., to contain the collection of paintings, engravings, porcelains, and bronzes given to the institution from time to time by Charles L. Freer of Detroit. Mr. Freer has given $1,000,000 to the institution for the new building.

Approximately 210,000,000 bushels of wheat and flour, the latter figured on a wheat basis, have been received at the port of Buffalo, N. Y., thus far this season. When to this amount are added the shipments now afloat, it is predicted that the record of 1898, which was 242,000,000 bushels, will be reached.

Announcement is made by trustees of the American Academy at Rome of the appointment of Charles Upson Clarke, assistant professor of Latin at Yale, to the directorship of the American School of Classical Studies of the academy. The appointment takes effect Oct. 1 next.

The report of the librarian of Congress just submitted to Congress shows that the library now contains 2,363,873 volumes and pamphlets, 147,553 maps and charts, 727,808 volumes and pieces of music, and 385,757 prints.

During the month of October over four hundred thousand fish were sent out from the fish hatcheries of Pennsylvania and distributed in streams throughout the state. More than half of this number were brook trout.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII December 25, 1915 No. 17

"The sustaining infinite"

IRVING C. TOMLINSON, M.A.

THERE is no mystery in the healing accomplished through Christian Science, however it may seem to those unacquainted with the subject. The transformations which are wrought through reliance upon God are as simple as the banishment of darkness by light, or the correction of a mistake in addition through the understanding of mathematical truth. With Christ Jesus the healing of the sick was a perfectly natural process, and every cure was accomplished by him with as much certainty as the mathematician eliminates an error with truth; therefore he could confidently say, out of his certain knowledge, "Ask, and it shall be given you; seek, and ye shall find."

The Bible, and Mrs. Eddy's writings elucidating the Bible teachings, make it plain that just as light is waiting to enter the open window and banish the darkness within, so our God, infinite Love, divine intelligence, is waiting to enter the human heart and replace disease with health, discord with peace, and sorrow with joy. In keeping with this proved availability of the ever present healing Truth, "Our Father which art in heaven," Science and Health has for its opening sentence: "To those leaning on the sustaining infinite, today is big with blessings" (Pref., p. vii). We do not have to wait for perfection and harmony to begin; whatever good exists for man is his now.

The Master said of the sparrows, "Not one of them is forgotten before God," and then declared, "Fear not therefore: ye are of more value than many sparrows." Again, in speaking of the fowls of the air, he states that "they neither sow nor reap; . . . and God feedeth them: how much more are ye better than the fowls?" Jesus saw the whole truth of creation, where mortals are frequently blind to the meaning of God's work as expressed in lesser ideas; for the wise Master fully understood the intimate relationship between divine Love and all conditions of need.

Following Mrs. Eddy's method, when she speaks of "the figurative transmission from the divine thought to the human" (Science and Health, p. 514), we remember that the salmon which make their summer home in northern waters, go out into the depths of the sea in the fall, and yet another spring they find their way back into the same river which formerly gave them food. The birds which in the fall journey far southward, in the spring unerringly return to their northern homes. A pair of fan-tailed pigeons were sent from western New York to Michigan, a distance of about two hundred miles. The friends in Michigan released the captives too soon, and the beautiful birds, mindful of their loved dove-cote, safely and surely reappeared in their old home in the Empire State. How truly Emerson grasped the great reality back of the symbol when he wrote: "The air is full of sounds—the sky of tokens. The ground is all memoranda and signatures; and every object covered over with hints, which speak to the intelligent."

This faculty called instinct, which guides the fishes and the birds, hints of the divine intelligence which is God, directing aright every creature He has made in the realm of Spirit. Science and Health (p. 1) affirms that "desire is prayer." This desire, or prayer, is a seeking for good, an asking which has in it harm for none, but makes instead for the welfare of all. It is right for the fish of the sea and the birds of the air to find their appointed homes where they are fed and nourished, and so responsive is divine Mind to every true desire that the fish unerringly gain their river home and the birds return to the open field or silent forest.

The Scriptures declare that "whatsoever ye shall ask in prayer, believing, ye shall receive." If the humblest desires of the lowliest of creatures do not go unheeded, how certainly may man look for a satisfying answer to his earnest appeal for help; but we must gratefully affirm and acknowledge the good we wish to realize. To all those possessed of childlike trust comes the message from the Giver of all good, "I will never leave thee, nor forsake thee." Wherefore Jesus said, "According to your faith be it unto you." Mankind alone limit good, and are thereby hampered in their achievements. When one's trust is in good alone, he brings good into his experience. When absolute reliance is placed on Him who is Life eternal, then disease is banished and health and joy abide. It is demonstrably true, as before quoted, that "to those leaning on the sustaining infinite, today is big with blessings."

The very nature of man as a Son of God is his guaranty of manifold blessings. There are many statements in the Christian Science text-book, "Science and Health with Key to the Scriptures," relative to man as God's idea, and especially on page 475 is given a luminous presentation of man as an emanation of the divine Mind, and hence necessarily reflecting the allness of that Mind. To know more about God is to know the truth about man, His image, and this God-consciousness clearly distinguishes him from all lesser ideas. Thus he is set apart from the beasts of the field and the fowls of the air by his spiritual understanding of the allness, perfection, and permanence of the spiritual creation, and the nothingness of the so-called material creation. Because of this ability to apprehend and demonstrate the spiritual verities of being, there rests upon human sense the compulsion to rise wholly above the material through a clearer realization of the spiritual. In this divine task of rising superior to all the false claims of the flesh, the man of understanding has the ever present help of "the sustaining infinite." We should ofttimes remind ourselves of the love and wisdom which, being infinite, reaches out to "every creature" and supplies all their needs.

It is really the possession of this healing consciousness that distinguishes man from all other ideas of Mind. The real man—the only man—abides continually in the shelter of the Father's love, and because of this spiritual communion enters upon a broader, truer living. Of him, therefore, the psalmist could truly sing: "Thou madest him to have dominion over the works of thy hands; thou hast put all things under his feet: all sheep and oxen, yea, and the beasts of the field; the fowl of the air, and the fish of the sea, and whatsoever passeth through the paths of the seas." It may have been with this

text in thought that an American poet, a true lover of nature, who felt something of the tender care of "the sustaining infinite," has written of the water-fowl:—

He who, from zone to zone,
Guides through the boundless sky thy certain flight,
In the long way that I must tread alone,
Will lead my steps aright.

✧

Our Wednesday Evening Meetings

ROSALIA RIEDEL FELTER

Mrs. Eddy says, "If people would confine their talk to subjects that are profitable, that which St. John informs us took place once in heaven, would happen very frequently on earth,—silence for the space of half an hour" (Miscellaneous Writings, p. 339). This gentle reminder to speak only of the things which are true, honest, just, pure, lovely, and of good report, can surely never be mistaken as an excuse for the silence which sometimes characterizes the Wednesday evening meeting. The study of Christian Science brings a truer understanding of God and His law, and the fruits of this understanding are so bountiful that there is no excuse for one moment's silence during the time set aside for testimonies.

It is sometimes a question just what is permissible or wise to say, but the remembrance of our blessings and the effort to put one's self in the place of the stranger, who has up to this time perhaps greatly misapprehended the teaching and results of Christian Science, but who, nevertheless, has had enough faith to come to our meeting, will surely enable us to give a cup of cold water in fulfilment of the Scripture, which saith: "Let the people praise thee, O God; let all the people praise thee." "Ye are my witnesses, saith the Lord." "Ye are a chosen generation, a royal priesthood, an holy nation, a peculiar people; that ye should show forth the praises of him who hath called you out of darkness into his marvelous light." Again we read: "They shall speak of the glory of thy kingdom, and talk of thy power;" "Let the redeemed of the Lord say so, whom he hath redeemed from the hand of the enemy." Surely these inspiring mandates, prophecies, and exhortations should enable us to realize that "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind," so that we "can do all things through Christ which strengtheneth" us.

Notwithstanding the joy that is ours as we give heed to the above texts, students of Christian Science often allow the carnal mind to be heard above the word of God, and offer its insidious excuses for not giving testimony. False sense may remind us that we have already told of our healing, and that we are not expected to repeat it every Wednesday. Here it may be asked, Was the work finished when that first healing was realized? Were we not then only on the threshold of infinite Truth? The transformation had only begun; and as we study this Science of Christianity are we not being healed each day of some belief in a power apart from God, good?

One of the most effective and helpful testimonies the writer ever heard was that given by a lady who told of being healed of "planning." She had been considered strong-minded because of her ability to plan ahead and carry it out, but the time came when she no longer seemed successful in so doing, and she attributed it to loss of will-power. When her health failed she found Christian Science, and in its study learned that we must try to see God's plan for us, rather than make our own plan and try to bring His power to bear on having it become effective. We cannot be listening for God's voice when we are telling Him what to do.

To cling to a particular plan as the only solution of a problem may deter us from beholding and manifesting the highest possible good. Great peace have we when we learn that "no loss can occur from trusting God with our desires, that they may be molded and exalted before they take form in words and in deeds" (Science and Health, p. 1). Such healing in particular opens wide our doors to immortal Mind; and if we really listen for the voice of Truth, we shall both hear and heed it.

Further, the tempter may whisper to us that if we could speak as well as certain others we could then testify every week. Respecting this Mrs. Eddy says (Science and Health, p. 89), "If one believes that he cannot be an orator without study or a superinduced condition, the body responds to this belief, and the tongue grows mute which before was eloquent." In Isaiah we have the assurance that "the heart also of the rash shall understand knowledge, and the tongue of the stammerers shall be ready to speak plainly." Simplicity and sincerity go far in convincing the seeker for Truth, and it is well to bear this in thought. At one of the Christian Science meetings a lady said, in a voice trembling with emotion, "I have been healed!" and a stranger present declared that to him it was the most convincing testimony given that evening.

Many of us no doubt can testify that it required an effort the first few times to speak in the Wednesday evening meetings, even though the heart was overflowing with gratitude, but that it was this fulness of gratitude which enabled us finally to rise and return thanks for our healing. Perhaps even now it is not always easy to testify, but in due time we learn that obedience to the demands of Truth makes the task easy. Let us remember that "the dead," they that are oblivious to the truth, "praise not the Lord, neither any that go down into silence;" but "the living," they that are awake to the truth, they shall praise Him.

✧

"Loose him, and let him go"

FRANK B. HOMANS

In the business world we sometimes see an honest, conscientious Christian man trying hard to do a fair business and make a living, and we see him jostled, crowded, and finally defeated by some overpowering monopoly. This seems all wrong, contrary to law and justice, and we may wonder why such things are permitted. Sometimes we hear the question asked, "Why does God allow His children to suffer in this manner?" Many years ago one of the good old prophets said, "Thou art of purer eyes than to behold evil, and canst not look on iniquity," and if we believe and understand the Scriptures, we must realize that God is not a party to the many terrible things which seem to exist.

John tells us that "God is love," and we know that infinite Love is not simply lovely or loving, but Love itself. We also know that God is Spirit; hence it would be as impossible for Love, Spirit, to be conscious of evil as it would be for the sun to embrace darkness. Put the sun in the midst of darkness and instantly the darkness would be dissipated. So too if evil could come into the presence of God, or good, it would instantly disappear. In Christian Science we are taught that error has no power, is nothing, no real thing. Nothing is represented by a zero, and a big zero has no more power than a little one. In like manner an army of people, if in error, would be no more formidable as an opponent than a small, weak body of persons or a private citizen. If the defending party has truth, justice, and right on his side, if he is fearless in his defense, confident of success because he is right

Digitized by Google

and knows he is right, and realizes that "one on God's side is a majority," he cannot fail to win his case even against overwhelming odds.

This statement has been proven true a great many times, and especially by Christian Scientists, who know how to meet human conditions from a scientific standpoint. Right will prevail. The only reason it sometimes seems to fail is that the one who is in the right lets in fear; he sees the enormous wealth and assurance of his enemy, attaches greed or dishonesty to him, accuses him mentally or otherwise of possessing faults, and thereby brings himself down to the same level. If he is confident that he himself is in the right, he should maintain a high moral standard; he should realize that man is a child of God, His reflection, and as such he is doing right and wants to do right and wants only such results as are right. This realization will bring victory even as it did to David. The children of Israel noted the enormous size of the Philistine. David saw only the power of God.

In dealing with a case where one person, be he great or small, rich or poor, is trying to take an unfair advantage of another, a serious mistake is likely to be made. The oppressed believes in and admits the error in his oppressor. He feels that he is mean and dishonest and mentally or verbally accuses him of being such, thereby letting in hate and resentment. When approached on the subject he is very apt to say, "He is trying to rob me." Jesus, however, said, "Love your enemies." We are also told in the ninth commandment, "Thou shalt not bear false witness against thy neighbor." Christian Science teaches us to voice the truth at all times and to return good for evil. The truth, the real truth, is that no matter how bad and dishonest human sense may seem, the child of God does not want to injure any one, is not greedy, selfish, or avaricious. By holding the right thought regarding the supposedly bad men or party of men, the asserted enemy is rendered harmless.

In Isaiah we are bidden to "loose the bands of wickedness," to "undo the heavy burdens," and to "break every yoke." Yet how common it is for mortals to commit the sin of which Jesus accused the lawyers when he said, "They bind heavy burdens and grievous to be borne, and lay them on men's shoulders; but they themselves will not move them with one of their fingers." We say of a certain class of people that they are born dishonest and cannot help being so. Of another class it is said that they are grafters, of yet another that they are naturally treacherous, and then we wonder why they do not measure up to a higher standard of virtue. As well bind a chain armor on a man and push him overboard and expect him to float as to bind an error on a person and expect to see him freed from this error. This line of thought is a gross violation of the golden rule, especially when we dwell upon another's faults and show them up to others. No matter how kindly we may appear to do so, it is never right to expose another's faults unnecessarily.

The writer recently had an experience which taught him a valuable lesson. A powerful body of men were trying to do him an injury. They had their plans well laid and from a material sense victory was within their grasp. There seemed to be nothing that could stop them from striking the fatal blow. Resentment at this seeming injustice was fast getting a strong hold, and thoughts of their cruelty and injustice were about the only ones in evidence, until one day he was gently led to see the error of this attitude. Then thought was changed to a higher standard, and he was enabled to see the truth of our Leader's words (Science and Health, p. 369), "It is error even to murmur or to be angry over sin." He also saw that he was giving error the only power it had. The case was tried before the highest tribunal in the state, but had been delayed in a most exasperating manner. Finally, however, it was brought up and disposed of without a word of protest. No one could explain just how it occurred. From a material standpoint what had happened seemed impossible, yet it was found that "one on God's side" was a majority against a seeming multitude.

From this experience was born a strong desire always to think of every brother man at his best and keep him thus in consciousness, to lose sight of wickedness in human nature, to magnify the good that is to be found if we look for it, and to trust God implicitly, even as Jesus did when at the tomb of Lazarus he uttered that immortal sentence thanking the Father for answering his prayer before it was made. He showed his great trust in and understanding of divine Love. He knew that Lazarus was not dead, but he must destroy the belief in death held by all who stood about, so that they might loose him from the thoughts they were entertaining of him. If we could but learn to see the good in mankind instead of the evil, dwell upon this good and keep it ever before us, it would go a long way toward dispelling the world's belief in evil. There is good in every one. Our failure to find it shows we are not reflecting the Mind "which was also in Christ Jesus."

✧

Flower Giving

CORNELIA BATEMAN FARADAY

From the seemingly little things that come to us in our daily experiences we often learn large and useful lessons. As Mrs. Eddy has said (Science and Health, p. 234), "Whatever inspires with wisdom, Truth, or Love—be it song, sermon, or Science—blesses the human family with crumbs of comfort from Christ's table, feeding the hungry and giving living waters to the thirsty."

Recently the writer was given a great bunch of roses by some friends whom she had been visiting. She was delighted with them and appreciated greatly the love which had prompted the gift, as well as the exquisite color and fragrance of the flowers, and she thought of the joy of having them in her room, of the pleasure of looking at them and inhaling their sweetness. On her way home in the car she sat directly opposite another young woman who was alone. This other woman had no roses, and her face and whole attitude seemed to say she had no friends, no joy,—nothing that was beautiful. Then the thought came quickly to give her some of the roses. Mortal mind said, however: "No, you had better not. She may resent your doing so and tell you she does not want your flowers; and then too these were given to you to enjoy and they will be so beautiful in your room." But in a moment the right thought came, and the realization that if the flowers were given with enough love they must carry their message with them and could not possibly be refused or resented. Quickly she separated some from the bunch and without a word laid them in the other woman's hand. The look and the smile which she received in return were enough. She knew that the roses had given their message.

There came a great desire to go through the world giving blessings to every one, and she seemed to see everywhere people who had been forlorn, and neglected, and poor, and heart-hungry, all with happy faces, carrying bright, fragrant flowers. In place of grayness there was the color of joy; instead of sorrow and despair there were the blossoms of faith and hope. Selfishness and hatred had given place to Love's reflection, until the whole universe seemed a wonderful blooming garden, and these words from the thirty-fifth chapter of Isaiah came into mind: "The wilderness and the solitary place shall be glad for them; and the desert shall rejoice, and

Digitized by Google

blossom as the rose. It shall blossom abundantly, and rejoice even with joy and singing."

The writer realized that the flowers were only the outward human concept, in this case beautiful but nevertheless fleeting, and soon came the earnest desire always to give out to every one with whom she came in contact the flowerings of beautiful thought, sweet with the perfume of love. Then would her world truly seem a lovely garden and the kingdom of heaven not afar off. She took the other flowers home, but soon had given all but one of them away; yet in looking at the vase with its one little rose she seemed to see instead of emptiness and loss a great cluster of joy and gladness. Each rose that she had given away seemed to have left with her something real and beautiful, and she had truly learned that only by giving can we really receive, and as we attain greater purity of thought and come closer to God, thus reflecting divine Love in ever greater and greater degree to all, so we are indeed dwelling in what the prophet calls "a watered garden."

Spiritual Cultivation

WILLIAM A. HUNTER

THE novice in Christian Science often wonders why he has so much error to overcome when he is striving to live in accordance with its teachings; indeed it may sometimes seem that the errors and false beliefs manifest as sin, sickness, and limitation, which were supposedly overcome, reappear even more frequently than before. One who is in this state of wonderment may gain a helpful lesson by considering the process of the farmer in tilling the soil. Ground that has never been cultivated is sometimes covered with prairie grass in which are often found weeds of various kinds that are not always seen by the casual observer. This wild grass serves its purpose as a pasture and is usually rather attractive, but its beauty and the productiveness of the soil are not to be compared with the cultivated field.

In preparing such wild land for cultivation, any large stones or other obstructions must first be removed. The grass and weeds are then plowed under, and when the ground is smoothed over, it is ready for the good seed which the farmer has selected. The farmer has nothing to do with the growing process, for God "giveth the increase." It is necessary, however, for him to watch constantly, lest the weeds and wild grass which were overturned but not destroyed, reappear, to hinder or thwart the germination and growth of the seed. He does not become discouraged in this, for he knows that it is because the soil is good and is being cultivated that the weeds appear more troublesome than before. He knows too that if he immediately uproots them as they appear above the surface, they can do no harm. If he is faithful in keeping out the weeds, he is sure to have a bountiful crop as a reward for his work; but if through ignorance, carelessness, or negligence they are allowed to grow, he will not only be deprived of his present harvest, but sooner or later he will again have to go through the overturning and uprooting process before the soil can be productive of further good, and the work will be more difficult because of his having allowed the weeds to take possession.

The significance of this illustration readily appears. The soil of the human mind is covered with the wild grass of selfishness and the weeds of error, false beliefs,—evil thoughts and tendencies of which we may not have been conscious until we began the study of Christian Science. On page 96 of "Science and Health with Key to the Scriptures" Mrs. Eddy says: "The breaking up of material beliefs may seem to be famine and pestilence, want and woe, sin, sickness, and death, which assume new phases until their nothingness appears. These disturbances will continue until the end of error, when all discord will be swallowed up in spiritual Truth."

Before one takes up the study of Christian Science, stones of prejudice and other obstacles should be removed from consciousness. The wild growths of sense, the "old man," must be uprooted, and the soil of consciousness must be smoothed, brought to a receptive state of peace. Then the good seed of Truth and Love is sown by the study of the Bible, together with the writings of Mrs. Eddy and other authorized Christian Science literature. To those uninstructed in Christian Science and unfamiliar with the seeming operations of evil, it might appear that there is nothing more to be done; but the experienced Christian Scientist knows that here also, while he has nothing to do with the growing process, it is necessary to watch lest products of mortal sense spring up in consciousness and seemingly hinder or thwart the germination and development of the plantings of Truth and Love. It is well to remember further that it is because the soil of our consciousness is being cultivated that the weeds of error come to the surface, and it is our privilege and duty immediately to uproot these through spiritual vigilance, and thereby forever destroy them as fast as they appear.

Sometimes we grumble or become discouraged because we apparently have so much to overcome and our progress seems slow and difficult. Perchance the tempter induces us to say that we never had these things to meet before coming into Christian Science, and this may be true; but it is also true that our consciousness was not formerly productive of anywhere near the measure of good. The consciousness which is being cultivated is more receptive, and requires constant watchfulness on our part to see that nothing enters "that defileth, . . . or maketh a lie." If we are faithful in keeping out the weeds of wrong thinking, the seeds of which the world-thought is unconsciously scattering along the way, we shall reap as a reward for our righteous endeavors a bountiful harvest of that peace which, as Christian Science teaches, is the kingdom of heaven.

On page 343 of "Miscellaneous Writings" Mrs. Eddy says: "Warmed by the sunshine of Truth, watered by the heavenly dews of Love, the fruits of Christian Science spring upward, and away from the sordid soil of self and matter. Are we clearing the gardens of thought by uprooting the noxious weeds of passion, malice, envy, and strife? . . . The weeds of mortal mind are not always destroyed by the first uprooting; they reappear, like devastating witch-grass, to choke the coming clover. O stupid gardener! watch their reappearing, and tear them away from their native soil, until no seedling be left to propagate—and rot."

"I will lift up mine eyes"

RHETA L. TODD

I HAD reached the crest of the hill, and reined up my horse to rest while I looked out over the country with its expanse of valleys and hills. The beauty, the power, the wonder of the panorama led me to bow my head in thankfulness for its inspiration. Then I thought I heard these words of the psalmist: "I will lift up mine eyes unto the hills, from whence cometh my help."

Was I dreaming, or did I really hear a woman's voice? I turned in my saddle, but saw no one. Unconsciously I gave my horse the rein and moved on, peering meantime into the bushes for a sight of the speaker. Seeing no one, I could but believe myself the subject of a queer, haunting experience. Near town, however, I met a miner friend.

"Anybody living up near the top of Big Creek hill?" I asked.

Digitized by Google

He smiled, and stepping closer to the horse, answered, "I ain't superstitious and I ain't religious, but there's something funny about that. A woman and her husband moved into the little cabin beyond where the trail forks. I've stopped in when I passed over to my claim, and we got to talking. It seems she was superintendent of nurses in a big hospital, and now she's brought him up here away from doctors and nurses and medicines and all those things, because he's supposed to have lung trouble. Ain't that the strangest thing you ever heard?"

I smiled to myself. The recollection of the psalm began to clear the seeming mystery.

"And the strangest of all," he continued, "is that he gets better and stronger. I don't know how or why. When they first came up he couldn't move, and she'd sit and read to him out of a little book. It wasn't a Bible, but sounded like it in spots. Now he works about the house, and he walked over to my place the other day."

"Do you think he is getting better?"

"Do I think it?" he repeated rather firmly; "I don't think it, I know it."

I wished that I might tell him of the "little book," but instead I simply asked him to visit them as often as he could, for I knew he had come upon those who had learned to look up to the spiritual heights whence cometh our help. On reaching the hotel, I turned to the familiar pages of Science and Health and read again with gratitude the chapter on Footsteps of Truth.

Sorrow Dispelled

JANIE MYROVER

In our text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy writes that "trials are proofs of God's care," and that "sorrow has its reward. It never leaves us where it found us" (p. 66). Recently an opportunity was afforded to prove the truth of these comforting words. I received a message which bore the news of what seemed to mortal sense an overwhelming affliction. For the first few days the burden seemed intolerable; but I turned to God and found relief. I sought the Scriptures, and my attention was directed to this passage: "Now our Lord Jesus Christ himself, and God, even our Father, which hath loved us, and hath given us everlasting consolation and good hope through grace, comfort your hearts, and stablish you in every good word and work;" also to the Master's own words, "I will not leave you comfortless: I will come to you."

Then followed peace, healing, tranquillity, and calmness, with a sense of safety entering my consciousness as silently but as surely as the sunshine penetrates the farthest corner of the darkest room. Such moments touch the heart with the fire of divine inspiration. It is indeed the entertainment of angels, respecting which Mrs. Eddy has written (Miscellaneous Writings, p. 306): "When angels visit us, we do not hear the rustle of wings, nor feel the feathery touch of the breast of a dove; but we know their presence by the love they create in our hearts. Oh, may you feel *this* touch,—it is not the clasping of hands, nor a loved person present; it is more than this: it is a spiritual idea that lights your path!"

Think of it! Not only can we find balm for grief, but we can grow from such experiences, and be established in every good work.

✧ ✧ ✧

True glory
Lies in the silent conquest of ourselves.

THOMPSON.

Selected Articles

[Judge Clifford P. Smith in *Northwestern Christian Advocate*, Chicago, Ill.]

A clipping containing a question asked by a correspondent, as printed in the *Advocate*, has been sent me for a reply. I am entirely willing to answer it. His question was: Why reject medicines, if they are prescribed in a scientific manner? In other words, Is Christian Science scientific? My reply is: Christian Scientists do not favor the use of medicine as a remedy for disease, because Christ Jesus did not do so, and because, to quote from Mrs. Eddy, "his acts were the demonstration of Science" (Science and Health, p. 273). In other words, our concept of Science is based on the teaching and example of Christ Jesus.

Your question, printed as a heading to the letter of the correspondent, was evidently as much a comment as a question. I assume that you will not be unwilling to have it answered accordingly. Question: Do Christian Scientists think the Lord made a mistake when he put herbs in the world? Answer: No, they do not think the Lord ever made a mistake. The former concept of God as the giver of herbs for medicine does not fit the medical practice of today. For the corresponding position nowadays, He would need to be regarded as the provider of germs to kill germs, and the sender of disease to mitigate disease. The twentieth-century physician is not an herb doctor. Instead of administering a dose of herbs, he inoculates his patients with the germs of a disease, with the hope that this expedient may prevent a worse disorder. Neither of these views of Deity, however, can be brought into Christian theology without amending the New Testament.

✧

[Ezra W. Palmer in *The Rocky Ford* (Col.) *Tribune*]

The evangelist who preached in your city ignored the remarkable benefit that Christian Science has been to the world in reinstating primitive spiritual healing and the understanding of "the deep things of God" which the study of Science and Health in connection with the Bible makes available for the student. The successful mission of Christian Science made no appeal to him. He attempted to discredit Christian Science by perverting its teachings and by giving distorted definitions of incomplete sentences and passages from "Science and Health with Key to the Scriptures" by Mrs. Eddy. The effect of Christian Science teaching is not to discard the Bible, as the critic declared. On the contrary, Christian Scientists declare that the Bible, as a result of the light thrown on its sacred pages by Christian Science, has become a new book. Its teachings are understood; apparent contradictions and discrepancies are cleared up; above all else, its truths are rendered available in healing sickness and destroying all forms of evil.

Christian Scientists do not worship Mrs. Eddy, as this critic declared. They are profoundly grateful to her for her labors of love in giving again to the world the spiritual import of the Scriptures, which heals and saves. They however worship God only, in accordance with the first commandment. The evangelist attempted to make God the creator of matter by quoting the second, or false, account of creation in Genesis, instead of the first, which tells of the true or spiritual creation. Modern physicists are more and more approaching the position of Christian Science,—that matter is merely a manifestation of mortal human belief, and not an expression of reality or a creation of the infinite Mind. Christian Science does not deny that sin, sickness, and death exist to human thought, but it denies that God created these evils, and it further teaches that a right understanding of

Digitized by Google

God will destroy them, even as Jesus and his disciples destroyed them through divine power.

Christian Science does not deny the doctrines of atonement and regeneration. Doubtless its teachings differ on these subjects from the conceptions of this evangelist; but this does not of necessity prove the falsity of the teachings of Christian Science.

✧

[Robert S. Ross in *Brooklyn* (N. Y.) *Eagle*]

There may have been a time when some people accepted without question the sweeping statement that Christian Science does not heal; there may have been a time also when some people believed that Christian Science could not destroy sin; there may have been a time, even, when some people believed that Christian Scientists had so little faith in God as to believe omnipotence to be helpless on some occasions,—but that time has long since passed. The power of Christian Science to take away the ills of the world, as well as its sins, is today being so widely demonstrated that the person who denies it is pretty sure to be classed among those who have gotten out of touch with the facts.

Does the critic believe that in Jesus' time there was one kind of leprosy which could be healed and another kind which could not be healed? Does he believe that there was one kind of sin which could be destroyed and another kind which could not be destroyed? Does he believe that there was one kind of water which could be walked on and another kind which could not be walked on? Possibly he does, but there is no warrant in Jesus' teaching for any such belief, for he said: "He that believeth on me, the works that I do shall he do also."

We of today have the same God that Jesus had. God is changeless; He is "the same yesterday, and today, and forever." Mrs. Eddy, reasoning along this line, arrived at the point where she could see that while what is known as the Christian religion—with its belief in both good and evil, its differing creeds and materialistic ceremonies—had changed with every generation, the Christianity of Christ Jesus had never changed. She learned that God is still one, and that one, good. Mrs. Eddy named this great discovery Christian Science. She then wrote "Science and Health with Key to the Scriptures," the explanation and elucidation of her discovery, and through this book there was firmly reestablished on earth the lost art of Christian healing.

✧

[John M. Tutt in *Kirksville* (Mo.) *Democrat*]

A false statement is made by our critic, who asserts that Christian Science "really denies the divinity of Christ, the chief corner-stone of the whole structure of Christianity." Now as a matter of fact the Christian Science text-book abounds with statements, line upon line, precept upon precept, to establish the fact of Christ's divinity. Throughout "Science and Health with Key to the Scriptures" are to be found paragraphs such as the following from page 583: "CHRIST. The divine manifestation of God, which comes to the flesh to destroy incarnate error."

In affirming the divinity of Christ, Christian Science does not, however, fall into the error of teaching that Jesus was God. Refusal to accept such a doctrine fully accords with Jesus' vehement denials that he was Deity. He said plainly and by inference that he was a man, "the Son of God." To understand the Christian Science teaching on this point it is necessary to get the proper distinction between Jesus the man and Christ, Truth, as demonstrated in the life of Jesus. This Christ enabled the Master to promise his followers what it would have been impossible for the fleshly Jesus to fulfil: "Lo, I am with you alway." Mrs. Eddy says, "The divinity of the Christ was made manifest in the humanity of Jesus" (Science and Health, p. 25). The way of salvation from sin, sickness, and death is the way Jesus trod. It lies through the demonstration of the lives of all his disciples, for it is the Christ, Truth, that shall make you free, even "Christ in you, the hope of glory."

Just why an evangelist who essays to carry Jesus' message of salvation to the erring should turn aside to ridicule and abuse a teaching that he manifestly does not understand, but which is itself doing a great evangelical work in saving multitudes from sin and disease through Christ, is inexplicable on any Christian ground. It is hopeless for any one to study Christian Science through prejudiced eyes and expect to arrive at its real meaning. But it is possible for such a one to observe in the lives of his fellow men the fruits of the practice of Christian Science by those who do understand it.

✧

[Thorwald Siegfried in *The Sumas* (Wash.) *News*]

Christian Science is not the invention of any person; the very words "Christian" and "science" are older than modern language. Science means, very simply, knowledge, and in its highest sense it means spiritual knowledge. Jesus the Christ had knowledge, scientific knowledge, of the truth, and his ultimate promise is that we shall know the truth, and the truth shall make us free.

The reported statement of our critic that the sick should call the elders of the church and be anointed with oil, and have prayers uttered for them, but that if these were insufficient they should then call the doctor, is interesting in its unconscious revelation of a much greater faith in the doctor and his drugs than in the directions of Scripture. And the mixture of blind faith in the words of the Scripture with blind faith in the doctor shows that in neither is to be found that knowledge of the truth of which blind faith is the opposite. Mrs. Eddy has stated the matter very simply on page 83 of Science and Health in the sentence, "Nothing is more antagonistic to Christian Science than a blind belief without understanding, for such a belief hides Truth and builds on error."

Christians agree that God is omnipotent. This means that He is the only power, not that He is one, the greatest, of many powers. Therefore the Scriptures counsel resorting to God in all matters, including the healing of sickness. As stated in Romans, "There is no power but of God." God is Spirit; God is Love; and neither was ever found in matter, which is not the counterpart or likeness, but the counterfeit and opposite, of God. Therefore blind faith in material remedies is idolatry. The moment this is clearly seen by any one he comes nearer to an abiding knowledge of the Christ. Mrs. Eddy pointed out this fact with great clearness, and Christian Scientists would be ingrates indeed if they were not honest enough to acknowledge it, or loving enough to be grateful for it.

✧

[Henry Deutsch in *Pipestone County Star*, Pipestone, Minn.]

The real reason why there are so many followers of Christian Science is that it has turned people back to the study and spiritual meaning of the Bible, and enabled them to prove the possibility today of its practical application to all the problems of human existence.

This is an age of much talking and greater profession, and many persons seem to shirk the requirement of doing by spending much time in mere verbiage. The religion of Christ Jesus was not one of words but of works. He constantly turned his hearers from his speech to his deeds as the proof of the genuineness of his words. He healed the sick and saved sinners, not by preaching sermons or by self-assertion, but by

Digitized by Google

bringing to them the light of God's love and truth, which banished the disease and lifted consciousness from the slough of sin. His religion was not doctrinal but practical. He was not satisfied merely to preach abstract truths, but insisted upon demonstration, and he prescribed the latter as the proper test of those who professed to have absorbed and subscribed to his teachings and to have faith in him. He said: "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." He likewise said, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also."

It must appear very strange to thinking people that men who claim to be evangelists and are traveling around the country seeking to bring men to God, should lack that humility which was the predominant characteristic of the Master, and not only arrogate to themselves the claim of being the sole discoverers of the only pathway to salvation, but to withdraw all hope from the other vast majority because they may be seeking another, and perhaps a better, pathway. It also seems ill-fitting for a professed follower of the "Prince of Peace" to spend so much of his time in stirring up strife, in critical condemnation of others who cannot see things his way, and in preaching the doctrine of hate, dissension, and discord in the name of him whose command was, "Love one another."

Through its discovery by Mrs. Eddy, Christian Science has come to the world with the healing balm of Truth, fulfilling the Master's promises and bringing a message of hope and joy to suffering and sinning humanity. It has warred with no one, it disputes with no one, indulges in no controversy, seeks not to destroy, but simply to fulfil the law of love which was preached by the Man of Galilee nineteen centuries ago. Into the darkest corners of misery, suffering, and shame it has cast its rays of light and hope. As Mrs. Eddy says in Science and Health (p. 342): "Christian Science awakens the sinner, reclaims the infidel, and raises from the couch of pain the helpless invalid. It speaks to the dumb the words of Truth, and they answer with rejoicing. It causes the deaf to hear, the lame to walk, and the blind to see. Who would be the first to disown the Christliness of good works, when our Master says, 'By their fruits ye shall know them'?" If it had not succeeded in restoring the works of the Master which the other churches have failed to do, if there were not today unnumbered thousands bringing grateful testimony to its truth, it would not be subjected to these attacks and misrepresentations; but even as of old the new religion of the Master grew and thrived under persecution, so today it is fair to say that attacks of this character only serve to stimulate the interest in Christian Science, its literature, and its church services, and to bring its healing benefits to a still larger number of needy mortals.

✧

[S. T. Downs in *The Star*, Indianapolis, Ind.]

The Christian Science Lesson-Sermons, to which a correspondent has referred in uncomplimentary terms, are compiled by a committee selected especially for the purpose, and embrace twenty-six different subjects. These Lesson-Sermons are published in *The Christian Science Quarterly*, and consist of a golden text, the responsive reading, and six sections of correlative passages from the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and it is quite evident that the critic's opinion is decidedly at variance with the opinions of the "swarming crowds" to which he refers.

Every one knows that the Bible requires consecrated thought and contemplation, and it is therefore reasonable to suppose that a text-book explaining the Bible, as does the Christian Science text-book, should require study and a reasonable effort to put its teachings into practice before its real significance can be grasped. A very large majority of those present at the Christian Science Sunday services have given diligent thought and study to the Lesson-Sermon during the week preceding, and the citations often form the foundation for much research. It is not unusual, as a matter of fact, to find individual Christian Scientists who put quite as much study and work on the Lesson-Sermons as many ministers give to their Sunday morning discourses. It is not strange, therefore, that one who attends a Christian Science service for the purpose of getting material for criticism, or out of idle curiosity, should fail to get the full significance of the Lesson-Sermon.

The critic voices the erroneous notion that those who attend Christian Science services are seeking physical healing only, because a very large majority of those who turn to Christian Science do so for relief from some form of suffering after all other means have failed to give the help desired. There is a sentiment shown in nearly every testimony of Christian Science healing, however, that while much gratitude is felt for deliverance from suffering, it is the spiritual uplift and moral regeneration accompanying Christian Science study and ministration which call forth the most gratitude. It is found, then, that the major portion of those in attendance at Christian Science services have learned in a very practical way the value of the Master's injunction, given first place in Christian Science teaching and practice, "Seek ye first the kingdom of God, and his righteousness," and they yield cheerful obedience to it.

✧

[D. M. Ely in *Mansfield (Ohio) Shield*]

The substantial growth of Christian Science during the past forty years can be attributed to the fact that it is a religion of works—one with "signs following."

Christian Science does not ignore sin, but demands that the nothingness of sin be demonstrated by its destruction. To declare sin to be nothing and yet continue in it, is sin itself, and the result would be suffering. On page 1 of Science and Health Mrs. Eddy says, "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love." Because of this prayer of spiritual understanding and unselfed love to the loving Father, God, a multitude of men, women, and children cry aloud today with joyous hearts, "Great is our God above all gods," for their prayers have been answered, and sin, sickness, want, and woe have disappeared before the power of God.

Christian Scientists have no quarrel with those who differ with them. It is not their desire to force the teachings of Christian Science upon any one, but because of great blessings which spring from an understanding of this demonstrable Science they gladly embrace every opportunity to give a reason for the hope that is in them.

✧ ✧ ✧

Race antipathy is the greatest of all causes of war,—which is but the most active department of the kingdom of Satan,—while the cultivation of the international mind, which in its last analysis is the mind of Jesus, and the merging of exaggerated notions of both personal and national sovereignty, will bring about speedily the true brotherhood of man under the fatherhood of God.

DR. WILLIAM ELLIOT GRIFFIS.

Editorial

Separate and Distinct

As Christian Science differs so radically from all other religious and healing systems, it is not strange that there should have grown up a misconception of Christian Scientists which pictures them as what might be termed one-idea enthusiasts, who have individually arrayed themselves against every person that holds views different from those which they themselves hold. Mrs. Eddy's attitude on this subject is shown in the very brief paragraph on page 99 of Science and Health as follows: "Those individuals, who adopt theosophy, spiritualism, or hypnotism, may possess natures above some others who eschew their false beliefs. Therefore my contest is not with the individual, but with the false system. I love mankind, and shall continue to labor and to endure."

In various other places in her voluminous writings Mrs. Eddy has expressed the same Christian sentiments toward individuals of every shade of religious and medical belief. Needless to say, Christian Scientists are thoroughly in accord with these views of their Leader, and while they do not accept nor subscribe to any religious or medical theories which are in opposition to Christian Science, still they have the utmost consideration and respect for every individual who is sincerely and honestly advocating or practising that which he believes to be true, or of value to mankind. The person who is indulging hatred of another because of divergent views about religion, medicine, or any other subject, is coming far short of the teachings of Christian Science.

All of this is preliminary to calling attention to the reasons why it became necessary for Mrs. Eddy to establish Christian Science as a religious system separate and distinct from the churches already constituted, and also as a healing system separate and distinct from so-called regular medical systems. Perhaps nowhere in her writings does she give these reasons more concisely than on page 9 of "Unity of Good," where she writes: "Healing has gone on continually; yet healing, as I teach it, has not been practised since the days of Christ," and "*by knowing the unreality of disease, sin, and death*, you demonstrate the allness of God. This difference wholly separates my system from all others. The reality of these so-called existences I deny, because they are not to be found in God, and this system is built on Him as the sole cause. It would be difficult to name any previous teachers, save Jesus and his apostles, who have thus taught."

In the ministry of Christ Jesus the healing of the sick was coincident with salvation from sin and with the preaching of the gospel, but in the years intervening between the third century and the latter half of the nineteenth the healing of sickness was so largely lost sight of that finally it was not regarded as a necessary part of Christianity or of Christian ministry. If, perchance, in answer to prayer some one recovered his health, this was regarded as a miracle—that God had set aside His own law. The church during all these years was strangely unmindful that the truth of Christian preaching was to be demonstrated in a practical way, and that when the Master commissioned his followers to go about in his name, he not only commanded them to preach the gospel, but also to do the healing work which he himself had made prominent in his ministry.

As to what was to be accomplished by the formation of the Church of Christ, Scientist, we quote briefly from the Historical Sketch commencing on page 17 of the Church Manual, as follows: "At a meeting of the Christian Scientist Association, April 19, 1879, on motion of Mrs. Eddy, it was voted,—To organize a church designed to commemorate the word and works of our Master, which should reinstate primitive Christianity and its lost element of healing." That there was need for the reinstatement of this lost element of healing, and that the church which was formed with this in view has been faithful to its ideal, is borne out by the facts. One of the most impressive things in connection with the work of this church is the tremendous volume of testimony published in the *Sentinel*, *Journal*, and *Herold*, and given orally at the Wednesday evening meetings, that the sick are now healed as in Jesus' time.

It should be noted too that in a majority of these cases the healing of disease has been accompanied by a spiritual regeneration for which great gratitude is expressed. This not only stamps Christian Science as Christian, but it also differentiates this system from all others which claim to heal through mental means. Christian Science is the full gospel that Jesus taught and practised, since those who understand and practise its teachings are made "every whit whole."

ARCHIBALD MCLELLAN.

Demarcation

THE word demarcation as used in Science and Health is of the deepest significance, and the idea which it embodies cannot be too often pondered and applied in the working out of our human problems. In absolute Science God and His manifestation constitute the whole of reality, and a declaration of this truth, based upon spiritual understanding, in many cases heals the sick and awakens the erstwhile sufferer to a new sense of life. Mrs. Eddy tells us, however, that "the new birth is not the work of a moment. It begins with moments, and goes on with years; moments of surrender to God, of childlike trust and joyful adoption of good; moments of self-abnegation, self-consecration, heaven-born hope, and spiritual love" (Miscellaneous Writings, p. 15). All this calls for a clearly defined line of demarcation between mortal belief and spiritual understanding; in other words, between "the old man, which is corrupt according to the deceitful lusts," and "the new man, which after God is created in righteousness and true holiness," to quote St. Paul.

There is no denying that the mortal concept is "deceitful" through and through, therefore mortals deceive themselves even more than they deceive others, foolishly believing that they can pass muster in the presence of Truth by professions of religion. This error was uncovered by Christ Jesus, who declared that no one could enter the kingdom of heaven by mere affirmations of loyalty, by saying "Lord, Lord," but only by doing the will of the Father, a lesson which is needed by Christian Scientists as much as by others. When the allness of God, good, is affirmed in Christian Science, this by no means includes any element of evil; on the contrary, it excludes all that is unlike God, and to be clear about this calls for the understanding which, as Mrs. Eddy tells us on page 505 of Science and Health, "is the line of demarcation between the real and unreal."

It is needless to say that proof is what all are seeking, that which was designated a "sign" by the Master; and this can only be gained in the truest sense where an entire separation is made between the mortal or material and the spiritual, and this by both practitioner and patient. It is, however, fair to assume that the practitioner is more advanced than the patient, hence the line of demarcation should be very clearly marked in his thought, speech, and action, so that he may be able to aid the other, both by precept and example, to reach man's likeness to God, with its entailed dominion over all evil. He must show that the line of demarcation is well defined be-

Digitized by Google

tween purity and impurity, between honesty and dishonesty, between unselfish love for his fellow man and selfishness; in brief, between Truth and error, the spiritual and the material. This does not release the patient from strict obedience to the divine demand, but it should aid and inspire him to meet it, and thus reach the stature of Christ.

The Christian Science statement as to the line of demarcation between the false and the true is only another way of saying: "Come out from among them, and be ye separate, saith the Lord, and touch not the unclean thing; and I will receive you, . . . and ye shall be my sons and daughters." At this point we should remember that understanding alone can rightly make the separation between Truth and error, and this never means the drawing aside of the robe to avoid personal contact with one who has not awakened from the mortal dream of life in matter, neither does it mean that we can flee from error as did Moses from the serpent. If we attempt to do this, we too shall have to turn and face it fearlessly. Then we can obey our Master's command to handle serpents and prove their stings powerless. Furthermore, it means that we shall not hesitate to define sharply in the secret chambers of our own thought the difference between right and wrong, between the material and the spiritual, not with a gloomy sense of self-condemnation, but with an unwavering determination to rise to the moral and spiritual altitude of the real man, of whom it is written, "Thou hast put all things under his feet."

ANNIE M. KNOTT.

Law and Life

IN no more important particular and way is Christian Science transforming the thought of the world today than in awakening a new and true sense of law and of its relation both to the infinite Life and to the life of man. In Jeremiah it is said of the world's spiritual renaissance, "Behold the days come, saith the Lord, that I will make a new covenant with the house of Israel . . . I will put my law in their inward parts, and write it in their hearts; and will be their God, and they shall be my people." The inauguration of this spiritual kingdom is registered for the individual when and in so far as he becomes amenable to divine law. As the realization of the true significance of the reign of law to life dawns upon uplifted sense, the cry of the psalmist, "O how love I thy law!" thus becomes the all-encompassing outflow of a great tide of redemptive thought.

It is probably true that the majority of men, and possibly of professed Christians, think of law as something that limits freedom; they look upon it as coercive and contracting. Though reckoned to be necessary, perhaps "a good thing" for the inconsiderate and the impulsive, it is regarded, not as a stimulus and support, but as voicing demands and requirements, as redemptive by restraint. This sense of the nature of law naturally begets the effort to escape its penalty, but not to rejoice in its rule. There is, moreover, a very large body of people who insist that they will not honor any law but the will to be and to do. Even some whom the world has classed as philosophers deprecate every conventionality which, as they say, hedges in personal liberty. There is a school of artists who definitely champion the assertion that no man can achieve any great art work until he has "let himself go," until he has escaped from everything that would fetter impulse!

Christian Science is again asserting that "the law of the Lord is perfect;" that it is the law of man, and that the recognition of this perfect natural law does convert "the soul," the prevailing sense of life, its privilege and its power. More than this, it is enabling men to see and to prove, as the great prophet declared, that "out of Zion," this redeemed sense, "shall go forth the law;" that the true, effective Christian delights in and demonstrates conformity to law in all his every-day words and activities as he goes about among men. This may be said to be the great practical theme of all of Mrs. Eddy's teaching, and the glory of the healing work which has been accomplished through the apprehension of the Christ, Truth. Indeed, as we read in Science and Health (p. 128), "the term Science, properly understood, refers only to the laws of God and to His government of the universe." Every rejoicing, therefore, that springs to the lips of those who have been saved from sickness and sin is a witness, a glad tribute to the reign of Love's law, for this in Science is the meaning of law, the ever beneficent activity of Love.

The thought of law as punitive, as an unforgetting, inescapable Nemesis, thus gives place to the realization that it is always beneficent, that it never afflicts, never destroys, but always inspires, establishes, strengthens, comforts, and saves. Apprehending this, one can indeed sing with rejoicing, "O how love I thy law!" He thus expresses his glad recognition that conformity to law is the acme of achievement. Further, it is now seen that the law of Love never compels, that it wins by attraction and by this alone, and that all penalties—sickness, sorrow, suffering, and death—come not as a decree of Love's law, but as the sequence of our failure to apprehend this law of eternal good which even to the obdurate and the rebelling makes that loving appeal voiced by the Master when he said: "O Jerusalem, Jerusalem, . . . how often would I have gathered thy children together, as a hen doth gather her brood under her wings, and ye would not!"

JOHN B. WILLIS.

A New Concordance

The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

The publisher is now ready to receive orders, and shipments will be made as promptly as possible. Single copy, $6.00; in lots of six or more to one address, each $5.50.

Address Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Massachusetts.

Among the Churches

Current Notes

GEORGIA.—The Christian Scientists of Georgia are to be congratulated on their growth during the past year, as indicated by the increased activity along several lines relative to the work of the Christian Science committee on publication for this state. First, possibly, is the very gratifying increase in the distribution of authorized Christian Science literature, which shows an average increase by the month of about 47 per cent over the preceding publication year. Another cause for rejoicing is the awakening as indicated by the increased financial support of this committee. The average monthly payment shows an increase over last year of about 65 per cent. The work with the legislature has been very systematic. By the generosity of the Trustees under the Will of Mary Baker Eddy, many public libraries in the state, as

Digitized by Google

well as libraries of institutions, have been supplied with all of Mrs. Eddy's writings and the Christian Science periodicals.

Literature has been distributed as follows: 11,965 *Sentinels*, 1,217 *Journals*, 168 *Heralds*, 46,175 *Monitors*, 616 pamphlets, 4,838 reprints, 209 newspapers and magazines, in all numbering 65,188.

Christian Science Committee on Publication.

GRAND RAPIDS, WIS.—Completion of the new Christian Science church in this city tells of the rapid growth of a new organization steadily gaining strength in this section. The church, situated on the east side of the Wisconsin River, commands a wonderful view of the rapids after which the city was named. Near by is the big dam which furnishes power for the Consolidated Pulp and Paper Company. The building and grounds are valued at about seven thousand five hundred dollars. The Christian Science congregation was organized in this city in 1903, with about a dozen members.

Milwaukee Sentinel.

BISHOP, CAL.—Wednesday evening [Oct. 20] the Christian Science Society held its mid-week service in the new and modest but handsome bungalow church edifice on North Main Street. The building, lot, and accessories represent an outlay of something over six thousand dollars. The normal seating capacity is one hundred and sixty, but if necessary the reading-room and the main auditorium can be thrown into one room and seats can be added, giving a total seating capacity of about two hundred.—*Owens Valley Herald.*

DEWEY, OKLA.—One of the popular booths in Art or Floral Hall, during the week of the free county fair, was that conducted by the Christian Scientists of Dewey and Bartlesville. In addition to the works on Christian Science by Mary Baker Eddy, an abundance of literature of various kinds published in connection with Christian Science was on display. This literature was eagerly sought for, and it was freely distributed by the ladies in charge of the booth. Over a thousand pieces were given out to inquirers.—*Dewey Globe.*

CANYON, TEXAS.—We have distributed Christian Science literature in the last year as follows: 450 *Sentinels*, 90 *Journals*, 24 *Heralds*, 3,000 *Monitors*, 26 *Quarterlies*, 12 Christian Science Hymnals, 4 copies of Science and Health, 2 of "Christian Science Healing," 1 of "Retrospection and Introspection," 100 of Judge Works' speech in Congress, and 12 pamphlets.—*Correspondence.*

GRAND RAPIDS, MICH.—The erection of a new Christian Science church in Grand Rapids is only a matter of a few more years. Every Sunday the present edifice is twice filled to its capacity, and it is felt that with the ever increasing membership a new church will be demanded in a short time. Indeed, a building fund has already been started.

The Lectures

Dawson, Yukon Territory

In introducing William R. Rathven, who lectured on Christian Science before an audience of nearly six hundred people in the Arctic Brotherhood Hall, A. J. Gillis, M.D., D.D.S., said in part:—

Personally I am not a follower of Christian Science, for the reason, perhaps, that I do not possess sufficient knowledge of its teachings, and for this same reason I am not a disbeliever in it. Honest, intelligent belief in any system must of necessity imply a comprehensive knowledge of its teachings, and absence of such knowledge is not a valid excuse or warranted justification for disbelief or condemnation. It is the duty of every man and every woman to think, reason, and investigate before accepting or rejecting, before arriving at any conclusion as to the merits or demerits of any institution or system of belief.

Christian Science was discovered and founded by Mrs. Eddy about fifty years ago. No institution, unless supported by a foundation of at least some merit and stability, could have withstood the fierce shafts of adverse criticism which during these years have been leveled at Christian Science without causing it for a moment to swerve from its signal purpose of healing the sick and aiding the distressed. With marvelous serenity it has pursued the even tenor of its phenomenal growth in adherents, influence, and power.

While Christian Science naturally appeals more readily to those who are thinkers, seekers after truth, and are willing to accept truth in whatever form it manifests itself, yet it is a fact that Christian Science gathers its votaries from every walk of life; and candor compels us to admit that those who embrace its doctrines are better men and women for having done so.—*Correspondence.*

❖

Watertown, N. Y.

Jacob S. Shield, who delivered a lecture on Christian Science in the City Opera House, was introduced by Attorney Henry M. Brown, who said in part:—

Although I am not a Christian Scientist, I am deeply interested in this rapidly growing religion. Christian Science offers itself to the world as an ideal religion,—a religion of happiness and a religion of healing for all mankind. How true and how great are the words of Mrs. Eddy on the first page of "Science and Health with Key to the Scriptures": "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love. Regardless of what another may say or think on this subject, I speak from experience." Think of it, so grand a thought inspired by the author's own personal experience! These sublime words reveal to us the all-importance of faith, knowledge, and love.

Watertown Reformer.

❖

Syracuse, N. Y.

The remarks made by Marshall W. Downing, principal of the North High School, introducing George Shaw Cook at the lecture on Christian Science, were in part as follows:—

This audience is made up of three classes. I see before me many ardent adherents of the cause in the interests of which the speaker of the day has come from Chicago. A few from other denominations have come in because of their intense interest in the cause of Christ and their desire to broaden their horizon of information and usefulness. During the past week I have hoped and prayed that there might also come in to this meeting some of those who have never named the name of Christ, who have not tasted and seen that God is good. To all such I would say that it matters not under which particular church banner you may decide to march; but it does matter whether righteousness comes into your life or not, and permeates your being, and shows itself a real and vital thing in your every-day work. Sherwood Eddy said in this city last week, "Christian character is the only basis for successful national life." I believe that Christian Scientists rather more faithfully than most other religious sects carry into their daily living the principles of Christianity.

Solomon said, "Righteousness exalteth a nation." This proverb contains the greatest single essential key-note to be

Digitized by Google

incorporated into a church creed, into a city charter, into the running of a daily newspaper, into the deliberations of a state constitutional amendment convention, into a political party platform, into the constitution of any nation, and into that some-day world federation of civilized nations with headquarters at The Hague.—*Correspondence.*

✧

Excelsior, Minn.

A lecture on Christian Science was delivered in the Town Hall by Dr. Francis J. Fluno. He was introduced by Henry Deutsch, who said in part:—

Jesus' work was unique and characteristic. He preached and taught no new or special doctrine or creed, but simply interpreted to his hearers the law and the gospel of the Scriptures,—or, as one of his disciples stated it, opened their understanding,—that they might grasp their spiritual meaning and obtain their effect. Therefore he neither sought nor needed to force or even persuade his hearers to accept what he preached. He proved his teachings by his practice, and no other argument or means was necessary to insure their acceptance. Jesus not only preached but practised; he not only professed but proved, and what he claimed was made manifest by "signs following."

In like manner the message of Christian Science has come to the world. Mrs. Eddy in her experience found healing without material means. She recognized the reason of it as the power of God, and in Christian Science she gave to the world the result of her earnest search and effort to find the way in which the power of God might be made manifest to men, and the rules for the application of the Principle of divine Science reduced to human comprehension. The results of her work are indicated in thousands upon thousands of cases of healing and regeneration, and these results demonstrate that the word of God is susceptible of practice as well as preaching, of proof as well as profession.

Correspondence.

✧

University of Michigan, Ann Arbor

The introduction given Bicknell Young, who lectured on Christian Science for the Christian Science Society of the University of Michigan, by H. L. Frost, president of the society, was as follows:—

As students in this great university we are deeply interested in whatever makes man happier and more confident as he wends his way in search of what Maeterlinck calls the "blue bird." In this search we are traveling very different routes, but we hope that they all lead to the same goal. There are multitudes of human beings who have not been able to find any teachings by which they have been willing to let themselves be guided in the paths of life. Dissatisfaction leads to investigation, and many there are who have knocked at the door of Christian Science, and knocking, have had opened to them new visions of a new life.—*Correspondence.*

✧

Portsmouth, N. H.

A lecture on Christian Science was delivered by Bliss Knapp on board U.S.S. Southery, prison ship, Portsmouth navy-yard. He held the close attention of the men and women who made up his audience of about one hundred, which included officers and their families, the crews of the detention and prison ships, and some visiting Scientists. The introduction by Assistant Naval Constructor Harold E. Saunders was in part as follows:—

We may all be glad that in this age of suffering and strife and materialism Christian Science has come to weary humanity as the truth that is freeing from bondage. When hundreds of thousands of people in all walks of life and in all parts of the world can testify that it has healed them not only of sickness, sin, and death, but of poverty and want, malice and revenge, that it has made their lives happier and brighter and more useful, we know that Christian Science is to be reckoned a tremendous power for good. It behooves us, therefore, as intelligent men and women, to know something of this truth which is able to transform our lives, and to give us through a clearer and more spiritual perception of God a more vital and more practical Christianity. We are here this afternoon to hear one who speaks with authority in the new tongue of this new-old religion.—*Correspondence.*

✧

Punxsutawney, Pa.

The lecture on Christian Science by Col. William E. Fell, delivered in the High School auditorium, was well attended and highly appreciated by those present. The speaker was introduced by Mrs. John P. Wilson, who said in part:—

My knowledge of Christian Science is decidedly limited, but what I do know is altogether to its credit. I like its disavowal of fear, and I like the emphasis it places upon love and service to humanity. Above all, I like its people. I like their sincerity and their enthusiasm for their own religion, and I like their tolerance for other religions. I also like that great, clean newspaper, *The Christian Science Monitor.*

The growth of this new religion has been phenomenal, and has been the wonder of the religious world. What its teachings have contributed to encourage kindness, gentleness, cheerfulness, and patience, and what it has done to discourage vindictiveness and evil speaking, entitles it to the respect of everybody.—*The Punxsutawney Spirit.*

Testimonies of Healing

Six years ago Christian Science was first revealed to me, at a time when, as we read in the Scriptures, I had gone down to the very "gates of death." I called upon God and He heard my cries, and delivered me "from my destructions." For a year or more I had wrestled with a mental problem which it seemed impossible to solve, and many times I prayed earnestly to the God in whom I had trusted for fifteen years to direct my path and keep my feet in the way I should go; but circumstances only grew worse, until I could stand the strain no longer, and one day I collapsed both physically and mentally.

The physician who was called diagnosed the case as acute appendicitis combined with nervous prostration in its worst form, and only those who have gone through a similar struggle can know what the condition was. I remained under his treatment six weeks without relief; indeed, I gradually grew weaker, until my mentality seemed to give way completely. It was while in this serious state that I called to God to save me and asked for help in Christian Science, although I knew absolutely nothing of it and knew little of what I was saying. The family and loved ones about me were filled with fear, but they did as I asked and called a practitioner, who came to me and began treatment. My sister, who was in the room at the time, says that in less than half an hour I was resting comfortably. I went to sleep and slept all night, the first time for six weeks that I had been able to do so without an opiate. In the morning I realized a great change had taken place in my consciousness, for the peace that "passeth all understanding" seemed to be present with me.

The complete healing was slow, nearly six months elapsing before I was entirely free from the great fear characteristic of this nervous trouble. There was, however, much to be overcome in that time, and the slow healing led me to be more faithful in the study of Science and Health. When I look back and see the way in which my problem was solved in Christian Science, I thank God for His goodness, and am indeed grateful to our Leader for bringing again to the world's remembrance the truth which makes free. I realize that without this help I would never have lived to testify to this healing today.

Since our marriage, four years ago, my husband and I have taken great comfort in working out our daily problems together, and in his profession as a dentist he has many opportunities to prove that God is the only presence and power. Oftentimes he handles successfully cases which other dentists refuse to take. We are both most thankful for our happy, harmonious home, also for our Christian Science literature and the Lesson-Sermons. We are trying each day to let our light so shine that others will see our good works and glorify God.—Mrs. Fred W. Rugh, Cedar Rapids, Iowa.

✧

It gives me much pleasure to testify to my healing in Christian Science of gastric ulcers, heart and lung trouble, extreme nervousness, depression, sensitiveness, and many other discordant conditions. I was very ill and almost in despair when I asked a Christian Science practitioner for treatment a few years ago. For thirteen years I had suffered from the stomach affection, living on a milk diet most of the time. The doctors tried every remedy known to them, and finally I underwent an operation, all with no lasting benefit. They said a second operation might do me good, but that on account of the heart trouble they could not operate, so the only thing I could do was to keep entirely to the diet for the time I should live. The healing of the stomach affection in Christian Science was almost instantaneous, for I was able at once to eat and drink anything I wanted. More slowly, but surely, the other diseases have been healed, and I am well and happy, and stronger than ever before. I have also been healed of a very bad gathering on my foot, and last winter was quickly healed of an attack of influenza.

Words cannot express my thankfulness to God for all the healing and other benefits I have received through Christian Science, and for the patient, loving help that has been given me.—Emily Goodsell, London W., England.

✧

It is almost four years since the light of Christian Science penetrated the seeming darkness in our home and brought us health, happiness, and plenty, where before there seemed to be a lack of all these things. My wife turned to Christian Science for the healing of chronic neuralgia, as material remedies gave only temporary relief. I had no faith in the healing efficacy of Christian Science, and when the disease responded so quickly to the treatment (in less than half an hour) I said that the pain was just ready to yield anyway. I then remarked that if Christian Science could heal the trouble in my ear, I would believe in it; so my wife insisted on my giving it a trial.

There had been a constant discharge from one ear for over three years. Different doctors had done all they could for me and a specialist in our city told me the ear could not be healed because the drum was punctured, and that if he should succeed in stopping the discharge, the first time I caught a cold it would be as bad as ever. I then concluded to give Christian Science a trial, but even when healing resulted after two treatments I refused to believe that Christian Science had anything to do with it. I said that if it would heal our son's face I would believe. This son, just arriving at manhood, had large sores or boils on his face and chest and the doctor had tried in vain to help him. Besides being very painful, this condition was humiliating to the boy, so when we asked him to try Christian Science treatment he readily consented. He was under treatment three weeks, when the practitioner pronounced him healed. His face looked as bad at that time as I had ever seen it, but in less than three weeks it was perfectly smooth.

I was no longer a doubting Thomas. From that day to this we have depended entirely on God for every human need, and we have never been disappointed, but have had many other proofs of God's power to heal. We are more thankful than words can express for what Christian Science has done for us.—Charles T. Ray, Los Angeles, Cal.

✧

[Translated from the German]

In August, 1913, I suddenly became so ill that I had to be taken to a hospital. I suffered with severe pain and felt very weak and miserable. The three examining physicians declared the trouble to be an infectious disease and believed an immediate operation on the head to be necessary. In this distressing condition I had a visit from an uncle who has been an adherent of Christian Science for quite a while. When he explained to me that I did not need to submit to an operation, I was very willing to be treated in Christian Science. He at once wrote to Hannover for help, with the result that after the first treatment I experienced a measure of relief. The operation was declared to be unnecessary, and two weeks later I was dismissed from the hospital healed. For this instance of help received I am most deeply thankful to God and to Christian Science.

Lina Römer, Schwalenberg, Lippe Detmold, Germany.

Digitized by Google

It is three and a half years since a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy was placed in my hand by a dear neighbor, who asked me to read it. I did so, and before I had read half way through the book I was healed of stomach disorder, from which I had suffered for years, and also of heart trouble and nervousness. If these blessings had been all that the Father had in store for me, I should and would be thankful, but I have been receiving them every day since.

On one occasion my son returned from his work in the country as usual at the week end, but with his right hand very much swollen. He said he had experienced considerable pain and inconvenience from it on Friday, but after reading the Bible and Science and Health and trying to realize the truth, he felt no pain and worked comfortably all day Saturday. On Sunday evening my son returned to the country, but he could not work on Monday. All day he remained in his room reading the Bible, together with the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and declaring the truth, and each meal hour his fellow workers came to him with their human sympathy, voicing fear freely. Before breakfast on Tuesday morning he came home, his hand being badly swollen and very painful. We worked for him as taught by our dear Leader, but by evening he could not move either fingers or thumb and was very feverish. I advised him to go to a practitioner, and he did so. He slept well that night and all feverishness disappeared. He promised to let the practitioner know if he needed further help.

While my son was away I tried to realize the truth, and it was plainly shown to me that God, divine Principle, does not need the help of surgery to heal, that the truth about God heals. As I read on page 60 of "Unity of Good" by Mrs. Eddy, "This false sense of substance must yield to His eternal presence, and so dissolve," I knew it was true and was greatly comforted. My son and I pondered long over this short sentence, and I went to the Wednesday evening meeting convinced that no knife was required. The patient slept well all night. In the morning, when he was washing, the abscess opened and he was soon able to move both thumb and fingers. On Saturday he said he could go to work, and there was no more trouble.

To say I am thankful for this proof of the ever present help of our loving Father-Mother God is very little. I want to live my thanks.—Jennie E. Thoma, San Diego, Cal.

✧

I feel I must give expression to my joy and gratitude for the better understanding of God gained through the teaching of Christian Science. Having been most religiously brought up, I thought I was a Christian and tried to live a consistent life, but latterly was conscious of a vague sense of unrest. My sense of God did not satisfy me, He seemed so far away. I was often ailing, and suffered most intensely at times from severe headache, but I learned to bear it with resignation as the will of God.

With the passing on of my dear mother, great sorrow and bitterness filled my heart that God should so discipline me, although I dared not say so. Then a copy of the *Sentinel* was given me to read. I had heard of Christian Science before, but only in ridicule, and so I was quite unprepared for the splendid ideal it upholds. Later these same friends loaned me "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I read it hungrily. Here was the God I needed and to whom I had unconsciously been reaching out! But, as for years I had been trained to think of God differently, I feared to accept this to me new teaching, and a mighty struggle began within me. Evening after evening a dear friend patiently explained seeming difficulties and encouraged me to struggle on through doubts and fears, until one glorious day the truth of being dawned upon me and I was radiantly happy.

With the understanding of Truth came healing. Since childhood I had suffered from internal weakness, and I was wearing a supporting belt. I had been told by a doctor that I would never be really well, but thank God I am well and happy. Weakness, heart trouble, and headache vanished like the dream they were, and I am finding out now in the daily problems I have to meet that God is indeed "a very present help."

I am proving daily that "the people that do know their God shall be strong, and do exploits." Though still rather frail looking, I am alert and energetic, and never once since my healing about four years ago have I had recourse to the medical appliances worn for many a weary year. I have had hard work to do, lifting heavy weights, packing and unpacking large cases, but have ever been sustained by Truth. Our church is at Bournemouth, a distance of about two miles, but I walk there and back and feel no fatigue.

I am deeply grateful to our dear Leader, Mrs. Eddy, for her "work and labor of love," and rejoice with proud humility in being a Christian Scientist.

Marie Blunden, Boscombe, England.

✧

In October, 1913, a distressing condition of inflammation and irritation of one eye came upon me, and seemed to get worse with every day. I knew something had to be done, and being advised by my mother to try Christian Science, as she and father had both been healed through its study, a practitioner was at once asked to help me. I was healed instantly of the eye trouble, also of a bowel difficulty and severe headaches. Moreover, I was made new in spirit. I now love to read "Science and Health with Key to the Scriptures" and to study the Bible. Glasses had been worn over eighteen years, and I had been told by an optician that I could never go without them, as the eyes were in a most serious condition. I thought this was true, but have found that God's work is perfect and I no longer need glasses. My daughter, ten years of age, was healed of what to material sense was acute lung trouble, by understanding that all life belongs to God. My husband has been healed of the drink habit, after being addicted to the use of liquor for fifteen years.

For all these blessings, and many more, I praise God, and give thanks to our dear Leader, Mrs. Eddy, who brought to us the Christ-healing.

Mrs. Charles W. Robinson, Bicknell, Ind.

✧

Ten years ago I was led to investigate Christian Science for the cure of a number of diseases. I was suffering from catarrh of the head, throat, and stomach, also from heart trouble. I lived on the plainest of food, and at times took as many as three kinds of medicine at once, under the direction of the best doctors I could find. I was likewise suffering from the burning of my throat at regular intervals to allay the inflammation and pain. I sold out a good business and went to hot springs and a dry climate in search of health. When I continued to lose weight under this bondage of fear, a friend who had been cured of Bright's disease by Christian Science advised me to try it. I had worked with this friend, and so I knew his deplorable condition, as he had told me the doctors had done their best but gave no hope of any permanent relief. I advised him to try Christian Science, and he did so. Three weeks later he came to my shop a well man.

Digitized by Google

I rejoiced with him and then thought no more of it, as I knew nothing of Christian Science except what I had learned from the reading of a *Journal* which was given to me and which I had passed on to my friend.

Little did I think that I should go through so much suffering without thinking of Christian Science. When I did think of it, I wrote to my friend to find out if he was well and still believed in it. On his advice I at once began to study this teaching, and as I perceived a little of the truth I so hungered for it that I could scarcely stop reading and meditating on what I read. I lost the fear of my complaints, and by degrees they fell away.

In realizing to a degree the truth of Mrs. Eddy's discovery our hearts go out in gratitude to her who paid the price and pointed the way to eternal Life.

BENJAMIN L. BLAIR, Dryden, Ontario, Canada.

I wish to testify to the truth of the statements made by my husband. I can also say that I too have been helped in many ways by Christian Science. For the good we are continually receiving I am indeed thankful to God, the giver of all good gifts.—HATTIE BLAIR.

✧

About a year ago I started to read the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had not progressed far when I was taken with a bad attack of influenza. I could not speak aloud and coughed nearly all the time. An absent treatment from a Christian Science practitioner helped me, but the next day she was called to my home. Seven treatments in all were given, and although there was an abscess in one ear and another in my cheek they gave me no pain. The healing was slow, but for that I am now very glad, as I feel I have a better understanding of divine Truth than I would otherwise have had.

I have also been healed of a serious hip trouble caused by a fall when I was eleven years old. The right hip was nearly twice as large as the left and gave me a great deal of trouble, but today it is very little larger and gives me no trouble whatever. Since birth I had suffered from a bowel disorder for which I was obliged to take medicine regularly. Now I am entirely free from that difficulty and have not taken any medicine for a year. Rheumatism and neuralgia have also been overcome through the study of Science and Health, and glasses that had been worn for fifteen years have been laid aside. The Bible is becoming clearer to me every day, and I enjoy reading it, whereas before I did not care to do so because I could not understand it. I had often wondered why I never joined a church, as I had always gone to church and tried to live right, but now I know I was waiting for this wonderful healing truth.

To say I am thankful to God, and grateful to Mrs. Eddy, for this saving truth revealed in Christian Science, and the understanding that all sin, sickness, and death can be overcome, is putting it very mildly. I am striving and studying, so that I may be called a true Christian Scientist.

MRS. F. G. CHAFFIN, Los Angeles, Cal.

✧

[Translated from the German]

In June, 1912, I stumbled and fell down the stairs from the attic. While falling I unfortunately allowed the thought to flash through my mind that I was going to lose the use of my foot. Upon recovering from a short period of unconsciousness, I felt a severe pain in the left foot, but as I at once began to realize that there is no sensation in matter, the pain subsided in a comparatively short time, and I was able to go down the next two flights and attend to my household duties. In the afternoon the pain set in again, and in the evening both the foot and leg were very much swollen, so that walking became impossible. Late in the evening I telephoned to a Christian Science practitioner for treatment and experienced its beneficent effect, for the fever and pain yielded and I was able to rest.

This was on a Saturday, and the condition remained about the same until the following Wednesday. My relatives, while showing great loving-kindness, allowed fear to enter their thought. They said that this was a case which necessitated surgical help, and that after the foot had been properly attended to it might heal quickly under Science treatment. The practitioner faithfully helped me to overcome this sense of fear, and from then on the healing progressed rapidly. In two weeks I was able to use my foot quite normally. I consider this a glorious proof of God's omnipotence and of the possibility of overcoming errors of all kinds, for they return into their native nothingness if we but overcome our sense of fear and our false beliefs, as in the foregoing instance of the supposed necessity for a surgical operation.

Great is my thankfulness to God, whose ever present love surrounds us. But I also feel that I owe a debt of gratitude to Mrs. Eddy, who has made these blessings available to mankind; and I am thankful to all who lovingly and faithfully help me to walk in the path of Christian Science.

FRAU E. SPITTLER, Bern, Switzerland.

✧

It was not through any physical ailment that I came into Christian Science, but its healing powers have been demonstrated to me frequently. For several years I had been afflicted with chronic lumbago, for which *materia medica* was given a fair trial without bringing any relief. This ailment was overcome through the study of Christian Science, although the healing was slow. I was also in constant fear of drafts, being a great sufferer from colds, which would appear at all times of the year and always in winter; but during the past winter I was free from such experiences for the first time in my memory.

While I am grateful for the physical healing, the moral transformation that has gradually taken place means even more to me. My one desire is to grow worthy to be known as a Christian Scientist. I am also deeply grateful for the privilege of church-membership, and for the many blessings that have been mine since coming into that fellowship. I am a subscriber to all the periodicals, and many have been the benefits received through their healing messages. I am indeed thankful to God and grateful to Mrs. Eddy for Christian Science.—FRED MAHLER, Chicago, Ill.

✧

Several years ago, after failing to find relief for gall-stones through *materia medica*, I turned at last to God, and through the work of a faithful Christian Science practitioner I was healed. Since then there have been many wonderful proofs of God's power and love, one of them being the painless birth of a little girl. One night this baby awoke with a high fever, but it was mastered in an hour through the declaration of the allness of God, and the next morning she was perfectly well and happy. My little boy has been healed of a very bad temper, besides many physical ailments. Many more blessings have come to me, such as the overcoming of fear, hatred, and jealousy, and they have indeed been wonderful; but the greatest blessing of all is the understanding of God as an all-loving Father-Mother, a perfect creator. In the last two years it has seemed necessary for me to do all manner of

Digitized by Google

physical labor, such as mowing grass and driving the cultivator. Though sometimes I have felt so tired that I could not do any more, the next day I have been fresh and ready for work. I am in the best of health.

I enjoy the wonderful privilege of the Lesson-Sermons and am teaching my two little ones the truth. I hope I may be a channel to spread this healing word. I cannot express my love and gratitude for this blessed truth, the truth Jesus taught and lived and now again revealed to mankind through Mrs. Eddy.—CLARA VAIL, Pasadena, Cal.

The Bible records that Jesus healed ten lepers, but only one of them returned to give thanks and praise for his healing. I do not wish to be classed with the nine, hence would express my gratitude to God for Christian Science and for the complete healing which came to me after many years of suffering.

For five or six years before this Science was brought to my attention I was a hopeless sufferer, having three chronic diseases,—a serious bowel disorder, female trouble, and a kidney disease said to be inherited. The kidney disorder had caused me much distress all my life, bringing on dropsy, rheumatism, inflammation of the bladder, and so on, also severe headaches and stomach disorder; in fact I never knew a well day. Like the woman spoken of in the Bible, I "suffered many things of many physicians." I had spent all that I had, and was "nothing bettered, but rather grew worse." Physicians of three schools of medicine failed to help me; surgical operations and change of climate proved of no avail. Besides all this physical suffering, much sorrow had come into my life. Everything that held out a promise of happiness turned into bitterness and disappointment.

While visiting a friend in Kansas City I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, and also took a few Christian Science treatments. Then "a new heaven and a new earth" gradually opened up to me. One by one the ailments vanished, and when I was healed, like the one leper I turned to Christ, Truth, "and with a loud voice glorified God." With a heart full of love I also gave thanks to the consecrated woman who had courage to take up the cross and follow the Master "all the rugged way" (Poems, p. 14), thus making it possible for mankind to gain an understanding of the teaching and demonstrations of the great Wayshower, for through this understanding I have been freed of my load of disease and heartache. My debt of gratitude for the blessings that have come to me can only be paid by daily striving to follow Christ Jesus.

SUE T. HINTON, Louisville, Ky.

[Written for the *Sentinel*]

Day by Day

MYRA FAY GRANT

The days that pass us, one by one,
Are as a string of gems to me,—
Days that are shining with a deed well done,
Days all aglow with the love we've won,
Each day enshrined in loving thought,
Linked with the joy the truth has brought;
And as we con them, round and round,
An endless chain of gems is found.
Days that are gone, reflecting light,
Days yet to come, all pure and white,
Memory and hope join hands, and we see
Time reaching on to eternity.

From Our Exchanges

[Rev. A. Z. Conrad, Ph.D., D.D., in *The Advance.*]

We are wont to say, "He who lives well dies well," but we had better say, "He who has learned the secret of living has learned the secret of avoiding dying," for to live well is never to die at all. A personality that antagonizes all forms of evil and attracts all forms of good is made possible only through obedience to the will of God, and the incoming of His life gives life and peace. There is a constitutional attraction or repulsion in almost everything. It is peculiarly true in personality. That personality which becomes so imbued with the spirit of Jesus that in itself and without effort it repels evil, has gone far toward discovering the secret of joy and peace and blessing.

Life's largest secret is how to live divinely. Its quest for happiness is a legitimate quest. It is not so far to seek. A definite and unfailing alliance with the "Father of lights, with whom is no variableness, neither shadow of turning," guarantees a permanency of blessing. "Righteousness exalteth a nation: but sin is a reproach to any people." "Seek the Lord, and ye shall live," has been written in letters of blood over the cross of our Lord Jesus Christ, and today it needs to be flashed into the very heavens, that all the world may see and turn aside from their pride, their vanity, their presumption, their hate, and with inspired devotion place larger faith in the keeping care of the Father, whose "tender mercies are over all his works."

[*Zion's Herald*]

As a matter of fact, men have interpreted God in one way or the other from the very beginning, and with their answers have built labyrinths of thought in which they have often lost themselves. Transcendence, left to itself and followed to its unfortunate conclusion, produces deism with its carpenter God, a God who made all things and now is entirely outside of everything. Immanence, on the other hand, degenerates into pantheism, with a God diffused into everything, responsible logically for the moral delinquencies of man as He is for his excellences, making impossible freedom or individual character. One shuts out God while the other shuts Him in. It would be difficult to say which conception is attended with the more unfortunate results. The true idea of God lies in a proper relation of transcendence and immanence. God is immanent in nature and in man, but He is also above nature and man.

The contribution of the doctrine of divine immanence to Christian thought is most distinctive. It illuminates the fundamentals of faith as nothing else has done. The incarnation, the relation of God to man, forgiveness, the atonement, prayer,—all take on new and richer meaning as we think of God as immanent in the world. In Christ "dwelleth all the fulness of the Godhead bodily" is easily grasped under these conditions of thought. The indwelling of the Holy Spirit, convicting of sin, then guiding and giving divine assurance of sonship, is but a logical deduction. In fact, the divine immanence illuminates the whole round of the most precious Christian doctrines, vitalizing faith and bringing very near to the individual the transcendent God.

[*The Universalist Leader*]

Humanity is coming home from the war to face the most stupendously solemn facts in its whole history. The task of Christianity and the Christian church has not been so vital and so imposing since Christ was crucified on Calvary, as in the not far-off coming years. And there must be prepara-

Digitized by Google

tion. The Christian church must take its Christianity seriously; it can no longer hold it as a scheme of future redemption for the individual soul alone, as a theory apart from life, but must hold it as a program of life in all its relations, —between man and man, between nation and nation, between the human soul and God. Class and national and racial boundaries must be brought low, to make way for the universal brotherhood, for the kingdom of heaven, which is at hand.

The Christian church must make ready to meet its obligation and its opportunity. It must be self-converted; it must be self-consecrated; its hands must be strengthened, its mind whetted to keenness, its heart inspired, its spirit relighted from the altar of God. The church is summoned in this age as never before to be prepared to follow its Master and save the world.

[Philip Wendell Crannell in *The Standard*]

The scientific imagination is precisely the one the minister needs,—the imagination which can read the divine story in the details of the humblest human life; the possible divine destiny of the lowest; the divine message in the multitudinous, deeply differing, seemingly contradictory events of history, past and current; the divine features in the confused and confusing lineaments of a frowning or ambiguous Providence; the divine process that through the troubled ages runs; the divine Christ, revealing himself somehow in all that is, until "that face, rather than decomposing, grows, or decomposes but to recompose, becomes my universe that feels and knows;" in short, the imagination which, not beyond nor beside but in what seems to be, discovers what really is. Without this any minister works in the dark; he is in the dark as to the actual realities of the lives about him; he is in the dark as to the divine intentions (and operations) of grace in those lives; he is in the dark as to the feasible path that leads from those human realities to the realizing of those intentions of God.

This is the scientific imagination, an imagination restrained, cautious, creeping long before it tries to soar, severely correcting itself, constantly testing its findings and its flights by the cold unvarnished truth, but the imagination which, in the realm in which it works, finds the truth of God and man. By this imagination, to which, when touched by the spirit of God we give the name of faith, "we understand" not only "that the worlds were framed by the word of God," but also the depths of human nature and the breadths of life and the heights of God. Apart from it we understand—nothing.

[Leon A. Harvey in *The Christian Register*]

Fear is the natural child of malice, hatred, and ill will, just as faith and trust are the children of love and good will. If a man hates you, you fear him just in proportion as you think he has power to injure you. If a man loves you, you trust him and feel assured of his help whenever he can serve you. This is just as true of nations as of individuals; and this terrible calamity has overtaken the world just because ill will and hatred have been cherished by nations, though love and good will have long dwelt in the hearts of the peoples of those nations in their thoughts of and dealings with each other.

[*American Lutheran Survey*]

To be born and reared in lowly circumstances is not a misfortune; nor would the rise of lowly men to high estates be as rare as it is if more of earth's lowly ones would cease repining over their misfortunes and permit the King to find them and exalt them. The upward way is one of constant sacrifice, but the heights to which it leads are blessed indeed.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition" size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new pamphlet entitled "Man's Unity with God" has been printed in the German language. This pamphlet contains seven articles republished from the Christian Science periodicals which have been translated into German. The pamphlet is now on sale at the prices of our regular pamphlets, as shown on the opposite page.

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

A new pamphlet, "What went ye out for to see?" is now on sale. This pamphlet contains the four following articles, republished from the Christian Science periodicals: "Principle Not Person"; "Jesus of Nazareth"; "Jesus the Christ"; and "Jesus and the Christ."

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

Digitized by Google

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Miscellaneous

For quantity rates on goods specified in the following list please refer to the current catalogue in *The Christian Science Journal*.

BIBLES. 01483 x. Clarendon Brevier, heavy-faced, distinct type: Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.75.

01440 x. Brevier, light-faced type; self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.50.

Morocco slip case to hold pocket edition of Science and Health, *Quarterly*, and Bible, $1.25.

Two other sizes of slip case listed in the current issue of the *Journal*.

Covered morocco case with handle and purse on outside, $3.50; without purse, $3.25.

01561 x. Large type Bible, 7½ x 6¼ inches, 1½ inches thick, bound in Alaska seal. Specially adapted for use of second readers, $7.25.

The improved index will be added to any Bible listed in our catalogue for an additional charge of 35 cents. Catalogue No. 22 of selected Bibles will be mailed free upon application.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. 132 pages with index. Paper covered, 15 cents; cloth binding, 85 cents.

THE LIFE OF MARY BAKER EDDY. By Sibyl Wilbur. 424 pages. Cloth, $2. Edition de luxe, $5.

"PERSONAL CONTAGION" and "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Paper cover, 10 cents.

THE MOTHER CHURCH. By Joseph Armstrong. A history of the building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated, 107 pages. Cloth, $1.50.

CHRISTIAN SCIENCE: ITS LEGAL STATUS. By Judge Clifford P. Smith. 128 pages, paper covered, 10 cents.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, $1.15; half morocco, $1.40; full morocco, $2.50; levant, $3.50; pocket edition, size 4⅝ x 6⅝, $3.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission, have been set to music as follows: "The Mother's Evening Prayer," 75 cents; "Christ, My Refuge," 75 cents; "Love," 40 cents; Communion Hymn—"Saw Ye My Saviour?" (Johnson), 50 cents; "Blest Christmas Morn," 27 cents; "O'er Waiting Harpstrings of the Mind," 27 cents; "Shepherd, Show Me How to Go," 27 cents; "Saw Ye My Saviour?" (Root), 27 cents. The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing. 8-inch (mount 12 x 16), $1; 12-inch (mount 15 x 20), $2; 16-inch (mount 21 x 29), $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18 x 24 inches, $5; on India paper without remarque, $3. Smaller reproduction, size 11 x 14 inches, on Japanese vellum, $1. Photogravure post-cards, reproduction of the picture of the Church Edifice and Publishing House, 5 cents.

QUARTERLY COVERS in black morocco, $1.15; with purse, $1.40.

ALUMINUM LESSON MARKERS. Set of thirty, with paper shields, 50 cents. Extra paper shields, one hundred, 15 cents.

PRICE LIST OF BIBLE CONCORDANCES and DICTIONARIES OF THE ENGLISH LANGUAGE supplied on request.

REPRINTS (not printed in English). Two-page leaflets, 14 subjects in French and Swedish; 19 subjects in German. Ten copies to one address, 10 cents.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Send all orders for the works of Mrs. Eddy, with remittance by New York or Boston draft or money order, direct to Allison V. Stewart

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Oxford India Bible paper edition, with stiff morocco cover. Single copy, $6.00, six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 61 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in countries please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for year 1916. This notation and the delivery of the periodical will indicate that a remittance has been received and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post office as second-class matter.

Items of Interest

In his annual report for the fiscal year the secretary of agriculture indicates a number of important measures necessary for the betterment of agriculture in the United States. These involve: legislation designed to promote the better handling and storage of farm products and the trading on the basis of fixed grades and standards, including a permissive warehouse act, a cotton standards act, a grain grades act, and provision for a market-news service to obtain and disseminate accurate information regarding crop movements and prices; a land-mortgage banking act; assistance to communities near the national forests in road building and similar improvements; authority to grant water-power permits within the national forests for fixed periods; the classification of the remaining public grazing lands to determine their character and to secure information upon which to base plans for their future improvement and use; authority for the sale of lands needed for local enterprises in certain localities within the Alaskan forests after examination and classification by the department, with definite provision against alienation of those chiefly valuable for water-power sites, for the handling of timber resources, or for other public purposes; provision for a well balanced enlarged program for agricultural research; the continuance of appropriations for the purchase of forest lands in the Appalachian and White Mountains until areas sufficient to be influential in protecting those regions are acquired.

In his annual report, Secretary Lane of the department of the interior calls attention to the national parks as a valuable and undeveloped asset of the country. He says: "The United States furnishes to the people of this country playgrounds which are, we may modestly state, without any rivals in the world. Thousands have this year for the first time crossed the continent and seen one or more of the national parks. It may reconcile those who think that money expended upon such luxuries is wasted, to be told that the solicitous traffic men of the railroads estimate that this year more than a hundred million dollars usually spent in European travel was divided among the railroads, hotels, and their supporting enterprises in this country. During the year a new national park of distinction and unusual accessibility has come into existence. It crosses the Rockies in Colorado at a point of supreme magnificence; hence its title, the Rocky Mountain National Park. Through it, from north to south, winds the Continental Divide,—the Snowy Range in name and fact. Two hundred lakes grace this rocky paradise, and bear and bighorn inhabit its fastnesses. It has an area of three hundred and fifty square miles and lies only seventy miles from Denver. Many hotels lie at the foot of these mountains and three railroads skirt their sides."

The boring operations for the Roger Pass Tunnel of the Canadian Pacific Railway have been completed. This tunnel passes through Mount Macdonald, the dome of the great Selkirk Range, and is the longest railway tunnel on the continent and one of the longest in the world. More than two years was spent in preliminaries,—the selection of the proper place to drive the bore, also the surveying and the excavation work necessary before the real tunneling could be begun. The boring and the related improvements will cost more than $10,000,000. The Hoosac Tunnel at North Adams, Mass., is four and three quarters miles long, while the Roger Pass Tunnel is five miles long. The main shaft has room for double tracks. The tunnel is fully twenty-nine feet wide and twenty-three feet high, and follows a straight line under Mount Macdonald, emerging in the Beaver Valley at a point about one thousand feet below the present line of the railroad. The highest point reached by the tunnel will be 3,795 feet above sea-level. The passage through the mountain has a gradual rise of 1 per cent to the "interior summit."

Until a few years ago there were no facilities in India for the study of archeology, and the government of India had no option but to seek recruits in Europe. In order to remove this difficulty it was decided in 1903 to encourage the pursuit of archeology among Indians by the offer of state scholarships. In the first place, two such scholarships, of the value of 75 and 100 rupees per month were instituted, open to candidates who had shown special proficiency in Sanskrit, Persian, and Arabic, and arrangements were made for the training of the selected scholars under departmental experts. This experiment having proved successful, a scholarship was next instituted for Burmese archeology, and within the last three years six more scholarships have been sanctioned. At the present moment there are eight ex-scholars occupying responsible archeological posts, five in British territory and three in the native states of Hyderabad, Gwalior, and Kashmir, besides five other appointments held by Indians who have received their training in other capacities in the department.

The annual report of the forester of the department of agriculture comments on the government ownership of water-power sites and timber as exemplified by the national forest system. The financial burdens resting on private owners of uncut timber are held to have forced the manufacture of lumber without regard to market demands, and with consequent demoralization of the lumber industry and wasteful use of timber resources; while facts and figures regarding the water-power situation are given to prove that more rapid development of water-power in the West is mainly prevented by the lack of consumers rather than by the absence of suitable legislation. Water-power permits taken out for national forest projects, says the report, involve a total of 1,261,560 horse-power. Free permits cover 70,628 horse-power, and the plants actually constructed or operating June 30 had an output capacity of 311,276 horse-power, the rentals paying $89,000 during the year.

A four ton boulder, carrying a large bronze plate, has been set in a circular space in North Terrace Park, Kansas City, Mo., overlooking the Missouri River, to mark the spot where Senator Benton stood in 1852 and made the prophecy, "Here where these rocky bluffs meet and turn aside the sweeping current of this mighty river, here where the Missouri, after pursuing her southern course for nearly two thousand miles, turns eastward to meet the Mississippi, a great manufacturing and commercial community will congregate and less than a generation will see a great city." The monument was placed by the Elizabeth Benton Chapter, Daughters of the American Revolution, which worked nine years to carry out the project.

The White Star Steamship line has agreed to pay $661,000 in settlement of all claims arising from the sinking of the Titanic on April 5, 1912, when more than fifteen hundred persons perished. Of this amount, if all those claiming damages should accept the terms, approximately $500,000 would be distributed among American claimants, $50,000 to British claimants, and $111,000 would be required for interest and expenses. The original claims for damages amounted to about two and a half million dollars.

Secretary Lane of the department of the interior has ordered the restoration to disposition under the appropriate public land laws of approximately twenty-nine thousand acres of land in northern California. The tract was withdrawn a number of years ago under the authority of the reclamation act in connection with the proposed Pitt River project. It has now been determined that the lands will not be needed for that purpose, also that they contain no power possibilities.

Press despatches from Pekin had stated that Yuan Shih-kai did not intend to assume the throne for some time, though he formally accepted the offer. In a cablegram from his secretary the Chinese ruler says he will "submit to the people's will" when the "necessary preparations" have been made. In transmitting the cablegram, his private secretary referred to Yuan Shih-kai as "His Majesty," indicating that in effect at least he is now Emperor of China.

The commission form of government is in effect in 81 of the 204 cities of the United States of over 30,000 inhabitants. Civil service regulations are applied to the appointment of policemen in 122 such cities, including all those of more than 300,000 inhabitants. Policewomen are employed in 26 cities. Municipal prohibition prevails in 15 cities, state prohibition in 17, and county and parish prohibition in 3.

The nation's harvests this year have surpassed any ever before recorded. The value of the principal farm crops, based on prices paid to farmers Dec. 1, is announced by the department of agriculture in its final estimate at $5,568,773,000, making 1915 a banner year both in value and in production of crops.

A channel was opened on Dec. 17 through the slide at Gaillard cut, the first time the Panama canal has been open to traffic since last September. It is stated that canal tugs and dredges will be able to pass through the slide region about Jan. 1.

The action of Congress forbidding the importation or interstate transportation of motion picture films of a prize fight has been declared constitutional by the United States Supreme Court.

Vol. XVIII | January 1, 1916 | No. 18

Cheerfulness

HON. CLARENCE A. BUSKIRK

Do Christian Science practitioners and patients sufficiently recognize the value of cheerfulness in overcoming sickness and other discordant conditions? or do they sometimes neglect to encourage that good cheer which is such an important aid in the application of the divine Truth-cure for the world's redemption? In Proverbs we read, "A merry heart maketh a cheerful countenance: but by sorrow of the heart the spirit is broken." In harmony with this statement, Mrs. Eddy says in Science and Health (p. 395) that "an ill-tempered, complaining, or deceitful person should not be a nurse. The nurse should be cheerful, orderly, punctual, patient, full of faith,—receptive to Truth and Love."

In the plastic arts, all the conditions which affect the plasticity of what is to be shaped and altered are studied constantly. In the divine Truth-cure, with its unwavering faith in the Supreme Being and its true prayer thereto as energizing aids, cheerfulness renders the patient more receptive, while despondency or discouragement or hopelessness renders him more difficult to restore to a normal state of harmonious activity of mind and body. Those who make a study of mankind, including many of the materialistic physicians, have long since observed the great importance of "good cheer;" but unfortunately, when ignorant of the understanding found in Christian Science, they have failed to use good logic in drawing the right lessons therefrom. On page 149 of Science and Health Mrs. Eddy says: "A physician of the old school remarked with great gravity: 'We know that mind affects the body somewhat, and advise our patients to be hopeful and cheerful and to take as little medicine as possible; but mind can never cure organic difficulties.' The logic is lame, and facts contradict it."

What kind of a Supreme Being can a man be thinking about, and what sort of logic is he making use of, when he argues in one breath that God has arranged things so that evil thinking can make us sick, and even stop the pulsations of the heart, and who then declares in the next breath that God has also so arranged things that righteous and good thinking cannot produce the opposite effects of health and life? Did not Solomon find it to be true that as a man "thinketh in his heart, so is he"? Did not Paul find it to be true that "to be carnally minded is death; but to be spiritually minded is life and peace"? This statement of the apostle, as understood in Christian Science, is of the deepest significance, and is capable of the widest application.

The wise among the ancients unite in saying that a happy life, to which good health usually seems to be essential, is the product of virtue, and that virtue comes from righteous thinking. Let us consider an excerpt from the seventh book of Aristotle's work on "Politics." He says, "As to a happy life, whether it is to be found in pleasure or in virtue, or in both, certain it is that it belongs more frequently to those whose morals are most pure, and whose understandings are best cultivated, and who preserve moderation in the acquisition of external goods, than to those who possess a sufficiency of external good things, but are deficient in the rest." It need not be remarked that cheerfulness is a conspicuous part of a happy life, and it does one good to note the many occasions in which our Master commended it to those in need. To a man sick of the palsy he said, "Son, be of good cheer;" then he healed him. Again, toward the close of his earthly ministry, he said to his followers: "Be of good cheer; I have overcome the world." We also read that this was the divine message to Paul when he was to mortal sense in a sore strait, "Be of good cheer, Paul."

It should be our constant effort to make cheerfulness an abiding angel of our thought. The more we seek and cultivate its smiling presence, the oftener will it visit us and the longer will it remain. Each hour of its companionship should give us greater courage, fortitude, compassion for others, more unwavering faith in divine Love; and the more of these we possess, the more permanent and perennial become the hymns of cheerfulness which sing in our hearts to gladden all our days. Whether we smile in the sunshine or seem to sorrow in the shadows, whether worldly fortunes seem to prosper or to darken and decay, whether our friendships remain with us to gladden our life or vanish, still we may find cheerfulness, along with gratitude, serenity, patience, humility, trust,—yes, even joy,—in the abiding assurance that the protecting arms of everlasting Love are beneath us and about us, always and everywhere!

In striving to cultivate cheerfulness as a guest in our consciousness, we must not forget that we need to be worthy of its smiling presence, for cheerfulness seeks congenial and worthy companionship. Its energizing and sustaining influences are not for the sordid and selfish mortal who lives for himself only; the gross and sensual mortal who sacrifices himself and others in the indulgence of bodily appetites; the mortal of low ideals, standards of thinking and conduct, of groveling aspirations and debased incentives; the mortal of inordinate greed, ambition, pride, and vanity, who succeeds at the expense of others; or the mortal who is content that others shall suffer and starve that he may wax fat and ride among his victims in arrogance and disdainful ostentation, and whose career is a miserable travesty on true manhood. Such men may never win the cheerfulness that is worth while and blesses its possessor.

Cheerfulness is the reward of those who practise high and virtuous thinking and living, and it cannot be bought or bargained for unworthily. It is not the product of ease or pleasure, or of the pride begotten of power, place, or wealth; it is the offspring of the consciousness of duties faithfully done, of abnegation of self for the good of others, of high and pure ideals, aspirations, and endeavors. Indeed, the surest way to abiding and supreme good cheer is heroic self-sacrifice in loyalty to a high ideal. The world may not understand, friends may doubt, adversity may come, even dungeons and tortures and physical death may threaten; but there are patience and courage for the lesser and greater troubles, humiliations, and sorrows, and withal the consciousness that one's self is worthy of the divine kinship, that the supreme intelligence beholds and comprehends.

History proves that the martyrs in every cause have ever been more cheerful and truly victorious than those who wickedly oppress and persecute them. The right kind of music, of environment, and also of reading, is helpful to the habit of cheerfulness, just as the wrong kind impedes it. Especially should we seek the cheer which comes from a recognition of the ever-presence of our loving Father-Mother God.

True Service

EDITH GOODRICH BLOOD

CHRISTIAN SCIENCE is unlocking the treasures of the Bible, so that it is becoming more widely and intelligently understood. Even the merest beginner is continually surprised at the wealth of wonderful truths laid bare before him as day by day he learns and proves that he can turn to its pages for the solution of his every-day problems, be they ever so simple or ever so difficult. And as the spiritual interpretation of the Scriptures dawns upon him, he clearly perceives that humanity's longings will all be met when it is learned that we serve God truly by individually learning to think as did our great Exemplar.

To illustrate, let us see just how comprehensive was Paul's admonition to the Galatians when he said, "Bear ye one another's burdens, and so fulfil the law of Christ." Scientifically interpreted, this injunction at once enlarges man's sphere of usefulness by opening up a vast field for right activity daily,—nay, hourly,—a field open to each man and woman. Generally speaking, however, to serve another or to bear another's burden means to exert one's self continuously or statedly for the benefit of another. It has reference in most instances to physical acts, labors, or material gifts. The fact that service can be purely metaphysical and so universally beneficial, blessing each and all at the same time, is not generally considered of very great consequence, if it is even accepted. Consequently if one accepts the material construction usually given to this passage, he can but find his field of service very limited, and each day altogether too short to number many helpful services rendered beyond the tasks he must perform for his individual or family needs.

Christian Science emphasizes the higher interpretation of service, and so removes this whole discouraging sense of limitation by teaching that acts, labors, or gifts are of secondary, not primary, importance in our ministry to others, though these will necessarily follow loving, helpful, and intelligent thinking. Indeed Christian Science teaches and proves that thoughts are things, that the metaphysical supersedes the physical at all times, and that each of us can serve his neighbor most by refusing to think any but Christlike thoughts. When one learns to "stand porter at the door of thought" (Science and Health, p. 392) and allow nothing to enter his own consciousness that defileth the godlike man, he will be applying the law of Christ to all that he sees and does; and he will be a benefactor indeed, for he will bless all upon whom his thoughts may rest.

When a sense of lack or limitation presents itself, one should turn his thought instantly away from the testimony of the senses and know that God, infinite substance, infinite good, the All-in-all, has never for an instant limited or stinted His own idea, man, but rather has bestowed upon man continually more than he knows how to accept, since God is infinite wisdom and love. Mortal testimony can be surmounted individually by each, as he refuses to admit its reality through a constant and earnest endeavor to come into at-one-ment with divine Truth.

Again, if he sees or hears about disease in any phase whatever, let him with unflinching, unwavering, and calm reliance on God replace these mortal pictures of inharmony with the truth of man's inheritance. Since God is the one and only creator and made all that is made in His own image and likeness, any disease manifestations whatever are not real, and can be wiped out of consciousness and be denied and denounced just as the student rejects a result in mathematics obtained by applying a fictitious law or rule. He has only to go back to the true basis, work out the right result, and thus clearly prove the discord unreal.

So, too, when from any source whatever there come thoughts of unrest, dissatisfaction, fear, foreboding, or the like, let us trample upon these mental thistles just as carefully as we would upon a manifestation of physical discord. Let us turn our thought Godward and assert man's birthright,—the ability to see, hear, feel, and think only good. As Mrs. Eddy says in "The First Church of Christ, Scientist, and Miscellany" (p. 210): "Keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them."

This is the way to fulfil the law of Christ daily and hourly, even as our great Teacher taught. When Christ Jesus looked upon his fellow man he did not see him as sick, poor, maimed, or burdened, but looked beyond and above the human testimony and saw the godlike man; he turned from every material evidence of inharmony and discord and saw the perfect universe and the perfect man,—saw beauty, harmony, and plenty as omnipresent and eternal. The refusal to see or admit the evil as real destroyed it. This is what Christian Science is teaching men to do today,—to reject all that is unlike God.

Mind and Body

EVERETT EDGAR KING

Two questions often asked by beginners in Christian Science are these: "What relation exists between me and my body?" and, "If God knows nothing about my body, how can He heal it?"

Physiologists tell us that the body is a self-supporting and self-sustaining organism made up entirely of water and mineral matter. Now these substances have never been accredited with any intelligence of their own, and it is difficult to conceive how, when they are made into the brain and nerves of the material body, they can think, and direct one's actions, any more than they could in their native state. One of the first things we learn in Christian Science is that the material body is the product of mortal thought and is governed by that thought. In Science and Health (p. 177) Mrs. Eddy says: "Matter, or body, is but a false concept of mortal mind. This so-called mind builds its own superstructure, of which the material body is the grosser portion; but from first to last, the body is a sensuous, human concept."

The real man is created in the image and likeness of God. He is a divine concept entirely separate from materiality or mortal mind. He can no more be outlined than can God. Man was created for the purpose of expressing the infinite; in fact, all there is to him is what he reflects of God, good. The material concepts which we externalize are the products of mortal mind belief. They do not belong to any one of us, although mortal mind would have us believe they are our own. Neither is the intelligence which we manifest the result of our own thinking. It comes to us from God, and it is the duty and privilege of every one to let these higher spiritual thoughts which are continuously coming to them, govern them. In proportion as they do they will claim and prove man's dominion, and base mortal thoughts will disappear. If we strive to keep the mortal thoughts in subjection and let the divine Mind rule our thinking, the human concepts will be harmonious and our bodies will manifest health. If

Digitized by Google

mortal thoughts are allowed to take their own course whithersoever they tend, they will dominate us wholly. At times these thoughts will become discordant, and the body, being governed by them, will become diseased. It is human desire, reaching out for right thinking and acting, which allows the real man to appear.

When we see a man walking down the street, do we unconsciously consider him as so much flesh and blood clothed for his daily tasks, or do we stop to consider that what we see is only the mortal concept and that the real man is unseen to the physical senses? We should endeavor to know the perfect man as Jesus knew him, the man who reflects God. We know that we are constantly expressing thoughts of some kind. They may come from the universal mortal mind, so called, or they may be from the divine. The true Christian Scientist will strive to know himself as God's child, and remember that his existence is in consciousness and is mental. His human thoughts will then take their rightful place and become harmonious.

We learn in Christian Science that sight is a mental process in no wise dependent upon the eye; that hearing is achieved by thought and not by the ear. Mortal mind, however, has taught us for ages that man is wholly dependent upon physical organs; that these organs can become diseased, and when they do they cannot perform their proper functions. If we know that the real man is spiritual, and if we let Truth destroy the mortal thought which is causing disharmony, the body will respond with health.

The apostle Paul says, "We are debtors, not to the flesh, to live after the flesh." He also says, "If the Spirit of him that raised up Jesus from the dead dwell in you, he that raised up Christ from the dead shall also quicken your mortal bodies by his Spirit that dwelleth in you."

Treasures of Truth

HELEN ANDREWS NIXON

TODAY surely demands that we think and act from a higher mental plane than we did yesterday; that we recognize and destroy the false claim of lethargy, free ourselves from stereotyped opinions, and come forth stripped of mortal vestures, and thus better fitted for the ennobling race that is set before us. It is a steady, patient ascent we have to make in the demonstration of Christian Science, and the lighter the baggage the easier the climb. There are always the extremes to be avoided and the middle of the road to be found and kept. This task alone requires much thought. It demands demonstration, not speculation, and much painstaking effort.

On page 286 of Science and Health Mrs. Eddy writes: "A special privilege is vested in the ministry. How shall it be used? Sacredly, in the interests of humanity, not of sect." When made luminous by spiritual understanding, the by-laws contained in the Manual of The Mother Church are seen to be of the highest significance, and that they confer "a special privilege" upon every Christian Scientist is made quite plain. Take for instance Section 5 of Article VIII, which reads, "The prayers in Christian Science churches shall be offered for the congregations collectively and exclusively." "Collectively,"—here we stop to think. Metaphysical self-denial is the immediate demand. The so-called material senses are to be given no hearing. They are forbidden to outline and number the people. They are forbidden to report an assemblage of many minds and bodies, with varied aims, interests, and antagonisms. Shutting out personal sense, the way is opened to spiritual consciousness.

To pray for the congregation collectively is to withdraw from sense-testimony, and to abide and rejoice trustingly in the spiritual consciousness that all true believers are "the people of his [God's] pasture, and the sheep of his hand." Spiritually understood, divine Love is our shepherd, and there is but one shepherd and one fold, even as Jesus declared. In the light of scientific prayer mortal differences melt away, the oneness of need, purpose, and achievement appears, and nothing seems so worth while as the sweet and certain sense that good alone is real, and that conscious at-one-ment with God is the divine birthright of each and every man.

The second specification of the by-law under consideration is that prayers shall be offered for the congregations "exclusively." Among many other spiritual treasures to be realized in these moments of prayer, are we not to ponder on the sufficiency of God's ever-presence to quench earthly yearnings, and so silence suggestions of loved ones absent or without the fold? Thought is not to wander in the byways of personality but to acknowledge humbly, gratefully, the allness of good and the nothingness of evil. Our Sunday and mid-week services supply oft-repeated opportunities for the revelation of spiritual truth, and in our lives they serve as intimate mentors along the way. The cause of Christian Science can but be greatly strengthened in the hearts of all Christian Scientists through this scientific prayer, which in its unfailing regularity reflects the Love which "never faileth."

Our Manual is a storehouse of wisdom, of tried treasures which bring to mind Jesus' saying, "Therefore every scribe which is instructed unto the kingdom of heaven is like unto a man that is an householder, which bringeth forth out of his treasure things new and old." God's care for Israel in all the centuries is expressed through these rules and by-laws, and it was through our Leader's spirituality that they were formulated and made effective. Our debt to her can be paid only in one way, namely, that expressed in her own words in Pond and Purpose (Miscellaneous Writings, p. 206): "As you journey, and betimes sigh for rest 'beside the still waters,' ponder this lesson of love. Learn its purpose; and in hope and faith, where heart meets heart reciprocally blest, drink with me the living waters of the spirit of my life-purpose,—to impress humanity with the genuine recognition of practical, operative Christian Science."

Citizenship

H. FARMER HALL

WHEN the nations of the earth groan under the burden of war, and on all sides we hear of heroic deeds and self-sacrifice, one can but be impressed with the patriotism and devotion which impels the citizens of those countries. At such a time it is perhaps natural that Christian Scientists should seriously consider what duties are involved in the call of true citizenship and patriotism, for thus a helpful and scientific attitude of thought may be maintained.

Humanity has been generally inclined to base its claim to citizenship on a question of birth. The country in which a man is born determines his citizenship, and by the very nature of things material, an individual's convictions, aims, and ideals have been looked upon as qualities of citizenship, rather than that which constitutes a basis for the fact itself. Though perhaps not generally recognized, it is nevertheless true that to be a native of any country can never really of itself entitle a man to be accredited a citizen or patriot, for such terms entail the necessity of willing conformity to the laws and ideals of that country, and one who is lacking in this respect can be neither a true patriot nor a true citizen.

If such a statement as the foregoing is correct, it is evident that a man whose concepts of law and government are not

Digitized by Google

in consonance with the country to which he belongs by birth, —such a one ceases in truth to be a citizen of that country, and perforce takes upon himself citizenship in that other country in which his ideals of government are put into practice. Here we have an interesting proposition that every Christian Scientist will do well to consider. The Science of Christianity has come into our lives, purifying thought, uplifting ideals, giving clearer judgment and higher aims, until each one who has honestly applied these truths to his daily living has gradually found that old concepts have been swept away, and "behold, all things are become new." The views which he had entertained in the past with regard to God and man have been replaced by those which belong not to any human ideals but are drawn from another realm, whose government is spiritual and whose laws are divine.

Does not this transference of our ideals mean that we are no longer citizens, in the highest meaning of that word, of any earthly country, but rather, as Paul has declared, "fellow citizens with the saints, and of the household of God"? If so, does it not behoove all who have named the name of Christ to see to it that their understanding of these terms "patriotism," "citizenship," "loyalty," be not marred by the mesmerism of any lesser ideals, but that as citizens of heaven they may also be true soldiers girt with "the whole armor of God," wherewith they shall be "able to quench all the fiery darts of the wicked."

On page 254 of Science and Health Mrs. Eddy has declared, "Pilgrim on earth, thy home is heaven." It is indeed true we are but pilgrims, aliens journeying through foreign lands, and as such rendering obedience to the laws and governments of the countries through which we travel. Nevertheless we should not forget to hold aloft our standard of liberty, on which is written, "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars" (Science and Health, p. 340), and by so doing give the highest ideal of law and government to troubled millions of hearts in the lands through which we pass.

Mind and Medicine

STOKES ANTHONY BUNNETT

In his illuminating talk with the woman of Samaria, Christ Jesus declared, "God is a Spirit," or, as the American Standard Version of the Bible in a foot-note renders it, "God is Spirit." The Greek word for Spirit denotes "the vital Principle;" and a well-known Bible authority says that in Spirit "is . . . our true Ego." The term Ego signifies, as one of our dictionaries puts it, "the permanent real being to whom all the conscious states and attributes belong." Thus we see that in their highest and best sense Spirit, Principle, and Ego have practically the same meaning, and that this meaning may be summed up in two words: divine Mind. We also see that God is divine Mind.

Throughout the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, Mind is used interchangeably with God, Spirit, Principle, and Ego; while on page 143 of this book it is written, "Mind is the grand creator, and there can be no power except that which is derived from Mind." It therefore becomes plain that the right understanding of divine Mind, the divine intelligence, is the one thing which should have mankind's most careful attention,—yea, which should serve as the guide and the governor in every thought, word, and deed.

Perhaps never before in the world's history was there so much discussion about medicine and healing as there is today. While the so-called medicine of matter, as favored by the schools, naturally enters into the discussion, it by no means occupies the whole ground, for "the medicine of Science," which "is divine Mind," as Mrs. Eddy tells us (Science and Health, p. 104), is fast coming in for its important share of consideration and respect. While *materia medica* is setting forth its various theories and claims, Christian Science, through the Bible and its "Key," is revealing to the world the new-old Science of practical Christianity, the Science which now, as in Scriptural times, is known by its fruits,—the fruits of physical, mental, and moral healing and regeneration. In fact, so successful is this Science in dealing with the many seeming difficulties and inharmonies of human experience that people of every race and clime, in constantly increasing numbers, are seeking a knowledge of it and are striving to render it demonstrable.

"Which was first, Mind or medicine?" Mrs. Eddy asks, and she adds: "If Mind was first and self-existent, then Mind, not matter, must have been the first medicine. God being All-in-all, He made medicine; but that medicine was Mind. It could not have been matter, which departs from the nature and character of Mind, God" (Science and Health, p. 142). If one who believes in the teachings of Holy Writ but has not before been summoned to look upon Mind and matter as just presented, will set himself to reasoning logically and consistently, he will readily discern the great truth of Mrs. Eddy's statements. It will be clearly shown to him that since God is Spirit, or Mind, and the author of the entire creation, all is in reality Spirit, Mind, and its expression or manifestation.

Therefore, as Mrs. Eddy declares, Mind was the first medicine; and being such, it will always remain first, for God is unchangeable and eternal. God's children, then, should ever regard and depend upon divine Mind as their only remedy for every ill and discord. This whole-hearted dependence is plainly implied in Exodus, where God is heard to say, "I am the Lord that healeth thee;" and also in Psalms, where the writer enjoins, "Bless the Lord, . . . who forgiveth all thine iniquities; who healeth all thy diseases."

Christians are aware that the most successful healer who has walked the earth was Christ Jesus. He it was who never lost a case, and his practice covered all manner of sickness, disease, and inharmony. What were the means which Christ Jesus used and which made him so successful? The answer is given in his own words. He said, "I do nothing of myself;" and again, "The Father that dwelleth in me, he doeth the works." This was the secret of the Master's marvelous strength and success. God is Spirit, Mind, and it was because Christ Jesus expressed or reflected the divine Mind so perfectly—was so completely at-one with this Mind, even as a ray of sunlight reflects or is at-one with the sun—that he was able to do wonderful works and to speak with authority.

When the Master healed the sick and helpless, he did it through the divine Mind, not through matter. It is sometimes maintained that in the case of the man born blind Jesus resorted to material means for aid when he "spat on the ground, and made clay of the spittle, and . . . anointed the eyes of the blind man with the clay," at the same time saying, "Go, wash in the pool of Siloam." But the very fact that the Master "spat on the ground" (on the dust whence comes, in belief, all mortal error and discord) showed his utter contempt for matter, while his strict command to go and wash off the clay evidenced the necessity of one's being cleansed from that which is material. In this connection it should not be forgotten that immediately prior to anointing the man with the clay Jesus said, "I am the light of the world." Now, nobody believes that this "I" was meant to imply anything material. Rather was it meant to portray and to emphasize the divine Ego, the divine Mind, which animated and sus-

Digitized by Google

tained the Master continually and gave him unlimited power over matter and its discords.

Again, when the Master changed water into wine at the wedding-feast, when he fed the five thousand with a mere handful of food, when he stilled the storm, went through solid walls, walked on the wave, took the boat across the lake in an instant, passed unseen through the multitude, and raised the dead, he did it through the might of divine Mind; that is to say, through an absolute understanding of the omnipotence, omnipresence, and omniactivity of God. Jesus knew that because God is All-in-all, as the Scriptures teach, there could not possibly be aught besides Him and His perfect, harmonious spiritual creation. This constituted the Master's correct knowledge of the truth of being, and his faithful application of this knowledge brought to human view man's rightful heritage of dominion and freedom, as depicted so vividly in the opening chapter of Genesis. Thus it was that the great Exemplar made null and void so-called material oppression and bondage, and demonstrated "the glorious liberty of the children of God."

Christ Jesus said, "He that believeth on me, the works that I do shall he do also." This means that those who understand the absoluteness or entireness of the divine Mind and its ideas, and make their understanding practical, can win success such as he won, thus establishing both for themselves and for others true and lasting health, happiness, joy, and peace. Christian Science continually directs the attention of its students to this wonderful saying by the Master, and in the language of the apostle Paul it declares, "Let this mind be in you, which was also in Christ Jesus."

[Written for the *Sentinel*]

Dawning Faith

ELLA CLEMENT DAVIES

THE teacher said:
"You children all so very good have been,
The Scripture lesson you yourselves may choose,
Then perfectly repeat the sacred text."
"And may I really learn the one I love
The best in all the Book?" a maiden said
With trembling lip and eyes aglow with light.
"Ah, then I know the chapter mine shall be."
The teacher, smiling, asked: "And which is it
You love so well? What lesson does it teach?"
A moment's pause: "The angel with the book!"
And when the day for recitation came,
The story of those verses then she told
Unfalteringly, and questioning asked:
"Is it all true? How could he place his feet
On sea and land at once, and never fall?
If I could see that angel, I would ask
That I might read his 'little book,' and know
What made him cry aloud as lions roar,
And why his garment should be like a cloud.
I want to see the rainbow on his head.
Can I, oh, can I find him anywhere?"

Long years have passed.
The child to woman grown has found her quest,
Has seen that angel with the "little book"
Standing 'twixt earth and heaven, on land and sea,
With hands uplifted to the shining stars,
Uttering the voices of those thunders seven
Of things which John in isle of Patmos saw,—
God's finished mystery, the Word revealed
In Christian Science, making all things new.

Selected Articles

[Judge Clifford P. Smith in *Poughkeepsie* (N. Y.) *Star*]

Unless the council of Constance was right in saying to John Huss that no faith need be kept with a heretic, the anonymous defamation of Christian Scientists, to which circulation was recently given by *The Alliance Weekly*, cannot be justified. One of the charges was that Christian Scientists in general, and the readers of Christian Science churches in particular, try to kill people by mental attack. A more groundless accusation was never put in print. Most fair-minded observers would say that the lives lived by Christian Scientists should furnish assurances to any one that they are not engaged in attempted murder. The early Christians found that their well-doing did not always silence their critics, as Peter said it should, for they were often denounced as enemies of mankind; but enough time has elapsed since then for strife between religionists to have become less violent, and all Christendom has reason to know that Christian Scientists are at least as sincere and successful as other people in their endeavor to make their conduct conform to their profession.

Readers of the *Star* will be further interested to know that the articles in question contained other statements that were equally groundless. One of them was this: "Christian Scientists do not believe in compassion, and are positively forbidden to sympathize with any one." The fact is, Christian Science inculcates compassion and sympathy, and cannot be practised without these qualities of thought. It is to be observed that the chapter on Christian Science Practice in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, begins with a lesson on compassion (pp. 362-367). In the course of this lesson (p. 366) "sympathy for his fellow-being" on the Scientist's part is declared to be essential to "that recognition of infinite Love which alone confers the healing power." It is this same recognition that enables Christian Scientists to bear with some degree of serenity such vilifications as that which *The Alliance Weekly* has published. It is possible, of course, that the anonymous writer may have had an unfortunate experience with some avowed Christian Scientists, and if so, she was entitled to sympathy. But it is probable that her recollection of that experience does not bear a close resemblance to the original circumstances, and it is certain that several points in her story have no basis in fact whatever.

✧

[Thorwald Siegfried in *The Tacoma* (Wash.) *Tribune*]

I would be glad to have space in which to comment on the letter of a writer who objects to an article on the subject of education which appeared in *The Christian Science Monitor*.

The writer of the letter, admitting a twenty years' study of hypnotism and suggestion, and commending them, makes it clear that she is in favor of systems of education which are hypnotic and suggestive. To this partiality she has a right, if she desires it. On the other hand, the objection of Christian Scientists is not to the form or name of any system of education, but to its content and method, if these involve the mesmeric control of the child's personality by his teachers. The fact is that the practice of Christian Science is entirely opposed, in design and method, to hypnotism and mental suggestion; and a study of Christian Science quite naturally leads the student of it into opposition to any proposal which would or might interfere with the right of him or of his children to be governed by that Mind which is God, and to be free from the government of any so-called human mind.

The belief that suggestion can be used for constructive purposes, as expressed in the letter, is one of the errors that

Digitized by Google

occasionally leads a person to rely on it for aid. Advocates of suggestion generally admit that evil is suggested quite as readily as good, to one who subjects himself to its so-called power, and that is sufficient proof to a student of metaphysics that any seeming good attained through suggestion is really evil and but temporarily deceives one into the belief that it is good. If suggestion could ever bring any perfectly good thing to man it would be incapable of becoming the instrument of evil. Good and evil are contraries, and do not mix in their causes or results in human affairs or in the manner of their becoming apparent to human thought.

✧

[Robert S. Ross in *The Advertiser-Journal*, Auburn, N. Y.]

Why these attacks on Christian Science? Is it because Christian Science is demonstrating that during all these centuries the Bible has not been clearly understood by even its most profound students? Is it because Christian Science is proving that what was possible to Christians in the first century is possible to Christians in the twentieth? Is it because Christian Science makes urgent demands upon Christendom to submit proofs rather than mere professions of discipleship?

Let us away with the recital of creeds; away with the doling of theological arguments! We have had enough of mere lip-service. What the world now needs is some Christianity; it is starving for lack of love. We seem to have forgotten that the mission of Jesus of Nazareth was one of mercy. Instead of sowing the seed of human hate, Jesus spent his time in healing the sick, uplifting the fallen, and binding up the broken-hearted; and this is precisely what Christian Scientists are trying to do.

✧

[Ezra W. Palmer in *Pueblo* (Col.) *Chieftain*]

In a recent issue an evangelist is reported to have said that Christian Science rejects "the inspired Word of God." Presumably the evangelist by this statement intended to convey the impression that Christian Science rejects the Bible as the inspired Word of God. This statement is erroneous. Christian Science accepts the Bible, and bases all its teachings upon it. We love the Bible, are tireless students of it, and are seeking to put in practice its teachings. In the tenets of Christian Science on page 497 of Science and Health is this definite and concise statement about the Bible: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." The clergyman quoted above is evidently ignorant of what Christian Science teaches.

✧

[S. T. Downs in *La Porte* (Ind.) *Herald*]

The question of private interpretation of the Scriptures calls forth much human opinion which is not debatable, but in Mrs. Eddy's explanation of the Bible she in no way violates the command given each of us: "Work out your own salvation." Her book "Science and Health with Key to the Scriptures" simply sets forth the spiritual import of the Word. Our critic says, among other things, that Christian Science is pantheism, but pantheism teaches there is life in matter, that matter expresses God, and God and matter coexist. Christian Science, on the other hand, teaches that "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love," and further, that "there is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation" (Science and Health, pp. 465, 468).

Our brother said very positively that in Christian Science "the divinity of the Christ is absolutely denied." Christian Science, on the contrary, declares the Christ to be eternal, divine,—"the divine manifestation of God, which comes to the flesh to destroy incarnate error" (Science and Health, p. 583). But Christian Science uses the term Jesus to designate the physical, and to distinguish it from the Christ, "the divine manifestation." In declaring that Jesus was not God, Christian Science is but following the Master's example, since he specifically taught this great fact. For instance: "Why callest thou me good? none is good, save one, that is, God." At another time he said, "The Father that dwelleth in me, he doeth the works." The Scriptural record of his ministry shows how he reiterated this teaching in many ways.

Mrs. Eddy never said, in referring to the text-book, that "we may not hope to fathom its meaning," as the critic stated, although one cannot hope to learn Christian Science by merely reading Science and Health. In answer to the question, "How can I progress most rapidly in the understanding of Christian Science?" Mrs. Eddy says on page 495 of this book: "Study thoroughly the letter and imbibe the spirit. Adhere to the divine Principle of Christian Science and follow the behests of God, abiding steadfastly in wisdom, Truth, and Love." In her Message for 1900 (p. 2) she tells plainly how to gain this understanding in these very significant words: "The song of Christian Science is, 'Work—work—work—watch and pray.'"

Pretended operations, the use of will-power, or the attempt to deceive the sick by giving bread pills, do not typify Christian Science healing, and citing such instances in an attempt so to classify Christian Science shows conclusively that the critic was thinking of mental practice, which involves some form of suggestion, mesmerism, or hypnotism. Christian Science is opposed to all these, even as is light to darkness or heat to cold. Christian Science reveals the great Scriptural truth that God is Mind, and that the real man, man in God's image and likeness, is governed by the divine law. It reveals the operation of the divine Mind, or spiritual law, as it applies to humanity, and it very soon becomes apparent to the student that this law, operating in human consciousness, is supreme over every inharmonious condition. The belief in the power of the human mind to govern itself or other human minds, also its power over matter, is suggestion, and is the direct opposite of Christian Science, as stated. One could engage in the practice of suggestion only as he departs from Christian Science.

✧

[E. M. Ramsay in *The Shetland Times*, Lerwick, Shetland Islands]

On page 460 of Science and Health Mrs. Eddy says: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being." I have endeavored to explain that this "truth of being" is the great fact set forth in the first chapter of Genesis; that the reality or essence of the universe, including man, is spiritual and "very good." This is in complete accord with our Lord's command, "Be ye . . . perfect, even as your Father which is in heaven is perfect." Now if anything is absolutely perfect for the least fraction of time, it will be perfect throughout the ages; but nothing material can ever be perfect. That which is the image and likeness of God is not the material body, but the divine qualities which a man manifests, and which are at hand for all to manifest. The day will come, however far off that day may now appear to be, when men will awake from their present false sense of bondage to matter, to sin, disease, and death, to perceive the true facts of being—"the glorious liberty of the children of God." In that day we shall find that sight, hearing, and the other faculties which now appear to pertain to matter, are really mental qualities, part of our inalienable spiritual inheritance.

Digitized by Google

Perhaps the following illustration may help to elucidate this point: Two friends share a bedroom. Jock gets into bed and falls asleep before Aleck is ready to put out the light. Aleck sees Jock lying motionless in bed with closed eyes, and addresses a remark to him, but receives no answer. To the sense of Aleck, Jock sees and hears nothing. But what about Jock's sense of things? On falling asleep, Jock finds himself running to catch a train; he sees, hears, joins in the busy life of noonday. If some one in the dream should ask him, "What enables you to see and hear?" the answer would probably be, "I see and hear with my eyes, my ears, and my brain, of course." As long as the dream lasts Jock seems surrounded by material objects, as by day. This surely shows that the seeing and hearing are not parts of the body, but accompaniments of a normal consciousness. Many people, some of them known to myself, have been healed of blindness and deafness by the recognition that these powers, being part of God's ever present nature, cannot be lost. A mortal may lose the sense of their presence, or may never have known this sense, but it is as near him as purity was near Mary Magdalene in the dark days before she met our Saviour and was born anew. It was a change of consciousness which showed her something which had always been hers, but which she had never known.

While Christ Jesus walked this earth, he was undoubtedly subject to belief in some of the limitations of the flesh. Had this not been so, he could not have shown us the way of life; but a closer study of the passages referred to will show us some things which may have escaped our notice. In the wonderful story of our Lord's conversation with the woman of Samaria, his fatigue was overcome by the power of the truth which flooded his consciousness as he spoke to her the words of life, and so he declined the food which the disciples begged him to eat. In the same way, we read that after some of the long days spent in healing and teaching he would find the best refreshment in a night spent in prayer. Then, again, he himself said that he could have avoided the awful ordeal of the crucifixion: "Thinkest thou that I cannot now pray to my Father, and he shall presently give me more than twelve legions of angels?" He went through this experience for the sake of mankind, to show us that the way out of the flesh is by overcoming every thought which is not of God, to prove to us that the real life of man cannot be destroyed, that nothing can "separate us from the love of God, which is in Christ Jesus our Lord."

Christian Science teaches that it is through humility alone that we can become conscious of the things invisible to the physical senses; that there is but one will in the universe,—the will of omnipotent good. At present it seems as if each one of us had a will of his own which he is constantly asked to resign; the day will come, however, when we shall fully recognize that since God's will is the will of good, of life, of purity, of peace, it must be the will of each one of us, for with this recognition will come a joy, a freedom, and a power which can be attained in no other way.

✧

[Albert W. Le Messurier in *The News*, Jersey, Channel Islands]

In the letter of a correspondent, Christian Science is bracketed with "theosophy, spiritualism, and kindred doctrines," as though they were one and the same thing, and the writer gives three points of divergence between these "kindred doctrines" and his own views of Christianity, just as though the various churches today were not themselves in a state of disagreement and unrest over these very points.

Now any one who took the trouble to read thoughtfully "Science and Health with Key to the Scriptures" by Mrs. Eddy (and it may be found in the public library) would never have fallen into the mistake indicated, and would have seen how fundamentally Christian Science differs from theosophy and spiritualism. Be it understood, however, that the Christian Scientist does not run down other denominations, under whatever name they journey. He particularly wants his neighbor to enjoy the liberty of conscience he insists on maintaining for himself, so he rests content with stating the truth and leaving it there. If he required any evidence to support him in this stand, he has it in the sad condition of the world today as a result of the lack of applied Christianity since creeds and dogmas usurped the place of the practical Christianity Jesus recommended to all followers: "Preach the gospel" and "heal the sick."

The basic truth of Christian Science is of course Scriptural: "Hear, O Israel: The Lord our God is one Lord,"—the only God, infinite good, knowing no evil nor permitting it; of too pure eyes to behold evil. Christian Science further emphasizes that the real man is made in the image and likeness of God, Spirit. In Christian Science there is absolutely no other way to God than that marked out by Christ Jesus. In the words of Science and Health (p. 497), "We acknowledge Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus the Wayshower." Following spiritually the mental footsteps of Christ Jesus, honoring the Father as Jesus honored Him, walking in the straight and narrow way of pure spirituality, unadulterated with any belief in a material power opposed to and so dishonoring God,—this it is that brings humanity out of "depravity" into the right understanding of God, and into the freedom that correct scientific thinking must bring. "As he thinketh in his heart, so is he."

Necessarily the Mind that was in Christ Jesus has nothing in common with the carnal or mortal mind, alias will-power or mental suggestion, that testifies to a lie about God and man. A lie, whether about God or man, has obviously no more power than we choose to give it, and it is surprising what a quantity of unhealthy thinking has to be parted with as we reverently approach a purer concept of God. Jesus said, "Ye shall know the truth, and the truth shall make you free." Certainly it comes as a joy to realize through the teachings of Christian Science that the same power manifested through Christ Jesus to forgive sin and heal sickness is as operative today, and therefore that the omnipotent God who can destroy sin is equally powerful to destroy all sense of sickness. In ever increasing ratio this testimony to the omnipotence of God is accumulating and cannot be denied. After all, the only real test of our Christianity is that one advanced by Jesus: "He that believeth on me, the works that I do shall he do also."

✧

[Henry A. Teasdel in *The Herald-Republican*, Salt Lake City, Utah]

Your paper published a statement made before the Panama-Pacific dental congress in San Francisco to the effect that Christian Science and other systems of healing are superstitions. I do not speak regarding other systems of healing, but I desire to state most emphatically that Christian Science is not a superstition. Superstition is based on ignorance and fear. Christian Scientists have a God they can understand, and a religion the truth of which they are proving by demonstration every day both for themselves and for others.

In the Christian Science text-book, "Science and Health with Key to the Scriptures" (p. 83) Mrs. Eddy says clearly and unmistakably, "Between Christian Science and all forms of superstition a great gulf is fixed, as impassable as that between Dives and Lazarus."

Editorial

"One thing I know"

THE fact that so many persons have become Christian Scientists because they have been healed of disease through the ministration of those who practise Mrs. Eddy's teachings, has led some to believe that physical healing is the sole aim and purpose of Christian Science. For this reason many of the published criticisms of this Science have had to do only with this phase of its ministry, and the attempt has always been to discredit in one way or another the statements made by those who have been healed. These critics have assumed to believe that the testimonies of healing given at our Wednesday evening meetings and through our periodicals are based upon the more or less amateurish diagnoses of those who give these testimonies; therefore their criticisms of Christian Science healing have been based upon the supposition that the persons referred to were simply victims of their own imagination, because the supposed serious nature of the ailments from which they suffered was not substantiated by the diagnoses of physicians.

The facts are, however, that very few persons who turn to Christian Science for healing do so until they have unsuccessfully tried one or more medical systems and have been treated by one or several physicians. It is likewise to be noted that the diagnoses reported by them in their statements concerning their healing are the diagnoses of these same physicians. While it is quite true that in at least half of these instances (according to the admission of an authority in medical circles) the diagnoses may have been wrong, it is also true that these diagnoses were given to the patient and his friends by the physicians in attendance, and formed the basis for whatever treatment was administered by them. As such they stand in precisely the same relation to the truth as do all other physical diagnoses, and undoubtedly they would have been the foundation for death certificates if these had become necessary.

Further than this, another physician of long experience and high standing declares that aside from a limited number of diseases the symptoms of which are unmistakable, in nine cases out of ten that come to him for diagnosis and treatment the doctor can only "make a guess" at the real nature of the disease, and prescribe experimentally until he hits upon something that seems to meet the conditions, with, in the wholly baffling cases which every physician occasionally gets, a post-mortem as a last resort.

It would seem, then, that a medical diagnosis is of at least doubtful value in any event, and particularly as the basis of an argument against a system which recognizes as the one infallible authority Him "who forgiveth all thine iniquities; who healeth all thy diseases." Granted that the diagnosis is correct in only half of the cases that come to the Christian Science practitioner after the physicians have admittedly done all in their power, it is doubly to the credit of Christian Science that it succeeds where *materia medica* has failed. As for the other half, whether the diagnosis was right or wrong, they can and do say as did the erstwhile blind man, "One thing I know, that, whereas I was blind, now I see."

As a matter of fact Christian Science does not base its appeal solely upon its healing work, even though the majority of those who accept this teaching turned to it primarily for relief from physical or mental suffering. This is clearly set forth in "Rudimental Divine Science" (p. 2), where Mrs. Eddy declares that "healing physical sickness is the smallest part of Christian Science. It is only the bugle-call to thought and action, in the higher range of infinite goodness. The emphatic purpose of Christian Science is the healing of sin; and this task, sometimes, may be harder than the cure of disease; because, while mortals love to sin, they do not love to be sick." The truth of this statement is borne out in the lives of her followers. A Christian Scientist must necessarily adhere to the tenets of Christian Science (p. 497 of Science and Health), the first of which is: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life;" and the last: "And we solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure."

The man or woman who earnestly tries to be obedient to these teachings cannot help being a better man or woman than ever before, a more loving and helpful neighbor, and a truly devout Christian. This should be and is the aim of every genuine Christian Scientist.

ARCHIBALD MCLELLAN.

✧

Essential Liberty

IN her declarations respecting "the liberty of the children of God," found on pages 224 to 228 of Science and Health, Mrs. Eddy has named the heart of spiritual impulse, the eternal privilege and opportunity of the spiritual life. The Founder of Christianity broke away from the trammels of both church and clan, the conventional standards and requirements of both social and religious caste. He paid as little regard to orthodox intellectualism as he did to contented stupidity. He refused to be enslaved either by fear or by ties of kinship. He dared to ignore both precedence and tradition, to resist the decrees of both ecclesiastical and political authority. In a word, he asserted his freedom from the sovereignty of any and every material sense, however long honored by men. He was the world's great apostle of liberty, the liberty of Love and Truth, and to this rôle every Christ-man is called.

That we are to follow him here, and keep our eyes fixed on spiritual realities as our rightful possession, regardless of its significance to passing experience, is the great insistence of Christian Science, and no incident in the life of Mrs. Eddy, the Founder of this movement, was more tellingly prophetic than that in which, when but an intuitively sensitive girl, she faced the revered representatives of the church of her fathers and asserted her fealty to her higher spiritual sense, regardless of the judgment and condemnation perchance of the loved ones who marveled at her presumption. It was the appearing of that spirit of progress which in the nature of the case must be non-conformable to everything that is not demonstrably true.

No subtler temptation comes to men than this, to be satisfied with devotion to a conventional order; and how universally have not only the thoughtless and indifferent but the sober-minded and would-be progressive become the victims of this mesmerism. Especially has this been manifest in the history of religious reforms, which have usually had their beginning in the illumination of some individual—a vitally redemptive spiritual idea has found new birth in human consciousness, has stimulated heroic daring and sacrifice, proved its worth by its works, and thus dated a new era. Then, not infrequently those who have come after them, who "have tasted the good word of God, and the powers of the world to come," have so yielded to materiality as to become absorbed in the letter of their once vital faith and lose their hold upon its essential redemptive truth. Be it ours so to guard our thought against every temptation to forget our spiritual goal, as to

Digitized by Google

escape the mistake which called forth St. Paul's severe but appealing rebuke to the Galatians, "Now, after that ye have known God, . . . how turn ye again to the weak and beggarly elements, whereunto ye desire again to be in bondage?"

Of the menace of this weakening tendency Christian Scientists have been most earnestly warned by their Leader. A falling away of those who are strangers to a scientific faith, who have not been taught the Principle and rule of the Christ-teaching, cannot be surprising, however lamentable. Christian Scientists, however, having been taught how to test the verity and efficiency of their apprehension of divine truth, "have not so learned Christ," and for them to fail would indeed be to "crucify to themselves the Son of God afresh, and put him to an open shame."

So long as a man is in doubt as to the possibility of gaining a demonstrable knowledge of the truth, so long his efforts to acquire this knowledge are sure to be feeble or spasmodic: but let him reach the conviction that Truth is both knowable and provable, and he has found an unfailing stimulus to that honest, continuous effort which merits and will obtain the promised reward. The only faith that cannot become weak and insipid is that which has ripened in the light of revelation into spiritual understanding, and which is daily answering Yea and Amen to Truth's imperative demands.

Spiritual freedom means spiritual efficiency, and it should be guarded as the very Palladium of Christianity. It is the verification of the Master's words, "If the Son . . . shall make you free, ye shall be free indeed."

JOHN B. WILLIS.

"Quick, and powerful"

MOST Christian people have read Paul's statement that "the word of God is quick, and powerful," but very few, apart from those who accept the teachings of Christian Science, think of applying in a practical way the truth therein expressed. Not only is this so, but in many cases professed Christians unhesitatingly deny that the "word" is quick enough to meet human need in the case of illness, thus denying Truth's inherent power as well as its readiness to meet without delay every legitimate demand. It is even held to be criminal to depend upon God's word, because its action is unseen by the physical senses, and the utter inconsistency of this position should be apparent to those who profess to accept the Scriptural teaching that "eye hath not seen, nor ear heard, . . . the things which God hath prepared for them that love him." The healing of sickness is surely among these things, if we are to judge by what Jesus did for suffering humanity.

Those who are willing to face this question fearlessly and honestly, must admit that hesitation about relying upon the divine word to heal is due to the belief that spiritual power is an unknown quantity, and that mortals are more familiar with matter and material means, such as drugs and the like. This naturally raises the question as to why Christian people should so long have overlooked the injunction, "Acquaint now thyself with him [God], and be at peace," when the reward of a closer acquaintance with God is sure proof that His word is both quick and powerful.

Too much cannot be said respecting Mrs. Eddy's sublime courage in standing by her discovery that divine power is the only power, and she did not hesitate to say that "to acknowledge any other power is to dishonor God" (Science and Health, p. 228). She at the same time stood by the Scripture teaching that the truth which heals is quicker in its action than is anything to which mortal belief clings with blind faith, and proved this true. This of course could not be denied by any who accepted the gospel statements of Jesus' healing work, but the great demonstration in all the years has been so to spiritualize thought as to enable those who profess to follow the Master to heal as did he, without delay or uncertainty. It often happens that sufferers are terrorized by the statement that unless they at once submit to some material means of cure, usually a surgical operation, it will be too late, this verdict springing from the mistaken belief that the action of Truth is slow, not "quick," as the Bible declares. This dire delusion may truly be characterized as one of the "wiles of the devil" which vanish before the light of Truth, and happily many are proving that, as one woman said, "the healing of Truth is quicker than the lightning's flash."

In its deeper, truer sense Christian Science healing means the quickening of human consciousness so that the inertia, the dead weight, of belief in a life separate from God may be thrown off by patient and practitioner, by every man, woman, and child. Some dreadful manifestation of disease, like an intruding weed, may be plucked up in an instant, while other ills may linger under the belief of a time limit, and even demand the payment of the death penalty, but God's law annuls every decree of the carnal mind with the might of omnipotence.

In a recent issue of *The Christian Science Monitor* was the deeply interesting story of a lady who was a pioneer settler in a middle western state a number of years ago. To some it might seem a record of hardships bravely endured, but from another point of view it told of the wonders accomplished throughout this fair land, in comparatively few years, under the inspiration of freedom, intelligence, and integrity. To the student of Christian Science it spoke anew of what is being done and will be done by the quick and all-powerful action of the word of Truth in bringing to light and establishing among men the good things that the Father is waiting to bestow, when we are ready to receive them,—the new heaven and earth wherein is neither pain nor death, but Love is supreme over all.

ANNIE M. KNOTT.

Among the Churches

Current Notes

PUEBLO, COL.—Actual work on the new Christian Science church edifice, to be erected at the corner of Twelfth and Main Streets, will commence today [Oct. 23], when excavating for the foundation will begin. Completion of the structure will not be undertaken until spring. The building will cost in the neighborhood of twenty thousand dollars when completed.

Chieftain.

LOWELL, MASS.—First Church of Christ, Scientist, has purchased a lot fronting on Nesmith and Andover Streets, and accepted plans for an edifice costing between twenty-five and thirty thousand dollars. Building operations will be started at an early date.—*Correspondence.*

TRINIDAD, COL.—Transfer has been made to First Church of Christ, Scientist, of a lot at 317 Pine Street. The Christian Scientists hope to erect a church building on this site as soon as funds for the purpose are available. The location is unusually well chosen.—*The Evening Picketwire.*

CHICAGO, ILL.—At a special meeting of the members of Eleventh Church of Christ, Scientist, held June 21, 1914, it was voted to purchase for their church building site the lot at the corner of Logan Boulevard and Mozart Street, fronting 95 feet on Logan Boulevard and 125 feet on Mozart Street, at a purchase price of eleven thousand five hundred

Digitized by Google

dollars. This property has since been paid for. The site, location, and surroundings make this one of the finest corner lots in the Logan Square district.

Although the need for larger and more suitable quarters was very apparent, the actual erection of a church building was not seriously thought of until more recently, when the increasing attendance began to tax the seating capacity of the Logan Square Auditorium, where the church is now holding its Sunday services and Wednesday evening meetings. At a special meeting of the members of this church, held Sept. 12, 1915, it was the practically unanimous thought that there was immediate need of a church building and that the time had arrived to erect an edifice. Subsequently, at a meeting held Sept. 19, 1915, it was decided to proceed at once with the erection of the church home. The new church will have a seating capacity of at least fourteen hundred and will cost about one hundred and twenty-five thousand dollars. The work of building the new edifice will be started as soon as the necessary plans have been worked out.

North West News.

KOKOMO, IND.—First Church of Christ, Scientist, maintained a reading-tent at the Industrial Exposition held the third week of September. It was fitted up in an attractive manner with comfortable chairs, and a show-case containing all the writings of Mrs. Eddy occupied a prominent place. A table was provided with all the authorized Christian Science literature, as well as periodicals for the use of those interested. The tent was open daily until ten o'clock in the evening, and a large number of *Christian Science Sentinels* and *Monitors* were distributed to the public.

Distribution Committee.

NAPA, CAL.—First Church of Christ, Scientist, is glad to announce a second service on Sundays, beginning with the first Sunday in November.—*Correspondence.*

The Lectures

Kalamazoo, Mich.

The Rev. George Patterson of the People's Church, in introducing Col. William E. Fell, who lectured on Christian Science, said in part:—

Slowly we are coming to see that every religion is a divine response to human need, and every faith is somebody's way to God. I have a respect that is closely allied to reverence for any individual or group of individuals dedicated to an unfaltering belief in the inherent goodness and gladness and perfection of life. I think life is better and richer and finer because Christian Science is here, and this to me is the test of religion.—*Correspondence.*

✧

Chicago, Ill.

The lecture on Christian Science given by Jacob S. Shield at Valentine's Hall, under the auspices of Thirteenth Church of Christ, Scientist, drew forth a large and very attentive audience. Willard Moffatt, who introduced the speaker, said in part:—

The members of our church know that they have found in Christian Science the truth about God and man, and about those phenomena called human life and the material universe. Christian Science makes no claim to be anything other than the pure and complete religion taught, lived, and demonstrated by Christ Jesus. In common with other Christian denominations, we look upon the Bible as the record of revealed truth. We have no substitute for the Bible. The textbook of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is a lucid and comprehensible commentary on the Bible, and it casts so clear a light upon Holy Writ as to make practical for daily living the rules and precepts of Christianity. Having thus found the demonstrable remedy for the inharmony, sin, and disease of human life, we desire that all may share its blessings.

The Weekly Review.

✧

Leavenworth, Kan.

At the Lyceum Theater Bliss Knapp spoke on Christian Science. He was introduced by Lieut. P. H. Clark of Fort Leavenworth, who said in part:—

Enterprises of all kinds are judged by their results. Manufacturing processes, invention, laws, methods of business, indeed every activity, every department of life, is appraised and valued in accordance with the results it produces. And here it may be pointed out that no department of activity invites more searching inquiry and examination than does Christian Science. The amazing growth that has spread this movement around the earth is due to the superb fact that Christian Science fulfils its promises. It is remarkable that with sincerity and persistence any one can gain a working understanding of Christian Science; and in the degree that it is understood, in that same degree is it available for daily use in the solution of the problems of life.

The Leavenworth Times.

✧

Greenwich, Conn.

William R. Rathvon, who lectured on Christian Science, was introduced by the Rev. Charles Taylor of the Second Congregational Church, who said in part:—

Christian Science has restored some of the principal doctrines of Christianity which have been neglected by the Christian churches, and it has brought into Christian consciousness the emphasis which Jesus himself put upon one side of his gospel. It has also given to us a world of theology in its perception of God, and made Him really a Father, Spirit, the healer of human ills.

Christian Science has brought to Christendom a very great message, essentially the message of Christ Jesus, the Founder of Christianity. It has made hundreds of thousands of Christian people all over the world study the Scriptures, not only with interest and understanding, but with the purpose of making practical application of them in every-day life. The Christian Scientist evidently feels that he cannot get the blessing that Christian Science holds for him unless he studies the Scriptures, for in them he believes he has eternal life.

Three things I covet for the Christian churches generally, —the consciousness of the presence and goodness of God as a Father, as a Friend, and the almighty power of God toward all that come to Him. Those who study His Word know that therein is the secret of the fountain of life. I hope these three great gifts may become more general among Christians everywhere.—*Correspondence.*

✧

Bloomington, Ill.

A large audience heard George Shaw Cook speak on Christian Science at the edifice of First Church of Christ, Scientist. The introduction was made by F. G. Morgan, first reader, who said in part:—

There are many of us here this evening who would not be present were it not for the fact that Christian Science, in its practical application, has healed us of so-called incurable dis-

Digitized by Google

ease, as well as of chronic sin. At the same time it has taught us more love for God and man, and caused us to become earnest students of the Bible, which, together with the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is our daily companion.

Bloomington Bulletin.

Boulder Creek, Cal.

A lecture on Christian Science was delivered by Dr. Francis J. Fluno at Odd Fellows' Hall to a good-sized and very interested audience. Judge Isaiah Hartman introduced the speaker, saying in part:—

Christian Science is demonstrating Truth daily, hourly. The great world of suffering humanity is longing for freedom, reaching out for a practical religion that will free them from burdens which seem greater than they can bear. Many thousands are daily testifying to wonderful healings and other benefits which they have received through Christian Science. Health, happiness, and long life are conditions much to be desired and sought after, and the three are usually found together.—*Correspondence.*

East Aurora, N. Y.

In introducing Prof. Hermann S. Hering, who lectured on Christian Science in the Millard Fillmore Theater, the Hon. James W. Persons, referee in bankruptcy, said:—

I believe I am perfectly safe in the statement that there never has been a time when men were giving such serious and earnest consideration to religion as they are today. Men everywhere are seeking to find a religion by which they may live and which will help them in their daily lives. Our friends the Christian Scientists say they have found that religion. I speak as one who is not a Christian Scientist, but I am sure that all of us have had occasion to observe that peace and power in the lives of Christian Scientists which we desire. This gives us a great interest in this religion and makes us especially anxious to hear more of it.—*Correspondence.*

Anderson, Ind.

A lecture on Christian Science was delivered by Clarence W. Chadwick at the Grand Opera House. He was introduced by Stephen Metcalf, who said in part:—

The search for health is the universal quest of mortal man. To attain health, to regain it when lost or impaired, to maintain it, to live in the constant enjoyment of its manifold blessings, are considered the most satisfying of individual achievements; yet disease in multitudinous forms is seen on every hand. Sickness, pain, contagion, pestilence, hopelessness, and incurability seem to be the common lot of mortals. If the every-day experience of the majority of mankind in the matter of health is to be taken as the true status, then disease, with all its attendant conditions of wretchedness, misery, and despair, is the inevitable fate of humanity.

Happily, however, this is not the God-decreed fate of the human race. Long ago a Bible character found a perfect rule for health and longevity, which, had it been put to general use all down the ages, would have banished sickness and enabled men to fill out the full measure of their years without the abatement of physical strength or the loss of mental vigor. This good man was Caleb, of whom we read in the book of Joshua. At the age of forty years he was chosen by Moses for the responsible position of advance-guard of the children of Israel as they wandered through the wilderness, and he preceded the wearied hosts into the land of Canaan and espied out the land for them.

And now hear Caleb's proclamation made forty-five years after he was chosen by Moses for his difficult and arduous task: "And now, behold, the Lord hath kept me alive, as he said, these forty and five years, . . . and now, lo, I am this day fourscore and five years old. As yet I am as strong this day as I was in the day that Moses sent me." All this good fortune came to him, Caleb declared, because he "wholly followed" the Lord his God. The rules and regulations of the sanitarians, the hygienists, and the medicine men all through the centuries cannot compare with this simple rule of health and long life as given to the world for its guidance by this valiant and God-fearing man of the olden time.

It is peculiarly the province of Christian Science to illustrate Caleb's rule of health and longevity. It seeks to have every member of the human race in perfect accord with the law of God, good, and thereby to free the human consciousness of fear and hate, and anger and selfishness, and all discordant states of mind and body, and thus to establish the at-one-ment of man with his creator.

In conclusion, I shall briefly outline my own growth out of materialistic beliefs: From Tom Paine to Jesus Christ; from Colonel Ingersoll to Mrs. Eddy; from the "Age of Reason" to the Christian Science text-book, "Science and Health with Key to the Scriptures:" from "Volney's Ruins" to the Bible; from "The World's Sixteen Crucified Saviors" to the meek and lowly Nazarene, the one and only true Saviour of men; from agnosticism to a saving realization that there is one God who is All-in-all; from sore bodily afflictions that had rendered life a constant misery and burden for many years to restored health and usefulness; from the midnight of doubt and hopeless speculation into the morning dawn of spiritual illumination; from a world of chance, guesswork, and negation into the sunlight of the spiritual universe, where doubt has been dispelled, fear has been eliminated, and man is no longer the foot-ball of merciless conditions over which he has no control; and where hope, joy, gladness, Life, Truth, and Love make existence on this plane of thought a daily welcome because of its beauty, happiness, and wholeness.

Anderson Herald.

Testimonies of Healing

I feel that I can never express in words my deep love for God, or the gratitude that is in my heart for the many blessings I have received since being in prison. I can truthfully say that my life here has been a profitable one. The teachings of Christian Science have brought me such an abundance of good that I fail to find words to express my thankfulness to God for leading me to this healing truth. I am filled with gratitude as I realize that it has changed me to a healthy and happy man, every belief of despondency and discouragement having vanished, as well as a constant temptation to suicide.

In April, 1913, two ladies came to the county jail and talked to the inmates about Christian Science. I was then in very bad health, and had been for years. I had been a great sufferer from rheumatism in its worst form, at times unable to attend to my work, but I became interested in Christian Science and a close reader of Science and Health and the different periodicals. Soon I found a surprising improvement in my condition. The rheumatism, and many other ailments connected with it, left me entirely. I had been confined in the county jail for one year before these ladies came to visit it, and I was greatly reduced in flesh. Christian Science has taught me that to think of God, good, is health, and through the assistance of the noble Christian ladies who helped me I have gained a clearer understanding of Truth and Love, and my general health is now excellent. I have come to have the greatest faith in the love of God and the word of Truth.

Though in prison, since I have been closely following the teachings of Christian Science my life has grown to be one of happiness and peace. I know that if a sick person can be instructed by Christian Science to recognize the validity of God's law above every supposed law of matter, this recognition will prove to be a refuge to those oppressed, disease will be checked, and a speedy recovery is assured.

I cherish a deep sense of love and appreciation for our dear Leader, Mrs. Eddy, who pointed out to us this wonderful way, and I can truthfully say that Christian Science is the greatest blessing that has ever come into my life. It has taught me that when we put into practice good thoughts, good actions become easy, and then we begin to take pleasure in them. My greatest desire is to help others to lay hold upon this truth, and I send this testimony with the hope that it will be of some benefit to those who read it.

HARRY ROHM, Alabama State Penitentiary.

✧

In the fall of 1910 I was healed through Christian Science treatment of a very bad chronic condition of the digestive organs; of an extreme condition of nervousness, resulting at times in nervous exhaustion; also of a structural defect of the eyes, for which I had worn glasses for ten years. The oculists told me I would have to wear them all my life, as there was no cure known for this trouble. An inward-growing goiter has likewise disappeared. I had suffered acutely from it the winter before, and the doctor then prescribed a remedy, at the same time warning me that if I ever neglected to apply it there would occur a very rapid growth which would probably prove fatal in a few hours.

After my first treatment in Christian Science the glasses were laid aside, and they have never been worn for a moment since. I use my eyes far more than ever before and am never conscious of any feeling in them, whereas before they were almost constantly a source of pain. That night I suddenly realized that my throat was not troubling me, and after considerable argument with myself I decided to retire without applying the usual medicine. This was my first peaceful night, and the next morning I ate the first meal of solid food in many months. I have never since used material remedies, but have depended upon divine Love alone to give and keep me in perfect health. In about two weeks all evidence of the growth had entirely disappeared, and the throat has never troubled me since.

Previous to this time I had tried many remedies and treatments in the modern methods of cures, besides the regular schools of medicine, being a faithful devotee of physical culture, hygiene, gymnasium, and outdoor sports, with the result that the doctors had assured me there was no possibility that I could ever gain a normal condition of health. At the time I turned to Christian Science I was on the verge of another nervous breakdown, which I had been assured would be my last, as the doctors were positive I could never pull through another, and the end seemed very near.

I had consented to take a Christian Science treatment at the insistence of friends, but did not even hope that I would be benefited by it. Soon after receiving this instantaneous healing, however, I awakened to the fact that it was not so much a method of physical healing as a religion that was being offered me. Then I began to read our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, to see for myself what of fanaticism there was in it, firmly determined that I would give up even the physical healings which I had already received, if that were possible, rather than accept Christian Science as a religion if it proved to be what I had always believed it, although I had never read any of its literature.

I read the book through in a few days, and was considerably puzzled over the fact that in this reading I had found nothing of that for which I had been looking. Realizing that I had read it hurriedly, I determined to read it again, slowly and carefully, overlooking nothing. This I did, the second reading taking two weeks. When I had finished, I not only had to acknowledge that there was nothing of fanaticism or absurdity in it, but with a joy unspeakable I realized that I had at last found that for which I had been searching so many years and which I had given up all hope of ever finding on this earth,—an explanation of God and His creation which could reasonably be accepted and then proven to be true. I then began the study of Christian Science in earnest.

No words can express the joy which this study has brought into my life. I am thankful for the physical healing, but this was merely incidental to the finding of the truth about God. It is because of this spiritual enlightenment that my heart goes out in loving gratitude to Mrs. Eddy for her unflinching faithfulness to the truth which she perceived, until she had demonstrated it beyond all cavil and given it to the world in such a form that every one may avail himself of its blessings. I am striving to let my daily deeds testify to the genuineness of my gratitude.

ALLIE MORGAN, San Francisco, Cal.

✧

[Translated from the German]

This testimony is given in deepest gratitude for the wonderful healing through Christian Science in the case of our four year old boy. When the little fellow was a year and a half old, we became aware that he was cross-eyed, and this condition rapidly grew very much worse. Treatment was secured from an eye specialist of repute and continued for quite a while. He advised that the child wear glasses up to the age of fourteen, and that until then he ought to have

Digitized by Google

medical treatment frequently. At that time we heard much about the good accomplished through Christian Science. We discarded the child's glasses and turned the case over to a Christian Science practitioner, with the result that soon there was an improvement, and now, after half a year, the eye is normal.

We have received many blessings through Christian Science and feel that we cannot be too grateful to our revered Leader, Mrs. Eddy, for showing us the way leading to health and holiness.—Frieda Freyer, Berlin, Germany.

It is about ten years since I was healed through Christian Science of a serious bowel affliction which for a number of years had been growing continuously worse, though I was under medical treatment. At last, when I was bedfast, the doctor injected morphine into the bowels, afterward admitting to my mother that nothing more could be done for me. My mother then asked me to try Christian Science treatment, and this I was glad to do. Like the prodigal son, I was tired of feeding on the husks of materiality and ready to come to my Father's house. I turned to God, good, with a perfect assurance that my prayer would be answered, for I felt a great spiritual awakening which words cannot express or tongue articulate. I was indeed born again, and Spirit prevailed and proved its supremacy over the material senses.

The following February I contracted acute lung trouble, and some of my friends wanted me to call a physician, for I would receive no benefits from the lodge of which I was a member unless I did so. I refused to do this, saying I would soon be out again, and that I did not care to have the doctor lay down his laws for me to overcome. Although I was to sense delirious for three days, three weeks from the time I was taken ill I went to work. It was in March, and the handling of icy lumber and work in the snow did not cause a relapse; in fact, I have not had a cold that lasted more than two or three days until three years ago, when I had one that seemed to hang on for some time. I found it was my fault, for I did not at once get to work to overcome it with the truth. Finally the congested condition of the lungs seemed very severe, but I cast out fear and began to treat myself. In a few hours the healing was accomplished, and from that day to this I have had no more colds. I am now in the best of health.

Words are inadequate to express my love to God and to Christ Jesus, His Son and our Wayshower, also my gratitude to Mrs. Eddy, our spiritual Leader in this age. Surely God directed her pen, for many to my knowledge have been healed through the study of her written words.

L. P. Nichols, Pittsburgh, Pa.

I became earnestly interested in Christian Science about July, 1910, when I asked for help for my baby, then one year old, in a case of acute stomach trouble, and he received instantaneous relief. During that year and the next I had many proofs of the healing power of Christian Science, having no other help than that of Science through acute lung trouble and a severe attack of ptomaine poisoning.

All this time my husband was tolerant but amused, until in February, 1912, he contracted small-pox. After two days of intense suffering from headache and being delirious at intervals, he appealed to me, asking what he should do, as the doctor did not seem able to relieve him and his suffering was almost unbearable. I replied that I did not wish to influence him at such a time, but of course for myself I would have nothing but Science. To my surprise he told me to ask a practitioner to treat him, and from that moment he has relied absolutely upon Science. It not only brought him safely through a most dreaded disease, but my baby boy, my maid, and myself were all protected from contagion. We were quarantined and could not even have the comfort of seeing the practitioner, but we communicated with him daily by telephone, and his clear thought and earnest counsel enabled us all to come through an experience which almost any one would dread, healthier and happier than ever before, for we had been allowed the great privilege of seeing the power of God set at naught the laws of man in regard to sickness and contagion, and I had the happiness of having my husband interested with me in Science. During the time of quarantine none of us used any medicines, nor were any of us vaccinated, and we lived as usual. Two of our local doctors, conceded to be well up in their profession, pronounced this a very severe case of small-pox, and one of them further stated that my baby could not escape coming down with it, since I would not have him vaccinated.

This healing is only one of the many blessings Christian Science has brought to us. We have had help in times of sorrow and also over financial difficulties; in fact, Science has met all our problems for the past four years. I am thankful for physical benefits received, and yet more for the mental peace which has come to me. During the past year I have been endeavoring to put into practice for myself the truths which we learn in Christian Science, and I am realizing more and more that it is only by using the knowledge we have already acquired, and by letting that Mind be in us "which was also in Christ Jesus," that we may gain more.

Leona Jones Richardson, San Mateo, Cal.

[Translated from the German]

As a small tribute of love and gratitude for the blessings received I herewith wish to testify to the healing power of Truth as presented in Christian Science.

It was through a fall on Nov. 23, 1914, that I contracted a serious injury of the right knee. The physician whom I consulted said that there was a serious affection of the joint. I suffered much pain, and despite medical treatment it became so severe that I feared I would become bedridden. Upon the advice of a family of friends I consulted a Christian Science practitioner on Feb. 23, and I am deeply grateful to be able to testify that the trouble as well as the pain, which was almost unbearable, left entirely after the first treatment. The healing was accomplished so quickly that when I left the practitioner's house, besides being free from pain I had the normal use of my limbs, and there has been no return of the trouble since.

For this wonderful healing which I have experienced through the ministrations of Christian Science, I give thanks to God from the depths of my heart.

Charlotte Vosgerau, Berlin-Steglitz, Germany.

Some thirteen years ago I had what is known as the "mastoid" operation, that is, the removal of the bone just behind the ear. In operating, an incision was made through the ear which destroyed the ear-drum, and also the hearing in that ear, as I was told and for years believed. Less than two weeks after this operation skin was grafted from off the leg on to the wound to start the healing process, but some sixteen months thereafter, the head not having healed, the wound was sewed up. Nothing further was done until about six years ago, when a growth was noticed in the inner ear. This was removed at that time, and though not a serious operation, it was extremely painful. The growth constantly reappeared, and twice a year for five years I had it removed. These operations were so painful that I could not bear to have the

Digitized by Google

growth removed in one cutting. I always had to make two or three trips to the doctor's office.

In November, 1912, my employer made up his mind that something was wrong, and insisted on my going to his doctor, who was well known, for an examination. This doctor made an examination and advised that the head and ear be again opened and the old wound scraped clean and sewed up. He said in response to my inquiry that I had one chance in two to survive. Inasmuch as on three prior occasions I came near passing on, a fourth risk was not too inviting. My own doctor said that the operation would be in the interests of medical science, and would most likely result in my death; at any rate, to insure my living it would be better to have the minor operation twice a year, as I had been accustomed to do, adding that he would not be a party to the operation. I therefore had the growth again removed.

For some time several friends had been urging me to take up Christian Science, and immediately after the above operation, on the first day of December, 1912, I visited a practitioner. I had been wearing glasses for four years, and the doctor had been working on my eyes to get them into shape for permanent glasses. Every day during the month of December, 1912, I visited the practitioner for treatment, and every night very earnestly studied the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I also attended the church regularly. Just before Christmas the glasses were discarded. I did not come to Science for the healing of my eyes, nor did I expect to be healed of deafness, but I desired to know if the treatment would stop the growth in the ear, and this it did. For months I had carried with me four pairs of glasses, and for every move I made, a change seemed necessary. Before Christmas day I gave all my glasses to the practitioner, and with the exception of one occasion, when I borrowed them to show some friends who would not or could not believe my statement as to my healing, I have not seen them since. I have, however, read more and with greater comfort than ever before.

The healing of the deafness was not instantaneous. It was about the middle of April, 1913, that I began to hear. One Wednesday evening in church, between testimonies, I placed my watch to the deaf ear and caught every second or third tick. By the end of April I heard every tick. On two occasions I talked with my employer by telephone from Sacramento, Cal., to Reno, Nev., and have also talked for about seven minutes with people in Los Angeles. For the restoration of my hearing I am deeply grateful, as during thirteen years I did not hear a sound. Furthermore, I stammered for years, and though when nineteen years old I had some relief, it remained for Christian Science to establish correct speech. I have also been wonderfully healed of blood-poisoning.

I can with all truthfulness say that whereas I was deaf I now hear; that my sight was defective and now is perfect; that my speech was that of a stammerer and now is normal. All this I know, and in deepest humility express my gratitude to Christian Science.

William B. Acton, San Francisco, Cal.

✧

I wish to express my sincere gratitude to Christian Science for all the benefits I have received. For over ten years I was confined to the bed with heart and stomach trouble and a complication of other diseases. My doctor, who at that time was in regular attendance, gave me no hope of recovery, as he said the organs of the body were worn out, my age at that time being seventy-two. Three years ago, through a friend, I heard of a Christian Science healing, and being without hope of any improvement through medicine, I decided to ask for treatment. Since then my progress toward health has been gradual but sure, and I now enjoy such good health that last August I was able to take a journey of four hundred miles, go about a strange town for a fortnight, and return home without feeling any inconvenience. When I say that until I took up Christian Science I had not been out of my house for ten years, my gratitude will be easily understood.

I also wish to give thanks for the loving manner in which treatment has always been given me, and for the church services, which I attend regularly and which are a great benefit to me.—Frederick Saunders, Edinburgh, Scotland.

✧

My first experience with Christian Science was when I was instantaneously healed of a type of malarial fever contracted in Mexico, from which I had suffered for over a year. The fever had grown so bad that I was forced to leave the country, and the doctors could not relieve me. The last attack came on an extremely hot day in an Arizona summer. My wife had become interested in Christian Science as the result of her knowledge of the cure of a woman who had been given by her doctor but a few hours to live. I consented to try it, and my wife telephoned to a Christian Science practitioner. Treatment was given, and I soon fell asleep. Early the next morning I awoke full of vigor, and life seemed worth while. The cure was instant and complete. The chills and fever, which had attacked me twice monthly, never returned, and in six months I gained greatly in weight. That was over five years ago.

At first I tried to learn something of Christian Science, but soon through the lethargy of mortal mind, so called, I decided that it was too deep for me. With returning health my habits grew worse, particularly with regard to drink, and a year later saw me in another state at the end of my financial rope. My wife had kept up her interest in Christian Science and persuaded me to ask for treatment. This I did, and was soon able to leave that place for a new start. I tried to study for a while and made some progress in Science, attending church quite regularly. Then too I was smoking heavily, as had been my habit since boyhood. While under treatment for another trouble, the practitioner asked me about the smoking and I told her I did not care to stop; but in a day or so I had to leave my office and go home, I was so ill. I did not know what ailed me, but when a friend offered me something to smoke I discovered that I detested even the thought of tobacco.

My affairs prospered, and soon I was again drawn away from my interest in Christian Science. One night I was curious to know how a cigarette would taste. Everything rebelled against my touching it, but I was wilful. I also tried to drink some liquor. Immediately after I had done it I was sorry. That was the beginning of another backsliding. This period extended over another year, and I was helpless on my bed when I again turned to God for aid. I doubted my right to God's help, knowing nothing then of what Christian Science really teaches, and so employed a physician, who did everything possible for me. Finally, all aid failing and my financial resources being exhausted, my wife prevailed upon me again to call a Christian Science practitioner. I knew he could help me. He came on a Monday, and on the following Wednesday I went on a street-car to his office several miles away. I had not walked for months except on crutches, but I made this trip unaided.

My improvement was rapid, but after a journey necessitated by the passing on of a relative, I suffered a relapse. We were then living with some kind friends who were also interested in Christian Science. The faithful practitioner who was then handling the case explained Christian Science to me, and one day there came to me the revelation that makes

Digitized by Google

us free from the bondage of materialism. I had been studying hard for six weeks, and was being led by God's gracious love to a knowledge of the truth. My interest was now constantly active. I seemed to feel for some time as if I were on the point of a discovery, and one day it came. As I know that twice two are four, I knew then that this world and all it contains as mortals see it is not real, not of God. From that moment my recovery was rapid, and in a few weeks I was at work. In business I have had one demonstration after another, and today I am proving that a demonstrable understanding of Christian Science meets every need.

To those struggling for an understanding of Christian Science I will say that God unfailingly rewards honest endeavor, and it is for us to look into our hearts for the full solution of our problem. There is no possible condition, mental, physical, or financial, that the true understanding of God, gained through the study of Christian Science, will not make harmonious. It has given me perfect health, a clear mentality, and it is rapidly freeing me from financial bondage. For all these blessings I am indeed thankful, but particularly so for the knowledge of the truth that frees us, and the discovery that it is possible to experience a real sense of love for God and all His creation. I am deeply grateful to our dear Leader, Mrs. Eddy, whose love and purity brought this wonderful truth into the world again.

RAY H. COZZENS, San Francisco, Cal.

I first heard of Christian Science five years ago, when my condition seemed hopeless and I felt "without God in the world." I was indeed a miserable woman, and really wanted to die. For twelve years I had been suffering from a skin disease in its most aggravated form. Friends seemed to desert me; even my own people hardly realized how I suffered. In hot weather I could not sleep for the intense itching. I was cross and mean, and made every one unhappy who came into my presence. I had taken so much medicine that it had failed to have any effect, and physicians finally declared the case incurable. My neck and arms were so disfigured that I hated myself, and I was deprived of the pleasure of being with friends. I was growing weak mentally, and I knew it.

One day a neighbor spoke of Christian Science and what it would do for me. I told her I was willing to try anything, so she gave me all the Science literature I wanted, also let me read "Science and Health with Key to the Scriptures" by Mrs. Eddy. I became so deeply interested that I could not leave the book alone. I read almost constantly for a few months, and before I knew it the eruption had entirely disappeared and I was a new woman—my thoughts ran in an entirely different channel. I saw the light of Truth, repented earnestly, and after studying diligently I began to apply the knowledge that had been gained. I became conscious of the fact that the kingdom of God is here and now.

Though thus healed in Christian Science, I have always considered the physical betterment the smallest part of the good which it has brought into my life. To know and prove that "now are we the sons of God" and that God is ever present, is of greater importance. I have proven many times that God is my strength and supply. I was also suffering from rheumatism, but am now free, and the truth made me so. I am grateful to Mrs. Eddy for the interpretation of God's word, because it helped me to pray aright and to help others. My heart swells with gratitude for Christian Science, which is so practical in every way. My daily prayer is that I may reflect such love that all may know I have found the truth which Christ Jesus said should make us free.

MINNIE WELTHY HICKMAN, Kansas City, Mo.

From Our Exchanges

[The Christian Register]

The larger vision of religious kinship sees the man on the other side of the fence, and sees him whole, not as a sectarian, a bigot, or a heretic, but as the human brother we all talk so much about, but toward whose sentiments and opinions we practise so little real charity. Think as he may on certain abstruse and difficult subjects, his theology occupies only one corner of his mind, while his needs, limitations, temptations, weaknesses, are much like our own. It is his geniality and fellow-feeling that we need, as he may need ours could we find some common ground of meeting where distrust dies out.

Though in different camps, we acknowledge the same master, owe allegiance and loyalty to the same captain. In his name we should unite and express our spiritual kinship. The best in us is friendly and human, kindly and charitable, loving and merciful,—apart from outworn creeds. But we do not let these qualities have way with us as we ought. We all long to be quickened, strengthened, and refreshed, for at times we all feel the same dead, inert insensibility to spiritual things. Perhaps there is some one just around the corner who could bless and help us were we to seek him out. We dwell on the supreme duty of service and devotion to our helpless fellow creatures, but all our activity and bustle will not satisfy the craving for soul refreshing that would come with the acknowledgment of a larger religious kinship coming from those who ought not to be separated from us in the wide vision of fellowship and sympathy.

[The Advance]

There came a time when the disciples of Jesus felt much as Moses did. The time had come when they must carry forward an impossible enterprise, and do it alone. Jesus was about to leave them; and they heard his word with sorrow akin to despair. Bewildered and groping, they sought a vision of God,—"Lord, show us the Father, and it sufficeth us." If any men since Moses had needed that vision they needed it. They were undertaking to lead a world in ways they did not know. More even than Moses they needed that vision.

Jesus told his disciples that he was the vision of God which they needed. They were looking too far away. The place beside God was close at hand. With them at the table sat the Master, in whose human face and form they were permitted to behold the character of God. It is still a place of mystery, but not of dread. God was in Christ, reconciling the world to Himself. That is the simple story, and it is sufficient. Close to Christ we find the place beside God, where we may behold the glory of God without terror, and find strength for the journey we have yet to travel ere the world finds its promised home.

[The Christian Intelligencer]

The quest of truth is the duty of the present, even as it was the duty of the past. If our forefathers had been content with what they had and had given themselves over to selfish gratification, the progress of the world would have been immeasurably retarded.

Life to be great must accept serious tasks. Life to be noble must be serious, sober, and sacrificial. Life to be mighty must concern itself with things eternal. In spite of all our charities and philanthropies, much of life today is utterly selfish, frivolous, superficial, sordid, and material. We need to rediscover the magnificent greatness of the Christian religion. We need to grapple in hand-to-hand encounter with the meaning of the universe. We need a world-wide fellow-

Digitized by Google

ship of serious readers and thinkers and workers who appreciate the dignity and solemnity of life and who realize the obligations imposed by our blessings. It will not do to let ourselves go. God demands of us that we shall do our part in furthering His eternal purposes for mankind.

[*Zion's Herald*]

To the most casual hearer—to one who remembers the fervid, ejaculatory preaching of a generation ago—there is a different note in the pulpit deliverances of today. Outside of our own communion the same change is observed; sermons are less hortative and more instructive. The appeal is through the understanding, and not so much through the emotions. The conscience, that flinty fortress at the center of personality, is the object of attack, and pressure is laid upon it in order that the will may be coerced into right action. This method insures the more desirable element of permanency in moral behavior, and a greater steadiness in the attitude of life toward God.

This change of appeal from the emotions to the understanding has been caused by the enlarged mental view in both pulpit and pew. This enlarged intellectual view has been induced primarily by the advanced curricula of our schools and colleges, while opportunity for public expression has been given by the better education of the growing youth of our land. Thus the pulpit is often led into discussion of some particular phase of religious belief or moral truth, to the great intellectual profit and pleasure of the whole congregation.

But this ampler view of the whole field of mental research has unconsciously altered the tone of the preaching. The prophet, with his subliminal consciousness stirred to the very depths by the inward conviction that he is the mouthpiece of the Almighty, has been changed to the teacher with cap and gown, who perhaps is able to give the views of all who ever came before him on any one particular subject, but who lacks the tone of authority which was the one distinguishing mark between the great Teacher and the scribes of his day.

[Rev. James I. Vance, D.D., in *The Christian Intelligencer*]

How is Christian internationalism to be established and promoted? There is but one way. It is through the gospel of Christ. Internationalism is preeminently a Christian conception. I speak of Christian internationalism, but there is no other kind. Christ is the great international figure of the world. He is the Son of man. Every nation finds itself in him, and the goal of his gospel is nothing short of human brotherhood.

[*American Lutheran Survey*]

The advent season should be a time of spiritual preparation for the Christmas message. It should be a season of blessed exaltation. The Lord is come. He is in the world. He reigns in millions of hearts, more securely, more completely than ever an earthly king reigned over his people. His kingdom is not of the world. All worldly kingdoms are destined to crumble and fall away, but His kingdom shall have no end.

[*The Congregationalist and Christian World*]

We are on the eve of discovering an unrealized depth of meaning in the religion of Jesus Christ and its absolute sufficiency to change even such a world as that in which we live. And the discovery once made will mean on our part new capacities and new calls for endurance, sacrifice, and achievement.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new pamphlet entitled "Man's Unity with God" has been printed in the German language. This pamphlet contains seven articles from the Christian Science periodicals, which have been translated into German. The pamphlet is now on sale at the prices of our regular pamphlets, as shown on the opposite page.

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

A new pamphlet, "What went ye out for to see?" is now on sale. This pamphlet contains the four following articles from the Christian Science periodicals: "Principle Not Person"; "Jesus of Nazareth"; "Jesus the Christ"; and "Jesus and the Christ."

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, hand-sewed book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¼ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Oxford India Bible paper edition, with stiff morocco cover. Single copy, $6.00, six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the ax at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 61 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 91 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

The rapid growth of the idea of compensation of workmen for injuries received in the course of employment as a substitute for the old liability acts, is shown in a bulletin of the bureau of labor statistics of the United States department of labor. The legislation of the year 1914 included three states: Kentucky, Louisiana, and Maryland. One of these laws, that of Kentucky, was declared unconstitutional before it came into operation. That of Maryland superseded an earlier statute reported as unworkable. The new laws of 1915 cover eight states: Colorado, Indiana, Maine, Montana, Oklahoma, Pennsylvania, Vermont, and Wyoming, besides the territories of Alaska and Hawaii.

The legislation of 1914 included also a presidential order providing a compensation system for employees of the Panama canal and railroad, while that of the current year includes a similar order extending the Federal Compensation Act of 1908 to workmen engaged on or about the Government railway in Alaska. With the legislation of these two years, thirty-one states and the territories of Alaska and Hawaii now have compensation laws. A Federal statute covers also about one fourth of the civilian employees of the United States. All of this legislation has been enacted since 1908.

On the morning of Sept. 11, 1899, all the seismological laboratories of the world recorded a very violent earthquake. From the records it was ascertained that the origin of the earthquake must have been in or near Alaska, and this determination was soon verified by the arrival of meager despatches from the central part of the disturbed area. Nearly six years elapsed before it became known to scientific men that the earthquake presented phenomena of unusual interest. In the summer of 1905 a party of geologists, sent by the United States Geological Survey, visited Yakutat Bay. Very early in their work they noticed dead mussels and barnacles adhering to the cliff, far above the reach of the present tides, indicating a considerable rise of the land, and the observers rightly attributed the work of elevation to the crustal movements which had caused the earthquakes.

"The maximum uplift," says *Knowledge*, "amounted to more than forty-seven feet. If the boundary of the disturbed area be regarded as a circle with a radius of seven hundred miles, the total area shaken by the earthquake must amount to about one and one half million square miles. The great Lisbon earthquake of 1755 disturbed an area of not more than two million square miles; the Assam earthquake of 1897, one of about one and three-quarters million miles; the Kangra (India) earthquake of 1905, one of about one and one half million square miles. The largest known disturbed area is that of the Charleston earthquake of 1886, which must have shaken more than two and three-quarters million square miles."

The annual report of the United States commissioner of fisheries shows that the bureau has just completed the most successful of the forty-five years of its existence. The number of fish produced and distributed was greater, and the cost of production per million less, than in any previous year. Fifty permanent hatcheries and seventy-six subhatcheries, auxiliaries, and egg-collecting stations have been conducted, and the output during the fiscal year 1915 was over four billion young fish and eggs, an increase of more than 211,000,000 over the previous year. Plants of food fishes were made in every state and territory; fish eggs were distributed to the fish commissions of twenty-seven states; and consignments of eggs were sent to Porto Rico, Cuba, India, and Japan. The distribution of the output required over 146,000 miles of travel by the five special cars of the bureau and 491,000 miles by detached messengers. The introduction of the humpback salmon of the Pacific coast into Maine streams, which last year was an experiment, is now a reality. The counter-experiment of transplanting the Atlantic lobster in Pacific waters is still in progress.

Harry A. Barber, a United States post-office inspector who has been in the interior of Peru trying to locate the buried treasure of the Incas, it is understood has failed in his quest. Inspector Barber was sent to Peru to investigate for the Federal authorities at Wilmington, Del., the alleged existence of a $500,000,000 placer gold deposit which figures prominently in the McCune case, in which a number of prominent financiers are mentioned. McCune, it is said, floated a large corporation on the strength of having discovered the source of the gold of the ancient Incas. He finally became involved with the post-office department, and is now at liberty under $10,000 bail.

Pullmans and "diners" passing through Iowa are required to show placards warning passengers that the law forbids "tipping." No one can travel far outside of New York, New Jersey, and Pennsylvania without entering states or counties where the sale of liquor is forbidden. The Denver & Rio Grande Railroad went "dry" on Jan. 1, 1916, together with the rest of the state of Colorado, where most of its trains operate, and it is said that such great lines as the Michigan Central, the Missouri Pacific, and the Chicago, Milwaukee & Saint Paul will soon follow. There are several states which still hold back from general prohibition but which forbid the sale of intoxicants on trains.

It has been announced from the department of geology of Harvard University that plans have been approved for the eight weeks' geological trip to the mountains of Colorado next summer. It is planned to have the work start the second week in July and continue until about the first of September. There is provided a half course lasting five weeks, or a whole course lasting eight weeks. The tuition fee probably will be the same as last year, —$20 for the half course and $30 for the whole course. The estimates on the expense to the students show that the cost in camp per man will be about $150, which will include an individual saddle-horse to be used the last two weeks of the excursion while the party is traveling through high mountain area. The starting-point of the trip probably will be Ouray or Creede, Col. Last year's party of fourteen men made a geological survey of about two hundred square miles in the first three weeks of their stay. At that time the party was organized as a governmental party doing actual geological survey work.

One of the most perplexing questions before railway authorities in Australia is how to overcome the difficulty of the difference in gauges. In the commonwealth there are no less than five railway gauges. The 3 ft. 6 in. gauge has the greatest mileage, which totals about 11,500 miles; next comes the 5 ft. 3 in. gauge, with over 4,600 miles; then the 4 ft. 8½ in., with 4,200 miles; and finally about 400 miles of 2 ft. 6 in. and 2 ft. gauge. The war railway council of Australia recommends a uniform 4 ft. 8½ in. gauge of railway, linked by the capitals between Brisbane in Queensland and Fremantle in Western Australia.

The executive board of the National Council of the Boy Scouts of America, in regard to the statement issued by Ernest Thompson Seton, in which he alleged among other things that he had resigned as chief scout, states that "Mr. Seton did not resign; he was deliberately dropped by the National Council of Boy Scouts of America on the question of Americanism. He is not an American citizen. The National Council at its annual meeting in February, 1915, did not reelect him."

In his report to Congress the secretary of the department of agriculture of the United States outlines plans for extending the weather observation service throughout the Caribbean region, for investigations into the utilization of domestic products in dyes, manufactures, and fiber plants for binder twine purposes. The information was given in connection with estimates for appropriations in the next fiscal year for the agricultural service, amounting to $30,000,000.

The current report of the Argentine Single Tax League is commented on by *La Tribuna Popular* of Montevideo, Uruguay. The plan as advanced by Henry George has been put into partial effect in Jujúy, Argentina, largely through the efforts of the intendant. *La Tribuna Popular* supports the George idea and recommends that it be applied to all Uruguay.

Secretary Lane of the department of the interior announces, during the month of November, the approval of six orders of designation, which have brought under the operation of the 320 acre homestead law some nine hundred and fifty thousand acres in the states of Colorado, Idaho, Montana, Oregon, and North Dakota.

A party of seventy men from the Latin-American republics is in attendance at the Pan-American Scientific Congress at Washington, Dec. 27 to Jan. 8. A tour of the principal American cities after the close of the congress is being planned.

A cablegram received at San Francisco, by Tong King Chong, president of the Chinese Republic Association, from revolutionary leaders in Shanghai, states that seven provinces have declared themselves against the new Chinese monarchy.

Healing by Spiritual Law

ROBERT NALL

BECAUSE the use of the written formula in the work of demonstrating Christian Science must inevitably lead to dependence upon the letter rather than upon the spirit, our Leader forbade it, and generally speaking students have loyally recognized the wisdom which dictated this action. But what about the verbal formula? Is there not a danger that we may fall into the habit of very frequently using words and phrases, in speaking of Christian Science, about which we have but a superficial knowledge? Truth is metaphysical, and should therefore be understood spiritually. Every word of truth in the Bible and in Science and Health must be metaphysically interpreted and applied before it manifests its purifying and redeeming power. Because human thought must be educated out of its falsities, or rather because every wrong concept must be eliminated from the human mind, we have statements of truth in these volumes that can only be illuminated, understood, and translated into healing potency as we recognize that there is a benign law at the back of them,—a law which is metaphysical, and which therefore cannot be apprehended or conceived of by the corporeal senses.

When we think, for instance, of the "scientific statement of being" on page 468 of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we can all remember numberless instances in which it has been like a shaft of light from the throne of God, penetrating the darkened mentality, and so dispersing ignorance and fear that there has occurred what, until we came to know the Science of spiritual healing, would have been called a miracle. This was the effect of the operation of the law of Love, or spiritual law, the only law which has any real existence or power.

The popular meaning of law is a rule of action established by authority, or that which is lawful and therefore right according to human judgment. The definition given by a famous statesman was that "law is beneficence acting by rule." In Science we substitute "Love" for "rule," and thereby at once mentally depict spiritual causation, and accept as an eternal fact of being that God is the only cause and creator. This is what the student who is puzzling over metaphysical definitions and terms, or the sufferer who is despondent because he has not yet been freed from the fetters of mortal belief, needs to understand. It is not what one thinks about God, but what one knows about Him, that initiates and perpetuates healing activity. But knowledge comes from right thought, and as right thought emanates from God and can never be stagnant or dilatory, it goes back to God and becomes the prayer of faith that heals. That is beneficence acting by Love. It is the fulfilment of law. It was in obedience to this that Christ Jesus, by example and precept, taught how the sick are healed and the sinner is reformed.

Until by a process of scientific elimination the inquirer or student ceases to be at the beck and call of mortal bias and educated falsities, he is constantly raising the eternal question "Why?" He does not apply this question to God, or love, or peace, or harmony, or health,—these are accepted as necessarily existent and good,—but to evil, disease, and sin, to that which has only a phenomenal existence. Moreover, while there may be a lingering doubt as to whether disease can be cured by other than material means, there is a frank acknowledgment that it would be useless to try to cure sin in that way. Sin, it is believed, can be cured only when God forgives the sinner who is repentant and seeks Him by prayer. But sin and disease are alike in that they have no reality except in wrong thought, and both are destroyed in precisely the same way. Spiritual law does not discriminate or work partially; it recognizes only the mental cause of all sickness and sin, and deals with that only, annihilating error root and branch whenever man is humble enough to acknowledge the impotency of human help and places himself unreservedly under the healing and regenerating ministration of divine Principle.

Sometimes the thought is voiced that law is hard or callous, and can have no relation to that Love which is believed to be an attribute of the Divine Being. But the spiritually instructed can never class that which is the activity of Love with any quality of severity, rigor, or arbitrary power. If it be true, as the least demonstration over error proves, that love is the fulfilment of law, then law as the spontaneous outgoing of the divine nature must be compassionate, gentle, merciful, and yet just and righteous. It is perfect in its operation as well as in its influence and its effect. Therefore, because we embrace our body in our thought, the thought that conforms to law is that which transforms by the renewing of the mind, and establishes in the consciousness an entirely new factor, which is nothing more or less than God working in us "to will and to do of his good pleasure."

And here is indicated the only solution of one of the most perplexing of all problems. The question, "Why does not God answer prayer?" is never asked by those who understand what true prayer is. That which is not true prayer never reaches God. "It is a supreme moment," says a recent writer, "when what had been a cloud of nebulous luminosity suddenly yields to the lens of faith, and the Sun of the divine nature becomes apparent." Such faith claims the divine promises. It lays hold on the truth and makes all discord and disharmony subservient to it. It knows that infinite Love could as soon deny itself as refuse to answer true prayer. The effective prayer is that of humility, of penitence, and of surrender of material desires and concepts. It is the prayer of understanding, of affirmation, of receptivity, of unfaltering trust. It is reverent, but does not display the obsequiousness of a mendicant. It is a mental attitude, not a physical posture. It recognizes, as the Master said, that our heavenly Father knows what things we are in need of, and that just as soon as we turn to Him in the way that He has provided, then He will see us even "afar off," and we shall receive according to the pure desires of our hearts.

Prayer, therefore, is simply conformity to and harmony with God's law, the law of Love. This fact sweeps away as untenable and unscientific that human concept of prayer which expects a portentous demonstration of supernatural

Digitized by Google

force, or some rapid and tangible manifestation of divine power in national emergencies and disasters. It is well when we spiritually apprehend the message to the prophet of old, "Not by might, nor by power, but by my spirit, saith the Lord of hosts." This spiritual knowledge reveals that "secret of the Lord" which is a faithful and blessed possession of all those that fear Him.

But in seeking conformity to law we are not to become wedded to verbal formulas. The mere affirmation of truth does not necessarily mean to us the negation of error. Yet we can never pray aright, nor understand that our true being is spiritual, not material, nor perceive and claim our heritage of good, nor even faintly grasp that Christian Science is God's remedy for all human woes (see Science and Health, p. 143), until we know that error is not, and that we are not under its dominant sway. For spiritual law, which alone redeems man, knows only the realm of good, of truth, of righteousness. As this law supplants the so-called law of mortal mind, humanity becomes conscious that man is governed by God, and has entered upon the path of full redemption.

Reflection

LOUISE KNIGHT WHEATLEY

THE subject of reflection, as understood in Christian Science, is of such tremendous import that one will indeed be grateful if he may but touch the hem of its garment. Yet it may well be given earnest consideration, because it is one of the fundamental teachings upon which the whole superstructure of Christian Science rests. Our conscious capacity to do and to be is in exact proportion to our understanding of man's true identity as the perfect likeness of God.

This great verity the world in general, however, seems indisposed to admit. It agrees with Christian Science that God is perfect, but it decidedly objects to maintaining the same thing about man. It readily agrees that God is beyond the reach of the thousand and one ills "that flesh is heir to," —indeed to affirm otherwise about a Supreme Being would be practically unthinkable,—yet it believes that man is subject to all these things, and it thinks this with apparently no effort whatever. This is, perhaps, largely because it has failed to distinguish between the real man of God's creating and the frail, erring concept of the human mind called a mortal. Christian Science, however, makes this distinction very plain, for it teaches that man, being the reflection of Spirit, cannot be material but must be wholly spiritual; hence man can never be seen in, through, or by means of matter. In Science and Health (p. 305) Mrs. Eddy says, "As there is no corporeality in the mirrored form, which is but a reflection, so man, like all things real, reflects God, his divine Principle, not in a mortal body."

If we would give ourselves a simple object-lesson along this line, let us study the reflection of a rose in a mirror. Probably the first thing which will impress us is the fact that it has no corporeality whatever. Although in shape, size, form, and color it is the exact counterpart of the rose before the mirror, it possesses all these qualities without a single material accompaniment; in other words it is self-evident that its true substance is not in matter. All the substance it has is what it possesses as reflection. It is not the rose in the crystal vase, but it is the image and likeness of that rose. And is this not also true of man, of whom God said, "Let us make man in our image, after our likeness"?

Continuing our study, we see that there can be in the reflected rose nothing unlike its original. Does it not, indeed, owe its very being to the other rose? If that were taken away could the reflection last for an instant? Has it the slightest power inherent in itself? Is it self-creative? Has it ever for an instant preserved its own identity? While it includes everything which is in the other rose, can it possibly include anything else? Has it the capacity to disintegrate, to crumble, fade, decay, or be destroyed? Since it never at any time maintained its own existence, has it the freedom to end that over which it never had any control? Yet can it be deprived of anything? Can it be the victim of accident, chance, or change, so long as these come not to the other rose? Could a single leaf fall, unless one fell first from the rose before the mirror? And last, best, and most wonderful of all, are there in reality two roses or one? In answer, we are taught in Science and Health (p. 361) that "as a drop of water is one with the ocean, a ray of light one with the sun, even so God and man, Father and son, are one in being."

Let us then take courage even though to human sense the storm sometimes seems to come raging down upon us. At such times, as at all other times, we need only to remember who we are. Let us turn resolutely away from the terrifying pictures which sense-testimony presents to our affrighted vision, to contemplate instead the beauty, the perfection, the majesty, might, power, and presence of Him who holds "the waters in the hollow of his hand." Let the storm beat as it will, it can only dash itself in empty fury against the mirror in which as in some impregnable fortress the divine reflection stands serene and undismayed.

And what is this mirror which affords such complete protection? In referring to the subject of reflection Mrs. Eddy writes, "Call the mirror divine Science" (Science and Health, p. 515). Divine Science is the truth concerning God and man, and is not the truth about man the thing which protects him? As in some flawless mirror one sees his own reflection, so in divine Science one learns to behold himself as he really is, a reflection of the one perfect Mind, upheld by Life, governed by Truth, and controlled by Love. Did not our great Teacher, Christ Jesus, well understand this unity of good, and try to tell it twenty centuries ago to a dull and doubting world? "The Son can do nothing of himself," he said, "but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise."

Let us then stand as faithful witnesses for God, for all that is true, honest, just, pure, lovely, and "of good report." It is right that we should express beauty and joy. It is right that the world should be happier because of us. But in the midst of it all, let us be sure that as our reflected radiance thus shines before men, they may be led to remember whence it comes, and turn instinctively to glorify, not us, but the Father which is in heaven.

Both Great and Small

JULIA WARNER MICHAEL

THE wisest man who ever walked earth's ways often directed attention to great facts by using simple illustrations. For example, when he desired his followers to consider the field lilies, his purpose was not that they might ponder over the mortal frailty of these blossoms, but that they might be inspired to a keener perception of the omnipresent love and care of God for all His creation, the spiritual universe and man. He evidently felt the necessity for human consciousness to learn that man is no more separated from God, no less dependent upon divine Mind, than is any lesser idea.

The one Mind, God, absolutely governs man and all reality, and because this Mind is Love it necessarily rules all its handiwork, both great and small, through love; therefore man cannot be controlled by fear, hate, or passion, since

Digitized by Google

these are not in the one ruling Mind. Spiritual, divine qualities are all that can be expressed through man, these qualities being changeless in their perfection, since they are governed only by God. The divine source of government is man's eternal safeguard, enabling him to have dominion through everlasting at-one-ment with God. A consciousness derived from divine Mind is never charged with fear and can never become the victim of material suggestion.

In order that men might be healed of the limitations of mortal pride and the hindrance of personal opinions, Jesus required that they become very humble when he asked his followers to "consider," that is, look to and learn from, "the lilies of the field." He knew that from this view-point of humility the greatness and purity of man's true existence under the government of God is discernible. "Humility," our Leader says, "is the stepping-stone to a higher recognition of Deity. The mounting sense gathers fresh forms and strange fire from the ashes of dissolving self, and drops the world. Meekness heightens immortal attributes only by removing the dust that dims them" (Miscellaneous Writings, p. 1). The very attitude of consideration toward a wayside flower betokens willingness to learn, and this is the open door for Truth's entrance.

The Master used the foregoing occasion to urge upon men a fuller dependence on God, a more complete trust in His ever-presence and all-power, loving and sustaining His every idea from the least to the greatest. He taught and proved the superiority and power of God's man, him who knows no fear or hate, over material sense and the world conditions which express mortal belief. He proved that power is present with human consciousness in proportion to the absence of fear, lust, hate, and self-will, and revealed the fact that to the degree divine Love reigns in us we are elevated to a plane of thought which makes possible our dominion over the world, the flesh, and the devil. Jesus rebuked the assertive fear of human consciousness and the threatening waves of the sea at the same time.

The poise of spiritual consciousness should be ever present to annul the turbulence of mortal testimony, so that under all circumstances we may maintain a true sense of life governed by God. The intelligence which forms, nourishes, unfolds, and glorifies every manifestation of spiritual existence, expresses no evil at all. Man is therefore delivered from harmful tendencies, and human consciousness should awaken to this blessed truth and rejoice in the present liberty of the sons of God.

A very practical healing resulted from the application of the thoughts above expressed. One Sunday a young woman was asked to serve as a substitute reader in one of the large Christian Science churches. Previously fear had assailed her when asked to appear before even a half-dozen people in her music teacher's parlor, but turning to Truth for help, there came this simple illustration to point the way. She realized that a flower was as devoid of fear in the crowded marketplace as when it bloomed in its sheltered nook, the lily's fragrance and beauty as able to bless and remain unspoiled amid the human throng of the city as when in the garden solitude. Surely God is expressed through man as well as through lesser ideas, and this loving Life and Mind is eternally self-sustained and calm. A great peace enfolded her as she pondered this lesson, and when the time arrived for public appearance at the service not one vestige of self-consciousness or fear remained. On the contrary, she realized and expressed great peace and power.

The reason for and consummation of all real existence is in God. Every idea of Mind exists in God and is created to reflect Him. Human consciousness understands and expresses the greatness of man only as it comprehends that man can do nothing of himself but is ever animated by God. In proportion as we let God be practically our All-in-all, the Life and intelligence we are to reflect, then whether in cabined solitude or hall of state we shall be able calmly to fulfil man's mission and destiny. Consciously to live not to please mankind but to manifest God's glory,—this unfolds in human consciousness the flower of true selfhood and sovereignty. This is the natural state of all true existence, and it becomes a possible attainment for all through the understanding and practice of Christian Science.

Truth Ever Present

J. ALLEN BARRIS

In the ninth chapter of Ecclesiastes we read of a little city which was besieged by a powerful king, who "built great bulwarks against it." From the story we gather that if it had not been for a certain wise man, who by his wisdom saved the city, it would probably have been captured and destroyed. We are also told that afterward "no man remembered that same poor man." A study of the book of Ecclesiastes leaves no doubt as to the nature of the wisdom this man possessed.

We like to think of this "poor wise man" (poor only perhaps in the sense that he was alone and despised) as representing those who at the present time are ever alert in knowing the truth as taught in Christian Science on those occasions when it seems to be nobody's business, and yet is everybody's business, to declare it. We see many times what seems to be a narrow escape or hear of a healing which seems miraculous, and for which no explanation is made and nothing is said except that it "just happened so."

As an illustration of what is meant, the experience of one who knew something of Christian Science is given. He and his wife were riding on a street-car as it was running rapidly down a hill, when suddenly there was a loud exclamation and the car came quickly to a stop. All the passengers ran to the doors and windows except the Scientist and his wife, but they remained quietly in their seats and began to declare silently the truth as taught in Christian Science. There was a period of waiting, and when at last they looked up and out of the window they saw a small boy, all covered with dirt and dust, going off with a policeman. He had been knocked down and rolled along under the car, but had escaped all injury.

A day or two after this occurrence this same Scientist was walking down the street. As he was going along, examining the shop-windows, he heard a cry from the crowd on the sidewalk. He looked around and saw a man get off the street-car and step in front of a rapidly moving automobile. Just as he closed his eyes the machine struck the man. The Scientist had time to realize and declare only a few words of truth when he looked up and saw the man creeping out from under the car, which in the mean time had come to a stop. He had received no injury. These instances are mentioned only to show that for many such occurrences there may perhaps be an explanation, where heretofore there seemed to have been none. Who will presume to say that the work done by the Christian Scientist had nothing to do with the results? To do so would be to say that God is not "a very present help in trouble," and to deny that "the effectual fervent prayer of a righteous man availeth much." No one remembered this Scientist, of course, for no one knew that he was there.

As time goes on the world should witness many more such instances, and these will seem even more wonderful, for the "poor wise man" is becoming more in evidence as he is also getting much wiser. This is the result of the work of an inspired New England woman who for many years was satis-

Digitized by Google

fied to go about her work alone and unremembered, until such time as the world was ready to be awakened in some degree to the fact that the days of miracles are not past, and that nothing which occurs in God's universe just happens. There is always a reason, for there is no effect without a cause; and more often perhaps than we think the cause can be traced back to the work of one who has become wise, not "after the flesh," as Paul puts it, but after the spirit, and for whom there are many occasions on which to exercise his wisdom. He is the minute-man in Christian Science. His work, however, must be its own reward, for material sense is ever ready to glorify itself by attributing the results to some other source.

"Shut thy door"

EMMELINE HASKELL

Mrs. Eddy's admonition, "Stand porter at the door of thought," found on page 392 of "Science and Health with Key to the Scriptures," is known to all readers of the Christian Science text-book, but many do not seem to remember that a wise porter guards not only what comes in at the door, but also that which "cometh out." They do not consider the great need of applying the proverb, "He that refraineth his lips is wise." It is well to bear this constantly in mind, because to send forth the unripe fruit of the lips is a temptation which besets nearly all beginners in Christian Science, and this habit may bring about serious results. Sometimes members of other Christian churches mention to friends that they think of trying Christian Science, or are about to take treatment; and thus before the quest is more than begun public thought is called to their attempt to apply that truth which is "hidden in sacred secrecy from the visible world" (Science and Health, p. 118), and to which our Master referred when he said not to cast "your pearls before swine, lest they trample them under their feet, and turn again and rend you." Because of this rending, the beginner in Christian Science is sometimes turned aside, not knowing what has caused his deflection.

Others who know something of what has brought them rich blessings greatly desire to give it forth; but not remembering the Master's admonition, "Tarry ye in the city of Jerusalem, until ye be endued with power from on high," they follow in the course of Hezekiah, king of Judah, who most unwisely showed his treasures to a heathen king, confessing afterward to Isaiah the prophet that there was nothing among all his treasures which he had not showed, an indiscretion that beginners sometimes have occasion to recall when experiencing the added labor which their own unguarded conversation has entailed. The prophet said to Hezekiah: "Hear the word of the Lord of hosts: Behold, the days come, that all that is in thine house . . . shall be carried to Babylon: nothing shall be left, saith the Lord."

The study of Christ Jesus' public ministry indicates that the shutting of the closet door which he commended was for the safeguarding of his students, as well as to provide against imparting to dull ears the spiritual teachings for which they were unprepared. When Jesus spoke publicly it was frequently in parables. After he had revealed himself to three of his chosen disciples on the mount of transfiguration, he charged them not to tell it abroad at that time. Again, after Simon Peter had discerned that Christ Jesus' life and work was the fulfilment of prophecy respecting the Messiah, the disciples were enjoined not to speak of it, and even to those whom he had healed our Lord often said, "Tell no man." In view of these facts it may naturally be inquired, What then is the purpose of our testimony meetings?

In answer, we do well to remember Jesus' saying, "No man can come to me, except the Father which hath sent me draw him." Therefore, if no unwise influence is used, no one will come to our meetings unless he is led of God and ready for that which is offered. There is a time to keep silence and also a time to speak, and one of the times to bear grateful testimony to blessings received is in these meetings. He who said, "Every one that asketh receiveth; . . . and to him that knocketh it shall be opened," never withheld that which would guide or bless mankind. To idle curiosity no sign was given; and to priests and elders who asked by what authority the mighty works were wrought, Jesus replied only by a question. He said, "What man is there of you, whom if his son ask . . . a fish, will he give him a serpent?" Thus are we taught to consider conditions, before the door of our lips is opened.

When we have learned to guard completely the door of our lips, we shall know what it means to "pray without ceasing," and there will be no hindrance to divine communion. He who wrought for the redemption of the world, himself refrained many times from speaking, and to his disciples he said, "I have yet many things to say unto you, but ye cannot bear them now," thus exemplifying the Scripture, "He that believeth shall not make haste."

Communion

ELISHA B. SEELEY

Jesus said, "Whoso eateth my flesh, and drinketh my blood, hath eternal life." Again he said, "He that eateth my flesh, and drinketh my blood, dwelleth in me, and I in him." In other words, he that dwells in the realization or consciousness of existence as the manifestation of Life, Truth, and Love, and in whom this consciousness dwells, is spiritually and practically partaking of the Christ-life, and this at-one-ment is made manifest in health and holiness.

Communion as understood in Christian Science is not a commemorative rite, but the recognition of the divine ever-presence. It is celebrated neither at Jerusalem nor in Boston, but "in the secret place of the most High;" neither in temples of stone nor under cathedral dome, but in our "house not made with hands, eternal in the heavens,"—in other words, in our consciousness.

The true concept of communion and its spiritual significance is wonderfully elucidated in the by-law regarding it written by Mrs. Eddy in connection with the original organization of The Mother Church, and published in *The Christian Science Journal* of August, 1889. It reads as follows: "The sacrament shall be observed . . . by a short interval of solemn and silent self-examination by each member, as to his or her fitness to be called a follower of Christ, Truth; as to his real state of love toward man, and fellowship and communion with Christ; as to whether he is gaining in the understanding and demonstration of Truth and Love, coming out from the world and being separated from error; growing less selfish, more charitable and spiritual, yea, walking worthy his high calling. It shall be observed by silent prayer after the manner that casts out error and heals the sick, and by sacred resolutions to partake of the bread that cometh down from heaven, and to drink of his cup of sorrows and earthly persecutions, patiently for Christ's sake (Truth's sake), knowing that if we suffer for righteousness, we are blessed of our Father."

That this interpretation of communion is in harmony with that of the disciples and immediate followers of the Master is evidenced by Paul's words in his communication to the church at Corinth: "Let a man examine himself, and so

Digitized by Google

let him eat of that bread, and drink of that cup. For he that eateth and drinketh unworthily, eateth and drinketh damnation to himself, not discerning the Lord's body." This self-examination upon the basis of the tenets of Christian Science as given on page 497 of Science and Health lifts thought to the recognition of true communion, and gives us a more inclusive sense of Jesus' words, "My meat is to do the will of him that sent me, and to finish his work."

Clinging to Principle

LUCY E. DOE

Some years ago, when the writer was a very young student of Christian Science, a valuable lesson was learned while watching the growth of a hill of pole-beans in the garden. It was noticed that after they had grown large enough to put out tendrils the conduct of the vines differed greatly. One reached at once for the pole, clung fast, and began to climb as though the aim and end of its being was to reach the top; others twined around one another and lay on the ground for a time, until some of them incidentally reached the pole and began their ascent. The result was that the first vine reached the top of the pole very quickly and bore abundantly. The others did not succeed in getting even half-way up the pole, because they were hampered by one another, and they did not bear so well.

All this illustrates the contrast to be found in the attitude of students of Christian Science toward divine Principle. Some see at once that they must cling to God and His idea, not to personality; they reach out for and lay hold upon divine Truth at all times, realizing it to be their strength and support, sufficient for their every need in the working out of their problems. Such students have one aim,—to grow and bear fruit. They know it is an individual work and act accordingly; thus in due season they "bring forth abundantly." Not being hampered by the opinions and habits of others, they are not retarded in their growth or work.

Other students feel that they must cling to one another or to some other person for support and sustenance, and act accordingly. In this way all are placed at a disadvantage, and growth and fruitage are greatly retarded. If one of the number does eventually get a firm hold of Principle, he is treated as a mainstay. Others lean on him and cling to him, instead of taking a firm hold on Principle for themselves and working out their own problems. They thus remain very near the ground, instead of being "lifted up" into the sunlight of Truth and Love as the result of their faithfulness to God and His law. How much better it would be if we would all realize that God is just as much to us as He is to any one else; that it is our privilege to work out our own salvation and make every effort to gain such a firm hold on Truth that we shall feel confident that God is our sufficient support and strength at all times.

In the many years that have passed since this little lesson, the writer has been helped very often by remembering it. She has found that when she has clung steadfastly to the best she knew, turning to the Scriptures and to Science and Health, the "Key" to this treasure-house of wisdom, for guidance, regardless of other opinions or ways,—when she has been faithful to her highest concept of right, divine Principle has never failed her, and she has been supported through every trial that has come into her experience. At times we all need a helping hand, but this hand must guide us to ever sustaining and unfailing Principle; then we can take hold again, and with our courage and confidence renewed our growth will be upward and continuous.

Selected Articles

[Fred R. Rhodes in *The Huddersfield* (England) *Examiner*]

In an article on "Nature Around Huddersfield," the writer states, "I went to the Christian Scientists, from whose teachings, let me say, I have derived great benefit; but when I found in Mrs. Eddy's text-book that the study of minerals, stars, and so on, is of no real importance, that brought my inquiries in that direction to an abrupt end."

I am quite sure your correspondent would be the first one to admit the necessity for accuracy in quoting extracts from other authors, and will therefore permit me to give the exact quotation to which he refers, which is as follows: "The compounded minerals or aggregated substances composing the earth, the relations which constituent masses hold to each other, the magnitudes, distances, and revolutions of the celestial bodies, are of no real importance, when we remember that they all must give place to the spiritual fact by the translation of man and the universe back into Spirit. In proportion as this is done, man and the universe will be found harmonious and eternal" (Science and Health, p. 209).

To the student of physical science it is of "real importance" to study these questions, but to the student of metaphysics it is necessary to look at the things that are not seen through the physical senses. It would seem a pity to bring to an abrupt end the study of anything which had proved a "great benefit," simply on account of a misunderstood paragraph.

[Samuel Greenwood in *The Hedley* (British Columbia) *Gazette*]

In answer to a correspondent I would like to say that Christian Scientists have no quarrel with physicians. As a class we honor them highly for their splendid devotion to their work of relieving human suffering. My reference to the obituary column was not intended as a reflection against them, but to show that *materia medica* is not sufficiently infallible to be considered superior to the healing method of Jesus, since thousands are passing out under its care every day.

Your second correspondent evidently wishes to be fair to Christian Science, and for this I thank him. For his information I would say that Christian Science uses the word real as relating always to God and His creation. What God did not make is not regarded as real, in that it is not permanent and eternal but is capable of destruction. The Scripture reads, "All things were made by him; and without him was not any thing made that was made." Evil of any kind is not considered as part of God's creation, hence in the absolute sense it is not real.

Christian Science does not ignore the presence of sin in human experience any more than it ignores the presence of sickness, since, as I have before pointed out, Christian Science is here for the sole purpose of redeeming mankind from just such conditions. The great difference between Christian Science and other denominations in their attitude toward evil is this: that the latter are striving to overcome evil as a reality, while Christian Science is combating it as a false belief. Their purpose is the same but the methods are vastly different. The seeming reality of evil may be illustrated by hallucinations produced by mesmerism, in which the subject is made to believe that certain suggested conditions are real, and these seem tangible to him while in that state but disappear when a normal mentality is resumed.

Sin and disease are human errors, and seem as real to the person experiencing them as a boy's errors in arithmetic do to him; but in both cases when the truth is fully understood these errors disappear. Jesus said, "Ye shall know the truth,

Digitized by Google

and the truth shall make you free." Free from what? Surely not from things that are true. From what else but error could the truth free mortals, since error, as its name implies, is the lack of being true? Jesus came to save mankind from the things which God did not make, that is, from sin, disease, and death. If God made these conditions, they must be eternal, and can never be destroyed; but if God did not make them, they are not real in His sight, and are the errors from which a knowledge of the truth is to free mankind.

Christian Science does not regard the omnipresence of God, or good, as being circumscribed on account of the human belief in the presence of evil. David said, "If I make my bed in hell, behold, thou art there," evidently implying that good is always present to deliver mortals when they are willing to rely upon it. Evil is present only to the human sense that believes in and obeys it, not as a substantial and real entity. An apostle referred to the devil, or evil, as deceiving the whole world; but if evil is an actual reality, as goodness and love are, where would be the deception? If humanity universally obeyed the teachings of Christ Jesus and refused to obey evil suggestion, where would evil have existence or presence?

Christian Science practice is the influence of the divine Mind over the human, not that of one human mind over another mind. The latter is hypnotism, which is not a factor in Christian Science. While Christian Science does not approve of such methods, it leaves each one to work out his salvation in the way he feels is best.

✧

[Robert S. Ross in *Journal of Medicine*, New York, N. Y.]

In reply to the statement of a physician, permit me to assure the critic that at no time have Christian Scientists, either individually or collectively, endeavored "to assail legitimate medical practice." Although Christian Science and *materia medica* are diametrical opposites in both precept and practice, it should be understood by the medical profession that no class of people have greater regard for the upright, noble hearted physician than the Christian Scientists have. On page 444 of "Science and Health with Key to the Scriptures" Mrs. Eddy writes, "Students are advised by the author to be charitable and kind, not only toward differing forms of religion and medicine, but to those who hold these differing opinions."

Christian Scientists realize that if obliged to choose between Christian Science and *materia medica*, many people would choose the latter. To expect help from Christian Science without a sincere desire for that help, would be useless. To attempt to force Christian Science upon the public would, of course, be madness. Therefore, so long as there is a single individual who prefers *materia medica*, Christian Scientists not only believe that he should be permitted to have that form of treatment, but they believe that he should have the best there is. Viewed from this standpoint, Christian Scientists are perhaps as desirous as the profession itself to see the standard of medical practice steadily raised.

What the Christian Scientists object to is the tendency on the part of a certain element in the medical profession which seeks the enactment of laws that would prevent Christian Scientists and others from enjoying the same degree of personal liberty that physicians and those preferring medical treatment would fight for if anything threatened to deprive them of that liberty. If the phrase "practice of medicine" means treatment by material methods, Christian Science is not a practice of medicine, and it would be chimerical to think of permitting a material system to interfere with or supervise a spiritual system.

If, on the other hand, the practice of medicine includes all systems of healing, then Christian Science could probably be termed the practice of medicine; but since all schools of healing lay claim to equal ability to heal, they should enjoy equal rights, and the only fair test of value would be to measure them by their results only, for cures should be more convincing than mere claims. The only infallible healer of the sick the world has ever known said, "By their fruits ye shall know them,"—not by their words. Any other standard would place dangerous power in the hands of a single experimental healing system; it would stifle honest investigation and research, and would come dangerously near stopping the wheels of progress.

✧

[Willis D. McKinstry in *The Pittsburg* (Kan.) *Headlight*]

The citations of Scripture given by a critic to repudiate the statements of a lecturer on Christian Science relative to the unreality of disease, do not belong to nor can they be associated with the Biblical account of creation contained in the first chapter of Genesis. This record of Holy Writ declares that "God saw every thing that he had made, and, behold, it was very good;" also, that He made man in His own image and likeness. John says, "All things were made by him; and without him was not any thing made that was made." No sense of discord or ills of the flesh find an abiding-place in this infinite kingdom of Spirit.

If it be true, as the critic would have the public believe, that God is the author of and sends disease upon man, disease would be eternal, hence indestructible. It was to save from this erroneous belief, namely, that sin and disease were real, that God created them or permitted them to exist, and man was subject to and could be afflicted with them, that Christ Jesus came into the world. The ministry of the Master was one of healing, and he knew no incurable diseases. It is hardly possible that any one professing to be a Christian will say that Jesus did not fully and scientifically understand what he was talking about when he said: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Christian Science has no quarrel with doctors or with those who wish medical attention; yet the fact remains that the way of the Christ is the one true way of salvation from every human discord, and the teachings of Christian Science offer a demonstrable understanding of his way.

✧

[Thomas E. Boland in *The Sunday Call*, Easton, Pa.]

Christian Science teaches how to destroy sin and disease, not how to ignore them. It teaches that the only way of escape from evil is through overcoming it in the consciousness of the individual; but it does not stop here, for it also points a practical way by which each person may for himself accomplish this overcoming here and now. Christian Science not only teaches that sinful and discordant conditions should be overcome, which is patent to everybody, but what is much more to the point, it presents a universally usable method for accomplishing this much desired result. No one can study the life of Jesus the Christ without reaching the logical—yes, inevitable—conclusion that his mission was to bring to sinful and suffering humanity a full salvation from all its afflictions. Christians profess to believe that Christ Jesus was the Saviour of the world. Jesus placed much more emphasis on his works than on his words. His works were the proof of the truth of his words. He said: "If I do not the works of my Father, believe me not. But if I do, though ye believe not me,

Digitized by Google

believe the works: that ye may know, and believe, that the Father is in me, and I in him."

Many persons are first attracted to Christian Science because of the spiritual truth they perceive in it. A still greater number come because they are looking for relief from distressing physical conditions, from which in a large percentage of cases they have vainly sought relief elsewhere. That a smaller number should be looking for spiritual help than for escape from pain is not strange; for while it may not be complimentary to humanity, it is nevertheless true that people are more generally eager for release from physical disability than from sinful and immoral conditions. Those who come to Christian Science with a spiritual hunger find a satisfying truth, and it is the experience of thousands who come for physical help that they receive not only the sought for aid, but in addition a spiritual impulse which they rightly come to value far above any freedom from distressing physical conditions, however welcome such relief may be.

Christian Science has brought the message of an enlightened and uplifted faith in God and the "lively hope," followed by the actual experience, of release from disease to vast numbers as dead spiritually as the "dry bones" of Ezekiel's vision which constituted the critic's text, and to multitudes who were the victims of supposedly incurable disease, for whom hope was as much lost as Ezekiel declares it was to the house of Israel. The message which Jesus brought to the world was sneered at by the pulpit in his time. Because the same message brought today by Christian Science is meeting a similar experience, is no more proof now of the falsity of the message than it was nineteen centuries ago. Nor will ecclesiastical opposition in this day be any more effective than in the time of the humble Nazarene, in preventing this message of hope and healing from reaching and blessing mankind.

✧

[W. D. Kilpatrick in *Marquette* (Mich.) *Chronicle*]

The comparison, by our critic, of Christian Science with such doctrines as Gnosticism, theosophy, eastern mysticism, occultism, Buddhism, and the like, reveals a misconception of Christian Science which seems to characterize most of its would-be traducers. If the gentleman had gained ever so little insight into the true teachings of Christian Science he would hardly have dared venture this comparison. His statements, like many other stock criticisms of Christian Science, are most strikingly in agreement with the same charges hurled at Jesus and the early Christian church by the priesthood of those times. They accused Jesus of casting out sin and sickness by Beelzebub (hypnotism, occultism, and the like), because they did not understand the spiritual, scientific Principle by which his mighty works were done.

An attempt to discredit or disprove Christian Science by the Bible is as futile as would be an attempt to discredit the principle of mathematics by the use of an arithmetic. The warp and woof of Christian Science are the spiritual teachings and interpretations of Scripture, and there is no divergence at any point between Christian Science and a correct and demonstrable interpretation of the Scriptures. It is not denied that Christian Science differs at many points from the man-made creeds and the scholastic theology of the centuries, but therein lies the secret of its marvelous growth as a potent agency against sin and sickness. Jesus did not make any distinction, in pointing out to us our duty as Christians, between sin and sickness and the means whereby these conditions are to be overcome. His command so often issued, not only to his students but to all who believe in him, to cast out sin, was always accompanied and generally preceded by the command to heal the sick. He healed both sin and sickness, not through the understanding that these conditions are God sent or God created, but through the understanding of just the opposite, namely, that they are not of God, and therefore have no authority or power over God's creation.

Christian Science does not ignore sin or the necessity of overcoming and conquering sin in its every phase, as our critic would have us believe. Christian Science recognizes not only the necessity of overcoming sinful conditions, but it has in a measure succeeded in arousing mankind from its lethargy in sin and its belief in the necessity, as God given, of certain sinful conditions, to the understanding of man as free-born and not as a slave to sin or a child of chance and change. Christian Science has undoubtedly done more toward the destruction of sin and the Christianization of mankind in the short span of its existence than any other one contemporary agency. Christian Science is a return to the teachings of primitive Christianity; to the teachings of Christ Jesus and his disciples, and is in a measure, and in gradually increasing certainty, proving its divine authority. No man ever has or ever will overcome sin and sickness through the palpably erroneous belief that God creates or sends these conditions.

The critic seems to be considerably exercised over the attitude which Christian Science takes concerning the import of the Bible references to "the blood of Jesus Christ." It is very doubtful whether the critic, and in fact any one else holding the same views, can give a satisfactory explanation of what is understood by the cleansing of sin through "the blood of Jesus Christ." The question naturally confronts any one: If we are to believe that the shedding of Jesus' blood cleansed from all sin, wherefore do we find sin and death to be as prevalent in the world now as they ever were? This condition alone must convince any thoughtful person that theology has missed the point in the lesson which was given to humanity by this experience of Christ Jesus.

The term "blood" as used throughout the New Testament, and especially by Jesus, is most distinctly symbolic, and refers wholly to his experience and to the experience which each one of us must undergo in traveling the road from mortality to a state of consciousness where the old man can be put off for the new. In Matthew, for instance, in the account of the meeting between Jesus and his disciples at the feast of the passover, it is recorded that "as they were eating, Jesus took bread, and blessed it, and brake it, and gave it to the disciples, and said, Take, eat; this is my body. And he took the cup, and gave thanks, and gave it to them, saying, Drink ye all of it; for this is my blood of the new testament, which is shed for many for the remission of sins." It is perfectly clear that Jesus did not here mean that the wine was his blood, but that he did mean, as Mrs. Eddy says on page 26 of "Science and Health with Key to the Scriptures," that "all have the cup of sorrowful effort to drink in proportion to their demonstration of his love, till all are redeemed through divine Love," and on page 35: "Our cup is the cross. Our wine the inspiration of Love, the draught our Master drank and commended to his followers."

Christian Science teaches that absolute purity of thought is the only means whereby mortals will ever be able to emulate the Master in all the ways of his directing, and the statement by the critic that "real Christian Scientists are an unclean company" is one that will hardly require refutation at this late date, when the good works of Christian Science and its many respected adherents are so well known.

Editorial

Take Notice

We wish to caution members of The Mother Church in regard to the frequent solicitations they receive by mail and otherwise to invest their money in enterprises which purport to make a special appeal to Christian Scientists.

In the business world it is not customary to exploit the church affiliations or religious experiences of those connected with business enterprises seeking to sell either their stock issues or their merchandise. When such a course is adopted it should not be considered as recommending the soundness of the investment.

It is hoped that every Christian Scientist will make an effort to discourage the use of the directory of practitioners and churches in *The Christian Science Journal* as a mailing list for the literature of stock-selling schemes and business enterprises.

The Christian Science Board of Directors.

Boston, Mass., Dec. 29, 1915.

Cooperation and Efficiency

When Christian Science was first promulgated by Mrs. Eddy it naturally provoked quite a little stir in religious and medical circles, and much criticism, not only because it differed so widely from generally accepted beliefs and theories in regard to religion and medicine, but also because its teachings, being metaphysical, were largely misunderstood by a world which had not up to that time regarded religion as demonstrable or the healing of sickness as possible except by material means. Under these circumstances this criticism was largely unfavorable, and much of it was both unjust and discourteous, so much so that Mrs. Eddy in writing of its purpose said that it would "condemn to oblivion the truth, which is raising up thousands from helplessness to strength and elevating them from a theoretical to a practical Christianity" (Science and Health, p. 341).

That this criticism was based on either ignorance or misunderstanding of the actual teachings of Christian Science did not in the least take away from its harmful character; therefore it became necessary to refute it. As a first step in this direction Mrs. Eddy incorporated in the Christian Science text-book, "Science and Health with Key to the Scriptures," the chapter entitled "Some Objections Answered." Its clear and comprehensive statements provided a permanent basis for the refutation of unwarranted attacks, and Mrs. Eddy later organized a committee on publication, which should more especially and directly be responsible for the correction in current newspapers and periodicals of the misapprehensions of the teachings of Christian Science which catch the public eye and ear through the press or from the pulpit or platform.

That Christian Scientists should protest against the publication of incorrect and unjust statements, and request the privilege of correcting them, was doubtless at first surprising to newspaper editors, but the unfailing courtesy of the committees, and the kindly tone of the articles which they offered, have gradually won the day. This work was undertaken in the spirit of the wise man's counsel that "a soft answer turneth away wrath," and their Leader's admonition that "however despitefully used and misrepresented by the churches or the press, in return employ no violent invective, and do good unto your enemies when the opportunity occurs" (Manual, Art. VIII, Sect. 3),—all this in accordance with the teachings of the great Exemplar of Christian living. Disarming their critics lovingly and with patience, and availing themselves of every opportunity to place before the public the true standard of Christian Science living, the result of the committees' work could not be otherwise than a gradual overcoming of the prejudice of those who had mistakenly censured both the teaching and its exponents.

We recall that in a certain memorable battle even Moses needed to have his hands stayed up until the victory was won, and it is almost needless to say that as long as the necessity for the work of this committee exists, there must be cooperative action on the part of the churches in order that it may be most effective. One form which this cooperation may take has been pointed out by the manager of committees on publication, and we quote from a recent bulletin on this subject as follows:—

"For the performance of his duties, every committee on publication needs a certain amount of financial support. It may be that the primary responsibility for this support rests on the church whose readers appoint the committee, since he is spoken of in Article XXXIII, Sections 4 and 5 of the Church Manual, as being employed by that church; but the Manual also shows that his work is not particularly for the benefit of the church whose readers appoint him, nor under its direction. The benefit of his work extends throughout the state or locality in which he is to serve, as much for one church or individual Scientist as for another. In the most progressive localities, therefore, the expenses of the committee on publication are shared accordingly. Regular and definite contributions are made by all churches and societies having cards in *The Christian Science Journal*, ratably in proportion to the number of their members."

The work of the committees on publication was adjudged by our Leader a vital factor in defending the bulwarks of our cause. It would seem, therefore, that to provide justly and generously for its maintenance is a duty to be cheerfully taken over by Christian Scientists individually and collectively.

Archibald McLellan.

Exaltation

It is deeply interesting to trace in the Scriptures the awakening of mortals to a recognition of the greatness and goodness of God, and the expressed desire to exalt His holy name. It is noticeable in this connection that the one who gains this larger sense of the divine nature drops the mortal characteristic of self-importance and expresses the humility which the wise man tells us leads to honor, riches, and life. Isaiah declares that God dwells with the one whose spirit is contrite and humble, or, as a Christian Scientist would say, with the one who has emptied his thought of self. On the other hand we read much concerning the downfall of those who seek to exalt themselves, as did Nebuchadnezzar, who was brought down to the level of the beasts, and this because his mind was "hardened in pride." Far different from this is Mrs. Eddy's characterization of "Mind's infinite ideas," of which she says (Science and Health, p. 514), "In humility they climb the heights of holiness."

When we come to the teachings of Christ Jesus we find this: "Whosoever shall exalt himself shall be abased; and he that shall humble himself shall be exalted." We also find that self-exaltation is as likely to be a characteristic of cities or nations as of individuals, yet in reality righteousness alone "exalteth a nation." The city of Capernaum was at one time a place of much importance, and it was honored by Jesus' ministry of healing and teaching, as we read in the different gospels. In spite of this, however, the judgment

Digitized by Google

of Truth upon it is given in these words: "And thou, Capernaum, which art exalted to heaven, shalt be thrust down to hell." It is said that even the site of the city is a matter of uncertainty, and from its fate we may gather the lesson that only godlikeness can truly exalt an individual, a city, or a nation.

In pursuing this theme we shall find much enlightenment in studying Paul's words respecting Christ Jesus, in the second chapter of his epistle to the Philippians. Here the apostle exhorts us to have the Mind "which was also in Christ Jesus." Then he goes on to say that although Jesus "thought it not robbery to be equal with God," because of his perfect likeness to the Father, yet he "made himself of no reputation," and "humbled himself." He did not disown as brethren those who were in bondage to the beliefs of sin and sickness, but was to them as a man among men, so that he was called "a friend of publicans and sinners." Christ Jesus did not need to exalt himself; God saw to that, as He always does in the case of His every faithful child. Paul tells us that because the Master did not shrink from any humiliation, God hath "highly exalted him, and given him a name which is above every name." Of old the psalmist said of the one who makes God his refuge, "I will set him on high, because he hath known my name."

God may be trusted to give each one the place in His kingdom for which he is fitted, and even in our silent prayers as Christian Scientists we shall do well to remember the parable of the Pharisee and the publican. We cannot too highly exalt our heavenly Father or too clearly realize the greatness of His reflection, the perfect man, all the while remembering the divine requirement "to do justly, and to love mercy, and to walk humbly with thy God."

Our revered Leader says (Science and Health, p. 8), "We should examine ourselves and learn what is the affection and purpose of the heart, for in this way only can we learn what we honestly are." It is not enough to say "Lord, Lord," or to insist upon our likeness to the All-good, if we are not demonstrating this in purity, spirituality, unselfishness, and other Christly qualities. At a glimpse of the Christ-power and perfection Peter prayed, "Depart from me; for I am a sinful man, O Lord," but it was he who counseled us to be "clothed with humility," and who said, "Humble yourselves . . . under the mighty hand of God, that he may exalt you in due time."

ANNIE M. KNOTT.

Advancing Beliefs

THE recent organization by a body of people who, as they aver, are moved by "a common quest after an order of society in accordance with the Mind of Christ," will prove a matter of great interest to all humanitarians, and to Christian people in general. It is reported of the meeting that "after the most serious consideration of what was involved, the conference expressed its conviction that love, as revealed in the life and sacrifice of Christ Jesus, is the only sufficient basis of human society, and the only power with which evil can be overcome," and they therefore declare that "those who believe in this principle must dedicate themselves unreservedly to the enthronement of love in every sphere of personal and social life."

The recognition that, however seemingly forlorn their hope, it is incumbent upon all conscientious people to attempt the immediate realization of the ideal, is an advance step that merits hearty endorsement. It was the consecration of a few men who had been the disciples of Jesus to the enthronement of Love, which inaugurated the Christian era, and which has wrought all the redemptive achievements of history; and the association of those who are interested in any degree in this enterprise must therefore be regarded as an encouraging fact. That Love alone "is the liberator" (Science and Health, p. 225), the only basis and hope for the solution of human problems, cannot be questioned, and this is one of the vital teachings of Christian Science.

The failure of the church as the exponent of man-made creeds is universally conceded. So too the folly of depending upon militarism for peace, with all the jealousies, the burden-bearing, and the cruelty which it entails, is appearing to a vast body of people who have refused to become mesmerized by false patriotism and the glamour of arms, and in all this protest and advance of better belief Christian Scientists rejoice. The teaching for which they stand has always been declaring these things, but its success witnesses to the fact that it has stood for much more. To realize that the old order to which one has been zealously committed, perchance all his life, has been proved wanting, and that one is ready to give it up, speaks much for possibilities of good, but little for the gain of good unless the cause of this failure be carefully considered and a demonstrably right sense acquired.

It is well to turn away from hatred and champion love, to decry war and declare for peace, but it will profit little or nothing unless the Principle and rule governing him who was named "The Prince of Peace," and who declared, "My kingdom is not of this world," is apprehended and scrupulously adhered to. A pupil's discovery that he has been using the wrong equation and his readiness to give it up and try something else, is certainly essential to his advance, but it can never effect it. He must begin again with the fundamental law, and by logical procedure deduce the right formula, and then apply it in keeping with the data and requirements of the problem. There is no other way to get on, and this is the great contention of Christian Science, the insistence from which Mrs. Eddy never wavered. Though having its natural place in the true life, it is not the so-called Christian spirit, the desire to do the right thing, which counts, but rather the scientific apprehension and application of divine Truth, and this Christian Science is declaring and demonstrating in all the world.

Weariness with the old order and the longing for a better, though ever so highly organized and ever so well supported by well meaning men, will not avail to meet the present need, if men do not seek and gain that knowledge of God, divine Truth, which Christ Jesus so clearly and constantly taught was the key to human freedom. As we read in Science and Health (p. 496), naught but this Christ Science, the understanding of the allness of God, good, enables men "to demonstrate, with scientific certainty, the rule of healing, based upon its divine Principle, Love, underlying, overlying, and encompassing all true being."

JOHN B. WILLIS.

Lectures in Suburbs of Boston

Under the auspices of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., the following lectures on Christian Science will be given by Virgil O. Strickler, C.S., a member of the board of lectureship:—

Milton, Mass., in Town Hall, Canton Avenue (change cars at Milton Lower Mills for East Milton car; change on Mattapan line at Mattapan Square for Brockton car, to Canton Avenue), Monday evening, Jan. 17, at eight o'clock.

Brookline, Mass., in Beacon-Universalist Church, Harvard Street (near Coolidge Corner), Thursday evening, Jan. 20, and Friday evening, Jan. 21, at eight o'clock.

Watertown, Mass., in Town Hall, Main Street, Saturday evening, Jan. 22, at eight o'clock.

Digitized by Google

Allston, Mass., in Allston Theater, 128 Brighton Avenue, Sunday afternoon, Jan. 23, at half past three o'clock.

Roslindale and West Roxbury, Mass., in Highland Club Hall (corner Center and Corey Streets, West Roxbury), Monday evening, Jan. 24, at eight o'clock.

Everett, Mass., in Whittier Hall, Everett Square, Tuesday evening, Jan. 25, at eight o'clock.

East Boston, Mass., in Saratoga Street Methodist Church (Saratoga Street, off Central Square), Thursday evening, Jan. 27, at eight o'clock.

Waltham, Mass., in Asbury Temple, corner Main and Moody Streets, Friday evening, Jan. 28, at eight o'clock.

Winthrop, Mass., in Winthrop Theater (Winthrop Center, near Station), Sunday afternoon, Jan. 30, at half past three o'clock.

❖ ❖ ❖

Among the Churches

Current Notes

VANCOUVER, BRITISH COLUMBIA.—During the recent Western Canada Exhibition, held Aug. 13 to 21, a Christian Science reading-room was equipped and maintained on the grounds at Hastings Park for the use of the public, under the auspices of First Church of Christ, Scientist, and the Christian Science Society. The booth contained a liberal supply of authorized books and literature for the use of visitors. The distribution of literature was found to be best accomplished by arranging it on a table near the walk where the crowds were passing, and by means of a sign inviting the public to help themselves. In this way the committee distributed 707 *Sentinels*, 34 *Journals*, 12 *Heralds*, 525 *Monitors*, 135 pamphlets, and 57 copies of Senator Works' speech in Congress, making a total of 1,470 pieces. This number surpassed all expectations.

Joint Monitor and Literature Distribution Committee.

CONCORD, N. H.—The New Hampshire State Library has recently received from the Trustees under the Will of Mary Baker Eddy the following books on Christian Science by Mrs. Eddy:—

Science and Health with Key to the Scriptures (English and German); Miscellaneous Writings; The First Church of Christ, Scientist, and Miscellany; Unity of Good; Retrospection and Introspection; Pulpit and Press; Christian Healing and The People's Idea of God; Rudimental Divine Science; No and Yes; Messages to The Mother Church; and also "The Life of Mary Baker Eddy" by Sibyl Wilbur.

These books have been presented without cost to the library, and are to be placed at the disposal of the reading public as soon as they have been catalogued.

Concord Evening Monitor.

SYRACUSE, N. Y.—First Church of Christ, Scientist, beginning next Wednesday [Nov. 10], will hold two mid-week evening meetings at 704 East Fayette Street. The first service will begin at half past seven and the second at half past eight. This is said to be the first time in Syracuse that any church has been compelled to arrange for two mid-week religious meetings. The church has been overcrowded for more than two years, and until the new church building is erected at Forman Avenue and East Jefferson Street, the double services will be continued.—*Syracuse Post-Standard.*

ROCK ISLAND, ILL.—First Church of Christ, Scientist, held the first regular service in its new edifice yesterday [Nov. 14]. The church has a seating capacity of eight hundred and forty, and it is estimated that two thousand people were present during the day. The building is located in a very charming portion of the city. The growth of the organization has been remarkable. The first adherents of Christian Science met for a while in an up-stairs hall in a down-town business block. The present church edifice was built, and the congregation outgrew it within eighteen or nineteen years.—*The Rock Island Union.*

OHIO.—During the week of Sept. 6, a reading-room was placed at the disposal of the public on the Summit county fair grounds by joint committees from the Christian Science Society of Kent and First Church of Christ, Scientist, of Akron, and the following Christian Science literature was distributed: 86 *Sentinels*, 31 *Journals*, 1,047 *Monitors*, and 57 pamphlets, a total of 1,221 pieces.

Literature Distribution Committee.

WELLINGTON, NEW ZEALAND.—The growth of Christian Science has caused the society to secure new and larger quarters. A lease has been secured of Spillers Hall, in Boulcott Street, which has a seating accommodation for two hundred and fifty people in the main hall, and a large room suitable for a Sunday school and a reading-room.

Correspondence.

ROANOKE, VA.—On Wednesday evening [Nov. 3] the Christian Science Society held the initial service in their new church on Park Street and Church Avenue. It is the purpose of the society to erect a modern edifice on the present site some time during the coming year.—*Roanoke Times.*

VINCENNES, IND.—The congregation of First Church of Christ, Scientist, is erecting a new house of worship at Third and Hart Streets. The corner-stone of the new edifice was laid Tuesday, Oct. 26, and work on the building is progressing rapidly.—*Vincennes Commercial.*

❖ ❖ ❖

The Lectures

Leominster, Mass.

The Rev. E. B. Saunders, pastor of the Universalist Church, in presenting Prof. Hermann S. Hering at the lecture on Christian Science held in the Municipal Building, said:—

The occasion which calls us together is altogether a delightful one. We have come here with inquiring minds to learn more of that doctrine, if you choose to call it a doctrine, of which we have already heard much and of which none of us can boast a full understanding. There was a time, perhaps, when Christian Science awakened fierce antagonism on the part of many, but that time is very happily past. Christian Science has made its place and has gained its reputation by its followers, and now people of every denomination and every school are earnestly engaged in learning as much as they can of what Christian Science is really teaching, and all are in full sympathy with its warfare against sin, sickness, and death.—*Correspondence.*

❖

Alton, Ill.

The remarks of the Rev. J. Burrows, in introducing Jacob S. Shield, who lectured on Christian Science in the Temple Theater, were in part as follows:—

It gives me great pleasure to introduce your speaker this afternoon. I am glad to see such a gratifying company of men and women met together for the advance of truth. While

Digitized by Google

I am not professionally identified with Christian Science, there are many of its basic truths that I endorse and favor. It is inspiring to me, as a minister of the gospel of Jesus the Christ, to know that old-time narrowism is leaving us. Happily we are coming to recognize the fact that no one church possesses a monopoly of truth. Like God Himself, truth is universal and world wide. And whether it be through Christian Science that you are brought to see the light of divine Truth, or through some other means, let your honest cry be, "Show us the Father, and it sufficeth us."—*Correspondence.*

Butte, Mont.

A lecture on Christian Science was given at the Auditorium by the Hon. Clarence A. Buskirk. The speaker was introduced by William C. Orton, who spoke as follows:—

Centuries ago Jesus of Nazareth appeared upon earth in fulfilment of the law of God. He forgave sins, healed the sick, gave sight to the blind, made the lame to walk, raised the dead, and gave peace and comfort to the heart of man. Multitudes gathered around him to listen to his teachings. Some fifty years ago Mrs. Eddy gave to the world Christian Science; this religion is also the fulfilment of the teachings of Christ Jesus, and through Christian Science vast numbers are today again finding health and joy and peace, and multitudes are gathering to listen to its teaching.

Butte Tribune-Review.

Lynn, Mass.

Before an audience that filled the Auditorium Theater, Dr. Francis J. Fluno gave a lecture on Christian Science. He was introduced by William H. Lowe, first reader, who said in part:—

It has been said that this is a godless age, that men are losing faith in religion. Facts will not bear out this statement. Men may be losing faith in creed and dogma, which do not help in solving the perplexities of human existence, but they are manifesting an ever increasing interest and faith in a religion which meets their every need seven days in the week. Christian Science is a religion of doing. As Mrs. Eddy says in "Science and Health with Key to the Scriptures," Christian Science does not teach that "now men must prepare for a future-world salvation, or safety, but that now is the time in which to experience that salvation in spirit and in life" (p. 39). This salvation must be a complete salvation, saving not only from sin, but from sickness, poverty, want, and woe.

Lynn Item.

Ridgewood, N. J.

The Play House was well filled to hear William D. McCrackan deliver a lecture on Christian Science. S. S. McCurdy, who introduced the speaker, said in part:—

Although for many years a member of a denomination of unquestioned orthodoxy, one of the most serious mental disturbances I ever had was occasioned some years ago by the reading of a sermon by a man justly regarded as one of the most eloquent preachers of my church. A man of great intellectual attainment and force of character, his influence, especially with college men, has been unique. Yet in a sermon upon the text, "The letter killeth, but the spirit giveth life," he made this astounding assertion: "Christianity is not a life, but a dogma." If the belief thus voiced by this clergyman is widely held, the failure of the church today to hold a vital grip upon the thoughts and lives of men is in large measure explained.

Unfortunately for the world, many of its greatest minds have expended time and energy upon historical research as to the record and letter of Christianity, to the exclusion of attempts to prove the truth or falsity of the assertions made by Christ Jesus. He constantly insisted upon demonstration, begging his disciples to follow his rules and obey his commands. You will recall his statement: "If any man will do his [God's] will, he shall know of the doctrine, whether it be of God, or whether I speak of myself;" and again, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." Christ's teachings, therefore, must stand or fall upon the test of demonstration; but unfortunately those who are the most strenuous in claiming that Jesus was a man of integrity are the last to admit that he spoke the truth.

If this seems like a strong statement, recall for a moment the occasions on which you have heard the assertion made that the principles embodied in the Sermon on the Mount are utterly impracticable in the world of business today. Now, if we are professing to follow a leader of impracticable ideas, it is not to be wondered at that we fail of attainment, for mere faith in Christ's goodness will not carry us far. It would almost seem as if Paul's statement, "having a form of godliness, but denying the power thereof," had another application than that made by the apostle.

We have a distinct problem upon our hands, namely: Can what Jesus is said to have taught be grasped by men and so applied to human experience as to demonstrate that what he said was truth, or, in other words, a principle of life? If so, no other proof is necessary. If not, it is simply a waste of time to discuss it further. Thousands of men and women have today come to the knowledge of a way by which the demonstration of Christ's teachings can be made as a practical daily life. A glimpse of that way will be given us this afternoon.—*The Ridgewood Herald.*

Lectures to be Delivered

INDIANA—Kendallville: Hon. Clarence A. Buskirk, Boyer Opera House, 2:45 p.m., Jan. 16.

IOWA—Grinnell: George Shaw Cook, Colonial Theater, 8 p.m., Jan. 10.

MASSACHUSETTS—Andover (auspices Lawrence): Prof. Hermann S. Hering, Town Hall, 8 p.m., Jan. 14.

Milton (auspices The Mother Church): Virgil O. Strickler, Town Hall, Canton Avenue, 8 p.m., Jan. 17.

MICHIGAN—Ann Arbor: Jacob S. Shield, Whitney Theater, 8 p.m., Jan. 20.

Jackson: Jacob S. Shield, Masonic Temple, 8 p.m., Jan. 18.

MISSOURI—St. Joseph (First Church): Charles I. Ohrenstein, Church Edifice, Twelfth and Felix Streets, 3 p.m., Jan. 16.

NEW JERSEY—Ridgewood: Bliss Knapp, The Play House, Wilsey Square, 3 p.m., Jan. 16.

OHIO—Cleveland (Second Church): William R. Rathvon, Grays' Armory, 3 p.m., Jan. 16.

PENNSYLVANIA—Easton: Virgil O. Strickler, Third Street Theater, 3 p.m., Jan. 16.

Testimonies of Healing

In November, 1908, a Christian Scientist and her husband came to live with us. She was the first Christian Scientist I had known, and I was so impressed with her kind ways and gentle character that I knew then she had found the true Christianity for which I had been longing for years, as the teaching of the church in which I was raised did not satisfy me. Shortly afterward I was taken down with what the doctors diagnosed as a complication of nervousness, rheumatism, and a light attack of the gout, which settled in my feet so that I could not walk, and it was very painful for me even to stand. This lady explained Christian Science to me and said that it would heal me, so I thought I would try it. I had been sick off and on all of my life, supposedly as a result of having erysipelas when I was only six months old.

Although the healing was slow, I am truly grateful for this, as it impelled me to study earnestly to learn the truth for myself. It was about six months before I was healed of the rheumatism, but inside of three months I was healed of a double hernia, for which a support had been worn for over five years. I had contemplated undergoing an operation for this trouble, but the doctors did not give me much encouragement that it would be successful or of any benefit. I have been healed of Bright's disease in its early stage, of catarrh of the head and throat, of stomach disorder, with which I had been troubled most of my life, and of the liquor and tobacco habit. I have also been healed of deformed feet, the toes being drawn up in a cramped position.

As a result of the constant study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and of trying each day to live the life that we should live, doing unto others as we would have them do unto us, I have been freed from all this physical bondage. I am most grateful, however, for the overcoming of hateful temper and a disagreeable disposition which had gotten me into many difficulties and kept me out of employment most of the time, because I could not get along with anybody for very long. I have been able to solve almost every problem that has come to me, although as yet I have only started on the journey from sense to Soul.

My constant desire, in gratitude for Christian Science, is that I may show myself a workman approved unto God.

JOHN J. EDINGTON, San Francisco, Cal.

✧

[Translated from the German]

Human language never seems more inadequate to me than when I endeavor to express my gratitude for Christian Science and for the work accomplished by its Discoverer, Mrs. Eddy. About two and a half years ago, when I first heard of this wonderful teaching, I had reached the point where I took my suffering for granted and had ceased to expect to receive help. My interest in Christian Science was aroused by a dear relative of mine, because I was seeking after a more satisfying religion. That my expectations were far surpassed will appear more clearly from the following brief account of my sufferings and subsequent healing.

Sixteen years ago I was taken ill with appendicitis, and lay with ice on my stomach day and night for many weeks. How much I would have been spared had I known then of the power of Truth! Finally peritonitis set in, and when I recovered after many weeks, I had to learn to walk again. I was not fully restored to health, however, until comparatively recently. At first I suffered pain only when working, but as time went on the suffering became constant, and mental depression, sleeplessness, and an ever increasing convulsive cough were added, until seven years ago my condition grew almost unbearable. I was treated by many physicians, but in all cases without benefit. Then a professor advised an operation, as he assumed that all my sufferings were due to appendicitis. After an extensive operation the pain disappeared, and I was hopeful that in time I would regain my normal strength and ability to work; but ten months later the old pain returned with great severity, and with it all the other symptoms, at first only occasionally but later regularly every second or third week, despite the conscientious efforts of the physicians.

I had submitted to what I believed to be an unalterable fate, when through divine Love I was led to the fountain of Truth. I was freed of a great weight when I began to understand Mrs. Eddy's explanation of the Bible. I also realized that sleeplessness, nervousness, and the convulsive cough had vanished, and I at once perceived that Christian Science offered the means for my complete recovery. I immediately started to study the subject zealously, but the pain in the abdomen seemed to increase, and in the autumn of 1913 became so intense that I could hardly move. A physician was called, despite my earnest protests, and he declared that an operation must be performed at once, as he suspected an abscess in the region of the appendix. A delay of one or two days and the operation might be too late, he said; but I emphatically refused to be operated upon.

Material treatment was out of the question as far as I was concerned, and when the physician left I hastened to call a Christian Science practitioner, who came and promised to treat me. Then there came over me a feeling that I was tired of struggle, and all I did was to pray: "Lord, I know that help is with Thee. I am waiting on Thee." This was followed by an ineffable sense of relief, and I realized that till that day I had been trying to bring about my healing through an effort of the will, instead of relying implicitly on the activity of ever present Love. Fever and pain disappeared, and I was able to get up the following day. As no word had been sent to the physician, he came of his own accord on the third day, and appeared to be much surprised at seeing me well and out of bed. He again advised an operation, lest a catastrophe should take place; but I knew where help could be found and had lost the fear of evil.

Since that time I have enjoyed normal health, and a sense of deep contentment which I would not give up for all the riches of the world. Praise and glory be to the Most High, the creator of all good, whose works are so wondrous, who filleth our hearts with comfort and relieveth all our distress. Glory be to God!—FRAU R. HÜRZELER, Bern, Switzerland.

✧

For fifteen years I suffered from severe bilious headaches, which occurred frequently and would upset me for a week each time. I also had worn glasses for seven years. Six years ago the crisis came when my eyes grew rapidly worse. The eyeballs were swollen and the pain was intense. Then a friend advised Christian Science treatment, and I gladly consented to try it. In less than two weeks both these ills vanished, and with the healing came a great spiritual uplift.

Since that time many physical and mental conflicts have been wiped away by Truth. During the summer of 1909, while in Kansas City, Mo., to mortal sense I was overcome by the heat, which was intense, and was totally deaf for a few days. I called on a Christian Science practitioner, and after one treatment the hearing returned. Besides this, a sister was healed of typhoid fever in three days during that summer. In the past five years my mother, father, brother, and two sisters have come to know that God's kingdom is here and now, and we have had many proofs of the power of divine Love.

I am deeply thankful to God, and grateful to Mrs. Eddy for showing us the path to freedom from material laws and to true happiness. I am also grateful for many cases of healing which have come to me, and know that if we do God's will our reward is a clearer insight into the depths of His love.

CHARLOTTE M. GARY, Erving, Mass.

✧

Before coming into Christian Science I was unhappy, discontented, subject to the "blues," worried about lack of money and work, and was continually taking medicine. I did not have any religion or believe in the Bible as it is taught. My thought was reaching out, however, and I sought to know something of Christian Science by asking questions. One evening a friend came home from a visit where she had learned of this teaching, and she told me to read the four gospels. The next morning I did so, and my thought changed completely. I saw man as spiritual, and knew that Christian Science is the Christ-healing. Further, a "still small voice" told me I should not take medicine; but as I had taken it for seventeen years I knew of no way to get along without it except by having Christian Science treatment. I did so and was healed at once. This proved to me the truth of this teaching. I have been attending church for almost three years and now have a new outlook on life.

I have been healed of a tendency to take cold continually, of nervousness, and many other discords. I am grateful for the understanding of God which I have gained through the study of Christian Science, the knowledge that no matter what the material conditions seem, there is a sure solution to every problem. Each day I am learning more, and I find the daily study of the Bible Lessons a great help. I am grateful that the true idea of life has been given to humanity through the Bible, and that it has been made plain to us by Mrs. Eddy.

NELLE MARTZ SHARPLES, Chicago, Ill.

✧

Christian Science has revealed to me a God of love, unchanging good, and enabled me to know man as God's own child. There has been brought to my consciousness the peace which the Master spoke of, that the world can neither give nor take away.

I am thankful for the knowledge of God as Love, which came to me through the study of the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I would like to tell of an experience I had about twelve years ago. I had just finished reading the Lesson-Sermon when the postman brought the *Sentinel*. In looking over its pages my eyes rested on a little verse which was just what I wanted, and I read it many times. Later in the day I was running a sewing-machine, and in some way the needle passed through the end of my finger. For a few moments all was confusion. Then came the words from the *Sentinel*, and in a little while confusion and pain were overcome. This gave me a new sense of the meaning of the Master's words, "Lay up for yourselves treasures in heaven, . . . for where your treasure is, there will your heart be also."—HANNAH M. HAGMAN, Fort Worth, Texas.

✧

Christian Science has taught me how to read the Bible understandingly, has kept me free from drugs for over seven years, has healed me of a physical ailment from which I had suffered all my life. It has restored to me things believed to have been lost by the thought that nothing can be lost where God's light shines, and His light shines everywhere. It has helped me to overcome much resentment, self-pity, and self-love. Next to the Bible, Science and Health is the greatest book I have ever read, and were it not for this wonderful work the Bible would still be a closed book to me.

I have had many proofs of God's power to help in times of need. One evening I was taken quite ill with fever, a throat affection, and such severe pain in the head that I could not move the muscles of my mouth to speak. My mother telephoned a practitioner for treatment, and I slept well all night. In the morning, however, I was no better, so my mother again telephoned the practitioner, who said for me to rise and come to his office. He was told that it would be impossible, but he said to tell me if I was looking for trouble I could stay in bed and be as miserable as I wanted to be, but if I was looking to God for good to unfold I could rise and come to his office. When my mother brought the message to my bedside I could not speak, and I thought I could not get up. Then I looked away from myself to God for good to unfold, and almost immediately I rose, dressed, and went to the practitioner's office, feeling perfectly well. Of course there was no virtue in going to the office, but it was necessary to break the thought that I could not rise, even with God's help. Jesus made strong demands on all who came to him for healing, and every effort to prove our dominion is rewarded.

I can never fully express my thankfulness for all I have learned and am still learning by the study of the Christian Science Bible Lessons and all the works of Mrs. Eddy.

GRACE COLE, New York, N. Y.

✧

[Translated from the German]

I am indeed grateful for the opportunity to tell of the great blessings which have come to me through Christian Science. In 1910 I suffered severely from stomach trouble and pain in the back, these symptoms being supposedly connected with a kidney affection. I was also afflicted with rheumatism, and none of the medical means which were resorted to brought the health I was longing for. It was then that my sister-in-law brought me the first tidings of Christian Science. I immediately applied to a practitioner for help and read the Bible and the *Herold* assiduously; nevertheless for months my progress seemed very slow, as I experienced difficulty in gaining the right comprehension of Christian Science.

I went through many an hour of doubt and struggle until the understanding of our heavenly Father, ever present Love, dawned upon me and I saw that absolute faith in the omnipotence of divine good, and a life in accordance with it, alone would set me free. Then, after months of wavering, I began to experience in a very definite way the wonderful blessings which come from a whole-hearted, deep trust in God. I became able to work as never before, and was not in the least incapacitated when lifting or carrying heavy objects, as had formerly been the case, despite the truss used as a support. Of course I discarded this when the right recognition of this blessed Science came, and now my whole trust is set upon God. Treatment was necessary a short while longer, when I realized my complete healing. Now I am perfectly well.

To Christian Science I owe health and a new, right sense of life; and even more, the recognition of the Father's all-inclusive, infinite love, the knowledge that He forever cares for His own, and that all blessings are present, if through following the right course in thought and deed we become fit to be partakers thereof. My deepest desire is that many people may through Christian Science be led to true self-knowledge and the right understanding of God. I am so thankful that there was found one fit to impart to the world again the saving truth contained in the Master's teachings, and above all I am grateful for having found God and learned to pray to Him aright.

FRIEDERIKE SUHL, Stendal, Germany.

For three years before hearing of Christian Science I was laid up with a tubercular knee. I had to lie in one position and could not move; indeed, I had lost all power in the right leg. The bed was boarded to keep it steady, as the slightest vibration gave me intense pain. On the few occasions when it was necessary for me to be moved, I had to be lifted with great care and was always worse afterward. I had a great deal of pain and often lay awake night after night. Many doctors and various treatments were tried, but none of them gave me permanent relief. Just before we heard of Christian Science my husband called at a famous hospital in London to ask the doctors if they could suggest anything further that could be done for me; but they said all they could do was to alleviate the pain in some degree, as there was no cure.

Altogether we were hopeless, for it seemed as if I would just have to lie there the rest of my days. Then some one sent me a *Christian Science Sentinel*. I read it and was made hopeful at once. My husband made some inquiries of a lady who was a Christian Scientist, and was told there was no need for me to suffer, as it was not God's will that I should do so. She also lent me her copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I read it for a fortnight. Then we purchased a copy for our own, as I felt I had found what I had been wanting all my life. This lady also came several times to see me and encouraged me to try not to be afraid to trust God, for I was full of fear. This was in November, 1912.

The following February I asked for help from a Christian Science practitioner and gave up all my many material remedies. This help was given me with unfailing love and patience, and very soon I could walk a step or two in my room, and also sit on the sofa a little while each day. In May I began to go out daily in an invalid chair, and I shall never forget how delighted I was to be outdoors once more. I was then able to be up all day and go about the house more naturally. By the end of July I had quite given up the chair, was able to walk like other people, and was free from pain. Since then I have been able to walk about wherever I wanted to go. My husband and I often take long walks of five miles or so, and I can honestly say I am no more tired than he is. I can run up and down stairs, and altogether feel freer than I have felt for years, as I had a weakness in the knee for some years before I was absolutely laid up with it. The knee also became stiff while I was ill, but this too has been overcome, and I can bend it quite naturally.

For all this I feel I can never sufficiently express my gratitude, but I am far more grateful for the spiritual uplift, for the great change in thinking of which the physical healing is only the outward sign. I am thankful for the overcoming of fear, and for the weeding out to a certain extent of many faults, also for the understanding of God which one gains in Christian Science. My earnest desire is to gain more of this understanding.

Alice M. Kelly, Newcastle-upon-Tyne, England.

✧

I wish to offer a brief testimony of gratitude for what Christian Science means to me. I was getting along only fairly well in life, but had found engineering work interesting and was ambitious to achieve success. While physicians had not told me that I was seriously ill, I did not feel satisfied with my physical condition, and because of this there was a constant fear that I could never be very successful. How to become robust I was at a loss to determine, so conflicting seemed the various theories. I was ever on the lookout for a satisfactory philosophy of life, and was not content to go blindly on from day to day with the prospect of worldly success but with an unsatisfactory standard of righteousness to govern my actions in attaining it.

At a time when the outlook seemed darker than usual, Christian Science was offered as a possible solution of my difficulties. With more doubt than confidence, but with a willingness to consider Christian Science from its own point of view, I visited a practitioner. An hour's talk convinced me that it was worthy of investigation, for a new light was thrown on this human life-problem and I caught a glimpse of the stone which the builders had rejected. From that day to this, over seven years, I have been a constant student of "Science and Health with Key to the Scriptures," the text-book of Christian Science, and the other writings of its author, Mrs. Eddy. The methods therein explained for applying Truth in this human experience have also been constantly used, and they have never failed.

Our children do not know what it means to depend upon medicine in time of physical ills. When to the human sense of things one of them was afflicted with a malady which in addition to causing much suffering was diagnosed by physicians as probably incurable, patient application of Christian Science alone removed all trace of the complaint. We have indeed found access to the great Physician, "who healeth all thy diseases."

Perhaps one of the most helpful things I could speak of is my recent experience in accepting the position which I now hold. During the first few days many of those familiar with the conditions told me that I was undertaking a most difficult task, that many before me had tried and failed, and that they sympathized with me. My study and practice of Christian Science had, however, so fortified me against such arguments that I was not affected by them. I knew that "with God all things are possible," and as the difficulties have presented themselves, each in its turn has been overcome. I have been here nearly three months and I read in the faces of my friends that they marvel at it, and wonder how I do it.

I am happy to be of service to others who are reaching out for more life and freedom through this Christ-teaching, and I can say that every day the way grows brighter "unto the perfect day." I am indeed grateful for the privilege of sharing in carrying forward the work inaugurated by our Leader.

Charles K. Miller, Coyote, Cal.

✧

I came to Christian Science for physical healing for my mother and myself. After all material means had failed, we were advised by a friend to try Christian Science, and we decided to do so. My mother was in a very critical condition. She had been under medical treatment for months, and the physician then in charge told a member of the family that she would soon pass on. We felt sure that she was suffering from a malignant growth in the stomach, as she had nursed two members of the family through the same disease and was familiar with all the symptoms.

When we called for a Christian Science practitioner, my mother was indeed almost within "the valley of the shadow of death," but in a remarkably short time after dropping all drugs and relying entirely on God, divine Principle, she was completely healed. The growth dissolved and all pain passed away, and she has never had a return of it since.

With this healing there came to me a spiritual uplift, a wonderful unfoldment of Truth and Love. I began earnestly to study the Bible, together with our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, to find out how this healing was brought about, and gradually, with the aid of a loving practitioner, my own inharmonious conditions began to vanish one by one, though many of them had

Digitized by Google

been chronic. Glasses were laid aside after wearing them for seven years, and my eyesight is now perfect. Likewise stomach disorder and chronic bowel trouble have disappeared before the word of Truth.

Words are indeed inadequate to express our deep and heartfelt gratitude for all that Christian Science has done for us. It has given us a better understanding of our Father-Mother God, who is ever present and ever ready to help us in our need. We are also grateful to our beloved Leader for the revelation of this new-old truth that is so uplifting to mankind, and more than all, thankful to God, the giver of every good and perfect gift, for this truth.

EVALYN H. MARCOTTE, New Orleans, La.

✧

For three years I was an invalid, and for fifteen months helpless. I had many doctors and tried all material remedies we heard of, but no permanent help was received. The doctors advised an operation, although they could not say it would help; but at last, when I was in despair, Christian Science healed me. A friend told us of this saving truth,—that God is All-in-all, there is none beside Him,—and I was truly ready to accept it. That was twenty years ago.

I send this testimony with a heart full of love and thankfulness to God, and gratitude to our Leader, Mrs. Eddy, hoping it may help some poor sufferer out of darkness into light.

CELISTA C. DODDS, West Boone, Iowa.

✧

Christian Science has done a great deal for me. Two years ago, when my arm was swollen so I could hardly move my hand, and badly inflamed, the teacher at school said the condition was due to blood-poison, and if Christian Science could do anything for me she would think there was something in it. My mother had many times done good work in Science for me, but this did not yield to her treatment. When we called a practitioner for help, there was immediate improvement, and the next morning I could raise the hand above my head, the swelling was all gone, and I was healed. I had only just recovered when I was attacked by appendicitis. The suffering was intense, and I was to mortal sense in a bad condition. Again we called the practitioner, and I was entirely healed after several treatments.

One year later I was thrown from my horse in such a way that he stepped on my face, cutting it badly. I was also internally injured. By holding to the truth I was able to reach our business place and my father then helped me home. My mother came quickly to the rescue and was so clear and fearless that I was sustained and strengthened. Then I went over the Lesson-Sermon with my parents. Later we called for help from a practitioner, and I was soon perfectly healed. I am thankful to God for the truth as revealed in Science and Health; it has always met my need, and has protected and saved me in times of danger.

It has been wonderful what God has revealed to us in our home at all times of sickness and trouble, and they have been many. I cannot close without thanking God, and expressing my gratitude to Mrs. Eddy.

G. W. KREASAN, Preston, Ontario, Canada.

✧ ✧ ✧

More's felt than is perceived,
And more's perceived than can be interpreted,
And Love strikes higher with his lambent flame
Than Art can pile the faggots.

ELIZABETH BARRETT BROWNING.

From Our Exchanges

[The Christian Commonwealth]

Although the greatest determinant of modern faith, influencing every clause of the creed, is our changed idea of God, yet it is with regard to the historic figure of Jesus that we are most conscious of the working of the new knowledge. The whole force of modern historical study, with its rediscovery of ancient texts, its abstraction of sources and editors, and its analysis of evidence, has been turned upon the half human and half divine figure which the church has taught us to find in the New Testament.

What has been the result? First, there has been a great increase in the study if not the imitation of Jesus' life, regarded as that of the greatest of the saints. Secondly, experience has generally found something unexplained and inimitable in Jesus' character. But thirdly, there is a growing disposition to think that while this experience justifies a different attitude toward Jesus from that which we adopt toward other saints, it need not involve acceptance of the Catholic Christology, but points rather toward a recasting of this in a modern form.

The Christology of the creeds is the statement of a problem, not the solution of it. It requires us to recognize just two elements in the faith,—the historical nature of Jesus, from whom our religion springs, and his transcendence as an object of loyalty and worship. But it does not tell us how the two sides of this antithesis can be held together. It is better to think even of the Athanasian creed as a guide to definition than as itself defining the faith. We cannot bring the two images of Christ into focus so long as we go on using the old instruments.

Meanwhile, the new knowledge hardens the outline of each image and makes the discrepancy between them more evident. We realize, through our study of contemporary Judaism, especially its apocalyptic outlook, that there were features in the historical Christ which had to be transmuted before he could become the object of the church's worship. We learn from comparative religion how loose may be the relationship between historical facts and their corresponding religious faith, and we can apply its principles to the early developments of Christianity. Thus it becomes more difficult every day to be content with the bare and unexplained equation of the historical and the transcendent Christ, the human and the divine, which is presented to us in the creeds and in the traditional interpretation of the gospels.

[John Whitehead in *New-Church Messenger*]

The coming of the Lord that is needed is a coming in the light of truth. The clouds that trouble us are the clouds in the mind. The clouds of Scripture are mental clouds arising from the non-understanding of the letter of Scripture. It is these clouds of the letter, the numerous contradictory explanations and interpretations, which befog the minds of many. The truth is needed in definite and clear forms, as glory in the cloud, revealing our Lord as the God of heaven and earth.

[Zion's Herald]

When Jesus is "in the house" it is hard to keep the multitude away. It was so in Capernaum, it was so in Jerusalem, and it is so today. The eager people followed him into the wilderness; they pressed against him at the shore of Galilee, and they shouted hosannas at the triumphal entry. And when he went into a solitary place to pray, the disciples followed him and said, "All men seek for thee." Jesus was the

Digitized by Google

center of a surging, swaying, soul-hungry crowd that sought the Master even when he would speak with the Father.

It is the same today; the multitude has not changed. If it is known that Jesus is there, the people will come and fill the house. Every selfless great man who has preached the truth has found the multitude thronging him. If there is that in the man's life and message which makes it known that Jesus is there, the people will come to hear him.

[*Western Christian Advocate*]

Every Christian is familiar with the Scriptural exhortation to "grow in grace, and in the knowledge of our Lord." But it is usually thought that this refers exclusively to that vital knowledge which we include in "experience." It is taken for granted that it applies only to the inner life of the soul and the consciousness of the operation of the Spirit within. But why may it not also take in our mental conceptions and convictions about profoundest religious truths? Why should there not be a constant intellectual growth—a deepening and widening of our thoughts upon holy things? Why should we not seek to serve the Lord with all the understanding as well as with all the heart? Why should we not expect that the God of our Lord Jesus Christ, the Father of glory, should give us a spirit of wisdom and revelation in the knowledge of Him? Why should we not seek to apprehend, intellectually as well as spiritually, with all saints, what is the breadth and length and height and depth of the love of Christ, which after all passeth all our completest knowledge? Why should we not look for a constant transformation by the renewing of our minds?

[*The Christian Work*]

It is a great pity if we are forgetting how to worship; for it is worship which more than all things else, unless it be a great love, which is worship, lifts us out of littleness. A people which does not bow down in reverence before something more exalted than itself misses that lifting up which makes it great. We grow into the image of that upon which our minds are set. When our minds are set on things, we grow up to things only. When we know no one higher than our fellow man, our development stops at the point he has reached. When we constantly or even statedly put our mind on the great, high God, we begin to measure up to His likeness. We become godlike through thought on God and communion with Him. We grow holy in His holy presence. The divinity within us is called forth by our laying hold of the divinity in God. It would be a great pity if worship ceased; for a worshiping people has greatness of character, holiness of soul, a touch of God upon it, a bit of the eternal in its being, that a people which never prostrates itself in awe before the King of kings, the eternal Father, can never have.

[Charles F. Dole in *The Christian Register*]

When we say that the purpose of a church is to make the good spirit prevail, this does not mean any special emphasis on talking. We may do too much talking. What the world mostly needs is to discover that religion is like a new kind of power,—that it makes people better, stronger, wiser, happier, more effectual, more vital; that the members of a church gladly do what they promise; that they understand the beatitudes; that they can use the golden rule in their business; that they carry brave and trustful hearts. Men do not so much doubt whether God exists as they doubt whether it is possible or worth while to live as children of God. Their doubts would mostly cease if they found about them everywhere people who were enjoying a richer life on account of their religion.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Publishing Society

A new pamphlet entitled "Man's Unity with God" has been printed in the German language. This pamphlet contains seven articles from the Christian Science periodicals, which have been translated into German. The pamphlet is now on sale at the prices of our regular pamphlets, as shown on the opposite page.

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

A new pamphlet, "What went ye out for to see?" is now on sale. This pamphlet contains the four following articles from the Christian Science periodicals: "Principle Not Person"; "Jesus of Nazareth"; "Jesus the Christ"; and "Jesus and the Christ."

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Oxford India Bible paper edition, with stiff morocco cover. Single copy, $6.00, six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

Bids have been accepted by the department of agriculture for two large bodies of national forest timber estimated to contain 188,100,000 board feet. One is in California and the other in Utah. With one exception these are by far the most important sales made this fiscal year, which is expected by forestry officials to run considerably above last year in receipts from timber sales. The California sale is on the Plumas National Forest, in the Sierra Mountains. The most valuable timber is sugar pine, for which $3.25 per thousand was bid, with an estimated total of nearly 26,000,000 board feet on the tract. For yellow pine, of which the amount is put at over 37,000,000 feet, $2.60 was bid. Douglas fir, white fir, and incense cedar brought an average of about 70 cents a thousand for a total of over 43,000,000 feet. The purchaser will be allowed an operating period of fifteen years, besides a year at the beginning for the construction of necessary improvements; but the prices to be paid are subject to readjustment every five years.

The Utah timber is in the Wasatch National Forest, and will be cut chiefly for railroad ties. It comprises, according to the Government estimate, 82,100,000 board feet of green and dead lodgepole pine, Engelmann spruce, and Alpine fir. The total cut from all the national forests last year was 689,000,000 board feet. The timber receipts during the last fiscal year were in excess of $1,175,000.

After having been interrupted for some time, owing to the war, efforts are again being made to render the Werra River, Germany, navigable, a task that has been undertaken in connection with a scheme for constructing a waterway to the Danube from Nürnberg to Munich capable of being used by vessels of 1,000 tons.

A conference recently called by those interested in the work being carried out on the Werra was widely attended by representatives of the various states, towns, and chambers of commerce concerned, as well as by those of the Bavarian Canal League and of industrial and economic groups. The meeting agreed to take steps toward arranging for the construction of a grand waterway from Bremen to Donauwörth, with tributaries to Augsburg and Munich, and to initiate proceedings in spite of the war. It was also decided to incorporate the scheme worked out by Herr Meyer of Hameln for connecting the North Sea with the Danube in the program of the Bavarian Canal League, and to cooperate with the league for the furtherance of the scheme.

The caste system of India is being steadily undermined by the influence of English education, by contact with western ideas, and by the personal influence of the increasing numbers of Indians who cross the seas. Apart from these silent factors there are several organized bodies, such as the Aryan Brotherhood of Bombay, whose avowed aim and object is to put an end to the disabilities and restrictions of the caste system. Under the auspices of the Aryan Brotherhood, or some kindred association, conferences and movements are projected from time to time, the purpose of which is to draw the fire of the forces of reaction, and to bring prominently to the public notice the numerous evils attendant upon the caste system and the benefits which accrue from its abrogation.

Some years ago, according to a writer in *The Scientific American*, it was discovered on the coast of the island of Schouwen, in Zealand, that although the dikes remained intact, the waters oozed up in the dike-protected polders; the sea was undermining the land, and this undermining process began far out from the coast under the waters. The water ate into the land until the dikes, having lost their foundation, toppled over.

The engineer of the department of waterways for Schouwen, devised a means of defense against these inroads. He caused the seabottom itself, where it sloped away seaward from the foot of the dike, to be strengthened by laying over it a flooring of concrete. Such a flooring is in reality a sort of "mat" composed of blocks of concrete, each one meter square. Every such "mat" weighs 220 tons.

A national park service which would gather under one directing head the recreational, scenic, and historical reservations of the country now under diffused control, and which would assure their proper maintenance and development, is provided for in a bill just introduced into Congress. The director, under the direction of the secretary of the interior, would have supervision, management, and control of the several national parks and national monuments now existing and that may hereafter be created. The bill provides for the integrity of the national areas under any encroachments for commercial purposes.

Off the coast of Georgia is a low-lying swampy island called Blackbeard's Island, which has long been a paradise for migratory birds. The state of Georgia plans to cooperate with the Federal Government in setting aside this place as a bird preserve. For generations hunters have played havoc with the bird life of the South, and several feathered species are in imminent danger of extinction. Marsh Island, off the gulf coast of Louisiana, was the first important tract to be set aside as a bird preserve.

The approach of Indiana's statehood centennial has given impulse to a movement to set aside certain districts as common parks, for the enjoyment of the people. Enos Mills, who is credited with having successfully promoted the Rocky Mountain National Park, urges that Indiana set aside at least three spots. The first he places in Brown County, a picturesque wooded region not far from the capital. The second is known as Turkey Run, in Parke County, and the third embraces a typical section of sand-dune country on the southern shore of Lake Michigan.

In November the people of Oregon declared for state-wide prohibition by a majority of over eighteen thousand. Certain interests began to contest the election, and a test case was filed on Nov. 30. They were defeated in the county courts and in the superior court, and an appeal was taken to the supreme court of the state. The objections were mostly technical, and were all over-ruled by the supreme court, which sustained the law at every point. As a result of elections, prohibition went into effect Jan. 1, in Oregon, Washington, and Idaho.

The International Silver Company and the silver working concern of Manning Bowman & Co., both of Meriden, Conn., made effective on Jan. 1 a new wage schedule, under which employees receive more for a fifty-five hour week than they have been getting for a sixty hour week. Notices of wage increases affecting 75,000 employees have been posted in cotton mills in various cities in northern New England. Wages of 200,000 employees in various trades in New York City were increased Jan. 1.

The coal fields of Chile cover an area of 3,130 square kilometers. About half of this area is workable. The coal seams run between two and five meters in thickness, and this works out a yield of 3,600,000 tons to the square kilometer. The development of the coal industry began about 1843. The coal production in 1909 was 887,594 tons. Men employed in the fourteen mines working were 7,175. The nominal capital invested in the industry amounted to $32,970,000.

More than 75 per cent of the developed water-power of the United States is owned or controlled by public service corporations, and eighteen of these corporations control one half of the total. In addition, 120 public service corporations claim to own or control 8,600,000 horse-power of undeveloped water-power. No really new Federal legislation concerning water-power development has been passed for twenty years.

During practice in trench digging by French troops at Palaeopolis, on the site of the ancient Hephestia, in the northern part of the island of Lemnos, a Greek statue of Eros was unearthed. Further excavation by the troops seemed to prove that the ancient city was destroyed by an earthquake instead of being sacked by the Turks.

A movement launched by the various commercial organizations of Arizona to secure the annexation, virtually by purchase, of sufficient land from Mexico to extend the boundary of Arizona and California to the Gulf of California, has been furthered by Governor Hunt, who has written to Governor Johnson of California asking cooperation.

Dr. Romula S. Naon, Argentine ambassador to the United States, is authorized by his government, it is declared, to begin negotiations with Chile for the preliminary basis of a quadruple arrangement between the United States and the A. B. C. powers for the protection of neutral states.

Larger intellectual relations of Spain with the world is indicated by the recent election of two Harvard University professors to the Real Academia de Buenas Letras de Barcelona.

The government of Chile has authorized the director of public works to spend 143,000 pesos gold in prosecuting the work on the railway from Iquique to Pintados.

The registration of students at Harvard College and graduate schools this year is 4,716.

Danger of Making Excuses

ALFRED FARLOW

ONE of the most prolific causes of mistakes is the habit of excusing one's self on the ground of having been influenced by some other person. It is a habit which dates back to the beginning of the world's history and plays a prominent part in the Adam-allegory.

It is entirely proper that one should note his proneness to foreign influences as a warning and as a means to remind him of needed caution or defense against such supposed influences, but to excuse one's self on the basis of having been unduly influenced is simply to admit that one has not the moral stability to withstand such influence and constitutes an admission of weakness. It is quite as unbecoming Christian manhood, and quite as harmful, to blunder by invitation as to err from one's own initiative. We are not on the safe side until we are strong enough to resist undue outside influences as well as our own weaknesses. St. Paul refers to the pressure of principalities, powers, things present, things to come, and so on, which beset the Christian in his warfare; but in another connection he says, "None of these things move me."

One of the essential duties is to withstand the intruder and meddler. Christian Science teaches us that "man is properly self-governed only when he is guided rightly and governed by his Maker" (Science and Health, p. 106). Every foe of righteousness within and without must be silenced, and we must be governed alone by divine Principle in order to gain our crown. An excuse is a form of self-justification. It amounts to an argument that the wrong concerned is within the bounds of propriety because other things and persons besides one's self have contributed to the act. If, however, we have the law of right doing written in our hearts, we shall be alert to its demands whenever a suggestion of error presents itself and whatever its source. Paul says that in the cases of those who are striving to obey the law of God their consciences also bear witness, "their thoughts the mean while accusing or else excusing one another."

The blunderer is none the less in error because his act was suggested to him. The trickster who persuades us to buy a block of worthless or doubtful stock places himself in the criminal class, but this does not atone for the fact that we have willingly been duped, nor does it in any degree lessen the sure, just penalty. We must learn to be wise enough to take care of ourselves in the presence of all sorts of evil persuasions, whether audible or mental. We must be shrewd enough in truth and righteousness not to become a prey to those who go about to devour us; and the wisdom and moral strength necessary to this end will be reached more rapidly when we cease to make excuses, when we cease to condone our mistakes on any ground whatever, and stick to the text that divine Mind is the only real power and influence.

One often excuses himself in errors of omission on the ground that he "forgot it," but every one knows that before one can forget a thing he must first have remembered it, and the time to do a thing is before one forgets it. It is not practical to do things which are forgotten, and the declaration "I have forgotten it" is simply a confession that one did not take steps to insure the doing of the duty when he did remember it. Most things are remembered at least once, and one opportunity is sufficient; for this reason we cannot justly complain if any given opportunity comes but once in a lifetime. It is well to meet obligations as they are presented. Procrastination is forever robbing us of opportunities, and it is our business promptly to put an end to its rule.

Forgiveness

SOPHIE R. WEINERT

THE successful effort to overcome anger or resentment for wrongs experienced, though an important and necessary step toward the solution of a problem, is not all there is to forgiveness. On page 497 of Science and Health Mrs. Eddy sounds the key-note of the whole matter when she says, "We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal." The terms of this forgiveness, so plainly stated in the Lord's Prayer, "Forgive us our debts, as we forgive our debtors," leave no loophole for misunderstanding or mistaking the way. We can forgive our debtors only as God forgives, that is, by "the destruction of sin." Science is very definite in its statement that "evil is nothing, no thing, mind, nor power;" that it "has no reality. It is neither person, place, nor thing, but is simply a belief, an illusion of material sense" (Science and Health, pp. 330, 71). Then where can sin be destroyed save in a supposititious mortal consciousness, in the believer's belief of sin?

We are all familiar with the expression, "I can forgive but cannot forget." Could we picture God as forgiving our sins and yet holding in thought the remembrance of them? On this point the Word saith, "I, even I, am he that blotteth out thy transgressions for mine own sake, and will not remember thy sins." Can we in any sense claim to have forgiven a debt that has not been canceled? Is it not this very forgetting of evil because we remember the allness of good, which constitutes forgiveness?

A recent experience brought this lesson home quite forcibly to the writer. Suffering one day from a peculiar sense of fatigue and depression for which she could not account, a search in memory for its incipience brought to remembrance a conversation from which a deep sense of injury had arisen. As the probe sunk deeper in the process of analysis, of a sudden the error lay uncovered, and she was enabled to see clearly that the cause of her suffering was not the act of another, as she had imagined, but her own magnified impression of it. Who was the real sinner? Had she not believed in the reality of error, trusted sense-testimony, and identified evil with a brother man? As the light of Truth illumined this occurrence, all sense of fatigue and depression vanished and the incident was put out of mind. The following day, when business relations again brought the person to her, she was surprised and delighted by the cordial greeting of her

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

fellow worker, and it was thus proved to her that "God's forgiveness of sin" had been made manifest "in the destruction of sin."

It is clear that if we do not feel hurt we are not hurt, and furthermore, when malice finds that its shots are fired in vain it soon gets tired of aiming at a mark it cannot hit. Some of us, however, may have been in the habit of thinking ourselves very superior when in spite of an injury we can greet a supposed enemy without resentment, even doing him a good turn as occasion offers; and yet in the next moment, perhaps, we meet a friend and relate to him the entire circumstance, mentally patting ourselves on the back for our generosity and forbearance. The truth of the matter is, as Mrs. Eddy has pointed out, that we have never anything real to forgive, and only a material sense of existence to reform, that false sense which thinks it can be injured.

Why does anything ever hurt us? Is it not because the love of self, of the mortal selfhood, is too prominent in our affection, engrossing it to the exclusion of God, good? If we loved good supremely, we could not see anything but good, for God, good, and His creations are everywhere. The disposition to resent injury is not far removed from the disposition to inflict injury. Both have their roots in self-love, and occasion alone determines which of the two will be manifest in us. Paul rightly discerned the nature of self-love when he classed it among the list of errors which war against spirituality and is "the law of sin and death."

In its truest sense, forgiveness is dependent upon that broad charity which covers a multitude of sins. As Paul has said: "Charity suffereth long, and is kind; charity envieth not; charity vaunteth not itself, is not puffed up, doth not behave itself unseemly, seeketh not her own, is not easily provoked, thinketh no evil; rejoiceth not in iniquity, but rejoiceth in the truth; beareth all things, believeth all things, hopeth all things, endureth all things. Charity never faileth." It is charity that solves the whole problem of forgiveness; charity which can be attained only by complete self-abnegation, the denial of that false sense which would relate everything to a personal I.

It is only by looking away from material unrealities that we are enabled to raise our eyes to the heights, those spiritual realities which reveal the ceaseless activity of the one perfect and divine Mind. Here, in that steadfast abiding which is sure augury of spiritual attainment, we will find that loving desire to forgive which gives happy assurance of being forgiven.

✧

A Practical Beginning

AMY C. FARISS

As human footsteps which lead onward and upward to higher action and wider usefulness appear to follow along a somewhat similar path, a new church-member is likely to be confronted by the universal question, How may I serve our cause most wisely now that I am a living stone in the spiritual structure known as a Christian Science church? From the Church Manual and from previous study such a one has already learned something of what his mental attitude should be in regard to the activities of the movement; but the desire for a definite place in which from day to day one's usefulness may be outwardly expressed, presses insistently upon the thought. To be a Sunday school teacher, to be appointed on committee work, to be one of the library staff, or in the distribution work; in short, to be what is usually spoken of as an active member, holds an important place in the new member's vision. That the work is already in able hands does not quiet the desire for actual participation in it.

One may read in our Church Manual (Art. VIII, Sect. 15), "God . . . supplies within the wide channels of The Mother Church dutiful and sufficient occupation for all its members," and in the Bible Jesus' admonition, "Lift up your eyes, and look on the fields; for they are white already to harvest," but "the laborers are few." Again and again one may read and ponder these inspired words and still for the time being fail to see just how he can obey. At least this was the experience of one church-member. Being the only Christian Scientist in a locality which was rather remotely situated, she had few acquaintances within the church; and as she imperfectly realized even the mental help, which might have been more freely given, she seemed lost in her new, bright world, its joys were dimmed because no familiar hand or loving eye sought or noted the still figure faithfully in place Sunday after Sunday, Wednesday evening after Wednesday evening. Where is the Master's work? she cried. Where are the white fields, the needed laborers, the "dutiful and sufficient occupation"?

"Desire is prayer," our Leader tells us (Science and Health, p. 1). So in time a pair of surprised eyes opened to behold the field ready for harvest, the work laid out. As is always the case, since every advancing command waits patiently for us to awake and respond, there had never been a time, after the responsibility of church-membership had been assumed, when constant, needful, helping, and helpful action had not been provided. The difficulty in seeing it had been due partly to the fact that self had wished suddenly to arrive at some busy position which gave opportunity to mingle genially with other workers.

Now that a clearer view was obtained, an unending field was discovered in which laborer after laborer might enter and none usurp or hinder another's work. The whole vast state in which the awakened one resided swept out as an immense field, and even beyond its borders a thoughtful hand might reach. No remote habitation could hinder here; no directors' meeting need pass on one's fitness for the work; no notice was necessary to tell that the hour of action had arrived. The work once begun, it soon developed unthought of possibilities. And what was this work, what are the wonderful possibilities awaiting each earnest heart? What is this work within our church supplied by God? All who seek may find an answer, and one of these is the sending of *The Christian Science Monitor* to others.

With the solution of the problem came the method of procedure. It was discovered that by a little care the *Monitor* could be slipped from its wrapper, leaving the latter intact, and that nimble fingers could as readily slip the copy back in place when ready for its outward journey. The words "return address" were written before the original receiver's name, which was slipped up to give the right space for the new address. This method was found very expedient. Articles were marked as read, and in case there was more than one in the family, a postal card informed the members that they would find their special items marked by one cross, two crosses, three crosses, and so on, as signified on the card. A list of names was made from the most promising persons of the sender's acquaintance.

In the extreme suburban section of the city lived three dear little children and a faithful mother just budding into Science. What did the *Monitor* contain for them? Many times a verse suitable for each was chosen, and always an article of interest to a bright young boy,—what some other lad had accomplished, as, for instance, a description of the work of boy scouts. A touch of baby love was always discovered for the little tot of the household, a bird's timid note, the laughter of a child, or the whispering flutter of

Digitized by Google

falling leaves. Stories of other small girls were found for the enlightenment of the third member of the group, and the pictures on the children's page were often called upon to visit this abode. For the mother the Science article on the Home Forum page was marked.

Far beyond the northern line of the state copies of the *Monitor* found their way. A brother was captain of a dredger. What might not our paper mean to men in isolated swamps shut off from their own world? Special articles were searched out and forwarded to those who might be interested in them. An article on the hope of the Jewish people was mailed to one of that race; choice poetry to one who would greatly appreciate it; and the article "The Great American Pie" was sent to one who might not otherwise have been induced to look between the pages of our paper.

Then came a day when these marked articles and the letters despatched to the border of Mexico did much to hold a dearly loved one to a better life. The work which had been taken up long before now became a hope for good beyond all other outward activity. The *Monitor* was eagerly and thoroughly searched. No item was passed that might serve to offset the influence of the disturbing surroundings in which the loved one must for the time remain. Articles on the mail service, in which he was engaged, were marked and sent; all references to the parcel post or governmental action in this line, however slight, were selected; also articles in relation to the Mexican situation; subjects along educational lines; the calm, sane editorials and political discourses that would tend to counteract the agitated spirit of the hour.

During this period, which covered several months, instead of seeing an idle *Monitor* silently pointing to neglected opportunities, the necessity for added numbers was felt. Sometimes error would argue that the work might prove unavailing. But as the special mission of the paper is to bless mankind, it was plain that God would take care of the other end of the work. The sender's business was wisely to speed the messenger on its way. The blessing could not go astray in the transit.

Friendship

JOHN STEEN

Friendship, its joy and solace and inspiration, is universal in its appeal and beneficence. The understanding of Christian Science purifies and strengthens the relationship, and brings to light the eternal nature of all that it manifests of good and of truth. In order to approximate the perfect and unchanging—and this is the legitimate desire of true friendship—it must be based upon a mutual understanding of the truth of being; that is to say, to appreciate its joys to the full it is necessary first of all to know the truth about its real nature. Even on the human plane companionship is helpful and lasting only as it is founded on good, and when people become interested in Christian Science they become greater friends than ever. It is found that an unfailing remedy is now at hand for the elimination of all that is ignoble, sordid, and selfish, all that would mar the beauty and full expression of this relationship. What a joy for friends to know and begin to prove that the real man's identity is not material, not affected by sin or disease, but is spiritual and perfect now.

Christian Science destroys our belief in imperfection, and enables us to assert the good and deny and overcome all evil. The realization in thought of spiritual individuality gradually eliminates the sense of material personality. We have learned how to be "all of one mind" when we have come to understand that the real man is an idea of God, and that God's ideas are entirely obedient to and governed by the divine Mind of which they are the expression. Great is our joy when we begin to prove that it is impossible for the ideas of Him "with whom is no variableness, neither shadow of turning," to be at variance with one another. Then intercourse becomes sweeter and more unselfish and helpful.

On page 100 of her "Miscellaneous Writings" Mrs. Eddy says, "Science speaks when the senses are silent." Then she goes on, "Pure humanity, friendship, home, the interchange of love, bring to earth a foretaste of heaven." All true friendship is based on that which is good, and God being omnipotent good, it is only as we are good that we can be at-one with God and so at-one with each other. Again, God is Love, and the realization of this fact in Christian Science impels us to love our friends so truly that we will refuse to accept the false evidence that man is subject to material conditions, and declare ever for their spiritual identity.

We may thus see, too, how the beliefs of separation in time and space can be overcome through the understanding that God and His ideas are one and ever present. Fewer claims are made upon the personal presence and attention of our friends when it is learned that there is no separation in Mind between any of God's children. We know that there is no such thing as the rule of chance in God's kingdom, but that everything is done according to the requirements of perfect law, in harmony with unchanging divine Principle; therefore in reality everything is contributing to the welfare of ourselves and our friends, and this is proved to us in proportion as we acknowledge God to be our first and foremost friend. We have our friends' welfare only at heart. We have no fear or worry about them, because we know that wherever they are God is always blessing, sustaining, and upholding His children. In this knowing we can best show our love for our friends and help them.

That there is nothing far-fetched or impractical about this, Christian Scientists are abundantly proving in actual experience. Because friendship is a necessary, right, and good relationship, we must make ourselves worthy of it in every way, and we must look to God for our friends as for everything else. What a joy and consolation to know that we can never lose our friends, that true friendship can never pass away! Since it comes from and is a manifestation of God, good, it is indestructible and eternal. Our Master's estimate of friendship can be seen in his words to his disciples, "I have called you friends; for all things that I have heard of my Father I have made known unto you."

✧

Green Pastures and Still Waters

LAURA GERAHTY

During the long, anxious hours of a night of watching by the bedside of her child, a mother had much reason to be grateful for the healing and comfort derived from the twenty-third psalm as illuminated by Christian Science. It was then named "the cooling psalm," and it has ever remained such to the inmates of that home. On many an occasion during the last six years its benediction has been repeated in cases of need. Except the sips of cool water so frequently demanded when the little one was seemingly in a high fever, there was no other alterative employed than the constant repetition of this psalm; and it required little imagination or effort to lift thought from that mental picture of inharmony to the green pastures and the cool waters, while softly repeating to the little sufferer verse after verse of the psalmist's inspiring words.

In the magnificent strength of their simplicity and the uplifting appeal of their great humility lay the restoration,

Digitized by Google

and a quiet not to be found in all the drugs on earth. Because of their familiarity the remedy was close at hand, and between the few moments of sleep snatched at grateful intervals by the side of the little sufferer, the darkness hindered not at all the constant repetition of the well-known words, "The Lord is my shepherd." Mrs. Eddy gives us the spiritual sense of these words when she says divine Love is our Shepherd (see Science and Health, p. 578). Why then are we distressed and anxious when the verity of the Shepherd's care is understood and acknowledged?

"He leadeth me,"—of what consequence is the mortal dream of temperature and even delirium when spiritual sense is serene and peaceful, dwelling in safety, composure, and content in His fold? What matter though mortal sense tells of burning heat, if the pastures are green? And though fear may beckon the watcher to wander off into forbidden and dangerous enclosures, the Shepherd is ever ready to restore the straying sheep and bring it back in safety to the fold. There are no dangers or surprises at the table which the good Shepherd has so lovingly prepared for His own, no lurking enemy to startle or injure them as they pass innocently along in quest of food; for His tender care has chosen the paths of peace and safety, while His rod removes all obstacles and His staff supports the weary.

And so the song continues to the very end, one constant reminder of the divine love and care; that the goodness and mercy of God are eternal, therefore no circumstance can remove or destroy them, but they shall follow us all the days of our life. Knowing this hourly, and heeding it oh so gladly, we can well afford to promise to dwell in the consciousness of good forever.

✧

"Out of the mouth of babes"

ELMA E. WILLIAMS

As a man was driving an automobile along a country road one day last summer, one wheel of the machine dropped into a rut. The effort to extricate the car caused it to veer across the road and collide with a boy who was coming from the opposite direction on his bicycle. The bicycle was smashed, and before the driver could stop the car, two wheels—a front and a rear one—had passed over the boy's body. The driver was badly frightened, and ere he could collect his wits sufficiently to find out what had happened to the boy, the lad was standing beside him and saying, "Don't be alarmed, sir, I'm not hurt a bit."

Following this car was another automobile in which was a veterinary surgeon, who had witnessed the accident. This man refused to accept the boy's statement that he was unharmed. From his standpoint it seemed impossible that a heavy car could pass over a child's body without doing it some harm. He kindly took the lad and his broken bicycle home. On arriving there he insisted that an examination should be made, and to satisfy him the mother examined the boy's body and found it absolutely unharmed.

Now this mother is a working Christian Scientist, and by this is meant that she uses her understanding of Christian Science in a practical, sensible way, and teaches her children to use theirs in the same manner. She does not do their Science work for them, but has them do it. If the problem seems tolerably hard for them, her attention is directed toward increasing the children's understanding of Truth rather than toward relieving them of demonstrating it. Her children are sent to a Christian Science Sunday school and are taught to study the Lesson-Sermon as regularly and as thoroughly as they study their lessons for school. Then if discords arise they are taught to use what they have gained from their study in solving the difficulty.

The incident related above occurred on a Saturday. The Lesson-Sermon to be read in the Christian Science churches the following day was on the subject, "Is the Universe, including Man, Evolved by Atomic Force?" There had been a great many references in this Lesson-Sermon to the effect that matter is unreal, and these children had been obliged to study hard in order to grasp the spiritual fact, for matter seemed pretty real to them. The mother had overheard them discussing the Lesson among themselves during the week, and she told the writer that she was confident it was the truth her son had gained from this study, operating in his consciousness, which saved him from injury. When questioned by his mother concerning his thought during the incident, he said: "Why, I just knew that God is our Life;" and then he added that he also realized the nothingness of matter.

While going through this experience the child not only had no fear, but he maintained great presence of mind, even after the front wheel had gone over his body. The father of the boy is not a Christian Scientist, and he was filled with fear on seeing his son brought home with a demolished bicycle. The fear, however, was turned to gratitude and amazement when he learned the facts. He could not quite understand it and wanted to talk about it. Here again the boy put into practice his understanding of the truth, for he said, "Now let's not talk any more about it."

This boy's demonstration of God as the Life of man, and of the protecting power of a right sense of substance, has been so helpful to the writer that she wishes to share it with others. We have in this demonstration a practical illustration of the work which the Christian Science Sunday schools are doing in training the children to become right thinkers; we have also a proof of what is gained by having children study the Lesson-Sermon for themselves, leaving the unfolding of Truth in the child-consciousness to God's own guidance. We have, moreover, a proof that parents make a serious mistake when they try to do the child's work for him. Finally, we have a rebuke for that state of consciousness which declares that Christian Science is difficult to understand or cannot be understood; which says the Lesson-Sermons are incomprehensible, and the like. Here was a boy, less than a dozen years old, who proved that he could gain enough understanding of Christian Science to find protection and freedom in a very trying experience, to say the least. Paul says, "The wisdom of this world is foolishness with God," and conversely it may be stated that the wisdom of God is foolishness with this world.

Proofs of God's ever-presence and power in the child life should make us all more awake to the import of the Master's words: "I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and hast revealed them unto babes. Even so, Father: for so it seemed good in thy sight."

✧

Rejoice Always

ALFRED H. HULSCHER

THE way to the place of daily occupation led over a small stream which was uninteresting in itself, while on either side were flat stretches of marsh-land. Motives of convenience and utility had combined to fill the low places with all the refuse of a city, making the scene far from pleasing to the eye. Hardly a place likely to be a source of inspiration, one would say; yet morning after morning it was noticed that on a certain low tree a song-sparrow poured out rapturous notes until it seemed as if the little throat would burst. It was always the same tree, always the same song, and there was always the same appearance of obliviousness to the surroundings.

Digitized by Google

Involuntarily comparison was mentally made with a thought so often entertained and frequently expressed,—that pleasant material environment is essential to happiness or to the production of one's best work, and that the opposite condition can exert nothing but a depressing influence. A little reflection shows readily the futility of listening to any such arguments of mortal mind, and to refute their false claims recourse may be had to the teachings of the Bible and of Christian Science. The Master surely did not defer his demonstrations of healing until the surroundings might be more pleasing. Continually he sought to impress upon his followers the idea that "the kingdom of God is within you." Mortal mind declares the opposite, and the truth is sometimes not learned except by experiences which prove the utter inability of matter to contribute in any way to a true sense of happiness. All must sooner or later learn that happiness is from within, not from without, is neither enhanced nor diminished by material surroundings, and is available in proportion to the degree of recognition accorded in consciousness to the divine source of all good.

Mortal mind is ever disposed to urge recognition of its own baseless claims, and the necessity for constant watchfulness is nowhere more apparent than in the so-called "little things" that make up the round of daily existence. It is so easy to see discordant conditions as external to one's own consciousness, and seemingly so difficult to realize the simple truth that such conditions are not entitled to even the recognition given a mirage in the desert, which deceives the traveler with its phantom of distant lake or city. It is so easy to allow duties to become burdens instead of pleasures, and to look with longing eyes upon a distant environment which has been painted in glowing colors; so easy to persuade one's self that lack of opportunity of association with other Scientists is responsible for failure to advance in the understanding of Truth and to master one's problems. It may be any one of a dozen other subtle suggestions of mortal mind that, failing to make an inroad into one's thought from without, attempts to destroy the citadel from within and finds a start for the destructive fire in the ready kindling of discouragement.

An attitude precedent to the destruction of all disturbing thoughts is that of rejoicing. Nothing is more simple than this, nothing more easy, and nothing withal is richer in results, particularly when exercised habitually instead of occasionally. Even in the old thought there is not a person but can find some cause for rejoicing; how much more one who has received even a little instruction in Christian Science, and who should know that nothing but joy is ordained for all of God's children, and that in equal measure. Such a feeling finds natural expression in Christian song, and turns without hesitation to that rich storehouse of comfort. Every student of Science will recall times in his experience when nothing seemed to dispel the clouds of doubt and fear until some favorite hymn came to mind, and by its words of cheer and promise revealed the sunlight of Truth. Appreciation of the efforts of those who have labored faithfully in collecting and disseminating the manna of Christian Science literature, especially our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, also takes full note of our Hymnal, whose study inevitably brings one to hear "songs in the night." By so doing we can, like the bird, see the blue sky above instead of the muck and refuse below, and find that "the trivial round, the common task," instead of being disagreeable or distasteful, will offer, as the poet tells us,—

Room to deny ourselves, a road
To bring us daily nearer God.

Selected Articles

[Charles W. J. Tennant in *Finchley* (England) *Press*]

Your correspondent is not correct in his assumption that it is an argument of Christian Science to say that "since the creator is all good there is no sin, suffering, or sorrow in the world." Christian Science does not teach that sin and suffering do not seem real to the material senses; it teaches that "like produces like" throughout infinity, and that since the creator is Spirit, creation must be in reality spiritual, governed by spiritual law. The world, as seen by the carnal senses, is not spiritual. We are told very plainly in the Bible that God is "of purer eyes than to behold evil." Therefore the universe, from the view-point of the divine Mind, must be pure, perfect, and eternal. We are also told that the "carnal mind," that mind which relies for its evidence on the testimony of the physical senses, "is enmity against God." Its view-point must be the reverse of God's view-point.

St. Paul tells us to let that Mind be in us "which was also in Christ Jesus." Now, if this means anything at all, it means that we are to think as Jesus thought. It is quite clear from the works of our Master that he did not think from the carnal mind standpoint when he healed the sick, raised the dead, multiplied the loaves and fishes, or walked on the water. Christian Science teaches one how to obtain the Mind of Christ, and how to prove that one has it by "signs following."

[Robert S. Ross in *Buffalo* (N. Y.) *Express*]

Every reader of the *Observer* knows people who have failed to get relief by *materia medica*, and at least some of them know of people who have been healed by Christian Science after medicine had failed. Now, who among them would approve of the efforts that are being made by coercive medicine to prevent individuals from employing the method of treatment which they have found to be best suited to meet their own individual needs, no matter what the method may be? Surely, cures should carry more weight than mere claims.

If departure from popular medicine brands one a medical impostor, then the only infallible healer the world has ever known was also the world's most notorious charlatan. According to the reasoning of the *Journal of the American Medical Association*, Jesus of Nazareth and the Science of Christianity which he taught and practised would today be deemed inimical to both the health and morals of the public. But what Christian could agree with such a conclusion? The *Journal* lays great stress on the importance of physical diagnosis in the successful treatment of the sick, but did it ever occur to the *Journal* that physical disease is merely an effect, and that drugging and cutting an effect does not in any sense remove the cause? This explains why, in many cases, diseases which for a time seem to be cured by medical treatment recur again and again.

On the other hand, Christian Science teaches that all physical effect is due to mental causation, to fear or sin, either consciously or unconsciously entertained by the human mind, so called. When Jesus told his followers that the things which defile a man are sickly, sinful, discordant thoughts, he meant of course that sin, disease, and death are due to wrong thinking, or the "carnal mind" which, as Paul wrote to the Romans, "is enmity against God," good. This wrong thinking and its effects are overcome in the exact proportion that mortals let that Mind be in them "which was also in Christ Jesus," whereby error is corrected by the truth.

Therefore, in order to be effective, both diagnosis and treatment must be purely mental instead of physical. This

Digitized by Google

was the Christ-method of healing, the science of which Mrs. Eddy discovered in 1866 and in 1875 embodied in her famous book "Science and Health with Key to the Scriptures." If, as the *Journal* says, "one who wants his watch repaired sends it, not to a blacksmith, but to a watchmaker," then Christian Science replies that if one would be physically well he must first be mentally right by applying to his case not the crude methods of physics, but the skilled medicine of Christian metaphysics.

✧

[Joseph H. Mendinhall in *Wilmington* (Del.) *News*]

It is regrettable to notice that an evangelist has stepped aside from his work of "glorifying God" to criticize a religion with which, judging from his words as quoted, he is unacquainted.

The most practical answer to this criticism is to be found in Mrs. Eddy's message on the occasion of the dedication of the Christian Science church edifice in Concord, N. H., July 17, 1904, as follows: "I am asked, 'Is there a hell?' Yes, there is a hell for all who persist in breaking the Golden Rule or in disobeying the commandments of God. Physical science has sometimes argued that the internal fires of our earth will eventually consume this planet. Christian Science shows that hidden unpunished sin is this internal fire,—even the fire of a guilty conscience, waking to a true sense of itself, and burning in torture until the sinner is consumed,—his sins destroyed. This may take millions of cycles, but of the time no man knoweth. The advanced psychist knows that this hell is mental, not material, and that the Christian has no part in it. Only the makers of hell burn in their fire. Concealed crimes, the wrongs done to others, are millstones hung around the necks of the wicked. Christ Jesus paid our debt and set us free by enabling us to pay it; for which we are still his debtors, washing the Wayshower's feet with tears of joy" (The First Church of Christ, Scientist, and Miscellany, p. 160).

The Wayshower, Christ Jesus, proved the power of divine Love to heal sin, sickness, and death, and through the understanding of divine Love as taught in Christian Science many have been reclaimed from the gutter, and many have learned of God's protecting care and have thus been lifted from the dregs of sin. The reformed lives of those who have left prisons, reformed through Christian Science, speak for the efficiency of his power. As Christian Scientists we are grateful that we are able to follow the footsteps of the Master sufficiently well to be instrumental in bringing out enough of the truth which he taught to heal, even if it "takes a long time," as the critic states; but as a matter of fact many cases are instantaneously healed. In all cases the recipient of the healing is blessed by being brought closer to God, into better at-one-ment with God, good.

✧

[J. M. Baker in *The St. Lucie County Tribune*, Fort Pierce, Fla.]

In the editorial on Sunday school work your readers are warned against heresies and various isms, among which Christian Science is included. Christian Science teaches that human opinion emanates from the mortal or "carnal mind," which Paul said was "enmity against God." The statement is made that Christian Science is "nearer Brahmanism than Christianity in theology" and that "it has not the first principles of a science worthy the name." The fact that Christian Science is classed with Brahmanism by the minister shows conclusively that he is not familiar with the two teachings, as no similarity exists between them.

It is admitted that every one wants the truth that Jesus said would make us free,—free from sin and sickness. When this is accomplished, then we can say, "Now are we the sons of God." Jesus proved his gospel by his works. To show that he expected the same of his followers he said, "He that believeth on me, the works that I do shall he do also." When John sent messengers to Jesus to inquire if he was the Christ, the Master referred them to his witnesses—the healings. Two of the main reasons for the great growth and prosperity of the Christian Science church are: That the gospel as taught and practised in Christian Science heals the sick and saves the sinner the same today as it did in the first century. Second, that Christian Scientists are taught to be "doers of the word, and not hearers only." We think that if the full gospel were taught and practised without dogmatism and division by other Christians there would be less reason among the clergy for fearing Christian Science.

In the Christian Science Sunday school the child is taught first the ten commandments, the beatitudes from Jesus' Sermon on the Mount, and the Lord's Prayer with its spiritual interpretation as given on page 16 of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. As the pupil advances he is taught the Scriptures from Genesis to Revelation, and through a spiritual interpretation of them the Bible is made the Book of life to man. The fact that Jesus taught the truth, that his promises are true and available here and now, and that the "kingdom of heaven is at hand," is impressed upon the child; also that God does answer prayer in the healing of all human ailments and the meeting of every need.

✧

[Editorial in *New Haven* (Conn.) *Register*]

There is now and then a physician and surgeon who, in the eyes of his fellows, must be reckoned terribly "unprofessional." One of the tenets of the profession is to preserve an unbroken air of deep and mysterious wisdom in the presence of the "invariably" ignorant layman, while maintaining a no less solemn front of infallibility in the presence of fellow physicians. The bluff of knowing it all has to be kept unbroken. It must be an awful strain. Is it surprising that there should now and then stray into the sacred circle of the profession a man with a human sense of the fitness of things?

Perhaps it is because he is really big enough to be independent that Dr. John B. Deaver, the distinguished surgeon, talked right out to his fellows at a medical meeting in Philadelphia recently. He told them, if he is correctly reported, that many physicians made errors, and that every young surgeon would have to fill a graveyard before he became an accomplished practitioner. As respects the public, it may be that this is the brutal attitude of "What are you going to do about it?" He was talking, however, to doctors. It is most to the point that he was talking right out, whether or not he intended to have his remarks get any considerable publicity.

For thereby are we, the public, warned. We are warned that there is among certain members of the profession an indifference to the ultimate welfare of the public. We are experimental stuff—just subjects. We may be mediums for the demonstration of the wonders of medical skill, or we may be food for graveyards, just as it may hap. It may make a great difference to us which we are, but it is all in a day's work to the operator. We take all the risk. If we win we pay. If we lose the estate pays. The doctor wins in any case. This is a brutal way of putting it, but however brutal it is, we need the enlightenment. That this spot-light plays on only a minor portion of the medical profession, while the major part is made up of sincere, self-sacrificing men, with the high purpose to save lives and promote health and only

Digitized by Google

a secondary thought of reward, only modifies the risk we take, for we are not always skilled to discriminate until it is too late. So we may regard the frankness of Doctor Deaver as saving frankness.

✧

[Thomas E. Boland in *The Lebanon* (Pa.) *News*]

It is difficult to understand how any one, even though but slightly acquainted with the subject, could style the text-book, "Science and Health with Key to the Scriptures," the Bible of Christian Scientists. The latter part of the title of the book clearly indicates its character as a commentary on or explanation of the Bible. Had the critic read as far as page 497 of the book mentioned, he would there have found certain illuminating statements concerning Christian Science, called tenets, which all Christian Scientists accept. The first of these reads: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life."

It is not a difficult matter to distort the meaning of any book by taking from it certain phrases robbed of their context, grouping them, and then drawing an entirely erroneous conclusion. In the Christian Science text-book the definition of "God" (p. 587) is expressed by certain words, among which are "Mind; Soul; Spirit." When it is understood that the author of Science and Health in speaking of man (p. 516) as "coexistent and eternal with God," means the spiritual man described in Gen. i. 26, "And God said, Let us make man in our image, after our likeness," the true meaning is seen to be just the opposite of that conveyed by our critic.

The account of the spiritual creation which God saw was "very good," and of man as "his own image," is contrasted in Science and Health with the material account of creation, in which both the man and the ground are cursed (see Gen. iii. 14, 17). As Mrs. Eddy is unwavering in her acceptance of God as Spirit, which all Christian churches profess to believe, she naturally designates the spiritual creation as the true, and the material creation as the untrue or the "lie." Again our friend is quoted as using several disjointed phrases from Science and Health to draw the conclusion that Christian Science teaches "man is God." The Christian Science text-book very definitely disposes of such a deduction in the words on page 480, "Man is not God, and God is not man."

There is nothing startling in the assertion that matter is not real. Forty years ago Mrs. Eddy declared that matter is not real in the sense that it is not created by God, and therefore is not a fact of being. At least twenty years ago Thomas Henry Huxley, the eminent naturalist and biologist, declared: "After all, what do we know of this terrible matter, except as the name for the unknown hypothetical cause of states of our own consciousness." Thus Mr. Huxley says the existence of matter is hypothetical, while Professor Ostwald of the University of Leipsic, Germany, declares it is "a thing of thought." In the light of these statements by such high authorities, why should Mrs. Eddy's prior declarations along this line be singled out for criticism?

That disease and sin exist in human experience is as freely admitted by Christian Scientists as by any one else, for they have turned to Christian Science as a means of escape from these very plagues; but these afflictions are not attributed to God who is good and who is Love. Such things come into human experience only as the result of human ignorance of what God and the true man really are. Christian Science does not teach that the mortal, material man is "incapable of sin" (Science and Health, p. 475). It is only too obvious that mortals are quite capable of wrong-doing, and to argue the reverse would be contrary to every-day observation. We cannot, however, conceive of the spiritual, real man, made in the image of God, as sinning, unless we accept the unthinkable conclusion that God Himself sins.

Our town is indeed to be congratulated if it has been freed from all evil, misery, and suffering, so that nothing now remains to be attacked from the pulpit but Christian Science. It is, however, difficult to see why such an assault is made upon a religion whose adherents have accepted the tenet given on page 497 of Science and Health: "And we solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure."

✧

[Frank C. Barrett in *News and Globe-Star*, Westbrook-Woodfords, Maine]

Christian Science has spread rapidly during nearly half a century, and the last two or three years have witnessed its greatest growth. Surely Christian Science could not have attained its present position as a religion, in all parts of the world, unless it supplied a vital need of the people. Christian Science is not a mere theory or philosophy, but a demonstrable religion, healing sickness and sin, uplifting the sorrowing and broken-hearted, and reclaiming thousands from every form of evil to which mortals are subjected. If these good works are all "folderol," as our critic declares, then let us have more of it, for this is what Jesus promised would follow when his teaching was rightly understood and practised.

"By their fruits ye shall know them," the Master said, and this simple and practical test was the only one he mentioned as being of any particular value. The fruit that is good does not come from a corrupt tree; nor is it likely that many people, after having tasted good fruit, will ever leave it for the bad and support the tree that bears it. Any church which is fulfilling God's demands need never fear that the people will leave it for something not so good. Scoffing at another's religion is no part of the Christian Science propaganda, and it is to be hoped that other religionists may be equally forbearing.

✧

[Thorwald Siegfried in *The Yakima Republic*, North Yakima, Wash.]

On page 2 of her Message to The Mother Church for 1902, Mrs. Eddy states: "I never left the church, either in heart or in doctrine; I but began where the church left off. When the churches and I round the gospel of grace, in the circle of love, we shall meet again, never to part."

Christian Scientists freely acknowledge their gratitude to those laborers in God's vineyard, individuals and churches, who have helped to make the Bible the best known book of the world. In making the spiritual treasures of that book practically available to its readers, Christian Science is indeed perfecting a work the foundations of which have been laid by many noble and far-seeing men and women to whom the Bible held out the promise which is now being fulfilled by its sweet ministrations and its spiritual victories over sin and disease, poverty and death. As partners in that work of redemption Christian Scientists refrain from stigmatizing their colaborers. Even though it is plain to students of Christian Science that the godlike views of man presented by the Bible have been obscured in popular thought by the man-like views of God put forth in creed and sermon, they nevertheless endeavor to recognize and honor sincerity and honesty of purpose wherever it appears.

Editorial

Teaching the Children

FROM time to time we have given space, particularly in the *Sentinel*, to articles dealing with practical experiences in teaching in the Sunday school, for the reason that the many letters received at headquarters, requesting information as to the right way to carry on the work of the Sunday school, indicate that the subject is of wide-spread interest. It is also evident that there is not only an intention on the part of those who are most intimately connected with and responsible for the conduct of this work to put into it their best efforts, but there is a general desire that these efforts shall be rightly directed. This spirit is commendable, since what is said and done in this school for the Christian education of the young should always be in keeping with Mrs. Eddy's intent in establishing this important department.

Our Leader has made careful provision for the welfare of these lambs of the flock, and as fundamental authority on the subject of teaching the children we have the organic law of the church as contained in Article XX of the Church Manual (p. 62 of the present edition). It seems very clear, from a careful study of this by-law, that it was intended to define therein fully and specifically the scope of the subjects to be taught the children. In fact, it is couched in such definite language that there can be no question or difference of opinion as to just what our Leader considered fundamentally essential in teaching them Christian Science.

It is important to note, however, that the by-law does not say the teaching shall be confined to the mere letter of the commandments and the other subjects named. In a letter by Mrs. Eddy's secretary and which had her approval (*Sentinel*, March 3, 1906), it is stated that "it was not her [Mrs. Eddy's] intention to limit Sunday school instruction to the routine of memorizing the letter of the designated portions of the Scripture," but that "the children should be taught the *meaning* of the Ten Commandments," etc. From what view-point this teaching shall be given is plainly stated in the closing sentence of Section 3 of the by-law referred to; viz., "The instruction given by the children's teachers must not deviate from the absolute Christian Science contained in their text-book." This seems to make it quite clear that the instruction given the children should be along the line of the spiritual meaning and import of the Scriptures, rather than upon the basis of the material history of a race of people or a nation, useful as this history oftentimes may be in providing illustrations in point.

It will also be noted that in the by-law from which we have just quoted there is no provision made for the use of any other books in the Sunday school than the Bible and Science and Health. The one object in view is to teach the children both the letter and the meaning of "the first lessons," namely, the ten commandments, the Lord's Prayer and its spiritual interpretation by Mrs. Eddy (Science and Health, p. 16), and the beatitudes; after these "the next lessons." These "consist of such questions and answers as are adapted to a juvenile class, and may be found in the Christian Science Quarterly Lessons, read in Church services."

There is likewise no provision made for the "entertainment" of the children (this is a point on which there seems to be some question), and it is safe to assume that our Leader had nothing of this kind in view when this by-law was made. That which she did consider necessary and was careful to say, was that "they shall be instructed according to their understanding or ability to grasp the simpler meanings of the divine Principle that they are taught;" but it is worthy of note that she has said much the same thing about adults (Science and Health, p. 396, l. 22; and p. 414, l. 15).

Nowhere does Mrs. Eddy say that Christian Science is to be sugar-coated or diluted in order to make it more palatable or to bring it down to the comprehension of the beginner, whether young or old. On the contrary, she insists that it shall be given out only in its purity, and this necessarily applies to teaching in the Sunday school as well as to the work of practitioners with patients. That she considered even young children capable of assimilating the truth is evidenced by the statement on page 236 of the text-book: "While age is halting between two opinions or battling with false beliefs, youth makes easy and rapid strides toward Truth."

An occasional getting together of the officers and teachers to talk over the work of the Sunday school and how they can best conform to our Leader's requirements for its conduct, is helpful and all that is necessary in the way of so-called "teachers' meetings." The best solution of their problems will be found in a careful and prayerful study of Article XX of the Manual. Strict adherence to its provisions, both in the letter and in the spirit, will go far toward safeguarding the children of this and succeeding generations, which is its intent. The "order of exercises" given on page 127 of the Manual should likewise be strictly carried out as indicated.

ARCHIBALD MCLELLAN.

Conservative Radicalism

CHRIST JESUS has been rightly named "a great radical," and it is equally true that he was a great conservative. He championed ideas which supplied a new concept of God, of man, and of life; a new basis for thought and action, so that the great majority of human opinions were instantly affected. Furthermore, he uncovered the materiality and inconsistency of much existing ecclesiasticism, and thus dated a new religious order. Nevertheless, no good thing in human belief was to be done away. He declared that he came simply to fulfil the law and prophets which they had assertedly believed. So too Peter and Stephen and Paul, in all their addresses to their countrymen, made respectful reference to the value of the history, the characters, and the ideals which their hearers professed to reverence. Even in addressing those who were heathen to the Jews, St. Paul on Mars Hill began his portrayal of the true God and true worship by commending those about him, in view of the fact that, as one translator renders the Greek, they were "greatly given to deity reverencing."

Christian Science thus stands for the conservation of all good. While radically intolerant of error, every phase and aspect of materiality, it recognizes, as St. John has said, that the light of Truth reaches in some degree "every man that cometh into the world," and that this light expressed in the instinct of worship, the spirit of brotherhood, the sense of the sacredness of life, the awe awakened by the sublimities of nature, or in love for the beautiful in nature or in art, is not to be annihilated, but to be cherished and added to.

This thought is found in the larger meaning of a phrase to which Mrs. Eddy has given prominence, "the unity of good," and it indicates the right attitude respecting the value of improved beliefs. If the illumination of human consciousness is and has ever been progressive, and if God is the only source of truth and goodness and beauty, then every flavor and element of bettering sense, every unselfish aspiration and ennobling endeavor, is of divine impulsion. The show of reverence for the conceived source of good, of kindliness and fairness, of right desire and nobility, which has been found among men of every race and stage of civilization,—all this is seen to mark the dawning light of the divine appearing, and a fairer estimate of ethical values is at once entertained.

Digitized by Google

And who can measure the greater good to all if Christian workers in home and foreign lands had thus perceived and presented the gospel as the fulfilment, the completion of all the good which had already appeared in human thought and character? if they had gone into the highways and byways of the world to say, We have come to tell you of the larger blessings which have been conferred upon us, to bring to its blossoming every longing you have felt for better things?

When one thinks of the variety of religious beliefs in all the world, and of the devotion to them which witnesses in no small degree to sincere aspiration, to honest desire for an ideal brotherhood of honored right and universal well-being, his truer sense of love is sure to beat down dividing walls and to embrace the whole human family in the reflection of something of that divine compassion of which St. John has said, "God sent not his Son into the world to condemn the world; but that the world through him might be saved."

This is the teaching of Christ Jesus and of Christian Science: that good is universal and omnipotent; that something of it finds expression in every bettering belief, and that the salvation of every man is possible through the apprehension of that demonstrable truth which is scientific, which emanates from Principle, and which is divine. On page 234 of Science and Health Mrs. Eddy writes, "Whatever inspires with wisdom, Truth, or Love—be it song, sermon, or Science—blesses the human family with crumbs of comfort from Christ's table [note the definitive phrase], feeding the hungry and giving living waters to the thirsty." Christian Science is destructive of no good thing; on the contrary, it is the sense and substance of all good things.

JOHN B. WILLIS.

✧

The Master's Program

IN the fourth chapter of Luke's gospel we read of Jesus' temptation in the wilderness, his complete victory over the world, the flesh, and evil, then his entry upon his earthly ministry. We are told that he taught in the synagogues in Galilee and was "glorified of all" because of the spiritual power which he manifested. Then we read that he came to Nazareth, where his boyhood and youth had been spent, and on the Sabbath day entered the synagogue and stood up to read. The book of Isaiah was handed him, and these inspiring words of the prophet were chosen by him: "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord." This passage as found in Luke is not the complete text as given in the sixty-first chapter of Isaiah, but it is substantially the same, and what really concerns us is to grasp so far as we can the Master's own sense of its meaning.

As we read the account of that scene in the synagogue at Nazareth, it is easy to see how all the spiritually-minded must have been thrilled by the new and vital meaning given to familiar words, but when Christ Jesus went on to insist upon the application of the truth contained in Isaiah's words, those present "were filled with wrath." He reminded them that none save a lone widow was ready to accept spiritual help from Elijah in the great famine, the woman whose son was awakened from the dream of death. He also reminded them that although there were many lepers in their own land in the days of Elisha, only Naaman the Syrian was healed by the prophet. So enraged were Jesus' hearers at this that they sought to kill him, and they did drive him out of their city, but this only sent him to other places to demonstrate what a modern writer has called "the full content of Christianity," which beyond all question includes the healing of sickness as well as of sin, and "the manifestation of the sons of God."

Now no professed Christian would deny that God could heal the sick if He chose, and that Jesus did heal all manner of sickness, and even raised the dead, but they halt before his demand that his followers shall do the same. Christian Scientists, however, have proved the truth of their Leader's words on page 495 of Science and Health: "God will heal the sick through man, whenever man is governed by God. Truth casts out error now as surely as it did nineteen centuries ago." No Christian would deny that sin can be overcome by divine power and that it is man's duty and privilege to be a coworker with God in this respect, but the Master's complete program has been virtually denied a place in present-day Christianity.

We should not forget that when the people of Nazareth rejected Isaiah's prophetic outline of the Messianic mission as presented by Christ Jesus, he was not stayed thereby, nor did he offer to the world an abridged program because his first proffer of salvation was refused by those who would have contended for the sacredness of the Scripture itself, even as so many do today. So far as we can judge from the gospels, the Master's work went on unabated up to the time of his crucifixion. After the raising of Lazarus he boldly carried the healing ministry into the temple, in spite of the fact that the priests and the scribes were "sore displeased," and that his students were under orders to continue this work is very clear from the experiences recorded in the book of Acts.

It is indeed strange that any should desire to limit the power of Truth in any direction, or even consent to make of the Master's words and works "a mutilated doctrinal platform" (Science and Health, p. 37), when the acceptance of the whole gospel brings such a rich reward. Jesus himself said, "If I do not the works of my Father, believe me not." Many of his professed followers would doubtless shrink from this test, but it stands, and points forever to the complete program of Christianity which Christian Scientists accept and strive to measure up to, knowing that thus alone can spiritual and ideal manhood be reached.

ANNIE M. KNOTT.

Among the Churches

Current Notes

KOKOMO, IND.—The vacant lot at the corner of Mulberry and Market Streets has been purchased for a building site by First Church of Christ, Scientist. The lot, a most desirable one, is 66 by 132 feet, and is centrally located in a fine residential district. The purchase price was fifty-five hundred dollars. Later it is planned to erect a church edifice on the lot.—*Correspondence.*

FLINT, MICH.—First Church of Christ, Scientist, has purchased a site on the corner of East Court and Harrison Streets for a new church home. The price paid is given out as seven thousand five hundred dollars. It is the plan to remain in the present quarters until next summer. The work

Digitized by Google

of remodeling the house on the property will be started about May 1, and the building will be occupied as a place of worship as soon as the necessary alterations have been made. The crowding in the present quarters in the Ward Building made it plain that the church would soon need additional space.

When the Christian Science movement in this city was started, the meetings were held at the homes of the members, but the continued growth made it necessary to have more room. In 1911 the new auditorium in the Ward Building was occupied. It was equipped with about two hundred theater seats. Even this space proved to be too small, and after being used for only four years a new church is needed.

The Flint Journal.

BARRINGTON, ILL.—Five years ago a small number of students of Christian Science began holding meetings every Sunday in a private house for the purpose of reading the weekly Lesson-Sermon. After several months it was decided to engage Stott's Hall as a more suitable meeting-place, and the little group of students gathered there every Sunday for more than a year. Then for a period of perhaps a year there was an interruption of the meetings, until they were resumed in a private home. The attendance grew gradually, but so surely that it was again thought best to engage a public meeting-place, and in August, 1914, the first public service was held in the I. O. O. F. Hall. In March, 1915, a Christian Science Society was organized.—*Barrington Review.*

FRESNO, CAL.—Plans and specifications for the construction of a thoroughly modern forty thousand dollar church building at the corner of Calaveras and N Streets have been approved by First Church of Christ, Scientist. The new home for the congregation will face on Calaveras Street and will have a base dimension of 82 by 115 feet. The main auditorium will have a seating capacity of about eight hundred and sixty persons.—*Fresno Republican.*

MAINE.—More than twelve thousand pieces of Christian Science literature, not including that distributed by churches and societies, were distributed by this office. The committee has made application to the Trustees under the Will of Mary Baker Eddy for authorized Christian Science publications for nearly one hundred public libraries in this state.

Christian Science Committee on Publication.

OAK PARK, ILL.—Construction of the new edifice of First Church of Christ, Scientist, is now going rapidly forward. It is expected that the Sunday school room will be completed and ready for occupancy by Jan. 1, and the completion of the auditorium will follow as quickly as the work can be done.

The Maywood Press.

✧ ✧ ✧

The Lectures

Kennebunk, Maine

The lecture on Christian Science given in Mousam Opera House was delivered by Willis F. Gross. Introductory remarks were made by Judge Herbert L. Luques of Kennebunkport, who spoke in part as follows:—

We are here tonight to learn something of that Science of Spirit which is the essence of all religions, or to add to our knowledge concerning this comparatively new religion, which under the name of Christian Science in the space of a few short years has made such advancement that its followers are numbered by the thousands and include people of all classes, and whose publications may be found in nearly every village of our land. It is an aggressive religion. We are compelled to recognize its presence, and if our understanding approves its claims as worthy of belief, we want it. To acquire a proper understanding of its merits we must study it, and listen to the teachings of those who have fitted themselves to expound its truths. We have the opportunity this evening to begin or to continue, as the case may be, our study of this religion by listening to a noted exponent of it.—*Eastern Star.*

✧

Portland, Ore.

Clarence C. Eaton delivered a lecture on Christian Science in the edifice of Second Church of Christ, Scientist, to a large audience. This lecture, which was repeated the following evening at the Princess Theater, Arleta Station, is the first on Christian Science to be given under the auspices of Fifth Church of Christ, Scientist. The lecturer was introduced by Mrs. Gertrude Deane Houk, first reader of Second Church, who said in part:—

For about three centuries Jesus' followers not only taught but practised according to his teachings, healing the sick and even raising the dead. Then Christianity was adopted by a pagan court and people, and this simple, beautiful truth was lost to humanity, and for many centuries mankind searched among the varying beliefs of scholastic theology for some glimpse of the healing Christ. Through all these years there have been those whose vision has been clear enough to catch some gleam of the truth which heals and saves, but it was not until nearly half a century ago, when the human consciousness had been still further purified and made ready for its acceptance, that the healing work of primitive Christianity was again restored to humanity. This restoration came through the spiritual understanding and research of a woman, now known to the entire civilized world as Mary Baker Eddy, and was named by her Christian Science.

Portland Telegram.

✧

Melbourne, Australia

An audience of twelve hundred people assembled in the Auditorium to hear a Sunday afternoon lecture on Christian Science by Virgil O. Strickler. He was introduced by the Hon. Arthur Robinson, member of the legislative council, who said in part:—

Christian Science is a subject which at a time like this I am sure demands the most serious attention, and I venture to say it will receive it at your hands. Many of us are aware that friends and relatives have received great benefits from the doctrines of Christian Science, and I have no doubt we will get today a comprehensive and instructive exposition of those doctrines from the lecturer.

An assemblage exceeding by several hundreds the Sunday afternoon audience met in the Masonic Hall on the following Monday afternoon, when Mr. Strickler again delivered an address on Christian Science. The chairman, George A. Maxwell, LL.B., an eminent Melbourne barrister, in introducing the speaker said in part:—

I desire to say this: I think we should all be thankful that there is in our midst a body of people like the Christian Scientists, who, however much we may differ from them in certain particulars, are always making a claim on behalf of the spiritual; a body of people who have a purely spiritual conception of life, for which we should be particularly thankful at a time like this. I for one believe that this awful experience through which we are passing may possibly be that darkest hour before the dawn of a better day,—a day when men shall have a truer and more spiritual conception of life.

Digitized by Google

I believe that the efforts, as well as every aspiration of Christian Scientists, are directed to the bringing about of that better day, and because of that I, as I am sure you do, wish Christian Science here and everywhere "God speed."

Correspondence.

✧

Skowhegan, Maine

Roland T. Patten, business manager of the *Independent Reporter*, in introducing Prof. Hermann S. Hering, who lectured on Christian Science at the Skowhegan Opera House, said:—

The gentleman who is to speak to you during the next hour represents a faith which has had its growth in the present generation. Originating in our own New England, the Christian Science belief has spread to all the civilized countries of the world, and it numbers among its adherents more than a million people,—all within the memory of those now living. This wonderful development may not prove to all minds the soundness of the Christian Science doctrine, albeit stronger evidence of merit could hardly be asked for; but it does without doubt make it a subject no man can ignore and yet pretend to be informed upon the great movements of his time. Such development is reason enough why you and I should welcome this opportunity to know more about Christian Science.—*Correspondence.*

✧

Hamilton, Ohio

Bicknell Young lectured on Christian Science in the Jefferson Theater. He was introduced by Judge Belden, who spoke as follows:—

The quest for truth is an old and never ending one. The constant cry of thoughtful and earnest men and women is for light,—more light. It has been said that "he is wise who finds a teacher in every man,—an occasion to improve in every happening, for whom nothing is useless or in vain." Never has the world been more tolerant in religious matters than now, never more liberal in awarding to every man the right to worship his creator in such manner as he deems proper. The time has passed when any American should be discriminated against on account of his religious faith. Freedom of choice is a privilege dearly bought and not to be lightly surrendered. Let us be big enough and broad enough to give "equal rights to all; special privilege to none." Truth is the essential thing, and in the search for it the minds and souls of human beings should be unfettered and untrammeled.

The organization represented here today has made great progress in the last decade. It numbers its adherents by the hundreds of thousands, and has made a deep impression upon the hearts and lives of our countrymen. To those who in sincere desire to inculcate the principles of right living have labored so earnestly and so faithfully, who have sought to honor God and help humanity, we today pay respect and bring tribute, even though our faith may not be the same as theirs.—*Hamilton Journal.*

✧

Toronto, Canada

At a lecture on Christian Science given under the auspices of Third Church of Christ, Scientist, in the Royal Alexandra Theater, the lecturer, Jacob S. Shield, was introduced by ex-Mayor Hocken, who said in part:—

The thing that impresses me most about Christian Science is that it is purely constructive. While I am not a member of the Christian Science church, I have a number of friends who are, and I have been associated with a good many Christian Scientists in business and in other ways, and it has been impressed upon me that on no occasion, so far as I can recall, have I ever heard a Christian Scientist attempt adversely to criticize other churches, while doing the best he can to build up his own. I think the purely constructive character of Christian Science should recommend it to every impartial observer and every person who thinks deeply.

Testimonies of Healing

When Christian Science was presented to me through the loving thought of a friend, I was broken in health, suffering from many female weaknesses, sleeplessness, and sorrow. I prayed nightly to die, thinking death would relieve me of all this misery. Then this saving truth, which indeed makes free, came with healing in its wings through the reading of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the body became normal and performed its functions without pain. Sleeplessness left, and I was lifted up and out of my condition of thought and given a new outlook toward life and my fellow man. I have also been healed of an injured ankle, abscess, bowel disorder of years' standing, and hemorrhoids. Recently I have had a wonderful demonstration over sorrow caused by the loss of a dear one whose suffering left a mental picture that was tormenting me. Through the declaration of the truth this wrong picture was absolutely destroyed, also the hurt and loneliness.

I hope this testimony will reach and help some one who may be passing through his Gethsemane. I have been greatly blessed in every way, mentally, physically, financially, and above all spiritually. I know today as never before that "to those leaning on the sustaining infinite, today is big with blessings" (Science and Health, Pref., p. vii), and my daily prayer is that this divine Principle may speedily be uncovered to all mankind.—Amy Eckbert, Los Angeles, Cal.

✧

[Translated from the German]

A sense of deep gratitude impels me to testify to the wonderful benefit which I have experienced through Christian Science. It was in August, 1912, that I first turned to it for help and went to Dresden in order to look up a Christian Science practitioner. Most complicated and trying family problems had well-nigh made life unbearable, and drove me in utter despair to seek refuge in Christian Science. The practitioner lovingly pointed out to me the cause of these entanglements and showed me how a person may be responsible for his or her failures by allowing error to be present in consciousness. I merely mentioned to her the many ailments which were besetting me, and dwelt chiefly upon difficulties of a personal nature for which a solution seemed imperative. Never before had I been led to seek the solution within my own thought and guided in the way to rid myself of the errors of which the untoward external conditions were a sequence. The conversation with the practitioner opened my eyes with regard to myself and made me realize the healing power of divine Love. As a result I immediately became aware of a transformation which was beginning to take place within me, and asked for assistance in order that I might be able to continue on this new road. Help was given with much love and patience, and I thereby experienced freedom from many physical ailments; in fact, the healing was instantaneous.

As a result of an apoplectic condition I had both a heart trouble and a nervous affection, and hypodermics were administered on various occasions. We consulted a number of physicians, among them very able specialists, but none of them succeeded in relieving me of my distress. I went through a terrible time and in despair turned away from God, my life thereby becoming still more miserable. Besides, I suffered dreadfully with neuralgia and sleeplessness. All these troubles disappeared through the explanation and declaration of truth in Christian Science, and I returned home that same day feeling like a new person and with overwhelming gratitude in my heart. I feel perfectly well now, thanks be to God, and am enjoying a sense of divine protection such as I have never known before. The recognition is present with me that God bestows upon His children health and good only, and since He is not the originator of disease, I do not need to be sick, provided I as a child of God keep His commandments and think right thoughts.

I would like to mention another instance of help received. My daughter was preparing for an entrance examination two years ago and thought that she would be unable to pass it, as she was said to have been backward in her studies and hence would fail to come up to the mark. I wrote immediately, telling her that her fears were without cause, as God would guide her thoughts as well as her work. I then asked the practitioner to help her in Christian Science, which was done, and my daughter passed her examination with high marks. A year afterward, in September, she expected to take her examination as a teacher of domestic economy, but seemed to struggle with various difficulties. In this case also Christian Science proved a help, and she made a good showing. I could tell of many instances in which God's presence has been made manifest to us. Christian Science has brought me a sense of contentment, and the realization that we cannot be separated from divine Love has proved a very potent help under the most difficult circumstances.

My thankfulness to God is unbounded, and words fail to convey my gratitude for the work accomplished by our revered Leader, Mrs. Eddy. I shall strive to grow more and more in the understanding of this glorious truth, that I may increasingly partake of the light which shineth in the world.

Frau Elisabeth Stephan, Eisleben, Germany.

✧

Though I have experienced many cases of healing during the eight years that I have been interested in Christian Science, I was particularly impressed with one which was practically instantaneous. Some time ago I came home from the city, and seeming to be fatigued, retired early. About midnight I was awakened by a sharp pain in the stomach and intestines, and the attack seemed so severe that I was kept awake most of the night. In the morning a Christian Science practitioner was called in. At once, upon her entrance, I had a sense of the presence of Truth revealed to human consciousness. After the audible reading of the platform from Science and Health (see p. 330) and one treatment, I slept for two hours. Shortly after awaking I ate a good meal and then dressed. There has been no return of the symptoms. I first became interested in Christian Science by attending the Sunday school in Orange (where the above healing occurred), and have been interested ever since. I find this teaching very helpful in my various college activities, and I am happy to be able to assist in the local work here.

I am truly thankful to God, and grateful to Mrs. Eddy, for the spiritual uplift, as well as for the physical healing which has come through this spiritual understanding of the teaching of Christ Jesus, which is indeed scientific.

Fred. W. Nixon, Princeton, N. J.

✧

I want to express my gratitude for the revelation of Truth that came to me while visiting in Virginia in the spring and early summer of 1914. For five weeks we had extremely hot weather, and as I was not accustomed to the climate, the prolonged and excessive heat was affecting me, under the government of fear. A day came when it seemed to me that I must give up my otherwise delightful visit and tell the people whom I was visiting that I must leave them lest I be ill on

Digitized by Google

their hands. I tried, however, during an exhausting day to declare the truth that the one supreme Mind was the only power, and that only good was coming to me. When evening came I went to my room feeling that if I turned to some of the Christian Science literature lying on the table I should find my sustaining help. I took up a pamphlet, and on opening it my eye fell on this verse from Isaiah: "Neither shall the heat nor sun smite them." From that moment there was no more fear, but a comforting sense of God's protecting power and ever-presence. All thought that I could not remain to finish my visit was at an end. Many times were the helpful lines repeated when hot days followed, and always with a sense of peace. The uplift in thought that is mine through this revelation of Truth that in God's loving care we are protected, and that divine Love meets every human need, I have not words adequately to express.

During my visit I was healed in three days of an acute attack of rheumatism that rendered my right arm helpless, so that I required assistance in dressing. My food had to be prepared for me, and I was obliged to remain up through the night, the pain being so severe that I could not lie down. This healing through Christian Science was a revelation to the family where I was visiting, for they were not Christian Scientists and could not understand its healing power. I am most grateful for all that Christian Science has done for me.

ELIZABETH C. WAUGH, West Somerville, Mass.

✧

Through troubles that seemed more than I could bear, the light of Truth was revealed to me about three years ago. The revelation of man's at-one-ment with God came to me in a way that words cannot explain. I caught but a faint glimpse of the truth, but I knew that the course of my life had changed. Christian Science has brought me many blessings. Worry, which seemed to dominate my life, has been entirely overcome, and glasses which I had worn for more than ten years have been laid aside. For many years I had been a sufferer from acute stomach disorder, which seemed incurable. This condition too has been overcome in Christian Science, and I find, as I continue faithfully to study and apply my understanding, that the healing of all inharmonious conditions goes on.

The physical healing has been wonderful to me, and I am very grateful for it, but the spiritual uplift is indeed the "pearl of great price." The Bible, which was an unknown book to me, has become an unlocked treasure through our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I am also grateful that the truth has spread to several members of our family. I thank God for His loving-kindness in leading me, and I am deeply grateful to our revered Leader, Mrs. Eddy. I also thank the friend who first mentioned Christian Science to me.

ANNA L. BAROGGÉ, Brooklyn, N. Y.

✧

For six years Christian Science has been a very present help in time of need. By the study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the help so lovingly and freely given us by a practitioner, we have been able to meet every experience that has come to us.

A little over a year ago, after about five months of intermittent suffering, my husband on coming home to lunch one day found me about exhausted, and asked me to call a practitioner and have treatment. After finishing lunch and putting our little ones to bed for their nap, I called for help, then lay down on the couch. The last thing I remember I was repeating the Lord's Prayer. Then I slept, a restful, peaceful sleep, and when I opened my eyes I knew I had been healed. I needed no material evidence; I knew that whatever had been the false condition it was gone, and God's law of harmony reigned. When I got up, a fibroid growth, which had caused all my suffering, was released and passed from me without pain.

Since this wonderful demonstration of God's power I have had perfect health. Is it any wonder words are inadequate to express my gratitude?—HARRIET TYSON, Pasadena, Cal.

✧

Twelve years ago, while attending for the first time a Christian Science service, I was healed of depression and discouragement. During a two years' course at a state normal school I had found myself suffering from almost constant headache, which seemed to destroy my ability to concentrate thought on the given work. The headache was accompanied by backache, bowel disorder, occasional attacks of rheumatism, and a few minor ailments. The doctors considered that the root of the trouble lay in imperfect eyesight. A specialist advised spectacles to be worn constantly for the remainder of my life, on account of a serious structural defect and another incurable condition. His treatment was followed carefully for a year, and at the same time I was obediently following the directions of our family physician. Then as I was no better my father was referred to a nose specialist, who announced the necessity of removing a bone pressing on the optic nerve. This slight operation was followed by a period of greater depression, for no improvement physically had taken place in any way during the entire year's treatment.

Then came the first glimpse of Christian Science. During that first service my "spirit of heaviness" was replaced by the "garment of praise." That evening treatment was begun, and it was continued for six weeks, during which time I purchased a copy of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. The consciousness of the presence of Love which came to me during the treatments was wonderful, and the truth voiced by the practitioner filled my hungry heart. The spectacles were removed and have never been needed since. My health began to improve at once, and with continued application of the truth to everyday problems I became perfectly well and strong. My work, which had been neglected during the year of darkness, was resumed and continued for four years, when I resigned in order to do more active work for our cause.

I thank God for His "wonderful works to the children of men." Our Leader through her constant self-abnegation presented the Science of Christianity to us in its purity. My prayer is that I may grow "unto the measure of the stature of the fulness of Christ."

ISABELLE C. BIXBY, Roxbury, Mass.

✧

It is four years since I began to study Christian Science, and I should like to bear testimony here to one of the many blessings I have received through it. In Science and Health (p. 323) Mrs. Eddy says, "The effects of Christian Science are not so much seen as felt," and I have proved the truth of this, for darkness is gradually being turned into light,—light which I earnestly hope in time to be able to radiate on those around me.

One afternoon about two years ago I pinched my finger badly while folding up a deck-chair, and the pain was so great that it made me feel faint. I was alone at the time, and sat down, wondering if I were going to have a bad finger, when suddenly I remembered that matter can have no feeling. In a few minutes the pain stopped and all traces of the swelling and bruise had disappeared. I am thankful for what Christian Science has brought into my life, and my one wish is to help others.

MISS A. E. O. GARNETT-ORME, Bell Busk, England.

Digitized by Google

While in their infancy my two sons were healed through Christian Science of a skin disease supposedly inherited, the healing of the younger one being most remarkable. After wiring a practitioner to treat him, he improved so rapidly that in three days his skin was without a blemish. When about eighteen months old, this child in falling threw his hand out against a red-hot stove. I made use of my understanding of divine Science, and in a few minutes he stopped crying and in half an hour had forgotten about the injury. Although a blister appeared, he played about as usual, using his hand and refusing to keep it bandaged. At the end of a week there was scarcely a trace of it, and in a few days more even the scar vanished.

The almost painless birth of my last child, the overcoming of fevers, bowel disorders, and an injured ankle healed, are a few more of the blessings that Christian Science has brought to us; but above all is the spiritual peace "which passeth all understanding." For this I am most thankful to God, and grateful to Mrs. Eddy, whose noble life made it possible for us to receive this rich legacy. I am also grateful for the privilege of listening to several lectures by members of the board of lectureship, and to The Christian Science Publishing Society for the literature from which we all glean so much good.—Grace A. Benson, Randsburg, Cal.

✧

Some years ago, while I was suffering from a nervous breakdown, a friend gave me her copy of Science and Health to read; but I could not understand the book, so put it aside. Five years later I turned to it in an extremity. I had married meanwhile and had two little boys. The baby in his second summer was very ill with teething troubles, and medicine had no effect. Another friend, a Scientist, recommended that we have him treated by a Christian Science practitioner. I accordingly called on one that evening and explained my baby's need, for he had wasted away and I was afraid of losing him. Two treatments were given, though I feel confident the first one healed him, as he was better and able to go in his carriage to the practitioner's home the next morning. In a week he was fat and rosy again.

By this time I was sure I had found the truth, and began the study of Science and Health, but only desultorily. A year later the same little boy was healed instantaneously of croup by the loving work of the practitioner, and then I began to study in earnest. Both boys passed quickly and easily through measles and whooping-cough, the truth being our only remedy. Some seemingly endless difficulties have been terminated under my growing perception of the light, and many blessings have come to us all through the understanding of divine Love as taught in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. The truth, when rightly applied, has been adequate to meet every need, whether physical, domestic, mental, or financial. Today I give thanks for the progress made, and though it has been slow and every hour presents new problems, I feel confident of the rule, and the right answer is inevitable.

My health has improved, until from a nervous, dyspeptic girl I have developed into a normal, healthy woman, one little chronic ailment after another, such as headaches, stomach disorder, and the like, having dropped away almost imperceptibly. The recent birth of a son, while not painless, was a blessed experience. Not long ago I had what would have been called acute lung trouble under medical treatment, but with the help of a dear friend and practitioner I did not go to bed; instead, I continued to do all my own work and was healed in about a week.

My growth in grace has been slow. In the study of Science I have had much to unlearn, as I found the wisdom of this world to be foolishness with God. My husband has been healed of a serious difficulty. We find our growing knowledge of Truth very helpful in the management of our three boys, and the children are healthy and happy, our home harmonious. We are isolated, and I seldom enjoy the privilege of attendance at church, though I belong to the nearest society and rejoice in my recent admission to membership in The Mother Church; but I find the daily study of the Lesson-Sermon very helpful, as well as the reading of the *Sentinel* and *Journal*. The testimonies have proved encouraging to me, and I hope my own may benefit others.

One night my whole family suffered from what is known as ptomaine poisoning. One little boy was not sick at all, as he threw it off immediately. My husband was ill, but quickly recovered by the aid of Truth. The severest struggle fell to my lot, as the poisoning brought back an old enemy, acute stomach trouble, which I had not met for many years. I spent several hours in agony, doing my best to realize the presence of divine Love, while my husband read to me from Science and Health. Before morning I was healed, and although somewhat weak was able to be up and about my work next day. By the following day I was as strong as ever and could eat anything I wanted. In former years, under *materia medica*, such an attack required hypodermic injections. I would remain in bed at least two weeks and keep on a liquid diet for a month thereafter. This was our first experience in meeting an urgent need without the help of a practitioner.

While the physical healing has meant much to us all, the spiritual enlightenment is beyond expression. I have been lifted from the shadow of despair into God's sunshine, and while even yet clouds seem at times to darken my path and the way is often rough, it is always upward. I still have far to travel, but the progress is sure, though slow, toward the sunlit heights. If asked to name what I consider the greatest benefit to mankind in Christian Science, I should say the confidence we have that its Principle is absolute, its rule is sure, so that results must follow. Instead of merely believing, we know God, and to know Him aright is life eternal.

I cannot express my thankfulness to God, and my gratitude to our revered Leader, for the assurance that we, who live so far from other people, now have a remedy always at hand and that never faileth.—Anna W. Didlake, Douglas, Ariz.

✧

The beauty and peace that come into one's life from the study of Christian Science can never be told in words; it must be lived, and reflected in daily living. The healing that has come to me through the loving work of a Christian Science practitioner and the careful study of our literature, has been wonderful to my friends and beautiful to my family, who understand that it is divine Love that heals and Truth that sets free.

For eighteen years the struggle for health had been severe. Three major and four minor operations were performed, but they gave only temporary relief. After the last one, which was a very serious one (laparotomy), things seemed worse. Then osteopathy was tried and relief experienced, but other troubles arose, in the form of neuritis and a useless arm. Continued treatments brought improvement, but all of a sudden lockjaw set in, and the doctor said this was also caused by neuritis. According to man-made law, paralysis of the spine was becoming manifest, and as I had had a stroke at the beginning of my illness, it seemed that this condition was again asserting itself. After suffering terrific pain and awful hunger for three weeks, in sheer despair I turned to Christian Science. Strange as it may seem, I knew nothing

Digitized by Google

of this Science, except as something it was better to let alone, and as my father was a minister I was well filled with creed and dogma.

The first treatment brought relief, and better still, the desire for the truth. As I had never been satisfied in the old thought, but was always looking for the peace of mind which I had never found, it was a delight to feel the real desire for church that came to me on the Sunday morning following the first treatment. Physical relief had been given to me to the extent of no pain and relaxed muscles, so that I could hold my head erect and eat what I wanted. The good work went on, and as I studied, the desire for health was lost sight of in the greater desire for and satisfaction in finding the truth. In Science I found all I had been unable to find elsewhere,—the why of life, the where of heaven. Having learned that the true basis for building is divine Principle, the eternal good, the work could go on, and I rejoice to say that by careful study it is going on.

In three weeks I was entirely healed. Then there was an abscess in one ear; but Science took care of it, proving to me that acute as well as chronic conditions can be met. Money matters have been adjusted, seeming lack has been overcome, and the most beautiful part of all is that my family, my husband and three children, have been with me. This has come about since March 9, 1913. In the fall of 1914 a double curvature of the spine, which caused one limb to be an inch shorter than the other, simply disappeared, and I found myself walking on both feet comfortably and without pain. This condition of the spine has not returned, and my back is now straight.

It is no wonder that words fail me whereby to express my gratitude, and that only a daily living which shall bring good to others will repay even in small part my debt of love to God and to the great Wayshower, and of gratitude to our beloved Leader, Mrs. Eddy. My hope and prayer is that I may so live as to help others gain a knowledge of this saving truth, even as we have been helped.

Dora L. Doty, Wilmette, Ill.

✧

Over four years ago, while visiting my parents at Galt, Ontario, on my way to Winnipeg, I was taken severely ill with an attack of stomach and bowel trouble, which caused great suffering during the night. My parents are Christian Scientists and no doubt helped me some. In the morning I asked for treatment from a practitioner and received immediate relief. By noon I was able to partake of light food, and later enjoyed a good supper. I then walked some distance to see the practitioner, slept well that night, and left on my journey west Tuesday afternoon, as I had planned.

This experience gave me a clearer spiritual perception than I had before. For this and for the physical healing I am deeply thankful to God, and grateful to Mrs. Eddy, who made it possible for the healing power of Christ to be manifest to mankind in the present age.

James Albert Turnbull, Winnipeg, Manitoba, Canada.

✧

Several years ago I was healed through Christian Science of rheumatism and chronic earache. For seven years I never dared neglect the daily use of material means for relief, but one treatment in Christian Science freed me. Words fail to express my thankfulness to God, and my gratitude to Mrs. Eddy for teaching us through Christian Science how to know Him. This truth is helping me daily.

Kate F. Campbell, San Francisco, Cal.

From Our Exchanges

[John Hunter, D.D., in *The Homiletic Review*]

The whole ministry of Christ, from its beginning to its close, was a ministry of reconciliation,—a power of atonement. By what he was, what he said, and what he did, he sought to make God known, to save men from those false ideas of the divine character and ways which set human thought and feeling wrong, to expel suspicion and fear from their hearts, and to make them realize that they were his Father's children, and therefore had no right to despise themselves or despair of themselves. They saw in his compassion the divine compassion, in his love the revelation and assurance of the divine love, in his forgiveness the type and promise of the divine forgiveness. . . . Coming to know God as He is revealed in Jesus Christ is to trust and rejoice in God, and to have sympathies and harmonies created where previously dwelt antipathies and antagonisms. When on earth our Lord also sought to make men in all the relations and provinces of their life at-one with the divine will. He fought against disease, ignorance, injustice, hate, and all forms of selfishness, as the enemies of God and man. The great burden of his message was God's kingdom, God's order, and he suffered and died daily to reconcile men to the divine order of their life.

[*Zion's Herald*]

After all, we are made mostly by our affections, for love begets love, and the heart draws a multitude of things captive in its train. Back of the doing is the being, and it is really by reason of the nobility and benignity of their character that we are so greatly pleased to have certain people ask, "What can I do for you?"

There is nothing nobler than a disposition, which by continual practice has become habitual, to do for others instead of selfishly expecting something from them all the time. And in order best to serve our fellow men we need imagination, so that we can visualize their needs, realize their possibilities, and, in short, look at life from the angle at which they view it. If half the world does not know how the other half lives, it is time that both halves found out. Mutual sympathy, born of a better understanding of man by man, would make this old world, now scarred with sin and rent with passion, almost a paradise. Learn to objectify your thoughts, and project your sympathies into the lives of others. Live for the sake of the best in them by means of the best that is in you. Confer more favors than you seek, and find your chief pleasure in giving pleasure. Then will you be following closely in the footsteps of the Master, who, though Lord of all, "pleased not himself."

[*The Universalist Leader*]

Jesus began his ministry by summoning men to that repentance for past sins and that renewal of moral purpose which brings the soul into a healthful relation to the life of God, and so makes possible the growth of character toward its ultimate perfection. His was not that type of optimism which closes its eyes to what it does not wish to see and thinks to conquer evil by ignoring its existence. If he beheld the splendid possibilities of human nature, he perceived with equal clearness the harm that resulted to its faculties through their unlawful use. He saw alike the rewards of virtue and the self-inflicted penalties of vice. He pictured both the loneliness of the prodigal in the field where the swine were fed, and the glad and loving welcome that awaited his return to the father's house. He said to Zacchæus the publican and to Mary the Magdalen, not that they had done no wrong,

Digitized by Google

but that their evil deeds were all forgiven. He announced that he had come "to heal the broken-hearted," to open the eyes of the blind, to set at liberty those that were bound, to proclaim "the acceptable year of the Lord." He affirmed that his gospel was at once the sovereign remedy for the world's sin and the most potent inspiration of its virtues.

[*American Lutheran Survey*]

It is astonishing how much of the activity of the people who really accomplish things is fully described by the well chosen phrase, "regular round of duties." Most of the world's great deeds have been done in this regular round. Most of the world's great men, the constructors of permanent structures, have been men who moved in their own orbit, without desire to be busybodies in other men's affairs.

Remembering that the orbits of the stars have been assigned to them by the hand of the Almighty and All-wise, one reaches the conclusion that an orbit, far from being a humdrum, prosaic arrangement, is invested with solemn sacredness. The God of order is the creator of men's orbits. . . . Happy is he, and blessed, and a blessing to others, who accepts at his creator's hands the largest orbit which it lies within his powers to fill, and follows its charmed circle faithfully, hallowing his pursuit of the daily round with a consecration which acknowledges his responsibility to high heaven.

[*The Christian Intelligencer*]

The prophets were preachers of righteousness in the age of corruption. Every one of that galaxy of seers was a fearless champion of the social virtues that spring from obedience to divine laws. They were the true patriots, ever calling their country to the uplands of high ideals; and though they failed in their time, their messages are mighty in the world today. It was said of them by a New Testament writer that they were among those "of whom the world was not worthy," but also in a succeeding verse the same writer adds: "And these all, having obtained a good report through faith, received not the promise: God having provided some better thing for us, that they without us should not be made perfect." We are the heirs of their splendid lives and writings.

[Rev. William Bryant, D.D., in *The Christian Work*]

So we are not despairing. The story of history is on the side of forgiving and forgetting. But best of all, God has not surrendered His throne when earthly thrones are rocking and falling. He has not changed His laws of righteousness, even when science and philosophy for a while thought that they had discovered some new universal laws. God is still our Father, and we are brethren, even though for a time we have so wickedly forgotten it. The "Prince of Peace" is still the "Lord of hosts," and herein is no contradiction.

[Rev. Minot Simons in *The Christian Register*]

Now we may not be in entire agreement in our social philosophy, but we can all strive to turn the world's mind and heart to the pursuit of the good of all. We can strive to lift modern industrialism to the plane of fraternalism, compelling it to produce for the good of all. We can strive for human good, justice, and brotherhood as the supreme goal of applied religion. Here is the twentieth century ideal, and we are all passing before it for judgment.

[David James Burrell, D.D., LL.D., in *The Christian Intelligencer*]

The song of Salem, the City of Peace, is only for those who stay their hearts on the living God. The voice of the singer is attuned by faith, the faith that antidotes all spiritual maladies.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Publishing Society

A new pamphlet entitled "Man's Unity with God" has been printed in the German language. This pamphlet contains seven articles from the Christian Science periodicals, which have been translated into German. The pamphlet is now on sale at the prices of our regular pamphlets, as shown on the opposite page.

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

A new pamphlet, "What went ye out for to see?" is now on sale. This pamphlet contains the four following articles from the Christian Science periodicals: "Principle Not Person"; "Jesus of Nazareth"; "Jesus the Christ"; and "Jesus and the Christ."

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Oxford India Bible paper edition, with stiff morocco cover. Single copy, $6.00, six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

An illuminating survey of the progress of legal education in the United States during the past fifteen years, an almost revolutionary period in this subject, was given at the fifteenth annual meeting in Chicago of the Association of American Law Schools by its president, Dean H. S. Richards of the University of Wisconsin Law School, in his opening address. He said in part:—

"While we have made some notable advances in the past fifteen years, the legal profession is still the easiest to enter, and for that reason is still attracting many undesirable men. The bar examinations lack uniformity, and in general, by the type of question used, make it easy for unfit men to come to the bar, and furnish the opportunity for commercial cram schools. We should as an association give our active encouragement to the movement for the adequate study of the history of our law, and a comparative study of the basic juristic principles of all the great systems of law. At the time of the organization of this association there were ninety-six law schools in the United States, with 12,516 students. In 1915 the reports of the bureau of education show one hundred and twenty law schools. The number of students in residence schools in 1915 was 21,885, an increase of 75 per cent in fifteen years. At the time of the formation of this organization the members reported 6894 students, or a little over 55 per cent of all law school students. At present this association represents but 39 per cent of all law students, instead of 55 per cent, as in 1900. It is significant of standards when the better law schools, measured by standards of equipment, standards of admission and graduation, are gaining so slowly, as compared with schools outside the association, all of which are unable or unwilling to comply with the standards of this association."

The annual meeting of the American Society of Landscape Architects was held in New York City last week. There were reports on professional practice and ethics as well as other matters of policy and publicity. Among the latter are prevention of diversion of park areas to other purposes and the encroachment on public areas, the preservation of great scenic features such as Niagara Falls, the regulation of bill boards, and pending legislation regarding the administration of United States national parks. A committee reported in favor of "a bill to establish a national park service department under the charge of a man appointed by the secretary of the interior and to establish an appropriation of $100,000 for that service." The American Civic Association and the American Society of Landscape Architecture are responsible for the bill, which continues: "It further provides that in the granting of leases and concessions, and in the general management of said parks, monuments, and reservations, no action, unless specifically provided for by future enactments of Congress, is to be detrimental to the fundamental object of these aforesaid parks, monuments, and reservations. The object is to conserve the scenery and the natural and historic objects therein, and to provide for the enjoyment of said scenery and objects by the public in any manner and by any means that will leave the whole unimpaired for the enjoyment of future generations."

The plan for the construction of a highway connecting the states of North Carolina and Tennessee, which had its origin some years ago, is now being pushed with vigor. Organizations of western North Carolina are cooperating to bring about the completion of the highway. This means one of the most important links in a system of highways which, it has been predicted, will be a real paradise for motorists in search of scenic routes. These highways will traverse and transect the entire famous Sapphire country of western North Carolina and eastern Tennessee, and their various tributary roads are to furnish a network of highways throughout the section. From Chicago to Miami on the west side of the Alleghanies runs the Dixie Highway. From New York to Jacksonville on the east side of the Alleghanies runs the National Highway. The proposed Tennessee-Carolina Highway, running east and west, will, through the Asheville-Charlotte Highway on the eastern end, connect with the National Highway, while in Tennessee on the western end it will tap the Dixie Highway.

The tracing to its source of the Rio Dubina (River of Doubt), the existence of which was reported by Colonel Roosevelt on his return from South America, has been described by George and Stephen Gester of Berkeley, Cal., engineers in the employ of the Standard Oil Company, on their return from an expedition into the Cordillera Geral (Andes) Mountains. The engineers said they reached the headwaters of the river by crossing the Andes with pack-mules from Lima, Peru. According to them, the river has its source among glaciers high up in the mountains, and runs nine hundred miles from the boundary of Bolivia into Brazil, emptying into the Madeira River near latitude 5.

The commission appointed to establish a state vocation school for girls in Tennessee has received offers of land and substantial contributions toward the erection of buildings from many different cities which bid for the school. The board of control, which has charge of all state institutions and lands, has not yet decided which of these cities is to have it, but the school is assured to the state.

From the National Museum at Washington there comes the announcement that the oldest American inscription has just been deciphered. It dates back to 100 B.C., and was found on a stone statuette unearthed at Vera Cruz in Mexico in 1903 by a peon while plowing. It has taken all this time to make the hieroglyphics yield their secret. The inscription is in ancient Mayan. This discovery leads to the conclusion that other important finds may yet be made in this vicinity. Up to thirty years ago the Maya inscriptions were a closed book. Patient application on the part of scholars, and important discoveries, have resulted in quite a body of literature, which tells in their hieroglyphics of the rise and fall of several of their cities and of their civilizations.

The official call for the fifth annual convention of the Colorado division of the Pikes Peak Ocean to Ocean Highway Association,—the Lincoln Highway Association of Colorado,—to meet at Denver, Jan. 19, says that the year 1916 promises to witness important strides in the greater development of Colorado's road system. Since its organization, Feb. 7, 1912, the Lincoln Highway Association of Colorado has taken an active part in promoting the good roads movement, and particularly in developing a thoroughly practicable highway through central Colorado.

Plans are being considered in Rome for the preservation of the ruins of republican buildings below the surface in the quarter crossed by Via Arenula, where improvements are at present being carried out. Excavations have been made to bring to light the Temple of Hercules, only four columns of which were hitherto visible. The bases and fillets of other columns have been found in a good state of preservation.

A general harbor bill has been formally agreed upon by the House of Representatives rivers and harbors committee, which voted to begin immediately the preparation of a measure on the basis of the projects already authorized. It would embrace a maximum of $44,000,000 for new work under authorized projects, and $4,000,000 for their maintenance.

Postal service transactions of the United States have doubled in the last twelve years, and during the last fiscal year they reached the $2,000,000,000 mark for the first time. Sales of stamps, postal cards, and stamped envelopes, the greatest source of income, netted $258,000,000 for the year. About $200,000,000 was paid out in salaries.

Exports through the port of Philadelphia in 1915 were more than double those of the year previous, and broke all records for that city. They amounted in value to $135,000,000. Total imports during 1915 amounted to $69,000,000, a decrease of $18,000,000 as compared with the previous year.

Massachusetts is now ready to go into the business of teaching by mail, and the first bulletin of the Correspondence-Study Division is ready for distribution. This bulletin announces sixty-six correspondence courses offered to residents of Massachusetts.

The production of anthracite coal in Pennsylvania in 1915 was less than in any year since the record year of 1911, except 1912, when there was a six weeks' suspension pending the adjustment of a labor agreement.

American securities to the amount of $1,500,000,000, par value, which were owned in Europe, have been thrown on the market since the opening of the war and purchased in the United States.

The second Pan-American Scientific Congress met at Washington on Dec. 27, 1915, in Continental Hall. The program included addresses on transportation, commerce, finance, and taxation.

Coins to the value of nearly $50,000,000 were made at the United States Government mint at Philadelphia last year. This is the heaviest year's coinage in the history of the mint.

Vol. XVIII | January 22, 1916 | No. 21

Love at the Helm of Thought

SAMUEL GREENWOOD

THE life of Christ Jesus exemplifies how impossible it would be correctly to state Christianity, the truth of man's relation to God and of man's duty to man, except in terms of Love. From the same necessity it is impossible fully to understand and practise the Master's teachings except as one possesses and obeys that divine inspiration. If it were possible wholly to separate a man from Love, his divine origin, if he could be deprived of his loving nature, his gentleness, compassion, and outflowing goodness, there would be nothing left, so far as he is concerned, to declare the existence of God, and such a man would be a nonentity.

On the other hand, the evils that oppress mankind, the existence of which in human thought made the coming of Christ Jesus necessary, can be stated only in terms that denote the lack of love. There is no phraseology intended to indicate the opposite of God's government which does not express the opposite of love. There is no other evil, and could be no other, than such a state of thought. Mortals have vainly striven to be satisfied without loving their neighbor. Kings, governments, and nations have tried leaving it out of their councils and enactments, and out of their dealings with other nations, but the experiment has always ended disastrously for themselves, and always must do so. No one has discovered, nor can any one discover, a substitute for the divinity of loving. No one has yet found that he can leave love out of his life without forfeiting its blessings. To shut love out of one's thoughts is to shut out all that lightens and happifies human experience, and to let in all that debauches and debases the consciousness of men.

"We have nothing to fear," Mrs. Eddy writes, "when Love is at the helm of thought, but everything to enjoy on earth and in heaven" (Miscellaneous Writings, p. 113). What statement so clearly and comprehensively sets forth the kingdom of heaven, and the means whereby to attain it? But little imagination is needed to picture the difference in world conditions today had Love been at the helm of the ships of state. The average person requires no strong fancy to see wherein his own experience would be vastly improved if Love were in control of all his thoughts. Nor does one need to be a prophet to foresee the immeasurable abundance of good which would bless mankind if humanity followed none but the course which Love points out.

Mortals are a fear-filled race, seeking for relief everywhere but at the right source. St. John prescribes God's remedy for fear as "perfect love." "There is no fear in love," he writes, and uncovers the cause of fearful thought in that incisive rebuke, "He that feareth is not made perfect in love." Then should not Christians strive to overcome their fear by becoming more perfect lovers? If thought indulges in hate, malice, revenge, and other kindred errors, can we hope to escape their accompanying fears or their hideous nightmares? Christ Jesus did not even hint the existence of any way into the kingdom of heaven except that of love for God and man; for this kingdom, as he pointed out, is to be found within one's own spiritual consciousness.

The word love comes so lightly, sometimes thoughtlessly, to the lips that unless one is watchful his familiarity with the letter of Christian truth may breed a practical indifference to its spirit. It is comparatively easy to have love at the helm of speech, but loving thoughts spring only from one's actual reflection of the divine Spirit. Human salvation and safety must be worked out through the demonstration of divine Love, because, as every one knows, unloving and selfish thoughts are not of God, and do not deliver mortals from sin or its effects.

Who would care to contemplate himself as at the mercy of a ship whose rudder is in unskilful hands, or whose helmsman deliberately steers the vessel on a dangerous course? But are we not often careless or apathetic as to the course along which our consciousness is being taken? We should treat as our worst enemy whatever would prompt us to wrong our neighbor or to advance ourselves at another's expense. That which in its nature declares itself to be the opposite of Love is a thief and a murderer, and brings blight and destruction wherever it is allowed to rule.

This question is one that all can understand. Every one must know whether Love is at the helm of his thought, but what every one does not stop to consider is the consequence of not having Love there. After all, it is not a matter of whether we can, but of whether we will. Any man can have love in his heart if he loves to have it there. And even the weakest of mortals may keep what he has of love increasingly active, if that is his dominant desire. Hatred and selfishness, with all their etceteras, are the sheerest impostors, and have absolutely no power to enter or sway one's consciousness without his consent. Evil is not intelligent, and cannot cling to us for a moment after we cease clinging to it.

Loving one another is not the maudlin sentimentalism that would senselessly indulge the object of affection, nor is it being subservient to others' opinions lest offense be taken. Love is divine intelligence; hence to be guided by Love does not mean obedience to personal caprice, but to what one understands of Principle. Love can be understood by humanity as that state of mind which the apostle describes as thinking no evil; and the test as to what constitutes good thinking may be found in what has been called the golden rule, whose meaning is simple enough for even the most untutored to comprehend and practise.

To be loving and lovable is the indispensable requisite of harmonious living, and the genuine Christian will be found honestly striving for that Christlikeness. There is no way known to men by which to work out the ends of Christianity, to uplift humanity, reform the sinner, redeem the erring, and bring peace and good will to earth, except through the activity of love in human thought. Without love, Paul said, "I am nothing." Were we to subtract love from our consciousness, what would we have or be? The lack of love, as spiritually understood, underlies all the miseries and sufferings of mankind, while its quickening presence is their divine redemption.

This question relates especially to Christian Scientists, since they more than most others express faith in the declaration that God is Love; hence to them Love is the only intelli-

gence and power. If this means anything to us at all, it means that nothing can be rightly done unless it is done through Love, and that no thinking is right thinking, or is worth while, except what Love prompts. Nothing should be more certain than that, if we are not willing to let Love abide at the helm of our thought, we are not willing to be Christian Scientists. It would seem wise to face this matter squarely, and to act promptly in the right direction, because Love holds the only key to our peace and joy "on earth and in heaven."

It should be known that Christian Science, the restatement of primitive Christianity, cannot be correctly taught, nor its students' activities, opportunities, and duties rightly defined, except in terms of love. This very necessity makes it impossible for a Christian Scientist to be consistent, to be faithful to his church, to make it fruitful in good works, except as he obeys the behests of Love. If it were possible to separate him from this obedience and from the spiritual ideal which his church embodies, if he could be deprived of his loving loyalty to the methods and government adopted for our cause by its inspired Leader, the Discoverer and Founder of Christian Science, what would he have left wherewith to help fulfil its beneficent purpose? How all-important, therefore, that we put self out of the way, and let divine Love alone direct our thoughts and govern our intercourse with all mankind.

Christian Education

FRANCES THOMPSON HILL

"TRAIN up a child in the way he should go: and when he is old, he will not depart from it," is a commonly heard maxim, and one with Scriptural authority. In the world at large today, the training of the child from youth to manhood is a problem to which much thought and time are given. Indeed, one of the chief objects of a community or a nation is that its citizens be of the highest type of manhood, and that this type be improved in each generation. One and all agree that only through the proper training of the individual can this be attained. Our great philosophers and pedagogues have searched long and written much upon this subject of education, and have given us valuable material in this line; still there is a crying and ever increasing need for better lives, better people, and this shows that we have yet much to learn along the lines of the proper education of our children, who will in turn become our citizens, our lawmakers, our politicians, our populace.

The maxim states broadly, "Train up a child in the way he should go," but what the specific way is and how it is reached are questions upon which there seem to be various and varying opinions. The greatest Teacher of mankind said: "I am the way," and surely he spoke these words for our earnest consideration. May it not be that in all our searching after pedagogical methods we have largely overlooked the simplest, safest, and best way given to us by the wisest guide the world has ever known? The Master said, speaking of material knowledge as compared to spiritual, "Whosoever drinketh of the water that I shall give him shall never thirst," showing that material methods do not make for lasting right education, but that spiritual knowledge leads to the realization of eternal life.

On page 196 of Science and Health Mrs. Eddy says: "If materialistic knowledge is power, it is not wisdom. It is but a blind force. Man has 'sought out many inventions,' but he has not yet found it true that knowledge can save him from the dire effects of knowledge." Again on page 312 we read: "How true it is that whatever is learned through material sense must be lost because such so-called knowledge is reversed by the spiritual facts of being in Science."

In the Christian Science Sunday school the child is taught to be a law unto himself. He learns that as he thinks correctly, his dominion over every inharmonious condition is assured. Thus he learns to turn naturally to God with his every problem, and to solve it with the Principle which he has been taught. When he sees that this is never failing, he turns to it intuitively, more and more, until it becomes to him a life-giving power, an ever present and always efficient help.

The first lessons taught in the Sunday school are the ten commandments; the Lord's Prayer with its spiritual interpretation, as found on page 16 of Science and Health; and the beatitudes. Surely too great importance cannot be attached to these first lessons, provided for the children through the wisdom of our Leader, since a right apprehension of them must pave the way to the child's broader and richer development into a true citizen. Through patience and persistence in acquiring the letter and the spirit of these first lessons, a mental enrichment is gained which will be adequate to every human need. To a child thus taught, the Scriptures become an illumined, unfailing guide, a record of the human footsteps by which men may attain something better and higher. It is noteworthy that to such a child no subject is utterly incomprehensible. He is able intelligently to understand even many of the world's historical events, past and present, because he sees them in the light of Mind and knows them to be but a record of a continuous struggle after something better and higher, and the footsteps by which we reach this goal.

The child is also taught in the Sunday school the lesson of obedience. He learns that in order to be happy, he must be obedient to the law of God, good; that for him to manifest envy, jealousy, dishonesty, or disobedience, would be to have "other gods before me;" that in so far as he thinks loving, truthful, and right thoughts, he will be harmonious, but that when he thinks their opposite, namely, unkind, dishonest, or wrong thoughts, he is liable to be inharmonious, mentally and physically. Thus he learns that cause and effect are mental, and he joyously and spontaneously obeys the divine Mind. The value of this early training cannot be stated in words, and no one can estimate the unlimited good that the children of our Sunday school, who are to become practitioners and teachers, will accomplish as a result of this early training.

The privilege of teaching the children the simple and vital truths of Christian Science, and so preparing them in time to go into the world to heal and to save mankind from bondage, is a rare one,—one of the most important in our movement; and while demanding some personal sacrifice, it surely brings its own reward in the good it accomplishes. It is necessary, in view of this great work, that the teachers be thoroughly acquainted with the Bible and all of Mrs. Eddy's writings, that they may give to the children, as fully stated in Section 3 of Article XX of the Manual, only the "absolute Christian Science contained in their text-book," and not a personal or speculative theory.

The older children of our Sunday school who attend the Wednesday evening testimony meetings and the lectures on Christian Science, have educational opportunities of the greatest value. These aid in broadening the pupil, perhaps unconsciously, and help to fit him for whatever field he may enter; while the Christian Science publications furnish the student with a large amount of helpful information, which is presented in full literary form.

Through the study of Christian Science thought is becoming spiritualized, and this spiritualization of thought must and will become manifest in our educational systems. The time is not far distant when the curriculum of our schools and

Digitized by Google

institutions will be modified and changed to keep pace with the growing demand for a system which shall give to our boys and girls the necessary knowledge,—all that makes for human progress in civilization,—without encumbering their thought with the so-called laws and opinions of mortal mind; when each subject will be taught in harmony with the pupils' growth in the understanding of the truth and its practical application to human experience.

Thus the best in education for human betterment will go on, until humanity lays aside all materiality and recognizes man as the child of God, thus fulfilling the prophecy of Isaiah: "All thy children shall be taught of the Lord;" and of Jeremiah: "They shall teach no more every man his neighbor, and every man his brother, saying, Know the Lord: for they shall all know me, from the least of them unto the greatest of them, saith the Lord."

Channels of Love

VIRGINIA ROSS

In one of our hymns the opening line reads, "Make channels for the streams of love" (Hymnal, p. 89); and the blessings following this counsel came to one weary of the conflict of life, her heart filled with bitterness and, alas! hatred and resentment. She was constantly thinking of her wrongs, which amounted to persecution, her blighted hopes and ambitions, which were never to be realized here, and she did not care if there was any other place. In fact she did not expect any happiness, for "hope deferred maketh the heart sick," and her heart was certainly sick.

Mentally alert, she was eager for work which required mental activity, but her strength was not equal to the demand, and no wonder that she was weary. She craved the health that was needed to bring to her the success which she felt could be hers, and hopelessly she painted beautiful word-pictures that were read and cherished by many, spending hours at her work regardless of the pain, not knowing that the seeds of hatred, jealousy, and malice had brought forth a crop of failure and misery from which she was suffering.

Time and again she had won recognition in her chosen work only to lose it because of weeks and months of bodily suffering and mental fatigue. During these seasons of idleness she sought comfort in music, not knowing that it was the harmony of right thinking which she really needed, for her discordant thoughts had brought such inharmony into her life that music alone could not heal. Unconsciously her longing for literature, music, and art was really for the beautiful, the good, and the true. She painted from nature and drew sketches, but the cruel hand of false belief held her in its iron grasp, and her crop of error grew until she gave up her work to search for health, not knowing that while she was saying, "Lo here!" and "Lo there!" the reign of harmony was at hand, that it was within her own consciousness.

One day, after she had brought out of memory's chamber her dead hopes and ambitions, her heart crying out for peace when there was no peace, a beloved friend told her of a wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, that contained the truth which heals and makes glad the hungering heart, and persuaded her to buy a copy of it. She began to read, and the first thing she discovered was that its God was Love. This she knew was the kind of God she had always felt was the right one, but she had never been taught how to find Him. Then she learned that it was wrong thoughts which had made her ill, and one day she gleaned from her reading that she must love those whom she called her enemies, a teaching that she was most reluctant to accept. How was she to send them thoughts of love when she did not feel love? But the voice of Truth bade her think love; it said to her rebellious heart: "If a thought of hatred tries to creep in, shut the door on it. If you cannot think love, direct your thoughts into the channel where you can find it."

"Ah, that sounds easy," she thought, "but I can never do it." The voice said: "For every wrong thought that you send out, you will receive a return of like character, and for every right thought you will receive a hundredfold in return. Close the avenue of wrong thinking, with its hatred, malice, envy, resentment, and the like, and open the door to right thinking; then send out to those whom you think you hate, good will, love, tenderness, mercy, brotherly kindness, and forgiveness."

"I can do all but forgive," she cried; and the voice softly reminded her of the petition, "Forgive us our debts, as we forgive our debtors." Startled at what this meant, she anxiously asked, "Does it mean that with what measure I mete it shall be meted unto me? Then teach me, O Father, how to forgive as I would be forgiven." Thus the healing begun in her own consciousness brought also the peace that passeth understanding. She sent out loving thoughts, made "channels for the streams of love," for the love that "suffereth long, and is kind," and one glad day she could honestly say, "I have no enemies, for, behold, they have become my friends." Gradually those who had opposed her changed their attitude, and soon began to love her, although not a word had been spoken on the subject between them; but the leaven of love had been working, and good must result from it. The words on page 17 of Science and Health, "And Love is reflected in love," were proven true.

She now tells those who think they have enemies and hate others, of her experience, and that they must "make channels for the streams of love," so that only love can flow in or out, for all wrong thoughts are turned back by the streams of love that are flowing outward. They can also rejoice in knowing that "a man's foes shall be they of his own household," namely, the wrong thoughts he allows to take possession of his consciousness.

Lack Overcome

LIDA HERVEY SPENCE

During a time of great sense of lack, a couple of years ago, opportunity was given a Christian Scientist to prove the truth of the statement that "man in God's image can lack no good thing." She was then working long hours as a stenographer in a busy commercial office, and her evenings were employed in writing fiction, which did not sell. Discouragement with all its train of wrong thinking crept in, and persuaded her that if only she had a better typewriter to use at home when she was too weary from her day's work to remain in the office, she could write better stories and thereby meet with sales. But there appeared to be no way to procure a new typewriter.

Presently a Christian Science friend called, and during the conversation the troubled one spoke of her problem and of her sense of discouragement. The friend asked why she did not buy a new machine, to which the reply was made that she simply could not afford it, that her salary barely met expenses. The friend looked earnestly at her for a second and then asked, "Why do you not work it out in Science?" To this the response was made that she did not know how, with the hope that the friend would offer help. Instead the friend said, "If you really want to work it out scientifically, you will be shown a way."

Later, in accompanying her friend to the train, she carried

Digitized by Google

some of her companion's books and parcels, and after the train had gone, discovered that she had inadvertently retained one of the little books, which proved to be a pamphlet containing reprints from the Christian Science periodicals. As she walked home, idly turning over the leaves, these words seemed to stand out from the printed page: "Man in God's image can lack no good thing," and she said to herself with a smile that a typewriter was a good thing, and that she certainly needed one. She thought no more about the little book and its message, however, until later in the evening, when on going to her desk she again noticed it, and picking it up, turned over the leaves so as to get an impression of its general contents. Again the same words arrested her eye.

Immediately came the thought that this message must be for her. Always she had turned to some one else for the working out of her problems in Christian Science, but now she saw this was an opportunity to prove her own understanding of supply and recognized the occasion as a privilege to see herself as God's image. Systematically she set to work to clear her thought of all that was unlike good. All at once she remembered an article which a practitioner had at one time advised her to read, and the next day she went to the Christian Science reading-room, looked up the article, and carefully read it. It made clear the fact that the only work she had to do was to seek first "the kingdom of God, and his righteousness," and that in proportion as she did this her problem was already solved; that God's work is always done —it was her work which yet remained to be done.

From that time on, in everything she did she endeavored to put into practice this thought of seeking "first" the kingdom of God. If it were to take dictation in the office, she tried to realize that the only employer she had was God, and that it was her privilege to serve Him in reflecting accuracy, perfection, and love. If it were just to buy a loaf of bread, she saw the person from whom she bought it as God's image and likeness. If it were to put her little son to bed at night, she realized that right then they were both in the kingdom of God, which is "righteousness, and peace, and joy in the Holy Ghost"—joy in the unfolding of Life, Truth, and Love. In everything she gave thanks, and in this way so far as possible kept her thought lifted above material things as a source of good or happiness.

A week or perhaps ten days had passed in this way, when she went to a typewriter agency and made arrangements to trade her old typewriter for a new model, leaving a balance of forty-five dollars, on which she was given sixty days' time. She told the salesman she would pay the amount within that time, though to herself she acknowledged she did not know how it was to be done. She had no money and no more prospects for it than heretofore, but she had come into the understanding of supply as being spiritual. The typewriter was installed in her home, and she continued her endeavors to seek in every possible way the kingdom of God. She tried to realize that, as Mrs. Eddy tells us in "Miscellaneous Writings" (p. 107), "more love is the great need of mankind."

It was probably a week after this that she returned from her office one evening and found among her mail a letter from a New York agent who had been trying to put her stories on the market. Upon opening the envelope she found a note stating that a story had been sold, and the enclosed check was in payment therefor. The check was for forty-five dollars, the exact amount of the deferred payment!

She had sold her first story, and she owned a new typewriter! Surely here was the fulfilment of the promise—these were the things that had been "added." But it was not for these material proofs that her heart began to sing a song which has grown ever sweeter as the years pass. It was because she had been given absolute proof that supply is spiritual,—that "the kingdom of God is not meat and drink," and that "man in God's image can lack no good thing" when he seeks "first the kingdom of God, and his righteousness."

This was her first demonstration, and it has led to many more both for herself and others. The belief in lack, which had held her in bondage for years, has been entirely overcome, as will be the erroneous belief of any one who is willing to follow God's commands in the light of Christian Science.

Spiritual Thinking and Its Effect

CHARLES A. GRIFFITH

THE editor of a well-known American periodical recently favored his readers with a lengthy editorial on the subject, "Why I am not a Christian Scientist." Had he but known it, any student of Christian Science could have given in one sentence a better reason, in fact the only reason, why he or any other individual is not a Christian Scientist. It is for the same reason that one having no understanding of the science of numbers and unable to demonstrate the laws of mathematics is not a mathematician. Any one who is able to demonstrate the Principle of the Science of being as did Jesus the Christ nineteen centuries ago, and as he commanded his followers in all ages to do, is a Christian Scientist, and strictly speaking, no one else can be. The act of becoming a Christian Scientist is not merely the acceptance of a creed. Neither is it the negative position of discontinuing the use of material remedies and ignoring the claims of evil in the forms of sin, disease, or discord of whatever nature, charging them all to Providence and imagining that the dear Lord will in some superhuman manner cause good to result from evil.

In the editorial referred to the writer says, "I dread the enervating influence on the human race of a philosophy which denies the reality of evil, calls men off from courageous, patient, and intelligent campaign against it, and bids them regard evil, whether moral or physical, as only a mortal thought to be vanquished by a process of spiritual thinking." Here the fact is worthy of observation that what the writer is pleased to term an "enervating influence" has during the past half century raised thousands from sickness to health, from immorality to morality, from want and woe to comfort and happiness, all by a process of spiritual or right thinking and in obedience to the Master's commands: "Go ye into all the world, and preach the gospel;" "Heal the sick." This "enervating influence" is filling Christian Science churches with earnest students of the Bible, which through the light of Christian Science has become to them the Book of Life. Integrity in business has replaced sharp practice and questionable methods; happiness and contentment have found their way into homes where sin and despair once held sway, all as a direct result of the understanding of the nothingness of evil and the allness of God, good.

Christian Science is affirmative and positive in both nature and statement, and its effect is to negative the false claims of evil and expose their falsity. In "Science and Health with Key to the Scriptures" the obligation of the Christian Scientist is set forth in unmistakable language. On page 450 Mrs. Eddy writes as follows: "The Christian Scientist has enlisted to lessen evil, disease, and death; and he will overcome them by understanding their nothingness and the allness of God, or good. Sickness to him is no less a temptation than is sin, and he heals them both by understanding God's power over them. The Christian Scientist knows that they are errors of belief, which Truth can and will destroy."

There are some even today who firmly believe ghosts to be

Digitized by Google

real and to have power to harm. Would such a person find his belief in the reality of ghosts an exhilarating influence in assisting him to overcome a ghost? Would he not, on the contrary, find it exceedingly enervating under such circumstances? Must he not, before he can possibly overcome the baneful influence of ghosts in his experience, rid his consciousness of a belief in them through a knowledge of the truth that there are no ghosts? Firmly convinced as he probably is that he has actually seen ghosts, and confident as he no doubt is that they have caused him more or less distress in both mind and body, has he not quite as much reason for believing in their reality as the sick man has for believing sickness to be real, or the sinner for considering sin more powerful than righteousness? Truth cannot destroy one iota of truth, but it does most effectually destroy what is not true.

Jesus' Sermon on the Mount begins with a series of admonitions to spiritual thinking by which, we are assured, certain results will follow. To such as are obedient to these commands the Master says, "Ye are the salt of the earth;" "Ye are the light of the world;" and he adds, "Whosoever therefore shall break one of these least commandments, and shall teach men so, he shall be called the least in the kingdom of heaven: but whosoever shall do and teach them, the same shall be called great in the kingdom of heaven." Is it not a self-evident fact that only he who through spiritual discernment perceives the absolute unreality of evil because of the allness of God, good, can be courageous to meet and able to destroy the false claims of evil? Such an understanding is indeed true faith, the faith that moves mountains—of error, the faith described in the hymn:—

A faith that shines more bright and clear
When tempests rage without;
That when in danger knows no fear,
In darkness feels no doubt.

[Written for the *Sentinel*]

Lay of Truth

ADELA V. SCRIMGEOUR

"Come unto me," O tired and weary one.
The way is long down error's thorny road;
From dawn of day to dark of setting sun,
Heavy the load.

Cruel the yoke that galls the flesh of those
Who drag their useless burdens,—fear and grief;
Sharp is the whip, and heavy are the blows
Of false belief.

"Ye shall find rest," with Truth to gently lead;
The yoke is easy and the burden small.
Peace, troubled heart, ye need not strive or plead,
Love giveth all.

Truth is a covert from the tempest's roar,
As flowing river in a parched plain;
A hiding-place from woe, an open door
From sin and pain.

Truth is our Shepherd, and He leads His flock
In pleasant pastures with a gentle hand;
Truth gives the shadow of a mighty rock
In desert land.

How sweet the pleading call, "Come unto me"!
I hear the pitying voice, the kind behest.
Can I refuse the truth that maketh free,
That giveth rest?

Selected Articles

[Judge Clifford P. Smith in *Boston* (Mass.) *Traveler*]

The recent attack of a local clergyman on Christian Science differed from his others chiefly by reason of the fact that it was delivered to an audience of fellow preachers. This fact, however, did not add anything to its weight. It is vain in any circumstances for a representative of one Christian faith to say that another "rejects all distinctive Christian teachings." The most that this can signify is that his concept of the Christian religion differs from the other. In this instance the reverend gentleman named four particulars: "The personality of God, the Trinity, the salvation from sin, and the sacraments." Christian Science accepts all that Christ Jesus taught on these subjects, and does so in a simple and evident manner. An unbiased person would be far more likely to find a plain correspondence between the four gospels and "Science and Health with Key to the Scriptures" by Mrs. Eddy, than he would between the gospels and the creed subscribed to by our censorious friend.

Take, for instance, the question of salvation from sin. Jesus said to an adulteress, "Go, and sin no more." Mrs. Eddy has consistently said, "The way to escape the misery of sin is to cease sinning" (Science and Health, p. 327). Or take the question whether the Deity is one person or three. Jesus never taught that God consisted of three persons, but expressly approved the statement, "He is one; and there is none other but he" (Mark xii. 28-32, American Revised Version). So Mrs. Eddy said, "God is *One*,—not one of a series, but one alone and without an equal" (Science and Health, p. 117). It is a clearly proved fact that the creedal doctrine of three persons as Deity dates from the fourth century.

If any one will read "A Century's Change in Religion," a recent book by George Harris, president emeritus of Amherst College and formerly professor in Andover Theological Seminary, he will see that most of the changes noted by this author are in the direction taken by Christian Science. For example, we read on pages 89 and 90 with reference to Jesus: "Theology starts now with the historical, human person, and finds divinity in that which transcends human nature, especially in his moral perfection, in his oneness with God, in his sonship, in his health-power, in his revelation of the character of God. . . . The doctrine of the Trinity is a symbol of the various aspects of God." Also on page 71: "When the conception of the universe as mechanism running in grooves by the agency of second causes, gives place to the conception of the universe as organism throbbing with force and life, nature in all its movements is regarded as having its power and law in God, and the supernatural, if the term is retained, signifies the higher revelations of God in Christ, rather than that which overrides or interrupts the processes of natural law. . . . Health-power, exercised in the restoration of the sick, in the resuscitation of a body apparently dead, is confirmed by manifestations of similar power in our own times, a power we do not understand but cannot deny."

As for the personality of the Deity, Mrs. Eddy has stated the issue fairly in these words: "Human philosophy has made God manlike. Christian Science makes man Godlike" (Science and Health, p. 269). The distinctive and essential fact of personality is self-consciousness, or existence as a self-conscious being. (See any dictionary, particularly the Century.) Christian Science ascribes to the Deity not only this which constitutes personality as commonly defined, but all else that belongs to personality that is divine, perfect, and infinite.

One other item in the speech in question remains to be

Digitized by Google

noticed. It was that Christian Science has changed and is no longer the same as the teaching contained in Science and Health. This comment does not state the fact. In effect, it merely presents the question whether Mrs. Eddy's teaching is likely to be understood as well by a violent adversary as it is by those who are studying the Bible and her writings every day and putting their understanding thereof into daily practice. It is doubtless true that Christian Scientists do not find in Mrs. Eddy's writings what professional antagonists say they have found, but this fact does not qualify the latter to speak on this subject.

✧

[Harry I. Hunt in *Newark* (N. J.) *News*]

The sermon of the clergyman recently reported in the *News* on "Christian Science Wrongly So Called," displays such a fund of knowledge of things that are not so about Christian Science, that a correction is in order. Apparently our brother gleaned his information from critics of the movement, so it is not to be wondered at that he should fail to deal with actual Christian Science, or that he should aim his shafts of ridicule at a veritable man of straw.

To say that "Christian Science is not Christian because it denies the existence of a personal God," is in the first place an outright misrepresentation of Christian Science teaching. On page 116 of "Science and Health with Key to the Scriptures" Mrs. Eddy clearly states: "If the term personality, as applied to God, means infinite personality, then God *is* infinite *Person*,—in the sense of infinite personality, but not in the lower sense." And again on page 331 of the same work Mrs. Eddy writes: "Life, Truth, and Love constitute the triune Person called God." How Deity can be less than infinite is inconceivable.

In the second place, this remarkable statement of our critic is open to objection in that it declares for a personal or corporeal God, in direct contradiction of the teaching of Christ Jesus. Standing at the well of Jacob, Jesus declared, "God is a Spirit," to be worshiped "in spirit and in truth." If Christianity rests upon a personal God, as our critic holds, then Jesus would have declared to the woman of Samaria: God is a person, and they that worship him must worship him in person and in truth. "God is Spirit," Mrs. Eddy writes on page 117 of the Christian Science text-book; "therefore the language of Spirit must be, and is, spiritual," a statement in exact accord with that of the Master, and therefore Christian in phrase and essence.

In classifying Christian Science as unscientific, our critic treads ground already beaten down by countless critics who have said the same thing. Yet Christian Science is scientific, being based upon truth, the foundation of all science. On page 341 of Science and Health we read, "Sneers at the application of the word *Science* to Christianity cannot prevent that from being scientific which is based on divine Principle, demonstrated according to a divine given rule, and subjected to proof." Science is defined as "knowledge classified and made available in work, life, or the search of truth." Hence a Christian Scientist is one who is grounded in the knowledge of the teachings of Christ Jesus and who applies these teachings in his daily life. Christian Science is therefore scientific in the fullest sense, and it is Christian because it is a restatement of the teachings of the master Christian.

Our brother refers to Christian Science as "quite simple," a facetious fling for which he may be forgiven, in view of the statement of St. Paul to the Corinthians, referring to the spirituality of his teachings: "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him." In calling Christian Science "impure as to its character," our brother betrays an utter ignorance of this Science. Jesus laid down a simple and efficient rule whereby to judge justly, when he said: "A good tree bringeth not forth corrupt fruit; neither doth a corrupt tree bring forth good fruit. For every tree is known by his own fruit." Christian Science asks to be judged by its fruits. The healing of sickness, regeneration of people's lives, sweetening of tempers, overcoming of evil habits, destruction of sin,—these are some of the fruits of Christian Science teaching applied practically to daily living. If this teaching is impure, whence comes this good fruit?

Abuse of Mrs. Eddy is of course no argument against Christian Science. Intelligent people are apt to regard it as evidence of an intolerance which is all the more regrettable when voiced by one who is supposed to be an exponent of the golden rule. Access to the facts about Mrs. Eddy's life and work is so easily obtained in almost every public library and in every Christian Science reading-room, that there is no excuse for any one to bear false witness against one who has done so much to lift the burden of fear and pain and to raise men and women from lives of suffering and sin.

Our critic asserts that Christian Science is "a system of practical negation of all the evidence of our senses—a mere negation of the natural world." Here it is plain our brother has utterly failed to grasp the teaching of Christian Science as regards Spirit and matter. Christian Science does not deny the existence of matter to the human sense, but it does deny its ultimate reality, and in criticizing this teaching our critic heaps ridicule also upon the most advanced natural scientists and thinkers of the day. Needless to say, the positive results obtained by the practice of Christian Science, on which there is a vast amount of reliable testimony, could not possibly spring from any so-called system of negation.

It is easy enough to say, for example, that Christian Science is, in our critic's opinion, "subjective idealism gone mad," "mad philosophy," and so on, but it proves nothing in the face of the growth of the Christian Science church, and the authenticated testimony of many thousands that Christian Science heals every form of disease, organic and functional, and is transforming the lives of countless thousands the world over. "By their fruits ye shall know them."

✧

[Carl E. Herring in *World-Herald*, Omaha, Neb.]

In a somewhat extended article signed "Hippocrates," the author states: "After a quarter of a century of earnest inquiry and following up rumors and reports, I have never been able to discover a solitary instance of a Christian Science cure that could not be traced to mental suggestion."

At the outset it would seem that the mistake made by "Hippocrates" was in following up "rumors," when the most tangible, direct evidence is offered him at every Wednesday evening meeting of all Christian Science churches. He can find scores of cases of men and women of the highest repute who publicly testify to having been healed of tuberculosis, cancer, stomach trouble, and in fact of almost all the ills that beset humanity. Nearly all of these cases came to Christian Science after exhausting all known medical treatment. The persons themselves are there testifying to their condition and giving Christian Science the credit of healing them. It is not rumor, but a living presentation of past illness and long continued and present health.

There is no "mysticism" about Christian Science, any more than there was mysticism when the blind man whom Jesus healed said, "Whereas I was blind, now I see," and this revelation which Jesus gave to the world is the discovery of Christian Science by Mrs. Eddy. No other claim is made for it except that it is the healing taught and demonstrated by

Digitized by Google

Jesus of Nazareth. If our critic would lay aside prejudice and take up the serious study of Christian Science from original sources, not from flippant talks or tracts against it, he would find his mental horizon lifted and no longer think of Mrs. Eddy as indulging in vagaries or of her expression "mortal mind" as any different from the "carnal mind" of which St. Paul spoke.

The article suggests that "Scientists employ surgeons to set broken bones, and a tyro knows that diseases of the brain and blood are harder to heal than broken bones." To be sure, the surgeon brings the broken parts together and holds them with splints, but we did not know that Scientists or any one else went to the surgeon to heal the broken parts in the sense of being healed of a fever. Senator Works in a speech in the United States Senate in January of this year [1915] reported and submitted proof of fifty-seven cases covering thirty-six distinct diseases healed in Christian Science. Nearly all of these cases had been diagnosed by reputable physicians and pronounced incurable. Christian Science is regarded as mysterious because it requires study and spiritual discernment. Medieval theology is regarded as simple because its postulates embrace only heaven and another place —come up and be saved or sit down and not be saved.

Constantine standardized the religion of Christ Jesus according to his narrow, material concept of it, then stopped there and lost it. The people of the middle ages forgot to read what Jesus said and did, but the theologians read it for them, and awakened fear of a burning lake of eternal torment, instead of bringing the loving appeal of the Master, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." They made it man's principal business to keep out of this place of torment, instead of stimulating him to try to understand what the Bible means when it says that man is created in the image and likeness of God and given dominion over all the earth, and the things of the earth, and what Jesus meant when he said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do."

✧

[W. G. Watkins in *Antigo* (Wis.) *Journal*]

Our critic says that "Christian Science denies the reality of matter without offering any explanation as to the distinction which Mrs. Eddy makes between matter and Spirit." Mrs. Eddy uses "real" in just this sense: that it is the creation of God, Spirit, and is indestructible. She never said that pain and death are not, relatively speaking, facts to the human consciousness. She did deny that absolutely, that is spiritually, they are facts; and so does the Bible. This distinction is in exact accord with what Jesus taught and demonstrated. In all that the Master said and did is seen the inevitable fact that there is and can be but one reality,—that of Spirit,—for nothing else besides God, who is Spirit, has a single element of perpetuity.

The statement by our critic that Christian Science denies the existence of mortal mind in one instance and acknowledges it in another for the sake of the argument, is not in any sense true. From beginning to end Christian Science maintains that mortal mind, or the "carnal mind," which St. Paul said "is enmity against God," is just as it is defined on page 592 of "Science and Health with Key to the Scriptures," namely, "a belief that life, substance, and intelligence are in and of matter; the opposite of Spirit, and therefore the opposite of God, or good."

Our brother who thinks that Christian Science is not "profound," needs a better understanding of what its teachings have wrought in the lives of suffering humanity. It has been well said by an editorial writer in the Chicago *Tribune* that "not only is the number of her following notable, but likewise its character. Mrs. Eddy has not swept into her church myriads of the unthinking and uneducated. On the contrary, her teachings have appealed to the highest classes, and the level of the character and intelligence of the Christian Scientists is everywhere high."

The revision of Science and Health by Mrs. Eddy is much to the credit of the author, for her one and only object was to give to the world a clearer presentation of her discovery, without in any way losing sight of the basic truth. Exception is taken to the Christian Science text-book being used in connection with the Bible in Christian Science services. Our text-book offers a spiritual interpretation of the Bible, but it does not in any way claim to be a substitute for that good book. The correctness of Mrs. Eddy's interpretation is daily being attested in the experiences of its students, who have proved something of the blessings which this Science affords. Our critic exercises the right to interpret to his congregation his own concept of the Scriptures, and we see no reason why he should not accord a like privilege to others. No body of Christians believe more sincerely in the Scriptures than do Christian Scientists. The Bible is their constant companion, and they look to it to guide them into right conduct.

✧

[Robert S. Ross in *Cortland* (N. Y.) *Standard*]

The person who starts with the premise that divine Principle, Love, is the one and only cause, will if consistent inevitably arrive at the conclusion that there can be no effect from any other cause. Surely sin, disease, and death are not effects of Life, Truth, and Love, which constitute Deity, and if they are not, they are not effects of anything. Therefore they are nothing claiming the reality and actuality of something. In other words, they are illusions or beliefs. In the proportion that the sinning and suffering realize that sin and sickness are not made by God and are therefore powerless to influence or harm them, in that proportion also do they become their master. It was this simple yet profound process of reasoning to which Christ Jesus referred when he said, "Ye shall know the truth, and the truth shall make you free."

The declaration and demonstration of this spiritual fact did not, however, deter the Pharisees from ridiculing and persecuting Jesus. Indeed, it stirred so terrifically the belief in evil, alias the "carnal mind," that the spiritual advisers of those days cried out for the blood of the most spiritually and beneficently minded man the world has ever known. The calumny heaped on Jesus knew no bounds. "The reputation of Jesus," Mrs. Eddy writes on page 53 of Science and Health, "was the very opposite of his character. Why? Because the divine Principle and practice of Jesus were misunderstood." If the life and works of so great and good a man as the Nazarene could not escape pharisaical vilification and abuse, it is to be assumed that the attacks on Christian Science and Mrs. Eddy by a local evangelist can be endured without murmuring. Certain it is that there is nothing in the teachings of the Founder of Christianity to warrant the critic's views of what constitutes Christian discipleship.

Science and Health is based on the Bible, is coordinate with it, and is inseparable from it. In not the slightest detail does Christian Science depart from the pure idealism of Christ Jesus, the critic's statements to the contrary notwithstanding. And if your readers would like to know the facts about Mrs. Eddy, they will find them in "The Life of Mary Baker Eddy" by Sibyl Wilbur, which may be found in any public library. Suffice it to say that the world can never repay the debt it owes to Mrs. Eddy for reestablishing on earth the long lost art of primitive Christian healing.

Editorial

Simplicity of the Gospel

PEOPLE who begin their acquaintance with Christian Science by attending the church services, are usually impressed first with their simplicity and dignity. From the opening hymn to the pronouncement of the benediction every detail is in accordance with the apostolic injunction "Let all things be done decently and in order." A sense of fitness pervades the entire order of service provided for The Mother Church and its wide-spread branches, as outlined on pages 120, 121 of the Manual. It is even specified that the instrumental music which precedes and follows the service shall be "of an appropriate character." Nothing is left to chance or the vagaries of mortal sense.

Nevertheless this very simplicity is a strong factor in reaching the consciousness of the individual. He sees there is no striving for effect, no obtrusion of personality or of personal opinion. The one aim and object is to present to the congregation the simple truths of the gospel which Jesus taught and exemplified,—to sow the good seed, knowing it is "God that giveth the increase." It is this broader view, this elimination of the individual, which is made prominent in the by-law respecting "Prayer in Church." Section 5 of Article VIII of the Manual reads: "The prayers in Christian Science churches shall be offered for the congregations collectively and exclusively."

Here we have the key-note. The Lesson-Sermon itself represents a consensus of conception. It is not prepared for some particular group of individuals or some special field, but for every one who is ready to hear the truth and make it his own, since "Love," Mrs. Eddy tells us, "is impartial and universal in its adaptation and bestowals" (Science and Health, p. 13). All over the civilized world the truth in its purity and simplicity is read in the Christian Science churches each Sunday, and if it is read in the spirit of that purity and simplicity it cannot fail to bring help and comfort to each member of the congregation in the measure of his apprehension.

There is the same difference between reading with understanding and with meaning, that there is between reading to a congregation and reading at it, either collectively or individually. The function of the reader is to present to the congregation the truth with such measure of understanding as he has gained by prayerful study and meditation; it is not his office to interpret it, either by look or undue accentuation, as of immediate interest to certain of his hearers. There is no occasion to usurp the office of divine Love, but rather to send forth the healing word and leave it to carry its own message to each hungry or aching heart, remembering the divine declaration, "It shall not return unto me void, but it shall accomplish that which I please, and it shall prosper in the thing whereto I sent it." This is equally true in the choice and rendering of the Scriptural selection. Its appropriateness to the occasion, rather than its applicability as a rebuke to some brother or sister, should be the governing thought.

Close study of the Lesson-Sermons makes it plain that the strength of the teachings both of the Scriptures and of Science and Health lies in their simplicity and directness of statement. In his Sermon on the Mount and in all his discourses to the disciples and the multitudes who gathered about him, the greatest of all teachers brought home to his hearers the simple truths of the gospel in a way that made the Mosaic law something more than a mandate to be obeyed because feared. There were no "vain repetitions," no intricate arguments, but clear, terse presentations of the truth of being that penetrated the armor of indifference or of ecclesiastical hatred even as the pebble from the sling of David laid low the Philistine warrior. He made the law a vital and integral part of their daily living, and its willing observance desirable. So, too, Mrs. Eddy, as she explains in the Preface to Science and Health (p. x), "has made no effort to embellish" the infinite theme of Christian Science, but "bluntly and honestly given the text of Truth." She has left us in her writings the key to that storehouse of truth, the Bible, and diligently and earnestly seeking, we shall make these truths our own in proportion to our apprehension and application.

Let us remember these things, and whether we read, write, or bear witness to the efficacy of Christian Science, let us do it with that simplicity of speech and action which shall be an avenue for the manifestation of the all-embracing power of Truth and Love.

ARCHIBALD MCLELLAN.

✧

Unceasing Progress

ALL civilized peoples as well as individuals undoubtedly desire progress, but few are willing to pay the price it demands in the way of tireless effort and unshrinking self-sacrifice. This does not mean, however, that progress involves suffering; indeed without progress there must be suffering, for men and nations alike, for the reason that "progress is the law of God," as we are told on page 233 of Science and Health. The command given to the Hebrews at the Red Sea is no less applicable to us today than it was then: "Wherefore criest thou unto me? speak unto the children of Israel, that they go forward." Oftentimes there is a sense of waiting for God to work out our problems for us, when the requirement of Love and wisdom is that we remove from our own consciousness the hindrances to progress and go forward, even if to human sense this may call for a tremendous effort.

In Paul's letter to the Philippians, written during his first imprisonment in Rome, he says, "I press toward the mark," and in the same epistle he goes on, "I can do all things through Christ which strengtheneth me." Not a few things, be it observed, but "all things," and this should be remembered if we are ever tempted to excuse ourselves for slow progress on the ground that circumstances are against us. Paul planted the standard of Truth in Philippi when he was in a dungeon, his body lacerated by cruel stripes, but never once do we find a pitiful complaint from him because of many experiences of this sort. On the contrary, he tells us that if he must glory it will be because he was able to pass through such experiences unscathed, his ardor for the cause of Truth undimmed, and his purpose to serve God and humanity whetted rather than dulled by the efforts required.

In no other respect perhaps is watchfulness more needed than in the effort to progress steadily. Intermittent activity will do very little toward enabling us to reach the goal. While it may be true that we take only one step at a time, there should be no delay in taking the next, especially if the delay is due to a backward look at the things which should be left behind. Concerning this we have an impressive warning from our Leader on page 339 of "Miscellaneous Writings," where she says, "One backward step, one relinquishment of right in an evil hour, one faithless tarrying, has torn the laurel from many a brow and repose from many a heart."

Delay is often caused by satisfaction with incomplete achievements, indeed vanity is apt to assert itself when some forward steps have been taken. Whenever thought turns to self, consequently away from God, progress ceases until

Digitized by Google

this error is corrected. It also happens that the praise of others may be a greater deterrent to progress than censure. Did not the Master say, "Woe unto you, when all men shall speak well of you!" On the other hand he bade his followers "Rejoice, and be exceeding glad," when they were defamed and persecuted. It is easy to see that then they would be compelled to seek refuge in Truth and Love, and this would of course mean real progress.

In the closing chapters of Revelation we have pictured an awful conflict, universal strife so far as human sense could reach, and we might easily suppose that under such conditions all progress would be stayed; but above the "mighty thunderings," as the sound of many waters comes the unchallenged declaration, "The Lord God omnipotent reigneth." We also read of the purity typified by white robes, which tell of "the righteousness of saints." Then there comes into view the new heaven and earth, wherein is neither sin, sorrow, pain, nor death. Where but an hour before all seemed blank destruction, there appeared a city resplendent beyond human conception, and more than all else "the tree of life," whose leaves are "for the healing of the nations." This clearly shows that the law of progress had been at work in human consciousness all the while, overcoming all that is unlike God, and bringing in "everlasting righteousness," for which we may well work, watch, and pray unceasingly.

ANNIE M. KNOTT.

A Saner Sense

To grow more spiritually wise is to grow more discriminating, more scientific in our thought, and one of the most fundamentally corrective and broadly illuminating contributions made by Christian Science to the truth seeker is its new and provably true definition of nature, of God's universe, and of life.

A very large body of Christian believers include in their thought of the natural world that which is regarded as of God, and yet which is condemned by their moral sense, and which as they aver is to be escaped from through faith in Christ, plus the experience of death. They even identify themselves with that which is unspiritual, unlike God, so that their thought of the first step in the ascent of the Christian life, viz., conviction of sin, is to be thoroughly ashamed of one's self. Surely the admixture of good and evil so generally consented to as legitimate if not necessary, never assumed a more grotesque figure. Even the Greek philosophers were the more consistent, in that they frankly declared the unideality of their gods, whose envyings, immoralities, and strifes not only supply the background and explanation of what has been named "the romance of mythology," but explain by way of sufficient reason all the contradictions, contentions, and tragedies of the world life which was subject to them and in which they were wont to take a very active part. This renders the splendid ethics of an Aurelius and an Epictetus the more remarkable, and their loyalty thereto the more heroic and wonderful.

Today the fruit of "the tree of the knowledge of good and evil" which comes to its ripening in the asserted Christian theology that stands for the divinity of the material order, lacks some of the pagan virtues, since it dishonors the ideal to which its representatives professedly adhere. Nothing can be more discreditable or self-stultifying than to believe that God, the infinite good, maintains and, by consent if not by purpose, is responsible for a world order which is instantly pronounced upon by the moral sense of the believer, and which, as asserted, must be gotten away from through the further divine provision of death in order to reach the ideal life.

The teaching of Christian Science is ever in unison with the thought that both in nature and in manifestation God is absolutely and eternally consistent. It declares that His world, the only natural world, is now present and may be brought into immediate demonstration, so that St. John's declaration, "Now are we the sons of God," no longer remains a transcendental vision, but becomes an irresistibly victorious actuality of present-day experience, the realization of that sovereign rule of man which is declared and rejoiced over in the eighth psalm. Nature thus takes on an entirely new meaning in the light of St. Paul's scientific statement that "the invisible things of him [God] from the creation of the world are clearly seen, being understood by the things that are made," or as Mrs. Eddy has phrased the perception, "His manifold wisdom shines through the visible world in glimpses of the eternal verities. Even through the mists of mortality is seen the brightness of His coming" (Miscellaneous Writings, p. 363).

This is the new world into which they have entered who through apprehension of Christian Science have learned to discriminate between the realities of Truth and the seemings of false sense. The basis of a true democracy and of a redemptive humanitarianism has thus been gained. Every unideal human state or condition now prompts only to compassionate, freedom-bringing ministry. To think right about God and man is the one remedial thing which all believers are privileged to do all the time.

This Christ-idea enthroned in human consciousness and radiated through all the channels of human experience is the panacea for all ills. It is the Word of God, and able to save "to the uttermost." This is the new vision, the new life, and the new joy to which we are called, and its goal and consummation were named when the "great voices in heaven" were heard saying, "The kingdoms of this world are become the kingdoms of our Lord, and of his Christ."

JOHN B. WILLIS.

Lecture in The Mother Church

The First Church of Christ, Scientist, Boston, Massachusetts, announces a free public lecture on Christian Science by William R. Rathvon, C.S.B., a member of the Christian Science board of lectureship, in the church edifice, Falmouth, Norway, and St. Paul Streets, Back Bay, Monday evening, Jan. 31, 1916, at eight o'clock. The public is cordially invited.

Among the Churches

Current Notes

NEW HAMPSHIRE.—The press of the state has maintained a general attitude of respect toward Christian Science. Only two papers have published articles that were unfriendly, and these were plate matter. On the other hand, much of a friendly nature has been printed; and in many instances editorials from *The Christian Science Monitor* have been reprinted with favorable comment. Several papers have printed Christian Science lectures in full. During the first ten months of 1915 the following literature was distributed: 8,821 *Sentinels*, 1,727 *Journals*, 28,557 *Monitors*, 483 pamphlets, and 10,115 miscellaneous publications.

Committee on Publication.

BOULDER, COL.—First Church of Christ, Scientist, has opened a public reading-room over the Moys hardware store. A suite of three rooms has been remodeled and converted into one large, comfortable, well-lighted room, especially suited for the purpose.—*Boulder News.*

Digitized by Google

PARIS, ILL.—Papers have been passed for the transfer of the Bowen property on East Court Street to the Christian Science Society. While no definite arrangements have been made, it is understood that the society contemplates the erection of a new brick church in the near future. For several years the society has been meeting in the old Commercial Club rooms over the Citizens National Bank on the southeast corner of the square. Although the hall furnishes ample room for the present membership, the society desires to get away from the noise of the street-cars and to have a church of its own.—*Daily Beacon.*

GRAND ISLAND, NEB.—The edifice of First Church of Christ, Scientist, was dedicated yesterday morning [Nov. 7]. The organization now has a home worth, with the real estate, about five thousand dollars. As long ago as 1886 physical healing by means of Christian Science was demonstrated in this city. In the year 1889 a practitioner located here, at whose home Christian Science services were held. On Sept. 22, 1896, a church was organized with a membership of thirteen. A room in the Independent Building was rented, and there the members of the newly organized church held their services, remaining at this place until 1901, when a house and lot located at the corner of Kimball and Second Streets was purchased, to be used as a church home. The house was remodeled somewhat, and opening services were held on June 2, 1901. On June 19, 1904, the church was dedicated. In October, 1907, it became evident that the little building was inadequate in various ways, and after consideration it was decided to move into the Odd Fellows Hall, which offered a much more desirable place for holding meetings. The lot on Kimball and Second Streets was sold, and in February, 1910, another property was purchased, on which the present edifice stands.—*The Grand Island Independent.*

CANTON, OHIO.—The new Christian Science church in Cleveland Avenue N.W., is expected to be ready for occupancy about Thanksgiving, according to members of the building committee.—*Canton Repository.*

CORTLAND, N. Y.—The Christian Science Society has made arrangements for the use of the Universalist Church in which to hold its services.—*Binghamton Press.*

The Lectures

Sydney, New South Wales, Australia

The introductory remarks of Arthur Smyth, J.P., at the lecture on Christian Science delivered by Virgil O. Strickler in the Protestant Hall, were as follows:—

It is close on two thousand years since Jesus the master Metaphysician walked the streets and byways of Judæa and Jerusalem, casting out devils and healing all manner of diseases. You will remember how the Jews hated him, and how they tried on every possible occasion to entangle him in his speech, and how wise and unanswerable were his replies to their hostile questions. They complained, among other things, that the great healing works which were done were performed through the agency of the devil, and the Master's reply rings clear today, after twenty centuries, fresh and irresistibly logical: "Every kingdom divided against itself is brought to desolation." We have proved that often, have we not? Evil cannot cast out evil; sick thoughts cannot cast out sickness. The devil is not likely to cast himself out. It was one of those splendidly clever replies that has become axiomatic for all time: A "house divided against itself shall not stand." And consider the natural corollary driven home by the Master: "If I with the finger of God," that is, the power of Truth, "cast out devils, no doubt the kingdom of God is come upon you;" and of course it had, but they did not know it.

Are we any nearer the truth than they were? The same Christ is with us, and mighty works of healing are being done throughout the world through the power of Truth as taught in Christian Science. Here in our midst, every day, marvelous healings are taking place, and there are still to be found some who say they are of the devil. So history repeats itself, for if Christian Scientists by the power of Truth are casting out the devils of sin and sickness, "no doubt the kingdom of God is come upon you." Do not miss any opportunity of investigating Christian Science; it is worth the trouble. It will bring a joy into your life that no man can take from you; it is the "pearl of great price," which when a man has found, he will go and sell all he has to obtain it.

Correspondence.

Aberdeen, Wash.

William R. Rathvon, who lectured on Christian Science at the Grand Theater, was introduced by E. E. Boner, state senator, who said in part:—

Nearly two thousand years ago there appeared on earth a man who announced that his mission was to show mankind "the way." Yet when we contemplate struggling, suffering humanity, we must reach the conclusion that the world has never understood the Master's philosophy of life or applied his science of living. While it is true that man has ever sought to know the science of being, I think it may be said that men are today seeking deeper after spiritual truth than ever before. We are now, I believe, undergoing a sort of spiritual renaissance, from which mankind will emerge with a clearer understanding of God and their relation to Him. And now to the world that is eager to know the truth, Christian Science brings its message, based upon the teachings of Jesus of Nazareth. It is well that we pause, consider, and seek to understand all that is desirable of attainment in life.

Aberdeen World.

Utica, N. Y.

Jacob S. Shield lectured on Christian Science at the edifice of First Church of Christ, Scientist. Clarence A. Nelson introduced the speaker with the following remarks:—

The rapid growth of Christian Science is not a result of what it promises its followers at some distant place called heaven, or at some future time beyond the grave, but is rather the result of what it is doing here and now to relieve suffering humanity of sickness, and sin, and all the other discords that enter into human experience. Christian Science has rescued multitudes from the depths of despondency and despair, and has given to them "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness." Not alone does this religion heal sickness and sorrow, but through its holy influence it causes the wicked to "forsake his way, and the unrighteous man his thoughts."

Utica Press.

St. Louis, Mo.

A lecture on Christian Science, under the auspices of Fifth Church of Christ, Scientist, was delivered in the Victoria Theater by Charles I. Ohrenstein. He was introduced by Paul Shortridge, first reader, who said in part:—

Through the centuries there have been a goodly number of noble men and women, actuated by motives which for lack

Digitized by Google

of a better word the world has been pleased to term altruistic, who have labored most earnestly and unselfishly to establish the true brotherhood of man. Much good and some progress have been achieved in each century, but withal there has been an excess of groping in the dark, a seeking for some positive rule to follow, all unmindful of the fact that nearly two thousand years ago Jesus of Nazareth gave a truly positive rule, the correct, in fact the absolute, solution to this problem, when in answer to the tempting question of the lawyer he said, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself."

The failure to find in this absolute statement of ideal altruism the real solution, has arisen not so much from lack of desire to heed the admonition of Jesus as from a lack of knowledge of how to do it. For some years, however, this excuse has not been valid, for over forty years ago a gentle Christian woman, Mrs. Eddy, the Discoverer and Founder of Christian Science, when so-called material sense yielded to spiritual sense, gave to the world so profound yet so simple an interpretation of this "that he may run that readeth it." In increasing numbers those who have felt the call to higher things, as well as those burdened with the ills of this world, have been coming to Christian Science and finding therein a complete fulfilment of hopes and desires.—*Correspondence.*

✧

Clear Lake, Iowa

In introducing Clarence W. Chadwick, who lectured on Christian Science in the Congregational Church, the pastor, the Rev. W. A. Marzolf, said in part:—

The Christian church in every age has endeavored to interpret the truth to men. As men grow in knowledge and obedience to the truth, old and worn-out institutions founded upon part truths must give way to new institutions founded upon more advanced understanding of the truth. The true Christian spirit is one of broadest tolerance, the mind, heart, and will ever waiting and ready to accept and obey the next revelation of the truth of God for men. As children of the universal Father and brothers of all men, we must love and welcome any brother man who comes to us sincere in his convictions that the Father has in some way revealed to him more of His truth, and that when obeyed by His children it will hasten the day when His kingdom will be established, and His will be done "in earth, as it is in heaven."

Correspondence.

✧

Janesville, Wis.

George S. Parker, in introducing George Shaw Cook, who lectured on Christian Science, said:—

I am not a member of the Christian Science church, yet I have learned enough of this religion to believe that it more nearly fulfils my ideals of the every-day requirements of this life, and of the life to come, than any other religion of which I know. A religion that removes sickness, sorrow, and sin, and replaces them with joy, love, happiness, and prosperity, surely challenges our admiration. If we are to judge Christian Science by its influence and results, then surely the verdict must be favorable. The wonderful growth accorded this religion is one of the marvelous things of the age. Does it not prove conclusively that this teaching supplies the spiritual nourishment for which all are seeking?

Well do I remember the first Christian Science service I attended years ago in a distant city. The look of eagerness apparent among the vast audience in the unfolding of the lesson taught, was to me a new experience. I said to myself, "Surely a great audience like this, made up of intelligent, thoughtful, serious yet happy people, must have found something that many others have missed." The service, the genuine desire put into practice of making the stranger in a strange land feel that his lot was cast among friends whose intent was to make life more joyous and the burdens easier to bear, was to me a revelation.—*Correspondence.*

Testimonies of Healing

I have experienced the healing power of Christ, Truth, as taught by Mrs. Eddy in her book "Science and Health with Key to the Scriptures," and for this healing I am very grateful. I did not take up the study of Christian Science for physical healing, although that was very much needed, but I sought the aid of a practitioner and began to attend meetings for peace of mind, and for an understanding of God which might possibly enable me to cope with conditions in which I was compelled to earn my livelihood. I had always been a Sunday school student and had tried to do as nearly right as I knew how, but this did not seem to bring me the happy results which ought to have attended faithful work.

When Christian Science was presented to me, after slight deliberation I began to study it. Then after some lengthy study, accompanied with many doubts as to whether Christian Science really was the truth about God for which I hungered, I found myself, through the aid of a practitioner, better satisfied and healthier. In order to feel fully settled in my own mind, however, I went through a class in March, 1900. Since then I have not taken a drop of medicine. There have been serious attacks of illness, but I have always been helped and sometimes quickly healed by the aid of a practitioner. No ailment that has once been overcome has ever returned, though a difficulty with my eyes has not yet entirely yielded. Christian Science has also helped me to see the way clearly through business difficulties. In my work with children in the schoolroom it has been of very great value.

During the past fourteen years I have given Christian Science a thorough trial in every kind of need, physical, mental, moral, financial, and spiritual, and it has never been found wanting. It has been a present help in all emergencies, and there have been many. There is now no doubt in my mind as to its being the truth about God and man, of which Jesus said, "Ye shall know the truth, and the truth shall make you free." I am very grateful for the knowledge of Christian Science as a practical, every-day religion.

EMILY S. WARREN, Chicago, Ill.

✧

I was led to investigate Christian Science in order to discover if possible what had been the transforming touch which had made the daily living of some Christian Science friends so beautiful, so unselfish and loving. Religion, which had long seemed to me mere theory, became of vital interest as I read the text-book, "Science and Health with Key to the Scriptures," and all prejudice against its author, Mrs. Eddy, melted away after reading one chapter, for I felt the uplifting influence of her purity and spirituality and knew that her message was the truth.

At first no thought was given to the healing power of Christian Science, though I had never been well, and at the time I began to study the text-book had resigned my position as teacher in our city schools because physically unable to continue the work. For years the almost constant care of faithful physicians (on two occasions surgical aid also was sought) had resulted only in continued suffering and invalidism, but as a result of the study of the Bible together with Science and Health, also occasional treatment from a practitioner and most loving counsel and encouragement, I was able to take up my work again. Since that time, eleven years ago, I have worked harder than ever before, yet have been at my post daily, with no loss of time on account of illness. There have been days when I could not have been there had it not been for the healing power of Truth, which brought dominion instead of subjection.

Loneliness, anxiety, and sorrow have been replaced by joy, peace, and confidence in the Father's protecting care. Discordant physical conditions, such as weakness, emaciation, stomach disorder, and frequent severe colds, have disappeared, some of them so gradually yet completely that they are forgotten, until in recalling my past discomfort I begin to realize my present freedom.

I am very grateful for the protecting, healing, and uplifting power of this truth, which has been my only remedy since I began the study of Christian Science. I long for more understanding, that I may be better able to live according to divine Principle, which Mrs. Eddy was faithful, pure, and loving enough to be able to discover and reveal to the world. I rejoice every day in an increasing measure of freedom, physical and mental. It is proved to me absolutely that when applied according to the teaching of our text-book, Christian Science is an unfailing remedy for every form of error, whether manifested as sickness or sin. I am more grateful today than ever before for the understanding I have of it.

MAY E. BERRY, West Somerville, Mass.

✧

Through much sorrow and mental anguish, as well as physical weakness, I sought for truth, for some sure guidance, for a knowledge of the living God. My father was a minister, and he had taught me to get great help from the Sermon on the Mount. So much comfort was gained from the Bible that I took a special Bible course at Oberlin College and Theological Seminary with a view to being a Bible teacher. I tried to keep my thought free from prejudice and open to truth.

A year after leaving Oberlin I became very weak and ill, and for a year and a half suffered from what the doctors called incipient tuberculosis, neurasthenia, nervous exhaustion, stomach and heart trouble. For six months I was under the care of a trained nurse, and for many months after that followed the treatment used in such cases. During the early part of my illness some Christian Science literature was sent to me, but supposing that Christian Science was not Christian, I told the nurse to put the literature in the fire. Months later, when I was becoming very much discouraged, for the weakness and other symptoms still persisted, a friend offered me some copies of the *Sentinel*. I did not care to take them, but was ready to see if there might possibly be any help. On opening one with the hope that there might be some good even in Christian Science, I came at once to a statement which I accepted as true. Right then I knew that the message of Jesus was for all time and all peoples, and the statement was made that any person could prove this for himself. I did not want to read any more, but reached out at once in prayer for a proof, and received it.

I began to hope that Christian Science was true. I got a copy of Science and Health and began to put its teachings to the test, taking Bible promises and trusting them. Immediately I received relief from stomach disorder which had troubled me for ten years, but I still went slowly, testing every step. I had much prejudice against Mrs. Eddy, but I kept reading and trying to apply what I read. A practitioner was asked to help me, and it was not long before all signs of tuberculosis were gone and I knew that Christian Science was the Christ-message which I must give to others. It is beyond all comparison better than anything I ever knew before.

I have met many Christian Scientists, have studied the Bible as never before, and it is wondrously illuminated and made practical by Mrs. Eddy's explanations. I have had class instruction, have joined the church, and have been blessed beyond all I asked or expected. One has only to study

Digitized by Google

Mrs. Eddy's books in order to overcome his prejudices and to receive great blessings. This faithful, courageous, noble woman discovered the Principle which underlies the teaching of Christ Jesus, the apostles and prophets.

GERTRUDE GARBUTT, Olean, N. Y.

✧

In September, 1913, I was taken suddenly ill with pains in the right side, and I suffered intensely for two weeks, although a doctor was in regular attendance. He, as well as two other skilled physicians who were consulted, said an operation was the only thing to bring relief. I was convinced I could not survive an operation, and was frightened and unhappy. The thought then came to me to try Christian Science. A practitioner was sent for, and she brought so much comfort to me in her visit that I was afterward able to go to see her. In a very short time I was healed, and am now as well as can be. I have also been healed of bowel trouble and weak eyes, and have learned to overcome fear, for I know that God will guide us continuously, if we trust Him. I have a better understanding of the Bible than heretofore, and our Lesson-Sermons are a help at all times. I still have much to overcome, but I know that all inharmonious conditions will be met if we pray intelligently and without ceasing.

ETHLYNN WILLIAMS JAY, New Orleans, La.

✧

In October, 1904, I was healed of an internal growth, the result of falling on a frozen creek-bed when a child of twelve years. This growth grew worse and caused a great deal of suffering, so that finally surgeons of Los Angeles advised an operation. At this point I turned to Christian Science, and after being treated three weeks by a practitioner was completely healed. There has been no return of the trouble.

During the years since then other ailments have been overcome, among them a severe case of blood-poisoning, which yielded in one treatment so that I was able to get about, and on the third day I was entirely well. I have never suffered severe pain for more than three hours at a time since becoming a student of Christian Science. Now I consider myself "every whit whole," whereas formerly I never thought myself free from sickness.

Words cannot express my gratitude to Mrs. Eddy for showing us the way to see what Christ Jesus taught the multitudes years ago, namely, how to get away from the captivity of sense, of sin and sickness, and find our freedom in Spirit, God.—BESSIE ESTHER PARKER, Monrovia, Cal.

✧

For a long time I have felt it a duty as well as a privilege to express my gratitude for the many blessings Christian Science has brought into my life.

I knew of Christian Science for a number of years before accepting its teaching. I had purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, which I read a little, then laid aside, thinking I could not understand it. Not until I was in a strange city, a complete wreck physically, and my money all gone, with the prospect of having to go back to the hospital (I had been there for nearly four months a few years before), did I turn fully to Truth. One day when alone something said to me, Why don't you give Christian Science a fair trial; they say it is God that does the healing, and if it is, He is no respecter of persons and will heal you. I hunted up the text-book, and when my husband came home he found me reading and asked what I had. When I told him, he had little faith I would be benefited, as he was a druggist; but I was desperate. By faithful study I was healed of chronic bowel disorder, female weakness, and nervousness that seemed worse than any pain; but the root of all the trouble was fear. I was afraid of everything; there seemed to be danger everywhere. I had been taught to believe in a literal hell, a personal God up in the sky, and a devil after me constantly. It is impossible to describe the peace and joy of knowing God as divine Principle, Love.

My healing came slowly. Only as my concept of God and man was changed did the body respond. I have caught my husband looking at me in amazement, and he has gradually accepted Christian Science as the truth. Today each member of the family is working out his salvation in the light of Christian Science. We have had some beautiful demonstrations of God's power to heal physical discord, and we have also been helped financially. As I gain in the understanding of Christian Science, my appreciation of our dearly loved Leader increases.—LIZZIE S. DE WATERS, Iola, Kan.

✧

Christian Science came to me in an hour of great darkness. For several years I had been suffering from severe stomach disorder and had tried many medical remedies, none of which gave me any permanent relief. My health was gradually getting worse. I could neither eat nor sleep without some kind of drug, and finally the doctor told me that I would have to give up my business, go off to a resort, and take a complete rest; but this I positively refused to do, as I had too many depending on me for a living. He then asked which I would rather do, go off and be cured, or stay at home and lose my mind worrying over business. I still refused to give up, and he said that it was of no use for him to treat the case unless I would obey his orders.

At this point my wife advised me to see my sister, who had been healed in Christian Science. I did not believe in Science and said so, but was prevailed on to go and have a talk with my sister. This was about twelve o'clock at night. I had not slept in three nights and saw that there was no sleep for me that night, so I told my sister what the doctor had said. She only smiled and said that it was not necessary for me to give up my work, since it was honorable, and that I could continue with it if I would let Science show me the way. This I agreed to do; so she said she would treat me at once, and that I could go home and go to bed without taking any medicine. I agreed to this, after telling her that if I could not go to sleep in an hour or two I would have to take the medicine, for I was afraid I would lose my mind if I did not get some sleep. The result was that I immediately went to bed, and slept all night like a child, and have had no trouble about sleeping well since then, which was about six years ago. Instead of giving up part of my business as the doctor told me I would have to do, I have increased it at least fourfold, yet have no trouble in managing it. Business men often ask me how it is that I can manage such an amount of business with so little trouble and worry.

I write this testimony trusting that it may fall into the hands of some one whose life may be darkened as mine was with sickness and financial difficulties, and to assure such a one that if he chooses the way I took he will find relief. I can never be thankful enough to God for Christian Science, and to Mrs. Eddy for the Christian Science text-book, "Science and Health with Key to the Scriptures."

G. T. ANTHONY, Washington, Ga.

I gladly bear witness to my husband's testimony as being every word true, for I was with him in his healing, and I rejoice with him in giving our testimonies, in the hope that they may cheer some one on the right road to recovery. I did not seek Christian Science for physical healing, although the daily reading and study of the Lesson-Sermon has healed me

Digitized by Google

of many discords, one being headache, to which I had been subject since a girl of about sixteen. I have had only one attack since accepting Christian Science, and that was overcome in half an hour through the power of Truth.

About six years ago my husband was very ill with severe stomach trouble, and as all medical aid had failed him he resorted to Christian Science treatment and was healed in one week. In order to help him in his efforts the practitioner, who was his sister, asked me to read Science and Health with him, and I was only too glad to do so, for to have him well again meant more than anything else to me. I at once saw that this was the truth which Jesus said would set us free, and just what I had always wanted but did not know how to find. My husband's healing was so complete and so wonderful that we were both convinced of Truth's healing power and accepted Christian Science as our guide and help, and it has never failed us. We have not used medicine or had a doctor since, and our home has been blessed not only with health, but with happiness, harmony, and prosperity. Divine Love has more than met our every need and has proven to be our source of supply.

I am most grateful for all these blessings, and for Mrs. Eddy's life and teachings that have shown me the true way and the true life. Darkness, doubt, and fear are gone, for I have found that the truth is "a lamp unto my feet, and a light unto my path," and that God, good, is All-in-all.

JANET PADDISON ANTHONY.

✧

[Translated from the German]

I would like to state the following case of healing: Four years ago I was taken down with gout in the hip, and the physician who had to be called in accordance with the regulations of our sick-fund, declared that I must stay in bed six weeks and take medicine prescribed by him. My condition was such that the neighbors could hear my cries of pain. We then applied to a Christian Science practitioner, through whose treatment the disease yielded within four days. This caused the physician great surprise. "Why," he said, "this is wonderful! I have never had such a result before." I was able to move my limbs freely and to leave my bed. I would here mention the fact that the medicine was not used, my healing being accomplished through the truth as understood in Christian Science.

For this wonderful healing I am most deeply thankful to God, and grateful to the Discoverer of Christian Science, Mrs. Eddy. This experience has shown me that every error which may present itself causes us to draw nearer to God, and in a sense helps us in our progress, for the way leading "from glory to glory" is not attained by walking on paths of flowers, and in my experience the darkest hours have been preparatory to the finding of priceless gems of truth. Our consciousness must be filled with the desire after righteousness, and Christian Science alone leads us to the wonderful recognition of Truth.

WILHELM BUSCH, Hannover, Germany.

✧

My attention was first drawn to Christian Science in 1902, when a member of my family was instantaneously and permanently healed of stomach and bowel trouble, also of rheumatism and gout of about thirty years' standing. I had been a great sufferer from severe headaches, which occurred frequently and lasted for days at a time. These grew constantly worse, until I felt forced to take a drug which the physician told me affected the heart. This trouble, as well as chronic bowel disorder, was healed through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have witnessed within my immediate family the healing of many other ailments, among them nasal catarrh, a throat affection, eye trouble, blood poisoning, bronchitis, skin eruption, sciatica, influenza, and sprains.

Christian Science has given me a religion that is rational, logical, and demonstrable. This new-old understanding of God has not only relieved me of physical discord, but it is teaching me how to overcome a sensitive disposition, also such habits as fear, worry, criticism, and resentment. I am especially thankful for being healed of a sense of loneliness. I rejoice in having found God to be Life, Truth, and Love, the one infinite Mind, divine Principle. My heart is filled with thankfulness to God, and gratitude to Mrs. Eddy, for all the blessings that have come to me and to my family through the study and application of Christian Science.

SOPHIE NEWMARK, Los Angeles, Cal.

✧

Christian Science has brought so much love and peace into my life that I feel it my duty to add my testimony to the many which have already appeared in the periodicals. For thirteen years I suffered intense pain, said to be due to stomach and kidney trouble. I was treated by eight different doctors with only temporary relief. Some advised an operation, to which I would not submit, and some dieted me with only enough to sustain life. When living in Oklahoma I had a very severe attack and was treated by two doctors, but realized only a little relief after being confined almost three months to my room. Then my doctor advised change of climate and I came to Bisbee, but before I had been here two months I had a more severe attack than ever before. I was treated by one of the best doctors of this place but did not derive any benefit, and he practically told me there was no help for me.

Having exhausted all material means without receiving any help, I became despondent, but in the mean time a dear friend told me what Christian Science had done for him and gave me some literature to read, including "Science and Health with Key to the Scriptures." I read but I could not understand. When, however, I saw there was to mortal sense no help for me, I turned to Christian Science as my last hope. When I went to a practitioner I could hardly walk because of the pain; but during the treatment I forgot my suffering, and went home feeling much better and happier. Then as I read Science and Health in earnest and began to gain an understanding of Truth, the improvement continued, until now I am well. I am truly thankful that I have found the fountain of life.—THOMAS H. CARR, Bisbee, Ariz.

✧

I feel it a duty as well as a privilege to send my testimony to the *Sentinel* for publication, thinking it may be of help to others. Living as I do in the Cascade Mountains, I am somewhat isolated from all church influences; still there is no loneliness or feeling of lack of God's care and love. On the contrary, I am contented and happy, knowing that God is my continual guide, ever near in all my daily needs. I have had many good demonstrations of God's love and power. My granddaughter, five years of age, came to me saying she had the toothache. I took her in my arms and maintained the declaration that we are in God's kingdom, which is spiritual, and that there is no pain where God is. In a few moments she was asleep. She slept an hour, and when she awoke the toothache was gone, and it has never returned. For this and many other blessings I am indeed thankful, and also grateful for Mrs. Eddy's knowledge of religion. What a sweet assurance of eternal bliss comes through living the life of a

Christian Scientist! I am thankful each day that I am a follower of this teaching.

My husband was healed of an attack of rheumatism in fifteen minutes after treatment was begun. On Nov. 14, 1914, I fell on the sidewalk and struck my hip on the iron scraper. To mortal sense I was badly hurt, but my first thought was, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494), then that as God's child I am in His kingdom here and now, therefore I cannot be hurt; and I was instantly healed.

Last September I was badly wounded by my cat, and as a result fear crept in. I then applied to a Christian Science practitioner for help. Partial relief came in thirty-six hours, but the first twenty-four hours the pain was so great that I had no sleep. After a week I undertook the working out of my own problem, feeling that God was my help. A permanent healing was realized in ten days, and I can never thank God enough for what Christian Science has done for me.

FRANCES C. PRINDLE, Prindle, Wash.

✧

I am very grateful for the knowledge and understanding of God's love for man which I have gained through the study of Christian Science. It has given me an unvarying rule to apply to every problem. Eight years ago I was led into Christian Science through the healing of my mother of asthma, which had been pronounced incurable, but I have never applied this teaching to myself until lately, when by so doing I have been healed of almost incessant headaches. I have also been healed of influenza and a throat affection. My health has thus greatly improved, and this I am sure is entirely due to the preventive power of right thinking, which I am trying to make habitual by studying the various authorized Christian Science publications.

I am thankful to God that there has been a woman so great, good, and unselfish as Mrs. Eddy to discover this wonderful truth for all mankind. I also wish to express my gratitude to the contributors to our periodicals, as the articles mean so much to me.—ELEANOR M. HECKMANN, New York, N. Y.

✧

[Translated from the German]

About six years ago I was suddenly seized with spasmodic pain so intense that I wished it were all over with me. I had familiarized myself somewhat with the teachings of Christian Science, and therefore did not want my husband to call in a physician. When the pain grew less severe I tried to realize that life is spiritual, "neither in nor of matter" (Science and Health, p. 14), and presently there was a calm, and I slept several hours. From that day on I sought to go deeper into the study of the teachings of Christian Science, and whenever there was a recurrence of the above described condition I would quickly succeed in meeting it.

While visiting friends in Berlin in 1912, I woke up with dreadful pain on the night preceding my departure for home. This time I seemed unable to rise above the attack, and as I did not wish to disturb anybody, I waited till morning, and then asked my friends, who thought they should send for a physician, to wire to a Christian Science practitioner in Hannover for treatment. Two days after this, when I returned home, there was still an inner upheaval, but on the third day I was completely free. A stony substance had been expelled from the system, and since then I have had no return of the distressing condition. Many have been the instances in which I have experienced the workings of Truth. It is as the Bible says, "Ye shall know the truth, and the truth shall make you free."

FRAU AUGUSTE KINDERMANN, Hannover, Germany.

From Our Exchanges

[*The Universalist Leader*]

One may have all that he wants and yet be far from possessing all that he needs. Deep in the heart of every human being abides the need of something that shall lift his life above the petty limitations of personal desires and aims, and endow it with a loftiness of purpose and a breadth of thought and feeling unknown to those whose only care is for themselves. We need the ambition not only to promote the welfare of those whose happiness is our special care, but in this and all permitted ways to render service to the world at large. We also need the conscious endeavor, through the integrity and kindness of our own life, to deserve the approval of our Father in heaven. Only those whose lives are ennobled and enriched with the joys which the fulfilment of such desires as these afford, are truly happy.

Those whose energies of heart and brain are devoted to interests larger than their own, have little time or inclination to think about themselves. You will not hear them complain that they are not appreciated and that the world has treated them meanly. Theirs is the blessedness of devotion to unselfish ideals; and how much or little of what is called personal enjoyment may go with it, is a trifling matter.

[*The Christian Register*]

It was a Chinese augur in the seventh century before Christ who, according to Professor Giles, said: "Natural phenomena do not bring with them either good fortune or bad fortune. These are brought about by men themselves." The saying sounds very modern, but what is more remarkable, the need of it is just as modern. After all the knowledge of the world and the course of events, all the dissemination of scientific principles, there are still as many people as ever, apparently, who assume that what happens to men is the disposition of a higher power. If the truth could be told when people indict Providence with their sorrows, it would go farther than all the labored explanations to clear the matter. If doctors could tell all they know of the reason for early death, for pain, for disease; if the minister could say candidly, "This man was taken away not by God's will, but by his neglect of the elementary laws of God's care, by his dissipation or self-indulgence" . . . religion would be spared a good many questions which its answers do not meet. Then the field of religion would be cleared for an unassailable faith.

[Rev. Britton D. Weigle in *The Living Church*]

The church of today will have to be constantly on her guard lest both pulpit and pew be exposed to the danger of unconsciously inhaling an atmosphere impregnated with elements which distort the vision and blur the perception of social transgressions. The interests in the church which are peculiarly exposed to this danger of subtle and adroit exploitation are a zeal for orthodoxy and a regard for propriety.

Too often, alas! when the modern preacher of the true prophetic order raises his voice in protest against entrenched wrongs and outrages against the God of justice and righteousness, he is unctuously advised to "preach the simple gospel," by those who seem oblivious to the call of the prophet of old and of our Lord and Master to "preach the gospel to the poor; . . . to heal the broken-hearted, to preach deliverance to the captives, . . . to set at liberty them that are bruised." Or else he is solemnly enjoined to point his periods and trim his words with punctilious precision and exacting

Digitized by Google

nicety, lest they offend the sense of propriety cherished by some of his hearers. It has been well observed that in being too correct we may miss the truth. When a warden, while consulting Bishop Lawrence, expressed a fear of calling a rector with too pronounced social views, the bishop replied, "We may possibly get a rector of such correct and careful habits that he will reach no one. We must take some chances, break away from some conventionalities, and so move in among the people as to gain their interest."

[*The Congregationalist and Christian World*]

Doubtings and debates are quite natural in the circumstances of the war. They are natural also in the conditions of our ordinary lives, and have compelled a wholesome unwillingness to dogmatize, in America as well as in Great Britain. We are far less ready to limit the mercy of God in order to fit a formula of theological systems and the opinions of our forefathers. We are agreed, however, in believing that the experiences in this or any other world are one in the necessity of a communicated life from above, for any true and happy share in the divine experience which Christ came to reveal and impart. We shall do well if we concentrate attention upon the need and necessity of this life from above, without dogmatizing upon invariable methods of God's working or limiting God to activity at fixed times in the experience of the soul.

[John Hunter, D.D., in *The Homiletic Review*]

What we see around us is not a world really redeemed, but only a world that is being redeemed. The actual redemption of humanity is coincident with its moral and spiritual progress, and can be accomplished only by the slow and constant operation of the spirit and power of God. But the divine power is no abstraction, and the divine spirit no wandering ghost. The unity of power is not God, nor man, in isolation. God in the world, reconciling it to Himself, means God and man working together; the divine power and spirit in human hearts and lives, permeating and quickening them as the infusion of a higher life. The atonement is still in process of completion. Into the Son's work, which is also the Father's, we are called to enter; called to hasten, by our life and labor, the time of the great reconciliation, when man's moral being shall be received into the unity of creation, and things in heaven and on earth shall be one, and God, that is good, be All-in-all.

[John C. Seegers in *American Lutheran Survey*]

The Reformation was a spiritual victory. It was a triumph within the soul. It was an inner experience before it was an historical fact. But spiritual triumphs affect the entire man; they are never confined to the soul; they are never isolated. And therefore the church was not the only beneficiary of this great conquest; every phase of human life felt the power of its divine impact. It emancipated the human mind. The fetters of a worn-out philosophy were shattered and an unrestrained, free inquiry and research became possible. It made illiteracy unnecessary, and if followed consistently, a godless literacy impossible. It pervaded the sphere of civil life.

[*Zion's Herald*]

The man who abides in Christ is perpetually at home; into the soul that has made its peace with God the Father, the Master mystically enters to sup—and stay. Amid the changes that are constantly occurring in this shifting and unsatisfying world, men need more and more to lay stress on the things that do abide.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new pamphlet entitled "Man's Unity with God" has been printed in the German language. This pamphlet contains seven articles from the Christian Science periodicals, which have been translated into German. The pamphlet is now on sale at the prices of our regular pamphlets, as shown on the opposite page.

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

A new pamphlet, "What went ye out for to see?" is now on sale. This pamphlet contains the four following articles from the Christian Science periodicals: "Principle Not Person"; "Jesus of Nazareth"; "Jesus the Christ"; and "Jesus and the Christ."

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Oxford India Bible paper edition, with stiff morocco cover. Single copy, $6.00, six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

Conditions mainly due to the great war in Europe continue to keep all the American shipyards operating at full capacity, while many plants are enlarging and otherwise adding to their facilities for constructing and repairing vessels. The Newport News Shipbuilding & Drydock Company, Newport News, Va., has obtained a large share of the contracts, according to *Manufacturers' Record*. The Newport News plant's contracts aggregate about twenty-seven million dollars, and include nineteen contracts for new ships and one contract to rebuild a vessel, six ships being now under construction. A year ago the company was employing about 4100 men, and today the employees on its pay-roll number 6700. The vessels for which contracts are on file include a battleship of 34,100 tonnage, another of 27,500 tons for the United States Navy, five oil carriers 10,900 tons each for the Standard Oil Company, two freight carriers of 4500 tons each, and an oil carrier of 5125 tons for the Southern Pacific Company, and an oil carrier of 8400 tons for the Atlantic Refining Company.

More than $1,765,200 has been expended in six months on the Dixie Highway alone, in the fifty counties in various states which it crosses. These counties are preparing to spend $6,931,000 within the next twelve months. In seven out of eighteen counties in Kentucky there has been expended $135,000. In Ohio, eight counties out of twelve, not including Hamilton County, of which Cincinnati is the county seat, expended $388,000. Five counties out of twenty-two in Florida spent $301,000 on the highway in the last six months. Six counties out of eighteen in Tennessee spent $173,000. Four counties out of five in Illinois, and not including Cook County, of which Chicago is the metropolis, spent $252,000, while ten counties out of twenty-four in Georgia spent $95,000. From the reports received from the fifty counties, over 367 miles in these districts are either paved now or contracted for, using either concrete, brick, or asphalt.

Official figures returned to the public works department of Providence, R. I., and compared with figures of the port of Boston, appear to show the former port to be the largest oil distributing point in New England. The development of this port as an oil port has been sudden. The great oil companies of the country are spending large sums. The Standard Oil Company has a plant on Seekonk River, and three other companies have located there within a comparatively short time. The new companies include the Texas, Gulf Refining, and Mexican Petroleum companies. A fourth company, the Huasteca, has taken over a large frontage at Kettle Point, and is shortly to begin the construction of wharfage and tanks at an expense of $300,000 or more.

A good deal remains to be done in the way of legislation and regulations against hydro-electrical abuses, if Niagara Falls is to be preserved in its scenic grandeur. The subject received serious attention from the American Civic Association at its recent convention at Washington. The association went on record in favor of making Niagara Falls and certain lands on the Canadian and United States sides an international park, in case that course was found to be practicable. It was the opinion of the convention that the surroundings of the falls might be best developed for scenic and tourist purposes by placing them under the control of an international commission.

The fourth annual meeting of the New York State Forestry Association was held at Syracuse last week. This association was formed three years ago for the purpose of welding together all forces working along forestry lines in the state. In addition to discussing forests as producers of timber, other subjects were considered, among them the necessity of forests in controlling the run-off water, and the forests as a recreation place and as a home for fish and game. The State Federation of Women's Clubs gives its support, and its president spoke on "How Women's Clubs Can Best Promote Forestry in New York."

Silk manufacture in Pennsylvania has advanced so rapidly the past few years that it now ranks as one of the state's important industries. Within twenty-five years it has developed from virtually nothing to a manufacturing interest employing about thirty-eight thousand hands and representing an investment of perhaps one hundred millions of dollars in capital. Though New Jersey is still the silk state, Pennsylvania is rapidly overhauling it, and seems destined to take the leadership before many years.

The transformation of many thousands of acres of land in Ohio, which at present is not productive from an agricultural standpoint, into a great forest reserve, is urged by Prof. William R. Lazenby of Ohio State University. In a paper read at the session of the American Association for the Advancement of Science, Professor Lazenby declared that the dearth of forests in Ohio has reached a stage where it should have serious consideration. He stated that when the first settlement was founded at Marietta, the state was almost completely covered with forests. These wooded areas decreased, until in 1870 there were only 10,000,000 acres, and in 1880 only 5,000,000 acres. Now, Professor Lazenby said, there are less than 2,500,000 acres of anything that can by any stretch of the imagination be called forests.

Practically all the details for the formation of a great hundred and fifty million dollar oil merger, headed by the Mexican Petroleum Company as the center of all the other concerns, have been completed, with the exception of the formal signing of the contracts. The merger is one of the largest oil amalgamations which has been put through since the original Standard Oil Company with all its underlying subsidiary concerns was formed. The new company will be known as the Pan-American Petroleum & Transit Company, and will have outstanding $150,000,000 in stocks and bonds.

Deepening of the Delaware River, recently projected, will make possible the bringing of big barges from tide-water at Philadelphia up the river at least as far as Easton and Phillipsburg, according to B. F. Cresson, Jr., chief engineer of the New Jersey board of commerce and navigation. It is believed that the larger amount of heavy freight, such as cement and slate, originating in the Lehigh Valley, could be carried more economically in barges than on the railroads under the existing rates.

Reporting on the progress of the Welland ship canal, F. W. Field, imperial trade correspondent, states that although this waterway is in Ontario, it plays an important part in the development of Western Canada, of Montreal, and other Canadian ports, as well as of Ontario. Its proposed enlargement will effect the cheapening of western grain rates and counteract the competition of the United States in the shipment of western grain from the head of Lake Superior.

Approximately three hundred delegates, representing leaders in religious and other fields from the United States and the countries of Central and South America, as well as the islands off the eastern coasts of the two continents, will gather in Panama for the sessions of the Congress on Christian Work in Latin America, from Feb. 10 to 20, inclusive.

Four hundred and twenty-one thousand furs, the greatest number ever sold at St. Louis, Mo., in one day, brought $300,000 at a recent auction sale of more than a million dollars' worth of animal skins. Three hundred thousand muskrat skins sold for approximately $100,000; 51,000 skunk skins brought $150,000; and 70,000 opossum skins sold for $50,000.

Announcement is made by the Massachusetts forest commission that it has bought for $17,000 the "bird and game farm" in Carver and Plymouth, and will turn it over to the state for a state forest reserve. This is the commission's second acquisition under recent legislation. The first was in Winchendon. This Carver farm comprises 6000 acres.

Cincinnati, a center in the use of bituminous coal, is making satisfactory progress in its problem of eliminating the smoke nuisance and can no longer be called a smoky city. The owners of buildings, firemen, and engineers are actively cooperating with the smoke inspection department in bringing about the improved conditions.

The American Society of Landscape Architects, at its recent meeting in New York, agreed to raise a fund of $100,000 within the next three years for the purpose of establishing in the American Academy at Rome, Italy, a new fellowship in landscape architecture annually.

A preliminary statement of the general results of the census of manufacturers for the sugar-refining industry shows that the value of the product of eighteen establishments in the United States during 1914 was $289,398,715.

The United States Steel Corporation announces the construction of a seven million dollar steel mill at Youngstown, Ohio, to be completed within a year.

It is reported that Feb. 9 has been decided upon for the coronation of Yuan Shi-kai as Emperor of China.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII | January 29, 1916 | No. 22

Right Proportion

WILLIAM R. RATHVON

A NECESSARY part of the constructive work of the demonstrating Scientist is the uncovering of error, for an adversary unseen is often an adversary unsuspected and therefore unopposed. That Mrs. Eddy regarded this uncovering of evil as essential to its overcoming, is shown unmistakably in her writings. Indeed she specifically designates it as accomplishing the greater part of error's destruction, as may be seen on page 355 of "Miscellaneous Writings," where we read, "Error found out is two thirds destroyed."

As in carnal warfare, so in spiritual, an enemy must be located before he can be dislodged. It is obvious, therefore, that in Christian Science the uncovering of error must precede its destruction. To fire our mental artillery in the direction we think an enemy must be, without first finding him out, may keep us busy, but it does not interfere with his activities. To prevail, we must employ the truth, first in error's uncovering and afterward in its undoing. To this end we have but to understand enough about error to know that it has no enduring presence or power, activity or actuality. This does not imply, however, that as Scientists we are to spend time and thought and energy in exhaustive study of error's methods or nature. We do not have to master physiology in order to heal the ailments of the body through Christian Science; we do not need to become proficient in knowledge of material medicines to administer the healing remedies of Spirit; we do not need to become intimate with sin in order to aid sinners to reform; we do not need to embrace vice in order to establish virtue. These are not the methods of our warfare. The ways and means of scientific uncovering are not based upon the conjectural knowledge of evil, but upon its opposite, the applied knowledge of good. The more of Truth and Love we know and apply in our daily thinking and doing, the more readily may we prove error's inability to hide itself or its handiwork. The false is best detected by those who know the most of the true.

The writer was at one time an expert detector of counterfeit money. His early business training at the teller's window of a bank made him so familiar with genuine money that the counterfeit was instantly detected without conscious effort on his part. He knew so much about good money that the bad declared itself. He had but to do the one thing that is indispensable in uncovering every form of error,—watch. Jesus saw the need of watchfulness on the part of his followers, and Mrs. Eddy was quick to discern our need of it today. Let us be grateful that she has provided a simple device for reminding us of it whenever we glance at the blue cover of our *Sentinel*, for there speak back to us those stirring words of Jesus, the faithful sentinel for all humanity: "What I say unto you, I say unto all, Watch."

But however eager and earnest we may be, mere alertness will not uncover evil in hiding. A practical knowledge of the nature and power of good must always accompany scientific watchfulness. An arrow, even in the hands of the most skilful archer, is of little use without the bow. So long as good is seen by us to be more actual, more enduring, more influential than evil, there is little to apprehend from error's efforts to upset our mental poise and confuse our right sense of values. It is axiomatic that as non-essentials assume importance in our thought and absorb our attention, the essentials of higher living lose their weight and importance with us. Hence the need of watching those influences that would make us lose our true sense of proportion respecting the vital things of life, making little things seem big to us and big things seem little.

An unsuspected effort of evil among Scientists today which needs uncovering is that which makes good seem less attractive, less necessary, less vital to us than it used to be. When the healing power of God is first revealed to us, our thought is often luminous with gratitude. We feel that God is very near and very dear to us, and necessary to our being. By comparison, evil then seems very little and very far away. These days of our exaltation are golden days, but when gray days come we need to know that God is just as near and just as dear to us when we do not feel His presence as when we do. The endeavor of evil today is to lead our thought away from the good. Sometimes it coaxes, sometimes it threatens, but more commonly it interests us in some affair which in itself may be of little consequence, yet to which we attach so much importance that it grows upon us and absorbs attention until it seems to be the momentous question of the day.

The vital elements of a religion are always obscured and sometimes lost when its adherents give their time and thought and energies to its externals and non-essentials. History records religious conflicts, bloody and awful, that have originated in petty differences of opinion between coworkers over some non-essential matter, after evil had succeeded in destroying their right sense of proportion. The name of God had become more to them than His nature. They would fight for their religion, starve for it, die for it if need be—do anything but live it.

Time spent by Scientists in prolonged discussion of non-essentials, disputes about things that do not directly bear upon our spiritual well-being, is worse than wasted, for it is time taken from our worthier activities, from our study, from our daily work of self-protection, and from those things that make for our spiritual growth. Let us remember that an evil influence is at work when non-essential things clamor for our time and attention. Let us carefully analyze every such situation, particularly when it is connected with our church affairs. Let us ask ourselves, Is this thing which we are so very sure is the right thing, but about which some of our fellow Scientists have an opposite opinion, worth the time and thought we are giving to it? May not the amount of merit it now seems to possess be overbalanced by the amount of harm that may come out of it later, by our making too much of it? Is it likely so to mesmerize us as to cause us to neglect more important things? Is it filling our thought with things that are foreign to God? This kind of self-examination will aid us in preserving our right sense of proportion between good and evil, between the essential and the non-essential. As in individuals, so in nations, communities,

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

churches, and families. Whenever evil succeeds in upsetting the true sense of proportion, there follows trouble among the brethren, even when the motives of all are worthy.

A homely story is told of two brothers who were building a house to be occupied jointly by their families. It was a good house, convenient, substantial, and architecturally fine. As it was nearly completed, both families were looking forward to the time when they would move into it. The brothers were in entire accord about every detail of its construction until it came to painting the roof. One brother preferred green paint, the other red, and each was positive that his choice of color was all right and the other's all wrong. Their difference of opinion widened into a difference of conviction; their families took sides on the color question, and soon there were turmoil and divisions, accusations and recriminations, but the more they talked the farther apart they drifted and the more their unfinished house was neglected. Then the rain came. Finally a few of the saner members of each family begged the others to cease their bickerings over such a nonessential thing as color. Meanwhile it rained again, and the unpainted roof leaked worse than before, until the whole structure was in danger of being ruined, and the brothers, drifting farther and farther apart, saw no good in each other; so that instead of a house beautiful it became a "house divided against itself."

Now let us carry this analogy to our own churches and note how evil would bring about division over equally trivial questions. Red or green paint may not be the instrument that error employs, but frequently it is something of no more consequence. Such familiar questions as the individual interpretation of a by-law, the mannerisms of a church official, the "unscientific" statements or actions attributed to another, are common instances. The stubborn opinions and unyielding preferences which crop out whenever a church considers a new location or a new building, are others. All these things merit due attention at the hands of the right individuals at the right time, but they become the entanglements of error when we make too much of them, when we allow them to seem so big to us that they shut out of our sight the things of enduring importance. It is possible to hold a bit of wayside gravel so close to the eye that it hides the great mountain beyond.

It is necessary, then, to the uncovering of error, that we preserve our right sense of proportion and never allow nonessentials to seem big enough or attractive enough to shut out of our sight and push out of our thought those essentials which make for spiritual growth. Let us particularly remember that in our church affairs there may be more than one way of bringing about a right result, and that the opinions of our coworkers, though they differ from ours, are not necessarily all wrong because we believe ours are all right. Both may be right in motive and purpose, though differing widely in method. When each becomes a law unto himself by recognizing God as the only Lawgiver, it will be possible to respect our brother's position even though it may differ greatly from our own. Then too we shall not drift very far apart or remain apart very long. We shall find a new joy in going not only half-way to meet our brother, but farther.

It is to be remembered that a thing which shows some qualities of good and which we are supporting, may yet have opposite qualities that another may see while we do not. Hence it is scientific to discriminate between things which resemble one another yet differ widely in value. Essence, and not quality or appearance, is a standard of truth. A pumpkin and a nugget of gold are both yellow, but there the similarity ends. Is it not deplorable to see brethren squabbling over pumpkins when nuggets of gold are lying neglected at their feet, covered up by the dust of dissension?

The Christian Scientist may well rejoice that the simplicity of his church services has relieved him of what is a common cause of dissension among those who are bound by ritual and ecclesiasticism; but let him not forget that error needs neither creed nor ritual to set brothers at variance, if their right sense of proportion has been obscured. Trivialities will suffice. It matters little whether a reader's eyes are turned up or down, if his thoughts habitually trend upward. Yet churches have been brought to the verge of division over matters of no greater importance. The pumpkins have seemed of greater value than the gold. The sense of proportion has been lost. To preserve it, and at the same time to block error's further efforts to control us, we can find no better aid than ever to keep deeply enchiseled in the tablets of our thought the enduring words of our Leader on page 210 of "The First Church of Christ, Scientist, and Miscellany," which are addressed to those Christian Scientists whom she calls "Beloved," beginning with the words, "Keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them."

"As the mountains"

HENRIETTA A. FIELD

THE sun had set beyond the western slope, and the long twilight was fast deepening into the shades of night. Up the cañon where the rugged cliffs first flung their heavy shadows, the winding road was already lost in the gathering gloom, but away on the distant mesa the great fantastic piles of rock yet stood out bold and weird against the eastern sky, the gorgeous coloring of their robes still showing crimson even in the fading light. In the valley below, the little town with its twinkling lights lay nestled among the mountains, like a child in its mother's arms at close of day. Gently the shadows crept apace, while one by one the stars came out overhead; and as the darkness deepened, the jagged outline of the mountain tops rose clearer and sharper against the cloudless sky, like giant guardsmen rousing themselves for their nightly vigils. Then the watchful sentinels seemed to come closer and closer, to remind one that "as the mountains are round about Jerusalem, so the Lord is round about his people from henceforth even forever."

Sitting there in the hush of that twilight hour, one could understand in some degree the visions that came to the shepherd lad as he watched his flocks on the hills of Judæa. To him the mountains were the symbol of the great over-heart of Love, so invincible in strength, so far-reaching in height and breadth, so untiringly vigilant in tender care. Ages might come and go, empires rise and fall, but that divine goodness would stand like the eternal hills, unchanged from day to day,—a girdle of protection, an ever encircling presence, a crown of joy and beauty. To that mountain-loving poet, God's righteousness was "like the great mountains" whose heights invite the tireless climber to seek that nobler outlook which strengthens and inspires. To those who have struggled upward have ever come the wondrous, far-reaching visions of Truth,—the law of Sinai, the Sermon on the Mount, the transfiguration, the ascension, and that great discovery, the mountain that is "heaven-crowned Christianity" (Miscellaneous Writings, p. 328).

True, the ascending path may seem rough and dangerous, but "on Faith's inspiring height" are living streams, abundant pastures, and safe abiding-places, for "he that walketh righteously . . . shall dwell on high: his place of defense shall be the munitions of rocks: bread shall be given him; his waters shall be sure." As we wait and heed the word that comes from above, we shall take on the likeness of that which

Digitized by Google

our ears have heard and our eyes have looked upon, until the whole life is transformed into a daily representation of the divine strength and endurance, the heavenward reaching of faith and love, the sublime heights of spotless purity.

Mrs. Eddy has said, "That glory only is imperishable which is fixed in one's own moral make-up" (The First Church of Christ, Scientist, and Miscellany, p. 122). Hence the true glory of the individual, like that of the mountains, waits not upon the praise of men, on artist's skill or poet's song; it is embedded deep in the grand and noble ideas of which one has become the living expression, for "they that trust in the Lord shall be as mount Zion, which cannot be removed, but abideth forever."

A Great Discovery

ROBERT O. CAMPBELL

THE vast number of material remedies proposed as cures for the ills of mankind, and the many material antidotes in use which are relied on to destroy disease, enable any one to realize that at the time Christian Science was discovered, healing by spiritual means was practically lost to the world. The restoration of sufficient faith to practise healing successfully by the method of primitive Christianity, became possible only through a sufficiently clear apprehension of the Christ-teaching to prove the Scripture statements true. Without this demonstrated faith the authority with which the Master taught would have been lacking. Unless the science of his teaching and practice had been discovered, the ability to state the healing system would not have been present. The discovery was accomplished because the essential spiritual illumination was gained, and disbelief in the human consciousness was thus powerless to prevent Mrs. Eddy from giving her message to the world.

The concept of man as perfect and immortal, the image and likeness of a perfect God, must have been prominent as a fact in the understanding of the primitive Christians. It was in harmony with Jesus' command, "Be ye therefore perfect, even as your Father which is in heaven is perfect." Again, Jesus declared one day at Cæsarea Philippi that Simon Bar-jona was blessed because not flesh and blood but the "Father which is in heaven" had revealed to him that the Christ was "the Son of the living God," and the church of Christ was founded on the spiritual foundation of man's sonship with God. To establish a church which would restore the healing element, it was necessary to have the same foundation. The Master's understanding of man as spiritual and perfect, inseparable from the Father, must again be demonstrated to restore a system of healing by spiritual means alone.

The lack of dependence on spiritual understanding in the healing practice of modern times, compared with the faith in God demonstrated in the events recorded during the years of Jesus' ministry, gives impressive evidence of how far astray those who were involved in the effort to commemorate the word and works of the Master had wandered from a provable basis. The words uttered, as recorded in the fifth, sixth, and seventh chapters of Matthew, and the palpable proof of their practicality chronicled in the eight succeeding chapters, mark the way. They combine in unimpeachable testimony of a spiritual way. They leave no doubt of the word and works to be commemorated in Christianity.

The organization of the Christian Science church was a step in spiritual progress. In all the wilderness of human theory there was not sufficient wisdom to establish a church for such a purpose. The healing work of the Christ required the recognition of God as divine Principle, else the healing were not done spiritually. The thousands of instances of healing recorded in the history of Christian Science indicate the divinity of its method. Mental and physical ills overcome are a potent force in forming convictions. Material modes of cure are on trial, and they must prove their worthiness to endure the light of advancing civilization. No special legislation by state or government will ever be necessary to promote the stability of this movement.

The members of this church, which is "designed to commemorate the word and works of our Master" and to "reinstate primitive Christianity and its lost element of healing" (Manual, p. 17), are awakening to a worthier love for God and man. Apprehending the purpose of the Christ-healing, they are learning to appraise its matchless worth. The activity of spiritual law in individual consciousness is arousing them to the possibility of growth into the stature of manhood in Christ Jesus. In the operation of this spiritual activity they recognize the power of spiritual understanding, which has been repeatedly proved in the healing of physical ills and in surcease of suffering and sorrow. Today the words of the Master to John's messengers are again brought home to thought: "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them."

Lessons from Rosebuds

ELEANOR M. BLAIR

WHY were such tight little rosebuds sent for decoration, I wondered, as I looked at the slender points of red which dotted a bunch of white flowers at the Sunday morning service. It seemed to me that a mistake had been made, until a reference in the Lesson-Sermon was made clear to me through the little buds. This reference was from page 506 of Science and Health, and reads as follows: "Spirit, God, gathers unformed thoughts into their proper channels, and unfolds these thoughts, even as He opens the petals of a holy purpose in order that the purpose may appear."

As I looked at the closely folded buds, I did not doubt their sure unfoldment, and I knew that the purpose of that unfoldment would appear. Why, then, should I doubt the unfoldment of perfection in my life? Surely if I am ever aspiring, Truth will gather my unformed thoughts into their proper channels and unfold them harmoniously in order that the holy purpose of God in creating man in His own likeness may appear. Thus the rosebuds taught me assurance. Then I thought how gradual their unfoldment would be; how each little bud would open, one petal at a time, and how each petal would add new beauty to the whole, and I cried out: "'Why art thou cast down, O my soul?' What if thy progress does seem slow! 'Rest in the Lord, and wait patiently for him.' Rejoice in the new beauty of each tiny realization of Truth. It is beautiful in itself, and it helps to form the perfect concept in consciousness." So the rosebuds taught me patience.

I considered also how futile would be the efforts of mortal fingers to render assistance to the opening blossoms. However kindly their motive, they could work only ruin. So Christian Science had taught me that material remedies for sin, sickness, and discord of every name only hinder the manifestation of that real and permanent harmony which Spirit unfolds. On page 95 of Science and Health Mrs. Eddy says, "Material sense does not unfold the facts of existence; but spiritual sense lifts human consciousness into eternal Truth." I knew that mortal eyes would see no movement of the petals as they opened, yet the result would prove that they had opened. So, I thought, though my daily progress in Chris-

Digitized by Google

tian Science is not evident to the material senses, yet the result, in frequent demonstrations, proves that Truth has unfolded in my consciousness. Thus the rosebuds taught me reliance upon Spirit.

A day or two later I saw the same bunch of flowers at the reading-room, and my heart rejoiced anew. There were the full-blown roses in all their velvety beauty, and their perfume filled the room. I bowed my head and gratefully gave thanks for their messages of assurance, patience, reliance upon Spirit, and gratitude.

True Progress

SADIE KIEKINTVELD

In order to progress in any line of work one must first have a firm conviction of the desirability of that for which he is striving, a conviction strong enough to keep him working persistently, to lead him to meet obstacles bravely and overcome discouragement cheerfully. Moreover, he should have the expectation of final success.

When the desire for progress engenders so many admirable qualities, it seems a pity that the end in view should so often be found worthless and disappointing. The average mortal may be surprised, and probably disappointed, when he is told that the only true progress is spiritual. He may have had a half acknowledged belief that to serve God means to lead a life which is limited, hard, and cold, while to the worldly-minded come freedom and success; for, as in the case of Christ Jesus, error still flaunts the delusive promise of the gift of all the kingdoms of this world to those who will fall down and worship it, and it still uses the present faulty attempts of God's children as arguments against the faultless work of divine Love. Mistaken opinions like this account for much of the wavering and faint-hearted adherence to religion, while secular matters claim the best of their energies and the utmost devotion. Many are not sure that religion is really worth while.

Should not the very injustice of this argument quickly show that it is one of error's devices? Goodness and power are synonymous. One's power increases as he grows in righteousness. There is no limit to the power and goodness of God, and the closer one lives to God the more he grasps of dominion over the earth. Every vision of beauty, harmony, freedom, abundance, peace, and purity that comes to one in his best moments, is an intimation of the full realization of the good which is even now unfolding with ever increasing power in human experience. When we realize that God is good, that God is Love, that He is the "rewarder of them that diligently seek him," this affirmation of truth lessens and must finally overthrow the seeming power of error.

Is not this a goal desirable enough to spur one on to his best efforts, to bring out his best work and most untiring devotion? And there is no doubt of the outcome. The reward is sure. Furthermore, success in this respect is all-inclusive. It means freedom from weary effort, from friction, from poverty and ignorance, from injustice and suffering, and even from the fear of death. These blessings may not all be seen at once, for, as Mrs. Eddy tells us, experience is a necessary factor in progress. (See Science and Health, p. 296.) But experience should not be regarded as synonymous with suffering. It should mean education in right doing, and need be no more painful than the study of music or arithmetic. This does not mean that the Christian life will not demand sacrifice until one reaches perfection and a Sabbath day of rest from the assaults of evil, but each denial of selfishness and lethargy brings large returns of peace and joy, while the acceptance of error, though it may illusively suggest ease and pleasure, brings suffering and disappointment.

To those who have made some progress in Christian living the grosser evils of human experience offer no temptation. We may therefore take courage from this fact to look forward to the time when no petty claims of pride and selfishness will be able to deceive us into thinking they can bring any real satisfaction, but will be seen as clearly in their real character as the more obvious evils. Then they will no longer appear as temptations. What to the sinner is a temptation, to the good man would be an affliction. It is possible and necessary for every one so to grow in the understanding of divine Love that every response to malice or hatred is wiped out of his consciousness.

In Science and Health (p. 326) Mrs. Eddy says: "The purpose and motive to live aright can be gained now. This point won, you have started as you should . . . and nothing but wrong intention can hinder your advancement." Opposition, envy, and criticism cannot stop our progress. We can and must continue to grow in the understanding of God, the understanding which destroys any attraction of evil, casts out fear and anxiety, heals disease, banishes poverty, and makes all things new.

Spiritual Strength

ZORA MAY DUNNING

One Sunday morning I had occasion for great thanksgiving. Christian Science has helped me to solve many hard problems, but there came one which seemed especially difficult. Having worked for a long time over it, always seemingly faced by a stone wall, I was becoming somewhat discouraged. On this particular Sunday, being unable to attend the church service, I took up one of the Christian Science pamphlets, and in turning over the leaves I found this statement from page 128 of Science and Health, where Mrs. Eddy says: "Business men and cultured scholars have found that Christian Science enhances their endurance and mental powers, enlarges their perception of character, gives them acuteness and comprehensiveness and an ability to exceed their ordinary capacity."

Instantly it dawned upon my consciousness just what the stone wall had been. Unconsciously I had been feeling that I did not possess the ability to do what was right for me to do; consequently I was doubting God's ability. In other words, while declaring God's universe perfect, I had entertained a feeling that I lacked something when called upon to perform an allotted task outside the line along which I had been educated. I had been thinking not of my true self but of the weak human sense of self. To know that God's idea, man, has the ability and endurance to exceed ordinary capacity, and that I as God's reflection had the alertness and ability to perceive and execute the Father's business in the most intelligent and efficient manner, certainly meant very much toward the solving of my problem. Instead of the stone wall, vista after vista opened up, showing plainly how man is unlimited in his divinely bestowed capacities, and that, as Mrs. Eddy reminds us, "Soul has infinite resources with which to bless mankind" (Science and Health, p. 60).

I had often declared that God was my strength and an ever present help, but it had never dawned on me before just how much this statement might include. Certainly strength is unlimited; but that it might include the qualities of perception, comprehensiveness, and acuteness had not before been considered, strength having seemed to be mainly of a physical instead of a spiritual nature. In every-day thinking we are

Digitized by Google

very apt to associate strength wholly with bone and muscle; but in thinking of it as spiritual, it necessarily would include every quality which tends toward fortifying one against the belief of inability to perform one's right and proper work, and to see it in this light surely removes every seeming obstacle.

In Science and Health (p. 488) we are taught that "Mind alone possesses all faculties, perception, and comprehension." Therefore ability to perform work, of whatever nature, is in reality spiritual strength, and as we gain a better understanding of Christian Science we will find that there is no limit to what we may accomplish.

[Written for the *Sentinel*]

An Ideal

MARY I. MESECHRE

If I could live to God one single day,—
One single day, from early dawn of light
Till the soft twilight deepens into night,—
Could curb to gentle speech my hasty tongue
And check the words impatiently outflung;
Could think no thoughts but those of loving kind
And hold my peace unmarred by hostile mind;
Could do each daily deed in gracious wise,
Secure against intrusion or surprise;—
Methinks could one whole day by me be spent
In speech and thought and act as God hath meant,
Henceforth I then could live to God alway.

If I could live to God one single hour,—
For that brief span, submitting to His will,
Could know the comfort of Christ's "Peace, be still,"
Quelling my turbulence to tranquil calm,
Healing my restless spirit with sweet balm,
Hushing my warring senses into rest
As grieving babe is soothed on mother's breast;
One single hour wherein no hasty word
Should from my love-enguarded lips be heard,
When every act of mine should be so mild
As to be worthy of my Father's child,—
Then would I live to magnify Love's power.

If I could live to God one moment brief,—
Could lift my face to Him in perfect trust,
Knowing His love unfailing, ever just,
Is ready to my aid when baseless fear
O'erwhelms my sense of Him as ever near;
Could turn to Him at once unfalteringly
When evil threatens those I love, or me,
Secure that He who knoweth good alone
Will in that knowledge safely guard His own!—
And then I hear His voice: Yea, I do keep
The field of thy desire, whence thou shalt reap
Sweet moments full of trust, blest hours of peace,
And perfect days; nor shall my keeping cease
Until thine every want doth find relief.

Henceforth, my God, to Thee I live my days,
My hours, my moments; since my heart's desire
Is for perfection, still do I aspire
Through moments, hours, and days so far below
My fair ideal that shame-bowed I go,
Until I think: For these I need not weep,
Only the perfect Thou for me dost keep;
And these are waiting when I turn to Thee
And take them from Thy hand all trustingly,
Knowing that Thou dost keep my days and me
In perfect peace, throughout eternity.
Since I am kept, what can I do but praise!

Selected Articles

[From an editorial in *Los Angeles* (Cal.) *Graphic*]

What a joy to the discerning in these days of rampant, self-advertising journalism is that well edited, sanely conducted daily newspaper, *The Christian Science Monitor*, which requires no biased eyes to see its intrinsic worth. We have no church affiliation with this comfortable and comforting exchange to induce this tribute. It is paid ungrudgingly and in all sincerity after a year of daily reference to its columns. Perhaps the editorial page might be a trifle more sparkling; an occasional bit of airy persiflage would not detract from the otherwise solid information imparted and sound opinions conveyed, but that is a mere matter of personal taste. Invariably the page is catholic in its treatment of affairs of moment, and so well written that to the average reader it cannot fail to prove educational in its tendency. Restrained head-lines over its news columns; foreign correspondence rarely found elsewhere and of a most trustworthy nature; feature articles devoid of sensation, but written in a sprightly vein and exceedingly readable; schools, homes, politics, civics, finance, commerce, sports,—all carefully covered and displayed with a nice appreciation of the relative value of each subject considered. Our compliments to our Boston contemporary; may its influence so widen that eventually, instead of being conspicuous by reason of its distinctive qualities, it shall have set such a pace and won so large a constituency, not alone of Scientists, that hundreds of saffron inclined dailies shall have repented of their yellow course and patterned after our amiable and esteemed contemporary.

✧

[Judge Clifford P. Smith in *Westchester News*, White Plains, N. Y.]

Whether confidence in prayer is more or less of a superstition than faith in medicine, and whether the practice of Christian Science requires less or more arduous preparation than the practice of medicine, are questions which a recent editorial in *Puck* entitled, "Enter Prayer, Exit Pill," was more likely to agitate than answer; and I am willing to leave these questions where *Puck* left them. With your kind permission, however, I would offer your readers some authentic information regarding Mrs. Eddy, of whom *Puck* spoke as "illiterate" and "an extremely commonplace New England woman."

So far as systematic instruction is concerned, Mrs. Eddy received as much or more of it than was usual with the children of prosperous parents in New England in the first half of the nineteenth century. As a young girl she wrote poetry of such merit that it was sought for publication by newspapers and magazines. Two of her poems were republished at Manchester, N. H., in 1850, and again at Boston in 1856, in a collection of poems and essays by New Hampshire authors. As a young woman she was regularly paid by several periodicals for writing articles on topics of public interest. Before her discovery of Christian Science she was offered and declined a salary of three thousand dollars a year to become associated with the Rev. Albert Case as editor of the *Oddfellows' Magazine*.

Among Mrs. Eddy's tutors was the Rev. Enoch Corser of Tilton, N. H., a well known Congregational clergyman and educator, who spoke of her as "an intellectual and spiritual genius." This he said while she was still a girl or young woman. Another clergyman who knew Mrs. Eddy well was the Rev. Richard S. Rust, for many years principal of the Methodist Seminary at Northfield, N. H., in which institution he offered Mrs. Eddy a position as a teacher. He was afterward state superintendent of public instruction in New

Digitized by Google

Hampshire, later president of Wesleyan College at Cincinnati, Ohio, and subsequently president of the Union Central Life Insurance Company. Having kept up his acquaintance with Mrs. Eddy for more than half a century, Mr. Rust spoke of her as one of the brightest women he ever knew.

The late Clara Barton, founder of the American Red Cross, was also personally acquainted with Mrs. Eddy. Miss Barton and Mrs. Eddy were born in the same year in adjoining states of New England, and their public careers were contemporaneous. In 1908 Miss Barton spoke of her acquaintance with Mrs. Eddy and said, "Mrs. Eddy should have the respect, admiration, and love of the whole nation, for she is its greatest woman;" also, that she looked on Mrs. Eddy as "the one person, regardless of sex, living today, who has done the greatest good for her fellow creatures."

Another gentleman who was personally acquainted with Mrs. Eddy, is the Hon. Edwin G. Eastman, a prominent New Hampshire lawyer and formerly attorney-general of that state. Speaking of Mrs. Eddy last year, Mr. Eastman said, "I consider her the most remarkable woman, perhaps, that this country or any other country has produced." Former Governor Samuel D. Felker of New Hampshire has also said: "As Daniel Webster was the first man of New Hampshire, so Mrs. Mary Baker Eddy, the Discoverer and Founder of Christian Science, was first among the women of the Granite State. She has left the impress of her work not only on New England but on the entire world, and we are proud of her."

It is not necessary to accept any one's opinion as to whether Mrs. Eddy was qualified to be the founder and leader of a great religious movement. Her fitness for a great spiritual service to mankind is now proved by what has been accomplished. Christian Science has already become a world-wide religion; and its wonderful redemptive value—its healing and saving efficacy—is a fact of authentic history, a fact that cannot be reversed or turned back. Who and what Mrs. Eddy was, is most surely to be ascertained from her works on Christian Science, and from the results thereof which have ensued in the lives of the vast multitude of persons who have accepted her teachings.

✧

[Thorwald Siegfried in *Granger* (Wash.) *Enterprise*]

Curiously enough, the failure of men to permit religion to be the practical dynamic thing in their lives that it is in truth, may be traced in a very large degree to the very practice which our critical friend commends and from which students of Christian Science are freeing themselves; that is, the habit of taking any one's "opinion" about religion as truth. Even Jesus does not offer us his opinions; he tells us what he knows. His words in Scripture do not speak in terms of "I believe," but of "I know" and "Ye shall know." The belief that any one is or can be saved from sin, sickness, or death by holiness which he does not take into his daily thought and action, is a bit of medieval theology which our critic would himself repudiate on careful reflection; yet that is the logical basis of his desire to have searchers after truth permit themselves to be guided by any one's "opinions," in preference to their own practical proofs of God's presence and omnipotence.

The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is not a collection of opinions; neither is the Bible. In both books the basic spiritual law is unfolded to human consciousness, stated in language and illustrated by incidents comprehensible to the human mind. A knowledge of mathematics, for example, can be acquired by the study of a text-book which does for that subject what the Bible and Science and Health do for all life, namely, state the rule, illustrate its application, and enable the student to reduce it to practical usefulness by conforming his action to it.

Of the Christians Gamaliel said, "Let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God." Christian Scientists are entirely willing to accept this test and to be known by their fruits. These quite generally consist of added trustworthiness, cleaner living, better health, more joy and peace. They are quite certain that these are the fruit of the Spirit and come from God, the giver of every good gift. On that basis they invite every one to share them, without undue persuasion or subtle forms of coercion.

✧

[H. L. Eddison in *Chat*, Portsmouth, England]

In a recent issue of *Chat*, under the heading, "What the Doctor Says," the writer advocates sunshine, fresh air, simple, healthy food, rest, and faith as aids to health, and adds: "What of rest and faith? Must we turn lazy and become Christian Scientists? By no means." May I point out that to "turn lazy" and at the same time become a Christian Scientist is a moral impossibility. On the first page of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, "prayer, watching, and working" are emphasized as essential to health, and St. Paul's advice to the Philippians to work out their own salvation is the alphabet of Christian Science. A lazy Christian Scientist is a contradiction in terms. If any one doubts this, let him come and try! Striving to obey the divine command to heal the sick, men and women inevitably find themselves workers together with God.

✧

[Samuel Greenwood in *The Hedley* (British Columbia) *Gazette*]

Your correspondent is anxious to know who would be "foolish and weak-minded enough" to try to heal a sick body by spiritual means. If he will read the Old and the New Testament carefully, he will find the names of a large number who were willing to be just that foolish. He will find out more if he will read Gibbon's account of the healing practised by the early Christian church. The prophets and apostles, and the Master himself, are naturally included in this sweeping condemnation, so that Christian Scientists need not be ashamed to be found in such illustrious company.

How foolish and weak-minded it must have been on the part of Daniel in the lions' den, and the three Hebrews cast into the furnace, to have used spiritual means to effect the escape of their bodies! I suppose our critic would have had them contentedly submit to the apparently inevitable, and be meekly eaten and burned, rather than have had them ignore the material laws in the case and to rely upon spiritual means. And think of Paul, how weak-minded it was for him to use spiritual means to restore the young man who had fallen out of the window and was taken up as one dead. And how foolish of the apostle James to counsel the sick to send for the elders of the church, that they might pray over him; and to think of his saying that "the prayer of faith shall save the sick." I wonder that our friend has patience to read these things, since he scouts the idea of there being any virtue in spiritual means.

What relation does God bear to men, if they cannot go to Him in physical trouble with any prospect of obtaining help? Are we to infer that one is wise and strong-minded in the ratio that he trusts material things in preference to spiritual? The large majority of those who have been healed in Christian Science had been given up by their physicians. Was it then foolish for them to allow themselves to be healed by spiritual means? Should they have been content with

Digitized by Google

the verdict of their physicians, and either continue to suffer or to die, according to the program laid out for them? Many of these people were suffering from what is called organic disease, and some of these cases I have known personally. Let me say that in my own experience, after ten years of failure on the part of physicians to bring even temporary relief, I was healed by the use of spiritual means as applied in Christian Science. Very foolish and weak-minded, of course, but it has proved immensely comforting these many years. If it is foolish to rely upon God for physical help, what course would our critic advise the people to take who are unable to find relief in material means?

The beneficiaries of Christian Science are to be found in all walks of life,—on the judicial bench, in the editorial chair, among the faculty of universities, at the head of banking and commercial institutions, and on the floor of Congress,—all happily ignorant of their "weak-mindedness" in using spiritual means for their sick bodies. Just why our critic despises spiritual means is not apparent. Paul said, "To be carnally minded is death; but to be spiritually minded is life and peace." As this apostle was guilty of using spiritual means for sick people, this quotation may not be acceptable.

✧

[James D. Sherwood in *Temple* (Texas) *Telegram*]

I note that an evangelist has been holding a protracted meeting in Temple, and on several occasions made reference to some other religious denominations whose teachings differ from his views. Among them he spoke of Christian Science. Now Christian Science is not mere human opinion. It is not Mrs. Eddy's private opinion, but it is her discovery of a demonstrable Science of being, a Science that elucidates the teachings of Christ Jesus, and that makes practical his teaching by reforming the sinner, healing the sick, and raising the dead (those "dead in trespasses and sins") by spiritual means alone. On page 126 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy says: "I have set forth Christian Science and its application to the treatment of disease just as I have discovered them. I have demonstrated through Mind the effects of Truth on the health, longevity, and morals of men; and I have found nothing in ancient or in modern systems on which to found my own, except the teachings and demonstrations of our great Master and the lives of prophets and apostles. The Bible has been my only authority. I have had no other guide in 'the straight and narrow way' of Truth."

We read in the Bible that "faith without works is dead." Christian Science is the gospel of good works, and its worth to humanity should be estimated by its beneficial effects upon the health and morals of mankind. Its healing activities illumine thought, gladden hope, and bring the kingdom of heaven to the apprehension of the children of men. Its teachings concerning God, man, and the spiritual universe make men wiser and better, because with Biblical authority Christian Science declares the allness of God, and teaches how to demonstrate the infinity of good and to utilize good in the affairs of daily experience. The world is getting weary of direful utterances that lead to discouragement, and it welcomes with gladness the demonstrable understanding of that grace and truth that came by Christ Jesus, that lead gently into a realization of illumined thought, better ideals, improved morals, that ultimate in health, harmony, and happiness here and now.

Our critic objects to the Christian Scientist's use of the term divine Principle as applied to God. In her Message to The Mother Church for 1901, Mrs. Eddy thus defines divine Principle: "By this we mean Mind, a permanent, fundamental, intelligent, divine Being, called in Scripture, Spirit, Love" (p. 3). The lexicographer defines principle as source or cause, a permanent or fundamental cause. God is the only creator; He is the one "great First Cause;" and it should seem reasonable to expect our critics to recognize this generally admitted fact and gladly join with us in keeping the first commandment.

The second coming of Christ is today seen in the reappearing to the human mind of that same Christ, Truth, that appeared of old, and it comes in the manner foretold by Christ Jesus as recorded in the fifteenth chapter of John: "When the Comforter is come, whom I will send unto you from the Father, even the Spirit of truth, which proceedeth from the Father, he shall testify of me: and ye also shall bear witness, because ye have been with me from the beginning." The Christ, Truth, "who taketh away the sins of the world," and who lifteth the thoughts of men above the lusts of the flesh into purer desires and nobler purposes, is even now in the world, and is seen healing the sick and reforming the sinner in the way that Christ Jesus taught and practised when he was on earth.

The Christ, Truth, has always been present and available to bless every one who has perceived the truth sufficiently to make it practical. Abraham, Jacob, Moses, and the prophets had perceptions of the Christ, Truth, and this gave them power from on high and enabled them to do the wonderful works that they accomplished in their ministry.

✧

[Fred. R. Rhodes in *Bradford* (England) *Telegraph*]

A contributor makes the statement: "One need not be a Christian Scientist to know that a man with a strong effort of will can stave off a cold or influenza." If the writer had stated that one could not be a Christian Scientist and know that a man with a strong effort of will can stave off a cold or influenza, he would have been stating the truth, but not as he puts it, because this intimates that Christian Science is human will-power, or mental suggestion, which is quite untrue. If in reality a man were only able to "stave off" these unwelcome guests by a strong effort of will, he would be in a helpless plight, because, as most of us know, under such conditions there is little if any effort of will left for us to exercise. On page 469 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy writes, "The exterminator of error is the great truth that God, good, is the *only* Mind," and it is through a higher understanding of what really constitutes this Mind that we are able to know the truth which our Master promised should make us free; and I am sure your readers will agree that one does need to be Christianly scientific or a Christian Scientist to demonstrate that Mind "which was also in Christ Jesus."

✧

[From an editorial in *Portland* (Ore.) *Spectator*]

Christian Science is doing good,—indeed, so much good that it is a marvel that newspapers admit to their columns attacks on it when so many evil influences call for excoriation. The testimony of its followers sets forth some of the good it has done. It has put into the lives of many the sunlight of a peace and happiness that were not there before; it has brought comfort to the hopeless, and healing to many who were thought to be incurable. Probably Christian Science has not done all that is claimed for it, but if it has done but an infinitesimal part of the things to which testimony is daily made, surely it is worthy of consideration and should be immune from the paid attacks of needy writers and necessitous newspapers.

Editorial

Following After Personality

THROUGH the spiritual perception with which Mrs. Eddy was so richly endowed, and which she used for the blessing of all mankind, she clearly perceived that one of the grave dangers threatening Christian Scientists and the great cause to which she was so fully consecrated, was the condition of mortal mind which she so aptly named "mere personal attachment" (Manual, p. 40). Not only in the by-laws of the church, but also in her letters of advice and admonition, and even in Science and Health itself, "he that runs may read" that this enemy, which she elsewhere speaks of as "personal contagion" (The First Church of Christ, Scientist, and Miscellany, p. 116), offers a serious menace to the spiritual advancement of Christian Scientists.

Throughout our Leader's writings is to be found the constant admonition to turn away from the domination of personal and material sense to the perception of divine Principle; in other words, the denial of material testimony and the recognition of infinite Mind as our common Father, the only lawgiver. "Faith in aught else," she writes on page 153 of "Miscellany," "misguides the understanding, ignores the power of God, . . . seeks personality for support, unmindful of the divine law of Love." In this way she has led Christian Scientists apart from the guidance of erroneous and fickle mortal opinion to the unchanging wisdom and verities of divine Mind, even as Jesus rebuked the sense of personality when he said: "I receive not honor from men. . . . How can ye believe, which receive honor one of another, and seek not the honor that cometh from God only?" On another occasion he disclaimed any credit to himself other than that which results from loving obedience to the divine will, openly declaring, "The Father that dwelleth in me, he doeth the works."

In the early days of Christian Science churches it was very generally the case that there was but one teacher of Christian Science in a church, and quite naturally the members of such a church were largely the students of this teacher. This condition, though it did tend even then to induce a personal control of students which was to be deplored, was perhaps excusable as a product of circumstances. In the tremendous development which has attended the movement, however, these conditions gradually have been outgrown in almost every branch church, although there still remain some few instances where this advance step has not been taken.

That there was nevertheless a grave danger attendant upon this practice must have been foreseen by Mrs. Eddy, just as she foresaw the danger which threatened in the practice of readers remaining in office for an indefinite period, and which caused her to recommend to the branch churches the adoption of a three year term for readers. The great good which has accrued from obedience to this recommendation is now apparent to all Christian Scientists, and that similar good would eventuate to our cause through compliance with the spirit as well as the letter of Section 9 of Article XXIII of the Church Manual, should be equally apparent. This section is as follows: "The Mother Church and the branch churches shall not confine their membership to the pupils of one teacher."

Of the dangers which have confronted the Christian Science movement through all the years, none has been more insidious or more serious than those which have been brought about through that following after human opinions and human personalities against which our Leader has so plainly warned us. Fortunately there has always been the counteracting perception which has understood divine Mind, and the courage which has followed this Mind, even though it entailed untold suffering and self-abnegation.

In those churches wherein the question of "mine or thine" is not made important in the thoughts of the members, there is much greater opportunity for individual growth and demonstration than there is in those churches the members of which, unfortunately, set too great store upon personal opinion and personal leadership, unmindful of our Leader's counsel (Miscellaneous Writings, p. 283) that "each student should, must, work out his own problem of being; conscious, meanwhile, that God worketh with him, and that he needs no personal aid." That such following after personality is unwise and inevitably brings undesirable consequences, goes without saying.

ARCHIBALD MCLELLAN.

The Individual and the Race

INDIVIDUAL man has been said to be a microcosm, an epitome of the universe. As in the image of God there must dwell in some great sense His fulness, so the man of human sense is also an epitome of the universe of human sense, and the more one meditates upon this thought of himself, the more interesting it becomes. We at once see that the personal problem embodies all the factors of the universal problem, hence in solving it each may render the race a redemptive service.

This realization makes possible that intelligent and saving compassion to which the writer to the Hebrews refers when he says of the Master, "In that he himself hath suffered being tempted, he is able to succor them that are tempted." More than this, as one comes to understand in Christian Science that his own problem is identical with the world-problem, and that the annihilation of the alleged power of evil in his own instance speaks for what Mrs. Eddy has termed the "final destruction of all sin" (Science and Health, p. 339), a greater dignity and determinative value is given to the personal equation, and one can but be impelled to consecrate himself to his task of working out his own salvation with a greater abandon and enthusiasm, with a more knowing earnestness and devotion. He finds himself in a situation in which heroism is instinctive and in which it mightily prevails.

The depth of the significance of Christ Jesus' words, "Be of good cheer; I have overcome the world," now becomes apparent as never before, and something of the nature of the Christ-consciousness, its concept of world ministry, its consequent inspiration and triumphant joy, is apprehended. Jesus did not say "my world," but "the world," and this for him was the consummation of all achievement, the end of all struggle; even as he said, "It is finished." The fulness and comprehensiveness of the work which was wrought for mankind by the Master is not and can not be rightly estimated apart from the recognition of his self-identification with humanity, his embrace and mastery of the world's every temptation and trial.

In the presence of his puzzled pupil the adequate teacher has no problem save to make the youngster see that he too has none. He can understand the student's perplexity, but he feels nothing whatever of his despair, because he knows the end from the beginning. He finds the conclusion in the premises without experiment or protracted process. So too the Christian Scientist knows the nothingness of the claims of error; that it is but a counterfeit of truth, and that the heart of all sin and suffering is potentially pierced when he smites the false belief that tries to assert itself in his own consciousness. This gives that largeness to his loyalty to

Digitized by Google

Christ, his resistance to temptation, which characterizes all truly Messianic ministry, and he does his deed with "the strength of ten," because he knows he is doing it not for self alone but for every needy brother in all the wide world.

In individual consciousness not only is the touch with the contradiction of material belief intimate, but here the possibility of its removal appears. The world's redemption dawns, and is first recorded in the triumph of truth over error in thought. We are aware of the strife of sense, the war that is in our members, as St. Paul has said, and Christian Science has shown us how "this corruptible" may "put on incorruption," how all evil is destroyed. "It is to know no other reality—to have no other consciousness of life—than good, God and His reflection" (Science and Health, p. 242), and this is as mandatory with respect to the great world tragedies as it is with respect to a case of measles. We are to approach the larger problem as we approach the lesser, and know that in being true to Truth we are true to all mankind, and helping all toward the goal of spiritual freedom and joy in Christ.

JOHN B. WILLIS.

Obedience and Exactness

IN Paul's epistle to the Romans we read, "By the obedience of one shall many be made righteous." This refers primarily to the obedience to divine law manifested in all the earthly experience of Christ Jesus. Obedience is defined as "submission to rightful restraint or control," which is good so far as it goes, but a higher sense of obedience sees beyond the present hour, and gladly does that which makes for the universal good. It must have been in this sense that the psalmist said, "I delight to do thy will, O my God." It goes without saying that blind obedience to a self-constituted authority can only lead to revolt in the end, hence the necessity for a clear recognition of the law of right-doing, which to the Christian Scientist expresses the divine Principle of man and the universe.

In the article called "Obedience," which begins on page 116 of "Miscellaneous Writings," Mrs. Eddy says, "Obedience is the offspring of Love; and Love is the Principle of unity, the basis of all right thinking and acting; it fulfils the law." The entire article should often be studied by Christian Scientists, especially in view of this statement: "If in one instance obedience be lacking, you lose the scientific rule and its reward: namely, to be made 'ruler over many things.'" As it was our Master who declared that the faithful and obedient worker should be made "ruler over many things," we cannot afford to disregard his teachings on this essential point. Here it may be remarked that the one who readily obeys every right requirement develops both symmetry and strength of character, and that one must learn to rule himself before he can become a ruler of conditions on a wider sphere of action. The feats of the athlete illustrate in a remarkable way the results of obedience to certain rules. Although these are mainly limited to the physical plane, they point to what might be accomplished by at least equal devotion to a high ideal.

All mortals are spoken of in the Bible as "the children of disobedience," which is a fitting characterization of those who in response to material sense let self-will control them instead of letting God's will be done. Christian Scientists cannot complain that they have been encumbered by many rules and regulations in respect to their church services or their work in demonstrating the Principle of their religion. Christian Science, however, demands exactness in all things, and this brings its own reward in ever increasing harmony in the church, in the home, and in individual experience. Our work may be described as the offering up of "spiritual sacrifices, acceptable to God," and all things should be after the pattern shown in the mount, although we do not use cup, censer, or candlestick, as did the priests in the Jewish service.

Both children and adults are taught to obey the ten commandments, not only in their outward significance but also in thought and desire. Furthermore, both are expected to obey our Master's teachings, so far as they are understood, and the Lesson-Sermons are undoubtedly of great importance in showing us how to keep the commandments. All students of Christian Science should be thoroughly acquainted with the "Note for Students of the Lessons" which follows the last Lesson in each *Quarterly*. If this is carefully read there can be no excuse for mistakes in the reading of the Lesson either in public or in private. The utmost care is taken by the Bible Lesson committee in the preparation of these Lessons, and while all students have free access to the Bible and Science and Health for their individual study, our Sunday services should be uniform the world over. It would be a serious mistake for a reader in church or a pupil in Sunday school either to add to or take from the references indicated in the *Quarterly*, and heedlessness would be a poor excuse, being indeed a phase of disobedience.

No one would willingly rob himself or others of the reward which always comes with obedience; and we may well recall the prophet's words, "Behold, to obey is better than sacrifice."

ANNIE M. KNOTT.

Among the Churches

Current Notes

OSSINING, N. Y.—The first testimony meeting at Sing Sing Prison was held on Thursday evening, Nov. 18, in one of the prison class-rooms. More men desired to attend the meeting than could be accommodated in the room, and future meetings will be held in the chapel. The regular order prescribed in the Manual for Wednesday evening meetings was followed, and a number of splendid testimonies were given by prison inmates, in advance of testimonies by the visitors. Copies of *The Christian Science Monitor* of even date were given to all who attended the service.—*Correspondence.*

NEW YORK.—During the past ten months the newspapers of the state have published 167 corrections submitted in reply to articles about Christian Science and Mrs. Eddy. The number of favorable articles published, exclusive of answers and lectures, was 163. The number of reports of lectures published was 146, making a total of 476 favorable articles of all kinds published during the ten months.

The total number of books, periodicals, pamphlets, and miscellaneous publications distributed by this office was 16,489.

Committee on Publication.

MANSFIELD, OHIO.—Lot 1102 has been transferred to the trustees of First Church of Christ, Scientist, the consideration being forty-seven hundred dollars. This lot is located at Marion Avenue and Wood Street. The intention is to build a church there some time, but no plans have been formulated. The congregation is now occupying rooms on West Third Street, but it will have to move later.

Correspondence.

MARION, IND.—At seven o'clock on Thursday morning, Nov. 4, the corner-stone of the edifice of First Church of Christ, Scientist, was laid. The structure will be ready for occupancy early in the spring of 1916 and will have a seating capacity of about four hundred persons.—*Correspondence.*

Digitized by Google

MISSOURI.—Through correspondence and the aid of assistants in the field, forty-three libraries have been supplied partly or wholly with the works of Mrs. Eddy, "The Life of Mary Baker Eddy" by Sibyl Wilbur, and the Christian Science periodicals. These donations have been made through the generosity of the Trustees under the Will of Mary Baker Eddy. The books and periodicals supplied to libraries up to Nov. 1 totaled 668. Authorized literature has been sent out to individuals as follows: 3,556 *Sentinels*, 510 *Journals*, 1,857 *Heralds* and pamphlets, 21,640 *Monitors*, and 6,669 miscellaneous publications, making a total of 34,232 pieces. The total number of pieces sent out to correspondents was 12,946.—*Committee on Publication.*

ASBURY PARK, N. J.—First Church of Christ, Scientist, has just taken title to the property at Third Avenue and Emory Street. The land will be cleared of buildings and will be held as a site for a church. The congregation plans to complete the edifice before the opening of the 1916 summer season.—*Newark News.*

ARKANSAS CITY, KAN.—On Nov. 2 the corner-stone of the new home of First Church of Christ, Scientist, was laid. The building will seat approximately two hundred people.

Correspondence.

PEORIA, ILL.—The corner-stone of the edifice of Second Church of Christ, Scientist, on Barker Avenue, was laid last Wednesday morning [Oct. 27].—*Peoria Transcript.*

The Lectures

Keene, N. H.

The Rev. J. L. Seward, Unitarian clergyman, in introducing Prof. Hermann S. Hering, who lectured on Christian Science, said in part:—

Within the present generation there has arisen in the religious world a most interesting and enthusiastic movement, which has achieved a reputation that is world wide; and of that movement, and especially of one or two phases of it, we are to hear tonight from one who is amply qualified to discuss the subject. I am here, like all the rest of you, to learn what this good man has to tell us in regard to this movement. I said it had developed within the present generation, but I have no doubt our friend will tell us that while the organic features of it are new, the truths which lie at its foundation are eternal, for they existed eternally in the mind of God; that all of the laws of nature are eternal in their true essence and are not new, since their only newness is our application or discovery of them, our first perception of them.

Correspondence.

Detroit, Mich.

The remarks of W. D. Kilpatrick in introducing Dr. Francis J. Fluno, who lectured on Christian Science under the auspices of three Christian Science churches, were in part as follows:—

It was but a few short years ago that the truths of existence, the facts relating to God and His creation, including man, were discovered by a modest, God-fearing New England gentlewoman, Mrs. Eddy, and were given by her to the world in the name of Christian Science. While Christian Science pins no faith to numbers and recognizes no power or potency but that from on high, yet within the short span of one generation this great movement for good has encircled the globe with its beneficence and has found a welcome lodging-place in the uttermost parts of the earth. It has experienced a growth probably never paralleled in religious history, and is today expanding and growing in a manner aptly described as "the marvel of the ages."

This gratifying growth, this universal spiritual awakening, is due to no other fact than that Christian Science practises what it preaches, and that it preaches in their primitive simplicity and purity of meaning the great truths of Scripture, the truths which Jesus of Nazareth proclaimed and demonstrated for the good and for the guidance of all mankind, and which he said would, when understood, make us free from all the besetting ills of mortal existence; those truths which he declared that all who believed on him should be able to demonstrate and prove for themselves.

Correspondence.

New York, N. Y.

Willis F. Gross, who lectured on Christian Science for First Church of Christ, Scientist, was introduced by Campbell MacCulloch, who said:—

Christian Science is so called because it is a scientific, practical method of applying the truths taught by Jesus the Christ to the every-day problems of humanity. By many persons the possibility of a divine influence on human affairs has been doubted, chiefly because there has been no visible connection between God, the ruler of heaven, and man upon the earth. It is just this connection that Christian Science has come to establish. It is just this vital truth, that God is an ever present help in time of need and that His help can be had unerringly at the exact moment that it is needed, that has given Christian Science the wonderful impetus it is now displaying.

In fifty years this healing truth has girdled the globe, and it has done so on the single basis of establishing a truth and then proving its efficacy. This growth has been made possible largely because of the foresight and wisdom of Mrs. Eddy, the Discoverer and Founder of this new-old religion, in providing channels through which the healing streams might flow.—*Correspondence.*

Brisbane, Queensland, Australia

John McKay, second reader of the local Christian Science church, in introducing Virgil O. Strickler, who lectured on Christian Science, said:—

In her book "No and Yes" (p. 28) Mrs. Eddy asks the question, "Has Truth, as demonstrated by Jesus, reappeared?" and answers, "Study Christian Science and practise it, and you will know that Truth has reappeared." Now Christian Scientists do rejoice because they know of the reappearing of Truth, and would have you know,—for are not the sick being healed, the sorrowing comforted, and the sinning reformed by the same Christ-method today as was the case nineteen centuries ago, and in direct confirmation of the Master's words when he said, "He that believeth on me, the works that I do shall he do also"?—*Correspondence.*

Cedar Rapids, Iowa

An audience that filled the new edifice of First Church of Christ, Scientist, listened to a lecture on Christian Science by William D. McCrackan. Earl G. Killeen, musical director of the Coe College Conservatory, introduced the speaker, and said:—

The art of living has been the subject of discussion for many centuries, while the science of living has only recently gained merited attention. With art we have associated the

Digitized by Google

beautiful, with science the exact; and some have felt that what is exact cannot at the same time be beautiful. We have recognized the beauty of a good deed, we have praised the quality of loveliness in a life devoted to good, but we have missed until recent years the fact that law underlies good, that the greatest science yet discovered is that which gives a working basis for our daily lives,—a Science of Christianity, based upon the teachings of Jesus the Christ, that unites the exact and the beautiful. The speaker is here to enlighten us upon this Science.—*The Cedar Rapids Republican.*

✧

Bartlesville, Okla.

An audience of about four hundred people listened attentively to a lecture on Christian Science by the Hon. Clarence A. Buskirk at the Grand Theater. He was introduced by Alexander Calvert, first reader, who said:—

Christian Science comes to this age as naturally as day follows night. For centuries the world has clung to the Bible, vaguely conscious that its hope of salvation lay within the sacred truths there presented. It has believed that there was an omnipotent God; and in the fulness of time there came one spiritual enough to perceive that omnipotence is a fact, available for today. It was through a woman, Mary Baker Eddy, that this truth was revealed to this age.

Correspondence.

✧

Belfast, Ireland

An interesting lecture on Christian Science was delivered in the Ulster Hall by John W. Doorly. The chair was occupied by the Rev. R. W. Seaver, M.A., B.D., who said that his knowledge of Christian Science was, as they would understand, entirely the knowledge of an outsider. He held that in these strenuous and changing days it was the bounden duty of every man, and especially of one who professed to be a Christian teacher, to attempt to acquaint himself with what other men of different churches and different beliefs were thinking in the age in which he lived. From that standpoint he approached the study of Christian Science. With what he understood were two of its fundamental articles of belief he was in entire and thorough agreement. One of these was the universalness, the all-pervasiveness of Spirit, that is, of God; that we live in a universe which from the basal point of view is not material but spiritual. The other fundamental belief, as he understood Christian Science, was this: the absolute supremacy of Mind.

The chairman further said that as a Christian teacher he was bound to take Christian Science on its face value and accept it for what it professed to be. It professed to be Christian, and also to be scientific. It claimed to be putting into practice the principles of Jesus Christ our Lord. He took it that he was speaking to some who, like himself, were not members of the Christian Science body. They had not come out there driven by that morbid curiosity which was an outstanding feature in the life of modern Athens. Life at this moment was too serious, and the issues were too important for trifling. He took it that many of them felt what he profoundly felt,—a dissatisfaction with much current religious teaching. This century, as happened three centuries ago, had allowed religion very largely to develop into scholasticism. They wanted something real. They wanted reality, if anywhere, in their religion, and any system that came and professed to enable them to live strong, pure, strenuous lives, developing body, soul, and spirit, demanded the attention of every thoughtful man or woman. This, he understood, was the claim which Christian Science made.

The Northern Whig.

Lectures to be Delivered

CALIFORNIA—Los Angeles (Third Church): Bicknell Young, Church Edifice, 734 South Hope Street, 7 and 8:30 p.m., Feb. 8.
Watts: Bicknell Young, I. O. O. F. Hall, 8 p.m., Feb. 7.

CONNECTICUT—New Britain: Charles I. Ohrenstein, Russwin Lyceum Theater, 3 p.m., Feb. 6.

FLORIDA—Bradentown: Jacob S. Shield, Opera House, 8 p.m., Feb. 10.
Daytona: Jacob S. Shield, Daytona Theater, 8 p.m., Feb. 7.
Jacksonville: Jacob S. Shield, 8 p.m., Feb. 6.
Orlando: Jacob S. Shield, Lucerne Theater, Court Street, 8 p.m., Feb. 8.

GEORGIA—Augusta: Jacob S. Shield, Tubman High School Auditorium, 8 p.m., Feb. 3.

ILLINOIS—East St. Louis: Clarence C. Eaton, Church Edifice, Summit Avenue and Washington Place, 8 p.m., Feb. 1.
Highland Park: Virgil O. Strickler, Church Edifice, 125 Hazel Avenue, 8 p.m., Feb. 8.
Tuscola (auspices Mattoon): Clarence C. Eaton, Globe Theater, 2:30 p.m., Feb. 6.

INDIANA—Huntington: Bliss Knapp, Huntington Theater, 3 p.m., Feb. 6.

MASSACHUSETTS—Lynn: Jacob S. Shield, Church Edifice, Chestnut Street, near Broad Street, 8 p.m., Jan. 28.

Testimonies of Healing

During the past five years I have learned through an absolute reliance on Christian Science that it is indeed the "Comforter" promised by Jesus. I first became interested in it through observing what it had done for several of my relatives. I had never had any serious sickness, so I took up the study of Christian Science merely to investigate its teaching. During the first five months of attendance at the Sunday and Wednesday evening services, I often became discouraged, because, while reading the Lesson-Sermons daily, I seemingly could not understand all I read; but I kept on with the study, feeling sure Christian Science was the truth.

Then I met with an accident, my right wrist being seriously injured while cranking an automobile. At first everything seemed to turn black, and I was just about to faint, when it dawned on me that "accidents are unknown to God" (Science and Health, p. 424). Immediately everything became clear, and with the assistance of a friend the wrist was set back in place. Just a realization of what those words meant had healed me instantly, for there was no swelling or pain, and in five days I was again using the arm in my daily work.

This experience proved to me that as the result of having read each day faithfully from Science and Health, in spite of the argument that I could not understand it, I had understood it, and this understanding had been available and applicable, and it was the truth. Since that moment Christian Science has been my constant guide in all things in my home, my business, and all my experience. I have since been healed of the liquor and tobacco habits, and have had numberless proofs of the wonderful healing power of Christian Science.

I am deeply grateful for these many blessings, but most of all for that dear woman who was so unselfish as to devote her life to the statement of this wonderful truth, that it might bless all mankind; and my earnest desire is to live according to its teachings. I also wish to express my gratitude for our periodicals, as they are an avenue for the expression of the substance of being. This thought gives me great encouragement in my efforts to increase the distribution of them, and I am grateful for the many opportunities that come to me in this line.—Reuben A. Joy, Chicago, Ill.

✧

For over seven years I have been trying to be a Christian Scientist. The first two and a half years of that time the way seemed very easy, I was so happy with this revelation to me of God and His love and power. I fairly sped ahead, encountering little difficulty, with joy and gratitude for the progress which I was making daily. Every available moment I hungrily studied the Lesson-Sermons, the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and other Christian Science literature. There were many wonderful healings in our little family, and almost always my husband or I did the Science work. Then there came a period of unrest, and with the birth of our third child I began to have trouble, for a veil seemed to be spread over my mental vision.

During those first years in Science I lived most of the time in a little Mississippi town where there was only a small society, and therefore a great deal of responsibility fell upon me in keeping up the services. I then moved where there was a church organization, and for a time my active work seemed to cease. I had known very few older Scientists during my short life in Christian Science, so had not been shown how to meet the false thoughts of arrested progress and even retrogression, and soon a sense of discouragement set in. Always when I did my part in studying and trying to correct my thought, I got along beautifully, and kind new-made friends helped me a great deal. At last, without realizing it, however, I seemed to let go completely, and found myself in a deplorable condition, which lasted for three years. Then I gave birth to a fourth child, and this seemed to add to the burden already too heavy. One trouble after another came upon me, until I felt that I would lose my mind.

I am sure it was my hidden knowledge of Christian Science as Mrs. Eddy has given it to us that saved me, for whenever I thought of the above mentioned possibility some words of our Leader would come to me, although I was in such a condition that I would disdainfully shut them out and heed them not. Nevertheless they were there, and through it all I knew that Christian Science was the truth, and kept longing for an understanding of it and for a renewal of the days when it was so clear to me and when it met my needs; but I had lost all desire to read. I was told time and again that I might give up Christian Science, but that God would not give me up. God held on to me, no matter how much I let go of Him. That was the one thought that seemed to do me any good.

There came a day when I felt that I had reached the limit and could endure no more. Then a dear friend came to see me at my request and talked with me for about an hour, at the end of which time I was a changed woman. She had just been through so much trouble herself, and had come out of it so beautifully through reliance upon God as taught her in Christian Science, that she could speak from the heart and with assurance, and I can truthfully say she delivered my family of six from the misery I had brought upon them through my condition. She did not do the work for me, but told me that I must do my part, showing me my mistakes and pointing the way to overcome them. After so much wrong thinking, however, I was not to be so easily freed and sent on the way rejoicing. For three months I had one illness after another, as did also the children; but I had begun to read again and try to help myself, so it was easier for me to understand what was told me.

It was then that a kind practitioner pointed out that I had not been truly appreciative of Christian Science, and I finally realized that this was so, that I had been grateful merely for its power to heal and save me from suffering. Now came the fuller meaning,—that it revealed a Principle by which to work out life's problem, and that with its guidance I was to live for others and overcome every thought unlike the Christ. Thus all ills and sins would be overcome, and I would continually "grow in grace" and in the knowledge of God. The stone has truly been rolled away, and the door is free to be opened as quickly and as wide as I will have it,—according to my faithfulness to God and His Christ.

The healing has been permanent, and I have continued to improve in my understanding of the truth as taught in Christian Science. I am indeed grateful for the blessings I have received through the application of this truth.

Frances Van Rensselaer Briscoe, Riverside, Cal.

✧

The testimonies in the Christian Science publications have been very helpful to me many times. The first change I noticed after learning of Christian Science, in the fall of 1913, was an improvement over a very irritable disposition, this having taken place during my conversation with one who made the truth known to me. I had suffered five years from the belief of nervousness and all the diseases which usually accompany neurasthenia. At the time this teaching was

Digitized by Google

brought to my attention I seemed to be suffering most from sciatic nerve trouble, but I was so thankful for the peace of mind Christian Science brought, that I forgot about the physical ailments. Several days later I felt that my ill condition must be overcome, and thereupon I asked for guidance as to a practitioner, knowing that all help comes from God, and the thought immediately came to me, "Why, you are healed," and I was healed at that moment.

A few years ago I had gone to a hospital to have an enlarged joint on each foot operated on, having been troubled with bunions since childhood; but it was proven to me that the trouble was not in the joints but in my understanding, for as soon as I was able to walk, infection appeared in another part of the feet. For this I was treated nearly a year by chiropodists and a physician; but after being told of Christian Science I had a few treatments and found that as I studied this Science and imbibed its spirit my feet became more normal, and I am thankful to say that the following spring I gained perfect freedom in walking. Not only has my healing been complete and permanent, but my attitude toward things generally has changed, and my whole life has become better. Constant watchfulness for good everywhere, enables me to help others and to manifest my gratitude for this saving truth.

Abbie Mitchell, Detroit, Mich.

✧

I desire to express my appreciation of what Christian Science has done for me during the past five years. Jesus' words, "Ye shall know the truth, and the truth shall make you free," mean more to me than ever before, and for the realization of this freedom that has come through the study of Christian Science I am very grateful.

It was owing to the need of physical healing that I became interested in Christian Science, and although the demonstration has been slow I am grateful, for it has brought me nearer to God and has given me a better understanding of man's true being. For many years I had suffered from stomach disorder and hardly knew a day without pain. When I took up Christian Science I had been for several years under the care of doctors, first one and then another, and at that time was taking medicine every hour of the day, and at night too if I awoke. Since 1910 I have not tasted medicine or stimulants of any kind, and I can truly say that my healing is complete.

I am grateful not only for the physical healing, but for the mental uplift which has come through the spiritual consciousness of life. Christian Science has taught me to think right; it has taught me patience and a willingness to wait for guidance, has brought into my life love for my brother man, and has given me a working Principle that I can apply in my daily life. When I am mindful of God's love and realize the blessings we receive from the many promises He has given, I am more thoughtful, and my work in business is made much happier. By keeping ever before me the knowledge that as God's child I can reflect only divine intelligence, the daily problems become clear, and I am assured that "I can do all things through Christ which strengtheneth me."

For the peace and freedom that have come to me, and for the knowledge I now have of the allness of God, I am deeply grateful.—Adeliza F. Kraetzer, Lexington, Mass.

✧

[Translated from the German]

I am very willing to express my gratitude for Christian Science. Before becoming acquainted with this wonderful religion I was often in a state of despondency. I would get up tired in the morning and go to bed tired at night. My feet felt so heavy that it seemed difficult to move them. Besides, I was afflicted with varicose veins and often had to use bandages. I had also lost the sense of smell, and physicians told me that there was no way of restoring it. In addition to these troubles I suffered with severe attacks of headache, which kept me in bed for days at a time.

While in this condition I came to Berlin, and there became acquainted with a Christian Science practitioner. After the third treatment given me I took part in an excursion on which I was able to walk for hours without experiencing fatigue, and I have been healed of all my ailments through Christian Science. As years went on other benefits were added. Thus, when a year after coming to Christian Science I was taken ill, my throat being in such a condition that for five days I went about unable to take nourishment, I put myself under the care of a practitioner, with the result that it became possible for me to attend to my business duties without experiencing much fatigue. A week later other symptoms manifested themselves, such as rheumatism and seemingly severe inflammation of the lungs. One treatment, however, was sufficient to restore me to health.

For all these benefits I am thankful to God, and grateful to our beloved Leader, Mrs. Eddy, for through her the Christ-way, the truth, was revealed anew unto us. I am very grateful also for the spiritual uplift which I have experienced through Christian Science. I know that no matter how difficult circumstances may appear to be, God, good, is always present, and that divine Love guides our steps and supplies our need, if we but trust in Him. My greatest desire is to assimilate more of this redemptive religion, and through daily living to conform more fully to its requirements.

Frau Emilie Schweim, Berlin-Wilmersdorf, Germany.

✧

In July, 1913, my eldest son, then eight years old, was caught in a railroad turntable, terrible injuries resulting. Both legs were broken above the knee, while the left leg was crushed and torn and the right one badly wounded. There was also a deep gash in the back, penetrating the kidney. I had some knowledge of Christian Science, and with its application was able to support and encourage the boy during the two hours that it took to set the limbs and sew the wounds. He was then taken to a hospital in Jacksonville, where I at once put the case into the hands of an experienced Christian Science practitioner. My husband is not a Christian Scientist, and I had been led to believe that I could not get help for the boy without his father's consent. I will never forget my relief when the practitioner consented so lovingly and pityingly to help us, saying that she would indeed have been lost if Christian Scientists had refused to help her before her husband became interested.

No one expected the child to live. The most dreaded form of infection appeared in all the wounds, and to mortal sense the pulse and temperature indicated the approach of death. The physicians did all they could, and relieved the child very much by keeping him on a frame to prevent his touching the bed. They also faithfully dressed the wounds every day, but with little or no hope of his recovery. After four months in the hospital and one month in a hotel, my son came home. He was able to walk and all healed save a slight wound on the left leg, which still discharged at that time. Both doctors on the case declared that the leg would never knit without an operation. Upon cutting into it, however, they found the bone had already knit, but removed a loose piece of bone three inches long. The healing was called marvelous by every one; even the physicians said the child had a wonderful constitution, when in fact he had always been delicate. There was no shortage in the limbs, as was expected.

Digitized by Google

After the boy had been walking nearly four months he had a fall, breaking the left leg again. I telegraphed the Christian Science practitioner at once and all the results were most harmonious. The old wound healed and the leg came out of the cast straight and strong, again without shortage. He is now walking and is in perfect health. One of the remarkable things about this accident was the cheerfulness and courage with which he met the agonizing pain experienced when the wounds were dressed, and how soon he forgot it. Now he runs about, rides a bicycle, swims, and indulges in the usual pastimes of a healthy boy. Occasionally he has complained of a pain in the leg that was so badly injured, but my understanding of the truth has always dispelled the fear.

I am praying for more love for God and man, and for more of the Mind that was in Christ Jesus, so that I may be able to help to bear another's burden, even as I have been helped. I thank God for Mrs. Eddy's perception of His allness and goodness.—Mrs. C. A. Simpson, Monticello, Fla.

✧

When Scientists are walking with God they are constantly coming upon proofs of His power. One morning I felt severe pains, and by evening they seemed worse. Then a small growth was discovered. A physician who diagnosed the condition said it was quite serious, being caused by a strain. He said the growth should be opened without delay, and added that he had seen many such cases and advised me not to neglect it. I refused to have any medical aid, however, and Christian Science treatment was begun. Shortly after this I dressed and went out in the park with my books, free from pain and experiencing no inconvenience in walking. That night the formation opened without any pain. There was no uncleanliness connected with it, and within twenty-four hours it was practically all gone.

A friend came to see me the following morning and I told her how thankful I was for the experience. "Why," she said, "before I knew of Christian Science I had the same thing, and I was flat on my back for two months with a trained nurse attending me, and the affair ended up with blood-poisoning." To say that I am thankful for my knowledge of God as Love and man as His perfect child, very inadequately expresses my feeling. I am grateful to Mrs. Eddy and all the dear Science friends and helpers. To be a Scientist is indeed to be a helper!

Irma Kate Shivers, New York, N. Y.

✧

[Translated from the German]

I am glad to be able to testify to a wonderful instance of help received a few years ago through Christian Science. On washing day I evidently sustained an injury to the thumb of my right hand, for the following day it was very much swollen, with symptoms of blood-poisoning extending to the elbow. I went to a Christian Science practitioner, who took up treatment for me in the most loving way. In the mean time the upper arm as far as the shoulder had also become very much swollen, and the hand was badly discolored. On the third day I suddenly awoke out of a sense of stupor, and as an effect of Christian Science treatment a wonderful sense of peace came over me. I had been lying almost unconscious, when the thumb opened and discharged. Afterward the old skin came off, and everything was overcome in such a wonderful way that I experienced a sense of shame to think of how ungrateful mortals are in the presence of such manifestations of infinite Love, and how little we praise God and give Him the glory.

We had another experience which brought the vivid realization of divine Love's watchful care over its own. About twelve o'clock one night in December, 1914, I was awakened all of a sudden as if by a divinely aroused impulse. I arose and tottered to the kitchen in a state of dizziness. In the kitchen, to which a door led from the bedroom, the gas-pipe had become loosened, and gas had been leaking out since half past ten, as I had forgotten to turn off the main tap. My mother was not affected, but I had to shake my niece out of a stupor. In these moments of anguish I realized the import of divine Science, for I can but believe it was God, good, that kept me from lighting a match, and gave me strength and led me to do the right thing under the circumstances. After a few hours spent unitedly in fervent prayer, in realizing the truth and giving thanks to the Father, everybody went back to sleep.

We have had innumerable blessings in our family circle. God's omnipotence has been made manifest in cases where we seemed in great stress. Help in a financial way is also experienced by those who trust Him implicitly as their source of supply. Words are inadequate to express my thankfulness to God, and my gratitude for the fact that there are present with us so many faithful people who are ready to lift us up when we have stumbled. This thought ought to make us feel very happy and grateful indeed. I am most deeply grateful for the truth which through Mrs. Eddy has again been given to the world, and I praise God for the strength and spiritual uplift which I have experienced through Christian Science.

Marie Bertram, Hannover, Germany.

✧

I was considered a delicate child, since I had stomach trouble and was very susceptible to disease. My parents despaired of ever raising me to manhood, and the doctor was a frequent visitor at our house. When I was sixteen years old Christian Science was introduced into our home, and it sounded reasonable to me, so I accepted its teachings as the truth. It was while confined to my bed with scarlet fever that I gave up my faith in material remedies forever. The medicine was thrown away, and I speedily recovered while my mother read in Science and Health and applied her slight understanding of Christian Science to my case. That was eight years ago. I have not taken or had cause to take medicine since, and am now in perfect health. Several years ago my business required me to take a physical examination, and the physician in his report said that I was as nearly normal as any man he had ever examined.

Later I was cured of the tobacco habit, both chewing and smoking, of the growing habit of drinking intoxicating liquors, of profanity, as well as of other vices which go with such habits. Four years ago I took up the study of Christian Science in earnest, and since then I have witnessed many healings and have been enabled to relieve others who have applied to me for help. I am learning that only love, purity, truth, and good can profit me, and that envy, self-seeking, resentment, self-righteousness, and all manifestations of hate and error, are but dreams of the counterfeit senses, and these disappear as the true spiritual consciousness is established within us. This teaching has lifted me physically, morally, and mentally so far above what I was when it first came to my notice, that I would be ungrateful did I not place an account of my experience where some one hungering for health and greater peace can see it.

My gratitude to Mrs. Eddy, and to the earnest workers in Christian Science who are unselfishly devoted to the cause of humanity, must be shown in my daily efforts to do likewise.

Joseph C. De Witt, Louisville, Ky.

Digitized by Google

My first healing in Christian Science came to me a few months after taking up the study of this religion. Previous to this time I had suffered from two attacks of acute lung trouble, and both times it seemed as if I would pass on. This had caused me to have a great fear of the disease. When the last attack came I felt my testing time had come, but I was confident that my chances were better than ever before. A Christian Science practitioner was called to the house and gave me a treatment. Absent treatments were then given for two days, when all symptoms of the disease were gone except the extreme physical weakness which had always followed these attacks. The practitioner was informed of these conditions, and that afternoon I was able to get up and remained up the rest of the day. The next morning I was about the house.

With this healing the fear of the disease was overcome. Three years have passed and I have had no return of the trouble. I cannot express in words the joy and peace that has come to me with the little understanding I have of Christian Science.

MARGARET JOHNSON, Grand Rapids, Mich.

✧

It has never before occurred to me to give a testimony of my healing, because I have succeeded in forgetting the incident, save when some physician tells me it was a wrong diagnosis in my case, or some good friend tells me that I quit taking medicine at the right time. The doctors called my trouble curvature of the spine, but Christian Science proved it unreal. It would be impossible to tell of all the good that has come as a direct result of my healing. A sister has been cured of tuberculosis of the bowels, and an aunt of a malignant growth of the breast, while the mental uplift which in countless ways has come to us far outmeasures the physical blessings.

That the seed of Truth has brought forth such a bountiful harvest of good proves conclusively the efficacy of the revelation of divine Science through Mrs. Eddy. Not only has my healing been a lasting one, but it gives me great joy to state that it is a growing one.—A. E. CARVER, Gary, Ind.

[Written for the *Sentinel*]

Night Voices

PEARL M. HADLEY

DOWN purpled mountains evening sweeps,
And through my window softly creeps
The light of stars which write on high,
Across the zenith of the sky,
God is Love.

The ocean's call, the wind's low sigh,
Are sleeping nature's lullaby.
They murmur o'er and o'er again
In accents low the sweet refrain,
God is Love.

The wavering mist above the stream,
The floating cloud, the moon's soft beam,
Unite in tenderest tones to tell
The ear attuned to nature's spell,
God is Love.

And with night's voices solemn, sweet,
I raise mine own my Lord to greet.
Whate'er life's mysteries may be,
Dear Lord of life, I trust in Thee,
For Thou art Love.

From Our Exchanges

[Philip S. Moxom as quoted in *The Christian Register*]

The words ascribed to Jesus, "I am not alone, because the Father is with me," are true for every sincere soul, and the companionship of God makes every hard experience tolerable. In the divine order there is compensation at last. Slowly even his church apprehends the real spirit of Jesus and feebly prosecutes his real mission. Sometimes it seems as if the centuries were but one prolonged passion week, and Jesus still prays in Gethsemane or toils up new Calvaries "with the cross that turns not back," and those who in name are nearest to him sleep while he sorrows, or flee in dismay at sight of the cross.

To be a Christian is heroic but not easy. It is to be steadily in sympathy with Jesus, not only in his sufferings but also in his aims and enterprise. It is to face with courageous and frank acceptance the discipline through which he passed and through which we must pass in order to understand him and become like him, and not shrink back from it in petulance or resentment. It is to walk with him by day and night, in silent hours of meditation and strenuous hours of labor. It is to confess his name by manifesting his spirit. It is sincerely and without ostentation trying to shape our lives in accordance with his teaching. To be a Christian is to be in sympathy with Jesus, and to the best of our knowledge in this confusing world and time to be in sympathy with him is to be in sympathy with God.

[*The Universalist Leader*]

Even if our goodness were always certain of outward reward, our desire for that alone would not enable us to achieve its fullest practice. In the hope of obtaining fame or fortune we might undertake the writing of a great book, the painting of a noble picture, or the production of splendid music; but when we had done the best we could the book would lack greatness, the picture would be commonplace, the music devoid of charm, unless we also loved for their own sake the truths we aspired to write, the beauty we sought to portray, or the melody we strove to express. In like manner, in spite of our utmost effort to make it so, the goodness which our expectation of reward, here or hereafter, enables us to practise, is neither so great nor so constant as that to which we attain when the heart is in love with the excellence at which the conduct aims.

[*American Lutheran Survey*]

The Christ-child, wrapped "in swaddling clothes" and lying in the manger in Bethlehem, is to the believing Christian the incontrovertible "sign" and assurance of God's love, who wills not the death of men, but that they live through faith in His love, as proven by the incarnation of His "only begotten Son." Herein is joy. Herein is assurance. Herein the Christian finds the rock foundation upon which he builds the temple of his faith and confidence. The love of God shed abroad in his heart through faith in the "sign"—the manger and that other "sign," the cross—bears witness with his spirit that he is a child of God.

[*The Living Church*]

The true preparedness for peace, domestic and international, must be found in the expansion of our religion so that it takes in, it fully comprehends, it understands and sympathizes with, the other man, the other nation, the other race. No religious body today quite fulfils this ideal. Among the heresies which have eaten out the life of the church in

Digitized by Google

other ages this heresy of the nineteenth and early twentieth centuries must be added,—the heresy of absorbing spiritual grace into one's self for himself rather than for the benefit of the whole social mass.

God works through individuals for great social ends. He guides particular men, as He guided Moses and Joshua and David, King Alfred, Savonarola, the American patriots who founded this nation, and many another, to apply the principles of their religion in the realm of society. True, there have been those who, like Hildebrand, catching this splendid idea, were content to press it into a political rule rather than into a social principle. The reaction of Hildebrandism has thrown us into the opposite heresy of a religion of individualism. That heresy, in turn, has produced the grave social evils of our day at home and the clash of the nations abroad. The two extremes produced very similar fruits. Our preparedness for peace—which is quite apart from the necessity for preparedness to repel invasion from without—must take the form of expanding, socializing our religion, and then extending it generally throughout the world.

[*The Congregationalist and Christian World*]

There is no true Christmas that is not a Christmas of the heart. For Christmas is a sign and symbol of the drawing near of God to man. The scene is no longer in the stable at Bethlehem. It is everywhere,—in your heart and mine, in your village and home, when the life of God's self-giving is born in the heart of a man.

We are living in a time of desperate need, of strained sympathies and overmastering sorrows. Is it still possible for us to win the joy of Christmas, the simplicity of giving and receiving, of greetings and of songs of cheer? In the midst of the outward shows and ceremonies by which men around us are seeking to make celebration, we shall feel the tug and strain of a haunting and foreboding grief unless our joy has deeper roots than habit or circumstance; unless we have learned the secret of the life that is "hid with Christ in God."

[*Western Christian Advocate*]

The one thing needed to bring back into this warring world the Christmas joy and the universal good will among men, is for all who call themselves Christian to live in sincerity and truth the Christianity which they have professed to believe. The gospel is still "the power of God unto salvation" to all who actually receive it. We have called Christ's program of godlike righteousness and brotherly love too ideal for the practical problems of such a world as this. In doing this we have not even suspected that we were repudiating Christianity altogether. Jesus made it very plain that we could not be divided in our allegiance and half-hearted in our espousal of his cause.

[*Zion's Herald*]

Human nature is an odd compound of ideas and motives, and must be studied with a due mixture of sympathy, criticism, amusement, and allowance. We cannot expect everybody to agree with us, because nobody wholly agrees with himself. But in spite of the conflict of opinion, and out from the cross-seas of many competing social interests, God will deliver the Pauls who trust in Him, making them more masterful than the Romans and wise enough to teach even Athens itself.

[*The Christian Register*]

Spiritual energy is always ready to manifest itself in human life. Any human soul putting itself into right relations with it becomes a spiritual dynamo, through which the power of the Highest flows and reveals itself as the light of wisdom and the heat of moral enthusiasm.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new pamphlet entitled "Man's Unity with God" has been printed in the German language. This pamphlet contains seven articles from the Christian Science periodicals, which have been translated into German. The pamphlet is now on sale at the prices of our regular pamphlets, as shown on the opposite page.

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

A new pamphlet, "What went ye out for to see?" is now on sale. This pamphlet contains the four following articles from the Christian Science periodicals: "Principle Not Person"; "Jesus of Nazareth"; "Jesus the Christ"; and "Jesus and the Christ."

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

For table of English, German, Swiss, and French money equivalents, see inside front cover page.

Miscellaneous

For quantity rates on goods specified in the following list please refer to the current catalogue in *The Christian Science Journal*.

BIBLES. 01483 x. Clarendon Brevier, heavy-faced, distinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.75.

01440 x. Brevier, light-faced type; self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.50.

Morocco slip case to hold pocket edition of Science and Health, *Quarterly*, and Bible, $1.25.

Two other sizes of slip case listed in the current issue of the *Journal*.

Covered morocco case with handle and purse on outside, $3.50; without purse, $3.25.

01561 x. Large type Bible, 7½ x 6¼ inches, 1½ inches thick, bound in Alaska seal. Specially adapted for use of second readers, $7.25.

The improved index will be added to any Bible listed in our catalogue for an additional charge of 35 cents. Catalogue No. 22 of selected Bibles will be mailed free upon application.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. 122 pages with index. Paper covered, 15 cents; cloth binding, 85 cents.

THE LIFE OF MARY BAKER EDDY. By Sibyl Wilbur. 424 pages. Cloth, $2. Edition de luxe, $5.

"PERSONAL CONTAGION" and "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Paper cover, 10 cents.

THE MOTHER CHURCH. By Joseph Armstrong. A history of the building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated. 197 pages. Cloth, $1.50.

CHRISTIAN SCIENCE: ITS LEGAL STATUS. By Judge Clifford P. Smith. 128 pages, paper covered, 10 cents.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, $1.15; half morocco, $1.40; full morocco, $2.50; levant, $3.50; pocket edition, size 4⅝ x 6⅝, $3.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission, have been set to music as follows: "The Mother's Evening Prayer," 75 cents; "Christ, My Refuge," 75 cents; "Love," 40 cents; Communion Hymn—"Saw Ye My Saviour?" (Johnson), 50 cents; "Blest Christmas Morn," 27 cents; "O'er Waiting Harpstrings of the Mind," 27 cents; "Shepherd, Show Me How to Go," 27 cents; "Saw Ye My Saviour?" (Root), 27 cents. The first three hymns are arranged for high and low voices in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing. 8-inch (mount 12 x 16), $1; 12-inch (mount 15 x 20), $2; 16-inch (mount 21 x 29), $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18 x 24 inches, $5; on India paper without remarque, $3. Smaller reproduction, size 11 x 14 inches, on Japanese vellum, $1. Photogravure post-cards, reproduction of the picture of the Church Edifice and Publishing House, 5 cents.

QUARTERLY COVERS in black morocco, $1.15; with purse, $1.40.

ALUMINUM LESSON MARKERS. Set of thirty, with paper shields, 50 cents. Extra paper shields, one hundred, 15 cents.

PRICE LIST OF BIBLE CONCORDANCES and DICTIONARIES OF THE ENGLISH LANGUAGE supplied on request. Express charges collect on delivery.

REPRINTS (not printed in English). Two-page leaflets, 14 subjects in French and Swedish; 19 subjects in German. Ten copies to one address, 10 cents.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Send all orders for the works of Mrs. Eddy, with remittance by New York or Boston draft or money order, direct to Allison V. Stewart

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, larger-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

Two thirds of the steam and electric power used in the United States is controlled by less than one hundred corporations, the Stone & Webster interests of Boston standing at the top of the list of interlocking companies, according to a statement in the report of the secretary of agriculture, made in response to a resolution of the Senate and laid before that body. Eighteen corporations control over half the water-power, exclusive of steam-power, in the United States, and six corporations control more than one fourth of the water-power. Furthermore, the secretary declares, there is evident "a marked tendency toward association or community of interests, particularly between the principal holding companies, that cannot be viewed without concern."

The report will make, when printed, a massive volume in which graphic charts will tell the story of the interlocking directorates of power companies with banks and with other big corporations. The secretary points out that the concentration which his experts have discovered has taken place most rapidly in the states where power sites are largely on public lands. Revised figures of the potential water-power resources of the country place them at the minimum of 27,943,000 horse-power, and the maximum of 53,905,000. The national forests are stated to contain 30.4 per cent of this minimum and 31.4 per cent of the maximum, while over 72 per cent of the country's total is found in the mountain and Pacific states.

In a decision of wide effect to water-power development throughout the United States, the Supreme Court holds that states possess the power to enact laws authorizing condemnation of power sites and water rights by right of eminent domain. The decision was announced by Justice Holmes in upholding the constitutionality of the Alabama water-power condemnation statutes in a case touching the improvement of Tallapoosa River. "The principal argument," he said, "is that the purpose of the condemnation is not a public one. In the organic relations of modern society it may sometimes be hard to draw the line that is supposed to limit the authority of the legislature to exercise or delegate the power of eminent domain. But to gather the streams from waste and to draw from them energy and labor without brains, and so to save mankind from toil that it can be spared, is to supply what, next to intellect, is the very foundation of all our achievements and all our welfare. If that purpose is not public we should be at a loss to say what is."

The constitutionality of the legislation in Massachusetts upon which minimum wages for women in industry is based, will be contested before the supreme court of the state in an answer filed by the attorney for four laundry proprietors. Upon the outcome of this case will depend whether or not further advances can be made in establishing minimum wages for women in the state, and in fact whether or not rates already being paid under decrees of the minimum wage commission can be enforced. Claims of unconstitutionality of the minimum wage law, and decrees under it, will be made in answer to a petition of the minimum wage commission for a mandamus to force the four laundry employers to produce their books so that the commission may get facts as to the condition of the laundry industry, the ability of these employers to pay the eight dollars a week which the decree imposes for experienced women workers, but which these four employers, along with many other laundry employers in the state, have refused to pay.

The ownership and operation of munition plants by the United States Government is being advocated in the Senate by Senator A. B. Cummins of Iowa, to minimize the probability of war by eliminating war profits to private factories. "It ought to be made impossible," he said, "so far as the power of the Government can be exerted, for any man or corporation to make money out of war. Our people will in the future, even more than in the past, be in constant contact with all the powers of the earth. There will be controversies to be settled, either by conference, mediation, arbitration, or war. In the management of these difficulties our Government will need not only the highest statesmanship, but behind it and impelling it a public opinion untainted and uncorrupted by the selfish influences, seen or unseen, of the business profit which will come from war."

The plans for an art museum for Kansas City, Mo., adequate to the needs of the city, are near realization. In the settlement of an estate, the residue of which was bequeathed the city for the building, the executors have reached a point where they can assure that about $350,000 will be available for the purpose. The park board has offered a site on a commanding rise of ground facing the new Union Station on the south, and the landscape architect of the board has prepared plans. The will provided that if the building was placed on public ground it should be part of a plan for a civic center. The board's action in setting aside the site is believed to forecast a plan for such a center, where ultimately other public buildings will be grouped. The city already has the nucleus of an art gallery in paintings now hung in the Public Library Building.

The Supreme Court of the United States upholds the constitutionality of the income tax law. Chief Justice White gave the court's decision, sweeping aside all the many objections to its constitutionality in whole or in part. The decision was announced in connection with the case of a stockholder of the Union Pacific Railroad, who sought to enjoin the company from paying the tax on the ground that it was unconstitutional. Most of the opinion was directed toward overruling the contention that the income tax amendment provided a hitherto unknown power of taxation, whereas as a matter of fact it was a power recognized to exist from the beginning of the government, and thus decisions defining the taxing power previously rendered were applicable to it.

One of the final steps toward linking the United States and its foreign possessions by a great chain of wireless stations was taken the other day when the secretary of the navy approved a contract for the equipment of the big radio stations now under construction at San Diego, Cal., Cavite, Philippine Islands, and Pearl Harbor, Hawaii. Completion of these stations within the next year will pave the way for radio communication from Washington, not only to the insular possessions, but to almost any point in the world where there may be a receiving plant. The new stations at Pearl Harbor and Cavite will be the most powerful in the world. They will be equipped with apparatus for exchanging messages over an area of approximately forty-seven hundred miles.

One of the first quail and song-bird preserves in Ohio will be established in Hamilton County. The land is located near the experimental farm, Mount Healthy, and the owners have given permission for the tract to be used as a preserve for birds. The work is being conducted under the auspices of the fish and game department of the state board of agriculture. Ohio has adopted a rather novel method of obtaining control of large areas of territory at practically no expense to the taxpayers. By this method farmers agree to lease their lands for the propagation of quail and song-birds for at least five years.

The growth of the automobile industry in Rhode Island is indicated in the annual report of the state board of public roads, presented recently to the General Assembly. The report states that there is one automobile for every thirty-five persons living in the state. Three years ago the proportion was one vehicle for every fifty-eight inhabitants. There are 17,000 machines and 23,000 licensed operators.

The Latin department of the University of Wisconsin is cooperating with the Wisconsin Latin Teachers' Association in presenting to the public the purpose and practical value of the study of this language. A publicity committee has been appointed and an active campaign has begun.

Representative James A. Frear of Wisconsin has introduced in the House of Representatives at Washington a bill providing for a national waterway commission. It puts all waterway projects under control of a national commission with wide powers and jurisdiction.

The grain crops of Canada in 1915 showed the most abundant yield in the history of the Dominion. The value of field crops amounted to $800,000,000, of which grain brought $586,161,900; potatoes and sugar beets, $36,739,500; and fodder crops, $192,768,100.

The thirty-fifth annual meeting of the American Forestry Association was held in Boston recently. There was an attendance of several hundred delegates, coming from all sections of the country.

Copper mining companies of northern Michigan set a new record for the district with a total output for the year 1915 estimated at 261,000,000 pounds.

The coronation of Yuan Shi-kai as emperor of China has been postponed indefinitely. The reason given officially is the uprising in southern China.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII | February 5, 1916 | No. 23

Righteous Rejoicing

REV. JAMES J. ROME

No one can know, without having had the experience, what a joyful relief comes to those who through Christian Science treatment have been set free from physical ailments after they have searched in vain for healing through material methods. Very closely akin to this sense of joy is that expressed by the young student of Christian Science who has successfully applied his knowledge of the truth and has been enabled to bring relief to those in physical distress. It was no doubt joy of this nature that filled the hearts of the seventy disciples when they returned to Jesus from their healing mission and exclaimed, "Even the devils are subject unto us through thy name." One can well imagine their receiving with some surprise the gentle rebuke administered by the Master when he said, "In this rejoice not, that the spirits are subject unto you; but rather rejoice, because your names are written in heaven."

In his rebuke Jesus was pointing out a danger, and the warnings given by him then are valuable to us now. What was the lesson intended? It was not the rejoicing which he rebuked, but the cause of rejoicing. Neither can we suppose that Jesus meant to minimize the importance of healing disease and casting out evils, since he had already pointed to these very effects as a proof of his divine authority. Why then was their rejoicing at fault? Jesus taught very clearly that while physical harmony and material supply resulted from the better sense of the divine presence which he imparted, the purpose of his life-work was by no means to bring ease and gratification to material sense. Their rejoicing evidently indicated that they were attaching undue importance to the material, physical effects, and that this led to the obscuration of the spiritual facts which produced them.

It is a poor evidence of progress when one stops to admire the product of his work. If he has the proper breadth of conception, he will but regard his present accomplishment as an evidence of that greater achievement upon which his heart is fixed. Pride in accomplishment evidences a lack of maturity. The music pupil may practise his lesson in order to show how well he can play it, but the musician is reaching out far beyond his production to ideals that as yet he cannot outwardly express. So is it with the student who has reached beyond the first steps in Christian Science: he ceases to wonder at or find his joy in the mere physical healing, which he learns to regard as a matter of course, as the natural result of his higher understanding of what is far more important and substantial.

In Science and Health (p. 150) Mrs. Eddy writes: "The mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world." The testimonies of those who are healed in Christian Science show that these higher results desired by our Leader are being realized in large measure.

The chief cause for rejoicing, Jesus pointed out to his disciples, was that their names were written in heaven. The name stands for the individual, the entity of the individual is his consciousness, and heaven is the higher type or spiritual sense of being; hence to rejoice because their names were written in heaven was to find their joy in spiritual consciousness, a right sense of relation to their divine source. Here Jesus unfolded a great vital truth. There are times when Christian Scientists feel impatient and even discouraged because they are not treating cases of disease,—they love to be making people physically well. But is there not a danger lurking here? May not the desire to watch the healing of disease lead to a sense that the disease is something which needs healing, instead of an unreal condition which needs to be exposed as such?

When we see sickness and sin in the true light, we shall know them for what they are,—delusion, nothingness,—and one would hardly find great cause for rejoicing in the destruction of nothing. There is, however, much to rejoice over when we realize that it is because we appreciate more and understand better man's higher nature and our actual relation to the absolute truth of being, that we are liberated from the bondage of mortal sense. Then we can indeed rejoice because our "names are written in heaven," for with Paul we can say, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

What seems so anomalous about Christian Science is that the practitioner does not heal disease by trying to heal it, and not infrequently the effort to accomplish the healing is just what gets in the way. The Scientist may find himself laboring under the sense of personal responsibility and an anxious fear, and this hinders the natural, quick results of Christian Science treatment. The cause of the anxiety or fear is generally the result of thought of the seeming diseased condition as serious, dangerous, complicated, difficult to treat. What says there is disease or a diseased condition? Is it not the mortal consciousness which holds man as subject to matter and evil conditions? This mortal sense, however, is the evil one which Jesus denounced as "a liar, and the father of it." The real source of man's being is spiritual and perfect, consequently no imperfect condition can emanate therefrom, and this is the chief contention of the Christian Science worker.

We are striving to realize the name written in heaven when we are turning from all false testimony and endeavoring to attain to the divine consciousness. Then we can rejoice, not in the fact that evil has been destroyed, but in the more perfect sense of life which has been gained. The appearing of this more spiritual vision to human sense is beautifully expressed by Mrs. Eddy in "Retrospection and Introspection" (p. 31), where she writes: "My heart bent low before the omnipotence of Spirit, and a tint of humility, soft as the heart of a moonbeam, mantled the earth. . . . It was the gospel of healing, on its divinely appointed human

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

mission, bearing on its white wings, to my apprehension, 'the beauty of holiness,'—even the possibilities of spiritual insight, knowledge, and being." Well might John write these words so familiar to Christian Scientists: "Behold, what manner of love the Father hath bestowed upon us, that we should be called the sons of God."

Stars in the Firmament

JESSIE B. RICHMOND

In the apocalyptic vision of John, the woman who is the type of the spiritual idea, of man in the image of God, wears a crown of twelve stars. A crown symbolizes sovereignty. Man as God has made him, has dominion "over all the earth," —dominion first over himself and then over his environment and circumstances, which by being properly used become opportunities for loving deeds and high achievements. Man's dominion consists in what he knows of good; and because Jesus knew the Christ, Truth, he had dominion over all things. This idea is clearly set forth in the teachings of Christian Science, which proves itself to every sincere truth-seeker to be indeed the Christ Science, or divine knowing. Thus the path leading to dominion for every individual student of this Science lies in making his own the Mind, as Paul says, "which was also in Christ Jesus."

Mrs. Eddy tells us that the crowned woman of the Apocalypse "symbolizes generic man" (Science and Health, p. 561), all humanity seen as one, consciously and continuously reflecting the all-knowing, all-loving Mind, for man is the expression of the divine Mind, God. The crown named in St. John's vision is adorned with twelve stars. This number represents completeness. Every seeker for Truth is represented there, shining with the brightness of the divine appearing as a light in heaven. This light, or true enlightenment, is the spiritual understanding of all-inclusive harmony. All is good to the consciousness governed by Principle; and this state of consciousness constitutes heaven. The woman's crown is truly one of rejoicing, for humanity is satisfied, having awakened in God's likeness. Men have come to recognize divine Love's universality and impartiality; there is none left outside, and nothing to cast into the pit but sin and death, false destructible beliefs. Thus mankind reaches a higher level than that of the poet who sings of his faith,—

> That nothing walks with aimless feet,
> That not one life shall be destroyed,
> Or cast as nothing to the void,
> When God has made the pile complete.

But before mortals can see the woman God-crowned, they must travel the road that leads by Bethlehem, and like the Magi of old discern spiritually that guiding light, the vision of Truth, perceived but dimly at first through the darkness of human ignorance, the star which led the wise men to the manger-cradle. Only through light from the harmony born of obedience to divine Truth and Love can humanity find its redemption from the bonds of the flesh and enter the kingdom of the Christ-idea.

To John the revelator there came the further vision of the infinite possibilities rising from small beginnings, when he saw the seven churches of Asia as seven golden candlesticks. Looking above this human sense of the seven lights of infant Christianity, shining amid the heathen darkness of paganism and fossil Judaism, John saw in the right hand of him who was in the midst of the seven candlesticks, seven stars. The voice of Truth proclaimed that these were the angels of the seven churches. Human sense saw the candlesticks, the human effort and present achievement of these first church builders and practitioners of Christianity, but the Christ revealed the churches as seven stars in his right hand, endued with the power of immortal Love and Life. These seven ancient churches of Asia, even while to mortal sense they were struggling with obdurate and subtle error, were shown by Spirit to be lights in heaven, corroborating and fulfilling the prophetic vision of Daniel that they who "turn many to righteousness" shall shine "as the stars for ever and ever."

Is not this the happy experience of the Church of Christ, Scientist, today? What a privilege it is to share in its great work, walking in the light of this prophecy and tasting day by day the blessing which comes to those who sow that others may reap! The light that shines from divine Science is the light of Love, and it is lighting up every dark place of the earth, for it brings that understanding of the truth of being which heals both sickness and sin. In this divine light evil is seen to be but a dream, and the supposed existence of matter, with its limitations and reversals, to be an illusion. The actual fact of being, here and now, is, as our inspired Leader tells us in Science and Health (p. 510), "Mind, . . . shining by its own light and governing the universe, including man, in perfect harmony."

Like John on Patmos, Mrs. Eddy looked above and beyond the present demonstration of the Church of Christ, Scientist, and saw not only the candlesticks but the seven stars, pure and perfect, the immortal ideas of divine Mind. Once more the revelator's message quickens the churches, while it rebukes error, and thus we learn that every blessing—the "hidden manna," the "tree of life," the "white stone"—is promised to "him that overcometh," who meets and masters every temptation of the "powers of darkness" by active and intelligent use of the Science he knows. Though his present performance may be slight, he may take to himself the sweet promise of that never ending unfoldment of good contained in the message to one of the Asian churches, "I will give him the morning star,"—the joy of witnessing the dawn of the new era when Christian Science is being recognized for what it is, namely, the reign and rule of Life, Truth, and Love, even as in the beginning, "when the morning stars sang together, and all the sons of God shouted for joy."

"Absolute Christian Science"

FREDERICK R. RHODES

A QUESTION that invariably comes up for consideration in the departmental work of our Sunday school organization is that of mode of procedure in the instruction of the younger classes. Now as the seed sown here will go a long way in determining the quality of the learner, who will eventually graduate into a church-member, it is of the utmost importance that the highest method obtainable should be observed. There is always one channel to which we can safely refer when in doubt as to the correct order or system to be observed, namely, the Manual of The Mother Church. Although one must always remember that these wonderful instructions are not the outcome of human efforts, but of the scientific knowledge of God, and therefore must be interpreted by each from his own individual standpoint, yet we can afford to gather lovingly together in His name (nature) in our prayerful and careful efforts to obtain the highest possible ways and means in our church organization.

There can be no question as to the importance of the work to be done in the Sunday school for all the pupils; therefore we may well ponder very often the words of the great Teacher, "Suffer the little children to come unto me." The provisions of the Manual relative to the Sunday school work are all intended to do this very thing. The Manual tells us (Art. XX, Sect. 3), "The instruction given by the children's

Digitized by Google

teachers must not deviate from the absolute Christian Science contained in their text-book," and in the dictionary we find the word absolute means "complete in itself; perfect; consummate; faultless."

It would appear from the above interpretations that it is not in accordance with the by-law to introduce into the Sunday school class-rooms, for use in instructing the pupils, any books other than the Bible and the works of our Leader, since these books and these alone can be truthfully said to contain only "absolute Christian Science." One sometimes hears it said that the younger children need something to interest them, but is this suffering the little ones to come to Christ, Truth? and did not our Master tell us that unless we become as little children, that is, childlike, not childish, we cannot gain a real consciousness of harmony? Surely, then, we must be very wide-awake and prevent the human sense of instruction from obscuring or obstructing the unfoldment of truth, and rest in the consciousness, as we read in Science and Health (p. 518), that "Love giveth to the least spiritual idea might, immortality, and goodness, which shine through all as the blossom shines through the bud." If we are ever tempted to think the provisions of the Manual insufficient for the children's needs, we may well pray, as did the disciples, "Increase our faith."

Loss and Gain

JOSEPHINE SCHUBERT

In his epistle to the Philippians, Paul wrote, "For to me to live is Christ, and to die is gain." At another time he spoke of death as an enemy. No one can believe Paul so inconsistent as to teach that an enemy brings gain to any one, hence the only logical conclusion is that when he wrote "to die is gain," he meant to die to the evidence of the material senses is gain. He knew it was only as he died to materiality and became alive to spiritual things, that he could say, "For to me to live is Christ." Again in the same epistle he makes the noble confession: "What things were gain to me, those I counted loss for Christ. Yea doubtless, and I count all things but loss for the excellency of the knowledge of Christ Jesus my Lord: for whom I have suffered the loss of all things, and do count them but dung, that I may win Christ." If all people would rise to Paul's exalted ideal of loss and gain, what an awakening there would be! What changes in the lives and pursuits of men, what an enormous lessening of selfish greed, and what an abundance of joy would flood the earth!

Carlyle has well said that "everywhere in life, the true question is not what we gain, but what we do." Loving, grateful service rendered to God and to our fellow man in Christ's name, verily brings the true gain; all else is, can be, but loss. There is nothing that will guide us more truly in this blessed service than a constant thirsting and searching for Truth, whereby our spiritual senses are ever kept alert to the "still small voice" of God's approval and blessings. And what could be more grand or more potent for real success or true gain, than to have stamped upon our consciousness the fact that God approves our work? With this confirmation we can say joyfully, as did the psalmist, "Establish thou the work of our hands upon us; yea, the work of our hands establish thou it."

This, too, may be a safety-valve which we can close against false opinions of loss and gain. We should count earthly possessions nothing as compared to riches of divine grace—the true wealth which is gained and kept only as we let that Mind be in us which was in Christ Jesus, and "walk worthy of the vocation wherewith [we] are called." The loss of riches, fame, reputation, is not the loss of anything real, inasmuch as it does not make us poor in God's sight, or in the sight of any who have a spiritual understanding of loss and gain. Some one has said:—

> When wealth is lost, nothing is lost;
> When health is lost, something is lost;
> When character is lost, all is lost!

Character, that priceless jewel by which we are working out our destiny daily and hourly, is the goal of all right endeavor, and in Christian Science this is understood to mean the unfoldment of the understanding of man's real being.

It is sometimes urged that those who walk with God sacrifice many pleasures; but such a statement comes from a wrong conception of what constitutes walking with God, a misapprehension of what pleasure really is. If we have found the truth of God and are demonstrating the same in our lives, we can but gain, although to mortal sense we may sometimes seem to lose. Mrs. Eddy says: "If you launch your bark upon the ever-agitated but healthful waters of truth, you will encounter storms. Your good will be evil spoken of. This is the cross. Take it up and bear it, for through it you win and wear the crown" (Science and Health, p. 254). Nothing can be loss where an eternal crown is to be won!

We may be assured of the impossibility of losing anything from right doing, for we have the Master's promise, "He that findeth his life shall lose it: and he that loseth his life for my sake shall find it;" or, as our Leader expresses this thought in "Miscellaneous Writings" (p. 341), "Learn to lose with God! and you find Life eternal: you gain all."

"Thy will be done in earth"

BEATRICE H. INGLIS

In the old way of thinking it would have seemed almost fantastic, if not actually irreverent, to think of God as the divine energy, the supreme force that alone accounts for the impetus, productiveness, and fulfilment of the earth; but in Christian Science we learn that all the manifestations of real life are expressions of the presence and activity of the one divine Principle, God.

To material sense earth is matter and its products are material, but to spiritual sense it is a compound idea expressing spiritual productiveness, which in turn manifests beauty and benefit, availability and usefulness. In Science and Health (p. 507) we read, "The tree and herb do not yield fruit because of any propagating power of their own, but because they reflect the Mind which includes all." This reflection, then, like spiritual man, always has been, antedating any appearing to mortal sense. In Isaiah we read, "Thus saith the Lord, The heaven is my throne, and the earth is my footstool;" and in Jeremiah, "Do not I fill heaven and earth?" These passages convey the idea of completeness, entirety, outcompassing any and all material concepts of time and space. This gives us the right starting-point; and to those whose business it is to turn to account the products of the earth,—for instance, planters, farmers, or pioneers,—it is most helpful to work along this line of thought, namely, that there is no place and there are no circumstances where God is not.

Christ Jesus said, "In my Father's house are many mansions." This would include many manifestations of the infinite Principle behind every presentation of life, activity, productiveness, intelligence. Not that every material product of the earth as we see it is of itself a manifestation of the supreme gift to man, for to human sense the earth appears

Digitized by Google

to bring forth much that is baneful, poisonous, worse than useless. These things are no more a creation of God than is a sinful mortal. On page 280 of Science and Health we read: "From Love and from the light and harmony which are the abode of Spirit, only reflections of good can come. All things beautiful and harmless are ideas of Mind." Jesus found no use for the barren fig-tree; not only was it not ready with its fruit, even in immature form, but it gave no indication of eventually fulfilling its useful purpose; no man could eat of its fruit, for the tree had all gone to leaf.

All of good is from God, all that is useful, beautiful, beneficial: "And God saw every thing that he had made, and, behold, it was very good." Therefore there lies before all of us this necessity of seeing, beholding, God's perfect creation, manifested no less in the manifold products of the earth than in His spiritual, perfect man. "Blessed are the meek: for they shall inherit the earth." What is this heritage but dominion over the whole earth,—over all that is on, over, under, or brought forth by the earth,—bringing to light the perfection of God's creation, already and forever established? Thus does the psalmist say, "All thy works shall praise thee, O Lord."

Day

SAMUEL JOHNSTONE MACDONALD

Words may be spoken of as links in chains of thought. Just as one link of a chain brings up another, so does one word bring up another. Scholars have invented a convenient word to designate this quality or characteristic of words, and accordingly they say that one word connotates, or connotes, another; as, for example, father connotes son, parent connotes child, and so on. Thus the word day connotes many other words, among which will first appear sunrise and sunset. To complete the full idea of day one will recall many other cognate words, chief among which are dawn, morning, noon, afternoon, twilight. In such apparent progression and retreat does each earthly day round out its complete appearance, or brief cycle, and then seem to pass on; so that we speak of "days that are past" as if in some shadowy realm called the past each day was laid away in its appointed place, and could be recalled at will, like some obedient servitor.

The student of Christian Science, learning by degrees that the so-called material universe is only the shadowy apparition or poor counterfeit of the real universe, also learns that the earthly day is likewise a mere appearance and counterfeit and has no real and actual existence. What the real day is, he is beginning to learn when he apprehends in some degree the meaning of the psalmist's declaration, "A day in thy courts is better than a thousand." In pondering this statement he will first slowly rid himself of the educated belief that this is a mere emotional outburst, or a poetical expression of devotional fervor. The sooner this belief is discarded the sooner will he begin to understand that the Bible is really an inspired work and the word of Truth, not merely a compilation of tribal traditions and folk-songs. Thus he will gradually realize that its statements are exact, precise, and scientific, only awaiting our advancing comprehension, and that our revered Leader was no less than inspired when she discovered the name Christian Science for this wonderful and inexhaustible study.

The real day may be apprehended from this pregnant statement in Science and Health (p. 209): "Mind, supreme over all its formations and governing them all, is the central sun of its own systems of ideas, the life and light of all its own vast creation; and man is tributary to divine Mind." It should therefore be readily apparent that when we shall have overcome all sense of material need, we shall have realized the perfect day,—"and there shall be no night there." It must follow, consequently, that our night is nothing but a mortal sense of the absence of light, or, in other words, a material sense of need. Now, when this night falls upon him, what does the student of Christian Science do? Does he not seek the courts of the divine Mind, which are ever illumined by the infinite central sun? And does he not invariably find, with glowing gratitude, that "a day in thy courts is better than a thousand"?

Come, then, dear brother, you who cry out with the psalmist, "I am weary with my groaning; all the night make I my bed to swim; I water my couch with my tears," let us spend a day in the courts of divine Mind, and behold if you are not surely healed. See, there across the thickest darkness trembles the dawn, the first faint groping sense that divine Mind is Love, infinite, ever present, ever active good. Does not even the dawn bring hope? And does not gentle patience with cooling touch bid us wait "until the day break, and the shadows flee away," and blessed peace begin to spread her comforting wings over you? Truly, the dawn "feedeth among the lilies," and one might well be content to dwell forever in its gentle twilight; but "God said, Let there be light," and light is therefore the law of God's universe. So we may not linger in the gardens of dawn, even among the lilies; for we too shall behold "the Sun of righteousness arise with healing in his wings."

One healed in Christian Science is beginning to learn right thinking; to think thoughts of good instead of thoughts of evil, thoughts of trust instead of thoughts of care, thoughts of love instead of thoughts of hate, thoughts of health, harmony, and holiness instead of thoughts of disease, disorder, and discord. Thus do the faithful followers of Christ, Truth, spend the glorious morning in patiently, lovingly, and joyously learning to think aright, and before they really become aware of it the effulgent high noon of demonstration bursts upon their glorified spiritual sense and they are healed.

Who then shall begrudge them the placid afternoon of joy in healing and harmony? This is not Lotus-land, however, the land where it is ever afternoon, and they presently awaken at the call of gratitude and learn that it is a vital thing and not a mere quiescent and mesmeric sense of thankfulness. The glowing colors of loving gratitude paint a wondrous sunset, and then pass imperceptibly into a long, lustrous twilight of peace and joy. Then "he giveth his beloved sleep," and lo, this wondrous day has indeed been "better than a thousand."

Despite the Seeming

FREDERIC C. HOTCHKISS

In the office where the writer is employed and where a great deal of gold is used, all the sweepings from the floor are saved and placed in a barrel to be sent away to the refiners. The last barrel sent out looked to be worthless, nothing but dirt; but though hidden by the rubbish, gold was there in sufficient quantity to bring in a few days later a check for a considerable amount of money. This brought to my mind the work of Christian Science in separating the divine idea from the seemingly worthless conditions of thought manifested by the human sense, which is buried in false beliefs that, like the rubbish in the barrel, need to be burned, destroyed, in order to bring to light what is of real worth.

In Science and Health Mrs. Eddy says, "The furnace separates the gold from the dross that the precious metal may be graven with the image of God." Again she says, "The fiery baptism will burn up the chaff of error with the fervent heat of Truth and Love, melting and purifying even the gold

Digitized by Google

of human character" (pp. 66, 565). No one has ever gone so low in the moral scale but that there is a reflection of divine, omnipresent Love to be found hidden somewhere in the seeming worthlessness. Can we then afford to condemn any who may turn to us for love and assistance and say there is no good in him?

Like its original, the image of God is to be found everywhere, despite the seeming; and it needs only to be separated from the rubbish of mortal belief. As this is scientifically done, we find the man who, the psalmist said, is "a little lower than the angels," and who is crowned with "glory and honor."

✧

Cause and Effect

GERTRUDE TWIGGS

THE physical healing in Christian Science will always remain a point of contention to non-Scientists, for the simple and sufficient reason that when a man apprehends the Science of healing, he is no longer a non-Scientist. That man is not subject to matter, seems at first to be almost beyond the comprehension of the beginner, but after he has begun to apprehend this truth, it is no great mental journey to the place where he is able to distinguish between the carnal or mortal mind, which seems to govern man, and the Principle of being, to whom man is really subject. Most people are willing to concede that the mind influences the body, but many believe that the body influences the mind to an even greater extent. We can see in sudden outbursts of temper how the face pales or flushes, and we can read on the face joy, pain, sorrow, excitement, and even a life history. In this case the mental state is the cause, and the changes produced in the body are the effects. The thought is the potter, while the body is the clay, and the potter is not subject to the clay.

In Christian Science we learn that the body is subject to one's thought, and for harmony and health this thought must be at-one with divine Mind, the Principle of being. All the discord manifested on the body as sickness, results from the general belief that man is governed by matter or by will-power, by the carnal mind, which is opposed to God. The weary sufferer, struggling with the manifestations of inharmony and a load of fear, may take heart and know that "God never endowed matter with power to disable Life or to chill harmony with a long and cold night of discord" (Science and Health, p. 378). The struggle is purely mental, and the inharmony is a result of the rule of false belief, of failure to apprehend the truth of being.

A Christian Scientist recognizes as effect that which the ordinary physician thinks of as cause, and when the sick can realize this, the battle is practically won. Often when fear and doubt seem almost too heavy to be borne, by studying the Scriptural account of the words and works of Jesus in the light of Christian Science, the patient can see that the truths Jesus taught and demonstrated are available today, and thus he can gain comfort and assurance. When human thought is sustained by Truth and Love, the healing work goes on of itself. This, then, is our task, to hold fast to Truth.

The curative agent does not originate with us, it is divine, and expresses the harmony which resides forever in divine Mind. This is what Jesus meant when he said, "I can of mine own self do nothing." God's work was already done, and the Master bore witness to the truth.

✧ ✧ ✧

How sure it is,
That, if we say a true word instantly
We feel 'tis God's, not ours, and pass it on.
ELIZABETH BARRETT BROWNING.

Selected Articles

[Judge Clifford P. Smith in *Westchester News*, White Plains, N. Y.]

The item "About Christian Science" in a recent number of *Echoes*, found an alleged inconsistency on the part of Christian Scientists which can be found as easily in the teaching and practice of Christ Jesus. It says: "They profess to believe that these bodies of ours have no real existence. Then why trouble to heal them?" It should be remembered that Jesus did a good deal of healing, although he said, "The flesh profiteth nothing."

In the same item Christian Scientists were reproved for eating and drinking; but the writer of it took no notice of the fact that Jesus, although he rested at the well of Sychar while his disciples went to buy food, and though he asked the Samaritan woman for a drink, told her that he could give her a better kind of water,—"Whosoever drinketh of the water that I shall give him shall never thirst; but the water that I shall give him shall be in him a well of water springing up into everlasting life." It is to be observed that the Master and his disciples had received money with which they were able to purchase food, yet the receipt of money was put by our critic among our supposed inconsistencies.

It is a curious fact that *Echoes*, a Christian periodical, reported the item in question from a Jewish publication, although it amounted only to a scoff at Christian idealism. The explanation is to be found in the fact that most of his followers do not presently accept what the Founder of Christianity taught regarding the absolute truth of man's being; hence some of them are tempted to jeer at those who do accept the full import of his teaching and apply it to human conditions as did he.

✧

[Thomas E. Boland in *Carbondale* (Pa.) *Leader*]

That Christian Science is indeed founded on the Scriptures may be clearly understood from the very first tenet of that faith, which reads: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). The book just named is the text-book of Christian Science, and its author, Mrs. Eddy, appropriately denominated a portion of its title as a "Key to the Scriptures," for many thousands of earnest men and women in this and other lands have found that this key has unlocked for them new stores of truth in the Bible, through the understanding of which there has been brought into their lives more of happiness, health, and spirituality than they had experienced before.

How any one who has "studied very minutely Christian Science in relation to the Scriptures" could reach a conclusion that it is "unscriptural," is difficult to see in view of the universal testimony of Christian Scientists that they use the Bible to a far greater extent than before their connection with the Christian Science church, and that the message of the Scriptures is better understood and is more practical for meeting the every-day problems of life than previously. The fact is that Christian Scientists are constant students of the Bible, for in it they must find that truth upon which they depend for preservation from sin, sickness, and misfortune. Neither are Christian Scientists the prevaricators in regard to a sense of pain that critics make out, for they turn to Christian Science for relief from suffering. They do not, however, regard sin, sickness, and death as eternal facts of being or creations of God, for such a belief brings only hopelessness and misery to mortals.

Our critic is also perturbed because in his opinion Christian Scientists do not "go out into the highways and byways to

Digitized by Google

seek the lost and strayed." If Christian Science is what the critic has painted, instead of bemoaning such a condition, did it exist, he ought to rejoice that those of the highways and byways have been spared the attentions of Christian Science. As a matter of actual fact, the membership of Christian Science churches includes high and low, rich and poor, persons who come from all walks of life.

So far as attracting members of other churches is concerned, it may suffice to say that the propagational methods of the Christian Science church are dignified and unobtrusive, and it is not urgent with respect to numbers. Moreover, it is the unanimous testimony of those who have come to the Christian Science church from other denominations that far from having "lost contact with the faith" they have had that faith strengthened and uplifted, and they have experienced a spiritual impulse which has naturally and inevitably brought them greater happiness and better health.

✧

[M. S. Bruen in *The Dundalk* (Ireland) *Herald*]

It is acknowledged that scientific facts are provable, demonstrable, and that the relative truth contained in physical science is variable. It must also be acknowledged that divine Science, or Christian Science, must be absolute truth, for it embraces the knowledge of God, who "changeth not." The Bible declares that God is Truth, infinite, and All. Textbooks of physical sciences all have their own technical phraseology which the student must master, as he could not understand the book unless he knew the sense in which the words were used. Critics of Christian Science often, indeed generally, make the mistake of neglecting to accept the meaning of the terms in which it is expressed, before studying Mrs. Eddy's works. This was one of the mistakes into which an earlier critic fell, in his sermonette which began this correspondence. He certainly never would have objected to Christian Science if he had understood the meaning of it, and all the criticism is wasted which he leveled at what he thought was Christian Science. The present critic followed in the wake of the earlier one, but the criticism which he expected to be most crushing also fell quite wide of the mark. In his own phrase, he criticized "what Christian Science is not."

It would be very difficult to give a reason for objecting to the definition of death as "mortal error." It is undoubtedly "mortal," and as the opposite of Life, God, it is opposed to Truth. This subject may seem to be hard to understand until the first steps are taken in understanding what life is. Writing in "Unity of Good" on the question, "Is there no death?" Mrs. Eddy says (p. 43): "The achievement of this ultimatum of Science, complete triumph over death, requires time and immense spiritual growth. I have by no means spoken of myself, I *cannot* speak of myself as 'sufficient for these things.'" It has been abundantly proved, however, that sin and sickness, which constitute the pathway to death, are healed by Christian Science. While its students are multiplying and growing, living and proving its truth, the expectation is not extravagant that the day is coming when it will also be proved that "there shall be no more death." We cannot forget that Jesus said, "If a man keep my saying, he shall never see death."

Experience has shown that every advance in knowledge is called unreasonable until it is understood. A few centuries ago Galileo was held to be very unreasonable and unholy because he said the earth moved and the sun remained still. Had not every man, woman, and child seen the sun sink into the west? Did not the earth feel steady under the feet? The inventor of the locomotive was called a fool for saying that he could run a carriage without horses faster than a stagecoach. This was on the plane of relative truth. When St. Paul said he was sent "to open their eyes, and to turn them from darkness to light, and from the power of Satan unto God, that they may receive forgiveness of sins, and inheritance among them which are sanctified by faith that is in me," Festus said, "Thou art beside thyself;" but he said, "I am not mad, most noble Festus; but speak forth the words of truth and soberness."

In our own day the same message has been brought by Christian Science, and its Discoverer and Founder is called unreasonable. Every day more individuals are accepting the fact that sin, disease, and death have their origin in ignorance, which is not an entity, just as darkness is no more than the absence of light. They are indeed convictions in the false or "carnal mind" (called "mortal mind" by Mrs. Eddy), and are to be overcome by letting that Mind be in us "which was also in Christ Jesus." "To be carnally minded," Paul said, "is death; but to be spiritually minded is life and peace."

Ignorance is not ignored by a teacher, but he shows his pupils how to overcome it by learning better. Christian Scientists do not "profess to maintain present conditions by 'taking thought' that the evil, sin, sickness, pain, and death that are visible and present in the world will not be their portion, so far as they are concerned, by ignoring them." They know they have not escaped the penalty for every wrong thought, word, or action, but they are learning that by turning to Christian Science they are making a start to have the balance on the right side, and that as they learn to have a better understanding of God, false appetites and desires are left behind. They appreciate more and more all the texts that our critic has quoted, and the Bible becomes practical to them. They begin to see the beauty of the invitation, "Learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls."

Christian Science teaches how to accept the salvation from sin and sickness which Jesus offered to all mankind, and how to learn through humility and love the meaning of his atonement and propitiation. Not by "taking thought," but by giving up old beliefs and convictions of the "carnal mind," is the light of Love, God, admitted into recesses of thought where only gloom and fear had been before. It has been found by hundreds of thousands of men and women that a study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, throws a flood of light on the Bible which makes them read it more and love it better than ever before, for now they hear in it the voice that says, "I am the Lord that healeth thee."

✧

[E. M. Ramsay in *The Shetland Times*, Lerwick, Shetland Isles]

In studying the English Bible we are dealing with a translation from a foreign tongue, made three hundred years ago, and it is a matter of the greatest importance that we should endeavor to find out the precise meaning of the original writers. That great scholar Doctor Westcott has pointed out the care which St. John takes throughout his gospel to distinguish absolute from relative truth, and the word translated "knowledge" in Ephesians iv. 13, as well as in some other passages of St. Paul's writings, means precise, scientific knowledge. Christian Science shows us that our Lord's words were statements of scientific truth, that his wonderful works were wrought through the understanding of spiritual law, and that the acts of healing performed by him and his followers are as possible of achievement today as in the first century of the Christian era.

Christian Scientists are agreed with all other Christians in the paramount necessity of resisting and conquering sin; they do not attempt to minimize or ignore it. Our aim, therefore, is the same, but we employ a different method of dealing

Digitized by Google

with it, a method which we are convinced is the gospel method, and which is proving its efficacy in the improvement which it is effecting in the lives of those who are employing it.

In the first epistle of John we read that "the Son of God was manifested, that he might destroy the works of the devil." Now what did Christ Jesus destroy? The gospels tell us that he went about healing sin and sickness, and even raising the dead. In Luke we read that Jesus expressly said that Satan had bound the poor, bent woman whom he healed so lovingly on the Sabbath day. In another case, that of the man sick of the palsy, recorded in Matthew's gospel, he asked, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" Here he plainly intimated that in this case the illness was the result of sin, but he saw that the man had repented of his wrong-doing.

Our next point must be to find out what our Lord meant by "the devil." For this let us turn to St. John's gospel. In John viii. 44 the same word for devil is used which we find in I John iii. 8. Jesus said to the Jews: "He [the devil] was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." Here, then, our Lord states that there is no truth in the devil; in other words, that he is not a real being, but a false sense, or lying sense. Consequently his works are equally unreal, in the absolute sense of that word. How then are lies, false impressions, destroyed? By the knowledge of what is true. As Jesus said, "Ye shall know the truth, and the truth shall make you free." If man was made in the image and likeness of God, of most pure Spirit, without parts or passions, then man's real, essential nature must be spiritual and sinless too. As we constantly, humbly, trustingly dwell on this wonderful fact of our unity with the Father, we find sin becoming less natural, less powerful, less attractive, and we find also that our bodily health is improving as our thoughts and desires become braver and purer. In the same way, as our dependence on God increases, we lean less on matter, believe less in it, are less affected by its supposed laws.

There was a time in the infancy of the world when men and women believed in a god Moloch; they believed and feared Moloch to such an extent that to avert still greater calamities they would even sacrifice to him one of their own little ones; and yet all the time there had never been such a monster. Are we so much wiser than they? We still believe in incurable diseases, in incorrigible drunkenness, because these troubles and sins have not yielded to the material methods which alone, perhaps, we have tried! And yet Mary Magdalene was saved from her sins, and the lepers from their death in life, by the knowledge of the power of God. To be saved from evil of all sorts we must see its unreality, and we can only see evil as unreal by knowing and loving the truth and seeing something of its omnipotence.

"Science and Health with Key to the Scriptures" is not the Bible of the Christian Scientists; we are students of the one and only Bible, but we find Mrs. Eddy's book a most valuable commentary or explanation of the Holy Scriptures; it has opened up the Bible as no other book has ever done, and is enabling us to follow in the footsteps of the Saviour more closely than we knew how to do before.

✧

[D. M. Ely in *Mansfield* (Ohio) *News*]

A sermon reported in the *News* contained the representation that Christian Science is one of the "false religions," and that the genuine Christian Scientist cannot pray because of his views as to sin and as to "the blood of Christ on Calvary." The mere *ipse dixit* of the preacher does not necessarily establish what he said as the truth. A careful and intelligent study of the words and works of Jesus will suffice to show that precisely the same judgment would be applicable to him in the light of the preacher's view-point. The fact is, that Christian Science is nothing more or less than a revival of the ministry of Jesus.

According to the recognized rules of criticism, it is only right and proper that the intent of another in his statements should be first clearly understood before being attacked by criticism. Christian Science does not say that there is nothing in sin, but just the opposite of that. It teaches that it is something to be abhorred and avoided and escaped from, and shows how freedom from it is to be obtained.

That it is possible for Christian Scientists to pray effectively is demonstrated in the experience of hundreds of thousands who in answer to such prayer have experienced all manner of healings,—physical, mental, moral, and spiritual. Herein we have the explanation for the wonderful growth of the cause of Christian Science. And its progress will continue so long as it meets the cry of mankind for help for all manner of needs.

✧

[J. Arnold Haughton in *The Blackburn* (England) *Times*]

Christian Science does not, as stated in an article entitled "Chat on Health," depend for its efficacy as a healing agent upon the influence of the human mind on the body. On the contrary, it teaches that there is but one Mind, God, and the Christian Scientist can heal only as he has in him that Mind "which was also in Christ Jesus," that is, the Mind of God.

In the gradual awakening of mankind to the fact of a close relation between mind and body the world is only taking its first step toward the practical recognition of the teaching of Christian Science. On page 177 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy says, "Matter, or body, is but a false concept of mortal mind;" and again, "From first to last, the body is a sensuous, human concept."

The advice so freely given not to worry or fear because of the effect of conditions of mind on the body, does not give the power to profit by it. Just as the possession of building materials would not enable you to erect a house unless you had a working knowledge of the laws of construction involved in the process, so you cannot eliminate fear and worry from the human mind unless you rightly understand the power of God and intelligently feel assured of the harmonious government of His creation. The understanding of God as the only Mind is therefore what heals both mind and body. This differentiates Christian Science from the systems of mental healing with which the writer of the article associates it.

Again, Christian Science healing is not confined to disorders of nervous origin, as stated, but heals sickness and diseases of every description, functional, organic, and so-called incurable diseases.

✧

[S. T. Downs in *South Bend* (Ind.) *News-Times*]

It is not very unusual for critics to say that Christian Science denies the necessity for repentance, as does a minister whose sermon was reported in a recent issue, and such a statement could result only from lack of information regarding Christian Science teaching. The fallacy of such a claim will be seen in the fact that there could be no destruction of sin until there is an uncovering of the sin, and the repentance manifested that strives to forsake sin. The third religious tenet of Christian Science (Science and Health, p. 497) reads: "We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal. But the belief in sin is punished so long as the belief lasts."

Editorial

Democratic Government

A FUNDAMENTAL of the existence and continuance of the branch churches of the Christian Science denomination is that they shall have a democratic form of government, which of course means that in general they shall be governed by the entire membership, and not by one person or by a small coterie. It has been determined, however, by human experience that the simplest and most efficient form of democratic government is that which is representative, rather than that which is collective, and for this reason the churches have very generally adopted a system by which the management of the administrative and business affairs of the church or society is reposed in a board of trustees or directors elected by the membership at large. In addition to this board there are other officers whose duties are of a purely clerical nature, and of course the two readers. The duties and powers of such a board are in the main the duties and powers of an executive committee, and are usually conferred and limited, generally by the by-laws or specifically by vote of the membership in meeting assembled.

In theory at least, each member of a branch church is on precisely the same footing as every other member. In practice, however, the members of the church elect from their own number such officers as are necessary to a proper carrying on of the work of the organization, these officers to perform those duties which manifestly cannot be performed by the entire membership. The persons so elected thereupon become the servants of the church; that is, they are thereby set apart to do certain acts or perform certain services for the church. They are delegated such authority as they must possess in order to do these acts and perform these services, but no more. They do not through their election become masters of those who have elected them, nor do they become proprietors of the church which it is their duty to serve.

Nor have we far to seek to find the precedent for this ruling. When the sons of Zebedee besought the Master that he would promise them the chief places when he should come into his kingdom, the rebuke to their self-seeking was prompt: "Whosoever of you will be the chiefest, shall be servant of all. For even the Son of man came not to be ministered unto, but to minister." In "Miscellaneous Writings" (p. 303) Mrs. Eddy says: "We are brethren in the fullest sense of that word; therefore no queries should arise as to 'who shall be greatest.' Let us serve instead of rule, knock instead of push at the door of human hearts, and allow to each and every one the same rights and privileges that we claim for ourselves."

The repository of all authority in the affairs of a branch church is the membership and those (if any) who are given the right by state law to vote at church meetings. It is their will and pleasure which is to be exercised in the management of the church affairs, and not the will and pleasure of those whom they have elected to act only in a representative capacity. The by-laws of The Mother Church enjoin upon all branch churches that their government shall be democratic; therefore for some person to arrogate to himself the title and supposed authority of "head" of the church, would be for him to violate the spirit of these by-laws. For a branch church to permit such a condition to exist would be to violate directly Section 10 of Article XXIII of the Manual.

On page 583 of Science and Health Mrs. Eddy has defined the real church, the spiritual idea, as "the structure of Truth and Love; whatever rests upon and proceeds from divine Principle;" and the human expression of this divine, spiritual idea as "that institution, which affords proof of its utility and is found elevating the race, rousing the dormant understanding from material beliefs to the apprehension of spiritual ideas and the demonstration of divine Science, thereby casting out devils, or error, and healing the sick."

It is only through "the apprehension of spiritual ideas and the demonstration of divine Science" that a true branch of The Church of Christ, Scientist, can be organized and maintained; therefore it behooves both officers and members in exercising their respective functions to remember and live up to the sixth tenet of Christian Science, which is given on page 497 of Science and Health as follows: "And we solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure."

ARCHIBALD MCLELLAN.

Wheat and Chaff

RELIGION has always admitted that there should be not merely a distinction between right and wrong, but a separation between good and evil, so far as it is possible to establish this on the human plane. Christian Science teaches that evil has no place in the divine consciousness, therefore the separation between truth and error, spiritual understanding and material belief, must be made on the plane of human consciousness. The necessity for this separation has not only been recognized by mankind, but penal systems have aimed to enforce it, and scholastic theology has declared it to be provided for in the eternal separation between the good and the bad in heaven and hell respectively. This does not, however, point to the destruction, the entire annihilation of all evil in the way that the Bible seems to teach, and this is surely the higher hope on which we should seek to lay hold.

In the Old Testament the destruction of evil is presented under the figure of flame devouring chaff and stubble. In pointing out the difference between his ministry and that of the great Teacher, John the Baptist declared that his mission was to rouse men so that they would be willing to submit to the baptism of repentance, a step Spiritward which is wonderfully presented by Mrs. Eddy in Pond and Purpose, beginning on page 203 of "Miscellaneous Writings." John was, however, far from considering this mental and moral experience final, for he said of the one that should come after him, "He shall baptize you with the Holy Ghost, and with fire." John also said that this divine manifestation was "mightier" than he, and in defining in human terms the activity of the Christ-idea he went on, "Whose fan is in his hand, and he will throughly purge his floor, and gather his wheat into the garner; but he will burn up the chaff with unquenchable fire."

The great humility of the Baptist in acknowledging that Jesus' ministry was mightier than his own, was evidence of deep spirituality, but like many good men of the present day he failed to grasp the meaning of Jesus' healing work, and this called forth from the Master these words: "Among those that are born of women there is not a greater prophet than John the Baptist: but he that is least in the kingdom of God is greater than he." It would appear that the Baptist had not reached the point of entire separation between the material sense of God and man and the spiritual sense. He was fearless in rebuking sin and sensuality, but he evidently did not see that belief in a life separate from God, in other words, of life in matter, is responsible for all sin and must yield up its false claims through the understanding of the Holy Ghost, or "Divine Science." (See Science and Health, p. 588.)

It does not appear that John's disciples ever engaged in the healing work which Jesus taught his disciples to do.

Digitized by Google

In the nineteenth chapter of Acts we are told that John's disciples had not advanced beyond the baptism of repentance, until Paul showed them their need of the baptism of the Holy Ghost, which destroys both sin and sickness as fire consumes chaff. This gives a new meaning to the Scripture, "Our God is a consuming fire." Human sense may shrink from this baptism, nevertheless it brings the purity which is not partial but complete, the true basis of health and strength. Through this baptism, with its "accession of spirituality," as our revered Leader tells us (Miscellaneous Writings, p. 204), "God, the divine Principle of Christian Science, literally governs the aims, ambition, and acts of the Scientist." No good thing can then be lacking on the part of such a one. No longer does he feed upon the husks of material belief; no longer does he ask for bread and receive a stone; he desires life and is given the bread which means eternal life.

Of old the psalmist sang the praises of the Most High and said, "He healeth the broken in heart, and bindeth up their wounds. . . . He maketh peace in thy borders, and filleth thee with the finest of the wheat." Who would not gladly yield to this mighty yet merciful activity of Truth, until no vestige of chaff remains, and God and His idea are recognized as all!

ANNIE M. KNOTT.

"Stand therefore"

NOTHING is more discreditable to Christian profession than the disposition to dodge a duty. It plants the seed of moral cowardice and dates the beginning of degeneracy. To try to run away from duty is always unheroic and debasing, and they who would overcome the temptation do well to be very much awake to its subtleties. The "easier path" constantly invites one to leave the ascending and ofttimes stony right way. We often start out well, even run up-hill a little way, "to meet the rising sun," and then, as Mrs. Browning so finely says,—

> We are apt to sit tired, patient as a fool
> While others gird us with the violent bands
> Of social figments, feints and formalisms,
> Reversing our straight nature, lifting up
> Our base needs, keeping down our lofty thoughts,
> Head downward on the cross sticks of the world,

and naught but the love of truth, as we learn in Christian Science, "can pluck us from that shameful cross."

The most conspicuous duty-dodger is the one who commits suicide, the man who forfeits everything to be won in this life, and who takes the hazard of a future into which he ignobly plunges, rather than play the man; but something of the flavor of his folly is found in every willingness to withdraw from a post of duty because it calls for burden-bearing, for the assumption of some discomfort, the determination, if need be, to stand alone with God. This is true whether the issue be between friends, in the church, in our communal life, or in legislative halls. Every day the seduction presents itself to turn our prow toward some near-by eddy instead of bending to the oars in the face of a current whose overcoming offers the only possibility of getting ahead.

The saints and heroes have invariably been found to be vertebrates, capable of standing erect on their own two feet, face front; unenamored of "plushed repose," and bent on achievement. Peter Cartwright was a rough representative of this virtue, and it is said that when the fitness of a candidate for the ministry was being looked into, he was wont to inquire if the young brother had any backbone. He knew what it meant to travel a circuit, live on corn bread and bacon, and handle the toughs who attended protracted meetings for the express purpose of "having a lark." He knew, as we need to, that success calls for hard work, together with plenty of grit.

A genuine Christian Scientist will prove himself to be "on the mend," at least with respect to this habit of limpness in the presence of duty. He has gained and begins to exhibit what Thomas Hughes calls the "manliness of Christ." He is no longer subject to the sophistry that duty can be done by proxy. As Mrs. Eddy has written, Christ Jesus "did life's work aright," to show men "how to do theirs, but not to do it for them nor to relieve them of a single responsibility" (Science and Health, p. 18). We cannot enter into the at-one-ment save as we do our work in the Wayshower's way. We may forget his eternal demands upon us, but by no possible means can we evade them.

Would-be Christian Scientists evidence this weakness when they run to cover the moment it begins to blow. Readiness to call a practitioner if a little pain is felt is a sure sign that we have not yet learned even the alphabet of practical Christian Science. Dependence upon personality always marks the absence of genuine reliance upon God, and thus to emasculate the individualism of Christian Science is to prove that we have missed its vital idea. So too in church affairs, when some phase of an existing situation is found to be trying, and seeing no immediate way out we are tempted to unite with an otherwise entirely uncalled for movement to divide the forces, how well it would be to make sure that we are not running away from a call for patient, prayerful waiting, that confident and courageous reliance upon Truth which can and surely will work out every human problem.

"Having done all, to stand," lovingly and expectantly, with our faces toward the sunrise,—this surely is noble and wise. Moreover, it is very frequently called for.

JOHN B. WILLIS.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston Street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk Streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon Street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

MILWAUKEE, WIS.—Fourth Church of Christ, Scientist, which has for several years been holding services at the Atheneum, on Wednesday night, Dec. 1, held its first service in its new home in the Kenwood Masonic Temple, Hackett Avenue and Park Place.—*Milwaukee Sentinel.*

CANTON, OHIO.—The new Christian Science church on Cleveland Avenue N.W. is now completed and ready for occupancy. The first service in it will be held on Sunday morning [Dec. 5]. The building has a seating capacity of nearly six hundred, and cost fifty thousand dollars.

The Evening Repository.

PEORIA, ILL.—The stone on the new Christian Science church has been laid about two thirds of the way, and the entire outside work will probably be completed by Jan. 1. The corner-stone was laid Oct. 27.—*The Peoria Transcript.*

Digitized by Google

MINNESOTA.—The year has been full of fruitage in many respects, and indicative of the constant growth which has become so characteristic of the Christian Science movement. Collaborating with the Trustees under the Will of Mary Baker Eddy, a large number of our Leader's works have been placed in the public libraries throughout the state, where the offer to furnish the same brought forth a response that indicated an almost unexpected volume of interest in Christian Science. It has been very gratifying to note that the newspapers generally are manifesting a greatly increased liberality toward Christian Science, and a spirit of generosity in accepting replies to either unfavorable or incorrect statements. The newspapers are likewise showing a greater interest in Christian Science literature, in many cases indicating great appreciation for the copies of the periodicals sent to them, and manifesting their interest by frequent reprints from the columns of the *Monitor*.

The movement is steadily enlarging its borders, and this year, as in the past, has shown an expansion into new sections of the state. New societies and churches have been organized, and from many unexpected quarters has come the gratifying news of groups of interested workers in Truth, who are laying the foundations for the spread of the gospel and the birth of new organizations.

The important activity of the year was encountered early in the session of the legislature, which convened in January. Preparation in anticipation thereof had been made several months before, and the situation that developed was readily and successfully met. The several bills which were introduced in rapid succession, and which were perhaps of a nature more drastic than any ever before attempted in the state legislature, met with defeat in less than a month; but defeat was accepted with good grace and kindliness by even those who fostered and supported the bills. The victory was one without bitterness or hostility, and left in its train a spirit of friendliness and kindness which is a demonstration of the effectiveness with which the healing work of Christian Science is appealing to modern thought. The number of *Sentinels*, *Journals*, *Heralds*, *Monitors*, and pamphlets distributed for ten months to Nov. 1 was 23,388. Copies of Mrs. Eddy's works have been placed in eighty-five public libraries.

Committee on Publication.

ROCHESTER, N. Y.—It is expected that the new edifice of First Church of Christ, Scientist, corner of East Avenue and Prince Street, will be completed about April 1. Work on the building was begun a year ago last September, and the foundations were completed before winter set in. The structure itself represents a cost of one hundred and fifty thousand dollars, while the location is valued at forty-five thousand dollars.—*Rochester Democrat Chronicle.*

✧

Admission to Membership in The Mother Church

The next admission of candidates will be June 2, 1916. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 10, 1916.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

Wilmette, Ill.

Dr. Francis J. Fluno delivered a lecture on Christian Science to a large audience in the Village Theater. He was introduced by Hugh Stuart Campbell, first reader, who said in part:—

Nineteen centuries ago Jesus, the master Metaphysician, healed all manner of diseases, raised the dead, fed the multitudes, and walked on the water, through his clear understanding of God as divine Principle. He illustrated his words by practical demonstration. He said very plainly that those who believed on him could repeat his works, and that mountains could be removed by the amount of faith proportionate to a grain of mustard-seed. Today Christian Science furnishes undeniable proof that Jesus' words have not passed away. It substantiates its claim to be the Comforter promised by the Master by merging precept into practice, linking theory with demonstration, and manifesting the power of the word of God by healing all manner of sickness, reforming the sinner, and revealing to thousands of adherents man's tender relationship with the ever present God who is Love. It was for this that Mrs. Eddy lived and labored. It is for this that she has the gratitude of thousands. Her achievement might be epitomized in the modest statement in Science and Health (p. 174): "Truth is revealed. It needs only to be practised."—*Correspondence.*

✧

Mill Valley, Cal.

Prof. Hermann S. Hering, who lectured on Christian Science, was introduced by Judge Lewis R. Works of the superior court as follows:—

"Preach the gospel" and "Heal the sick" were two of the cardinal commands of our beloved Master, Jesus the Christ. The first of these has been generously obeyed, in form at least, and for nineteen centuries people have listened to a persistent preaching of the gospel. Christendom cannot boast an equal degree of obedience to the second command. For about sixteen of the centuries mentioned, and up to the time of the discovery of Christian Science by Mrs. Eddy, the healing of the sick was no part of the practice of the Christian religion. This lapse was so uniform, so complete, that the dictum was continually announced that this command was only intended to operate upon the immediate followers of Jesus. The untruth of this statement may be demonstrated by three methods. In the first place, the book of Acts records many healings by those who were not the immediate followers of Jesus, notably in the case of Paul, who never saw him. In the second place, secular history teaches us that for more than a century the dead were raised, and that for nearly three centuries after the ascension the sick were healed, by the early Christians. The third proof of the untruth of the statement lies in the fact of the discovery of Christian Science. Mrs. Eddy and her followers have demonstrated that the sick may be healed today as a part of the practice of the Christian religion, just as in the time of Jesus or of the early Christians.—*Correspondence.*

✧

Fairmont, Minn.

The words of C. J. Timms in presenting William D. McCrackan, who lectured on Christian Science, were as follows:—

We are told in the New Testament that under certain conditions we should inherit the kingdom of heaven. Through all the years since the time that promise was made, men have

Digitized by Google

sought to interpret and to fulfil its conditions, so that they might enter into this kingdom. Many have sought blindly, in ignorance of what this kingdom was, or of the time when or the place where it might be found. Christian Science tells us that this kingdom is within us, that it brings the peace that passeth understanding, and that we may enter into our inheritance here and now. We are gathered here tonight to learn of this Science.—*Correspondence.*

Omaha, Neb.

George Shaw Cook lectured on Christian Science at the Brandeis Theater. Judge George A. Magney, county attorney of Douglas County, in introducing the lecturer said in part:—

Christian Science has recently become an important factor in the world's religious thought. It has interested and held the attention of some of the brightest minds of this age. Its growth in recent years has been without a parallel in church history. It has given a fresh impetus to primitive Christianity, and established a practical religion that appeals to men and women of all classes and conditions. Among its adherents are to be found those in high places as well as those from the humblest walks of life. It has created a new interest in the Bible on the part of many who were formerly unconcerned or had been unable to understand its spiritual import. It has given its students a satisfactory understanding as to what God really is, and it has made plain to them the relation that man sustains to his creator.

The Christian Scientist has an abiding faith in the omnipotence of God. He believes that the infinite can and does heal both sin and disease by the same spiritual law. He believes that the command to heal the sick means just as much as the command to preach the gospel. The Saviour healed all manner of disease, according to the record, and he said, "He that believeth on me, the works that I do shall he do also." Christian Scientists accept this promise and rely upon it, and in doing so they have put their religion to a rigid test. They have demonstrated its truth by healing the sick and reforming the sinner through the operation of spiritual law, as exemplified by the Nazarene two thousand years ago. Their demonstrations are an open book, and they are willing that their work should be judged by its results. If Christian Science is the truth it will stand this test.

Correspondence.

Halifax, England

A lecture on Christian Science was delivered by John W. Doorly at the Victoria Hall. The chairman, Frederick R. Rhodes of Leeds, in introducing the lecturer said in part:—

When our Master extended to humanity that loving invitation, "Come unto me, all ye that labor and are heavy laden, and I will give you rest," it contained no reservation or limitation, and it is here for our acceptance as much today as it was when first uttered over nineteen hundred years ago. Mrs. Eddy in her text-book, "Science and Health with Key to the Scriptures," has shown in a demonstrable manner how this truth can be applied in our daily needs. As we have freely received, so we desire freely to give to others the opportunity of hearing the truth concerning the premises of the teaching of Christian Science, and therefore these lectures were instituted by Mrs. Eddy in order that the public might learn the truth about its fundamentals, and not be deceived by the various mistaken reports which are so often offered for its acceptance through ignorant channels.

The Halifax Guardian.

Lectures to be Delivered

CALIFORNIA—Los Angeles (Second Church): Bicknell Young, Church Edifice, 948 West Adams Street, 8 p.m., Feb. 5, and Auditorium Theater Beautiful, 3 p.m., Feb. 6.
Marysville: William R. Rathvon, Theater Building, 8 p.m., Feb. 15.
Oroville: William R. Rathvon, Congregational Church, 8 p.m., Feb. 17.
Pasadena: Willis F. Gross, Church Edifice, Oakland Avenue, near Colorado Street, 8 p.m., Feb. 18.

COLORADO—Denver (First Church): Bicknell Young, Denver City Auditorium, 8 p.m., Feb. 15.
Denver (Fourth Church): Bicknell Young, Denver City Auditorium, 8 p.m., Feb. 14.
Fort Collins: Bicknell Young, Lyric Theater, 3 p.m., Feb. 13.
Fruita: Bicknell Young, Majestic Opera House, 8 p.m., Feb. 18.

FLORIDA—Fort Lauderdale: Clarence C. Eaton, High School Auditorium, 8 p.m., Feb. 18.
Tallahassee: Jacob S. Shield, Leon County High School Auditorium, 8:15 p.m., Feb. 18.
Tampa: Jacob S. Shield, Tampa Theater, 3 p.m., Feb. 13.
West Palm Beach: Jacob S. Shield, Church Edifice, Hibiscus Avenue and Poinsettia Street, 8:15 p.m., Feb. 15.

GEORGIA—Shellman: Jacob S. Shield, Princess Theater, 8 p.m., Feb. 17.

ILLINOIS—Cairo: Virgil O. Strickler, Kimmel Theater, 8 p.m., Feb. 10.
Chicago (Second Church): John W. Doorly, Church Edifice, Wrightwood and Pine Grove Avenues, 8 p.m., Feb. 14 and 15.
Chicago (Seventh Church): Prof. Hermann S. Hering, Church Edifice, 5318 Kenmore Avenue, 8 p.m., Feb. 12, and 3:30 p.m., Feb. 13.

MINNESOTA—Minneapolis (Second Church): Clarence W. Chadwick, Church Edifice, Second Avenue South and Eleventh Street, 8 p.m., Feb. 14 and 15.

MISSISSIPPI—Vicksburg: Virgil O. Strickler, Walnut Street Theater, 8 p.m., Feb. 15.

NEW YORK—Poughkeepsie: Charles I. Ohrenstein, Church Edifice, 111 Market Street, 8 p.m., Feb. 11.
Rochester: George Shaw Cook, Temple Theater, 3:30 p.m., Feb. 13.

NORTH CAROLINA—Charlotte: Virgil O. Strickler, The Academy of Music, 8 p.m., Feb. 18.

OHIO—Dayton (First Church): Hon. Clarence A. Buskirk, Memorial Hall, First and St. Clair Streets, 8 p.m., Feb. 14.
Norwalk: Charles I. Ohrenstein, Universalist Church, 8 p.m., Feb. 15.
Oberlin: Charles I. Ohrenstein, Apollo Theater, Hobbs Building, East College Street, 7:30 p.m., Feb. 14.
Toledo (Second Church): Charles I. Ohrenstein, Coliseum, Ashland Avenue and West Bancroft Street, 3:30 p.m., Feb. 13.
Youngstown: Charles I. Ohrenstein, Masonic Temple, 8:15 p.m., Feb. 17.

SOUTH CAROLINA—Charleston: Virgil O. Strickler, Recital Hall, 8:15 p.m., Feb. 17.

TENNESSEE—Knoxville: Virgil O. Strickler, Church Edifice, 531 West Fifth Avenue, 3 p.m., Feb. 13.

TEXAS—Beaumont: Jacob S. Shield, Woman's Reading Club, 8:15 p.m., Feb. 22.

VERMONT—Lyndonville: Frank Bell, Music Hall, 8 p.m., Feb. 18.

Testimonies of Healing

Christian Science has changed my life. When I began to think of it as a means of healing my physical ailments I was full of fear, bodily suffering, and worry over what seemed to be disagreeable conditions which would have to be endured but could never be improved. I had taken medicine for headache, as well as for stomach disorder and its attendant ills. The thought of being compelled to take it all my life made the future look discouraging. The headaches were beginning to keep me from performing my duties as I desired to do them, when a friend said Christian Science could cure me.

Without any knowledge of this teaching, but with a desire to be treated, I went to a practitioner, and in one treatment was healed of the stomach trouble. Immediately I ate anything I liked and of those things which formerly appeared to cause me much discomfort. A new feeling entered into me; I was very happy and felt as if I were walking on air. I had to descend from this mount of exaltation, however, and tread slowly up again, being purified by this discipline and learning with each step something to enable me to see more clearly how to help others when opportunity offers this privilege. One day I discovered that the catarrh which had annoyed me for several years had vanished, and the headaches gradually disappeared. Not all my ills were healed instantly, and if they had been I might not have clung to this saving religion and gained the spiritual uplift and growth the existence of which is proved by the physical healings.

Gratitude fills my heart for the truth that has set me free from false beliefs and taught me that man reflects infinite Love and Life. I have been lifted above the conditions which seemed to imprison me—they have ceased to be. I am deeply grateful for the patient, compassionate woman, Mrs. Eddy, who has given us Christian Science. At one time I was embarrassed to know how to express my gratitude and love, but now I feel convinced that the way is to keep patiently and quietly thinking right, and so live that wherever I may be some good will come to those about me and I may be an aid and not a hindrance to the cause of Christian Science.

Mary A. Cowen, Washington, D. C.

✧

Years ago, in a small town in South Dakota, a dear white-haired lady lived so close to God and so understood His law and His loving care, that when a woman came to her in great distress with an infant who had swallowed a so-called poisonous substance, she was able quickly to destroy the woman's fear by her words of truth and the child was healed. The lady was a Christian Scientist, and I was the child who was healed through her realization of the power and presence of God. This experience seemed very remarkable to my mother and she felt grateful that my life had been saved, but soon afterward my parents moved away and we did not see the Christian Scientist again. At that time Christian Science literature was not so widely circulated as it is now, and we did not receive the advantage of more fully studying the subject until many years later.

During my girlhood I suffered severely from various ailments,—a stomach and bowel disorder and other internal troubles. I was given one year's material treatment without the slightest relief, nor did I benefit from the medicines, of which I had taken a considerable quantity. These difficulties have been healed through Christian Science, which has given me continued health, strength, and happiness.

As the result of an accident to one of my shoulder-blades, I suffered for many years from what prominent surgeons declared was a very unusual condition. The deformity was very noticeable unless my clothing was carefully made, and even then could be plainly seen at times. As this accident occurred when I was about eight years old, the doctors had some hope that I might outgrow the condition if I wore military braces, and I did so for several years. At the age of seventeen or eighteen, however, the shoulder was no better, and the suffering had increased to such an extent that my parents again consulted a surgeon. Upon examination this doctor advised an operation as the only possible means of relief; but when asked by my mother if he would guarantee a successful outcome, he stated in surprise that he did not possess divine power or wisdom and could only say that the resulting condition would be much better or much worse. My mother had undergone several operations without permanent relief, and she was therefore unwilling that I should be operated on unless successful results were assured. The surgeon's admission of his own powerlessness awakened my mother's thought to the realization that help might be obtained from God.

Soon after this we turned to Christian Science and purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I felt from the moment I began to read this book that it contained the rules for the healing of all manner of disease and discord. During the first year of my study of the text-book I was healed of the trouble with my shoulder-blade, which has become absolutely normal, and I have used the arm on that side for many years without difficulty.

During my first few years in Christian Science I read little but the Bible and the Christian Science literature. These opened up a new purpose and hope for me, and as I studied and gained some understanding of the Principle of being, I realized that every problem in my life could be correctly solved if I were faithful and honest in the study and application of this Science. I have progressed according to my faith and trust in God, good.

Christian Science came into my life when there seemed to be nothing left to our family but suffering and sorrow, yet through patient striving we have found that each trial was a helpful lesson; that we must be tried and purified, and then we would receive our reward. The reward was healing and harmony, and we found that there had been no loss or failure, but that the things which we had seemed to lose were false, unprofitable, and did not bless at all, but so blinded our eyes that it seemed necessary to lose them before we could see that those things only are worth while which are added after seeking the kingdom of God. We found that Christian Science has in it only good for every one, and when the shadows of false belief and unreliable sense-testimony roll away, the love of God will come into our lives as naturally and beautifully as the sunshine flows through an open window.

It has been gratifying to me to see and to know that the action of Truth is more potent to heal than any material remedy.—Marie L. Spaulding, New York, N. Y.

✧

The benefits which have come to me through the study of the Bible in the light of Christian Science have been manifold. I have been healed of a long-standing bowel trouble, stomach disorder, nervousness, and a number of other things, including the tobacco habit, to which I had been in bondage for twenty years. I had tried every known remedy for the bowel difficulty before I came to Christian Science, but had never received more than temporary relief. Today I am glad to be able to say that I am healed, and my general health is good. It is not, however, so much of the physical benefit that I would like to speak, although it enabled me to go about my

Digitized by Google

daily work again in peace, but rather of the spiritual uplift and the new concept of life I have found. I am convinced that every man will find physical healing and spiritual life when he looks on religion not so much as something to be believed, but rather as something to be understood and practised in every-day life.

I always desired to live a clean life, and religion more or less appealed to me, but I never understood the sayings of Christ Jesus until I was healed through the understanding of Truth, which brought peace to the troubled thought and again established health and harmony. To say that I am grateful does not seem sufficient in my case, and only those who have been healed through Christian Science can tell what it means.—C. P. THOMAS, Providence, R. I.

✧

A few years ago my little boy was sent home from school after a medical inspection with a note saying that his tonsils and his vision were defective and that I should have them attended to. He had a slight cold at the time, but as far as I could see there was nothing the matter with his eyes; nevertheless I followed the advice of my parents and took him to a physician. He did not seem to find anything the matter with the child, but prescribed a tonic to be taken three times a day before meals.

After taking two bottles of the tonic the little fellow was indeed sick. His stomach was badly upset, and on each side of his neck there was a painful swelling. At this time I was just beginning to awaken to the demands of Christian Science, but I yielded to the advice of my mother to send for the doctor who had prescribed the tonic. He gave me a remedy for the boils and ordered me to bandage the neck with flannel. He also left some pills to be taken at regular intervals. I followed these instructions implicitly, but the more pills the child took the worse he seemed to feel, and the boils became more and more painful. After two days of this treatment I began to fear that more strenuous methods would have to be applied, so I decided to take matters into my own hands. The pills were thrown away and the bandages removed.

It was a sunny day, so I dressed the boy in warm clothes and took him to a Christian Science practitioner. He suffered severely on the way, was unable to move his head, and had to walk very slowly. I encouraged him with every step, and my own faith in what little I knew of Christian Science sustained us both. The demonstration was a beautiful one, and this first experience of God's immediate help has planted the good seed securely in the little heart. For this I shall always be thankful. During the treatment the child began to cheer up, and as the pain gradually left him he became quite animated. When we had arrived at the practitioner's house he could hardly get up the stairs, but after the treatment he fairly ran down-stairs, and then begged me to take a walk with him.

When we came home, however, I was reproached for my recklessness and for not following the doctor's instructions. I then told my parents openly that I had taken the child to a Christian Science practitioner and that he was already much better. There was quite a little work for me to do to overcome the errors of false belief, for I noticed that when any one looked at the swellings on the neck or spoke to the boy about his illness, the symptoms seemed to become more aggravated. I kept him to myself as much as possible, and with God's help I was always able to alleviate the suffering. I took him to the practitioner twice after that, begging my family to hold their peace and not to say anything so long as they did not see the child getting worse. As I am the guardian of my children since my husband passed on, no one raised any objections, though their disapproval was keenly felt. Divine Truth and Love, however, sustained me and won the victory. The boils disappeared almost visibly, and after each treatment the little fellow was so full of life that he almost turned somersaults in the street. The healing was complete within three days of our first visit to the practitioner.

I thought that this would open the eyes of the other members of the family, but they seemed to be blind and chose to ignore the healing power of Christian Science. To me it was a revelation, and since that time my boy has never had a drop of medicine. Every attack of illness has been quickly overcome with Christian Science, sometimes with the aid of a practitioner, and occasionally I have been able to make the demonstration with my slight understanding of Mrs. Eddy's teachings.

I cannot express my gratitude. I am very thankful to know that both my boys will grow up in Christian Science, and that they will not have so much to suffer and unlearn as those of us who have come to it through great tribulation. For myself I am thankful to God for this wonderful gift. With the help of divine Love I have overcome the bitterest sorrows, and found comfort and balm for wounds which otherwise could never have been healed. There were times when the antagonism of others, who would not understand, seemed to make my path very difficult, but this has also been overcome. Often when the day seemed darkest the light of Truth illumined my way. On page 410 of Science and Health Mrs. Eddy says: "Every trial of our faith in God makes us stronger. The more difficult seems the material condition to be overcome by Spirit, the stronger should be our faith and the purer our love." This has helped me over many a stumbling-block.

My heart goes out in love and gratitude to that noble woman, Mrs. Eddy, who has worked and suffered for this cause with unflinching courage, so that the whole of humanity may have the blessings of her labors merely for the asking. It is for us to turn away from darkness toward the light and accept with loving and grateful hearts the riches of God's goodness. With all my heart I say, Thank God for Christian Science!—JOHANNA CELLARIUS, Oakland, Cal.

✧

[Translated from the German]

It is with a grateful heart that I wish to testify to my having found help through Christian Science in my extremity. I was suffering from hardening of the arteries in a very severe form, designated as such by the physicians under whose care I had put myself. All the methods of cure to which they resorted proved ineffective, and as my condition grew more serious every day, still another physician was called in. He too, however, gave no hope of recovery. I was completely exhausted, lost consciousness, and lay in the last stages of the disease, when word came through my sister of the wonderful healing work done in Christian Science.

It was impossible for me at the time to decide on anything, but as it was my daughter's desire, a Christian Science practitioner was entrusted with the case. The result was that within a few days my condition improved so much that I was able to get up. Then I had the first visit from the practitioner, and my improvement went on steadily. When in the course of six weeks I was completely restored and called on the physician who had treated me formerly, he showed great surprise and could hardly recognize me. According to his opinion I ought to have taken the medicine which he had prescribed for at least six months. During the period of treatment in Christian Science I took no medicine, and there were no physicians in attendance, for they had been dis-

Digitized by Google

missed. I set my trust solely on God's help and on the truth taught in Christian Science.

I can but testify, therefore, that with God's help and through the new-old Christ-teaching I have been completely restored to health, and for this I thank God from the depths of my heart, and gratefully remember Mrs. Eddy, the Discoverer and Founder of Christian Science.

FRAU BERTHA RADDE, Berlin, Germany.

✧

In January, 1911, I first read "Science and Health with Key to the Scriptures" by Mrs. Eddy, at the urgent request of a dear one in California who wrote over and over again of a God who is Love, of the peace "which passeth all understanding," and told me of the "Key" which unlocks the treasures of the Bible so they can be understood clearly. Sorrow, suffering, and despair had weighed me down till I did not want to live. A specialist in Boston said there was no help for me, that I would soon be entirely deaf. Then a certainty that I was fast growing blind came upon me, and terrible headaches added to the blackness; but the worst was the passing on of my little boy. Life was unbearable and I felt I should soon be crazy; but divine Love sent help. I read Science and Health and the headaches ceased forever. The darkness lifted, and all was light; other ills disappeared, the great sorrow was lifted, and Love healed the wounds. Then my hearing was restored. I attended a Christian Science lecture in 1913 and heard every word. I rejoice that I can see and hear; but to me the best of all is the great love and peace which has come, the knowing that God is Love and that He is our Father-Mother.

It was proven for five of us that as God does not send anything but good, we need not have any disease. My son came home with the mumps on both sides of his face, but the swelling went down, and much to every one's surprise none of us caught this ailment.

I am thankful for the faithful work of our beloved Leader, Mrs. Eddy, and also grateful for the help found in our literature; there is so much in every publication to help and inspire. With divine help I am trying to live as God would have me.—MARION K. BOND, Union Village, Vt.

✧

It is with a heart full of gratitude that I give my testimony to the healing efficacy of Christian Science. For eight years I was a hopeless invalid, suffering from a serious condition of the bowels. As I was heavy and fleshy, the doctor told me I could not be cured. I had to sit down to do everything, and would hitch about the house in a chair to do the housework. I struggled on till I was a complete wreck, both mentally and physically, and my husband could hardly live with me, my mind was in such a state. I had come in contact with Christian Science several times, but did not think it could do anything for me, since I had tried doctors and medicines and every remedy my friends would suggest, all without avail. Then a friend who was a Christian Scientist came to live with us, and this gave me a chance to read some of her books and to inquire about Christian Science.

My husband, who is a Mason, had been sent to Topeka as a delegate to the grand lodge. There he met a man whose wife had been to Kansas City to a specialist and was cured. When he came home he wanted me to go to this specialist and try once more to see if I could be healed. I had little faith, but promised to go, thinking all the time that if this attempt did not succeed I would never try material means any more, but would go to God, for I knew He alone could make me well. I went to Kansas City and was examined by four doctors, none of whom could do anything for me. They offered to operate, but I refused. Everybody was kind, and everything was done that could be done for me, but I was not cured. As soon as I could get away from the doctors a friend telephoned to a Christian Science practitioner. In fifteen minutes he came and told me I could be well. A great weight fell from me which I had carried all the eight years, and a thought of joy came into my consciousness. I received one absent and one present treatment, and was healed. The spiritual uplift was wonderful.

That was ten years ago, and I have not taken any medicine since; God has been our only physician. I have had many beautiful demonstrations of the power of God, and am very grateful for the understanding gained by reading Science and Health and other works by Mrs. Eddy. My husband has taken up the study of Christian Science and has been healed of asthma of many years' standing. Divine Love guides us in every walk in life and supplies all our needs.

MRS. MILES STANDISH, Colorado City, Col.

✧

For a number of years I attended one of the Christian churches, but when a flood of adversity came upon me I found my house had been built upon the sands; for with the rush of the waters of misfortune it fell, and so far as my own personal interests were concerned, "great was the fall of it." Amid the wreckage of my material hopes Christian Science found me, and through a study of its teachings I am gaining a correct understanding of the relationship between God and man. Pernicious habits that have seemingly been lifelong companions are dropping away one by one, and physical ailments which I am satisfied are largely a reflex of those habits, are also disappearing into their native nothingness, so that now, at this period of my journey from sense to Soul, I can look back and realize in a measure what a great change has come into my life. This change is perceptible not only in the home, but in the conduct of my business. In the latter province, where a chaotic condition prevailed owing to fear and wrong thinking, there now obtains a systematic regularity due to a confidence born of Truth.

The healing of the physical discord (*materia medica* termed it Bright's disease) occurred some three years ago, and I have been in sound health ever since. Every day brings fresh proofs of God's love, and so I am thankful for Christian Science,—thankful to God, and grateful to our revered Leader, Mrs. Eddy.—NELSON MOTT, Brooklyn, N. Y.

✧

I feel it a duty as well as a privilege at least to try to tell some of the good that has come to me through the study and practice of the teaching of Christian Science. I did not come to Christian Science for healing for myself, but I am sure there could be no one in more need of the truth than I was, although my family also needed it. It has proven to me that "man's extremity is God's opportunity." I began to read to one under treatment, and soon found that I did not worry as usual, but seemed more willing to trust God.

For two weeks or more after Christian Science came into my home I used medicine for the children, but when I had seen intense pain overcome in a few minutes, and was myself healed of a throat affection by the reading of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was willing the children should be treated. One child had several places of proud flesh on his back where there had been boils, two of the children had a bad form of skin trouble and were in such a condition that they were not allowed to go to school; but they were all healed in less than one week by Christian Science. From that time until now, over eight years, we have used nothing but Christian Science in a family of six; it not only heals but prevents sickness.

We have had many convincing demonstrations. Before

Digitized by Google

I took up Christian Science I was much opposed to what I thought it to be, but it has given me an understanding of God and my relation to Him, and has taught me that He indeed "is no respecter of persons." Truth has helped me to keep the family together, and has been our supply, because without it I never could have had the strength and courage to do the work I have done.

I am trying so to live that I may be worthy to be called a Christian Scientist. Words cannot express my gratitude for Christian Science and what it has done for me and mine. I am thankful to God, and to all who have helped me, and grateful to Mrs. Eddy for this practical religion.

CHARLOTTE J. BOUCHER, Joplin, Mo.

✧

For the benefit of the tobacco smoker who thinks he cannot stop without the use of more will-power than he possesses, I want to state my experience. After having been addicted to the use of tobacco for more than thirty-six years, I quit it altogether, with the help of almighty God through a Christian Science practitioner, and without employing will-power at all. I can truthfully say that from the minute I left off smoking I had no more desire for it than one who had never used the weed at all. I thank God for this healing, and for other benefits received through Christian Science.

J. E. BLAIR, Los Angeles, Cal.

✧

[Translated from the German]

I submit this testimony with a sense of deep gratitude to our almighty Father, from whom proceedeth all healing power. For years I suffered from a chronic bowel trouble, and was hindered in my activities by varicose veins in one of my limbs, which finally opened in one place. Medical skill proved inadequate to relieve me of this distressing condition. In my capacity as owner of a rather extensive tailoring establishment I have to be on my feet from morning till night. Every one, therefore, will realize how I felt to be kept by these troubles from attending to my business, which supplied my income. But God heard my prayers.

My attention was drawn to Christian Science by a dear friend who made me acquainted with its teachings, and I soon felt that I had found the right way and that God was nearer than I thought. All sense of disharmony yielded, and now I am perfectly free and able to attend to my work without experiencing pain and without any sense of worry; and there will be no return of either, for I no longer fear them as having power, but reject them as error. I realize that God is All-in-all, and His love encompasseth me; therefore I am not afraid of anything. With the many who through Mrs. Eddy's teachings have found again the way pointed out by our Lord and Master, I would say with the psalmist, "Bless the Lord, O my soul: and all that is within me, bless his holy name."—FRAU MATHILDE KUNERT, Berlin, Germany.

✧

Deep gratitude compels me to tell what a blessing Christian Science has been to me. For two years I had what doctors called mental trouble, and I was beyond their help. Although I had been in Science for six years I had lost faith in everything and was a burden to every one on account of my peculiar fancies. However, it is impossible to express in words the change which has since taken place. I am well and happy again.

My heart goes out in love and thankfulness to God, and in gratitude to our revered Leader, Mrs. Eddy. My one desire is to learn more of her teachings, and to bring others to feel the peace and comfort this healing truth affords.

ANNA STANSILL, Brooklyn, N. Y.

From Our Exchanges

[John A. Earl in *The Standard*]

The growth of revelation should be kept constantly in mind by those who would be students of the Bible. It does violence to the principle of a progressive revelation when we put the books of Chronicles on a par with the epistles to the Corinthians, or when we attempt to compare the book of Judges with the prophecy of Isaiah. The book of Genesis and the gospel of John begin almost identically; but what the gospel of John so clearly reveals is found, if found at all, only in germ in the book of Genesis. The law of Christ is infinitely above the law of Moses. Paul makes a clear distinction on this point in his second letter to the Corinthians, the third chapter. Speaking of the two covenants he says, "God made us fit to be ministers of a new covenant—not a written law, but a spiritual principle" (Twentieth Century Version). Paul saw that revelation had grown from written law to spiritual principle.

[*The Christian Intelligencer*]

Of the personal advent in the spirit of "The Prince of Peace," a large number of Christians have not a moment's doubt. The world may not come to an end, but something in the world is coming to an end—that is sure; and that something is not a trifle. Certain views of life, as well as certain principles of action, certain forms of civilization in government and in culture, as well as certain social and religious institutions, are going to give place to better things,—to deeper spiritual convictions on the one hand, and broader, more inclusive systems on the other. Certain ruling forces are eventually to break down before a mighty onrushing of the divine Spirit. Both state and church will be far different to what they have been hitherto.

[*American Lutheran Survey*]

The nations of the world may not cease their struggle and strife for power and supremacy even to listen to a message from almighty God Himself; but whether they pause or not, He will speak in this season, and if His message were but heard and heeded it would solve the problems, heal the wounds, regenerate the hearts of men, and reunite His forces for the spiritual conquest of the world. Every day and hour He is proclaiming, through every means of approach to the human soul, His unchangeable and infinite love; but particularly at the Christmas time, when men's hearts are softened and their better sentiments are stirred, He brings a message of special blessedness. He proclaims Himself the universal Father. He tells of His universal love. He presses upon men His offer of universal salvation.

Through this message of universal fatherhood, love, mercy, and grace, God impresses upon men, as can be done in no other way, the unity and solidarity of the human race, and a kinship of nations deeper, finer, more real, more vital, than any relationship growing out of association, or tradition, or combination of interests, or even of sameness of blood. While it is true that He has made of one blood all the peoples of the earth, it is yet true that their closest relationship is the relationship of spirit.

[Rev. J. Frank Thompson in *The Universalist Leader*]

It may well be that the good we unconsciously do exceeds the sum of all our purposed benefactions. It often happens that for one or another reason our special projects for promoting the happiness of our associates result in failure. We do not always succeed in helping those whom we try to

Digitized by Google

help. But however this may be, it is certain that if for thirty or fifty or seventy years we have lived purely and dealt honestly, if we have bestowed such kindness as we could, if we have been brave in trial and cheerful in all vicissitudes of outward fortune, then the number of those to whom our life has been an unpurposed blessing can hardly be overestimated. There have been multitudes of weak people who have been strengthened, sad people who have been made glad, tempted people who have been saved, and people whose lost faith in the essentials of religion has been renewed, by the influence of our wholesome personality unconsciously exerted.

[Lyman Abbott in *The Outlook*]

We have made Christianity a sect,—a great sect, a noble sect, a world sect, but still a sect. We have treated Jesus Christ as the founder of a religion. We have said, Confucius founded a religion, Siddartha founded a religion, Zoroaster founded a religion, Mohammed founded a religion, and Jesus Christ founded a religion. And we have them put alongside each other in our study of comparative religion in order to see which is the best. Or we have said, Let us take the best from each of these religions, and out of them make the universal religion of the future. But Jesus Christ did not come to found a religion. He has told us what he did come for. I have come, he said, "that they might have life, and that they might have it more abundantly." Whoever takes that life, lives that life, follows Christ in the living of that life, is a Christian, because he is Christ's disciple, Christ's follower.

[*Unitarian Word and Work*]

As we commemorate the birth of the Founder of Christianity, is it not well for us to consider the surprising fact that Jesus never said anything about "religion"?—the author of a great spiritual impulse who yet never once defined, discussed, or tried to classify religion as such! Religion as a subject of speculation did not seem to enter his mind. He was just interested in life and living. Religion and life were synonymous. With him it was not a question of getting religion. He assumed that everybody who had life had what we call religion. He did not say that he came to bring religion, but that men "might have life."

[*The Christian Register*]

The chief enemy of truth—it is a strange paradox—is the way people have of holding what they deem true. When it becomes a prejudice, their conviction stands in the way of truth. Prejudice is literally a judgment made beforehand, but in fact it is a judgment which has lost all the qualities of judgment. It is a petrifaction. . . . In order to keep a faith secure from change it is sometimes deposited in a statement or in a denomination. Then loyalty closes around it. It will not enter the arena of discussion and comparison. It soon changes from a possession to an obsession. In such case even a truth may become impossible.

[*Zion's Herald*]

The aim of a true religion is not to gloss over sin or to offer a sop to the conscience, but to regenerate the hearts of men and to put them into moral sympathy with the purposes of their Maker. . . . If the kind of faith a man professes is having no regenerative effect whatever upon his life, he would better transfer his regard to some other form of belief, for his religion has no real worth. Only the religion which changes us is the kind of religion from which we should never change.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new pamphlet entitled "Man's Unity with God" has been printed in the German language. This pamphlet contains seven articles from the Christian Science periodicals, which have been translated into German. The pamphlet is now on sale at the prices of our regular pamphlets, as shown on the opposite page.

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

A new pamphlet, "What went ye out for to see?" is now on sale. This pamphlet contains the four following articles from the Christian Science periodicals: "Principle Not Person"; "Jesus of Nazareth"; "Jesus the Christ"; and "Jesus and the Christ."

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Pamphlets

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BUNKER.

CHRISTIAN SCIENCE: "THE RESURRECTION AND THE LIFE." By CLARENCE W. CHADWICK.

CAUSATION: VIEWED IN THE LIGHT OF CHRISTIAN SCIENCE. By FREDERICK DIXON. Also printed in Swedish.

CHRISTIAN SCIENCE VS. MENTAL SUGGESTION. By FREDERICK DIXON. Reprinted from the *Weekly Budget*, London, England. Also printed in Norwegian.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $2.00; twelve or more, each $1.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 61 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916, XVII is used for year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post office as second class matter.

Items of Interest

The Ferris bill, providing for the development of water-power and the use of public lands, has been passed by the House of Representatives and is before the committee on public lands of the Senate. In the bill the secretary of the interior is empowered to lease to citizens of the United States, or to associations or corporations, or to any state or county or irrigation district, public lands, including lands in public forests and other reservations, for the purpose of developing and utilizing hydro-electric power. It is stipulated that in the granting of leases the secretary of the interior may give preference to applications for leases for the development of electrical power for public purposes.

The bill provides that there shall be a diligent and reasonable development and continuous operation of the water-power, and not more than 50 per cent of the total output shall be sold to any one consumer without the written consent of the secretary of the interior. It is expressly provided that combinations of plants used to limit output or to fix, maintain, or increase prices are forbidden. The sale or delivery of power to a distributing company without permission is forbidden. This bill is favored by the conservation forces. They oppose the Shields bill, which it is claimed was drawn for the benefit of the water-power interests.

A treaty of peace and friendship between Uruguay and Peru was recently signed at the ministry of foreign relations in Lima. It provides for an international commission of five members, to whom questions between the two countries which fail to yield to the ordinary methods of diplomacy shall be submitted for investigation. Only constitutional questions are excepted. The commission is to have a year in which to act, and more if the two countries agree to grant it, to investigate and report on such cases. After the report is made the countries are allowed six months more in which to reach an agreement. If they fail to do so within that time, the question is to be submitted immediately to the permanent court at The Hague for arbitration.

The treaty is to be effective for at least five years from the date of its ratification, and it is to continue itself indefinitely, unless one of the countries gives notice of its desire to withdraw from it at the end of the current five-year term.

Some remarkable work has been achieved in India, in the Punjab especially, by British irrigation engineers. The greatest irrigation project which has so far been undertaken, even in the Punjab, was brought to a successful completion recently, when the Upper Jhelum Canal was opened for use by the viceroy. The cost of the canal itself is estimated at 447 lakhs of rupees, or nearly £3,000,000. It has been the most difficult engineering work of its kind ever undertaken in India.

The canal for the first sixty miles of its course is situated on the lower slopes of the Pabbis, and for the remaining twenty-eight miles across the plain of the Gujrat "bar" to the Chenab River. For the first fifty miles it runs through a tract furrowed by numerous deep and well defined hill torrents, and for the rest it lies in a flood-swept tract of delta country. The work has been in progress for ten years. The Maharaja of Kashmir, through whose territories the canal runs for about nineteen miles, made a generous concession of all the land required, free of cost.

The Government of Ecuador and private interests in that country are pushing forward many public improvements. One of the more important of these is the Puerto Bolivar-Amazon Railway, surveys for a considerable part of which have just been completed. Among other projects already under way is an electric light plant at Cuenca, a town of some forty thousand inhabitants two hundred miles south of Quito. A legislative decree has declared the Daule electric plant project, as well as the Tulcan electric light and waterworks, to be municipal work. The minister for public works has been authorized to construct, either by contract or governmentally, works to prevent the overflow of the Julones River, after the necessary technical studies have been made. The municipality of Baba has been authorized to increase the depth of the Baba River, as well as that of other streams, and to complete other works of public utility.

The reports from Trinity House, London, tell of the success of the bird rests and perches erected outside of lighthouses. For many years large numbers of migrating birds have been destroyed at various lighthouses around the coast. The Royal Society for the Protection of Birds undertook some time ago to erect perches on which birds momentarily confused by the brilliant light could rest, and the Trinity House report makes it clear that the scheme is likely to prove successful.

The discovery of an immense archeological field in the San Juan region of New Mexico, east of the town of Aztec and not far south of the Colorado line, is reported by Prof. Earl H. Morris of the University of Colorado. He found many ruins in the cañons Carriso, Gubernador, and Frances, which are tributary to the San Juan River. These ruins were evidently abandoned after the Spanish occupation. They are newer than the Mesa Verde and Aztec ruins.

The Sahara Desert is not all sand after all. Having skirted the fringe of it on all sides and seen nothing but sand-dunes, travelers came to the conclusion it was nothing but sand from border to border, and the geographers put it down accordingly. But now it turns out, after thorough explorations, that while there are 700,000 square miles of sand, the desert has also 2,800,000 square miles of rocky table-land. There are sections that are capable of cultivation, and this can be carried on even among the sands, as was the case near Biskra last year, where through sinking eight hundred wells 1,500,000 date-palms were made to bear fruit.

It was a banner year for the California walnut in 1915. The output, 15,000 tons, almost doubled that of 1914. The season's returns are valued at $4,500,000. Specializing in the sale of the product has created a large demand for shelled walnuts. To handle this demand the growers' association has established in Los Angeles one of the largest cracking plants in the United States. The plant employs more than two hundred and fifty people during six months of the year, and it turns out more than six tons of shelled meats daily.

According to a decree published in the Guatemalan official gazette Dec. 20, 1915, the republic of Guatemala reserves the absolute title "to all sources of petroleum and hydrocarbons in general" in the country, and will permit the acquisition and exploitation of such lands only under leasehold. The leases, which are to be contracted with the ministry of public works and submitted for the approval of the chief executive, may not exceed ten years' duration, and will be made only with native or naturalized citizens.

Figures compiled by grain exporters show that approximately 12,000,000 bushels of last year's wheat remain in the Pacific Northwest unmarketed, due to the practical impossibility of getting steamers or sailing vessels to carry it to foreign markets. About forty vessels would be required to move the wheat still on hand. Only sufficient tonnage is under charter to move 2,000,000 bushels.

The emergency employment bill passed by the legislature of Idaho in 1915 has been declared unconstitutional by a recent decision of the supreme court. This act was framed to give employment to needy men rather than to render them assistance in food and coal, and was to be handled by the counties through their commissioners.

The Maharajah of Indore, following the example of the Gaekwar of Baroda and the Maharajah of Mysore, has made elementary education compulsory throughout his state. The area over which he rules is 9506 square miles, a little larger than the commonwealth of Massachusetts, and it has a population of 1,007,856.

Thirteen hundred representative manufacturers in New York state, employing approximately five hundred thousand persons, are paying an average of 7 per cent more in wages than a year ago, according to a report made public by the Bureau of Statistics and Information of the state industrial commission.

Three petitions for the creation of game refuges are under consideration by the state game and fish commissioner of Minnesota. If all are granted Minnesota will have eight game refuges in addition to state parks and national forests.

The Fort Riley military reservation in Kansas is to be made a game refuge. Special attention will be paid to the conserving of quail and prairie chicken, and an army officer at the post has been named a special game warden.

The American Association of Agricultural College Editors will hold its fourth annual conference at the Kansas State Agricultural College from June 21 to 23.

The world's gold production in 1915 was approximately $[illegible] of which two thirds came from the British empire.

Worldly Philosophy

WILLIAM D. MC CRACKAN, M.A.

CURRENT events are causing the public to probe prevailing creeds, philosophies, systems, and so-called sciences with pitiless keenness. Mere authority and antiquity are proving no defense against these attacks. No traditional sanctity suffices to ward off the impatient questions about the meaning of life, the possibility of immortality, the presence of an overruling Providence, and kindred questions. People who have never before taken thought of these subjects are beginning to pry into their own concepts of God and man, of heaven and life eternal. They are not easily put off today with the stock objections that religion is mystical and mysterious, that God's ways are inscrutable, and that to attempt to inquire into them means rebellion if not blasphemy.

Most of the questions now asked brush aside the usual defenses and go straight to the point. They keep coming ever faster and more numerous, and will not be satisfied with the usual evasions. Is there a God? If there is, what is His nature? Does He sanction sin, sickness, and death? Is He a participant in or a silent spectator of strife, fratricide, despair? Is there an overruling Providence or is the universe given over to blind chance? Does the testimony of the physical senses constitute the evidence upon which final judgment as to reality must be passed? These are the questionings that will no longer "keep silence."

It is becoming obvious to present-day inquirers that reliance upon physical testimony must lead to a philosophy of despair, for according to this testimony man is material; so also is the universe in which he dwells and the laws under which he maintains his existence. Under this rule man begins and ends miserably, and during his short span of life is the plaything of the elements. There is nothing in the so-called physical facts to indicate the presence of mercy or compassion, of salvation or healing, of permanence or immortality. Thus the harassing question arises, If man is the sport of circumstance, what consolation can there be in religion? The fact is that current theories concerning the value of life and the nature of man are wholly inadequate to give humanity a satisfying hope. They are "blind leaders of the blind." The dark abyss of despair awaits those who trust their leadership. They are without hope because they are without the Science of being.

Christian Science, as taught by Mrs. Eddy, enters into this turmoil, this desperate confusion of sense, with the Master's comforting words, "Peace, be still," and his gentle admonition, "Be not afraid." True philosophy can spring only from Truth itself; genuine religion must be scientific; intelligence must be good to be effective. God must be Father-Mother to be the Life of man, hence no attempt to account for man or the universe which ignores God, His nature and attributes, can be worthy of a moment's consideration on the part of those who are awakening to the truth.

What, then, is God? God must be wholly spiritual, having no physical element or quality, or else He would be appreciable to the physical senses and they could determine His presence and power. Christian Science admits not an atom of material quality into its definition of God. In Science and Health (p. 465) we read, "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love." Not one of these synonyms can be expressed in terms of matter without destroying its meaning. Therefore it is the joy and assurance of those who are studying Christian Science that no current events in human history can affect the truth of being itself, but that on the other hand a spiritually scientific understanding of Truth can affect the course of events and shape their ends.

Instead of attempting to deduce God from physical testimony, the sincere inquirer is invited to deduce man and the universe from the God defined by Christ Jesus. Physical science has long made a pretense of ignoring God, and scholastic theology has enshrouded Him in obscurity. Christian Science shatters both agnosticism and obscurantism with the sword of Truth, and gives the waiting world the assurance that there is certainty, explanation, understanding, and science in the spiritual realm. Since God is Spirit, man is essentially spiritual, and his life is not at the mercy of matter. The belief of life in matter destroys the value of life, for it exposes life to extinction in accordance with the vicissitudes of material experience. This belief mocks at immortality. It would deliver man to annihilation. Therefore when the world passes through an experience in which this belief of life in matter seems to be shown little consideration, this same world asks itself whether such an easily discarded belief can have been true.

Christian Science interposes and explains that since God is both Spirit and Life, man in reality must have his life in Spirit and not in matter, and that the disappearance of the belief of life in matter does not mean the destruction of life itself, but only of a false sense of life. There remains therefore the possibility of immortality even in the presence of this passing belief, and Christian Science by reason and revelation turns this possibility into a certainty.

Man, made in God's image and likeness, is an imperishable entity, independent of physical sense or evidence. It follows that though the world is passing through a crisis of sin, sickness, and death, this does not mean that God lacks love, but that humanity lacks the understanding that God is Love, and so is delivering itself over to the belief that physical force is power; that hate, greed, and crime are created entities and are ways and means of accomplishing desirable results. The mistakes of humanity cannot impugn the loving character of God or disprove His benevolence, but such mistakes may serve to enlighten men and cause them to turn aside from their false gods and worship the one God, who is infinite good. It will not do for those who persist in believing that man and the universe are material, to hold God responsible for the consequences when that belief leads to death and destruction. Rather is it demanded that they revise their belief, place it upon the spiritually scientific basis of understanding, and so reconstruct their religion.

Those who claim that the existence of evil is the proof that God is not Love, that the command to love one's neighbor is a

Digitized by Google

dead letter, and that religion is a sham, are arguing from false premises and naturally reaching false conclusions. Let them reverse their reasoning and deduce the nature of life and love from the nature of God, and they will soon find themselves dwelling in a universe of light instead of darkness, of truth instead of error, of mind instead of matter. They will then learn that by maintaining these facts of being in consciousness and expressing them in daily life, they will be able to nullify the asserted reality and power of evil, to save the sinner, heal the sick, deliver the dying, bring peace where strife once reigned, and so prove the worldly philosophy of despair to be mistaken, both in theory and in practice.

❖

Passing of Matter

MARTHA BURR BANKS

On page 144 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy has these lines: —

> Naught is the squire, when the king is nigh;
> Withdraws the star, when dawns the sun's brave light.

These words are used in illustration of the necessary decrease of error under the light of Truth, the disappearance of matter under the understanding of the supremacy of Spirit. Most of us have proved this true in our own experience when this new view of reality and unreality has been presented to us. "Do not I see matter and feel matter and stand on matter?" asks the unillumined thought, and no argument will shake this faith until one has witnessed for himself the fading away into its native nothingness of this supposed substance under the dawning of spiritual sense. Then the claims of materiality to presence and importance begin to lose their impressiveness.

Any one who sets out to put into practice the teachings of Christian Science, to turn from that which he has believed to be substantial and place his trust in that which is unseen and unfelt to mortal perception, finds that he does begin at once to leave matter behind him, in some degree at least. For instance, there was an individual who at one time dared not go away from home without several household gods in the form of favorite remedies for special ills. One idol was a prescription for alleviation of the torments of hay-fever, or rose-cold, which she fancied was caused by fragrant hay-fields, beautiful flowers, or the bright goldenrod which adorned the autumn roadsides, as if God had planned these things to distress His children. Another dependence was a flask of spirits of ammonia to appease nervous headache, and another a box of tablets to aid digestion. Matter, therefore, demanded of its slave that she bear with her from place to place a heavy satchel containing pot ies and boxes which could not conveniently be packed in a trunk with other articles. But when she learned something of the all-presence and all-power of Spirit, she was able to dispense with this mental burden, and to forget herself and others in the same way she always had done before.

Later the same person took another step along the narrow way from which matter is gradually excluded. It came to pass that she was placed in circumstances in which she was to find to apply herself to unaccustomed and unwelcome work. Among other things she had to do a great deal of nursing that seemed to her irksome and useless, and was often accompanied with considerable impatience and irritation. After a while the pressure of the stresses apparently produced a slight swelling or tumor upon one of her limbs. Shortly afterward another swelling put in an appearance, and before long still another was added. These manifestations were mortifying and annoying, but at first she did not think of looking to Christian Science for help. Finally, however, she sought the aid of a practitioner, and immediately began to notice that the enlargements were becoming less and less prominent. One by one they actually came to naught before her eyes, as the apprehension of spiritual law grew in her thought, and at last every trace of anything abnormal had utterly vanished from her hand. Then she realized that the evidence of discord had never been anything or anywhere, for it had not gone anywhere else; it simply was not, because it never had been, except to a false sense of substance, and the coming of the light had shown her the fallacy of its pretensions.

This healing brought to her thought the memory of a childish experience. For a time she had slept in a small room where on the wall at the foot of the bed was a row of hooks on which hung some outer garments belonging to the children of the household. In the early morning hours, when she first awoke, these garments were to her not garments at all, but queer figures of people and of animals. There was an old woman with a pointed chin peeping from a wide hood, a man with a broad laughing face, a boy with outstretched arms, a dog in full chase, or a cat with bristling back; but as soon as the sun smiled into the little room these figures straightened out into hoods and capes and coats, and except in the undispelled darkness were never anything else.

So she learned to appreciate the fact that "the crude creations of mortal thought," of which Mrs. Eddy speaks in Science and Health (p. 264), are not creations, but misconceptions of true being. She also grasped more intelligently than ever before the truth of the statement on page 552: "Matter always surrenders its claims when the perfect and eternal Mind is understood."

❖

Our Help and Hope

GERTRUDE M. HIGGINS

It is not possible to state in adequate terms the change which takes place in the consciousness of an individual when once the glorious light of Christian Science has shone upon him, and when it is given a place in his consciousness where it may continue to shine. This change is not confined merely to the opinions and beliefs which might be classed as his own, that is, what he himself once believed, but it is found that he no longer holds or consents to the beliefs entertained by the majority of persons with whom he comes in contact.

Among the many false beliefs, too common to most people, perhaps no one is more firmly held in the night and with more disastrous effects than that time—days and weeks and months and years—passes and nothing satisfactory or worth while seemingly is being accomplished, although the average person is desirous of doing some good in the world if only the way were made clear. This erroneous belief does not tend to make the happy ones or peace-lovers, nor does it aggravate or uplift thought and thereby lighten one's cares and burdens or add pleasure to the duties which he is called to perform; rather does it depress energy with the unpleasant mental picture of ultimate helplessness and disability, until mortals are strongly described as those "having no hope, and without God in the world." Mankind fall very far short of helping the struggling upon the road whom they have perhaps heard of through daily Christ in training, and those who have been taught the lessons of Christian Science richly owe a debt of gratitude to Mrs. Eddy for teaching in a way that all can understand what God is and what He has done and is able to do for the children of men.

Digitized by Google

Some years ago the writer attended a service held on the last night of the year in a large city church. This service was what is known as a watch-meeting, and was for the observance of the passing of the old year and the ushering in of the new one. As the church of which she was then a member held no like service, this one was in the nature of a novelty; therefore the sacredness of church service, supposedly held for the worship of God, was not uppermost in thought, and ritual and sermon went on with apparently little if any interest to her. At the midnight hour, however, when the bells of the city began to ring in the new year, the service closed with the singing of the hymn beginning,—

O God, our help in ages past,
Our hope for time to come,
Our shelter from the stormy blast,
And our eternal home.

This beautiful hymn may be found in the Christian Science Hymnal, but it was then unfamiliar to the writer. The words, however, left a deep and lasting impression. In those days God did not seem very near, but soon after the ushering in of that new year the truth of Christian Science found entrance to her consciousness through the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which had been brought to her attention, and through this teaching she began to learn something of the God to whom this hymn refers. From that time the words had a real significance, and as thought developed, the passing of time also came to have a different meaning, and the statement which is found on page 584 of our text-book, that "Mind measures time according to the good that is unfolded," became clear. Through the lessons thus learned the vague concept of God as practically unknowable has been replaced by that acquaintance with Him which Job counseled, and by the comforting assurance that He is "a very present help in trouble," and "able to do exceeding abundantly above all that we ask or think."

This is one of the many forms of that healing which takes place through the study of Christian Science, and which goes on until one false belief after another yields to the truth and disappears, never to return. The lessons we learn in this way are wonderful aids to our progress in spiritual growth and in our appreciation of that divine source of good which is always available. The incident referred to would be of no special value only that in human experience the midnight hour comes to all, even to those faithful workers in Christian Science who have labored and who have been privileged to see wonderful results from the application of the Principle to which they have adhered. In the dark hours sometimes the sense of utter helplessness and disability will be so keenly felt that courage almost fails and hope seems to grow dim; then suddenly the bells will be heard ringing in the new-old truth that the God who was a help in ages past will surely help now, and hope is kindled anew.

We may well hold watch-meetings for ourselves every day in every year, and instead of counting the passing of time, rather observe the signs of the passing from our consciousness of harmful and inharmonious beliefs which had previously manifested themselves in physical ills and other discordant conditions. So doing, we shall presently find that we are more ready to "go forth with honest hearts to work and watch for wisdom, Truth, and Love" (Science and Health, p. 15),—to give even as we have received.

Christian Scientists can never be too thankful to their Leader for the aid and encouragement she has given them to help them on their way in their daily life, for she has vigilantly pointed out that God is their helper now; that He is the one in whom they may well hope; and that in Him they will surely find shelter from the stormy blasts of earthly strife and sorrow. How comforting it is, to one who has been accustomed to count the passing of time as mortals usually do until they are better instructed in Christian Science, to turn from the false belief and false testimony of material sense and accept the teachings of Truth, for, as Mrs. Eddy states in "Miscellaneous Writings" (p. 362), "we all must find shelter from the storm and tempest in the tabernacle of Spirit."

Practitioner and Patient

JOHN M. TUTT

THE beginner in Christian Science may find himself perplexed in his effort to understand the office of a practitioner. Former beliefs concerning the healing art and physicians provide no accurate basis for an estimation of the metaphysician and his work. Material medical theories and practices address themselves frankly to the prevention and cure of disease by means of matter. They take no thought for the mind, except as it relates to and is dependent on the body. Metaphysics, obedient to Jesus' command, takes no thought for the body, dealing rather with the mental states which cause disease, and appealing to the divine Mind for prevention and cure alike. *Materia medica* is avowedly unreligious, and its art requires no Christian qualification.

At the outset and in all their procedure the two systems diverge. The man of material medicine, content with the apparent restoration of the body to the normal, rests his case there; the one who heals through Mind, viewing the healing of the body as indicative of a mental change, pushes on toward reformation, that moral and spiritual regeneration without which there is no true metaphysical attainment. As the Christian Science practitioner does not, therefore, occupy a position analogous to that of the medical doctor, it may be helpful to the beginner in Science to have set forth, in part at least, the office of a practitioner, his relation to the patient, and *vice versa*.

In the sixteenth chapter of Acts there is recorded an incident in Paul's Christian practice. It reads: "A vision appeared to Paul in the night; There stood a man of Macedonia, and prayed him, saying, Come over into Macedonia, and help us." Paul's response to the appeal was instant, for "assuredly gathering that the Lord had called," he went immediately and performed the office of helper, leaving the enduring record of Christian healing from sin, disease, and death. No less today the Macedonian cry comes up out of the confusion of human life,—

From our brother comes the wail
Give us light, our idols fail.

In Science every man can be his own physician, and his practice is the unremitting work of casting out of thought all that is unlike God, good. In general the need of assistance results from a state of confusion as to the great facts of being, their beneficence, ever-presence, and permanence, with a consequent inability to lay hold upon the healing power of Christ, Truth. Such a mesmeric state may be attended by great pain, or depression and distressing conditions of body, all calculated to unfit one for effective prayer in his own behalf. The necessity for breaking this mesmerism is apparent, and the cry for help is instinctive. Here may be recalled Mrs. Eddy's admonition in Science and Health (p. 420): "If students do not readily heal themselves, they should early call an experienced Christian Scientist to aid them. If they are unwilling to do this for themselves, they need only to know that error cannot produce this unnatural reluctance."

It cannot be too strongly pointed out that whereas the

Digitized by Google

privilege and duty to seek a practitioner in time of need is clear, one should also know that no erroneous process of reasoning can induce one to turn over to another the work which rightly devolves upon one's self, thus shifting the responsibility to work out one's own salvation. There may be an occasion wherein the patient should relinquish his own effort, leaving the case entirely in the practitioner's hands, but as a rule the office of practitioner should be that of helper. Both practitioner and patient should work to know the truth, and to know the truth is a simple definition of a Christian Science treatment.

The bonds of Roman subjugation bore heavily upon the free-born Macedonian, even as carnal beliefs incapacitate and enslave free thought. But the attentive ear of a Paul is ever receptive to the call for help; his clarity of vision includes no such mesmeric beliefs as beset the patient. God does for man through man. The patient should be confident that there is a practitioner available who can meet his need. Indeed there is no case which cannot be met by some practitioner, and it is always possible to find that one. If a choice is made and there be no favorable results from the work done, the relationship of practitioner and patient thus established should not be made to continue arbitrarily. It is not always easy to lay down a rule, but in general, in the absence of complete healing, or at least distinct improvement, the practitioner may be courteously asked to yield the case to another; or the practitioner, under proper circumstances, may ask the patient to change. Failure of one or more practitioners is no basis for discouragement, for such failures only indicate the need for "patient continuance in well doing." There is a right treatment for every case, and God has not withheld either the truth or its manifestation.

The relationship of practitioner and patient being based on the mutual helpfulness of God's children, the interrelationship of Mind's ideas, there can be properly no restraint, no binding, no undue mental intrusion; not even the successful issue of a case can be made the basis for continuous or future relationship. Indeed the anticipation of a necessity for treatment is erroneous. Each call should be divinely directed. There is therefore no *rationale* for a permanent relationship of practitioner and patient, and no practitioner correctly thinks of any one as his patient unless that one be actually under treatment. The relationship ceases when the treatments cease, but may be renewed at any time by mutual consent. In the interim the terms "my practitioner" and "my patient" are manifestly out of keeping.

The practitioner seeks to cast out of his own thought and that of the patient all superstitious beliefs which might operate to establish a substitute for the family doctor or clergyman. He relies upon the wholesomeness of right thinking to correct the errors of belief. He makes no effort to concentrate his mind on that of the patient, but he does consecratedly seek to let that Mind be in him "which was also in Christ Jesus." The one and only Mind, being everywhere present, needs not to be concentrated. Practitioner and patient together humbly approach the throne of grace in confidence, never doubting. The practitioner in accepting a patient assumes full responsibility for the healing in so far as he himself is concerned. His first responsibility is to accept the patient only when, under wisdom, he recognizes his fitness to be healed, for, as our Leader says (Science and Health, p. 369), "no man is physically healed in wilful error or by it, any more than he is morally saved in or by sin." The patient should also assume the full responsibility on his own part. **Each needs to be right without judgment of the other, and both are wholly responsible to God.**

A not uncommon erroneous belief is that a certain practitioner is peculiarly successful in the treatment of a particular disease. That diseases are to be considered entities is repudiated even by certain schools of material medicine. Christian Science certainly gives no basis for specializing in the treatment of disease, unless indeed it be conceded, as Christian Science holds, that all diseases are reducible to this: a misconception as to health. Every Christian Scientist should be a "specialist" in reversing the lying belief of life in matter and revealing man's true status as a spiritual being.

It will thus be seen that the Christian Science practitioner is not, in the common usage of terms, a family physician, prescriptionist, specialist, mediator, pastor, or master. He is simply a servant of mankind, and his office may be fittingly termed a helper. His heart is open toward Macedonia, his ears are alert, and his footsteps are eagerly set thitherward. He receives his commission from the master Metaphysician, Christ Jesus, and the apostle James thus voices its practical nature: "Pure religion and undefiled before God and the Father is this, To visit the fatherless and widows in their affliction, and to keep himself unspotted from the world."

❖

Friendship

VIVIAN M. KUENZLI

In no other one thing, perhaps, does mortal mind so betray its followers as in its perverted sense of what constitutes friendship. Any one can recall an instance where some one submitted to a slighting remark or offensive attitude on the part of one of his associates or "friends" without retaliation in kind, and perhaps without apparent notice of what was very palpable to the onlookers, and the judgment meted out by these same bystanders later may have been that he was guilty of something or he never would have submitted to such treatment without resentment. Have we not all heard this, and more?

Perhaps these two persons had been very closely associated for years, had learned in part to "bear and forbear," had given each to the other love and unselfish service in unstinted measure, had shared each other's sorrows and joys. Then because in an unguarded moment one may have listened to the arguments of mortal mind and believed himself to be entirely justified in assuming an aggrieved and injured attitude, must the other, in order to evince a "proper pride," retaliate in like manner? Should he immediately forget all that has gone before,—all the years of loving companionship? No, not even in common humanity, much less if one or both have "enlisted to lessen evil" (Science and Health, p. 450).

Can the holding to a human sense of pride, injury, or resentment ever give the slightest degree of satisfaction to any one? Can we not rather afford to be misjudged, to be thought incapable of intelligence enough to perceive an affront, when we are learning that intelligence never did and never will see anything of this kind, and are striving consciously to reflect this intelligence, the Mind that is God?

Suppose a neighbor or friend has apparently forgotten to do his work: have we always been so faithful in guarding our own thought that we would willingly have others know all that has been entertained therein? and has not this negligence expressed itself later in the neglect of some opportunity to show love and forbearance when there seemed sore need of tender patience and forgiveness? Should not any apparent manifestation of error in others merely serve to remind us to hold to the truth until the lie is destroyed in our consciousness and that much of the burden is lifted from our brother?

It is surely our duty and privilege to watch that we be

Digitized by Google

not deceived by sense-testimony into believing a falsehood. Nothing that has been written along this line can be more helpful than a careful study of the article "Taking Offense," beginning on page 223 of "Miscellaneous Writings" by Mrs. Eddy. Then we can ponder the Master's teachings and prepare to forgive an offending brother, not merely seven times in a day, but "seventy times seven" if the need arise.

✧

"Bring the book"

ANNIE JONES ATKIN

In a small town in southern Utah a traveler stopped at the hotel. He was stricken with illness when he came, and after being assigned to a room did not leave it for four days. The writer, who was the proprietress, asked the maids if the room had been attended to, but was told that the man was never out and that he would not let them enter. Accordingly she went at once and, demanding admission, found the man in a very weak state. She advised him to take the next room, so that his could be put in order, and although he at first objected to this arrangement, he finally consented.

When the proprietress was leaving the traveler in his new quarters he asked her to bring him something from the other room, and said: "I have a few bottles of medicine in there, and a book. I do not care about the medicine so much, but please bring the book." She did so, but as it was dark did not notice what the book was until she brought it to him and turned on the light, when he said: "I do not know what kind of book it is; my brother sent it from Los Angeles. Nevertheless, since I have had this trouble that drove me to drink I feel better all the time I am reading it." It was "Science and Health with Key to the Scriptures" by Mrs. Eddy.

The proprietress told this man that she was a Christian Scientist and that she read the book every day. Nothing more was said, but the next morning he came down to breakfast looking calm and peaceful. In a few days he was fully recovered and the drink habit was completely eradicated. He had been waiting for the truth that heals and saves, and when it came he did not know the source. This weary wanderer, "athirst in the desert" (Science and Health, p. 570), was healed and saved through the word of Truth as revealed in Christian Science, and the battle he fought in the secret place of human thought defeated the evil suggestions and gained a victory, the consciousness of perfect peace.

✧

[Written for the *Sentinel*]

Coming Morn

FRANCES A. HALDANE

Across the earth the fogs hang low and drear,
And tardy-footed morn delays to come,
While death stalks boldly where the bullets hum,
Save when it meeteth one that knows no fear:

The bugle-call of Spirit, sweet yet clear,
Will pierce the mists of "chaos and old night"
Till startled sense awakes to primal light,
And e'en the seeming dead shall hear,—shall hear!

Then with that glorious dawning will appear,
In the pure light that Truth alone doth give,
To a clear sight, undimmed by time or tear,
That all the seeming dead do live,—do live!

Blow, bugle-call of Spirit, loud and long,
Till earth resounds with Life's glad matin song.

Selected Articles

[Judge Clifford P. Smith in *Boston* (Mass.) *Transcript*]

In a book review the reviewer quoted and commended a statement to the effect that the cures wrought by Christian Science are due to suggestion. This is a common misapprehension. Suggestion differs from the practice of Christian Science as "that which is born of the flesh" differs from "that which is born of the Spirit," or as that which is material and human differs from that which is spiritual and divine. The one differs from the other as "the power of darkness" differs from "the finger of God," even as ignorance differs from understanding and as deception differs from enlightenment. The only effect of suggestion is a change from one form of bondage to another, but the invariable effect of practising Christian Science is some degree of freedom.

I am aware that the advocates of suggestion have not assented to the distinctions just stated. Indeed, its practitioners do not need to be interested in the basis of such distinctions. But it is probable that most of the authors who have written in favor of suggestion would admit that the person who formulates a proposition for the practice of suggestion does not need to know it is true, or even believe it, and that the expected effect of a suggestion on the person to whom it is made is an assent without actual knowledge, a belief without the presence of true consciousness. To such a practice Christian Science is opposed. The basis of its practice is the absolute truth of man's being. It requires spiritual understanding instead of human belief, and one of its effects is to annul the possibility of suggestion. As Mrs. Eddy has said, "The Christian Scientist demonstrates that divine Mind heals, while the hypnotist dispossesses the patient of his individuality in order to control him" (Science and Health, p. 375).

The practice of Christian Science therefore consists in having "the mind of Christ" and in using its power to liberate and redeem, to heal and save. In this practice the spiritual sense of being manifests the life-giving power of Spirit; it corrects the errors of human belief and confers a freedom from their effects; it redeems men from the seeming laws of evil and enforces the government of God.

✧

[Robert S. Ross in *The Knickerbocker Press*, Albany, N. Y.]

In an article headed, "Says Lying Is Best Asset of Doctor," a physician is credited with premising that disease is something real and formidable, and that a denial of this reality constitutes a lie. His readers are then instructed how to lie so persistently that one human mind thoroughly believing in the reality of disease will be able to force another human mind, also thoroughly believing in the reality of disease, to admit that it is not sick. By this process this doctor would endeavor to bring health out of the impossible situation illustrated by Jesus when he said, "If Satan cast out Satan, he is divided against himself; how shall then his kingdom stand?" In brief, he would have the human mind cure that of which the human mind is already the cause. The physician admits that the suggestive, hypnotic method which he espouses is capable of both good and evil; that the same mental method which is employed to cure one person may be employed to kill another person, but St. James has said, "Doth a fountain send forth at the same place sweet water and bitter?"

The Scriptures tell us that God made all that was made, and that it was "very good." In other words, God's work was done; nothing could be added to or taken from His crea-

Digitized by Google

tion, which was spiritual, perfect, complete. Sin, disease, and death certainly are not good; therefore they were not made by God; and if God did not make them, they do not really exist, since He made all that was made. It was to the operation of divine law underlying this metaphysical process of reducing sin, disease, and death to their native nothingness, and substituting in consciousness the idea of God's allness, that Jesus referred when he said, "Ye shall know the truth, and the truth shall make you free." It is this identical method of healing which Mrs. Eddy has taught the world for over forty years in the Christian Science text-book, "Science and Health with Key to the Scriptures."

In the light of Christian metaphysics it will be evident to logical thinkers that to deny the reality of sin, disease, and death is not to utter a falsehood, but to declare the absolute truth. To believe otherwise would be to impugn the veracity of Christ Jesus himself, who healed by spiritual means only, and assured his followers that throughout all time those who should understand his teachings would be able to repeat his works. Therefore instead of trying to make a sick man well, Christian Science affirms the spiritual fact that man as God made him never has been sick, and that this method heals more effectively than any other method few will now deny.

✧

[S. T. Downs in *The Richmond* (Ind.) *Item*]

In an attack upon things in general by an evangelist, Christian Science is included with the absurd and many times refuted claim that Christian Scientists worship Mrs. Eddy. Christian Scientists are grateful to Mrs. Eddy, of course,—and why not? The Christian Science ranks are made up of those who have been healed of disease and misery after other modes of treatment had failed, and also of those who have searched in vain elsewhere for the truth about God and man and have found it in the teaching of Christ Jesus as it is spiritually interpreted in Science and Health. This has awakened a love for and a sense of gratitude to this noble woman; but any one who has even a superficial knowledge of her teaching knows that Christian Scientists worship the God of Moses and the prophets—Him whom Christ Jesus came to reveal.

A fact well known and highly commended by many in the Christian denominations who are in a position to know, is that Christian Science has made more Bible students than any other movement of modern times. The fact that Christian Scientists read the Bible daily in connection with their text-book does not mean that Science and Health takes the place of the Bible, as our critic stated, and this practice could not rightfully call forth denunciation any more than could the study of the Word in connection with any of the great number of commentaries that are on the market. No one has ever heard of Christian Science denouncing or vilifying any one for preferring to accept a preacher's opinion about the Bible "with as good grace" as he would read Science and Health. Yet Christian Science has healed every known disease and all manner of sin in obedience to the Master's commands to "preach the gospel" and "heal the sick."

✧

[Hiram W. Hayes in *Washington* (D. C.) *Post*]

Nothing could be farther from the teaching of Christian Science than the statement that healing can be accomplished by suggestion. The healing which comes through the understanding and application of Christian Science is the exemplification of that well-known saying of Jesus, "Ye shall know the truth, and the truth shall make you free." It comes, as stated in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy (p. 231), through "the higher understanding that the divine Mind makes perfect, acts upon the so-called human mind through truth, leads the human mind to relinquish all error, to find the divine Mind to be the only Mind, and the healer of sin, disease, death." The efficacy of this "higher understanding" in the healing of disease is being attested daily by thousands who have turned to Christian Science for health and happiness, of whom the writer is one.

✧

[Carl E. Herring in *Trenton* (Neb.) *Register*]

It has always seemed to me to be unfair to begin a discussion of any subject by discussing something not related to it, without regard either to antithesis or similarity. For instance, why should an advocate of vertical writing begin an argument in its favor by discussing cuneiform characters, leaving the inference that there is some similarity between slant writing and the primitive writings of the Persians?

Christian Science bears no more relationship to mesmerism or spiritualism than Methodism does to cannibalism, and an attack on the Methodist church, if any one cared to make it, should not be prefaced by a sketch of the decline of cannibalism, coupled with a suggestion that Wesley built on its ruins. The facts as to the origin and growth of Christian Science are too well known to be the occasion of any dispute. The world has accorded to Mrs. Eddy the rightful claim to be its Discoverer and Founder. Her wealth is not a "bone of contention," but is being used in the hands of trustees to promote peace on earth, "good will toward men," in accordance with the provisions of her will. There was litigation during her lifetime, but it was brought by interests opposed to Christian Science, who used that means to try to break it down and enrich themselves.

Our critic says that miracles were performed by Jesus to prove that he was God, and by the apostles in the name of Jesus "to prove that he has the power and will to save those who trust in him, from sin and all its evil consequences." For three hundred years after the crucifixion, or until the time of Constantine, the followers of Jesus healed the sick. If it was done to attest the divinity of Jesus, why did it cease then? If it was done pursuant to the command of Jesus to heal the sick, as oft repeated in the gospels, why did it cease then?

Miracles were performed by Moses. For what purpose? The Bible says, "That they may believe that the Lord God of their fathers, the God of Abraham, the God of Isaac, and the God of Jacob, hath appeared unto thee." Elisha healed the leper, Elijah raised the dead: the Old Testament abounds with accounts of miraculous deliverances and cures. Shall we say that God's arm is shortened in these latter days, or shall we say that no suffering and misery exists now that calls for the attention of divine power?

Instead of believing that God has withdrawn Himself through the ages only to appear at rare intervals to prove His existence, or to prove the sonship of Jesus, or to prove something else by means of some supernatural exhibition, would it not be better to study the Bible in the light of an ever present God, whereby, as Mrs. Eddy says, "these mighty works" become "not supernatural, but supremely natural"? (Science and Health, Pref., p. xi.) Can it be said that Jesus gave his commands to heal the sick and demonstrated the divine power for the benefit of a few fishermen on the shores of Galilee? Christian Science is proving today that the Christ-power is for all time and for all people.

There is so much to commend in the article of our friend, and the quotations so aptly define the purposes and aims of Christian Science, that we regret space does not permit

Digitized by Google

more of commendation to balance the criticism; but we feel no conclusion can be better than that of our critic: "Oh, that Christians would follow the example of the first thirty years of our Saviour's life on earth, which he has promised to help us do."

✧

[Harry I. Hunt in *Newark* (N. J.) *News*]

An evangelist's reported attack upon what he calls "Modern Misbeliefs," places Christian Science in an improper light. The statement was made, with more feeling than elegance, that the teachings of Christian Science are as "garbage" placed "before the souls of thoughtful men and women." If our brother expects this to be accepted at its face value, how does he account for the fact that thousands of thoughtful men and women who have accepted these teachings and put them into daily practice, have become better citizens and neighbors, more loving and kind in the home and in their dealings with their fellows, more honest and successful in business? "Ye shall know them by their fruits," Jesus said, in that wonderful address known as the Sermon on the Mount. "Do men gather grapes of thorns, or figs of thistles? . . . A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit."

If Christian Science resembled in any degree that which its critics say it is, it would deserve the harsh things they have said about it. But as long as the experience of those who are striving to follow the Master as they are taught in Christian Science, coincides with the declaration of St. Paul to the Galatian church, so long must Christian Science be judged by its fruits. "The fruit of the Spirit," Paul wrote, "is love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance." What has been our critic's Christian experience? Does it bear out the apostle's statement?

Our critic charges that Christian Scientists deny "the divinity and deity of Jesus," and so gives evidence that he has failed to grasp the teaching of Christian Science as to Christ Jesus. If our brother means to make "divinity" and "deity" synonymous, then most certainly Christian Scientists will dissent. Jesus must have known whether he was God, and he never said that he was. He frequently called himself "the Son of man," and referring to his divine origin, called himself "the Son of God." If he had been God, he would not have declared, as John reports: "I can of mine own self do nothing: . . . I seek not mine own will, but the will of the Father which hath sent me. If I bear witness of myself, my witness is not true." It is quite evident that the disciples did not regard Jesus as Deity, for we find Peter, in his pentecostal sermon, referring to "Jesus of Nazareth, a man approved of God." Many other references might be quoted to show that Christian Scientists have Jesus' own authority for denying that he is God, and that authority ought to be conclusive.

Christian Scientists accept the Scriptural account of Christ Jesus' divine origin. On page 26 of "Science and Health with Key to the Scriptures" Mrs. Eddy writes: "The Christ was the Spirit which Jesus implied in his own statements: 'I am the way, the truth, and the life;' 'I and my Father are one.' This Christ, or divinity of the man Jesus, was his divine nature, the godliness which animated him." It should be clear to any fair-minded thinker that Christian Scientists claim and concede to Christ Jesus all that he claimed for himself. So far from making the Bible a lie, as our brother says, this teaching brings mankind back to the religion taught and practised by the great Teacher.

To scoff at Mrs. Eddy's "easily amended work," as does our brother, is merely unkind; but to say that it (Science and Health) is "constantly appearing in new editions, with interpretation changed," is both unkind and untruthful. The last revised edition of the Christian Science text-book was issued in 1909. Mrs. Eddy's only purpose in making revisions was to make the language clearer, so that the student might the more easily grasp the thought expressed. The critic's concluding reference to Christian Science as "building itself upon the wreckage of rational thinking and the deity of Jesus," raises the question as to how anything enduring can be built upon irrational thinking, and recalls the wise counsel of Gamaliel: "Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

Christian Science is Christian knowledge or knowing, and its healing work and its redemptive work are carried on by right thinking applied to every human problem and condition. "Let this mind be in you, which was also in Christ Jesus," is the injunction of St. Paul to the Christians in Philippi. That is the Mind for which Christian Scientists are striving. Those who are striving for the same Mind will find no time to cast stones at their brothers along the way.

✧

[Henry A. Teasdel in *The Ogden* (Utah) *Standard*]

A lecturer makes a statement of his religious views as compared with the teachings of Christian Science. Our friend has evidently read something of Christian Science, but not studied it. When he does study it, his views on the subject will undoubtedly undergo a change. He says, "The exegesis of all the new cults is not warranted by the Greek and Hebrew." Christian Science is not a new cult, but is the religion taught and practised by Jesus of Nazareth nineteen centuries ago, a religion of love. It is the practising of the commandments of Jesus, with all that they imply,—to love God, and your neighbor as yourself,—for, as Jesus said to the inquiring lawyer, "on these two commandments hang all the law and the prophets."

Our friend further says, "We are told that the real man is not sick. Then why take a treatment?" The real man made in God's image and likeness, as recorded in the first chapter of Genesis, is not and can not be sick, for he is spiritual. To the mortal man, or Adam-man, sickness and disease appear real, as the physical senses testify. On page 460 of Science and Health Mrs. Eddy says: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction." But God has given man dominion over all materiality, and with this God-given power man can and does heal the sick, even as he was repeatedly commanded to do by Jesus. It is useless to attempt to decry Christian Science treatment, as its efficacy has been proved and is daily being proved by thousands of successful cases of healing of all manner of diseases.

Judging by the efforts of our friend to explain the differences between his beliefs and the teachings of Christian Science, it would indicate that against his will he partly believes in the latter, but is striving to convince himself and his hearers to the contrary. In conclusion he says, "When the church does go forth with her real message of wholeness, salvation, and healing, she will come to her own birthright." The Christian Science churches throughout the world today are giving out to mankind that very message, and are furthermore proving the truth of it by doing the works Jesus did and promised should be done by those who believed on him.

Editorial

Holding Fast

THERE is no better, no easier way to acquire what might be termed a working knowledge of Christian Science, than is briefly outlined by Mrs. Eddy on page 495 of Science and Health: "Study thoroughly the letter and imbibe the spirit. Adhere to the divine Principle of Christian Science and follow the behests of God, abiding steadfastly in wisdom, Truth, and Love." Surely these directions are simple enough, yet here we have in substance the theory of all Christian Science practice, either for one's self or for a patient. That it is practical, demonstrable, and ever available, has been proven times without number.

Christian Science does not demand of those who turn to it for aid that they become adherents of its teachings, but it does point out to them the open door to that glorious liberty of the children of God which is man's heritage, even while it binds up their wounds and soothes their sorrows. There are those who like the lepers of old accept their healing and go their way unmindful of the boon they have received, content to accept though giving nothing in exchange. Nevertheless, that all mankind shall know and exercise their privilege of salvation, till sin, disease, and death have ceased to be, is the goal toward which every loyal student is striving.

Such was the underlying purpose of Paul's command, "Work out your own salvation," and the more earnestly each one who has gained an understanding of this Science, however slight it may be, puts that understanding to the test, the sooner will the mission of redemption and regeneration to which the cause is committed reach fulfilment. This does not mean that one is never to ask aid from a practitioner, never to turn to his teacher for help and counsel, but it does mean that he should first make a tremendous and persistent effort to stand on his own feet instead of always being bolstered up by some one else. By daily study and unceasing prayer he can so fortify himself against the illusions of sickness and sin that when temptation assails him, when the hour of trial of his faith comes, he will instinctively turn to the source of all wisdom, even to infinite Mind, for help and guidance.

This is the wisdom, or knowledge of God, which Christ Jesus declared is eternal life to him that hath it. The best of it all is that this understanding increases with use; the more one gives it out, the more he has. His confidence in the omnipotence and ever-presence of Truth and Love is enhanced with each new proof of God's unchanging goodness, and he finds, as the apostle declared, that "whoso looketh into the perfect law of liberty, and continueth therein, . . . this man shall be blessed in his deed." It is the parable of the talents over again: "For unto every one that hath shall be given, and he shall have abundance."

So long as there are sick and needy ones, so long there will be work for the practitioner; but it is a part of his responsibility, when the immediate occasion for help has been met, so to encourage his patient's faltering footsteps in the new way, so to strengthen his reliance upon Principle rather than upon any human personality, that he will neither lack confidence to plead his own case in the court of Truth, nor become so mentally asleep or mesmerized by error that he relies on the practitioner to pull him out of the difficulties into which his own inactivity has betrayed him, just as he formerly depended on the family physician. Such a relationship, needless to say, is incongruous with the consistent practice of Christian Science.

To the stanchest Christian Scientist, however, there may come an hour of trial, an hour of anguish of mind or body when, struggle as he may, his usual clear sense of the allness of God and the nothingness of error is momentarily dimmed and the loving Father seems afar off. That is the hour to bring up reenforcements, and having fought the good fight, he will not hesitate to ask for the needed assistance to hold his ground. It is a serious mistake, in fact, to let pride stand in the way when one's most earnest efforts have seemingly failed. Christian Science faithfully practised is an effectual preventive of inharmony of mind, body, or estate, but this is accomplished only by holding fast to the truth of being, by unflagging obedience to the greatest of all the commandments,—love to God and to our fellow man. Thus and thus only are the palms of victory won.

ARCHIBALD MCLELLAN.

❖

Gladness and Gain

AMONG Old Testament worthies there is no more interesting figure than that of David, the story of whose youth is a romance, of his manhood a tragedy, of his old age an epic. At his best he was venerated and loved by his own people and honored and feared by all the nations about him, and when he went down it was with a crash such as when a monarch of the forest measures its giant greatness upon the ground. In that sad hour it could have been truly said of him, "How are the mighty fallen!"

Nevertheless, when human sense had been duly chastened by suffering, when his heart had been purged as by fire, it was given him to acquire his greatest distinction as the Sweet Singer of Israel, the poet of the religious world. From his wallowing in the mire of moral debasement, he rose to the summit of spiritual exaltation, companioned with God as with a friend, and bequeathed to mankind an inexhaustible heritage of comforting and inspiring thought. Though familiar with the heart-breaking aspects of human experience, though, as it would seem, forever saddened and subdued by the remembrance of his own unspeakable sin and the rebellion and death of Absalom, yet he so responded to the call of God, so "put on Christ," his true spiritual nature, as to be able to manifest a veritable genius for joy, and enthrone praise and thanksgiving as not only the highest tribute to God, but as the noblest service we can render Him. Again and again he affirms that to rejoice in God is not only true worship, it is the secret of the gain of all good. "Let the people praise thee, O God," he cries; "let all the people praise thee. Then shall the earth yield her increase; and God, even our own God, shall bless us."

When in the light of Christian Science one comes to understand this assurance, that the possession of coveted good is to be won through the cultivation of a sense of being which is ever sorgful, he perceives that it is altogether philosophical. In Science we learn that true praise is the fragrance of spiritual apprehension, the spontaneous outgive of the bloom of redeemed consciousness. This thought is constantly emphasized by Mrs. Eddy, that "Science inevitably lifts one's being higher in the scale of harmony and happiness" (Science and Health, p. 60); that the perception of good means the attainment of good, and that rejoicing in God is a harvest song, even as David declares, "Delight thyself . . . in the Lord: and he shall give thee the desires of thine heart."

St. Paul's counsel that we "rejoice in the Lord alway," is in fact a call to perpetual and efficient prayer, and he defines the nature of this winning joy when he says, "I delight in the law of God." This is the secret of gain. We win as we appropriatingly rejoice in the truth. To know God is to reach

Digitized by Google

the wellspring of happiness; it is to find comfort of heart, content of mind, and as an incidental blessing, the satisfaction of every lesser human need. "Joy in the Lord" is not the result of the supply of wants, but the ground and occasion of that supply. He who has come to realize that God, infinite good, is the strength of his life, his light, and his salvation, is at once and irresistibly impelled to break forth in those wonderfully beautiful words expressive of the consciousness of abiding safety and peace: "And now shall mine head be lifted up above mine enemies round about me: therefore will I offer in his tabernacles sacrifices of joy; I will sing, yea, I will sing praises unto the Lord."

Though smitten and afflicted of men as none other, though he bore the burden of the whole world's unworthiness, nevertheless the great Wayshower said, "These things have I spoken unto you, that my joy might remain in you, and that your joy might be full." The coming of the gospel was heralded as "tidings of great joy," and its restatement and demonstration in this our day has begotten an echo of that sweet song in the heart of every true Christian Scientist. In tender, vibrant gratitude he is learning to say with David, "In thy presence is fulness of joy; at thy right hand there are pleasures for evermore," and when this gladdening song is wrought into all his daily doings, then he becomes a veritable evangel, a blessing to all he may meet.

JOHN B. WILLIS.

✧

Immortal Qualities

CHRISTIAN SCIENCE enables its students to distinguish clearly between that which really expresses Life and that which does not; in other words, between the true and the seeming. St. Paul tells us that God "only hath immortality," and yet in all his epistles we are urged to "lay hold on eternal life." Apart from the teachings of Christian Science it has generally been supposed that both good and evil are immortal, that the good enjoy endless bliss and the not-good endure eternal suffering; but human sense has challenged the justice of such doctrines, even while unable to offer mankind anything better.

Some, it is true, have had glimpses of the truth that evil cannot be immortal because it is self-destructive, and so they have assumed that only good people continue to exist after death; but this has failed to satisfy because no proof can be given that such an assumption is correct. Furthermore, such theories do not relate themselves to the problems of every-day experience. There are others, again, who are unable to grasp the idea of immortality, either for themselves or for those dear to them, and yet we have the unequivocal statement of Christ Jesus, "If a man keep my saying, he shall never see death." We are told that at the time he was giving out this truth, and telling his followers what it means to "live by the Father," there were some who became offended and left the ranks; but Peter could see beyond the mortal sense of things, and he said, "Thou hast the words of eternal life." The others murmured at the teaching because it pointed away from the material to the spiritual, but Paul, a later disciple, declared unhesitatingly that "flesh and blood cannot inherit the kingdom of God," hence the necessity that our concepts of life and immortality be changed, and then shall death be "swallowed up in victory."

Here some one may ask how Christian Science deals with these questions. To this it may be answered that it makes a clear distinction between the material and the spiritual. The mere fact that a destructive insect or savage beast can move about is no evidence of life from the Christian Science standpoint. All that really lives must express the divine nature and qualities, and these are never less than immortal. Mere physical strength is no more a proof of the actual presence of life in a human being than in an animal, and it has no power to perpetuate itself; but as the sick and suffering are awakened to a consciousness of the divine nature and omnipresence, and man's inalienable right to reflect and express the divine qualities, a great change is wrought, sometimes slowly, but in other cases "in the twinkling of an eye."

A well-known writer has said that fear is the "attraction of mortals to earthiest earth," and as this asserted attraction is broken and the attraction of Spirit, God, is felt and responded to, fear vanishes, and in its place is found the immortal quality of courage, which is closely allied to heroism. Fear certainly can lay no claim to immortality, nor can any of kindred brood. It is no part of man's true being, and so we say to the faint-hearted, "Be a man." Besides fear there are other mortal qualities, such as selfishness, hatred, impurity, and various etceteras, which belong neither to God nor to man, and as these vanish before the light of Truth, immortal qualities appear as eternal facts, and are made manifest to the human sense as mental and physical health.

On page 88 of "Retrospection and Introspection" Mrs. Eddy speaks of the understanding needed to "apprehend the living beauty of Love, its practicality, its divine energies, its health-giving and life-bestowing qualities,—yea, its power to demonstrate immortality." If we would enjoy sound health and lay hold upon eternal life, we must see to it that nothing unlike God is allowed to linger in consciousness. Besides this we must more fully apprehend "the living beauty of Love" and do this in such a practical way that Love and Truth may be the directing and controlling influence in our lives. As this is done, the immortal qualities which tell of "God with us" will shine forth in health, happiness, and harmony.

Among the Churches

Current Notes

COLORADO.—The progress of Christian Science has never been more marked than during the past year. Growth in attendance and membership is noted in practically every Christian Science organization throughout the state, while new organizations and groups of Scientists working together have sprung up in a number of communities which heretofore had no known workers. For a number of years the state committee has been chairman of the joint distribution committee of the Denver churches, but on July 1, 1915, separate committees for each church were organized. During the nine months beginning Nov. 1, 1914, and ending July 31, 1915, there was distributed by the Denver committee under the direction of this office a total of 56,369 pieces of literature. Also during the fiscal year there was distributed throughout the state by the state committee on publication 14,935 pieces.

The *Monitor* is supplied to the Denver & Rio Grande Railroad observation cars between Denver and Salt Lake City, and the Y. M. C. A. at Minturn, the Santa Fe observation car (train No. 12), the State Road Camp at La Porte, the

Digitized by Google

Odd Fellows Home, the Boys' Industrial School, the State School of Mines, the public library at Lamar, the U. S. Naval Hospital, the State Penitentiary, the Girls' Industrial School, and the State Reformatory. Mrs. Eddy's works, also "The Life of Mary Baker Eddy" by Sibyl Wilbur, and subscriptions to the Christian Science periodicals, are supplied to the libraries of the state by the Trustees under the Will of Mary Baker Eddy upon recommendation of the state committee. Last year thirty-nine public libraries were supplied in this manner, and in these libraries subscriptions to periodicals are being renewed and new works added, where necessary.

The press of the state continues its favorable attitude toward Christian Science. In fact, editorial criticisms of Christian Science have almost ceased. On the other hand, references favorable to Christian Science frequently appear on the editorial pages.—*Committee on Publication.*

MILWAUKEE, WIS.—Christian Scientists began working on the problem of holding services in the county jail as soon as the present sheriff was installed. He freely gave his consent, but it took some time to settle on the date for holding them, as all the regular Sundays were occupied by other denominations. Finally it was arranged to have the fifth Sunday of the month whenever it occurred. Two services have been held on those days, and a third on Thanksgiving day, when the Thanksgiving service provided in The Mother Church Manual was followed, including testimonies by Christian Scientists which were appropriate for the occasion.

The prisoners, some thirty-five to forty in number, followed the service throughout with strict attention and apparent interest, and gladly accepted the literature which was distributed afterward. The jail officials and attachés were very courteous and lent valuable assistance in carrying out the service. One of them volunteered to see that the literature left over was distributed to those of the prisoners who would be interested in receiving it. After the first of the year it is proposed to arrange to have more Christian Science services. To date, the three churches that unite in maintaining the committee on distribution of literature have had charge of these services, each holding one service.

Correspondence.

COLORADO SPRINGS, COL.—Following the Thanksgiving services of First Church of Christ, Scientist, yesterday morning [Nov. 25], dedicatory exercises were held. Although the church building was completed in 1908, it was not until a short time ago that it was entirely free from debt. As is customary, Christian Science church edifices are not dedicated until all debts have been cleared away.

Colorado Springs Gazette.

Admission to Membership in The Mother Church

The next admission of candidates will be June 2, 1916. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 10, 1916.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*

Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

Boston, Mass.

William R. Rathvon on Monday evening [Jan. 31] delivered a lecture on Christian Science in The Mother Church. H. Cornell Wilson, first reader, in introducing the lecturer said:—

Christian Science is indissolubly connected with the onward and upward development of mankind. It provides the scientific way by which Christianity will attain for humanity those ideals that have ever been its hope. Mrs. Eddy, who discovered and founded Christian Science, defined it as "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1).

That the Principle and rule of Christian Science apply directly and beneficially to all physical, mental, moral, and spiritual conditions of mankind, whenever and wherever this Principle and rule are obeyed, is a fact that needs no emphasis on my part. The benefits of Christian Science are becoming generally known, and they are increasingly impressive. These lectures make it possible for more people to have a correct conception of how Christian Science works, and why, thus extending the influence and advantages of right, spiritual thinking.—*The Christian Science Monitor.*

Manchester, N. H.

Willis F. Gross delivered a lecture on Christian Science in the Palace Theater. He was introduced by Attorney Fremont E. Shurtleff, who said in part:—

Are the subjects taught in Christian Science those about which we ought to know, or are they mere academic questions of no real or vital importance? The true answer to this question will determine the extent of the possible benefits we may derive from this lecture.

Alexander Pope said that "the proper study of mankind is man," while Christian Science teaches that to know man aright we must know God, the author and creator of man, thus directing our thoughts, as do the Scriptures, to the fountainhead of all knowledge. It is claimed, too, that we can begin here and now to know God, not simply to know about Him; and to the extent that we acquire such knowledge and apply it, to that extent will our daily problems be solved, —evil will disappear and heaven be gained.

If we can thus acquaint ourselves with God, the importance of that fact cannot be overestimated. All the physical discoveries and inventions of the past ages, and all the material knowledge acquired by our greatest thinkers and investigators, sink into insignificance beside it. Is it true? Can it be done? Thousands of men and women throughout this and other countries, many of them of the highest intelligence, declare they have proven to their own satisfaction, by actual demonstration in their own lives, that it is true, that it can be done.—*Correspondence.*

Kingston-on-Thames, England

There was a large attendance in the assembly rooms, Surbiton, when a lecture on Christian Science was delivered by John W. Doorly. C. W. J. Tennant of London presided, and in introducing the lecturer said in part:—

We have reached a period in the world's history when the question is being asked by many, Has Christianity failed? Christian Science has come to assure us that Christianity has not failed, and never will fail, but that humanity has some-

Digitized by Google

what misunderstood, or not understood to the full, the teachings of our Master, and we have to put his teachings fully into practice. Christian Science comes with its message of love to mankind, revealing to us again the methods by which the early Christians healed the sick and which enabled the disciples of our Lord to come out and preach everywhere, "the Lord working with them, and confirming the word with signs following."—*Correspondence.*

✧

New York, N. Y.

The remarks of Albert F. Gilmore in introducing Dr. Francis J. Fluno, who lectured on Christian Science at the edifice of Second Church of Christ, Scientist, were in part as follows:—

It may be truly said that Christian Science is the religion of optimism, if one may judge by the cheerfulness, happiness, and hopefulness of its adherents and followers. If one were to inquire for the reason of this assurance, this splendid confidence, it would be found that it is not due to mere belief, unfounded opinion, but that it comes from a very definite and absolute knowledge and understanding, an understanding of the greatest of all truths,—the truth about God and man, and the scientific relation between God and man. And then with this knowledge, with this understanding, there comes the great truth that God is ever present good, omniactive, all-power, all-presence; that man is the expression, the reflection of that infinite good,—perfect God and perfect man; and this knowledge coming into man's consciousness dispels the clouds of darkness and fear and doubt of whatever kind, and brings that calm and peace and assurance which is well defined as "optimism," optimism in the highest and best sense.—*Correspondence.*

✧

Canton, Ohio

The new building of First Church of Christ, Scientist, Cleveland Avenue N.W., was filled to its capacity when Willis F. Gross gave a lecture on Christian Science. Mayor C. A. Stolberg in introducing the speaker said:—

It requires no belief in miracles to prove to any intelligent man that a true God exists. It is impossible to study nature without believing in nature's God. No man with the welfare of his city at heart would tear down the present religious institutions, but the good done largely depends on the helpfulness to the individual. The so-called social problem of today is the problem of the individual. Moral and social reform is individual reform. A creed of religious belief must be based on truth to endure; even the work of fiction, no matter how beautifully written, must have a grain of truth in the story to live beyond the generation in which it is published. I am not a Christian Scientist, but in this great land of ours we all have the right to believe as our conscience dictates, and I firmly believe a religion should rather teach us how to live than how to die.—*Canton News.*

Testimonies of Healing

For over fifteen years I suffered intensely from various ailments, diagnosed by physicians as stomach trouble, an abnormal kidney condition, rheumatism, catarrh, and bowel disorder. Finally I was told that dropsy was setting in, but if I would adhere strictly to the treatment offered I could be cured. This I did, continuing medical treatment from time to time until 1909, when my condition was worse than ever, the physician in attendance admitting he was at a loss to know what to do next.

At that time there seemed to be nothing for me but surgery, for my suffering was continual. I was about to yield to an operation, when Christian Science was recommended to me, and I feel that divine wisdom guided me to the office of a practitioner, who with all patience made clear to me that all things are possible to God, infinite Mind, Life, Truth, and Love, a thought that has helped me many times since. I took treatment for three months and was healed, and words are inadequate to express my thankfulness to God and my gratitude to our beloved Leader for this healing. It is my desire to know more of this blessed truth which freed me in such a short time from the bondage to which I had been a slave for so many years.

After studying Christian Science about a year, one day while crocheting the hook slipped and entered my forefinger clear to the bone. My first thought was to go down-stairs for assistance, as I was alone, but immediately I realized that I was alone with God, and as the hook hung heavy from the finger I proceeded to prove my faith by my work. It did not seem any time before the finger was free. This happened between four and five o'clock in the afternoon; at six, when my husband came home, in telling him of the demonstration I showed him the finger, but we could find no mark or discoloration or soreness at all.

Our blessings have been many. The privileges which we have enjoyed in our home, especially these last two years, have all come through the study of Christian Science. By reading the Bible, together with "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have learned that sickness, sin, and death are unreal, and that Life is God, good, harmonious and eternal. Quite recently a splinter got into my arm above the wrist. There were many temptations to employ material assistance, but reliance on Truth met the need. On one occasion, the cover of the ice-box fell down with its full weight upon my hand, but there was no pain, and no discoloration. This again proved to me our God-given dominion. Many problems have thus been solved since I became interested in Christian Science. Dental work has been done, which before coming into Science I had let go on account of fear; but this was destroyed by the truth. It is now five years since I became interested in this teaching, and during this time my only physician has been and is divine Truth.

In submitting this testimony I thank God for the patience and love which our Leader exemplified in making so clear to us the word as taught by Jesus for the good of all mankind.

LILLIAN M. KNAPP, Michigan City, Ind.

✧

[Translated from the German]

I gratefully testify herewith to the rich blessings which I have received through Christian Science. For years I had been afflicted with hemorrhages from an ulcerated stomach, and with neuralgia. The lightest kind of food disagreed with me, and there was little hope of improvement. In my need I heard of Christian Science, and although the subject seemed quite incomprehensible to me at first, yet it contained a definite promise, and I therefore decided to attend the meetings and services in order that I might gain a clearer idea of these teachings. Next I applied to a Christian Science practitioner, who declared herself ready to help me. It was lovingly explained to me that God is man's life, that there is no power apart from Him, hence that all evil is unreal. A change took place in my condition, and in a short time I had so far recovered that I could partake of all kinds of food without experiencing any discomfort.

I was very happy and grateful for the help received, but the memory of my former sufferings had so impressed itself upon my mind that I entertained a sense of fear lest there might be a relapse. This mental state finally did result in a severe manifestation of the former trouble. I had to ask again for help, but the practitioner immediately discerned the trouble, and this time the fear was destroyed along with all symptoms of disease through the power of divine Truth. This wonderful healing and all the good which I have experienced since have made Christian Science very dear to me. I feel convinced that divine Love will continue to be my help, guide, and instructor in gaining a better and clearer understanding of Christian Science.

For all these blessings I am deeply thankful to God, and grateful for having been led by His goodness into the right way. I also lovingly remember Mrs. Eddy, our revered Leader, through whose work it has become possible for us to know the truth. My family shares my gratitude, and we are endeavoring to draw more and more from the fount of life, that we may fully recognize that God is Truth, Spirit, and Love.—HERMANN HELMS, Schwerin i.M., Germany.

✧

While I was a student at college, I withdrew from the church in which I had been brought up. Tormented by theological questions, and wholly unsatisfied because of the impossibility of obtaining any answer to my inquiries, I found it difficult to keep an easy conscience in the association with my fellow church workers. The philosophy of the professors promised much more than the theology of the pastors. Gradually my childhood love of nature seemed to fill the place of religious faith, as in nature I saw God, a power and presence ever working. But the most wonderful part of the unfolding of this time was the way in which I was led gradually to see the life of Jesus in a new light, and it came to me that some day I should know what his birth, his resurrection, and his ascension meant. Christian Science has revealed this to me, and given what those years had so surely foreshadowed. It has been a demonstration of the revelation of Truth which is all-satisfying. All that I love in nature is here, as full and lovely as ever, but I do not depend so much upon it, nor do I walk miles to secure quiet and rest of thought. More and more the ideal of "stationary power, stillness, and strength" (Retrospection and Introspection, p. 93) is present with me.

To have a church home is a wonderful blessing. The time had come, after that period of cleansing, when I would go to church for the comfort of hearing God spoken of and for the tender message of the hymns; but that was merely spasmodic. Now to be able to give one's self freely and fully to the service of the church, to receive its blessings, to rejoice in its oneness, lifts all one's endeavors to a higher place. I used to think religion was for the soul only, so that when Christian Science proved that it has healing for physical ills, I began to understand more clearly what we are and what we are not. I struggled for years with catarrh, bowel trouble, and eyestrain of the eyes; but the trouble lessens, and I know it will finally disappear when harmony is seen in its place. In re-

Digitized by Google

gard to the eyes, it came to me that there is perfect adjustment in Mind. Once the glasses were resumed with a sense of relief, then laid off again, and finally.

Science does not stop short of complete regeneration. Every fault of character, every blemish, has to be cleansed. Hard experience has taught me that self-will has to be given up, temperament corrected. Nor can we stop half-way at any diversion, subterfuge, or palliative. We must yield ourselves to the divine Mind if we would receive the blessing. When we have yielded, the blessing is inevitable.

The Christian Science literature so abundantly provided fills my needs. One becomes involuntarily more discriminating in his choice of reading when in Science he realizes the imperative demand for pure thinking. So one cannot afford to read that which would defile. The daily study of the Lesson-Sermon hallows the morning and strengthens us for the day.

It is impossible to describe the whole debt I owe to Christian Science; it can only be acknowledged. This teaching presents to us "infinite tasks" (Science and Health, p. 323), but it gives also the Principle by which to work them, for they mean our salvation. My appreciation of Mrs. Eddy's life and work becomes greater as I strive for deeper understanding of what they have brought to us.

MARGARET TROILI CAMPBELL, Los Angeles, Cal.

✧

About three years ago Science and Health was loaned to me by a very dear friend, who handed it to me on a Saturday with the remark that she could spare it until Monday. This gave me the impression that she prized the book very highly, as I had no book, not even the Bible, which I would not loan for thirty days at least. However, I took the book home, and my wife perused it sufficiently to be desirous of obtaining a copy from the public library, and this she accordingly did. Shortly afterward, when she had an attack of backache, to which she had been subject for years, she said she would like to try Christian Science if I would go with her to a practitioner. I considered myself very indulgent when I consented to do so, and as we neared the building I viewed askance every one I met, wondering if any one might perchance know where we were going. The practitioner was out and my wife was disappointed, but I saw on the next door the name of another practitioner, so I said, "Let us try this one; they are all alike." After a short chat the practitioner picked up a much used copy of Science and Health and read these beautiful words on page 6: "'God is Love.' More than this we cannot ask, higher we cannot look, farther we cannot go." Somehow there was a gentle cadence in the reader's voice which made the words sound truly appealing, and I know now it was because she understood what she was reading.

Shortly afterward I was asked to step into the outer room while my wife received treatment. She realized instant relief, and from that time we have had innumerable blessings. After having worn glasses for seventeen years and being unable to do needlework or read very long at one time, a single treatment adjusted the trouble, although my wife had been advised by one of the most prominent eye specialists in the United States to have an operation. Her physical condition has improved in every way.

I had always had the best of physical health, but I soon began to take inventory of my habits and modes of thinking. I had been an inveterate smoker for over twenty years, and I told my wife that I should like to quit the habit. She said nothing, but went to work to see if she could make of herself a channel to bring relief to me, with the result that I was healed of the habit in a week. This meant much to both of us, and soon a red-letter day came in our journey from sense to Soul. We packed all our drugs in a basket, and I took it to a vacant lot and there disposed of its contents.

Since that time divine Principle has been our liberator from every discord, physical and otherwise. One by one the shackles are loosening and dropping off, and our horizon broadens as we journey Spiritward. Mrs. Eddy's unbounded love for mankind prompted her to study years to give to the world a guiding star, "Science and Health with Key to the Scriptures," which as an interpretation of the spiritual meaning of the Scriptures has become a prime factor in transforming the world from discord to harmony. Her effacement of personal opinion and her exposition of truth in the absolute are sublime facts that inspiration alone could make manifest.—THOMAS C. PULLEN, Portland, Ore.

✧

[Translated from the German]

This testimony is given with a grateful heart. In the latter part of March, 1915, I was suddenly taken ill. Being in the public service, I had to be examined by the confidential physician, who found a serious case of jaundice, swelling of the liver, and gall-stones. I did not, however, take the medicine prescribed, but applied for help to a Christian Science practitioner. My healing was slow, for there was many a fault which the practitioner lovingly and patiently pointed out and which had to be eradicated. I willingly submitted to this task, and today am enjoying excellent health. For this I am most deeply thankful to God, and grateful indeed to our beloved Leader, Mrs. Eddy.

OLGA MÜLLER, Charlottenburg-Berlin, Germany.

✧

My attention was called to Christian Science through the healing of a friend. Experiences for several years previous to this time had made me dissatisfied with my knowledge of God. I felt there was much more joy and satisfaction for us, if we only knew how to come into possession of it. This case of healing awakened a hope within me that it was possible in this world to gain something higher in Christianity than we had yet known.

I procured a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy and began the study of it. I read much which I was not then able to understand, but the small proofs I was enabled to make encouraged me to press on in my search for Truth. In the next year after I began the study of Christian Science, twin boys came to our home. I had absent treatment for two weeks previous to their birth, and thankfully testify that the experiences of that time were absolutely free from pain or discord of any kind. This grand proof of the power of Truth over so-called material law gave me much joy, and I determined to make my life an expression of thankfulness to God for this truth which our dear Leader has labored so wisely and unselfishly to reveal to us.

Within the past year members of our family have been freed from the law of contagion with small-pox, measles, and mumps. We are blessed indeed with daily benefits, and with the constant store of good things in our literature, for all of which our love and gratitude increases.

LILLIE M. BARTLETT, Iola, Kan.

✧

I have so much for which to be grateful to Christian Science that I will no longer delay giving my testimony. Always delicate as a girl and young woman, it was not until I was forced to turn to Christian Science, because the doctors said they could do nothing more for me, that I was healed of asthma in a very severe form, rheumatism from which I had

Digitized by Google

been helpless for weeks at a time, a throat trouble which came regularly every winter, chronic bowel disorder, and a tendency to coughs and colds. I have had only one slight attack of asthma since my healing, and that was quickly overcome. Christian Science has been my only help in every need.

On one occasion my daughter, not quite two years old, pierced her tongue with a wire spring on a spinning-top. It is a spiral wire, turning until it gets to a point, when it turns back. I heard her crying, and went outdoors, striving to know that she was God's child, and that there are no accidents in divine Mind; but when I saw this wire right through her tongue I was frightened, as there seemed no way to remove it except by tearing a piece of the flesh with it. Then I found myself saying aloud, "All is infinite Mind and its infinite manifestation" (Science and Health, p. 468), and the top came away into my hand. It was to me a proof of God's loving care for His little one. After I had washed her face and changed her dress she wanted to play again, and there was no soreness or any indication of the accident.

God has been my only physician for a number of years, and I am very grateful to our Leader, Mrs. Eddy, who has made it possible for me to gain this understanding of God as an ever present help.—ADELE L. BARUCH, Glendale, Cal.

✧

For many years I suffered from kidney trouble, and a relative told me to ask a Christian Science practitioner for help. I did so at once and was healed in one treatment. I can truly say that the power of God does heal, save, protect, and defend here and now. I have had many proofs of this in the overcoming of discordant conditions through the reading of Science and Health. I wish to express my thankfulness to God, and my gratitude to our beloved Leader, Mrs. Eddy.—FLORA KUTTNER, Chicago, Ill.

✧

It is with love and thankfulness to God, and gratitude to our dear Leader, Mrs. Eddy, that I write this testimony. After being an invalid for eight years and after having been given up by at least a dozen physicians and specialists, Christian Science was recommended to me, and through the patient, faithful work of a practitioner I was healed. The healing seemed a little slow at first, but one symptom after another disappeared, until now I am perfectly well. My husband also was healed of a serious eye disease in a short time through Christian Science treatment. This trouble appeared every year before Science was applied, but since the healing, about five years ago, there has not been a trace of it, and he is very grateful.—MRS. L. J. DORSCH, Milwaukee, Wis.

✧

I am very thankful that several years ago I became interested in Christian Science. While visiting in London I had the pleasure of reading Science and Health for the first time. I attended the church services and thought them most impressive, also met several people who told me they had been healed in Christian Science. Some time after returning home I was afflicted with varicose veins and suffered for about six months. Then a friend came to stay with me and brought Science and Health with her. Again I read and studied the book, and tried to put the truth into practice to the best of my understanding, with the result that in two weeks the trouble had entirely disappeared, and I have had no return of it.

This was my first experience of healing in Christian Science, and since that time I have not used any material remedies. Afterward I met with an accident, giving my back a severe strain. This for a time caused much pain, but with the loving help of a practitioner it was quickly overcome. Then in December, 1913, my foot was slightly hurt and a piece of skin rubbed off. I did not take any notice of this until the foot became much swollen and inflamed, with every appearance of blood-poisoning. As I seemed unable to overcome the trouble and relief was urgent, I again asked for help from the practitioner, and the healing was soon complete.

My gratitude is sincere for all the blessings I have received in Christian Science, and I hope I am gaining each day a better understanding of God, who healeth all our diseases. I am also very grateful to Mrs. Eddy for the great spiritual help contained in Science and Health, which unfolds and makes manifest even the truth of the Christ-healing.

ROSETTA LAWRENCE, Harpole, Northampton, England.

✧

About three and a half years ago my son was afflicted with rheumatism of the heart and a complication of diseases. Medical aid proved of no avail. Then Christian Science was brought to my notice by a lady who was not a member of the Christian Science church, but who had been greatly benefited by the truth it taught. She loaned me the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. My son read it and was healed. My wife, my younger son, and myself have all been cured of ailments of years' standing, among them rupture and abnormal growths.

I preached what I thought was the gospel for twenty-four years, but all that time was conscious of a barrenness that could not be explained. In my missionary work in the South I often felt for the afflicted people I was called upon to visit. I could simply pray for them, and my prayer was not one of understanding. Now, even my slight understanding of Christian Science is of immeasurable value. I am in better condition than ever in my experience. The rupture, which was of about thirty years' standing, has been permanently overcome. I have gained much in weight and can run like an athlete, where before I could not even walk more than a few blocks without pain, and many times I was compelled to sit down.—C. W. HAWKINS, Philadelphia, Pa.

✧

When Christian Science found me, I was a depressed and depressing invalid, spending my time largely in bed or on the couch, and leading a life of mental and physical suffering. I know now that resentment within myself not only caused a large part of my illness, but also unfitted me to cope with the problems at hand. In the terrible mental depression in which I then lived the thought of death as "surcease from sorrow" often appealed to me almost attractively, for life seemed to have become only a mockery. Several good physicians advised an operation, saying that I would never be a well woman without one. Change of scene did some good, and osteopathy seemed to help for a time, the latter being undertaken especially for a supposed curvature of the spine and sciatic rheumatism. At this time also stomach disorder developed, so that all food distressed me. As I look back upon those years of invalidism, I can see what heavy burdens my thoughts of self laid upon the dear ones who worked so hard to help me into health and happiness, and certainly my life was as much a burden to those around me as to myself.

Even the casual thought or mention of those years now is followed immediately and eagerly with the thought, deep with thankfulness and gratitude, of the "cup of cold water" that was finally offered to me, almost in fear and trembling, by a dear friend. This friend was an osteopathic physician who had labored long and earnestly to restore me to health, and

Digitized by Google

who was loving enough to see finally that "a sick body is evolved from sick thoughts" (Science and Health, p. 260). I believed then, as do many people before investigating it, that Christian Science was something a little bit "queer," and felt the necessity for apologizing to my friends for becoming interested in it. Also, my mental attitude was one of condescension.

However, by the time I had taken a few treatments and had read even a little in Science and Health my attitude changed. I well remember gleaning through the pages of the book, during those few days, for sentences or parts of sentences whose meaning I could grasp, and I realized that there had come into my life what I could express then only in the rather crude words, "the discovery of a gold mine." This feeling of the rich store that Christian Science is, its unlimited joy and love and peace and abundance, has never left me, though my steps at first seemed slow and my healing gradual; but during the ten years that I have endeavored to follow Truth's guidance I have experienced some heavy sorrows and have had many difficult problems to meet. Through its teachings I am learning to trust God entirely, to take every problem to divine Love. Daily and hourly I am thankful to God for the one law of good which surrounds and supports us, and it is my endeavor to make my life express the gratitude I feel.

For the help that Christian Science has been in the home, and for its guidance, for the happiness and well-being of my three children, I am deeply thankful. It quickly overcomes any sickness or inharmony that may arise, and it is very unusual for a member of our family to be absent from work or school on account of indisposition of any sort.

Aurilla H. Allyn, Western Springs, Ill.

✧

Gratitude for what Christian Science has done for my family as well as for myself during the past eight years prompts me to send this testimony. For twenty years I suffered from a skin eruption in its severest form. When I turned to Christian Science for treatment, the condition of my hands was such that I had not for years been able to open them fully; and to put them into warm water and to do my housework caused constant and severe suffering. All of this has been changed through the loving ministry of Christian Science, and for the last four years my hands have not only been supple but smooth and soft, and I can work without suffering. Words fail to express my thankfulness to God for this deliverance.

I could tell of many healings in our family of seven, and of the help Christian Science has been in time of trouble, but the fact that we have found the right road and the way to work out our salvation is the greatest of all. When we first heard of Christian Science and had bought the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, my husband asked me not to read it until he first saw if it was all right. On the third day of his reading he found he was healed of a difficulty from which he had suffered for years and for which he wore a medical appliance all the time. After this I began the study of the book and found a happiness never before experienced.

Georgina King, Ottawa, Canada.

✧ ✧ ✧

There is not in a wide and sorrowing earth
Enough of dark
To dim the sunshine or the tender worth
Of love's least spark.

Laura Gerahty.

From Our Exchanges

[*The Christian Register*]

The finest office of the Christmas spirit would be to make us celebrate it so earnestly and generously that one day will not hold its observance. The year ought to be different for having had a Christmas before it. It ought not to be a day alone, but a year and a day. That is the really consistent Christmas, whose irrepressible spirit does not die at birth. How one has observed Christmas let succeeding months show. It can be the light of a life as well as the glow of a season. The atmosphere of friendliness may get so inbreathed that one will exhale friendliness everywhere. It would be no small mission to see that expressions of kindness were atomized into the most ordinary relations of life, particularly those of service, in which so many are held at arms' length from us. The fee of feeling happier for having served us, is the right of every one who meets our need. The gift not of condescension, but of the giver with the gift, is the prime and universal opportunity. Such a spirit makes Christmas perennial and perpetual.

[*Northwestern Christian Advocate*]

It is well to remember that the pentecostal gift was not a new thing in the world; it was really the renewal of an old-time privilege. Some people argue as if the spirit of God began its active career among men only in connection with the prayer-meeting in Jerusalem, at the beginning of our so-called Christian era. Nothing could be more mistaken or misleading. The spirit is not given by measure that way. From the day of creation down, God's spirit has been brooding over the universe as the informing and directing power through which the sons of men were to become the sons of God.

It was in the power of this spirit that Enoch "walked with God," that Noah became "a preacher of righteousness," that Abram went out from the ancestral home to seek a city whose builder and maker was God, that Moses "endured, as seeing him who is invisible," that Jesus became the captain of our salvation, that Paul fought the fight and kept the faith. . . . It is in this spirit that the sure hope of this world's redemption lies, and it is for a church quick with the power of this spirit that the world waits. Always the spirit of God has been in the world; always it is that God waits to make His people rich and powerful in the possession of His spirit; always it is the privilege of united and steadfast prayer to make the resources of the spirit available; and always it is the church, glorious in the power of the spirit, which will move upon the world to bring order out of confusion and to bring light into the darkness.

[*The Universalist Leader*]

To know that our conduct fulfils the divine purpose, that our pulses beat in rhythmic unison with the eternal heart, that in so far as the infinite can find expression in the finite we and God are one,—this is to know the purest and most abiding happiness which life can offer. Such happiness is felt by every one who hears, in his sense of having done what duty required, not merely the approval of his own conscience, but a higher voice saying to him as it said to Jesus, "Thou art my beloved Son, in whom I am well pleased."

[*The Christian Intelligencer*]

One of the great defects of the age is its lack of earnest and honest thought. As some keen observer has remarked, "All men talk and act, few men think;" and it is because of this lack of thought that so much of our speech is foolish or evil

Digitized by Google

and so many of our actions fruitless or unwise. We owe it therefore to ourselves and to others that our thoughts should be right and true, sweet and pure, and able to produce right actions.

[*Unitarian Word and Work*]

Supposing we could incarnate the Christmas salutation for the coming year, so that the main business of our living would be to create the feeling wherever we went that is expressed in the words, "Fear not: for, behold, I bring you good tidings of great joy," what an increase of life would flow all along the channels of our influence! We would not have to define religion, we would not need to state our beliefs, we would never think of denying or defending the positions of orthodoxy. More abundant life would flow into and through human minds and hearts, and a kind of spiritual good cheer would radiate so persistently that religion could be taken for granted, as Jesus took it. Christmas would then be not only for a single day, it would be a living presence all the year round.

[John Reid Shannon, S.T.D., Ph.D., in *Zion's Herald*]

As the mountain stands alone with the sky and the stars, so Jesus the Christ stands isolated in his supremacy because of his spirit. He is vastly more than anything he says, vastly more than anything he does. The richest possession of the world is what Jesus is in spirit. True, patient, tender, sympathetic, loving, godlike in the midst of every-day human experiences, he illustrates the possibility of such a life in the midst of the commonest conditions. Christ's spirit is an incarnation of Christianity. It shines forth like the sun. It is the moral inspiration of the ages. It is the glory of Christendom.

[*Western Christian Advocate*]

Before it can be honestly alleged that "Christianity is a failure," it would be better to inquire whether, as it was set forth in the Sermon on the Mount and in the parables and direct instructions of Jesus, it had ever been thoroughly adopted on the large scale as a program in entirety. It may be that the organized church of Christ on earth has made attempts, with some comparative success, to embody these magnificent ideals in its practice, but with humility it must acknowledge that in its corporate life it has fallen far short of complete realization. Nevertheless, better the straining after such lofty attainments, though failure mark the effort, than supineness and no struggle at all.

[*The Congregationalist and Christian World*]

Love is the greatest force in the world, and love for God and among men is the very heart of the life and the gospel of Christ. In spite of all signs to the contrary, the spirit of love is increasing among men. A study of the history of the Christian centuries proves, by its contrasts between the past and the present, that the leaven of Christ's spirit is working in the meal of human society. It works slowly indeed, even as Christ forewarned his followers, but it works steadily. The kingdom of peace on earth is a goal set before us, and a goal which, with faltering steps and slow, mankind is approaching. The follower of Christ must never doubt, nor lose sight of the goal.

[*The Standard*]

The experience of being filled with the Holy Spirit was not confined to the day of Pentecost. We read throughout the first chapters of the Acts of the Apostles how the people were filled again and again with the Holy Spirit, and in the epistles of Paul we find him commanding his converts to be filled with the spirit. Therefore we conclude that this rich experience is for all Christians for all time.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new pamphlet entitled "Man's Unity with God" has been printed in the German language. This pamphlet contains seven articles from the Christian Science periodicals, which have been translated into German. The pamphlet is now on sale at the prices of our regular pamphlets, as shown on the opposite page.

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

A new pamphlet, "What went ye out for to see?" is now on sale. This pamphlet contains the four following articles from the Christian Science periodicals: "Principle Not Person"; "Jesus of Nazareth"; "Jesus the Christ"; and "Jesus and the Christ."

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church.—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 350, falsified Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 350, falsified Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1918.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under those titles in this price list.*

Items of Interest

The exports of oil-seeds from India in the year ended March 31, 1915, amounted to 953,900 tons, valued at £9,750,000, as against 1,582,000 tons, valued at over £17,000,000, in 1913-14. In normal years about 95 per cent of the exports goes to the countries at present involved in hostilities. Noticeable decreases occurred in the quantity and value of the exports of rape-seed, groundnuts, and sesamum. India has seen a great increase in recent years in the number of oil-mills worked by steam or other mechanical power. These crush all the more common oil-seeds, and this development has been especially noticeable in the case of mustard-oil and groundnut-oil. Mustard-oil manufacture is a flourishing industry in Bengal; there are several cocoanut-oil mills on the Malabar coast and in Cochin, and groundnut-oil mills in Bombay. Some of the larger mills deal with a great variety of seeds.

The board of engineers of flood control appointed by the supervisors of Los Angeles County, Cal., following the floods of 1914, has just rendered its report. Among the measures proposed as a part of the remedial program are these: conservation of storm waters through reforestation and retarding work in the mountains; spreading of storm waters on the gravel deposits at the mouths of cañons; acquisition of official channels for the principal streams on the lower levels and the permanent rectification and protection of these channels; diversion of the Los Angeles and San Gabriel Rivers from the Los Angeles and Long Beach harbors to Alamitos Bay.

Russia has just opened for traffic the first line in her new double-tracked railroad from Petrograd to the Arctic Ocean. The section completed is 530 miles long, from the capital to Soroka on the White Sea. It will relieve and expedite the traffic now centered at Archangel when that port is open. Ordinarily it is closed by ice from October to May. This line will give Russia a port on the Arctic which is open the year round, due to the fact that the Gulf Stream pursues its course as far as the Arctic waters to the north of Ekaterina, and its backwashes touch the Lapland and Murman coasts. They prevent the formation of more than a thin film of ice over the harbor of Ekaterina, which is 400 miles nearer the Atlantic than Archangel. The road has been built through difficult country,—a land of morass and swamp. Ekaterina has a sheltered anchorage, where the waters are nearly always calm, even when the Arctic storms are raging. The water is from sixty to ninety feet deep.

The Marseilles-Rhone Canal, a great engineering work that has been under way for some time, is now nearly completed. The four and a half mile tunnel through which the canal will flow, penetrating the Rove Mountains, is nearly finished. The work was begun six years ago and the war has not been permitted to interfere with the enterprise. The width of the canal through the tunnel is seventy-two feet and the depth of the water fifteen feet eleven inches, permitting small Mediterranean steamers to enter the Rhone and even admitting sea traffic to go as far up the river as Lyons. The canal, which is just short of fifty miles in length, cost about $18,000,000, of which $7,000,000 was borne by the French Government and the remainder by the city of Marseilles and the department of Bouches-du-Rhone.

Upward of six hundred miles of levees for the reclamation of agricultural lands alone have been built in the Sacramento Valley of California in the work of reclaiming over four hundred thousand acres of the million or more of fertile overflow lands in this section. Approximately 300,000 acres more are included in contemplated reclamation work. The levees now in existence have cost the state approximately $25,000,000. War department engineers estimate this reclaimed land as worth from two hundred to three hundred dollars an acre, so there is every reason to believe that the expenditure for reclamation work has been justified.

The Government of South Australia has a project in view for a connection of the Morgan to Wentworth line with Hay. This line is laid with the object of linking up the irrigated tracts of Coldoglia and Ral-Ral, and to afford access to the farming areas north of the river. The connection of the line with Hay will involve larger scope for trading facilities between Riverina and Port Adelaide. The interstate railway commissioners report states that a railway extending from Hay by way of Wentworth and Terowie to Port Augusta, would provide an almost direct through inland line on a standard gage between Sydney and Kalgoorlie.

The beet-sugar industry has come to be one of the important industries in California, producing an annual revenue of more than $16,000,000. More than one hundred thousand acres of land is devoted to the raising of sugar beets, and ten great factories have been built for the purpose of converting the beets into the sugar which finds it way into the markets of the world. A total of $15,750,000 was derived from the marketing of the state's output last year. In addition to this, a considerable revenue, almost $700,000, was realized through the sale of beet pulp used for feeding dairy and other stock.

By a decision of the supreme court of Pennsylvania, just handed down, the title to forty acres given to the University of Pennsylvania by the city of Philadelphia has been confirmed. The university is obliged to maintain seventy-five city scholarships and to pay a nominal annual ground rent. The land secured joins the present boundary on the south. By the added land the university now occupies 117 acres of land practically in the center of the city, as it is only ten minutes to City Hall. Upon this land are seventy buildings, and in addition there are forty club and fraternity houses surrounding it.

The United States federal district court at Cincinnati, Ohio, has entered a decree, with the consent of the National Cash Register Company, finding that the company and its officers "had violated the federal anti-trust act by combining to restrain and attempting to monopolize interstate trade and commerce in cash registers." The criminal proceedings will be dropped. The decree sets forth the means employed by the company to achieve its object and specifically forbids the use of any of these means in the future.

"You think of Bolivia as a little country," says a writer in *World Outlook*. "It is as big as Germany, Austria, and England. Peru is as large as all the United States from Nova Scotia to Indiana, from Canada south to the Gulf of Mexico. Argentina equals all the United States west of Omaha. Brazil is a United States with another Texas added. The resources of that vast area are in keeping with the bigness of the continent."

Lloyd's register returns indicate that there were under construction in the United Kingdom at the end of 1915, excluding warships, 420 vessels of 1,363,590 tons gross. The tonnage is about 264,000 tons less than that which was building at the end of 1914. All vessels below 100 tons are excluded from the returns. During the past quarter work was started on seventy steamers of 83,656 tons, and seventy steamers of 93,621 tons were launched.

The Chinese ministry of agriculture and commerce has done much to encourage fisheries. On April 28, 1914, regulations to promote the fishing industry on the high seas were issued. A sum of $50,000 was set aside in that year, and this has been made an annual appropriation.

President Porras formally opened the Panama national exposition Sunday afternoon, Feb. 6. It includes many United States Government exhibits brought from the San Francisco exposition. The exposition will continue 100 days.

Officials of the New York Fur Auction Sales Corporation, buyers, and all others interested in the first fur auction held in that city, pronounce the recent sale an unqualified success. The million dollar mark in sales was eclipsed by $100,000.

The appointment of a committee to return the visit of Central Americans who attended the recent Pan-American Financial Conference has been made by Secretary McAdoo. Other committees will be named to go to South American countries.

The Board of Trade of England have placed an embargo on the export of logwood from Jamaica to the United States, in view of the difficulty experienced in obtaining supplies of logwood for the aniline dye industry of their own country.

The Irish flax crop for 1915 is estimated at 1,516,267 stones, an increase of nearly a quarter of a million stones over 1914, while the area showed an increase of 3890 acres.

The total mineral output of Alaska for 1915 is estimated at $32,000,000, compared with $19,064,963 for 1914.

The value of the 1915 milk production of the United States is estimated at $2,320,000,000.

A New Enrichment

REV. WILLIAM P. MC KENZIE

For a long time earnest students of Christian Science have gathered from Science and Health the coherent teaching of Mrs. Eddy on practical topics by the use of its full concordance, and from her other published works by means of partial indexes. The recent appearance of a complete concordance to these other writings is therefore a special occasion for gratitude and rejoicing, in that it renders the entire field of her published thought accessible to every one without the expenditure of much time or extended labor.

Mrs. Eddy's teaching, as contained in her books, we conceive to be the pure spring of living water for this age, for it draws from the eternal fountains revealed in days of old by prophets and seers and messengers of God, and offers its blessing universally. The apostle Peter, using the figure of light, speaks of prophecy as thus unfolding its blessing: "Whereunto ye do well that ye take heed, as unto a light that shineth in a dark place, until the day dawn, and the day star arise in your hearts." He declares that the message of Scripture is not of private interpretation, indicating that it is not sectarian or divisive, but scientific and universal, and he goes on to say, "No prophecy ever came by the will of man: but men spake from God, being moved by the Holy Ghost." Thus the Revised Version clarifies an often quoted passage. These utterances of "holy men of God" in the past have, through the interpretation and demonstration of Christian Science, become present inspiration.

The consummation of prophecy, the interpretation of mystery, was found in the acts of Christ Jesus; yet he taught his disciples so to labor that their acts were acts of healing. Mrs. Eddy shows the universality of this teaching when she says, "Jesus gave his disciples (students) power over all manner of diseases; and the Bible was written in order that all peoples, in all ages, should have the same opportunity to become students of the Christ, Truth, and thus become God-endued with power (knowledge of divine law) and with 'signs following'" (The First Church of Christ, Scientist, and Miscellany, p. 190). Science and Health unfolds this opportunity because it has proved to be a "Key to the Scriptures" by opening the treasure-house that the doors of the past had shut off from men of today. And now indeed we have guidance additional, since in these other writings of Mrs. Eddy there are three hundred and sixty-five references in clarification of the Old Testament, and a thousand and thirty-one in exposition of the New.

When the Japanese made their expedition into Manchuria, a great deal was made of the care that was taken to provide the soldiers with pure water. It was recognized that the rain-water which had swept down hillsides and collected in standing pools had gathered surface impurities, hence required filtration and separation from these ere it was fit for drinking; whereas the springs of water pushing up through sand-beds or porous rock were thus naturally cleansed. Care was taken to guide every soldier in the way of receiving only what might be called his natural right to pure water. If such care has recognized value, how much more important is it that the mind should be given that which is pure, and thus saved from the painful elimination of what is unwise, unwholesome, unclean, uninspiring.

It might be well to recall a dictionary definition of Christian Science, showing how it is identified. In the Standard dictionary it is defined as "a system of moral and religious instruction, founded upon principles formulated by Rev. Mary Baker Eddy, and combined with a method of treating diseases mentally. As presented in Mrs. Eddy's Science and Health, 'Christian Science is based on teachings of Scripture which it interprets, giving the Christ-principle and rule in divine metaphysics which heals the sick and sinner. It explains all cause and effect as mental, and shows the scientific relation of man to God.'"

"The natural fruits of Christian Science Mind-healing are harmony, brotherly love, spiritual growth and activity," Mrs. Eddy says, and she continues: "The malicious aim of perverted mind-power, or animal magnetism, is to paralyze good and give activity to evil. It starts factions and engenders envy and hatred." She also says, "The spirit of Truth is the lever which elevates mankind" (The First Church of Christ, Scientist, and Miscellany, pp. 213, 130). If a bearer carrying the precious spring-water provided for the thirsty lips of the wounded should spill it on the ground, then gather up the defiled liquid and offer the same for drink to the undiscerning, would he be the real helper? Is not the honorable one he who brings fresh water, clear and clean, to satisfy humanity's thirst? This the Discoverer and Founder of Christian Science has done through her writings, and just so soon as students discern their own free access to the unadulterated Christ-teaching, they will naturally turn from stagnant traditions and false metaphysics and drink of the living spring.

Christian Science practice has this outstanding distinction: that healing is its *raison d'être*. Healing is the motive uplifting the worker, healing is his reward, healing is the proof that it is a divine method. The theory of false systems is to greaten one person at the expense of another, to subdue the other and make him tributary. It is "the will to power," and respecting it Mrs. Eddy with clear, ringing certainty has said: "This is not Science. *Per contra*, it is the mortal mind sense—mental healing on a material basis—hurling its so-called healing at random, filling with hate its deluded victims, or resting in silly peace upon the laurels of headlong human will" (Miscellaneous Writings, p. 254).

The reestablishment of the Christ-teaching, adversative to that of the world, took place not without cost. Arrogance, cruelty, lust, self-will, subtlety, envy, hypocrisy, pride, and fear are the crowned heads of the world kingdom. Patience, kindness, purity, obedience, honesty, generosity, sincerity, humility, and love are characteristics of those who seek first "the kingdom of God, and his righteousness," and these were the characteristics of the Leader of this movement. What she recommends in her writings she first proved. Chancer

pictures this ideal in describing his parson, whose noble example was "that first he wroghte, and afterward he taughte." The description ends:—

He wayted after no pompe and reverence,
Ne maked him a spyced conscience,
But Cristes lore, and his apostles twelve,
He taughte, but first he folwed it him-selve.

Goldsmith in "The Deserted Village" depicts the universal friendliness of the village preacher, how

He watched and wept, he prayed and felt for all.
And as a bird each fond endearment tries
To tempt its new-fledged offspring to the skies,
He tried each art, reproved each dull delay,
Allured to brighter worlds, and led the way.

Hardly could there be a better description of the tender influence in these writings of which we have been speaking. But ages may pass before poets will understand enough to do full and complete justice to the life and example of Mrs. Eddy, because mankind must win a due appreciation of her teachings by themselves proving them true.

Spirit's Silent Activities

LUCY HAYS REYNOLDS

Amid the mountain heights stillness reigns supreme. With the coming of the evening hour the calm of Spirit seems to brood over all. An occasional call of a bird, the babble of running water, or the low rustle of leaves are the only sounds that are heard. Yet everywhere there is activity, from the mountain brook at one's feet to the great celestial bodies above that move through space at an almost incalculable speed. In the harmony of this silent action earth's turbulent noises are forgotten, and intuitively thought turns Godward. Pondering these beauties of nature and their silent activities, we discern through them, even if but dimly, the true universe, the activities of Mind.

"Mind revolves on a spiritual axis," Mrs. Eddy writes, "and its power is displayed and its presence felt in eternal stillness and immovable Love" (Retrospection and Introspection, p. 88). In the hush of divine might creation was brought forth; in the silence of Soul the rotations and revolutions of the universe operate with unlabored energy. No harsh noises, no friction, no explosive activities of mortal law pertain to the operations of Spirit.

As spiritual thought-forces are perceived and understood they become operative in human consciousness, unfolding through reason and revelation the eternal verities of being. Silently they correct false beliefs with spiritual facts, and cause human concepts to give place to divine ideas. As this spiritual activity goes on in human thought, lives are quietly transformed and the sick are healed. Thus spiritual being is never characterized by inertia or stagnation, but rather by that divine energy which authoritatively commands the false belief of inaction to stretch forth the withered hand that it may be made whole. Its power is displayed in the calming of the storm and in the walking on the waves. Through its operation material activity gives way to spiritual activity, even as in the lonely tomb, where false belief reported the torpor of death, there was going on the great work of our Master as he "set the seal of eternity on time" (Science and Health, p. 44).

Let him, then, who affirms that the Christian Scientist, because he sits in silence and administers no material remedies, does nothing for his patient, investigate the results of scientific "silence," and if honest with himself he too will come to behold its majesty and power. "This sounds very well," some one may say, "but how can mortals gain this higher consciousness while in the midst of the strife and confusion, the storm and earthquake of human experience?"

Christian Science declares that spiritual overcoming and peace can be experienced only through the realization in consciousness of spiritual law, and that there is never a time when this law is inoperative. It should be as natural for the metaphysician to apply this law under all conditions as for the tradesman in the rush and confusion of business hours to utilize the rules of computation. Many a time the Christian Science practitioner is called upon to prove the power of unspoken spiritual thought when all around is uproar and confusion. Before this power error subsides, and again the sweet words, "Peace, be still," bring about a Christly calm. Silencing the material senses, the Scientist gains communion with Spirit and listens to the inaudible word of God.

As one enters into the silence of spiritual consciousness the nature is transformed; impulse, emotion, and other temperamental abnormalities are healed. In silent wrestling with himself the earnest Christian Scientist fights against principalities and powers until, conquering, he gains a dominion which the world can neither give nor take. His words may be few, but they are wise and effective in contrast with the babble of idle and superficial chatter. "A silent, grand man or woman, healing sickness and destroying sin," Mrs. Eddy says, "builds that which reaches heaven" (The First Church of Christ, Scientist, and Miscellany, p. 194). Silence may indeed become golden, its blessings priceless. Within its sacred precincts wisdom, peace, and power are found, depth of purpose and stern resolutions are sustained, and true friendship is established and sanctified.

Christian Science has reduced spiritual experiences to human comprehension, and all who will may avail themselves of the silent power of Truth, until

Through the harsh noises of our day
A low sweet prelude finds its way

and the half hour's stillness that was once experienced in heaven is experienced on earth. Thus quickened and inspired through reason and revelation, glimpses of the real universe unfold, until "sun, moon, and stars forgot," we feel the presence of Mind, and experience "the solemn hush of being, newly born."

"I look to thee"

RICHARD ALFRED LAZIER

It was Christmas day, but never before had the significance of the day appeared so clear to me. About three o'clock that anticipated morning I awoke with a sense of acute pain. My first impulse was to try to relieve it by rubbing, but immediately the right thought came and I did not move. I lay still, trying to realize that there is no sensation in matter, and that "all is infinite Mind and its infinite manifestation, for God is All-in-all," as we read in the "scientific statement of being" (Science and Health, p. 468). Then there came to me, as they had done many times before, the words on page 208 of our Hymnal:—

I look to Thee in every need,
And never look in vain;
I feel Thy touch, eternal Love,
And all is well again:
The thought of Thee is mightier far
Than sin and pain and sorrow are.

and in a few minutes all sense of pain had disappeared, as it must always do when the truth is declared and realized.

Since beginning to study Christian Science some four years ago, I have had experiences which to mortal sense would probably appear much more wonderful than this; but to me

Digitized by Google

this was the most significant of all, for as the sense of pain vanished, the church bells began to ring and I realized that it was Christmas morning,—the anniversary of that day when Jesus the Christ appeared, to teach humanity the way of Truth. My heart was filled with gratitude that again the Christ-presence and power are with us, healing us from sickness, sorrow, and sin, even as in Jesus' time. This demonstration, coming in the early hours of Christmas day, seemed to me a bright promise of the time to come, when we shall be able to overcome all error, even as did our Master.

Prayer and Answer

DR. EDMUND F. BURTON

JESUS said, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." On page 1 of "Science and Health with Key to the Scriptures" Mrs. Eddy says, "Desire is prayer." To the thought untaught by Christian Science it appears that lack is a constant factor of desire; that that which is desired is not yet possessed; that possession extinguishes desire; that the two cannot coexist,—so that to this thought it seems impossible to be conscious of the possession of that which we desire. During the centuries since the above words of Jesus were uttered, many an honest seeker, lacking understanding of the true relation of answer to prayer, has despaired of being able to obey them. In place of this despair Christian Science brings exactly the opposite experience through its scientific and satisfying revelation that prayer is the unfoldment to experience of the blessings which we already possess, and that therefore the higher and more urgent our desires the greater our joy; that it is not humility which allows our prayers to be small or feeble in their demands, but self-limiting ignorance of both God and man.

Based on the fundamental truth that "all is infinite Mind and its infinite manifestation," and that "man is not material; he is spiritual" (Science and Health, p. 468), Christian Science teaches that all the realities which constitute harmonious life for man are present states of consciousness. Since no individual can step outside of his own consciousness, that which he desires necessarily already exists in his own consciousness, or it could not be perceived to be desirable. Desire indicates the conviction that that which is desired is good. The strength of this conviction measures both the fervency of the prayer and the experience of the benefit of its answer. We may be sure then that our prayer is being answered at the moment it is offered; in fact, that it is the perception of the answer which inspires the prayer; that the answer may be said to be within the prayer, it being not the creation or production of a new condition in response to petition or newly arisen need, but the unfolding in human consciousness of eternal truth. We are thus privileged to say with scientific certainty, as did Jesus, "I knew that thou hearest me always," having learned that the answer to every prayer is an eternal truth before the desire is felt.

To "pray without ceasing" is therefore to experience without ceasing higher and higher consciousness as thought unfolds to the reality of God, good, and we may have the happy knowledge that as our prayers increase in depth and fervency, become higher, holier, purer, they are not dreams of the unattainable, as mortal sense would tell us, but are the unfolding within us of the Christ-idea, the truth about God, growing into conscious immortality. All the good that we know how to pray for is already ours potentially, though not as yet in experience. God is ever present good, and when desire mounts to absolute conviction of good, there will be experienced the understanding of God which is eternal life.

Again, this teaching of Christian Science forestalls the discouragement which comes from a sense of an irremediably faulty self, for it shows to the one who is praying for a cleaner and higher human life his own innate purity, teaching him that every aspiration, however limited at first, is his individual consciousness of good; that it is both a reflection of God and an awakening to his own being, to the spiritual self that is man; that prayer is thus true self-assertion, man's true nature seeking expression.

Moreover, since God is All-in-all, prayer is a looking toward all good, and even though it be no more than a fleeting aspiration toward a dim something above one's present belief of experience, still that which is glimpsed is of God and is His godlike manifestation, and there is certain to come to the individual, through the clarifying effect of faithful prayer, far more than was asked for. So much does the answer often exceed the expectation as not to be recognized without the light of later knowledge. "Eye hath not seen . . . the things which God hath prepared for them that love him," and who perceive His goodness.

By way of crude illustration, suppose a traveler to be lost on his journey. He searches the landscape, and finally sees on the horizon a moving speck which proves to be a motor-car, by means of which he is rescued. At first even the outlines of the machine are indistinct. Although ignorant of its construction and knowing nothing of its various parts, yet from the moment that it appears to his sight he is really looking upon a demonstration of all the laws involved in its mechanism. Later he may become entirely familiar with the machine, and as this familiarity develops, the meaning and use of each part will unfold to his understanding as though newly created for him. Yet there will never be anything really added to that which was to him at first sight but a speck in the distance.

Desire colored by selfish beliefs involves disappointment, and good cannot accord with personal outlining. It is therefore not the part of wisdom to limit prayer to present thought, dim through lack of spiritual experience. Such limitation opens the way to doubt, and doubt obscures the perception of divine qualities, thereby postponing fuller experience of their blessings. Mrs. Eddy says, "No loss can occur from trusting God with our desires, that they may be molded and exalted" (Science and Health, p. 1); and escape from all danger of this sort is through obedience to the fundamental teaching that all prayer must include the "not my will, but thine, be done," which enabled Jesus finally to say, "I have overcome the world," and which is making Christian Science prayer effective in the healing of sin and sickness in the world today. Also the further teaching that evil has no knowable existence is in scientific harmony with the promise of Jesus that the pure in heart shall see God, and with his instruction to let the eye be single, since the conviction of the utter desirability of good which is ceaseless prayer is the purity and singleness of vision through which the whole consciousness is filled with the light of divine presence.

Moreover, through this perception of the unity of good there is given protection from the suggestion of lack of capacity to live up to the demands of the higher life aspired to. The knowledge which Christian Science brings us that the desired good is God manifest, leaves no room for fear that there can be any good thing lacking, and the good which reveals the presence of God must contain in itself that which enables the individual to utilize to its fullest extent all that can possibly come to him in answer to his highest desires. Whatever is needed in character or condition, be it courage, talent, skill, wisdom, freedom, strength of body or mind, friends, opportunity, all will be found comprised in the answer to his prayer.

Digitized by Google

One who has learned through Science and experience this true relation of aspiration to realization, and that both are stages of actual experience, is free from the limitation of blind faith in and trembling supplication to a God needing to be influenced to be good. Since with God all things are and always have been possible, all good is and always has been existent. He whose faith assures him of this truth is in a state of constant prayer; he is learning more and more thoroughly that all prayer has inevitably been answered from all eternity; he is ever actively receptive to greater good; he is bringing into consciousness day after day new phases of life; he is understanding and obeying divine Love; he is steadily progressing toward that knowledge of God which Jesus said is eternal life; in a word, he is demonstrating Christian Science.

"Human footsteps"

EMMA W. DIMOND

To the consciousness upon which Christian Science has dawned with its wonderful hope and promise, the light, though really faint, seems so brilliant when contrasted with the deep darkness of material thought, that the beginner in the study of the Science of Life may feel confused, failing to remember that he cannot comprehend infinite Truth at one bound. The prophet's counsel, "For precept must be upon precept, precept upon precept; line upon line, line upon line; here a little, and there a little," does not seem to him to be necessary in his case. Lifted by some demonstration of Truth's power to a mental mountain top, it seems as though the infinite were fully revealed.

Most students of Christian Science have experienced the shock of a fall to the valley again, with its depression and darkness; but the vision gained is not lost, it is only temporarily obscured, and if we adhere steadfastly to Truth, the cloud of discouragement will be pierced and dissolved. We are told that after Peter and James and John had witnessed the transfiguration they came down from the mountain and took up the detail of their daily life, and through the illumination which comes from obedience and suffering they were able in a measure to do the works their Master did.

On page 254 of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we are told that "the human footsteps leading to perfection are indispensable." It is no easier to be obedient now, when every tendency of the human mind pulls the other way, than it was two thousand years ago. Human nature is the same, and mortal mind just as essentially evil and just as subtle. If we examine ourselves honestly, we will face the fact that we are continually denying the Christ.

How often, like the disciples, do we neglect to watch with the Master one hour, being overpowered by the sleep of material sense. We want to be obedient and faithful; we fully intend to be, but we do not know the way; we have not taken the necessary steps of spiritual growth. The beginner must not be discouraged, however, because he sometimes fails to be obedient, does not always watch, or does not always keep awake. Patiently following Isaiah's counsel, starting on again after stumbling or falling, and keeping his eyes fixed on the goal of spiritual understanding, satisfied if here a little false belief is cast out and there a little inclination to be unloving is restrained, he is roused from the dream of material living and gets nearer to the full awakening.

Most people who enter with interest into any line of work, at first attempt too much. There is no royal road to any human endeavor, and though we know that God leadeth us "in the paths of righteousness," the lifting of thought from the human to the divine cannot be done without patient, continuous effort, without the prophet's rule of life,—"precept upon precept; line upon line, . . . here a little, and there a little." Some of us realize now how much of our early Science life was spent in groping; how far we fell short of being faithful because we did not know how.

Again, we have sometimes been so busy watching the groping of our brother that we have fallen, not recognizing our own unsteadiness. As our faces were turned from the light of Love, we have not seen in our own path the stumbling-blocks of criticism and censure. It is only by taking the needed footsteps that we cast out of consciousness the false beliefs with which sense tries to govern us. It is only by reflecting here a little love and there a little love that in time we shall dissolve the "adamant of error,—self-will, self-justification, and self-love,—which wars against spirituality and is the law of sin and death" (Science and Health, p. 242).

A receptive child-thought often sees the light and accepts the truth, while those of larger experience are trying to reconcile its leadings with the material laws which all have so long obeyed. We have seen how the trusting little child will put his hand in his father's and go anywhere with him, never doubting that he will be protected and guided aright. His trust is so absolute that he does not think of anything but the joy of going with his father. He knows no danger, but he does know that his father will take care of him.

It is this quality of thought in the child which Jesus has told us that we must emulate. Mentally we must put our hand in the Father's, and go with Him trustfully, joyfully. To reach this mental state we need to "study thoroughly the letter and imbibe the spirit" of Christian Science (Science and Health, p. 495). We must also let our lives show that we have imbibed the spirit. We must demonstrate what we know of Truth and Love, until at length we find our consciousness the habitation of infinite good, until we consciously walk with God, having awakened in His likeness.

Faith and Works

AIMÉE BURDETT DAWES

It is in its wonderful interpretation of the Bible as a whole that Christian Science is unique. This to the writer was the proof of its divine origin. The seemingly irreconcilable differences between reason and revelation, between conscience and revelation, and even between one Scripture statement and another, had led to a confusion of thought, a drift of doubt which had almost reached indifference. Then came the white light of Christian Science, in which the varying prism hues to appearance so unlike in color are yet blended in one.

Two of the truths thus reconciled are the seemingly contradictory statements as to faith and works. The writer was brought up in a school of thought which emphasized Paul's teaching of justification by faith almost to the total exclusion of James' practical corollary, "Faith without works is dead." The teaching that it is wrong to believe that by our works we are justified, may lead to the conclusion that works are of little importance, and the result is mental and spiritual stagnation. Fortunately the inner light of Truth will constantly militate against this view, and in the conflict between Truth and dogma, Truth must at length prove victorious.

But how wonderfully does Christian Science reconcile these seemingly divergent views! All we have and all we are, are gifts of eternal Love, our heavenly Father; all is the gift of grace. God's man does not need to win pardon for offenses against God's law, for St. John declares, "Whosoever sinneth hath not seen him [God], neither known him." Mortals, however, must work out their salvation from all error until

Digitized by Google

mortality is "swallowed up of life." We find forgiveness in the perception of the true man's reflection of his Father's righteousness.

But what of works? James says, "Ye see then how that by works a man is justified, and not by faith only," and in Revelation we read, "And they were judged every man according to their works." This is simply a statement of the fact that true faith or understanding is a vital power, not merely an intellectual perception, for it includes fidelity as well as faith. To take a familiar example: A child may have been taught concerning the buoyant properties of sea-water, and have some intellectual perception of these, and yet this same child may refuse even to attempt to float on the water. What is the difficulty? Is it not the seemingly overwhelming sense-testimony? The water does not appear to have the properties necessary for supporting weight. This sense-testimony may gradually yield to a clearer view of truth, but it cannot blossom into understanding until it is coupled with that venture of faith which alone can give satisfying proof.

This enables us to understand why Mrs. Eddy laid so much stress on the destruction of false beliefs and sense-testimony. Their destruction is not only a sign of the presence of a vital faith, but enables faith to grow, for "we cannot fill vessels already full" (Science and Health, p. 201). "Faith without works is dead," for then it shows no vitality; and until we learn to deny sense-testimony and commit ourselves to the ocean of divine Love we have not that faith of which Abraham was the type, in whose "seed shall all the nations of the earth be blessed." Browning has beautifully expressed something of this idea in the words,—

> This throws himself on God, and unperplexed
> Seeking shall find Him.

The only way by which we may find God is through demonstration of the truth we apprehend.

✧

"Let your light so shine"

BETSEY R. TAYLOR

We are often reminded that if we improve our opportunities, are faithful to the light we have, we shall be prepared to gain clearer views of Truth. This recalls something which was once told me, and which has been a help many times since, when I had a difficult problem to solve and it seemed almost impossible not to outline my future steps.

The story was to the effect that a farmer whose barn was some distance from his house was accustomed to start out each night after dark to go there with a dimly lighted lantern. A motorist who was staying at the house thought he was very foolish to try to find the barn door with so small a light, and offered to loan him the search-light from his automobile. The farmer said to him: "I do not need to see the barn door. I use the little light I have, which is just enough to show me that I am in the path. I put one foot where the light shines and then find the place for my next step. I continue this, and before I know it I have reached the barn door."

Here was practical wisdom, and just the kind we need to use in working out our problems. With the understanding gained in Christian Science it is not necessary for us to see the end of our mental journey; all we have to do is to live day by day in the highest understanding of Truth we have. Then we can rest calm in the assurance Mrs. Eddy has given us (Science and Health, p. 254), that "when we wait patiently on God and seek Truth righteously, He directs our path," and that no good thing will be withheld "from them that walk uprightly."

Selected Articles

[Editorial in *Bellingham* (Wash.) *Journal-Progressive*]

That Mrs. Eddy's name is seldom mentioned as worthy of a place among the great women of the world seems inexplicable. Were the only monument to her memory the founding of a religion which in a few short years numbers its adherents in millions and in every nationality, we might explain this oversight to ourselves on the theory that small indeed is the earthly reward of those who tread spiritual pathways. But even at that the name of this great American woman is probably better known and more familiar in more countries today than that of any other woman to whom the world has given birth.

One does not need to endorse the spiritual teachings of Mrs. Eddy to realize the greatness of their author; the growth of her following speaks eloquently for itself. Apart altogether from the foundation and the business management of one of the great churches of the world, she is the founder of a daily newspaper that ranks second to no publication in the world in its reliability, the cleanness of its columns, and its impartiality; also of several other publications. While she herself never attained fame in the newspaper field, and never, as far as we know, attempted to, yet her accomplishments in this direction, if they do not altogether outshine, form at least a worthy rival to those of the Pulitzers, the Gordon Bennetts, and all the rest. A wonderful woman indeed!

✧

[W. G. Watkins in *Milwaukee* (Wis.) *Journal*]

In confusing Christian Science with psychotherapy (alias mental suggestion, or hypnotism), our critic, a doctor, in his reported statement makes it quite plain that he is not acquainted with what Christian Science teaches. It is true that what Mrs. Eddy discovered is nothing new. The power of right thinking has always been available. Its value was discovered of old by the prophets and the apostles, as witnessed in the many good works which they performed. It remained, however, for Jesus to demonstrate the full salvation of pure metaphysics. All manner of disease, as well as death itself, disappeared in the presence of his realization of man's oneness with divine Mind.

The operation of the Mind which was in Christ Jesus is in marked contrast, however, with that of the human mind, which is capable of both good and evil. It is becoming more and more apparent that salvation must be wrought out in the mental realm; and it is a question of distinguishing between thoughts which are finite and make for limitation, and thoughts which have their origin in "the great First Cause," or God, and which make for life eternal. On page 264 of Science and Health Mrs. Eddy says that "mortals must look beyond fading, finite forms, if they would gain the true sense of things. Where shall the gaze rest but in the unsearchable realm of Mind? We must look where we would walk, and we must act as possessing all power from Him in whom we have our being."

✧

[Thomas E. Boland in *Easton* (Pa.) *Free Press*]

To quote passages from Mrs. Eddy's writings which pertain to the spiritual, perfect man, made in the image and likeness of God, and then apply them to mortal, material, human beings, is completely to distort their intended meaning. The text-book, "Science and Health with Key to the Scriptures," is sufficiently clear on this point to be understood by an earnest reader, for there we read, "Man is the likeness of Spirit, but a material personality is not this likeness;" also, "A sinful, sick, and dying mortal is not the likeness of

Digitized by Google

God, the perfect and eternal" (pp. 544, 292). Mrs. Eddy did not teach that the spiritual, perfect man, the image and likeness of God, is sinful or sick or dies, any more than God Himself is sinful or sick or dies. It ought to be clear, however, that she recognized that these misfortunes come into human experience, since she devoted forty-four years to teaching how to overcome them and ameliorate their results.

The critic objects to Mrs. Eddy's views on death being an unreality, and in proof quotes Jesus' declaration, "Lazarus is dead," entirely overlooking those other words of the Master recorded just a few lines previous to the above quotation: "Our friend Lazarus sleepeth; but I go, that I may awake him out of sleep." Seeing that his disciples had not understood him, he then used the language with which they were familiar. Again, when called to the house of the ruler of the synagogue, Jesus said of the daughter who they had told him was dead, "Weep not; she is not dead, but sleepeth," and straightway restored her. Mrs. Eddy's teaching relative to death is simply that it is not a creation of God, not an eternal fact of being. She did not deny that it comes into human experience, any more than she denied that sin and misfortune come into human experience. These errors are not, however, regarded as God-created or God-sent.

It is seldom indeed that any critic, however careless of a basis for his accusations, alludes to Christian Science as a "peril to the home." Mrs. Eddy's writings will be searched in vain for the least far-fetched shred of evidence to support such an utterly unjust and untrue statement. If Christian Science involved any such thing, the tree would long ago have been known by its fruits. The lives of Christian Scientists constitute a sufficient refutation of this falsification. The chapter Marriage, in Science and Health, sets forth the author's views on this subject. One quotation (p. 56) will serve as an illustration: "Infidelity to the marriage covenant is the social scourge of all races, the 'pestilence that walketh in darkness, . . . the destruction that wasteth at noonday.' The commandment, 'Thou shalt not commit adultery,' is no less imperative than the one, 'Thou shalt not kill.' Chastity is the cement of civilization and progress. Without it there is no stability in society."

Fault is also found with Mrs. Eddy's views on the unsubstantiality of matter. This is a question which has long vexed scholars and thinkers. That physicists and philosophers are not so far afield from Mrs. Eddy's expressions on this subject may be gathered from Mr. Huxley's opinion that the existence of matter is "hypothetical." Professor Ostwald says, "It is a thing of thought;" and John Burroughs wrote recently, "In the electron we have matter de-materialized; the electron is not a material particle," and "indeed, in the new physics, matter is only a hole in the ether."

There is in Science and Health a chapter on the subject of prayer, which for sanity and clarity of view, as well as for truth and beauty, is truly remarkable. Surely any Christian could accept these statements found on page 4: "What we most need is the prayer of fervent desire for growth in grace, expressed in patience, meekness, love, and good deeds;" "Audible prayer can never do the works of spiritual understanding, which regenerates; but silent prayer, watchfulness, and devout obedience enable us to follow Jesus' example."

Christian Science accepts the life, teachings, atonement, resurrection, and ascension of Jesus, for it accepts the whole Bible. It may not interpret some theological views in exactly the same way the critic himself happens to think. It is no new thing for denominations to differ over theological beliefs; in fact, that is the reason there are different denominations. Christian Science does not, for instance, believe or teach that the crucifixion of Jesus of Nazareth nineteen centuries ago will save from punishment in this day one who deliberately and persistently sins. If the critic wishes to believe this he has that privilege. Science and Health says, "Escape from punishment is not in accordance with God's government, since justice is the handmaid of mercy;" and "without punishment, sin would multiply;" also: "The way to escape the misery of sin is to cease sinning. There is no other way" (pp. 36, 11, 327). An entire chapter in Science and Health, Atonement and Eucharist, is devoted to the teachings of Christian Science on the atonement, crucifixion, resurrection, and ascension. To thousands this chapter has brought a clear and helpful understanding of these subjects.

In conclusion, there is food for thought in the editorial comment of two papers. The *Rocky Mountain News* of Denver says: "From the days of popular 'exposure' and ridicule, Christian Science has moved quietly and efficiently onward to its present high station. It has brought peace to many tempest-worn lives; it has given health to many pain-racked bodies; it has conferred content upon many tortured minds; it has established faith and cheerfulness, where formerly was despair of this world and doubt of the hereafter. For all the beauty and usefulness it has given to a million lives, the faith is to be revered and the name of its Founder is to be held in grateful remembrance." The *Manchester Union* of New Hampshire says: "The character of the members of Christian Science churches is such that ridicule may be said to have become itself ridiculous, and it has well-nigh ceased."

✧

[David Anderson in *The Ballarat* (Australia) *Courier*]

By an increasing number of unbiased sermon hearers it is now considered axiomatic that if one would learn something of what Christian Science is not, attention should be given to pulpit philippics of the "orthodox" divine. In an address as reported in *The Ballarat Courier*, a bishop put a question to his hearers which expressed a fallacy, and answered it for them in a misrepresentation of fact. "Why," the bishop asked, "do not Christian Scientists go to church?" "Because," he answered, "Christian Science says there is no such thing as sin, and therefore you do not need any such person as Saviour."

In reply I would say that Christian Scientists do go to church. In relative proportion of members, as well as in regularity of attendance and in devoutness of attention and participation in the service, they will compare favorably with churchgoers of the Anglican or any other denomination. They go to church to pray, and to worship and hold communion with God, a natural part of their daily lives which is not confined to Sunday observance. They go for the very reason cited by the bishop as desirable on the part of his congregation: "Because they want to bring themselves into closer touch with God and the unseen world."

Christian Science does not tell its devotees, any more than it tells its theological critics, that "there is no such thing as sin." As sin is neither God created nor God upheld, it is not an eternal verity of being, and so it is regarded in Christian Science as "unreal." Sin, being any want of conformity with or any transgression of the law of God (and Christian Scientists read into that definition the widest comprehensiveness), is painfully in evidence on every hand, and nobody is more alive to it as a present factor in human experience than the Christian Scientist, for he knows that to cast sin out of his own consciousness it must be grappled with and overcome. He knows also that if sin were today cast out of the thought of individual consciousness, of all humanity, there would be nothing left of it. In "Science and Health with Key to the Scriptures" Mrs. Eddy says: "Since Jesus must have been tempted in all points, he, the immaculate, met and conquered

Digitized by Google

sin in every form." "For victory over a single sin, we give thanks and magnify the Lord of Hosts." "Vibrating like a pendulum between sin and the hope of forgiveness,—selfishness and sensuality causing constant retrogression,—our moral progress will be slow. Waking to Christ's demand, mortals experience suffering. This causes them, even as drowning men, to make vigorous efforts to save themselves; and through Christ's precious love these efforts are crowned with success" (pp. 564, 568, 22).

The Christian Science view of the atonement may not in all respects harmonize with that of the bishop, and on that account the reverend bishop may call it "heresy" and possibly think it wrong. Christian Scientists believe it accords with the teachings of Jesus the Christ, and they have a right to their belief. They do not quarrel with the bishop because of his belief. Some of them are nevertheless under the impression that all the bishops of the Anglican church are not in absolute uniformity of view in respect of that doctrine.

✧

[John M. Tutt in *Joplin* (Mo.) *News Herald*]

It is unfortunate for the critics of Christian Science that they do not first arrive at the spiritual view-point of the Scriptures seen in Christian Science before they give utterance to statements entirely unfair to the subject. It should be quite sufficient for our reverend friend to say that Christian Scientists do not unqualifiedly concur in his opinion concerning certain Scriptural teaching.

It should be said here, in all sincerity, that Christian Science accepts every essential of the scheme of salvation as set forth in the Bible. Christian Scientists believe, however, that the spiritual import of the Scriptures is their essence; that since God, Spirit, and His creation are not material, the universe, including man, must be interpreted not materially, but spiritually. They believe they find full authority in Jesus' example for turning away from matter to divine Mind, and thus abandoning material ritualism and observances.

But as proof of the fact that the unparalleled sacrifice of Jesus with its saving grace is recognized and magnified in Christian Science, I quote from "No and Yes" by Mrs. Eddy (p. 33): "The sacrifice of our blessed Lord is undeniable, and it was a million times greater than the brief agony of the cross; for that would have been insufficient to insure the glory his sacrifice brought and the good it wrought. . . . The glory of human life is in overcoming sickness, sin, and death. Jesus suffered for all mortals to bring in this glory; and his purpose was to show them that the way out of the flesh, out of the delusion of all human error, must be through the baptism of suffering, leading up to health, harmony, and heaven."

✧

[Charles W. J. Tennant in *New Days*, London, England]

The article in a recent issue entitled "Christ and Mrs. Eddy" reveals an extraordinary misunderstanding of both the teachings of Jesus and of Christian Science. Our critic, in speaking of Jesus, says, "He lived a life of poverty, self-denial, and persecution, and went at last, of his own choice, and innocent of all offense, to a violent and shameful death." Jesus certainly did not lay up any store of materiality, for he knew perfectly well that matter was not substance. All the same, at a moment's notice he could apply his spiritual understanding to produce loaves and fishes for the multitude, money from a fish's mouth to pay a requisite tax, and clothes to wear when coming out of the tomb. Possessing the ability to prove God's power to this extent, it were folly to call him poor, in any sense of the word. Jesus went through what mortals term death in order to prove its unreality and that it had no dominion over him. He said, "Destroy this temple [body], and in three days I will raise it up;" and he did so.

Our critic, speaking of Mrs. Eddy, says, "She denied the existence of sin, suffering, disease, and the devil, although he whom she professed to follow had treated them as serious realities, of which nothing but his death could ever rid the world." If the critic had understood for a moment the meaning of reality, as used in Christian Science, he would have understood why Mrs. Eddy denied their reality. On page 335 of Science and Health she writes, "Reality is spiritual, harmonious, immutable, immortal, divine, eternal." From this it will be seen how impossible it would be to include sin, disease, and death in this definition. Mrs. Eddy never denies that these conditions seem real to the material senses, for she thoroughly agrees with St. Paul when he says, "The things which are seen," that is, by the physical senses, "are temporal; but the things which are not seen are eternal."

Referring to the Christian Science text-book, "Science and Health with Key to the Scriptures," our critic says, "This curious volume has very little in it that is prayerful." Now it all depends upon what prayer is considered to be. Mrs. Eddy has devoted a chapter in the text-book to the subject of prayer, and many have expressed their opinion that it is the finest treatise on the subject extant. St. James tells us, "The prayer of faith shall save the sick, and the Lord shall raise him up." This effect has followed in hundreds of cases while reading and understanding Science and Health, and this is a clear proof of the prayerfulness of the text.

Two thousand years ago Jesus taught that the kingdom of God was at hand. He said very plainly, "The kingdom of God cometh not with observation: neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you." Mrs. Eddy does not depart from this teaching when she says, "Thy kingdom is come; Thou art ever-present" (Science and Health, p. 16). Christians acknowledge the omnipresence of God. They must acknowledge also the omnipresence of His kingdom, which is a state of spiritual consciousness and not a physical locality, as some believe.

If our critic had read the Christian Science text-book more carefully, he would not have made the mistake of saying that it denied the divinity of the Christ. Such is not the case. The following quotation, taken from page 25 of Science and Health, is one of many throughout the book showing forth the teaching of Christian Science on this point: "The divinity of the Christ was made manifest in the humanity of Jesus."

That Christian Science does heal the sick and sinning is an acknowledged fact throughout the civilized world. The phenomenal growth of the movement is brought about by the simple fact that Christian Science has taught its followers how to obey the injunction of our Master, to preach the gospel and heal the sick, "confirming the word with signs following."

Love's Bounty

RUTH TINKLER

So many smiles that come and play
Across the threshold of the day,
So many flowers that softly bring
The tender messages of spring,
So many songs so sweetly sung,
So many deeds of kindness done,
So many loving hearts and hands
To loosen sin's unlawful bands,
So many stars that banish quite
The seeming darkness of the night:—
So much of good, so much of love,
Who seeks a paradise above?

Editorial

"The Christian's vital breath"

NOWHERE is there to be found a stronger refutation of the claim that is even now occasionally put forward, namely, that Christian Scientists do not pray, than is given on page 133 of "Miscellaneous Writings," where Mrs. Eddy, in a letter to one who had attacked Christian Science and referred to her as "prayerless Mrs. Eddy," not only disproved the statements of this critic, but also pointed out to her followers her own practice in regard to daily communion with God. She says: "Three times a day, I retire to seek the divine blessing on the sick and sorrowing, with my face toward the Jerusalem of Love and Truth, in silent prayer to the Father which 'seeth in secret,' and with childlike confidence that He will reward 'openly.' In the midst of depressing care and labor I turn constantly to divine Love for guidance, and find rest."

If further proof is desired that Christian Scientists are taught to pray, we have only to turn to Article VIII of the Manual, where in Section 4 our Leader outlines a prayer for daily use, and in Section 1 she also counsels daily seeking for deliverance from all evil. On page 442 (line 30) of Science and Health she clearly indicates an important subject of prayer, which she has also made imperative through Section 6 of Article VIII of the Manual. The chapter "Prayer" in Science and Health is, particularly to beginners, one of the most beautiful and probably the most appealing of all in this text-book. In it Mrs. Eddy quotes with approval the Scriptural injunction to "pray without ceasing," and also, at the close of the chapter, she has given us that wonderful spiritual interpretation of the Lord's Prayer which has brought comfort and healing to so many aching hearts.

As any one who makes use of the concordances to Mrs. Eddy's writings may find without trouble, prayer was to her what the poet has stated it to be, namely, "the Christian's vital breath." In her Message to The Mother Church, June, 1901 (pp. 19, 28), she writes: "I know that prayer brings the seeker into closer proximity with divine Love;" and again, "It is only by praying, watching, and working for the kingdom of heaven within us and upon earth, that we enter the strait and narrow way, whereof our Master said, 'and few there be that find it.'"

With many well meaning Christians (and this includes Christian Scientists) the manifold and conflicting duties and pleasures of each day have seemed to leave no time for daily prayer, or at least no time for more than the perfunctory repetition of words which, without the divine animus of unselfish desire and holy, consecrated purpose, have become but the noise of "sounding brass, or a tinkling cymbal." Our Master plainly did not say that after we had sought all other things then would the kingdom of God be added unto us, but rather that we should seek "first the kingdom of God," and that a result of this unselfish seeking would be the supply of all our needs. The prayer of the Christian Scientist is of course this unselfish seeking of God's kingdom, and not the desire that he personally may gain something of material value to himself, or that like the Pharisee he may be "not as other men."

The opening sentence of the first chapter of Science and Health is, "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love," and this describes the prayer of Christian Science. The example which Mrs. Eddy set for Christian Scientists, of praying three times daily for the blessing of all mankind, is one which can be followed by all with the assurance that if our prayers are sincere and unselfish they will not be amiss, but will be answered in the purification of our thought and motives, and in the understanding that on earth, even as in heaven, God's will is done, and that He is our divine helper, guide, and friend.

Who will dare say that they have no time for such intimate communion with the Father? With prayer as the central feature and greatest purpose of each day, men will surely see and understand that the kingdom of heaven is within, and that God is not a far-off abstraction,—that He is omnipotent, omniscient, and omnipresent; "the same yesterday, and today, and forever."

ARCHIBALD MCLELLAN.

Truth's Power

THERE is perhaps no passage of Scripture which is so much loved and so often quoted by Christian Scientists as the Master's words, "Ye shall know the truth, and the truth shall make you free." As this promise is appropriated by each one, it assures him of freedom from every ill which seems to hold him in bondage at the present time or which might threaten him in the future, whether it be manifested as sickness, sorrow, sin, or poverty. In all of Jesus' teachings constant reference is made to the power and availability of Truth, and yet professed Christians in general are on very much the same plane as was Pilate when he asked, "What is truth?" If, for instance, they were told by a Christian Scientist that truth alone could heal some sick person, without the use of any material remedy, would they not question the wisdom of relying upon something unseen by the physical senses and fall back upon the threadbare argument that to depend upon a purely spiritual remedy would be equivalent to doing nothing for the patient. Did we not all believe so before we became acquainted with Mrs. Eddy's teachings?

Now truth may be spoken of as "the substance of things hoped for," although it is approached by faith on the part of humanity. Nothing else is so vital as truth, and the saying of Christ Jesus when on trial before Pilate, "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth," cannot too often be recalled. It is noteworthy in this connection that Jesus did not answer Pilate's question, so far as the record goes, doubtless for the reason that the materialists about him would not understand his answer any more than the corresponding thought does today. Yet the Master said on that momentous occasion, "Every one that is of the truth heareth my voice." On page 142 of Science and Health we are told that "Truth is God's remedy for error of every kind."

Students of Christian Science soon learn that they cannot accept both truth and error in respect to anything and make any progress. They must "know the truth" about every problem of human experience, and this demands the acceptance of the spiritual fact at all times. Absolute Truth is always opposed to material sense evidence. The "scientific statement of being," which bases all work done in Christian Science, says (Science and Health, p. 468), "Spirit is immortal Truth; matter is mortal error." It is necessary, however, to know the truth as distinguished from error, in order to prove Truth's power. When Jesus entered Jairus' home he was told that the ruler's young daughter was dead, but he denied this in the face of scorn and opposition. He held by the changeless fact of God as the only Life of man, while those who laughed at him held to their belief that matter is the arbiter of life and death and that Mind had surrendered its sway, temporarily at least, to this mortal despot.

Digitized by Google

It was then and there that the answer to Pilate's question was given. Those who were "of the truth" heard his voice and witnessed to the majesty of Truth; even the maiden who was in the dream of death responded to the call and proved that the identity of God's child is never lost or obscured. Those who were not "of the truth" were not participants in that triumph of Life over death. We read that Jesus "put them all out." This cleared the way for the great demonstration which followed, and thus must we put out of our consciousness all that questions or denies in any wise the power of Truth to break the fetters of sin, disease, and death.

That which was true "when the morning stars sang together, and all the sons of God shouted for joy," is just as true today, and when we know it we can do no less than give utterance to our joy. To the Christian Scientist Truth's power is infinite and Truth's name so sacred that it can never be taken in vain. It means no cold abstraction, no mere formula of the schools, it is God with us, Love with us, the Christ with us, forever declaring, "All power is given unto me in heaven and in earth." Those who cling to this declaration rejoice that Christian Science is obeying the command to "teach all nations" the truth that makes free.

ANNIE M. KNOTT.

"Be not faithless"

IN reading the story of Thomas' unbelief one is impressed with the wilfulness of his doubt, with the wretchedness of the dejection and discouragement into which it must have plunged him, and with the gentleness and pertinence of the Master's rebuke, "Reach hither thy finger, and behold my hands; and reach hither thy hand, and thrust it into my side: and be not faithless, but believing."

The more one thinks of the matter, the more clear it becomes to him that every disabling doubt has something of this stubborn nature, and that we all have need to pray that we may have the will to believe. Faith, as generally understood, is expressive of much besides logical apprehension, namely, educated disposition, sentiment, emotion, and certainly choice. Faith not only affects the whole domain of human sense, it involves it. When the Master said, "Get thee behind me, Satan," he rebuked the entire list of material impulses and beliefs, and especially that assertive, would-be ruler among men and things known in Christian Science as the mortal I; our "one enemy," as Mrs. Eddy names it on page 10 of "Miscellaneous Writings."

No state can be more pitiful than that of a famishing man who, though having abundance of food, is wholly debarred from its enjoyment by the fact that he cannot swallow. This illustrates the condition of him who, while in possession of convincing evidence of the verity of some vital statement, is apparently unable to accept it because of inherited or educated temperamental incapacity. The incredulity or reserve of judgment which calls for logical sequences of thought, and for convincing proofs that a given proposition is true, before giving it consideration, may be said to be essential to all scientific advance, all healthful mental development. He whose thought is so undiscriminatingly hospitable as to be accessible to every vagrant theory or wind of doctrine that may come his way, is sure to revel in excitations, but he can never get anywhere, and the wise do not envy him his so-called "open-mindedness."

On the other hand, the state of the man who cannot be convinced, who has unconsciously grown to be rather proud of what he may think of as his immovable adherence to truth, but which in fact is a sectarian indisposition to think outside of a prescribed circle, this Thomas-type of a man—and he is a very numerous body—is no less hopelessly enthralled. The Christian Scientist has gone but a little way before he realizes that in this regard he has experienced a great emancipation. The crawfish that refuses to leave his last year's shell is destined to become a dwarf, and so is the man who habitually refuses to consider any proposition which would prove him to be in error. Upon every plane of life teachableness is absolutely essential to growth.

Two facts loom large in this story of Thomas, to wit, his self-stultifying stand for the inviolability of material law, and our Lord's willingness to satisfy him upon his own plane of thought. With respect to both of these facts he stands for a very great though rapidly decreasing number of disciples today. He had known and rejoiced in the power of Spirit to annul physical law, even in the raising of the dead, and he had heard the Master's assurances that he would rise the third day. Moreover, he had heard the testimony of the other disciples that the Lord had risen, and yet he would not believe. This was not only defeating to his hope, it was discreditable to his past opportunity and professed belief. So too while most Christian believers accept the fact of the healing works of Christ Jesus and his early disciples, while they affirm the immutability of divine law, and in these latter days have heard from unnumbered fellow disciples that the Christ has come again to free from sickness, sin, and death, nevertheless many will not believe.

This will to doubt is one of the most lamentable facts of modern times, of all times; but as in Thomas' instance, it must yield and is yielding to the compassionate and convincing ministry of the Christ-idea in Christian Science.

JOHN B. WILLIS.

Among the Churches

Current Notes

RICHMOND, STEGE, CAL.—Second Church of Christ, Scientist, held dedicatory exercises in their church edifice on Bay Avenue, Stege, Sunday, Nov. 21, 1915. In July, 1912, the members of this organization secured their building lot. They erected, furnished, and occupied their church in ten days, and have been holding regular Christian Science services in it ever since it was constructed,—a period of over three years.

Wednesday evening, Oct. 2, 1910, fourteen residents of Stege and two invited guests from Berkeley, all of whom were interested in Christian Science, gathered at a private home. They decided to begin services and continue them for six months. The following Sunday the first service, with a congregation of twenty-seven, was held in a small room in a building on Bay Avenue, Stege. In one month the accommodations were outgrown, and it was found necessary to move into larger quarters at the same location. When the six months had expired, a Christian Science Society was organized, with twenty-four members enrolled. The society in June, 1912, was merged into Second Church of Christ, Scientist, Richmond, Stege, Cal., with thirty-one charter members.

Richmond Independent.

DULUTH, MINN.—Members of First Church of Christ, Scientist, held services in the basement of their new building at John Avenue and Nineteenth Street yesterday [Dec. 5, 1915].—*Duluth News-Tribune.*

CONCORD, N. H.—First Church of Christ, Scientist, of Concord, has been given a lot of land on Tuttle Street, adjoining Pleasant View.—*The Manchester Union.*

Digitized by Google

CONNECTICUT.—A review of the past seventeen months to Nov. 1 reveals gratifying evidences that in Connecticut, as elsewhere, interest in Christian Science has steadily increased. The attendance at Christian Science lectures has been larger than formerly, there has been a greater number of visitors at the reading-rooms, and more activity has been manifested in all lines of Christian Science work. The demand for Christian Science literature has resulted in increasing the facilities and broadening the work of established literature distribution committees, and also in the organization of new committees. In connection with the distribution of literature, special mention should be made of the Christian Science literature booth conducted by the Christian Scientists of Hartford at the state fair, Charter Oak Park. This was first undertaken in September, 1914, at which time 1510 pieces of literature were distributed. There was a Christian Science literature exhibit, consisting of Mrs. Eddy's works and the publications of The Christian Science Publishing Society. The results were so gratifying that a year later, September, 1915, the project was repeated on a somewhat larger scale. On this occasion the distribution totaled 2448 pieces.

The generous offer of the Trustees under the Will of Mary Baker Eddy to donate to public libraries willing to accept and properly catalogue them, copies of Mrs. Eddy's works, "The Life of Mary Baker Eddy" by Sibyl Wilbur, and subscriptions to the Christian Science periodicals, has given a new impetus to the library work. Ninety-two Connecticut public libraries have one or more Christian Science books, or are regularly receiving one or more of the Christian Science periodicals. *The Christian Science Monitor* is being supplied to the Connecticut State Reformatory, the George Junior Republic, seven jails, the Stonington Home, the Connecticut School for Boys, the Masonic Home, the three state normal training schools, the Connecticut Agricultural College, the Loomis Institute, and the Norwich Hospital for the Insane. Science and Health, "The Life of Mary Baker Eddy" by Sibyl Wilbur, and the *Monitor* have been placed at the Hospital for the Insane, Middletown, the Connecticut Industrial School for Girls, and the Fitch's Home for the Soldiers. A full set of Christian Science literature has been given to Yale University Library, Wesleyan University, and the Woman's College. The distribution of literature for the seventeen months ending Oct. 31, 1915, totaled 30,440 pieces.—*Committee on Publication.*

ZANESVILLE, OHIO.—One of the most important real estate deals of Wednesday [Dec. 15, 1915] was the purchase of the old Schultz homestead, on South Seventh Street, by First Church of Christ, Scientist. The lot is 63 feet front and 142 feet deep, and the price paid was five thousand two hundred and fifty dollars. The site is ideal for church purposes.

The Zanesville Times Recorder.

Admission to Membership in The Mother Church

The next admission of candidates will be June 2, 1916. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 10, 1916.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

Roslindale and West Roxbury, Mass.

The Hon. William A. Morse, in introducing Virgil O. Strickler, who lectured on Christian Science in Highland Club Hall, West Roxbury, under the auspices of The Mother Church, The First Church of Christ, Scientist, of Boston, spoke as follows:—

When I first came to West Roxbury about twenty-five years ago, there were but few persons here who had manifested the slightest interest in Christian Science, and those few were charitably criticized by their kindly disposed neighbors, who were confident it was only a matter of time until they would return to the fold they had abandoned, wiser and somewhat humbled by their peculiar waywardness; but this, like many other human prophecies, has come to naught.

My attention was first called directly to the subject of Christian Science some eighteen years ago. I was then senator from the Cape district and a bill was presented for an enactment which would have completely prohibited the teaching and practice of Christian Science. I was surprised to find that the passage of the measure was urged not only by certain influential members of the medical profession, but by active members of churches of almost every denomination. In those days the Christian Science movement certainly had its hours of danger, but because it was based upon divine Principle it has developed and extended by virtue of its inherent truth and the benefits following its application, until it has become as firmly established in this commonwealth, where it had its beginning, as the law itself. It is now rapidly monopolizing many members of those same denominations, as well as occasionally taking over some progressive and conscientious members of the medical profession itself. My interest later was much intensified by having the great privilege of knowing the Discoverer and Founder of Christian Science and hearing from her own lips of what she had done and was doing for the cause and its advancement. Since that time I have read and heard much about it, and I state a fact that is known to all,—that no person who has sought Christian Science with an open, impartial mind can now be found who is not its advocate and friend.

As I understand it, the one great spiritual truth that distinguishes Christian Science from all other religious teachings is that the divine Mind can help men in their troubles from sickness as well as in their troubles from sin. There is a science of the intellect that has indeed made wonderful progress, and in its sublime research and philosophy has measured the ocean, has almost counted the sands of the earth and calculated and classified the stars. Knowledge of these facts brings little comfort to struggling humanity, weary and heavily laden with difficulties and despair; but there is a science of the heart and mind that brings joy, peace, and sympathy, that casts out fear, weakness, and despair, and enthrones in their place strength, courage, and harmony; and the great Metaphysician that brings these things to pass is the divine Principle of Christian Science as made known by Mrs. Eddy and her faithful followers.

Correspondence.

Terre Haute, Ind.

The Hon. Clarence A. Buskirk, who lectured on Christian Science at First Church of Christ, Scientist, was introduced by Attorney Chalmers M. Hamill, who said in part:—

There is a field of production that cannot be termed industrial or economic. For our present purpose we may style it spiritual production. It is perhaps not unfamiliar

Digitized by Google

doctrine that each human being is in itself an instrument of production, and that its product is the impression which that life, as a spiritual entity, makes and leaves on its surroundings. As in industry, so in spiritual production, one of the great elements is education. The religion based on the life and teachings of Jesus the Christ must, as I see it, become more and more a scientific exploration into the recesses of the infinite Mind. Christian Science has made admirable advances in that direction.—*Correspondence.*

St. Paul, Minn.

Bliss Knapp, when he spoke on Christian Science at First Church of Christ, Scientist, was introduced by Senator Moses E. Clapp, who said in part:—

It may not be amiss to step beyond the limits of a mere perfunctory introduction and say that as Christian Scientists, realizing that God is the author of all that is, of all that is real, and that all of His works are good, we are forced to turn to a source outside of and not of God for that which we see and call "evil." As Christian Scientists we are not so much concerned with the origin of evil, for if it cannot be attributed to God, if it is not of God, then it is not a reality, in the light of God's purpose, and is not a part of God's work. Therefore, we say in this sense, there is no reality in evil. Real as evil may seem, it is real only to our mortal sense, and as we understand that it cannot be of God, that it cannot be real as part of God's work, as we realize its nothingness, it disappears. Thus, for the destruction of sin and sickness—for Jesus said, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Rise up and walk?"—we turn to a realization of the allness of God and the perfection of His works.

Many suppose that physical healing is the ultimate purpose of Christian Science. This is natural, perhaps, because the healing of sickness is more tangible than the destruction of sin, if we use these terms distinctively. But Christian Science is a religion which deals with sickness and sin, with all forms of what we call "evil," and destroys them through the knowledge and realization of their unreality, as not being of and from God.—*St. Paul Dispatch.*

Lectures to be Delivered

ALABAMA—Birmingham (Second Church): Charles I. Ohrenstein, Lyric Theater, 3 p.m., Feb. 27.

Montgomery: Charles I. Ohrenstein, Church Edifice, 16 High Street, 8 p.m., Feb. 24.

CALIFORNIA—Alameda: Dr. Francis J. Fluno, Unitarian Church, 8 p.m., Feb. 29.

Bakersfield: Willis F. Gross, Scribner's Opera House, Feb. 28.

Berkeley (University of California): Willis F. Gross, Edifice First Church of Christ, Scientist, Bowditch Street and Dwight Way, 8 p.m., March 2. (University public only.)

San Francisco (First Church): William R. Rathvon, Dreamland Rink, Steiner Street, near Sutter Street, 3 p.m., Feb. 27, and Church Edifice, California and Franklin Streets, 8 p.m., Feb. 28.

Ukiah: William R. Rathvon, Victory Theater, 8 p.m., Feb. 29.

CANADA—Westmount, Province of Quebec: John W. Doorly, Victoria Hall, 8:15 p.m., March 2.

Woodstock, Ontario: John W. Doorly, City Hall, 8:15 p.m., Feb. 28.

COLORADO—Loveland: Bicknell Young, Majestic Theater, 3 p.m., Feb. 20.

Rocky Ford: Bicknell Young, Christian Church, 8:15 p.m., Feb. 22.

ILLINOIS—Chicago (Twelfth Church): Virgil O. Strickler, Temple Sholom, 3760 Pine Grove Avenue, 8 p.m., Feb. 28 and 29.

Testimonies of Healing

I was healed of chronic peritonitis through reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. The Science literature was brought to me when there was no hope of recovery. I had undergone three major operations with only temporary relief. The last operation failed to give even that, and the attending physician said he could do no more. My diet at that time was rice water, and for seven years I had been able to eat very few things. There was no action of the bowels, and the only relief obtained was by washing them out. In three weeks I had proved the truths of Christian Science so that I ate anything the rest of the family had, and walked up-town a long distance to the Christian Science service. Inside of six months I did the housework for a family of four. I had never been able to do this, as my sickness dated back to the time I was fourteen years old. It is now eight years since my healing, and all conditions of inharmony have been overcome very quickly. I have not been confined to my bed more than a day; whereas before my healing in Christian Science I would be seriously ill for months every year.

My prayer is that I may strive to follow our Leader, Mrs. Eddy, in every way. I am very grateful for the spiritual uplift her teachings have brought into my life.

ANNIE B. DUKESHIRE, Portsmouth, N. H.

I can verify my wife's testimony. The physical conditions were most serious, but have been entirely overcome through reading Science and Health. It was through this healing that I became interested in Christian Science, and I have since been greatly benefited. The overcoming of the tobacco habit is one of the great benefits that have come to me through this teaching, and I am very grateful for all the blessings we have received.—HOWARD L. DUKESHIRE.

Like many others, I entertained a very erroneous opinion of Christian Science until I attended a Wednesday evening meeting, when my views underwent a change. I did not believe it possible that this new religion could be founded on the Bible, or that the beneficial results so much talked about were anything other than some form of will-power, producing a mesmeric state which caused the patient to forget for a time his bodily ills or mental troubles.

I went to this meeting in a criticizing state of mind, but came away determined to investigate the subject. I did not want opinions, I wanted facts, so I immediately secured a copy of the Christian Science text-book, "Science and Health with Key to the Scriptures." The popular belief that God is Life and All, yet sends or allows death; that He is Love and All, yet is responsible for the hate manifested in this world, had never seemed reasonable to me. Consequently when I came across the statements in this text-book that God is Life and does not send death, and that He is Love and knows no hate, I was intensely interested to know if such conclusions could be substantiated by Bible authority.

I soon found myself looking up and comparing Bible references with the quotations used by Mrs. Eddy in Science and Health. The Bible statements referred to were so plain, and the passages, some of which I had committed to memory as a small boy at Sunday school, became so illuminated by her explanation, that the Bible became a new book to me, and the good result of corrected thinking manifested itself upon the body by restoring my eyesight. I had been unable to read more than the head-lines of a newspaper for years without the use of glasses. There was no use for any one to tell me that this healing was not good; that it was not founded on the Bible; that the Christian Science text-book had not been the means of unlocking to my consciousness the truth which the Master said would make us free; or that the work had been accomplished by any other than the divine will, for I had not resorted to any other means for help than the reading of the Bible together with Science and Health.

This healing was soon followed by the overcoming of biliousness, bowel trouble, stomach disorder, a moderate use of liquor, and a long confirmed smoking habit which I had attempted to break off many times through will-power, but could not, as I was never able to get rid of the desire to smoke again. These healings occurred ten years ago. Not only have they proved permanent, but I have enjoyed good health during this period, using no other remedies than the better understanding of God and His laws as taught by Christian Science, which ensures health and harmony in proportion as these laws and this understanding are put into practice.

As David, after first learning how the lion and the bear could be driven away without a spear, could show the armies of Israel how Goliath could be conquered without a sword, so Mrs. Eddy, after discovering how Jesus healed all manner of sickness and all manner of sin, was able to show through her words and works how it is possible for all mankind to overcome all kinds of sickness and all kinds of sin, in the same way and by the same truth used by Christ Jesus and his disciples. More than this, Christian Science has proved and is proving that these healings are permanent, and are available to every one here and now.

HARRISON D. FOLINSBEE, Brookline, Mass.

In 1905 I became afflicted with a serious nerve trouble, which affected my muscles so that I became almost helpless. For six years I could not lift my arms, comb my hair, or write a letter. After trying all the local physicians without relief, I entered a sanitarium in Cincinnati, Ohio; but after remaining there for nine months I was in a far worse condition than before. The specialist said I had tuberculosis of the nerves. I then went to Mobile, Ala., and after I had been there six weeks the specialist sent for my husband and told him to take me home, saying there was nothing that could cure me.

My mother then closed her house and came to remain with me until the end. While I was in this state of utter despair a relative telephoned that he had a message for me, and I waited impatiently for his coming, thinking he had at last found a physician who could cure me. When he said he wanted me to try Christian Science treatment I burst into tears, and cried all night from disappointment, wrongly believing that Christian Science was only good for imaginary diseases. He tried to allay my fears by assuring me that during his travels in the West most of the thinking people he had met were Christian Scientists, or trying to be, and that they had related many wonderful healings after doctors had given up the cases as incurable.

Upon my promising to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, this relative gave me a copy, and I read it through several times before going to Memphis, Tenn., for treatment. In one week I was able to walk to the office of the practitioner, though it was nine blocks away, without fatigue, and after three weeks my arms were free, so that I could write, as well as comb my hair. Although I had written to my husband of my healing, he could not fully realize it until I arrived home. When the

Digitized by Google

friend who had so often helped me dress offered to remove my coat, I thanked her, but said I did not need assistance, as I could do it myself. Then the tears of gratitude and joy shone on my husband's face. I live in a town where it is difficult to get servants, and for seven months I have been doing my own work. I am now a strong, well woman.

For the physical healing I am deeply grateful, but for the spiritual uplift I "praise God, from whom all blessings flow." Job says, "There is a spirit in man: and the inspiration of the Almighty giveth them understanding." I thank our Father that through Mrs. Eddy He has given us a "Key to the Scriptures" that helps us to understand what our Master meant when he said, "Ye shall know the truth, and the truth shall make you free."

ANNA W. FARNSWORTH, Lockhart, Ala.

It gives me pleasure to confirm the above statement of my wife, and I am more grateful every day for the many blessings Christian Science has brought into my home.

CHARLES A. FARNSWORTH.

✧

I feel so grateful for Christian Science and all it has done for me that I desire to tell others of my healing. For nine years I suffered from what was diagnosed as tuberculosis of the breast. I was attended for about three years by four different medical men and underwent three slight operations. I was then advised to undergo a serious one; but having heard of Christian Science and its wonderful healing power, I decided to try it. On applying to a practitioner for help, I had immediate relief, but after a month the trouble again appeared. I asked for treatment from another practitioner, who was coming frequently to our house to see a member of my family, with the result that after three treatments the condition disappeared. That was two years ago. There has been no return of the symptoms and I am in perfect health.

For this, and also for a recent healing of acute stomach trouble, I am grateful, but still more so for the spiritual enlightenment which has come through the teaching of Christian Science. I am most deeply thankful to God, who is indeed "a very present help in trouble," and grateful to the kind friends who have so lovingly helped me.

MARGARET ELLISON, Bournemouth, England.

✧

I was always considered delicate and had throat and stomach trouble. Tuberculosis was supposed to be hereditary in our family and the fear of that disease was always held over me. When I was seventeen years old symptoms of this malady began to appear, after we had left our home in New Mexico and moved to Los Angeles. I grew worse all the time and tried one doctor after another. Finally a specialist, after several weeks of severe treatment, told me I must leave California at once, as I would live but a few months in that climate. I returned to Albuquerque, N. Mex., in the hope that the climate there would cure me. I also took three months' treatment from a doctor, who said he would cure me in that time, but at the end of that period he said I was incurable. I was a total wreck. The doctor also told me that if I lived a year I would go insane. I left his office very much discouraged, but a wonderful surprise was awaiting me, and my sadness was soon to be turned into joy unsurpassed.

When I returned home I found a letter from a Christian Science friend in Los Angeles who had tried to interest me in Science when I was there, but I was not ready for it until everything else had failed. I wrote her that very night to begin treatment; I also began to study out the truth for myself. The stomach trouble and cough were overcome in a few weeks, and one by one all other symptoms faded into their native nothingness. This was in May, and the following August I entered the university. In the two years I went there and the following year that I taught school I did not miss a day on account of ill health. My father was opposed to Christian Science and would not give me the money to get a copy of "Science and Health with Key to the Scriptures," so I walked to the university each day, a distance of two miles or more, and saved five cents. In this way I got enough to buy a pocket edition of the text-book. It took quite a while to save the amount, and I had to walk about two hundred miles, but it was worth it.

In the glorious eight years since my healing I have had many proofs of the truth of Christian Science, both for myself and for others. I left New Mexico several years after my healing, and have lived in Ohio, Nevada, and again in California. This has proved to me that there is nothing in climate, and colds and sore throat are absolutely a thing of the past. I have been given a health certificate from the physician who treated me before I came into Science. He watched me for several years, and said himself that he knew I was healed.

I am thankful to God for the Comforter promised by Christ Jesus, and I am grateful to Mrs. Eddy, also to the loyal Scientists that so tenderly, lovingly guided me into this living truth.—RUTH REA THOMPSON IRWIN, Currant, Nev.

✧

When I took up Christian Science some three years ago, I was in utter despair, despondent and discouraged. For years I had been a sufferer from many physical discords, and although I was almost constantly under the care of a physician I never received any permanent relief. While my healing in Christian Science has in some respects seemed slow and is not yet entirely complete, still I can hardly realize how much Christian Science has done for me and what a complete change it has brought about in my thinking and living.

I have been healed of the smoking habit of more than twenty-five years' standing, of so-called chronic stomach disorder and bowel trouble of still longer standing, and my eyesight has been restored after wearing glasses for twenty years. It is now eight months since I destroyed my glasses, and I have had no further need of them. For many years even with glasses I could hardly bear bright sunlight or wind, but now I do not notice any strain from either, and my eyes are strong and good for constant use.

While very grateful for these and many other physical healings, I am far more grateful for the peace and harmony which Christian Science has brought into my home and business life, and for the realization of God's ever-presence and all-power to meet every human need.

S. M. KNAPP, Chicago, Ill.

✧

Many years ago, when only a child, I had what the physicians called a fever, and in a very dangerous form. After a long period of doctoring and nursing I recovered from the fever, but not from its effects. As years passed the suffering increased. Everything in the way of medical means was tried, but all these failed to bring the desired relief.

Then Christian Science was brought to my attention, and I decided to try it, with the result that relief came at once, and healing a little later. Now I am learning to seek Principle and to find true healing. In our home we are learning that when Truth is rightly sought, human needs are rightly met. As Solomon declares, "Understanding is a wellspring of life unto him that hath it." We are grateful for the understanding that comes to us through Christian Science,—its literature and other means of instruction.

Digitized by Google

I can truthfully say that I consider it a duty, with many attending privileges, to be employed as a teacher in a Christian Science Sunday school. While directing others to the "wellspring of life" I am enabled to gain more from that infinite source. The deeper meaning now comes to me of Mrs. Eddy's profound sentence: "The rich in spirit help the poor in one grand brotherhood, all having the same Principle, or Father; and blessed is that man who seeth his brother's need and supplieth it, seeking his own in another's good" (Science and Health, p. 518).

Words are inadequate to express my gratitude to Mrs. Eddy for her teachings. The Bible has been unfolded to me through her clear, spiritual perception of its teaching as given in her books. I thank God for the privilege of daily access to the literature of Christian Science.

LILIAN SNYDER MCBRIDE, Kansas City, Mo.

✧

One day my little girl fractured her collar-bone, and the injury seemed very serious. I had seen many wonderful healings by Christian Science, but they were not of surgical cases, and as I was a trained nurse before marriage, I had mental pictures of the result of imperfectly set bones; consequently I expressed a desire to call in a surgeon. My husband said I must do whatever I felt to be for the best, but pointed out that Truth always heals perfectly, and reminded me of the many wonderful healings we had seen. As I recalled them, a wave of shame came over me that even for an instant I had thought infinite, omnipotent Mind needed human help to heal any wrong condition. We called in a Christian Science practitioner, and the shoulder healed perfectly in a very short time, without pain or inconvenience to the little one. The healing is permanent and complete, and for this and many other blessings I am most sincerely grateful.

EDITH M. CHUTE, Wayzata, Minn.

✧

It is with a heart full of love and thankfulness to God, and gratitude to our dear Leader, Mrs. Eddy, that I give this testimony. From childhood I was afflicted with scrofulous affection from my knees to my feet, and it became worse as I grew older, so that for several weeks at a time I could scarcely walk. A lady called one day, and seeing the condition I was in both physically and mentally, for I was very much discouraged, asked if I would like some Christian Science literature, saying that through reading it she had been healed. I was very much interested, so in a few days she brought me "Science and Health with Key to the Scriptures" by Mrs. Eddy. At this time I could not wear my shoes, and got around mostly on my knees. When she came to see me three weeks later I had my shoes on and laced to the top.

With this healing there has come to me a sweet sense of peace and freedom such as I never knew before. This was six years ago, and I have since been healed of dropsy and many other ailments. I am happier now than I have ever been, and stronger in health, having been able to lay aside glasses during the past year, although I was sixty-nine years old last July. I can read, crochet lace, and sew without them.

I wish to express my gratitude for these healings, and also for the spiritual uplift that has come to me.

MRS. E. A. MARSH, Reno, Nev.

✧

After four doctors had told me I would never be well without an operation, and after nearly six years of indecision, I finally consented to have it performed, and with the doctor's help was getting in physical condition to withstand the shock. I had suffered so much that it seemed as if death would be a relief; but God had blessed me with three children, and my daily prayer was to be allowed to stay with them so as to train their little feet in the paths of righteousness.

Christian Science came as an answer to that prayer. A dear friend brought the truth home to me in such a convincing manner that then and there I knew that God's promises could be relied upon. For three days I simply devoured the *Sentinel* she gave me. There I found the quotation from Science and Health (p. 494), "Divine Love always has met and always will meet every human need." I kept my next appointment with the doctor, asking God for help to break the news gently to him; but after a thorough examination he informed me that an operation would not be necessary now. Divine Love had not failed me! After a few weeks I called on a Christian Science practitioner for relief from a condition of eighteen years' standing, and in a very short time was healed of that and many other ailments. I thank God daily for the Christian Science literature, which gives me a better understanding of His word.

My heart is filled with gratitude to Mrs. Eddy, who was spiritual enough to receive this great blessing and compassionate enough to give it to a seemingly ungrateful world.

MRS. W. E. GEACH, Los Angeles, Cal.

✧

My desire is to express our thankfulness to God and our gratitude to Mrs. Eddy, who has so lovingly opened the way for us in Christian Science that we can have the spiritual understanding that God is an ever present help in trouble. This was proved to us in the fall of 1913, when our little boy, then four years old, was taken ill, and all was done for him that could be done materially. At that time I stood alone in Christian Science, neither my husband nor any of my relatives being interested in it. A physician who was called diagnosed the case as appendicitis.

Time passed on with no relief for the little sufferer, and a second physician who was called in consultation agreed with the first in every way. At the end of two weeks it was decided to operate quickly in order to save the child's life. This was done, and it gave relief for a few days. We would not consent that he be taken to a hospital, so the work was done in our home. In a short time he began to cough, and the doctors claimed that an abscess had formed on the lung and that the whole system was poisoned. My husband did not seem to realize the seriousness of the child's condition, but I could see him weaken each day, and my grief was almost unbearable. I, however, clung steadfastly to God, and felt confident a way would be provided to restore him again to health, although he was only a shadow of the robust boy he had been. The doctors held another consultation, and I insisted that they tell me exactly their views of the case. One said there was no chance whatever, the other said there was one chance in a hundred, that one chance being that his strength might hold out.

Then man's extremity became God's opportunity. I asked my husband if he would not now have Christian Science, and he gladly agreed to do so. The practitioner who was called gave us words of encouragement and accepted the case even at so late a stage. She came about half past one in the afternoon, and two hours later there was a marked change for the better; the pallid look had left the child's face and he threw off all the pus which it was said he would not be relieved of. His appetite began to return and he was given everything to eat that he called for, with only good results. By the third day he was eating quite heartily, and he gained so

Digitized by Google

rapidly that within a week we took him for a ride. By the fourth week he was out playing and as well as ever, the lung being perfectly normal, and now he is a picture of health. On entering school this fall he was examined by one of the physicians who had attended him, and his lungs were pronounced normal. This certainly was a convincing demonstration of the power of Truth over error.

I hope any one reading this testimony and needing help as we did, will not hesitate to ask for Christian Science treatment. It was one of the most peaceful and happy hours of my life when I knew our only child was under God's protecting care.—Florence Studyvin Morey, Watertown, S. Dak.

✧

I would like to tell how Christian Science helped me during an illness I had in January, 1913. I went to bed one Saturday night with pain in the top of my head and down the left side of my face. My sleep was broken, and I was unable to get up next morning; my face also was twisted to one side. I stayed in bed that day and sent to Edinburgh for Christian Science treatment. I had no fear and never thought of what the attack would be called. I just got up, as I felt I could, and worked away quietly. I think it was the following Friday that a doctor called. He was not sent for and did not know I had been ill, but just called in passing. He said I had facial paralysis, but that the worst was over. My ear was covered with little blisters, both inside and outside, and there was a strange noise in my head. Knowing that I was a student of Christian Science, he did not ask me to take any medicine, but offered to lend me a battery, saying it would be six weeks or two months before my face would be right, if even then. However, I wrote to him and said I would not need the battery, as my face was very much better. On Monday morning he called again, saying he could scarcely believe me and wanted to see for himself. He admitted that my face was much better, but thought I should use the battery, as the eye was still affected. He made still another call, and then asked me to do certain things, and I did them without any trouble. He said that he had never known a case of this kind to be healed in such a short time. I think it took in all about sixteen days for the trouble to disappear.

I felt so thankful for this demonstration,—thankful to God, and grateful to Mrs. Eddy for her wonderful teaching, which enables us to help ourselves and others.

Christian Cumming, Hamilton, Scotland.

✧

I often wonder how I ever got along without Christian Science, for I know it has saved my life. For years I had suffered from a serious nervous trouble, and this truth healed me; it has also healed every member of my family of different diseases, some of which were considered very serious.

Four children have been born to me under Christian Science treatment. Each time I have been able to get up the next day and go on with my work the same as usual. I know this has all been due to the healing power of Truth as taught in Christian Science. As a family we certainly have much for which to be grateful, but I have found the only way to prove our gratitude is to live this truth in our daily lives. This we can do, for if we press on each day and do our part, our Father will open the way.

I am thankful to live in this age when the leaven of Truth is at work; grateful to our dear Leader, who has borne so much to give to the world this Science which is helping all mankind; thankful to know God as an ever present help in time of trouble. I hope this testimony will be of benefit to others seeking the truth.

Mrs. M. E. Randal, O'Donnell, Texas.

From Our Exchanges

[Philip I. Roberts in *The Christian Work*]

At the manger of Bethlehem we may even dare to look forward in some coming time to that union of human hearts of which the noblest of our race again and again have dreamed; to a brotherhood which has sometimes been dictated by revolutionary terrorism, sometimes recommended by abstract arguments; but which to be genuine, must be the perfectly free movement of hearts impelled toward each other by a supreme attraction. And count these words as the wildest foolishness if you will; nevertheless, it shall here be written that when the "shouting and the fighting" have died away, as die away they will, that supreme attraction will be found in the child of Bethlehem, born that he might redeem, that he might regenerate the world!

[*The Advance*]

The Christian life is above all else a fellowship of the individual soul through Christ with God. The minister of the gospel, the organized church, the Bible, and the creeds, all are but agencies toward this fellowship. As agencies they may not be made ends.

These agencies of the Christian life often become hindrances, withholding the soul from the divine fellowship. There are many examples of those who have lost the end of divine fellowship in the means to its attainment. Some souls start out toward God and get no farther than the meeting-house. Some belong to a minister rather than to Christ. Not a few think they have reached the goal in the Bible, or in a creed new or old. At the present time, when stress is placed upon institutions and personalities, the peril of the Christian life is that many, even professing Christians, shall stop short of the supreme allegiance, which is to God, and fail to realize what President Henry Churchill King calls "the divine friendship."

["Anglais" in *Pacific Christian Advocate*]

Assuredly all persons do not receive the things of the spirit in the same way. The souls of some are slow to respond and are dependent on the stimuli of the spoken appeal, an elaborate ritual, or the ecstasy of music. Most of us derive our help from the mediation of the human: we need to be taught by the prophet, shown by the seer, and encouraged by the saint. It is well; but fortunate is he who can make his own voyages into the realms of God. There are some who thus are endowed with a higher sensitiveness of soul,—the prophets, poets, and mystics,—who reveal to us the spiritual mysteries as they are revealed to them. Hand in hand with expectation goes endeavor. To expect to attain goodness without striving for it is presumption.

[Gerald Stanley Lee in *The Congregationalist and Christian World*]

The world does not have today quite so religious a look as it had a hundred years ago. The people who are occupied in giving the world a religious look, who specialize all day, every day, in making religion look religious, are apparently somewhat smaller in numbers and less prominent in people's thoughts than they were a hundred years ago. There are moments when religion, judged by appearances, seems to many people to be a kind of trickle of goodness threading its way through the barren waste of a busy, stony, and preoccupied world. I cannot share this feeling, and while I as well as others have from time to time criticized the church, who was it but the church that taught us to criticize it, or gave me the standard, the impulse, or the faith to criticize it?

Digitized by Google

Who but the church could have made us so proud of God and so sure of the church that criticism was possible? As it has seemed to me, there has never been a moment in the history of the world when the question of whether religion is stronger now than a hundred years ago could be answered with such joy and praise as today.

[*Unitarian Word and Work*]

Whatever the historical Jesus may have been, his life and his personality were such that he gave the world its pronounced and effective ideal of human completeness. . . . When that quiet Galilean is brought to mind, it is his completeness, his perfect soundness, that we recognize. It is the beauty of his wholeness, or holiness, that makes him wonderful. Somehow he makes us feel as if he could not be vanquished by any sort of opposition or adversity, and so he has become an ideal personality, not because of his knowledge or wisdom, not because of his oratory or his goodness or his spiritual insight even, but because of his perfect poise in a world that was full of strife and wrong and injustice and cruelty and ignorance. Nothing unsettled him; nothing clouded the clearness and sanity of his vision.

[*The Christian Register*]

Some old-fashioned truths cannot be shelved with that title. It is not enough to say that they are old-fashioned; it is only necessary to determine whether they are true. The identification of truth with time confuses the passing with the permanent. Fashions grow old, statements get old-fashioned, emphasis changes, and forms become antiquated, but once a truth is enunciated, time drops away from it, and it stands fresh and new forever. When we come upon it in ancient record we call it strangely modern. It is neither ancient nor modern; it is simply true. Its truth, not its age, makes it classic.

[*American Lutheran Survey*]

Vital, spiritual religion not only constrains men to lead lives of righteousness and patience and love, but it clarifies the intellectual vision as well. It brings to man's understanding the illumination of the Holy Spirit, enabling him to differentiate in all cases between right and wrong, and giving him the will to do that which is right, even to his own hurt. There are no clear moral perceptions where there is no "vital, spiritual religion." Expediency and self-aggrandizement obscure whatever moral perceptions an unregenerate man may have. Moral strabismus logically produces intellectual deficiency. Hence, the need of spiritual religion.

[*The Universalist Leader*]

If all Christians were to live up to their Christianity, within a year the kingdom of heaven would be here. But we have not taken our religion seriously enough. To some it has been a formula of belief entirely apart from life, and having practically nothing to do with it. Some still believe that it is related alone to the life that is to be after we are dead, and has no bearing upon today. Some have thought it a "sacred" thing that they must not take into their politics or business, but must confine to the meeting-house.

[*Zion's Herald*]

What one thinks of God finds expression in his acts. One need not give his imagination much play in order to grasp the full significance of this statement. The history of the human race, with its moral lapses, its persecutions, its spiritual indifference, its unethical social life, all enjoying at different periods, in one form or another, the sanction of religious authority, is pathetically emphatic in the proclamation of this fact. It makes a vast difference what man thinks of God.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $2.00, six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

Translation into modern Greek has been made of the lecture, "Christian Science: Man's Dominion over Evil," by Edward A. Kimball, C.S.D., and is now printed as a pamphlet with the English version opposite the translation. The new Greek pamphlet is on sale at prices of our regular pamphlets, as shown on the opposite page.

A new pamphlet entitled "Man's Unity with God" has been printed in the German language. This pamphlet contains seven articles from the Christian Science periodicals, which have been translated into German. The pamphlet is now on sale at the prices of our regular pamphlets, as shown on the opposite page.

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $3.00; six or more, each $1.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 30 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under those titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

Chambers of Commerce are to be organized in Cartagena, Cali, Cucuta, and Bucamaranga, in Colombia, South America, at the request of business men in each of those cities. The governor of each of the respective departments will call a meeting of not less than thirty of the principal business men of the community, representing various branches of commerce, importing, exporting, transportation, stocks and bonds, insurance, commission, manufacturing, and so on, and these men will elect 30 per cent of their number as members of the new Chamber of Commerce.

The Chamber of Commerce of Bogota is authorized to act as the official organ of all the commercial interests in Colombia, and as such to present to the national Government practical methods for increasing the prosperity of the country, to advocate improvements or reforms in commercial legislation, to make recommendations regarding taxes and tariff rates, and to promote the organization of any service which would be of value to commerce and industry in general. The Government is to make use of the chamber at Bogota as a consulting and administrative body, in the securing of estimates for public works and in supervising construction. The chamber will also provide a commercial court for the settlement of disputes arising between merchants where the parties concerned voluntarily submit their differences to this court rather than to the tribunals of law.

Improvements for the Mississippi and Missouri Rivers, as agreed upon by the rivers and harbors committee of the National House of Representatives, including completion of projects already under way and maintenance of those completed, aggregate a total cost of $10,000,000. This sum has been included in the $45,000,000 river and harbor bill about to be reported to the House. The bill proposes $6,720,000 for the Mississippi and $600,000 for the Southwest Pass at New Orleans in addition to the $100,000 regularly appropriated in the sundry civil bill for the South Pass. For the Missouri River $1,500,000 has been agreed upon for continuing improvements from Kansas City to the Mississippi, $50,000 from Kansas City to Sioux City, $125,000 from Sioux City to Fort Benton, and $75,000 for St. Joseph. The last item is dependent on a similar amount to be subscribed locally. For the Ohio River $5,000,000 is included for locks and dams, and upwards of $500,000 is proposed for open channel work. For the Hudson River generally an item of $640,000 has been included.

In South Australia, as in other parts of the commonwealth, the development of the interior has always demanded special attention by the Government on account of the problem presented by great distances. The area of this state is 380,070 square miles, and although over four and a half million acres have been brought under cultivation, the greater portion of this land is along the fringe of coast-line. In some instances, notably on Eyre's peninsula and south of the River Murray, vast tracts have been settled by means of the railway, and land that once was considered almost useless is now, by means of artificial fertilizers and improved farming methods, producing abundant crops of grain.

At a meeting of the Society of Antiquaries of Scotland, results were reported of some excavations conducted by the society at Traprain Law, Haddington. The area laid bare last year amounted to about an eighth of an acre. In this, with an average depth of from three to four feet, were found four distinct levels of occupation. The increasing Roman influence in the various levels was particularly marked. Thus Roman pottery was found to a small extent on the lowest level and to a greater extent on the higher, and the same evidence was forthcoming with regard to the coins, of which eighteen were discovered.

A bill presented by Senator Tillman for a Government armor plate factory has been approved by the Senate naval committee. An appropriation of $11,000,000 is carried by the bill for the purchase or construction of such factory, with an annual output of not less than twenty thousand tons. That is little more than would be required for two first-class battleships, and would leave a large part of the armor needed in the navy's increased building program to come from private plants. The proposal has the backing of Secretary Daniels, and Senator Tillman will press his bill for early passage.

Within a few weeks a comprehensive plan of planting the Lincoln Highway from coast to coast, fitting the individual vegetation of each state into a general harmony, will be worked out by an expert for the General Federation of Women's Clubs. The thought of planting the national road developed with the conservation department of the federation several years ago. The need of a general scheme of planting and marking of entrances to towns, approaches to historic spots, railroad crossings, and the like, soon became apparent, and committees were appointed to cooperate with committees of the American Institute of Architects.

The new bridge that is being built across the river Neva in front of the Winter Palace, Petrograd, Russia, is nearly completed; much of the delay is due to the fact that some material had to be reordered in Sweden after the outbreak of war, as the orders in Germany had not been delivered. The bridge is a five-span structure, with a length of 246.94 meters between the shore abutments. The width of the thoroughfare is 22 meters, while the footpaths are 2.91 meters wide. The bridge has already been opened for pedestrian traffic.

Proposals have been made that Massachusetts acquire Mt. Holyoke and Mt. Grace, and property for thirteen miles along the Mohawk trail over the Berkshire hills for state reservations. Besides the advantages of these places as attractive resorts for the people, there was said to be an opportunity for the state to make a business investment that would return good dividends from the sale of lumber. Particularly was this true in the case of Mt. Grace, which now has about five million feet of marketable timber.

A general plan for the consolidation of the Boston & Maine Railroad Company with its leased lines has been adopted by the directors of the Boston & Maine, the Boston & Lowell, and the Fitchburg railroads. It has been approved also by many of the large stockholders of the three companies. These three companies have taken the lead in a reorganization movement which is intended to include all the twenty-six railroads that constitute the Boston & Maine system.

A return by the New Zealand minister of finance shows that 13,967 taxpayers pay an income tax,—10,101 persons pay on incomes under £700, 137 on incomes over £10,000. The total net incomes assessed for 1914-15 were as follows: Salaried persons, £2,039,004; traders, manufacturers, and so forth, £4,119,167; companies, £5,486,301; professional persons, £1,320,742; others, £885,047; total £13,850,261.

Mount Mitchell Forest Reserve, in the very heart of the southern Appalachian Mountains, will soon be opened as a national park. Arrangements for the opening of the reserve have been completed by the forest service of the Government in cooperation with the Southern Railway. It is the purpose of the Government to place within the reach of all either locations for cottages or sites for camps.

A bill to establish a national park service was recently introduced in Congress by Representative William Kent of California. Each of the fourteen national parks is now under separate management. It is required in the bill that these parks, aggregating about four million six hundred thousand acres, be administered by the Government in Washington.

Half a dozen additional state game preserves may be established by the Pennsylvania state game commission within the next few months, as under the act of 1915 such preserves may be created on leased land. The state now has fourteen game preserves, of which eight were established last year.

An increase of 46 per cent in membership during the last year was announced at the annual meeting of the National Council of the Boy Scouts of America. The increase to 182,622 boys and scout masters made the year the most prosperous in the six years' history of the movement.

At its annual meeting in Boston, the American Society of Landscape Architects discussed in detail the bill now before Congress authorizing the establishment in the department of the interior of a new national parks service under the charge of a director appointed by the secretary of the interior.

Work on the Jackman and Moosehead Lake Highway, in Maine, which will open up to the outside world an elaborate network of macadamized roads built in the wilderness by the Great Northern Paper Company and the Hollingsworth & Whitney Company, will begin at once.

The printing of Japanese school-books in Roman letters was recently begun in Honolulu, Hawaiian Islands. A prominent Japanese resident of the city has made the remarkable statement that "inside of fifty years Japan will be using the Roman characters exclusively."

The All-important Quest

CHARLES I. OHRENSTEIN

CHRISTIAN SCIENCE heals. It does so invariably, and it does so quickly; but this does not mean that its practitioners are invariably able to give this proof of Truth's power. It sometimes occurs, therefore, that those who are not quickly healed wonder why this is so, and the question, "Why am I not healed?" is not infrequently asked. Moreover, too frequently, when asked of the practitioner, reasons are given which seem to place the blame on the patient, and when asked of others, on the practitioner. This should not be, since in most cases both patient and practitioner do the very best they can. Neither should be condemned, and in all cases the good results desired would be more quickly and more surely gained if adverse criticisms were refrained from by all concerned.

Those seeking help in Christian Science should early learn that God, good, is the only cause, and that this cause produces only good results. They should also learn that "sufficient unto the day is the evil thereof;" that is, to the present enlightenment of the individual the mistakes which disclose themselves in a natural way are quite sufficient. The practitioner, on the other hand, knowing that all things are possible with God, should remember that "Love never faileth" (Rev. Ver.). The belief that error of any kind can be a cause of anything, or a hindrance to the demonstration of God's omnipotence, will thus be corrected.

Mrs. Eddy indeed teaches that "a knowledge of error and of its operations must precede that understanding of Truth which destroys error" (Science and Health, p. 252). Nevertheless throughout her teachings she points out with great clearness that error is nothing, and this teaching is Scriptural. "Let no man deceive you by any means: for that day [enlightenment] shall not come, except . . . that man of sin be revealed, the son of perdition;" and the son of perdition was defined by Jesus as that which "abode not in the truth, because there is no truth in him." Thus Paul taught that evil, or error, must be recognized, and Jesus taught that it must be recognized as falsity, nonentity. Were this better understood, the sin, or error, "which doth so easily beset us" would not so easily disquiet us, and a right, harmonious state would be more easily attained. "Seek, and ye shall find," said Jesus. But he did not say that evil or the cause of evil should be sought after that good might be found. On the contrary, he always led thought up to Truth, to the effectiveness of Truth spiritually discerned.

It may be objected here, however, that Mrs. Eddy teaches that "ignorance of the error to be eradicated oftentimes subjects you to its abuse" (Science and Health, p. 446). Very true; and to believe that there is a presence, intelligence, or power in the form of some person, place, or thing which has brought about the trouble entertained, and which is able to maintain it, make it culminate disastrously, or hinder or offset the operation of that omnipresence, omniscience, omnipotence which is ever at work to accomplish its beneficent purpose,—to entertain such a belief is in itself "ignorance of the error to be eradicated," and, unrecognized as mere error, would assert itself in the way of fear, foreboding, and dis-ease, picturing these forth as some form of calamity or sickness with all the attendant symptoms.

This is indeed frequently the case: the very error which needs to be recognized and eradicated to facilitate the healing, being the everlasting searching for the reason of the seeming trouble (for which, in Truth, there is no reason), instead of a looking for every reason given in the Word of God for man's present godlikeness and his immunity from trouble and impairment of every kind. So solid is the erroneous conviction that there is a good and valid reason for a bad and invalid belief, that this conviction or belief has become one of the most difficult to recognize as error and so yield to eradication. Yet in order that right and desirable results may be obtained, this recognition must take place.

It should not be understood from this that error of every kind—and all that is contrary to God, good, is error of some kind—is not to be uncovered and destroyed. Nothing could be farther from the truth than such a supposition. There is nothing wrong, and therefore secret, that shall not be revealed, and Christian Science shows us how this must be done. It shows us that human conjectures, self-constituted detective agencies, or forced confessions are frequently even more erroneous than the error to be eradicated, and should in no way be employed in this important matter. The more hidden the errors which seem to hinder demonstration, the greater the need to seek, not the mistakes, but the truth, the unfoldment of which not alone uncovers them, but uncovers them as cheats and impositions upon unenlightened belief. This is so whether they are entertained as able to give one pleasure, satisfaction, gain, or to deprive him of them. Error must be recognized. It is not recognized at all, however, until it is recognized as nothing, and nothing can never form any hindrance to the operation of omnipotence.

"Seek, and ye shall find." But what is it that those who turn to Christian Science desire to find,—truth or error, good or evil? If they seek error, they will probably find it, and they may find little else. If, on the other hand, they seek that which is good and true, and seek it with all their hearts, they will surely find it. Why seek the living, the beautiful and good, among the dead, among that which is buried in error? Why not seek God, the one good? To seek a cause for the lack of the demonstration of that rectitude which includes all well-being, instead of seeking to know the truth which alone includes it, forms it, projects it, and shows it forth, is to seek amiss. This is so, because such seeking must presuppose not only a limitation of the one true God, but also that there is a power which counteracts His beneficence; therefore to do this is to break the first commandment, and the first commandment, according to the Master, is the chief commandment, basing Christianity.

If we remember that the word health is derived from the word wholeness, that in which nothing is or can be lacking or absent,—and this is surely the state that all desire,—we will not seek so much for the absence of something, or error, but more, much more, for that which should form the all-important quest,—"the kingdom of God, and his righteous-

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

ness." Most frequently the disinclination to do this on the part of those seeking health is shown in a longing for the loaves and fishes only, instead of appreciating and rejoicing in the finding of the "pearl of great price," the truth revealed by Christian Science. In not recognizing and steadfastly remembering the benefits already received, and in neither appreciating nor rejoicing in the proofs of God's loving-kindness, a state of consciousness is developed that is not helpful to recovery or success, since appreciation is joy, and with joy we are to "draw water out of the wells of salvation." On the other hand, impatience, complaint, and lamentation because of what has not as yet been accomplished, cannot result in one particle of good.

The recognition and abandonment of this error, as well as the turning away from the endless search for a reason or cause for that which does not emanate from the one and only cause, to a like earnest search for the good, the beautiful, and the true, which Christian Science teaches, would in all cases be more helpful. This method, together with the "prayer of faith" of the experienced and faithful Christian Scientist, encouraging the right desire and strengthening the confidence of the beginner, in all cases achieves the more desirable results.

Mental Remedy

PIETRO TONIELLI

In Science and Health Mrs. Eddy makes it plain that the origin of disease is mental, and that its remedy is likewise mental. Students of this book soon find that it is a false process of the human mind which induces the sense of disease, and that by a correct, scientific process of reasoning, and a sincere desire to know the truth about God and His creation, the nothingness of disease may be realized. An experience which the writer had some time ago confirmed him in the reliability of this teaching.

One night I awoke suddenly and found myself, according to the evidence of the physical senses, very ill. The condition was distressing, and with it all there seemed to be a disinclination to work in Christian Science; but I knew that if I would not be a hypocrite I must take the same medicine I gave others, and this thought overcame what Mrs. Eddy calls "unnatural reluctance" to apply the truth. (See Science and Health, p. 420.) I began to reason that for muscles to move or to be quiescent there must be volition; that volition is a mental quality; that there is only one Mind, so that all volition rightfully belongs to this one Mind; that the will of infinite Love does not operate for discord and misery, but only for good and joy. Then there came to me as never before the meaning of Mrs. Eddy's statement on page 450 of Science and Health, that to the Christian Scientist sickness "is no less a temptation than is sin," and I saw clearly the baseless delusion of mortal belief, and that I must not assent to the existence and operation of another mind opposed to the divine Mind.

The insistence of this temptation that I have another god seemed almost overpowering at first, but upon reflecting that there was nothing but illusion about the whole affair, and that not only was I in no wise obliged to give assent to it, but that loyalty to Truth demanded a peremptory dismissal of the thought that there was anything to fight me, the victory was won. Sense yielded, and peace and calm succeeded the era of turmoil. I then gained a deeper and more far-reaching view of the allness of Truth, and understood better what the Master did and meant when he calmed the storm on the lake with those words so significant and dear to the earnest student of Christian Science, "Peace, be still."

Next morning I found that every case of illness of a similar nature confided to my care had been healed, and as a small token of my gratitude for the stand our revered Leader took so unflinchingly and against such odds, in order that we might prove Truth's healing power for ourselves, I have felt a desire to record this victory, which plainly shows that it is quite possible for each of us to overcome the enemy through Christ, Truth. In the measure that the sin of believing in another god is destroyed in human consciousness through the truth about divine Love and its eternal reflection, we gain that consciousness which heals all disease and discord.

✧

Working Together

FLORENCE B. HAMILTON

Christian Scientists who hold steadfastly to absolute Truth should never become confused when working together, although it may take longer for groups of people to work out an ideal than it does for individuals. Because of this there come to one in an organization endless opportunities for advance in selflessness, charity, patience, and love. The great need in working together harmoniously is to know what the next orderly step may be in our journey toward perfection,—toward the realization that the absolute exists, that this absolute is God and His creation, perfect and eternal, and that it is the truth which brings us together. On this basis there is no uncertainty, no arguing, no criticism.

The difference of opinion sometimes comes in knowing what is our next step as a church, a Sunday school, or a committee, the step that will bring us nearer to the spiritual reality which is our birthright, and even well meaning persons occasionally are misguided at this point. The vision may become clouded when one is working with others, and this shows the need of being awake to the many methods of mortal mind in order that none may be deceived.

The writer has had occasion to ask herself lately, What is it that clouds our vision? and "in the quiet sanctuary of earnest longings" (Science and Health, p. 15) much help has been received. To begin with, we must be honestly and willingly ready to admit our need of guidance. We must be willing to admit that no matter how sincere our motives, we may be mistaken in our view-point or action. These admissions are purifying. They clear the atmosphere and make us more ready for progress. As we have had to learn in our individual work to trust spiritual methods if we would enjoy the fruits of Christian healing, so we must learn to trust spiritual methods in church work, remembering always that outward organization is but a means to an end. If we think it is our duty to steady the ark, we need not wonder if we hinder the church we love in our overanxiety to help it along, and what might be uninterrupted progress becomes through personal opinion a troublesome pathway.

Again, non-recognition of loving service, or the other extreme of dependence on persons for our good, may cloud our vision. Perhaps we have not always remembered that no matter how misguided we have been in the past, we may all catch a glimpse of the Christ at any moment, so irresistible is the power of Love. The temptations of mortal mind are many and varied. Should we not guard against determined wishes and desires, lest they merge into self-will? Should we be any more discouraged over a sense of self-importance than we are over self-depreciation? Let us ever remember, when our hearts grow sad over the constant complainings and criticisms of mortal mind, that perhaps we are on no different plane if we let fear possess us and prevent us from giving out the message entrusted to our care.

Digitized by Google

In working together there is usually a great desire for unity, and many mistakes are made in an effort to bring about this end. To think that we shall be nearer to unity by bringing persons together, is very far removed from the unity where two or three are gathered together in the name of Christ, Truth. Unity among the brethren is the beautiful manifestation which comes, not when we struggle to become personally adjusted to one another, but when we become conscious of our right place, and give to others their rightful place in the realm of Mind. Just as we expect growth in our individual work, so we have to remind ourselves that progress is the demand made upon us as we work together. The good of the whole is helped as each becomes really willing to do his part, and the steps to be taken are rarely the same for any two.

One may be called upon gladly to give up the work he has learned to love, while another may have to be willing to accept with joy the task which is set before him. To put down fear and speak bravely the word which will heal and bless may be some one's next step, while his neighbor may have to learn that "silence is golden." We shall never help to bring loving fellowship into our midst by staying in some isolated corner until other people are good enough to work with us, and if we cannot work with others, would it not be well to look into our own hearts first for a reason, before we lay all the blame on our brother?

It has been said that the Manual shows us how to take the steps which will bring the teaching of the Bible and Science and Health into our lives in all necessary relations with our fellow men. This being so, should we not study more earnestly its by-laws and be more ready to be obedient to their loving discipline? Also in her letters and messages to the branch churches Mrs. Eddy has given us many words of tender counsel which pertain especially to working together. These give us ample guidance, and if studied, will throw light on every difficult problem.

The world has much need these days to learn something of the joy of brotherhood. Then let Christian Scientists begin with themselves, knowing that to whom much has been given much is expected. Those who have had a vision of God's kingdom, wherein evil is powerless, ought to be the first to work together with gladness. Mrs. Eddy's words to the National Christian Scientist Association are also applicable to us. She says (Miscellaneous Writings, p. 135): "Our watchwords are Truth and Love; and if we abide in these, they will abound in us, and we shall be one in heart,—one in motive, purpose, pursuit. Abiding in Love, not one of you can be separated from me; and the sweet sense of journeying on together, doing unto others as ye would they should do unto you, conquers all opposition, surmounts all obstacles, and secures success."

"We shall not all sleep"

REV. ANDREW J. GRAHAM

MRS. EDDY has quickened and invigorated the thought of multitudes by her illuminating declaration that "death must be overcome, not submitted to, before immortality appears" (Science and Health, p. 76). This citation is the scientific correlative of the fifty-first verse of the fifteenth chapter of I Corinthians, which reads: "Behold, I show you a mystery; We shall not all sleep, but we shall all be changed." In this great chapter Paul, speaking after the manner of men, is contrasting life with death, and he unequivocally declares that what mortal man calls death is not a *sine qua non* of entrance into eternal life. A recent writer on this text fails entirely to note this fact, which is important not only because Enoch and Elijah did not "sleep," that is, did not die, not only because Jesus did not go to heaven by means of death, but still more because this exemption bestows upon each of us the privilege and right to immunity from the much feared episode named death.

We should reverently and confidently lay claim to all that the will of Jesus the Christ has bequeathed us. To relinquish or fail to lay hold upon the full promise is to disregard the promisor. Jesus said, "If a man keep my saying, he shall never see death," a statement to which Christian Scientists cling, and which is an inspiration not confined to spiritual life, but includes all the phenomena connected with the working out of the problems of human existence. A man should set before him nothing short of the perfect ideal, and the perfect ideal is not unattainable. As the poet has said,—

> A man's reach should exceed his grasp,
> Or what's heaven for?

To distrust one's ability to conquer death is to distrust the omnipotence of Truth. Death is not a categorical imperative: it never has been and never can be, *per se*, the gateway to heaven. We shall not all die. This is what the apostle says. The Greek verb *koimao* means here, and in many other New Testament passages, "death;" for example, it is written of Stephen, "When he had said this, he fell asleep." A distinguished Bible and Greek scholar has recently translated Paul's words as follows: "Here is a secret truth for you: not all of us are to die, but all of us are to be changed—changed in a moment, in the twinkling of an eye, at the last trumpet-call."

By fearing death one outlines and invites it. In the second chapter of Hebrews we are told the reason why Jesus willingly assumed the death experience, namely, "that through death he might destroy him that had the power of death, that is, the devil; and deliver them who through fear of death were all their lifetime subject to bondage." We are told that "perfect love casteth out fear;" also that "the last enemy that shall be destroyed is death." It cannot be denied that the heart of Christian Science is Love, and Love is the conqueror of death. There have always been those who inclined to the belief that John did not "sleep." In response to Peter's question Jesus said: "If I will that he [John] tarry till I come, what is that to thee?" God has no favorite persons, times, or places; with Him is "no variableness, neither shadow of turning." What Enoch and Elijah and Jesus attained unto by their understanding of the power of Truth, is open to all in every century and every land.

To imbibe the spirit of the scientific definition of "year" as found on page 598 of Science and Health, is to invigorate the consciousness with that spiritual sense of Truth which causes the shadow (for that is all it is) of death to begin its passage to its original nothingness. The passage reads: "One moment of divine consciousness, or the spiritual understanding of Life and Love, is a foretaste of eternity. This exalted view, obtained and retained when the Science of being is understood, would bridge over with life discerned spiritually the interval of death, and man would be in the full consciousness of his immortality and eternal harmony, where sin, sickness, and death are unknown."

The would-be followers of Christ Jesus have long been too timid in claiming man's right to dominion, made possible by the true understanding of God. There is as radical a contradiction between physical death, as popularly understood, and the laying off of mortality—materiality, matter—as there is between the symbols of plus and minus; one stands for "is not," the other for "is." The first, death, is "the wages of sin;" the second, eternal life, is "the gift of God." Paul

Digitized by Google

alludes to the one when he says, "We shall not all sleep;" to the other in this wise: "We shall all be changed." Jesus did not pass to heaven by means of death; from the episode of the crucifixion and the tomb he returned to earth; then forty days later he passed from earth by the ascension,—the translation or the change alluded to by Paul. In absolute Science no one should have died after the ascension of Jesus the anointed. That this conviction had some lodgment in the earliest Christian thought is abundantly proven by the New Testament passages, which regarded the universal coming of Christ—or as later centuries styled it, the second advent—as near at hand, as well as by the uniform inscriptions, symbols, and frescoes in the Christian catacombs of Rome, which in the face of countless martyrdoms declared the unreality of death.

Through Mrs. Eddy the truth of being has lovingly, patiently, and insistently knocked at the door of this age, and little by little understanding is opening the door, and in multitudes of lives the prophecy which she made is passing from promise toward fulfilment. In her book "Unity of Good" we read: "The sweet and sacred sense of the permanence of man's unity with his Maker can illumine our present being with a continual presence and power of good, opening wide the portal from death into Life; and when this Life shall appear 'we shall be like Him,' and we shall go to the Father, not through death, but through Life; not through error, but through Truth" (p. 41). Every case of healing in Christian Science removes in a degree the fear of death from the whole race; and as this fear is eliminated, Christian Science healing becomes easier throughout the world: for the light which comes to one extends to all, until all men shall have, as our Master declared, "the light of life."

✧

Preparation for the Feast

ANNA E. HERZOG

The writer is renewedly impressed every week with the importance of our Wednesday evening meetings, and is realizing increasingly that like all important things, they are worthy of our deepest thought and truest preparation. One sometimes hears the statement made that testimonies should be simply spontaneous utterances inspired at the moment, yet on page 149 of "Miscellaneous Writings" Mrs. Eddy refers to the weekly meeting as a "banquet of Christian Science," a "feast and flow of Soul." This feast is assuredly provided for the hungry and thirsty wanderer who is seeking relief from the beliefs of sorrow, sickness, or sin. These seekers are the guests at the banquet, invited by our notices and announcements. Surely, even humanly speaking, a guest should be given of our best, and our best calls for loving, considerate preparation.

If we find, after experience, that the inspiration of the moment does not prove sufficient to put us on our feet, ready with a clear and concise statement of the healing, mental and physical, which Christian Science has brought us, then surely it would be better in the quietness of home to think upon the most helpful way to express our loyalty and gratitude and healing, that our hungering, seeking brother may have his need supplied. This does not mean that one should outline his statement, but that he should empty his thought of fear, ambition, and the desire for vainglory, so that the inspiration of Truth and Love may flow in.

It is our privilege to know before each meeting that Truth is ever present to meet the need of the seeker for it. It is our privilege as Christian Scientists to help by giving each his own message, which no one else can give. Testimonies are not intended to be flights of oratory or theological discussions, to be inspired by emotional excitement any more than by cold intellectuality, but they are intended to be loving, honest, grateful statements of what Christian Science has brought to us individually. As such they are surely worthy of prayerful consideration, and of any preparation which experience has taught us will make them most helpful.

If our dominating desire in giving our testimonies is to bless, our Master's declaration, "Give, and it shall be given unto you," will be fulfilled, for, as Science and Health tells us (p. 206), "whatever blesses one blesses all." Let us then prepare for the feast, and keep it, as Paul says, "with the unleavened bread of sincerity and truth."

✧

Character

FRANK P. EBERMAN

Given a man's beliefs as to any situation, and his treatment of it is not hard to forecast. His action will be efficient and fruitful as he has the facts, knows their values, and as his purpose is just. His work is abortive and characterless in proportion to any obliquity of view-point, that is, as he lacks understanding; he gains character only as he follows Truth.

The teaching of Christian Science that the truth is to be found only in Spirit and in the spiritual, does not depreciate or belittle the material achievements that chart sixty or more splendid centuries, from the stone axe and war club to a conquest of the natural world, which today commands for men the treasures and pleasures of land and sea and air. Nevertheless, while Adam is no longer a cave-dweller, he is still a grave-dweller; and a world poet, neither pessimist nor iconoclast, in saddened lay has sung the still unstifled lament of Rachel in the well-known lines:—

> The boast of heraldry, the pomp of power,
> And all that beauty, all that wealth e'er gave,
> Await alike the inevitable hour.
> The paths of glory lead but to the grave.

But there lived one—he still lives on—whom the grave could not hold. Calvary's sainted day presented a new fact with which the world has been slow to reckon, and piously modest Thomas Gray, in pointing mankind to an inevitable tomb, but voiced a yet prevailing fear. To this foreboding of human sense Mrs. Eddy brings a great light when on page 426 of Science and Health she says: "When it is learned that disease cannot destroy life, and that mortals are not saved from sin or sickness by death, this understanding will quicken into newness of life. It will master either a desire to die or a dread of the grave, and thus destroy the great fear that besets mortal existence. . . . The human concepts named matter, death, disease, sickness, and sin are all that can be destroyed."

Christian Science does not fail to reckon with this gigantic fact of past human history, and recognizes in Jesus of Nazareth one who had a perfect understanding of the terrible situation he was called upon to meet for humanity. He had said long before, "The words that I speak unto you, they are spirit, and they are life." These words, urged upon the multitudes in the temple and on the mount, on sea and plain, showed that he understood the Father to be Spirit, and that man, as one with Him, or as the writer of Genesis puts it, made in His image, is necessarily governed by spiritual laws alone, beyond the threat of the cross, the bludgeon, the spear, or the tomb. This was the character of the man of Galilee throughout. "What manner of man is this, that even the wind and the sea obey him?" would not have been asked had the questioners guessed that their lives had been preserved

Digitized by Google

from the angry waters by the presence and love of him who knew the power of divine Truth as they too could know who then simply believed.

No candid observer will question the world's sincere pursuit of truth. Ages of toil have led upward from belief to belief. Yet it is written, "I will overturn, overturn, overturn, . . . until he come whose right it is," and "every knee shall bow." "But this last call of wisdom," Mrs. Eddy writes, "cannot come till mortals have already yielded to each lesser call in the growth of Christian character" (Science and Health, p. 291), till the absolute truth about life and its laws is known and practised, till man is perceived and understood as spiritual and not material. It cannot come until matter limitations with their resultant strifes and jealousies are known only as myths; till all good is seen to be the divine heritage of all men; till wars cease; till purity reigns; till the love and constancy and clearness of spiritual vision, which have stamped the life charts of Christian Science with the cross embounden in a crown, shall at last have made the darkened day of Calvary the universal day of God and of our life eternal.

When these signs shall characterize a generation, perchance yet unborn, and men shall understand the storms of Galilee and of life as naught but the "insubstantial pageant" of unreal material sense, it will be fully and finally known that the divine character is Life, Truth, and Love, and that in man, God's offspring, held in His eternal embrace, character means the demonstrably right apprehension of Him whom to know aright is indeed life eternal.

Character is the evidence of intelligent obedience to Truth. It is the priceless possession of each individual, enabling him to bear the cross and to forget the thorns, the spitting, and the spite; to hope serenely on when friends have failed and the harsh voice of slander and condemnation assaults him; to keep pure the love whereby Truth is revealed, and to demonstrate to a needy and it may be jeering world that the works which the Master did, he who loves Truth can still do.

[Written for the *Sentinel*]

Rend Thou the Veil

REUBEN POGSON

When burn the temple's tapers dim,
And slumber priests within their stalls;
When choirs forget their God to hymn,
And silence hangs like funeral palls;
While grope we for Thy altar rail,
And miss the cup, and lose the bread,—
From out the darkness and the dread
We cry, Rend Thou the veil!

When hopes decay and joy is fled,
Beclouding sight with bitter tears;
When wealth of words leaves grief unsaid,
And burd'ning minutes seem like years;
When all we do doth naught avail,
Seems farther step we cannot go,—
Then hear when out our direst woe
We cry, Rend Thou the veil!

The flesh seems strong, the spirit weak,
But mighty Thou, O Love divine!
In vain Thou wilt not let us seek,
And bright, through mists, Thy truth will shine.
We shall not sink, we cannot fail,
Love finds the cup, faith grasps the bread;
Immersed in radiance Truth has shed
We cry, There is no veil!

Selected Articles

[John M. Tutt in *Warrensburg* (Mo.) *Star-Journal*]

An evangelist holding local services declared, according to your report, that Mrs. Eddy taught the non-existence of hell. Mrs. Eddy taught most emphatically that hell is an experience inseparable from sin, and that the sinner inevitably must suffer. She did not, however, subscribe to the ecclesiastical opinion of a material place beyond the grave filled with actual fire and brimstone. Christian Science does not operate to frighten sinners into being good. Being a restatement of the teaching of the Master, Christian Science is a religion not of fear, but of love.

Jesus taught both heaven and hell. The former he declared to be a divine state of consciousness. He definitely repudiated the Pharisees' belief in a material place called heaven by his reply to their inquiry as to "when the kingdom of God should come." He said: "The kingdom of God cometh not with observation; neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you." Inferentially, then, if heaven is a state of divine Mind, hell, heaven's opposite, must be the state of mortal mind which Paul declared to be "enmity against God." The question of whether there is a place called hell, pales before the great fact that the sinner is suffering right now.

If one is consistent in showing sinners the errors of their way, and how to overcome sin through Christ, he will be found lifting men from the hell of their own making into the kingdom of heaven on earth for which Jesus taught his disciples to pray. On page 160 of "The First Church of Christ, Scientist, and Miscellany" Mrs. Eddy has written: "I am asked, 'Is there a hell?' Yes, there is a hell for all who persist in breaking the golden rule or in disobeying the commandments of God. . . . The advanced psychist knows that this hell is mental, not material, and that the Christian has no part in it. Only the makers of hell burn in their fire."

Mrs. Eddy's writings show a fidelity to logic, a conformity of premise and conclusion, an exactitude of reasoning, a pure spirituality, which establish her scholarship as above the mere knowledge of letters. Scholasticism may continue to frown upon her who brought to light the spiritual teaching and healing of the Master, but the learned doctors will again fail in their efforts to make the law take precedence over the gospel of Love. Indeed Mrs. Eddy was a true scholar—she understood God and man.

✧

[J. Edgar Fielding in *Saturday Night*, Toronto, Canada]

Our critic condemns Christian Science as unchristian. The dictionary definition of a Christian is "a professed follower of Christ." Jesus said, "By their fruits ye shall know them," and also, "He that believeth on me, the works that I do shall he do also." These works of Jesus included the healing of sickness as well as the destruction of sin. Even opponents of Christian Science acknowledge that Christian Scientists are healing the sick and reforming the sinner today, thus proving their claim to be followers of Christ.

Christian Science does not teach the thought of God as personal in any finite sense, but in "Science and Health with Key to the Scriptures," the text-book of Christian Science, Mrs. Eddy states: "If the term personality, as applied to God, means infinite personality, then God *is* infinite *Person*, —in the sense of infinite personality, but not in the lower sense" (p. 116). Christian Scientists accept the teachings of the Bible, that God is Spirit, Life, Truth, Love.

The statement is made that Christian Scientists deny the divinity of Christ. A careful study of the Christian Science

Digitized by Google

text-book will show this statement to be incorrect. It teaches most unmistakably that Christ is divine, but it does not teach that Jesus is God. In fact, Christian Scientists have Jesus' authority for denying this, since he rebuked this thought in the following words: "Why callest thou me good? there is none good but one, that is, God." Jesus never referred to himself as God, but he did call himself the "Son of God" and also the "Son of man." In John v. 30, 31, and vii. 16, 17, are further proofs that Jesus did not claim to be God. The following from page 26 of Science and Health will show the Christian Science teaching on this subject: "The Christ was the Spirit which Jesus implied in his own statements: 'I am the way, the truth, and the life;' 'I and my Father are one.' This Christ, or divinity of the man Jesus, was his divine nature, the godliness which animated him."

The further statement that Christian Scientists regard Jesus as a "mere healer of the sick" is very far from the truth. A person must be greatly prejudiced who can read the chapter on Atonement and Eucharist in the Christian Science text-book and not see that Christian Scientists revere Jesus as the Wayshower, who has shown to humanity the way out of suffering, the way to overcome sin in themselves and others and reveal to them their birthright as heirs of righteousness. The following passage from page 26 bears out this statement: "While we adore Jesus, and the heart overflows with gratitude for what he did for mortals,—treading alone his loving pathway up to the throne of glory, in speechless agony exploring the way for us,—yet Jesus spares us not one individual experience, if we follow his commands faithfully."

The claim that Christian Scientists consider prayer unnecessary, is ridiculous. I would refer our critic to the chapter on Prayer in Science and Health, and if this is studied with a desire to know the truth on the subject, and not in a spirit of antagonism, she will learn that the prayer of Christian Science is the prayer of faith (understanding) which saves the sick. One quotation from the Christian Science Hymnal (p. 91), "Prayer is the Christian's vital breath," is typical of the Christian Scientist's thought on prayer.

That Christian Science is meeting a great need of the world today in giving to men a religion which is practical and satisfying, is proven by its remarkable growth, although I suppose this would be no proof to our critic, who is evidently quite satisfied that the governments of the various states which have given protection to Christian Science, as well as those who have adopted Christian Science, have been and are being greatly deceived.

✧

[Lieut. Paul H. Clark in *The Army and Navy Journal*, New York, N. Y.]

Two references to Christian Science in your columns indicate a lack of clear understanding as to what Christian Science is and what it teaches. You speak of Christian Science as a "method of ignoring disagreeable facts."

Christian Science makes clear that everything is governed by law, that the real, genuine, fundamental laws enforce efficiency, completeness, adequacy, and harmony in every part, great and small, of the universe. Christian Science recognizes that in human experience laws appear to operate in opposition to the fundamental laws already referred to, but it shows that in reality there are no other laws than the fundamental laws of God, and that what seem to be opposition laws, producing disease, sorrow, poverty, and the like, are not laws in reality, but only spurious, illegitimate beliefs of law.

Christian Science practice is the enforcement of God's law, and conversely, stops and abolishes spurious law. Christian Science recognizes the human experiences that follow belief in and recognition of these illegitimate laws, but denies to such alleged laws any validity, power, or effect. All of this is daily put in practice and shown to be operative in literally thousands of instances of all kinds of diseases and human problems. The rapid increase in the number of people who in greater or less degree are practising Christian Science is due only to the efficacy with which Christian Science is accomplishing its helpful work. As you are perhaps aware, an increasing number of army and navy people are coming under the benign influence of this return to primitive Christianity.

✧

[Henry Van Arsdale in *The Weekly Monrovian*, Monrovia, Cal.]

The *News* of recent date contained an account of an address by a clergyman who attempts to "review" an authorized lecture on Christian Science. Much that the clergyman is reported as having said is based upon his own misapprehension, or misreading, of the lecture.

Christian Science has nothing to do with psychology, as the latter term is generally understood; it is therefore not to be wondered at that the lecturer disagreed with writers on psychology. Christian Science is what the term indicates, knowledge gained by correct thinking, verified by proof, and formulated in a rational system derived from and relating to the Christ, or what is known as the Christian religion. It is not, therefore, a "hodge-podge," a "mixture," or a "misinterpretation."

The critic is most unfortunate in the quotations used from the published lecture and from the Bible. He quotes the lecturer as saying, "When we have knowledge of the truth, we get practical results," and again, "The lecturer said the personal concept of God is incorrect." What the lecturer did say about knowledge of the truth was to quote Jesus, "Ye shall know the truth, and the truth shall make you free," and to show that practical results, such as the emancipation of humanity from sin, sickness, poverty, and death, will come about when this knowledge of the truth Jesus referred to shall have displaced and destroyed all false beliefs. If there is no evil or sickness in consciousness, these could never be expressed; all that can be manifested in action will be true and good, and there will be no "devil" to "know" anything or be "incarnate" in anything.

Now, as to God. It is of course the truth about God that Jesus referred to when he said, "Ye shall know the truth." This truth is certainly not person, nor is it personal, or confined to any personal concept, for all Christians unite in the belief in an infinite being called God. Christian Science does not teach that human love or goodness, or the human sense of love or goodness, is God; far from it, and for the reason the critic unconsciously gives when he uses as an illustration that murder and hatred may also be incorporated in the human mind. Murder and goodness do not have a common source or dwelling-place. Christian Scientists cannot rest content in a belief that "goodness and love do not amount to a snap of the finger unless they come through a person," or the human mind, where, as the clergyman states, murder and hatred may also be incorporated. The statement of the beloved disciple John that "God is love," which has comforted millions, still remains true; therefore Mrs. Eddy's use of the word love, capitalized, as a synonym for God, gives many persons a higher sense of God than they previously held.

Neither of the Bible quotations given from James is quoted correctly, and it would appear that it was not the Christian Science lecturer who attempted "to change the meaning of the Bible." There is no doubt with the Christian Scientists that the Bible is written in plain language, even if others have such doubt. Jesus said, according to Mark's gospel, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." Here is a clear statement as to the thought which should govern in prayer, and it is in this

Digitized by Google

sense that Christian Scientists get results from prayer, for, as the clergyman states, the effect desired is a change in the mental attitude of the one who prays, not an expectation that the unchanging God will change.

The whole arena of the activity of prayer is in the consciousness of the individual who engages in prayer, and if present methods are not producing results, the individual needs to change. Thus will be brought about that renewal of the mind which Paul declared is necessary if the individual is to be transformed and the good and perfect will of God for all His children is to be proved. Then the body will manifest the health that a renewed mind knows is the will of God; the antecedent, not the subsequent, thought of the mother will protect the child, even as the three Hebrew children were protected from the fiery furnace.

Thus, too, no clergyman will be led to imply that Christian Scientists "take the name of Christ and put that of man or woman above him," for they do not. Christian Scientists have the same reverence that Baptists have for the one Christ. Then, too, our critic's duty as a Christian minister will be so to pray that he may engage in the activities of the full message of Jesus the Christ, "to preach the kingdom of God, and to heal the sick."

I write at length only because the message of Christian Science is to the dissatisfied, never to the satisfied, and we do not wish to be misunderstood, be it ever so unintentionally. However, there can surely be nothing to regret if "some of the finest people in the world" are "slipping away from other churches" into Christian Science. Such people are not apt to make mistakes of this order, and if they one and all testify, as they do, that their Christian experiences are quickened and uplifted, their love for God intensified, their study of the Bible enlightened, then surely that which has brought this about will never again be referred to as "hodge-podge."

✧

[F. Elmo Robinson in *Lebanon (Ore.) Express*]

A writer in an issue of the *Express* attempts to prove the existence of a personal devil, and thereby establish the power and reality of evil. In so doing he has taken occasion to misrepresent the teachings of Christian Science concerning the nature of evil.

Ages of religious teachings, which have included the belief in a personal devil, have failed to liberate mankind from the seeming power of evil and its effects; but Christian Science, instead of personalizing evil and investing it with power and authority, is uncovering its subtle and deceptive nature, thereby making possible its destruction,—the demonstration of its nothingness. Now that form of teaching which is most effectual in emancipating the individual from the thraldom of evil will naturally make a tremendous appeal to burdened humanity. The fact that through Christian Science multitudes have lost their love of sin and have ceased to indulge false appetites and desires, is the strongest possible testimony to the superiority of its teachings, since the Master said, "By their fruits ye shall know them."

Christian Science teaches the infinitude of God, good, and hence precludes the possibility of an opposite called devil, or evil. In Christian Science evil is treated as a belief, as an experience of the carnal or mortal mind, to be overcome through the operation of the Christ, Truth, in human consciousness. The contention of our critic that the denial of evil would make possible greater accomplishments of evil, is quite paradoxical when one understands what is meant in Christian Science by such denial. Christian Science does not deny that to erring mortal sense there is an appearance or claim of evil and disease, but it demonstrates that this claim is pure deception,—is false, is nothing. This teaching by no means encourages one to ignore evil, nor does it encourage the indulgence of evil. The love and practice of sin is possible only to those who believe it to be something. Only as it is believed to have power to attract and satisfy is it indulged.

The student of Christian Science well knows that he must deny evil, must refuse to give it any place or power in his thinking. He is enabled to do this through the practice of Mrs. Eddy's teaching. She says: "Beloved Christian Scientists, keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them. It is plain that nothing can be added to the mind already full. There is no door through which evil can enter, and no space for evil to fill in a mind filled with goodness" (The First Church of Christ, Scientist, and Miscellany, p. 210).

No one better knows than the Christian Scientist that personalizing, ignoring, or condoning evil means the perpetuation of its seeming power and the attendant suffering. He knows, as Mrs. Eddy has well said in Science and Health (p. 458), "that Christ's way is the only one by which mortals are radically saved from sin and sickness."

✧

[S. T. Downs in *South Bend* (Ind.) *News-Times*]

Some people have formed the opinion that Christian Science is "merely a system of bodily healing." Christian Science places emphasis on healing the sick, it is true, and we find that the Scriptural record of the great Master and his early followers does the same thing, while secular history records such healing as among the works of the early Christians. No one would attempt to prove, however, that the mission of Christ Jesus was to heal sickness, nor was it the mission of the apostles and the early church, but rather we find the healing of sickness to be one of the "signs" which follow the destruction of sin. Healing in Christian Science results now as it did with the great Teacher and his first disciples,—it is one of the "signs following."

It will be seen, then, that Christian Science is primarily engaged in the destruction of sin, and this is shown among all classes of people and in every community through the purer lives and higher citizenship of its adherents. It is also true that physical healing in Christian Science could not be accomplished without moral and spiritual betterment.

✧

[W. G. Watkins in *Milwaukee* (Wis.) *Journal*]

Those who are willing to venture beyond the shadow of preconceived opinions are finding in Mrs. Eddy's teachings that golden thread of consistency with which the Scriptures abound and which makes for a larger knowledge of God and the elimination of sickness as well as of sin. Fortunately, Christian Science need not be accepted or rejected on the mere word of another; for on page 547 of "Science and Health with Key to the Scriptures" a statement compatible with the demand, "Work out your own salvation," is expressed in the assertion, "You can prove for yourself, dear reader, the Science of healing, and so ascertain if the author has given you the correct interpretation of Scripture."

✧ ✧ ✧

What a great God have we:
Who giveth His people
The right to be free;
Who giveth and lendeth
To great and to small;
Whose love and truth endeth
The sorrows of all.

Editorial

Mental Trespass

It is surely commendable, and wise withal, that the Christian Science practitioner should endeavor in his treatment of the sick to be governed by the rules of practice laid down by Mrs. Eddy. Throughout her writings there is a gentle insistence that the golden rule shall govern the proceedings of her followers,—not alone their outward conduct, but that inward action for which, though hidden from the sight of men, there must sooner or later come an accounting. It was the rule by which her own life was ordered, and she knew that therein lay peace and safety to all concerned.

In most instances where there seems to have been a turning aside from the strict letter and spirit of the teachings of Christian Science, it has plainly come from either ignorance or misunderstanding. What, for example, could be clearer than this statement: "For a student of mine to treat another student without his knowledge, is a breach of good manners and morals; it is nothing less than a mistaken kindness, a culpable ignorance, or a conscious trespass on the rights of mortals"? (Miscellaneous Writings, p. 283.) It is twenty years since Mrs. Eddy gave this teaching to her followers, yet not infrequently instances of promiscuous mental treatment come to light that show an almost inexcusable ignorance of it. We hear of members giving unsolicited treatment to the readers and other officials of the church, of teachers treating the pupils in their classes without their knowledge or consent, and even of a concerted effort of this kind on the part of a group of overzealous workers.

Just where or how this mistaken practice came into vogue no one seems to know, but wherever found it should be lovingly yet firmly rebuked. That there is no authority for it in Mrs. Eddy's writings is certain. There could not be, in fact, on the basis of the golden rule, the touchstone by which the sincerity of one's purpose may always be tested. No one who wishes to preserve inviolate his own mental dwelling, even as he guards his home or place of business from trespassers, will himself commit a breach of the moral law against invasion of another's mentality. Surely it is the more reprehensible to attempt to act in the capacity of a self-appointed regulator of our neighbor's thoughts, when we would not presume to adopt a similar course in regard to his office!

But, it may be urged, how can it be wrong to try to help in this way, when even Mrs. Eddy counsels that "prayers in Christian Science churches shall be offered for the congregations collectively and exclusively" (Manual, Art. VIII, Sect. 5). It is quite another matter to pray impersonally, as our Master taught his disciples,—to desire that infinite ever present Love, God's kingdom come on earth, may find acceptance from every waiting heart,—than to single out some individual as needing moral or physical readjustment and without leave or license proceed to treat him therefor. It is unaccountable by what strange process of reasoning any one individual in his self-righteousness elects to act as another's mentor, whether desired or not.

Are we not, then, to speak the truth to error when it presents itself? How about the innocent, helpless victims of error in one form or another to be met with all too frequently? Always we may declare for the omnipotence and omnipresence of good, and the nothingness of error, provided it is done impersonally. Would we not seek to protect one who is dear to us from promiscuous handling? Then let us extend the same immunity to our neighbor, at least so far as we are concerned. Not even the plea that the motive is to do good can render such trespass pardonable, except in an emergency where no other help apparently is available.

If such practice is reprehensible when the motive however mistaken is to do good, what remains to be said when the motive is evil! In one short article (Miscellany, p. 210) our Leader has covered the entire ground. The Christian Scientist who dwells "in the secret place of the most High," whose daily defense against the attacks of evil, whether insidious or in the open, is the knowledge that where Truth and Love abide sin, disease, and death cannot find entrance, has naught to fear from the mental malpractitioner, since the harm the evil thinker would do others must inevitably react upon himself. It is the working out of the divine law of compensation that whatsoever a man soweth, whether it be wheat or tares, that shall he also reap.

Archibald McLellan.

Knowledge and Expression

The teaching of Christian Science vigorously demands that union of spiritual knowledge and its ideal expression which is portrayed in the thirteenth chapter of I Corinthians. This has been called "a poet's apotheosis of redemptive love," and it might as fittingly be named good form in Christian living, outlining as it does the proper attitude of Christian thought and the becoming order of Christian conduct. It discloses the possible heroisms of humility; it teaches the technique of Christlikeness, and it forever fixes the canons of spiritual excellence.

Paul always kept his eye upon the spiritual goal of life rather than upon the incidental experiences connected with the struggle to reach it, and was distinctly free from bondage to non-essentials. At the same time he was insistent that the good deed should be done with "the fine stroke and gesture" of nobleness; that every brick in the building should be laid not only with regard for the strength and durability of the structure, but with regard for its perfection of beauty. Thus while rugged and strong in his devotion to the truth, he was poet-like in his consideration for the consistency and propriety of the form in which the Christian spirit was to be objectified. Schooled in the knowledge of his day, he delighted in finished products of thought and speech, and this bias shaped his concept of what befits Christian manliness in word, in bearing, and in deed.

This blend of ruggedness and refinement made him unusual; it also made him exemplary. His epistles are models of logical argument, expressed with such a richness of illustration and tactfulness of address that one follows him with no less of pleasure than of profit. He did not forget that it is possible to reflect the beauty of the Lord as well as His wisdom and power, so that the doing of the right shall grow more delightful to the doer and the more winsome to those who see it done. The Christian man is not at liberty to be careless or uncouth in any word or work.

In the wayside blossom the Master found disclosures not only of the intelligence and beneficence of God, but also of His art, and his counsel to us is that we "consider the lilies." We are to gain the capacity to do things ideally by observing and thinking upon the ways of good, especially as revealed in the daily life of the Master. On page 224 of "Miscellaneous Writings" Mrs. Eddy says that we are to go out into the world, not only "with a keen relish for and appreciation of everything beautiful, great, and good, but with a temper so genial that the friction of the world shall not wear upon our sensibilities; with an equanimity so settled that no passing

Digitized by Google

breath nor accidental disturbance shall agitate or ruffle it; with a charity broad enough to cover the whole world's evil, and sweet enough to neutralize what is bitter in it."

They who would fulfil this ideal of Christian living will do well to note that the twelve virtues which the apostle names in the chapter referred to, to wit, patience, kindliness, freedom from envy, humility, decorous bearing, unselfishness, equanimity, guilelessness, optimism, endurance, openness to conviction, and hopefulness, make up in part Love's perfect spectrum, and this gives a larger meaning to Jesus' urgency that we love everybody, and love all the time. He taught that if we but have love enough, then the specific demands of every possible circumstance or experience will be supplied us, since true love blossoms naturally in all the nobilities and refinements of Christlike living.

Every truly loving heart is to become a veritable garden of the Lord, and how splendid it would be if in yours and mine sweet old-fashioned kindliness, unselfishness, and cheeriness were always found fragrantly blooming. Some virtues like some flowers seem to have their seasons. We have all been able to be noble upon certain occasions, and now it is ours through the prayerful cultivation of habit to increase the number of graces which are continually manifest in us.

This art of giving expression to spiritual ideals is the greatest of all arts, and we must not forget that the appeal of our faith to others is determined very largely by the skill in it which we daily exhibit.

JOHN B. WILLIS.

✧

"Look unto me"

IN the olden time, when the children of Israel were on the way to the land which to them was a type of man's divine inheritance, they were warned by Moses never to stray from the straight and narrow path of Truth. In the fifth chapter of Deuteronomy we read: "Ye shall observe to do therefore as the Lord your God hath commanded you: ye shall not turn aside to the right hand or to the left." This warning against divergence from the way indicated by divine wisdom may also be taken as an admonition against the tendency of mankind to go to extremes in their attempts to bring out harmony. On page 215 of "Miscellaneous Writings" Mrs. Eddy says, "The tendency of mortal mind is to go from one extreme to another." Then she adds, "Let us depart from the material sense of God's ways and means, and gain a spiritual understanding of them."

At the present time some are asking whether it is better to depend mainly upon silent declarations of truth, in the treatment of patients, or to instruct them in Christian Science. To this it may be answered that no fixed rules can be given for Christian Science practice other than those which are found in our Leader's writings, especially in Science and Health and in the Manual. Intelligent discrimination must be made by the practitioner, in view of the different mental states of those who ask for treatment, but without any exception patients should be advised and encouraged to work out their own salvation, so far as this is possible. The aim of the practitioner should ever be to lift his patient's thought to Almighty God, known in Christian Science as infinite Principle, ever present Life and Love, that the words spoken of old—"Look unto me, and be ye saved, . . . for I am God, and there is none else"—may bring assurance of salvation from sin, disease, and death.

It is never wise to enter into discussion with patients over vexed theological problems, but this does not mean that their eager questionings are to be merely silenced, as was done in too many cases before they came to Christian Science. They can be given fundamental truth from our text-book and told to ponder and practise it. They can also be given sound counsel, such as that found in the first epistle of Peter, wherein we are told that we must lay aside "all malice, and all guile, and hypocrisies, and envies, and all evil speakings." Then, "as newborn babes," those awakening to spiritual reality are bidden to "desire the sincere milk of the word." The "strong meat" will come when the Truth-seeker is ready for it, but the babe cannot be left to starve while he is awakening to the importance of reaching out for the life-giving nutriment. The psalmist's words, "My heart and my flesh crieth out for the living God," really describe the longings of all men, whether they know it or not. Let us, therefore, feed both sheep and lambs when they come to us, and do it wisely, and let us see to it that the hungry do not go away unsatisfied and unhealed.

It is well for all Christian Scientists to study earnestly and often all that our revered Leader has to say respecting the power of silent prayer, in conjunction with our Master's admonitions along the same line. In some cases, when explanations are sought by patients, simple and practical articles from the Christian Science periodicals may be of service, also the testimonies, which show that Christ is "the same yesterday, and today, and forever;" but above all else the practitioner must keep before his patient's thought the eternal fact of man's likeness to God. Let us listen to these wise words of our Leader, beginning on page 205 of "Miscellaneous Writings": "Mortals who on the shores of time learn Christian Science, and live what they learn, take rapid transit to heaven, . . . from flux to permanence, from foul to pure, from torpid to serene, from extremes to intermediate." In Christian Science the dual command, "Heal the sick" and "Feed my sheep," is best obeyed by the one who follows most closely the guidance of Principle, never swerving from the straight and narrow path of pure spirituality.

ANNIE M. KNOTT.

Notice

In response to many inquiries we are pleased to announce that the construction of the memorial to Mrs. Eddy is proceeding rapidly. Approximately three fourths of the entire work has been completed and about eighty-five thousand dollars has been expended.

The memorial fund is still open and contributions thereto will be received and receipted for by the Treasurer of The Mother Church.

✧ ✧ ✧

Among the Churches

Current Notes

NORTHERN CALIFORNIA.—The literature distribution committees report greatly increased work, and literature is being more widely distributed. A number of boats leaving the various ports are being supplied with bundles of literature for both the officers and the crew. Those having charge of the work of visiting jails, penitentiaries, and places of a similar nature, report that the literature is anxiously waited for and eagerly taken and read. Regular services are being held on the first and third Sundays of each month at San Quentin, the attendance averaging about two hundred. Bundles of *Sentinels*, *Journals*, *Monitors*, and pamphlets are sent over each week, and are then distributed by a committee from the Christian Science churches in San Francisco. About fifty subscriptions to the *Monitor* are being sent to Folsom. The

Digitized by Google

work there is taken care of by the literature distribution committee from the churches in Sacramento, and the expense is met by the committees on publication for northern and southern California from their general fund.

The San Francisco *Examiner* and Berkeley *Gazette* have published in full the lectures delivered in San Francisco and Berkeley during the year. The San Francisco papers containing these lectures have been given wide circulation by the Christian Science committee on expositions, who have purchased and mailed them to the Christian Science churches and societies in northern California. Lectures have also been published in full in numerous other papers throughout the state, and these have been widely distributed by the local distribution committees.

The Trustees under the Will of Mary Baker Eddy are renewing subscriptions to Christian Science periodicals which are being sent to libraries throughout the state, and also placing Christian Science literature in libraries that have not already been supplied. *Committee on Publication.*

COEUR D'ALENE, IDAHO. Yesterday [Nov. 25, 1915] was a red letter day for First Church of Christ, Scientist. At the special service held in the forenoon at the church, Third Street and Foster Avenue, the day of thanksgiving was celebrated, and the building was dedicated.

The Christian Science movement in this city dates back to July, 1904, when meetings were held in a private home. In September, 1905, the place of meeting was moved to McFarland's Hall, but after a time the hall was given up, and the services thereafter were held in private homes until May 1, 1908. At that time a room in the Wiggett Block was secured, and on July 12 a society was organized with eighteen charter members. Increased attendance soon made it necessary to secure larger quarters, and in July, 1909, Sanders' Hall was rented. It was occupied until the present church building was ready. About the time the change was made to Sanders' Hall, the lot where the church now stands was purchased for seven hundred and fifty dollars. The structure was built at a cost of about fifteen hundred dollars, and occupied for the first time May 22, 1910. *Coeur d'Alene Press.*

SEATTLE, WASH. The Christian Science literature distribution committee has distributed the following pieces of literature during the year Dec. 1, 1914, to Nov. 30, 1915: 17,086 *Sentinels*, 2317 *Journals*, 304 *Heralds*, 107,700 *Monitors*, 70 *Quarterlies*, 3485 lectures, 92 pamphlets, 11 copies of Science and Health in English, 2 copies of Science and Health in German, 3 of "Retrospection and Introspection," 15 Bibles, 2 complete sets of Mrs. Eddy's works, and 3 copies of "The Life of Mary Baker Eddy" by Sibyl Wilbur.

Correspondence.

Admission to Membership in The Mother Church

The next admission of candidates will be June 2, 1916. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 10, 1916.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, Clerk.

Suite 350, 236 Huntington Avenue, Boston, Mass.

The Lectures

Portland, Ore.

The remarks of former Governor West in introducing the Hon. Clarence A. Buskirk, who lectured on Christian Science for Second Church of Christ, Scientist, were in part as follows:—

It is quite likely that curiosity has had more or less of a hand in leading me here this evening, for although personal friends who were Christian Scientists had often told me of the beauties of this faith and of its success in healing the sick and relieving sorrow and distress, I was never thoroughly impressed until I was advised of the coming of the distinguished lecturer, who I was informed had been a fellow sailor upon the political seas, though after he had landed safely in public office he had seen fit to depart therefrom and enter the field of his present activities.

I think I am safe in saying that few positions offer better opportunity than public office for the study of human life and its problems. Here wealth and poverty, vice and crime, pass in daily review; here the harpies gather, and the direful effects of greed and avarice and the oppression of the weak by the strong are uncovered. Here truths are burned into one which can never be forgotten. And what are these truths? They are first, the absolute futility of many of our attempted efforts to bring about a higher standard of government; and second, that reform must start with the individual. Good government must have for its foundation a high standard of citizenship. No government can be stronger than the man at its center, and this truth must be driven home to every citizen before material progress can be made.

What a great change would instantly take place in things if we should all suddenly decide to obey the simple teachings of Jesus. Greed and hate would give way to charity and love. Poverty and distress would disappear from the face of the earth, and while none would be rich, all would be well to do. Our prisons would become relics of the past, and our courts would be all but forgotten. Sessions of our legislature would be so far between and so harmless that membership therein would take on an air of respectability.

So the whole problem of life reduced to its last analysis is that of teaching the individual how to become better, morally, mentally, and physically, and the church that will obtain the greatest results in this direction is the one that will endure forever. I am happy to be able to say that during my term as Governor of this state I found that whenever I was engaged in an effort to help the unfortunate or relieve the distressed, my hands were being upheld by Christian Scientists, and for such kindly interest and support I shall be ever grateful.—*Correspondence.*

Cedar Rapids, Iowa

Not only members of First Church of Christ, Scientist, but many others, heard William D. McCrackan lecture on the tenets of Christian Science. He was introduced by Earl G. Killeen, musical director of the Coe College Conservatory, who said:—

The art of living has been the subject of discussion for many centuries; the science of living has but recently gained merited attention. With art we have associated the beautiful, with science the exact, and we have sometimes felt that what is exact cannot at the same time be beautiful. We have recognized the beauty of a good deed, we have praised the quality of loveliness in a life devoted to good, but we have

Digitized by Google

missed until recent years the fact that law underlies good; that the greatest science yet discovered is that which gives a working basis for our daily lives, a science of Christianity which is based upon the teachings of Jesus the Christ and which unites the exact and the beautiful. The speaker of the evening is here to enlighten us upon this science.

The Cedar Rapids Gazette.

Berkeley, Cal.

Charles I. Ohrenstein delivered a lecture on Christian Science under the direction of First Church of Christ, Scientist, in the High School auditorium. Mrs. Emily Alpers Martindale in introducing the speaker said:—

Christian Science gives a reasonable explanation of the origin and life of man. The unspoken, insatiable longings of the human heart are being satisfied in a degree that gives absolute promise of entire fulfilment, because based upon unchangeable law, because sustained by manifest proofs. In the light of the teachings of Christian Science thinking men and women throughout the world today are attaining to that simplicity of thought which is willing to say as did the disciple of old, "Lord, teach us to pray." Through the understanding of the Bible as explained in "Science and Health with Key to the Scriptures" by Mrs. Eddy, countless thousands testify to the joy of that effective prayer which proves that willing obedience to Truth inevitably reaps its rich reward.—*Berkeley Gazette.*

Colorado Springs, Col.

Willis F. Gross delivered a lecture on Christian Science at the Burns Theater. A. A. Hubbard presided at the meeting and introduced the speaker, saying:—

The desire to know the truth is universal, and man's search for it has been untiring. The problem, however, for each individual is not so much the finding of truth as its recognition and practice, for one can only know what he himself has proved true in his own experience. Many are proving Christian Science to be the truth and are daily understanding more about this new-old religion, and they are receiving great peace and joy therefrom.—*Colorado Springs Gazette.*

Lectures to be Delivered

ARKANSAS—Eureka Springs: William D. McCrackan, Church Edifice, 68 Mountain Street, 8 p.m., March 9.

CALIFORNIA—Los Angeles (Third Church): Jacob S. Shield, Church Edifice, 734 South Hope Street, 8 p.m., March 10 and 11, and Auditorium Theater Beautiful, Fifth and Olive Streets, 3 p.m., March 12.

Oakland (First Church): William R. Rathvon, Municipal Auditorium, 3 p.m., March 5.

Redlands: Jacob S. Shield, Contemporary Club House, 8 p.m., March 7.

San Diego (First Church): Charles I. Ohrenstein, Church Edifice, Second and Laurel Streets, 8 p.m., March 9 and 10.

Santa Ana: Jacob S. Shield, Grand Opera House, 8 p.m., March 9.

Santa Monica: Charles I. Ohrenstein, Santa Monica Bay Women's Club, 8 p.m., March 7.

CANADA—Toronto, Ontario (Third Church): John W. Doorly, Church Building, University Avenue and Caer Howell Street, 8:15 p.m., March 3.

ILLINOIS—Champaign (Second Church): George Shaw Cook, Orpheum Theater, 3 p.m., March 5.

Freeport: George Shaw Cook, Masonic Temple, 8 p.m., March 9.

Highland Park: John W. Doorly, Church Edifice, 125 Hazel Avenue, 8 p.m., March 7.

Macomb: George Shaw Cook, New High School Building, 8 p.m., March 7.

Olney: Clarence W. Chadwick, Court-house, 2:45 p.m., March 5.

Peoria (Second Church): Bicknell Young, Mohammed Temple, 207 North Monroe Street, 3 p.m., March 5.

INDIANA—Newcastle: William D. McCrackan, Alcazar Theater, 3 p.m., March 5.

IOWA—Belle Plaine: Clarence W. Chadwick, National Hall, 7:45 p.m., Feb. 29.

Independence: Virgil O. Strickler, High School Auditorium, 8 p.m., March 6.

Red Oak: Virgil O. Strickler, Beardsley Opera House, 3 p.m., March 5.

KANSAS—Caldwell: Clarence C. Eaton, Electric Theater, 8 p.m., March 10.

Pittsburg: Clarence C. Eaton, Church Edifice, Euclid Avenue and Walnut Street, 8 p.m., March 7.

MAINE—Sanford: Bliss Knapp, Town Hall, 3 p.m., Feb. 27.

MASSACHUSETTS—Arlington (auspices Cambridge): Frank Bell, Town Hall, Massachusetts Avenue, 8 p.m., March 7.

Cambridge: Frank Bell, Scenic Temple, Temple Street, Central Square, 3:30 p.m., March 5.

MICHIGAN—Detroit (Third Church): John W. Doorly, Arcadia Hall, 4 p.m., March 5.

Grand Rapids: Bicknell Young, Church Edifice, Washington Street and Lafayette Avenue, S.E., 8 p.m., March 6 and 7.

MINNESOTA—Kasson: Virgil O. Strickler, City Hall, 8:15 p.m., March 7.

Minneapolis (Fifth Church): Bicknell Young, Church Edifice, University and Twelfth Avenues, S.E., 8 p.m., March 9 and 10.

MISSISSIPPI—Meridian: Charles I. Ohrenstein, New City Hall, 8 p.m., Feb. 29.

MISSOURI—Lexington: Clarence C. Eaton, Orpheum, 3 p.m., March 5.

St. Louis (Fourth Church): William D. McCrackan, Church Edifice, 5569 Page Boulevard, 8 p.m., March 6 and 7.

NEW HAMPSHIRE—Lisbon: Frank Bell, Empress Theater, 8 p.m., March 3.

NEW MEXICO—Albuquerque: Charles I. Ohrenstein, High School Auditorium, 3 p.m., March 5.

NEW YORK—Ossining (auspices Second Church, New York): Bliss Knapp, Sing Sing Prison, 3 p.m., March 5. (For inmates only.)

OHIO—Cleveland and Lakewood (community lectures), Clarence W. Chadwick:

Cleveland, Third Church, West Twenty-fifth Street and Mapledale Avenue, 8 p.m., March 6 and 7; Fifth Church, Franklin Avenue and West Fifty-eighth Street, 8 p.m., March 10 and 11.

Lakewood, First Church, Detroit Avenue at Arthur Avenue, 8 p.m., March 9.

OREGON—Pendleton: William R. Rathvon, Temple Theater, 8 p.m., March 7.

WASHINGTON—Olympia: Willis F. Gross, Ray Theater, 3 p.m., March 5.

WISCONSIN—Whitewater: Clarence W. Chadwick, Congregational Church, 8 p.m., March 3.

Testimonies of Healing

The past two years have brought marvelous blessings into my life and into the lives of my dear ones. For a period of thirty-two years I had been a great sufferer, having been afflicted with many ailments, some of which were of the most alarming character. I was under the constant care of eminent physicians and surgeons; had undergone several serious operations; had been put through many so-called "cures;" was subjected to the most rigid dieting and health laws; in fact I was deprived of practically all the pleasures of life, aside from the fond ministrations of a devoted husband and children and a host of sympathetic friends. My doctors repeatedly told me that some of my ailments were incurable, and that I must try to bear them and be grateful for the blessings already received. As a consequence I felt my faith in medical treatment gradually waning.

One night in July, 1913, while tossing on a bed of suffering and in utter despair, the thought came to me to try Christian Science. I thereupon fell into a sound, refreshing sleep, such as I had not experienced in years. Upon awakening the next morning I eagerly related my experience to my dear ones, and although we knew little or nothing about Christian Science, it was decided that a practitioner should be called in. During the first treatment a calmness came over me such as I had never before experienced, a consciousness that the ills were fading away; and such actually proved to be the fact.

One of my healings was practically instantaneous. I had suffered from chronic bowel trouble since childhood, never retiring without taking medicine for it. When told by the practitioner that I might destroy the drugs and many remedies and eat and drink whatever I chose, I was amazed. However, relying on the truth, I followed his advice, with the result that this disorder and all its attendant ills, such as sleeplessness, liver trouble, severe headaches, nausea, and so on, faded into nothingness. Other ailments, including chronic catarrh, rheumatic gout, weak heart, exhaustion of the nerves, and sinking spells, disappeared one after another, without any material means whatever, until today I can safely say that I am in the full enjoyment of health and happiness such as I never expected to have, and such as I have not had since childhood.

For all these blessings I am most grateful. Along with these healings has come into my consciousness a realization of the allness of God as Spirit, and the nothingness of matter. Through the daily study of our helpful Lesson-Sermons and attendance at the weekly services, I am gaining a fund of knowledge which adds constantly to my happiness and to my fitness to be of service to my fellow men and women. All my dear ones are equally impressed with this saving truth. They too are ardent students, and are receiving their rewards both physically and spiritually. As a consequence, all is harmony in our family. For all these blessings my thankfulness goes out to God, and my deep gratitude to our dear Leader, Mrs. Eddy.—Jennie L. Nelke, Philadelphia, Pa.

I wish to express my gratitude for the many blessings that have come into the lives of my entire family (embracing three generations) since we first became interested in Christian Science a little more than two years ago.

The healings experienced by my wife, which in my estimation were simply wonderful, bear every evidence of permanency. They furthermore served as forerunners of many other happy experiences realized through our efforts to put Mrs. Eddy's teachings into practice. Scarcely a day passes without some new evidence of physical, mental, or financial benefits, which I believe can be attributed to right thinking as taught in Christian Science. This is particularly noteworthy when we stop to realize the unparalleled world-wide discord now existing.—Harry Nelke.

✧

[Translated from the German]

As a result of measles, with which I was taken ill at the age of four, I retained an ear trouble,—at least, this was the physician's opinion. I suffered from this ailment for several years; then I ceased to experience distress, and it was believed I had gotten rid of it. Later, when I began to go to school, it was observed by my parents as well as by my teachers that I read at a very close range. My parents took me to several noted specialists, who all declared that this near-sightedness could not be remedied. Moreover, in their opinion my vision would deteriorate steadily till the worst might be expected. It goes without saying that I had to wear glasses.

In the summer of 1914 I had a sudden return of my former ear trouble, and it was then that my mother told me of Christian Science, to which her attention had recently been called. We immediately talked matters over with a Christian Science practitioner and availed ourselves of her help. After a short time the pain in my ears ceased, I was able to discard my glasses, and after a few months, during which I had made a diligent study of the teachings of Christian Science, my eyes were completely healed. For this I thank God from the depths of my heart, and am most grateful to our revered Leader for the benefits and blessings which I have experienced through Christian Science.

Gertrud Malchow, Berlin-Schöneberg, Germany.

✧

Because of the many benefits which I have received in Christian Science and the wonderful blessing it is to me in my every-day life, I wish to bear this testimony. I recently celebrated my ninetieth birthday, and at the present time I am enjoying splendid health. I am sure it is due entirely to the wonderful truth which has been revealed to us through our Leader, Mrs. Eddy. I have known of Christian Science for the past twenty years, and during that time I have neither used medicine nor had a doctor. I was eighty years old when I became a member of the Christian Science church, although I had been a member of another church previous to that time.

About the most wonderful demonstration I have had was the restoration of lost eyesight. I had what the doctors termed cataracts, and was some time in being healed, having tried more than one practitioner; but the healing was complete, and today I am able to read and sew with perfect ease, although I use my glasses. I have also been healed of piles and severe hemorrhages.

I have not words to express my gratitude for all that Christian Science has done and is doing for me today, and as I look about me and see the many people who are much younger than I and who are in bondage to the ravages of old age, my heart goes out in gratitude to God for Mrs. Eddy's discovery of the Principle of the Christ-healing.

On my recent birthday anniversary it was so gratifying to be able to enjoy such a happy, pleasant time with my dear ones about me, and I think I enjoyed the occasion as much as any of my friends. In the last year I have pieced several quilts, and did it with as much ease as I did when a girl.

I enjoy the Christian Science periodicals, and I read them all, and am always helped by them. For all these blessings I am more than grateful, and am very happy to be able to express my gratitude.—Susan B. Moore, Lafayette, Ind.

Digitized by Google

That I am alive today is a witness to what Christian Science can do in the way of healing a tortured mind and body. After five weeks of agony I was completely healed of septic poisoning. The bowels, which had been paralyzed for two weeks, were restored to their normal condition, much to the surprise of those about me, who would not believe the teachings of Christian Science. I also suffered from a very serious bladder condition, and from nervousness and melancholy. These conditions were overcome only as I gave up the material at all points and relied steadfastly on Truth, as explained by Mrs. Eddy in "Science and Health with Key to the Scriptures." My little boy, who had become infected by my condition, is now strong and sturdy. The few slight ailments that he has had, have quickly yielded to this great truth. I am deeply thankful to God, and grateful to those who have helped me to walk in the way.

Aimée Callaghan, Glen Morris, Long Island, N. Y.

✧

A great love for Christian Science comes to me as I begin to realize the abundance of good it has brought into my life. It has given me a happy home, and each day my gratitude grows as thought unfolds in the knowing that all true things are of God. It has made me a more intelligent wife and a better mother. I was first healed in Christian Science of stomach trouble, but for some time afterward did not know what had healed me, as I had asked the practitioner not to talk to me of religion, thinking I had all the religion I wanted. But as other difficulties came into my life, trials and anxieties for which I knew medicines would be useless, I began to wonder what it was that had brought my release from suffering, so I turned to "Science and Health with Key to the Scriptures" by Mrs. Eddy, and there found what I then knew I had always wanted. Since that time I have had many healings, for Christian Science has met every need.

The proof of God's care in a case of what was named painters' colic meant much to me when I was young in the study of Science. Although at the time I was unconscious of my surroundings, in reality I was conscious of the thought that in God I live and move and have my being. I came to myself enough to tell those around me to call a Christian Science practitioner, but immediately became unconscious again. As I seemed to be suffering intense pain, it was hard for those caring for me not to administer material aid, for they were not Scientists. I was nevertheless healed, and had the opportunity of knowing how blessed we are in having practitioners who are willing to give their time and patience to help us in our first feeble footsteps in the way of Truth.

With Christian Science care, childbirth five and a half years ago was made an experience of gladness. It was entirely harmonious and almost painless under what would otherwise have been trying circumstances. When the baby was less than three years old he fell, cutting a deep gash under his chin. I talked to him of God's loving care and he was soon about his play. He came to me again, however, and said, "There is a hurt coming, mother." I told him when the hurt tried to come, to think of something good instead,—to think of God. He went into the other room, and presently, as I heard no sound, I looked in, and found him sitting in his little chair. He said he was thinking of the Lord's Prayer. I told him that was good, very good, and stepped out, leaving him to his own thought. Then I heard him softly repeat the words of the prayer. Nothing more was heard about the cut, which healed up beautifully. This is only one of many such instances when I have been brought more clearly to see that truly a little child shall lead us. In November I gave birth to a little girl without pain, and it was a greater realization of joy than I can express.

My greatest desire is that I shall learn to love with more compassion, and daily express greater gratitude by trying more nearly to do unto others as I would have them do unto me, for the real joy gained from Christian Science is not from the physical healing, but in the endeavor to live closer to God.—Ardria Miner LePelley, Chicago, Ill.

✧

Twenty years ago Christian Science was first brought to my attention by a sister who through great tribulation had come to a perception of this law of God, but I would have none of it. Four years went by, and then my beloved mother passed away under medical treatment. At this time of grief I found I had nothing to sustain me when I came face to face with what I called "that grim reality, death."

Then I went to visit this same sister, and what a changed household I found! In the six weeks that I stayed there I never heard an unkind word said to any one or about any one. I never heard sin, disease, or death talked about, and I felt that a religion which wrought such practical results was the one for which I was looking. I needed physical healing, as I had been under the doctors' care much of the time for fifteen years; but more than all I needed spiritual healing, for I was of a most morbid nature, sensitive to slights, quick-tempered, and unhappy. So without any sense of religious emotion I commenced the study of Christian Science. I had been a church-member from the age of fifteen, but I had gradually drifted into non-churchgoing, and my only religion was a conviction that if I did the best I knew how to do, everything would come right in the end. I realized, however, that my sister had found something in the Christian Science textbook, "Science and Health with Key to the Scriptures," that had brought to her an understanding of the law of God which all my years of orthodoxy had never bestowed on me. So I determined to find out about it for myself, and began studying the Bible together with Science and Health.

I was so steeped in laws of hygiene that it seemed very difficult for me to apprehend the statements of truth which now seem so simple and clear. I read and reread Science and Health without seeming to grasp its meaning in the slightest degree, but having seen what the understanding of it could do, I kept persistently at it. Treatment was given me at the same time, without any apparent result, but gradually the light of understanding came to me, and in proportion as it grew clearer, the physical ailments disappeared. I have not yet attained to perfect physical health, but I have learned that when fear, belief in heredity, resentment, pride, and the like, are allowed to enter my thought, then inharmonious physical conditions are manifested. When I banish these thoughts and think only the truth about God and man, harmonious results follow, and I am thankful to have learned this much.

In all these years we have never used material remedies, but have relied solely on the truth to keep us well and happy, and we have had beautiful proofs of the all-watchful power of Love. We have been led by divine wisdom in the most wonderful way. What gratitude we owe our revered Leader, Mrs. Eddy, who by her unfailing trust and understanding of God has made it possible for us to utilize the eternal good.

Caroline Beecher Silva, Carmel-by-the-Sea, Cal.

✧

Some time ago, while our little girl was at school, she fell off a horse and injured her arm. When she got home I tried to use what understanding of Christian Science I have; however, when she went to bed I had to cut her sleeve off, and the arm was so swollen that I could not determine its condition. My husband went in to the town, which is five miles away,

Digitized by Google

and telephoned to a Christian Science practitioner in Winnipeg for treatment, and from that time on the pain decreased. The child did not lose a night's sleep and was up and dressed every day. For a while the arm was powerless and she had to wear a sling, but all this was overcome in about five weeks. What seemed to me most wonderful was that she experienced so little pain and inconvenience. I am convinced that under any other treatment she would have suffered greatly, and perhaps had a stiff arm. The arm that was injured is quite as strong as the other, and except for a slight lump at the elbow, which is gradually going away, I could not tell which one had been hurt.

I am very thankful for what I know of Christian Science, and am trying to learn more of this truth which brings happiness to so many.

Alice M. Robinson, Wapella, Saskatchewan, Canada.

✧

As I do not often have an opportunity to testify at the Wednesday evening meetings, I take this means of expressing my appreciation and gratitude for Christian Science. I thank God that through Mrs. Eddy He has given us this Science, whereby we can gradually attain to the liberty of the sons of God.

My first healing experience in Christian Science was with a case of toothache, which was overcome in a few minutes, thus revealing to me the operation of Christian Science in healing diseases. I have always been grateful for this proof. This experience also revealed to me the truth of Mrs. Eddy's statement found on page 365 of Science and Health: "If the Scientist reaches his patient through divine Love, the healing work will be accomplished at one visit, and the disease will vanish into its native nothingness like dew before the morning sunshine." My heart overflows with thankfulness to God for His goodness to us. May I be found loyal and true always.

N. P. W. Swanson, Orion, Ill.

✧

With a heart overflowing with love for suffering humanity, and thankfulness to God for the many blessings which I have received, I wish to send my testimony of healing, hoping thereby to help some one, even as I have been helped and healed. I joined a church when only twelve years old and tried to live up to its teaching as best I could, but as I began to study and reason out the Bible teaching I found there was something wrong either with myself or the teaching I was trying so hard to follow, for it did not harmonize with what the Bible taught me.

I was never very strong, and as the years rolled by my eyes failed me. Then I suffered from other conditions that are common to womanhood, all the time growing worse and worse, until it seemed as if I could endure no more. I was carried to several physicians, was given all kinds of medicine, underwent operations, and in fact everything possible was done for me; but I finally became a physical and mental wreck. I was an invalid for several years, but kept reading the Bible, and understood it better. I told my friends and loved ones that God could and would heal me if I could trust and obey according to Jesus' teaching. My faith grew as I read. I sent word to the most faithful members of my church to pray with me, that I might be healed, but they one and all said, "The time of miracles is past." So I turned to God alone, and received some light, for which I felt very thankful. God was surely leading me. That was in the year 1897, and I had not then heard of Mrs. Eddy or her book, "Science and Health with Key to the Scriptures."

About this time my husband was taken ill and was sick unto death for months. The doctors said there was no cure for him, that they had tried everything they knew of in medicine and all had failed. Then a friend sent word to him that if he would read some Christian Science literature he would soon be well. After a few days this friend brought us some copies of the *Journal*. He and his wife had just been healed, but knew little about Christian Science otherwise. They gave us a practitioner's name, and my husband asked for treatment and was healed in a short while. I said, "As 'God is no respecter of persons,' He will heal me too," and so I was treated and healed by the same practitioner. I can never forget how glad I was when I got a copy of Science and Health. I drank in its teaching as a thirsty child would water. I read until one and two o'clock at night, and I rejoiced and praised God for unfolding so many blessings to me and mine.

I have been able to help some others to know this healing truth. We have the Lesson-Sermon here with six or eight students every Sunday at a private house, and I feel God is with us, blessing us very richly. I am thankful that Mrs. Eddy was pure enough and lived so near to God that she was able to grasp this truth in its simplicity, for all the world to study and thereby be freed from every phase of sin and suffering.—Ida A. Martiny, Johnson City, Texas.

✧

I feel I owe a great debt of gratitude to Christian Science for the many blessings I have experienced and for those I have seen bestowed on mankind. About four years ago, while at my daily work in the shop, I was engaged in cutting a piece of steel with a hammer and chisel. In so doing one of the chips, about three sixteenths of an inch in length, flew from the work with great force and buried itself almost completely in the ball of my eye. This caused almost unbearable pain, but notwithstanding the severity of it, through my understanding of Christian Science I was able to eliminate fear to a great extent. On returning home I called up a Christian Science practitioner on the telephone and asked for treatment. The help was lovingly given, and in about forty-eight hours every trace of the accident had disappeared. No material remedies were applied. The truth which Jesus taught was the only remedy. I was indeed very grateful for this healing, for it lifted me higher in the understanding of the allness of God.—C. Calvin Reed, Los Angeles, Cal.

✧

When I was under fourteen years of age my aunt passed away, leaving my uncle with a family of seven children, the youngest less than a year old and the oldest not twelve. Another uncle also made his home with him, and I did the housework most of the time in this family of nine, besides myself, for over three years.

When I left this work I felt a stinging pain or ache in the muscle which extends from the neck to the shoulder, for it had been overtaxed. The pain was sometimes excruciating, and I suffered from it for about twenty years. In the mean time I established a good business in dressmaking, but had to abandon it on account of my shoulder. Then I began to study "Science and Health with Key to the Scriptures" by Mrs. Eddy. My healing was slow, as the injury seemed very real to me, but it has been permanent. I am very thankful for the spiritual uplift and the true light.

Bertha A. M. Salchow, Junction City, Kan.

✧

I wish to express my gratitude for the healing of my little boy. A few years ago he was afflicted with what the physicians called tubercular glands. I was told by a surgeon that if he were not operated on at once, this trouble would eventually prove fatal. Having had Christian Science treatment

Digitized by Google

for myself as well as for my eldest child, and having found it very effectual, I decided to have it at once for this little one, who was then about three years of age. When Christian Science treatment was begun he had a high fever, but this was broken in a very short time, and the healing was perfect. There is not a sign of a scar on his neck, and he is a fine, healthy boy.

I am indeed grateful for Christian Science. It has helped me to keep up when things have seemingly had a very dark aspect. The spiritual uplift has been of great benefit to me. I am thankful for having been helped on my way, and I hope to prove by my life what the truth has done and is doing for me.—Wilhelmina P. Abrecht, Brooklyn, N. Y.

✧

[Translated from the German]

I am glad to be able to testify to my healing through Christian Science. I had become afflicted with an eruption on the head, which gradually grew worse and compelled me to seek medical aid. This, however, was unsuccessful. Acquaintances then directed my attention to Christian Science, which I had never heard mentioned before, and I attended the Wednesday evening meetings. During one of these there suddenly dawned upon me the recognition of the truth that we have but one physician, God, who is All-in-all. I now applied for help in Christian Science, and after the first treatment felt a physical as well as a mental change taking place in me. Every treatment brought improvement, and in three months' time I was completely healed; yea, more,—I felt regenerated. From the depths of my heart I thank God for the good that has come to me, and am grateful for the help in Christian Science.

Frau Bertha Mett, Hannover, Germany.

✧

I wish to express my gratitude for the benefits received by myself and family through Christian Science. I was healed of a severe attack of rheumatism in a very few treatments, and have been helped in many other ways. Minor ailments have been overcome through our understanding of this truth, and I am indeed grateful for this knowledge.

Leo A. Wolterding, Chicago, Ill.

[Written for the *Sentinel*]

The Heart's Needs

MINNA MATHISON

More light we need to flood life's dreary spaces
With a bright, quickening ray;
More light to lead us on to higher places,
To guide us day by day.
And when we seek the one immortal Mind,
All, all of light already ours we find.

More truth we need to strengthen our endeavor,
More truth to speed the thought
To heights where human sense is stilled forever
And man of God is taught.
Christ said, I am the life, the truth, the way.
The truth that was his own is ours today.

More love we need,—the love that, all-embracing,
Attuned to good alone,
Finds a new peace the olden woes effacing,
And every joy its own.
If upon perfect Love we lean, oh, then
We know true peace on earth, good will to men!

From Our Exchanges

[Rev. Henry Wilder Foote in *The Christian Register*]

We need to build in a larger faith in God. Man's marvelous increase in control over the forces of nature in the course of the last century, his unprecedented accumulation of wealth, has bred in us all a pagan belief in the importance of material possessions, a confidence that our security was to be found in the power which our hands could wield, a faith that wealth and comfort and freedom from irksome cares were our highest good.

It takes, perhaps, a stupendous catastrophe like this war to shatter those idols, to shake men into the realization that honor is more than life; that willingness to endure suffering is better than broken faith; that it is better to be just and true than to command the markets of the world; that the spirit of Christ is more lovely and admirable than the hammer of Thor; that the things which are seen are temporal, while the things which are unseen are eternal. The world which has awakened to that realization will be a more deeply religious world, more sensitive to the life of the spirit,—a world of greater faith, of greater generosity, of nobler ideals. And it will turn to its hard tasks of reconstruction upheld by the knowledge that it must build again, not by might, nor by power, but by the spirit of the Lord God.

[*The Universalist Leader*]

We are going to face great events in the next few years; the church is going to be tested as never before. Those preachers who are living on the fruits of former years and are being simply "practical," are going to find their bins exhausted; those who are joined to the sources of eternal life can face eternity with equanimity. We are not prepared to say, better a bad theology than no theology, but we have to admit that a bad theology can beat no theology out of sight, and we do say what we firmly believe, that we must have some theology if we would live and serve. Therefore the time has come when those who have a reasonable, rational, reverent, Scriptural, and especially a practical theology, should set it before the world, which is showing itself so hungry for some theology that it is conspicuously gnawing the dry bones of dead dogmas.

[*The Christian Work*]

Deity does not have to wait for the tolling of earthly bells before He can make Himself known. Celebrations of Christmas, past or future, should alike enforce the gracious ministries of Christ in the silent regions of the soul. There he does his lasting work in us; there he enables men and women to live the very life God sent us here to live. Every aspiration after that life, every attempt, however feeble, to respond to its supreme appeal, is met with closest, dearest fellowship, making us rich in the heavenly treasures of peace and good will. The aftermath of Christmas is an expanded being, than which nothing is more desirable; a being in which stand forth our Horeb, our Sinai, our Bethlehem; a being in which self-interpretation is governed by better motives and more laudable aims.

[Rev. Herbert W. Prince as reported in *Chicago* (Ill.) *Examiner*]

A new day is coming, and it is coming fast. It is the day when the traditions, theories, statements, ceremonies, rites, even the sacraments of the church, will go by the board unless they can prove themselves of fundamental worth to humanity. The age has already come when the historic churches have ceased to hold their people by virtue of their teaching. The church holds its members today partly by fear, partly by

Digitized by Google

custom and habit, partly by individual personality. This will not last forever. Fear will some day be dissipated, custom and habit are already rapidly dying out, and personal attractiveness is very precarious and superficial.

Before the great days of enlightenment come, the church will pass through "the valley of the shadow of death." It is impossible to tell whether she will be reborn in the vital struggle. In any case, orthodoxy as we know it will utterly perish. The orthodoxy of the past and the present deserves to perish utterly, because it is an orthodoxy of terms and phrases and theories; it is not an orthodoxy of the spirit. But a better day will dawn. The people of that better day will recognize the infinite spirit of God in the person of Christ, because of the life he lived, the deeds he did, the words he uttered, the character he impressed on the world. The people of the coming day will call him "Master," because they will recognize in him the greatest teacher of mankind. They will find him to be the Son of God, not because of any theological utterance relating to his birth or his eternal coexistence with the Father, but because the truth of God flowed through him in complete filial obedience.

[*The Christian Intelligencer*]

Christianity must become a spiritual power throughout the world, rather than a mere formal expression of thought or faith. It has often been said since the war began that "Christianity has broken down." Christianity has not broken down; but the formalism which is tied up with certain methods of expression, or with certain creeds and rituals and organizations, this has truly proven unequal to the terrible strain put upon it by human jealousy and hatred and passion, and its restraints have been thrown off because they were formal and external and had no spiritual force or power to hold back the raging wrath of men.

One thing, therefore, to which the church of Christ and every true disciple of Jesus must bend all their energies, is the reestablishment in men's hearts and consciences of the spiritual rule of Jesus Christ as a controlling power over their hearts and lives and in their principles and practices.

[*American Lutheran Survey*]

Approval cannot well be withheld from the definition of Christian life which says that "it is infinite love in ordinary intercourse." It is true that Christianity is the most extraordinary element which could conceivably be introduced into our human order of affairs; but it is just as true that Christianity has no quarrel whatever with the ordinary. Its whole quarrel is with sin. There is nothing about Christianity which hinders it from adapting itself to the ordinary in our lives; and this is one of the strongest commendations of the Christian teaching and the Christian life.

[*New-Church Messenger*]

The growth of a recognized spirituality, paramount and above the sensual and material, was never more evident than today. The puny efforts of selfish men to build a world of material and circumscribed conditions, independent of God, are coming to naught. Men everywhere, in innumerable ways, under the divine Providence are turning again to the Lord God the Saviour with hope and confidence.

[*The Advance*]

There are many humble people in the world who are less useful than they ought to be, because they despise themselves. They have no great talent and they know it, and they think they might as well bury the little that they have. Make no mistake; the soul that is alive and active is capable of achievements so great that God alone knows how much one man with God can do for the uplifting of the world.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each $0.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

Translation into modern Greek has been made of the lecture, "Christian Science: Man's Dominion over Evil," by Edward A. Kimball, C.S.D., and is now printed as a pamphlet with the English version opposite the translation. The new Greek pamphlet is on sale at prices of our regular pamphlets, as shown on the opposite page.

A new pamphlet entitled "Man's Unity with God" has been printed in the German language. This pamphlet contains seven articles from the Christian Science periodicals, which have been translated into German. The pamphlet is now on sale at the prices of our regular pamphlets, as shown on the opposite page.

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

Digitized by Google

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Six amendments to the Federal reserve act are recommended to Congress in the report of the Federal Reserve Board for the first full year of operation of the new banking system. "A year's experience in the operation of the Federal reserve act," says the report, "has confirmed the board in its profound conviction that the act has been one of the most beneficial pieces of legislation ever adopted by Congress. Not only have its fundamental principles been fully vindicated, but in most details the working of the measure has been successful."

The amendments, as recommended in the report, permit national banks to subscribe and hold stock in banks organized for the special purpose of doing a banking business in foreign countries; permit, with the approval of the board, the issue of Federal reserve notes to Federal reserve banks either against the deposit of commercial paper or gold, provided that the gold so deposited shall count as part of the required reserve of the bank; extend the acceptance system to the domestic trade so far as it relates to documentary acceptances secured by shipping documents or warehouse receipts, covering readily marketable commodities or against the pledge of goods actually sold; permit national banks to establish branch offices within the city or county in which they are located; permit advances to member banks against the member banks' secured promissory notes or against the deposit or pledge of United States Government bonds; and authorize a wide discretion in the making of farm loans by national banks so that a Federal reserve bank might make proper loans of this kind within a radius of one hundred miles of its place of business, whether in its district or another district.

"It is believed," says the report, "that the enactment of these amendments will, besides enlarging the usefulness of the national banks, result in greatly strengthening the operation of the Federal reserve act, and more completely realize the purposes of its framers."

In the first public report ever issued by a Massachusetts court, the municipal court of Boston recommends the extension of the single trial law to the criminal sessions, and points out the success of the law as applied to the civil sessions, abolishing the right of appeal. The single trial law went into effect in 1912. Through its application a litigant must elect whether he shall try his case in the municipal court or go directly to the superior court for a trial by jury. If the case is tried in the civil session an appeal lies only to the appellate division of the court on questions of law, and thence to the supreme court. It was formerly a practice to try the facts in the municipal court and again in the superior court. The new law has permitted a defendant who wished a jury trial to have the case removed, when entered in the municipal court, to the superior court.

The report says: "A system designed only to secure the constitutional right to a trial by jury has become in practice very largely a system of delayed justice and revision of sentence, accorded to lesser offenders, but denied to felons; a double avenue of escape of doubtful consistency with public protection, tending to the discredit of courts of first instance in the view of the criminal classes, if not of the public generally, and an obvious handicap to the probation system."

The machinery of justice in Los Angeles, Cal., has recently been augmented by a new court, which has a number of features that make it different from judicial organizations of a kindred nature in other cities of the United States. It is called the women's court, and its purpose is to allow the trial of women offenders to be carried forward under the conditions of privacy and sympathy which will insure the greatest possible degree of justice to each offender brought before the bar. Cases which come before this new tribunal are such as were previously tried in the police courts of the city. The hearings of cases which come up before the court will not be open to the general public, so that any woman who is brought to trial has the utmost opportunity to tell her troubles in detail. The secretary and the probation officer are both women who have had considerable experience in dealing with unfortunate members of their sex. As a result of their experiences in connection with this court, which is now over a year old, the judges are seeking to create an industrial home for women.

The *Daily Iron Trade* says: "Of much importance to consumers of tin, and particularly to tin-plate makers, is the establishment of the tin refinery at Perth Amboy, N. J., by the American Smelting & Refining Company. This plant, which began operating Feb. 1, is to produce about ten thousand tons of tin annually, or approximately one fifth of our present requirements. The particularly notable feature is, that by the application of new metallurgical principles it is to produce from ores of inferior grade a quality of tin fully equal to the product of the Straits Settlements. Tin produced by the new process, which involves electrolytic refining, already has been tried out with uniform success by tin-plate makers. The ore treated at the Perth Amboy refinery is brought from Bolivia.

An ancient fortification, declared to be more remarkable from an engineering view-point than the Pyramids of Egypt, has been discovered in the Andes, according to G. W. Monkill, a member of the Yale and Geographical Society expedition to Peru. The archeologists discovered apparent evidence of a pre-Aztec civilization which flourished about the eighth century. Excavations made forty-five miles from Cuzco, Peru, revealed the fortification. It is an enormous edifice composed of stones weighing thirty and forty tons, which had been transferred from a quarry across a river and carried up a steep mountainside.

Coal for commercial uses is being successfully mined near Seldovia, Alaska, on Kachemak Bay. Under restrictions of the law and of the regulations established by Secretary Lane of the department of the interior, a permit was granted last April to mine coal in the area of the Chugach national forest. The permittee began operations on May 1, and since then has built bunkers with a capacity of 500 tons, purchased scows for the transportation of the coal to Seldovia, and run a drift to cut the vein of coal near the point of outcrop. Up to Nov. 1, 1915, he had mined and marketed 700 tons of high-grade lignite.

Broad expanses of country suitable for wheat culture still await the plow in South Australia, and to make these areas available for settlement the Government has constructed, during recent years, hundreds of miles of railways, and is proceeding vigorously with the work of surveying. At the present time over a million and a half acres are under survey or to be surveyed in districts east of the River Murray and on Eyre's peninsula, and a large proportion of this is arable land. The total area under wheat this season is estimated at 3,192,381 acres, and a yield of 28,000,000 bushels is anticipated.

Waste in the logging industry in the United States amounts to between 15 and 20 per cent of the timber cut, or about a billion and a half cubic feet of wood annually. Sawmill waste also amounts to several billion cubic feet of wood, although not all of it is absolute waste. A bulletin on the subject of lumber by-products just issued by the bureau of foreign and domestic commerce, department of commerce, makes the claim that only 320 feet of lumber is used for each 1000 feet that stood in the forest.

A summary of the world's ship-building in 1915, just issued by Lloyd's Register of Shipping, shows that eighty-four merchant vessels, aggregating 177,460 tons, were launched in the United States during the twelve months, as against ninety-four of 200,762 tons in 1914. The total of new tonnage throughout the world for the year was 1,201,638 tons, the fleet including 630 steamships and 113 sailing vessels. No returns were received from Germany and Austria because of the war.

The extension of the German canal system has recently become prominent. In a debate on the matter in the Bavarian Diet the whole subject was discussed in connection with the problem of utilizing the Danube as a waterway to the near East. The House agreed unanimously upon the necessity of linking the Rhine, the Main, and the Danube by navigable canals. The work, it was argued, should be undertaken as a part of a uniform imperial waterway policy.

An industrial exposition was recently held in Punta Arenas, Chile, the southernmost city of its size in the world. The exposition was held in the halls of the Society of Popular Instruction, under the auspices of the Chilean Mutual Aid Society, and the list of exhibits of local manufactures furnished an interesting review of the industrial development of this southern city.

The British Government, it is reported, has decided to grant facilities to ship-builders to complete 500,000 tons of mercantile shipping, which is nearing the launching and fitting-out stages.

The Japanese Government is considering the advisability of transferring all Government-owned institutions to private ownership.

Vol. XVIII March 4, 1916 No. 27

Loving Service

CLARENCE W. CHADWICK

SINCE "love is the fulfilling of the law," the highest service known to man is the exemplification of his unity with God, the giving of practical proof of his relationship to divine Love, else the eternal unity of God and man will not become a practical and tangible reality to humanity. God has a way of expressing Himself to His children, and Christian Science makes clear to us the modus of this expression. It tells us plainly that Love is reflected only through loving thoughts and deeds, not through their opposites, and since the highest possible goal to be reached is that of spiritual perfection, the highest possible service will be that which fulfils the law of perfection, which is the law of Love. The beloved John, were he with us today, would no doubt repeat to us what he was credited with saying while on earth: "Little children, love one another."

If all Christian Scientists would realize as did the great apostle that there is no human substitute for the demonstration of divine Love either in time or eternity, the prosperity of our cause would know no bounds. To lose sight of Love is to lose sight of healing; and without healing the church of Christ has no adequate foundation to stand on. Without Christian healing there is no Christian unity, no true fraternalism, no accurate or scientific knowledge, no right mental activity. Our service in behalf of humanity will avail little until we learn to demonstrate the love which we profess. An active servant in the Father's vineyard is one who opens wide the door of consciousness to receive the Christ-idea of infinite Love, and who strives with a whole heart to apply the power of love in the overcoming of hate. This demands unceasing watchfulness lest wrong thoughts crowd into consciousness and obscure the Christ-image. It is not an easy matter to do this, but it is a labor of love and the highest service.

Centuries have passed since the utterance of those memorable words, "He that loveth not knoweth not God; for God is love," and yet there are comparatively few who have grasped their scientific meaning. Equally true is it that he who loveth not knoweth not man, for man is the expression of divine Love. Christian Science teaches: "Love God and keep His commandments: for this is the whole of man in His image and likeness" (Science and Health, p. 340). This certainly conveys the thought of mental activity, since there could not possibly be any conscious love for or understanding of God without such an activity. Consciousness always expresses life and action. Stagnation and inaction are unknown quantities in the divine consciousness. Man, then, being the expression of infinite Mind or divine Love, is that right mental activity which forever expresses the nature of God. He is not a listless, indifferent, apathetic, or inactive image floating in an invisible ether; he is the conscious, ever active manifestation of ever present Love. Only through spiritual understanding are we able to see this man who is forever inseparable from Love, and to gain a true concept of service or obedience.

If we love God, divine Love, supremely, there is a divinely natural way of letting this fact be known to the whole world. Every heavenly blessing is at our disposal if we but let the Word of God, the manifestation of Love, find full expression in thought, word, and deed. Love alone can inspire and vitalize systematic scientific effort. Without love there is really no service performed. Whatever is not done through love is only a waste of time, because it does not express the activity of good. A heavy burden would be lifted from humanity if it could but grasp the idea of loving service. There is just one way of attaining it, and that is through self-renunciation.

The individual who believes that he has a mind and will of his own to do as he pleases, is unable to understand the meaning of Love's service. He may think to the contrary, but the very admission of his mortality sets up a barrier between him and God, who is Spirit, thereby closing the channel through which Love can be revealed to him. Until Christian Science shows him how to cease "from man, whose breath is in his nostrils," and to "put on the new man, which is renewed in knowledge after the image of him that created him," the reflection of divine Love will be to him an unknown quantity. In other words, the belief in the mortality of man is not a manifestation or expression of divine Love. It is only when man is discerned in Christian Science as spiritual and immortal that the unity or oneness of God and man can be proven in demonstration. From the false premise of mortality it is impossible to prove the reality of immortality. Love is the substance of immortality; hatred the basic error of mortality.

The hypocritical pretense of loving one's neighbor while secretly cherishing a reserve body of evil thoughts, ready at a moment's notice to spring into action to accomplish some evil design, represents neither the letter nor the spirit of Christian Science. Christian Science is genuine from beginning to end, and whatever expresses it must be genuine. There are no bad or indifferent Christian Scientists. Whatever a genuine Christian Scientist does is done lovingly, for such service is all that identifies him as a Christian Scientist. It is the only proof to humanity of man's true relationship to God. It is what is needed to bring all into the one fold of spiritual understanding. It is the only thing that sweetens human life, that comforts, heals, and regenerates.

Knowing this, should we not prove the sincerity of our interest in Christian Science, should we not put on the whole armor of righteousness and press courageously onward in the ennobling strife to reach the coveted goal of perfection? The call has come to give forth the very best that is in us. That which is mediocre and commonplace should be silenced. The imprint of noble manhood and womanhood will be found wherever love's labors have been bestowed. Where love reigns there can be no egotism, no enmity, no resentment, no envy, no mad ambition, no self-glorification, no meddlesomeness, no evil speaking; only loving service, which seeketh one's own in another's good.

The unselfish interest displayed by many Christian Scientists in the distribution of our literature speaks well for those

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

engaged in this work, particularly in the sending of our periodicals, especially *The Christian Science Monitor*, to soldiers on the battle line. The expressions of appreciation from those who are perusing the literature sent to them are sufficient proof that love's labors are not lost. The present is pregnant with opportunities. The little things in every-day life need our attention, as well as the greater ones. Nothing can be ignored. However menial the task to be performed, if love is recognized as the motive back of the action, the service will be cheerfully and efficiently rendered, for love makes one fit for any work.

It is a very common error to lay stress upon the fact that we have much material work to perform. Right here is where one loses sight of the fact that all action is mental, not physical. So-called material work is seldom easily accomplished. It is accompanied with more or less human effort, resulting oftentimes in a sense of weariness and suffering. One should remember that "to work is to pray," and that whatever service love impels, can be performed without any sense of reaction and suffering. When all power is given to prayer or right thinking, all necessary work will be seen to be mental, and purely a labor of love. Loving service always radiates an atmosphere of good cheer, of peace and joy and contentment. This was "that good part" chosen by Mary of old. She knew that there was work to be done, but she also knew that it was mental rather than physical; while Martha, as Jesus reminded her, was "careful and troubled about many things" because she thought of her work as material and that she was the one who alone had it to do. Mary knew that as she listened first to the word of the Master, she would receive inspiration which would at the proper time be expressed in loving service in whatever direction it might be required.

The Marys of today are rapidly becoming more numerous, and their loving service at all times, regardless of what they may be called upon to do, is helping every plodding Martha to see that the only labor there is or ever will be is mental, and that as our Leader tells us (Science and Health, p. 225), "Love is the liberator."

✧

"Greater works"

ROSALIE G. AMORY

In pondering the words of our Master, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father," many are led to wonder what those greater works could be which the Master declared should be done by those who were to believe on him.

When one first comes into touch with Christian Science, it seems astonishing to learn that every Christian is called to accomplish any of the works done by Christ Jesus, since these "marvels" or miracles of his have so generally come to be regarded as supernatural. When, however, one experiences the benefits which follow the study of Christian Science, and learns by small beginnings that these benefits do follow a right apprehension of God and man, it appears less strange that our Master should have made healing the test of true faith, and one realizes with rejoicing that every believer not only may be but is able to do the Master's works. The student learns to take comfort in the fact that Christ Jesus disclaimed any personal power; rather did he constantly reiterate the fact that all goodness, all power, all glory belong to God the Father; that the "Son can do nothing of himself." From this it becomes manifest that in proportion to one's realization of divine sonship he is enabled to heal the sick.

Nevertheless, when thought dwells upon the further promise of the Master that "greater works" shall be done, who can believe that anything so apparently impossible can be accomplished? If one seeks for an explanation from the material point of view, it certainly is inconceivable that any one should bring about a greater work than the raising of the dead or the restoring of sight to the blind, the healing of the man who had been lame from birth, the walking on the water, the stilling of the storm, or the feeding of the multitude with five loaves and two fishes. Still it is evident that the Master never spoke idly, hence the meaning of his words must be found in their spiritual interpretation. On page 2 of "Rudimental Divine Science" Mrs. Eddy writes: "Healing physical sickness is the smallest part of Christian Science. It is only the bugle-call to thought and action . . . The emphatic purpose of Christian Science is the healing of sin; and this task, sometimes, may be harder than the cure of disease."

At our Wednesday evening meetings one frequently hears expressions of gratitude for the protective influence of divine Truth; protection from accident, loss, contagion, and so on. This realization of defense against evil, and therefore of safety, is very real, very comforting. Our Leader tells us, however, that "divine Science . . . resolves *things* into *thoughts*" (Science and Health, p. 123). To one who is earnestly trying to live the life of a true Christian Scientist, who is striving to put all he understands into practice, it becomes a habit to trace things to the thoughts which are their cause. As time goes on, one comes to realize a protection of another kind, of a much loftier order,—a protection against the evil thoughts which would destroy peace within.

The understanding of what God is, hence what man is, not only casts out the evil of disease, but destroys fear. It protects from thoughts of malice and of hate, from sorrow and resentment, from impurity and dishonesty, from loneliness and disappointment, from pride and revenge. The list grows and multiplies as one human experience follows another. These thoughts are the wolves in sheep's clothing which devour and destroy. However, as the truth of Christian Science occupies thought, there comes a new sense of freedom, peace of mind, and a great joy which fills the heart; and now when the sad, discordant, or destructive thought comes and knocks at the door of consciousness, there is no longer a receptive thought to respond to it, no longer any room for it in voluntary consciousness.

All this is of necessity a matter of growth. As Mrs. Eddy writes on page 15 of "Miscellaneous Writings," "The new birth . . . begins with moments, and goes on with years." Even our present attainment is, however, an abiding cause for that spiritual rejoicing which is not at the mercy of material conditions. This is expressed somewhat by Isaiah when he says, "The work of righteousness [right thinking] shall be peace; and the effect of righteousness quietness and assurance forever." This right thinking, moreover, is externalized, not only in better health, but in the removal of all manner of discords. This peace, therefore, "which passeth all understanding," which is a result of constant overcoming, and which indicates a purification of sense and self, must be one of the "greater works" which it is the privilege of every Christian Scientist to achieve.

This greater work is accomplished so quietly that one can only liken it to the heaven which "cometh not with observation," of which we cannot say "Lo here! or, lo there!" Neither is this work necessarily more difficult, except that it requires more time to complete; that it is more far reaching, more all inclusive. Our Master completed his statement about the greater works by saying, "Because I go unto my Father." He lovingly and yearningly told his disciples, "It is expedient

Digitized by Google

for you that I go away." He could not stay to watch their progressive footsteps. Indeed he had recognized that readiness of human nature to lean upon another's strength which robs one of the discipline which is necessary for the development of individual character.

Unselfishly and uncomplainingly Jesus "endured the cross" for our sakes, in order that he might give to us that supreme proof of the "power of an endless life." For the comfort of his disciples, however, and as well for the comfort of those who believe "through their word," Jesus promised that he would send the Comforter, "even the Spirit of truth," and we rejoice that in fulfilment of that promise divine Science has been revealed to this generation. Our Leader has shown us the truth which makes free, so that we may not only understand the Master's words, but that we may accomplish the "greater works."

"He that is greatest"

CASSIUS M. LOOMIS

THE deep, almost unspeakable teachings of our Master could not well have found utterance in the vocabulary of the learned doctors of early Christian times. It would be hard to imagine what the Sermon on the Mount would have been like if put forth according to the ritualistic oratory of Cæsar's court executors. It is a matter of great moment that the simplest concepts since history began have endured the longest. With the patience, yea, the fortitude of one sent from God, Jesus spoke in words so simple that they instantly moved the mighty either to mortal discomfort or open combat.

To that momentous question of Jesus' disciples, "Who is the greatest in the kingdom of heaven?" his reply came with a readiness that caused his hearers to marvel. Beckoning a little child to him he said, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." As much as to say, "Getting into heaven at all depends upon a sense of humility and sinlessness equal to that of a babe, let alone the matter of being 'greatest'." His avowal, however, needed a further context. Even while his words were burning in their ears, and as if to give emphasis to his meaning, he said, "Whosoever therefore shall humble himself as this little child, the same is greatest in the kingdom of heaven,"—an attainment far removed from the pride of worldly power or doctrinal contests.

When we have grown to an understanding of the term heaven, these humble sayings of Jesus evince incalculable depths. On page 587 of Science and Health we find this definition of heaven: "Harmony; the reign of Spirit; government by divine Principle; spirituality; bliss; the atmosphere of Soul." Mark the conditions imposed upon mankind by the world's most patient and loving taskmaster. All true worshipers of God, he said, must "become as little children" before their coveted inheritance can be realized. Do not these words, primitive in their utterance and cogent with meaning, overshadow the most learned controversies of scholastic research? What characterizes the innocent lispings of childhood? A perfect trust, a responsive, abiding love that never questions, and a guileless cleaving to parental care in every emergency or experience. To achieve true greatness by means so simple—has the world of boasted mastery heeded this summons, spoken in our behalf on the shores of Galilee?

Since Christian Science first voiced its truths to a waiting world, the light of gospel teaching has broken forth with a new effulgence. Hard and fast edicts of unyielding theology have been silenced, and a gospel vivid with the flame of Christlike love is fast taking the lead. To become as a little child is no difficult task, when it means a better life, a self-effacement based on the golden rule, and a reward, not in the far distance, but now, today, even while we are engaged in the work of right doing and right thinking. Much can be learned by studying the child life. Think you that a child of tender age would be able to define the word disease? Has he any theories of sickness or lack? Can he hold a feeling of enmity against a playmate over night? Is he looking with forebodings upon tomorrow? Secure in the sweetness of perfect trust, he has not as yet discovered that he has a body, or that bodily ailments or mental conflicts are a part of life's overcoming. He may be cradled in a section where war is imminent, yet his sleep is still the sleep of childhood. "Except ye . . . become as little children,"—what a blessed mandate in defense of a greater Christianity!

Christian Science has shown us the way back to the days when simple fishermen found it profitable to love as children love; days when it was a serious trial, perhaps, to worship God with hearts so pure and loyal that it made them "fishers of men." "He that is greatest" is not necessarily our neighbor of affluence, but rather he who comes nearest to the Christ-ideal. Such have always been characterized by the directness and simplicity of true childhood, and the Master counsels us to receive in his name such a child. Longfellow tells us that "great men stand like solitary towers in the city of God." This city, under the benign canopy of a smiling heaven, is here now, and we may become partakers of all the wonders it contains.

Love's Power

MYRTLE BIRNBAUM

THE writer is one of those who are grateful for physical benefits, but most thankful for the understanding of God as Love as a practical basis from which to work out human problems. Not long ago there came to me an added proof that my conviction on this point is well grounded.

While I was engaged in teaching, a boy was attending our school who had the name of being the bad boy of the community. His record was one of stealing, cheating, and lying, and though the principal had scolded, punished, and suspended him, there was no apparent change. One term he fell to my lot, and the other teachers offered me their sympathy, for, as they said, he kept things stirred up. I paid little attention to him until he began to annoy me considerably, and then I knew it was time to awake to the demands of Truth.

Upon visiting the child's home, I found conditions far from ideal, and love seemed to be entirely lacking. It was then that I began to take long walks with him, and brought him historical books, which he much enjoyed. All the time I strove to see mentally the perfect child, in the image and likeness of God, instead of the mortal counterfeit, which seemed to be very wicked. He was evidently surprised that any one should be interested in him, or show him any loving-kindness; but after a couple of months there was a complete change, so that he did not give me any trouble the remainder of the term.

It seems so easy to love our own little circle of family and friends, yet to love in the universal sense, as taught by the great Nazarene prophet and as reaffirmed by Mrs. Eddy, seems somewhat of a task to the human mind. I have found, however, that by loving all mankind, even those who from a human sense of justice we consider our enemies, we not only heal ourselves, but lift these others up into the sunshine of love and peace. As we read on page 12 of "Miscellaneous Writings," "In Christian Science, the law of Love rejoices the heart; and Love is Life and Truth."

Digitized by Google

This rejoicing is another striking characteristic of the genuine Christian Scientist. There may have been "blue days" before we knew God and understood man's relation to Him, but when we learn in Christian Science that our Redeemer liveth, it is a blessed privilege to be about our Father's business. My heart goes out in deep gratitude to our beloved Leader, who loved God enough to bring this healing truth again to light.

✧

Error Has No Foundation

MORRIS W. LEE

We would undoubtedly be more alert to deny the evidence of personal sense, and would find it much easier to do so, if we appreciated that in so doing we were destroying the very foundation on which the belief of error builds. To the man or woman of constructive mentality the word foundation presents a very tangible and familiar idea. One must first have the foundation before any structure can be erected. That Jesus recognized its significance is shown by his several references to it, the best known illustration perhaps being the parable of the house built upon the sand. In his letter to the Corinthians Paul writes, "For other foundation can no man lay than that is laid, which is Christ Jesus."

"Metaphysics resolves things into thoughts," Mrs. Eddy tells us on page 269 of Science and Health, and we can easily follow the connection between the idea of foundation as a thing and of foundation as a thought. Here then is the point of beginning in the scrutiny to which we should properly subject each thought that comes to us: What is its foundation? Did it come from God, or is its basis personal sense? If from God, the foundation is sure; but if from mortal sense, that father of lies, it is unsafe to build upon. This is the interesting and instructive point to the one who is learning to watch his thoughts and not be imposed upon by falsities, namely, that if we do not accept the first false testimony of personal sense in any specific instance, it has nothing on which to build, hence it cannot develop in our consciousness.

Many of us have learned at the cost of bitter experience that the structure of error erected in belief upon the foundation of material sense, is the house built upon the sand, which cannot stand; but when we learn to reject this unreal basis at the outset, so that nothing can be built upon it, we are saved a great deal of needless suffering and disappointment. To meet the false assertion of material sense in its incipiency, its first effort to obtain a foothold or foundation in consciousness, is effectually to prevent the development of the error in whatever way it may try to enlarge itself. Sometimes the first claim of error is a belief of pain in the body; sometimes it is "news" in a letter, or a morsel of gossip, or the newly recited sorrow of a loved one. Whatever it may be, this first effort to get itself believed is the effort of error to lay a foundation. But if no permission is given to error, no foundation can be laid, no building can be put up; in other words, the effort of the belief of error is effectually frustrated.

This process of protection illustrates the unlabored action of the divine Mind. All that Mind has to do is to know. When scientific thought recognizes the fact that some lie about Mind is being presented for acceptance, it spontaneously rejects the lie and the liar, personal sense. The result is a victory for what is true, with a corresponding sense of peace in the consciousness of the individual. No wonder that at times it seems almost impossible to manifest the spiritual courage necessary to declare the facts as God knows them, when discord seems supreme and powerful to destroy. The bald imposition of error would browbeat us if it could, by a show of size or importance when attempting to lay its foundation; but the multiplied admonitions found in our textbook to watch our thoughts continually, direct us in the way whereby we may avoid this imposition and so prevent any erroneous foundation being laid.

On page 273 of Science and Health Mrs. Eddy says, "Divine Science reverses the false testimony of the material senses, and thus tears away the foundations of error." This shows the false nature of error and its supposed foundation, for if the foundation were solid or true, nothing could tear it away; but divine Science does destroy the foundation by reversing the evidence of the senses, denying their verity. One might see in a mirage a tall building standing in the air with no apparent support, but it is inconceivable that a building of solid materials could be erected or presented to view without a substantial basis or foundation properly proportioned to support it. The mirage is typical of all the presentations of error; they are foundationless. If, therefore, we seem temporarily convinced of error, mesmerized by the belief that some awful apparition which presents itself is real and actual, when we tear away or remove the foundational error on which the apparition was based the whole trouble will quickly vanish.

If we have not watched faithfully, some error may have crept in unnoticed, until a large, complicated structure, big with pretension of reality, bursts upon the consciousness of the individual. If this has in belief seemed to occur, we need to reflect upon the fact that nothing which personal sense presents in the way of testimony is real or reliable or true; and the natural result of such reflection is to show up the erroneous thought or testimony which was first allowed to enter. Once seen through in its falsity, the nothingness of the foundation is disclosed and the whole false building collapses and disappears without the work of pulling it down piecemeal. The gradual or rapid adoption of this process of perception saves us much in the way of anxiety and fear, for it forestalls and prevents the growth of errors in consciousness, with their attendant discouragement, gloom, and prophecies of disaster.

This realization of the unreality of error's foundation is a most helpful adjunct in accomplishing our much desired education into the kingdom of heaven. Whether we are alert and see the falsity of the sense-testimony at its very first appearance, or do not perceive it until the belief has assumed terrifying proportions, the remedy is equally effective. The more alert mentality, however, justly experiences the greater reward of faithfulness.

✧

Overcoming the World

LOUIS W. SCHAAFF

Christian Science, rightly understood and lived, lifts thought above the testimony of the physical senses, thus enabling one to recognize the fatherhood of God and the brotherhood of man, and "on earth peace, good will toward men," through unity in faith. We need to hold to this truth continuously, and thus aid in that universal realization of good which will usher in the millennium. It is not merely incidental that America shelters within its boundaries the Bethlehem of this age, wherefrom the Science of Christ, the declaration of the truth of being, has again gone forth.

While according to the testimony of the physical senses the conflict in which various nations are at present involved seems to indicate a tremendous regress in civilization, the lessons to be learned therefrom may yet prove how absolutely truth, when spiritually discerned, reverses sense-testimony.

Digitized by Google

Those who have dear ones that are taking an active part in this struggle, are likely to be called to face problems which seem very trying. With me it was a struggle whether I should take my stand for Truth regardless of what might follow, or should take sides with one or another of the warring nations and thus fail to obey the command to love my neighbor. On page 340 of Science and Health we read that "one infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself.'"

This was my mental condition for some time, until one day, after an especially uplifting Wednesday evening meeting, I suddenly yet peacefully awoke in the early morning hours to realize as never before the truth of being, and to perceive what my stand had to be. It was when I had risen above the sense of personality that I realized my real nationality to be in God's kingdom and my Father-Mother God to be everywhere present, governing all. The loss of the material and personal sense of these things, bitter and even disgraceful as it had appeared to me at first, proved to be my gain, since it has enabled me to destroy every sense of enmity and hatred, to know the unreality of all this material order, and to feel the deepest compassion toward all involved. It was the dawn of a glorious day of freedom, ushering in the spirit of good will toward all men. On page 281 of "The First Church of Christ, Scientist, and Miscellany" Mrs. Eddy writes: "Faith full-fledged, soaring to the Horeb height, brings blessings infinite, and the spirit of this orison is the fruit of rightness, —'on earth peace, good will toward men.'"

✧

Abiding

ADA JANE MILLER

In the ninety-first psalm we find the basic law upon which the demonstrations of Christian Science are founded. All of the promised protection, peace, and freedom which the psalmist discerned, and of which he sang, are contingent upon a condition of thought attainable and maintainable by humanity today. The onus of the proof of this statement is upon those who are turning from the pantheistic belief in material power to the monotheistic belief in spiritual power as not only dominant but as all. The connotation of the word "dwelleth" points to a certain permanence, a rest that is emphasized by the word "abide," which occurs in close connection in the first verse of the psalm. These words carry with them a sense of steadfastness which foreshadows the promises that follow.

What is necessary on the part of one who wishes to gain the fulfilment of these promises? Many answers have been given to this question. Each creed, presumably, would bring protection and peace to him who accepts it. But creeds have done this only in a limited degree, and they leave men searching to find out God. It is apparent that in order to fulfil the conditions of these promises one must have something more than faith; he must have a principle and rule with which to work, and these are available today in the revelation of Christian Science.

With the understanding of God as divine Principle there comes a constantly increasing ability to dwell in the "secret place," to abide "under the shadow of the Almighty," and as the result of this dwelling and abiding Christian Scientists are proving that the promises which the psalmist's inspired vision discerned as concomitants of Truth are now demonstrably true for all who are willing to begin their true life-work,—the bringing of every thought into captivity to Christ.

Selected Articles

[Judge Clifford P. Smith in *The Journal and Tribune*, Knoxville, Tenn.]

When a minister preaches the gospel in which he believes, he is likely to know what he is talking about, and he may have something to say that is worth hearing; but when a preacher undertakes to expound and criticize the religious views of other people, he is liable to betray his unfitness for such a task and to illustrate the dangers of unrighteous judgment. These observations are pertinent to the sermon by a minister of the United Brethren church which you reported. What he said about Christian Science showed an utter lack of preparation for comment on that subject.

Christian Science does not teach that you and I are illusions. It teaches us to know ourselves even as we are known by our Maker. The main question for each of us to decide is, whether his view of self and life should be subordinate or superior to the so-called facts of mortal existence. Christian Science adopts the answer to this question offered by St. Paul: "Be not conformed to this world: but be ye transformed." How, in what way, can this be done? St. Paul answered this question also at the same time: "By the renewing of your mind." Human conditions are improved and human experience transformed "by the renewing of your mind;" that is, as false mentality is displaced by true thought. And Mrs. Eddy has truly said, "Thus it is that the real, ideal man appears in proportion as the false and material disappears" (Science and Health, p. 69).

So long as a man believes he has a headache he will have one; but let him become conscious of the spiritual facts of being, and as a result he will not cease to have a head, but he will cease to have a headache. Furthermore, the cure thus effected in one instance will help to set him free from liability to headaches. If our critic has been a sufferer from this form of disorder, he would better study and apply Christian Science for the purpose of gaining his freedom. More than one minister who has caviled at this teaching has learned to honor it and to share its benefits.

✧

[Thorwald Siegfried in *North Yakima* (Wash.) *Herald*]

Quoting a writer in another paper of your city recently, it was stated that among the Yakima Indians the practice of attempting to cure ailments by commanding the victim to make peace offerings of horses, cattle, or sheep still continues, and that this process of healing is, in part, an Indian form of Christian Science, "twisted and distorted."

May I have space in your columns to point out that this is the very antithesis of Christian Science, bearing no analogy to it whatsoever? If it is analogous to anything in the healing art as practised by the Caucasian race, it bears some resemblance to the attempt to heal by making a loud noise and a bluish-green flame inside an X-ray tube, by administering drugs which in past ages have been usually filthy and repulsive, and in the present age tend to be poisonous and full of danger, or by cutting, steaming, cooling, and molding the human body, which fluctuates in the very hands of its manipulators with the variations in the beliefs of which it is the expression.

The good faith of the physician is not to be questioned merely because the doctrines he believes call for the use of ridiculous and unintelligent devices for healing the sick. Indeed the fact that many Christian Scientists agreed with the physicians until their introduction to Christian Science, is proof that their objection is not to their brothers who practise medicine, but to the untenable beliefs which control them and which controlled these present Christian Scientists before

Digitized by Google

they became such. Even the Indian's sincerity is entitled to our acknowledgment, as well as that of the doctors. The Indians attempt to build up a blind belief of health in the human mind by all sorts of fantastic means; the doctors of material medicine do the same by means somewhat more artful and refined but in many instances no less fantastic.

What Mrs. Eddy said of one who attempts to heal by hypnotism may also be said of the Indian and the doctor: "If he heals sickness through a belief, and a belief originally caused the sickness, it is a case of the greater error overcoming the lesser. This greater error thereafter occupies the ground, leaving the case worse than before it was grasped by the stronger error" (Science and Health, p. 104). That is one explanation of the comparatively frequent occurrence of a medical operation being pronounced successful, although the patient does not recover.

Christian Science heals, on the other hand, by the wholly metaphysical process of recognizing God, the divine Mind, as being the only substance and Life of man, beyond the reach of material discord or decay. This recognition of God as present necessarily includes a denial of the presence and power of matter, or material so-called law, for the reason that God and matter are opposites, and cannot be present to consciousness simultaneously. This constitutes a prayer of affirmation, as illustrated by Jesus' prayer at the grave of Lazarus, and the healing power that flows from it is to be explained by the fact that it corresponds with and does not contravene the fundamental facts of being. A denial of God's presence and an affirmation of the all-presence and power of matter leads to discord and death, because it denies Truth and affirms error to be true; whereas knowledge that God is the only power, and knowledge that other seeming powers and threats of danger are mere suppositions, opens the human consciousness to the influence of that divine Love in the presence of which disease fades out and health appears.

True healing is more than mere patchwork upon the human body. True healing destroys both sickness and sin at one operation. It not only redeems the body from disease, but also lifts human thought, motive, and action from the plane of the selfish and sinful to that of the loving, hopeful, and considerate, which every one recognizes as being the manifestation of God's loving-kindness. One proof that the practice of material medicine is on an unsound basis is the general belief that the healing of sin is not a necessary requisite, or even a necessary consequence, of the medical treatment of disease. The same may be said of the exorcisms of the Indian medicine man.

✧

[Charles W. J. Tennant in *Medical Press and Circular*, London, England]

If there is one thing throughout the writings of Mrs. Eddy that is clear to a Christian Scientist, it is the well defined distinction she has always drawn between the absolute (eternal) and the relative (temporal). On page 300 of "Science and Health with Key to the Scriptures" she writes: "The temporal and unreal never touch the eternal and real. The mutable and imperfect never touch the immutable and perfect." A vast majority of the misunderstandings of this subject would be cleared away if the exact meaning of certain words as used in the Christian Science text-book were understood.

For instance, the Christian Scientist's use of the word real seems to cause many misunderstandings until the meaning given it by Mrs. Eddy is comprehended. She says on page 335 of Science and Health: "Reality is spiritual, harmonious, immutable, immortal, divine, eternal. Nothing unspiritual can be real, harmonious, or eternal." It is self-evident that this meaning can never be applied to sin and disease. Reality must be the condition of the eternal, and therefore can only be spiritually discerned. With regard to the material sense of things appearing real to the carnal or human mind, she writes on page 460 of the same book: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being."

In the reviewer's assumption that the universe is perfect, it is of course the spiritual universe that is meant, not the material sense of it, as he supposes. The latter's illustration of two anatomists agreeing that the human body cannot possibly be anything but perfect, is wide of the mark, for nothing material ever has been or ever can be perfect from the Christian Science point of view. Mrs. Eddy says: "All the real is eternal. Perfection underlies reality. Without perfection, nothing is wholly real" (Science and Health, p. 353). Christian Science does not teach that a perfect creation includes an imperfect human consciousness, as our critic avers, any more than mathematics teaches that the principle governing the science of numbers includes mistakes in the computation of numbers.

✧

[E. M. Ramsay in *The Shetland Times*, Lerwick, Shetland Isles]

In "A. J. B.'s" letter to *The Shetland Times* he charges me with leaving troublesome problems alone, and with saying "peace, peace," where there is no peace. This is very far from being my intention or wish, but I would point out that in taking up a new study he makes the best progress who is content to begin at the beginning and leave the more advanced parts of the subject till he has grown in understanding.

In order to gain confidence in the power of unseen truth, one must begin to apply it to the overcoming of evil in his own consciousness. Let us suppose that a man appears to suffer from the bigotry and intolerance of another. How is this to be dealt with in Christian Science? We must first separate these supposed evil qualities from man by recognizing that since they are not to be found in the nature of God, they cannot form any real part of His image and likeness, the real man, the only man. We have thus to deal, not with a bigot but with bigotry, not with an intolerant man but with intolerance. In this way we have resolved things into thoughts, and are thus able to deal with them mentally.

Having got to this point, we begin to examine our own hearts to see if we are harboring there anything of bigotry and intolerance ourselves, for if this be the case, we must cast this beam out of our own eye before we can go farther. What means, what instrument, can we employ for this operation? What can cast out an evil thought? The true idea, which shows the unreality of the special evil thought with which we are concerned. Bigotry and intolerance are the outcome of a false conception of God's nature, as Science and Health shows us: "Tyranny, intolerance, and bloodshed, wherever found, arise from the belief that the infinite is formed after the pattern of mortal personality, passion, and impulse" (p. 94). In order, then, to get rid of a false conception of God, we must turn to the true conception as given in the New Testament. We dwell on what we there learn of His nature, and on the thought of Love, Spirit, "with whom is no variableness, neither shadow of turning," the Father, the very source of life and blessedness, destroying evil "with the brightness of his coming," as we read in II Thessalonians.

Our Lord tells us that it is the child-heart which enters the kingdom; in the Revelation we learn that the Lamb slew the dragon. Evil certainly must be recognized as evil, but why should we ascribe to it the very qualities of God by maintaining that it is powerful, well-nigh omniscient, highly intelli-

Digitized by Google

gent, that it possesses endurance, resource, and the highest degree of organization? Are we not really worshiping the devil when we do so? Let us take heart and meet evil in the right way. Our weapons are the qualities of God manifested. We oppose evil with love, with kindness, courage, with joy in God's goodness, with the gaiety of innocence, with an absolute conviction that Truth and Love are immortal, irresistible, and cannot fail to win. In our present dim state of consciousness, struggling out of a condition in which evil has seemed a power, it may require a long persistence in right thinking, but our victory is none the less assured.

✧

[David Anderson in *Bendigo* (Australia) *Independent*]

In a sentence in the course of a lengthy letter which has just appeared in the *Independent* under the heading "Spiritualism," your correspondent instanced Christian Science as a system of religion which "repudiates the cross of Christ." Permit me to state that in Christian Science the cross of Christ is not repudiated. Something like twenty references to the cross are to be found in "Science and Health with Key to the Scriptures," and on page 179 Mrs. Eddy speaks of the necessity for "taking up the cross and following Christ in the daily life."

To the Christian Scientist salvation does not mean something realizable in a future state and location of seraphic bliss, to be entered only through the gloomy gates of death; to him it means a present salvation in spirit and life, attainable here and now in proportion as the carnal mind gives place to the Mind which was in Christ Jesus and as he grows to "the measure of the stature of the fulness of Christ."

Christian Science is not a religion of opinion and dogma, it is the practical Christianity which Jesus taught; and the test of his following was obedience to his commands, including performance of his works—compound test which he never simplified, narrowed, or elaborated. It is a system of religion capable of proof and demonstration, and it requires from its adherents proofs rather than expressions of Christian power.

✧

[Peter B. Biggins in *The Western Standard*, Calgary, Alberta, Canada]

It is true that healing through the reading of Christian Science literature is of frequent occurrence. This healing results not from blind faith, but, as your article states, from "getting true understanding." The Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, teaches and explains clearly the power of God to heal every ill. It makes clear the Scriptural teaching that God is Spirit, Love, Truth, and Life; that He is ever present and all powerful; that all things are possible to Him; that the real, spiritual man is made in the image and likeness of God, and is therefore perfect and harmonious. The clear understanding of these facts raises the human consciousness from the contemplation of man as material, born to sin, to be sick, and to die, and as the result of this uplifted spiritual understanding healing is natural and spontaneous. This healing takes place not only in the case of nervous and functional disorders, but also in the case of diseases termed organic, including those which are commonly considered incurable.

Thus healing resulting from spiritual understanding, as in Christian Science, is vastly different from a cure based on blind faith. The operation of blind faith is practically the same, whether this faith relies on a visit to a shrine or to a mineral bath, on contact with a relic, the knife of a surgeon, or swallowing a potion. In all of these instances the result is due to a "strong impression" made on the human mind by an expectation of health. If, however, the human mind can be influenced by an impression or belief of health, it can also be affected as readily by an opposite belief. Thus so long as health depends upon mere belief or blind faith, health is very uncertain. In Christian Science healing the human mind yields to the Mind of Christ, and thus health and harmony are based upon a firm spiritual foundation.

Healing in Christian Science is not miraculous, as this word is generally used. The term miracle is commonly employed to denote a departure from the uniform operation of God's law. In Christian Science it is clearly seen that God is unchanging Love, which is the same yesterday, today, and forever. Similarly God's law is unchanging and constant in its operation for the welfare of His children. Healing as Christ Jesus practised it, and as it is practised in Christian Science, is the result of the utilization of the unchanging law of God, not a deviation from it. A deviation from a law which is unchanging is obviously impossible, although theologians have long been blind to this self-evident truth. The works of the Master commonly called "miracles" were simply "signs"—signs which he himself said "shall follow them that believe," that is, spiritually understand, his teaching and practice of God's law.

It is therefore unquestionably true that the time for the manifestation of these "signs" is not only in the past, but also now and forever. It is encouraging to note that this is being more clearly recognized by Christian churches today, and that renewed efforts are being made to fulfil the entire purpose of Christian ministry as established by the Master, by healing the sick as well as preaching the gospel. It is also plain that healing through divine power is not supernatural, but divinely natural. This is being abundantly proved in Christian Science.

✧

[John L. Rendall in *The Intelligencer*, Charles City, Iowa]

An evangelist is quoted as stating of Christian Science that it is evil, not according to Scripture, and inspired, he believed, by the devil. This opinion is so utterly contrary to facts and so altogether at variance with Christian Science as its teachings have become known and respected by hundreds of thousands of people, that it seems strange and almost incredible that a minister of the gospel can at this time give utterance to such statements.

There has always been a tendency upon the part of ecclesiastical monopolists to arrogate to themselves the right to dictate what is or is not "sound doctrine." This was evidenced in the time of Jesus when the Pharisees voiced the opinion that he was of Beelzebub, that is, inspired by the devil, and as again brought out in the instance of the blind man whom Jesus healed, as recorded in John: "Then again called they the man that was blind, and said unto him, Give God the praise: we know that this man is a sinner. He answered and said, Whether he be a sinner or no, I know not: one thing I know, that, whereas I was blind, now I see."

This is the answer given by Christian Scientists to all such criticisms. They know beyond all doubt or question that Christian Science through its beneficent ministrations has brought into their lives inestimable benefits. They know that whereas they were sick or discordant or poverty stricken, or the victims of appetite or vicious habits, or seemingly subject to other forms of discord, through Christian Science peace and joy and happiness, health and harmony, have come into their lives. They know that they are better men and better women, better fathers and mothers, and better citizens because of what Christian Science has taught them.

✧ ✧ ✧

I am profitably engaged in reading the Bible. Take all of the book upon reason that you can and the balance on faith, and you will live and die a better man.—*Lincoln.*

Editorial

Fulfilling the Law

On page 38 of "Miscellaneous Writings" Mrs. Eddy in answering the question, "Is it necessary to study your Science in order to be healed by it and keep well?" differentiates quite clearly between the person who has just turned to Christian Science for the cure of "his present disease" and the person who previously has been healed by Christian Science and wishes through this Science to be kept in good health. In considering this question and answer it is also well to take into account her answer to the next question (p. 39), "Can you take care of yourself?" Grouped together these two statements clearly indicate that it is to the interest of one who has been healed in Christian Science, and in fact that it is his duty, to give faithful daily study to its teachings, and we might add, particularly as these teachings are set forth in the regular Bible Lessons, in order that he may not only learn how to be free from disease, but also that he may be able to help others bear their burdens, and thus, as Paul counsels, "fulfil the law of Christ."

It is gratifying, nevertheless, that very many who find healing in Christian Science, even after all manner of material means have failed to bring relief, are so impressed with the wonder of it all that they cannot rest until they have sought and found for themselves the truth which makes free as revealed to this age in the discovery by Mrs. Eddy of the Principle and rule by which the Master wrought and taught. To such earnest seekers it is inevitable that having once come into the light and proved its truth for one's self, the next step should be to extend a helping hand to the brother still groping in darkness. This is as it should be, for the underlying spirit of Christian Science is that love for God and our fellow man which prompts to active service.

From all this it is clear that those who call themselves Christian Scientists cannot afford to be placed in the position of being perennial patients, unable or unwilling to gain a demonstrable understanding of Christian Science by study and application of its teachings. It is likewise incumbent on those who are engaged in the work of healing others, to see to it that their patients are encouraged so to inform themselves of the fundamentals of Christian Science that they will try to help themselves to overcome at least the minor ills with which they may be threatened.

It has been proven in the experience of the older Christian Scientists that the long and unnecessarily continued relationship of practitioner and patient is of no advantage to either, and that to maintain such a relationship beyond a reasonable and necessary period is detrimental to both. Throughout Mrs. Eddy's writings there is not only a complete and logical explanation of what God is, and what man's relation to Him is, but also continued exhortation to all mankind to appeal directly to Him "who forgiveth all thine iniquities; who healeth all thy diseases," rather than to depend upon any human personality to secure for them that peace "which passeth all understanding."

Christian Science is not a system by which some persons are elected or set apart to stand in the relation of family doctors to other persons. Rather is it the Science of Christian living, by which all mankind are offered the opportunity to demonstrate the true relationship of God and man, the reality of Spirit and all things spiritual. When this is understood by all, it will be seen that every man must seek first the kingdom of God, and that this cannot be done vicariously. Either here or hereafter all must work out their own salvation, and no time should be lost in so important an endeavor.

The foundation of all Christian Science practice is the right understanding of God, and of His creation. This is righteousness, and righteousness is the sure concomitant of man's at-one-ment with God, divine Mind. When this at-one-ment is realized, all fear and false beliefs are dispelled, and man is seen to be "pure and holy" (Science and Health, p. 477). The practitioner who impresses this upon his patients will do much toward enabling them permanently to "blot out the images of mortal thought and its beliefs in sickness and sin" (Science and Health, p. 391), besides healing them of their "present disease."

Archibald McLellan.

✧

Our "high goal"

In no other respect perhaps is Mrs. Eddy's teaching more remarkable than in her ability to direct thought continually to the spiritual heights, and at the same time to point out patiently the steps to be taken along the straight and narrow path which leads thereto. The student will find it wise to ponder his Leader's words on page 426 of Science and Health, where she says: "The discoverer of Christian Science finds the path less difficult when she has the high goal always before her thoughts, than when she counts her footsteps in endeavoring to reach it." She does not say that these footsteps are not to be taken, for she adds most emphatically that one should "renew his energies and endeavors, and see the folly of hypocrisy, while also learning the necessity of working out his own salvation."

We can never afford to lose sight of the goal, which is spiritual perfection, and which we can never reach until we are willing to take all the steps demanded by wisdom and Love, though these call for constant self-denial, as our Master taught. The mortal sense rebels against every demand for self-denial, and would even claim that it has no place in Christian Science; but a careful study of our Leader's writings, with the aid of their concordances, will show the utter mistake of such an opinion. Mortal sense refuses to take the indispensable "human footsteps leading to perfection" (Science and Health, p. 254). In this mood it loses sight of the real intent of our Master's counsel to take no thought for the morrow, and with reckless disregard of its own best interests, as well as of the rights of others, it says like the Epicureans of old, "Let us eat and drink."

The truth is that if we have the high goal of spiritual living ever in view, we shall not be tempted either to indulge the senses or to give loose rein to pride and vanity that we may appear well to men. It should never be forgotten that self-denial on the material side leads to expansion on the spiritual side, and this alone represents reality. It is also true that a right sense of economy forestalls the need of taking thought for the morrow, and if we love our neighbor too well to owe him anything, this mental attitude will be an unceasing defense against the tendency of the thoughtless or the unjust to deprive us of our rights, but we must ourselves be honest if we would prosper. Let no one suppose for a moment that the vision of the "high goal" means little or nothing in the working out of today's problem. It means everything, but the goal itself must not be lost to view in the intervening mists of desire for merely temporal things.

A young girl was once crossing a broad and swiftly flowing river on an improvised bridge of planks, which served a need while the permanent structure was in course of erection. She was bidden to keep the opposite shore ever in view and to

Digitized by Google

place her feet firmly on the narrow pathway leading thereto. All went well until she neared the middle of the stream, when she looked aside at the foaming rapids and became so terrified that she would have fallen, as others had done, except that, happily for her, a workman who was just ahead heard her cry of fear. Quickly he caught hold of her arm, at the same time bidding her look up and away to the shore, for not otherwise could even he have helped her across. The kind voice was heard above the rush of the waters, and in due season the goal was reached.

The student of Christian Science who is wrestling with what so many call the problem of supply, would do well to read the closing verses of Habakkuk's prophecy. He tells us that although the fig tree, the vine, and the olive should fail, though the flocks and the herds should be cut off, yet would he be glad and rejoice in the God of his salvation. Then he declares that God is his strength, and that God will make his feet like those of the swift and sure-footed creature that fearlessly climbs the crags until the "high places" are reached. Our high goal is neither lands, houses, nor bank accounts, but as Christ Jesus said, the kingdom prepared "from the foundation of the world," and realized through the denial of self and sense, the Christ-way.

ANNIE M. KNOTT.

Identity in Christ

THE Messianic psalms of David, and the wondrous prophecies of Isaiah and other Old Testament worthies, focused the spiritual aspiration and communal hope of the Hebrews upon a messenger of God who was to be both their leader and savior. However, as the result of their subjection to Babylon and to Rome, the concept of this hero to come grew less and less spiritual, until when Christ Jesus appeared his unlikeness to the martial chieftain they longed for led to his rejection at the hands of his own people.

Though the disciples came to see that the Master's kingdom was not of this world, their attachment to him naturally perpetuated this personal sense of the Messiahship, so that they were greatly puzzled, it would seem, when he told them frankly that it was better for them that he should go away. Again and again St. Paul and other New Testament writers use the word Christ when referring to the Man of Galilee, and this habit still obtains among Christian writers. One comes upon frequent Scripture passages, however, in which this interpretation of the word is manifestly impossible. Writing to the Corinthians, Paul says, "If any man be in Christ, he is a new creature;" and to the Romans, "If Christ be in you, . . . the Spirit is life because of righteousness." In these and kindred passages it is apparent that the apostle is not speaking for a blend of personalities, but for the impartation of the divine Life to the individual man.

The higher apprehension of the nature of the Christ-coming and Messiahship, thus clearly glimpsed, was practically lost, however, in the mazes of later materialistic dogmatism, until through the teaching of Christian Science the world was again led to see that the coming of the Messiah is the dawning of spiritual truth in human consciousness; that the Christ is universal, the law and order of the divine appearing, of which the Christ-man or true individuality is a concrete expression. On page 230 of Science and Health Mrs. Eddy declares that the awakening from illusion, the dream of mortal sense, "is the forever coming of Christ, the advanced appearing of Truth, which casts out error and heals the sick." Here we have the revelation of divine Truth related to every individual believer, and all are to profit by it until, as one translator puts it, "We all of us arrive at oneness in faith . . . at mature manhood and the stature of full grown men in Christ."

Moreover, we come to understand that "the divinity of the Christ was made manifest in the humanity of Jesus" (Science and Health, p. 25); that the Master's uniqueness inheres not in his unlikeness to man, but in the fact that, in contrast with his brethren, in him dwelt "all the fulness of the Godhead." This scientific apprehension of Christ, the Messiah, as universal and impersonal, the wisdom and love of God dawning in human consciousness, is one of the most far-reaching illuminations of Christian Science. It removes all difficulties of thought respecting the nature of inspiration and the preservation of individual identity. We can now understand Paul's phrase, "Christ in you," even as we understand that a law of numbers may be embraced by the consciousness of the student so that it is indeed in him "to will and to do." He has become a mathematician. There is no loss of identity in this, but simply escape from the ignorance or misapprehension of human sense.

Furthermore, in this light of Science the absorption-into-deity idea is seen to have no place. The completeness of his apprehension and demonstration of divine Truth made Christ Jesus the "only begotten Son;" but what he wrought objectively to convince human sense, must be wrought subjectively in the heart of every man through the perception and assimilation of Christ, Truth. On page 289 of Science and Health we read that "the Christ, or Truth, overcame and still overcomes death." This is the revelation of that divine law, order, and purpose, in obedience to which all men may be saved unto the uttermost. To know and follow Christ is to discern and objectify the law of Life, Truth, and Love. It is to demonstrate the immortal selfhood, the true identity.

JOHN B. WILLIS.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston Street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk Streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon Street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

SYRACUSE, N. Y.—During the New York state fair held in Syracuse Sept. 13-18, 1915, First Church of Christ, Scientist maintained a booth for the distribution of Christian Science literature. It is estimated that over a thousand people entered it. The Syracuse *Post-Standard* said: "Free ice-water has helped to make the Christian Science booth in the Liberal Arts Building at the fair grounds an attractive spot. Although in the thick of the noise and the clamor of scores of barkers, the Christian Science booth is the most restful place in the exposition city. During the week nearly three hundred gallons of ice-water has been given away."

To those making special inquiries about Christian Science and desiring to know more about it, the following pieces of literature were given: 145 *Sentinels*, 26 *Journals*, 5 *Heralds*,

Digitized by Google

1 copy of "Christian Science: Its Legal Status," 74 English pamphlets, 11 foreign pamphlets. To people passing the booth who were willing to listen to what was said about a clean daily newspaper, 2254 *Monitors* were distributed. Some who thus heard of it for the first time, were glad to know that such a paper existed. Many wrong impressions were corrected.—*Literature Distribution Committee.*

PHILADELPHIA, PA.—The congregation of Fourth Church of Christ, Scientist, met for the first time in their new edifice at Fifty-eighth Street and Cobb's Creek Boulevard yesterday [Dec. 26]. The original membership of the organization was one hundred persons, at the time they left First Church of Christ, Scientist, for the purpose of relieving the congestion. Meetings have been held in Red Men's Hall, Sixtieth Street, above Spruce, and growth has been steady and consistent. There are seats for three hundred and ninety-nine persons in the auditorium of the new structure, while the Sunday school building, which is directly in the rear of the main edifice, has a seating capacity of one hundred and fifty persons. The church was organized on May 7, 1915.

The Philadelphia Record.

BUFFALO, N. Y.—The dedication of the edifice of First Church of Christ, Scientist, at Elmwood Avenue and North Street, yesterday [Jan. 2], took place at four o'clock. The debt of the church was completely wiped out in barely more than thirty days through voluntary contributions. There were no bazaars, no canvassing. Ground was broken for this structure in the fall of 1910, and the first services were held in it on Sunday, Sept. 28, 1913, at which time sixty-five thousand dollars was owing on the building. The property represents an investment of two hundred and fifteen thousand dollars, of which forty-seven thousand dollars is for the land and one hundred and sixty-eight thousand for the handsome church edifice.—*Buffalo Commercial.*

MORRISON, ILL.—The first Christian Science church in Whiteside County is nearing completion. Nearly forty years ago the cause was espoused by a Morrison man, and it has been slowly growing until there is a fair congregation to worship in the new edifice, which is situated in the good part of the city.—*Sterling Gazette.*

BOULDER CREEK, CAL.—Articles of incorporation of the Christian Science Society of Boulder Creek were filed with County Clerk Miller today [Dec. 21]. The new organization is the first of its kind to be formed in this county.

Santa Cruz News.

Admission to Membership in The Mother Church

The next admission of candidates will be June 2, 1916. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 10, 1916.

An application, sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Suite 550, 286 Huntington Avenue, Boston, Mass.

The Lectures

Paris, France

John W. Doorly lectured on Christian Science in Washington Palace. He was introduced by William H. Norledge, who said:—

A few weeks ago a social reformer of the younger school in France was talking with me of some aspects of social reform in Europe. What struck me most was his statement that while the great thinkers recognized the unrivaled quality of French thought, they had come to deplore beyond all else the immense gulf that plainly existed between thought and action. This wide discrepancy between ideals and practice to which French thinkers are awakening as never before, is not however peculiar to France, but is really now the great problem of the civilized world. Lofty ideals have hardly ever been lacking, but how to bring these ideals into practical expression in common daily life has seemed to be almost beyond the possibility of mankind.

The bridging of this gulf, the meeting of this universal need of individuals and of nations for bringing action more in accord with thought, is preeminently the message of Christian Science to the world, for the very essence of this message is the demonstrability of the highest ideal that man has ever known. The message of Christian Science is not so much to tell mankind that ideal truth does exist, but rather to show how this ideal truth can be made available to human needs. A great modern writer has said that the wonder of wonders is that a man may learn to know God. Christian Science makes it possible for the individual to begin consciously to know the Mind that is infinite, the Mind that is God.

Christian Scientists in no way claim to have mastered a knowledge of the infinite, but they do claim to have learned something of the true nature and power of the infinite, and the little they know in this direction has already worked wonders, for to many thousands it has brought health in place of sickness, and peace and harmony in place of trouble and discord.—*Correspondence.*

Fresno, Cal.

An audience of more than fifteen hundred persons heard a lecture on Christian Science delivered in Convention Hall by Charles I. Ohrenstein. H. M. Cobbey introduced the lecturer and spoke as follows:—

In the Bible it is written, "The Son of man came not to be ministered unto, but to minister." Such is the service of Christian Science. Christian Science in its ministration of love is bringing relief to overburdened humanity. It brings hope to the discouraged; it brings health to the sick; to the infidel or the one heart-sick and losing his faith in God it brings a religion comprehensive and demonstrable. In her self-sacrificing life-work Mrs. Eddy endeavored to put within the reach of all a knowledge of the truth that frees from bondage. On page 24 of "Science and Health with Key to the Scriptures" she has written, "He to whom 'the arm of the Lord' is revealed will believe our report, and rise into newness of life with regeneration."—*Fresno Herald.*

London, England

Clarence W. Chadwick gave a lecture on Christian Science for Seventh Church of Christ, Scientist, in the Hammersmith Town Hall. He was introduced by Eric W. Carr, first reader, who said:—

Digitized by Google

In the course of the last year we have heard much concerning the prophecies of the Bible,—prophecies of struggles, wars, Armageddon, and so on,—but are we not sometimes inclined to lose sight of the fact that hand-in-hand with these prophecies are the most glorious promises in the Bible, —promises of health, maintenance, freedom, and salvation? Now Christian Science has come to emphasize these promises; not only so, but to show us clearly that they are meant not for some far-off future time, but to be fulfilled in the experience of each one of us today, as we gain a right concept of God and begin to live in accordance with His laws.

Those of us who have been studying Christian Science and endeavoring to carry out its teachings, are gratefully conscious of the blessings that have already come to us as a result of so doing, and we naturally wish to help others. We have therefore invited you here this evening in order that you also may hear something of Christian Science, and begin to share with us some of the blessings contained in the beautiful Bible promises.—*Correspondence.*

Lectures to be Delivered

ARIZONA—Tucson: Jacob S. Shield, Woman's Club Building, 8 p.m., March 5.

ARKANSAS—Fort Smith: William D. McCrackan, New Theater, 8 p.m., March 12.

CALIFORNIA—Berkeley (First Church): Jacob S. Shield, High School Auditorium, 8 p.m., March 17.

Glendale: Charles I. Ohrenstein, High School Auditorium, Fifth and Louise Streets, 3 p.m., March 12.

Lompoc: Charles I. Ohrenstein, Lompoc Opera House, 8:15 p.m., March 13.

Long Beach: Charles I. Ohrenstein, Auditorium on the Pier, 8 p.m., March 11.

Pasadena: Jacob S. Shield, Church Edifice, Oakland Avenue, near Colorado Street, 8 p.m., March 13.

Riverside (Second Church): Jacob S. Shield, Loring Opera House, 8 p.m., March 14.

Santa Barbara: Jacob S. Shield, Potter Theater, 8 p.m., March 16.

Santa Maria: Charles I. Ohrenstein, Gaiety Theater, 8 p.m., March 14.

Venice: Charles I. Ohrenstein, Church Edifice, Second and Brooks Avenues, 8 p.m., March 12.

CANADA—Brantford, Ontario: Clarence W. Chadwick, Society Hall, Temple Building, Dalhousie Street, 7:45 p.m., March 13.

ILLINOIS—Chicago (Seventh Church): Frank Bell, Church Edifice, 5318 Kenmore Avenue, 8 p.m., March 16 and 17.

Chicago (Sixteenth Church): Virgil O. Strickler, Assembly Hall, Armstrong School, Rogers Park, 8 p.m., March 13.

Elgin: Frank Bell, Universalist Church, 8:15 p.m., March 9.

Evanston: Frank Bell, Church Edifice, Chicago Avenue and Grove Street, 3:30 p.m., March 12.

La Grange: Frank Bell, Church Edifice, Catherine Avenue and Cossitt Boulevard, 8:15 p.m., March 13.

Quincy: George Shaw Cook, Church Edifice, Vermont and Eighteenth Streets, 8 p.m., March 16 and 17.

Wheaton: Frank Bell, Library Hall, 8:10 p.m., March 14.

Testimonies of Healing

During the five years of my journey from sense to Soul many blessings have come to me. The first ten years of my married life my health was seemingly gone. The family physician said he had done all he could and advised my husband to take me to the best specialist in our nearest city, Atlanta. He did so at once, and after a most thorough examination the specialist advised an operation in ten days for an abnormal condition of one kidney. I stayed in the infirmary eight weeks after the operation and then returned home. For a few months I was better, but complications set in and my condition became more critical than ever. Stomach trouble, which was pronounced a malignant condition, was followed by rheumatism, which drew me all out of shape, especially my arms and legs. Then I was carried back to the infirmary, where the physicians told me that another operation was necessary, though there was very little hope for its success as I was in such a low state of health. I returned home, this being on Saturday, and was met at the train by my husband and family physician.

The two words "Christian Science" then flashed through my mind, and I called a friend who had often spoken of it, and asked her to order a copy of "Science and Health with Key to the Scriptures" for me. She brought the book with her the following Tuesday afternoon and told me to read and try to understand and she would treat me. By Saturday I was a well woman; not a vestige of the old condition was left. That was five years ago. This was just the first demonstration; others followed almost every day, among them a severe case of lockjaw with my little son, an attack of acute lung trouble with my little daughter, also burns, colds, and headaches.

My greatest desire is to prove myself worthy of this glorious truth, and thus show my thankfulness to God by striving each day to have more of that Mind in me "which was also in Christ Jesus." I am most grateful to our beloved Leader, Mrs. Eddy, for giving us this truth in Christian Science.—Florrie Powell Franklin, Covington, Ga.

✧

Early in the autumn of 1913 I was taken ill. The case was diagnosed as a complete nervous breakdown, accompanied by severe attacks of so-called bilious fever, catarrh of the stomach, and sciatica. Fourteen years previous to this time my mother had been healed through Christian Science of a severe illness, but being only a child I did not realize what the truth had accomplished for her. I was brought up in the Christian Science faith and can recall many instances where an application of the truth, as I understood it, was sufficient to meet my needs. In the present instance, however, this treatment was opposed by some members of the family, and as I was in such a nervous condition, I yielded to their insistence for treatment by a physician. For weeks I took very little nourishment and suffered intensely; but when material remedies had failed to give relief, I longingly turned to Truth.

After a night of unusual suffering a Christian Science practitioner was telegraphed to, and he responded promptly. I shall never forget the sense of peace that came to me as he passed the threshold. There were many seeming difficulties to be overcome, but through untiring effort on his part their nothingness was soon proven. Slowly but surely, one by one these obstacles were removed, the pains ceased, the appetite returned, and health and strength were made manifest. When I was first able to be up one leg was considerably shorter than the other, but this too was soon righted.

Since my healing I have experienced greater joy and happiness than ever before. I am striving daily to realize more and more the omnipotence, omnipresence, and omniscience of God. Though at times it seems difficult to fathom the facts of being, yet this I know,—that nothing is impossible to man as God's reflection, and that His law is a law of progress; there can be no failures, no retrogression. I am truly grateful to all who ministered to my wants during my illness, but most of all I am thankful to God. Only those who have had like experiences can know the gratitude felt not alone for physical help received, but much more for spiritual enlightenment gained thereby. My daily prayer is to have the Mind which was in Christ Jesus, and no other consciousness but God, good.—Mrs. W. R. Harley, Medina, Ohio.

✧

A deep feeling of gratitude urges me to make public acknowledgment of the benefits I have received through Christian Science. I hope this testimony may lead some one to study this Science, and if it ever comes under the eyes of a naval officer I can only tell him that nothing else in the world can give him such rest and peace in times of storm and danger. Before I became acquainted with Christian Science I was subject to a bad physical condition which dated from my childhood. Every year I grew worse, and it was in this serious state that Christian Science found me. I understood very little of it, and clung tenaciously to fear and doubt; hence disappointment was the result. At that time I gave it up, but the hope remained that the time would come when I would know and understand the truth.

Three years later I had a talk with a Scientist, and this made such an impression on me that all doubt was gone. I saw that I had to take up my work again, being a naval officer, and so went to see a Christian Science practitioner to ask her to give me treatment before my departure and during my first voyage. I can say that I experienced no trouble of any kind, and many ills were overcome. The extreme melancholy and bodily weakness left me and I became a strong and healthy man. I have no words to express my thankfulness to God for the benefits I have received through Christian Science; also my gratitude to Mrs. Eddy, who gave us the truth, and to all who helped me to "put off the old man with his deeds."

Dirk A. Bossen (Naval Officer), Amsterdam, Holland.

✧

In reading the parable of the sower I am reminded of my experience in coming into Christian Science. While reared in the teachings of an orthodox church, I had never become a member, because there seemed to be something lacking; yet I always felt that sometime I should find a religion which would appeal to me. About five years ago, when my husband, who was a traveling salesman, stopped at Memphis, Tenn., he found a copy of *The Christian Science Journal* in his room at the hotel. After reading it, he sent it to me with the message that the book seemed to advocate the ideal religion for which I was seeking. We read the *Journal* thoroughly, and discovered that there was a Christian Science Society in our town. No time was lost in attending the services, and in a short while we bought our first copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Three weeks' study of this wonderful book healed my husband of asthma in its worst form, after all material remedies had failed. We are grateful to the unknown friend who opened the way for us to find the truth. It was seed sown in good ground, for we were ready and eager for the truth. This is work we all can do, even the least of us. We can sow the seed, the "word of God," by leaving our periodicals wher-

Digitized by Google

ever we can. Paul says, "There are diversities of operations, but it is the same God which worketh all in all," and Mrs. Eddy tells us on page 111 of "Miscellaneous Writings" that "leaving the seed of Truth to its own vitality, it propagates: the tares cannot hinder it."

MINNIE GLANTON FORSCHLER, New Orleans, La.

✧

In March, 1913, I suffered what is termed a nervous breakdown, and finally got in such a state I was afraid to leave the house, as I felt that I was going to lose my mind. I was then located with my family on the desert, eighteen miles from Mojave, Cal., our mail coming through the Los Angeles Aqueduct. With other things there came to us three copies of the *Sentinel*, which were thrown aside, as my wife and I knew nothing of Christian Science.

One day, after a severe spell, feeling as though I would become demented unless something were done for me, I went to the house, where instead of a magazine I picked up a *Sentinel*, and read it from the first to the last word, then asked my wife for the other two copies and read them also. When I had finished I said I was going to be a Christian Scientist; that I could be healed, and I was.

Since then I have had many wonderful healings through the help of practitioners. Glasses had been worn for five years, the specialist saying the eye tissues were exhausted. After one treatment the glasses were taken off and I have never missed them, although I have used my eyes more than ever before. Christian Science has been a great help to me in my work and in my feeling toward my fellow men, and I earnestly pray and strive for a fuller understanding. I am thankful to God, also grateful to Mrs. Eddy for the many blessings that have come to me. I am striving to know more of the truth that makes us free.

HARRY H. HASTINGS, Brawley, Cal.

✧

One night, one of my little boys had great difficulty in breathing, as there seemed to be a serious obstruction in the nose, causing great annoyance and therefore sleeplessness. Before I came into Science he had been operated on for nasal growths, and it occurred to me that perhaps they had returned; however, I held to the thought that there are no obstructions in the realm of Truth, that divine Mind and its manifestation are always harmonious, and that therefore matter has no intelligence to become abnormal in any sense. After a little while the child became quiet, and he then slept peacefully until morning.

I was wakened another night by the crying of my older son, and found that he was suffering from toothache,—not one tooth but all the teeth seemingly clamoring for recognition. He had been playing football the day before and was somewhat shaken up by it, and I thought perhaps this was a result. I declared the truth audibly to him, when a statement from Science and Health suddenly came to me so forcibly that I gave utterance to it,—that in God "all being is painless and permanent" (p. 414). In a few minutes the boy turned on his side and went to sleep. The next morning he told me that when I declared the truth to him the suffering faded away and he was free.

A few months ago some one whom I hardly knew was apparently causing me a great deal of annoyance. At length there came a day when I could stand it no longer, and I tried to declare love for the seeming offender and to know that the offenses were no part of her. The next morning, upon answering the telephone, I was greatly surprised (though I should not have been, knowing that Love and Truth always destroy error) to find that it was this lady, and she wished me to come to see her. With some trembling I did so, feeling that Truth was doing the work and that I must do my part, also that I would be given strength and wisdom to do and to say the right thing. Truth did indeed uncover and destroy the error, though to mortal sense the struggle seemed long, but all things were adjusted and all parties concerned were benefited.

My gratitude for the Christian Science periodicals is unbounded. I find that through them our every want is supplied, and it is a great comfort to know that when in need we can always turn to some one of them and find help and encouragement.—LEORA C. SHELDON, Oak Park, Ill.

✧

It would be impossible for me to enumerate the many benefits I have received from the study and application of the truth taught in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. It is now thirty years since Christian Science first found me. At that time I was confined to my bed with what the doctors diagnosed as female trouble. From childhood I had been considered frail, and my parents, in their ignorance of the truth of being, held the law of heredity over me; but thanks be to God I now know that the so-called law of heredity is not true. In my first healing it was proven to me that God's law is the only law.

My husband had spent much money for medical treatment for me, but without any permanent results, until finally two of our local physicians, after consultation, gave him very little encouragement that I would ever be any better. Then a lady called to see me, and said there was a Christian Science practitioner coming to our town that afternoon, and asked why I did not try Christian Science. My husband met the practitioner at the depot and invited her to our home. My healing was almost instantaneous, for I received my first treatment on Saturday afternoon, and the following morning I was up and dressed when the practitioner came. Before that day closed I called on my nearest neighbor, and the following Wednesday evening attended mid-week prayer-meeting at the church of which I was at that time a member, to the astonishment of those present.

I have never taken a drop of medicine since my first treatment. God alone has been our physician in every time of need, and His grace has been sufficient for us. My husband is a contractor and builder, and in April, 1908, while at work with his men on a new building, the scaffold gave way under them, and he fell about twenty-five feet, head downward, into an excavation. He was practically hung up by one foot, and was taken out of the hole for dead and carried in an unconscious condition to a surgeon's office. It was found that he had sustained a very serious scalp wound (it seemed necessary to take nine stitches).

The accident happened at two o'clock, and three hours later he was brought home, Christian Science treatment being given him meantime. He sat at the table and ate supper with the family, and the following morning dressed himself, and before nine o'clock was out on the street looking after his business. The morning of the ninth day the stitches were removed and the surgeon was much astonished to find the wound perfectly healed. He has had many other demonstrations over falls, cuts, and the like, and his men have been surprised to see him go right on with his work as though nothing had happened.

For the encouragement of any who may think their improvement is slow, I will give my experience. A few months after my husband's healing I was suddenly overcome with a nervous breakdown which bordered on insanity. For three years different Christian Science practitioners treated me,

Digitized by Google

until finally the trouble yielded to the spoken words of Truth and was destroyed.

I am now enjoying perfect health, and words cannot express my thankfulness for what Christian Science has done for me. I am thankful for its regenerating power, for the life of our dear Leader, Mrs. Eddy, and for the privilege of studying her writings. I am also thankful for my membership in The Mother Church and the local society, and for the understanding which has enabled me to speak the word that has healed others. There is no joy so great as that which comes from being instrumental in bringing health and happiness to others.—Mary E. Higgins, Bellevue, Mich.

✧

About ten years ago Christian Science was presented to me through the healing of my sister. I had been a semi-invalid for years, during which time I was continually under the care of physicians who were quite unable to give me relief, so that I was easily persuaded to visit a Christian Science practitioner and ask for treatment. It seemed, however, that I was not then ready for the revelation of Truth, and after a few months I turned again to material remedies, and also to a new physician, who was very encouraging and quite confident of helping me. The mental and physical depression nevertheless grew deeper, until one afternoon, when I came in utterly exhausted from a very short walk, feeling desperate I picked up an old copy of Science and Health which some one had given my brother long ago and which had been lying there with its beautiful message unheeded. As I opened it I said aloud to my family, "If there is anything in this book for me I am going to get it," earnestly meaning every word. When I began to read in the Preface (p. vii), "To those leaning on the sustaining infinite, today is big with blessings," something immediately attracted and held me. Two days after this I threw away my medicine and wrote to a practitioner for help. From that day I have not taken any material remedy.

My health has steadily improved, though the healing has been slow. Chronic ills have dropped off, and my whole outlook on life is changed. I have no longer a morbid, depressed disposition, from which I had suffered since childhood, and I can endure fatigue that before would have prostrated me. Another thing I want to mention is the way Christian Science helped me in the overcoming of sorrow. When my mother was taken from me, life seemed so desperate and impossible that I was forced to turn with all my strength to God as I understood Him in Christian Science, and with loving help I was carried through this trial in a way beyond all human imagining. With this same understanding of divine Love I have been brought safely through other dark places that were hopeless to human sense. My longing is to grow steadily in the understanding of the truth. I love it more and more each step of the ever brightening path.

These are some of the ways in which God has helped me through Christian Science, and I realize more every day how impossible life would be without it.

Lovinia B. Turner, The Plains, Va.

✧

Through the teachings of Christian Science I have been freed from one of the heaviest burdens with which mortal man can be weighed down,—the belief in heredity. My father had passed on with a so-called incurable disease, and a few years later my older brother went with the same trouble, so the verdict went forth that I too must be afflicted in the same way. For a number of years the fear of hereditary disease never left me for a moment, though not one of my friends or relatives knew anything about the state of my mind. Finally, in the words of Job, "the thing which I greatly feared" came upon me. Then followed years of suffering and sorrow. The doctors ordered me to a different part of the country, and I spent over five years going from place to place in search of health. My last effort was nearly a year's confinement in a sanitarium in Silver City, N. Mex. However, neither climate nor *materia medica* seemed to help me, for my condition kept on getting worse.

Christian Science had been recommended to me, but I refused to have anything to do with it, and as I look back on that time I know that it was because I knew absolutely nothing about it. There came a time when I was at the end of my resources, in that I was completely discouraged and knew not which way to turn or what to do. It was on that day that I was led to the home of dear good people whom I had never seen or heard of before. They happened to be the only Christian Scientists in that community, and I shall never forget the words they said to me that day: "You can be healed in Christian Science." That same evening I began the study of the Bible, together with the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had never read the Bible before, except in Hebrew, and the English Bible was a most wonderful revelation to me. The joy and peace and happiness that immediately followed is beyond my ability to describe. The healing power of God's glorious truth began at once to manifest itself within me, and presently I was freed from that terrible belief of heredity by the understanding that God is our only Father, and the belief of lung trouble was destroyed by the understanding that the children of our heavenly Father are perfect.

It is nearly three years now since this blessed truth made me free. As soon as possible I went back to my former occupation, and today finds me better and stronger, healthier and happier, than ever before. My heart is filled with prayerful thanks to God for His mercy and His loving-kindness. I am thankful for my small understanding of the teachings of Christ Jesus, and grateful to our beloved Leader, Mrs. Eddy, for this beautiful religion of Truth and Love.

Jacob Goldfinger, Los Angeles, Cal.

✧

A few years ago I took up Christian Science, as I was suffering from what the doctors called an exophthalmic goiter. I had treatment for about three weeks only, and began to show great improvement. At the end of six weeks the condition had entirely left me, together with the heart trouble, nervousness, and weakness which accompanied it. Severe headaches, neuralgia, and seasickness have also been overcome through Christian Science, and I am very grateful for the health and happiness I have found through this healing truth.

Carrie J. Robbins, West Kensington, London, England.

✧

When Christian Science found me, almost five years ago, I was both mentally and physically sick. Like many others, I was afraid to try Christian Science for fear of becoming like those "peculiar Scientists," as I in my ignorance termed them. I had suffered some six years from a bowel and stomach trouble, and our family physician told me that he could do no more for me than he had done, namely, change my medicine from time to time. Soon after this I became alarmed to find that my strength was failing. I had never been very robust, but still I had always attended to my household duties. Most of the summer before coming into Christian Science, however, I found it necessary to lie down a great deal, as my back ached constantly.

My husband and I finally decided to try Christian Science,

Digitized by Google

for we felt that at least it could do me no harm, so I began to take treatment. I shall never forget the first night of restful sleep and the peace of my thoughts. The bowel trouble yielded very slowly. It was not entirely overcome for about nine months, but I am grateful to say that I was never once tempted to take medicine and that in itself was a great blessing. I am very grateful for the slow healing, since I was led to study more diligently.

The first day that I went to the practitioner she told me I must do my part, namely, read Science and Health. I informed her that it would be impossible for me to read more than a page or two, as the oculist who fitted my last glasses had warned me to use my eyes as carefully as possible. He said there was very little sight in the right eye, that I had been born with defective eyesight, and that while the left eye was only slightly affected, still I would have to be very careful of it. I only promised to read a couple of pages of Science and Health each day, but I found that precious book so interesting that I read every spare minute. After three or four days, when I began to find my vision blurred I would read a sentence at a time and then stop for a while; but this did not last very long, for after ten days my eyes were completely healed. I have perfect sight now, and can read for any length of time. The eyes never tire. I had only two weeks' treatment, as I felt that with such perfect sight the stomach trouble could be overcome by reading, and this proved to be true, for I am entirely healed.

Christian Science means everything to us in our home. My husband, father, mother, and sister all rely entirely upon it. I cannot express my thankfulness to God, and my gratitude to Mrs. Eddy for bringing us this wonderful revelation of Truth. I try to the best of my understanding to live the life of a Christian Scientist, and although I fall far short at times in my efforts, I feel assured that if I keep on striving I shall ultimately succeed. We have had many beautiful healings in our family since we first started to study Science and Health, and we are all deeply grateful, but we are even more grateful for the mental healing, as it is helping us to overcome our faults and to be more loving to our brother man.

LAURA J. ESPENSEN, Salt Lake City, Utah.

[Written for the *Sentinel*]

"Thy Maker is thine husband"

AGNES F. CHALMERS

"THY Maker is thine husband." God hath shown
Ofttimes to me the glory of this prayer.
Stranger in foreign lands, I, drear, alone,
Upon Isaiah's words have leaned, and where
My need seemed greatest I have found that He,
Redeemer, Father, hath protected me.

"Thy Maker is thine husband." Countless days
When poverty and fear have clamored long,
I have been led in quiet, peaceful ways
Through trusting in this prayer, this joyous song.
With needs supplied, I could not doubt that He,
Redeemer, Holy One, had nourished me.

"Thy Maker is thine husband." I have wept
Ofttimes o'er persecutions, trials, fears;
Remembering this prayer, then have I crept
Within Love's secret place. Yea, all my fears
Are wiped away through knowing well that He,
The God of the whole earth, abides with me.

From Our Exchanges

[*The Christian Register*]

Failures to think clearly are the most frequent facts of controversy. Earnestness and zeal for a cause make men commit sins of reasoning which would extend indefinitely the list of fallacies in text-books of logic. One idea screens their whole vision so they see everything in the changed colors produced by that idea. Thinking ceases to be a task of clearing a path of truth in the wilderness of experience and becomes merely gathering wood for the fire.

This is what makes so much discussion bootless and embittering. Each participant becomes an advocate rather than an explorer. He settles down in one place and fortifies it, instead of opening up a wider region for settlement. He contends for his own possessions, instead of developing the possibilities of the common good. He no longer seeks the truth, but only strives to have his one portion accepted as the whole.

The love of truth itself is higher than any denomination of it. If every one could feel that love, many divisions which set men against each other would disappear. The unpardonable sin is the assertion of what one wishes accepted as truth against what one knows, or ought to know, is the truth.

[Rev. E. Dean Ellenwood, as reported in *Elgin* (Ill.) *Courier*]

It is only necessary to contemplate the steady and almost phenomenal growth of two of the newer cults, widely differing in their philosophies and methods but both deeply spiritual in their aims and ideals, to realize that the drift away from the established institutions of religion is not a departure from religion, but merely a transfer of allegiance. A careful canvassing of the growing membership of both the Socialist and the Christian Science fellowship will discover the fact that to a surprising extent the persons who constitute the bone and sinew, the rank and file of these significant movements, received their earliest religious training in one or another of the great historic religious communions. For some reason the mother has ceased to feed and employ her offspring.

Just here, it appears to me, exists the great field of study for the present leaders of religion in all communions; and it is a study to which must be brought all of the common sense, historic perspective, tolerance, and disinterested human affection, actual or potential, in every one of us. Scolding will prove as unavailing as it is unlovely. Old authorities may not thus be restored, and I, for one, am very far from desiring a resurrection of the decadent authorities of "the religion of yesterday."

In all quarters we hear the hopeful prophecy that we are just at the threshold of a religious awakening such as the world has never known. In this hope we turn eagerly to the consideration of "the religion of tomorrow." It will reveal many of the characteristics of its parents and grandparents, "the religion of yesterday" and "the religion of today." It seems reasonably certain, however, that none of the ground gained religiously in our march up the slopes of time shall be lost. Therefore it is not too much to predict of "the religion of tomorrow" that its worship will be "in spirit and in truth" and its service social righteousness.

[*The Congregationalist and Christian World*]

Before all other wishes for the days to come we may well wish for a church of Christ serene in faith, dauntless in courage, patient in hope, persistent in its witness through good deeds to the love which was the law of our Redeemer's life and is the ideal of our own. Without that persistent and

Digitized by Google

courageous witness of Christ's followers the future is black indeed,—a night of storm with no tokens of sunrise in the eastern sky.

But we belong to the sunrise. The dawning of the day-star has come already in our hearts. Surely we think too cheaply of ourselves and of him who is the light and hope of all men, when we deem ourselves unfit to carry on the great tradition of the heroic past! We have crippled our own souls by our regrets and our forebodings. We have refused the witness to which we are called when we cower shivering, instead of venturing forth in the name of the Lord to put all things to the test of obedience, in the assurance of his presence and his power to lead and guide.

[*The Universalist Leader*]

It is when we value essential righteousness more than any benefits it may procure that our conscience becomes most sensitive to distinctions between right and wrong. It is when we feel the kindness which we seek to express that the voice becomes most sympathetic and the smile most winning. It is when we are more anxious to bestow happiness than to gain approval that we are quickest to perceive in what way we may render amplest service to others. No selfish ambition could have enabled Jesus to practise that perfection of virtue which resulted from his love of moral excellence, his devotion to human welfare, and his reverence for his Father's will. There are heights of moral achievement which the feet of self-interest are powerless to scale but to which we easily rise on wings of love. In the realm of moral endeavor, as in every other department of effort, we do our work best when we enjoy it most.

[*The Christian Intelligencer*]

Life is a bigger interest than the making of a living; and consecrated business men have found it possible to combine a full business life with large, unselfish service for the kingdom. It is all a question of heart and will. If a man has the true estimate of life and is in sympathy with the work of Christ, and if God is given first place in his life, he will find it possible to make such adjustments and arrangements that the church will be able to count on his presence and influence. Business is not to become an enemy of the spiritual life; the true Christian soldier will make it an ally.

[Prof. A. T. Robertson, D.D., LL.D., in *The Homiletic Review*]

The church is lost today that relies upon culture, money, music, ecclesiastical machinery, architecture, eloquence, social prestige, instead of the Spirit of God. It is simple truth to say that the slow progress of the gospel through the ages is due to the paralysis of Christianity by the world spirit and the loss of energy from the loss of direct contact with God. In Acts we have the picture of men, simple and learned, weak and erring, yielding themselves to the leading of God and letting God use them, men filled with the Holy Spirit.

[*The Christian Work*]

The Bible should be often in our hands. It was written by men who lived in troubled and stirring times, and who kept their heart calm at the center of the storm. The Old Testament was written by men who in their own experience had proved that God can keep in perfect peace all who put their trust in Him, and the New Testament is the work of men whose lives were "hid with Christ in God."

[*American Lutheran Survey*]

Lack of spiritual religion is the cause of all sin and wickedness. It was the cause of Israel's discomfiture again and again. The Lord warned them most earnestly against their indifference to spiritual religion, their formalism, their hypocrisy, their forgetfulness of God, and their worldliness.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

Translation into modern Greek has been made of the lecture, "Christian Science: Man's Dominion over Evil," by Edward A. Kimball, C.S.D., and is now printed as a pamphlet with the English version opposite the translation. The new Greek pamphlet is on sale at prices of our regular pamphlets, as shown on the opposite page.

A new pamphlet entitled "Man's Unity with God" has been printed in the German language. This pamphlet contains seven articles from the Christian Science periodicals, which have been translated into German. The pamphlet is now on sale at the prices of our regular pamphlets, as shown on the opposite page.

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

Digitized by Google

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

CHRISTIAN SCIENCE: ITS LEGAL STATUS. By Judge Clifford P. Smith. 128 pages, paper covered, 10 cents.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, $1.15; half morocco, $1.40; full morocco, $2.50; levant, $3.50; pocket edition, size 4⅝ x 6⅝, $3.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission, have been set to music as follows: "The Mother's Evening Prayer," 75 cents; "Christ, My Refuge," 75 cents; "Love," 40 cents; Communion Hymn—"Saw Ye My Saviour?" (Johnson), 50 cents; "Blest Christmas Morn," 27 cents; "O'er Waiting Harpstrings of the Mind," 27 cents; "Shepherd, Show Me How to Go," 27 cents; "Saw Ye My Saviour?" (Root), 27 cents. The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing. 8-inch (mount 12 x 16), $1; 12-inch (mount 15 x 20), $2; 16-inch (mount 21 x 29), $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18 x 24 inches, $5; on India paper without remarque, $3. Smaller reproduction, size 11 x 14 inches, on Japanese vellum, $1. Photogravure postcards, reproduction of the picture of the Church Edifice and Publishing House, 5 cents.

QUARTERLY COVERS in black morocco, $1.15; with purse, $1.40.

ALUMINUM LESSON MARKERS. Set of thirty, with paper shields, 50 cents. Extra paper shields, one hundred, 15 cents.

PRICE LIST OF BIBLE CONCORDANCES and DICTIONARIES OF THE ENGLISH LANGUAGE supplied on request. Express charges collect on delivery.

REPRINTS (not printed in English). Two-page leaflets, 14 subjects in French and Swedish; 19 subjects in German. Ten copies to one address, 10 cents.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Send all orders for the works of Mrs. Eddy, with remittance by New York or Boston draft or money order, direct to Allison V. Stewart

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 61 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

Organization of the Great Lakes Transit Company, to control 85 per cent of the passenger, packet, freight, and grain steamships navigating the Great Lakes, is announced. The company's fleet will comprise thirty-five vessels with a freight capacity of 150,000 tons. They are steamers that six railroad companies were compelled to relinquish, under the section of the Panama Canal act forbidding rail lines to own competing water routes. The capitalization of the company, it is announced, will be $20,000,000. The ships purchased by the company include all except six of those which have been operated on the lakes by the Pennsylvania, New York Central, Erie, Delaware & Lackawanna, Lehigh Valley, and Rutland Railroads. The history of lake navigation in connection with trunk railroads dates back to 1852, when the Erie started a line of steamships from Cleveland to Toledo, Ohio, Detroit, Mich., and Dunkirk, N. Y.

The census bureau of the department of finance and municipal statistics of the United States Government is soon to issue a set of tables giving special financial statistics for twenty-four cities,—eight having the council form of government during the fiscal years 1913 and 1915, eight having the commission form during those years, and eight having the council form in 1913 and the commission form in 1915. In the first group are Indianapolis, Ind.; Hartford, Conn.; Youngstown, Ohio; Troy, N. Y.; Peoria, Ill.; Little Rock, Ark.; Davenport, Iowa; and Charlotte, N. C. In the second, Birmingham, Ala.; Lowell, Mass.; Salt Lake City, Utah; Des Moines, Iowa; Pueblo, Col.; Topeka, Kan.; Montgomery, Ala., and Austin, Texas. In the third, Dayton, Ohio; Reading, Wilkes-Barre, and Allentown, Pa.; Covington, Ky.; Saginaw, Mich.; Springfield, Ohio; and Joplin, Mo.

The decision of the United States Supreme Court in the tide-lands case, giving the state the title to tide-lands in the harbor of San Pedro, Cal., affects the status of all the tide-lands of the state, about two billion dollars worth of which, in different parts of the state, are claimed by private or corporate interests. This is regarded as one of the most important decisions ever rendered affecting California. The decision upholds the contention of Attorney-General U. S. Webb that tide-lands are the inalienable property of the people, and that any grants that may have been made are invalid. The suit contended that the state cannot convey for private purposes lands lying between navigable rivers and between lines of high and low water marks.

The Ohio Good Roads Federation has announced that a movement has been launched to test the sentiment in Ohio on a proposal to amend the state constitution through the initiative next November to commit the state to a settled policy of road construction and repair. The hope of the federation is to make road work stable through change of administration. The proposal is for an annual levy for ten years, beginning with 1917, of $750,000 on all taxable property of the state, to be outside of tax limitations. The fund is to be subject without appropriation by the General Assembly to be expended in the improvement of highways, as now or may hereafter be provided by law.

During the war Sweden has tried to make herself as independent as possible of other countries in regard to commerce, and the thorough work carried on by the Swedish Government in this respect has been in every way successful. The country has succeeded in replacing a third part of her coal imports by means of peat and electricity. A further step in this direction has now been taken, and the Swedish state railways are to be electrified. It is calculated that the expense of electrifying the first seven short lines proposed will be about 50,000,000 kroner. This amount does not include the building of the power stations and the electric locomotives.

There were registered in the United States last year 2,123,788 motor vehicles, an increase of 686,998, or 39.6 per cent, according to the annual compilation made by *The Automobile*. To register these cars and trucks the owners paid into the treasuries of the different states more than four million dollars. Ohio has one car to every twenty-eight persons in the population. In the proportion of cars to population, however, Iowa is the leader, having one car to every sixteen persons. California has a car to every eighteen of its population. Massachusetts is rated as having a car to every forty-one.

The Massachusetts homestead commission has a bill before the legislature to authorize the purchase, in behalf of the commonwealth, of tracts of land for the purpose of providing homesteads for citizens of the state, in accordance with the vote at the last election in favor of an amendment to the state constitution, which resulted in a majority of nearly three to one in favor of the amendment. The bill authorizes the commission to spend not more than $50,000 in the project, and stipulates that none of the land, or the land with the buildings thereon, shall be sold for less than cost.

The ship-building industry on the Great Lakes, after lying dormant more or less for half a decade, is enjoying a revival of prosperity, according to reports from shipyards at and near Cleveland, Ohio; Detroit, Mich.; Toledo, Ohio; Duluth, Mich.; Buffalo, N. Y.; Chicago, and smaller Great Lake ports. Cleveland alone reports the closing of contracts for forty-six vessels, at an aggregate cost of more than eight million dollars, and that negotiations are in progress for thirty more ships. These orders are being filled at various points.

A large number of Swedish ships have been sold to other countries since the outbreak of the war, the aggregate tonnage amounting to approximately one hundred thousand tons. During the last three months of 1915, sixty-two vessels were sold. About two thirds of the ships have gone to Norway and one third to Denmark. The Swedish press emphasizes the increasing difficulties of keeping the Swedish mercantile marine up to a fair level, and points out that on the other hand the Danish and Norwegian ship-owners are gradually adding new tonnage to their fleets.

The special committee charged with preliminary organization of the Argentine Confederation of Commerce, Industry, and Production, has just sent its report, together with a tentative draft of a constitution, to all the institutions which are supporting the project. The idea grew out of the recent concerted protest against the increase of railway tariffs.

School lands of California suitable for cultivation are now being sold, pursuant to the provisions of an act passed by the legislature of 1915. By this act authority is given to accept applications to purchase school lands suitable for cultivation in quantities not to exceed 320 acres.

The St. John River international commissioners' report is now *en route* to Ottawa and Washington, as the commission, which has been engaged intermittently on the points at issue since 1909, has signed official copies of the report. The disagreement was chiefly over water rights.

During 1915 the New York Central Railroad handled 4,507,759 car-loads of freight, or a car-load every seven seconds. The combined length of trains into which these cars were made up was 34,150 miles, or 9000 miles more than the circumference of the earth.

The bill providing for a woman suffrage amendment for Maryland was defeated in the House of Delegates by a vote of 64 to 36. Although the Senate had passed the bill to a third reading, the action of the House disposes of the matter at this session of the legislature.

Reports from the lumber operators on St. John and Allagash waters of Maine are to the effect that the cutting season, which has just ended, has been most successful. The total cut will be in excess of 53,500,000 feet.

The sale of the controlling interest in the Pennsylvania Steel Company to the Bethlehem Steel Corporation has been consummated. The purchase price was officially announced as approximately $31,900,000.

A bulletin issued by the Bureau of Immigration shows that there were admitted to the United States in January 17,293 immigrant aliens, against 18,901 in December.

The President of the republic of Chile is shaping a project for the erection of new school buildings. An internal loan will probably be proposed for financing it.

South Carolina has just adopted the Torrens system of land title registration. This makes the fourteenth state to adopt the Torrens plan, and the third within a year.

The California development board has announced that the walnut output of the state for 1915 was 14,500 car-loads. The crop was appraised at $4,000,000.

The Baldwin Locomotive Works corporation has let a contract for a $500,000 factory addition to the present plant in Philadelphia.

The Pennsylvania Railway in 1914 and 1915 carried 361,572,114 passengers without a single fatality.

Spiritual Creation

ROBERT NALL

In replying to the question, "Is it possible to know why we are put into this condition of mortality?" Mrs. Eddy struck at a deep-rooted error when she said, "We must not consider the false side of existence in order to gain the true solution of Life and its great realities" (Miscellaneous Writings, p. 64). Belief in a "false side of existence" necessarily involves belief in a false creator and creation. This in turn embodies a number of subsidiary opinions or judgments which, engrafted as they are in much human thought and given free play, make men unconscious obscurants, blind to the spiritual light and love that are so bountifully offered to all God's children. It is the great tragedy of mortal experience that while light has come into the world, men still "abide in darkness," sinning and sorrowing, attributing their discordant condition and circumstances to causes of which they allege they have no control, and crying for a deliverer.

The mental attitude of the loyal and earnest Christian Scientist is in striking contrast to this. He has found his freedom, has glimpsed in a measure the true side of existence and creation, and is now privileged to be daily and hourly grateful for his crown of blessings. But the contrast does not, or should not, stop there. He who has not come into the practical knowledge of Truth's healing power is not slow to bemoan his so-called "fate" in tones that to the metaphysical student indicate an entire misconception of God, man, and the universe. The Christian Scientist, radiating health, holiness, and happiness, takes his part in demonstrating Truth in his daily walk and conversation; otherwise, as Jesus told the Pharisees who wanted him to rebuke the people for praising God, "the stones would immediately cry out,"—the transformation of the life and the character would be so manifest that nothing could hide the reflected glory or stem the insurgent tide of Love's quickening and purifying stream.

Christian Science would not be the perfect knowledge of a perfect creator if it did not uproot and destroy the very foundations of error. It must do this in order to reveal the spiritual temple,—man as the spiritual idea of God. In the answer given in "Miscellaneous Writings" already referred to, our Leader lays down emphatically that "every question between Truth and error, Science must and will decide" (p. 65). The student will make a false start unless he accepts this as a definite rule upon which he may act without hesitation. He will first of all, if he is wise, get the clearest possible understanding of what Christian Science is, what it stands for, and what it means to him, and therefore to the world. He will then learn that there is not, never has been, nor ever will be, but one creation, and that that is spiritual, immortal, eternal, complete. This is a basic truth without which one's effort to do the works that Jesus did will fail. Just as the true and the false can never possibly commingle, so there are not two creations or two kinds of spiritual healing or a multiplicity of minds.

The Christly life is that which is obedient to the Christ-commands. Our regeneration, our perception of the undying realities of immortal life, and our subjugation of evil,—these will be the measure of our awakening to the fact not only of the one true creation, but that this creation is indivisible and flows continually from the only fount of immaculate good. To the inquirer, to the sufferer, to the perplexed and the discouraged, there is the balm of Gilead in these scientific truths. For is not the whole of Christian Science literature studded with this question, with its sympathetic variants and the logical reply: If in reality there is nothing but spiritual creation, and if the universe, including man, is thus created perfect and harmonious, whence comes all that seems to be opposed to this creation?

Now the doubter is more frequently convinced of the truth by demonstration than by precept. Perhaps he learns by painful experience. He refuses to accept the oneness, the spirituality of creation; he is wedded to a dual concept—spirit and matter, evil being as real as good, error as potent as truth, death as inevitable as life. His life-problem is pressing; he sees no reason why healing and salvation are not to be attained on what seem to be reasonable facts and therefore a perfectly rational basis. But the time assuredly comes when he sees that he is attempting the impossible. He is seeking to find the perfect in the imperfect, to build a mental structure of health and holiness on a foundation honeycombed with error. Every humanly devised hypothesis is allied to a consciousness which is divorced from the spiritual and is therefore powerless to aid mankind.

A Christian Scientist is one who has made some demonstration of Truth; that is, he has had some proof which to him is irrefutable that the spiritual law of good is operative today, that man is endowed with qualities of Truth which enable him to perceive those spiritual verities that are pregnant with vitalizing life, and that all the manifestations of Mind are the product of a perfect source, which becomes more clearly visible as the spiritual selfhood is recognized.

Every patient bowed with pain, every sinner enmeshed in the toils of mortal passion, every weary mortal satiated with all that earth can give, and who has found relief in Christian Science, has been compelled to arraign himself at the bar of thought as he pondered over his condition and was reluctant to accept what divine Love was offering him. And we can well imagine that many such have thus reasoned: There seems to be no other way but this way. All other means have failed, —failed evidently because they were basically wrong, practically ignoring the omnipotent, omnipresent Principle of life. It is now time frankly to admit that if I am to be healed I must give up every mortal delusion, and know that I, as a spiritual being, am the immortal idea of a perfect creator; that nothing but my own ignorance and fear hinders my entering into the true self-consciousness, the freedom which revelation and the Master's words convince me is man's birthright. "I will arise and go to my Father." Was it ever known that infinite Love was irresponsive to such a mental attitude of penitence, humility, and confession?

It seems to be a paradox that while we speak of spiritual creation as complete, yet we know that to human sense it is continuous and progressive. There is comfort and strength

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

in this, especially to those tempted by the illusion of despondency to think that because their healing of the body or mind is not rapid there must somewhere be an element of failure. It is impossible to think of Mind as stagnant. The activities of Love are manifest in a thousand things around us. Spiritual ideas are multiplied to us with the growth of spiritual discernment. Every pure thought is a product of spiritual creation, and these pure thoughts, vibrant with healing power, come with watchfulness and prayer, clothed in the armor of light, and bringing ever with them a great song of thanksgiving. These are the thoughts that are lifted above materiality, above the sordid, deadening, ensnaring testimony of mortal sense, and that with increased spiritual understanding intensify the longing to follow the apostle so far as to know "no man after the flesh;" not even Christ, who is the impersonal Truth come to save mankind. A new world opens up to him who has been thus regenerated. Cannot an innumerable host today testify that "if any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new."

To the blind of heart this is an incredible transformation, —just as much so as that physical healing which is not the result of the application of some material or human means. How true it is that "human capacity is slow to discern and to grasp God's creation and the divine power and presence which go with it, demonstrating its spiritual origin" (Science and Health, p. 519). Nevertheless the signs of the times indicate a gradual approach to that attitude of mind which will recognize the utter futility, the falsity of every thought, belief, theory, and determination which is not based on a perfect spiritual creator and creation. This alone imparts the true concept of being, in which sin, disease, and death have no part.

Thoughts for a Beginner

LOUISE KNIGHT WHEATLEY

MANY surprises are often in store for the one who has just turned to Christian Science for help, and perhaps not the least of these is the difficulty he seems to experience in getting the practitioner to realize the extreme gravity of the situation with which he is confronted. This physical trouble from which the patient seeks relief has been, perhaps for years, the dominating factor in his thought. Its type and general symptoms, past history, present status, and future outlook are of such absorbing interest to him that he is somewhat disconcerted to discover that a recital of its various details does not appear to be received by the practitioner with that respectful consideration which he feels to be its due.

Is it possible, the patient wonders, that the practitioner does not understand how sick he really is! He hears a cheery voice say: "Well, that does seem to have been pretty bad, doesn't it? Suppose we talk about something pleasanter. Suppose for just a little while we talk about God and His goodness and love, and how He never wants any of His children to be sick and unhappy."

This is certainly disconcerting to mortal sense; in fact the patient may feel a bit piqued to have his long-cherished affliction treated with such scant respect. He receives treatment, however, and goes home to think it over; and the main thing which he finds himself thinking over is what the practitioner told him about God. Nothing new, of course, nothing but what he has already read in the Bible many times before; but somehow as the words were spoken they seemed to have a new meaning. "God is Love," he had been told, and how could Love send sickness upon His children? "He sent his word, and healed them,"—His word, not medicine. "With God all things are possible,"—not some things, or most things, but "all things," even the cure of rheumatism. As these thoughts linger in memory, the day suddenly seems to grow brighter with a new-born hope. Suppose it should all be true! "I have blotted out, as a thick cloud, thy transgressions,"—the wonder and sweetness of it rests upon his tired sense like some heavenly benediction. He goes to sleep that night with a peace in his heart which he has not known in years; and the next morning he is so surprised to discover that his rheumatism is gone that he is not at all disturbed over the manner of its going.

If it should happen, however, that some one who reads these lines is puzzling over the *modus operandi* of metaphysical treatment, perhaps the following illustration will be of help: One day a steam radiator in a Christian Science reading-room began to pound vigorously. The librarian, hearing the noise from the outer office, entered the room, but instead of going to the radiator she walked directly away from it to a thermostat on the opposite side of the room. There was a quick, simple adjustment of the mechanism, and the noise instantly ceased. If any one noticing the little incident had been unfamiliar with the system of heating that office building, he might naturally have wondered why the librarian paid no attention to the radiator when the noise was so unmistakably there. One better informed, however, would know that although the noise was unquestionably in the radiator, the cause of the noise was under the control of the thermostat. The radiator was simply expressing an effect; the cause was somewhere else.

Sense-testimony, based upon the hearing of the ear, had located the trouble in the radiator; intelligent understanding, based upon a better instructed knowledge of the facts in the case, had located the trouble elsewhere, and how obviously futile to attempt to remedy an effect so long as the cause remains untouched. Until the world, however, learned through Mrs. Eddy's discovery the simple yet metaphysical truths which Christ Jesus taught and practised, it knew no better than to doctor effects. If the disturbed action chanced to be in the human heart or the human lungs, it proceeded to doctor the human heart or the human lungs! No matter how insistently the radiator may be calling attention to itself, can we afford to be deceived? No matter how much patience and love and fidelity a man might possess, how long would he have to work over the radiator with his hammer and screw-driver before he could reach a cause which was not there at all? In Science and Health (p. 400) Mrs. Eddy writes, "When we remove disease by addressing the disturbed mind, giving no heed to the body, we prove that thought alone creates the suffering."

Christian Science practitioners understand this. That is why they are not more deeply concerned as to physical symptoms. They believe that the wiser plan is to drop the hammer and screw-driver altogether, and turn to discover the state of the innocent looking little thermostat, the human mind. Would it in any way facilitate matters to stand before the radiator and carefully record the number of times that it pounds to the minute, and how long it has been pounding, and what somebody else thinks is the reason that it pounds at all? Christian Science deals with thoughts, not with things. Mrs. Eddy says: "Our Master asked: 'How can one enter into a strong man's house and spoil his goods, except he first bind the strong man?' In other words: How can I heal the body, without beginning with so-called mortal mind, which directly controls the body?" (Science and Health, p. 399.) Christian Science heals one by healing him of his false beliefs. It corrects wrong thinking by putting right thinking in its place, and thus cancels the effects of wrong thinking. Like

Digitized by Google

some faithful gardener, it removes the noxious weeds of selfishness, envy, hatred, and fear, so that where they once seemed to flourish, now fragrant flowers of compassion, forgiveness, purity, and love may blossom instead.

At this point some one who is still standing, footsore and heavy laden at the parting of the ways, may enter a protest. "I believe all this may be true," he may say. "I see now that I should have controlled my thinking long ago, instead of letting it control me, but the fact remains that I did not. Is it too late? I want to know what I should do today, not what I should have done twenty years ago. Can I yet be healed? How long does one continue to pay the penalty for a past mistake?"

Christian Science teaches that one pays the penalty for a mistake only until the mistake is seen, acknowledged, and corrected; no longer. It does not recognize the term "too late." Man has ever the eternal now in which to do right. Let him who thinks it is impossible to redeem the past, take courage. No matter how grave may have been his error, no matter how long and how tenaciously it may have been holding him in bondage, if he is really sincere in his repentance, and is proving that sincerity by making all the amends in his power, and to all concerned, he can leave it behind him, with all its haunting memories, as surely as he can leave behind him, when he chooses, a worn-out garment. When the prodigal returned to his father's house there were no reproaches, no recriminations. The best robe was put on him; not a reasonably good one, but "the best." A ring was placed on his hand, shoes on his feet, and a dear familiar voice was heard acknowledging him as "my son."

Thus does divine Love wait for each one of us. We may have been a long time in that "far country," and we may have suffered much before we were ready to turn away from the husks of a false belief in a material existence to find our true selfhood as the beloved child of God. The journey home may be slow and toilsome, with many a stumble, many a fall; but Love is ever there, just waiting. Only let us be sure, as we journey, that it is not merely because of the ring and the shoes and the best robe that we are coming; rather let us be sure that it is because we need our Father most of all, and desire above all things else to find that peace which comes from a conscious dwelling in His abiding presence.

✧

"A word in season"

CAPT. ROBERT E. KEY

It is impossible to derive benefit from Truth ourselves without giving help to those with whom we come in contact. A few words aptly spoken are sufficient to bring about a transformation in the human mind, and a testimony to the power of Truth given with sincerity has often been sufficient to dispel the darkness resulting from years of suffering or of sin. On page 449 of Science and Health we read, "A grain of Christian Science does wonders for mortals, so omnipotent is Truth." Just as the first breath of spring stirs the chrysalis from its winter sleep, so the first understanding of Truth will stir a mortal from his narrow corner of materiality and turn him toward the light. Perhaps the first glimpse may seem too vague and abstract in its brightness, just as the objects of the outer world are vague to one who has been a long while in the darkness, but a glow is there,—a promise of better things,—and that is enough to stir the poor sufferer from his heavy sleep and to bid him rise and walk.

At first he is cramped and drowsy from the long winter of inaction, while his abode is festooned with cobwebs and the dust lies everywhere. Even the windows are begrimed, and it is only here and there that the light shines bravely through. There is much to be done; but the light is there, outside and inside, and all the dust stirred up by his first footsteps need not deter him from putting his house in order. He can brush away the cobwebs of sense, take down the dingy hangings of materiality, and open the windows wide to the sunlight of Soul. What a glorious breath it is! All his stiffness is gone now. Active and free, he steps forth into the garden of God (the consciousness of good), in which there is no limitation, and wherein everything, as seen by God, infinite Mind, is "very good."

✧

Publicity

JAMES L. RICH

On several occasions I have seen in print the statement made by critics of Christian Science that its rapid growth has been the result of a well-directed publicity plan of propaganda. Christian Scientists know that this is true in a large measure, but the critics seem to stop at this point instead of going farther and learning the occasion of this publicity.

Suppose a man had a well the water of which would heal every disease in the world; that the water could not be pumped out faster than it flowed in, and that the owner knew it was impossible to exhaust the supply. Would not the average man, owning such a well, want to share his good fortune with sick humanity? While the supply of water in such a well might be large, it would be infinitesimal when compared to the supply of spiritual truth, the truth about God and His creation which heals and saves. If one could imagine mankind demonstrating the basic law of mathematics so often as to exhaust the supply, then he might imagine the supply of truth as subject to exhaustion. If one could imagine any place where the principle of mathematics is impossible of demonstration, then he might imagine a place where Christian Science would be unavailing.

Is it any wonder, therefore, that when one learns a little of Christian Science, and perceives in ever so small a degree its adaptability and universality, he is filled with rejoicing and praise? He realizes that he has truly found the "pearl of great price." And is it any wonder if such a one becomes a self-appointed committee of one on publicity, be his sphere in life ever so large or small? As the teacher's store of knowledge is not impoverished but rather replenished by imparting knowledge to his pupils, so the Christian Scientist realizes that every time he explains to some inquirer what Christian Science has done for him, telling him of its promises and their fulfilment, he not only helps his brother, but he is adding oil to his own lamp and trimming it so that he is better able to see his own way and work out his own problems. Thus too he gains an increased understanding with which to explain the truth to the next inquirer whom he may meet.

While the Christian Science church has not sent out missionaries, in the generally accepted term, to heathen lands as other Christian bodies have done, every Christian Scientist is a self-appointed missionary wherever he is or wherever he goes. Because of this there is probably not a land in the world where the seed of Christian Science has not been sown by some of its followers. And if our critics would take the trouble to investigate, they would learn that while a large proportion of our publicity comes from the well-directed efforts of our efficient executive officers in their official capacity, yet much of it emanates from the laymen. It would be difficult to say which of the following statements is nearest the truth: "Publicity is the result of growth," or "Growth is the result of publicity," because both are true. In Christian Science publicity and growth are inseparable. It is impossible to have one without the other immediately making

Digitized by Google

its appearance, and this explains why publicity is such a prominent feature of the Christian Science movement.

But publicity is only an incident, and not the object, of Christian Science. It is but the natural, outspoken rejoicing and thanksgiving of a grateful membership for the blessings received, and that ofttimes after every known remedy had failed and death was believed to be impending, or when sorrow, sin, or disaster had so crushed one that life was a miserable existence and death would have been welcome. As in every movement, so in Christian Science, its growth is in proportion to the benefits received by its adherents.

Sunday School Work

FRANCES MACK MANN

THE result of effective, scientific teaching in the Sunday school is apparent when the pupil begins to know and overcome his imperfections in thought and act. But how is the teacher to find out that the truth taught Sunday after Sunday is achieving this desired work, that this alterative is being woven into the warp and woof of the child's life? In answer it may be said that he can discern the changed thought of the pupil in the same manner he would discern a change in his own thought. At times the teacher may see that vanity, egotism, disorder, disobedience to authority, irrelevant remarks, irreverence, whispering in class or during church services, inattention to lessons, and kindred manifestations of evil, are preventing the child from gaining what he should from the instruction given. Then is the time for mental and spiritual alertness, that the root of these errors may be uncovered and destroyed.

On page 226 of "The First Church of Christ, Scientist, and Miscellany," Mrs. Eddy writes, "Beloved students, in this you learn to hallow His name, even as you value His all-power, all-presence, all-Science, and depend on Him for your existence." Self-knowledge and reverence for God are necessary for scientific progress. It is as essential for the child to know himself as for the adult. The wise saying of Solomon, "Train up a child in the way he should go: and when he is old, he will not depart from it," is especially applicable to the work of the Christian Science Sunday school. There is no doubt in the mind of one who has applied the Principle successfully that "the way" is clearly taught in the Bible as understood in Christian Science, also that the child cannot for any length of time depart from this way if in the Sunday school he has learned by actual experience that the teaching in the class helps him in his home, in school, and at play, as these constitute for the time his world. The years will then steadily increase his love for Science.

When the love of God as it has been manifested to this age in Christian Science is of paramount importance in the home, the study of the Sunday school lesson will be considered an essential part of the child's education. It is as needful each morning that he have his spiritual food as that he have his material food. There are few circumstances more injurious to a pupil's character than to have a lesson assigned him in the Sunday school and then be allowed to prepare only half of it, or not to study it at all. A slothful habit of thought and a "don't care" spirit augurs poorly for success in any undertaking in after life. Laggards at school are apt never to catch up, to be always behind others. "What is worth doing at all is worth doing well," and Scientists have before them a marked example of the beneficial effects of exactness and efficiency in the life-work of Mrs. Eddy.

A faithful teacher is alive to the fact that he must thoughtfully and prayerfully prepare the lesson himself if he expects the pupil to do likewise. It matters not if he has been over the same ground for years, since there are always new inspirations awaiting him in this inexhaustible subject. Preachments are as out of place in the Sunday school class as in the Wednesday evening testimony meetings; it is spiritual activity of thought in the class that is most needed. There must be giving as well as receiving, if the teaching is to produce a lasting effect. The pupil is stupefied by smooth-flowing words which he neither understands nor cares to understand. His interest is to be aroused and attached to something definite, related to his every-day experience.

The work in the Christian Science Sunday school has now been organized for about a generation. Are the results satisfactory? Are these earlier scholars, now perhaps with children of their own in the Sunday school, generally doing their own work in their families, or are they depending upon a "regular practitioner"? Do we find among them our most earnest church workers of today? Are they taking the Bible and Science and Health as their guides to eternal life? In "The First Church of Christ, Scientist, and Miscellany" (p. 230), Mrs. Eddy writes: "It is a joy to know that they who are faithful over foundational trusts, such as the Christian education of the dear children, will reap the reward of rightness, rise in the scale of being, and realize at last their Master's promise, 'And they shall be all taught of God.'" What an incentive to ever more earnest endeavor!

"See that ye be not troubled"

MILDRED CORNING HAMILTON

WHILE talking with a friend who had recently become interested in Christian Science, she made the remark, "How are we, as Christian Scientists, to think about present world conditions?" She added, "I do not like to think about them." By way of answer, there came to the writer's thought the Master's gentle yet imperative command concerning these seemingly turbulent times, when he said, "See that ye be not troubled."

In the twenty-fourth chapter of Matthew Jesus tells us distinctly what our mental attitude and work should be when we "shall hear of wars and rumors of wars," and it is well during these times that we pay special heed to the duty so plainly enjoined. We should daily strive to realize the omnipotence of divine Love, the Love that destroys all hate, the Love that alone will establish the government of the one Mind, the Mind that annuls the so-called law and strife resulting from the belief in many minds, and conversely enthrones the government that "shall be upon his shoulder," that shall spring from the Christ-idea.

As all right ideas emanate from the one Mind, we are thus aiding in the spiritual uplift of the world, in breaking the mesmerism and thraldom of material sense, and the consequent effacement of evil. We are not only overcoming the "troubled" sense in our own consciousness, but are also helping to "set at liberty them that are bruised." Hence, to the Christian Scientist, not to be troubled means not for one instant to agree with, dwell upon, or admit the testimony of the senses. It is to "stand porter at the door of thought," as Mrs. Eddy bids us on page 392 of Science and Health, and admit only those thoughts which will bear the test of the touchstone of Truth, be in harmony with the Christ-mind. It is continually to know that above the panorama of evil stretched upon the canvas of mortal mind stands the eternal Truth, divine Mind and its perfect, imperishable ideas.

On page 96 of Science and Health Mrs. Eddy writes: "Mortal error will vanish in a moral chemicalization. This mental fermentation has begun, and will continue until all

Digitized by Google

errors of belief yield to understanding." Admonishing us as to our spiritual duty, St. Paul tells us to "put on the whole armor of God, . . . that ye may be able to withstand in the evil day, and having done all, to stand." The verb "to stand," used in this sense, is plainly not indicative of passivity. It is defined as "to occupy a certain position; to be at rest or fixed; continue; remain without injury or ruin; be safe; not to fail or yield; be firm."

Each one of these definitions studied in its spiritual sense and application implies unwavering mental activity; a mental state that stands in the activity of right thinking, that resists the arguments of material sense, that refuses to yield to the contemplation of evil as fighting personality, but that continues in the activity of right mental work, constructive thinking. In so doing the Christian Scientist is girding himself with the "whole armor of God," the wholeness of right thinking. He has resisted the temptation to bear "false witness" against his fellow man. He is obeying through demonstration the Master's command to "be not troubled," and he is fulfilling the duty enjoined on him by our Leader (Science and Health, p. 97), for he is hourly aiding "in the ejection of error," and will "cheerfully await the certainty of ultimate perfection."

Testimony Giving

C. E. BRYAN

It is a privilege and a pleasure to tell of some of the good which comes into experience as a result of the study of Christian Science. Its faithful students are daily proving the truth of Mrs. Eddy's statement that "to all mankind and in every hour, divine Love supplies all good" (Science and Health, p. 494). They are learning how to appropriate the good things which divine Love supplies.

Not least of all the good which has been my portion, has come through the giving of a testimony. It was not easy to give my first one; indeed it seemed very difficult. While the earnest desire to do what our Leader had counseled was urging obedience as a token of love and gratitude in itself, there seemed to be a number of arguments to withhold the expression. After considerable thought a few faltering words were said one Wednesday evening at the service, and after they were uttered the testimony seemed a very unworthy offering. During the following week, however, there was wonderful activity in consciousness. More light had entered and much was seen which before had been hidden.

The effect of this increased activity was that on the following Wednesday evening I went to the meeting joyfully, and eager to continue my testimony. There was no doubt it was a worthier offering,—the clearer light had made it so. After this came a most beautiful experience, a holy joy, a spiritual uplift, with brighter, higher views of divine Principle, Love. There came also a clearer perception of the vast spiritual insight of the revered Discoverer and Founder of Christian Science. I perceived too that the giving of testimonies means a great deal more than had at first been apparent; that it is an important step, indispensable to individual growth and development, and a means by which all may begin to prove "the grand human capacities of being bestowed by immortal Mind" (Science and Health, p. 200).

I am deeply grateful for all the beauty, joy, comfort, peace, all the healing which comes to us through Christian Science,—healing which is the result of spiritual understanding and therefore permanent. I know that Christian Science is rapidly bringing us up out of bondage "into the glorious liberty of the children of God."

Selected Articles

[B. W. Oppenheim in *Idaho Statesman*, Boise, Idaho]

The methods pursued by an evangelist in attacking Christian Science and its Founder, as reported in a recent issue of your paper, are typical of that form of religious zeal which defeats its own object. The weapons of religious intolerance, perversion, abuse, misrepresentation, and ridicule are too easily recognized to deceive intelligent people.

Christian Science has no quarrel with other creeds, and has not been built up by attacks upon them. Its marvelous growth is due to its achievements. It should be judged, if at all, by its works, which are of such a character as to entitle it to share in that charity exemplified in the golden rule, which permits brethren to dwell together in harmony and which is one of the characteristics of a Christian. Mrs. Eddy was exceptionally endowed with spiritual vision, and her life was one of purity and unselfish consecration. She is universally recognized by fair-minded people as one of the great women of history. Not only did she during her lifetime establish a great religious organization of world-wide scope, but her life and works have had a marvelous influence in leavening and spiritualizing the thought of the entire world. Her achievement speaks for itself. Her teachings, as well as her methods of spreading them, were and are simple, direct, righteous, rational, and as far removed as possible from charlatanism. Her followers are not ignorant, deluded, or deceived people, but intelligent men and women, whose faith is not founded upon accident or sentiment, but upon a sure knowledge of the practicability of her instructions.

The esteem in which Mrs. Eddy is held by her followers is not a blind worship or a deification of her personality, but rather a sense of gratitude such as one feels toward the bearer of good news. They recognize her as a wise, logical, and spiritually-minded interpreter of the Scriptures, who through her explanations has made the Bible a source of new inspiration and has brought God nigh unto them in their daily lives. By what warrant an ordained minister reads Christian Science out of Christian fellowship and classes it as unbiblical and unchristian, it is difficult to understand, unless he measures it by the narrow standard of a particular creed or dogma.

Christian Scientists are willing to be judged by their fruits —the true test of Christianity as fixed by its Founder, who also said: "These signs shall follow them that believe; In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover." "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." Christian Science is based entirely on the Bible. The first lessons taught in its Sunday schools are the commandments, the beatitudes, and the Lord's Prayer. "The inspired Word of the Bible" is acknowledged by its adherents as their "sufficient guide to eternal Life" (Science and Health, p. 497). Its Sunday services consist of the reading of selections from the Bible and their spiritual interpretation as given in correlative passages from Science and Health. The Bible is the subject of daily study by its followers.

While the healing of physical disease is only one of the characteristics or proofs of Christian Science practice, it seems to be the principal point of our critic's attack. It is not true that the cures wrought by Christian Science are confined to disorders of a nervous or hysterical character. Practically every ill that flesh is heir to (whether commonly classed as curable or incurable) has been healed by its ministrations, as is proved by thousands of authenticated testimonies appearing in its authorized literature. These cases of healing

Digitized by Google

are matters of history and of common knowledge, and the dictum of the critic cannot reverse the facts so established.

Christian Science is not related to faith-healing or any other system of healing, whatever may be the merits or demerits of such systems, nor is it capable of being used in any direction or for any purpose other than for good. It is based upon a knowledge of God and man's relation to Him. It is a restoration of primitive Christianity. Why any Christian who believes in an omnipotent and good God should deny God's ability or willingness to heal the sick by spiritual means, is incomprehensible in view of the numerous instances of such healing recorded in the Bible and in religious history,—cures effected not only by Jesus and his apostles, but by prophets before him and Christians after him. Why should these cures be regarded as supernatural and miraculous, and the result of a special dispensation? If God is "the same yesterday, and today, and forever," why should not an understanding of His law be as efficacious to heal the sick in one age as in another? Are the laws of God so unstable and variable that they are incapable of formulation into exact scientific statements?

Christian Scientists believe that Jesus and the early Christians healed disease as well as sin by a scientific or exact knowledge of God,—an understanding of the Science of Life,—and that the rules or laws of divine metaphysics as practised by him have been restated by Mrs. Eddy in the language of the day and in a form which every man can understand. Further, that this Science is capable of being proved, and that the test of their understanding of it is their ability to prove it daily in the overcoming of sin, disease, and death.

Christian Science invites all men to reexamine the Scriptures in the light of Mrs. Eddy's interpretation thereof, and then to test its doctrines by its applicability to the trials, troubles, temptations, sickness, and sorrows of daily living here and now, rather than by a promise of bliss in a far-off and undefined future.

✧

[Thomas E. Boland in *Warren* (Pa.) *Times*]

We will agree with our friend, a local clergyman, in his declaration that "illness in one or another shape is a very general human experience, and anything which addresses itself to illness, and particularly promises to subdue or do away with illness, is sure to claim the immediate interest of many persons." The fact that medical science has been on the field for centuries and yet these conditions exist, would seem to indicate some lack of complete satisfaction with prevalent systems; and since the public looks eagerly for more efficient methods in other directions, it is not remarkable that it should do so in the vitally important matter of getting rid of sickness and disease.

Christian Science does not profess to be a new thing, but simply an eternal truth reapplied in this age. It is older far than Berkeley, whose "metaphysical idealism," the critic mistakenly declares, is practically the same thing. Berkeley formulated some interesting theories regarding the unsubstantiality of matter, and so have other physicists and philosophers, but it is quite safe to say that no one would be more surprised than the good bishop himself could he know that to him is attributed a system of religion identical with what is today known as Christian Science.

Christian Scientists believe that he who spake as never man spake before, and who healed "all manner of sickness," was the most accurate thinker of all time, and knew more about God and man than any other being who ever trod the earth. They believe that Jesus presented the universal panacea for both sin and disease when he declared, "Ye shall know the truth, and the truth shall make you free;" that he gave the one perfect prescription for the ages when he declared, "The words that I speak unto you, they are spirit, and they are life." They believe the gospel ought to be and is a whole gospel, and that it provides the means not only for overcoming sin but also for destroying disease and suffering. They believe the works of Jesus indicated this beyond all question, and that the metaphysics which he taught, when understood, will not "bewilder" but enlighten. They believe that Christian Science, so far from "going outside the old church of Christ," is simply giving the church its full and rightful function of saving men from every phase of evil.

Issue is not taken by Christian Scientists either with those who prefer to continue their reliance upon physicians or with medicine itself. The right of personal choice is cheerfully accorded, as well as asked. It is recognized too that all earnest, conscientious medical practitioners are laboring in their way to cure disease and alleviate suffering, though with less success than they themselves hope for. Christian Scientists are simply convinced from experience that there is a better way.

✧

[George A. Law in *Danbury* (Conn.) *News*]

A speaker was quoted in your columns as having said that "whatever was true in Christian Science was not new, and whatever was new was not true;" it was also added that he had made a thorough study of Christian Science.

To the student of Christian Science and those familiar with its teaching these statements are inconsistent, for such know that in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, it is nowhere claimed that Christian Science contains anything new. On the contrary, it is very plainly stated in this volume that what Christian Science presents is as old as God and creation. The fact is, Christian Science is nothing more nor less than the message which Jesus brought to humanity. However, it is the complete message, nothing having been added to it nor taken from it, "the undivided garment" (Science and Health, p. 142), teaching how to obtain deliverance from the bondage of sickness as well as sin.

While teaching his followers how to heal spiritually both disease and sin, Jesus gave these specific instructions: "Preach the kingdom of God" and "Heal the sick." He taught that it was no more difficult to heal sickness than sin; indeed, he made it plain that there was as much responsibility resting upon his followers to heal physical disease as to heal sin. This Jesus exemplified while healing the man "sick of the palsy," to whom he said, "Son, thy sins be forgiven thee," adding, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" This incident also shows how closely allied Jesus regarded sin and disease and their causation.

Jesus confined the teaching of spiritual healing to no particular group of people or to any particular period of time. He said, "He that believeth on me, the works that I do shall he do also;" and again, "These signs shall follow them that believe; In my name shall they cast out devils," or evils. The only limitation he made was that they that believed, understood, would be able to demonstrate the healing power. Notwithstanding that Jesus did not limit himself or his followers respecting the types of physical disabilities they healed, but healed all who came, without regard to conditions, the clergyman herein referred to is quoted as having expressed doubt as to the possibility of healing broken bones by prayer. In this he also disregards the thousands of authentic published testimonies of such healing accomplished through Christian Science.

The speaker's inference that Christian Science teaching

Digitized by Google

permits one to disregard the rights of others, to the extent of allowing children suffering with contagious diseases to play on the street with other children, indicates a false and much perverted sense of that subject. As previously explained, Christian Science is the Christianity taught and practised by Jesus, which, as is well known, includes a practice of the golden rule, "Whatsoever ye would that men should do to you, do ye even so to them."

Christian Science stands uncompromisingly upon the fundamental truth that God is infinite Spirit, omnipotent, omnipresent, and omniscient; that man created in the image and likeness of God is spiritual. That this truth is scientifically, demonstrably applicable to the needs of humanity is evidenced by the healing work accomplished in Christian Science.

✧

[W. G. Watkins in *The Northwestern*, Oshkosh, Wis.]

I note that one of the accusations of a local evangelist about Christian Scientists is, that they are "backsliders." We are glad to admit this charge, but would immediately explain that we find it to be an action that makes for progress, as it is a getting away from preconceived opinions about a far-away God and the attainment of a larger realization of God's ever-presence and all-power which furnishes proof that the "kingdom of God" is indeed within. We are getting back to fundamental facts—to the "stone which the builders rejected," namely, the allness of Spirit and the nothingness of matter with its attendant train of sickness and sin.

Jesus was ever busy because he was about his Father's business, and on every hand he gave to the sick and sinning the proof of a present-day salvation from troubles of every kind. He also commanded his followers to do likewise. To say, as does this evangelist, that Christian Scientists should not be classified with Christians, is therefore equivalent to saying that that which bears fruits in accordance with the Scriptures is contrary thereto.

The unkind reference to Mrs. Eddy finds a splendid answer in the following recognition in an editorial in *The Boston Traveler*, which is only one of many tributes to her worth: "Mrs. Eddy has been one of the world's greatest benefactors. Her followers will say more than that, perhaps, but there is no reason why even her enemies should say less. Regardless of differences of faith or philosophy, the world must recognize in her work a vast contribution to human happiness. Certain it is that Mrs. Eddy found the world full of doubt and despondency, and gave it a larger measure of brightness and hope. She taught the weak that they need not be weak, the sick that they might be well, the suffering that they had it within themselves to end their wretchedness. Those who were ailing physically or mentally were enabled, as she herself had been, to become strong in soul and body. Neurasthenia and melancholy yield to the gospel of optimism. Call it what you will, it is a fact that Christian Scientists, as a class, are healthy, hopeful, happy, and prosperous. And Christian Science modes of thought have permeated the thinking of the world, outside the pale of the church. It is a great thing to be a teacher when the teaching bears such fruit."

✧

[Robert S. Ross in *Buffalo* (N. Y.) *Express*]

On page 550 of "Science and Health with Key to the Scriptures" Mrs. Eddy writes: "Embryology supplies no instance of one species producing its opposite. A serpent never begets a bird, nor does a lion bring forth a lamb. Amalgamation is deemed monstrous and is seldom fruitful, but it is not so hideous and absurd as the supposition that Spirit—the pure and holy, the immutable and immortal—can originate the impure and mortal and dwell in it." Throughout the entire round of nature, like produces like. But behold the zeal of our critic, who, like many other critics of Christian Science, endeavors to attribute to Spirit, Mind, the only cause and creator, which we call God or Principle, His opposite, matter! If God is Spirit, His creation must be spiritual. If Spirit is the only creator, matter is not a creator. Therefore matter, including the so-called human body and all other material phenomena, has no foundation in fact, and in reality it does not exist.

Speaking of the unreality of material existence, Christ Jesus said: "Why do ye not understand my speech? even because ye cannot hear my word. Ye are of your father the devil, and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." This was the master Metaphysician's way of telling his followers that matter is a supposition, a falsehood, a lie, assuming the reality of substance only to the degree that a lie seems real.

Christian Science healing is brought about in proportion to one's understanding of the allness of Spirit, God, and the consequent nothingness of matter, evil. Christ Jesus said, "Ye shall know the truth, and the truth shall make you free." His understanding of the spiritual fact of being was so complete that in the event commonly referred to as the ascension he actually explained away his belief in material existence, and the physical Jesus became the spiritual Christ. Our critic is therefore quite right when he declares that Christian Science teaches the unreality of matter, which is the inevitable conclusion if God is All-in-all. Man, as God created him, is and always will be spiritual, harmonious, complete, in conscious possession of his oneness with God, not through the so-called human mind, but through the Mind of Christ.

Instead of trying to make a sick man well and a sinning man pure, Christian Science teaches its students that both physical and moral healing is brought about by realizing that spiritual man, the only real man, is neither sick nor a sinner. In other words, the process of Christian Science brushes aside the veil or illusion of matter and reveals the glorious realities of being.

[Thorwald Siegfried in *North End News*, Seattle, Wash.]

In order to correct some misstatements regarding Christian Science and Mrs. Eddy, printed in an open letter, I would like to say that no student of Christian Science claims that Mrs. Eddy is the Comforter promised to humanity in the Scriptures. Jesus defined the Comforter as the "Spirit of truth," and Mrs. Eddy is thoroughly in accord with the statement of Jesus when she says, "This Comforter I understand to be Divine Science" (Science and Health, p. 55), and when she speaks of "the Comforter; the Holy Ghost that leadeth into all Truth; the 'still, small voice' that breathes His presence and power, casting out error and healing the sick" (Miscellaneous Writings, p. 174).

Christian Science is not to be confused with any occult or mysterious teaching or religion; it is the continued working of primitive Christianity, of that spiritual insight which leavened the lives and works of prophets, seers, and saints from Abraham's day to our own, and of which Jesus the Christ is the perfect flower. Its appeal to human thought includes that prime requisite, the capability of being understood rationally and applied scientifically. Its results in purer lives, in healthier, happier, holier men and women, attest its divine origin.

Editorial

"One grand brotherhood"

READING the very many expressions of gratitude that have come from those whose necessities have been met in a measure through the war relief fund subscribed by Christian Scientists in the United States, one can but look upon this endeavor as an exemplification of the teaching found on page 518 of Science and Health: "The rich in spirit help the poor in one grand brotherhood, all having the same Principle, or Father; and blessed is that man who seeth his brother's need and supplieth it, seeking his own in another's good." To those who have already contributed to this fund and to those purposing further contributions, the few typical extracts given below will bring assurance that the aid thus extended blesses "him that gives and him that takes."

"I hardly know how to begin my letter, my heart is so full of grateful thanks to your church for the loving help—I cannot call it anything else. Perhaps you can guess how especially grateful we feel, because we tried so hard to endure quietly. I already take a deep interest in your church and shall now take a deeper—it has certainly proved to me that 'God is Love.' Will you convey to the givers our grateful thanks? Tell them the kind way in which it has been sent makes us feel it is a gift sent by God through them. We don't feel a bit as though it were charity, in the cold sense of the word."

"I felt I could not rightly express my gratitude yesterday, when you handed me a check. That my difficulties should have been overcome in such a practical manner seems just marvelous, and the Christlike love that must be at the back of all this has given me such peace and a realization of the Father's tender care. Words in no way express what I feel at the lifting of a great burden. I trust that some day I shall have progressed enough in this great truth to make myself useful to others."

"Next to God, I wish to thank our dear friends in Boston most sincerely for the help that has come to us through the relief fund. When the misery was greatest and the war took from us our father and husband and with him all the income we had, the tender help of our friends has been here to meet our needs, as a proof that God is an ever present help in trouble. Besides the little money I was able to earn, the ample provision we received from the fund helped the family through, and the hope in good, harmony, was again established among us. As the rod of Moses brought water out of the rock, so the help received has opened channels of living water. We had so many proofs of kindness,—it is all the expression of the infinite, ever present love of our God."

"It is now a year since the war relief fund was established! With grateful hearts we look back on this year. It is a wonderful expression of brotherly love and divine power. On our Thanksgiving day we heard several testimonies from those who were helped through the fund. Yesterday I heard of a case which seems wonderful. By one of our adherents a woman was referred to us, whom we then gave assistance. She knew nothing of Christian Science, and when her husband came home from the front for a short while she told him of it and the help she had received. The husband went to the above-mentioned adherent of Christian Science and had a long conversation. He was very much impressed by the truth and confidently he returned to the front. Soon after that he fell into the hands of the enemy and was in serious danger when the thought came to him which the Scientist had told him to hold: that God is an ever present help in times of trouble. He held on to this thought and in the next moment the men desisted and he went away unharmed. Is this not wonderful, and does it not in a small measure prove that there would be no war if all men thought the truth? How grateful have we to be for this wonderful Science."

"For a long time I have cherished the desire to thank the kind friends in America who fortunately are preserved from the war and thereby are in a position to help their brethren in such a liberal way. I feel very grateful for this. It demonstrates true Christianity and will surely bring blessing a hundredfold. My husband has been an adherent of Christian Science for the last ten years. About a year ago he was called upon to do military service, and this left me with my four little boys in a desperate condition. My husband wrote me to apply for help to a Christian Science practitioner; that I would find help mentally and that my needs would be met. From the time I turned for help to the source of all good it became lighter around me and peace and harmony were again established. Though we often feel lack in many directions, we know that divine Love will meet our needs."

Another writer tells how she was led away from Nice in France at the outbreak of the war, after having been a prisoner of war for six weeks. After some time she was led to Switzerland, where by and by work was found and her needs met. A copy of "Miscellaneous Writings" had been given to her a few weeks before the outbreak of the war, from which she obtained much encouragement, especially from page 117: "God is the fountain of light, and He illumines one's way when one is obedient. The disobedient make their moves before God makes His, or make them too late to follow Him. Be sure that God *directs* your way; then, hasten to follow under every circumstance." Surely this is wise counsel for us all, under any and every circumstance.

ARCHIBALD MCLELLAN.

Cause and Cure

CHRISTIAN people are frequently compelled to try to explain to themselves, if not to others, the reasons for the saddening delay in the healing of humanity's hurt. The centuries pass without any noticeable lessening of mortal ills; while the phases and aspects of evil are ever shifting, its blight remains. Some of the maladies which afflicted our fathers seem to have disappeared through faith-filled reliance on material remedies or the hygienic improvement of conditions, but for every ailment thus escaped from two new troubles have appeared; while, as the result of the more studied acquaintance with disease and its continuous exploitation in the interest of the trade in nostrums, the subjection of people in general to fear and their consequent dependence upon drugs and doctors, has vastly increased.

These facts are so unquestionable that today the saying of a celebrated physician, to the effect that it would be well if everything pertaining to *materia medica* were sunken in the sea, is quite as likely to awaken serious consideration as it is to beget a smile. Four thousand years of effort to banish physical disharmony has effected great changes in the catalogue of fashionable discomforts, but that it has decreased the number of diseases to which men are subject, or sensibly emancipated the race from the fear of them, even the most optimistic materialists would not claim.

Christian Science explains this fact in its recognition that men have been wrestling with phenomena when their attention should have been addressed to cause. It teaches that the only wise course to pursue in the effort to get rid of any ill, is to

Digitized by Google

discover and dispose of the circumstance or thing which occasions it. There is nothing queer about this proposition, and yet many are exercised over its intimation that in the effort to heal the sick the medical profession has been indifferent to causation. They point by way of protest to the discovery that the mosquito is responsible for the spread of yellow fever, and to other achievements in the way of the determination and eradication of the sources of disease.

Among out and out materialists this protest has a reasonable basis. To the great majority who believe in the power of the poison which this winged innocent dispenses, it is of great significance that he should have been trapped, and the patient genius exercised in accomplishing this feat is to be duly credited. Unfortunately, however, the mosquito is not the only agency at hand to serve such ends, the number of germs, microbes, and the like, which according to educated belief are still free and intent on begetting sickness and suffering, is incalculable. Moreover, when one is informed that every time he eats, drinks, or breathes, he allows a horde of these enemies to enter his private domain, he begins to realize something of the tremendous handicap under which the materialist is trying to keep well.

Christian people, however, are not supposed to be materialists. They cannot forget that Christ Jesus identified sickness as attendant upon sin; that he healed it with the word of Truth; and that to its victim he said, "Sin no more, lest a worse thing come unto thee." Theoretically Christian people have always accepted this teaching that sin is the cause of all disharmony and disease; hence those of them who think logically must see that to treat sickness simply as a material phenomenon is to ignore the fundamental difficulty and therefore to fail to meet the human need. Further, they must come to see that the teaching of Christian Science, that "mortal mind, not matter [mosquitoes, etc.], contains and carries the infection;" "that the human mind alone suffers, is sick, and that the divine Mind alone heals" (Science and Health, pp. 153, 270), is the only tenable philosophy of cure, because it alone can effect the removal of cause. This gospel is very much more than a logical statement of the process of Christian healing. To unnumbered thousands it has become a demonstrated fact that the knowledge of God as apprehended in Christian Science can and will free men from every phase of sin and disease, and this has awakened a note of joy which is being "heard round the world."

JOHN B. WILLIS.

"The tree of life"

IN the closing chapter of Revelation we have a wonderful picture of the things which mortal eye hath not seen, and which cannot enter into the heart of mortal man; yet they are spiritual realities, the things known of God and prepared for all His children. We are here told of the river of the water of life, and of that tree whose leaves, John tells us, are "for the healing of the nations."

This tree of life is first mentioned in the second chapter of Genesis, and it is specifically distinguished from "the tree of knowledge of good and evil." We are also told of a river which rose in Eden, but which was divided into four separate streams as it flowed out into the world. The first departure, Pison, seems to indicate symbolically the quest for gold, which on the mortal side is but a base counterfeit of the divine idea, the possession of which "maketh rich" and "addeth no sorrow with it." Spiritually understood this stream stands for "the love of the good and beautiful" (Science and Health, p. 593). The other branches, Gihon, Hiddekel, and Euphrates, are also worthy of more than passing notice, especially Euphrates, which is wonderfully explained by Mrs. Eddy on page 585 of our text-book, where she presents a picture of human belief at its best with "metaphysics taking the place of physics," as in a dissolving view; and as the finite sense gives place to the spiritual idea, we have "divine Science encompassing the universe and man."

It is, however, with the tree of life that we are here most concerned, for according to the allegory in Genesis man was permanently barred from it because of his disobedience, although he was still permitted to partake of the fruit of that other tree which had been the occasion of his downfall. This belief has prevailed among mortals all through the centuries, for men have denied that any could have access to the tree of life, though it has been held that the tree of the knowledge of good and evil must be looked to for the healing of all fleshly ills. A knowledge of evil has, moreover, been given preeminence in all medical systems, and the "leaves" of this tree are typified by poisonous drugs, which may, according to medical opinion, destroy life while they are relieving pain, and which may also corrupt the moral nature, as in the case of stimulants and opiates. Worst of all, God is held responsible for all of this, although His decision reads, "In the day that thou eatest thereof thou shalt surely die."

In different parts of the Bible we find references to the tree of life, some of these making wisdom and understanding synonymous with it, but John's apocalyptic vision crowns the Christ-mission, with its promise of perfect healing and abundant life, and shows how it is to be attained. Those who "do his commandments" are to "have right to the tree of life," and they enter the holy city by the gates divinely provided. Without are sorcerers, the impure, and all that cling to a lie rather than to truth. The decisions of Truth against all error may well be regarded as the leaves which heal men and nations, whatever their maladies, so that "there shall be no more curse."

It is important to observe that "the tree of knowledge of good and evil" has no place in the paradise of God, the gates of which "human beliefs have closed," but which are reopened with "the key of divine Science" (Science and Health, p. 171). In this spiritual realm there are neither diseases nor drugs, and the ignorance of them which prevails is bliss and not bondage. The kind of knowledge typified by this tree is "foolishness with God," and it is so also to the one who knows God and who understands our heavenly Father's wise provision for His children's every need.

As to the "fruits" of the tree of life, we may well ask whether we are getting our full share of them, and see to it that no indifference on our part can rob us of the faith and the "love, joy, peace" which are life bestowing, and against which "there is no law."

Among the Churches

Current Notes

SOUTHERN CALIFORNIA.—During the past year the Christian Science committee on publication has endeavored to extend the distribution of our authorized literature into those places in southern California where Christian Science is unknown or where interest has not yet reached the point of formal organization. With the kind cooperation of practitioners and friends we have been enabled to reach interested readers in 114 such places, and the list is still growing.

At the annual tournament of roses in Pasadena on New Year's day, 1915, the literature distribution committee of First Church of Christ, Scientist, Pasadena, erected a large
