tent on the main street. Many grateful visitors took advantage of the hospitality provided, and much literature was taken away from the tables just inside the main entrance. *Monitor* booths and reading-rooms were also maintained at the pure food show held in Los Angeles in February, at the fifth national orange show in San Bernardino in February, at the Riverside County fair in Riverside in October, and at the Orange County fair in Santa Ana the same month. Gratifying reports have been received from each undertaking.

An inestimable amount of good has been accomplished through the generous distribution of authorized literature at the exhibits of The Christian Science Publishing Society provided for by the Christian Scientists of California at the expositions at San Francisco and San Diego. Handsome booths were erected in each instance, where our Leader's works and all of the products of The Christian Science Publishing Society were attractively displayed in show-cases especially built for the occasion. On the walls revolving racks were hung, wherein were photographs of Christian Science churches throughout the world, mounted views of all departments of the publishing house, and the latest issue of *The Christian Science Monitor.*

Acting with the committee on publication for northern California, literature is being provided for the state prisons at Folsom and San Quentin, and services are being conducted at the latter. Sixty-nine copies of our Leader's works, and large quantities of our pamphlets and periodicals, as well as many subscriptions to the latter, are being judiciously used. Requests to the Trustees under the Will of Mary Baker Eddy from thirty libraries passed through the office for a total of 223 copies of Mrs. Eddy's writings, including 80 copies of Science and Health, besides 22 copies of "The Life of Mary Baker Eddy" by Sibyl Wilbur, and 43 subscriptions to the periodicals.—*Committee on Publication.*

COLUMBUS, OHIO.—One of the city's most beautiful churches, impressive in its simplicity, will be used for the first time today [Dec. 26], when services are held in the new edifice of First Church of Christ, Scientist, in East Broad Street, between Ninth Street and Washington Avenue. The auditorium is 86 by 94 feet and has a seating capacity of one thousand.—*Ohio State Journal.*

DENVER, COL.—The new edifice of Second Church of Christ, Scientist, at the corner of South Grant Street and Bayaud Avenue, is approaching completion. For some time the congregation has been meeting in the foyer, but probably will move into the auditorium about March 1. This church will seat approximately twelve hundred. The cost of the building, completed, will be in excess of one hundred thousand dollars.—*Denver News.*

✧

Admission to Membership in The Mother Church

The next admission of candidates will be June 2, 1916. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 10, 1916.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Suite 550, 286 Huntington Avenue, Boston, Mass.

The Lectures

Shanghai, China

A large and interested audience heard Virgil O. Strickler expound the doctrines of Christian Science at the Lyceum Theater. As this was the first Christian Science lecture ever given in Shanghai, the theater was well filled. In the audience were many prominent church people, followers of other faiths. The lecturer was introduced by W. Adams Oram, who said:—

Although comparatively new to Shanghai, Christian Science has now been before the world for nearly fifty years, having been discovered by Mrs. Eddy in 1866. Like all new religious movements, it has often been and still is the subject of adverse criticism and misrepresentation, but being founded on the rock of ages, it has safely weathered every storm that has raged around it, and is today established more firmly than ever. Its adherents are numbered by hundreds of thousands, and are to be found in almost every country of the world and in many different walks of life; and to those who have earnestly studied its teachings and faithfully adhered to its rules, it has invariably brought health and happiness, and an understanding of the true meaning of Christ Jesus' words, "Ye shall know the truth, and the truth shall make you free."

It was for the purpose of presenting Christian Science in its true colors, and in such a manner that it could not be misunderstood, that these lectures were instituted by Mrs. Eddy. They are given wherever a Christian Science church or society is established, and many who have attended them, suffering from physical infirmities or mental worries, have found relief and peace, and have had reason to thank God that the days of so-called miracles are not past.

The China Press.

✧

Elizabeth, N. J.

A large audience gathered at Proctor's East Jersey Street Theater to attend the meeting at which William D. McCrackan delivered a lecture on Christian Science. A. Kean Moe, formerly United States consul to Dublin, Ireland, in opening the meeting, said in part:—

In the lapse of fifteen centuries the preaching of the gospel has attained such unique magnitude that Christians of today have quite forgotten Christ's equally important grant of power to his followers to heal sicknesses and cast out devils. Christ not only taught the truth, but he healed the sick and the sinning. And when he sent forth his disciples he commanded them to do likewise. Just as long ago the disciples and their successors went forth to preach and to heal, so now the modern disciples of this new yet old faith come among us to impart Christ's word and deed. They come, as I believe, neither to exhort nor to proselytize, but rather to contribute their demonstration of the truth through which they perceive the light, and attain intelligence of the Mind that was in Christ Jesus.—*Elizabeth Journal.*

✧

Rockford, Ill.

An audience which filled to its capacity the auditorium of First Church of Christ, Scientist, listened with deep interest to a lecture on Christian Science delivered by Frank Bell. The speaker was introduced by Dr. W. C. Loar, who said in part:—

Six and a half years ago I was a physical and mental wreck. There seemed nothing but certain death before me.

Digitized by Google

It was by mere accident that I took up and began to read the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. To my surprise I soon found myself healed. I was forced by my own healing to acknowledge there must be a power in Christian Science of which I had never taken any account, and I sought for the secret of the power that had given me health instead of disease, life in place of death. As I studied the text-book, there gradually unfolded in my consciousness the nature and operation of spiritual law, the law the Saviour fulfilled in his works of healing.

Evidently the Saviour knew of a higher law than that of anatomy governing the action of muscle and nerve, when he could say to the man with the withered hand, "Stretch forth thine hand," and it was made whole as the other; a higher law than that of physiology governing the circulation of the blood, when he spoke to the woman "sick of a fever," and "she arose, and ministered unto them;" a higher law than that of chemistry governing digestion, when he said, "Take no thought for your life, what ye shall eat;" a higher law than physics governing sight and hearing, when he healed the blind and the deaf. Now Christian Science is simply the unfolding to human consciousness of the laws of good which are always present to heal, to save, to feed, and to bless mankind.—*Rockford Register-Gazette.*

✧

New Bedford, Mass.

Willis F. Gross gave a lecture on Christian Science in First Church of Christ, Scientist. He was introduced by Oliver H. Gardner, one of the directors of the church and instructor in the New Bedford Industrial School, who said:—

We are gathered here tonight to hear something of Christian Science. The Scriptures abound in God's promises to His children, and we are all God's children, created in His image and likeness. "Come unto me, all ye that labor and are heavy laden, and I will give you rest." "And ye shall seek me, and find me, when ye shall search for me with all your heart." "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them."

Once we believed that God sent sickness and pain and sorrow to us, and that we must be patient and loving, for if we were faithful to the end, we should be made free. The Bible says, "Behold, now is the accepted time." Christian Science as discovered by Mrs. Eddy has come to show us that "there is but one way to heaven, harmony, and Christ in divine Science shows us this way" (Science and Health, p. 242). There are thousands today testifying to the healing power of Truth and the spiritual uplift they have received through Christian Science.—*The Morning Mercury.*

Lectures to be Delivered

ARKANSAS—Fayetteville: Clarence W. Chadwick, Ozark Theater, 3 p.m., March 19.

CALIFORNIA—Anaheim: Dr. Francis J. Fluno, High School Auditorium, 3 p.m., March 19.

Lodi: Jacob S. Shield, Lodi Opera House, 8 p.m., March 24.

Napa: Jacob S. Shield, Novelty Theater, Randolph Street, 8 p.m., March 21.

Petaluma: Jacob S. Shield, Christian Science Hall, McNear Building, 19 Main Street, 8 p.m., March 20.

Sacramento (First Church): Jacob S. Shield, Tuesday Club House, Twenty-eighth and L Streets, 8 p.m., March 23.

San Pedro (Seventh Church, Los Angeles): Jacob S. Shield, Elks Hall, 3 p.m., March 19.

COLORADO—Aspen: Hon. Clarence A. Buskirk, Church Edifice, 8 p.m., March 21.

IDAHO—Idaho Falls: Clarence C. Eaton, American Theater, 8:15 p.m., March 20.

INDIANA—Evansville: Bicknell Young, Evans Hall, Fifth and Locust Streets, 8:15 p.m., March 17.

KANSAS—Fort Scott: Virgil O. Strickler, Pictureland Theater, 8 p.m., March 17.

Larned: Virgil O. Strickler, Opera House, 8:30 p.m., March 21.

Oswego: Virgil O. Strickler, Grand Theater, 8 p.m., March 23.

Wellington: Virgil O. Strickler, Isis Theater, 8:15 p.m., March 20.

Winfield: George Shaw Cook, Winfield Opera House, 8 p.m., March 23.

MINNESOTA—Duluth: Willis F. Gross, Church Edifice, East First Street and Ninth Avenue, 8 p.m., March 23 and 24.

Minneapolis (Sixth Church): Frank Bell, Church Edifice, Summit and Hennepin Avenues, South, 3:30 p.m., March 19, and 8 p.m., March 20.

Virginia: Frank Bell, Socialist Opera House, 8:15 p.m., March 21.

MONTANA—Great Falls: Willis F. Gross, Masonic Temple, March 20.

Kalispell: Willis F. Gross, McIntosh Opera House, 3 p.m., March 19.

NEW HAMPSHIRE—Derry: Prof. Hermann S. Hering, Adams Memorial Hall, 3:30 p.m., March 19.

NEW YORK—New York (First Church): Prof. Hermann S. Hering, Church Edifice, Central Park West and Ninety-sixth Street, 8 p.m., March 21.

New York (Fourth Church): Bicknell Young, Church Edifice, Fort Washington Avenue and 178th Street, 8 p.m., March 21 and 23.

OKLAHOMA—Oklahoma City: Virgil O. Strickler, Overholser Theater, 3 p.m., March 19.

Stillwater: Clarence W. Chadwick, Grand Opera House, 8 p.m., March 21.

Tulsa: Clarence W. Chadwick, Grand Opera House, 8:30 p.m., March 20.

OREGON—Portland (Second Church): Charles I. Ohrenstein, Church Edifice, East Sixth Street and Holladay Avenue, 8 p.m., March 20, 21, and 23.

PENNSYLVANIA—Lancaster: Bicknell Young, Colonial Theater, 3 p.m., March 19.

Lock Haven: Bicknell Young, Court House, 8:15 p.m., March 20.

Shamokin: Bliss Knapp, High School Auditorium, 8:15 p.m., March 18.

York: Bliss Knapp, Orpheum Theater, 8:15 p.m., March 20.

TEXAS—Amarillo: George Shaw Cook, Mission Theater, 3 p.m., March 19.

Bowie: George Shaw Cook, First Christian Church, 8 p.m., March 24.

Canyon: George Shaw Cook, Photo-Playhouse, 8 p.m., March 20.

Corpus Christi: Clarence W. Chadwick, High School Auditorium, 8 p.m., March 24.

UTAH—Salt Lake City (Second Church): Clarence C. Eaton, Salt Lake Theater, 3 p.m., March 19.

VIRGINIA—Lynchburg: Prof. Hermann S. Hering, City Auditorium, 8:15 p.m., March 24.

WEST VIRGINIA—Charleston: Bliss Knapp, Burlew Opera House, 3 p.m., March 19.

Testimonies of Healing

The power of Christian Science to heal the body did not prompt my first interest in it. For several years I had been much disturbed in regard to my religious beliefs, for although a member of a church, I was not at all satisfied with its teachings. One night, shortly before hearing of Christian Science, I declared positively that I would not pray any more, as my prayers were never answered, and I seemed to get along just as well when I forgot or was too tired to pray as when I did.

This resolve not to pray again until I knew what I was doing, was my first real prayer, for I did want to know, and that prayer was answered. Soon after this a Christian Science practitioner was called to the house for a member of the family. While I did not accept a great deal that he said, yet I did most heartily wish that I could be as sure of anything as he evidently was. But even that glimpse of Truth was apparently forgotten until a few weeks later, when I was invited to attend service at The Mother Church one evening. What I heard was a revelation to me. I do not remember much of the meeting, but never from that time to this have I doubted that Christian Science is the same truth that Jesus taught.

The text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, was immediately purchased, and I carried it with me everywhere, reading it whenever I had a moment of leisure. I had never been regarded as well and strong, but just at this time, because there was no particularly painful condition present, I thought there was no need for physical healing. I stopped carrying medicine around with me, however, and found that I did not need to keep up the diet my physician had prescribed; that I could be an hour late at dinner without suffering the next day, and in fact could eat anything at any time.

Catarrh was one of my worst enemies, and for this ailment I had tried almost every material remedy with no good result. The disease had reached the point where it was painful, causing headaches which kept me at home. Finally passages in my head had been forced so I could breathe through my nose, but this had to be done every two weeks and I seemed to be getting worse. Although I was wearing glasses, my eyes would become so inflamed that I did not dare to be without a certain solution which seemed to give some temporary relief. All these troubles, together with several bad habits which I had vainly tried to overcome, have now passed entirely out of my life, and a certain sense of security and spiritual uplift which cannot be described has taken their place.

After these ills had left me through my study of Science and Health I began to think I could not be sick again, but I was taken with a throat affection from which I had suffered every year as far back as I could remember. I thought surely this would be easily overcome, but after trying several days and getting gradually worse I had to stop work and go home. I then called a practitioner and had, I think, three treatments, when I got up well and have never had that trouble since, now over ten years.

The more I see of what Christian Science is doing for mankind the more I realize what it must have meant to Mrs. Eddy to have brought this truth to our apprehension and so become the means of freeing thousands from the slavery of sin, disease, and the fear of death. For the many blessings that have come to me, and especially for the peace and security which I have found, I am very grateful.

EDWIN MARQUAND, Mount Vernon, N. Y.

Deep gratitude for the truth that has come to me through Christian Science teaching prompts this account of its helpfulness. Several years ago I was obliged to take a rest because of what was called nervous prostration. I tried to follow medical advice, but was so restless and morbid that I could not keep quiet, yet had no strength for active occupation. I went to a Christian Science friend for advice, and she kept me with her for nearly a week, when I was so well and cheerful that I resumed my duties successfully. During the following two years I went through deep waters and my strength was severely taxed, but it did not fail. Eighteen months ago I came into a Christian Science household, and since then I have come to a better understanding of Christ Jesus' teaching and have found God an ever present help.

I have had three notable experiences in healing. An acute attack of bowel disorder accompanied with high fever was overcome in a few days; a nervous condition that had a belief of heredity to add to its difficulty, and was of long standing, was healed in a month; and a troublesome swelling on my lip has disappeared. I was an earnest Bible student and teacher for years, but not until I studied "Science and Health with Key to the Scriptures" by Mrs. Eddy did the real significance of the Master's teaching come to me as truth to be applied to every practical daily need, and I rejoice in the discovery day by day.—JULIA E. BARNARD, Stamford, Conn.

✧

For a long time it has seemed that I should express my gratitude for the help that has come through the study and application of the teaching of Christian Science. On Aug. 13, 1910, I gave up my position on account of nervous breakdown and a peculiar vertigo that made it impossible for me to continue work. I called on a doctor in Los Angeles, who said it would be better to give up the idea of doing office work for at least two years; that perhaps I would never be able to do it again, as it was too confining. I took the medicine he prescribed for me, also other remedies, but did not seem to improve. After remaining at home for over a month, I accepted a position in an office, but at the end of five weeks felt worse than before. Then, after staying home again for a period of nearly two months, without getting any better, I was very unhappy and discouraged.

Finally I recalled what a friend had told me about Christian Science soon after coming to Los Angeles, so I went to her and asked if she really thought I could be helped, and she said she knew I could be. The next day, Nov. 17, 1910, I had my first Christian Science treatment, and three weeks later went to work in an office and have worked there ever since. I can honestly say that never have I enjoyed such good health in all my life as since taking up the study of Christian Science. I have also gained in weight and strength, and my work does not tire me as it used to do.

I am thankful to God and likewise grateful to Mrs. Eddy for the many blessings I have received since coming into Christian Science.—SELINA L. KIENAST, Bairdstown, Cal.

✧

This is to testify how deeply grateful I am to Christian Science for the help it has been and is to me. About two years ago I was healed of a disease which the physicians claim is incurable. I did not receive even temporary relief from medicine but grew steadily worse. Seven of the leading physicians in this city were consulted. One of them said he would try to help me, one would not take the case at all, and another said he could do nothing for me, but advised a change of climate. My husband said if that would do me any good he would be willing, but personally I had very little faith;

Digitized by Google

in fact, I had lost all hope of ever being helped, and my family and friends thought if I held out three weeks longer I would do well.

At this point a neighbor spoke to me of Christian Science, so I asked her to let me see the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and she did so. After reading it, I asked to have a practitioner visit me. Treatment was then given, and in three weeks I was healed. I was also cured of stomach disorder, from which I had suffered for nearly two years, being unable to eat anything but raw eggs, and part of the time not even those. I suffered a great deal from nervousness, too, but this has been overcome. Since then I have had many satisfying proofs of the power of this blessed truth. When my first baby was born the birth was entirely painless, and I suffered no inconvenience whatever. Three weeks afterward I was taken ill with milk blain in a severe form, but this was overcome quickly with no help except Christian Science treatment.

I cannot find words to express my thankfulness to God for His goodness, or my gratitude to our Leader, Mrs. Eddy, for showing us the way.—Clara M. Williams, Norfolk, Va.

✧

Like many others, I did not come into Christian Science in the endeavor to secure release from sickness. Several members of our family had been healed of serious ailments and attributed their healing to God through the understanding of the truth as stated in "Science and Health with Key to the Scriptures" by Mrs. Eddy. I became in a measure indignant, as I held agnostic views and was quite sure that they were mistaken as to the method used. I therefore took up the reading of this text-book with the avowed purpose of discrediting its author's contention, and felt very certain of my ability to do it. In reading it over the first time I was healed of many chronic ills which the physicians had pronounced incurable, among them anemia, stomach disorder, catarrh, terrible headaches, and a structural defect of the eyes. One thing I would call attention to is that I was healed although not expecting to be. Also as a result of reading Science and Health, the Bible became most interesting and instructive.

While I owe a great debt of gratitude for the perfect physical healing, which in these eighteen years has proved to be permanent, I feel that the joy and peace which accompanied this experience is of greater value. My hope is that I may be able to realize the gratitude I owe, and that this realization may impel me to be of greater use to my fellow man. Surely the life of our Leader, Mrs. Eddy, serves us as a beacon-light to right thought and action.

Isaï T. Kahn, Chicago, Ill.

✧

For some twenty years I took medicine every day and tried first one doctor and then another, but only temporary relief could be given. Neuralgia all through the body, and especially around the heart, was the cause of the attacks which became more frequent and more severe all the time. After being brought home three times in one week with these spells, for which the doctors could give no relief, I turned to Christian Science. I knew nothing of it and did not have much faith in it, but there being nothing else to turn to, I put forth every effort to learn what this teaching was and if it could heal.

My healing was slow, for which I am now glad, as it made me stay close to the teachings of Christian Science, and I am better for it. While I had many attacks after taking up Science, they were always met with the aid of a practitioner. Dreadful colds, extreme nervousness, and other ills have been overcome; also a great fear of certain foods has been done away with. Words can never express my gratitude for Christian Science. Just in so far as we put into practice what we know to be the right way, will we receive the blessing.

Mrs. Will Barden, Madison, Wis.

✧

From childhood I had sought God, even studying for two years in a Bible training school, as I wished to become a foreign missionary; but nowhere in Christian teaching could I find a concept of God that satisfied me. Moreover, I was a mental and physical wreck, "having no hope, and without God in the world." Good but misguided people had taught me that Christian Science is the anti-Christ, and because they were sincere people I believed them.

When a sister told me that she was studying Christian Science, I said, "Let it alone; it is of the devil," and she did let it alone. I vehemently repeated the same thing to a friend only a few days before turning to Science, after having exhausted all other means. On my way to see the practitioner, I thought of what Gamaliel said to Paul, "If this . . . work be of men, it will come to naught: but if it be of God, ye cannot overthrow it." I told the practitioner that I would accept nothing but what the Bible told me was true, and she replied that she did not wish me to do so. Never once did she try to proselyte, but she did give me some of the literature to read. How grateful I am now for the loving spirit with which she guided me out of Egypt!

To me God is no longer a tyrant, but a God who is Love. I no longer tremble when I say "Thy will be done," but rejoice because I know His ways are pleasantness and His paths are peace. Since the truth came to me I am a new creature, and my desire is to labor in Love's vineyard. I have had physical healings, one of strained and infected eyes, and financial problems have also been overcome, but there is nothing for which I am so grateful as for the renewing of my mind. I am thankful for our Christian Science literature, for often when working out a problem some article proves itself God's messenger, bringing to me His thoughts, which always carry victory with them.

Clare Holland Blough, Canyon, Texas.

✧

I wish to express my gratitude for all that Christian Science has done for me. I have been healed of rheumatism, fever, inflammation of the bowels, a broken ankle, cataracts on the eyes, and many other ills; in fact, I have been snatched from the grave. Nevertheless the physical healing is nothing in comparison with the spiritual uplift and the peace and harmony which I have gained through the study of Christian Science. Words fail to express my thankfulness to God for these many blessings, and my gratitude to Mrs. Eddy for showing us the way to receive them, by giving us the right understanding of Truth.

Winifred Simpson, Hamilton, Ontario, Canada.

✧

My motive in taking up the study of Christian Science was curiosity for the most part, as I wished to compare its teaching with a system of so-called mental science in which I was at that time becoming interested. I began by making a comparative study of the literature in both lines of thought and by attending the services at The Mother Church in Boston.

I was in need of physical healing, although this was not the first consideration with me. I decided, however, to put Christian Science to a little private test, and so began by trying to leave off glasses, which I had worn steadily for

Digitized by Google

eight years; but found that the headaches, which had led to my using them, returned. I then took up the matter with a Christian Science practitioner, with the result that the glasses were laid off, nor have they been worn once in the eight years since, and my eyes have been as strong as I could wish. Within a few weeks thereafter I was healed of chronic stomach trouble, which had been a constant foe for twenty years.

However, I was still undecided about the truth of Christian Science, but in the course of my study it developed that Christian Science was a religion. My student course had brought me into an atmosphere of the "higher criticism," which caused me to abandon practically all religious thought, and I fully believed that I had advanced beyond the need of a religion. When a practitioner to whom I mentioned this, simply referred me to page 138 of Science and Health, where it speaks of the "theology of Jesus," I was tempted to abandon further study. While I had believed Christian Science to be a system of philosophy and metaphysics I was attracted, but was repelled from what savored of religion. Still I was miserably unhappy and disappointed with my lack of accomplishment, with the seeming failure of all hopes and ambitions, and there was nothing to do but to go forward with Christian Science. As I continued to study, other ailments left me,—hemorrhages of the lungs, melancholy, sleeplessness, and nervous exhaustion, which had caused me to abandon the legal profession.

I can truthfully say that not a vestige of the old physical ailments remains, and one may be sure that all this change could not have taken place without a corresponding change in character, temperament, and ideals. For eight years the Bible, together with "Science and Health with Key to the Scriptures" by Mrs. Eddy, has been my constant study and daily food. Through this study, faith in God as omnipotent, omnipresent, and omniscient Mind has progressed and deepened. In such an improved state of consciousness, fear and worry must necessarily take their flight, and I realize that these enemies have vanished in a wonderful degree. During this period of spiritual regeneration there have come to me a variety of extreme experiences, business, social, and physical, which without the aid of my awakened understanding of Christian Science, and without help from faithful practitioners, I could not have stood up under. But I know that these have only been the problems which one must solve in studying any science, and as Christian Science is the Science of Life, Truth, and Love, we can be grateful that we have abundant opportunities given us whereby to prove the truth of its Principle and rules.

My gratitude is daily increasing for the knowledge of God and the understanding of the teachings of our Master Christ Jesus which I am gaining through the study of the Bible and of Science and Health.

A. W. Edes, Los Angeles, Cal.

✧

About six years ago my grandfather, my two children, and I were going to Montana to visit some relatives. At that time we were living forty-five miles from the railroad station where we were to take the train. On the way we ate some lunch I had prepared, and it seemed to poison the two children and myself. My grandfather did not eat any, and my husband, who was taking us to the station, had enough understanding of Christian Science to overcome the bad effects for himself. My understanding was, however, very small at this time. As we passed through a town, we stopped at a hotel for a short time, and the people there said we ought to call in a doctor, as I was in a bad condition, but I told my husband to take me to the place for which we had started, as there was a Christian Science practitioner there. There were ten miles more to drive, but we went on, though my husband said afterward he would not have been surprised if I had passed on. We had been at the practitioner's house not over half an hour when I was all right again, and helped to get supper while she treated the children. We were only delayed one train on our trip. While we were in Montana the little boy had typhoid fever, but with the help of a faithful practitioner he was well in less than a week.

Three years ago I found that another child was coming to us, and I was unable to walk much or to be on my feet without fainting. We still lived far from any Christian Science practitioner and I could not help myself, so we wrote for treatment and then decided to move so as to be near a practitioner and also a church. It was a long journey, but I stood the trip finely. We asked for help, and soon I began to do my housework. When the baby came I had an easy time compared to former experiences of this kind under the doctor's care. The baby is so happy and healthy that people speak about it. Measles, whooping-cough, scarlet fever, chicken-pox, colds, and other ailments in the family have likewise been overcome.

My heart overflows with gratitude and love for Mrs. Eddy, who was so good and pure as to be able to tell the world of this wonderful truth. My prayer is to live so as to be worthy to be called a Christian Scientist.

Daisy Youngs, Logan, Neb.

✧

One afternoon in January, 1914, while in Los Angeles, Cal., a gasoline stove exploded as I was lighting it, and I was terribly burned about the face, neck, and arms. As I was a stranger in the neighborhood and unable to help myself, neighbors called an ambulance and I was hurried to the hospital. Before being taken away I requested one of the neighbors to get a Christian Science practitioner for me, and she did so through a friend. The practitioner took up the work at once, and my suffering stopped very quickly. Although the nurse feared I would never again be able to see, my eyes were perfect in a few days, and in a little over two weeks I was able to leave the hospital and attend church. There was not a scar or a blemish left, and I experienced no bad effects whatever. I feel very thankful to God, and am grateful to Mrs. Eddy, for this healing and for the enlightenment which I have received through reading "Science and Health with Key to the Scriptures," together with the Bible, which I could never understand until I found the light through Christian Science.—Frances E. Fager, East Orange, N. J.

✧

I wish to express my deep gratitude to Christian Science for the many blessings and the joy and peace it has brought into my life since I began to study it, about thirteen years ago. One of the greatest of these blessings was my speedy recovery from a very serious illness. I had been staying with some old friends, who were so very antagonistic to Christian Science that I had given up mentioning the subject to them. They were not very well when I left them to return home, and that evening, as I learned later, they sent for a doctor, who said they were suffering from acute lung trouble. He called in other doctors and two nurses, and all that human aid could do was done, but before the week was over the mother and her young daughter had both passed on.

Three days after my arrival I began to feel very ill and was not able to think clearly or read. I knew that help must be secured at once, and so wrote to a friend in London, a Christian Science practitioner. I had not the slightest

Digitized by Google

notion as to what was the matter with me, for I had not then heard the sad news of my friends; but there was no doubt afterward, for my symptoms were exactly the same as theirs. For three days I felt very ill, but slept calmly and restfully every night after I had received treatment, and on the fourth day knew as soon as I awoke that the healing had been accomplished; my head was clear and I could do all that I wanted to do. A bad cough and slight weakness were all that remained, and they very quickly disappeared.

I have received many other benefits from Christian Science. Neuralgia had been an enemy the greater part of my life, but since becoming a Scientist I have had only a few attacks, and the last one was very quickly overcome. I wired to my friend in London, and within one hour the pain had ceased, and there has been no return of the trouble. Seasickness also has been overcome every time I have had treatment. For these and many other blessings I thank God, and likewise feel very grateful to our Leader, Mrs. Eddy.

KATHERINE H. LOWE, Great Meols, Cheshire, England.

✧

From childhood I had been subject to periodical spells of mental depression, which seemed to become more pronounced and of more frequent occurrence as I grew older, until I passed the age of forty, when they became quite burdensome, increasing in frequency and duration. Also to add to my discomfort came the complication of kidney and bladder troubles, accompanied by dull headache and a continual pain in the small of the back, this pain never ceasing day or night. Life was indeed a burden, and I cared not to live but was afraid to die.

My attention was directed to Christian Science by a salesman, who invited me to his church and also advised me to procure "Science and Health with Key to the Scriptures" by Mrs. Eddy. This I did, and after reading the book and attending the service I became convinced that my greatest need was of a spiritual nature, and that my healing could be accomplished only through a better understanding of God. After this I applied to a Christian Science practitioner for treatment and was greatly benefited. But being still unwilling to yield entirely to the demands of Spirit, I struggled along, footsore and weary, stumbling and falling at times, and almost willing to give up the fight, which seemed to beset me with overwhelming odds. But all through these times something seemed to whisper into my consciousness, "Press on; there is hope and victory for you."

After moving here in the fall of 1910 I pursued the study of Christian Science more diligently, becoming a regular attendant at the services, also receiving the help and advice of a practitioner. I was completely freed from one of the most stubborn conditions a human being could be afflicted with, and have since enjoyed perfect health and happiness. Several other difficulties fell away, and the tobacco habit also left me, not the slightest trace of it remaining, although I had been a slave to it since boyhood.

For all these blessings, and for many other benefits received, I am thankful to God, and grateful to Mrs. Eddy, through whom the truth was revealed to this age. There is no doubt in my own mind that the Christian Science church is called to do a great religious work in the world today, and it certainly is the highway to holiness and harmony, ushering into the consciousness of mankind the kingdom of heaven, with peace on earth, good will to men.

LOUIS F. ALBER, Greeley, Col.

✧ ✧ ✧

A star is beautiful; it affords pleasure, not from what it is to do or to give, but simply by being what it is.—CARLYLE.

From Our Exchanges

[*The Christian Work*]

The Old Testament is a ship sailing across the seas of the centuries, but a divine figure stands in the scene, though the men who wrought about that figure were slave owners, polygamists, cruel soldiers, cherishing many superstitions toward astronomy and natural philosophy. Ours is a world where white lilies grow amidst the slough, and where diamonds are found in the midst of the geode. From decaying logs the snowdrops spring, and in the mind and heart of Jacob with his deceits and polygamy, of Joshua with the cruelty of his soldiers, there springs a new idea of the wickedness of sin and the blessedness of right.

That new ideal worked like leaven in men's minds, made harsh government soft, made cold laws warm and cruel rulers humane. . . . Spreading, the leaven slowly sweetened the whole lump of society. The inspired thing in the Old Testament is the moral element, with its new wonderful thought that God is merciful, gracious, slow to anger, full of compassion, and of great mercy.

[*Northwestern Christian Advocate*]

What the Book does emphasize from lid to lid is the fact of a spiritual conflict, and what it continually urges with an intensity born of God is the need of preparedness to withstand even common, every-day skirmishes. Paul in Ephesians, sixth chapter, relates the need specifically by indicating the manner of our armament, both offensive and defensive, and stating as justification for his order of preparedness that "we wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this world, against spiritual wickedness in high places." He therefore orders his fellows to take unto themselves "the whole armor of God." That is the doctrine of preparedness that breathes the militaristic spirit. Paul was unequivocal, and what this Christian general advocated was championed by every writer in the New Testament.

[*The Christian Register*]

It would not seem to need proof or argument to show that in the faiths of the people there is not one God, but many deities, and that the supreme divinity described in all the creeds of Christendom does not exist. What then? Are we left without God, and without hope in the world? On the contrary, we are now at the beginning of a new age of faith, which may be so noble as to atone for all the devastations of war. If there were a deity of the kind commonly believed in, we might imagine him as saying to all the nations of the earth: "Behold and understand. Old things have passed away, and all things have become new." Jehovah, the tribal god of the Hebrews, does not exist; the Allah of Islam was an invention of his prophet; the vengeful deity who casts a shadow over central Europe lives only in the vain imaginations of bewildered nations.

[*The Congregationalist and Christian World*]

There is all the difference in the world between non-resistance and the higher resistance, and it is the higher resistance for which the peacemaker asks the nation to arm itself. There is no call in the gospel or out of it to let evil have its way with the world, but there is an essential Christian way of overcoming evil, and it is not the way which is just now most in evidence in Europe or most seriously considered by the makers of public opinion in America. The world's way is to overcome evil with force; the Christian way is to over-

Digitized by Google

come evil with good. In this the Christian has behind him the massive demonstrations of history. No great issue has ever been decided save by epoch-making transformations of temper and idealism secured through the gradual displacement of false and misleading philosophies and doctrines and methods of procedure, whether in church or state, by truer and more inclusive conceptions of life and action. The action of these profound and unresting forces has sometimes been overlaid by war, often obscured by it, and too often hindered by it; but when the smoke of battle is cleared away and the accounts of the generation have been cast up, then the real battle is seen to have been fought on the field of the spirit and won by the weapons of the spirit. Every other kind of fighting has in the end been pitifully sterile.

[Rev. J. Frank Thompson in *The Universalist Leader*]

A man of absolute integrity recognizes honesty when he sees it, because he has it. To every honorable deed for which the cynic can account only on selfish grounds, he attributes the same motive that would have prompted him to its performance. When we have proved the essential worth of domestic faithfulness and neighborly good will in our own experience, it is not difficult to believe that others are practising the same virtues because they are equally dear to them. All things that are clean and unselfish in the lives of our associates are best perceived by us when we look at them with pure and kindly eyes. To show the importance of this requires no argument. We all know that any satisfying friendship or affection must be founded on a mutual respect. If God were left out of the question, it would still remain true that the pure in heart are blessed, since they alone perceive in other lives those virtues a belief in which is so essential to our own happiness.

[Rev. John Hunter, D.D., in *The Christian Commonwealth*]

Character is the supreme demand of life from youth to age. We constantly need to be laying up reserves of power for the surprises of life, for sudden calls to duty and service and sacrifice, for great temptations and great sorrows, for hours of critical strain and trial. The true preparation for opportunity is the preparation of ourselves. What we do depends ultimately on what we are. To be practical in the best sense we must not be shallow. To give we must get; to teach we must learn; to inspire we must be inspired; to exert a truly Christian influence in every relation and sphere of life our spirit must be the spirit of Jesus Christ.

[*The Christian Intelligencer*]

To have Christ so living in us all that everything we do becomes the expression of his mind in us; to be independent, therefore, of either applause or censure; just to go on faithfully, humbly, and ardently, sure of our consecrated motives, in the confidence that our labor in the Lord shall not be in vain,—this would be great. It would give us the secret of happiness; it would make us a power. How the kingdom would come!

[*The Sunday School Times*]

How thoughtless and superficial and lazy it is for any of us to quote one verse or another from God's Word, or even two or three verses, and say that we thereby know His will! For the Bible often seems to say directly opposite things, in different places, about the same matter.

[*The Advance*]

God has provided no other way of reaching the better good than the faithful use of present good.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

The two pamphlets entitled "Environment and Opportunity" and "The Providence of Good" have been translated into French and are now published with the English version opposite the translation. Each of these pamphlets contains five articles.

"Christian Science: Man's Dominion over Evil," a lecture by Edward A. Kimball, C.S.D., has been translated into Russian, Norwegian, and modern Greek. Pamphlets in these three languages have been published with the English version opposite the translation and are now on sale at prices of our regular pamphlets as shown on the opposite page.

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to page four in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

Roscoe Pound, A.M., Ph.D., LL.D., who has been appointed dean of the law school of Harvard University, emphasizes the importance of unification of laws of the commonwealths in this country. The larger part of the burden of the movement, in any systematized sense, is being carried by the American Bar Association through its commissioners on uniform state laws. "There is no logical reason," Doctor Pound says, "why there should not be uniform state laws in the United States. Much has been done already along commercial lines. Our negotiable instruments law has been adopted by forty states. In all, nine uniform laws framed by the American Bar Association commission are in process of acceptance by the several commonwealths. The latest, a uniform law on partnership, has been accepted by one state."

A recent report by the American Bar Association's commission on uniform state laws showed that the uniform warehouse receipts act has been passed in twenty-one states and territories and the District of Columbia; the sales act in eight states and one territory; the stock transfer act in five states; the bills of lading act in six states; the wills act in four states; the family desertion act in five states; the uniform divorce act in three states. The commission has committees on commercial law, wills, descent and distribution, marriage and divorce, depositions and proof of statutes in other states, insurance, congressional action, purity of articles of commerce, uniform corporation law, Torrens system and registration of land titles, banks and banking, vital and penal statistics, child labor legislation, situs of real and personal property for purposes of taxation, boilers and inspection, expert testimony in criminal proceedings, flag legislation, and computation of time.

The local supreme court of the Philippine Islands has ruled that billboards offensive to sight may be removed. The decision, written by Justice Trent, goes into the different points made by the attorneys for the Mercantile Advertising Agency and concludes in these words:—

"It might be well to note that billboard legislation in the United States is attempting to eradicate a business which has already been firmly established. This business was allowed to expand unchecked until its very extent called attention to its objectionable features. In the Philippine Islands such legislation has almost anticipated the business, which is not yet of such proportions that it can be said to be fairly established.

"It may be that the courts of the United States have committed themselves to a course of decisions with respect to billboard advertising, the full consequences of which were not perceived for the reason that the development of the business has been so recent that the objectionable features of it did not present themselves clearly to the courts nor to the people. We in this country have the benefit of the experience of the people of the United States and may make our legislation preventive rather than corrective. There are in this country, moreover, on every hand in those districts where Spanish civilization has held sway for so many centuries, examples of architecture now belonging to a past age, and which are attractive not only to the residents of the country but to visitors. If the billboard industry is permitted without constraint or control to hide these historic sites from the passer-by, the country will be less attractive to the tourist and the people will experience a distinct economic loss."

In the Cape Cod district of Massachusetts, where rock is scarce and sand plentiful, the highway commission had a problem in constructing roads suitable for motor traffic. They have by experiment arrived at a satisfactory solution in the use of sand and oil mixed. The process is to excavate the surface sand and then shape the subgrade, hardening the soft spots as much as possible. Then dry sand is heated and put in an ordinary concrete mixer with a quantity of hot, heavy asphaltic oil, and the two are thoroughly mixed and heated. When the sand is thoroughly coated with oil and while the mass is still hot, it is taken to the road and spread in much the same manner as asphalt is spread on a city street.

Usually the mixture is laid in one course, though sometimes in two. The shaping is done with rakes and then it is rolled by a horse roller. After a few hours the steam roller is brought into use and the surface rolled hard and smooth. The final process is to seal the surface with an application of hot oil spread by a distributor, the oil is then covered with sand, and this in turn covered by more oil and more sand.

Asking for a repeal of an act of the legislature of 1915, which practically nullified the general educational test requirements of the Massachusetts bar examiners, representatives of the Massachusetts Bar Association and the Boston Bar Association argued at a recent hearing before the legislative committee on the judiciary that the general educational test is desirable as a help in maintaining a proper standard of legal practitioners.

If a bill introduced by Senator Chamberlain of Oregon becomes law, title to 2,300,000 acres of land granted by the United States to the Oregon & California Railroad will be revested in the United States. The Government, however, will reimburse the railroad with the sum of $2.50 for each acre out of the money to be derived from the sale of the land.

The cultivation of rice in California is a comparatively new industry, as it was in 1911 that the first rice was milled for commercial uses. At that time there were about 500 acres planted to rice, and the season's production was 2000 sacks. In 1912 the production had increased to about 25,000 sacks and a promise of a considerable increase of acreage for the next year. Southern California is now growing rice successfully. Next year there will be 80,000 acres of land planted with rice, which will yield at least 3,000,000 sacks.

The growing of flax in Oregon is to be made a factor of importance in the industrial production of the state. The Portland Chamber of Commerce, through the Oregon Development Bureau and the Flax committee, is back of the plan. Cooperating with the chamber are the School of Commerce of the State University, the Oregon delegation in Congress, the Southern Pacific Railroad, and the department of agriculture. The Willamette Valley is considered especially adapted to flax culture.

The department of agriculture, through its foreign seed and plant introduction division, has imported during the past seventeen years tens of thousands of exotic plants of variable value. Among them are yellow potatoes from the Andes, red currants from the Altai Mountains, hardy, large-fruited haws from China, delicious melocotons from South America, honey-carobs from Spain, and hardy Manchurian wild pears.

The suit brought by the present administration of the New York, New Haven & Hartford Railroad to recover $2,700,000, alleged to have been due the New Haven in transactions under a former administration with the Billard Company, a holding company, has been settled out of court. The suit has been compromised by the payment to the New Haven of $1,250,000 in cash.

The first train-load of what is said to be the largest transcontinental shipment of a single commodity ever made, has arrived in New York. It is sugar from Hawaii. The entire consignment is valued at $25,000,000, weighs 250,000 tons, and will require 6000 freight-cars, or 120 solid trains. The freight charges will be about three million dollars.

The Supreme Court of the United States holds constitutional the Washington and Florida trading stamp laws. The attack on the laws contended that the statutes were an unconstitutional discrimination against a legitimate method of advertising and within the protection for freedom of contract contained in the Federal Constitution.

Twenty-nine denominations in the United States and Canada were represented at the sixth annual session of the Sunday School Council of Evangelical Denominations, which was held in Richmond, Va., Jan. 25 to 27, 1916. There were over one hundred delegates, representing a church-membership of over twenty millions.

The construction of canals and locks paralleling the St. Lawrence Rapids so that ocean vessels can connect the ports of the Great Lakes with the seaports of the world, is asked in a resolution adopted by the executive committee of the Chicago Association of Commerce.

The United States Steel Corporation announces it will spend $6,000,000 in improvements on the Lorain, Ohio, plant of the National Tube Company.

The production of plantation rubber in 1916 is estimated at 120,000 tons, and of wild rubber, 45,000 tons.

Proper Sense of Infinity

SAMUEL GREENWOOD

THE means by which those marvelous demonstrations of divine power recorded in the Scriptures were wrought, was the human understanding of what Christian Science designates as the allness of God, namely, His all-power, all-presence, all-intelligence. While this truth is nominally included in most of the religious creeds, its full significance is neither implied nor taught, else the children educated under these auspices would not grow up with such profound fear of some other power than God. Under such conditions mortals do not learn to have that faith in God which Jesus enjoined and which is so essential to human progress and salvation.

It is certain that humanity will not reach perfection through devotion to an imperfect or limited concept of Deity; that they need to gain a "proper sense of the infinite," as Mrs. Eddy phrases it, "in order that sin and mortality may be put off" (Science and Health, p. 265), and that that is not a proper sense of the infinite which includes both good and evil. The belief that aught but good exists in God's universe denies His supremacy; while to locate a sinning world outside of God's kingdom would set aside His omnipresence, since there could be nothing outside of that which includes all.

It is obvious that sin and mortality are found in human experience because the all-inclusiveness of good is not recognized. If mankind accepted the allness of God in the fulness that Jesus did, they would find no place for sin, disease, and death, and these illusions would disappear because they would be seen as illusions and not facts. Hence it is human ignorance of Truth, and not Truth itself, which affirms the presence and power of something besides God. In other words, it is the claim of evil and nothing else that argues for itself. However well-intentioned the motives may be which underlie the teaching offered in many churches and Sunday schools, that there is a power apart from God, it will be found upon analysis that it is evil's own teaching, and not the pronouncement of divine wisdom and understanding.

If there were conceivably a place which God does not inhabit, it might be thought that evil exists and reigns there, but human doctrines and beliefs have no authority to mark limits for Deity, or to set the boundaries of His habitation. There is no ground for assuming that God is not present in the world simply because a false sense sees evil there. The truth of what God is cannot be decided by human opinions or set at naught at the will of mortals. Humanity has not yet awakened to the unfailing potency of good; but this will become manifest as mortals grow weary of their errors and set out to find God. It has remained for Christian Science to accept the infinity of God in absolute earnest, for no other voice is raised in all Christendom to protest against the validity of evil's claims. This position should never have been vacated by the Christian church, but religious sanction has left evil free to increase and afflict mankind.

The teaching of scholastic theology practically amounts to this: that good and evil, God and devil, work together among men, either with God's consent or contrary thereto; but mortals have realized no comfort from this position, for if evil afflicts them with God's consent, then He is not worthy of trust, and if without God's consent, evil is the stronger, and mortals are left without hope of ultimate escape. Christian Science exhorts humanity to have faith in God, not as being perpetually at war with another power, nor as a helpless or heartless spectator of earth's woes, but as infinite divine Principle, the All-in-all. This divine infinity leaves no room for anything unlike God, and this is the answer of Christian Science to the argument of evil. In the omnipresence of God there can be nothing but good, and when Christians reach that definite conclusion they have begun in the only practical way to overcome the mortal sense of a power opposed to God.

On page 469 of the Christian Science text-book, "Science and Health with Key to the Scriptures," we read that "evil can have no place, where all space is filled with God." The worldly wise critic may sneer at such literal interpretation of Scriptural teaching, but for all that, this truth is the only possible remedy for the very evils to which he points. The man who decides that what is not good has no rightful place in his consciousness, and holds steadfastly to that position, is reaching the only ground of safety there is. It is just as correct to say that the law of God is everywhere operative as that the rule of three is everywhere operative. It is just as logical to conclude that the divine Principle or creator never produced a sinful and imperfect man as that the laws of mathematics have never produced a false or imperfect result. It is just as practical to teach that there is no error in the truth about God and man as that there is no error in the truth about numbers.

Admitting that God is All, there can be nothing without Him or beside Him; and admitting that there is nothing beside good, we must either consider sin, disease, and death as existing in God or deny them altogether; and this is what Christian Science does,—it denies them altogether. The materialist may resent this as an insult to his intelligence, but the simple seeker for Truth lays hold of it gladly and finds health and peace. The whole avowed purpose, effort, and desire of all the Christian religions is to overcome evil; but if this were even now accomplished and evil were wholly destroyed, would God be more than He already is, or fill a greater space than He already fills? Will it ever be possible to add to the sum of God's being or to increase His presence and power? Can mortals by their beliefs augment or exhaust the divine attributes?

On the other hand, let it be supposed that evil were triumphant; that God were blotted from the universe and good were taken out of the cognizance of men,—what would there be left? Would there then be men and things, activity and being and power, existing in and of themselves? Would there be joy, happiness, success, life, and love with no God there? If then the presence of God is necessary to the veritable being of things, nothing unlike God can be substantially real, nor can anything be actually here or there which does not express the nature of good.

If we believe the inspired statement that "all things were made by him," why should we think and talk and live as if

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

there actually were things of which God is not the author, and which therefore no one has made, and as if there actually were a power which has no relation to God at all? After all is said, why should it ever seem necessary that aught else than good should be? From the standpoint that God was original being and power, there could have been nothing else than Himself to be made manifest, nor any power to become operative but good. Then at what point in the order of the truth of being could the necessity arise for making manifest what is unlike God, or for changing good into its opposite? For God even to contemplate such things would imply the possibility of His own defilement and the degradation of His own nature.

It should be self-evident that the only true sense of the infinite is absolute, not relative. Christian Science insists that the definition of God as All-in-all means that there is nothing else, and its application to human need is that there is nothing that can sin, suffer, or die. That this position is not visionary or impractical is seen in its healing and uplifting effect in Christian Science practice. Take away from mankind all that makes them sinful, unhappy, and mortal, and would there be any less of Truth? Would men have less of manhood, or would life be less livable for the absence of these things? Would there not be left all that is worth having, all that God knows, and all that makes consciousness blessed?

"Wait, and love more"

MAUDE M. GREENE

When that beautiful hymn "Mother's Evening Prayer" (Poems, p. 4) was given us by Mrs. Eddy, there was one Christian Scientist who, while welcoming and loving it, found within herself an unexpected but well defined rebellion against making the third stanza her own prayer. There was an inarticulate cry of protest against a prayer that asked to be made to "wait, and love more for every hate." The waiting had seemed long and hard enough already, the scalding tears and "hope deferred" promised a rather vivid and extended experience. Why must she pray for willingness to wait, to love more! But the words "Wait, and love more," kept persistently saying themselves over and over to her, until they seemed a personal command. The realization soon followed that if she must still wait, and not only continue to love, but love more, she would be forced to find a higher and better understanding of love, a sense which would exceed and transcend any human personal sense of love.

In order to understand the apostle's declaration that "God is love," the word love must be separated from its human entanglements, and it must be understood that the statement is not a thing of emotion or sentiment, but is a scientific necessity. The "great First Cause" is God. In order to be first it must be primary, underived, must be that which exists of itself and continues itself; must be that which can involve within itself no element of oppositeness, else it could be neither self-existing nor self-continuing. This Life without a possible opposite is divine Love. If there is cause, there is effect; one cannot exist without the other.

Mrs. Eddy tells us that man is "the full representation of Mind" (Science and Health, p. 591). He must therefore forever express Life without a possible opposite; he must forever be conscious of Love. That sense of existence which can know its opposite, cannot be life; that sense of love which can recognize its opposite, cannot be love. The omnipresence of Life and Love is also a scientific necessity. The one great cause must be infinite and all-inclusive in order to be first. Life and Love cannot be omnipresent as abstractions; the concrete activities of Love and Life must be everywhere manifesting themselves.

A glimpse of the eternal absoluteness of Love reveals to us that the relative, unstable, personal sense we have called love, is not of God. There is nothing in greater need of redemption than the human sense of love, since the true, spiritual sense of Love is the only Redeemer. By reason of its own inherent law, this true understanding of Love begins at once to uplift, regenerate, and redeem the restricted human sense of love, and means more love, purer love, right now. The knowledge that Love is infinitely wise to know good and infinitely powerful to bestow it, begins at once to solve the perplexities and problems of human love and to relieve and heal its helplessness and fear.

As we press through the thronging, erroneous concepts of life and love and touch the hem of the Christ-garment, we receive a benediction. If the love of certain persons seems very necessary to one's happiness, if a sense of injury and wrong done makes it seem impossible for one to include certain persons in his consciousness of love, then his sense of love must be uplifted and regenerated by spiritual understanding until it has reached the place where personality cannot come. The love that can "wait, and love more," when hate and all its unlovely train are seen and heard by material eyes and ears, is the spiritual sense which knows and beholds only the omnipresent manifestations of Love, and perceives the consequent falsity and unreality of all evidences of material sense.

It must be understood that this absolute, all-inclusive sense of love does not mean that one is to try to force one's self to love unlovely things or to call them good; neither is he to ignore them, or meekly accept and try to forgive them in a merely human way. But it does mean that he is to become so conscious of man's at-one-ment with Love that he is able to perceive the unreal and false nature of all that is unlike Love. In Science and Health (p. 5) Mrs. Eddy says, "Sin is forgiven only as it is destroyed by Christ,—Truth and Life." To lose in one's own consciousness the sense of the reality of sin is the only real forgiveness possible. A human sense of forgiveness may help one to lose his sense of resentment and his desire to retaliate; it may give him a pleasanter mental place wherein to dwell, but it can never heal either the offender or the offended from the results of sin. Truth alone can teach us that this spiritual and universal sense of Love is not remote or intangible, but is actual and accessible, most loving, compassionate, and effectual.

The love that is waiting, and loving more for every hate, need "fear no ill,"—need not fear that human selfishness and tyranny will take advantage of its non-resentful, non-combative attitude. The love which fails to retaliate because of its knowledge of the unreality of a blow, need fear no repetition of the blow because of its forbearance. Sometimes there is a human sense that it is only right, and compatible with one's dignity, to let those who have despitefully used him see that they have hurt him and have made him unhappy. Sometimes one may be almost afraid or ashamed to manifest the happiness which is one of the fruits of true love, lest he offend a conventional sense which believes that conditions demand that he manifest a decorous amount of sadness and unhappiness.

Either one of these conditions of thought is only a subtle form of self-righteousness and self-pity, which would exhibit its lack of resentment and yet desire to return hurt for hurt. But this is not the coin or method of payment which Jesus enjoined when he said, "Pray for them which despitefully use you." To pray for them is to love so scientifically and spiritually that all sense of a man apart from God, either to hurt or to be hurt, disappears from conscious-

Digitized by Google

ness; it is to prove that the loss of material sense is gain, and that one need never fear any compromise of human dignity or right from the attainment of this divine sense of love.

When the Christian Scientist mentioned had but entered the threshold of this better understanding of love, her first rebellious questionings were all answered, and her heart was filled with gratitude for the message and all that it had meant to her. She knew why she must wait, and what she must wait for. The waiting must be for the human personal sense of love to give place to the divine and absolute Love, for human will and desire to surrender to the divine. This quality of waiting is not in any sense resignation to evil; it has its being in the knowledge of the omnipotence of Love and the impotence of hate. Let us remember that the tears for which we are to be made glad are not the tears which scald with the heat of resentment and self-pity, not the tears which burn with the dissatisfaction and disappointment of personal love, but those which make us spiritually ready and willing to "wait, and love more."

Winning Success

GRAY MONTGOMERY

It is evident that thought-forces control every condition of human life. Our health, our harmony, our happiness and success depend wholly upon the thought-force which is governing us. If it be the false, fearful, and sinful thoughts of mortal mind that are influencing us, then health, harmony, and success in life are impossible; but if it be what Mrs. Eddy calls "the spiritual forces of divine Mind, whose potency is Truth" (Science and Health, p. 293), which are directing us, then health and success are assured.

Disease of the body is due to a mental cause, and it is healed by banishing the wrong thoughts that have caused the disease and admitting the right thoughts,—pure, holy, exalted thoughts from the divine Mind. If a man is unsuccessful in business, if he is without employment, or if he is not receiving just or prompt payment for his work, the cause is wholly mental, and can be truly corrected only as the cause of the discordant condition is removed by bringing the human mind into conscious harmonious relationship with the divine Mind. Whatever the error of thought may be that is causing the discord and distress, whether it be from without, the mental malpractice of evil minds, or from within, the doubt, discouragement, dishonesty, envy, jealousy, resentment, hatred, or fear harbored within our own mentality, it must be overcome by denial of its claims to reality and by recognizing God's ever present peace, power, and love, and man as God's divine reflection.

By turning to God with the understanding that infinite Mind is the real source of all supply, the business man, through Christian Science, is able to gain some realization of the spiritual fact that God supplies the work to be done and governs and guides man in the accomplishment of his work and the fulfilment of his duty. Striving to have his every thought, word, and deed based upon the fact of God's perfection and man as His perfect reflection, his chief desire and concern is to be right, to do right, and to bless his fellow men. Then, whatever may be his daily duties, his mind being filled with the right thoughts of God and of man's unity with the divine Father, he will be about his Father's business, in which there can be no idleness, no lack, no fear, no failure. Through the spiritual realization of this truth the demonstration over depression in business, lack of work or pay, is accomplished. Thus the business man through Christian Science is enabled to gain true success, which benefits not only himself but all with whom he has dealings.

On page 128 of Science and Health Mrs. Eddy says that business men "have found that Christian Science enhances their endurance and mental powers, enlarges their perception of character, gives them acuteness and comprehensiveness and an ability to exceed their ordinary capacity. . . . A knowledge of the Science of being develops the latent abilities and possibilities of man. It extends the atmosphere of thought, giving mortals access to broader and higher realms. It raises the thinker into his native air of insight and perspicacity." This being realized, we shall know where to look for true success, and what is more, we shall find it.

✧

Serenity in Victory or Defeat

ELIZABETH H. MURDOCK

In all the relations of life, whether in the family, in society, business, politics, or religion, mankind are apt to experience the friction and inharmony of clashing human opinions and human wills, and well were it if all were able to manifest the beautiful spirit Mrs. Eddy describes when she says (Miscellaneous Writings, p. 224): "We should go forth . . . with a temper so genial that the friction of the world shall not wear upon our sensibilities; with an equanimity so settled that no passing breath nor accidental disturbance shall agitate or ruffle it; with a charity broad enough to cover the whole world's evil, and sweet enough to neutralize what is bitter in it."

It is probably clear to us all that much of our trouble is due to the existence of a dominating quality in human thought, which makes us determined, unconsciously perhaps, to have our own way, proud and vainglorious if we get it, and humiliated and resentful if we do not. Our great necessity is therefore to find some practical way to free ourselves from this human desire to dominate. In my own experience I discovered that in proportion as I was a looker-on at things, I did not experience these disagreeable mental conditions. When I was actively interested, I unconsciously identified myself with the struggle, the victory, the defeat.

The remedy, then, was evidently to gain and preserve an impersonal sense of things. But though I perceived this clearly, I was seldom able to put it into practice. I could not remain perpetually a mere spectator in life, and none of my other attempts seemed at all successful. So it was a great joy to find that Christian Science offers us among its many helpful gifts an opportunity to learn how to be in the midst of a conflict but not of it. It does this by showing us that there is never any conflict except the suppositional conflict in human consciousness between truth and error, or between the right idea and the false human concept. As we ourselves are neither the true nor the false concept, though we may manifest each in turn, it is clear that the conflict is a purely impersonal one, never between us as individuals, and with never a personal victory or a personal defeat. Indeed the true "we" is never really in it at all.

This understanding, if made practical, will so free us from a personal sense of things that when we are happy enough to perceive the right idea and ally ourselves with it, and are swept on by the might of Truth to victory, or when we are allied unfortunately with the false concept and inevitably suffer defeat, we are protected from any sense of self-importance in the working out, from any self-glorification in the victory, and from the sting of personal humiliation in the defeat. We know that it is not our victory, but the triumph of the right; not our defeat, but the downfall of the wrong. We can even rejoice in defeat, since we are thereby freed from one more erroneous belief.

Digitized by Google

Immediately, however, this brings the question, But are we not sometimes overcome by the wrong adversary? We all remember that we have been at times confident that we were on the side of the right, and yet we have suffered defeat. When this experience comes to us, if we are really as right as we think we are, and do not need to correct our own view of things, we are placed in a very trying position, which will test us pretty thoroughly. Not being able to comfort ourselves this time by knowing that whatever has come to us, Truth has won and error has been overcome, we are exposed to the temptation to make it all very personal, to become resentful, and worst of all, through material efforts to bring about what we believe to be right.

Christian Science shows us that though this is a trying position, yet it gives us a splendid opportunity for growth, enabling us to learn that excited human activity is not the right way to meet defeat, and to prove that quiet resting in the power of right is the true and all-sufficient remedy. Victory never remains long on the side of error, even to human sense. The ultimate triumph of the right idea is certain. It may not be today or tomorrow, but it will surely come. And it does not need our puny help to bring it about; it will come of its own power. "Truth is used to waiting," Mrs. Eddy writes (Miscellaneous Writings, p. 268), and can we not well afford to wait patiently with it for the right time for it to be manifested? All it requires of us is to recognize it and trust it. But let no one think that this recognition and trust is a merely negative or passive state of thought. On the contrary, to gain and maintain this right attitude demands the most active and intelligent thinking of which we are capable.

If we do this, if we turn away from self and material measures, and stand with expectant, uplifted thought awaiting Truth's appearing to all concerned, filled with love even for those who to our sense seem to be in error, there will come to us, even in momentary defeat, a serenity and sweetness that passes human comprehension. We shall hold our peace, because we know that righteousness reigns.

"I have overcome"

GRACE SQUIRES

EVERY Christian Scientist needs to watch his own attitude toward his individual problems, lest his view-point become perverted and a too close focus on self exaggerate his struggle and blind him to the grand ultimate, namely, to be able to say as did the Master, "I have overcome the world." The Ponce de Leon spirit of personal quest is a far cry from the sublime selflessness of the Christ, and if we would attain the one we must forego the other.

The bitterness of discouragement that one sometimes feels is often indicative of a loss in which self figures too obtrusively, sweeping the ultimate of righteousness and spiritual understanding from his effort and vision. We place too much weight on temporal peace, and too little on the understanding of God, which is life eternal. One's spirit toward his demonstration of Christian Science is somewhat analogous to that of the woman of Samaria,—"Sir, give me this water, that I thirst not, neither come hither to draw." Such a one sometimes resists the labor of drawing, and sits footsore and thirsty beside a well of deep water. This sloth of mortal sense that would escape individual effort puts a low price on salvation, yet its price proves its grandeur.

In "Miscellaneous Writings" (p. 269) we read: "Christian Science may be sold in the shambles. Many are bidding for it,—but are not willing to pay the price." Christ Jesus said, "Labor . . . for that meat which endureth unto everlasting life," and this discernment that there is a price, together with the willingness to labor for it, discounts at the start all discouragement and self-pity. In each problem one sees God's victory rather than personal discomfort, and measures his effort to that end.

Instead of feeling that each problem which confronts us is a sorry failure indicative of an ignorant application of our faith, we may make a far better analysis of the situation, one which is well illustrated in "Pilgrim's Progress." In his journey to the Heights, Christian met the lions and passed them. Later he fell into the Slough of Despond and waded through, and still farther up he wrestled with Giant Despair and overthrew him. For those who climb there will be lions, and it is far better to climb and pass them than to sit idling in the valley. They will sooner or later be passed by each and all, and if one is passing them now, should he rejoice, or despond? If on the Heights stands One whom you love with all your heart and mind and strength, will you count the cost of the journey, or feel that innumerable lions can ever discount the joy of reaching those "everlasting arms"?

The only time that Christian failed to climb was when he found a pleasant spot, and then he fell asleep. Shall we climb, or sleep? We often put too high a price on peace; and those who have applied Christian Science for some years know that the supreme spiritual victories they have gained have not been won in pleasant valleys or in slumber. We are privileged to place our own price on individual circumstance, and if in each problem we see victory and not failure, if we know that this particular lion would not have been met unless we had climbed, we shall endure, "as seeing him who is invisible," and press on. Christ Jesus said, "Be of good cheer; I have overcome the world," and Christian Scientists are under orders to follow him.

It is the price one sets on what he is climbing for that nerves endeavor. If it is only "self," one's personal ease and exemption, he will have an exhausting and defeating climb. If he climbs to reach infinite good, glad to wrestle with every obstruction because he knows his victory brings him nearer, he will not climb in vain, nor self-pityingly count its cost. In scorn for miserable aims that end with self, he will drink with his Leader the "living waters," as we read in "Miscellaneous Writings" (p. 207), of her "life-purpose,—to impress humanity with the genuine recognition of practical, operative Christian Science."

The Manual

FRANK B. HOMANS

AMONG the first things a person does when he joins an organization, social, political, or fraternal, providing this has not been previously done, is to acquaint himself with the rules or by-laws of that body, his natural desire being to avoid violating the regulations. If this is supposed to be requisite in secular affairs, how much more essential it should be in religious matters. By-laws are commonly considered dry, uninteresting reading, and to familiarize one's self with them is thought to be more in the line of duty than of pleasure.

Christian Scientists, however, should not be designated eccentric or foolish when they say that the by-laws formulated by Mrs. Eddy in the Manual of The Mother Church are neither dry nor uninteresting. Contrariwise, this book can and should be studied many times by every Christian Scientist, and this may be done with enjoyment and profit in view of the fact that it contains so much valuable instruction, not only pertaining to church life but also to daily living. Its importance as a reference and guide increases with use and study.

Digitized by Google

It would seem like presumption to select any one paragraph from the Manual and say it was the best Mrs. Eddy ever wrote. It would nevertheless be difficult to choose one more far reaching, or more applicable to daily needs, than "A Rule for Motives and Acts" (Art. VIII, Sect. 1), which begins, "Neither animosity nor mere personal attachment should impel the motives or acts of the members of The Mother Church." Neither our likes nor dislikes, but Principle, should govern us in all we do. How necessary it is that this rule should guide every member in a church business meeting, especially when voting for new officers, but more particularly for the readers. No question of human personality, high social standing, class association, popularity, or ability to present a good appearance should influence one's thought. The only question should be as to which persons are best fitted spiritually and otherwise for the office. The reason for our choice, as given in the Manual (Art. III, Sect. 1, and Art. II, Sect. 2), may well be pondered: "That the mental atmosphere they exhale shall promote health and holiness, even that spiritual *animus* so universally needed;" and that they shall be "exemplary Christians and good English scholars." No sense of pique, resentment, jealousy, or prejudice should prevent us from exercising clear, honest, unbiased judgment in making our choice.

The "Rule for Motives and Acts" continues, "In Science, divine Love alone governs man." Here is a statement which if realized in our daily life would render disappointments impossible. Sometimes circumstances occur which are so contrary to our expectations that it is as though some heavy weight had dropped on us, making it almost impossible to rise; we may even wish for the moment that the weight had been a bit heavier and so rendered the rising unnecessary. When these seeming disappointments come, we should try to realize that "divine Love alone governs man;" that we have placed ourselves under this divine guidance, and that we have implicit faith that God, Love, is guiding us. Thus the effect of the bitterest disappointment may be destroyed. The rule goes on: "And a Christian Scientist reflects the sweet amenities of Love, in rebuking sin, in true brotherliness, charitableness, and forgiveness." If this were done, quarrels and disputes would be impossible. The harsh, cold, critical attitude in viewing mistakes and errors is neither lovable nor the reflection of Love.

The rule ends with these words: "The members of this Church should daily watch and pray to be delivered from all evil, from prophesying, judging, condemning, counseling, influencing or being influenced erroneously." Every word of this sentence is a most imperative command. It requires very wise as well as constant and careful watching to see that we are not thus being influenced. This is often done mentally. Thoughts are passed along, suggestions made, hints given, and the recipient, being off his guard for the moment, accepts and acts upon them, perhaps to awake later to the realization that he has made a serious mistake. The value of this entire rule is not confined to church work and its members; indeed, if it were used in social and business affairs, it would be a great factor in increasing happiness and harmony. One can easily see why Mrs. Eddy thought it wise to have it read in every Christian Science church on the first Sunday of each month.

In the branch church of which the writer is a member this rule is read at the opening of every board meeting and, in connection with it, four other carefully selected sections are read at the opening of every business meeting. This not only tends to spiritualize thought, but to impress the members with the existence of these by-laws and the need and present profit of obedience thereto.

Selected Articles

[Judge Clifford P. Smith in *Springfield* (Mass.) *Homestead*]

In a sense, Christian Scientists can agree with the preacher who was reported in the *Homestead* as speaking of Christian Science and saying, "One needs no mental healer who has the will to cultivate those states of mind which make for calmness and peace." Although Christian Scientists do not put dependence on human will, they would say that the cultivation of those mental states which make for calmness and peace is of unlimited value to every one who undertakes it rightly; also that his own endeavor, in unity with the divine Mind, is of utmost importance to this end. From the fact, however, that our friend saw fit to deliver public instruction on this subject, we may safely conclude that his proposal to dispense with healers was not intended to abolish teaching or teachers. And since he spoke from a Christian pulpit, we may, I trust, draw the further conclusion that our brother does not wholly reject those parts of the New Testament which declare the possibility of Christian healing and commend this as a Christian service by one person for another.

When the Master directed his disciples to teach he also told them to heal. (See Matthew x. 5-10, where he spoke to the twelve, and compare Matthew xxviii. 19, 20, where he directed them to make disciples of all nations, and made all of his commands universal.) It is to be observed, moreover, that he healed while teaching, and that he spoke of healing as no less related to salvation than is teaching. (See Luke iv. 16-24, especially verse 18; xi. 14-20, especially verse 20; xiii. 11-17, especially verse 16; and x. 1-9, especially verse 9.) For a Christian minister, therefore, to decry or deprecate the function of healing is anomalous. Mental healing, truly considered, is spiritual healing; it is healing by having "the mind of Christ." Teaching or preaching without healing may be nothing better than "having a form of godliness, but denying the power thereof." With regard to men who do not advance beyond this latter position, Paul's advice to Timothy was, "From such turn away."

What is here said draws a contrast; but this is due to the occasion for vindicating the entire Christianity of Christian Science which was furnished by the sermon in question. Seeing that its theme was "Rest," I hope that two quotations from page 519 of Mrs. Eddy's "Science and Health with Key to the Scriptures" may be offered as a helpful bit of teaching on this subject: "God rests in action;" "The highest and sweetest rest, even from a human standpoint, is in holy work."

✧

[Avery Coonley in *Sterling* (Ill.) *Gazette*]

In the Prophetstown department of the *Gazette*, under the caption "Interesting Sermon," were reported some statements made by a minister of that place, setting forth his conception of God as physically personal and material, and as having "died that we might live eternally," also recording his protest against the worship of God as one. In view of the interest in this subject to which you refer, you will be willing, I am sure, to grant me space to draw attention to certain things in the Bible which have an important bearing upon the nature of God with reference to the questions under consideration.

When in the temple at Jerusalem one of the scribes asked Jesus, "Which is the first commandment of all?" the Master prefaced the first commandment with the significant statement, "Hear, O Israel; The Lord our God is one Lord." Then when the scribe undertook to restate this declaration, including in his statement the words, "There is one God; and there is none other but he," Jesus commended the answer, thereby settling the question regarding the oneness of God. As to

Digitized by Google

whether God is a material personality, your readers are invited to consider among other passages Jesus' statement to the Samaritan woman,—"God is a Spirit." The Bible teems with declarations inconsistent with the theory that He is a bodily or material being stationed in a locality called heaven, while the Scriptures can be harmonized on the theory that God is Spirit.

The belief that God is a physical person and that He died to save men, which obtains with some religionists, our critics among them, evidently arises from assuming Jesus to have been God. This assumption, however, is inadmissible in the light of Jesus' own words. Jesus never said that he was God; indeed, he called himself "a man that hath told you the truth," and he virtually denied that he was God, for to a certain ruler who addressed him as "Good Master" he said, "Why callest thou me good? there is none good but one, that is, God." He made numerous statements which preclude the theory that he was God, and none that require this belief. If these declarations about God, made by the Founder of Christianity and emphasized in the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, were true then, they are true now, and they offer all the hope, comfort, and salvation that mankind needs or ever has had. Our critic implied that Christian Scientists were to be criticized for "tearing down" something, and to be pitied for missing the saving grace of the Bible.

Christian Scientists have no dispute with other denominations, and in going earnestly and happily about their own regeneration and salvation, they are tearing down nothing that is true; and in replacing their false beliefs with the truth about God and man, they are interfering with no one. Incidentally they are putting the correctness of their understanding of God to the very practical test of depending upon it for the healing of disease as well as for the relief of sorrow and sin, and with notable success. This is certainly building up and building along all the lines commanded by the Master, who sent out the disciples not only to preach the gospel, but also to heal the sick.

Surely no one is to be pitied who is claiming and in large measure receiving the protection so abundantly promised in the Bible. In fact, it has been a subject of remark from one end of the country to the other that Christian Scientists are a contented and happy people, and the reason is not far to seek. It is because they are learning to say of the Lord in the words of the psalmist, "He is my refuge and my fortress: my God; in him will I trust."

✧

[Daniel M. Ely in *Basil* (Ohio) *Record*]

Every Christian Scientist welcomes an honest investigation, for it will prove to the satisfaction of any earnest seeker that Christian Science is founded on the teachings of Jesus. The critic's use of references from Mrs. Eddy's writings which are separated from the context is unfair, and only serves to show the injustice of basing an argument upon detached sentences when the full context would bring out the standpoint of the author.

The teachings of Christian Science are clearly set forth in its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and these teachings are based not only on the words of Jesus but on his works as well,—works which he said his followers should do also. This Science teaches that God is Life, Truth, Love, Spirit, omnipotent, omniscient, omnipresent; that man is the image and likeness of God, and therefore is spiritual and not material. It is to the spiritual man that Mrs. Eddy refers when she says that man is incapable of sin, and not to the material and mortal man, the man that is "born of a woman" who, as Job declared, "is of few days, and full of trouble." Jesus referred to the material man in these words: "Ye are of your father the devil, and the lusts of your father ye will do." It is this material man who, as Paul says, is governed by the "carnal mind," which "is enmity against God."

Christian Science teaches that we pay to the utmost farthing for every sin; that we can only escape from sin and suffering through Christ, "the divine manifestation of God, which comes to the flesh to destroy incarnate error" (Science and Health, p. 583); and that sin is never forgiven or its penalty removed until forsaken. If the world would accept the standard of marriage as set forth in the wonderful chapter on Marriage in Science and Health, divorce would be unknown, and future generations would express better health and higher morals. On page 60 we read, "Marriage should improve the human species, becoming a barrier against vice, a protection to woman, strength to man, and a center for the affections."

Throughout the entire world today there are thousands who have been healed through Christian Science, and these are thankfully spreading the joyful tidings that now, as aforetime, God is an ever present help, and that He healeth sickness as well as sin. The great growth of Christian Science is attributed to the fact that it proves its teachings by "signs following." Christian Scientists are earnest and prayerful students of the Bible, and in their text-book they find a "Key to the Scriptures" which unlocks its treasures, giving them a clearer understanding of God and His Christ.

✧

[From an editorial in *Greensboro* (N. C.) *News*]

Is there a man living who is interested in things spiritual, ethics, the effect of intellectual development upon faith in the creeds of the orthodox, who has not wished that he might take up the Bible, or at least the New Testament, as a book fresh from the press? What would not one give to read the story of the Christ with mind mature but wholly free from knowledge of creed and controversy, of debate and dogma? All of us have had teaching and preaching,—some of it leading, much of it misleading. While it is impossible to make the narrative of Christianity as a tale that is untold, one may by an effort of the will banish prejudice and preconceived ideas, and read with a determination to let the doctrines of the twentieth century influence one not at all,—to be his own interpreter of Scripture.

Therefore let us take our Testament in hand as a new book,—and preferably The Twentieth Century New Testament. This edition is one prepared by and for the orthodox, and is simply the Testament expressed in the simple diction of the day. It is indented, after the fashion of modern text-books, with marginal notes setting forth the subjects of the paragraphs. Nothing is omitted, nothing added on; sincere Calvinists, Baptists, or Methodists may read with us and experience no shock to the stability of their creed, for to many it is a familiar volume. But to us it seems they study it with senses drugged or deadened by the theology imbibed steadily since childhood.

Now turn to the gospels. Almost every page has in the marginal index, "The cure of." Sometimes these words occur three times upon one page. One would almost fancy Christ came into the world to heal the body, losing sight of his great spiritual mission. This is not a Christian Science article, nor is the writer a Christian Scientist; but surely the mind, when freed from previous doctrine, will admit that physical healing was a large part of the work of the compassionate Lord. Today, as nineteen hundred years ago, mankind groans under bodily infirmities and seeks after every eminent

Digitized by Google

physician, any marvelous medicine. Our Christian Science friends have got hold of a great truth, and with it have drawn away thousands from the evangelical fold. For Christ did not claim to be the only earthly healer; he gave to his disciples the same power he possessed, even to the raising of the dead, and declared his followers should do all that he did, and more.

It will not do to say the times have changed; a world religion must be true yesterday, today, and forever. It is the belief of many that we are on the verge of a spiritual awakening; that we are living very close to the time of revelation; that the unseen world is ready to open its gates to the sincere seeker after truth; that closer, more honest study of the Bible will set light to our feet, and that we may find the way. If this be true, and deaf, dumb, and blind we stumble on, what wonder that the angels weep!

✧

[Duncan Sinclair in *Paisley and Renfrewshire Gazette*, Scotland]

It is a long time since we read anything so palpably weak and misleading in the nature of a criticism of Christian Science as that published in a late *Gazette*. Not one quotation purporting to be taken by our critic from Mrs. Eddy's book, "Science and Health with Key to the Scriptures," is accurate. Bits of the book, which has to be read as a whole to be intelligently comprehended, are either misquoted or torn from their contexts. Indeed, we utterly fail to identify this school of criticism. Surely it cannot be a product of these modern days, when truth is supposed to be preferred to dogma and righteousness to creed. This critic assures your readers that many Christian Scientists are "respectable, intellectual, and honest members of society." It matters very little what is said about another; what really is of concern is the understanding of good which a man possesses, for that defines the honorableness of his position in society.

Christian Science is not "unchristian, antichristian, or contradictory and absurd." What is it to be Christian? To be Christian is to be like Jesus the Christ, the Founder of Christianity. To be like Christ Jesus is to think like him and to act like him. It is generally admitted by Christians that the Master knew more about God, "the Father," than any other who has lived on earth, and that because of this knowledge he was the purest and the best of men. Christian Science teaches that God is Truth, Life, and Love, so that the Nazarene owed his power to his spiritual understanding of Truth, Life, and Love. It was this spiritual understanding of God which enabled him to heal disease of all kinds and to forgive or destroy sin in the human consciousness.

Christian Scientists are endeavoring to obey the commands of Jesus by healing sickness and sin as he did; and they know well that this is possible just in the proportion that they possess "the mind of Christ," possess the same understanding of Truth that he did.

In Christian Science God is declared to be infinite Mind, Soul, or Spirit, infinite good. If God is infinite Mind, or Spirit, then the real creation is spiritual; that is to say, the real universe is the spiritual manifestation of Mind. It is this spiritual creation which is described so wonderfully in the Elohistic version in the first chapter of Genesis. But Christian Science holds further, that since God is infinite good, evil, which purports to be good's opposite, is unreal in the absolute sense. Not for one minute is the endeavor made to deny that mortals believe in the reality of evil and that their thoughts of evil germinate into sinful acts. So long as mortals believe that evil is real, just so long is it real to them, in exactly the same way that a child who believes that twice two are five will continue to act on his belief until he learns better. If evil were a reality, it would be part of the divine consciousness, and would accordingly be indestructible or eternal.

In Science and Health (p. 207) Mrs. Eddy writes: "God is not the creator of an evil mind. Indeed, evil is not Mind. We must learn that evil is the awful deception and unreality of existence." Why should it be thought wrong to be logical? Since God is infinite good, surely it is the duty of every Christian to allow his thoughts to dwell on good and not on the opposite of good, so-called evil. What would happen if the world as a rule and not as the exception were striving to realize good as the omnipresent fact? Would not its hatred give place to love, its jealousies and envyings to brotherly kindness, its bestial tendencies to purity, and its fretful fears to trustfulness and peace? Assuredly this would happen.

Christian Science is today bringing to the world the greatest consolation the world has ever received. Its message is not the dry-as-dust speculative theory of the empirical philosopher, nor the dead letter of formalism, nor yet the stifling dogmatism of an obsolete orthodoxy. The message of Christian Science is the message of Jesus the Christ in all its tenderness and simplicity. It is the knowledge of Truth, of the divine Principle, Love, aflame with the potency of infinite good; and the day is fast approaching when this same knowledge of God will have covered the earth "as the waters cover the sea."

✧

[Carl E. Herring in *Norfolk* (Neb.) *News*]

Jesus proved his mission on earth by destroying evil, and in Matthew he says, "I am not come to destroy, but to fulfil." Clearly, evil is not of God, for if so, it would contradict both the words of Jesus, that he came not to destroy, as well as his works in the destroying of sin, sickness, and death. If evil is not of God and is real, we must look for some power outside of God, and yet we read in John, "All things were made by him; and without him was not any thing made that was made." Surely, then, we have no Scriptural authority for the creation of anything good or bad that was not created by God; moreover, in Genesis it is said, "God saw every thing that he had made, and, behold, it was very good."

In order, therefore, to accept sin and evil as real, we must contradict the Scripture declaration that God's creation is good; deny the gospel statement that God made all things; conclude either that Jesus did destroy in the face of his avowal that he came not to destroy, or (possibly as a last resort) that God created evil and Jesus destroyed it, and in doing so was fulfilling his mission, and that taken altogether evil was good. We cannot conceive of any such tortuous process of reasoning being required of us, and yet it is necessary the moment we regard evil as a reality of God's universe.

✧

[Charles W. J. Tennant in *West Briton Cornwall Advertiser*, Truro, England]

An interesting letter from a correspondent contains the following statement: "The fundamental fact on which the whole structure of Christian Science is based is the denial of matter, the negation of the material." Now I think it will be conceded that a negation can never be the basis and fundamental fact of anything. One would not say that the fundamental fact on which the principle of the conservation of numbers is based is the denial that two and two make five. Christian Science is based on the fact that God, Spirit, is infinite, All. From this arises the necessary corollary that matter, the opposite of Spirit, must be a suppositional negation of Spirit, and hence unreal, in the absolute sense.

Editorial

"Words, words, words!"

"WHAT do you read, my lord?" the sage Polonius asked of the king's son. And Hamlet's reply, "Words, words, words!" comes pertinently to thought when, as occasionally happens, there appears at the editorial desk a copy of the so-called "endless chain prayer," which still finds circulation with doubtless well-meaning but certainly ill-informed people. For at least a generation, and perchance even longer, this meaningless string of "words, words, words" has been going the rounds, because here and there it falls into the hands of some one who, awed by the implied penalty or lured by the equally vague promise of "some great joy," hesitates to "break the chain," and this despite the fact that the fraudulence or absence of authority for this "prayer" has again and again been exposed and disclaimed in the newspapers, and that the sending of a threat through the mails—for that is what it practically amounts to—is in direct violation of the law of the land.

In view of the by-law forbidding the use of formulas (Manual, Art. VIII, Sect. 9), there should be no need of cautioning our readers against assisting in the circulation of these anonymous documents, and yet they are more often than not the victims of this practice, being selected as the ones most likely to be interested, because of their well-known belief in the power of prayer. In these stirring times the very thought that some good may possibly be accomplished even indirectly by these "prayers" makes strong appeal, and the unwary may be deceived thereby; but there is only one disposition to be made of these and all other anonymous documents as well, and that is to destroy them immediately. Their very anonymity stamps them on the face as worthless, for he who has good thoughts and true to bestow on mankind is ready to assume the responsibility attaching to them by signing his name thereto.

Remembering too the Master's counsel that when we pray we are not to use "vain repetitions, as the heathen do," we shall not be misled by these appeals. One earnest prayer to God, such as Jesus prayed when he sought to bless mankind and which he had the assurance was always heard by the Father, is of more avail, if we would invoke the infinite blessing and protective care, than a million "copies" of "words, words, words!" Who that has faithfully studied the inspiring chapter on Prayer in Science and Health could for a moment think that the omnipotent and ever present God could be importuned by a meaningless jumble of phrases such as these so-called "chain prayers" convey!

We can never be grateful enough to the beloved Leader who taught us that "the prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love;" and that "what we most need is the prayer of fervent desire for growth in grace, expressed in patience, meekness, love, and good deeds" (Science and Health, pp. 1, 4). It is this kind of prayer, genuine prayer, that the world in its sorrows and distresses needs and is waiting for with eager longing, and it is because Christian Scientists everywhere, each in the measure of his understanding, are trying to give expression to this prayer in love to God and daily service to their fellow men, that despite the hovering clouds of war the world is a better place to live in today and we are far nearer to a realization of the kingdom of God in the hearts of men than we were a half-century ago.

There is no better way to lessen the weight of the world's woe than for each one of us, as the opportunity serves, to manifest to our neighbor, our brother, the love that is a reflection of the Love divine. Every hurt that is healed, every tear that is wiped away, is that much of evil overcome, that much of joy and gladness bestowed in fulfilment of the commission imposed on every follower of the meek and lowly Saviour of mankind; namely, "to preach the kingdom of God, and to heal the sick." There is, there can be, no higher duty, no greater reward.

ARCHIBALD MCLELLAN.

The Voice from Heaven

IN the book of Revelation we are told that John heard "a great voice out of heaven" declaring the ever-presence and unbroken harmony of God's kingdom. To many Christian people this divine utterance means a past event, something which the apostle heard while in Patmos, and which dealt with conditions to be realized in the far future if on this side of the grave; but not so is it understood in Christian Science. Those who accept this teaching are convinced that God is speaking to men all the time; the only question is how many hear and heed the divine utterance. Throughout the Scriptures we are told of many who heard the voice of God and were guided thereby. Respecting this Mrs. Eddy says (Science and Health, p. 308), "The Soul-inspired patriarchs heard the voice of Truth, and talked with God as consciously as man talks with man;" and in one of our dearly loved hymns by her (Hymnal, p. 237) are these lines:—

I will listen for Thy voice,
Lest my footsteps stray.

Every student of Christian Science knows that unless we do this, no real progress can be made.

As we read in the twenty-first chapter of Revelation the message which John heard, we find the declarations of truth given out in Christian Science to be wonderfully like it. The voice from heaven said that God dwells with men and wipes away "all tears from their eyes." Then follows the declaration which mortal mind so stoutly resists, but which is of such vital importance to humanity: "There shall be no more death." Christian Science teaches that God is Life, and in view of the divine ever-presence there can be no place for death. Christ Jesus was most insistent that his followers should lay hold upon eternal life and nothing less, for while the belief in death lingers in human consciousness it is sure to express itself sooner or later in pain and disease. As we follow farther the declaration from heaven, we are told that there shall be no more pain, and the explanation is, "Behold, I make all things new."

If one who is struggling with a sense of life in matter, with its attendant fear and suffering, possibly in an acute stage, will but listen for the "great voice" which John heard, and realize with the aid of Christian Science that every word of the message is for him individually no less than for all humanity, very soon for him the "former things" will have passed away. If he is athirst, oppressed mentally and physically by what Shakespeare has called "life's fitful fever," the cooling water is at hand. If he thinks himself too weak perchance to reach out for it, divine Love says, "I will give unto him that is athirst of the fountain of the water of life freely." Not a cupful, but a full draught from the fountain itself. Then he is ready to overcome all that is unlike God, and to trample down the mortal beliefs of sin,—malice, impurity, sorcery, idolatry. Having done this he is no longer "fearful;" but he must be faithful if he would take the next step and talk as did John with an angel, commune with one of

Mind's spiritual ideas. When he does so he is lifted up to see the city which hath its foundations in reality and which is beautiful beyond all that material sense can conceive. Its gates shut out sin, disease, and death and enclose all that is known of God and that blesses His children, its light radiating throughout the whole universe of God.

In the epistle to the Hebrews we read, "See that ye refuse not him that speaketh." Then follows a solemn warning against turning away from Him "that speaketh from heaven." Of old the psalmist said that when God "uttered his voice, the earth melted." Our part is to listen, then to obey, and whatever the manifestation of error it will melt away at the mandate of Truth. Christ Jesus rejoiced that God heard him always, and so shall we when we listen and obey as did he. What the poet calls the "harsh noises of our day" will then be powerless to disturb or to mislead us; nay, they will cease forever when all are guided by the voice from heaven!

ANNIE M. KNOTT.

World Fraternity

ON page 467 of Science and Health Mrs. Eddy has said that "war will cease and the true brotherhood of man will be established" when we come to understand that all men have one God and Father. This thought addresses itself with peculiar significance to present world conditions, reemphasizing as it does the teaching and example of Christ Jesus. As the immediate outgrowth of the spiritually grounded fraternalism which he exhibited and called forth, his disciples were led to declare for one universal and undivided fellowship in love. The great Teacher had shown himself entirely free from the bias of racial prejudice and sectarian pride and had ministered to all classes of men under the impulsion of a spiritually intelligent affection. He knew no man after his earthly antecedents or circumstances, that is, "the flesh," but only after the spirit.

This vital Love-life lived among them so impressed his followers that their first act when they came together in fraternal unity was the appointment of deacons who were to care for those who might be in any need, and that without regard to their nationality, previous faith or condition. Thus the very heart of brotherhood, the church within, found spontaneous, all-inclusive expression in the church without. This fraternalism had in view that administration of justice for which Moses sought to provide in his economic legislation, and its approval of God was surely registered on the day of Pentecost, when, as we read, the disciples were "filled with the Holy Ghost," and declared the "wonderful works of God" in terms which led even the barbarians among them to rejoice.

This splendid Christian brotherhood went down when ecclesiasticism entered upon its career as an earthly power and accepted the caste discriminations of the world; and with the passing of the years the far removal of the bulk of Christian believers from conscious at-one-ment with the spirit of the primitive church in this regard has found colossal expression in human history. The phenomena of sanguinary strife are merely symptoms which witness to the rule of jealousy, envy, hatred, those mental states which mark the absence of Christian love; and in so far as these conditions are permitted to rule in human hearts, the adequacy of Christianity to meet the social need is practically denied. We may still regard Christian faith as equal to the solution of the individual problem, but in so far as we are content to submit international issues to the determinations of war, so far we are certainly declaring for the failure of our realization of the fundamental teaching of Christ Jesus.

This removal from the spirit of the brotherhood which he inaugurated is no less clearly manifest, surely, in the economic conditions which exist in all Christian lands today, and against which Christian people have never entered a united and effective protest. The involuntary poverty which is found in all our cities and which eventuates in the untold suffering and degradation of innocency, is a pitiful commentary upon the absence of that genuine love for our suffering brothers which would seek earnestly and intelligently to remove every disability for which they are not responsible.

In Christian Science it is made clear that this failure of the church without is directly attributable to the absence of the church within, and that before wars can cease and economic wrongs be righted the heart of the Master's fraternalism, a genuine love for all mankind, must be gained. It further teaches that we cannot have either a right sense of man or a savingly compassionate love for humanity, until we have a right sense of God. Patriotism not infrequently expresses a degree of selfishness of which its enthused exponents little dream, and one of the greatest and most compelling experiences that can come to any one is the awakening to a love for his brother men which knows no racial, national, or social discrimination. To yield one's heart and hands to the guidance of the Master's spirit of brotherhood is to find an inspiration and a joy that dates a new era for the individual, even as it will for the world, in its blessed consummations.

JOHN B. WILLIS.

Among the Churches

Current Notes

CAMBRIDGE, MASS.—First Church of Christ, Scientist, has increased its distribution of all the Christian Science periodicals during the year just closed. It has been interesting to note not only the welcome acceptance of our literature, but the sincere appreciation of it as evidenced by the loving letters received. The total amount sent out during the year, including subscriptions, has been 4511 *Sentinels*, 491 *Journals*, 258 *Heralds*, 19,596 *Monitors*, 8 pamphlets, 295 copies of Senator Works' speech, and 1675 local newspapers containing lectures on Christian Science. Grateful acknowledgment is hereby given of sincere appreciation for the gift by the Trustees under the Will of Mary Baker Eddy for distribution work shared in by the branch churches.

Literature Distribution Committee.

ALLIANCE, OHIO.—Owing to its steady growth, the members of the Christian Science Society have purchased one of the most desirable properties on the west side of Union Avenue, just south of Market Street. With some alterations the present structure will be used for services and a reading-room. The intention is to build a church in the future. The lot has a frontage of 60 feet upon Union Avenue, and back a short distance is widened to 105 feet, while the depth is 346 feet.—*Alliance Review.*

SEATTLE, WASH.—Preliminary plans for a new edifice for Fourth Church of Christ, Scientist, at the southwest corner of Eighth Avenue and Seneca Street, have been filed with the department of buildings. The cost is estimated at two hundred and fifty thousand dollars. The structure will have an auditorium with a capacity of twenty-five hundred persons and a Sunday school room with a capacity of fifteen hundred persons.—*Seattle Times.*

Digitized by Google

DURBAN, NATAL, SOUTH AFRICA.—While the sale of literature for the year ending Oct. 31, 1915, has not been equal to last year's splendid record, the demand has been steady and continuous, the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, in particular being eagerly purchased. The demand for *Sentinels*, *Journals*, and *Quarterlies* has increased. There have been sold 94 copies of Science and Health, 67 copies of Mrs. Eddy's other works, 30 *Sentinels* (per week), 20 *Journals* (per month), 212 *Quarterlies* (per quarter), 25 Hymnals, and 429 pamphlets. Literature has been distributed as follows: 1064 *Sentinels*, 196 *Journals*, 12 *Heralds*, 1513 *Monitors*, 215 pamphlets.
Correspondence.

GALESBURG, ILL.—A mortgage of five thousand dollars on the edifice of First Church of Christ, Scientist, has been released, and the building, valued at ten thousand dollars, now stands free from debt. The indebtedness has been paid during the past five years by a membership of less than one hundred people. The church has a most desirable location. It is situated at the southwest corner of South and Cedar Streets. Plans are being formulated to build a new edifice in the near future.—*Galesburg Mail.*

FERGUS FALLS, MINN.—On Dec. 24 the Christian Science Society purchased the north 100 feet of the lot in Reserve 64 on the corner of Summit Avenue and Whitford Street, better known as the old Presbyterian Church site, and expects to erect a house of worship in the near future. The grading of the lots will begin early in the spring. This property borders on one of the most beautiful streets in the city.
Fergus Falls Journal.

SAN DIEGO, CAL.—During the year 1915 there was sent out from the distribution office of First and Second Churches of Christ, Scientist, working jointly, 80,415 pieces of literature, showing a gain of more than 100 per cent over the previous year. This total includes 13,832 *Sentinels*, 1619 *Journals*, 419 *Heralds*, 53,726 *Monitors*, and 10,771 pamphlets, documents, and reprints from local newspapers.
Literature Distribution Committee.

DECORAH, IOWA.—Gratifying growth has been experienced by the Christian Science Society. Jan. 26, 1916, will be the first Sunday of the society as a branch of The Mother Church.—*The Decorah Journal.*

BUCYRUS, OHIO.—First Church of Christ, Scientist, laid the corner-stone of their new church building Dec. 10, 1915. Plans are being made to dedicate the church in the spring of 1916.—*Correspondence.*

Admission to Membership in The Mother Church

The next admission of candidates will be June 2, 1916. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 10, 1916.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

Dublin, Ireland

A lecture on Christian Science by Clarence W. Chadwick was delivered in the Abbey Theater to a large and appreciative audience, representative of the leading professional and other classes in Dublin, as well as visitors from the country. The lecturer was introduced by Maurice Saunderson, first reader, who said:—

Christian Science is being asked today to give an answer to certain vital questions. These questions are: Can I be healed from the sickness from which I am suffering? Can I be relieved from the bondage of sinful habits and desires? Can I obtain surcease from sorrow and affliction? There are numbered by the thousands, all over the world, those who have found such questions wholly answered through the demonstration of the teachings of Christian Science.

The spirit of inquiry as to what Christian Science teaches is universal, consequently many have come forward to give their ideas on this profound and all-absorbing subject, and the tendency has been too common to decry it. The Discoverer and Founder of Christian Science, Mrs. Eddy, foresaw this, and forestalled it through the establishment of these lectures, so that any honest seeker after truth may hear the doctrine of Christian Science correctly stated, and find if there is not in its teachings a solution to the many perplexing problems which beset us all.—*Irish Weekly Mail.*

✧

Oshkosh, Wis.

F. C. Knebler, in introducing George Shaw Cook, who lectured on Christian Science, said in part:—

There never was a time in the history of the world when we needed more than now a realization of the universal and divine relationship or brotherhood of man, and a better understanding of our purpose on earth. We have this evening the good fortune to listen to a discourse on the discoveries and ideas on this important subject as advanced by one of the grandest characters of our age. Mrs. Eddy's religious interpretation given to the world only a few years ago was received with almost as much jeer and ridicule as those of the Christ twenty centuries ago, but Christian Science teaching and healing has spread rapidly, and has been embraced by so many of our best thinking and influential people that today scoff and ridicule are seldom heard. Everywhere we can find earnest efforts for light on the subject; in fact when we meet a stranger who wears an optimistic countenance radiant with perpetual smiles, we feel confident that he must be one of those happy Christian Scientists.

I feel safe in stating that there are many here this evening who have adopted this faith, and others who like myself have given the subject considerable thought and study, but have not yet been able to grasp the meaning of all its teachings. Then there are those who have friends and acquaintances in whom a wonderful change has been wrought through Christian Science. They have seen hatred and malice replaced by friendship and love, passion and prejudice by deliberation and justice, sickness and sadness by health and happiness.
Correspondence.

✧

San Jose, Cal.

The lecture on Christian Science given by Charles I. Ohrenstein at the Victory Theater attracted an audience which filled that spacious structure to overflowing. The lecturer was introduced by R. C. Sheppard, who said:—

One of the lessons we may learn from the Bible is that the

Digitized by Google

desire for a better knowledge of God is the first step toward its realization, and that the consistent endeavor to "follow after righteousness" assuredly leads to a broader vision of the real and true. The world's religious history as recorded in the Bible would seem unquestionably to be a record of the emergence of the human mind out of mental darkness into the light of Truth. At various stages in this history we may note the appearance of certain individuals who, desiring something better than the materialism and superstition of their day, were through their spiritual-mindedness enabled to look beyond the seeming and gain a higher understanding of the realities of being.

Thus we find Abraham seeking "a city which hath foundations;" Moses grasping and proclaiming the fact of monotheism,—"Hear, O Israel: The Lord our God is one Lord;" the prophets declaring the sure rewards of righteousness and the certain punishment of evil, and foretelling the coming of "The Prince of Peace." Later we have the purely spiritual teaching and demonstrations of Jesus and the apostles, and finally, in our own day, through the broader spiritual vision of an earnest follower of the Master, we have the fulfilment of the prophecy of Jesus, "He shall give you another Comforter, that he may abide with you forever."

Christian Science we understand to be this Comforter, and it has come in response to humanity's dire need. Its message reiterates the loving invitation of the Christ, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." Its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is indeed, as its name indicates, a "Key" by means of which the student may gain access to hidden treasures in the sacred writings of the Bible.

San Jose Mercury-Herald.

Lectures to be Delivered

CALIFORNIA—Los Angeles (Fifth Church): Jacob S. Shield, Woman's Club House, 7078 Hollywood Boulevard, 8 p.m., March 30 and 31.

CANADA—Ottawa, Ontario: Bicknell Young, Church Edifice, Metcalfe and Gilmour Streets, 8:15 p.m., March 28.

ILLINOIS—Carterville: Virgil O. Strickler, Second Baptist Church, 7:30 p.m., March 27.

Chicago (Fifteenth Church): Willis F. Gross, Masonic Temple of Austin, Central Avenue and Fulton Street, 2:30 p.m. and 4:30 p.m., March 26.

Farmer City: Virgil O. Strickler, Church Edifice, Main Street, March 28.

INDIANA—Terre Haute: Clarence W. Chadwick, Church Edifice, Sixth and Cherry Streets, 8:15 p.m., March 30.

IOWA—Council Bluffs: William R. Rathvon, Masonic Temple, 8 p.m., March 28.

Fairfield: William R. Rathvon, High School Auditorium, 8 p.m., March 31.

Iowa City: William R. Rathvon, Church Rooms, 211½ East Iowa Avenue, 8 p.m., March 30.

Testimonies of Healing

It is with a grateful heart that I relate the following healing, which took place in August, 1913. My youngest son, a lad of eighteen years, went out cycling on a Saturday afternoon. He had been gone a couple of hours when a policeman called at my home to tell me that the boy had been run into by a tram-car and was then in the hospital, and that I should try to get to him as soon as possible. I had to go seven miles by train to get to the hospital he was in, but before I left home another son telephoned to a Christian Science practitioner, asking her to take the case.

When I arrived at the hospital my son was unconscious, and the doctors told me to remain all night, as he was in a very serious condition and there was a possibility that he might pass away at any time. They told me his injuries were a fractured skull, both jaws broken, a broken nose, and his top lip cut completely through. I sat by the bedside declaring all the time the truth of being, and that God would heal him. The nurse was taking the pulse and temperature every half-hour, and every time there was an improvement. When morning came the doctors told me they thought he would live. On the following Wednesday he sat up in bed and ate ordinary food; on Friday he was walking about the ward, taking food to the other patients who were not out of bed; and the following Wednesday, less than a fortnight after the accident, he was at home. The accident necessitated a full set of teeth from the dentist, but today no one, seeing my son, would know that his face had been so injured.

For this beautiful demonstration we are most thankful to Mrs. Eddy, who has shown us the way.

Mrs. M. Fillingham, Rockdale, Sydney, New South Wales, Australia.

About seven years ago I had a scalp eruption which was supposed to have been contracted at the barber's. My mother had me treated by a Christian Science practitioner, and in three weeks I was completely healed. My mother has sent a testimony of my healing in 1913, which was very wonderful. Today I am as well and strong as ever before. At the time of the accident I had no papers on me giving any clue to my identity, but although not expected to live until the physicians had finished dressing my wounds, I was able to give my full name and address, and also to state that I was a Christian Scientist. I am thankful to God, and grateful to Mrs. Eddy for showing us the Christ-way of healing.

H. C. Fillingham.

✧

It is with thankfulness to God that I write this testimony as to what Christian Science has done for me. I am now nearly seventy-two years old, and for many years I had been a great sufferer from what the doctors called neuralgia, supposedly brought on by exposure while a soldier in the civil war, and for which I tried a good many doctors and remedies. For the last fifteen years or more I had suffered severe pains, so that I got scarcely any sleep, and that only by taking drugs. The doctors advised whisky, and by constant use of it I got to drinking heavily and thought I could not do without it.

I continued to grow worse all the time, and my heart was affected so that I would be unconscious for two or three hours at a time. I was finally advised to go to the Old Soldiers' Sanitarium in South Dakota, at Battle Mountain. I was hardly able to get there, but I went. I however got worse and nearly passed on. The doctors and nurses said that as I had a weak heart I could not live up there long, for the altitude was too high, and that if I wanted to see my family again I had better go home right away. They told me that I could not go alone, so I paid a comrade to accompany me, and it took two men to get me into the house when I arrived there. That was in November, 1914. I only stayed there eight days, and I suffered so much all the time that I prayed to die in order to get out of my trouble.

Some time in February, 1915, a kind Christian Science neighbor sent me a *Sentinel* and a *Journal*, and then loaned me "Science and Health with Key to the Scriptures" by Mrs. Eddy. I commenced to read and study, and it was not long before the light began to shine through the darkness. When I thought about my pains I did not have any. I threw the material remedies away, and also discarded the whisky. I discovered I could get along without either, and I now have no desire for them. I also found that God is an ever present help in time of trouble. The pains came back in about a week, but I kept on reading and studying Science and Health and they left me. Now I do not have any trouble but what I can overcome by reading the book and praying to the Father for help. I am so thankful for the spiritual uplift it has given me, and also for the works that our Leader, Mrs. Eddy, has left us.—George W. Blevins, Surprise, Neb.

This is to testify to the above statement of my husband's condition and his healing through Christian Science. I have also been helped through the study of Christian Science.

Lucretia A. Blevins.

✧

I was brought into Christian Science through a son ten years old. Some other boy had interested him in this teaching by telling him he could be healed and need not be lame. For nine years he had suffered from a tubercular knee, for which he had been treated by the best doctors and had had all other kinds of material treatment. He had undergone three operations and was about to have another, when he asked if we would not try Christian Science. I had almost lost faith in God and knew nothing about Christian Science, but decided to try it for the boy's sake.

When treatment was begun, my son's condition was such that he did not play, eat, or take any interest in things about him, and his leg was drawn up so he walked on his toe. There were five openings which were discharging, so that I had to bandage the leg three times a day. After the first few treatments the boy began to eat and take an interest in things again, and in a short time the foot was down with the other one. He improved right along, but his healing was slow. I am now sure it was because of my unbelief, and as soon as that was overcome he was completely healed. He attends the Christian Science Sunday school and is learning to help himself in many ways. He is perfectly well and healthy, also rides a bicycle. It seemed to me I was in another world when I saw he was being healed and could walk and run around like other boys, which was something he had never before been able to do.

Words cannot express my gratitude for all Christian Science has done for us. I used to have throat trouble every winter, but since I have read Christian Science literature and attended the services I have never had an attack of it. We are indeed grateful to God for Christian Science.

Mrs. Frank Groff, Rochester, N. Y.

✧

It is with pleasure that I give this testimony of my healing in Christian Science about three years ago. I had been suffering from uterine trouble for several months, and had been told by two physicians that it would be necessary to go to the

Digitized by Google

hospital for an operation, as they feared poisoning would set in. Although somewhat interested in Christian Science I did not think of applying it to myself, until one night the thought came to me that now was the time to prove my faith in it. Next day I was hardly able to sit up, but I resolved to try Christian Science before undergoing an operation. A practitioner was called, and after a talk with her I felt encouraged. I went to sleep, and in ten or fifteen minutes waked up feeling like a new being. The pain in the head was gone, and I said to my children, "I am healed."

This was the beginning of what proved to be a remarkable demonstration. Conditions were improving, so that I did work I had been unable to do for months, and in about three weeks the final test came. I had not consulted the practitioner since the first week, but had read and studied Science and Health and felt very strong. Then I was taken suddenly one morning with hemorrhages, which necessitated my going to bed. I refused to have a doctor, but asked the practitioner for help, and relief was soon experienced. I seemed to be entering "the valley of the shadow of death," but had no fear, and reassured my family by telling them that all was well. At about four o'clock that afternoon an abnormal growth was expelled, and every discordant condition was overcome as it appeared. I was about my work within a week, a well woman.

Headaches, from which I had suffered all my life, have been entirely removed, while my husband and the other members of the family have also been successfully treated by a practitioner for various ailments that would formerly have meant the calling of a doctor; so that we feel very grateful to have found that the healing which Christ Jesus taught and practised is available today, even as when he was here on earth.—Addie M. Selover, Santa Barbara, Cal.

✧

I feel deeply grateful for what Christian Science has done and is doing for me. I was very unhappy, my home was discordant, and I had reached the place where I prayed to die, since this appeared to be the only thing left for me to do. There seemed to be lack and desolation everywhere, friends proved false, and material pleasures ceased to satisfy. Although I had known of Christian Science, I felt it could not bring happiness to me. Finally turning to God like a tired child willing to be led, and truly saying, "Not my will, but thine, be done," I found peace. Love was not quick to deliver me, for I had to learn through suffering; but when I was grateful for every hard experience I began to see the light. Our home became harmonious and many blessings poured into my life. I have found real friends and what pleasure really is when we live in the realm of Love.

We have had many proofs of God's loving care, and for three years divine Love has met our every need. I wish to express my gratitude to the dear friends who so lovingly helped me, for the periodicals, and for our dear Leader.

Mrs. Harry W. Swengel, Chicago, Ill.

✧

For twelve years Christian Science has been my only physician, and for over eight years the only remedy in my home. Shortly after taking up Christian Science I was plunged into a condition of deep gloom through the passing on of a little daughter, and it seemed impossible to arouse myself from this condition. I took no interest in anything, simply wished to be alone. Then the thought of ending it all continually haunted me, and at times it seemed as if I must yield to this temptation; but some verse from the Bible or some thought from Science and Health would come to me, and by persistently holding it in mind I would be able to overcome the temptation. The permanent healing was slow, as it took about four years' work on the part of kind practitioners and a loving, patient husband; but I am now a happy, contented woman, and owe it all to Christian Science.

In July, 1913, I was awakened one morning with an attack of what is called gall-stones, and the pain was very severe. As I was unable to treat myself, a practitioner was called, and after five hours the pain suddenly left. I ate a hearty lunch, got up and dressed, had no soreness or weakness, indeed none of the after effects that are usually supposed to follow these attacks, and there has been no return of the trouble. My husband was healed of the smoking habit after having used cigarettes for twenty-five years. One of my daughters was healed of a very bad skin trouble, another daughter was healed of blood-poisoning in one of her fingers. After this last healing a new nail formed and no scars of any kind were left.

These are only a few of the healings we have had. For all of them I am very grateful, but far more so for the gradual eliminating of a great sense of fear from my consciousness, for the knowledge that divine Principle will never fail to heal when turned to with love and understanding.

Jennie F. Reynolds, Brooklyn, N. Y.

✧

[Translated from the German]

I am giving this testimony with a sense of deep gratitude for the benefits derived from Christian Science. For years I was under medical treatment on account of a stubborn bladder trouble, but without avail. A friend induced me to try Christian Science at a time when my condition seemed more serious than ever, and the result was that healing took place within a very short period. A year has elapsed, and my healing may therefore be considered permanent. Since then we have been faithful readers of the *Herold* and are deeply grateful to the dispenser of all good for the blessings received through Christian Science.

Karl Bichsel, Mattwil (Thurgau), Switzerland.

✧

I wish to express my heartfelt gratitude for the many and great blessings I have received since coming into Christian Science. Previous to my acceptance of this wonderful healing truth I had been a member of another church nearly all my life, its teachings and doctrine being so firmly embedded in me that it was very hard to conceive of any religion other than my own as being correct. But through the unceasing and patient work of dear friends I finally became interested in Christian Science, and to my great joy I discovered that it was indeed the healing truth taught by the great Wayshower. It is only a year and a half since I came into Christian Science, but in that time I have been healed of many ailments.

Ever since childhood I had been subject to a nervous trouble which was at times accompanied with intense suffering, but this was entirely healed in a comparatively short time. Glasses which I had been compelled to wear for nearly twenty-two years were laid aside through the study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the faithful and loving work of a Christian Science practitioner. Doctors had pronounced the eye condition incurable and said I would have to wear glasses all my life; but I have been without them now for a year and a half and have never felt the need of them in that time. My eyes are constantly improving, and I am sure that the final demonstration will be complete. I have also been healed of the tobacco habit, by which I was enslaved nearly fifteen

Digitized by Google

years. Recently a financial difficulty which had been most trying and discouraging was overcome through Christian Science treatment, and many minor ills have been healed through the little understanding I have gained.

I am indeed thankful to God for all, and my heart goes out full of gratitude to our revered Leader, Mrs. Eddy, through whom this saving truth has been revealed to mankind. I am also grateful for all the Christian Science literature, which is doing so much good. My great desire is so to live in word and deed that I may be found worthy to be called a Christian Scientist and that I may lead others to the truth.

CHARLES A. JOHNSON, Boston, Mass.

✧

Christian Science is a source of boundless blessings to me. It is daily teaching me to know more of God. I had always been told I should trust in Him to help me at all times, but He seemed far away. Christian Science has not only taught me that God is Love, and that divine Love is ever present, but also how to prove it.

The ever-presence of divine Love, to comfort and heal, was proved to me in time of great trouble, when news came to me from India that my dearly loved and only sister had passed on. The shock was at first terrible, but the peace and comfort derived from what I had learned in Christian Science was unspeakable. A great sense of separation brought with it a feeling of extreme loneliness, but during the night, which was spent with my Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, the words of our Master, "Lo, I am with you alway, even unto the end of the world," became a living reality to me. These words brought me great peace and comfort in the light which Christian Science had thrown on them, revealing the ever-presence of the Christ.

Although this experience was two years ago, this understanding has enabled me to feel the omnipresence of Love more and more, and I have never been lonely since. In those dark hours the definition of angels in Science and Health (p. 581) as "God's thoughts passing to man," was a great help to me, for the angels of His presence did indeed bear me up and keep me safe. This experience has been very helpful to me during this great war.

I did not take up the study of Christian Science for physical healing, but have proved it to be indeed the knowledge of the truth which Jesus said should make us free. All my life I suffered from severe colds, but for nearly two years I have been entirely free. For a much longer period I have been able to accomplish my work, which is teaching a class of sixty children, without ever feeling tired or being absent from my post. Christian Science has also given me an added zeal for my work, and here I should like to say how much *The Christian Science Monitor* has helped me. Seasickness, too, has been overcome.

I am very grateful for all our literature. My thankfulness to God for His dear Son, Christ Jesus, as he is apprehended through our Leader in Christian Science, can only be truly expressed in my daily life.

ETHEL JONES, Bexleyheath, Kent, England.

✧

I have had so much help in Christian Science that I wish to tell what it has done for me, in the hope that it may benefit some one else. I came into Science for the healing of bladder trouble, which was overcome by reading and studying "Science and Health with Key to the Scriptures" by Mrs. Eddy. My little girl, nine years old, while at school, had her finger seriously injured. The teacher and children offered all kinds of remedies, but she would have none and came home. I took up Science and Health and read to her and to myself, knowing God was the only power. In fifteen minutes the pain was gone and she was ready for school. The finger did not become inflamed or swell a bit, and a new nail grew which was as perfect as the others.

I have been in Science only one year, but my three children and I take no medicine now, and the power of Truth has cured them of croup, colds, earache, toothache, burns, sores, cuts, and other troubles. My little boy spilled an acid on his hand and a white blister formed all over it. When he came to me I covered up the blister so he could not see it, and in the afternoon there was not even a sign of it. I can truly say that I am thankful to God for all these benefits. Christian Science has also freed me from fear, and I am so grateful to Mrs. Eddy that I am trying to live according to her teaching and to help others.

MRS. ALBERT WILLIAMS, Boulder, Col.

✧

It is with deep gratitude that I speak of the benefits which have come to me through Christian Science. My attention was drawn to it seven years ago by a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, which was sent to me from the church loan library by a friend. At this time I seemed almost overcome with grief and unspeakable anguish, also with fast failing health. The latter did not seem so pronounced, however, owing to the greater mental suffering. A few years previous to this we had met with financial reverses and had almost constant illness in the home. I had long since tried all that relatives and loving friends could recommend, but to no avail; and matters grew steadily worse, until each day was welcomed simply because it meant one day nearer the end. What this would be I cared little, just so it might at least bring freedom from torture.

I had been taught that God sent all, both good and bad, and that He sent these conditions for some wise purpose. At this time, not feeling that I could thank Him and mean it, I ceased to pray. The reading of the Bible left me more or less confused, so I gave that up also. The day came when things were even worse. As far back as I can remember I had secretly longed to know and understand God, and at this time I did so earnestly desire to be led to know the proper step to take, for it seemed necessary to make a change. Suddenly a feeling of peace came to me and a desire for sleep, which I had not had for a long time. I awoke refreshed, and still the rest and peace remained.

The following morning's mail brought the copy of Science and Health. I could scarcely believe my eyes as I read the definition of God (p. 587), and that He was not the author of anything unlike good. Then turning to the Preface I read (p. vii), "To those leaning on the sustaining infinite, today is big with blessings." Right then and there hope sprang up, such as I had never known before, and it seemed that life was just beginning. I clung to this book and read it constantly, for I felt that it contained just what I had longed to know. As a result, my health improved steadily from the first. I was able to lay aside glasses which I had worn constantly for twenty-three years, and have never worn them since or felt the need of them. Furthermore, the pain has left my eyes. I am grateful for this blessing.

The inharmony faded out as I gained an understanding that evil is neither person, place, nor thing, and learned the difference between man as he really is and as he seems to be. This knowledge gave me peace and quiet in the midst of seeming storms. There were times when fear came in and the way seemed dark, but divine Love was ever present to sustain and lead to the light again. Life means joy, for I know that God

Digitized by Google

is good and ever present. The Bible is truly a comfort, since I know that the promises are for us all, and now. I am so glad to know that man is governed by the one Mind, also for the understanding of God and man which Christian Science has given me. I know that God is the ever present source of supply.

I am very grateful for all the blessings that have come to the home, and especially for what Christian Science has done and is doing for my children. I am grateful for having been patiently helped to a better understanding of Truth. I thank God, and am grateful to Mrs. Eddy, who has presented this truth in such a way that we can grasp it, apply it, and get results, and that it is for all mankind.

CLARA MOULTON, Los Angeles, Cal.

✧

From childhood I had suffered from extreme weakness, said to be caused by an abnormal condition of the heart. The culmination was reached in July, 1909, when after a most aggravated attack brought on by calling aloud for assistance, I suddenly collapsed. I do not hesitate to say that I was on the verge of passing away. I beckoned to my sister and whispered to her to call a Christian Science practitioner. Through the help of God, who is our Life, and the excellent work of the practitioner, I was able to get up and walk around the room within twenty minutes. Treatment was continued for several weeks, and now I am able to proclaim with heartfelt gratitude that I am a strong, active girl.

Christian Science is helping me to become more patient, tolerant, less critical and severe, and more gentle and loving. There have been many demonstrations in my home of the power and presence of God, and among the things Science has overcome are typhoid fever, Bright's disease, stomach disorder, toothache, and a structural defect of the eyes. The eye trouble was healed after glasses had been worn for two years. Also an ugly wart was removed from my finger through the understanding of the truth. For these evidences of God's protecting power and love I wish to acknowledge my deep thankfulness. Our loyalty to Christian Science and appreciation of the work of that noble, pure woman, Mrs. Eddy, are best expressed in deeds.

REBEKAH F. MITCHELL, Glencoe, Md.

[Written for the *Sentinel*]

Peace

REMINGTON SCHUYLER

A GRASS-CLAD hill,
The open sky;
I surely know
That God is nigh.

I lie prone, resting
In the grass,
While clouds triumphant,
Stately, pass.

All dark'ning doubts
Have blown away;
I feel God's peace
With me today.

Omnipotent Love,
Boundless and high,
Is with me now,
For God is nigh.

From Our Exchanges

[Prin. W. B. Selbie in *The Congregationalist and Christian World*]

The beauty and simplicity of Christ Jesus' doctrine of God, the rigor and splendor of his ethical standards, his new commandment of love to men, his preaching of penitence and assurance of forgiveness, the wonder of his cross and the power of his resurrection,—these all need to receive new emphasis and expression in the church of today. They cannot be learned from books or attained by any process of reasoning; but they come home to the humble and submissive heart of him who is content to follow the Master's way of service, obedience, and self-sacrifice. It is to the reverent, trustful, and adoring spirit of the disciple that the Lord Christ becomes known as "the chiefest among ten thousand" and the "altogether lovely."

[*The Homiletic Review*]

The world is awaking to this great truth: The democracy of the spirit runs deeper than business, deeper than politics. The industrial evolution, which may well be called revolution, by which the nations have been welded into an economic solidarity, has its counterpart in the great world community of interest in the things of the spirit. We cannot long interchange with other people the work of our hands without discovering that they are men of like passions with ourselves. We have discovered that fair play in commercial dealing must be founded on true regard for each other's manhood, if our trading is to be of permanent value. Having gone so far, we begin to ask each other, Have you no other products for interchange? How about arts, sciences, literatures, religions? When we assert that the past fifty years have witnessed greater progress in human affairs than in all preceding history, we may place at the head of the procession, as the pillar of fire and cloud, this mighty truth: the fatherhood of God, the consequent brotherhood of man.

[*Zion's Herald*]

How much of a technical metaphysician Paul of Tarsus was we do not know, but he was certainly an inspired apostle, and could not have been mistaken when he affirmed not only that the realest things are those which do not appear, but also that the invisible things of a divine working (even the eternal power and Godhead) are to be seen (by the mind which is both scientific and spiritual) gleaming and looming through the phenomenal haze of nature. To the insightful philosopher, as well as to the devout believer, this world is but the servant, as it is the sign, of a higher because a spiritual order; and visible things, so far from discrediting the invisible, possess in themselves but a pseudo-reality, and require for their interpretation and practical completion the eternal realities which constitute the substance of the cosmos and lie behind this wall of sense. Nature, then, is a veil more than it is a vision, and time is a prelude, not a substitute, for eternity.

[Rev. T. Rhondda Williams in *The Christian Commonwealth*]

That knowing which is the result of the divine touch upon the blind eye is a different thing from the knowledge which we gather through study and thought. That spiritual arrest which claimed Paul for a new line of life was as different from an intellectual conclusion as sunlight is from moonlight. Men discuss the subject of prayer,—volumes have been written on it; there are many theories and many arguments for and against. While these are going on, have you in your own experience some indubitable proof of the value of prayer?

Digitized by Google

If you have, you have a place in the cleft of the rock while the storm of discussion is sweeping past. Within that certainty you may shelter; there you may feed the religious spirit and maintain your trust for the days to come.

[John A. W. Haas in *American Lutheran Survey*]

There is a constant deterrent factor of progress in human society. Men tend to go on as they are going. But if truth is to be seen anew, and if new truth is to be found, we need the individual with a high vision and an independent purpose. He must frequently set himself against society. The history of the world is full of the stories of the martyrs to truth. Through them and their vision society has become better. But the origin of what is most valuable in human life has always been found in an individual soul. No scientific discovery was made except through some great scientist; no new view of life was gained except through some original thinker. No higher moral ideal and no deeper grasp of religion ever came to the world except through some great moralist or some inspired prophet. To hem in truth by its social relations is to cause its purpose to cease.

[Clyde Weber Votaw in *The Biblical World*]

Jesus perceived that the actual grounds of duty in every field and at every fireside are spiritual and eternal, and that the commonest life needs the highest inspiration. Therefore he brought the everlasting realities into their normal connection with the ordinary day's work, showing what men should be and do in view of those relations to God and their fellows which take hold on eternity. He suffused morality with religion; he attached every fiber of the human life to God. He is not an argumentative teacher, but the great proclaimer of truth. His teaching is morally axiomatic; if men reject it it is because the teaching does not appeal to them. Jesus was a character-builder, a maker of manhood. The standard and the inspiration of the right life were to be within. He set forth the great principles of faith, love, and service as the essentials of his ideal.

[*The Christian Work*]

The decay of creeds is largely caused by a truer understanding of what faith is. It is not the acceptance of propositions, however true; it is an attitude of the heart and life. We see that the essence of religion is not in propositions any more than it is in church organization. These are necessary and inevitable, but they exist for life, not life for them. The added emphasis on the practical and on the social side of religion is in keeping with the spirit of the age. There may be danger here of making our religion shallow and even of developing a new kind of formalism; but surely there is hope in the modern attitude. It means the end of much false emphasis.

[*The Christian Register*]

The outlook of the great souls who have led the progress of the world, the majestic thoughts of Jesus and Paul, of "the glorious company of the apostles," and "the goodly fellowship of the prophets," all were open and free. They opened outward toward infinity. Eternity did not give too much room and scope for their fulfilment.

[*The Universalist Leader*]

Theology is as necessary to religion as the skeleton to a man, but the man who is nothing but a skeleton is neither ornamental nor useful! Religion is theology clothed with life. Religion is more than an intellectual conviction; it never is itself until it is in right proportion, emotional. The appeal of religion is to the whole man.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

The two pamphlets entitled "Environment and Opportunity" and "The Providence of Good" have been translated into French and are now published with the English version opposite the translation. Each of these pamphlets contains five articles.

"Christian Science: Man's Dominion over Evil," a lecture by Edward A. Kimball, C.S.D., has been translated into Russian, Norwegian, and modern Greek. Pamphlets in these three languages have been published with the English version opposite the translation and are now on sale at prices of our regular pamphlets as shown on the opposite page.

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in countries please refer to page four in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

In a recent address, Col. G. O. Shields, president of the League of American Sportsmen, said: "The cotton growers are suffering a loss of one hundred million dollars a year by reason of the ravages of the boll-weevil. Why? Because the quails, the prairie-chickens, the meadow-larks, and other birds which were formerly there in millions, have been swept away by gunners. The grain growers are losing over one hundred million dollars a year on account of the work of the chinch-bug. They are losing another two hundred million dollars a year on account of the work of the Hessian fly. Both of these are very small insects, almost microscopic in size. It takes over twenty-four thousand chinch-bugs to weigh one ounce and nearly fifty thousand Hessian flies to weigh an ounce. A quail taken in a wheat field in Ohio and examined by a Government expert had in its craw the remains of over twelve hundred chinch-bugs it had eaten that day. Another quail taken in Kansas and examined by another Government expert had in its craw the remains of over two thousand Hessian flies that it had eaten that day. The farmers of the northern states are paying out sixteen to seventeen million dollars a year for paris green to put on their potato vines. A quail taken in a potato field in Pennsylvania and examined by a Government entomologist had in its stomach the remains of one hundred and twenty-six potato-bugs. The quail is one of the most valuable insect-eating birds of its size in the world; and yet there are so-called sportsmen all over the land, thousands of them, who insist on having legal authority to kill every quail they can find during at least three months of each year.

The United States Senate, after four weeks of debate, has passed the Shields bill to provide for development of water-power in navigable waters by private capital. The vote was 46 to 22. Conservation champions fought hard to amend the measure, but without avail. Several senators voted for the bill who had opposed it during the debate. One of them, it is reported, said he considered it bad legislation, but firmly believed it would be amended when it reached the House of Representatives. The bill was opposed by the National Conservation Association. Many amendments were offered by a score of senators, but the bill as passed was changed but little from its original form.

As adopted, the bill permits the construction of dams in navigable waters under licenses issued by the secretary of war, and gives grantees the right to operate power plants for fifty years, after which time the Federal Government may take over the plant after giving two years' notice and paying a fair value, to be determined by the secretary of war and the owner or by proceedings in the United States courts. Regulation of rates and services is placed with the states in which the plants are located, or if interstate commerce is involved, with the interstate commerce commission on appeals, when the states involved are unable to agree on reasonable rates and adequate service. The bill also provides that no works shall be operated in any combination to limit the output of electric power or in restraint of trade.

Investigation of possible uses of the indigenous Osage orange has resulted in the production on a commercial scale of an extract that is now available for the tanning, textile, paper, and other industries in which a natural dye can be used. It is hoped that this will serve not only to relieve the situation caused by a shortage of aniline colors in certain tones, but also in normal times to replace the use of foreign fustic. The dye is the same as that present in fustic, but it is a pure compound, free from the varying admixture of a reddish coloring matter which renders the use of tropical fustic somewhat uncertain. The orange-yellows, old gold, deep tan, olive, and chocolate shades obtained with chromium and iron mordants are said to be equal to if not better than those obtained with the use of fustic.

The attention of the department of commerce of the United States has been called by the president of a large paper manufacturing company to the fact that there is a serious shortage of raw material for the manufacture of paper, including rags and old papers. He urges that the department should make it known that the collecting and saving of rags and old papers would greatly better existing conditions for American manufacturers. Something like fifteen thousand tons of different kinds of paper and paper-board are manufactured every day in the United States, and a large proportion of this after it has served its purpose could be used over again in some class of paper. A large part of it, however, is either burned or otherwise wasted. This, of course, has to be replaced by new materials.

The herring fishermen of Newfoundland have just closed the most prosperous season in many years. The total export of 80,101 barrels of pickled and frozen fish was the largest since 1911, when it amounted to 85,666 barrels. The valuation of this year's catch, $238,710, was $40,000 more than that in 1911. The herring fishery is carried on in the bays on the west coast of the colony. A noticeable instance of the adoption of modern methods was the fact that rowboats, which heretofore had been used extensively in the work, gave way almost entirely this season to motor-boats.

The present waste and possible future utilization of sawdust have been studied by the New York State College of Forestry at Syracuse, where it is found that of the total cut of lumber in the United States 11 per cent, or about eleven billion feet, is wasted yearly in this form. It is estimated that in New York state alone an equivalent of nearly one hundred and thirty-five million board-feet of good lumber goes into sawdust every year. This amount of lumber is enough to build at least two thousand good, substantial frame houses.

Recently Glasgow purchased for £30,000 the estate of Balloch Castle on Loch Lomond-side. The area of the estate is 812 acres, 124 of which are included in Balloch Castle policies, gardens, and lower park, and 116 acres consist of woods and plantations, while 560 acres are comprised in four dairy farms.—What is to be known as Loch Lomond Park covers 200 acres, being the area facing the loch and containing the castle, its policies and gardens, the large grass field between the loch and the castle, the grass field west of Over Balloch farm, and the larger areas under woodland. Other parts of the estate will also be opened to the public. No great alterations will be necessary for the formation of a beautiful and commodious park.

According to preliminary estimates made by the United States Geological Survey, the value of the output of gold, silver, copper, lead, and zinc from Montana mines in 1915 was nearly eighty-seven million dollars, an increase of more than 81 per cent over the total value of output of the same metals in 1914, which was $47,849,747. Though greater quantities of all these metals, especially lead and zinc, were produced, the increase in value was due principally to higher prices.

A new tube plant will be erected at Gary, Ind., by the United States Steel Corporation. The new plant, with other extension work authorized during the last six months, will make a total of about fifty-three million dollars appropriated for new construction. It is estimated that the improvements, including ore docks, ore yards, blast furnaces, converting mills, blooming mills, power station, waterworks, sheared plate-mill, universal plate-mills, butt-mills, job shops, and all auxiliary departments, will cost $25,000,000.

A bank conducted according to the Morris plan is to be organized in Boston, according to present plans, about April 1. It is to be capitalized at $500,000, and it will give small borrowers an opportunity to get money without having to pay exorbitant rates of interest. The Industrial Finance Corporation of New York is to put $125,000 in the Boston bank and the remainder of the capital stock will be furnished by New Englanders. The Industrial Finance Corporation is capitalized at $7,000,000.

For the first time in the history of the undertaking the directors of the Manchester Ship Canal, England, are able to announce a dividend on the preference and ordinary shares of the company. The first dividend of any kind was paid in 1913 on the pre-preference stock. Since March, 1915, the traffic receipts have shown a steady expansion, and past history indicates that once new companies commence to use the canal their adherence and support are maintained.

The department of agriculture estimates the production of cane sugar in Hawaii for the crop year 1914-15 as 646,000 short tons, compared with 612,000 the year before. The area harvested was 113,200 acres, while the total cane area was 239,000 acres. Crop conditions were unusually favorable.

The Chilean minister of industry is giving special attention to the matter of the Santiago-Valparaiso wagon road through Casablanca, with a view to putting it into condition for rapid motor traffic.

United States Senator Pomerene's bill for a uniform bill of lading has passed the Senate.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII March 25, 1916 No. 30

Self-examination

HON. CLARENCE A. BUSKIRK

In the fourteenth century the great Italian poet Petrarch described the conditions of human existence as they appeared to him, and probably his description truly applies to every age and people of our planet. It is a very sad and somber picture; but its study gives one a vivid impression of some phases of the erring activities of mortal mind and may help us in our endeavor to escape from them. The translated passage is as follows:—

"When I consider the instability of human affairs and the variations of fortune, I find nothing more uncertain or restless than the life of man. We seem better treated in intelligence, foresight, and memory. No doubt these are admirable presents; but nature has given to animals an excellent remedy under disasters, which is the ignorance of them. Our intelligence, foresight, and memory often seem to annoy more than they assist us. A prey to unuseful or distressing cares, we are tormented by the present, the past, and the future; and as if we feared we should not be miserable enough, we join to the evil we suffer the remembrance of former distress and the apprehension of some future calamity. . . . We pass the first years of life in the shades of ignorance, the succeeding ones in pain and labor, and the whole in error; nor do we suffer ourselves to possess one bright day without a cloud."

It must be admitted that when we seek to gaze more closely upon the lives of individuals of former generations the lights of history are no better than smoking torches, and the farther we seek to penetrate into the past the more uncertain and baffling becomes their assistance. Yet the pictures of human life in the Old Testament and in other ancient and more modern writings which are preserved to us, as well as other memorials of the past, show us that what are termed the miseries of human existence are always repeating themselves. Nations grow and decay, environment changes, so-called civilization supplants barbarism in part, education partially dispels the shades of ignorance, but the melancholy picture of human error and suffering remains substantially the same, however altered in particulars, and this, as we learn in Christian Science, because material sense is the same persistent deceiver always and everywhere. For the most part mortals spend their time and energies in the pursuit and acquisition of worse than useless things and overlook the abounding sources of constant and abiding joy.

Only as we gain the spiritual-mindedness of Christ Jesus can we escape the tragedy of human fate. Educate mortal sense as we may in the so-called wisdom of materiality, build colleges for the acquisition of material knowledge and railroads to span continents, invent facilities to bear the spoken word through the realms of air, do all the mighty and wonderful things of which human sense may be capable: nevertheless these achievements serve to bring only material ease and riches, while humanity is still left weak, helpless, and miserable as before; enslaved by consuming passions, coiled about by persistent vices like the Laocoon of classic lore. This picture is not overdrawn. That lovable though erring genius, Robert Burns, spoke not only for himself but for every human being when he wrote:—

> Pleasures are like poppies spread,
> You seize the flower, its bloom is shed;
> Or, like the snow-fall in the river,
> A moment white, then melts forever;
> Or like the borealis race,
> That flit ere you can point their place;
> Or like the rainbow's lovely form
> Evanishing amid the storm.

And yet it is apparent that the great majority of men believe that their chief or only source of happiness is in the gratification of material desire.

In Science and Health we read that "we should examine ourselves and learn what is the affection and purpose of the heart, for in this way only can we learn what we honestly are;" and again, that "when false human beliefs learn even a little of their own falsity, they begin to disappear" (pp. 8, 252). Christian Science uncovers the falsity of mortal beliefs, and when one has been illumined through its study, he is able to discern the "affection and purpose of the heart" as never before. Further, he perceives that it is better frankly to recognize one's errors, in order that they may be made to disappear. Conscience is a safer, less indulgent critic when it has been rightly educated, and we are correspondingly less prone to attempt to excuse or justify our unidealities of thought and deed. Thus to educate conscience into authoritative spiritual intelligence, we need to seek diligently and untiringly the right understanding of the great verities of being, the nature of God and His man, and to make this scientific perception a vital part of our daily thought. This is the great gain of studying the writings of Mrs. Eddy.

All men aspire to bettered conditions, but with most of them such aspirations seem to be either wholly or chiefly for material advance. Let us meditate every day upon the Christ-ideal, and let us pass in review our thoughts, fancies, beliefs, hopes, fears, motives, desires, affections, aversions, as well as our conduct, that they may be known for what they are and be brought into touch with the corrective truth. The more we do this, the more alert and intelligent will conscience become, and the more effective our resistance to the seductions of false mortal sense. Then the word of Truth will indeed be a light upon the every-day path that will never be extinguished; a compass which always points true; a source of energy and fortitude which will never fail us.

Beauty and Holiness

ETHEL MUNRO GOSS

Once a woman stood by her kitchen window, weary with a dull day's work in which she had found little inspiration. Lifting her eyes to the western sky, she saw the rich colors of a wonderful afterglow bathing in amber light a slender crescent moon which seemed to drift into the luminous gold of the clouds. The picture was one of such fine and serene beauty that tears of gratitude came into her eyes, and as the meaning of its harmony crept into her thought it glorified

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

the plain little room and made objects and duties alike stand out in a different light. Turning again to her work, order and beauty unfolded under her quickened fingers, and she thought of the quaint promise of the psalmist, "Though ye have lain among the pots, yet shall ye be as the wings of a dove."

The lesson was not soon forgotten, and many times she found that the field of every-day care afforded ample opportunities to express the beautiful, since beauty, spiritually understood, is holiness. In "Miscellaneous Writings" (p. 86) Mrs. Eddy says, "My sense of the beauty of the universe is, that beauty typifies holiness, and is something to be desired;" and in "Rudimental Divine Science" (p. 6) she declares, "All beauty and goodness are in and of Mind, emanating from God."

The world's conception of beauty has too often been chaotic, immoral, material; but all down the ages great and simple hearts in seeking to find God have found in the beauties of nature the manifestation of His holiness. "The heavens declare the glory of God; and the firmament showeth his handiwork," sang the sweet psalmist of Israel. He had held communion with God under the silence of the stars, in the vast quiet of the restful night, while tending his flock in the valley or on the hillside. There he had known the dull routine of his daily task, and there he had found the Lord to be his shepherd. He lifted up his eyes to the hills and found that true help "cometh from the Lord, which made heaven and earth." Something of the gray grandeur of the rocks crept into his songs, also the silent majesty of the stars, the peace and rest of green pastures.

One always feels a sense of vague discomfort in Wordsworth's regret for "something that is gone" from his appreciation of nature when he says,—

> The pansy at my feet
> Doth the same tale repeat.
> Whither is fled the visionary gleam?
> Where is it now, the glory and the dream?

Is it true? Do the added years bring a lessening of our response to the beautiful? Are we no more to be thrilled with the glory of the sunset, the soft twilight call of the thrush, or the velvet darkness of the elms against a moonlit sky? Must it all "fade into the light of common day"? Surely, only if the vision is material can it be lost. On page 7 of our text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy says, "If spiritual sense always guided men, there would grow out of ecstatic moments a higher experience and a better life with more devout self-abnegation and purity." Should we not, then, seek such experience as men search for "hid treasure"?

Study Made Practical

ERNEST C. MOSES

Two farmers were discussing crop conditions, and one complainingly said, "I read nearly every book on agriculture that I can lay my hands on, and yet I do not get good crops." The other farmer, more wise and practical in his methods, replied, "That is the cause of your trouble; you put the cultivation all on yourself rather than on your land." William Penn has said that men agree that happiness is desirable, "but in the means of securing it they differ, and the cause is much the same,—not always want of light and knowledge, but want of using them rightly." So many fail to make progress in their relations with the work of the world because they do not make good use of what they know and have. It is the same false claim which Jesus rebuked in the parable of the talents. Those who made good use of their possessions were commended for wisdom and fidelity; the slothful servant, because he did not use his one talent, lost it entirely and received neither reward nor commendation from his Lord.

Students of Christian Science need to guard against the habit of reading the Bible, also "Science and Health with Key to the Scriptures" and the other writings of our Leader, with a merely intellectual interest, and against being lulled into an apathetic indifference to the necessity of demonstrating the divine Principle of Christian Science. One may think that reading bestows an understanding because he assents to the logical statements of truth presented in Mrs. Eddy's writings; but this is not always so. On page 323 of our text-book we read: "In order to apprehend more, we must put into practice what we already know. We must recollect that Truth is demonstrable when understood, and that good is not understood until demonstrated." The constant demand of Principle is, "Prove me now herewith." It is always "now," and there is always opportunity to demonstrate the loving readiness and power of God to meet our every need and the need of all who thirst for the waters of a better life than materiality affords.

Paul doubtless spent many years of his early life in the study of the Old Testament and scholastic theology, and became quite learned thereby. After he had learned to love and apply the teachings of Jesus, out of the depths of spiritual experience he contrasted his old method of seeking the truth with his new, in his statement to the Corinthians that his preaching "was not with enticing words of man's wisdom, but in demonstration of the Spirit and of power." He had discerned that "the letter killeth, but the spirit giveth life," and this is preeminently true in acquiring an understanding of Christian Science.

When the light of this Science comes into one's life, he finds himself possessed of a consciousness more or less strewn with hatred, envy, jealousy, pride, low ideals, and other erroneous beliefs, and these falsities do not entirely vanish merely by an acceptance of the letter of Christian Science. He may not quickly see that those who are successfully demonstrating the Principle of Christian Science have not advanced in spiritual understanding save as they have diligently applied this Principle and the rule for its demonstration to the purification of consciousness, and thus overcome and cast out the evils which would arrest the growth and fruition of a Christ-like character. Every earnest student of Christian Science speedily learns that success in it is achieved through a steadfast abiding in Truth. This brings to each student in readiness the healing work which gives him ample opportunity to demonstrate what has been learned through his study.

A great step of progress is made when each newly interested student of Christian Science recognizes that his own consciousness is his acre of opportunity, and that within it is a great possession, even "the kingdom of heaven." When this is recognized there is far less inclination to pray to God for great things, or for a greater opportunity, or to be removed to some other place where it is imagined that one would have less to meet. It then begins to dawn on one's sense that prayer should be made effective by learning what the will of God is, and by conforming to the divine purpose right where one finds himself. Well does Cowper point out the failure of mortals to recognize their opportunities, and also the better way, when he says:—

> But not to understand a treasure's worth
> Till time has stolen away the slighted good,
> Is cause of half the poverty we feel,
> And makes the world the wilderness it is.
> The few that pray at all pray oft amiss,
> And, seeking grace t'improve the prize they hold,
> Would urge a wiser suit than asking more.

On page 11 of Science and Health we are forcibly reminded that "prayer cannot change the unalterable Truth, nor can prayer alone give us an understanding of Truth; but prayer, coupled with a fervent habitual desire to know and do the will of God, will bring us into all Truth. Such a desire has little need of audible expression. It is best expressed in thought and in life." The continuous study of the Bible and Mrs. Eddy's works is indeed important, but there can be little success or permanent progress in understanding unless the student acts in keeping with her earnest words of counsel found in the Manual of The Mother Church (Art. XXX, Sect. 7): "I recommend that each member of this church shall strive to demonstrate by his or her practice, that Christian Science heals the sick quickly and wholly, thus proving this Science to be all that we claim for it." The demonstration of this Science is not the exclusive privilege of church-members; all may follow this wise injunction.

A child learns how to run by first learning how to walk. Even though he often tumble over, he will again and again rise to his feet, and thus acquire the needed strength and confidence. This is the way, and there is no other by which we may advance in our knowledge and use of Christian Science. It is well to try to put our understanding to the test, though we fail many times, for we thereby learn good lessons in both courage and humility.

Whenever the plea for help comes, it is our privilege and duty as Christian Scientists to realize the ever-presence and all-power of divine Love to fulfil the Scriptural promise, "Peace, peace to him that is far off, and to him that is near, saith the Lord; and I will heal him."

✧

"Lift thou up thy rod"

EARL J. STEVENSON

ANCIENTLY a rod was used as a symbol of spiritual understanding, and its spiritual significance has since grown clearer at each successive step in the line of higher thinking, until in this latter day, the symbol having disappeared before the effulgence of the Christ-idea, the active Christian Scientist is now found turning to that for which the rod stood, just as naturally as the flower turns its face to the sun for refreshing.

As we thus look beyond the symbol to that which it symbolized, we clearly perceive that the command given to Moses at the Red Sea, "Lift thou up thy rod," becomes just as applicable to those of the present age, engrossed with the problems of human experience, as it was to the great Hebrew lawgiver in that long ago when he faced the waters through which he must pass in escaping with the Israelites the approaching armies of their Egyptian taskmasters. Moses' obedience to what this command implied rolled back the surging waters before him, thus enabling him and all the host of Israelites to pass through safely on dry land, while their pursuing enemies were lost in the midst of the sea, which closed in upon them.

Prior to reaching the exalted state of consciousness requisite to this great demonstration, however, we find Moses confronted by many temptations to discouragement. At the very threshold of the work appointed him, we find his understanding obscured by a sense of fear due to suggestions of unfitness and inability to do God's work. It was at this crucial point in his experience, when his rod was "cast down," that there appeared wriggling in the dust of his material vision a serpent; but as soon as the mortal sense was reversed or destroyed, the spiritual sense reappeared, and was made to serve him in the higher and fuller demonstrations of his further career. The difficulties thus experienced by Moses and his people, and from which they were extricated, but typifies human experience with its myriad asserted laws and manifestations of evil; and it is this impersonal evil or lie which each mortal must fearlessly face, grapple, and wrestle with daily, hourly, momentarily, before it is fully subjugated and he is permitted to hear the benediction, "Enter thou into thy rest."

Are not we today as individuals, as families, as churches, and as nations, all confronted with our Red Sea experiences, in which the angry waves of mortal mind seem to forbid further passage? At the very outset are we not accosted with this same old lying serpent, characterized in Science and Health (p. 594) as "subtlety; a lie; . . . the belief in more than one God," and looking on either side, or behind us, do we not find, even after having made some progress on our journey from sense to Soul, that we are still being pursued by our old enemies (errors) in an attempt to compel our return? And associated therewith, does not the question naturally arise, How may we escape? how may we pass through the deep waters before us, and at the same time forever lose sight of those errors which have troubled us so much in the past?

May not our answer be found in obedience to the call, "Lift thou up thy rod," lift our understanding Godward, and thus perceive man's God-given authority and ability fearlessly to meet and master the whole situation, and this in God's way. We certainly can do this, and we will do it just in proportion as we heed the inspired counsel of our Leader on page 393 of Science and Health: "Rise in the strength of Spirit to resist all that is unlike good. God has made man capable of this, and nothing can vitiate the ability and power divinely bestowed on man."

Surely, the same God that sustained Moses is today sustaining faithful men; the same spiritual law that was operating in his behalf is and ever has been operating in behalf of the obedient, and this same God and His law is just as effective to deliver and save. The understanding gained in Christian Science is the rod with which the forces of infinite good are made practical in smiting error, breaking shackles, parting waters, and setting captives free. As the Israelites, through obedience to the command, "Lift thou up thy rod," were, as we read in Science and Health (p. 566), "guided triumphantly through the Red Sea, the dark ebbing and flowing tides of human fear,—as they were led through the wilderness, walking wearily through the great desert of human hopes, and anticipating the promised joy,—so shall the spiritual idea guide all right desires in their passage from sense to Soul, from a material sense of existence to the spiritual, up to the glory prepared for them who love God."

✧

Making a Demonstration

DORA E. UPTON

THE question, "What do you Christian Scientists mean by 'making a demonstration'?" has often been put to the writer by those inquiring into the teachings of Christian Science. So many inquirers think that the making of a demonstration is narrowed down to the mere overcoming of some physical trouble or inharmonious condition. This from their point of view is a comparatively small thing, which might have taken place without the aid of Christian Science. They therefore wonder at the joy the Christian Scientist displays when he has made a so-called "demonstration."

Here it may be said that a demonstration in Christian Science has a far wider and more spiritual meaning than this outlined view of it. To illustrate: Suppose a boy at school is desirous of progressing in mathematics. He has gained the knowledge of a rule for working out a certain problem.

Digitized by Google

The boy does not waste his time rejoicing over that one problem which he has mastered; his joy lies in the proof which it gives him that he has gained a knowledge of the mathematical law by which all similar problems can be solved. In like manner the Christian Scientist, having overcome some discordant condition, does not stop to rejoice in that fact alone, although all are naturally glad and thankful to be rid of inharmonious conditions; but his happiness and joy lie in the fact that he has gained a demonstrable knowledge of the divine Principle of life, a practical, provable knowledge which he is able to apply successfully to the problems of each day.

Again, inquirers often think that the Scientist's sense of life is limited, and goes no farther than the making of the same sort of demonstrations. Let us once more revert to the boy at school. When he has become more advanced in mathematics he is not given sums in simple addition; the understanding of how to do these is so complete that there is no need for him to give a concrete expression of his knowledge. In Christian Science, as in mathematics, the demonstration and the power to demonstrate lie in an understanding of unvarying law, and cannot be narrowed down to any specific expression of that law. Bearing on this point Mrs. Eddy writes in Science and Health (p. 496): "We all must learn that Life is God. Ask yourself: . . . Am I demonstrating the healing power of Truth and Love? If so, then the way will grow brighter 'unto the perfect day.' . . . Hold perpetually this thought,—that it is the spiritual idea, the Holy Ghost and Christ, which enables you to demonstrate, with scientific certainty, the rule of healing, based upon its divine Principle, Love, underlying, overlying, and encompassing all true being."

We need to remember Jesus' words as recorded in Mark's gospel, "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." The one who reads this with unbiased thought can no longer show surprise at the so-called enthusiasm on the part of the Christian Scientist when he makes any demonstration of the truth, for he will realize, as shown in the above quotations, that the Christian Scientist has begun a life study which is unlimited in its power for good, and which gives to the student boundless joy and happiness when putting his knowledge into practice.

"The lens of Science"

BERTHA V. ZEREGA

THE carnal mind, focusing its gaze within the contracted boundary of physical sense-testimony, looks through the lens of its own misconceptions and sees as real that which never has existed in Truth. From this corporeal point of view it cannot perceive "the things which God hath prepared for them that love him," for, as the apostle says, "they are spiritually discerned." Although the people who followed Jesus in such great multitudes were sorely in need of help, both physical and mental, immersed as they were in an age-long miscomprehension of God, they were unprepared to receive the spiritual, scientific teaching which the Master would so gladly have imparted to them if they had been pure and receptive enough truly to desire it. He said, "Therefore speak I to them in parables: because they seeing see not; and hearing they hear not, neither do they understand."

Well could Jesus turn to his disciples—the little chosen group of followers who had "straightway left their nets" to become "fishers of men"—with the words, "But blessed are your eyes, for they see: and your ears, for they hear." Leaving all they had, turning from the false corporeal sense of life and substance in which they had been educated, to demonstrate the Christ, Truth, embodied in the teaching of the Master, they gained a metaphysical consciousness of existence, and beheld through the lens of their spiritually chastened and uplifted thought a vision of man coexistent with his creator, and of God as the Father of all, sustaining and governing His perfect creation through spiritual laws of harmony and immortality.

Jesus inspired his disciples with the wonderful words, "And I, if I be lifted up from the earth, will draw all men unto me." This was to be their goal,—to become so pure, so unselfed in thought, motive, and desire, so lifted above carnal, fleshly impulses, and so free from worldly ambitions of striving to be greatest, that the healing light of Love would shine through their spiritualized thought, beckoning all the weary ones of earth within the focus of its life-giving radiation. Jesus urged upon them the necessity of constant mental purgation and of increased spirituality, in order to do the healing works. After instantaneously making a demonstration in which they had failed, he remarked that "this kind goeth not out but by prayer and fasting." He himself frequently continued all night in prayer to God. His rapt communion with the Father, fasting from a corporeal sense of things, enabled him to prove the absolute unreality of discord and disease which confronted him when he returned from these silent vigils illumined by the reflected glory of God's presence and power.

In Christian Science Mrs. Eddy has so clearly elucidated the Christ-method of attaining this spiritual altitude of thought, that we may bring into our conscious experience daily manifestations of the will of the Father, which Jesus declared to be "everlasting life." On page 194 of "Miscellaneous Writings" she says, "The lens of Science magnifies the divine power to human sight; and we then see the supremacy of Spirit and the nothingness of matter." The human intellect, working always through force or concentration, is incompetent to attain for us the delicate focal adjustment necessary to bring into our range of vision this metaphysical conception of man as he forever is,—born of Spirit, unfolding in the image of God, untouched by false, destructive laws of material sense; for the application of the carnal mind brings about the same predicament that results from looking at an adjacent object through the wrong end of a field-glass,—the size of the object is seemingly diminished, and an illusion of distance between it and the observer is created. Similarly, thoughts of envy, hypocrisy, pride of opinion, self-will, apathy, belittle spiritual facts and present an illusion of infinite distance between the individual and Truth.

We become worthy of this vision of the Christ—this radiant perception of God and His perfect spiritual creation—as we subjugate the beliefs in a corporeal selfhood, as we put off pride of intellect, place, and power, and reflect in our lives the "beauty of holiness," humility, love, purity; for only through this transparency of thought can the Christ-consciousness operate to disperse the darkness of ignorance and take away the seeming strength of sin. When the sons of Zebedee sought the privilege of sitting one on the right hand and the other on the left hand of Jesus in his glory, they were looking through the lens of self-interest and worldly ambition, seeking to reap spiritual benefits which they had not earned, and to occupy places for which they were not qualified and which were not prepared for them. Jesus rebuked their presumption, explaining that the only

Digitized by Google

pathway to true greatness lies along the unsought and inconspicuous road of humility and loving service. On page 356 of "Miscellaneous Writings" Mrs. Eddy says: "Humility is lens and prism to the understanding of Mind-healing . . . Humility is no busybody: it has no moments for trafficking in other people's business, no place for envy, no time for idle words, vain amusements, and all the *et cetera* of the ways and means of personal sense."

If there are times when we do not seem to be gaining so clear a conception of spiritual facts as we should, or our demonstrations are retarded; or if, on the other hand, we are being led by an insidious form of mesmerism to believe that we are making rapid strides spiritually, while neglecting to replenish thought by systematic study, yielding to the temptation to personalize good and evil, or to speculate about business which is in no sense our own, we have only to examine the lens through which we are looking in order to remedy the trouble. If upon honest scrutiny we find that we have been fitting to our vision the diminishing-glass of corporeal sense-testimony, with its exaggerated awareness of finite personality (especially of self) and its distorted focus of spiritual verities, picturing them as vague and distant, we can by prayerful endeavor adjust our mental gaze through "the lens of Science,"—the Christ-mind, the unclouded, illuminated vision of gratitude, meekness, universal love,—which magnifies God's nearness, reveals good as ever present, and unveils the spiritual unity, concord, and cooperation existing between all of God's ideas.

Only as we diligently watch to keep our thoughts pure, "unspotted from the world," may we look through the crystal lens of spiritual understanding, and refreshed and strengthened by the realities of true being glimpsed there, reflect the light of Love clearly enough to destroy the inharmonies of those who are turning to the truth for healing. We may be confident that every least effort which helps others to see with their eyes, and to hear with their ears, and to recognize their true selfhood in divine Mind, will widen our own vision, bringing as its reward a clearer perception of the truth and increased opportunities of service.

No Loss in Mind

MABEL WILLIS REEL

CHRISTIAN SCIENCE teaches us that no good thing is ever lost, and that this truth can be applied even in our temporal experience. One day, a few years ago, I missed a valuable ring, and at once began a systematic search of my room, but found no trace of it. At the time I was living in a hotel, and the thought came to me that some one might have taken the ring; but I soon realized it was error to suspect any one in this way. I then sat down and, bowing my head in silent prayer, tried to realize the truth about God and man; that God is ever present Mind; that man in His image reflects all knowledge; and that in this perfect Mind, in which "we live, and move, and have our being," there can be nothing lost.

As I dwelt upon this line of thought I was impelled to go and look behind a trunk which was in a closet connected with my room. The closet was quite dark, but I reached over behind the trunk and placed my fingers directly upon the ring. Any one who has had a similar experience will know the sense of gratitude and joy which comes with any least awakening to the truth of God's ever-presence and loving care for the children of men. I am truly thankful to God for the understanding of Truth which shows us how to trust and what to do in those times of need, when without this realization we should be sorely troubled and perchance create an atmosphere which is distressing to all about us.

Selected Articles

[Judge Clifford P. Smith in *The Boston* (Mass.) *Post*]

Formerly the members of Mrs. Eddy's household and many Christian Scientists spoke to her or of her as "Mother," but in 1903, owing to public misunderstanding of this usage, she made a request that it should be discontinued. This request was published in the *Christian Science Sentinel*, and it has been observed by all Christian Scientists. The words "Mother Eddy" were never used by Mrs. Eddy's friends, except by mistake, as in the case of an item in the *Post*.

Mrs. Eddy's first husband, George W. Glover, was not "a brick mason at Charleston, S. C.," as the *Post* has been erroneously informed, but he was, as the *Post* has rightly said, a contractor and a man of large affairs. As a youth in Concord, N. H., he learned one or more trades which relate to building. Then he became a contractor and builder in Boston, and subsequently continued the same business at Charleston, S. C.

The statement by Mrs. Eddy's son which the *Post* has quoted, to the effect that she was surrounded by unworthy persons who took complete charge of her affairs, was one of several averments made by her son, or by his counsel, from mere suspicion or supposition and without basis in evidence or fact. All such statements were completely refuted by the outcome of the suit in which they were made, it being withdrawn before the defense was completed. This case was entirely separate from the one in which Mrs. Eddy's son and adopted son contested her will. This latter case was brought to a decision by the highest courts in both Massachusetts and New Hampshire. In neither case was any point of fact decided in favor of the contestants, nor any point of law which affirmed their alleged rights.

[Samuel Greenwood in *The Citizen*, Vancouver, British Columbia]

In the articles entitled "Twentieth Century Religion" and "Guarding the Water Supply," both of which appeared in *The Citizen*, are some misleading references to Christian Science. A student of Christian Science would never think of associating it with the various isms named in the first article, for those who understand its teachings know that it stands entirely apart from all human doctrines and beliefs. Let me say that I heartily agree with the author that a religion composed of such discordant elements would indeed be a "humbug," but we can rejoice that such a compound is impossible so far as Christian Science is concerned.

The gentleman's quotation from Mrs. Eddy is incorrectly given, as is also his implied connection between Christian Science and what he terms higher criticism. What Mrs. Eddy says is this: "The different renderings or translations of Scripture in no wise affect Christian Science. Christianity and Science, being contingent on nothing written and based on the divine Principle of being, must be, are, irrefutable and eternal" (The First Church of Christ, Scientist, and Miscellany, p. 179); and on page 240 of the same work she refers to higher criticism thus: "Christian Science is the higher criticism because it criticizes evil, disease, and death—all that is unlike God, good—on a Scriptural basis, and approves or disapproves according to the word of God."

It should be obvious that truth naturally precedes whatever has been written about it. The inspired statements of Scripture are not true simply because they are in the Bible, but are recorded in the Bible because they are true. The truth declared by Christianity coexists with God, and therefore antedates the Scriptures; and this truth is the only basis of Christian Science.

Digitized by Google

The writer of the second article falls into the too common mistake of assuming that nothing can be true which does not accord with one's particular doctrine. It is this intolerant attitude toward others' views that in all ages has withstood human progress. The only convincing argument is demonstration; therefore the only effective weapon an opponent could use against Christian Science would be to give practical evidence that his own religion can more successfully heal the sick and the sinning.

That those who accept Christian Science do so to "their souls' eternal destruction" is certainly a formidable statement, but one rather difficult to substantiate. The simpler and better way is to stick to the present and decide the question here. If the influence of Christian Science is the dreadful poison which this critic declares, its effects would surely be apparent this side of eternity. No better test can be found of any religion than that set by the Master when he said, "By their fruits ye shall know them." He also said that "a corrupt tree" cannot "bring forth good fruit."

Over against this writer's statement is the well-known and well-attested fact that Christian Science is liberating men from all forms of bad habits and evil passions, from sin and disease, is promoting faith in God, a deeper love of the Bible, and a higher standard of living. Thousands have testified and are testifying to its beneficent influence. Who then has authority to pronounce the influence of Christian Science to be evil, when those most nearly concerned are conscious only of an increased sense of good and a more practical knowledge of the power of God?

A disappointing feature of the scholastic theology is that it persistently relegates a realization of its promised blessings to the hereafter, while mankind are asking for the truth that will bless them here. We are taught that God will not be any different throughout eternity from what He is right now, and it is right now that men are seeking that which will do them good. Since God is the same today that He will be tomorrow or in a thousand years from now, it must be possible to receive His help today. That religion is logically nearest right which does most for men where they are and in present needs. It is always fitting that we accept the Master's rule of judgment, lest we be found to condemn what God has chosen to bless. "How shall I curse, whom God hath not cursed?" asked Balaam, and the question is pertinent today.

✧

[J. Arnold Haughton in *Rochdale* (England) *Times*]

The letter of a correspondent drawing attention to a booklet which contains a "warning against Christian Science," matches the booklet in question for inaccuracy of statement about Christian Science. In this booklet Christian Science is said to have "for its corner-stone the doctrine that there is no such thing as sin; no salvation because no need of one." The true statement is, however, that Christian Science insists upon the fact that God did not create sin; and accepting St. John's word, "All things were made by him; and without him was not any thing made that was made," it follows that there is no sin in the sense that it is not part of God's creation. Christian Scientists recognize to the full their need of salvation from sin as a human experience, which is tantamount to salvation from believing in something which God did not create. In other words, they seek to honor and worship God as the only creator by recognizing as real only His creation. In practice, the proof that there is no sin is attained only as one ceases to sin.

The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, does not deny the judgment, as stated, but shows it to be a mental or spiritual awakening in human consciousness to more of truth, whereby human thoughts and acts are judged more truly according to their value in the line of spiritual progress. Again, there is no authority for the statement that Science and Health denies the existence of the Holy Spirit. A mere perusal of the book would reveal that Spirit is used as a synonym for God. Then the chapter dealing with the atonement fully explains this subject, and also shows that the atonement is not denied in Science and Health, as stated.

Christian Science teaches that God is the infinite Supreme Being, but not a personal being in any human sense. Science and Health recognizes the use of the word personal as applied to God in its higher but more uncommon meaning, and in this sense God is infinite Person. The statement, therefore, that Science and Health denies "that God is a personal being at all," gives a false impression. No reasons are given for the statements that Christian Science is antichristian or that it is blasphemous, and to call its teachings heresy only means that they depart from the opinions of their critic.

In conclusion, Mrs. Eddy never was a medium at any time in her life. .In Science and Health there is a chapter of thirty pages showing the irreconcilable difference between Christian Science and spiritualism, and on page 71 Mrs. Eddy says, "I never could believe in spiritualism." By the purity of her thought she was enabled to give to the world a higher knowledge of the power of God; and far from displacing the Bible, Science and Health shows us how to read it with more understanding than formerly. In the light of the healing of sickness and saving from sin effected through Christian Science, the accusation that it makes the "Word of God of non-effect" is an anomaly.

✧

[Carl E. Herring in *Omaha* (Neb.) *World-Herald*]

Deity is properly a synonym of God. Divinity, as defined by Webster, in its primary meaning and as used in Christian Science means of the "nature or essence of God." That Jesus is not God, and that he not only made no such claim but expressly disavowed it, as frequently evidenced in the gospels, is the position of Christian Science; but that he was endowed with the nature and essence of Deity is affirmed, and this constitutes the divinity of Jesus.

While it is true that Jesus represented the highest form of divinity which could be expressed in the flesh, yet it must be understood that the Christ, or divine idea, has always existed, and while the words Christ and Jesus are commonly used interchangeably, the former is properly applied to Jesus only in the sense that he was the demonstrator of the divine idea. Mrs. Eddy, in speaking of the spiritual conception, expresses the thought in more apt language in Science and Health (p. 29): "The Holy Ghost, or divine Spirit, overshadowed the pure sense of the Virgin-mother with the full recognition that being is Spirit. The Christ dwelt forever an idea in the bosom of God, the divine Principle of the man Jesus, and woman perceived this spiritual idea, though at first faintly developed."

✧

[Avery Coonley in *Peoria* (Ill.) *Star*]

The number of patients who have been pronounced incurable by the medical profession, but who are now well as a result of Christian Science treatment, is very large. Before such a patient abandoned medicine for Christian Science medical men have usually said that Christian Science could do nothing for him. After it has healed him, they have ordinarily concluded that there was nothing the matter with him which time and fresh air could not cure; hence, Christian Science had not benefited him. This simple mental process leaves Christian Science with churches filled with active, useful, and happy persons, many of whom the medical profession

Digitized by Google

had consigned to the cemeteries with tuberculosis, locomotor ataxia, cancer, tumor, and the like, and at the same time a clean record in the eyes of the medical organization of never having healed a case of organic disease.

I have submitted to the *Journal of the American Medical Association* a letter in correction of the misstatements about Christian Science in the editorial you have reproduced, in which I have pointed out that Christian Science invariably endeavors to preserve life, and with a notable record of success; that what they called doing nothing has healed hopeless disease in innumerable instances, and that it has nothing to do with "thought waves," but is that method employed by him to whom Christendom refers as the great Physician.

✧

[W. D. Hinchsliff in *Hobart* (Okla.) *Republican*]

Christian Science takes the Bible as its sufficient guide to health and life. It takes God at His word, and those who have given it the careful thought and honest investigation as a great religious movement which it deserves, have found that its premises are sound and tenable, and that it does what it claims to do, and is healing the sick and reforming the sinner as no other system is doing today, because it is reasonable and practical. It teaches of God, and of man in God's image, and of our relation to God in a way that is reaching a multitude of thinkers the world over. It is founded on God, good, and on nothing else. In no sense is it to be classed with higher criticism, agnosticism, or infidelity.

Christian Science heals the sick and reforms the sinner, as was promised by the Master, through knowing the truth which he promised would make men free. It makes clear the distinction between error and truth, and it denies that evil is any part of God's creation, because we are told in the Bible that God created all, and that all He created was good, and not only good, but "very good." Christian Science classifies sickness and sin as error and as no part of the divine creation; therefore it is without any real origin or cause, and will cease when man recognizes his true being. There are many different interpretations of the Scriptures, and Christian Science proves its worth by its fruits.

The clergyman is in error when he infers that Christian Science ignores the Bible, for it leads its followers to a more earnest study of the Scriptures. It reveals a beauty and practicability that is satisfying, and it sustains its claims by its works. It is the testimony of Christian Scientists that Christ is dearer and heaven is nearer than before they knew of its beneficent teaching. Mrs. Eddy says, "The vital part, the heart and soul of Christian Science, is Love" (Science and Health, p. 113), love for God, and man in God's image.

Christian Science asks no favors, but stands squarely on the divine Principle of all being, and is "ready always to give an answer" for the hope that is in it. It never proselytes or criticizes its neighbors, but bids Godspeed to every good word or work. Its interpretation of the Scriptures may be, and undoubtedly is, different from that of the preacher, but it is not necessarily wrong on that account. It rests on demonstration rather than on mere belief. Belief may be good, but understanding is better. Jesus said, "Ye shall know the truth, and the truth shall make you free." He also said, "It is the spirit that quickeneth; the flesh profiteth nothing." "Science and Health with Key to the Scriptures" is in no way a substitute for the Scriptures.

Christian Science does not minimize sin or condone it in the least, but emphasizes the truth that sin must be cast out, must be forsaken, before there can be health or harmony, and it shows how this is done in the most practical manner; how, seemingly attractive to the human sense, it is only a snare and a delusion, while the knowledge of God and His power gives the only true health and real satisfaction. As the psalmist has said: "As for me, I will behold thy face in righteousness: I shall be satisfied, when I awake, with thy likeness."

✧

[M. I. Whitcroft in *Cheltenham* (England) *Chronicle*]

In connecting Christian Science with "science falsely so called," mentioned in I Timothy vi. 20, our critic is unable to offer any evidence in support of this assumption. Jesus said, "By their fruits ye shall know them," and for close upon half a century Christian Science has been giving rapidly increasing evidence by its fruits that God's "way may be known upon earth," His "saving health among all nations." This critic then draws attention to the word science being mentioned in only one other place in the Bible. Daniel was chosen for his "understanding science," or scientific knowledge and understanding of God, which Daniel applied to every act and circumstance of his life; never more so than when in the lions' den he proved "the life-preserving power of spiritual understanding" (Science and Health, p. 579).

It was this same scientific knowledge of God and of His law which enabled Jesus to overcome every material so-called law, whether in raising the dead, healing the sick, or walking on the water. Christian Scientists today, in the degree in which they possess this understanding, are healing the sick and reforming the sinner, thereby giving that proof of their Christianity which was demanded by Jesus of all who profess to be his followers. Christian Scientists have not altered the Lord's Prayer, as our critic asserts, but they have it in their text-book, Science and Health, in the form in which it appears in the Bible, together with what Christian Scientists accept as its spiritual interpretation.

✧

[Duncan Sinclair in *The Times*, Glasgow, Scotland]

Christian Science neither teaches nor practises healing by "faith," as the term is commonly understood. Every healing which has taken place in the practice of Christian Science has resulted from the spiritual understanding of reality. The spiritual universe, which is the expression of God, is recognized in Christian Science to be perfect. And man, made in the image and likeness of God, as the spiritual idea of God reflects the nature of the perfect Mind. Seemingly opposed to the spiritual sense of being is the material sense of things. It is the material sense of things which is the seeming cause of every form of sickness; and it has been proved time and again in Christian Science that as the understanding of man's true spiritual selfhood is gained the ills of the flesh disappear.

Speaking of the terms "belief" and "faith" in their relation to spiritual understanding, Mrs. Eddy, the Discoverer and Founder of Christian Science, writes in "Science and Health with Key to the Scriptures" (p. 297): "Until belief becomes faith, and faith becomes spiritual understanding, human thought has little relation to the actual or divine;" and, as has been said, it is spiritual understanding which is the "curative agency" in Christian Science.

✧

[Robert S. Ross in *The Post-Standard*, Syracuse, N. Y.]

Your correspondent seemed to be more interested in sweepingly denying the Scriptural origin of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, than he was in logical reasoning; for if through the study of the Scriptures in the light of this text-book students are able, in a measure at least, to repeat the healing and regenerating works of primitive Christianity, then the deduction that the teachings of Christian Science are Scriptural is on firmer ground than the rock of Gibraltar.

Digitized by Google

Editorial

"Let them alone"

A SHORT time ago, in reporting a meeting of the Chicago Medical Society, the *Chicago Herald* quoted from the views expressed by those in attendance as follows:—

"We gain nothing for ourselves, and do not injure Science by attacking it," said Dr. H. B. Hemingway of Evanston. "My advice would be to leave it alone. If it hasn't merit it will die of its own weakness."

"What we should do," suggested Dr. R. R. Ferguson, "is to conduct a campaign of education among the Christian Scientists; not criticizing them, but urging them that when the time comes in their cases when it is apparent a physician is needed, to call one without delay."

"Doctors are to blame for driving a majority of the people into Christian Science," was the startling statement made by Dr. C. B. King. "Persons come to doctors with complaints, and the doctors do not know what is the matter; but they give something and collect their dollar.

"The patient does not get better, so he goes to another doctor, where the collecting process is repeated. The patient goes the rounds, and finally Christian Science is suggested. He embraces it and, as there was not much the matter with him, he gets well.

"If physicians used common horse sense they would hold these people; but they do not want these dollar cases. What they want is a chance to use the knife and get one hundred dollars or more for it. If we advise patients as they should be advised, there will be fewer Christian Scientists."

We have faith to believe that Doctor Hemingway spoke for a much larger section of the medical profession than is generally supposed, and that there is a growing disposition on the part of thinking people, both physicians and laymen, to follow the counsel of Gamaliel, who when brought face to face with the actual demonstration of Christian healing, said, "Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it."

In the fifty years since Mrs. Eddy discovered Christian Science there have been too many well-authenticated cases of healing by this system to justify any fair-minded person in joining in the legislative propaganda originated and urged by that section of the medical profession which has for its object the suppression of all systems which they regard as in competition with that which they practise. The basis of all these statements quoted by the *Herald* is of course the belief that there is but one system or method by which the sick are or can be healed, and that this system or method is that which is practised by these physicians and their fellow members of the Chicago Medical Society and similar societies. The merit of this belief is, however, very largely discredited by the fact that a large proportion of the adherents of Christian Science consists of those who previously had vainly called not one but several physicians without receiving the help which they sought; also, that afterward they were healed through Christian Science. The expressed belief that there is a necessity for Christian Scientists to call a physician is, to say the least, out of line with the simple, demonstrated fact that Christian Science has succeeded where medicine has failed, and that there are at the present moment thousands of persons walking the earth who but for this Science would have been buried years ago.

The healing work done by Christ Jesus and his immediate followers was in direct opposition to the claim that medicine or surgery is necessary to the healing of those who are suffering from disease. The Master did not use either of these means, yet he healed thousands who came to him,—the Scriptures say that he healed every one of them,—and it is by the same means that Christian Scientists are healing people today. Christ Jesus proved this system to be far superior to all other systems in its application to the healing of disease; but his work did not stop there, for he also proved that it reformed and regenerated mankind. Evidence that Christian Science is the same method employed by Jesus, because it is the only method which heals both sickness and sin, has been accumulating for half a century, and those who decry its efficacy and clamor for its suppression are but wasting time which, if half that Doctor King has said is true, should be devoted to the weeding out of their own profession those who are not a credit to it.

ARCHIBALD MCLELLAN.

"If ye abide in me"

THEY had been very near friends in the long ago, and it was most natural that after so revolutionary an experience the heart of the woman was moved to write her one-time spiritual mentor of the new glad day which had dawned for her. The little ivy-clad church where they once worshiped together centered her thought on many a heart to heart talk with him of the things of the Spirit, and she could but feel how glad he would be to learn that through Christian Science she had found escape from the agonies of pain and had gained a new and inspiring vision of spiritual truth and a joy of heart she had never known before.

Glowingly yet simply the story was written and winged with loving-kindness for its flight across the sea. Then after some days there came upon her a sense of heaviness and discomfort which she was puzzled to account for, and which maintained its assertion, though she was conscious of no dereliction of duty or disloyalty to Truth. Later she reminded herself that the experience would conduce to increased thoughtfulness of the fact that, as St. Paul says, "we wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this world."

Meantime her story had been read by her friend, not with the sympathetic interest which she had anticipated, but with the grief and solicitude of one who believed that she had yielded herself to the embrace of a blighting heresy, from the dire perils of which he hoped she might escape! The receipt of the letter in which he thus frankly expressed this conviction and implored her to return to the Christian faith of her fathers, not only overwhelmed her with astonishment but speedily awakened thought as to the possible explanation of her sense of abnormality, and as with glad assurance she laid hold upon the promises of protection and peace found in the ninety-first psalm, the burden was removed and she entered again into the joy of her Lord.

Such an experience may well remind us of the teaching of Christian Science that, in keeping with unnumbered Scripture promises, evil, condemnatory thought, has no power to harm us provided "virtue and truth build a strong defense" (Science and Health, p. 235). The Master's words, "If ye abide in me," condition his every promise of good, even as the psalmist preceded all his assurances of protection by the vitally significant qualification, "He that dwelleth in the secret place of the most High." If therefore we are unalert, and forgetful of these legitimate conditions upon which the pledge of safety is inherently based, then we may indeed become subject to an awakening by that pain which pertains to the rule of the beliefs of material sense.

The recognition that the physical body, with all that pertains to it, is but a part and parcel of this inharmonious material belief, fully explains the possible influence for ill of mortal thought and should beget in us that habit of wise forethoughtfulness, that conscious and continuous reliance upon divine Love for safe keeping which will banish fear and forestall every assault of error. The thought of the proverb, "A prudent man foreseeth evil, and hideth himself: but the

Digitized by Google

simple pass on, and are punished," is somewhat differently expressed in Christian Science, but its spirit is fully preserved and the importance of its teaching is sure to be impressed through suffering upon those who do not learn habitually to honor the Master's words, "What I say unto you I say unto all, Watch."

Especially do we need to remember that the most sincere and devoted human affection is not infrequently associated with an intensity of fear respecting the welfare of the one upon whom it is centered, or of hatred for the teaching with which he may be identified, that apart from the protection of a constant resting in God, becomes a menace to health and happiness. In these days, when the more subtle and aggressive forms of error are becoming so noticeably manifest, we cannot afford to be unmindful for a single hour of the imperative demand of divine wisdom that we commit our every experience and its every issue to the guidance and government of Truth and Love. Let it ever be repeated in our thought that Jesus' statement, "If ye abide in me," conditions the realization and the preservation of every good.

JOHN B. WILLIS.

From Belief to Understanding

THOSE who are becoming interested in Christian Science find it important to gain a correct sense of the words belief, faith, and understanding, and this can be readily done by a careful study of Mrs. Eddy's teachings as found in Science and Health and her other writings. In this study one naturally turns to the Bible, where the same words appear, and when the spiritual sense is gained we shall find that Mrs. Eddy's statements along these lines are in entire accord with those of the Scripture. It is, however, very important to gain the true sense of these words, or we miss the help which is so much needed, for the wise man assures us that "understanding is a wellspring of life unto him that hath it."

It may be observed that most people are more familiar with the words faith and belief than they are with understanding, and they are also disposed to regard faith and belief as practically the same. This question is finely explained by Mrs. Eddy on page 23 of Science and Health, beginning with this statement: "Faith, if it be mere belief, is as a pendulum swinging between nothing and something, having no fixity. Faith, advanced to spiritual understanding, is the evidence gained from Spirit, which rebukes sin of every kind and establishes the claims of God." In the two following paragraphs the distinction is even more clearly drawn. A careful study of the New Testament reveals the fact that it was faith of this sort which Christ Jesus demanded and which his followers endorsed and strove to express. We may therefore rejoice in having through Christian Science the understanding which links us to vital, immovable faith in God and His law, and which is best manifested in the healing works of our Master, for without these, Christian experience is apt to be "dead," as the apostle James put it.

The word belief is very generally used in Christian Science to express material concepts of every kind and their varied manifestations. A belief in good is of course better than a belief in evil, but until the divine Principle of good is understood and obeyed, belief is apt to be moved, like a weathervane, by popular opinion. A belief in health changes quickly to a belief of sickness, but sad to say the latter seldom changes quickly to a sense of health unless the light of Truth dispels the darkness. Isaiah says that when this light comes, then shall health "spring forth speedily;" and this is no mere change of belief, but the advance to spiritual understanding of which our Leader speaks.

When our Master healed the sick and gave sight to the blind he changed the belief of those who held one in thought as sick, blind, lame, or even dead. Even the one healed does not usually leap into the understanding of the divine power which has healed him, while those about him oftentimes fail to advance beyond the plane of belief. The parents of the man blind from his birth only saw that a great change had come to him, while the Pharisees refused to accept the healing at all,—refused to believe that the man had ever been blind and did their utmost to intimidate both him and his parents.

But the erstwhile blind man quickly gained the spiritual sense of sight, and this gave him a wider vision than mere physical sight would have done. He saw and declared fearlessly that his healer was a prophet; then he stoutly affirmed, "If this man were not of God, he could do nothing." He was getting ready for the glorious revelation of the Son of God,—the real man,—and although he was reviled and cast out by the authorities, he was advancing steadily toward the truth of being. When Jesus met him and asked, "Dost thou believe on the Son of God?" he responded, "Who is he, Lord?" And when Jesus made known to him the ever-presence of the Christ, he gladly accepted God's representative and "worshiped him."

On page 442 of Science and Health we read, "When Christ changes a belief of sin or of sickness into a better belief, then belief melts into spiritual understanding, and sin, disease, and death disappear." It is our high privilege to press on from mere belief to living faith, and thence to that understanding which expresses itself in whole-hearted love for God and our neighbor.

ANNIE M. KNOTT.

Among the Churches

Current Notes

ST. THOMAS, ONTARIO, CANADA.—The trustees of First Church of Christ, Scientist, this week [Nov. 8] purchased the fine home of Dewitt Green, 16 McIntyre Street. This is one of the finest locations in the city for a church site. It is the intention of the congregation to occupy the residence as its meeting-place and reading-room, and later it is planned to erect on the premises a fine new Christian Science church. The property, which was purchased at a price in the neighborhood of two thousand dollars, is beautifully situated, being in close proximity to Alma Ladies College.

St. Thomas Times.

OGDEN, UTAH.—On Sunday [Dec. 26] the new edifice of First Church of Christ, Scientist, at the corner of Twenty-fourth Street and Monroe Avenue, will be dedicated. This addition to the many beautiful churches of the city was commenced in 1914. The corner-stone was laid in March of that year, and the structure was completed and ready for occupancy by January, 1915. The first service was held on Jan. 3. The building and furniture, together with the lot upon which the church stands, cost fifteen thousand dollars.—*Ogden Standard.*

BROOKLYN, N. Y.—Title has just been taken by the trustees of Second Church of Christ, Scientist, now located at Eighty-sixth Street and Fort Hamilton Parkway, to a plot 80 by 100 feet on the south side of Sixty-seventh Street, adjoining the new Bay Ridge High School for Girls. Construction of a new church for Bay Ridge Christian Scientists is to be begun on this site in the spring. According to present plans, the new structure will be erected at a cost of about forty thousand dollars.—*Brooklyn Eagle.*

Digitized by Google

Oak Park, Ill.—At the northeast corner of Oak Park Avenue and Ontario Street the new edifice of First Church of Christ, Scientist, rises in symmetrical beauty, a fitting monument to the great movement for which it stands. For many months the building has been in the making, and the work is nearly completed. It stands on one of the most ideally located properties in the village. The lot, which cost fifteen thousand dollars, has a frontage of 100 feet on Oak Park Avenue and runs back 180 feet on Ontario Street. The building with its furnishings, complete, will total a cost of ninety-five thousand dollars. There is every reason to believe that it will be ready for occupancy April 2, as planned.

The Oak Park Events.

Boston, Mass.—Second Church of Christ, Scientist, at the corner of Elm Hill Avenue and Howland Street, Roxbury, will be dedicated tomorrow [Jan. 16], just one year after the laying of the corner-stone. The building seats one thousand persons, and with the land represents a cost of about one hundred and seventy thousand dollars. Under the auditorium is the Sunday school room, designed to seat four hundred. This church was organized to relieve the crowded condition of The Mother Church, and the first service was held in Fauntleroy Hall, Wenonah Street, Roxbury, in February, 1899.—*Boston Evening Transcript.*

Albert Lea, Minn.—First Church of Christ, Scientist, will hold its first public service in the new church edifice next Sunday [Dec. 12]. The main auditorium will seat about two hundred and fifty. The structure is a credit to its builders, and when the size of the congregation is considered, one wonders all the more. Yet the twelve thousand dollars that it cost is nearly all subscribed, and this is certainly a remarkable achievement.—*Freeborn County Standard.*

Annapolis, Md.—The Annapolis Christian Science Society is now occupying its new home, situated on State Circle, corner of Maryland Avenue. Yesterday [Dec. 5] for the first time the Christian Science services were held in the new quarters, which have been neatly and attractively decorated, newly papered, and which present a homelike, inviting appearance.—*The Evening Capital.*

Ludington, Mich.—Our church edifice was recently remodeled, but all the funds for the work have not yet been raised. The building fund, however, is increasing steadily.

Correspondence.

Neodesha, Kan.—The dedication of the pretty and comfortable Christian Science church in Neodesha last Thursday night [Dec. 2] was an interesting and pleasant affair.

The Neodesha Register.

Admission to Membership in The Mother Church

The next admission of candidates will be June 2, 1916. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 10, 1916.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

John V. Dittemore, *Clerk*,
Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

Santa Ana, Cal.

In introducing Prof. Hermann S. Hering, who lectured on Christian Science in the Grand Opera House, George C. Roy spoke in part as follows:—

It may not be inappropriate for me to state that I very distinctly remember when Mrs. Eddy, the Discoverer and Founder of Christian Science, after nearly a lifetime of effort in other localities, returned to that quiet New England city, Concord, N. H., and located in the immediate neighborhood where I lived for many years. Many of the scenes, local interests, and local characters in Concord that were familiar to Mrs. Eddy have been familiar to me from my earliest recollection, and during the period of her residence in Concord her figure was a familiar one.

It may be recalled that Mrs. Eddy was born in the little town of Bow, just outside the boundaries of Concord, and that the chosen home of her later years, known as "Pleasant View," where much of her important work was done, looked out across the valley upon the location of her birthplace. About thirty miles from Concord there is a beautiful lake, to which reference is made in Science and Health, which glistens among the New Hampshire hills and bears the poetic Indian name of Winnepesaukee. The English translation of the word Winnepesaukee is, "The Smile of the Great Spirit." There are those who believe that the life and work of Mrs. Eddy was also a "smile of the Great Spirit."

Santa Ana Register.

✧

Peoria, Ill.

At the Mohammed Temple a large and interested audience listened to a lecture on Christian Science by William D. McCrackan. He was introduced by Congressman Claude U. Stone as follows:—

The needs of the body are few and easily satisfied, but the thirst of the soul is quenchless. Therefore the person who leads man to the uplands of hope and faith renders a greater service than he who adds even a continent to his possession. The person who reveals and interprets to mankind the sublimities of worship, who elevates their minds to the principles of truth and purity and a complete and perfect faith, and who warms their hearts with the love and fraternity which our Saviour taught and demonstrated, surely opens unto them a new heaven and lays at their feet a new earth.

Such a benefactor was Mrs. Eddy,—a fact to which hundreds of thousands whom her teachings have comforted and blessed are willing to testify. It is fortunate that we have the opportunity to learn more about the institution which she established and which has done and is doing such a wonderful work in the world.—*The Peoria Transcript.*

✧

Rapid City, S. Dak.

The annual lecture on Christian Science was given in the Elks Theater. R. B. Irons, superintendent of schools, introduced the speaker, Clarence W. Chadwick, in the following words:—

Many of us, no doubt, are not wholly conversant with the fundamental teachings of Christian Science. We are all aware, however, of the great growth of Christian Science, both as to membership and influence on the world, during the past few years. Several agencies have contributed to this growth. The publications of the church, which are so well edited and widely read; the character of the lives led by the

Digitized by Google

members of the church, which is so optimistic and wholesome; the lectures provided by the church, to which the public are so cordially invited,—all have aided in the upbuilding of the church.—*The Rapid City Journal.*

✧

Sheboygan, Wis.

Clarence C. Eaton, who addressed a large audience on Christian Science at the Opera House, was introduced by Ernest Best, second reader, who spoke in part as follows:—

Commercially speaking, there is in vogue today a universal campaign for efficiency. With "better results and better working conditions" as its slogan, it advocates the existence of a law of efficiency which, when understood and rightly applied, helps to solve industrial problems and proves beneficial to both employer and employee. And so, speaking from a religious standpoint, Christian Science is abroad today with "health and happiness" as its slogan, and advocates the existence of a spiritual law which, when understood and rightly applied, heals the sick and holds the answer to the one great question, What is God, and what is man's relation to Him?—*The Sheboygan Telegram.*

✧

Rochester, N. Y.

The remarks made at the Temple Theater by the Hon. James A. Harris in introducing Charles I. Ohrenstein, who lectured on Christian Science, were as follows:—

I am not a member of the Christian Science church, but I know a little about its teachings. From the study and observation I have given it I have been led to throw away any feeling of prejudice I had previously held. I am convinced that thousands of our best men and women have become happy, contented, and prosperous by applying the teaching of Christian Science in their daily duties. Anything which will accomplish the good that Christian Science has accomplished has my approval.—*Correspondence.*

Testimonies of Healing

I consider it a duty as well as a great privilege to testify to the healing and regenerating influence of Christian Science. When I began its study I was a discontented and unhappy man. From close association with dangerous prisoners (being in the jail service), over whom I had to exercise control, I gradually acquired the habit of ruling by fear instead of by love. Inured to scenes of crime, also executions, and ever on the alert to defend myself against attack from those who held life so lightly, I developed a mental condition by no means enviable from a Christian Science standpoint.

Although I endeavored to be honorable in all my actions, yet I held such peculiar views of duty and honor that I spared neither myself, my family, nor any one else, high or low, who failed to measure up to my miserable standard, and few there were who escaped my criticisms. I was indeed a hard master, a domineering husband, an overexacting parent, and I had few real friends. To these traits were added a brooding disposition and an ungovernable temper. Every day would see me in a state of violent anger about even trifling things, while the nights witnessed to my remorse, mingled with prayers and resolutions to lead a better life. The following day, however, was only a repetition of the previous one. I fully realized that I was very wrong in all my thoughts and actions; but I could not help myself to get right, though I used to pray earnestly to God to guide me in the right way. Although my services were always commended by the authorities, yet I had a great craving for a higher life, a life "hid with Christ in God."

It was at this stage that a friend handed me a copy of the *Journal* to read and criticize. Before I had read half of it I felt arrested, like St. Paul. My eyes were opened to the real cause of my errors, and there and then I realized that there was no necessity for me to continue in wretchedness, for it was more or less self-imposed and caused by erroneous belief. The truth gradually dawned on me that as a child of God I was not subject to the bondage of sinful beliefs, but that my heritage was peace, joy, health, harmony, and immortality. I may mention that while reading the *Journal* and awaiting the receipt of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, for which I had sent, I was healed of the smoking habit, to which I had been addicted for thirty-four years.

In October, 1914, I gradually developed a disease supposed to be due to certain parasites. Although I had been a student of Christian Science for some time and had occasionally helped myself and family in cases of illness and had given up the use of drugs for over six years, yet I was careless about my own complaint and put off the treatment for a more convenient season, with the result that after a period of five months the disease was becoming chronic and began to cause me much fear and pain, for serious symptoms had set in. Finding that I had missed my opportunity of meeting the case in its incipient stage, I called upon a Christian Scientist at Calcutta for treatment, and I am grateful to say that within six days all traces of the disease vanished and I am now quite well again.

Besides my own healing through Christian Science, I witnessed the wonderful healing of my wife, who had sustained a serious spinal injury. Everything looked dark for us, and all our plans appeared for the time to be completely upset, as fear intruded itself that this injury would surely result in permanent invalidism; but thanks be to God, who rewarded us for our faith in Him, we clung steadfastly to the truth as taught in Christian Science, and she was healed.

While deeply grateful to God for the physical healing, I feel more grateful for my regeneration from the discordant mental condition, for I consider it to be of an even higher order of healing, since I was more spiritually uplifted by the latter than the former. Greatly rejoicing in the progress I have made, I am daily striving to be more and more worthy to be accounted a Christian Scientist. I am sincerely grateful to our dear Leader for bringing this teaching to our knowledge, and also to those dear friends who helped me along the rugged way. My thanks are due to the writers of the helpful articles in the *Sentinel* and *Journal*, as I have received much benefit from them.

ARTHUR H. OWEN, Madhupur, Bengal, India.

One day early in September, 1915, I met with a serious accident. As I was alighting from a train, I fell heavily on my back, and every attempt to lift my legs caused untold agony. Supported by my son and two servants I managed with the greatest difficulty to reach home, which was near by, where I was immediately put to bed. Such was my fear and confusion of thought that I was unable at the time to put into practice the teachings of Christian Science, of which I had some knowledge, having been healed through it of bronchial asthma only a short time before this accident.

As I lay helpless on the bed, dreading the result of this injury, more serious symptoms set in, such as partial paralysis. It was then that I was roused to make an effort to help myself by trying to realize man's true spiritual state of being; but being overcome with fear and suffering, I was not able to demonstrate the truth. I then bethought me of the Christian Science friend at Calcutta who had formerly treated me, and with difficulty I scribbled a few lines in pencil asking him for treatment. Those around me urged me to go to the hospital at Calcutta, where eminent surgeons would attend me; but my trust in God was so great that the prospect of becoming a permanent invalid, as was expected by others, did not deter me from holding on to the truth, for I knew that it is God alone who "healeth all thy diseases."

Within two days after our friend took up treatment I felt slightly better, and when he gave me treatment at my bedside all my fears left me. From that moment onward my healing was more rapid, and I began to walk about, though slowly at first. Within three weeks I felt practically healed, with the exception of a slight stiffness in the limbs, which has since vanished, and now I am perfectly well, and can go for long walks and do all my household work.

I am deeply grateful to God for this healing, and for the better understanding of Him that I got through it. I am also deeply indebted to our dear Leader for having brought the Christ-healing to humanity in these days.

ADA C. OWEN.

✧

I have been healed by absent treatment of an aggravated form of rheumatism through the faithful work of a Christian Science practitioner, and I feel more grateful than words can express. For over twelve years I had worn glasses for defective vision. They had to be ground every year or two, and the optician said the last time they were changed that they could not be altered again. I was relieved, however, of all this difficulty by reading Science and Health and with some help from a Christian Science friend. At another time I had attacks of blindness which would come on at any time. I got Science and Health and began to read, though I could see but very little. I kept on for perhaps ten minutes, and the mist cleared and has not returned.

There have been other instances of help received through reading Science and Health, and I am thankful that I was led

Digitized by Google

to this healing truth. I hope my testimony may be the means of helping some one in distress, as I was before beginning to read Christian Science literature. I was despondent, did not care to live, had not been inside a church for two years, but I can now look forward with a bright hope.

STELLA HOFFMAN, Venice, Cal.

I desire to express my gratitude for the healing of our son. About a year and a half ago he was seized with a severe attack of acute lung trouble and seemed to suffer very much. Christian Science treatment was given him, and on the fourth day the disease was broken. He seemed to be in a very serious condition all that day, but in the evening a large amount of pus was expelled from the lungs and he began to mend at once. I firmly believe if it had not been for Christian Science he would not have pulled through; but he is with us today, and stronger and healthier than ever. This to me was a wonderful demonstration.

I also wish to tell of the overcoming of grief at the passing on of a little daughter, in the hope that it will help some one who has sorrow to bear. While at the time it was a shock, when I began to realize that there is no death, but that life is eternal, I was greatly comforted. I am deeply grateful for this understanding, as it has indeed meant much to me. I am truly thankful to God and to Christ Jesus the Way-shower, also grateful to Mrs. Eddy.

BERTHA M. KELLER, Chicago, Ill.

I can fully verify the testimony given by my wife, for I know that the understanding of Truth and the faithful work of the Christian Science practitioner healed our son and enabled us to overcome grief and sorrow. Christian Science has also healed me of tubercular abscesses. I am truly grateful for what it has done for us.—AUGUST P. KELLER.

✧

A few years ago I was practically a physical and mental wreck, having been ill for ten years. I had exhausted all material systems of treatment and was then undergoing a fast. I firmly believed that if I were able to complete the fast I would be healed, but at the end of ten days I was forced to abandon it, a well-known specialist saying that if I continued, the result would probably prove fatal. Needless to say, I was extremely despondent and discouraged, as I felt my only hope for recovery was gone.

At this time my sister brought me a copy of Science and Health, begging me to read it and also to have Christian Science treatment. Although I did not expect to be healed, I consented, thinking I would read the book through as a matter of courtesy, since it had been presented to me as a gift. Before I had read half of its contents I realized it contained the "pearl of great price," and began its study in earnest. After one or two treatments, through a misunderstanding I was left for a day and night without help, but I was able to arise and perform the simple duties about the home, including the care of my three years' old son, although I had been warned by physicians not to exert myself.

I have been healed of numerous ailments, including a bad case of eye trouble. The doctors said I would never be well again, as my entire nervous system had been shattered, and one very prominent nerve specialist said if I did not get relief at once I would suffer a complete mental and physical breakdown within six months, which would result in insanity, and advised that I should not be left alone. When informed that I was trying Christian Science, the doctor said to let me try it, as I must be humored, but that I would soon be back in the old rut again. Despite this, I was quickly healed of everything, with the exception of the eye trouble, which yielded more slowly.

The oculist who had charge of my case did not take very kindly to the thought of Christian Science. He said it could never heal a case like mine, as I had been born with defective eyes and it was a case for surgery. I had undergone one operation without benefit, and was informed that a major operation was necessary; but it offered only relief, not a permanent cure. I had worn glasses for years, and for a year before taking up Christian Science I had not been able to read or use my eyes for any close work. I had suffered constantly from headaches since a child, and my greatest fear was of total blindness; but I am glad to say that my healing has been complete. I now spend many hours daily in study without the use of glasses, and without pain. The case has been met through mental surgery alone.

These are only a few of the many blessings that have come to me through my understanding of Christian Science. I began the study primarily for physical healing, but found I had merely taken my first step. For years I had studied many religious doctrines and various philosophies. I had never been a member of any church, for even at the age of nine I realized I could not consistently join a church organization while unable to accept all its teachings. As a young girl I felt very much alone in the world and longed for the comfort of a church. I had often been called an infidel, but I repudiated the name, for I always believed there was something beyond human comprehension. I kept on in a vain endeavor to fill my storehouse with grains of truth, but when forced to turn to something for help, I went to my storehouse and found it contained only husks, and for the first time I realized I had been crying: "Peace, peace; when there is no peace;" so I closed its door forever, and turned toward the Father's house, where I received His blessing, even as did the prodigal son from his earthly parent. This was indeed true healing.

My fondest hopes have been realized, and today in all humbleness I am glad to be a student of Christian Science. I am no longer alone in the world, for God is omnipresent. The Bible has become to me a treasure-trove. This book of Truth and the writings of our beloved Leader are my constant companions; they are all sufficient. The way is growing brighter, and I know that "the path of the just is as the shining light, that shineth more and more unto the perfect day." I would recommend to all seekers of Truth the earnest study and application of Christian Science, as set forth in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.—IDA TILTON, Denver, Col.

✧

About ten years ago, at the time of a severe and prolonged attack of neuralgia in the head, after spending many sleepless nights and enduring much agony, I decided to try Christian Science. It was on a Friday evening that I made my first visit to the Christian Science practitioner, and after some conversation I asked for treatment. Upon leaving the practitioner's home I returned to my room and retired immediately, for I was in great need of rest and sleep, having been unable to enjoy either for many weeks. I awoke the next morning feeling like a new man, having slept soundly all night, and I felt greatly refreshed. There was still a deadened sense of the neuralgia, but the excruciating pains had ceased and I never experienced them again. Treatment was continued for one week, at the end of which time all trace of this ailment and of a chronic cold and catarrh in the head, with which I had been troubled for several years, had entirely disappeared.

This experience convinced me that Christian Science is

Digitized by Google

indeed a powerful healing agency; but that was not all,—its moral influence was also taking effect. I began to study Science and Health and other Christian Science literature, and a Bible which had been stored away for at least three years soon became a daily companion and of the greatest interest to me. One of the first bad habits to yield to the touch of Truth was profanity, and in place of this my consciousness was being filled with a deep reverence and love for God, whom I was beginning to understand as infinite good, —not the cause but the exterminator of all human suffering, as well as sin.

For a number of years prior to my first knowledge of Christian Science I was an annual victim of hay-fever, but since the first attack was destroyed by Truth there has been no return of the disease. Through the teaching of Christian Science I am learning to look to God not only for the healing of physical ills, but for the supply of every need, and for wisdom to guide me in my daily affairs. Thus I am gradually coming to recognize that God, good, really is All-in-all, as the Bible declares Him to be.

No words that I might employ could express my gratitude to Mrs. Eddy for the Christian Science text-book, "Science and Health with Key to the Scriptures," and her other writings, the study of which is bringing so many of us into a realization of the omnipresence and availability of the God "who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with lovingkindness and tender mercies; who satisfieth thy mouth with good things," and "with whom is no variableness, neither shadow of turning." I would also like to express my gratitude for the high standard of efficiency maintained at headquarters, which is so clearly evidenced in every issue of the *Sentinel*, the *Journal*, and the *Monitor*.

L. E. Alvord, Kenosha, Wis.

✧

It is a happy privilege as well as duty to acknowledge the many wonderful blessings I have received in Christian Science. In September, 1909, I applied to a practitioner for treatment, being in great distress physically and mentally. I had some knowledge of the healing work of Christian Science but was not willing to give up material remedies entirely,—not until after a very distressing hospital experience, with little or no relief, soon followed by alarming conditions that had not appeared previous to the operation.

With the first treatment in Christian Science my relief was so pronounced that I was convinced it was the truth which Jesus said should make us free. During the following three months many serious ailments vanished, among them being what the physicians called an abnormal condition of the kidneys, chronic appendicitis, and nervous breakdown. No hope had been held out for me unless I submitted to another operation, but the operation of Truth and Love did the healing work, the least of which was the overcoming of physical ills; for I soon learned that it was fear, self-pity, ingratitude, faultfinding, and many similar errors of which I needed to be healed, and in the measure that I was willing to give up the old way and be renewed in Spirit the healing was made manifest.

There is not a day that I am not profoundly grateful for my understanding, though as yet limited, of this truth that does indeed make free and is always a "very present help." My healing has been permanent, and Christian Science has been my only remedy for discord of every nature since I turned to it for help. I am grateful for the increased understanding of and love for the Scriptures since studying Science and Health, and I could tell of many other wonderful blessings received. My gratitude is boundless to God, as well as to Christ Jesus the Wayshower, and I am also deeply grateful to our dear Leader, Mrs. Eddy, who was spiritual enough to receive God's message of love and give it to us in a demonstrable way, as taught in our text-book, "Science and Health with Key to the Scriptures."—Lyda McKenna, Chicago, Ill.

✧

I am glad to express my deep gratitude to God, and also to our Leader, Mrs. Eddy, for all that Christian Science has done for me. Through it I was healed of a nervous breakdown when the physicians could do nothing for me and gave but little hope that I would ever be well again. For nine months I was not able to do anything. Then after working for some time I again had to give up my position. At last, yielding to the wishes of a dear one, I went with her to see a Christian Science practitioner, and through the truth unfolded to me by this practitioner, who lovingly and faithfully worked for me, I was able in less than five weeks to resume my work, wholly freed from this trouble.

For this healing and many other blessings I am grateful. My prayer is that I may daily grow in the understanding of the truth as it is taught in Christian Science, so that I too may help my brother man, for our Master said, "Freely ye have received, freely give."—Lena Hartleb, Amherst, Mass.

✧

I wish to express my gratitude for what Christian Science has done for me. All my life I suffered from severe headaches, which became worse as I grew older. I had a bad attack on Thanksgiving day, 1910, and came very near passing on. The doctor said I would never be well again. I got so that I could walk about the room, but suffered a great deal all the time. On Dec. 7 I asked a Christian Science practitioner to come to see me and take my case. This she did, and began treating me at once. At Christmas I did all my own work and walked a mile and spent the day with a friend, something I had not been able to do for years. I was also healed of stomach trouble, which I had in a very bad form for thirteen years, and other ailments disappeared. For all this I am thankful to God, and grateful to our beloved Leader, Mrs. Eddy.—Dora Warren, Statesville, N. C.

✧

In April, 1914, I was thrown from an automobile and rendered unconscious for some time. The first thing I heard was my little girl crying for me. I tried to open my eyes and get up, but could not. My father and another man helped me on to my feet, but my back hurt so that I could not walk alone. They assisted me to my cousin's house and my father telephoned to my husband, who immediately tried to communicate with a Christian Science practitioner fifty miles away. As he could not get a telephone message through, the central operator said she would send it as soon as possible. He then got a doctor, and when they reached me I was being carried out in a chair to another automobile, so that I could be taken home. When the doctor was shown where I fell he came around to me and said at first that my back was broken; when he learned that I had stood on my feet, he said it could not be possible that I had such a fall without breaking my back.

When I got home the doctor made an examination and said the end of the spine was badly injured. He told me that I would have to lie in bed four weeks without moving, and that my back would trouble me all my life. There were eighteen people in to see me that evening. Nearly every one knew of some one who had injured the spine and who always suffered from it afterward. They told my husband he must

Digitized by Google

insist on the use of material remedies, as I did not realize my condition and therefore he should look after it.

The Christian Science practitioner did not get our message until the next day, and I suffered terribly until he began treatment. The doctor came again Monday of his own accord, and told me of some medicine to use, but I did not get it, as I knew that "what God cannot do, man need not attempt" (Science and Health, p. 231). The third day after the accident I was up for a short time, and in three weeks I was doing my own work again. My back never troubles me. I am thankful to God, also grateful to our Leader, Mrs. Eddy, for teaching this great truth.

EDITH DAVIS GURNEE, Nunda, N. Y.

✧

It is with a grateful heart that I tell of the blessings I have received through Christian Science. I had worn glasses for eight years, but the first day I heard of Christian Science I took a treatment and have not put them on since. That was two years ago. I was also healed of severe attacks of pleurisy in a few absent treatments.

One evening, while returning home from a friend's house, my mother was thrown from the street-car. Her head struck the asphalt pavement and was badly cut. When the company's doctor called the next day, he told us that the injury would affect her mind; but as we were interested in Christian Science we called a practitioner and my mother was able to be around in a few days. It is now six months since this occurred, and she has felt no ill effects from the accident.

Through Christian Science treatment my brother was healed in a few months of a sore which covered his forehead and which the doctors could not cure. He was also cured of serious throat trouble at the same time. We are indeed grateful for all that Christian Science has done and is doing for us each day.—ERWIN W. AUGUSTIN, Milwaukee, Wis.

✧

Counting up the many blessings that have come to me through the interpretation of the Scriptures by Mrs. Eddy, I am reminded of my first experience in Christian Science, for which I am especially grateful, as the physical relief, wonderful as it seemed, proved to be but the stepping-stone to still better things, the door, as it were, to an entirely new world. The truth of its teachings left its impression as a sweet benediction after a long night of chaos and fear. Through the help of a Christian Science practitioner I was relieved in a very short time of intense suffering from an abnormal growth. There is not the slightest trace remaining of this growth, which formerly was noticeable even when I was fully dressed. I had not been able to sleep at night for many months prior to my first treatment in Science, but sleep and rest soon came to me as the calm after a storm.

This healing took place over two years ago, and since that time I have proved God's allness and the nothingness of matter many times. I feel that my gratitude will be best expressed by letting my light shine.

MARY E. YARNALL, Roxborough, Philadelphia, Pa.

✧

It would indeed be hard to tell all that Christian Science has done for me. I have been healed of many physical ailments and much fear. My husband has also been helped at different times, and I am especially thankful for the quick relief experienced by him during a sudden and seemingly severe attack of fever. In time of sickness, in business problems, and in my every-day life, I find great help in knowing the truth about God and man as taught in Christian Science, and for all the blessings and comfort I have received in every way I am very thankful.

MATTIE MESSENGER, Grant Park, Ill.

From Our Exchanges

[Clyde Weber Votaw in *The Biblical World*]

Jesus had his conception of what life ought to be,—a life of lofty spiritual attainment, in right relation with God, marked by the worthiest conduct and character, wrought out in social spirit and service. All that Jesus did and said was to promote this ideal; he lived and died for it; and it represents his contribution to humanity. He gave no scheme of doctrines or set of institutions. Where we find his ideal alive, where we find men trying to fulfil it in themselves, in one another, and in the world, there is Christianity. Religion may take various forms, and accept various ways of thinking and modes of life, but it will be a Christian religion if the ideal of Jesus constitutes the object of its being. From the gospels we can obtain a clear view of the large ideal of man and his life that was characteristic of Jesus, and that he left as a guiding light to all who seek the best.

In the whole-hearted adoption of this ideal lies our only hope of becoming better Christians and of leading on toward a Christian world. The ideal of Jesus is as broad as the whole field of ethics and religion,—that is, as broad as the field of life. Other teachers of religion there have been, both before him and after him, but he stands out preeminent among them all in quality and power.

[Rembert G. Smith, D.D., in *The Homiletic Review*]

To the sons of time the blessings of Jesus are indeed not small, but they are confined to the temporal. . . . They follow him even into the wilderness for the loaves and fishes of earth; but they will not have the true bread of life, though he seek them out and offer it to them. They rejoice in all the temporal blessing of Christianity; they spurn the gift of eternal life.

They know this Jesus, but do not know him aright, for thus to know him is eternal life, and their horizon shuts from their vision the realms of the everlasting. Ignorant, they learn in institutions built in his name, but they will have none of the truth which he offers to give them; sick, they lay themselves down in hospitals erected in the perpetuated spirit of his healings of men's bodies, but they decline the prescription of the great Physician when he would heal the loathsome disease of sin; slaves of their fellow men, they exult when the influence of Christianity strikes off the manacles, but slaves of Satan, they hug their chains and decline the deliverance of him who "led captivity captive."

[J. H. Jowett, D.D., in *The Christian Intelligencer*]

The church sometimes seems to be contented to abrogate its ministry of regeneration and to settle down to the secondary ministry of reform. Often, too, she gives her strength to rearrangement of circumstances instead of to the transformation of life. She is often more concerned to alter an organism than to change the organism. Her real work, her appointed work, her permanent and abiding work, is to see to the rebirth of the race, the endowment of men with new power for the mastery of old circumstances, and the gift of new hope and vision, of new motive and constraint.

[William Ralph Inge, M.A., D.D., in *The Christian Work*]

We must not cling to the knowledge of Christ after the flesh. That is the lesson of the ascension. Jesus Christ has ascended; that is to say, he has passed into the invisible world. Do not think of him as occupying a position in the sky which could be determined by a good telescope. That is picture-book theology. Christ has passed into the invisible world, which is very near us, around us, among us. His

Digitized by Google

presence is of a different kind from what it was, but it is not less real, not less near. We come close to him when we are lifted up in heart and mind to the region where he dwells, to the sphere where all that is good and beautiful and true has its home. This is the heavenly region from which Christ came down, a region separated from earth not by tracts of space but by difference of nature. There is no up and down, no near and far in the spiritual world. If we have the mind of Christ we are with him forthwith. All that on earth is good and true and beautiful comes from him and belongs to him in whom it pleased the Father that all the fulness of the Godhead should dwell.

[Rt. Rev. Charles P. Anderson, D.D., LL.D., in *The Living Church*]

Men are seriously asking whether Christianity has failed. We answer, No. Christianity has not failed, but our civilization is threatened, because though it contains many Christians it is not corporately Christian. It is a legitimate question as to whether a united church might not have preserved peace in the world.

We look out upon the Christian church today, and in spite of its interior indestructible unity we see it externally rent and torn asunder, largely disintegrated and individualistic, unable to mold the national conscience or to influence the continental mind or to weave itself bodily into the warp and woof of our civilization. One does not have to deny the contribution which each church has made to the totality of Christian experience; one does not have to deny the religious values for which each church has stood; one does not have to deny these things in order to affirm that isolation and separation and disintegration are imperiling the power of the church of Jesus Christ.

[*The Congregationalist and Christian World*]

Christmas is still the keeper of the secret of the world's redemption. Holy peace is rooted in the good will of men. So we were long ago taught. So we must come in the end to see. The hope of a world which will in any fashion answer to any defensible vision of what the world ought to be is not in armies and navies, nor in treaties and international tribunals, nor in methods and organizations, but first of all and profoundest of all in human good will. It is all as simple as that, and we might have a brother world tomorrow if only we all would change the climate of our souls.

[*Northwestern Christian Advocate*]

Christ himself believed in and practised preparedness. As he approached the period when he was to launch out into a program of world conquest by announcing his divine mission, he retired into a desert place, not to escape Satan, for the tempter followed him, but that he might be near his Father and the sources of heavenly power. He came back to his inaugural fully panoplied from on high. When again he was to meet his adversaries at the close of his mission, and he realized the powers that should withstand him, he retired to the garden for divine strengthening.

[*The Universalist Leader*]

Christianity has not failed. It is an emancipating truth; it is a socially regulating and commanding power; it is adequate to transform this old earth into a kingdom of heaven. As a workable philosophy it is still regnant among all the schemes and visions of men. Christians, not Christianity, have failed! We have failed to believe, to trust with our whole souls, to passionately "dare, nor be afraid." The great social issue of the immediate present is applied Christianity.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

The two pamphlets entitled "Environment and Opportunity" and "The Providence of Good" have been translated into French and are now published with the English version opposite the translation. Each of these pamphlets contains five articles.

"Christian Science: Man's Dominion over Evil," a lecture by Edward A. Kimball, C.S.D., has been translated into Russian, Norwegian, and modern Greek. Pamphlets in these three languages have been published with the English version opposite the translation and are now on sale at prices of our regular pamphlets as shown on the opposite page.

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

MARY BAKER EDDY: HER PURPOSE AND ACCOMPLISHMENT. By FREDERICK DIXON. Printed in German and French.

THE FOUNDER OF CHRISTIAN SCIENCE. By B. O. FLOWER. Printed in German only.

CHRISTIAN SCIENCE: THE COMFORTER OF PROMISE. By FRANK H. LEONARD. Printed in French only.

CHRISTIAN SCIENCE: DEMONSTRABLE RELIGION. By FRANK H. LEONARD. Printed in Norwegian only.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. By PROF. HERMANN S. HERING. Printed in Dutch only.

CHRISTIAN SCIENCE: A RELIGION OF PROGRESS. By WILLIAM D. MCCRACKAN, M.A. Printed in French and Swedish.

CHRISTIAN SCIENCE: ITS PRINCIPLE AND METHOD. By BICKNELL YOUNG. Printed in French and Swedish.

PRICE, POSTPAID: Single copy 5 cents; twelve copies to one address 55 cents; fifty copies $2; one hundred copies $3.50. Orders for above pamphlets may be assorted as desired.

For table of English, German, Swiss, and French money equivalents, see inside front cover page.

Miscellaneous

A Catalogue of Selected Bibles will be furnished upon application, and quantity rates on other items specified below will be found in the current catalogue in *The Christian Science Journal*.

BIBLES. 01483 x. Clarendon Brevier, heavy-faced, distinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.75.

01440 x. Brevier, light-faced type; self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.50.

Morocco slip case to hold pocket edition of Science and Health, *Quarterly*, and Bible, $1.25.

Two other sizes of slip case listed in the current issue of the *Journal*.

Covered morocco case with handle and purse on outside, $3.50; without purse, $3.25.

01683 x. Large type Bible, 10¾ x 8 inches, bound in Alaska seal. Specially adapted for use of second readers, $9.25.

The improved Index will be added to any Bible listed in our catalogue for an additional charge of 35 cents. Catalogue No. 22 of selected Bibles will be mailed free upon application.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. 132 pages with index. Paper covered, 15 cents; cloth binding, 85 cents.

THE LIFE OF MARY BAKER EDDY. By Sibyl Wilbur. 424 pages. Cloth, $2. Edition de luxe, $5.

"PERSONAL CONTAGION" and "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Paper cover, 10 cents.

THE MOTHER CHURCH. By Joseph Armstrong. A history of the building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated, 107 pages. Cloth, $1.50.

CHRISTIAN SCIENCE: ITS LEGAL STATUS. By Judge Clifford P. Smith. 128 pages, paper covered, 10 cents.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, $1.15; half morocco, $1.40; full morocco, $2.50; levant, $3.50; pocket edition, size 4⅝ x 6⅝, $3.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission, have been set to music as follows: "The Mother's Evening Prayer," 75 cents; "Christ, My Refuge," 75 cents; "Love," 40 cents; Communion Hymn—"Saw Ye My Saviour?" (Johnson), 50 cents; "Blest Christmas Morn," 27 cents; "O'er Waiting Harpstrings of the Mind," 27 cents; "Shepherd, Show Me How to Go," 27 cents; "Saw Ye My Saviour?" (Root), 27 cents. The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing. 8-inch (mount 12 x 16), $1; 12-inch (mount 15 x 20), $2; 16-inch (mount 21 x 29), $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18 x 24 inches, $5; on India paper without remarque, $3. Smaller reproduction, size 11 x 14 inches, on Japanese vellum, $1. Photogravure post-cards, reproduction of the picture of the Church Edifice and Publishing House, 5 cents.

QUARTERLY COVERS in black morocco, $1.15; with purse, $1.40.

ALUMINUM LESSON MARKERS. Set of thirty, with paper shields, 50 cents. Extra paper shields, one hundred, 15 cents.

PRICE LIST OF BIBLE CONCORDANCES and DICTIONARIES OF THE ENGLISH LANGUAGE supplied on request. Express charges collect on delivery.

REPRINTS (not printed in English). Two-page leaflets, 14 subjects in French and Swedish; 10 subjects in German. Ten copies to one address, 10 cents.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Send all orders for the works of Mrs. Eddy, with remittance by New York or Boston draft or money order, direct to Allison V. Stewart

For literature listed above address orders and make remittances payable to

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Entered at Boston, Mass., post office as second class matter.

Items of Interest

Teachers' cottages, erected by the community in or near the schoolhouse, and used not only as the teachers' residence but also as the community center, are advocated in a bulletin prepared by R. S. Kellogg and distributed by the department of the interior through its bureau of education to county superintendents and other officers in charge of rural schools. Lack of suitable boarding accommodations is one of the most serious difficulties in the way of securing suitable teachers for country schools, the bulletin declares. There are more than two hundred thousand rural school districts in the United States and over sixteen million children of school age who live in the country or in towns of less than twenty-five hundred population, yet it is impossible because of the living conditions to get teachers of the highest type to remain in the country.

The Shields water-power bill, which was passed by the United States Senate, has been reported in amended form by the House committee on interstate and foreign commerce. To meet the demands of conservationists, it is expected that many amendments will be made in the House. The Adamson dam bill, similar to the Shields bill, was vitally changed on the floor at the last session of Congress, the conservationists winning on the question of a Federal charge for the use of water-power, adequate provision for termination of the leases at the end of fifty years, and provision for Government acquisition, if desired, at the end of that period by the payment of actual cost.

New York has made an innovation in municipal jurisprudence. A court devoted exclusively to the hearing of actions in which city departments are concerned will be opened in the Municipal Building. It is said that this is the first court of its kind in the country. Chief Magistrate McAdoo says: "Property owners and all classes of citizens who may offend against laws and ordinances involving city departments will hereafter not have to enter the unpleasant atmosphere of the police court. They will be brought to the new court by summons, never arrested unless it is impossible to get them to court in a less drastic way, and their cases will be treated by one judge."

The committee appointed by the Chamber of Commerce of Fall River, Mass., about a year ago to prepare a report on the question of taxation has just completed its work. The report is voluminous. As stated by the committee, its conclusions are as follows: "That taxation of industry cannot be excused either on moral or economic grounds; that the land value tax can and should furnish the funds for public works; we recommend that the Chamber of Commerce assist in the passage of the constitutional amendment striking out the word 'proportional'; that home rule taxation be advocated; and that the Somers system of realty valuation be adopted."

One of the newest highways proposed is that "across the South," designed to be a link to the "ocean to ocean" drive which the national highway commission is trying to establish. This highway through Dixie would extend from the Atlantic seaboard through the states of Florida, Georgia, Tennessee, Alabama, Mississippi, and Arkansas, and would consist of a system of highways tributary to one or more trunk roads. The road will follow the old military highways, which were opened up for the purpose of removing the Indians from the South to Indian territory, the main trunk of which is known in some places as the Jackson road.

The United States department of agriculture wishes to encourage the use of the Government lands in New Hampshire, and has, therefore, sent out a circular stating that temporary camping in the forest may be enjoyed simply upon the issuance of a permit by a forest officer. For those who wish to lease land for camp and cottage sites full information is given regarding the conditions under which such sites may be secured. Information is also given for those who contemplate building hotels or places of business on forest land.

The United States is getting ready, it is said, to print its money in continuous strips a mile long. A mile of dollar bills would represent $20,275. At the present time United States notes and certificates are printed in sheets of four. Until very recently all of the paper money has been printed on hand presses. It was only a short time ago that Congress was persuaded to authorize the use of machinery for printing the backs of the notes and certificates. The faces are still printed by hand on old-style presses.

Reclamation of harbor flats is about to start on a large scale at East Boston, Mass. The contract calls for pumping 1,000,000 cubic yards of material from the flats and dumping it inside the bulkhead which is being built off Jeffries Point, where thirty-five acres of new land will be made up to the street level and connected with the mainland by a solid fill, which will average eighteen feet in depth and will rise about sixteen feet above tidewater level.

The Associated Billposters of the United States and Canada is held by Federal Judge Landis to be a combination in restraint of trade. The ruling was given in the government suit asking dissolution of the association, filed in August, 1912. The complaint charged that ever since its organization in 1891 the Associated Billposters had sought to crush competition.

The New South Wales department of lands has issued a report on the land available for settlement and the progress of settlers on the various estates acquired under the closer settlement acts. It appears that the area available for agriculture during the period of 1915 amounted to more than a million and a half acres. An increase of the wheat area was desired, and to obtain it certain advances were made to owners of leasehold tenures to cover the expenditure necessary for the clearing and sowing of such areas.

The campaign for the improvement of waterway communication in central Europe is being pursued with increasing energy, and a conference on the subject has just been held at Nürnberg between the members of the Bavarian Canal League and representatives of the towns specially concerned with the scheme for the formation of a great Rhine-Main-Danube waterway.

The Governor of the state of Yucatan has issued a decree prohibiting foreigners from acquiring title of real estate there. It was explained that the decree was issued because of the activity of foreigners in efforts to unsettle the money market. The Governor promises to remove the decree when conditions have been remedied.

There has been a considerable development of new industries in Chile in the last year and a half. Plants for the manufacture of iron, of sundry iron products, of electrical supplies, and of plate glass, are among those recently established. Their output is not yet large, but plans are being made for extending them.

A party of Uruguayan boy scouts, or vanguards of the republic, as they are called in their country, arrived at Santiago, Chile, the evening of Jan. 24 for a friendly visit to their Chilean associates. They came in a special train supplied by the Trans-Andean Railway.

There have been offered to the financial board of the University of Cambridge, England, two farms, yielding a net income of £100 a year, for the encouragement of the study of forestry. The board has expressed its appreciation of the gift, and recommended that the university accept the offer.

Automobile manufacturers of America used 21,502 freight-cars in shipping their product in February of this year, compared with 11,973 in February, 1915. The number of cars used in January was 19,973, or 11,973 more than in the corresponding month last year.

Portland, Ore., is indebted to the women of the Monday Musical Club for the inspiration that will result in the $600,000 auditorium, actual work on which was begun Feb. 15. The building will have a seating capacity of 3527.

Oakland, Cal., is to see that the Lincoln Highway is marked as far east as Salt Lake City, with signs pointing the way and indicating the number of miles to that city, the western terminus of the great road.

The amount of shingles exported from British Columbia to the United States the past year was much in excess of the total for the previous year, the shingle production in 1915 being valued at about three and a half million dollars.

There are 819 daily newspapers published in the United States and using the English language that decline liquor advertising. A year ago there were but 482.

Leading Danes are again urging the sale of the Danish West Indies, but they want more money than $4,300,000, the price offered by the United States in 1901.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII April 1, 1916 No. 31

Jesus the Christ

JUDGE SEPTIMUS J. HANNA

WHAT an infinity of meaning the words Jesus the Christ embrace! The prophecies of the Old Testament center in the spiritual truth of which he was the individual exponent and the chief earthly representative. These prophecies begin with Genesis and run through the writings of the prophets down to and including Malachi, constituting the very warp and woof of the prophetic books.

Some of these prophecies are direct and literal; others are figurative and more or less obscure, that is in the letter, but spiritually discerned they are wondrously illuminative. An understanding of them establishes in consciousness that assured sense of the nature, character, and office of Jesus the Christ without which we cannot know God. It is not too much to say, moreover, that we can know the eternal Christ only as we study, understand, and apply the teachings of the Master. We must learn first of his humanity, and through the understanding of his humanity, come into the understanding of his divinity. On page 54 of Science and Health Mrs. Eddy says: "Through the magnitude of his human life, he demonstrated the divine Life. Out of the amplitude of his pure affection, he defined Love. With the affluence of Truth, he vanquished error. The world acknowledged not his righteousness, seeing it not; but earth received the harmony his glorified example introduced."

The fact that "God was manifest" to humanity through Christ Jesus, as St. Paul tells us in his first epistle to Timothy, establishes at once his humanity and his divinity. This corelation constitutes his full individuality. This duality of his nature and character is that which distinguishes him from all others and places him, as the Scriptures declare, "far above all principality, and power, and might, and dominion, and every name that is named, not only in this world, but also in that which is to come."

It was this transcendent vision of the Messiah that caused Zacharias, when filled with the Holy Ghost, to shout forth his praise as recorded in the first chapter of Luke's gospel: "Blessed be the Lord God of Israel; for he hath visited and redeemed his people, and hath raised up an horn of salvation for us in the house of his servant David; as he spake by the mouth of his holy prophets, which have been since the world began." It was this spiritual perception which caused Mary the virgin mother to sound her exalted notes of joy: "My soul doth magnify the Lord, and my spirit hath rejoiced in God my Saviour. For he hath regarded the low estate of his handmaiden: for, behold, from henceforth all generations shall call me blessed." We here see her relation to Jesus the Christ and to sacred history. It is interesting and instructive to note in this connection how distinctly our Leader brings out this relation in her writings, especially on page 332 of Science and Health.

It was this same Jesus the Christ to whom the Master referred in talking to two of his disciples on the way to Emmaus after his resurrection, as recorded in the twenty-fourth chapter of Luke: "O fools, and slow of heart to believe all that the prophets have spoken . . . And beginning at Moses and all the prophets, he expounded unto them in all the scriptures the things concerning himself." We should carefully note the word "all" as here used. It was this same Christman that spake through John the revelator when he defined his own nature, character, and office: "I am Alpha and Omega, the beginning and the ending, saith the Lord, which is, and which was, and which is to come, the Almighty;" and likewise this: "I am he that liveth, and was dead; and, behold, I am alive for evermore, Amen; and have the keys of hell and of death." On page 334 of Science and Health we find the following explanation of this passage: "This is a mystical statement of the eternity of the Christ, and is also a reference to the human sense of Jesus crucified."

It is this same Jesus the Christ to whom Mrs. Eddy refers so often throughout her writings, and to whom she constantly points as the wayshower and the mediator,—"that life-link forming the connection through which the real reaches the unreal, Soul rebukes sense, and Truth destroys error;" and again: "As the individual ideal of Truth, Christ Jesus came to rebuke rabbinical error and all sin, sickness, and death,—to point out the way of Truth and Life" (Science and Health, pp. 350, 30). Let us note the word "individual." It holds our thought to that individual entity which constitutes the Redeemer, and does not lead us away toward an impersonal and mayhap intangible concept of Christ.

Science and Health is replete with references to Christ Jesus. On nearly every page attention is drawn to him. The name Jesus occurs upward of five hundred times in the book, to say nothing of the numerous other synonyms expressing his nature, character, and office. How essential, then, that we should be ever alert to the place he occupies in the divine plan. We should carefully avoid displacing him either in history or in our own consciousness; and in our expressions of gratitude for what Christian Science has done and is doing for the world and for us, his nature, character, and office, nay, his unique place in God's government, should never be overlooked or forgotten.

If we clearly understand and duly regard the Scriptural saying, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent," we shall not lose sight of his place, for this Scripture so plainly conjoins the Father and the Son that there is no mistaking its meaning. It is well to notice too that Christ Jesus is here speaking of himself and defining his relation to God. Therefore if we were to say, "And this is life eternal, that they might know thee the only true God," leaving out the remainder of the passage, we would not be stating the whole truth or defining the wholeness of God and His idea.

Had it not come to pass that the Son appeared as the mediator and the wayshower, the world would have been minus that great revelation which constitutes the basis of the true Christian religion, and hence we should not have had the revelation contained in the writings of our Leader, nor the example of her exalted Christian life and the infinite blessings which are ours as the result of her consecrated labor in opening to our vision a conception and understanding of the Scriptures such as we had never before been privileged to know.

Let us therefore increasingly study the life and character of the great Wayshower, until "we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

Hope of the Ages

AMY C. FARISS

Possibly the most impressionable thing in the world is a child's consciousness. In Science and Health (p. 237) our Leader says, "The more stubborn beliefs and theories of parents often choke the good seed in the minds of themselves and their offspring." With what care, therefore, should we older ones guard the child's unfolding.

Would it not be well at times to give a glance backward at our own budding ideas, and from experience there try to understand more intimately something of how deeply a careless word may lodge in the tender soil? Like a seed dropped into some gentle spot of the springtime earth, it may lodge, perhaps to bear fruit after its kind; hidden away in a tiny breast, hardly a conscious thought, it may yet find root and gather strength, perhaps in time to have its part in the shaping of that life. "We are all sculptors," Mrs. Eddy reminds us, "working at various forms, molding and chiseling thought" (Science and Health, p. 248). The child at play is no less "molding and chiseling thought." Indeed, it is right here in the unformed consciousness that mortal existence begins to assume development. Here, then, is where the hope of the ages should ever have rested, where today the greatest hope of future ages still rests.

We of this generation must needs dig deep beneath the rubbish heaps of false conclusions, biased opinions, sometimes beneath the chaos of despair, to find a trace of the tender soil so much needed for the planting of the seed of Truth. Undoubtedly the results of distorted impressions vary in their subtly mischievous course; but in one case at least the farthest stretch of memory goes back to the hour when little feet were diverted into the angular by-path of unhappiness, driven there by the force of a baneful impression. This stretch of memory recalls a lean, keen-faced child standing alone in a big orchard. Dark clouds hung low in the sky, the wind whipped long strands of hair about the tiny, anxious face. The child shuddered but stood her ground. Thunder pealed and rumbled and died. The clouds grew singularly black and lowering. The slight body straightened, and took on defiance. If ever the devil was to come and carry away all naughty children, it would surely be today. The blackest cloud of all was speeding him nearer; there was no hope of escape. Even the gentle mother had declared that the devil and unending punishment were all that lay before so bad a girl.

In all likelihood the child's parents would have been amazed had they been able to look into the rebellious heart. It is doubtful if human eyes, ever so discerning, could have fathomed more than the surface of what lay there. Rebellion, fear, and superstition had buried their roots deep in the impressionable soil, to yield fruit after their kind. It is small wonder that no faintest conception of God, or any right idea of Love, so much as touched the rim of that stormy consciousness till half a lifetime had swept its floods upon her.

In part this is the mentality that Christian Science must reach,—a mentality clogged by superstition, hate, and fear. Nothing less than the Christ-spirit could have entered so dark a place; nothing except heavenly love and tenderness could have removed the heaped-up débris and found so much as the smallest opening in which to drop the seed of Truth. Thanks to the teaching of our beloved Leader, the danger of so erroneous a concept of life is fast being left behind. Yet as this child's parents were utterly ignorant of the weird views which had taken so firm a hold on her, none can tell what harm a careless or untruthful statement may produce. Only by the most painstaking thought can we gain, even imperfectly, a child's vision; but we may study to keep true ideas before their thoughts,—statements of absolute truth. We may see that no seeds of untruth are sown, and in every possible way protect the tender thought placed in our charge.

And when this is done, who can outline the possibilities which must await the full development of the pure child-mind that today begins life under the shelter of Christian Science! Untrammeled by superstition and fear, looking to no false gods, joyous and free in their God-given strength, their small feet already on the border of the heavenly land,—surely mankind's highest hopes will spring rapidly into fulfilment as these children grow into their places among men.

Christian Science and Its Fruit

S. F. SWANTEES

On a certain occasion when Jesus wished to warn his students he said, "Beware of false prophets, which come to you in sheep's clothing, but inwardly they are ravening wolves." Then followed the comparison of the good tree and the corrupt tree, ending with those words that have been quoted so often by adherents of Christian Science, "By their fruits ye shall know them." Now a prophet is a "spiritual seer" (Science and Health, p. 593), hence a false prophet must be one who pretends to understand spiritually but who sees only materially. So the Master's injunction evidently meant that his followers were to beware, not of a personality, but of the common error which takes the fable of materialism as a basis for judging of spiritual progress or of metaphysical understanding.

It is hardly to be supposed that he who had not "where to lay his head," who denied and overcame every law of matter, would place the fulfilment of material desires in the front rank as the fruit of Christian Science. It is scarcely conceivable that he who took upon himself the shame of the cross, did so to increase a false sense of material prosperity, when he had just said, "How hardly shall they that have riches enter into the kingdom of God!" He defined his position very clearly in these words: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." It is apparent, therefore, that the fruit of Christian Science, the Science of Spirit, must be spiritual, not material, and that spiritual fruit is required of every follower of the Master.

In the fifth chapter of Galatians Paul makes it plain as to what constitutes this fruit. He says, "The fruit of the Spirit is love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance." These fruits or demonstrations are required here and now as evidence of the genuineness of our profession of Christian Science. They are primary, and all other things are to be added as our heavenly Father seeth that we have need. It is evident that mortal mind cannot yield a single fruit of the Spirit, neither can the Science of Spirit beget a belief in the reality or necessity of matter.

For centuries the world has been content to believe that sin is to be pardoned through faith in Christ, while disease is to be healed through belief in matter or drugs. The separation of the healing of disease from the healing of sin is particularly comforting to mortal mind, since the healing or alleviation of disease by drugs does not interfere with a continuance in sin. But Christian Science has come, and through the

Digitized by Google

actual healing of "all manner of disease" it has proved itself to be the possessor of the seamless robe of Christ. It has again proved that the healing of sin and sickness cannot be separated, but must be and is a single metaphysical process.

Our Leader tells us that the outward signs are only to demonstrate the divine origin of Christian Science, "to attest the reality of the higher mission of the Christ-power to take away the sins of the world" (Science and Health, p. 150). To seek to destroy sin without destroying the false sense of sickness is therefore to limit the "Holy One of Israel;" but to seek to destroy disease through the aid of Christian Science without uncovering evil or desiring the destruction of sin, is to scorn the Christ-idea. It is to mock Christ, Truth, even as Jesus was spat upon in the court of Caiaphas,—not for healing, but because he had uncovered the sin of a nation that while claiming Spirit as their God yet clung to gross materiality.

The world wants the so-called physical healing, the loaves and the fishes, and it is quite eager, with its belief in personal power, to crown him king who can give to it what it wants. But he who is wise will not be deceived thereby, but will follow in the footsteps of the Master, who forsook the five thousand that had only sordid motives, preferring the little band of disciples who took to their boat and separated themselves from the throng, even as their understanding was separating them from spiritual ignorance.

Let us watch and pray, lest we give way to the temptation to make a material demonstration (?), forgetting that all we can or should do is to bring forth the signs that follow "a spiritual understanding of Him, an unselfed love" (Science and Health, p. 1). Then the "fruit of the Spirit" will be multiplied in us and in all those who come to us for help, thus leading up to the destruction of all sin, which is the ultimate of Christian Science.

✧

Logic

INEZ KOCH

In a conversation with a leading authority on law the question of logic came up. With great skill and perfect ease this eminent lawyer gave examples of logical reasoning, showing how unmistakably conclusion follows its premise, and how major and minor propositions must be coordinate to bring out the perfect syllogism; but the writer noticed that all the syllogisms given were based on a material premise.

The conversation was about the nature of man, the student of Christian Science maintaining the fact of man's spirituality, while the lawyer endeavored to prove man's materiality and consequent dereliction and death. After the lawyer had settled his point to his entire satisfaction through several perfectly stated syllogisms, the writer also gave a syllogism, based on the allness of Spirit, God, and the lawyer admitted that it was absolutely correct. From the standpoint of mere logic the syllogisms of both were faultless; but they were of course diametrically opposed in their conclusion, the one proving the spirituality and the other the materiality of man. On being asked how he proposed to combine these two opposite results to bring out the truth of the matter in hand, the lawyer laughed and said, "Well, of course you can only assume your premise; you cannot prove the truth of it." On the writer's insisting that in order to obtain correct results by true reasoning the premises must be true, he answered, "No one can be absolutely sure that his major premise is true."

This admission from one who possessed an international reputation in the legal profession, revealed clearly the unreliability of all human reasoning, and the great need of a knowledge of the truth in our law courts and elsewhere. The opportunity to gain this knowledge is given to the world through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. On page 279 of this book we read: "Every system of human philosophy, doctrine, and medicine is more or less infected with the pantheistic belief that there is mind in matter; but this belief contradicts alike revelation and right reasoning. A logical and scientific conclusion is reached only through the knowledge that there are not two bases of being, matter and mind, but one alone,—Mind."

When this teaching is universally understood, the prophecy of Isaiah respecting the "rod out of the stem of Jesse" will be fulfilled,—"With righteousness shall he judge the poor," and "he shall not judge after the sight of his eyes, neither reprove after the hearing of his ears," for in that day "the earth shall be full of the knowledge of the Lord, as the waters cover the sea."

✧

"Light of the world"

CLAUDE W. WOODRUFF

CHRISTIAN SCIENCE is not merely a therapeutic agency, as many believe; it possesses in higher degree than other interpretations of Scripture that warmth and effulgence which draws men out of cold, dark cells of materialism into the life-giving atmosphere of supernal day. To the thoughtful the question sometimes arises, What is this irresistible influence?

The answer to this question is apparent in the lives of those who adhere to the spirit of Christian Science. It is the light of Truth, the infinite attraction of divine Love, expressed in holiness (wholeness), a mental attitude that excludes offense, and a constant effort to do both to friends and to so-called enemies just what we would like to have all mankind do to us. It is Truth searching the "joints and marrow," the obscure places of mortal thought, and as Mrs. Eddy says, "purifying even the gold of human character" (Science and Health, p. 565). While the present-day religionist of other faiths is attempting to drive sin-ridden and woe-burdened humanity into a heaven afar off, Christian Science, coming as a "still small voice" of peace to the hungering heart, is gently winning its hundreds and thousands and giving them a heaven that can be realized here as well as hereafter.

Jesus said, "And I, if I be lifted up from the earth, will draw all men unto me." If we are so lifted in consciousness above the sordidness of materialism that we perceive the true idea, man, dwelling in the Father, we shall be so filled with the light which "shineth in darkness" that men will see our works and be drawn outward and upward. It is frequently said that Christian Science draws its numbers solely through physical inducements. As grand and indispensable as is its healing work, Christian Science would be a divided garment if it were not true that men of all classes and conditions find in it the "substance of things hoped for." That men, sound of limb and removed from the emotional, find in it, in response to those feeble heart-gropings, a friend and helper, may be seen in the following illustrations.

On board a man-of-war, where the physical welfare of all is in the hands of a zealous doctor, where the physical side of life has ever claimed ascendency, where religion is almost universally considered a thing to be shunned by able-bodied men, one Christian Scientist so lived that certain men who daily watched him saw that he possessed some desirable thing which they lacked, and frequently one would come to him saying, "Tell me something about Christian Science." One clean-cut young man went away after a self-appointed interview to

Digitized by Google

pore over the contents of a borrowed copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. The reading of a few pages convinced him that he would not be happy until he became the owner of a similar treasure, and this he promptly purchased, returning the borrowed one. He soon invested in a second copy, which he sent ten thousand miles away to his mother, and shortly afterward procured two more copies, explaining that he wished to be in a position to answer frequent questions by referring inquirers to the text-book. In addition, he subscribed to both the *Sentinel* and the *Journal*, besides ordering these periodicals sent to his home. Each succeeding day then became to him one of greater joy and freedom, and he wondered that he had ever before been tempted to seek happiness elsewhere than in Soul. Needless to add, the Bible thereafter held first place in his studies.

Another, a boy in good health and of fine physique, listened one day to a few remarks on Christian Science addressed to a third person. The words found fertile soil in his open thought and bore fruit; and as he later explained, the entering wedge was the light that he had seen shining in the daily life of the speaker. He formerly had dwelt in darkness, reaching out for the right but having no light to guide him. Beholding the light, he believed. Then the Bible and Science and Health became his daily companions. "Before knowing anything about Christian Science," he testified, "I thought the whole world was leagued against me. Now all is changed: I know that the world is with me, not against me." To him also men came, groping for the light; and as each was lifted up the tide Godward was accelerated.

Instances like the foregoing might be multiplied, but these serve to illustrate the grip that Christian Science obtains in the hearts of men, even when entirely separate from the strong appeal of physical healing. What evangelist would not wish for something in his life which would so transform it that men would seek God by reason of his example, not for the loaves and fishes, but for the "beauty of holiness."

Focusing the Light

JULIA S. KINNEY

WHILE visiting the Grand Cañon of Arizona and looking over its precipitous walls, in company with some friends, one of them, who was looking through a telescope, said to the writer: "See those things that look like white specks. They are tents, and there are people on horseback near the tents, which are on a little plateau, and below the plateau there is the river." All this seemed very surprising to the writer, since nothing of the sort was apparent to the naked eye; but when she looked through the telescope, sure enough, there was everything just as had been described. Where before nothing had been visible but a blur, now, by means of the powerful lens of the telescope, dashing waters, rocky ledge, and exuberant vegetation were brought to view in the depths of that immense chasm.

In a somewhat similar manner the writer remembers that before she knew anything about the teachings of Christian Science, friends told her that it had made the Bible clear to them and had made the omnipresence of God a demonstrable fact. She well remembers how strange this seemed to her, since her own understanding of the Bible was very dim and her conception of God vague and unsatisfactory. But after studying "Science and Health with Key to the Scriptures," the text-book of Christian Science, she found, even as her friends had told her, that the teachings of the Bible were all made clear. Like other Christian Scientists, she learned that, as we are told in "Miscellaneous Writings" (p. 194), "the lens of Science magnifies the divine power to human sight; and we then see the supremacy of Spirit and the nothingness of matter." This "lens of Science" has been available to all mankind in all ages, and the Bible is a record of the visions that Abraham, Jacob, Moses and the other prophets, Jesus and his disciples, gained as a result of its use. In the Scriptures the inspired writers have recorded the result of their experience, and named those things which clarified their view and those which seemed to dim it. Truly saith the wise man, "Where there is no vision, the people perish."

The author of Science and Health recorded her spiritual insight into the realities of being, and in proportion as her spiritual interpretations of the Scripture are understood and applied in every-day life, they bring health and harmony. The Church of Christ, Scientist, its services and its literature, all present opportunities for the student to broaden his own vision and aid in broadening that of others. In order to keep his vision clear, however, the Christian Scientist must constantly use the "lens of Science." In time of need he naturally turns to Science for relief, but when no acute distress occasions such action, he may be tempted to lay it aside. Recognizing this danger, Jesus said to his disciples: "If . . . thine eye be single, thy whole body shall be full of light. But if thine eye be evil, thy whole body shall be full of darkness. If therefore the light that is in thee be darkness, how great is that darkness!"

In Science and Health (p. 586) eyes are defined as "spiritual discernment." Certainly Christian Scientists can never afford to be without spiritual discernment, the "lens of Science." The Bible gives many earnest warnings against the evils which darken vision, and innumerable lessons pointing to the rich rewards that await those who keep their spiritual insight clear, one instance of which is found in the account of Joseph, who, true to his vision, gained wonderful dominion. Mocking and scoffing at the "dreamer," his brothers allowed envy and jealousy to darken their outlook, while in his ready forgiveness Joseph showed his sense of love and of brotherhood to be clear and strong, notwithstanding the years of estrangement and the injustice which had been shown him.

The student of Christian Science needs to focus his light upon all the activities of life in which he is engaged, upon all that he says and does, if he would truly prosper, grow in grace and in true wisdom. Under the "lens of Science" his business is seen to be identical with God's business, for it is a means of healing lack and limitation by the expression of honesty, industry, intelligence, integrity, and the suppression of idleness, selfishness, arrogance, and other evils.

If a Christian Scientist is confronted by a problem that seems difficult of solution, he can well afford to ask himself frankly, Am I looking at this problem in the light of Science, or am I trying to solve it on a material basis? It was Jesus' ability to be perfect which enabled him to see perfection. Christian Scientists who would heal and uplift as did their Master, must also behold the perfect man. The beatitude, "Blessed are the pure in heart: for they shall see God," indicates that right perception is dependent upon the state of the heart. Envy, hate, malice, suspicion, distrust, mar the judgment, and the heart must be cleansed of such evil thinking if the outlook is to be clear and the work scientific. Discouragement cannot overcome, or despair overwhelm one who determines to keep his vision clear and avail himself of every opportunity to profit by wisdom.

Unity can be established among men only on the basis of this spiritual vision. How useless it would have been for the writer to argue and contend over the difference between her own vision and that seen by her friend who was looking

Digitized by Google

through the telescope. In this case the reason for the difference in perception was perfectly apparent, and while not always so apparent, whenever there is a difference of opinion there is always a cause, even though it may be hidden in the recesses of the heart. Recognizing this fact, the true Christian Scientist will be calm in the midst of any seeming strife or confusion. Busy in the endeavor to keep his own motives pure, his own vision clear, he is not disturbed if all do not see as he does. He may or may not voice what he sees, but he is always watchful not to let anything into his heart that would mar his perception of good, and certainly not condemnation of those who do not see as he does. Charity, patience, and tolerance are constantly demanded. The endeavor to purify one's own heart naturally attracts and endears one to all who are making a like endeavor. Like Joshua's band, those who have their gaze steadfastly fixed on spiritual truth, and who are obedient to its every demand, shout together, and before them the walls of Jericho, the evidence of the material senses, fall.

Many secular writers have dreamed of better social and political conditions, but to St. John it was vouchsafed to see "a new heaven and a new earth." The lens of scientific apprehension so magnified the facts of spiritual being that he could see and describe them in all their splendor. By making angels, "God's thoughts" (Science and Health, p. 581), his instructors and guides, he was led to where he could see that "there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." The inhabitants of this city of God he saw were those who had washed their robes white (purified their thoughts). He does not describe a future state to be attained by death, but a condition which it is possible to reach here and now by any one who will study the Bible in the light of Christian Science. When understood, divine Truth wipes away the tears from the eyes of the sorrowing and restores the invalid to health. None are debarred from the blessings of health, peace, and plenty, since the gates shall not be shut at all and to every one the "Spirit and the bride say, Come."

✧

[Written for the *Sentinel*]

A Song of Cheer

IGERNA B. J. SOLLAS

THEY said 'twas the old sweet story;
To me it was very new:
It dawned on an outer darkness,
It said only good is true.

Only the good is true!
All things are made anew;
Life opens out,
See error's rout;
See what God gives to you,—
Freedom from doubt.

Only the good is true!
Nothing remains to rue;
All good is here,
All good is now;
Hear what Love sings to you,
Love's song is clear.

Hark to the song of cheer!
Banished are all things drear,
Banished all cause of fear;
Heaven is now and here.

Selected Articles

[Editorial in *Daily News*, Chicago, Ill.]

Doctor Robertson, city commissioner of health, wants to put a physician and a nurse into every public school in the city, these nurses and doctors to be under the direction of the city health department, but their pay to come out of the school fund. The plan should be rejected by the board of education. It appears that the initial expense would be two hundred and fifty thousand dollars a year, possibly rising to seven hundred and fifty thousand dollars. It is reasonably clear that no part of this expense would be properly chargeable to the schools.

The schooling of the children of Chicago touches the life of the city at so many points that it is often hard to draw the line between projects which are a proper charge on the school fund and those which should rightly be financed out of the general revenues of the city. The scope of the schools is constantly widening. But in the present case the commissioner of health plainly regards the problem as part of the general municipal health problem, for his idea is that the work should be under the jurisdiction of the city health department, not that of the schools. All the schools will be asked to do is to furnish the money. "There is no hope for an appropriation from the city for this work," confesses Doctor Robertson, "as the health department's appropriation is not likely to be more than it was last year, when it was far below the amount the work deserves."

The legislature at its regular session gave the schools of Chicago a greatly increased revenue, and to the taxpayer in consequence a larger tax bill, but this action was taken solely on the plea that the absolute necessities of the schools could not be cared for without more money. This new revenue, no doubt, is looked at longingly by the heads of city departments, but it must be preserved for purposes that pertain strictly to education.

Some sort of plausible argument might be made in favor of paying all or a large part of the expense of the city health department out of the school fund, but this would be recognized at once by most citizens as a perversion of the true use of the fund. The present plan of providing salaries for three hundred doctors and three hundred nurses at the expense of the schools will come under the same condemnation.

✧

[E. M. Ramsay in *The Shetland Times*, Lerwick, Shetland Isles]

The name Christian Science can only be applied to the Science which Mrs. Eddy discovered in 1866, and which she has fully explained in the Christian Science text-book, "Science and Health with Key to the Scriptures."

At the present moment the public is beginning to awake to the great seeming power of human thought; and many books, some of them written in a very attractive style, are purporting to teach us how to use this power. It is therefore a matter of paramount importance that we should learn to distinguish the correct from the incorrect teaching on this subject. Christian Science shows us that it is right thoughts only which are powerful. "Right thoughts are reality and power; wrong thoughts are unreality and powerless, possessing the nature of dreams" (Miscellaneous Writings, p. 252).

On what is this assertion by Mrs. Eddy founded? On the declaration of the Bible that God is Spirit, the only cause and creator, and therefore the only Mind of the universe. At first this statement may appear surprising and even impossible to some, but we are convinced that it is the scientific truth, and that in time all will come to admit it to be so. It will readily be admitted that truth is one, that any truth

Digitized by Google

which is known to an individual is simply part of the sum total of truth, part of the universal truth which is here for all men to know. There is no personal possession of truth.

In the same way Christian Science shows that all true intelligence, whether expressed by man or beast, is simply a reflection of this one Mind. Thus every true thought, every thought which proceeds from God, carries with it the power of God. In order to be able to employ this great power of good for our own benefit and for the benefit of others, we must have faith in it, and this faith becomes possible to us in proportion as we get rid of that self-asserting sense which claims to possess a mind of its own. We must become meek if we would inherit the earth. It is also necessary that our faith should have a firm foundation in understanding, that it should be faith reposed in a correct, logical, demonstrable knowledge of God.

It was this power of scientific right thinking which enabled our Lord and Master to still the storm, to heal the sick, to raise the dead. This power knows nothing of space or time, of race or clime. It is as near us today and as available as it ever was. God changes not; His methods of dealing with men are as tender and intimate as of old; it is we who have strayed into the wilderness of ways and methods apart from God. It remains for us, then, to bring "into captivity every thought to the obedience of Christ," as St. Paul bids us.

✧

[Samuel Greenwood in *The Hedley* (British Columbia) *Gazette*]

Our critical friend has no doubt noticed that practically all of the so-called miracles of Jesus were concerned with the healing of the body or in connection with bodily wants. He surely would not wish to be understood as implying that our Master made too much of the healing of the body; but that would be the natural conclusion, since Christians are commanded to take up the cross and follow Christ. It might also be noted that Jesus used no drugs. We have no record that he recommended his patients to go to the physicians if they were sick again. In the case of the woman who had "spent all her living upon physicians, neither could be healed of any," and who eventually applied to Jesus for help, is it possible that the Saviour erred in "repudiating the system of medicine" and "the skill of the physician," or did he do the will of God by healing the woman without resorting to material means? The obituary list in the daily papers hardly inspires one with confidence in *materia medica* as being the rightful substitute for Christian healing, as this clergyman would have us believe. But clergymen as well as doctors disagree on this subject, for eminent members of both professions have admitted that Christian Science does "do the works," our critic's denial to the contrary notwithstanding.

As for the attitude of Christian Science toward evil, which seems to trouble our friend sorely, let me assure him that Christian Science does teach most unequivocally that evil, when examined in the light of God's absolute allness, has neither reality nor power. He makes no mistake about finding that in Science and Health. If he reads the other works by Mrs. Eddy he will find it in them too. If he chooses to look he will find it in all the Christian Science periodicals. There is no attempt to evade this point,—why should there be, since Christian Science rests upon the truth that God, or good, is infinite? The gladdest thing that has come to the Christian Scientist, or that can come to any man, is the absolute assurance that good is supreme and omnipresent. We are taught in the Scriptures that God is in every place; how then can evil still have a place to exist in?

Making reckless charges against a teaching because it differs from one's own belief is foolish and unconvincing. If denunciation and abuse were effective weapons, the Christian Science movement would have long ago collapsed, for these have been heaped upon this movement and upon its Founder; but it continues to grow and to prosper, because it is meeting the need of mankind for a demonstrable knowledge of God and of man's relation to Him; and this practical knowledge of God's infinite goodness and love is all that can meet this need. It is every day becoming more generously admitted that Christian Science is of God, and that it is vain to attempt its overthrow, "lest haply," in the words of Gamaliel, one "be found even to fight against God."

✧

[Thomas E. Boland in *Newtown* (Pa.) *Enterprise*]

A late copy of the *Enterprise* contains a reference to Christian Science which while not unkindly may innocently lead to a misunderstanding of that subject. The writer states that Christian Scientists claim "everything up to surgical operations can be treated by will-power alone, or by simply 'willing' that there is nothing the matter with you."

So far as such an assertion coming from Christian Scientists themselves is concerned, it may be dismissed with the statement that they make no such claim or assertion, for the simple reason that so to claim would be the very antithesis of the teaching of their faith. This statement is, however, occasionally made by those not sufficiently conversant with the subject, and here a word of explanation may be in order. Under "will-power" may be included mental suggestion, hypnotism, and mesmerism. These systems presume that each human being has a separate mind of his own, that there are minds many, and that each may be used at the will of the individual either for ill or for good.

One of the basic propositions of Christian Science is that God is Mind (capitalized); that there is but one God, hence one Mind; that God is good, therefore Mind is good; that God does not and can not cause evil, therefore Mind does not and can not operate to cause evil. Mrs. Eddy, the author of the Christian Science text-book, "Science and Health with Key to the Scriptures," states (p. 144): "Human will-power is not Science. Human will belongs to the so-called material senses, and its use is to be condemned. Willing the sick to recover is not the metaphysical practice of Christian Science, but is sheer animal magnetism."

✧

[George A. Law in *Hartford* (Conn.) *Times*]

That one entertains prejudice may sufficiently explain a seeming inability to understand Mrs. Eddy's writings, for prejudice is as much a handicap to an understanding of Christian Science as it is to the acquiring of knowledge of any other subject. To appreciate that Christian Science is readily understood we have only to recognize the fact that it responds satisfactorily to the usual test, that results furnish the evidence to prove whether or not a subject is apprehended. The vast army of those who have been healed through its ministrations is the evidence which at once disposes of the contention that Christian Science is difficult to understand.

A practical knowledge of any subject is obviously essential to obtain results. It is equally true that an understanding of the application of the Principle of Christian Science is necessary in order to heal the sick and reform the sinner in accord with its teachings. It will be remembered that Jesus said, "These signs shall follow them that believe," or understand; and also, "He that believeth on me, the works that I do shall he do also." The healing works accomplished are the "signs" which Jesus said would prove that his teachings were understood.

Digitized by Google

In "Science and Health with Key to the Scriptures" Mrs. Eddy clearly explains the Principle and rule of spiritual healing as taught and practised by Jesus, and he who will may by faithful study attain an understanding sufficient to apply it successfully. Less than fifty years ago she stood alone before the world with her message. Christian Science churches are now found all over our land, and also encircling the globe, where every Wednesday evening accounts of healing may be heard, given by those who gratefully testify to having been healed through Christian Science. These testimonies include the healing of every known disease and every type of sin. The statement that Christian Science is being forgotten is far from the facts.

✧

[J. Arnold Haughton in *Blackpool* (England) *Gazette*]

In his remarks on spiritual healing, in the course of his inaugural sermon, the vicar of All Saints' made a slight reference to Christian Science which renders it desirable that some statement be made as to its teachings.

Christian Science is based upon an understanding of God so radical that it relies upon Him alone for healing. God works through means, as the vicar says, but Christian Scientists understand God's means for healing to be His own power and not *materia medica*. From the fact that Jesus did not make use of medicine, diet, and the like, or instruct his followers to use them, it is inferred they are not God's means for healing. On the contrary, Jesus' own statement, "Whatsoever ye shall ask in my name, that will I do," and "He that believeth on me, the works that I do shall he do also," as well as many other statements to the same effect, imply that healing should be by spiritual means alone.

Thus Christian Science is founded upon both the precept and the example of Jesus. It is not merely "called Christian Science," it is actually the Science of Christianity, or the knowledge of the law of God in its application to human affairs and conditions.

✧

[W. D. Hinchsliff in *Guthrie* (Okla.) *Leader*]

The tenets of Christian Science, as given on page 497 of Science and Health, are founded on the demonstrable truths of the Scriptures. The first and second read as follows: "1. As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life. 2. We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness."

Christian Scientists use Science and Health as a text-book, or "Key to the Scriptures," and not in any sense as a substitute for the New Testament. And why not, since the world recognizes the right of each individual to interpret the Scriptures in his own way? Our critic claims the right to explain the Scriptures in his way, and that is what Science and Health does for the Christian Scientist. Christian Scientists are law-abiding citizens. They are each one trying to emulate the life of the master Christian, Christ Jesus, as the last of these tenets explains: "And we solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure."

Christian Scientists have learned to trust God in every time of trouble, and their trust is not in vain. Every sincere seeker for Truth can prove for himself its beneficent and healing effect. Jesus came to "give light to them that sit in darkness," and the understanding gained in Christian Science enables one to hold the light higher, for it is a practical, every-day religion that keeps self well out of sight, while it exalts the Christ as the healing and saving power. Mrs. Eddy's own words to the adherents of her teachings are, "Follow your Leader only so far as she follows Christ" (Message for 1901, p. 34).

Christian Science is only about fifty years old, but in spite of the so-called "exposures" it has made a phenomenal growth, because it is filled with the power of infinite good and is reforming the sinner and healing the sick as was commanded by the Master. It is bringing to the world the vital truths of Christianity that were lost sight of since the third century of the Christian era. Christian Science has no quarrel with other religious denominations. Its followers recognize the great need of pure thinking and living, consequently they have no time to proselyte or find fault with their neighbors, but bid Godspeed to every rightful effort for reform, knowing that good is the only reality. Christian Scientists use the word real in a relative sense, and recognize that only as real which is indestructible and eternal, and the Scriptures plainly imply that sin and death will be finally destroyed.

Christian Scientists recognize in Mrs. Eddy, as the world is likewise beginning to do, a profound religious thinker and leader, and the church she founded as a vital force in the upbuilding of Christ's kingdom on earth.

✧

[W. G. Watkins in *Beloit* (Wis.) *News*]

There is nothing new in a local evangelist's recent attempt to show that Christian Science is not in accordance with the Bible. Critics have been attempting to prove this for the past half century, and all the while those who are students of Mrs. Eddy's interpretation of the Scriptures are finding, in the degree that they are living in accordance therewith, that they are able to heal the sick and overcome sin of every name and nature. It is quite an easy matter to select from the Christian Science text-book, "Science and Health with Key to the Scriptures," sentences and clauses which separated from their context would make them appear contradictory to specially selected Scriptural quotations. It is just as easy a matter, by thus comparing one Scriptural quotation with another, to prove that the Bible itself is contradictory.

In trying to disprove Mrs. Eddy's statement that "Spirit, God, . . . never created matter" (Science and Health, p. 335), our critic cites the first verse of Genesis: "In the beginning God created the heaven and the earth." Here we have his inference that God, who is infinite Spirit, created matter. Mrs. Eddy interprets this verse to mean that the real heaven and the real earth are spiritual, and furthermore that all that God created is spiritual, like Himself, and He "saw every thing that he had made, and, behold, it was very good." From the above premise she has never receded one iota. Upon this basic truth, "the stone which the builders rejected," a superstructure of good works has been raised that is daily becoming better known throughout the world.

On page 358 of Science and Health it is well said: "Christian Science, understood, coincides with the Scriptures, and sustains logically and demonstratively every point it presents. Otherwise it would not be Science, and could not present its proofs. Christian Science is neither made up of contradictory aphorisms nor of the inventions of those who scoff at God. It presents the calm and clear verdict of Truth against error, uttered and illustrated by the prophets, by Jesus, by his apostles, as is recorded throughout the Scriptures." Mrs. Eddy's accumulation of a comfortable fortune is perfectly legitimate, and it is being used in a most praiseworthy manner,—that of furthering the cause of Christian Science and thus benefiting the world.

Editorial

Stumbling-blocks

THOSE who have been a long time in the way of Christian Science and are familiar with its teachings, count this privilege among their blessings; but perhaps they do not always accept so readily its attendant obligation, namely, that as followers of the great Exemplar they are themselves to be wayshowers to the younger brethren, whose faltering steps must be sustained and guided until they too walk firmly the heavenly road. In fact, in these days of rapid advance of the cause, one has only to be ordinarily observant to discover many who are weighing the question and who are looking to the avowed exponents of Christian Science for proof of its power to heal and to save. Possibly some are friends or acquaintances, others may be wholly unknown to us, while to them all we carry the hall-mark that identifies us, and they are judging us accordingly.

Is our responsibility any the less because unconsciously to ourselves we have been singled out by some of these people as the test by which, so far as they are concerned, Christian Science shall stand or fall? Is it not really greater, lest all unwittingly we become stumbling blocks, and thus an offense that may bar some one from the Father's house? Beyond a doubt the world is watching Christian Scientists today as never before to see how they measure up, and Mrs. Eddy must have realized this when she penned the inspiring call which appears on page 110 of "Miscellaneous Writings": "Beloved children, the world has need of you,—and more as children than as men and women: it needs your innocence, unselfishness, faithful affection, uncontaminated lives. You need also to watch, and pray that you preserve these virtues unstained, and lose them not through contact with the world. What grander ambition is there than to maintain in yourselves what Jesus loved, and to know that your example, more than words, makes morals for mankind!"

There is indeed need to watch and pray if we are to manifest innocence, unselfishness, loving-kindness, and purity; yet all these are possible, for the Master's command is, "Be ye therefore perfect." The natural tendency of mortal mind is away from those qualities which Jesus exemplified, and the temptation to indulge seemingly harmless and rightful desires must be steadily resisted if this indulgence involves the loss of peace of mind either for ourselves or for those who are looking to us for guidance.

Christian Science is essentially a religion of love, the demonstration of that brotherly kindness which makes the world a better place because we are living in it. It is the working out of the law of justice and equity, the right of every human being to "life, liberty, and the pursuit of happiness," and on our part the endeavor to make that attainment possible. It means being good and doing good, not from fear of the law, but because we are striving to regulate our lives by that rule which bids us in all things do to others as we would have them do to us. Can any who profess Christian Science indulge selfishness, injustice, anything that is unlike good, and be loyal to their profession? Can they teach others its truths if they themselves do not measure up to them? "If any man will come after me," said the great Teacher, "let him deny himself, and take up his cross, and follow me."

It may seem a light thing to be a little lax in our observance of the Sabbath, to set at naught accepted conventions and proprieties, to keep the better end of the bargain and leave the poorer for our brother, to let the opportunity to do a friendly deed, to speak a loving word, slip by because, as we argue, it is none of our affair; but if we realized how far reaching and vital may be the influence of a kindly consideration for the welfare of others, surely we would not hesitate to do our part. Trifling things, all of these, we may think, and within the pale of the law; and yet, if because of our failure to live up to our highest concept of good, another thinks he may do likewise and goes beyond the pale, can we hold ourselves void of offense—are we not stumbling-blocks in our brother's pathway?

These are not light matters; our responsibility may not so easily be evaded. "There is neither place nor opportunity in Science for error of any sort," Mrs. Eddy tells us (Science and Health, p. 232); and she adds that "every day makes its demands upon us for higher proofs rather than professions of Christian power." Are we giving these proofs? Are we living the law of love?

ARCHIBALD MCLELLAN.

"The stone which the builders rejected"

CHRISTIAN SCIENTISTS have become quite familiar with the argument that healing by spiritual means is not a vital element of religion; indeed some people insist that it is wrong to attempt it, although it was practised by Christ Jesus and his apostles. It is curiously interesting to note that the Master himself was assailed by the same objections to his healing work, the critics holding to the ritualism which at best only typified the operation of spiritual law in human consciousness. The Jewish people jealously guarded the word as given in the law and the prophets, but with strange inconsistency rejected its application to the needs of suffering humanity, even as so many do today.

When Jesus read in the synagogue at Nazareth the healing words from Isaiah, and announced their present availability, his listeners were "filled with wrath" and sought to kill him. We read that in spite of this, on several occasions he healed the sick at the time of a religious service, one instance being the cure of a man whose hand was withered. On another occasion it was a man tormented with "an unclean devil" who was healed, and again it was a woman who had been "bowed together" for eighteen years. We read that she at once "glorified God;" but alas for mortal blindness, the ruler of the synagogue voiced only indignation, and this called forth from Jesus a scathing rebuke. The most deeply interesting account of such cases, however, is Matthew's record of the healing work done in the temple at Jerusalem, when the Master cast out the money-changers, and those who sold doves for the sacrifices. The little children sang his praises (perhaps some of them had been healed), but the rulers demanded his authority, and this he refused to give them.

Following this experience, Christ Jesus asked this most pertinent question: "Did ye never read in the scriptures, The stone which the builders rejected, the same is become the head of the corner?" Now in the 118th psalm, which contains the record of a wonderful case of healing, and is a most beautiful example of Hebrew poetry, is to be found this passage: "I called upon the Lord in distress: the Lord answered me . . . It is better to trust in the Lord than to put confidence in man." Then the one who had been healed goes on, "I shall not die, but live, and declare the works of the Lord." There are many today who are doing this in Christian Science, for the same reason that this man had. We then come to the passage quoted by the Master, the reference to the stone which the builders rejected; and while this doubtless referred to an actual occurrence in the building of the temple, the psalmist, and also Christ Jesus, employ it metaphorically to

Digitized by Google

illustrate the rejection of spiritual healing by the builders of religious systems throughout the centuries.

The people of Jesus' day were looking for the Messiah, but they were unwilling to give up their material and sensual beliefs for the pure spirituality which he taught, therefore he was "despised and rejected of men." In spite of this, however, the truth he taught was immortal, and although the ages refused the "signs" which "follow them that believe," one at length was found who could see that the spiritual healing practised and taught by Christ Jesus must be made "the head of the corner," for this healing far transcends mere bodily health. It means "God with us," and in Mrs. Eddy's own words (Science and Health, p. 259) it demands "a perfect Principle and idea,—perfect God and perfect man,—as the basis of thought and demonstration." Wherever a Christian Science service is held, on land or sea, in one of the thousands of branch churches or in the stately Mother Church, the stone rejected by so many builders has honored place, and the recognition of the ever-present Christ-power brings healing at every service.

Let no one think that Christian Scientists in cherishing the healing truth seek to separate themselves from any of the Father's children. Rather do they long for the day when the Truth that heals and saves will make all humanity one in its acceptance of vital Christianity.

ANNIE M. KNOTT.

True Vision

THE invention of the cinematograph has given the sense of sight an educational significance which leads one to recall the Master's saying that "the light of the body is the eye." As never before in the history of the world, people are looking out, and in, upon life, and being shaped for good or ill thereby; and this emphasizes the peculiar pertinence of Jesus' further qualifying statement, that if one's eye "be single," his whole body shall be "full of light." The achievements of photography have but intensified the readiness with which instinctive impulse has ever responded to the call "Come and see," and the possibilities of good attending right vision spring at once into prominence.

While this call "Come and see" may often be but a seduction to the satisfaction of vulgar taste, at its best it is the appeal of Truth and Love to aspiring sense, and right response thereto means the gain of that wisdom to which the sage referred when he wrote, "With all thy getting get understanding." Consideration of the discriminating intelligence with which we look, and of the nature of the objects at which we look, may be said to be the paramount concern of Christian Science, which teaches with Christ Jesus that to see truly is to understand, and that to understand is to begin to live.

In commenting upon John Erskine's study of "The Moral Obligation to be Intelligent," a critic has well said that "active intelligence is the virtue which gives whatever value they possess to all the other virtues that move us to action." All effective doing must be clear sighted. The light of the entire body of human consciousness, endeavor, and achievement, is the eye of spiritual understanding. Profitable seeing is never a mere matter of perception; there must be receptivity, and that apperception which is the fruit of love for truth and a Christianly scientific order of thought. Things mean to us what we bring to their interpretation. The Master said much of those who, having eyes, see not; and escape from error demands very much more than a theoretical perception of Truth. There must be that opening of blind mentality which enables us both to discern the truth of being and to relate it in a healing way to individual experience. Spiritual verities are to be so apprehended that the declarations of material sense can be disproved, a consummation which is referred to by St. Paul when he writes to the Corinthians, "We look not at the things which are seen, but at the things which are not seen." "The spiritual man's substantiality," writes Mrs. Eddy, "transcends mortal vision and is revealed only through divine Science" (Science and Health, p. 301). From the human standpoint spiritual vision is always analytical and discriminating; sense-testimony is made subservient to wisdom, enlightened understanding, and the gain and exercise of this wisdom marks our entry upon "life eternal." It is the realization that "now are we the sons of God," the fulfilment of the assurance, "In thy light shall we see light."

Just here, however, we most keenly realize our human handicap. Christ Jesus said, "The Son can do nothing of himself, but what he seeth the Father do," and the same limit of capacity is hinted at in the command to St. John, "Write the things which thou hast seen." It is inevitable that the perception of Truth should determine the bounds of both freedom and efficiency. Defending himself before the Roman centurion, Paul said, "I was free born," and so he was politically; but with respect to spiritual vision he was born as are all mortals, a slave. For the most part men are impelled and governed by an ignorance, a prejudice, or a selfish passion into which they were born, and educated from their youth. Their dominating beliefs are all darkening, and in so far therefore "blind from his birth" describes the condition of every son of Adam. It is this that gives such tremendous significance to the Messianic declaration which is again being fulfilled today in Christian Science: "I the Lord have called thee . . . to open the blind eyes, to bring . . . them that sit in darkness out of the prison house."

JOHN B. WILLIS.

Lecture in The Mother Church

The First Church of Christ, Scientist, Boston, Massachusetts, announces a free public lecture on Christian Science by Bicknell Young, C.S.B., a member of the Christian Science board of lectureship, in the church edifice, Falmouth, Norway, and St. Paul Streets, Back Bay, Friday evening, April 7, 1916, at eight o'clock. The public is cordially invited.

✧ ✧ ✧

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston Street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk Streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon Street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

WASHINGTON.—Through the liberality of the Trustees under the Will of Mary Baker Eddy, 55 public libraries, in addition to the supplies from local churches, societies, and committees, have been given, on the recommendation of this committee, a total of 154 copies of Science and Health by Mrs. Eddy, 471 copies of her other writings, and 61 copies

Digitized by Google

of "The Life of Mary Baker Eddy" by Sibyl Wilbur; while the subscriptions numbered 52 to the *Sentinel*, 53 to the *Journal*, 5 to the *Herold*, and 61 to the *Monitor*.

Committee on Publication.

DETROIT, MICH.—The following literature has been distributed during the last eight months of 1915: 2622 *Sentinels*, 435 *Journals*, 17 *Heralds*, and 66,505 *Monitors*. Free subscriptions have been given to all the telephone exchanges, thirty-three schools, six hospitals, the Florence Crittenton Home, the Arnold Home, the Detroit Neal Institute, and the employees' reading-rooms at eight down-town stores. Seventeen hundred and thirty-six marked copies containing special articles have been mailed from this office. Three barrels of literature have been sent to Captain Benn for the use of the mission yacht.

One thousand *Monitors* are distributed every week to factories, given to the men as they leave work. Eleven down-town theaters are supplied twice a week with literature. The jail, detention home, and house of correction receive from three to five hundred *Monitors* every Saturday. Thirteen lodging-houses are supplied twice a week with literature. Seven hotels have been supplied with copies of Science and Health, Bibles, and *Quarterlies*, and also have a regular supply of *Journals*.—*Literature Distribution Committee.*

NEW ROCHELLE, N. Y.—Plans are being drawn for the proposed new edifice of First Church of Christ, Scientist, to be erected at the corner of Harrison Street and the Garden Walk Home Park. The property was purchased for sixty-five hundred dollars. The lot, which occupies the southeast corner, measures 75 feet on the Garden Walk and 163 feet on Harrison Street. The trustees have applied to the supreme court for permission to sell the present church property on Locust Avenue.—*New Rochelle Press.*

CLEVELAND, OHIO.—A new Christian Science church, costing, it is said, in the neighborhood of one hundred thousand dollars, is to be erected on the northeast corner of East 105th Street and Fairmount Court S.E., on a lot purchased as a church site about a year ago.—*Plain Dealer.*

HEMPSTEAD, N. Y.—Another landmark is soon to disappear from Hempstead and will be replaced by a beautiful church. The homestead on the corner of Franklin Street and Fulton Avenue has been sold to First Church of Christ, Scientist.—*Brooklyn Times.*

SUPERIOR, WIS.—The church note in the *Sentinel* of Feb. 19, referring to Duluth, Minn., taken from the *Duluth News-Tribune*, should have referred to Superior, Wis.

Admission to Membership in The Mother Church

The next admission of candidates will be June 2, 1916. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 10, 1916.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

Palo Alto, Cal.

William D. McCrackan lectured on Christian Science at the Marquee Theater. He was introduced by H. J. Snyder, city councilman, who spoke briefly as follows:—

I am not a member of the Christian Science church, only one of the vast multitude that love truth, freedom of thought,—demonstrations that show results and true brotherly love. These things are found in Christian Science and by association with its students. The great majority of us acknowledge the allness of God but fail to make use of this power in our daily life. This is largely due to the fact that we have not been using the right key to the Bible. Those who are of a receptive thought find the necessary help in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and much assistance from authorized speakers on the subject.—*Palo Alto Times.*

Columbus, Ind.

At Crump's Theater Jacob S. Shield gave a lecture on Christian Science. He was introduced by M. S. Blish, who said:—

Religion is quite properly defined as "a system of belief and practice." Christian Science answers this definition exactly, in that it is preeminently a religion of belief and practice,—belief that leads to practice, which brings an answer here and now to the "prayer of faith" that St. James says "shall heal the sick." However, the terms belief and faith have a much deeper meaning for the Christian Scientist than is ordinarily given them. To him they mean that divine or spiritual understanding which gets from Jesus' words, "Whosoever believeth in him should not perish, but have eternal life," the knowledge that we not only can be like him, but must become like him if we are to be delivered from all evil. Such knowledge constitutes Christian Science.

The Republican.

Maplewood, N. J.

At the lecture on Christian Science in Masonic Hall by Bicknell Young, the introductory remarks of Harry I. Hunt were as follows:—

Early in the history of the race, as recorded in the book of Genesis, we find this sweeping indictment against mortal man: "Every imagination of the thoughts of his heart was only evil continually." In spite of the cleansing waters of the flood, the protests of priest and prophet, and even the clear teachings of Christ Jesus, this old indictment still stands.—mankind are still in bondage to the evil in their hearts. What has been the result? From the beginning until now, human beliefs have been projecting upon the screen of human sense distorted pictures which mankind have accepted as true,—pictures of sorrow and strife, of want and woe, of disease, disaster, and death. True, men have endeavored to escape from these visions of misery; they have tried to improve the pictures by tinkering with the screen. But every one knows that the only way to correct an imperfect picture is to go back to the lantern and correct the slide. Only in that way can we obtain pictures of the good, the beautiful, and the true.

Thinking people are beginning to see the futility of trying to change the pictures on the screen. They are beginning to see the necessity of discovering the cause of life's distorted pictures. Christian Science goes to the root of the difficulty. It shows how, through an understanding of the truth, a man

Digitized by Google

can displace the beliefs by which he has been bound. It shows him how to stop thinking wrongly and to think rightly; and in proportion as he corrects his thinking, the screen or veil of sense begins to be transformed, distorted images are dissolved, and before the purified vision joy supplants sorrow, peace replaces strife, harmony takes the place of discord, faith displaces fear, and love removes hate. So it is no wonder that there is everywhere a desire to learn something of Christian Science. It is no wonder that lectures on this subject are greeted everywhere by earnest men and women in search of the truths it teaches.—*Correspondence.*

Lectures to be Delivered

ARIZONA—Phœnix: John W. Doorly, Elks Theater, 324 West Washington Street, 8:15 p.m., April 11.

CALIFORNIA—Los Angeles (Fourth Church): John W. Doorly, Ebell Club House, 131 East Avenue, 57, 8 p.m., April 1 and 3, and Temple Auditorium, Theater Beautiful, Fifth and Olive Streets, 3 p.m., April 2.

Ontario: John W. Doorly, Euclid Photo-Play Theater, 8 p.m., April 7.

Pacific Grove: Clarence W. Chadwick, T. A. Work Hall, 8 p.m., April 14.

Redwood City: Clarence W. Chadwick, Woman's Club House, 8 p.m., April 13.

Santa Paula: John W. Doorly, High School Auditorium, 3 p.m., April 9.

CONNECTICUT—Danbury: William R. Rathvon, Odd Fellows Hall, 18 West Street, 8 p.m., April 14.

Middletown: Prof. Hermann S. Hering, Middlesex Theater, 3:30 p.m., April 9.

FLORIDA—Pensacola: William D. McCrackan, Universalist Church, 8 p.m., April 13.

Testimonies of Healing

As a child I was never strong, but I finally succeeded in finishing school and was married. Then ensued attacks of sickness with partial relief, until in December, 1890, I went to a Christian Science practitioner for treatment. After relating my woes very fully to the loving woman, she treated me, and then said decidedly: "Your blood is not your life. God is your life." Finding I had ceased attending any church, she loaned me Science and Health and recommended that I study it and attend Christian Science services.

I took four weeks' treatment with no apparent relief, and stopped; but with about six weeks' study, constantly holding in thought that God is our life, I rose one morning free, and was enabled to lay aside a body brace which I had worn for seven years. Thus was the statement proved, "Truth has a healing effect, even when not fully understood" (Science and Health, p. 152). The first three years in Science I saw few Scientists; my days were fully occupied, and studying had to be done evenings. The first twelve years I did all my own Science work and some for my family. Since then I have had occasional help. I have not used any material remedies, my every need having been met in Christian Science.

It has been my privilege to see many proofs of God's love and care in my little family, especially with two cases of acute lung trouble, in one of which approaching death was overcome in a few hours. A member of my family was wounded in the Philippine Islands. The bullet passed through his body, coming out on his back. It was six weeks before he reached home, but in two weeks thereafter he was well enough to go to work. Inflammation of the bowels was overcome through Christian Science treatment and the patient was back at his desk in three weeks. A rusty nail wound and a severe wound from a needle have been healed. Many minor discords incident to a family have been overcome, and financial problems have been solved many times. The Bible is a new book, and the awakening to the spiritual creation has been grand. Pages could be written of benefits received and fears overcome, and each day brings added proofs.

I am thankful that I was led to one who placed in my hands the means for my salvation from all ills,—the truth of the Bible as apprehended in Christian Science,—and who bade me drink from this fountain. I am thankful that I was ready to accept Christian Science fully and finally. Only once have I been incredulous, and then I met the thought instantly with the words, "With God all things are possible." From this simple declaration came a most wonderful proof of the truth of the statement.

With gratitude to God, also thankfulness to Mrs. Eddy, I send this testimony, hoping it may encourage some one who may be wondering if Christian Science redeems its promises.

GEORGIA A. FARLING, Stevensville, Mich.

✧

[Translated from the German]

It is with a sense of deep gratitude that I wish to testify to the many benefits derived from Christian Science. For many years I had been afflicted with a bad cough, and in September, 1913, after submitting to a medical examination, was told that I had lung trouble, but that there was yet hope of cure. Although I was thereafter constantly under the care of a specialist and followed all his instructions, my condition did not improve. Through an acquaintance I was then led to investigate Christian Science and its healing activities, and went to see a practitioner in Basel. Thanks be to God, two weeks of loving treatment brought great improvement, and complete healing followed within a short time.

I am thankful to God for His infinite love and goodness, and I feel greatly indebted to our Leader, Mrs. Eddy, for showing us again the way to light and truth and for teaching us the availability of the divine presence. My endeavor shall be to assimilate more and more of divine Truth.

LINA BECHTEL, Blansingen (Baden), Germany.

✧

I have been healed through Christian Science of chronic bowel trouble, stomach disorder, ulcerated tooth, colds, headache, and numerous other ailments, as the result of Christian Science treatment and the study of the Bible together with Science and Health. The study of the Lesson-Sermons and the reading of the articles in the *Sentinel*, *Journal*, and *Monitor* have also been a great help to me.

For three years God has been our only physician, and we have had better health than when we used material means. I used to be troubled every winter with rheumatism and a severe throat affection, and so came to dread the thought of winter, believing I would have to suffer from these ailments; but now I know that I do not, and so Christian Science is a preventive as well as a healer of diseases. I have learned that God is All-in-all, and if we work earnestly the demonstration will be made. I have been able to help others by declaring the truth and knowing that man in the image and likeness of God is perfect. My husband has been healed of fever; also of headache, and has been able to return to work after one treatment, when before we came into Science he would be home from work for a week with the same difficulty while under a doctor's care.

We are very grateful for these manifestations of Love, and thankful to know that God is all powerful and ever present, that "neither death, nor life, . . . nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate us from the love of God." I am indeed thankful to God for all these blessings, and for the understanding I have of the truth; also grateful to Mrs. Eddy for giving us the truth, and to all those who have helped me in gaining an understanding of Christian Science.

MARTHA F. BALFOUR, Kansas City, Mo.

✧

My healing through Christian Science of serious lung trouble, a stomach disorder, and an eye difficulty has been permanent, and I am glad to tell of divine protection during and after an accident in an automobile. The power and presence of God were revealed, and there was scarcely any consciousness of a material world. Divine Love marvelously preserved my husband, myself, and our little girl when the automobile, catching in the railing on a temporary bridge, turned upside down into a rocky gully. I have thus learned many lessons in Christian Science from what to mortal sense seemed a serious accident.

I am thinking almost continually upon Christian Science, and so my first thought when the car left the bridge was of God's allness, and of our relationship to Him, our inseparability from Him, and all thoughts of fear, of fire, or hurt of any kind were dispelled. Danger seemed far off while God's thoughts were with us, and I knew that His ideas are real and absolute. The car fell upon two large rocks, the radiator resting on one and the back of the rear seat on the other, leaving plenty of room for all of us in between. My little daughter, who is a Christian Science Sunday school pupil, was afraid at first, but heard me declaring the truth and called to her father, "I am not hurt a bit." Kind people came to our aid. The car was turned over, the engine started, and my husband drove out of the place (it was a shallow gully), and ran the car thirty miles into Santa Barbara. The damage to the car was only slight.

Digitized by Google

To say that I am grateful poorly expresses the thankfulness that fills my heart, not only for deliverance from danger in this case, but for the understanding that deliverance means a mental perception of spiritual being, of our relationship to Spirit, the real substance of being. No wonder Jesus spoke to the winds and waves and they obeyed; there is no power which can successfully oppose the realization of God's allness.

I am grateful for the health which has come to me through the study of Christian Science, but our deepest gratitude to God is for the knowledge of divine Principle which, as Mrs. Eddy tells us, meets all our needs, physical, mental, and spiritual. I am trying to follow in the way our Leader has made so clear and plain to all who earnestly seek for it.

SARA ANNE BEST, Yosemite, Cal.

✧

It is with a heart full of love and gratitude for what Christian Science has done in our home that I send this testimony. We had very little knowledge of what Christian Science really is, but the healing of an uncle led us to make a study of it. Through the understanding gained by the study of the Bible, together with Science and Health, we have been able to overcome many inharmonious conditions. Sorrow, worry, hatred, and ingratitude, also catarrh, croup, colds, whooping-cough, and a weakness of years' standing, all have yielded to the healing power of Truth. Although we are grateful for these proofs of physical healing, we are more grateful for our spiritual healing, which makes us pray daily that we may do some good, and teaches us how to love our neighbor. My earnest wish is that more may learn of this saving truth.

Since coming to South Dakota we have had tests of our faith and understanding, in some instances under very trying circumstances, but when we have put Science to the proof it has never failed us. Especially am I grateful for the demonstration made at the birth of my little daughter last August, for I was free from nearly all the so-called laws and limitations usually believed to be necessary at such a time.

For all Christian Science has done for us and is doing each day, we are able to express our gratitude only as we live the truth we know. I am very grateful to Mrs. Eddy for the love, patience, and spiritual-mindedness which enabled her to give to a hungry world her inspired books. The *Sentinel* and the *Monitor* are a daily pleasure in our home.

MAE ENGLER BLONDIN, Faith, S. Dak.

✧

Christian Science was brought to my attention about ten years ago in a manner which eliminated all doubt concerning its healing efficacy. At that time a member of our family was, according to belief, a physical wreck, burdened with nervousness and mental depression. The physicians employed in her behalf, probably a dozen or more of those prominent in our section of this city, had failed in their efforts to relieve her. The bath and water cure was given a fair trial, followed by electrical treatment, but no permanent improvement ensued. When all hope seemed lost, a kind physician suggested that as a last resort, perhaps only as a matter of comfort, we give Christian Science a trial. This was done. The healing was slow, but I am grateful to say that a complete cure was effected. The physical and mental change was so radical and apparent that friends were obliged to admit a marvel had been accomplished.

After I had witnessed this healing, Christian Science treatment was employed in my behalf, and the cure of various ills was effected almost instantaneously. Everything from toothache to so-called scarlet fever was overcome, but the practitioner was employed by me in much the same capacity as a physician would be, I believing I had found a superior curative agency. The little knowledge gained from hearsay regarding Christian Science seemed quite reasonable, but while I enjoyed continuous good health I was not very anxious to learn what was the power that executed such marvelous works; yet I was never really content in that state. The truth that makes free is an understanding of God, the eternal fact of existence, the Science of Life, Truth, Love. It was the wish for this understanding, the craving for which the human mind could not satisfy, that was fulfilled when, under trying circumstances, I was forced to study our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, in conjunction with the Bible.

I was stricken with so-called nervousness, depression, and several physical disorders. As usual, I sought the aid of a Christian Science practitioner, but in this instance received no permanent relief. I sought other practitioners, but to no avail. Finally the last one employed, with his excellent explanations, comforting advice, and treatment, aided me considerably, and in the degree that the truth in Science and Health was revealed to me, in that degree I regained my health. The healing was slow, but I am grateful for this, as the study of Christian Science then became compulsory; otherwise it would have been delayed for a more convenient season.

I am extremely thankful to God, and to our Master the Wayshower, also grateful to Mrs. Eddy for her priceless contribution to this age, to the Christian Science friends who assisted me, and for all our valued literature.

M. EDMUND BULSKE, Chicago, Ill.

I desire to corroborate the above testimony with a deep sense of gratitude for the innumerable blessings received.

MRS. MARIE BULSKE.

✧

When I was about thirteen years old a cousin sent some Christian Science literature to my mother. What I had been taught in Sunday school hitherto had never appealed to me, and I was far from being a religious child; but as soon as I read some of this literature I was sure it was the truth. After reading it a few days, I took off my glasses, for it seemed the only natural thing to do. My parents were quite alarmed when I refused to wear the glasses, for they did not believe my eyes had really been healed and thought I would lose my sight. That was ten years ago, and I have never had any trouble with my eyes since.

We were then living in the country, where there were no Scientists with whom I could talk, and no churches or reading-rooms. I saved up my money until I could buy a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and then began studying the Lesson-Sermons faithfully. A few years later I was located so that I had the privilege of attending the Christian Science Sunday school, and there I gained much good. I have been healed of many things, one of which was a very serious nervous breakdown. My healing of this was slow, but nevertheless I rejoiced, as I was forced to study all the harder and thereby gained a better understanding of God, who healeth all our diseases.

Christian Science has given me a wonderful sense of protection at all times, and this is especially valuable, as my work calls for constant traveling. I never fear that there will be an accident of any kind, for the Bible says, "He shall give his angels charge over thee, to keep thee in all thy ways." Mrs. Eddy says angels are "God's thoughts passing to man" (Science and Health, p. 581), so I know that in proportion as I reflect God's thoughts and shut out thoughts of anything contrary to harmony, I am protected. I have also been helped in obtaining engagements. When I have relied on

Digitized by Google

divine Mind to direct me, I have found the right place at the right time, and the surroundings have been most pleasant and congenial. To say that I am grateful for all that has been done for me is to make a very mild statement of a great fact. Every day I feel more grateful to Mrs. Eddy, who set forth this wonderful truth and pointed out the way for us. My thanks also go out to God in loving acknowledgment of all the help received.—Zona F. Cass, New York, N. Y.

✧

I had always been religiously inclined, yet never cared to know the doctrine of the churches I attended, for fear there might be something there to which I would object. Some years before I heard of Christian Science I had a realization that God is light, and I went from one church to another to find the light. In the home of a friend I found and read Science and Health, and the eighth chapter of Romans was made so clear to me that the light dawned upon my consciousness. Through continued study of the teachings of Christian Science I was healed of severe headaches that had troubled me for years.

I am very grateful for the better knowledge of God which I have gained through the study of the Christian Science text-book, "Science and Health with Key to the Scriptures," and wish to express my loving gratitude to Mrs. Eddy.

Mary R. Adamson, Llanerch, Pa.

✧

Words cannot express my thankfulness to God for Christian Science. For fifteen years I suffered from what is known as milk-leg; then it became a running sore for about one year, but through the help of a practitioner I learned the power of Truth over error and was healed in a very short time. That was about two years ago. I have had a great many other healings for which I am thankful, as well as for the spiritual uplift which I have received.

Minnie Burr, Painesville, Ohio.

✧

[Translated from the German]

About three years ago I was afflicted with lung trouble in an advanced stage, and also suffered greatly with nervousness. In July, 1912, I went to a sanitarium for nervous diseases, but was allowed to stay there only five weeks, as my case necessitated my being taken to a sanitarium for people with lung trouble. For months I had fever and as a result I became very weak. Then I coughed a great deal and was unable to leave my bed for many weeks. There were also various unpleasant symptoms which I would rather not recall, but according to the physician's statement both lungs were very much affected, and I had become only a shadow of my former self.

After spending about three months in the sanitarium I became acquainted with a patient who told me of Christian Science. I seemed unable to grasp at once his explanation of this religion in regard to the healing of disease, but he left with me a copy of the *Herold*, and upon looking it over I found an article on discouragement. This seemed to open my eyes, and I felt as if I could not read it often enough. I put aside all other reading and devoted my attention exclusively to this *Herold*. I may also mention that I threw away all medicines after I started with this reading, and my trust in God was so strengthened that I went to the physician and asked to be dismissed from the sanitarium. He refused to let me go, on the ground that I could not be permitted to remain in a lower altitude during that season of the year (it was November), as a change of air was fraught with danger; that there would be no hope of cure then, and the disease would rapidly take its deadly course. I, however, insisted upon leaving the sanitarium and went home early in December. I could hardly wait to get there and share my new-found treasure with my people. From that time on I have attended the meetings in Berlin in all weathers and have never again had medical treatment; I am entirely well.

Christian Science has become the greatest blessing to my whole family. We have had glorious proofs of the power of divine Love and of the ever-presence of God, and are unspeakably grateful for having found Christian Science.

Elisabeth Jordan, Berlin-Steglitz, Germany.

✧

Sixteen years ago I was in great distress, having suffered for years from nervous exhaustion in its worst form. The suffering was so intense that a peaceful night's rest had been unknown for many years. I had tried various remedies, but without avail. One day while out with my sister we met a friend, and she told us that Christian Science would alleviate my suffering. I inquired what it was, and was told that it was the work of God. When I heard the name of our Lord, great joy leaped into my consciousness, and I felt right then that there was hope for me. I began to study Christian Science faithfully, and learned that I had to be meek, humble, and obedient, and also that the blessing of healing would come only through spirituality. Thus by obeying divine Principle and applying it in all my daily living I have been perfectly healed.

I am thankful to our heavenly Father that He has heard my prayers, and that He will always hear His children. My mother has been healed through Christian Science of tuberculosis of the knee. The doctors said the limb would have to be amputated, but it was saved through the healing power of Truth, and restored to a normal condition. There are three in our family, and we rejoice in this wonderful privilege that our Father has bestowed upon us to "be of one mind" in Christ. My only aim is to live Christian Science not alone in words but in deeds, loving God more and more and my neighbor as myself. To say that I am thankful to God for all these blessings is not enough, for the wonderful gift which I have received through the understanding of the truth in Christ, with which I may help others, is a joy from heaven.

I am thankful for all our literature; it has sustained me in many trials and brought me great comfort and peace. I am grateful for the Lesson-Sermons, and also want to express my gratitude for the testimonies published from week to week and those given at the Wednesday evening meetings. We deem it a blessing to have in our home all of Mrs. Eddy's writings, and also the periodicals.

Annie Gilbert, San Francisco, Cal.

✧

These last six years Christian Science has been very precious to us. Over two years ago I went up a ladder to fix some electric lights in the ceiling of a high room. The ladder slipped and I came down with it on a hard floor, sustaining very severe injuries. I was unconscious, so the firm for which I worked sent me home, and also sent two doctors to attend me. When they saw me they wanted to take me to the hospital, but my wife said if they had anything to do, to do it there. They looked at me and talked to each other; then they said they could not do anything until morning. The firm called up another doctor, and this one said he could do nothing except plaster my arm to my side to stop me from moving it, as he could not set it until the swelling in my chest went down.

My wife sent word to a Christian Science practitioner almost as soon as I reached home. Treatment was given at

Digitized by Google

once, and I commenced to get better. An eye which was out of the socket went back into place; the collar-bone set and knitted, and the swelling went down. When the doctor came to set the arm, the trouble had been overcome. He could not understand this, so he worked the arm back and forth, but found it all right. In four days I regained consciousness and raised myself in bed with the seemingly wounded arm. In four weeks I was back at work, to the surprise of many.

I thank God for the many blessings I have received, and I am striving to live right each day. I am very grateful to our dear Leader, Mrs. Eddy, for making plain the teachings of Christ Jesus.—JOSEPH BENTLEY, Spokane, Wash.

The benefits I have received in Christian Science for the past four years have been so many that I must express my thanks to God for them. I was a member of a church and received some good from its teachings, for it taught me many lessons in the Bible; but as time went on my health failed me. I thought much of the promises of the Scriptures that I had heard read in church, but they did not give me health and happiness, that for which I was striving. I went to the physicians and they did what they could for me. For three years I took medicine constantly, with no good results. Then I tried Christian Science, with the result that I am healed. I am glad to say that this new-old religion did not take away the truth of the Scriptures; it only gave me a better understanding of them. Christian Science has given me a Principle and rule whereby I can demonstrate that "God is our refuge and strength, a very present help in trouble."

I have discontinued the use of glasses after having worn them for several years; I am also glad to say that the habit of using tobacco, formed in boyhood, has been overcome by the understanding of God as taught in Christian Science. I am grateful to Mrs. Eddy for giving us a book through which the Bible is understood in a better way than of old. Through "Science and Health with Key to the Scriptures" I am learning what God really is, and man's relationship to Him.

EMIL F. CALBERT, Hewitt, Okla.

Words can never express my thankfulness to God for what Christian Science has done for me and my loved ones. It found me heart-broken and badly wrecked. I had no hope, having exhausted all material means. My home doctor could do no more for me, so I sought the best specialist in Des Moines, only to receive the same sad verdict, that neither medicine nor an operation could ever reach my case.

I had been an invalid for twelve years, gradually going down-hill all the time,—indeed, I had been considered very delicate from birth; but three years ago I was persuaded by a dear friend to try Christian Science. At the time I called on the practitioner for help I breathed through only one lung, according to the statement of two doctors. I suffered from a liver condition said to be organic, which affected the heart; then too the bowels were considered to be in a serious condition. I also had female trouble, and was never without pain day or night. The kidneys and bowels were healed inside of twenty-four hours after I called on the Christian Science practitioner. My healing was wonderful to all who knew me, and many rejoiced with me.

We have had many beautiful demonstrations in our home, and words can never express my joy for being led to this blessed fountain that never runs dry. I have not worked out all my salvation yet, but with the Bible spiritually interpreted by Mrs. Eddy in Science and Health I expect faithfully to follow the route from sense to Soul.

ELISABETH PLATTER, Terril, Iowa.

From Our Exchanges

[John M. Thomas, D.D., in *The Congregationalist and Christian World*]

The Christ of men's hearts today is the Christ of the highest reaches of belief and veneration. Not with creeds toned down, with claims for Jesus lessened, is the gospel successfully presented today. The world was never more sure of the fact than now that "God was in Christ, reconciling the world unto himself." The confession of that divinity in Christ is necessary from the world's experience of the increasing Christ.

The divineness of our Lord is no formula composed in the clouds and flung down at us ready made. It came out of things that happened to people just like ourselves, in a world just like our world. Jesus walked the streets of Capernaum like any carpenter's son. His clothes were what other people wore; his bearing was not noticeably peculiar. Except for a very short time of his life he went out and in unnoticed, one of the millions of the poor and the humble. But "he opened his mouth, and taught them, saying, Blessed are the poor in spirit," and many other things of like sort. He stretched out his hand and blessed little children and the poor. Men remembered what he did, treasured what he said, talked it over with others, wrote it on bits of parchment, and they found —could not help finding—that the God of the martyred prophets was working at them through these remembered words; that a power had hold of them, not themselves, working with the power of the almighty God for righteousness, for kindliness, for eternal life. They were every-day people; they were not looking for a Son of God. The very idea was contrary to their training. But they could not help themselves. The Son of God revealed himself in their hearts. Jesus of Nazareth increased to that measure of fulness in their souls.

[John Whitehead in *New-Church Messenger*]

There are many forms of unpreparedness on the spiritual plane of life. Many are satisfied with living a merely natural life. They are zealous and diligent in all that relates to life in the world. They are interested in the welfare of the body and in civic progress, but have not advanced far enough to care for the welfare of the soul. They have laid the foundation but are not able to finish the superstructure that pertains to the spiritual man and the spiritual life.

We build high towers overlooking the lower planes of our life by acquiring knowledge derived by revelation from on high. By this knowledge we can see life from the source of life itself. In the Word of the Lord life is revealed as to its essential quality as it should be. All the evils that corrupt and injure our spiritual life are exposed to view by the divine truth. When we stand upon the Lord's word we are on a high tower, and, like the watchman, we can see the enemy afar off and give warning, thereby guarding against his injurious and destructive influences. But if we acquire only a smattering knowledge, or if our knowledge is limited by merely natural considerations, or if we accept false views of doctrine and life, although we may have begun to build, we have not been able to finish. For the knowledge thus limited and perverted does not give us the clear heavenly vision, nor does it guard us from the dangers of loss to the soul.

[Rev. William Temple, M.A., in *The Christian Commonwealth*]

If you were to ask most people what they think the Christian church is for, they would probably tell you, if they managed to find words on such a subject at all, that it exists for the benefit of the people who belong to it, to encourage them in faith and worship, and the like. The church ought not to

Digitized by Google

exist for the benefit of the people who belong to it; it ought to exist for the benefit of the people who do not belong to it. It is to be the body of Christ, the body that was broken and whose blood was outpoured. In its own greatest service it perpetually receives that symbol of its own life, because its own life is to be a life of sacrifice. It is to be the army of the kingdom—the army which may perish, if you like, provided the kingdom survives. The church ought never to be thinking of itself, or of its own members, except so far as it is thinking how it may serve that great kingdom, that fellowship of all mankind.

[Rev. Gordon L. Thompson in *The Homiletic Review*]

Christ is the great revealer of truth. He is God's ambassador to humanity. The life hidden with him cannot be entirely secluded from the world. Touched by his divine power, it will in turn manifest its divine nature and reveal its source. That which takes place in the human soul as a result of his presence cannot be hidden. The secret processes of the inner life stamp with an indelible impress the character of the man, and he becomes a living testimonial to the power of the Master to save from sin.

[*The Christian Register*]

The noblest revelations of the past are only symbols and suggestions of that which outruns all thought and transcends the highest flight of the imagination. It is for man now to say, All the evil in the world is of my doing; I will undo it, and for it I will atone; all that is good I will now strive after and achieve, and henceforth I will join with good men to help bring in the kingdom of heaven, of which the supreme laws are justice, love, and good will.

[*The Church Family Newspaper*]

There are gratifying signs that at last thinking people are being led to see that if Europe is to be redeemed and civilization saved, it must be "not by might, nor by power," but by the Eternal working His purposes out. For this reason we have pleaded for a spirit of adventure for God—the spirit that undertakes great exploits because of the illimitable power behind.

[*The Christian Work*]

The disciples must go to the mountain of transfiguration with Jesus. The next hour of the day they must go down with him upon the plain of human life to heal men of their diseases. But they cannot do his work upon the plain unless they have been upon the mountain top with the Master, so that they may come down radiant with the light that shines from his face.

[*The Advance*]

If we think back over our own lives we shall find that our deepest spiritual experiences were related to the simplest incidents involving mighty changes in our life program. To every soul the voice of God comes with its imperative command, ordering us to quit the life of ease and contentment and to seek spiritual adventures that lead to moral conquests and the development of character.

[*The Biblical World*]

It is of course easy to say that if the church had done its duty the world would not be so wicked as it is now. Such a statement no one can deny. But to say that the church has failed is a different thing. When one looks at the question in real perspective, there are countless things that indicate the awakening of the church.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Publishing Society

The increased cost of binding the periodicals has necessitated making an advance in the selling price of the bound volumes. The new prices, which take effect April 1, are as follows:—

JOURNAL—Volume 32 (April, 1914 to 1915). Cloth, $3.00; half morocco or half calf, $3.75.

SENTINEL.—Volume 16 (September, 1913 to 1914) or Volume 17 (September, 1914 to 1915). Either volume, cloth, $3.25; half morocco or half calf, $4.00.

For all other bound volumes of *Journal* or *Sentinel* write for prices.

DER HEROLD.—Volumes 5 to 12 in cloth, $2.75 each; volume 4 to 7 and 9 to 12 in half morocco, $3.50 each; volumes 4, 5, 9, 10, 11, 12, in half calf, $3.50 each.

The pamphlet, "Prayer and Healing," has been translated into French and is now published with the English version opposite the translation, and is now on sale at prices of the regular pamphlets.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present selections from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 65 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

More than twenty thousand tons of wood-flour, valued at $300,000, are used annually in the United States in two widely different industries,—the manufacture of dynamite and the manufacture of inlaid linoleum. Wood-flour is also used in making composition flooring, oatmeal paper, and in several other industries. It forms one of the means by which the huge waste product of our lumber mills is beginning to find some better means of disposal than the burner. A total of 36,000,000 cords of such waste is produced each year at sawmills in the United States, of which about one half goes into the furnaces as fuel, while the rest is burned as refuse. All industries that use wood-flour require a white or very light cream-colored flour having good absorptive powers.

In the manufacture of linoleum, either wood or cork flour is used. The flour is mixed with a cementing material, spread out on burlap, and rolled or pressed to a uniform thickness. The cement is the expensive constituent. Cork linoleum is the cheaper, because less cement is necessary. For inlaid or straight-line linoleum, wood-flour is used exclusively. Cork linoleum is always dark, and slightly more elastic than that produced from wood-flour. The wearing qualities are about the same.

The administration bill providing for the creation of a tariff commission has been introduced into the House of Representatives. In many respects the administration measure conforms to practical suggestions offered the committee on ways and means by the various business organizations. The Chamber of Commerce of the United States advocated a limited number of commissioners, preferably not more than five, and the National Tariff Commission League, with headquarters in Chicago, suggested six. The bill provides for six, of whom not more than three shall be members of one party. The chamber advocated official terms of not less than six years, and the bill makes the longest original term twelve years, successors being appointed for full twelve-year terms. The object of this long tenure is to insure that commissioners shall be removed as far as possible from temporary partizan influences.

The future of the Agricultural School of Chillan, a Government institution of Chile, has recently been a subject of discussion. Notwithstanding the excellence of the instruction provided, the school is admittedly accomplishing less than it ought. Development of agricultural education is one of the policies of the new minister of agriculture. He is eager to minimize, on the one hand, the prejudice against agriculture which exists among many educated Chilcans, and, on the other, the apparent reluctance among the farming population to adopt modern methods. He sees a possibility of reaching and converting the latter by establishing elementary schools of agriculture within easy reach of them.

An interesting decision is that of Judge Rose of the Federal court in Maryland in the case of the American Can Company, which was charged with being a trust. The court found that originally the company had succeeded in monopolizing 90 per cent of the can manufacturing industry. It further found that the price established for cans induced outsiders to establish competitive plants, and these forced down prices so that by the time the case came up for decision the defendant concern was making only one third of the can supply of the United States and could not be reasonably considered a monopoly.

In an article the *Canadian Engineer* says: "To claim that Canada is the greatest water-power country in the world would be premature, perhaps, in the light of the fact that although considerably over one million horse-power has been developed, only the fringes of the country's resources have been touched. Reliable water-power data accumulate slowly, but remarkable progress has been made by various branches of the public service. The enormous development of recent years is in itself a criterion of the awakening to this vast resource waiting to be converted into more serviceable form."

Conservationists have won the first step of their water-power contest in the House, by getting the report from the interstate commerce committee of a satisfactory substitute for the Shields general dam bill recently passed by the Senate. As it comes from the committee, the bill conforms in most essentials to conservation theories, the only exception being that it fails to provide compensation to the Federal Government for the use of water-power. It takes out of the hands of the secretary of war the absolute authority to issue water-power permits and requires an act of Congress for the granting of each lease.

The Manchester ship canal recently declared a first dividend on the preference and ordinary stock of the company. The canal has now been open for traffic for twenty-two years. It was originally expected that the cost of construction would not exceed £16,000,000, but the actual expenditure for capital purposes has approximated £17,000,000. In 1894 the total tonnage aggregated 925,659 tons; in 1915, 5,434,046 tons. The receipts for the first year totaled £97,901, while last year they reached £757,268.

The alcalde of Cochabamba, Bolivia, has sent a letter to the alcaldes of the neighboring provinces proposing an agricultural survey of the entire department, with the object of increasing crops, reclaiming waste land, and ultimately reducing the cost of food. He recommends that the work be placed in charge of a central office of investigation and information, and maintained upon funds voted by all the municipalities of the department.

A movement is on foot in Sebastian, Crawford, Washington, and Benton counties in Arkansas for a first-class modern highway from Fort Smith, through Winslow, Fayetteville, and Rogers to the Missouri border, where it is to connect with the great system of roads in that state and by the Santa Fé Trail with points east and west. The section of the road in Arkansas is to be known as "The Ozark Trail."

The secretary of the interior announces that an order has recently been approved classifying as non-irrigable in character nearly seven hundred and fifty thousand acres of land in the partly settled former Pine Ridge Indian Reservation, South Dakota, which reservation was opened to settlement and entry by executive order of June 29, 1911.

The report issued by the Chamber of Commerce of Lyons, France, shows that the silk industry during the year 1914 was, considering the circumstances, from many points of view exceedingly good. The registered production during the year was 5,154,814 kilograms for silk of all descriptions, as compared with 8,414,341 in the preceding year.

Efforts are being made in Argentina for the development of its railway system under governmental support. The kilometrage of the Argentine railways is already greater than that of the Brazilian lines, notwithstanding the fact that Brazil is much greater in area and population.

Tide-lands at the harbor of Los Angeles, valued at nearly two and a half million dollars, are restored to the city by a decision of the superior court. The property, comprising nearly two hundred and fifty acres, was won in a quit-title suit against the Salt Lake Railway Company.

The Viceroy of India, Lord Hardinge, is supporting in the legislative council the resolution of Pundit Malaviya of the United Provinces for the abolition of the system of Indian indentured labor, and announces that the secretary of state has agreed to the policy of total abolition.

Net receipts of eastern railroads have virtually doubled within twelve months. Southern railroads increased their net revenue more than 50 per cent within this period, while the western roads added about 16 per cent.

Yuan Shih-Kai, according to report, has decided to abandon the scheme for the establishment in China of a monarchical form of government, and a mandate to that effect has been issued.

The Religious Education Association will convene in Boston in March, 1917. This will bring from four to five thousand people, including teachers, ministers, and professors.

Salmon worth $250,000 at the canneries recently left Seattle, Wash., bound for New York City by rail. There are fifty cars in the train.

Ohio had under construction during the last year 843 miles of improved highway, the total cost of construction on which was $10,514,797.67.

Sale of $2,000,000 worth of undressed furs was opened at St. Louis, Mo., last week. More than a million and a half skins are to be sold.

Cottonseed crushed from the 1915 crop amounted to 4,132,466 tons, compared with 5,779,665 from the 1914 crop.

Doing Our Own Work Well

WILLIS F. GROSS

In "Science and Health with Key to the Scriptures" Mrs. Eddy writes (p. 202), "The scientific unity which exists between God and man must be wrought out in life-practice, and God's will must be universally done;" also in "Retrospection and Introspection" by the same author we read, "Each individual must fill his own niche in time and eternity" (p. 70). There is revealed in these interesting statements the divine Principle of all right doing and the motive which should inspire the activities of every loyal Christian Scientist. The greatest progress is the result, not simply of doing one's work, but of doing it in the best possible manner, and one can accomplish this only as he realizes that in doing his work well he is but expressing the activity of divine Mind, and that of himself he can do nothing.

In the seventeenth chapter of Exodus there is a striking example of what can be accomplished when individuals are content to fill their own niche and support one another in doing the work that ministers to the good of all. The children of Israel had scarcely entered upon their long journey through the wilderness when the Amalekites not only threatened to rob them of their possessions but also made impossible further progress toward the realization of their hopes. It thus became apparent that they must stand and fight together. A common enemy threatened destruction, and no haphazard, intermittent effort would meet the situation. The advance must be orderly and with a definite purpose in view, or they would go down to defeat.

In the contest that followed, Joshua took command of the forces on the field while Moses stood on top of the hill with the rod of God in his hand. The rod was a reminder that all power belongs to God. "And it came to pass, when Moses held up his hand, that Israel prevailed: and when he let down his hand, Amalek prevailed." It was very necessary that Moses should be supported in his work, so we read that "Aaron and Hur stayed up his hands, the one on the one side, and the other on the other side; and his hands were steady until the going down of the sun."

The children of Israel gained the victory because each was content to fulfil his own part in the work. They were willing to accord Moses his rightful place and support him in his work. They realized that he was doing far more than he could possibly do if he were to come down and fight on their battle-line. How different would have been the result if Joshua had desired to take the place of Moses, because to human sense he occupied a higher and less dangerous position; or if Aaron and Hur had refused to hold up Moses' hands, saying, "God is no respecter of persons; it will do just as well if we hold up our hands."

The best illustration, however, of what can be accomplished when the individual seeks not his own but another's good, is found in the life-work of Christ Jesus. While he was great and stood high above his fellow men, yet he lived his own teaching, and said, "Whosoever will be chief among you, let him be your servant." His daily life was a demonstration of the truth of these words: "He that humbleth himself shall be exalted." He was highly exalted, but it was through his oneness with the Father. Those who desired not the blessing he came to bestow, sought to accomplish his destruction, but every effort of evil to cast him down only made it possible for him to rise higher in the consciousness of infinite good.

The identity of each individual is established in Truth. If a desire to change this identity could be entertained, it could never be realized in the least degree, even as it is written, "Which of you by taking thought can add one cubit unto his stature?" We may live in ignorance of man's true identity as the son of God, but we can never add to or take from the reality of being. As one becomes identified with the activity of good he sees more clearly what God requires of him. Doing his work faithfully, looking to Truth for wisdom and strength, he gains a better understanding of God, and this better understanding of the infinite is a truer reflection of his own individuality.

"Thy will be done" was the Master's oft-repeated prayer, and his followers in all ages have succeeded in proportion as they have been inspired by the same unselfish motive and looked to the same source for strength and guidance. When a man is governed by divine Mind he reflects the truth of being and reveals his own identity. In the economy of divine wisdom there is no conflict of interests; no confusion as to who is called upon to contribute to humanity's need. When Love prevails, each one fills his appointed place, reflecting the might of meekness, and harmony reigns. The truly successful man is he who finds his work and does it well.

There is no greater need manifest today than an earnest desire to possess only the good which God bestows. The desire for place and power presents a most destructive phase of error, and without doubt does more than anything else to prevent the natural unfolding of good. This error has no place in Truth, neither is it to be found in that consciousness which is able to demonstrate the omnipotence of good. To the right apprehension of Life and its activities there is no high, no low, no divinely favored; but all the sons and daughters of God fill their appointed places and rejoice in the apprehension of that good which can never become more to one than to all.

The motive and effort of the spiritually-minded man is not always appreciated. The Nazarene expressed more of man's spiritual being than did others, but all with whom he came in contact could not accept his interpretation of life. Because of their material views and desires they were filled with envy, and rather than acknowledge the manifestation of goodness, they sought to prevent the demonstration of that spirituality which was above their comprehension. By so doing they not only failed to establish their own identity with good, but brought upon themselves the consequences of sinful thought.

Perhaps the greater part of the Christian Scientist's work is individual; in fact it is all individual, but there are times when it is necessary to be closely associated with others in the accomplishment of a particular work. Then there is great need of setting aside personal interests and personal opinions and working in harmony with the directions given by those

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

who are in a position to realize what is of greatest importance to all concerned, irrespective of the apparent needs of the few. There are many problems which cannot be solved by the individual alone. There is a common enemy to be overcome, and nothing less than harmonious cooperation on the part of all will work out the greatest possible good.

We help others most when we remember that Truth has established the identity of each in time as well as in eternity. When guided by Principle and sustained by divine Love, we perform our God-appointed tasks in meekness and humility, realizing it is necessary that our part of the work should be done. The true follower of Christ never thinks of himself as being exalted above others because he is called to a work which mortal sense would say is more important or more honorable than that which some one else is doing. He does no more than his duty when he employs all his talents and improves all his opportunities. He realizes he has done so little compared with what needs to be done, that self is humbled and pride rebuked.

On page 254 of "Miscellaneous Writings" Mrs. Eddy declares that envy is "the great red dragon of this hour." No other phase of evil is so subtle or works so insidiously, bringing misery to him that indulges it and adding to the burden of him who is striving to fill his own niche and do his own work while endeavoring not to trespass on the rights or privileges of others. When mortals learn the lesson of obedience and let the divine will be done in them, this error will be rooted out, and men will rejoice because of every good work that adds to another's happiness and well-being. They will know that all the good others have gained is for them to enjoy when they merit the blessing. Wherein there seems to be a lack in their experience, it is because they have not succeeded in bringing out the fulness of their own identity as children of God.

Every man finds happiness and prosperity when he is faithful to his trust. If he covets the place of another, he is not making the best possible use of the talent he possesses, and it is unreasonable for him to expect more than he deserves. The one who asks no more than he has earned is never envious of others, and he finds his highest joy and satisfaction in doing his own work well.

Efficacy of True Prayer

JULIA WARNER MICHAEL

When human consciousness first hears through the teachings of Christian Science that God, who is all good, is the only power, it eagerly reaches out to grasp the manifold blessings which accompany such a revelation. The realization that God's will can be done on earth now just as it is in heaven, first startles, then comforts humanity, and in proportion to that will's control of consciousness its divine reality is manifested. The duty of every man, therefore, is to make mental room for spiritual truth by ejecting material misconceptions. This process is the unceasing prayer of the righteous man, the straight and narrow way which leads to the visible kingdom of God on earth today.

There is a very prevalent misconception that righteous prayer is often unanswered, despite the Bible declaration that "the effectual fervent prayer of a righteous man availeth much." The oft-repeated remark, "I have prayed and prayed for such a result and it has not been given me," leads to the careless conclusion that something is wrong with God, whereas it should awaken the individual to the fact that something is wrong with the prayer. Indeed something has been vitally wrong with most prayers, both before and since the coming of the Christian era, for the sick, the sinning, and the poor have not been healed to any great extent by this means. Yet throughout Bible history there are records of the healing of human ills, even of death itself, by the righteous or right prayer. Jesus used perfect prayer with perfect results, and it follows that it is of paramount importance for the world to gain the Christ-understanding of prayer in order to receive the Christ-answer. A great help in this direction is to be found on page 206 of Science and Health, where we read: "The exercise of the sentiments—hope, faith, love—is the prayer of the righteous. This prayer, governed by Science instead of the senses, heals the sick."

What a light is here thrown on Jesus' prayer in contradistinction to the ordinary methods! Humanity's petitions have been directed by the senses; Jesus' prayers were always governed by divine Science. Mankind's orisons usually arise from distress, and attempt to impress Deity with the sad condition of things. Jesus' prayers always started with God and reflected the divine harmony upon man. Mortals have been stimulated to pray by poverty and pain, sin and sorrow, death and destruction, while universal plenty and peace, spirit and salvation, life and limitless good, have been relatively ignored. The Master knew and proved at all times that man could be constantly conscious of his unity with God, as God is conscious of man's unity with Him. His prayers, starting not from the standpoint of material evidence but from divine understanding, were winged with the power of God, radiant with celestial glory, charged with instant fruition of good.

A clear illustration of this is to be found in the experience of the man with the withered hand, as related in the twelfth chapter of Matthew. It was on the Sabbath day, the great Jewish day of prayer, that Jesus found the maimed man in the synagogue, the house of prayer itself. He was surrounded by the Pharisees, men whose whole lives were given to the study and use of prayer. It is only natural to infer that Deity had often been fervently besought by these men to help the afflicted one, yet evidently without avail. It is notable that the Pharisees questioned Jesus about the healing of the man, not that they might learn how he was restored, but that they might accuse the Master of ungodliness. This attitude of mind was utterly devoid of love, hence the prayers proceeding therefrom were necessarily unproductive of good for themselves or others. How strange that they could have forgotten that love fulfils the law!

Jesus first rebuked the Pharisees' vain self-satisfaction and arrogance with a parable of love about the rescue of a sheep fallen into a pit; then followed his sublimely simple prayer for the needy man, based upon the all-power of good.—"Stretch forth thine hand,"—in striking contrast to the pharisaical method, as also was its result—instant healing. Christ Jesus did not beseech God to alter the man's condition, but he commanded human consciousness to awake to the fact that man is governed by God alone, and He is "supreme in the physical realm, so called, as well as in the spiritual" (Science and Health, p. 427). On page 11 of "Unity of Good" our Leader writes of this healing: "The palsied hand moved, despite the boastful sense of physical law and order. Jesus stooped not to human consciousness, nor to the evidence of the senses. He heeded not the taunt, 'That withered hand looks very real and feels very real;' but he cut off this vain boasting and destroyed human pride by taking away the material evidence."

As in Jesus' time, so today the carnal mind, which is "enmity against God," good, ridicules and scorns this Christ-method of prayer, claiming that it is useless to try to heal sin and sickness by just being spiritually minded. However, such an untrue statement sinks into oblivion now as then, be-

Digitized by Google

fore the healing evidence of the prayer aflame with the understanding of divine Love. So-called prayers, which really are nothing more than grievances, complaints, and accusations against God, remain unanswered because they never reach beyond their own nothingness. God does not hear any statement of evil or reason for evil, neither does He need to know it in order continually to preserve man. But the prayer of faith, understanding, and praise, the prayer that acknowledges God's allness, never fails to reach divine wisdom, for it is ever one with it, flows out from it, and is continually answered by it. The wonderful definition of prayer, "To be spiritually minded is life and peace," is still true for all mankind, as true as when Paul used it; and its healing efficacy, when understood and applied, is unabated.

So the Christly scientific prayer, governed by Science and not by the testimony of the senses, availeth much today. It is the leaven of good. Rebuking cant and incredulity with its "signs following," it is reaching even the uttermost parts of the earth. Enveloped in the might of omnipotence, it is silencing the so-called voice of evil, annulling its seeming laws, dispelling its would-be presence, bringing to light the presence and power of God and His perfect man. It is establishing anew in the hearts of men and nations an abiding confidence in the willingness and ability of God to maintain the reign and rule of heavenly harmony on earth today. Thus true prayer—thought purged of mortal misconceptions, born of the understanding of Truth, impelled by faith, hope, and unselfed love—is being answered by the Father in abundant fruitage of good works, which will abound "more and more unto the perfect day."

Upon Leaving Home

WILLIAM LLOYD

In the book of Deuteronomy we read: "The Lord's portion is his people: Jacob is the lot of his inheritance . . . and he made him to suck honey out of the rock, and oil out of the flinty rock." This may be interpreted to mean that if we meet our trials, difficulties, and hard places with love, patience, and courage, we will surely gain sweetness, consecration of character and purpose, and so be better and stronger for the experience.

Along this line of thought a wonderfully helpful lesson may be learned from the story of Jacob at Beth-el. We can picture him to ourselves,—a young lad, his mother's favorite son, sent out by his father to make his way in the world. Night finds him far from home, with no loving hand to prepare his supper, no resting-place ready for him, nor security, even from wild beasts; alone in the open, a stranger in a strange place. How many have found themselves, at least in some sense, in the same state. What youth that has left home for college or business has not come to such a "Beth-el"? We are told that "he took of the stones of that place . . . for his pillows," and in the morning, filled with a sense of awe, he took "the stone," one only, and made "a pillar" of it to God and poured oil on the top of it. No doubt his pillows that night were indeed stones,—doubt, fear, loneliness, discouragement, self-pity, possibly cold and hunger; and in the morning they had all consolidated into one great spell of homesickness. A day's journey would take him back to his mother, but strengthened by the wonderful vision of the night he calls upon his understanding of God (undoubtedly taught him from his childhood), and so he lays all before that loving Father-Mother; he makes a "pillar" of his fear and doubt and pours oil on its top. In Science and Health (p. 592) oil is defined as "consecration; charity; gentleness; prayer; heavenly inspiration."

Is it any wonder that Jacob was strengthened and encouraged and went forward unflinchingly? Is it any wonder that in so doing he had a happy and successful earthly life, a foretaste of that heaven awaiting him and all those who do their duty as he did, lovingly, faithfully, looking ever to God for guidance and strength? And can we forget that the promise God made him is for each one of us if we persevere and conquer self? Let us take courage, then, and "go forward," as the children of Israel were commanded to do when the Red Sea lay before them. We have the same God Jacob had, and the promise reads, "Behold, I am with thee, and will keep thee in all places whither thou goest."

Friendship

J. W. E. GILHESPY

Of all the gifts wherewith God gladdens our earthly pilgrimage there is surely none more noble and beauteous than friendship, that joyous blessing which comes to sow earth's barren places with fragrant flowerets of Love divine. And yet how men have sought to appropriate and distort that which is so fair! How frequently they are heard to speak of friendship as though it were a personal possession, something which they are entitled to bestow or withhold at pleasure, and what misery has not this false view been responsible for in the world's history! Or they have thought of it as a sentiment excited in one individual by certain qualities in another, an attraction exercised by certain personal attributes.

Of such false views of friendship Mrs. Eddy says: "Would existence without personal friends be to you a blank? Then the time will come when you will be solitary, left without sympathy" (Science and Health, p. 266). Note that in this statement the word "personal" is coupled with "friends," else we might conclude that friendship has no place in the divine plan. Such an assumption would be entirely incorrect; for true friendship, far from being contrary to God's design, is actually of God. It is only humanity's false concept of it that has power to harm and that is therefore self-destroyed. As we learn to know it in Christian Science, friendship is a spiritual gift which each of God's children has from the Father, and which cannot be lost, for it is maintained and perpetuated by Love. It is associated with honesty, purity, justice, love.

Some years ago it was the writer's privilege to serve for two years side by side with one who was living in obedience to divine Principle in daily life, and this revealed to him something of the barrenness of his own sense of existence. I remember how I longed for friendship with this Christian Scientist, and yet realized the impossibility of it, for the purely personal qualities, which were all I had to offer as my contribution toward the friendship, seemed valueless in the realm in which he dwelt.

After a while we separated to join different ships, and in due time the good expressed to me during those two years bore fruit in my life and led me to turn to Christian Science for the peace which material methods had failed to supply. Since then, in exact proportion to my advance in the knowledge of Truth, friendship with my old shipmate has grown and deepened, and brought me hours of real joy. From that time on we have been apart, with only an occasional short period together, and yet our friendship has deepened month by month, promoted not by personal qualities but by an ever-growing realization of divine Principle, the one Mind.

Of such a type was that glorious friendship of Jonathan and David in the old Bible story, whereof the secret lies in

Digitized by Google

those words of Jonathan: "The Lord be between thee and me forever." Such friendship has no dependence on personal charms and attractions, but grows in joy and comfort with the increasing realization of infinite good. Its development destroys old false views of personality and ushers into consciousness a clearer vision of the true brotherhood of man.

Expression

SADIE LITCHFIELD KELLER

AMONG its fundamental teachings Christian Science upholds the Scriptural truth expressed in the first chapter of Genesis, namely, that man is the image and likeness of God. In amplifying this statement Mrs. Eddy speaks of man as the reflection, the manifestation, the expression of Deity. Let us see what man as "expression" means.

In heralding the appearance of the Christ-idea John the Baptist said, "No man hath seen God at any time; the only begotten Son, which is in the bosom of the Father, he hath declared him." The Son of God, then, is the declaration of God. What declares God? Does mortality, sensuality, evil, sin, disease, or death declare God? Can perfect spiritual being be expressed in such manifest opposites? Do we not rather see God expressed in all that appears of purity, good, holiness, health, and life?

What was manifested by that highest expression of the Son of God, Jesus the Christ? Was it not always good? We see him in his public ministry as he went along the street of his native city. When sin confronted him he spoke the word, and behold, the sinner was cleansed, the sin disappeared. He entered Peter's house, where the disciple's wife's mother lay "sick of a fever," "and the fever left her,"—health was seen in its place and there was rejoicing. Let us go with him along the streets of Nain, when a sorrowing mother was following her only son to his last resting-place. At the approach of the great Nazarene the procession halted. A moment more and life was expressed where death before seemed to hold sway. With the Master it was ever the declaration of God, of Truth, Life, and Love. The well-beloved Son had declared the Father. Everywhere that Jesus went, life, health, and holiness were expressed at his command.

True expression, then, is the manifestation of perfect spiritual existence, untouched by sin, disease, or death,—a forever outgoing of all that God is. And it must follow that since man is forever expressing God, he can never express God's opposite, or mortality; neither can he take on any of the beliefs of mortality. Expressing God as Mind, man cannot take into thought anything of evil, cannot take into body anything of disease or death. Expression is constant,—it never changes to absorption,—and so the real man is immortal, the perfect and eternal expression of God.

Cooperation in Church Building

SELENA HARRISON

EVERY Christian Scientist has a mental concept of the true church,—that which expresses gratitude, love, helpfulness to mankind, and praise to God. Our church is a divine idea, and as each one realizes this, and daily asserts the truth that man is made in the image and likeness of God, each will reflect in increasing measure the wisdom, the activity, and the intelligence that are imparted by spiritual understanding. He will also know that he cannot be made to respond to the false sense of apathy, insufficiency, or personality.

True cooperation means to turn away from personality and be guided by divine Principle only. In "Miscellaneous Writings" (p. 291) Mrs. Eddy says, "The notion that a mind governed by Principle can be forced into personal channels, affinities, self-interests, or obligations, is a grave mistake; it dims the true sense of God's reflection, and darkens the understanding that demonstrates above personal motives, unworthy aims and ambitions;" and on page 174 she says that Principle "moves all in harmony." Cooperation means more than working together to one end; it implies a clear-sighted vision of complete and perfect expression of thought, whether it result in the rhythm and harmony of a symphony, in the form and color of a beautiful painting, or in the fitness and dignity of noble architecture. More than this, one must have an understanding of perfected details, a comprehension of their relation to one another, and this should be governed by a spirit of active and timely interest in the fulfilment of the idea. God's promises are for now; the assurance of ever-present help removes any sense of disability.

In our church building we are all "lively stones;" each one is needed in the structure and Christ is the master builder. Our Master said, "Where two or three are gathered together in my name, there am I in the midst of them." To build high, and to build firmly, the stones must be fitly compacted with the enduring cement of brotherly love and kindness. Without this permanent bond of union the building could not stand the test of time and changing conditions. In cooperation there is a continuous and generous giving out,—a giving of thought, time, service, money, and never-failing interest and love. Who is there among us who cannot spare something from his share of God's blessings,—a portion of one or all of these possessions? We are told that "God loveth a cheerful giver," and as there are "diversities of gifts," each has something to bestow. It may be encouragement, kindliness, toil, material means, or that highest ministry of all,—healing. Every good gift is welcome in the storehouse of God's treasury.

Cooperation means character building, and character building means church building. Who can measure the latent possibilities of a constructive idea? Good thoughts rise on the wings of omnipotence. A simple illustration of this may be afforded by the following incident. A teacher in Sunday school, in taking up the subject of giving, had endeavored to impress upon the children the fact that the mere giving of money was not the paramount thought in their weekly offering to God. As Lowell has so beautifully phrased it:—

> The Holy Supper is kept indeed,
> In what we share with another's need;
> Not what we give, but what we share;—
> For the gift without the giver is bare;
> Who gives himself with his alms feeds three,—
> Himself, his hungering neighbor, and me.

With the thought of "giving out" there is inevitably associated that of "giving up," which is but a synonym for the sacrifice of material self. Does not such a sacrifice lead us a step onward and upward into the larger life of the realization of perfect being, while it carries with it a putting away of self-centered ambition, a lessening of personal demands and worldly pleasures, and a resolute casting out of every thought which would hinder or obstruct progress in others?

On a certain Sunday a short time ago the amount of the offering being somewhat above the average, the teacher spoke encouragingly of this happy occurrence. Immediately one child said, "I can make it a little more," and another and then another added a mite, until what represented to the children a perfect mark was reached. The teacher pondered a few moments, then she asked the children what they would have done had they kept these added coins, and in each case it was found that the "giving up" involved a seeming loss of per-

Digitized by Google

sonal pleasure or possession. With a song of gratitude in her heart, the lesson for the day was presented to a class of happy, smiling children, who had spontaneously, gladly, and generously evidenced their loving interest in church building. Jesus said, "Except ye . . . become as little children, ye shall not enter into the kingdom of heaven."

Successful cooperation is divine service, and means continuous effort. It is not an outburst of enthusiasm followed by a dull reaction of indifference, but a steady shining of the bright light of consecrated work; no task insignificant, but every duty expressing intelligent and loving action inspired by the wish to help others. Then obedience, courtesy, and constructive thought will be manifested in all, as we endeavor to follow the leading of the one Mind and as we strive to realize that others are governed by this Mind.

In Science and Health (p. 183) we read, "Submission to error superinduces loss of power." Faultfinding and unjust criticism are fatal to cooperation. Spiritual understanding, endeavor, and activity are sunny helpers; materialistic lack of comprehension, listlessness, and inertia are gloomy hinderers. Let our watchword be constructive appreciation of those entrusted with the seeming perplexities of deciding important questions. As we constantly affirm that God's ideas are governed by divine intelligence, every obstructive and destructive thought will be known to be inanimate and consequently powerless, and all who thus help others will themselves have greatly gained.

As the vision is broad or narrow, as the outlook is beauteous or commonplace, as the ideal is lofty or contracted, so will our church building bear the impress of our thought. Shall we not then plan to cooperate in good works only, so that the structure will arise in the "beauty of holiness," the majesty of righteousness, the simplicity of trust, the dignity of strength, the harmony of peace, and the symmetry of truth? Such is indeed a fit abiding-place for the expression of divine Love, which comes with its message of hope, happiness, and healing. Then all who enter will become conscious of the regenerating power of Truth, and the sick, the sinning, and the sorrowful, the halt, the maimed, the deaf, and the blind, will go forth to tell others the good news of salvation.

Let us ponder this divine utterance: "The morning stars sang together, and all the sons of God shouted for joy."

[Written for the *Sentinel*]

A Tribute

CATHARINE SEVERENS

THAT thou hadst kept
The tablet of thy mind so clean and fair
That God could write thereon His precious word
Of love and healing to a sin-sick world,
Were miracle enough! Yet great this also:
That thou couldst stand upon that Horeb height
And hold this message high for men to see.
Divinely taught, divinely strengthened, thou!
A steadfast, pure intent within thy heart,
A yearning love for all humanity;
Unmoved alike by scorn or hate or fear,
Unspoiled by pride or praise or flattery.

As one on whom
That lifted truth has shed its tender light
And brought the power of a conscious faith,
The joy and peace of longing satisfied,—
I touch thy garment's hem with grateful lips
And bless thee for thy life of purity.

Selected Articles

[Charles W. J. Tennant in *New Days*, London, England]

A correspondent accuses me of offering no defense to the gravest charges he has felt it his duty to bring against the teachings of Christian Science. If he likes to think it his duty to spend his time in stating what Mrs. Eddy does not teach, he is quite entitled to do so, but he need not expect a Christian Scientist who is conversant with her teachings to spend his time in denying each specific statement. Let us take one example. The critic declares, for instance, that Mrs. Eddy "denied the omniscience of the creator." Now in her writings there are no less than fifteen places where she has definitely affirmed the omniscience of God.

Jesus, when persecuted, "opened not his mouth," we are told. Has our critic ever wondered why? Simply because he did not need to. Truth vindicates itself. This is precisely what Christian Science is doing. The Master said, "By their fruits ye shall know them." The countless sick and sinning who are being healed and regenerated through the beneficent influence of Christian Science are far more powerful to convince humanity than are the negative statements of our critic.

✧

[G. S. Paine in *Elko* (Nev.) *Independent*]

In connection with the somewhat obscure reference to Christian Science in the first sentence of the very interesting article on "Inner Details of the Ford Expedition" in the *Independent*, I should like to point out for the benefit of your readers that the methods of this expedition and Christian Science have nothing in common. An editorial in *The Christian Science Monitor* for Dec. 11 said: "The simple truth is that the peacemaker in a hurry always fails to realize that patched-up peaces are only the preludes to further wars." Various other editorials in the *Monitor* for the past few months have dealt with the whole subject similarly. Any one who so wishes may therefore very easily determine for himself what the authorized literature of Christian Science has to say on the subject of peace and war.

Neither the Bible nor the works of Mrs. Eddy give us any basis for saying, "Peace, peace; when there is no peace." The teachings of Christian Science show us, however, that as we actually turn to and are guided by Principle, the adjustment of the human consciousness to the standard of Principle goes on continually, even through seeming turmoil, until a very real peace is manifested. Just as a Christian Science practitioner does not intrude his aid unsought in any case, but waits until his assistance is specifically asked for, so the would-be peacemaker in Christian Science can accomplish most by minding his own business until his good offices are really desired.

✧

[Samuel Greenwood in *The Hedley* (British Columbia) *Gazette*]

Two letters written by a clergyman, which appeared in the *Gazette*, are rather extraordinary, if for nothing else than the amazing assumption that because the writer has read the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, he is therefore entitled to speak with authority concerning its teachings. He knows, of course, that infidels have read the Bible carefully, but he would not on that account accept them as authority on the sacred writings.

Obviously what is really meant is, that although the writer has read the Christian Science text-book, he does not understand it. However, as many do read and understand this book, our critic should in all honesty admit that the fault must

Digitized by Google

lie with himself. Let me say in all kindness that, judging by what he has written, what he would describe as Christian Science would be promptly repudiated by any Christian Scientist. It is possible so to misread a book, ignoring its author's viewpoint, as utterly to miss its real meaning.

There is no doubt, and there never has been any, that Christian Science differs widely from popular or accepted theological teaching regarding God and man and the problem of human salvation; but it does not therefore follow that it is not in accord with inspired Scriptural teaching. At no point does Christian Science depart from the fundamental truths of Christianity, although it may depart from man-made doctrines and creeds that have divided Christendom into numerous sects, and that have not prevailed over the evil in the world, which evil, by the way, this critic takes such apparent satisfaction in defending as real. When spiritually understood, the Scriptures sustain every statement of Christian Science, our friend's objections notwithstanding.

The statement that Christian Science substitutes another book for the Bible is an invention, pure and simple. The Bible and the text-book of Christian Science are read side by side at every Christian Science service. It would be quite as truthful to say that a minister substitutes another book for the Bible because he uses a commentary in preparing his sermons, or that the preacher substitutes his own views for the Bible because he assumes to interpret its teachings to his congregation. As a matter of fact, a great many persons have come to study and to love the Bible as a result of their interest in Christian Science.

The charge that Christian Science treats the human body as of first importance is another fable, though one not so frequently met with, for most persons will do everything possible to have a healthy body, and they are none the worse Christians for that. If our critic has read Science and Health carefully, as he states, he must have come across the following, on page 150: "The mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing." This physical healing, Mrs. Eddy goes on to state, is "to attest the reality of the higher mission of the Christ-power to take away the sins of the world." Also in her little book, "Rudimental Divine Science," Mrs. Eddy says (p. 2): "Healing physical sickness is the smallest part of Christian Science. . . . The emphatic purpose of Christian Science is the healing of sin."

✧

[James D. Sherwood in *The Chronicle*, Houston, Texas]

In the address which was delivered before the Texas Hardware and Implement Association in this city, Doctor ——, who is said to be a student of psychology, is reported to have "challenged Mrs. Eddy and her followers in the field of Christian Science to prove that Mind is apart from matter or superior to matter." On page 24 of her book entitled "Retrospection and Introspection," Mrs. Eddy says, "During twenty years prior to my discovery I had been trying to trace all physical effects to a mental cause; and in the latter part of 1866 I gained the scientific certainty that all causation is Mind, and every effect a mental phenomenon."

For half a century Christian Science has been successfully practised in healing all manner of disease and reforming the sinner by one and the same method, and that method is in strict accord with Mrs. Eddy's discovery above mentioned. That Mind is apart from matter is evidenced by the record of creation given in the first chapter of Genesis, where God said, "Let there be light: and there was light." Cause precedes effect. So with each phenomenon therein mentioned, divine Mind spake and brought it into existence.

That Mind is superior to matter was shown by Christ Jesus when he rebuked the wind and the waves and there was a great calm. (See Matt. viii. 23-27, and Luke viii. 22-25.) On this occasion it is especially mentioned by Matthew and Luke that the Master rebuked his disciples' lack of understanding of Mind's control over the elements, saying, "Where is your faith?" And they, being afraid, wondered, saying one to another, "What manner of man is this! for he commandeth even the winds and water, and they obey him." This is Biblical authority for believing that Mind is apart from matter and that Mind is superior to matter. God is Spirit. Spirit and Mind are synonymous terms, and since God, Spirit, is infinite, All-in-all, it follows as a logical sequence that the opposite of Spirit, or what is termed matter, must be "that which seemeth to be and is not" (Science and Health, p. 472).

Matter is a mode of human belief, but matter apart from human will cannot think or act. Modern physical scientists claim to have subdivided the material atom into what they term radioactivity, or force. This material phenomenon is termed an electron or ion of electricity; but even in this rarefied form matter is not made to think, nor can it perform the functions of Mind. Mind and matter are opposites. Mind is intelligence, matter is non-intelligence.

The Christian Scientist is a student of the Bible. He begins with God, divine Mind, as the All-in-all and as the only creator. In the gospel of John we read, "All things were made by him; and without him was not any thing made that was made." Also in Genesis, "And God saw every thing that he had made, and, behold, it was very good." Again in John, "The flesh profiteth nothing." It might be asked, How much is nothing? Christian Science is pure metaphysics. The Christian Scientist accepts the allness and supremacy of Spirit, God, the divine Mind, and in doing so he relegates matter to its rank of unreality. His practice is in conformity with the teachings of Christ Jesus, and the record of hundreds of thousands of cases of healing in Christian Science practice is sufficient evidence that his premise is well founded.

[Editorial in *The Lewiston* (Maine) *Journal*]

One of the greatest marvels of the present age is the spiritual awakening that has come into public notice during the last quarter of a century. More wonderful still is the fact that this tremendous uplift in society has almost wholly been brought about by the prophetic vision of a lone woman struggling against a hostile world.

Christian Science does not claim to be a new religion, but is simply a revival and restitution of the teachings of Christ Jesus. It has met with the same reception that has been faced by every other reform. Material science was fast fettering the minds of men and decimating the pews of every church when Mrs. Eddy appeared, bringing her message on the wings of truth and love. Her reception was that of every other great reformer, for the world never willingly accepts a new idea. And yet she simply brought the exact doctrine that was taught by Jesus on the far-off shores of Galilee. It was he who said to his disciples: "Go ye into all the world, and preach the gospel . . . And these signs shall follow them that believe . . . They shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." This was the religion of early Christianity. It was the uniting of faith and works, and it was this that built up the early church.

For three hundred years after the crucifixion the disciples

Digitized by Google

followed this injunction and healed the sick, as they had been bidden to do by the Master. It was this that helped to overcome the materialistic opposition to their work, . . . and it is this feature that is propelling Christian Science forward with such tremendous strides. This is but a portion of the work of Christian Science, as the spiritual uplift is even greater, and by its teachings men are coming nearer to God.

Once more the old cry which rang through the hills of Judæa is heard, and the shout, "Crucify him!" resounds on every side. How little these enemies of this movement know of history and human nature! The more this faith is reviled and persecuted the faster it grows. Already it has spread over the civilized world, and its adherents are rapidly multiplying. It is a historic movement, and marks the beginning of a new epoch in the religious life of men. There is scarcely a community in the world today where cases of marvelous healing may not be found, and on every side sin, sickness, and discord are disappearing from the consciousness of men. The prayers of its advocates are those of affirmation, but never of supplication. Christian Scientists abuse no other religious faith, but extend the hand of brotherly affection to all.

A religion of such broad sympathies and tolerance as Christian Science will dispel the gloom that has surrounded the tomb, and it can never die. Whether you believe in it or not, it does its good work still, and this will continue.

✧

[Burton H. Wade in *Buffalo* (N. Y.) *Express*]

The confidence and cock-sureness with which our critic makes his statements regarding religion and theology is quite refreshing, to say the least. It is strange that he found among the vast number in existence even six denominations with which he could work conscientiously. He condemns nearly every religious organization known, and seems to be bent on tearing down,—and we admit there is much that needs tearing down,—but he offers nothing constructive in its stead, unless it be a long string of Bible quotations, which at least prove his familiarity with that good book, but which, without understanding, would give little solace to a sick man or one burdened with sin.

Among the recent articles by this writer appearing in the *Express*, was one in which he tells of the healing of a brother minister some twelve years ago through the efficacy of prayer, and he mentions two other instances in which he is confident healing was consummated through prayer. This we do not doubt; but why go back all those years to cite a case? Why is he not healing the sick now, today? The power of God cannot be limited to time or place, and opportunity is not lacking. If the method or rule for healing by prayer was discovered by this brother, why has he not given it to the world? Surely, suffering humanity needs all the enlightenment in this direction it can get.

Christian Science seems to be the special object of this critic's animus, and against it he aims his strongest shafts. He quotes frequently from the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, but not always correctly and usually in detached statements, which, when separated from their context, prove nothing and are unjust to the author. Christian Science does not deny the seeming existence or reality of evil to the senses, or consciousness, of the one who is enthralled in its meshes, but it does deny the reality of evil in the "kingdom of God," which Jesus said "is within you," within the consciousness of the spiritual man, which is the only real man there is. In Genesis we read, "God created man in his own image, in the image of God created he him." And did not Jesus say of the mortal or carnal man, "Ye are of your father the devil, and the lusts of your father ye will do. . . . When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it;" showing the whole scheme of mortal existence to be a deception and fraud.

Christian Science has reestablished primitive Christianity, free from creed or dogma, and is casting out devils, evils, according to the Master's teaching. Sickness and sin—other names for devil or evil—are being healed by one and the same process, and that is, knowing the truth about God and man. Unnumbered thousands all over the world are attesting the power of God to heal the sick and save the sinner, not nineteen centuries ago, but now. They no longer weep with Mary for having "taken away my Lord," for they have found the Comforter which Jesus said the Father would send, and they claim the full promise of the Master, "Lo, I am with you alway, even unto the end of the world."

This critic says he cares not what is the philosophy, creed, or system "that will bring a man out of the darkness of sin and death into the faith and love of Jesus Christ," or "that lets down the curtain between God and man." Christian Science is doing that very thing, and in the way of Christ's appointing. "And he sent them to preach the kingdom of God, and to heal the sick," we read in Luke; and again in Matthew, "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." Devoted men and women, freed from the bondage of want and woe, raised up from the depths of despair, sin, sickness, and death, through the ministrations of Christian Science, are consecrating their lives to the service of God and humanity as a grateful acknowledgment of that which they have received through the power of God's word. If the critic is not wholly obsessed by prejudice and intolerance,—and he says he is not,—he can find with very little trouble ample evidence of the noble, exalted lives these men and women are living for the cause of Christ.

✧

[D. M. Ely in *Bellefontaine* (Ohio) *Examiner*]

The happiness which is reflected in the faces of those who attend Christian Science churches is but the result of an inward peace which comes from a knowledge of God and an earnest desire to express the fruit of the Spirit,—"love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance." On page 450 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy says, "The Christian Scientist has enlisted to lessen evil, disease, and death; and he will overcome them by understanding their nothingness and the allness of God, or good." That Christian Scientists are doing this work is evidenced by the fact that not only are the sick healed, but many have turned away from sin in its various forms.

It is confidence in God which leads the followers of Christian Science away from that which "worketh abomination, or maketh a lie." It is this confidence which fills so many Christian Science churches to overflowing with those who are ever ready to testify to the great blessings that have come to them through the understanding of this demonstrable religion. Christian Scientists have learned with David to praise God "with joyful lips," and this joyfulness is expressed in the minutiæ of their human affairs. It is the earnest desire of Christian Scientists so to live that all mankind may be blessed through their expression of that Mind which was in Christ Jesus.

Editorial

Measuring Our Gratitude

In the parable of the good Samaritan, whereby Jesus answered the lawyer's question as to whom he should regard as his neighbor, the great Teacher apparently sought to break down the narrow human sense which would limit one's benefactions to his family and more intimate acquaintances. Instead the lawyer was shown so clearly that he who is animated by true love for his neighbor will not withhold the helping hand from even one who has fallen by the wayside, that when the Master asked which of the three who had seen the man as he lay bruised and beaten in the dust, had measured up to the test, he could answer without hesitation, "He that showed mercy on him." It is then that we have the gracious conclusion which relates the parable to present-day needs: "Go, and do thou likewise."

Seldom is a testimony of healing in Christian Science given which does not contain an expression of gratitude for deliverance, first of all to God, "from whom all blessings flow," and then to the one who was privileged to be the channel through which the divine ever-presence of good has again been made known to mankind. When the waves of sorrow, or suffering, or sin are breaking over us, when in extremity we cry out to the living God for deliverance, we are ready to promise anything,—"all that a man hath will he give for his life," the tempter declared. What shall be the measure of our gratitude, then, when through that same infinite goodness we are lifted out of the depths of our distresses and our feet placed on the firm ground of understanding? Is it not summed up, both for the man by the wayside and for him who passing by has ministered to his need, in that brief command, "Do thou likewise"? Delivered or delivering we are under the same rule: "Whatsoever ye would that men should do to you, do ye even so to them."

In one brief sentence Mrs. Eddy gives us a rule of measurement whereby we may test the genuineness of our gratitude for deliverance from sickness or sin. In that wonderful chapter on Prayer she says (Science and Health, p. 3), "Action expresses more gratitude than speech." It is not enough to protest we are grateful for the measure of infinite goodness that has been manifested to us, but we must share that goodness with another. We must go out into the highways and byways with the healing word, gathering in the sick and the sinning till not even one of the least of Christ's little ones is left without the shelter of our Father's house.

We are not told in the parable whether the man who was succored by the good Samaritan went and did likewise, but surely we may think of him as in turn doing a deed of mercy, and so on in an ever-widening circle, the presage of that mighty sweep of healing through Christian Science which spreading from shore to shore and from sea to sea heralds the dawn of deliverance from all evil. And this vital expression of gratitude, this sharing of good, is the privilege and duty of every Christian Scientist. Not all are so situated that they can give to the healing work the time and effort demanded of the regular practitioner, but they can at least so exemplify the teachings of Christian Science in their daily living that when the hour of need comes to some poor sufferer they too can speak "as one having authority" and bid evil depart.

There is one way open by which the beneficiary may always measure his gratitude for healing, and that is by a ready recognition that those who faithfully give time and effort to this work are entitled to a just compensation for their services. "Final deliverance from error," Mrs. Eddy tells us, "whereby we rejoice in immortality, boundless freedom, and sinless sense, is not reached through paths of flowers nor by pinning one's faith without works to another's vicarious effort" (Science and Health, p. 22). If one has not sufficient understanding himself to do the healing work, his gratitude for deliverance which has come through one who does possess that understanding, can best be measured by his willingness to make it possible for the practitioner to continue this blessed service to mankind. We are cutting off our full measure of blessing when we permit ourselves to accept that for which we are able but unwilling to make a just return.

In view of the constant recruiting of the ranks of Christian Scientists a word as to practitioners' fees may not be amiss. Our Leader's final counsel on this subject is that "Christian Science practitioners should make their charges for treatment equal to those of reputable physicians in their respective localities" (Miscellany, p. 237). If equivalent and efficient service is rendered, there can be no objection to such charges. On the other hand, condemnation of those who prefer to abide by the unwritten rule which formerly prevailed, or of those students of the text-book who, though not registered as practitioners, quietly and faithfully are likewise demonstrating that Truth does heal the sick today as of old, is out of place and may well be done away with. Christian Scientists one and all are amenable to that command which bids us love our neighbor as ourselves.

ARCHIBALD MCLELLAN.

Earth's Atmosphere

As the seasons follow each other with extremes of cold and heat, according to material evidence, a great many people still attribute these conditions to the inscrutable decrees of Providence, while others seek to account for them, though not very satisfactorily it must be confessed, from the standpoint of belief in material law. To foretell weather conditions from this basis is not to touch even remotely the subject of causation, though it is of the utmost importance to do so whatever be the problem involved. This calls upon us to leave the plane of materiality and to look for the harmonious and unvarying operation of divine Principle in human consciousness, where marvelous changes are wrought as the truth of being is recognized and made practical.

Physicists may tell us of impending or bygone atmospheric disturbances, but never attempt to trace their relation to mental conditions, though the Bible states plainly that drought and other undesirable manifestations accompany or follow disobedience to divine law; whereas obedience thereto, which includes right dealing between men and nations, would result in harmony. The prophet Joel tells us that coincident with spiritual awakening will come "the former rain" and "the latter rain," with overflowing harvests and the disappearance of all destructive insects. It is also deeply interesting to note what he says respecting the influence of mental conditions upon physical nature,—"The vine is dried up, and the fig tree languisheth; the pomegranate tree, the palm tree also, and the apple tree, even all the trees of the field, are withered: because joy is withered away from the sons of men."

It is even more instructive to study what Mrs. Eddy has to say along this line, for she invariably lifts thought from the physical to the metaphysical, to the realm of causation, from effect to cause. On page 590 of Science and Health she tells us of the kingdom of heaven, "the realm of unerring, eternal, and omnipotent Mind; the atmosphere of Spirit, where Soul is supreme." In this realm sin, disease, and death are unknown, and if we would live in it perpetually we must heed the Master's words, "Lift up your eyes." Christian

Digitized by Google

Science declares that this realm is universal, and it is perceived only as spiritual vision pierces the clouds of mortal sense. On page 220 of Science and Health we read: "The atmosphere of the earth, kinder than the atmosphere of mortal mind, leaves catarrh to the latter."

In numerous passages in the text-book and her other writings our Leader warns us against the mental and moral conditions which contaminate the atmosphere of human belief, the fear of disease and the love of sin, but she bids us rise above their miasma into the pure atmosphere of spiritual realization. On page 273 of Science and Health we read that the "atmosphere of mortal mind cannot be destructive to morals and health when it is opposed promptly and persistently by Christian Science." Earth's atmosphere is really a mental sphere, which is changed as human thought changes, and it will be perfectly harmonious at all times when divine Science is understood and obeyed. Man's God-bestowed dominion must be demonstrated on this plane as on every other. Christ Jesus stilled the storm-tossed sea through his understanding of spiritual law, and his followers should at least begin to follow in his steps by banishing disease beliefs from the land. Even as it is, places at one time held to be unhealthful change their character and become healthful when the ghosts of miasma are fearlessly faced by the understanding of Truth.

Man's heritage of dominion means everything or it means nothing, and all the vaunted progress along material lines will never satisfy the insistent demand of humanity for the spiritual, the real, that which God bestows. The regular recurrence of atmospheric disturbances is no proof of law, whatever human opinion may say; but health and harmony, embracing man and his environment, tell of the divine ever-presence, earth's atmosphere cleansed from sin and fear and made luminous by divine intelligence, Truth and Love.

ANNIE M. KNOTT.

"Be not dismayed"

WHATEVER its seeming hindrances and defeats, human history has proved beyond peradventure that truth demonstrated always survives and in the long run overcomes every resistance to its advance. Christian Scientists need not therefore be troubled by any show of antagonism to the demonstrated verities of their faith, but they certainly do need to be exceedingly thoughtful and wise if they would be free from all responsibility for this antagonism and the resulting delay in the world's redemption. The progress of the Christ-idea has always been hampered, not so much by the opposition of its foes as by the inconsistencies and unwisdom of its friends, and one of the generally recognized proofs of the vitality and divine impulsion of the essential truths of Christianity is found in the fact that they have lived on and accomplished so much, despite the unworthiness of the human factors of their expression.

This unworthiness is likely to be the more noticeable in connection with Christian Science for the reason that it uncovers latent error in the mentality of its representatives and thus for a time may seem to intensify their ignoble impulses, while on the other hand its share strikes deep into the fallow ground of venerated theologies and thus becomes an offense to unthinkingly contented believers, and especially to ecclesiastics. Further, the world has reason to expect the more of Christian Scientists, since their standard of excellence is so high. They declare for the legitimacy and practicability of the call to relive the Master's life; and since the world is growing more and more intolerant of pretense, those who dare to champion such an exalted ideal and who neglect to live up to it, can but bring both their own integrity and the worth of that which they espouse into question if not contempt.

Today the attitude of the secular press grows more and more kindly toward Christian Science, but the grossest misrepresentations of its teaching are constantly being given extended circulation through the columns of certain religious periodicals. These derogatory statements cannot be interdicted, nor for the most part corrected in the publications in which they appear; nevertheless, instead of proving a disadvantage to our cause, such attacks can be made to contribute to its advance, provided Christian Scientists are truly honoring their faith. There is no question whatever about this; the influence of a humble, healing Christian life is more than a match for the influence of all unjust criticism.

Mrs. Eddy very pertinently says of the truth that all it needs is "to be practised" (Science and Health, p. 174). If unselfishness, good cheer, and unfailing courtesy mark our bearing toward all, if we are scrupulously honest and fair in our dealings with all, if we are wise, loving, and unobtrusive in bringing the healing word of Truth to those who welcome it, and especially if we are daily demonstrating the power of Truth to heal human ills, then instead of being troubled we may rejoice in the assurance that every prejudiced, uninformed criticism of Christian Science is destined to help and not hinder its progress. One Christlike man certainly can chase a thousand and two put ten thousand to flight.

In his celebrated essay on "Liberty" Mill discusses convincingly the benefits growing out of "the clear perception and livelier impression of truth produced by its collision with error." This was the value of the dialectics of the Socratic school. Contented conviction is wont to grow torpid, incapable of adequate self-expression, and ofttimes needs the prod of unconscionable assault. There is further gain in the fact that the rabidity often exhibited in the criticism of Christian Science always stimulates the fair-minded to find out the facts for themselves. When, however, we realize that this defeat of ill-intent depends upon the conformity of our practice to our preaching, the greatness of our responsibility becomes apparent, and every hour we do well to remember St. Paul's earnest appeal to the Colossians that they "walk in wisdom toward them that are without."

JOHN B. WILLIS.

Among the Churches

Current Notes

NEBRASKA.—During the year which ended Oct. 31, 1915, 206 copies of Mrs. Eddy's works have been placed in various libraries in the state, with 44 yearly subscriptions to the *Sentinel*, *Journal*, *Herold*, and *Monitor*. So far as reported, committees of churches and societies and individuals have distributed Christian Science literature as follows: 11,585 *Sentinels*, 1889 *Journals*, 688 *Heralds*, 51,795 *Monitors*, and 4602 miscellaneous publications, making a total of 70,559 pieces. From the office of the committee on publication the following distributions have been made: Term subscriptions, 115 *Sentinels*, 3 *Heralds*, 244 *Monitors;* total copies distributed, 1380 *Sentinels*, 36 *Heralds*, 4367 *Monitors*, 733 of Senator Works' speech, 120 newspapers and miscellany, and 9 of the works of Mrs. Eddy. Total copies from all sources reported, 82,264.—*Committee on Publication.*

BEAUMONT, TEXAS.—Work on the new church building to be erected by the congregation of First Church of Christ, Scientist, will start immediately. The structure will be built at Calder Avenue and Main Street and will cost approximately fifteen thousand dollars, including furnishings. It will be finished by June 1.—*Beaumont Enterprise.*

Digitized by Google

LANCASTER, N. H.—The Unitarian Society of Lancaster has presented its church building and the land on which it stands to the Christian Science Society of this town. No use has been made of the property for several years, but the Unitarians are desirous that the building should be put to some good use, and feel that in giving it to the Christian Scientists it will be improved and maintained. The deed of gift has already been issued by the Unitarian Society, and the transfer of the property is expected daily. The Scientists greatly appreciate the generosity of the donors, as it has made possible a church home for them, something they have desired for some time.—*The Coös County Democrat.*

JUNCTION CITY, KAN.—This morning [Jan. 31] the announcement was made that plans and specifications for a new modern church to be erected at the corner of Fifth and Jefferson Streets, had been accepted by First Church of Christ, Scientist, and that after a few minor changes the plans would be ready for the contractors and work would be started as soon as possible. Seats will be provided for two hundred and fifty people. Sufficient funds have been subscribed for the completion of the building, which will cost ten thousand dollars, but changes and additions to the plans will require, it is estimated, at least a thousand dollars more.

The Junction City Union.

SAN ANTONIO, TEXAS.—The corner-stone of the new edifice of First Church of Christ, Scientist, at the corner of Avenue D and Fifth Street, was laid with simple ceremonies Jan. 25. The building is expected to be completed within ninety days. The main auditorium will seat eight hundred, and the Sunday school room four hundred.

San Antonio Daily Light.

TOLEDO, OHIO.—A literature booth was conducted by First Church of Christ, Scientist, at the land products exposition, which closed Sunday [Dec. 12]. More than twenty-five hundred pieces of Christian Science literature, consisting of weekly *Sentinels*, monthly *Journals* and *Heralds*, and daily *Monitors*, were handed out free.—*Toledo Blade.*

MORRISON, ILL.—The edifice of First Church of Christ, Scientist, is completed, and the congregation will hold its first services there on Sunday morning, Jan. 30. The dedication will be in the near future.—*The Whiteside Sentinel.*

WEST CHESTER, PA.—The local Christian Scientists conducted the services yesterday [Jan. 23] at the Chester County Prison.—*Local News.*

Admission to Membership in The Mother Church

The next admission of candidates will be June 2, 1916. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 10, 1916.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

Newcastle-upon-Tyne, England

A lecture on Christian Science was delivered in the Palace Theater by Clarence W. Chadwick. The meeting was presided over by Dr. R. Ramsey of Glasgow, who said if any one had told him ten years ago that he would have been filling such a position, he did not think he would have believed it. At that time he was in the practice of medicine. A patient returned from abroad, where he had been for the sake of his health, and claimed that he had been healed by Christian Science. He advised him (the speaker) to get the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and he did so, and started a systematic examination of it, chiefly, he was afraid, with feelings of opposition. He examined the text-book carefully with the Bible, and he was now absolutely convinced that it contained a true statement of the method of healing employed by their Master, Jesus the Christ, and his disciples, and brought to us through the work of Mrs. Eddy.—*The Newcastle Chronicle.*

Watertown, N. Y.

A healthy public mind, as well as the individual mind, should always be open to the truth in any form, no matter by whom it is presented, said William K. Mott in introducing Prof. Hermann S. Hering, who lectured on Christian Science at the High School auditorium. In no other way can public or private knowledge be increased or the public or individual conscience awakened. Ignorance is the parent of narrow-mindedness and most of the many ills that grow out of this condition. We should not only at all times be in a receptive mood for the truth, but always in search of that priceless jewel, for no one is wise enough to tell beforehand where it may or may not be found. We find ourselves in the shadow or in the sunlight exactly in the measure that we open the windows of our intellects and let in the sunlight of truth.

Christian Scientists say that they can prove that Christian Science is the inspired revelation of Truth. It belongs to all fair-minded men to give them the opportunity. Already, I understand, a vast army of more than one million have seen the light; and we know that among that number are found many intelligent, cultured, and refined people.

Watertown Times.

Clinton, Ill.

George Shaw Cook lectured on Christian Science to a large and appreciative audience at the K. of P. Hall. He was introduced by Judge Frederick C. Hill, who spoke as follows:—

The Scriptures tell us that a ruler once came to Jesus and inquired of him the way of salvation, and that the Master replied, "Ye must be born again." For nineteen centuries the religionists of the world have theoretically held to this truth; but to the spiritually blind, to sin-sick and suffering mortals, the truth is an enigma today as it was nineteen centuries ago, and humanity is now, as it was then, seeking for a savior.

In 1866 a woman, pure in mind and purpose, seeking to be delivered from bodily affliction and striving to know how to be born again, made the discovery that the savior of the world is ever with men, and that humanity is redeemed from sin, disease, and disaster through the knowledge of the Christ, Truth. That woman was Mrs. Eddy, and the discovery,

Digitized by Google

defined by her as "the law of God, the law of good" (Rudimental Divine Science, p. 1), she named Christian Science. "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497).

It is not evidence of mental disorder, neither is it proof of wanton abandonment of religious zeal and activity, to be identified with Christian Science. Quite on the contrary, it is proof of striving to have in us that Mind "which was also in Christ Jesus," and to emulate his example in doing good to humanity, that all mankind may experience full and final deliverance and redemption from all sin.

The Clinton Journal.

Lectures to be Delivered

ARIZONA—Douglas: John W. Doorly, Masonic Hall, 8 p.m., April 13.

Testimonies of Healing

When I first thought seriously about Christian Science, it did not seem to me that I needed salvation, nor was I conscious of anything from which I wanted to be saved. Perhaps my self-satisfied mentality at that time was not unlike others who believe it quite right and proper to drink liquors, smoke tobacco, take medicine daily as a preventive for bowel trouble, and wear glasses for a vision believed to be defective. That was the condition with me for more than ten years. I preferred liquor to food, and was so addicted to tobacco that I was loath to surrender the pipe for meals or sleep. I chafed somewhat under the bondage to such habits, because of the sense of unhappiness in the home which they entailed, but was quite unaware of their perniciousness, and the indulgence was found pleasurable.

The awakening from this false sense of things to some slight understanding of being apart from the physical was very gradual. As intimated, I did not seek physical or moral healing in Christian Science, because I was not conscious of such a need until it was revealed to me by the truth as found in the study of the Bible together with the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. What I found by the study of these books, as text and commentary, not only uncovered to my consciousness the error of my mental habits and the sin of indulging false appetites, but absolutely freed me from the bondage of those named, besides other similar physical and moral barnacles which have since disappeared at the command of Truth. I now rejoice in the "glorious liberty of the children of God."

While on an eastern visit a number of years ago, I read Science and Health at the request of a friend, and was more deeply impressed than I was willing to admit, even to myself. While in the midst of this reading a test was presented. In breaking up an old packing-case I stepped on a rusty nail and ran it deep into my foot through the sole of my slipper. I pulled my foot off the nail and looked at the nail but not at the foot. I did not even then remove the slipper, and after a few moments of thought proceeded with my work, while I attempted to apply as best I could that which I had just been reading in the Christian Science text-book. I then forgot about the incident and walked about the city all day. At night I examined the foot for the first time. There was only a small break in the skin, not the slightest soreness, no pain, no swelling, no evidence of the wound having even bled. I kept my own counsel and without fear awaited results. There never were any results except perfect healing. One would think that experience was sufficient to be convincing, but it was only partially so. I was younger in years at that time, and the world seemed gay; consequently I had no time for anything so serious and profound as Christian Science for a regular study.

Fourteen years later, in order solely to convince one who was near and dear to me that she had a false concept of Christian Science teaching, I borrowed and later purchased a copy of the text-book; and it is right at this point in my experience that something took place which left a deep impression. While the attendant in the reading-room was wrapping up the book I had just purchased, I was touched at the elbow by the lady who had first brought Christian Science to my notice. So dark was my mentality at the time that my sense of chagrin was most keen at having been caught in the very act of buying that book and by this person of all in the wide world, but with tears of joy in her eyes she said something about the seed having been planted in good soil, and I took my departure as quickly as possible, for I was uncomfortable. Now, as thought travels over the interval, my heart is filled with loving gratitude toward her as a faithful servant of God, who so many years ago was enabled to see the "good soil" and proffered me the "cup of cold water" in the name of Christ, Truth.

My growth has at times appeared slow, but my progress has been sure. Conscious always of having found the "pearl of great price," I am striving "to enter in," and to be ready to give a reason for the hope that is within me. It is my daily endeavor to be a transparency for the light of Truth, so that deeds and not mere words may attest the quality and quantity of my gratitude toward God for His gift of love to mankind. Old-time friends say that I seem changed and different. I know that I am changed from that self-satisfied mortal they knew, whose highest ambition was to be known as a so-called "good fellow." Though I have made but a small beginning, Christian Science has become the biggest and best thing in my life, the one thing really worth while. I find that the practical daily value of even a partial understanding that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468), transcends in worth everything else attainable. The health, harmony, and happiness coincident with spiritual sense, which Mrs. Eddy defines on page 209 of Science and Health as the "conscious, constant capacity to understand God," is mine in an expanding degree, and must ever find expression in the loving and willing effort to keep His commandments.

White Doesburg, San Francisco, Cal.

The desire for spiritual aid and comfort brought me to Christian Science. I had been taught to believe that the so-called law of heredity was an inexorable law of God, and I believed that one very near and dear to me was a victim of that law. Words cannot express my gratitude for the protecting influence of divine Love in guiding me to Christian Science, where our fetters fall.

How plain it is that the removal of ignorance—knowing the truth—is what makes us free! I was healed of my ignorant fear of a false, man-made law. I wept tears of gratitude for that first glorious glimpse of freedom given me by our beloved Leader on page 63 of Science and Health, where she says: "In Science man is the offspring of Spirit. The beautiful, good, and pure constitute his ancestry." I commenced right then to know no other ancestry and to learn the fatherhood and the motherhood of God. I had self-pity, self-will, and impatience to overcome in my thinking, and much false theology to root out; consequently the full realization of man's perfect freedom seemed to me rather slow in coming. But I can see now how wonderfully we were led through our "Red Sea" and how perfectly God's work is done.

Many physical healings have come as the natural result of uplifted thought, and for these I wish to express my sincere gratitude. I had worn glasses for six years for a very painful condition of the optic nerves, and had been treated by two specialists, both of whom said that the case was very obstinate and that I must always wear the specially ground lenses with which I was provided. I suffered intensely whenever I tried to do without these glasses, but one day I discovered that I had been reading the Lesson-Sermon and other Christian Science literature for four hours without noticing that my glasses were missing. I was amazed, but needless to say delighted, when I realized that my eyes were healed, and I never had any more need for glasses.

Three months before commencing the study of Christian Science I had a severe illness which *materia medica* named appendicitis and peritonitis, the latter preventing the operation which the doctors said must be performed as soon as I re-

Digitized by Google

gained my strength, because the trouble would surely be recurrent. I was never quite free from pain in my side during those three months, and was not strong enough to do all my housework, but I did not complain for fear of being rushed off to the hospital. The pain and weakness left me entirely during the first two weeks of my diligent study of the Bible and Science and Health. Two other troubles of long standing, chronic bowel disorder, and frequent attacks of throat trouble, have been overcome. Six years ago hemorrhoids were healed after four Christian Science treatments. Many other physical ills have been destroyed during my seven years of earnest striving to apply the glorious truth which Jesus said would make us free. But this physical freedom is indeed nothing when compared with the spiritual exaltation which this knowledge of God, and of man as coexistent with the Father, brings into our lives daily.

I am grateful for the healing of an unreasonable prejudice against Mrs. Eddy, for it had to be destroyed before I could go on with any peace of mind in the study of the Science which has brought such incomparable peace and joy into my life. I thank God for the love and gratitude I now bear toward the Discoverer and Founder of Christian Science, who has given to the world our text-book. Not the least of my blessings is the daily companionship of my husband in the sincere desire to serve the Master. We pray for wisdom and gentleness to follow the command, "If ye love me, keep my commandments," and to let our light shine. I want my life to prove my deep gratitude for this wonderful Christ-teaching which has come to me.

JEAN LAWRIE DOESBURG, San Francisco, Cal.

✧

[Translated from the German]

It was about the middle of March, 1914, that I first heard of Christian Science. At that time a diseased condition of one leg caused me to feel very much worried. The physician said he would do his best to help me, but he could give no assurance that there would be a complete cure. I firmly believed my affliction to be in conformity with God's will, and was about to submit patiently to what seemed to be the inevitable when a friend called and set me right with regard to this question. I now know that God does not send disease upon us, for He is Love only. I listened to my friend's explanations with close attention and read with great interest the writings which she gave me. From that day on I used the leg freely, the pain disappeared, and there has been no return of the inflamed condition, despite the fact that I am doing all my work, including the washing, and have often taken long walks.

Next to the study of the Bible I began to read the *Herold* and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and also attended the Christian Science services regularly. I may say here with a sense of deep gratitude that many have been the troubles from which I have since been freed. For fourteen years I had suffered with periodical attacks of headache, also with vomiting, and a bowel disorder which often kept me from attending to my household duties; but I have been freed from these ailments. During the two winters before the last I was bedridden for some time on account of lung trouble, whereas there has been nothing of the kind during the last year; in fact I feel better now than I have for twenty years.

A year ago my son became an apprentice in another locality. He would often suffer with headaches, and there was a sense of discord between him and his employer. With my son's consent I asked for Christian Science treatment in his behalf, and soon the inharmony and the attacks of headache disappeared. That Christian Science is a "very present help in trouble" has also been shown to us in a case of financial difficulty. After the war broke out my husband had to take part in the guarding of the frontiers, and as the family had been depending entirely on his earnings, of which we were now deprived, we found ourselves in reduced circumstances. The assistance received from the war relief fund of The Mother Church therefore meant much; and it was also proven to us that this help was not given as the world giveth, for an adjustment of our circumstances took place in a very unexpected manner.

How then could I fail to be grateful for all the benefits which have come to me and mine through God's infinite love? I also wish to express my gratitude for the work accomplished by Mrs. Eddy, the woman who prayed, endured, and labored in order to reveal again to mankind the Christ-healing.

FRAU I. AMSLER, Basel, Switzerland.

✧

In March, 1908, I had all my arrangements made for undergoing a slight operation, when a friend talked to me of Christian Science. At first I said that as the doctors were engaged I could not very well change, but finally found myself going to visit a Christian Science practitioner at the very hour the operation was to have been performed. I thank God that I listened, and I trust the voice of Truth may come to every one as it did to me. I could not understand what was meant by the Biblical phrase uttered by our great Master, "Marvel not that I said unto thee, Ye must be born again." How one could be born again seemed strange to me, but I rejoice that now, after six years of study and trials, I comprehend its meaning from the spiritual standpoint.

I was told by a noted nerve specialist in this city that I would have to take medicine all my life, and that I would require medical attention periodically to keep me in good health, as I had had three severe attacks of nervous prostration, twice having to be sent away to a sanitarium. I have been changed from a nervous, discontented girl to a healthy, happy Christian Scientist, striving each day to be of some benefit to mankind, praying for that Mind to be in me "which was also in Christ Jesus." Having been born and reared in the Jewish faith, I feared the mere mention of the name Jesus, and why I did not know; but now I realize that our Master was the greatest exponent of Love the world has ever known, and I thank God hourly and daily for this blessed truth of Christian Science, which was given to us so lovingly and untiringly by our revered Leader, Mrs. Eddy.

Words seem inadequate to express all I would like to say. I have been entirely healed of many physical ailments, but the loving thoughts and the spiritual understanding which I have received from this saving truth are far more significant to me. I have learned that the only way to thank God is by thinking good, and am daily striving to let my light so shine that I may glorify our Father which is in heaven.

JOSEPHINE KEAN GOLDBERG, Chicago, Ill.

✧

I am writing this testimony trusting that it may help some one who has given up all hope of ever being well and happy again, just as I did before I came under the loving care of Christian Science several years ago. I was a sufferer from Bright's disease and heart trouble, and for two years was under the constant care of *materia medica* without finding any relief. My attending physicians told me they had done all that could be done, but that a change of climate and absolute rest might prolong my life.

While in this state I was told of Christian Science by a

Digitized by Google

young man who assured me that I could be healed, so I went to a practitioner, and to my great joy I felt the healing influence in the first treatment. Three weeks later I was completely healed, and there have been no effects or symptoms of these diseases since. I have passed a very strict physical examination, and was told by a physician of one of the largest life insurance companies of this country that I was in perfect physical condition.

I am thankful to God, and grateful to our revered Leader for what Christian Science has done for me.

CARL FRICKER, Brooklyn, N. Y.

✧

I wish to express my gratitude for Christian Science, and for all the health, happiness, and peace it has brought to me. It was my joy and privilege to experience the practical and operative working of this truth at the birth of my baby daughter. Only my husband and the practitioner were with me at the time, and although there was some suffering, it was of very short duration, and everything was as harmonious as could be. The doctor arrived later, and after an examination pronounced it a perfectly natural birth. I escaped many ills both before and after the baby came that are supposed to accompany this experience. Neighbors came in the day after the birth and expressed great wonderment and joy over my strong, normal condition. I walked around a little that day, and the third day I sat up for most of the afternoon and sewed.

I know that Christian Science is the truth, and through it we shall know existence as it really is. Our publications are a constant source of joy and help to me. I am very grateful to God for all His blessings, and also to Mrs. Eddy for showing us the way.

MARJORY M. KULTCHAR, La Crosse, Wis.

✧

After having been healed through Christian Science of ailments which the physician said only an operation could relieve, and after studying Science and Health together with the Bible for several months, I found that I was again to become a mother, a fact that would have filled me with terror a few months before. With an understanding of Christian Science, however, I knew there was nothing to fear, and when any discordant conditions appeared they were overcome with the truth.

Before our little son was born, I had suffered very severely from what the physician said was a form of sciatic rheumatism, caused by my condition, and he could do nothing to relieve me. This ailment now began to assert itself and seemed very real, but as I had suffered so long with it the previous time, I at once asked the practitioner for help, with the result that in a little while it entirely disappeared. Some months later I was troubled with a varicose vein which seemed about to break through the skin, but I studied the Bible and Science and Health daily and suffered no pain from it. As it was not overcome through my own understanding, I spoke to a practitioner about it, and in one treatment it was entirely healed. The swelling went down and there was not a sign of any disorder. I was perfectly well.

When in February, 1914, a little daughter was born, I was alone in the house. The birth was perfectly harmonious and I had no fear, as I was trusting all to divine Love, which certainly met every need. About seven o'clock in the morning my little girl had telephoned to the nurse and the practitioner, while I was busy with the morning housework, and when she left for school I was all alone with God. The nurse arrived ten minutes after the baby was born and pronounced mother and child in perfect condition. About two hours later I sat up in bed and ate my breakfast. In two days I was around the house, and at no time was there any feeling of weakness. I have been doing all the housework and caring for my three children since the baby was a week old, whereas when my other children came I was so weak I could do nothing for six weeks and then was not strong enough to nurse them. With the help of Christian Science I have been able to nurse this child, and she is exceedingly strong and active.

I am very thankful to God, also grateful to Mrs. Eddy and to the dear friends who have helped me to awaken to the truth. Christian Science has been the only physician for my husband and children, as well as for myself, since December, 1912, when we first became interested in this teaching, and it has overcome colds and coughs, measles, mumps, bowel trouble, stomach disorders, and fevers, as well as cuts, sprains, and bruises; in fact every attack of error that has appeared. I am grateful for these blessings, but even more so for the spiritual uplift and the clearer understanding of the Bible which enables me to apply its teachings to everyday needs.—ETHEL LESLIE, Kansas City, Kan.

✧

Words cannot express my thankfulness to God, and my gratitude to Mrs. Eddy, for what Christian Science has brought into my life. Through its teaching I have gained a better understanding of what God is, and of what man is as God made him. I have proved again and again God's promise as found in Isaiah xliii. 2. I have found every seeming flood of error to be but another opportunity to prove God's allness. Instead of being filled with fear and dread I now have peace and joy in realizing the saving nearness of the one Mind, our all-knowing Father. In place of a body full of pain and weariness, Christian Science has given me health and comfort of body and mind.

A few years ago a son, then seven years old, was healed of a sense of deafness believed to be inherited. It seemed necessary to have help from a Christian Science practitioner, and two weeks' treatment was given. As a result the hearing was entirely restored. The same symptoms were manifested a year later, and once more they were removed by faithful application of the truths found in the Bible and in our textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Words cannot express my gratitude for these and many other proofs of this wonderful truth revealed through our Leader, and for the freedom it is bringing to all mankind.

ESTHER PAVEY CONDY, Sedro Woolley, Wash.

✧

Words cannot express the deep gratitude I feel for the moral, spiritual, and physical benefits that have come to me through the understanding and application of the truth as taught in Christian Science. At my mother's bedside during her last illness eight years ago, a friend who had been healed in Christian Science placed a copy of Science and Health in my hands with the remark that it might comfort me, and it surely did prove a great comfort to both my sister and myself in our sorrow. I read the chapter on Prayer over and over; it was such a revelation to me to learn that "the habitual struggle to be always good is unceasing prayer" (p. 4). How easy to understand, and yet how difficult for mortal sense to follow!

A few months after becoming interested in Christian Science, I joined our little church, and the very next day error tried hard to shake my faith. I was taken with an attack of neuralgia caused by an ulcerated tooth. Though young in Science, I am grateful to say that I called on a practitioner for help, but I grew very impatient because my healing

Digitized by Google

was not instantaneous. I also listened to my family's advice to have the tooth extracted. The dentist, however, said this would be impossible, owing to its condition, and told me to use hot poultices and return in the morning. When I reached home my consciousness seemed to be flooded with the first commandment, and I threw the poultice into the stove. Another remedy was suggested, but again the right thought prevailed. The last words of the practitioner that night, "Do not forget which side you are on," helped me to win the battle, and I fell asleep. Eight years have passed since then, and in all that time the tooth has never troubled me again, and it is as sound as ever.

For many months I was afflicted with an external abnormal growth that caused intense pain, but neither my husband nor any other member of the family, nor friends, knew of my suffering. I felt that if they did it would mean extra work for both the practitioner and myself to quiet their fears. The healing seemed very slow, but I am grateful that it was, for now I realize that not until the human thought is spiritualized can true healing take place. Two weeks previous to May 3, 1914, I knew that the demonstration was made, though the physical conditions were unchanged; I realized so clearly the nothingness of matter and the allness of Spirit, that all fear vanished, and I told the practitioner I believed the time had come for me to take my stand with God. On May 3 the growth came away, and I have had no pain or bad effects since. I should like to add that the Christian Science Hymnal filled an important part in this demonstration.

While I am truly thankful for the physical release, yet I am far more so for the spiritual uplift gained through this experience. I am thankful for our text-book, "Science and Health with Key to the Scriptures," which gives us a better understanding of God and man. The Bible is no longer a book of mysteries, but studied in the light of Christian Science it becomes a very simple exponent of Truth, applicable to any problem great or small, every day in the week. I am grateful for our periodicals, for every channel that has brought more light, thankful to the great Way-shower, and also for our revered Leader, whose patience and love for mankind enabled her in the very face of persecution to hold out to a suffering world this new-old religion of love taught and practised by our Master centuries ago, that all who will may come to its fountain and drink of its waters freely.—Laura Zarbock, Centralia, Ill.

✧

While reading Science and Health it became possible for me to abandon the use of tobacco, liquor, and profane and vulgar language, also cruelty to animals. At times I have needed help from other students and have always received it, but sometimes it seemed slow. In October, 1910, I was disturbed about something. The necessity of having some dental work done was apparent, but while the work was progressing I had to ask for treatment in Science for the mental disturbance. The help was given, but there seemed to be no improvement. One evening I went to my room and there audibly declared that man, the image and likeness of God, cannot sin, be sick, suffer, or die. In about fifteen minutes there came a sense of peace, such as I had not known before, and I then perceived that the work of the practitioner had not been in vain, but it was just necessary for me to know the truth for myself.

For these and many other benefits I would make due acknowledgment. Our sense of gratitude grows more spiritual as we learn what Life, Truth, and Love are.

Struve J. Schulte, Webster Groves, Mo.

From Our Exchanges

[Rev. G. Beesley Austin in *The Homiletic Review*]

Jesus is the contemporary of all the ages. He was in front of the first century and he is in front of the last. The world has never overtaken him. It has taken its great stride in the hope of coming up to him, but in the same hour he has moved on a step ahead. A new light has flashed from his face and unsuspected glory has broken from his life. But it is always the same Christ,—the man bearing a cross. He never lays that sacred burden down, for then love had perished and desire had failed. He lays bare the sacrificial life, shows us its rare grace, its fine beauty, its abiding power, its eternal fruitfulness. And as he goes before, he beckons and calls. It is always the same cry. The great challenge rings out: "Deny yourself, take up your cross, take it up daily, and follow me." It may be a hard path, but it will be good to follow in his steps. There may be thorns, thorns that are even plaited into a crown, but it will be a way of safety and of the abiding satisfactions. It can never be lonely, for it is haunted, not by a tender memory but by a sacred presence, and that presence illumines every step, and is the guaranty of a fellowship which has a joy like the joy of heaven.

[Rev. Clarence Lathbury in *New-Church Messenger*]

The better rendering of Psalms xxv. 14 is, "The secret of the Lord is with those who reverence him." "Fear" was the old English word for reverence. So we have it thus in our King James version. Three hundred years ago men understood "fear" to mean "reverence." Not the secret of the Lord is with them that are scared when His name is mentioned, but with those who are attracted. There is only one way to the divine heart, as to any human heart; only one way to hear His whisper of love, and that is by listening love, by approaching Him as an affectionate child approaches an affectionate parent.

[*The Church Family Newspaper*]

The hand of God is visible throughout the pages of history, so that he who runs may read. Nations as well as individuals have to be taught that the Lord omnipotent reigneth. We are dull scholars and slow to learn, but through the infinite mercy of an all-loving Father we are still preserved. Many warning notes have been sounded since August, 1914, but as a nation we have been loth to hearken to the divine call. We have put our trust in our men, our munitions, and our money, and too often God has been left out of our reckoning.

[*The Christian Register*]

It is true that many conceptions we clung to, put our trust in with childlike confidence, have gone down or been violently shaken by the past eighteen months, so that the world as at present constituted seems alien or fantastic, a something not yet possible to grasp and weld into a system.

There is only the quiet mind into which we may retire for the possible reconstruction through thought of what has been tumbled into ruins,—the erection of ideals on a better plan. If the belief in the immediate providential interference in human affairs is shaken, if our prayers for the triumph of such aims and purposes as we have passionately at heart are not answered, painful as it may seem, we must find new bases of beliefs, new hopes and trusts, on which we may stay our hearts, and quiet the terrible unanswered questions that torture us. Shall it not be a new sense of the responsibility of man for the evils of the world? Is there any reason in laying the results of man's sins at the door of God? For ages it has been the custom to accuse God of all the physical ills of life,

Digitized by Google

and also of the results of men's evil passions. A new theory is to arise which will exonerate God. Poor blinded humans for ages have been accusing God, and also imploring Him to ward from them the punishment they have deserved.

Out of the new sentiment of human responsibility may come a new heaven and a new earth, extending into all departments of life and action. The so-called favorites of heaven will then find themselves weighted with their own sins. Providence will not be there to shield them from the consequences. The quiet mind can afford to wait in faith, and hope that when the clouds of doubt have vanished there will be a clear shining of new trust and spiritual communion with the highest and best.

[*The Christian*]

The history of many institutions is the account of their departure from the original idea which gave them birth. Created for a definite moral and spiritual purpose, supreme ideals have been lost sight of by the encroachment of merely secondary interests. As they have become extensive they have ceased to be intensive. They have developed a mechanical organization, but have ceased to be living organisms. And while their outer form and profession remain the same, their true spirit has been lost. No organized enterprise in the kingdom of God is immune from this danger. Few indeed entirely escape it.

[*The Christian Intelligencer*]

It has been said that the events of the time prove Christianity has broken down. Rather must we say that Christianity has never yet been tried on a universal scale. It must be confessed with sorrow that Christians cannot disclaim their share of responsibility for the collapse of modern civilization. Rank disloyalty to Christ on the part of multitudes of professed followers of Jesus has contributed to the world atmosphere in which secular ideals and materialistic conceptions of life have triumphed and plunged the world into war. In the midst of a babel of conflicting counsels the voice which should be heeded is the voice that calls us back to Christ.

[*The Methodist Times*]

The churches can no longer rely upon the conventions and habits of the past to assist them. We are living in a secular age. The state of our congregations, the declining numbers of our Sunday schools, the disregard of the Lord's day, all witness to the fact that the conventional hold of religion upon the people is being rapidly destroyed. Christianity will live by the worth and fidelity of its spiritual witness, or not at all.

[*The Christian Work*]

Once more there is a great movement afoot for Christian unity. Everywhere men are striving to build a new church, which shall combine all the sects in one glorious temple where Christ's prayers that they might all be one shall be fulfilled. It is going to be one of the great tasks of the twentieth century.

[Rev. Frank B. McAllister in *The Congregationalist and Christian World*]

Religion today is interpreted as being not so much a passive experience as an active endeavor. The church is not so much a rest-cure as a moral power-house. Religion is at work as never before in the building of a new social order.

[*American Lutheran Survey*]

That life cannot fail to be the most successful life and the happiest life which succeeds in helping others by word and deed, in making others happy and bringing sunshine into the dark places of the lives of others.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

The increased cost of binding the periodicals has necessitated making an advance in the selling price of the bound volumes. The new prices, which take effect April 1, are as follows:—

JOURNAL—Volume 32 (April, 1914 to 1915). Cloth, $3.00; half morocco or half calf, $3.75.

SENTINEL.—Volume 16 (September, 1913 to 1914) or Volume 17 (September, 1914 to 1915). Either volume, cloth, $3.25; half morocco or half calf, $4.00.

For all other bound volumes of *Journal* or *Sentinel* write for prices.

DER HEROLD.—Volumes 5 to 12 in cloth, $2.75 each; volume 4 to 7 and 9 to 12 in half morocco, $3.50 each; volumes 4, 5, 9, 10, 11, 12, in half calf, $3.50 each.

The pamphlet, "Prayer and Healing," has been translated into French and is now published with the English version opposite the translation, and is now on sale at prices of the regular pamphlets.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

The United States Coast and Geodetic Survey held centennial exercises on April 5 and 6 at Washington, D. C., in the National Museum. This body in its work covers the coasts of continental United States, the Philippines, and Alaska. It is the contention of the department that as soon as correct charts have been made by it of all the navigable waterways and coasts, ship-owners will send out a better class of vessels. The reasons given are that under existing conditions owners who feel it a risk to send ships on coasts such as Alaska, for example, send out cheaper and less expensive vessels. The exhibit showed surveying instruments and appliances, pictures of surveying operations and equipment, charts, and other publications of the bureau. As far as possible, the earliest instruments and appliances which were used by this bureau were exhibited beside those now in use. The earliest obtainable maps and charts of the United States were shown for comparison with the present charts issued by the bureau.

The proposal to utilize water-power for the production of nitrates for various industrial uses has developed a unique situation in Congress. A bill has been presented by the agriculture committee for the production of nitrates for fertilizer purposes; another has been presented favoring a private concern, which would furnish nitric acid to the Government for the manufacture of explosives; and an army bill proposes sites for a Government plant to manufacture nitrates for its own use. The situation involves preparedness, Government ownership, conservation, special interests, and graft. The conservationists contend that the passage of a water-power bill properly safeguarding in the interests of the nation the natural resources in water-power sites, would solve the whole controversy.

Through the operation of the reforestation law Massachusetts has come into possession of about five thousand acres of waste land for the purpose of reforesting it. This area is composed of about one hundred and thirty different lots scattered among the cities and towns of the state. Such state-owned patches in at least sixty cities and towns have already been planted by the state forester. About five hundred acres will be planted this spring in the state reservations, and about as many more in towns of the state. Approximately one million transplants are available this spring, including white, red, and Scotch pines, Norway spruce, and European larch.

Representative Randall, at a hearing before the committee of the House on mines and mining, showed wherein the two million automobile owners in this country pay $2,000,000 for gasoline, in excess of what they paid eight months ago. "Two reasons stand out prominently in favor of Government control and ownership of the oil-producing areas of the country," he said: "first, the conservation and preservation of oil supplies needed for Government use in the future; second, the protection of the people, among whom petroleum products are now in universal use, against exploitation by powerful interests which control the oil business."

Owing to unusually favorable conditions, officials of the Vermont Maple Sugar Makers' Association say that the largest maple-sugar yield in years is expected this spring. According to the latest statistics there are 9,700,000 sugar-maples in the state, and it is probable that three quarters of them will be tapped. Last year, owing to the light snowfall and the flooding of the market with imitation sugar, less than 60 per cent of the trees were tapped. The total production for the season was 7,510,334 pounds of sugar and 605,398 gallons of syrup, together valued at $1,353,000.

At the recent fruit exposition held at the Campo de Santa Anna in Rio de Janeiro, the gold medal, the highest prize offered, was awarded by the jury to an American exhibit,—that of the California Raisin Growers' Association of Fresno, Cal. This exposition was the first of the sort that has been held in Rio de Janeiro. It was devoted chiefly to native fruits, and the California prize-winning display was the only one received from the United States. A special "United States day" was designated and was productive of a large attendance of Americans.

There are two national forests in Alaska. In earlier years over 40 per cent of the entire country was covered with timber. The forests in the interior are thinner and the trees of smaller growth than those along the southern coast, but comparable, however, with the well-known forests of northern Canada, and are bound to be of great importance in the upbuilding of the country. Already more than forty million feet of timber are sold from the Alaskan national forests every year.

All the large commercial and industrial centers of Canada have power possibilities adequate for any future demands, and the country is especially fortunate in water-power sites which on account of their location in the midst of vast timbered areas are particularly suitable for pulp and paper-making purposes. A number of large water-powers are situated at tidewater near excellent shipping facilities along the coast of British Columbia.

The New Haven Railroad in a little over two years has expended for new equipment over six million dollars and has authorized the further expenditure of over $4,500,000. The total amount involved in equipment ordered and authorized from Sept. 1, 1913, to Dec. 31, 1915, was $10,500,000. The units so far delivered include 3 electric locomotives, 171 coaches, 39 smokers, 100 baggage cars, 15 baggage and mail cars, 20 baggage and smokers, 6 club cars, 15 milk cars, 15 postal cars, 50 cabooses, 1 crane, 1 wrecking crane, 15 multiple unit motors, and 26 multiple unit trailers.

Investigation by the attorney-general of the United States into the legality of the high price of gasoline was ordered by the Senate in unanimously adopting a resolution introduced by Senator Martine of New Jersey. "The rise in price affects all classes of people," said Senator Martine. "It is no longer a luxury for those who ride in automobiles, but a prime necessity for commercial uses, on the farm, and for everybody." Later, by a little filibustering, the motion by the lapse of time was put "upon the table."

The $2,000,000 steel corporation, whose officers are mostly citizens of Chattanooga, Tenn., has secured a site for its big plant opposite that city on the Tennessee river. When completed, the plant will consist of two 75-ton open hearth furnaces, one 35-inch blooming mill, with a capacity of eight hundred tons every ten hours, a billet mill, a bar mill, and a sheet mill. The entire plant will be driven by electric motors. Contracts have been made for the power and machinery.

It is claimed by American geologists who have recently visited the different oil-producing fields in the Tampico territory of Mexico that it is possible to make a reliable estimate of the underground oil contents of the several localities where production is now in progress. Several of the larger companies have had surveys of this kind made of their properties. All told, there are said to be approximately fourteen billion barrels of oil in underground storage in the areas that have already been proved.

Evidence of the revival of ship-building in Maine, as a result of the prevailing high rates for ocean freight-carrying due to the war, is contained in the announcement that six four-masted schooners are to be built at a shipyard in Camden, under a contract just signed. It is said that the total cost of these vessels will be $800,000. This contract assures steady work in that shipyard for more than three years.

Governor McCall has signed the bill for a convention to revise the Massachusetts constitution. The bill contains a referendum clause, providing that the voters shall ballot on the question of holding a constitutional convention at the next state election. If a majority vote is cast in favor, the convention is to be held at the State House in June, 1917.

Announcement has been made that sufficient funds have been collected for the purchase of Star Island, one of the Isles of Shoals group, off the coast of New Hampshire, thereby assuring its future as a meeting-place for religious organizations. It will be used this summer by Unitarians and Congregationalists.

The value of imports of india-rubber into the United States in January amounted to $12,311,267, as compared with $3,835,044 in January, 1915. Of this rubber the United Kingdom supplied over five million pounds, Brazil nearly the same quantity, and the East Indies over ten million pounds.

Reports published as emanating from Peking and Shanghai state that the resignation of Yuan Shih-kai is regarded as imminent, the South demanding it as a *sine qua non* for the restoration of peace.

With the new obligatory inscription lists as a basis, *El Dia* estimates that the population of Uruguay is now approximately 1,800,000.

Abolition of capital punishment in Massachusetts is advocated by Governor McCall in a special message to the Senate.

Divine Will

WILLIAM D. MC CRACKAN, M.A.

IT is due to prevailing misconceptions concerning the nature of God that humanity should so generally dread the divine will. So constantly has God been pictured as the author of evil, of suffering, loss, catastrophe, and the like, that His will has come to mean for most people a power productive of evil. Hence when humanity is bidden to bow to the divine will, it has been taught to expect a blow instead of a blessing. What a caricature of that will which operates only to benefit, heal, comfort, and save! By a strange perversity, humanity has been made to look for adversity from the very source whence flows a never-ceasing stream of prosperity. It has been induced to shun the very mention of God's will; to look upon obedience to Him as a penance instead of a privilege; to attempt to propitiate its own false concept of God with material sacrifices, hoping thereby to placate omnipotence and avert punishment.

Christian Science is liberating humanity from all forms of fear, including the fear of a man-made, incredible, and impossible conception of the divine will. To bow to that will in loving obedience involves no sacrifice of anything good or desirable, but only enriches mankind with superabundant bounty, ever at hand and ever satisfying. Respecting this the writer of the epistle to the Hebrews has feelingly said, "Now the God of peace, that brought again from the dead our Lord Jesus, that great shepherd of the sheep, through the blood of the everlasting covenant, make you perfect in every good work to do his will, working in you that which is well pleasing in his sight, through Jesus Christ; to whom be glory for ever and ever."

Here it may be asked, How does Christian Science enable those who follow its teachings to welcome the divine will and to place themselves thus joyously under its law and power? By the simple process of correcting false views of God's character and qualities with a scientifically accurate understanding of His true nature. God is infinitely good. He is denominated by John as Love itself. Whatever God is, He is that absolutely, so that He cannot possess characteristics which are incompatible with His own perfection. He cannot entertain the mortal qualities which so greatly disturb the lives of human beings, such as envy, hate, wrath, desire for revenge, fear, or any sense of lack and poverty. These are some of the mortal characteristics which produce crime, disease, and disaster, and so they cannot be reckoned as attributes of divinity.

Following this line of reasoning and gaining clearer views of the divine nature, the heavenly aspirant soon learns to look with great happiness for every manifestation of God's will. He recognizes that the will of God must partake of His nature, must be absolutely good, just, merciful, wise, and truly compassionate. Therefore if troubles come, instead of trying to avoid the divine will as calamitous, such a one seeks to know the divine will and to place himself under its jurisdiction, knowing that this will must mean for him safety and shelter from the storm. This conduct is the very reverse of the common one, which consists in running away and hiding from God at the first symptoms of impending evil, and only submitting to His will when all other ways and means have been tried in vain.

Humanity has also made the mistake of confounding the divine will with human will-power. Its experience with the latter has been sufficiently desperate to make it suspicious of the very term "will." What atrocities have not been committed under that name! History overflows with the calamities induced by the unbridled will of mortals. Empires have risen through its means and fallen into ignominy in obedience to it. This type of will has proven to be tyrannical and oppressive in proportion to its success. No element of mercy has ever arrested its tumultuous career. In its subtler forms it has produced the phenomena of mesmerism and hypnotism. No wonder humanity has feared the manifestations of such a will and, mistaking the character of God Himself, has tried in every way possible to avoid His will, though it was designated as divine.

In the Glossary of Science and Health we find both types of will defined in the following words: "The motive-power of error; mortal belief; animal power. The might and wisdom of God." Mrs. Eddy adds here that the will of mortal mind "should not be confounded with the term as applied to Mind or to one of God's qualities" (p. 597). God's will is a quality of His being, and therefore is supremely good; but the will of mortals can be the source of evil only, unless it is governed by the divine. When Jesus uttered the momentous words, "Not my will, but thine, be done," he indicated the cure for the carnal or fleshly will. It must be dissolved by the divine will; replaced by that which can never do any one any harm, but can only bless.

In human experience this substitution of the right for the wrong type of will may seem a long process, but the effort to accomplish the task must be continuous. At first there may come an experience which shows that having our own way may prove dangerous, or that self-will in the long run defeats itself. This may cause the one having such an experience to become willing to let go a little of his own will and trust to the divine to carry forward his affairs and his right desires. Another experience may prove that the much vaunted exercise of human will-power in controlling others, educates a resistance on the part of the controlled which induces them also to retaliate with the same type of will, and to free themselves violently. Then the conviction comes that human will-power cannot be trusted to work out even its own desires; that in order to have good operative in our daily affairs, the will must be governed by spiritual understanding, consecrated to God's service, purified by love, made a servant instead of remaining a master.

These lessons learned, the individual does not sink into a nonentity, into flabby inefficiency, as mortal sense might predict, but he comes to be guided by the divine, controlled and governed by divine Love. Those who enter the spiritual warfare, though they relinquish carnal weapons, do not lay down

their arms. They continue to fight valiantly in behalf of Life, Truth, and Love, but their sense of warfare changes, the nature of their weapons is recognized to be mental and spiritual, and they learn to enforce the decrees of the divine will through obedience and through the sacrifice of self.

Angels

HENRIETTA MARCUS

One of the problems of human existence is how to distinguish that which will bless from that which will harm, to discern what is the whisper of evil and what the warning voice of Truth. Doubt respecting these things is well expressed by Hamlet, in his uncertainty as to whether his father's ghost is a manifestation of good or evil, in the words, "Thou comest in such a questionable shape." The explanations given in Science and Health of the method by which we can separate the real from the unreal are explicit and absolute; but the understanding needed for their application is only gained by much study, for truth, like salvation, is attained by the effort of the individual and not by that of another.

In regard to the difficulty of ascertaining the worth or worthlessness of certain thoughts which present themselves to us, it is helpful to consider the various accounts of angels given in the Bible, taking of course as groundwork the definition given in the Glossary of Science and Health, where we are told that angels are "God's thoughts passing to man; spiritual intuitions, pure and perfect" (p. 581). In our daily lives we can often discover the presence of these angels, or thoughts from God, which may even seem to come at times disguised in grievous forms; or perhaps one should rather say that through our troubles we are compelled to turn our consideration to those pure ideas which can alone lift us up and save us from our mortal selves. This does not mean that any trouble or suffering is, or can be, an angel, but simply that what appears to be an affliction occasionally reveals a blessing, which we are able to perceive after a sufficient time has elapsed so that we can judge the case by the results.

Jacob's wrestling at Peniel is wonderfully explained by Mrs. Eddy on page 308 of Science and Health. Jacob was really fighting against his own belief in the power of evil and not against good. Doubtless he was unaware of this fact and wanted to overcome what opposed his human will; but spiritual perception at length conquered his material desires and earned for him the praise, "As a prince hast thou power with God and with men, and hast prevailed." Take any belief of sin or sickness—is it not a wrestling similar to that of Jacob? The acceptance of evil as having reality and dominion is in itself a struggle with the angel that comes to us with the message of the all-power of God, and a perfect or even a partial realization of the truth of this message gives us "power with God and with men." The struggle always implies the resistance of human sense to the divine will, and the victory is gained not by the attainment of our human desires, but by the domination of spiritual sense over our fleshly beliefs.

As with Jacob, so with us it is not necessary to know the name of the angel, although the beginner in Christian Science often asks eagerly, "What thought shall I take up?" God's angels are legion, but all their power is derived from the divine Mind, so it is God alone that prevails. When angels are recognized, not by means of the mortal troubles which compel us to wrestle with them, but by our recognition of the divine idea which smites the belief of error and proves it unreal, sickness and sin are overcome.

Angels do not always come in a doubtful garb that puzzles and distresses us, and our struggle is proportionately increased or decreased according to our spiritual perception. When the angel appeared to Mary she was at once conscious that it was a divine thought which announced to her the coming of the Christ-idea. The work of the centuries that lay between the time of Jacob and that of Mary had increased spiritual knowledge, so that whereas Jacob wrestled with the angel, uncertain as to the result, Mary at once greeted the heavenly visitor, and although "troubled at his saying," there was neither struggle nor opposition in her heart.

Only by consecration, by definite and unvarying attention to the things of Spirit, are we enabled to perceive the angelic chorus around us; for our ears are dull and our sight is dim through dwelling in the world of materiality, and at most we can only hope for a distant glimpse of the celestial visitors who seem so far away and yet are at times so near. Untroubled by worldly knowledge, uninfluenced by human opinion, the humble shepherds recognized the angels who appeared to them, and they afterward gained a glimpse of the Christ.

The various accounts of angels given in the Bible show the adoration and extreme humility of the favored ones to whom they appeared. It is to this condition of thought that God's angels are most likely to be manifested. Real humility and meekness are holy attributes, and lead up to that purity of thought where God Himself is revealed. The Master said, "Blessed are the pure in heart: for they shall see God."

Abiding

MARIANNE HIDE WENDT

Human nature is very prone to accept agreeable statements without question and overlook any condition that may be attached. In nearly every instance the promises found in the Bible are given with a condition, the fulfilment of which determines their efficacy. We all know and love the promise, "Ye shall know the truth, and the truth shall make you free," but we do not remember as frequently as we should the condition upon which that freedom from bondage rests. "If ye continue in my word, . . . ye shall know the truth, and the truth shall make you free." It is conscious, constant abiding in the truth of Jesus' teachings which enables one to apply the truth that makes free. Only as we understand the omnipotence, the allness of God, can we demonstrate the nothingness of that which claims to be God's opposite.

To mortal sense it is not easy to abide constantly in the word of Truth; but even where one seems to be confronted by misunderstanding, criticism, hatred, and malice, these errors disappear as the result of constant and sincere endeavor to realize God's presence and power, and as one knows that where God is there can be nothing unlike Him. We sometimes hear the remark, "Oh, yes, I know that evil is only a false belief, but even that knowing does not always free from bondage." And that is just the trouble. We must know that God never made a false belief, or a man that could believe or be deceived by a lie. The attempt to realize the truth occasionally or half-heartedly will result in little freedom from the bondage of material sense; but by abiding in the word, unshaken, undiscouraged, and as Mrs. Eddy says in Science and Health (p. 392), standing "porter at the door of thought," refusing for a moment to recognize the claims of evil, keeping one's mind steadfastly on the rock of Christ, Truth, then freedom is ours, complete, boundless, perfect.

Very often one hears from new students of Christian Science, "Why am I not healed immediately?" "Why do

Digitized by Google

wrong conditions seem to cling so persistently?" I wonder if such a one has ever pondered the saying of Jesus, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Many at first turn to Christian Science only as another form of treatment for disease, and utterly regardless of the truth it demonstrates. It is little wonder therefore that such often fail to find relief as speedily as they desire. The writer has observed that many apparently slow healings in Christian Science were due to the fact that while the patients wanted physical healing, they did not want regeneration, and without the one the other was impossible.

Jesus said that "all these things shall be added unto you," but the condition which preceded the promise must be complied with. If one's consciousness is filled with the realization of God's ever-presence, what can the shadows do but disappear? Where is there room for a consciousness of sickness, inharmony, or evil, if our thought is filled with the realization of God as the only cause, presence, Life?

On page 149 of Science and Health Mrs. Eddy writes, "If you fail to succeed in any case, it is because you have not demonstrated the life of Christ, Truth, more in your own life,—because you have not obeyed the rule and proved the Principle of divine Science." Truth is ever available to meet our need, but the thought must be honest, the endeavor sincere. In the science of mathematics one would hardly expect to solve problems readily if he cared only for the working out of certain examples and nothing for the basic law of mathematics itself; while by seeking first an understanding of this law, the problems would be solved.

If one earnestly desires Truth, the understanding of Truth will come, and drive out all that is unlike itself. The kingdom of God is Truth realized, the understanding of God with us; and in proportion as we seek first the understanding of God, all these things—health, harmony, peace, joy unspeakable—will be added.

Neutrality

THOMAS C. PERINE

A YOUNG man entered the employ of a firm for which I was working, and from the start there arose a sense of jealousy and hatred between him and an older employee. This finally manifested itself in a battle of words, and the older employee tried to have the new man discharged. Before going to sleep that night I thought about the incident, and felt that while I could not treat either of the men without his knowledge and consent, I could know the truth which is the heritage of all men. I was therefore able to think of these men in their true selfhood, as God's children, all of whom are loving, kind, and helpful. I put my finger on my lips, as Mrs. Eddy instructs us to do on page 3 of Science and Health, and by thinking of nothing but the kind things these men were doing and could do since they were the children of God, I realized the meaning of peace.

Christian Science teaches that as God is Spirit and is perfect, man as His reflection is spiritual and also perfect. So whenever I thought of these men that night I tried to think of their true selfhood, God's reflection, and went happily to sleep, knowing that God, good, is all-power, hence error is nothing. The result was gladdening indeed, for their thought was more peaceful the next morning, and later their good will grew until they became the best of friends. I then saw that if two men can be healed of quarreling by impersonal declarations of the truth, the same kind of treatment will heal discord between nations. It is the highest form of neutrality to see these nations in the light of Truth as brothers, as Love's peaceful reflections.

Of old the angels sang of "on earth peace, good will toward men." In Science and Health (p. 581) we read that angels are "God's thoughts passing to man," and so angels are declaring to us this truth of peace and good will toward all men. The truth is that God, Life, Truth, and Love, is ever present, all powerful, and all knowing, and so in reality there never will be a time when peace does not reign, and when we cannot cherish good will toward all men.

Being neutral means more than not taking sides with either faction in any conflict; it means the destroying of our belief in war, just as we destroy our belief of sickness by knowing the truth about God and His reflection. We are doing our highest duty as citizens of the United States when we protect ourselves against the mesmeric tendency of war, and right thought on this subject will be of the greatest value in defending us against all the entanglements of error. Mrs. Eddy tells us that "Christian Science acts as an alterative, neutralizing error with Truth" (Science and Health, p. 162), and if the knowing of the truth about God and man will bring peace and friendship to two men, it will heal the whole world of war. Let us rejoice, therefore, in the privilege of scientifically loving our brothers and sisters in all the world, and knowing their exemption from error.

Sunday School for Children

MANA WILLIS FISHER

BEGINNERS in the study of Christian Science sometimes ask why the Christian Science Sunday school is for the children only, and the officers need to use wisdom and patience in explaining this rule. On this point the Sunday school is identical with the policy followed by the public schools of our country. When a child finishes in school, much of his education is yet to be obtained,—in fact he gets the greater part after leaving school,—but the foundation has been laid, and the further building depends on the individual. In Christian Science we learn that the one depending most on God grows the most rapidly. Many times there is a longing on the part of the beginner to attend Sunday school, thinking that it will hasten the growth Spiritward. For years before taking up this study, the average person had depended on others to do his religious thinking, but our Leader with her usual perspicacity saw that it was time for each individual to learn that his true self was as capable of thinking as are any of God's ideas, and as proficient on this line as on any other.

Jesus was the greatest teacher the world has ever known. He always directed thought to the one Father, his Father and theirs. The lesson sometimes took the form of the healing of physical distress or of a moral lack; sometimes he taught through a parable, which was always along a simple line. He was ever ready to teach the receptive thought and quick to discern whether his hearers were most interested in the teaching or the teacher. Our Leader tried earnestly to turn her students' thoughts to Principle, and when she discerned that they were thinking too much about her, she withdrew and left them to contemplate the teaching but not the teacher. Both of these messengers of God realized that the value of the teaching would be lost unless it turned thought to God alone.

If those past the age of twenty had a Sunday school teacher, they would doubtless ask him for the answer to the various problems they are called upon to solve, thus becoming sluggish in thought, instead of spending hours in prayer and study. As divine Mind is looked to and depended upon as

Digitized by Google

the teacher, each day the teaching becomes clearer. It would be impossible for a Sunday school teacher in one hour to explain to a class of six the teaching that could be gained in six hours of individual study on this lesson. This seeming lack has been abundantly filled. What Christian Scientist would exchange his "Key to the Scriptures" for the privilege of attending Sunday school? The *Sentinel* and the *Monitor*, with their weekly and daily message along the same line, as is so often the case, help to awaken thought to the true meaning of the Bible Lesson.

Students of Christian Science, like Jesus' students, are being healed of a belief in a power apart from God, and it matters not if this belief is called sickness or sin, hatred or criticism, worry or sorrow, the healing follows the teaching about God. As the healings come, there may be heard the echo of these words of the woman of Samaria: "Is not this the Christ?" When a student has reached the point where he is familiar with our Leader's works, and has proved to his own satisfaction that this teaching is the truth and he desires to be instructed in Christian Science, it is his privilege to select a teacher, as provided in the Manual of The Mother Church, and learn how to depend more and more on God and how to study the Bible.

The teaching given to children in a Christian Science Sunday school is explained in detail in the Manual. They are taught the Bible and the simpler meanings of the texts. Foundation for their future education is laid by turning thought toward God; but the greater part of the education comes when the individual begins to apply for himself the truths he has learned.

Wages

JANE C. ELSTON

THE general meaning of the word wages is that medium of exchange, called money, which is paid for personal service. Figuratively the word is synonymous with produce, which is specifically associated with agricultural products. In comparing things with thoughts we find that the mental world in which we live has the produce or wage of every right or wrong thought, and its realization, or payment, accompanies very closely the outward act. A Bible verse which made a deep impression upon the writer as a child was Paul's statement in Romans: "The wages of sin is death; but the gift of God is eternal life through Jesus Christ our Lord."

In Science and Health (p. 311) Mrs. Eddy tells us that "all sin is of the flesh. It cannot be spiritual. Sin exists here or hereafter only so long as the illusion of mind in matter remains." Hence while we live on the plane which makes a reality of physical sense the wages we receive will be disease and death, whereas the wage of service to Truth is the gain of intelligence, with dominion over the flesh, that true vision or spiritual perception which yields a higher sense of infinite Mind, the cause of all that is harmonious and eternal. Our Master once said to his disciples, "He that reapeth receiveth wages, and gathereth fruit unto life eternal: that both he that soweth and he that reapeth may rejoice together." There is no uncertainty about this kind of wage.

The first mentioned sense-wage comes to humanity in an illusion called hate, animality, the lusts of the flesh; but the messenger who comes bearing the wage of love, justice, and mercy, is spiritual consciousness, clothed in white garments. When we realize that the Science of Christ gives us a perfect rule whereby we can work out our salvation through and with divine Principle, the gratitude which trembles on the lips of men and women at our Wednesday night testimony meetings is easily understood.

Truly has our Leader pointed the way of spiritualized effort on page 240 of Science and Health, where she says: "In trying to undo the errors of sense one must pay fully and fairly the utmost farthing, until all error is finally brought into subjection to Truth. The divine method of paying sin's wages involves unwinding one's snarls, and learning from experience how to divide between sense and Soul."

Truth-healing

LILY M. SMITH

ONE very common criticism of Christian Science is that it pays too much attention to the healing work; in fact a minister was once heard to refer to Christian Scientists as "those who had been led astray by the lesser things that Jesus did." Now Christian Scientists do not consider that any acts which Jesus performed or any words which he spoke while on earth can properly be classed as "lesser things." It might be considered a small thing when Jesus turned the water into wine at the wedding feast, but it proved to humanity that God is the source of supply and ever available. Also when he was preaching to the multitude by the sea of Galilee, feeding them the real bread of life, "which cometh down from heaven," it did not seem too small a thing for him to notice their need of food, and out of his great love and compassion satisfy the hunger of the five thousand, when to mortal sense there was nothing but five barley loaves and two small fishes.

Every so-called miracle which Jesus performed has its special lesson, and in proportion to our understanding of his teachings we are able to profit by them. It is not to be supposed that he would have devoted so much time to the healing of the sick if this were of small importance to mankind. When he healed the man who had been blind from birth he said, "I must work the works of him that sent me," making it plain that he was about the Father's business just as much when healing sickness as he was when destroying sin.

It is often said that Jesus' healing work was a special dispensation, limited to himself and his disciples; but Christ Jesus laid a command upon his followers in all ages to heal the sick when he said, "Go ye therefore, and teach all nations, . . . teaching them to observe all things whatsoever I have commanded you." He taught his disciples to heal the sick as well as to preach the gospel. In Science and Health (p. 494) Mrs. Eddy says, "It is not well to imagine that Jesus demonstrated the divine power to heal only for a select number or for a limited period of time, since to all mankind and in every hour, divine Love supplies all good." When John's disciples were sent to Jesus and asked, "Art thou he that should come? or look we for another?" it is significant that Jesus did not try to prove his Messiahship by telling them what he believed, but said, "Tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached," showing that his followers must be judged "by their fruits."

Now, as did the disciples in Jesus' time, Christian Scientists heal the sick in proportion to their understanding of God's law, and these healings are the "signs following" by which we may know that we believe. The healing of physical pain and disease is not the chief part of a treatment in Christian Science, since it means the destruction in human consciousness of the ignorance and evil that seemingly stand between us and our realization of the allness of good, and that hide the true man, the image and likeness of God, from view. On page 150 of Science and Health Mrs. Eddy says that "signs and wonders are wrought in the metaphysical

Digitized by Google

healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

But, it is sometimes asked, if Christian Science can heal the sick, why did not God reveal it sooner to the world? It would be quite as pertinent to ask why some one did not discover America before the time of Columbus. This continent was here, but it was of no benefit to the old world until one came who could look beyond the evidence of his eyes and become convinced that the world was not flat but round, and who also had that sufficient courage of conviction which enabled him to start out on a voyage of discovery in the face of ridicule, criticism, and opposition.

So it was with the saving, healing truth as taught by Jesus. The truth has always been with us, ever active and operative. Our Master said, "Lo, I am with you alway, even unto the end of the world;" but mankind was so steeped in creeds, doctrines, and material forms that the real significance of the example of the Wayshower was lost to humanity, until there arose one whose love was so pure that she saw beyond the limited confines of material sense into the glorious vision of the spiritual universe, and recognized man "hid with Christ in God."

Love Casting Out Fear

MARY GERTRUDE BERGHELL

In "Miscellaneous Writings" (p. 110) Mrs. Eddy says, "Beloved children, the world has need of you,—and more as children than as men and women: it needs your innocence, unselfishness, faithful affection, uncontaminated lives." The gratitude that a mother feels for Christian Science, none can fathom but those who have experienced the human mother-love and its usual accompaniment, fear.

When my little girl was six years old, she had an uncomfortable experience with a dentist. He left the worst part of the work until the last, and she was afraid to go back to him. I made an appointment, but did not tell her until the day we were to go, when she quietly said she did not want to go to the dentist. Nothing further was said until the time of departure in the afternoon, when I asked her to get ready, and she did so promptly; but we did not mention the matter before we reached the dentist's building, though on the way I did very earnest mental work. As we entered the elevator she gave me a frightened glance, and I said to her, "God will be with you; divine Love will be very close to you, all around you, and you will be very happy." When we went into the office she walked quickly to the dentist's chair with a face that was radiant, seated herself, and took off her hat as if eager to begin. It was a long, hard ordeal for such a little girl, but whenever she had an opportunity to look at me she did so with a face that was full of light. After it was all over I asked her about it, and she said she had been very happy there.

We older children must know that there can come to us no experience so hard, so dark, or so painful but we can meet our Father there, and even in our Gethsemane the angels will come and minister unto us. Like Jacob of old, wrestling until the break of day, we must not let the experience pass until it has blessed us and the dawn appears. Then as we rise we shall hear the words, "Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee."

It is the touch of heart with heart that gives the surest sense of one supreme heart of all.—GEORGE S. MERRIAM.

Selected Articles

["Common Fellow" in *Fort Wayne* (Ind.) *News*]

Regardless of what one may think of Christian Science as a whole, an honest investigation of it will start one's mental machinery in motion. I have been studying this system of religion for the past three months (the explanation of my restless pen's quietude), and I discover that most of us have formed wrong opinions relative to it. I never gave the subject much thought heretofore, but the fact that the Christian Scientist believes he heals the sick in the same manner that Christ Jesus healed them, awakened sufficient interest in me to investigate. Some of the ideas set forth by Mrs. Eddy in "Science and Health with Key to the Scriptures" on the subject of sickness are impressive to us who have thought we had faith in God, who believe that we were made in God's image and that He is all powerful.

So far as I can see it, there may be more real truth in this system of religion than we usually ascribe to it; but if its claim in regard to sickness is true, it would be foolish for us unacquainted with its teachings to give up the use of drugs and depend on God alone to heal us of what we believe to be dangerous diseases. For the Scientist believes the word faith means not only absolute trust, but understanding as well. That is, one must understand to some extent the Science of being as set forth in Christian Science, to be able to have sufficient faith in God to destroy evil and sickness. But a true Scientist—one who knows and believes that the real and eternal things are spiritual and not material; that all is Spirit, God, Mind; and is not beclouding his spiritual understanding and power by sin, error—is able to heal the sick whether the sick understands as he does or not.

I should say in conclusion that we Christians can learn a lesson in faith from Christian Science. God certainly is not responsible for sickness. God is Love. Most of us are not in a position safely to do away with drugs and trust in God alone; but we can all trust God more. A close relationship with God, a clean, pure, Christlike life, must be conducive to health. God is never changing. Personally I feel that it is mortal error somewhere which has separated us from healthy, divine existence—error, not as we understand sin, but as a matter of ignorance, or lack of knowledge of God.

[Henry Van Arsdale in *Whittier* (Cal.) *News*]

In an account of a sermon appears the following statement: "In no country has religion been accompanied by so many remarkable wonders as in the United States. Modern spiritualism, Christian Science, Dowieism, theosophy, and the newer Emmanuel movement, practically all originated in this country; and all these have been accompanied by more or less of wonder-working manifestations." The inference indirectly drawn in this statement regarding Christian Science is, that it is similar in its origin and essentials to the other systems named. I desire to correct this, for Christian Science has a place entirely by itself, in that it is founded solely upon the Bible and is successfully restoring primitive Christianity to the world.

The works that Christian Science is doing in the way of reforming the sinner, healing the sick person, comforting the sorrowing, and removing the limitations of poverty and habit, are "wonder-working manifestations" only to the thought of those who, like the author of the sermon above referred to, do not understand that such manifestations are the natural results of the understanding of God which is to be obtained through the study of Christian Science.

In the wonderful fourteenth chapter of his gospel, John

Digitized by Google

reports Jesus as saying to his followers in all time, "Let not your heart be troubled: ye believe in God, believe also in me." Again, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." In the sixteenth chapter of the gospel according to Mark, the seventeenth and eighteenth verses set up a standard by which one may be known as a believer in the Christ, that is, known as a Christian. Here what the author of the sermon refers to as "wonder-working manifestations" are seen to be the natural results of the Christian's belief in or absolute reliance upon God the Father.

One who limits the power of God and divides the message of Jesus the Christ as to preaching the gospel and healing the sick, naturally considers that the healing of the sick is "wonder-working." Such healing is the result of the spiritual law which is behind all true preaching of the gospel, or good news, about God and man. Jesus healed the sick and the sinner because of what he knew of the spiritual law. Mrs. Eddy says on page 203 of the Christian Science text-book, "Science and Health with Key to the Scriptures," "If God were understood instead of being merely believed, this understanding would establish health."

✧

[Carl E. Herring in *The Pilot*, Blair, Neb.]

The teachings of Christian Science are open and accessible to every one. Christian Science draws its inspiration from the same source as our evangelist critic does, and it leads to a humble endeavor to obey the golden rule and to meet the world's need in the way commanded by the Master. Surely there is strife enough in the world without deliberately going about it to set the worshipers of the one God at variance with one another, even though some of us think that when Jesus said, "Go ye into all the world, and preach the gospel," "heal the sick," he meant that we should heal the sick as well as preach the gospel.

There was a time in the history of the religious thought of the world, when humanity was emerging from the shadows known as the dark ages, that an effective appeal was made to the masses through the agencies of fear and superstition. Happily that time is past, and the world today is finding its progress in discarding the terrible iniquities of the theology of the dark ages and going back to the simple precepts taught and practised by Jesus of Nazareth; and he who seeks the truths of Christian Science will find, as Mrs. Eddy says on page 43 of Science and Health, that "the final demonstration of the truth which Jesus taught, and for which he was crucified, opened a new era for the world."

✧

["E. R." in *Buffalo* (N. Y.) *Express*]

I would commend to the attention of your readers a series of sermons that the curate of Trinity Church is delivering on Christian Science. Whatever may be the opinion of the public regarding the singular doctrines or religious propaganda of Mrs. Eddy, it is a fact that the Founder of Christian Science was a remarkable woman. It is just as incontrovertible that the gospel of Christian Science meets and fills a human need which our orthodox Christian faith would not seem capable of meeting.

Our modern Christianity appears devoid of potentiality or of intrinsic virtue. Otherwise, how account for its anomalies, abuses, imperfections, and utter impotency—in so far as it affects and influences the lives and characters of its professed believers and adherents? How account for this present war, begun by professedly Christian nations, whose monarchs would pose as champions of the Christian faith? A religion so imperfect and anomalous stands self-condemned and face to face today with a rigid accounting for its *raison d'être*. If the Christian church cannot account for its apparent inefficacy, it is time that it should confess itself an absolute failure and make room for some other and better way and means.

When any Christian denomination undertakes to criticize and condemn Christian Science because it does not conform to Christian tenets and teachings, it behooves all thoughtful and earnest minds closely to scrutinize such criticisms and condemnation. In the present instance the curate of Trinity manifests a very fair and discriminatory spirit, descriptive in his criticisms and review of Christian Science, and even though he labors to prove that its teachings are liable to certain grave abuses and misinterpretations, he is generous enough to admit that there is much in Christian Science which closely approximates to the very essence of the Christian belief and teachings.

✧

[John L. Rendall in *The Estherville* (Iowa) *Enterprise*]

In reporting a critic's attitude toward Christian Science it is stated that "comparisons were drawn between many of the statements of Christian Science and the plain teachings of the Bible," and that "the evasions, contradictions, and fallacies of the former were clearly shown." This critic may be honest and sincere in his presentation of the subject, but the fact nevertheless remains that he is either ignorantly or wilfully mistaken when he assumes that Christian Science in any degree evades or contradicts the plain teachings of the Bible. On the contrary, it may be stated with authority and without fear of successful contradiction, that Christian Science as set forth in the authorized literature is logical, reasonable, and satisfactory in the highest degree to people who have the intelligence and the courage to do their own thinking, of which class the Christian Science following is largely composed.

Humanity has become very tired of mere abstractions, and there is very little disposition at the present time to cling to outgrown theological ideas merely because of their antiquity. Superstition and intolerance are rapidly being relegated to the obscurity where they properly belong, and a reasonable and demonstrable religious teaching which meets the needs of humanity, not only in the matter of redemption and regeneration, but also in the physical healing, as Jesus and his disciples taught and practised, finds ready acceptance, not because of the need for a new religion, but because of the need for one that is provable.

Because Christian Science is meeting the needs of humanity in these practical ways, because it reforms the sinner and heals the sick, because it gives to humanity that peace "which passeth all understanding," and because it teaches love for God and man in the highest degree, it has successfully withstood and will continue to withstand all opposition, whether on the part of ministers or others. Jesus' statement, "By their fruits ye shall know them," is as much in effect today as when it was uttered. The fruits of Christian Science, as above indicated, are its sufficient justification.

✧

[Charles W. J. Tennant in *Occult Review*, London, England]

There is nothing whatever in the nature of pretense in Christian Science. Either one does understand it or he does not. He who understands the divine Principle of Christian Science and abides by the rules laid down, cannot fail in demonstrating this knowledge in healing sickness and destroying sin. The power that heals is the power of Truth, and any one who makes an unbiased study of the subject may gain an

Digitized by Google

understanding of the truth which will make him free. The working out of a sum in arithmetic depends on the mathematical understanding of the student. It is precisely the same with a student of Christian Science. Christian Scientists do not worship Mrs. Eddy, and they do acknowledge Jesus the Christ as the Wayshower.

The letter closes with the words, "Owing to the fraud of Christian Science, we, the real healers, are driven out of business." This is a very poor excuse for the critic's failure. Christian Science teaches that Truth is omnipotent, omniscient, and omnipresent. Those who practise this teaching cannot be driven out of business.

✧

[S. T. Downs in *South Bend* (Ind.) *News-Times*]

Some people have formed the opinion that Christian Science is "merely a system of bodily healing," as it was expressed by a clergyman in a sermon reported recently. Christian Science places emphasis on healing the sick, it is true, but in spite of this our reverend brother is mistaken. We said that Christian Science emphasizes the healing of the sick, and we find that the Scriptural record of the great Master and his early followers does the same thing, and that secular history records such healing as among the works of the early Christians. No one would attempt to prove, however, that the mission of Christ Jesus was to heal sickness, nor was it the mission of the apostles and the early church; but rather we find the healing of sickness to be a sign following the destruction of sin.

Healing in Christian Science now, as was healing in the time of the great Teacher and his first disciples, is a sign following. It will be seen, then, that Christian Science is primarily engaged in the destruction of sin, and this is shown among all classes of people and in every community through the purer lives and higher citizenship of its adherents. It is also true that physical healing in Christian Science could not be accomplished without moral and spiritual betterment.

✧

["Honest Observer" in *Brooklyn* (N. Y.) *Eagle*]

I could read in the *Eagle* with perfect understanding Doctor ——'s statement relating to the origin of disease, and I could realize also the absurdity (to him) of the quotations cited from "Science and Health with Key to the Scriptures" by Mrs. Eddy, because the best part of my life has been spent in the study of material science, especially of physiology and hygiene. I know the doctor's viewpoint, and also the irritating, almost maddening effect of the affirmations of Christian Scientists on a person holding his convictions.

Knowing all this, and having had the experience that I have had, I make this request of the doctor: Will he not, if possible, lay aside his objections, cease arguing over the letter of the text-book, and put Christian Science to a practical test. If it is a science, it must be demonstrable. If demonstrable, what then? If the critic is a true and fair scientist, he will be willing to judge Christian Science by what it can accomplish. It takes much courage and honesty to do this in the face of one's own opposition, but it is the only right way of procedure.

After my own experience, I feel perfectly safe in declaring that if the physicians who oppose Christian Science on the grounds of the absurdities in its text-book will observe dispassionately the effect mentally, morally, and physically of its teaching on the lives of its adherents; if, absurd as it may sound, they will put it into practice in their own lives, there can be but one result. If they are honest—and they are—they will have to admit that Christian Science works; that after all the laughter, indifference, and opposition, Christian Scientists, in spite of the seeming absurdities of their theories, have gotten hold of something that sets the erudition of physicians at naught; that a movement has been started that can be stopped only by the followers themselves falling away from their standards, strange and absurd though these may seem to those outside their ranks, and that a key to health, success, and happiness has really been discovered.

It is only by repeated experiment that we prove the truth of a given law. Try putting into practice an understanding of the great Principle on which Christian Science rests. Hundreds of thousands of people have been led to do this, and with what result can be inferred somewhat by visiting the Christian Science churches. Notice that they are packed every Sunday and once during the week—a fact on which no little comment has been made in this day of "vacant pews." Notice the character of the attendants,—how they come from every station and profession in life. Notice also the expression on the faces of the attendants. Verily, the observer must conclude that these people, living according to a strange, new-old theory, have caught a glimmer of a "great light."

✧

[Robert S. Ross in *The Post-Standard*, Syracuse, N. Y.]

An evangelist undertakes, after a mere reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, to tell his listeners all there is to know about Christian Science. If instead of merely reading this wonderful book he had studied it, he would have learned that Christian Science consists of something more than negations. To say that there is no matter and abandon the subject, does not in the least enlighten the searcher after truth. To all intents and purposes matter and evil are real to most people. What Christian Science really teaches is that there is no matter, because God, Spirit, Mind, the opposite of matter, is All-in-all.

The person who starts with the premise that divine Principle, Love, is the one and only cause, will, if consistent, inevitably arrive at the conclusion that there can be no effect from any other cause. Surely sin, disease, and death are not effects of Life, Truth, and Love, which constitute Deity, and consequently they are not effects of anything. Therefore they are nothing claiming the reality and actuality of something; in other words, they are illusions, or mere beliefs.

In the proportion that the sinning and suffering realize that sin and sickness are not made by God, in that proportion do they become their master. It was this simple yet profound process of reasoning to which Christ Jesus referred when he said, "Ye shall know the truth, and the truth shall make you free." Science and Health is based on the Bible and is inseparable from it. In not the slightest detail does it depart from the pure idealism of Christ Jesus.

✧

[Thomas F. Watson in *Oakland* (Cal.) *Enquirer*]

Christian Science is founded on the Bible, especially the life and teachings of Christ Jesus, and has nothing in common with mental suggestion, mesmerism, or hypnotism. The spiritual understanding of God which enabled Jesus and his followers to heal the sick can never be accurately portrayed through story-book or drama, for, as the Bible states, spiritual things must be "spiritually discerned."

The text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, states and elucidates the healing Principle of Christian Science, and these truths can be demonstrated in proportion to the spiritual understanding of the student.

Editorial

A Wall of Defense

It is gratifying to note, as the years go by, how one by one the great scientific discoveries promulgated by Mrs. Eddy four decades ago, and which since then have been derided and ridiculed times without number by would-be clever critics, have later found vindication, strangely enough, at the hands of physical scientists. By devious ways and by incalculable labor and reasoning they have finally arrived at conclusions to which the Discoverer and Founder of Christian Science had long since attained, not by material research but through spiritual understanding of the word of God, and had proved them by actual demonstration.

For some time now, to cite one instance, it has been freely claimed by the medical profession that the excessive indulgence of anger, malice, and like brutal passions induces in the individual the secretion of a poison as injurious in its effects on the body as is the continued use of drugs or stimulants. Not long ago a case was brought before the courts in which this claim figured in a new phase, in that the verdict rendered by the jury was to the effect that death had been superinduced by "a mental assault;" in other words, by persistent fault-finding. Mrs. Eddy has shown how a disturbed condition of thought may react upon a person physically and mentally, but even so she does not leave that person helpless and hopeless, to succumb to such a belief, by conceding to evil either place or power. Instead she points out that the condition can be met by casting out the error, the perturbed thought which has manifested itself on the body, and that in order to do this one "must calm and instruct mortal mind with immortal Truth" (Science and Health, p. 415).

The case above mentioned is of interest only in that it directs attention to the fact that our law courts are not yet sufficiently advanced to take into account the allied relationship of mental and bodily assaults. It is hopeful, however, because it is indicative of an awakening on the part of the public to the recognition that these assaults when deliberately administered are in one and the same class, and should be so acknowledged and dealt with by the courts.

In this connection we may recall a paragraph on page 20 of our Leader's Message for 1901, where she says: "The crimes committed under this new-old régime of necromancy or diabolism are not easily reckoned. At present its mystery protects it, but its hidden modus and flagrance will finally be known, and the laws of our land will handle its thefts, adulteries, and murders, and will pass sentence on the darkest and deepest of human crimes." Surely the wilful perpetrators of such offenses must suffer from a sense of guilt as keenly as do those who are more open in their defiance of the command "Thou shalt not kill," and though they may for a time escape human justice, they have yet to reckon with that unchanging law which declares, "There is nothing covered, that shall not be revealed; neither hid, that shall not be known."

Christian Scientists have continual reason to be grateful for the assurance of protection which is theirs because they have been taught to recognize this hidden evil for what it is and how to protect themselves against it. In the article above referred to Mrs. Eddy writes: "This mental bane could not bewilder, darken, or misguide consciousness, physically, morally, or spiritually, if the individual knew what was at work and his power over it." Oftentimes young Scientists, and occasionally even those of more experience in dealing with the one evil, are obsessed with fear lest they become the victims of some subtle, mysterious enemy whose secret work they cannot combat. In such cases the remedy lies in the first place in the knowledge that evil is unreal and has no power, and second that it is not possible for one to be at the same time a true Christian Scientist and a deliberate malpractitioner.

Against all workers of evil the Scientist may and should build for himself a sure defense before the enemy can entrench itself within the citadel, and daily, hourly, he must see to it that his walls are kept impregnable to assault. Our Leader believed in prevention, and the Scientist who is alert enough to make his own the teachings embodied in the ninety-first psalm, and who is obedient to the admonition in Section 6, Article VIII, of the Church Manual, and in the last paragraph on page 442 of the text-book, may be of good cheer, for he has naught to fear.

ARCHIBALD MCLELLAN.

Rebuilding the Temple

STANDING in the presence of the pathetic ruins of the Parthenon, one is impressed with the splendor of its ideal, with the greatness of the people who conceived it and gave it such superb expression, and with the loss to all the world which was inflicted by a grossly stupid vandalism. Here an incomparably glorious concept bloomed into concrete form, and as one thinks of the decades, yes centuries, of studious development which must have preceded the attainment of such a masterful technique, and of the vast expenditure of patient labor which without any modern facilities reproduced the artist's vision in this pure stone, he is likely to feel a sense of protesting grief that these peerless columns should ever have fallen and this exquisite entablature lie crumbling upon the ground. From the human point of view it is all very saddening, and one finds relief only as he turns away from distressing thoughts of decay and gains the realization that the ideal, the ultimate and abiding fact, has not been and can not be mutilated or even marred, but remains the eternal possession of all those who love its appearing.

With kindred sorrow and solicitude unnumbered people are looking today upon what they speak of as "all that is left" of another wondrous temple, the Christian church, conceived and projected by a yet greater than Phidias, and to the erection and adornment of which the apostles, saints, and Christian heroes of the past freely gave their all. One can hardly take up a current religious periodical which does not comment grievingly upon "the decay of the church," "the passing of vital religion," or "the failure of Christianity." In so far as we fail to discriminate between "the structure of Truth and Love, whatever proceeds from divine Principle" (Science and Health, p. 583), and the church of creedal beliefs, we are likely to accept the status of the Christian church thus publicly enlarged upon by its best friends, and therefore concede the fitness of the symbol of its departed glories which is found upon the summit of the Acropolis.

Two points of contrast are immediately presented between the spiritual ideal and the pitifully imperfect embodiment of human endeavor, namely, those of unity and efficiency. As planned and provided for by Christ Jesus, the church is the expression of the natural, inherent unity of a demonstrable apprehension of the realities of being. It expresses that unity of thought which alone supplies a basis for unity of heart, for Christian brotherhood. Jesus' legitimate expectation of his followers was impassionably voiced in those wondrous words, "That they all may be one; as thou, Father, art in me, and I in thee, that they also may be one in us." How astounding, therefore, that our Leader's insistence respecting

Digitized by Google

the practical possibility and imperative need of a faith that has been scientifically raised to the level of spiritual understanding, at-one-ment with Truth, and thus made efficient in the healing of sickness, even as it was in the first century, should have served to uncover the unblushing incredulity of so many professed believers!

The loss of the healing faith and works of the early Christians could but bring disintegration and decay to the human organization, and yet the undisturbed consent to this loss, even by the good and great among Christian men, is impressively illustrated by Max Müller when he says: "It cannot be denied that cures of the physically blind have this in their favor, that so exceptional a personality as Jesus may also have possessed an exceptional healing power. It then depends only on the character of the blindness, whether it was curable or incurable, and the solution of this question we may be content to leave to medical men."

Christian Science again essays the demonstration of a church which exists essentially as a dominating, Christlike consciousness, and which may be seen of men as a brotherhood of believers who are both united and efficient. This is the rebuilding to which we are committed; and the greatness of the enterprise, its significance to human redemption, must surely give pause to thoughtless impulse and bring to every worthy Christian Scientist a sense of inspiration and holy purpose.

JOHN B. WILLIS.

Endurance

THE word endurance does not convey the same meaning to all classes of people. To a great many it means a sort of stubborn resistance to misfortune or suffering, and those who entertain such a view generally believe that one's power to endure is limited by his physical strength. Among other definitions of the verb to endure is this: "To continue in the same state without perishing." Of course this could not be applied to anything material, and from it we turn to that which is unchanged by the vicissitudes of mortal experience, whatever their nature. In the 102d psalm we read that the heavens and the earth shall perish; but this is written from a mortal and material viewpoint, for another passage of Scripture declares that "whatsoever God doeth, it shall be forever." From this we come back to the psalmist's assurance that although material things "wax old like a garment," yet God shall "endure," shall remain unchanged.

In looking over the ever-changing panorama of human experience we see persons and things giving place to other persons and things, and this has furnished a fruitful theme for poet and moralist, who at best have only urged resignation to that which has seemed inevitable. Mrs. Eddy, however, bids us look away from the mortal sense of things, and in no uncertain tone she says (Science and Health, p. 259): "Immortal ideas, pure, perfect, and enduring, are transmitted by the divine Mind through divine Science, which corrects error with truth and demands spiritual thoughts, divine concepts, to the end that they may produce harmonious results." Now this may be applied alike to individual experience and to world problems which concern the whole race. Christ Jesus clearly foretold the conflict between truth and error in individual thought and in families, also the strife between nations, iniquity abounding everywhere and the love of many waxing cold.

This dark picture might well appal us were it not for the strong word of assurance which is linked close to it, the antidote of Truth and Love at hand to forestall the possible influence of fear, and here it is: "He that shall endure unto the end, the same shall be saved." To some "the end" means death, with a promise of better things beyond the grave, but to the Christian Scientist it means the end of the opposing error, that which denies the omnipotence of divine Love, whatever be the issue involved. To God and His idea there can be no end. To the one struggling, it may be long and wearily, with a sense of physical suffering, this promise of the Master offers untold strength. God is not harmed by the supposititious conflict between flesh and Spirit.

Just here some one may say that this offers small comfort to the sufferer, and this might be admitted if it referred to a far-off God, but it does not. Our God is ever with us, and His child can no more be harmed by sin or sickness than can God, who is our refuge and our strength. God's child abides "under the shadow of the Almighty," and remains unchanged because the Father is unchanged and His truth "endureth to all generations." This truth,—the truth of man's likeness to God,—which Christ Jesus declared and demonstrated, has endured through all the years, and in spite of doubt and denial it sets men free from sin and disease as surely as it did in the first Christian century.

We are wont to think that if death came we should leave behind us the mortal body and at once "put on" that which is never touched by sin or death. Even if this were admitted, would it not be better to lay hold upon it now, for the truth of being is not created for any one when he passes on. One's true being is, as St. Paul says, "hid with Christ in God," and when this is recognized "the enduring, the good, and the true" is brought "into your experience" (Science and Health, p. 261). It matters not what may be the mortal sense of existence, it has no reality to God, who knows only His own creation. The apostle's further word is, "When Christ, who is our life, shall appear, then shall ye also appear with him in glory." With this in view, the phrase "endureth all things" takes on a new and glorious meaning!

ANNIE M. KNOTT.

Among the Churches

Current Notes

BELLINGHAM, WASH.—A beautiful new church is to rise in Bellingham in the near future at the southwest corner of Maple and Forest Streets. It will be built by First Church of Christ, Scientist, and will cost about twenty thousand dollars exclusive of furnishings. Including these the outlay will be about thirty thousand dollars. The entire building will not be completed at once, but the first unit will be built in 1916. The church lot is opposite the Y. W. C. A. Building, and has a frontage of 110 feet on Forest Street and a depth of 125 feet on Maple Street.—*American-Reveille.*

EAST ORANGE, N. J.—Increased attendance at the services of First Church of Christ, Scientist, has made new quarters necessary, and beginning tomorrow [Feb. 6] services will be held in the large hall on the ground floor at 317 Main Street, directly opposite the post-office.—*Newark News.*

BURNS, ORE.—The members of the Christian Science Society have had erected a very creditable edifice on the corner northeast of the Court House grounds, and will soon have a comfortable place of their own in which to hold services.

Burns News.

PARIS, ILL.—The general contract for the new Christian Science church has been let. The site on East Court Street has been cleared, and it is expected that the building will be completed in about five months.—*Paris News.*

Digitized by Google

ROCHESTER, N. Y.—As an outcome of the steady growth in the congregation of First Church of Christ, Scientist, at Alexander and Cobb Streets, there has come the erection of a large church at East Avenue and Prince Street. The auditorium of the new building will seat one thousand people, and the Sunday school rooms in the rear of the main building have a seating capacity of five hundred. The cost of the structure will total one hundred and fifty thousand dollars, and it will be ready for occupancy late in the coming spring.
Rochester Herald.

ROCKVILLE, IND.—The Christian Science Society of Rockville has purchased the residence property located at the corner of York and Michigan Streets. The society takes possession on March 1 and will remodel the residence for church purposes. The society first met in a private residence, and then occupied the rest-room at the Court House. The members expect in the future to erect a church upon the newly purchased lot.—*Terre Haute Tribune.*

OHIO.—First Church of Christ, Scientist, of Canton, First Church of Christ, Scientist, of Massillon, and the Christian Science Society of Alliance joined in maintaining a booth at the Stark County fair, held in Canton in September. There were distributed 2702 *Sentinels*, 304 *Journals*, 3002 *Monitors*, and 500 pamphlets, a total of 6508 pieces.
Correspondence.

PEORIA, ILL.—The edifice of Second Church of Christ, Scientist, is now being finished, and it will provide accommodations for the increasing number of Scientists in this city. This church is located on a large lot in the 100 block, Barker Avenue. It will have a seating capacity of over six hundred.
Peoria Journal.

EVERETT, WASH.—So rapid has been the growth in membership of the Christian Science church that the congregation recently purchased three lots, whereon eventually will be erected a fine new edifice. The lots occupy the southwest corner of Wall Street and Hoyt Avenue.—*Everett Herald.*

STROUD, ENGLAND.—The congregation at the Christian Science services at Lansdown Hall has so increased in numbers that it has been thought advisable to hold a service in the morning as well as in the evening.—*Stroud Journal.*

ROCKY FORD, COL.—The building committee of the Christian Science church is calling for bids for the erection of their new edifice, which will be located at the corner of Maple Avenue and Eleventh Street.
Rocky Ford Gazette and Topic.

✧

Admission to Membership in The Mother Church

The next admission of candidates will be June 2, 1916. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 10, 1916.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

Pasadena, Cal.

George Shaw Cook lectured on Christian Science to an audience that completely filled the church. He was introduced by S. W. Condon, who said in part:—

The overburdened man or woman of today is in as great need of the sustaining and healing power of divine Love as was the man who, a cripple from his birth, was healed by Peter and John as he lay helpless at the gate that was called "Beautiful," nearly twenty centuries ago. There is nothing like a real, vital problem to force humanity to strike root down deep into the soil of spiritual experience. Many of us in this audience tonight could testify from a conviction based on experience, that suffering and overburdened men and women stand very much in need of exactly that which Christian Science has to offer them. Possibly no further explanation is necessary to account for the remarkable growth and demonstrated permanency of the Christian Science movement.

Those who are trying very hard to dislike Christian Scientists because of their religion, are after all only criticizing them for making available to mankind now that which they themselves, in a more or less indefinite way, believe in as a future fulfilment and possibility.—*Pasadena News.*

✧

Eastbourne, England

A lecture on Christian Science by Clarence W. Chadwick was given at the Town Hall. In introducing the lecturer Lieut. C. F. Armstrong said in part:—

After one of the most beautiful and significant dialogues ever recorded or spoken, and that is still remembered after nearly two thousand years, a woman of Samaria returned to her friends in the city and told them that she had surely found the Christ. And she would seem to have remained satisfied with the mere recital of that portentous discovery; at any rate, we hear no more of her. Nearly nineteen hundred years later a woman of America rose from a bed of sickness and said to her friends, who wonderingly asked for an explanation of the miracle, that she had found the Christ. But this woman, Mrs. Eddy, who is now known and beloved all the world over, was not content to let things rest at that, and spent the remainder of her life on this earth in sharing her discovery with others and showing poor humanity the way to this Christ.—*Correspondence.*

✧

Wheeling, W. Va.

William R. Rathvon delivered a lecture on Christian Science in the Market Auditorium. He was introduced by Joseph R. Curl, first reader, who said in part:—

Today more than ever before nearly every individual demands the privilege of deciding for himself his course on every question. Formerly the ordinary individual without the least murmur allowed others, even in grave matters of conscience, to plan his line of conduct and stand with pointed finger to show him the path he must take; but now he is pulling away from under the yokes he thoughtlessly took upon himself or permitted others to place upon him. In each phase of endeavor he is now thinking his way and acting for himself.

That is how and why we Christian Scientists have chosen our course. In our ranks are former members of all other denominations, and very many of no former religious affiliation or belief. They have joined us because they investigated, reasoned, and became convinced. We believe that in Christian Science we have found a real panacea and solvent

Digitized by Google

for the disturbances and problems of life. Because our convictions in this regard are so firm, we believe it our Christian duty to acquaint our fellow men with this great truth which is available to all. Not alone are we actuated by the command, "Go ye into all the world, and preach the gospel to every creature," but we have apostolic example. When Andrew and Philip met Jesus and recognized in him the Christ, their first act was to find their brothers, Peter and Nathanael, and to invite them to "come and see" that which they had found. We have invited you to "come and see."

Correspondence.

Testimonies of Healing

In loving gratitude to God, also to our revered Leader, Mrs. Eddy, I shall try to tell how I found Christian Science and what it has done for me. As a girl I attended church regularly with my parents, and some of my happiest recollections are of that church and our kind minister. His wife assisted him devotedly in the work until she became an invalid, and this made a deep impression on me, as I did not want to be good if it meant being sick. I was taught to accept poverty and death as the will of God, and so as I grew older I nearly drifted into atheism, yet there was always the longing for a God I could understand.

About this time I heard a little of Christian Science, and the thought that God knew only good, attracted me. I decided to investigate it for myself and commenced to attend church regularly, at the same time putting my two children, who had received no religious instruction, in the Sunday school. I shall never forget the first day I went into the Sunday school room. I did not expect to meet any one with whom I was acquainted, but the superintendent proved to be an old friend of my mother and had known me as a girl. I was never alone or lacking for friends, and I give this incident to encourage others who may think it necessary to wait for some one to take them to church. If we will turn away from personality and look to God, we shall find the friends that meet our needs.

At first I could not understand very much of Science and Health, but our Leader's tender love which breathes through its pages was as balm to my aching heart. I was told to accept as much as I could and to wait patiently for the rest to become clear to me. There was much to overcome, but after I had grasped the fact of man's oneness with God it became my life-work to prove it. My progress was slow, for many faults and sins were uncovered that I did not know existed for me. I was healed of nervous exhaustion, of a sense of poverty, and of discord in my family relations.

My healing has not only been permanent, but many other blessings have been added to it, not the least of which has been a daily lessening of a sense of self. I have learned that we must guard against being influenced by others, and if we will earnestly strive to get rid of the false human will and seek divine guidance, our lives will become harmonious and successful.—Winifred W. Gatling, New York, N. Y.

✧

I did not take up the study of Christian Science for physical healing, but because the various material theories I studied failed to offer adequate explanation of God and man, and it was just this which I so much desired. Previous to entering college, I became dissatisfied with the church of which I had been a member for years, because many of its teachings appeared illogical to me, and I determined to strike out in search of something that I could accept, for I felt such a religion existed. While in college I studied various subjects that I thought would give me some light, and entered into friendly discussion with my fellow students to see what they had to offer. During this time my thought was in a very turbulent condition, and I even doubted at times the very existence of God. I read all I could and continued my study for three years. These were years of searching, and when my last energies were being exhausted, Christian Science was presented to me.

I had made it a point to give each new subject a careful examination, but just at the time Christian Science was offered me, I was very busy, although I did go to the church services. After I had attended them for a few weeks, the smoking habit left me, and a bowel disorder of years' standing was rectified. This was before I had read Science and Health. These healings were very impressive to me, and I began to investigate for myself. It was not easy to throw overboard my previously conceived opinions and to become as a newborn babe, desiring "the sincere milk of the word;" but I knew this had to be done, and in so far as I have relinquished wrong thinking, just so far have I been changed physically, mentally, and spiritually. In the two years which have followed I have found in Christian Science that for which I was searching.

While out for the wrestling team at college, my face and neck became completely covered with an eruption, but with the help of a Christian Science practitioner I was completely healed in a little over a week. From indulging in the same sport, a large swelling appeared on one ear. This condition was, however, almost entirely overcome in less than a month. I was very grateful for this latter demonstration, since of the numerous other cases of which I know among wrestling and foot-ball men, none have ever been healed.

I have had abundant proof of the healing and preventive power of Christian Science, which is meeting my needs in every way; but that for which I am most grateful is my changed basis of thought. Words can never express my gratitude to God, also to our faithful Leader, Mrs. Eddy, for the unfolding of this practical truth.

Everett Carmany Howard, Harrisburg, Pa.

✧

When I first heard of Christian Science it was after years of dependence on doctors and medicine; in fact I am quite sure there were not six months from my earliest infancy that I did not take medicine of some kind. As I passed from childhood to womanhood I suffered from so-called inherited diseases peculiar to women, and these were getting worse each year. I was told I would never be well and strong, or able to be on my feet without suffering. I also had kidney, liver, and stomach trouble. My heart was about the only organ in my body that was not said to be diseased. I had suffered from headache all my life, and had worn glasses about ten years for a structural defect and contracted muscles of the sight.

At this time, when I was so run down in general that the physician said I was on the verge of a complete nervous breakdown, I traveled from the Atlantic to the Pacific in the hope of getting my health in sunny California. I did, but not as I expected to get it. I had been here several months with no good results; in fact in some ways I was very much worse, my eyes in particular. The constant sunlight kept my head aching nearly all the time and I was not able to work at all. At last I was advised to try Christian Science, of which I knew nothing, but I was glad to try anything that promised relief.

Three days after my first treatment I laid off the glasses never to put them on again, although two of the best specialists in Philadelphia had told me I never would be able to go without them. The eyes were not entirely healed at that time, but the laying aside of the glasses made the work very much easier, the practitioner told me. In less than three weeks I was working, and I have not had to take any time off for ill health since. For eight years now I have not used a material remedy of any kind, but in every time of need have found God an ever-present help. I am able to walk, and can be on my feet all that is necessary to attend to my business properly.

I am indeed deeply grateful to God, who has shown us the way in Christian Science, through Mrs. Eddy, to live happier and more useful lives.—Ada Harden, Los Angeles, Cal.

Our baby, when twelve months old, was stricken with what appeared to be infantile paralysis, losing control of her limbs and suddenly becoming unable to sit up, also crying out from pain whenever it was necessary to move her about. This was accompanied by an acute attack of bowel trouble and high fever, also a cough. All these conditions were overcome by the power of Truth as revealed in Christian Science, and she was healed in less than two weeks.

For this healing and many other blessings we are deeply thankful to God, as well as grateful to all who have helped us in gaining the spiritual understanding of the law of Love which sets us free.

MRS. ARTHUR REED ADAMS, New York, N. Y.

✧

[Translated from the German]

I herewith wish to testify to the healing through Christian Science of my fourteen year old daughter of kidney trouble and a dropsical condition in its severest form. I had Christian Science treatment for her, and the pain left and did not return, but the girth of her body seemed to increase within the next few days, so I yielded to my husband's wish to call in a physician. After a brief examination he diagnosed the case as a serious affection of the kidneys and of the abdomen, in its most advanced stage, and said that it had already reached the heart; that our daughter should be taken at once and with all precautions to the nearest hospital and not left one moment without medical attendance. He finished by saying: "Whoever takes it upon himself to continue treatment here at home acts without conscience. I shall not do it, neither shall I come again."

I could not make up my mind to turn my child over to some one else. Now was the time to show implicit reliance on the omnipotent help of God, the great Physician. The practitioner continued her work fearlessly; no material remedies of any kind were employed, neither was there any change of diet. The result was that within a comparatively short time the water disappeared from the system. Six years have elapsed since then, and my daughter is in the best of health.

FRAU DORA VOIGT, Hamburg, Germany.

✧

When I had been out of school about a year I became very ill, and the doctor said the ailment was a serious throat trouble. He removed a portion of the palate, but the condition was not improved. Then some one recommended the waters of Ems, Germany; so I went there with a friend, but at the end of six weeks was so weak that I had to be wheeled everywhere. The physician then sent me to the noted iron baths of Schwalbach, where for another six weeks I went through the same régime, even to the taking of the iron mud baths, but was no better. We heard of the noted physicians of Heidelberg, and went there. One of them told me that the waters at Ems and Schwalbach had injured the coating of my stomach, and immediately, in response to his conjecture, I found that I could not eat the simplest food without suffering.

After two months' trial of this doctor, the friend with whom I was traveling became alarmed about me, so she brought me home in the middle of the winter. During the next two years I had sixteen physicians in my home city, also tried a sanitarium, but at last ended by going to bed and having a trained nurse. I was very ill and all expected me to pass on. At this time the thought came to me that I would not die; that if I could only stop thinking of myself and keep happy thoughts, I would somehow get well. It came as a firm conviction. Just then Christian Science found me. When asked if I would allow some one to come and treat me, I consented, with the provision that there should be no talking, for I felt too weak to bear any one's voice.

The practitioner arrived. I only remember that she said one sentence which very much awakened me: "You think that you are glorifying God by lying here so patiently, but you have almost worn the whole family out, and now you must get up and glorify God by being well and helping the world." She said, "I will not talk to you, but I will come daily and treat you. I will also leave my instructions with the nurse, and I want you to know that God will give you the strength to obey." When she had gone the nurse said, "I will now bring your luncheon." After she left the room I prayed as never before that God would give me strength to obey. I thought she would return with something very light in the way of food, but to my surprise she brought a well-filled tray. There was a moment of hesitation and resolve, but I felt that there was opening to me a new field of experience, and as a result I ate the first full meal in two years. I was then going to slip back into bed, but the nurse said the practitioner had told her that I was to remain up all the afternoon and that she was to help me walk around the room. This, too, I obeyed.

The next day the nurse carried me down to the first floor, the following day she had me out driving, and the day afterward out walking. When we reached the street in this first walk, she proposed what seemed a long distance. When asked how she knew I could walk back, she said, "The lady says I am to tell you always that there is but one Life and that is God, and that this infinite Life can never tire or get worn out." I clung to this simple statement; it was my meat day and night. In a few weeks I awoke to the fact that I was perfectly well and could do whatever I wanted to do. I did not understand how this healing came about, and strange to say would allow no one to explain it to me; I could only declare that "the Lord God omnipotent" had healed me. Christian Science was new here at that date; there was no church, no teacher. This dear, honest woman had just come to me with what she herself had learned of the great truth, and I was perfectly healed.

Afterward, when I married and had children, I found that I could not help them. I was in a constant state of fear about them, and to my chagrin I felt I must have the family doctor for them. Finally we moved to Kentucky and I had to leave the family physician behind me. I could gain no faith in the doctors in our new abode, and when disease broke out among the children in our town I was in a vortex of fear. For several days I prayed that God would show me how to gain the sense of health for the children that I had for myself.

Just at this time my sister sent me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had not asked for the book and did not know that I needed it, so it was put in a drawer. One evening, two weeks later, I began to read it. I had read only a few chapters before I was assured that it taught the Principle and gave the proof and explanation of my own healing and of how to help others. The next morning the children and I threw away the medicines and put the teachings of Science and Health into instant practice, with daily proofs of its truth. It has been almost ten years since I began to study our text-book, and it has never failed me. It can never fail any one, for it states the Principle and rule of the Christ-healing; it illumines the Scriptures, and points us, as Mrs. Eddy expresses it on page 107 of Science and Health, "to the revelation of Immanuel, 'God with us,'—the sovereign ever-presence, delivering the children of men from every ill 'that flesh is heir to.' "—FLORENCE STRATTON WEAVER, Baltimore, Md.

It would take a long time to tell of all that Christian Science has done for me and for my family during the past seven years, but I will just give a brief account of my experience and how I was healed of the liquor habit. At the age of nineteen my parents moved to the city, where I fell into the hands of some young sports and my drinking career began. For sixteen years alcohol had the best of me. When I awoke to the fact that the appetite for liquor was fastened upon me I tried to overcome it, but in vain. I took a "cure," but in less than five months was drinking harder than ever. The future looked very dark and I wished many times that I could die.

Then a friend advised me to try Christian Science, stating that he had been healed and that it would heal me. I laughed at him, for my wife and I had talked it over and we were under the impression that Christian Scientists were queer people and that Christian Science was the work of the devil. My friend, however, talked to me for a few moments and then told me that a friend of his was in town who had been healed of the liquor habit by Christian Science, and that he would have this gentleman call on me the next day. This he did. We had a very pleasant visit, and I could plainly see that I had been thinking wrongly about this religion. I told this gentleman that I would give Christian Science a trial, and did so the following week.

I presented my case to a practitioner, and much to my surprise was healed in the first treatment. From that day to this I have never had a desire for liquor. I was also healed of bowel trouble of years' standing, deafness in one ear caused by a shock from an electric battery when a small boy, the tobacco habit, and many other errors. All I have and all I am today I owe to Christian Science, which has met our many needs during all these years.

I have no words at my command to express my thankfulness to God for His loving care, and my gratitude to our beloved Leader, Mrs. Eddy, who was pure enough in thought to give to the world "Science and Health with Key to the Scriptures," which, studied with the Bible and properly applied, will heal us of sin, sickness, and death.

GEORGE E. NIGHTINGALE, Denver, Col.

✧

For many years I was a great sufferer from stomach trouble and severe headaches. I could eat and digest but little food and was constantly getting weaker. I was under the care of physicians during those years, and followed their advice faithfully in trying medicines, massage, and climate, but they afforded only temporary relief. During this time I also had a nervous breakdown and attacks of influenza, the latter every winter regularly. Finally I was prostrated with an attack of vertigo and confined to the house for seven weeks. When able to get about, the doctor told me I would be subject to these attacks the rest of my life and must be very careful about stooping quickly or crossing streets when any vehicles were near by, as I might be seized with dizziness and fall. Thus I was kept in a constant state of fear, in addition to the suffering and weakness.

Becoming discouraged, as a last resort I turned to Christian Science for help. While at the practitioner's I was suffering intensely from headache and dizziness, and told her I had been in the habit of taking a material remedy when these headaches came on, but had not taken any that day. She replied, "You have said enough; you are consenting to two powers, God and medicine." She then gave me treatment and I started for home, still suffering. Just before reaching there I came to the decision that I would have only one power control me,—God, the great Physician, the only healing power,—and that I would never take another drop of medicine, and that instant I was healed. I shall never forget the spiritual illumination, the peace, joy, and happiness, that came to me at that moment and has remained with me ever since. I went into the house, and feeling hungry ate a good dinner without any bad after effects, something I had not been able to do before for many years. Ever since then I have eaten everything I wished.

About a month after my first healing, while stopping at a hotel in New Hampshire, I was awakened about half past one in the morning suffering severely from inflammation of the bowels. There was no Christian Scientist to call on for help, so I took the Bible and read the first verse of the ninety-first psalm, "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty." Then the thought came to me that if I could be as near to the Almighty as this psalm says we can, no harm could come to me; and I was immediately healed and fell asleep.

Before understanding anything about Christian Science I was troubled with asthma when in certain places. While visiting in Vermont in the summer-time I would have such severe attacks of it that it seemed as if each breath would be the last, and I would have to return home as quickly as possible. Since coming into Christian Science I again visited this same home, and by putting what little understanding I had of God's allness into practice, I was healed, and have had no further trouble from this ailment. I am now perfectly well, and able to enjoy life as never before.

For all these blessings I am truly thankful to God, also grateful for the spiritual enlightenment which has come to me through Christian Science. My one desire is to love God and do all I can in His service.

FREDERICK LOVIS, Dorchester, Mass.

✧

[Translated from the German]

It was about seven years ago that I first heard of Christian Science and became an adherent of this teaching. Like many others, I was led to it through suffering. After spending twenty years in Colorado I developed heart trouble, owing, as was believed, to the high altitude, and this condition became more and more serious despite the medical advice received. Finally a change of climate was recommended, and southern California deemed a desirable place of sojourn for me; but even there I went through serious struggles, and material remedies failed to bring relief.

At the recommendation of my son, who repeatedly called my attention to Christian Science, I began to read Science and Health, and behold, the inspiring statements of truth by our Leader wrought wonders in my behalf. With the help of a practitioner I became better acquainted with this teaching, and as I progressed in understanding, physical improvement was followed, after a rather long and assiduous study, by complete restoration. This experience by itself makes me feel most deeply indebted to Mrs. Eddy for the wonderful healing power which has been revealed in Christian Science.

That the healing was thorough may also be seen from the fact that I was able to survive what seemed the heaviest blow of my life,—the sudden passing away of my only son, a young man of twenty-one. Only Christian Science with its teaching of immortality made it possible for me to bear this great trial. It illumined my path and showed me the right way unto salvation. I earnestly sought comfort in the teaching of Christian Science and derived solace from the lectures which I heard from time to time. The study and application of the teachings of Christian Science daily brought me nearer

Digitized by Google

to God, good, and through the power thereby conferred upon me I was able to overcome error in its various manifestations, such as worry, sin, and disease.

It has sometimes seemed to me as if the Scriptural saying, "Let us not be weary in well doing," had been spoken at my cradle, for since early youth my natural inclination has been to do good to my fellow beings; but I am in a better position to do so now, since through the right apprehension of God I have been strengthened spiritually, and am thereby enabled to help my neighbors more effectually in word and deed.

I am indeed grateful to Mrs. Eddy for the discovery of Christian Science and for what the truth as therein presented has done and is doing for me. We cannot honor the memory of that great woman better than by trying to live our lives in the spirit in which she lived hers, by helping to establish the kingdom of heaven on earth, by practising loving-kindness to one's neighbors, by being charitable, just, and pure; briefly, by doing unto others as we want them to do unto us.

FRAU PAULA J. WUTH, Los Angeles, Cal.

✧

I was brought up in the Jewish faith, and during my early years was a faithful follower of that religion, but as I grew to manhood, not being able to get a satisfying understanding of God thereby, I gradually fell away until I had no religion left. After several years of doubt and despondency as to whether there really was a God, I was taken suddenly ill with mental trouble and was removed to an asylum. For the next thirteen years I remained a mental wreck, with here and there a few months of patching up through change of climate and other material means, but only to be thrown back to the old hopeless condition. At last, after much suffering, I was given up by the best medical authorities as hopelessly incurable, the chief physician telling my wife that I would never do another day's work.

At this point (August, 1913) a neighbor mentioned Christian Science to my wife and advised her to try it on my behalf. Treatment was commenced on a Friday, and on the following Monday I was able to begin my business, although I did not do it all at once, but gradually as my healing came. I was also frequently ill with severe headaches, which made me useless for the rest of the day, but these have been overcome. Glasses which I had been told would have to be worn constantly have been laid aside. I am also healed of the habit of smoking, and am thankful to say the healing has continued satisfactory and is permanent.

Words cannot express my gratitude for all the blessings I have received through Christian Science; I am indeed thankful to God for having given us this truth, and grateful to Mrs. Eddy for our text-book, "Science and Health with Key to the Scriptures." I am also very grateful for all our literature. Before coming into Christian Science I had no desire to read the Bible or any religious book, but now I love to study the Scriptures daily. I know that I am spiritually, morally, and physically better than I used to be, and my one desire is to be a loyal and worthy Christian Scientist. I am deeply grateful to recognize Jesus as the true Messiah, and our Wayshower in the fulfilling of God's law by the healing of sickness and the destruction of sin. I should also like to express my gratitude to all the friends who have helped me to see the truth.

HENRY MORRIS, Ealing, W. London, England.

✧ ✧ ✧

Earth's crammed with heaven,
And every common bush afire with God;
But only he who sees, takes off his shoes.

ELIZABETH BARRETT BROWNING.

From Our Exchanges

[The Christian Work]

The principal value of the Christian revelation is this,—that it really does put us in touch with what is beyond and above all sense-experience, all change and decay, all darkness and evil. It can and does unite us to the eternal now; in a manner of speaking it puts us in possession of that which will survive when this world and everything in it have vanished like clouds and shadows before the light of the morning. By its ability to do this the gospel of Jesus stands or falls. If people only understood better what it is and what it promises, they could not possibly view it with indifference. Christianity is not primarily a set of rules for good behavior; it is not a code of conduct; it is not merely good advice as to how to live.

We cannot put this too strongly, for it comes home to us with overwhelming force as we view it in relation to human nature. It is an offer of deliverance from the dominion of a lie, the lie of sin; it is the infusion of a new principle into our hearts in response to faith; it is the letting through of the love of God and the joy of heaven into our earthbound souls, the shattering of the dominion of a delusion, the delusion of materiality; it is a perpetual miracle, the miracle of the impartation of God's own life to the believer through Jesus Christ our Lord. Mysterious as this sounds, it is the simple and literal truth; this is the secret of the vitality of the gospel in the world today as in every other day. Those who live by it come into possession ever more and more fully of something that is not of this world, a divine essence, a spiritual good, an unspeakable gladness, which is part of the real and indestructible eternal substance from which all goodness flows.

[The Advance]

We approach the thought of sacrifice with a certain and apparently reasonable prejudice. Why should sacrifice be necessary? If a thing is bad it should be no sacrifice to let it alone, and if it is good why should we not have it without stint? Why should sacrifice have any part in a reasonable religion? The pleasures of life are none too many. Why should we seek to limit them? Yet on the threshold of the Christian religion and of many other religions we are met with the centrality of the idea of sacrifice. The cross is the emblem of the Christian faith. It stands definitely for the idea of self-abnegation. There is a tendency in human nature to protest against this idea, and insist that it cannot be true. If God made the world and the world is good, and God made human life and human life is good, and God made the world for human life and human life for the world, the world and human life ought to answer to each other as the key to the lock. Not self-sacrifice but self-realization would seem to be the norm of life.

[The Christian]

It seems as though the gospel itself were on trial in the lives of those who profess its faith, with all the world looking on as interested witnesses. Unless its dynamic is unmistakably sufficient for the carrying out of its ethic, creating in Christian men unruffled confidence and undaunted courage, and inspiring them to the utmost self-sacrifice in the service to which they are pledged, the world is going finally to reject its redeeming declarations. Continuance is the ultimate proof of reality in spiritual profession, and only as it characterizes the lives of Christians today will men accept the message they proclaim. Upon our proved ability not only to endure the strain of life worthily, but also to overcome every influence

Digitized by Google

which tends to divert our energies from devotion to the things of the kingdom to personal concerns, depends in some measure the very reputation of our Lord. With what solemn responsibility does this fact invest life at the present time, when the world is at the crossroads!

[Rev. Gordon L. Thompson in *The Homiletic Review*]

With the old idea of religion as something apart from real life, men used to speak of secret Christians. The better understanding of Christianity as a power which renews every fiber of a man's being shows that in the very nature of the case there can be no such thing. One may believe that what we read concerning Christ is true without yielding the life to him; he may know and even confess that the Christian life alone is worth living, but he cannot be a Christian, he cannot live the life that is "hid with Christ in God," without his associates soon becoming aware of the fact.

[Rev. Donald B. Fraser in *The Christian Commonwealth*]

All I know is that the world wants a new kind of human creature,—is growing to want it more and more,—a creature who rises out of the ruck of our conventions and acts from highest promptings on a more synthetic plane; in whose mind more of these untapped possibilities of God energize; a fourth dimension creature, a being with a sixth and seventh sense, whose idea of truth gathers more into it of what we at present discard as falsity, who looks over the summit of our present contradictions and sees the range of sequence stretching upward to the infinitudes.

[*Zion's Herald*]

In the Acts of the Apostles there is an uneven distribution of emphasis, Paul, Peter, and James occupying most of the field of vision, with modest Luke flitting like a dim shadow in and out of focus. The biography of the Acts, and indeed of the whole Bible, is provided, not for its own sake, but in the interest of a spiritual progression, a process which we have come to know as the kingdom of God developing through history. The human interest is secondary to the divine thought and plan.

[*The Standard*]

Fixity in ideals, that is, the possession of definite standards by which our conduct is measured, or goals which we strive to reach, is a moral asset of the greatest value. The north star to the mariner, with or without a compass, is what a fixed ideal is to character. It is almost as bad to have variable ideals as to have no ideals. Fixity in ideas, on the other hand, is an intellectual—if not a moral—liability.

[*The Universalist Leader*]

There is much difference of opinion, too much, about the present-day function of religion, but we fancy that all this difference is really but the process of a living and growing religion adapting itself to the new conditions of a new age. Some cling to the old, while others rush to the new, and both are wrong, for the old must merge into the new so vitally that there is no dividing line.

[*The Church Family Newspaper*]

As we have frequently pointed out, the church is upon her trial, and if she chooses to waste her time and energy upon vain and futile disputes, her candlestick will certainly be removed.

[*The Continent*]

When men become irreverent and familiar, they have forgotten how great God is. When they feel themselves deserted, they have forgotten His nearness.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Law and Work" is the title of a new pamphlet containing the following articles: Love Fulfils Law, The Logic of Christian Science, Undisturbed, God's Law of Adjustment, Authority.

The increased cost of binding the periodicals has necessitated making an advance in the selling price of the bound volumes. The new prices, which take effect April 1, are as follows:—

JOURNAL—Volume 32 (April, 1914 to 1915). Cloth, $3.00; half morocco or half calf, $3.75.

SENTINEL.—Volume 16 (September, 1913 to 1914) or Volume 17 (September, 1914 to 1915). Either volume, cloth, $3.25; half morocco or half calf, $4.00.

For all other bound volumes of *Journal* or *Sentinel* write for prices.

DER HEROLD.—Volumes 5 to 12 in cloth, $2.75 each; volume 4 to 7 and 9 to 12 in half morocco, $3.50 each; volumes 4, 5, 9, 10, 11, 12, in half calf, $3.50 each.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to page four in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for the year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $5.50. On earlier volumes write for prices.

Items of Interest

The secretary of the international high commission on uniform commercial laws and practices in the western hemisphere recently made public the final program of subjects to be considered at the meeting at Buenos Aires, Argentina. They are the establishment of the gold standard; bills of exchange, bills of lading, and other instruments of international commerce; uniform classification of merchandise, custom-house duties, consular invoices and certificates, port charges; uniform rules for commercial travelers; further legislation in regard to trade-marks, patents, and copyrights; establishment of uniform postal charges, and uniform commissions on postal money-orders; extension of arbitration as a means of adjusting business disputes; advantages of uniform laws in regard to work and workmen; exploitation of petroleum and other combustible materials in America; need of better means of communication among the American republics; banking facilities, credits, funds for public and private enterprises, establishment of international exchange; telegraph tolls, wireless communication; also laws for improving the conditions for selling goods on credit.

A proposition is under consideration to build a macadam highway across the Isthmus of Panama from Boquete to the Atlantic seaport of Rovalo, and thence to Almirante, which is said to have one of the best harbors south of the United States. The proposed road will be 74.5 miles in length, and will pass through a country which is without paths or trails of any kind. In the opinion of engineers who have gone over the survey, the road when completed will be one of the most picturesque highways in the world. The survey crosses the crest of the mountain range at an altitude of 6000 feet. The country traversed is well watered, for the most part uninhabited, and everywhere exceedingly wild. In the hilly and mountainous parts waterfalls abound, one of which is said to be a sheer drop of 120 feet. The work of construction, it is reported, will commence in April or May. The highway is to be a standard macadam road with an 8 per cent maximum gradient and a minimum curvature of a 20-meter radius.

A cotton conference is to be held in Rio de Janeiro, Brazil, at the beginning of May. During the last five years great development has taken place in Brazil in the cultivation of cotton, the bulk of which is produced in the northeastern coastal states of the country, although it can be grown below Paraná or in the Amazon Valley. The increase in the cultivated area of cotton has taken place largely in the districts within easy reach of the great cotton mills of the republic.

A few years ago, in order to encourage this industry, some of the Brazilian states—Minas, for example—offered a subsidy for each 50,000 arrobas of cotton grown from selected seed furnished by the state Government, but required that modern machinery be used in its cultivation and that an area not less than 400 hectares be exclusively devoted to that purpose. This state also offered a subsidy to the first cottonseed-oil factory established within its borders, the minimum production to be not less than 100,000 liters of oil.

A radical modification of the doctrine of riparian rights was considered by the state water problems conference in session at San Francisco, Cal., recently. A committee recommended the adoption of a law requiring riparian owners to begin lawsuits to protect their rights within three months after the actual commencement of any work they claim to be an infringement upon their rights. Under the existing law, which is the old English common law governing riparian rights, the riparian owner may sue years after the completion of the work to which he objects. Action is also recommended for a further restriction of the riparian doctrine by an amendment to the present injunction law which shall require a riparian owner to prove actual damage before he can obtain an injunction to prevent some one else from using water. It is contended that the present water rights law has done much to retard the development of the state.

Last week the Senate adopted without debate a resolution by Senator Kenyon, directing the attorney-general, if not incompatible with public interest, to submit to the Senate all reports of investigations made by the department into the Standard Oil Company since the Supreme Court decree of dissolution against that company, and particularly any investigation into gasoline prices. Senator Kenyon had read to the Senate resolutions adopted by the Western Oil Jobbers' Association at St. Louis, petitioning Congress to supplement the Sherman law to make effective the decree of dissolution against the Standard Oil Company, and declaring it to be the sense of the association that the dissolution decree was a failure.

The Government has accepted an offer for the resumption in modified form of the contract for the new port works of Buenos Aires, Argentina, which was suspended following the outbreak of the European war. The work is to be on the basis of the expenditure of $100,000 gold a month. It is understood that this reduced monthly outlay is to continue only so long as the present abnormal economic conditions continue. The value of the work yet to be done in order to complete the contract is about three and a half million pounds sterling, and the government in accepting the present temporary arrangement reserve to themselves the right of requiring compliance with the terms of the original contract when circumstances in their opinion render it feasible and desirable.

The bill for the establishment of a national park service has had a hearing before the House committee on public lands. The bill would place a director, to be under the supervision of the secretary of the interior, in charge of all national parks, national monuments, and reservations. Beautiful parks, it is contended, would attract to the United States increasing tourist travel and trade. It is computed that Switzerland receives $150,000,000 a year from tourists, and France $500,000,000. Canada's income from the same source is second only to that received from field products and minerals.

The prediction made a few years ago that the development in power generation would take the form of large stations at the source of the fuel supply, is well illustrated in the program of construction of the West Penn Power Company, which now has a 60,000 kw. power station at Connellsville, Pa., is building a 150,000 kw. station at Wellsburg, W. Va., and plans to build this year a 100,000 kw. plant on the Allegheny River at Freeport, Pa.

An elk and deer refuge in Minnesota will probably be officially designated within a few weeks. This tract, which will cover nearly two hundred square miles, upward of one hundred and twenty thousand acres, is second only to the big Superior National Forest of one million acres. It will be located in Pine County, between the St. Croix and Kettle Rivers, these streams forming the western, eastern and southern boundaries.

The Vermont Marble Company's new mammoth lime-kiln at Whipple Hollow, two miles north of West Rutland, Vt., which has been under construction since April, 1915, is being electrified, and will be in operation May 1. The plant, which cost $250,000, will convert 200 tons of stone into 100 tons of lime daily. The kiln itself is 130 feet long and 12 feet in diameter. It will take care of the waste marble accumulations at the various quarries in West Rutland and Proctor.

Peanuts were imported into Argentina in 1913 to the amount of 7,985,169 pounds, of which China supplied 2,884,822 pounds; British possessions, 2,288,534 pounds; France, 1,371,487 pounds; Africa, 973,635 pounds; Dutch possessions, 389,222 pounds, and the United States 82 pounds. In 1914 the total imports amounted to 4,685,235 pounds. Besides this there were under cultivation in Argentina during the season of 1913-14 about 62,963 acres devoted to peanuts.

The Great Lakes Transit Corporation, recently organized with a capital of $20,000,000, has taken formal possession of the thirty-three vessels purchased from the New York Central, Pennsylvania, Erie, Rutland, and other railroads. Among the vessels which have been engaged in lake traffic are three passenger steamers, which cost $1,000,000 each. The combined capacity of the entire fleet is more than one hundred and fifty thousand tons.

Announcement has been made in New York of the organization of the Anthracite Coal Operators' Association, composed of independent operators producing about thirteen million tons of coal annually. Conservation of coal properties, improved methods of production and distribution, and means for safeguarding miners, are mentioned among the objects of the organization.

Manufacturing jewelers who use platinum in their products have just been notified by the United States Government that a large source of supply has been found near the headwaters of the Atrato and San Juan Rivers, Colombia, South America.

Approximately one million dollars will be spent by the Great Northern Railway this year on its New Rockford-Lewiston cut-off across North Dakota and Montana.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII April 22, 1916 No. 34

"Thy will be done"

REV. JAMES J. ROME

In all ages the human heart that could turn from the turmoil of mortal sense and with faith in the divine control could say in sincerity, "Not my will, but thine, be done," has derived much comfort and solace even when believing that the suffering was directed or permitted by divine wisdom. Too often, however, the seeming comfort has resulted from the fact that a spirit of rebellion has been displaced by one of fatalistic submission, somewhat in the sense that "what can't be cured must be endured." It is not until we can use the words with a true understanding of what the will of God really means, that we are enabled to derive therefrom the true sense of peace and harmony.

The passage of Scripture from which this expression is taken is that in which the sufferings of Jesus in the garden of Gethsemane are described, and is generally interpreted to mean that these sufferings were in accordance with the divine will, that the cup was given him by the Father. There are few if any, nevertheless, who do not feel a sense of aversion to the thought of an infinite, loving God forcing upon His innocent Son the agony from which he prayed to be delivered. To say that divine law demands restitution for sin by the suffering of the innocent for the guilty, is to violate the highest sense of even human justice and subvert the plain teachings of the Scripture: "The soul that sinneth, it shall die," and "Whatsoever a man soweth, that shall he also reap." What, then, did the expression used by Jesus mean?

It is evident, of course, that it was the human sense of Jesus which cried out, the sense which was conscious of the presence of suffering and fear. This was not by any means fear of the physical pain, however, but his prescience of that struggle to which Paul refers in writing to the Ephesians, that "we wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this world, against spiritual wickedness in high places," and of which Mrs. Eddy says (Science and Health, p. 50), "The real cross, which Jesus bore up the hill of grief, was the world's hatred of Truth and Love."

To suppose that Jesus dreaded the physical suffering would be to minimize his estimate of the purpose of his mission. It is known that men in their efforts to accomplish some great human purpose have been almost oblivious to what ordinarily would cause an agony of pain. How much less, then, would such suffering affect one striving for the salvation and transformation of a sinful world and the attainment of spiritual supremacy. The Master's struggle must therefore have been that of the human sense while being subdued by the divine, the claim of mortal existence being made subject to the spiritual, until "my will" bowed to "thine" in meek acknowledgment of its supremacy. Not that God's will was being accomplished in the suffering, but that the divine will was accomplished no matter what the evidence before the mortal senses seemed to be.

It is worthy of note here, that the word "accomplished" is considered by many as a better rendering of the original than the word "done" used in the common version, and is the one used by Rotherham in his translation. By comparison it is also found that the expression of Jesus in this instance is identical with that used in the Lord's prayer, "Thy will be done [accomplished] in earth, as it is in heaven," and to which Mrs. Eddy has given the inspired interpretation, "Enable us to know,—as in heaven, so on earth,—God is omnipotent, supreme" (Science and Health, p. 17). From the premise that this "omnipotent, supreme" God is infinite, perfect, harmonious Being, Christian Science draws the conclusion that He cannot therefore create, send, or recognize evil or discord, and hence that for His will to be done on earth as it is in heaven would mean the recognition by human consciousness of His perfect, holy, harmonious government.

Could Jesus mean, in using the same words in the two instances above referred to, that God's will being accomplished would result in perfect, blissful harmony in one case, and in discord, suffering, and confusion in the other? Impossible! Jesus was undoubtedly recognizing that even though to mortal sense there might seem discord and persecution, in the realm of the real there is only the perpetual reign of infinite harmony,—that "God is omnipotent, supreme." In his interview with Nicodemus, Jesus maintained this same attitude when he referred to himself as "the Son of man which is in heaven," while to mortal sense he was in the midst of discord. Without doubt it was his faithful persistence in holding to this higher, this divine sense that enabled him to triumph over death and the grave.

Christ Jesus taught by this experience a most valuable lesson. It was not in this experience alone, of course, that he showed unswerving obedience to the demands of spiritual law, for his whole life was one continual recognition of the supremacy of the divine will; but in this culminating test he showed his steadfast, unyielding adherence to divine Principle, regardless of the dreadful consequences which seemed to threaten. If the demonstration of truth requires of us an experience which is distressing and humiliating to the human sense, then this sense must be subjugated and mortal will and self-love be brought into submission to the domination of spiritual sense.

Herein one of the mistakes made in the effort to demonstrate Christian Science finds a severe rebuke. How often it is found that in our attempt to prove the supremacy of spiritual law we outline not only what the subsequent result should be, but the manner in which that result should be gained. Persistence in this may lead either to a false method of mental practice, or to a sense of disappointment and discouragement because the experience in attaining the hoped for results is not according to the expectations. It is well to ask ourselves whether we are working for the purpose of making a demonstration in a certain way, or because we desire to see divine Principle demonstrated, for it is this aim or desire which marks the difference between the human will and the divine will. There may be danger at times of desiring to have God's will done "my" way, and we are blessed indeed if we are able to say, "Not my will, but thine, be done,"—not my way, but Thy way.

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

The argument may be presented that since Christian Science is supposed to produce harmony, it is made apparent that the treatment has been a failure if a harmonious sense does not immediately result. In answer it may be said that to declare a treatment has failed to accomplish its work because harmony is not quickly realized, is to draw a rash conclusion. If such were the case, then Naaman's healing by Elijah, the healing of the blind man who was told to go and wash in the pool, and even Christ Jesus' struggle with human sense in the garden, were all failures. To permit the thought to enter consciousness that the treatment may fail, is in itself enough to deter if not interdict the desired result. When we are counting the time it takes to find the physical or mental relief, we are not seeking "first the kingdom of God, and his righteousness," or subordinating the human will to the divine.

When we are willing to sacrifice our material hopes and desires for the sake of attaining a more spiritual sense; to give up our mortal sinning sense of life and seek to reflect only the divine Life; to let go our self-interest and self-love for the unselfed love that finds its own good in helping others, blessing its enemies, healing the sick, and redeeming the sinner, then we will be able to understand better the words of the Master, regarding which Mrs. Eddy says in Science and Health (p. 33): "When the human element in him struggled with the divine, our great Teacher said: 'Not my will, but Thine, be done!'—that is, Let not the flesh, but the Spirit, be represented in me. This is the new understanding of spiritual Love. It gives all for Christ, or Truth. It blesses its enemies, heals the sick, casts out error, raises the dead from trespasses and sins, and preaches the gospel to the poor, the meek in heart."

The Comforter

M. LOUISE BAUM

"EARTH has no sorrow that heaven cannot heal." If these words of Thomas Moore are true, as Christians know them to be, then no multiplicity of sorrow, not the sorrows of all the earth, are beyond the healing power of divine Love. Christian Scientists, who understand the ever-presence of Life, know what it means to stand victorious before some seeming final grief, the utmost which mortal belief can do to hurt them. They know what it means to see the whole house become, as Shakespeare dared to phrase it, "a feasting presence full of light." They know what it means to cheer even those who come to comfort them, sharing thus the comfort wherewith they themselves are comforted of God. They know at last the meaning of Jesus' words to Martha, "I am the resurrection, and the life;" for there is no death, and they have seen into eternal life. They have seen, even though they cannot put it into words which mortal ears may hear, that no change has come for their beloved, but more light, more assurance of God, a brighter shining of that same beauty which has long sustained the Christian heart.

Christian Scientists know these things as a matter of understanding, not alone of hope or faith. In an hour of seeming loss or change they do not see "through a glass, darkly;" they have definite knowledge, clear as axiomatic truth. As they know that "a straight line is the shortest distance between two points," because they see it to be so, just so they know that Life is ever present, because they see it to be so. They look into the heart of divine Love, and they see there no shadow of darkness or fear. There is no loss; God's plan does not provide for loss or failure. His will is done on earth as it is in heaven. Our beloved do not die, for God is to them, to all, omnipresent Life.

But if Christians may know this amid the shadow of their own grief, since the extremity of human need is often the one hour when we really turn to God with all our heart and mind and strength, then surely Christians may stand with equal courage—yes, with the same radiant assurance of joy—in the very face of a world calamity. This can be done; it should be; it must be. It is the great duty laid in this hour on every one who has named the name of Christ. This is the testing time of Christianity. Now at last it must heed the first commandment; and the second is the corollary of the first: "Thou shalt not make unto thee any graven image." This graven image is made in thought. It is built up of beliefs in matter, whose image replaces the image of God. So long as we look at this graven or material image of things above or below or around us, we shall see all creation groaning and travailing together in anguish. Whether it be the open despair of a world that at last acknowledges how it is poor and naked and defiled, or whether it be the hidden corruption of that whited sepulcher men call civilization and peace, it is a graven image of something God did not make which occupies the thought of mortality. The image of God should dwell in the secret place of thought, the reflection of God, which is—what? Man and the universe made in the heavenly likeness. When this vision absorbs us we cannot see the other; the pictures of hatred, death, and despair no longer appear. Love for God, the One "altogether lovely," has wiped them out.

This is the process of healing the sick. Mrs. Eddy says: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick. Thus Jesus taught that the kingdom of God is intact, universal, and that man is pure and holy" (Science and Health, p. 476). If this is true in regard to one form of the human idol, or false image, or picture-making; if these eternal facts are proved in destroying the image called sickness,—then it is everywhere true. We not only may, we must, turn away from the images or idols of thought that show man and the universe as material and subject to death. We must cease to fear or to exalt or to believe these false "graven images," these idols of material sense. Here is the call of this hour to all the earth: "Thou shalt have no other gods before me."

Christians must rally today to this call of spiritual understanding. Now as never before they must stand with their faces to the light. Now they must shut their eyes from seeing evil, and they will not only dwell on high themselves; they will at last lift all human thinking above these lower levels, above the clouds of material sense, to the eternal calm and purity and peace of the kingdom of God. For the battle of Armageddon is being fought,—not outwardly, but in human thought and consciousness. The strife to turn to God, to turn away from obsession with material things, as either pain or pleasure,—this is the battle; and in this battle we are all perforce engaged.

While we see ourselves as mortal, we are in the trenches, head-high in living graves—the mortal dream. Shall consciousness remain buried here, or shall we fight our way out to light and peace? How? Mrs. Eddy has indicated this in her saying in "Miscellaneous Writings" (p. 180): "I awoke from the dream of Spirit in the flesh so far as to take the side of Spirit, and strive to cease my warfare." In this struggle to stand on the side of Spirit there is no discharge; but thank God there is no defeat, for God is with us. "We wrestle not against flesh and blood," but against the unseen kingdom of darkness, error, which is in its last analysis nothingness. We must turn the battle to the gate, and stand. Every sugges-

Digitized by Google

tion of that which denies God must be held at bay; this is today's demand on every Christian.

Do we believe our Master's teaching? Do we take him at his word? "The flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life," he said. Then by the definition of Jesus, Life is Spirit. It is not in or of the flesh. The sense-dream of the flesh never touches true life. To know this is the whole, the only fight today, the trumpet-call of this hour to civilian or to soldier. So far as the Christian stands firm in his battle for the unchanging perfection of God's creation, so far he forwards the victory of all who contend for the rule of Spirit. So far as the human heart yields to hate or fear, to pride, to grief, or to despair, so far the victory falters; but it cannot fail.

The understanding of God, then, is the Comforter. On page 55 of Science and Health, after quoting the words of Jesus, "He shall give you another Comforter, that he may abide with you forever," Mrs. Eddy says, "This Comforter I understand to be Divine Science." The word comforter means one who comes to strengthen or fortify. Then this Comforter, this present consciousness of God, in Divine Science, is the great ally, revealing the surrounding legions, God's angels, His holy, eternal ideas, forever perfect and all-glorious. Let us then lift up our eyes unto the hills, whence cometh help.

God's Manifestation

ELEANOR B. CONGDON

A short time ago I was deeply impressed by this statement in Science and Health (p. 117): "Christian Science attaches no physical nature and significance to the Supreme Being or His manifestation." If we emphasize the last word in the sentence, we see that Christian Science attaches no physical nature or significance to God's manifestation, and we thus find much food for thought. When a man is healed in Christian Science and his condition changes from sickness to health, one naturally asks, Is there not then some physical nature or significance attached to God's manifestation?

In my own experience I have always found danger in any line of thought, however plausible, which tends to make a bridge between matter and Spirit, and I have found the utmost consolation in the perception that there really is no physical nature whatsoever attached to God's manifestation. What really takes place when one is healed in Christian Science is a mental and spiritual change. Something of materiality, some material belief, has been put off, and a more spiritual concept, or enlarged mentality, put on, or let in; some of the old man put off and some of the new man put on; material sense has grown "beautifully less" and spiritual sense has been beautifully unfolded.

Is not this mental change God's manifestation? God could not possibly be reflected in changing forms of matter, however good they might seem, for matter, though "sometimes beautiful," is "always erroneous" (Science and Health, p. 277). Spiritual healing, then, is not the improvement of matter, but it is knowing the allness of that which has nothing to do with matter. The reason matter seems to improve is that we have lost something of it, and the less we have of it the less error we are burdened with, for it can never be good, because it is not of God.

If physical healing alone were the end and aim of Christian Science treatment and study, as it is in medicine and so-called mental suggestion, it might be said of Christian Science, as some of its critics have said of it, that it is a material form of religion. But the end and aim of Christian Science work is wholly different; in fact it is just this difference in motive which constitutes the vital difference between Christian Science and all other systems of healing. In many of these systems the motive seems to be simply to build up, "patch up" and improve the mortal man, or human self, with all its mortal conditions, and then to attempt to spiritualize this human concept, thereby magnifying the supposititious source of all evil. Contrariwise, the purpose of Christian Science is to destroy, to cast out, to lose this unreal mortal concept, and to make room in its stead for the consciousness of that one Mind outside of self in which there is nothing to improve, nothing to destroy, nothing which needs to be changed. Are not these viewpoints diametrically opposite?

It seems to me that we sometimes strive and struggle to improve something which does not really exist, namely, a self apart from God, instead of realizing the all-governing perfection of the one infinite Mind, in which "we live, and move, and have our being." Our Master said, "If any man will come after me, let him deny himself, and take up his cross, and follow me," and also, "He that loseth his life for my sake shall find it."

King Darius' Question

ANNIE P. FURBER

The sixth chapter of the book of Daniel is a well-spring of spiritual inspiration to the student of Christian Science who has seen instances of the power of divine Love to heal sickness and sin. Believing the Scripture to be true that declares Christ to be "the same yesterday, and today, and forever," the deliverance of Daniel from the lions is recognized as an instance of the ever-present and almighty protecting power of divine Love. It is natural, therefore, that when beset by perplexities and problems which often appear as formidable and dangerous as veritable lions, the student should turn to the Bible story of Daniel to refresh his thought by musing on the prophet's implicit faith and confidence in God, and to strive to realize that the same God is still "a very present help in trouble."

As Daniel may be taken for an example of the God-protected man, so may the Persian king Darius be regarded as a prototype of those seekers after Truth who at this time are reading the Bible in the light of a new hope, the hope that there is present today as of old a power to heal and save. Of this we are assured by our revered Leader on page 150 of Science and Health when she says: "Today the healing power of Truth is widely demonstrated as an immanent, eternal Science, instead of a phenomenal exhibition. Its appearing is the coming anew of the gospel of 'on earth peace, good will toward men.'" The deep interest taken by the powerful king in the fate of Daniel, shown by his night of anxiety and restlessness, his fasting and gloom, indicates that he realized that the Hebrew captive in his ability to rely absolutely on his God possessed something which he as king with all his pomp and splendor had not, and he hoped even while he feared that Daniel would be able to prove his confidence to be founded on invincible Truth.

So it was that the king went very early in the morning to the den of lions and cried out sorrowfully, "O Daniel, servant of the living God, is thy God, whom thou servest continually, able to deliver thee from the lions?" Wonderful indeed came the answer: "O king, live forever. My God hath sent his angel, and hath shut the lions' mouths, that they have not hurt me." This startling answer is being given again in this age to those who, in their search for Truth, are coming to the Christian Science Wednesday evening meetings, there to hear if possible words which shall add to their hope, courage, and confirmation. They come from every condition in life.

Digitized by Google

The learned man, who finds that all his lore cannot keep him from physical and mental decrepitude; the rich man, who has learned that all his wealth cannot save a beloved child; the widow, hoping that her oil and meal fail not in her dark hour; the business man, who sees his health and acumen failing and fears financial ruin; the sinner, loaded with his galling chains; the invalid, upon whom has been pronounced the sentence of death,—all crying in their hearts as did King Darius, "O servant of the living God, is thy God able to deliver us from the lions of sin, of sickness, even of death?"

Blessed indeed is that one who, in answer to this hungering cry, can and will rise and give a testimony of his own healing, thereby saying humbly and with gratitude, "My God hath sent his angel, and hath shut the lions' mouths, that they have not hurt me."

✧

Peace

MAGDELANA FRICKEY

CHRIST JESUS said, "When ye shall hear of wars and rumors of wars, be ye not troubled." These words convey profound meaning to those who are striving to follow in his footsteps, to be Christian Scientists in word and deed, and it is because we have learned through its teachings to know God and man aright, to put away trouble, and to pray somewhat as we ought, to gain a truly satisfying concept of unceasing prayer, that we should be ever grateful for Christian Science.

A fuller, deeper recognition of the possession of this knowledge was unfolded to me on a Sunday set apart for peace prayer in the churches. Our revered Leader tells us to respect "all that is good in the church or out of it," and if true to her teachings we earnestly endeavor to do this; but she adds that "one's consecration to Christ is more on the ground of demonstration than of profession" (Science and Health, p. 28). Words are ineffectual without works. The substance of Christian Science prayer is clearly shown in Isaiah's words, "The work of righteousness shall be peace; and the effect of righteousness quietness and assurance forever." Active right thinking about God and His creation at all times, in all places, is righteousness ("agreeing with right," as the dictionary defines it), and peace is ever the sure answer to this prayer. These two words, "righteousness" and "peace," are correlated in many Scriptural passages. James tells us, "The fruit of righteousness is sown in peace;" and in Romans we read, "The kingdom of God is . . . righteousness, and peace."

With the spiritual illumination thrown upon the pages of the Bible through the study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, the radiant significance of these words is revealed to us, and we clearly comprehend and understand them. This enables us also to behold the utter impossibility of praying aright while thought is filled with conflicting mortal elements, although the lips are petitioning for peace. This kind never gains the soul-sense and sweet blessing breathed through words like these: "Righteousness and peace have kissed each other."

When the Master was about to finish the work his Father had commissioned him to do, he willed to us an eternal possession of real substance when he said, "Peace I leave with you, my peace I give unto you." The veil of material belief would deprive us of this heritage and shut out the vision of the guiding star and the sound of the angel song. But we know a woman of God beloved, who saw and heard as clearly as the shepherds on the Bethlehem hillside ages ago; and through her the star now shines farther and brighter and the angel song is louder and clearer. Thousands upon thousands now behold and listen to "the coming anew of the gospel of 'on earth peace'" (Science and Health, p. 150); then we recall the prophet's words, "It shall come to pass in that day, that the Lord shall set his hand again the second time to recover the remnant of his people."

✧

The Rainbow Promise

ROBERT RAMSEY, M.B.

THAT "there is no life, truth, intelligence, nor substance in matter" (Science and Health, p. 468), is the teaching of Christian Science. Taken broadly, matter means a finite objective universe derived from mental force or material energy. Christian Science teaches that as there can be only one real universe, the result of the one real cause named God, Spirit, matter is simply the expression of a false material sense of this cause and its creation.

God's man, existing in the real spiritual universe, can only express himself by manifesting or objectifying the ideas which come to him directly from God. The false sense of reality, mortal man, projects its own lie about the real in order to account for itself with its supposititious material universe and intelligent mortals. This counterfeit, however, can only seem real to false belief; of itself it has neither fixity nor continuity as material fact or mental impression.

The Bible defines God as infinite Spirit, unchanging Mind, whose idea or expression must be infinite, omnipresent, and constructive, qualities exactly opposite to those ascribed to matter by natural science. Intelligence and life cannot be qualities of God and at the same time qualities of God's opposite. Let us suppose, however, that this opposite of God could exist, could express intelligence, that there could be a real mortal or material mind and universe; then by applying the unvarying law of like producing like, the thought-forces of this universe would be the opposite of God, good, that is, evil. A mind whose every imagination is "only evil continually," is incapable of life. This is the lesson of the Biblical flood, the overwhelming waters with their instability typifying the self-destruction of such a mentality.

This so-called mortal mind is seen, by this process of reduction, to be incapable of real existence, "having no hope, and without God in the world." It is equally true, however, that "where there is life there is hope," because a false sense cannot forever shut out the truth of being. In relation to the flood Noah stands for the idea of Truth, the man who finds favor with God, and proves that the surge of mortal mind in its self-destruction cannot destroy God's man.

After Noah had demonstrated protection for himself, the universal nature of salvation dawned upon him, and the rainbow became to him the sign of this idea. To the Christian Scientist this idea has been restated by Mrs. Eddy in Science and Health, where she says (p. 494), "Divine Love always has met and always will meet every human need." In attaching this promise to the rainbow, Noah was undoubtedly moved, not by a fear of the phenomenal, but by a vision of the Christ, Truth. The aptness of the simile is not far to seek. Man at-one with divine Love, in realization, can have no human need; to him infinite good is all. It is the introduction of a finite sense of good which opens the possibility of a belief in good's absence, and originates the belief in man apart from God and possessing unsatisfied needs. Similarly, when a mortal is fully occupied looking at the sun, he sees no rainbow; but when he turns his back on the sun and sees only the clouded sky, the mist that goes up from the earth, then appears the rainbow of promise, not in the cloud, never forming part of it, but on the cloud, between him and his difficulties.

The rainbow has its message to all mankind. To the natural scientist it stands for the resolution of light into the

Digitized by Google

several colors of the spectrum. To the child it awakens remembrance of the folk-lore saying, "At the foot of the rainbow is a pot of gold." To those having eyes to see, however, it symbolizes metaphysical healing, salvation on the cloud, from the cloud. To Noah it was a promise of the Christ,—the true light shining through an atmosphere of obedience and expressed in rays of beauty, blending in harmony. Though each has a color of its own, every color bearing witness to the light, yet all must be blended into one before the perfect light can appear. Thus the rainbow stands for healing so long as it is necessary, but it also points upward to that unity of individual consciousness with the one Mind, when mortal things shall have passed away and all shall know God. In this way only is every human need met.

The study of the symbolic presents the difficulty that a symbol can only illustrate a phase of the infinite. A symbol is necessarily limited and so may have an opposite; but that opposite is never part of the symbol, which must ever be in unison with the idea it symbolizes. Mankind has always tended to worship the symbolic or limited, in its desire to establish a selfhood apart from God and to recognize the reality of evil. The Hebrews worshiped Moses' brazen serpent up to the time that Hezekiah destroyed it, and the same erroneous concept is seen in the worship of idea rather than Principle. The sun has come in for worship from all time, but just as the modern religionist fails to detect the symbolic nature of such worship, so the devotee to sun-cures, air-cures, light-cures, cures from drugs, animal, vegetable, or mineral, all based directly or indirectly on the activity of a material sun, fails to realize that he is a sun worshiper.

There are indications in the Bible that the early teachers recognized this danger in symbolic teaching, and one of the methods they employed to counteract it was the use of the same symbol to illustrate different phases of ideas. Thus in Genesis we have the serpent as the symbol of evil, while in the wilderness Moses raised the brazen serpent as a symbol of wisdom, spiritual understanding, the impotence of material form to harm, apart from wrong mentality. It is for this reason that there can be no formula for a Christian Science treatment, for only the individual realization of man's unity with God, the recognition that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468), is the worship "in spirit and in truth" which Christ Jesus declared.

[Written for the *Sentinel*]

Truth's Dawn

CHARLES C. SANDELIN

A WONDROUS calm! A lifted sense!
The darkness flees and cometh day,
And error's storm-clouds pass away:
Behold Love's holy immanence!

A precious hope now doth unfold:
E'en as the sun on morning bright,
Truth fills the heart with gladdening light,
Dispersing earthly shadows cold,

And to the lonely heart the sweet
Companionship of Love doth bring;
The sorrowing arise and sing,
The impotent leap to their feet.

The world awakens from its sleep
And draws aside earth's blinding screen;
The universe of Mind is seen,
While Love its watchful guard doth keep.

Selected Articles

[Judge Clifford P. Smith in *Concord* (N. H.) *Monitor*]

The printed matter erroneously entitled "Christian Science Sentinel, Vol. 1, No. 1, London, 1916," which has been noticed in your columns, is not the first imitation of a genuine periodical which has been issued by the person responsible for this one. She is the lady who announced, three or four years ago, that she had discovered "The Unchangeable Law of the Conscious Cyclic Unfoldment of Life." Whatever this may have been, it was accompanied by what she designated "The Central Assembly of the Individual and Universal Church of Christian Science,"—an organization having barely enough members to fill its several offices,—and was followed, in 1914, by the first and only issue of what she called "The Central Sign," a document in the shape of a periodical.

Evidently these expedients did not accomplish the purpose of this lady and her associates. Thereupon she declared herself to be Mrs. Eddy's successor, took Mrs. Eddy's title, "Pastor Emeritus of The Mother Church," and began to make such use as she pleased of the names given by Mrs. Eddy to the church, the institutions, and the periodicals which the latter founded. It was expected, obviously, that acts of this sort would get the desired attention. Pursuing this course, the discoverer of "The Unchangeable Law of the Conscious Cyclic Unfoldment of Life" has sent out, within the last year, three different papers which closely counterfeited the appearance of the weekly, monthly, and quarterly periodicals issued by The Christian Science Publishing Society.

All of which shows that a printing-press can be put to many and strange uses. More particularly, these devices intimate that a "cyclic unfoldment" which has gathered a congregation of about a dozen persons, may present quite a portentous appearance when aided by a job printer.

✧

[Samuel Greenwood in *The Sun*, Vancouver, British Columbia]

According to a recent announcement in the press, an address was given before the Ministerial Association by a local clergyman in which Christian Science was referred to as a parody on Christianity. Christian Science is the religion of a large and ever-increasing number of earnest and devoted men and women who, it might be noted, have accepted its teachings because of conviction and practical demonstration, and not because it was the religion of their parents. They are generally admitted to be an intelligent body of people.

On what grounds, may we ask, do these ministers of the gospel base their decision? Is it because Christian Science is encouraging men to have more faith in God than they had before? Is it because it teaches that Christ is still the great Physician, and as ready to help men today as he was twenty centuries ago in Palestine? Is it because its adherents are actually finding in the practice of its teachings that which feeds their spiritual hunger and brings relief from the troubles and torments of mortal existence? Or do they take the position that because Christian Science does not coincide with their viewpoint in all things, it must necessarily be wrong?

It should be remembered that Christianity is the gospel of deeds, not of creeds. Jesus gave an infallible rule whereby to judge such things, a rule that rises above all human theories and opinions: that a tree must be judged by its fruits, not by its leaves or the soil in which it grows. He did not say that a Christian must subscribe to a particular doctrine. He did not teach that one's Christianity depends upon

Digitized by Google

whether he accepts the doctrine of the Trinity, or the Adamic fall, or predestination, or whether he believes in any of the other things over which men have fought and divided. What he did say was, "By their fruits ye shall know them," implying that it is not one's articles of faith but the life he lives that makes one a Christian.

If to help the sinning to reform and the sick to get well, if to help men to be purer and happier, and thus to add to the world's joyousness and right living, is a parody on Christianity, how shall the genuine be described? If it is a parody on Christianity to strive for a practical understanding of God as One who, as David expressed it, "forgiveth all thine iniquities; who healeth all thy diseases," what shall be said of the Scriptural writers who presented this concept of God? If it is a burlesque on true religion to worship Deity as supreme, to declare His omnipotence and omnipresence, and to acknowledge no other power, what shall be said of the Master and his apostles, whose practice was based on these truths? If in the first century it was not a parody on Christianity to teach its practical application to all human need, what makes it a parody to do this in the twentieth?

It is recorded in the New Testament that Jesus enumerated certain "signs" by which the true believer was to be recognized. Do the churches which these ministers represent manifest any of these signs which the Christian Science church does not? Are there any proofs of Christian practice which Christian Science does not give, but which are to be found in other religions? Leaving human doctrines and dogmas out of the question, for these do not decide one's Christianity and never did, in what thing vital to the Christian life is the Christian Science church deficient beyond other churches? In what direction do the faith and works of Christian Scientists fall below those of other Christians, that their religion should be publicly proclaimed a parody on Christianity?

Do not these brethren exhort their hearers to have more faith in God, and still more and more faith? Do they not teach them to observe the ten commandments, and to abide by all the Master's teachings and behests? Christian Science does not do less than this. Wherefore, then, do those who are pledged to be loyal to the teachings of the Nazarene meet together to sneer at their fellow religionists, who are working just as sincerely and successfully for the betterment and redemption of humanity? One is constrained to ask what true Christianity is, if the honest endeavor to make it practical is but a parody.

✧

[Thorwald Siegfried in *Spokane* (Wash.) *Chronicle*]

A Lutheran clergyman delivered an address in which he seriously concluded that Christian Science is not entitled to the name "Christian." Your report credits the minister with a liberal use of the word dogma as applied to the teachings of the Bible and of "Science and Health with Key to the Scriptures" by Mrs. Eddy. By definition of the word, any opinion, however false, that is firmly maintained, is a dogma; truth is not essential to constitute a dogma. The term is distinctly inapplicable to Christian teaching, for the simple reason that its teaching is, in the words of Jesus the Christ, "Ye shall know the truth, and the truth shall make you free." Reasoning from a dogmatic basis may, therefore, lead to a conclusion different from that to which we come when following the leadings of that infinite truth. The conflict between dogma and truth is a perpetual one.

In making the statement that Christian Science either ignores or denies the teaching of the Bible, the minister merely adopts this way of saying that he believes that the Bible teaches something which Christian Scientists have proved, to their own satisfaction at least, that it does not teach at all. For example, he says: "The Bible teaches that Christ died for our sins." Christian Scientists read in the Bible the glorious record of Jesus' resurrection, his appearance to and conversation with the disciples, and his ascension; and they know from the exalting experience of spiritual healing the truth of his own words, "Lo, I am with you alway." Quoting from Science and Health, we have Mrs. Eddy's statement, "The Sermon on the Mount is the essence of this Science, and the eternal life, not the death of Jesus, is its outcome" (p. 271).

No doubt our friends in other churches sincerely mean to observe and obey the precepts and practice of Christ Jesus, but mere good intentions are not sufficient. The question of fact still remains to be answered, "Are the works being done?" In that most scientifically accurate finale of the Sermon on the Mount, Jesus himself sets the standard by which any one may determine whether the name "Christian" is properly applied: "He that doeth the will of my Father." "Whosoever heareth these sayings of mine, and doeth them, I will liken him unto a wise man." "He taught them as one having authority, and not as the scribes."

✧

[E. M. Ramsay in *The Shetland Times*, Lerwick, Shetland Islands]

A correspondent maintains that the supreme test of any system of religion lies in its agreement with the Scriptures or its departure therefrom. So far we are in complete accord with him; when, however, he goes on to say that he has shown in former letters that Christian Science contradicts and opposes to some extent the testimony of the Scriptures, and that Christian Scientists when confronted with facts become evasive and have nothing to say, we do not admit the charge for a moment.

Much as we love and reverence the Old Testament, it is plain that we must turn to the words and works of Jesus in order to gain the clearest knowledge of God. In this connection let me remind your readers of a striking statement made by our Lord himself—"Among them that are born of women there hath not risen a greater than John the Baptist: notwithstanding he that is least in the kingdom of heaven is greater than he." These words were said on a remarkable occasion. John had sent two of his disciples to ask Jesus, "Art thou he that should come, or do we look for another?" To this question the Saviour replied by telling the messengers to return to their master and tell him that the blind, the lame, the lepers, the deaf, were being healed and the dead restored to life, and the poor (the beggars, that is, those hungering and thirsting after righteousness) "have the gospel preached to them." He pointed to these works as the proof of his Messiahship.

On what basis were these healing works wrought? They were wrought through the recognition that the real man is not born of woman; that is, that the reality of his being is spiritual, made in the image and likeness of God, and that man is therefore as invisible to the material senses as is his creator. A careful study of the New Testament will show that our Lord constantly taught that man's welfare depends much less on what he eats, drinks, and wears, than on what he thinks; that we must improve our thinking if we would become healthier, happier, and more successful. "The meek shall inherit the earth," the psalmist said.

In the Old Testament we read of cases of healing through prayer, but they were single acts, performed by men of exceptional faith, who were evidently unable to teach others how to do the same works. Our Lord, on the other hand, not only performed a great many healing acts himself, but he taught

Digitized by Google

his disciples to do the same and enjoined on all his followers the necessity of healing the sick. It is this same healing which is being performed today by Christian Scientists all over the world. It now lies with our critic to prove that better healing can be done by prayer based on the reality of matter, than that which is being accomplished through the recognition of the unreality of matter.

This unreality of matter seems at first puzzling to many, and even unscriptural, because they think it means that we do not believe in the reality of beasts, fishes, flowers, trees, hills, and so forth. To this we reply that we accept the statement made in the first chapter of Genesis, that God made all things, but we are convinced that these too are in reality perfect, and therefore spiritual. The following little illustration may help to make our position clearer. We all recognize that the Arabic figure 7 is only a symbol. This same idea may be represented by the Roman numeral VII, by the English word seven, by the Latin word *septem*, and by a great many figures and words employed by other nations in ancient and modern days. The words and figures which we now employ to designate seven may in the course of years give place to others, but the idea seven will remain unchanged and indestructible, because it is a mental or spiritual fact. In the same way the real individuality of a man is as superior to his bodily presence as the real individuality of seven is superior to its symbol.

✧

[Frank C. Barrett in *Lewiston* (Maine) *Journal*]

Our critic has gone to some length to prove that Christian Science teaches that disease is mental, and that its cure must be brought about by mental means. That is just right, for Christian Scientists heal by prayer, and in Christian Science prayers are mental. What I pointed out in my recent letter was that the mental means employed was not "will-power," as a physician had insisted it was. It was shown that the cures mentioned in Senator Works' speech in Congress were produced by mental means, but not by will-power. Does not our critic try with his material methods to heal sickness and make it unreal to his patients? Why should any one complain if Christian Scientists, by using Jesus' method of prayer or applied spiritual understanding, succeed often after every material means has failed?

If Christian Science is adding five, ten, twenty, or more years of healthy, happy existence here to thousands, then it has done something toward reaching that state to which Jesus referred when he said, "If a man keep my saying, he shall never see death." Shall we indeed relegate Jesus' sayings to the past and admit that they are of no practical value in this and every age? Christian Scientists are at least taking the first steps toward the ultimate overcoming of the "last enemy."

✧

[Charles W. J. Tennant in *Croydon* (England) *Guardian*]

A clergyman in an address to the North End Brotherhood made a statement with regard to the teaching of Christian Science which is misleading. He said, "Christian Scientists today teach that pain and sorrow are unreal, and that if one only made one's self believe so, they would not exist." Our critic has not understood the meaning of the words real and unreal from the Christian Science point of view; hence his remark.

A very clear line is drawn between the absolute, or eternal, and the relative, or temporal, throughout the works of Mrs. Eddy. Pain and sorrow are temporal phenomena cognized by the physical senses. That they seem very real to these senses, no Christian Scientist would deny, but he would affirm they have no part in the eternal reality of being. The definition of reality according to Christian Science teaching is given on page 335 of "Science and Health with Key to the Scriptures" by Mrs. Eddy, as follows: "Reality is spiritual, harmonious, immutable, immortal, divine, eternal." It will readily be admitted that pain and sorrow cannot possibly come under this definition.

Our Master said, "Ye shall know the truth, and the truth shall make you free." Now if pain and sorrow were manifestations of Truth, how could a knowledge of them make any one free from them? They are manifestations of erroneous thought, which must disappear before the light of spiritual understanding. Our Lord destroyed sin, disease, and death through his spiritual understanding of absolute, eternal truth, of which divine Mind is the divine Principle. Hence the admonition of St. Paul, "Let this mind be in you, which was also in Christ Jesus." In other words, think as Jesus thought, and your works will correspond. Has not our Master said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do"?

✧

[Carl E. Herring in *Omaha* (Neb.) *World-Herald*]

A critic in a recent article is quite generous in placing under the ban of disapproval every religion, ancient or modern, that undertakes to heal the sick, and at the same time calls attention to the fact that no religion was ever founded that did not include the healing of the sick. He also hints at instability because Mrs. Eddy found it necessary to revise the first edition of Science and Health; and suggests that Christian Science must stand on the expression of this truth as it first dawned upon Mrs. Eddy.

It is not possible to find a departure in any later edition from the fundamental teachings of Christian Science as first presented; but that Mrs. Eddy gained in clearness of expression is probably true. That this should be so is in obedience to the law of progress, which natural science recognizes as fully as does Christian Science. We are not so unfair as to intimate that any student of medicine would or should be obligated to rely upon the first expressions of medical treatment as a foundation for public confidence now; for if we went back to first sources the student of medicine would be confronted with the fact that his healing art included elephant's bile, dried spiders, toads, lizards, snakes, and such tidbits, as standardized remedies.

Passing the age of Hippocrates, the father of medicine, who prescribed dog meat, cabbage juice, copper, and lead, down to the nineteenth century, we shall find that the medical writers complain "of the enormous doses of medicine given, which interfered to an alarming extent with the process of healing." Within our own memory the fever patient was deprived of water and supplied with drugs, while under the present germ theory and serumtherapy the entire learning of the past has been swept aside, and probably not a reputable physician today relies on a medical work that is not of very recent date.

There is nothing to regret or censure in this, but rather to rejoice that it marks the close of the use of drugs as medicine. It should teach an important lesson of toleration and destroy any tendency toward dogmatic assertion or ridicule of others' beliefs. With a view, then, in a neighborly way, of trying to understand what a large body of entirely respectable citizens really think instead of trying to misunderstand them, let us recall to the educated chemist, physician, or scientist the fact that the eminent writers in their profession unite in the postulate that "there is no matter." When Mrs. Eddy says this they write to the public press about it, but when a college professor prints it they send their boy to that college to be educated.

Editorial

"Now is Christ risen"

EVERY now and then this question is put to the earnest seeker after Truth: Why, if Christian Science teaches that there is no death, do its followers pass through this experience? The question may be asked by a caviler against this teaching, or by one whose new-found faith in a God who is Love has been rudely shocked by the seeming failure of Christian Science to meet the test; but the answer is one and the same—the prevalence of material sense over spiritual understanding; in other words, comparatively few people have risen above the belief that death is a necessity. The logicalness of this position is plain when it is remembered for how many thousands of years mankind as a whole accepted death and decay as an inevitable sequence to material existence, and made preparations therefor. Consequently, though complete demonstration of the teaching that Life alone is real and death but an illusion, has not been attained in the half-century since this truth was promulgated by Mrs. Eddy, the progress made in this direction borders on the marvelous.

This tragedy of human experience, for such death is, seems the more unexplainable when it intrudes upon a home whose inmates are earnestly endeavoring to demonstrate the Christ-teaching, for then mortal sense takes up the apparent failure with the old hue and cry, "He saved others; himself he cannot save." The many proofs of the power of Truth to heal and to save which have been vouchsafed, are overshadowed or forgotten, and if through prejudice or ignorance, as sometimes happens, the case is dragged into court, the position of the Scientist is difficult indeed. Of himself he knows that Mrs. Eddy's contention is true, but to explain so that a public hampered by material thinking will understand that what has occurred is due, not to the employment of Christian Science, not to negligence on the part of the practitioner, the patient, or the family, but to the preponderance of mortal belief that death is inevitable and must be submitted to, is not easy. Particularly is this true in a community where Science is comparatively little known or when the family and friends are antagonistic, and hostile criticism and predictions of failure have to be contended with from the start. Then it is that the Christian Scientist sometimes asks himself why these things must be and wherein he has failed.

Truth never fails, but sometimes its exponents fail in their realization of its power, simply because, no matter how great their own faith may be, it is outbalanced for the time being by the sum total of mortal belief. Are they then to lose heart? Not at all. Christian Scientists do not go so far as to declare that complete demonstration over death is possible in this generation, because to claim this, as Mrs. Eddy points out, "is to assert what we have not proved" (Unity of Good, p. 40); but Christian Science does teach and its adherents believe that every overcoming of evil, whether of sin or sickness, is a step toward the ultimate vanquishment of this long-standing foe of mankind, and that when these trials of their faith come it is to strengthen their trust in the omnipotence of Truth. God is omnipotent, and this will be fully demonstrated when mankind unite in acknowledging it, instead of conceding, as the majority still do, that evil has power.

This point is brought out very clearly on page 43 of "Unity of Good," where Mrs. Eddy says: "This generation seems too material for any strong demonstration over death, and hence cannot bring out the infinite reality of Life,—namely, that there is no death, but only Life. . . . The achievement of this ultimatum of Science, complete triumph over death, requires time and immense spiritual growth. . . . I urge Christians to have more faith in living than in dying. I exhort them to accept Christ's promise, and unite the influence of their own thoughts with the power of his teachings, in the Science of being."

The great Wayshower came "to give light to them that sit in darkness and in the shadow of death, to guide our feet into the way of peace." At this season Paul's solemn yet exultant declaration, "Now is Christ risen from the dead, and become the firstfruits of them that slept," comes home to the lonely and aching heart with joyous reassurance. To the Christian Scientist it speaks of the breaking asunder of the rigorous bands in which mortals have so long been held by belief in that which the psalmist rightly calls "the shadow of death." Just as the earth with the recurring seasons wakes from its seeming dream of death and decay into ever-new life and beauty, so he sees in his daily overcoming, symbolic of that wrestling with evil in which with the apostle he dies daily, the foreshadowing of that final conquest in which men wake to a knowledge of Life as eternal and indestructible, though to human sense their earthly mission seems accomplished. The Master's word, "Because I live, ye shall live also," has not lost its power.

ARCHIBALD MCLELLAN.

"Risen with Christ"

CHRISTIAN SCIENTISTS are sometimes asked why their church does not observe "times and seasons" in the way that a good many other churches do, as, for instance, the Sunday called Easter. These questioners forget that St. Paul reproached the Galatians because they apparently did not grasp as they should the meaning of divine sonship, but instead clung to outward things, "the weak and beggarly elements" of mortal belief. He says, "Ye observe days, and months, and times, and years." In Article XVII of our Church Manual (Sect. 2) we are told that "there shall be no special observances, festivities, nor gifts at the Easter season by members of The Mother Church." Our Leader adds: "Those sacred words of our beloved Master, 'Let the dead bury their dead,' and 'Follow thou me,' appeal to daily Christian endeavors for the living whereby to exemplify our risen Lord."

Let no one think, however, that the Easter season means little to the Christian Scientist, who no longer observes it with outward ceremonial, but instead asks himself to what extent he has "risen with Christ" above earth and earthliness, consequently above doubt and fear. In his epistle to the Colossians Paul deals with this whole question in a daring and profoundly spiritual manner. He tells of the divine purpose to reveal to men that which has seemed to be a mystery, hid from the ages but made known through Christ Jesus, and he says that "the riches of the glory of this mystery" is "Christ in you, the hope of glory." The apostle then calls for faith in "the operation of God," who raised Jesus from the dead. To the Christian Scientist this does not mean faith to believe that God did so, for this is accepted by him without question, but faith in the operation of the same divine law at the present hour and in his own experience, the unfolding faith which lifts one above sin, sickness, and the fear of death.

To those in a sense of sadness or suffering at the Easter season this Pauline message tells of a new and wonderful sense of life, not to be gained from anything material, but which comes from being "quickened together with him,"—with Christ. Nature lovers point us to the revival of plant life in the springtime, but the plant is the same as that which had appeared in meadow or garden the year before. Not so, however, with the one who has died to materiality by learning

Digitized by Google

its nothingness, and who has "put on the new man, which is renewed in knowledge after the image of him that created him." The one who is "risen with Christ" is daily renewed in knowledge, the kind of knowledge which is power.

Christ Jesus knew that because God is omnipotent, evil is powerless, and he faced it unshrinkingly in its most hideous and fearsome forms. Those who are risen with Christ must prove it by living above anger, malice, and impurity, not in a merely negative way and on stated occasions, but by love, forbearance, meekness, wisdom, health, and harmony every day of the year. Paul says that, at most, holydays are but "a shadow of things to come," and we would fain possess the substance, Christ forever with us, giving us "the full assurance of understanding." Our goal is perfection, and for this we strive continually, for like the apostle we should each be ready to say of the divine power that it "worketh in me mightily."

Christian Scientists are privileged to offer unanswerable proofs that all the truth which is symbolized by Easter observances is to them a most vital thing every day of the year, and they cannot too often ponder the words of their revered Leader on page 191 of "Miscellany": "This glad Easter morning witnesseth a risen Saviour, a higher human sense of Life and Love, which wipes away all tears. With grave-clothes laid aside, Christ, Truth, has come forth from the tomb of the past, clad in immortality. . . . Mortality's thick gloom is pierced. The stone is rolled away. Death has lost its sting, and the grave its victory. Immortal courage fills the human breast and lights the living way of Life."

ANNIE M. KNOTT.

✧

"That they might have life"

WE of the northlands are again surrounded by reminders of that miracle of renaissance, that tidal reappearing of the infinitely varied manifestations of life, which may be so interpreted as to bring stimulus and spiritual uplift to thought as well as delight to the eye. In the midst of the greatest appeal ever made to the human heart and understanding, Christ Jesus called attention to a simple flower, and intimated that its study in the light of a right concept of God and His universe would prove immeasurably illuminating. If, therefore, we can but acquire the mental mood in which the flowers of the field become our teachers, then indeed we shall not lack that wisdom which the Scriptures declare is above rubies.

He who goes out into the morning to realize, as Mrs. Eddy has said, that "the one Mind or Spirit called God . . . supplies all form and comeliness" (Science and Health, p. 281), and that these are not dependent upon materiality, has gained that scientific point of view which is saving, because it makes it possible for him to extract the honeyed treasures of inspiration and strength from every wayside flower. It will increase that knowledge of good which, as Jesus taught, is the very substance of life. To the mentally alert this gain is both natural and inevitable. It were quite impossible for one to watch the opening bud without being impressed with the beauty, the power, and the glory of the spiritual ideal. This is "the secret of the Lord," and it is with all them that fear Him.

Absorption in materiality, failure to discern the true substance,—this is one of the world's greatest mistakes, and the so-called "living" which it constitutes is a perpetual deception and disappointment. Life is not without, but within. In an important sense, everything worth while is a hidden treasure, and in Christian Science it is made clear that in searching for it we begin to "arise from the dead." As one studies the four-petaled chalice of a field poppy he can but observe its wondrous orderliness, its delicacies of color, its perfection of beauty, and he is immediately impressed with the purity, the chasteness, the artistry, the ideality, the righteousness of the thought behind it. Here is an appearing that materiality cannot explain, and immediately spiritual sense becomes ascendant. The most significant of all the miracles is taking place in our awakening to Truth's ever-presence, and this experience directly contributes to the fulfilment of the Master's words, "That they might have life."

No one can "consider the lilies," so graciously commended by Christ Jesus, without experiencing the dawn of Easter. The ascension has begun for each one with the emergence of his thought from the world of material belief into the world of Spirit, God's unmarred and eternal kingdom of goodness, beauty, and truth. This means that passing of error in consciousness to which St. Paul referred when he said, "I die daily." Olivet was but the consummation of what had been taking place ever since Jesus as a little boy went with Joseph and Mary up to Jerusalem. His advance was continuous, because he was forever awakening to richer and fuller realizations of the presence, the perfection, and the sovereignty of Life.

God, good, is revealed concretely to human sense. The Master counseled not that we should consider goodness and beauty in the abstract, not that we should undertake to be transcendentally absolute in all our thoughts, statements, and relations, but that we should look through and beyond the specific seemings of sense to the demonstrable actualities of Spirit. That while very much "in the world," that is, in touch with human experience, understanding its situations, points of view, aspirations, and needs, we should not be "of the world," but superior to it; even as the teacher, while called to reckon with error, to know its appearing as fact to the pupil, must himself live in the demonstrable verities he is seeking to communicate.

Thus to know and rejoice in that kingdom of truth and beauty which is ever present and divine, is to enter upon the immortal life. It is to become a priest and a poet, an illumination and a joy to all about us. It is to be in so far a genuine Christian Scientist.

JOHN B. WILLIS.

✧ ✧ ✧

Among the Churches

Current Notes

OSSINING, N. Y.—The annual lecture on Christian Science at Sing Sing Prison, which has become a feature of the prison routine for the last three years, was delivered today [March 6] by Bliss Knapp. Warden Kirchwey introduced Mr. Knapp, and the attendance of more than one hundred and fifty men was made up of those who attend Christian Science services every Sunday.

Christian Science was introduced into Sing Sing life by chance. A prisoner's wife took some Christian Science literature to him and it was subsequently passed around to other prisoners. They became interested and asked for further literature, which was obtained for them by the prison officials. Since then Christian Science has found favor with hundreds of prisoners and many of the officials also have become interested. At all times the missionary method of the Christian Science promoters has been unobtrusive, but any literature requested has been readily furnished. The prison officials stated that those who attend the services each Sunday are among the best poised and most orderly prisoners in the institution. A feature of today's lecture was the distribution of several hundred copies of the Bible and Mrs. Eddy's book, "Science and Health with Key to the Scriptures."

New York Herald.

Digitized by Google

WASHINGTON, PA.—During the year 1915 the following Christian Science literature was given out by the distribution committee and the members of the Washington Christian Science Society: 279 *Sentinels*, 82 *Journals*, 6 *Heralds*, 1008 *Monitors*, 13 *Quarterlies*, 131 pamphlets, 446 marked papers with corrections and kindly references to Christian Science. A complete set of Mrs. Eddy's works was placed in the circulating library of the Citizens Free Library of this city, and all the Christian Science publications are received regularly at this library. A Bible and a copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, are kept in one of the hotels, and literature has been placed in other hotels, boarding-houses, and barber shops throughout the city. The circulating library of Mrs. Eddy's works furnished to the reading-room of this society has been in almost constant use, as are all the copies of Science and Health in this reading-room.

Literature Distribution Committee.

SEATTLE, WASH.—"At a meeting held May 26, 1915, the membership of Fourth Church of Christ, Scientist, adopted a resolution 'that the church when constructed shall be of such size as to seat comfortably approximately twelve hundred people, all on one floor, without a gallery,' and 'that the total cost of the church and lot when fully completed and finished shall not exceed one hundred thousand dollars.' The purchase price of the lot was twenty-one thousand dollars."

The above correspondence modifies an item in the *Sentinel* of March 18 taken from the *Seattle Times*.

WILLISTON, N. DAK.—Plans for a new building are being considered by the Christian Science Society. Although it is probable that the building will not be undertaken this season, the lot at Main and Seventh Streets, 66 by 140 feet in size, was this week [Feb. 21] purchased by the local society. It is understood that the consideration was one thousand dollars.—*Williston Herald.*

LOS ANGELES, CAL.—At a meeting of Fifth Church of Christ, Scientist, held last week, Feb. 7, work was authorized to be started on their new church home, which will be erected on their lot at the corner of Hollywood Boulevard and La Brea Avenue. Acting on this authorization, the contract was let for the foundation and ground was broken this week. This handsome structure will cost thirty-eight thousand dollars.

Hollywood Citizen.

BURNS, ORE.—The new Christian Science church has been completed, and the first service is to be held in it tomorrow [Jan. 2].—*Burns Times-Herald.*

✧

Admission to Membership in The Mother Church

The next admission of candidates will be June 2, 1916. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 10, 1916.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

Boston, Mass.

On Friday evening [April 7] Bicknell Young delivered a lecture on Christian Science under the auspices of The Mother Church, The First Church of Christ, Scientist. The lecturer was introduced by H. Cornell Wilson, first reader, who said:—

Those who are unfamiliar with the means employed for bringing the subject of Christian Science to the attention of the public may be interested to hear of some of the opportunities which Mrs. Eddy, the Discoverer and Founder of Christian Science, has provided.

There are the church services. The Sunday services in Christian Science churches have for their principal feature the Lesson-Sermon as published in the *Quarterly* Bible Lessons. This sermon is made up of selections read alternately from the Bible and "Science and Health with Key to the Scriptures," the Christian Science text-book. Wednesday evening meetings are held, which are mainly devoted to testimonies of Christian Science healing. Free public reading-rooms are also maintained in communities where there are Christian Science organizations. There are issued by The Christian Science Publishing Society five periodicals,—two published monthly, one weekly, one quarterly, and a daily newspaper, *The Christian Science Monitor*. There are also the lectures on Christian Science given by members of the Christian Science board of lectureship. These lectures present Christian Science accurately, and correct misconceptions of the subject which may prevail in the public thought.

The Christian Science Monitor.

✧

Omaha, Neb.

In introducing William D. McCrackan, who lectured on Christian Science to an audience of upward of three thousand at the Auditorium, Richard L. Metcalfe said:—

Many persons who do not readily grasp the meaning of Browning, love to linger over his lines,—

God's in His heaven:
All's right with the world.

And for nearly two thousand years little children have been taught to lisp the words of the Saviour of men: "Come unto me, all ye that labor and are heavy laden, and I will give you rest." Christian Science as I understand it is the optimistic dream of Browning come true.

If men and women who through actual experience have learned that the poverty and the grief, the pain and the tears with which the world struggles, may be conquered through the operation of divine law, undertake to lead us into the light that has been shed into their own lives, may we not give patient attention to their story of love and of life, feeling within our heart of hearts, "How beautiful upon the mountains are the feet of him that bringeth good tidings."

Correspondence.

✧

London, England

At a lecture on Christian Science for Sixth Church of Christ, Scientist, given by Clarence W. Chadwick at Putney Hippodrome, the introductory remarks by Mrs. Mabel S. Thomson were as follows:—

In looking round this audience I am irresistibly reminded of the first public Christian Science meeting ever held in this country, now nearly twenty years ago, at which some fifteen or twenty people were present, representing practically the whole of the Christian Science movement here at that time. In his stay of two months Mr. Chadwick has already lectured

Digitized by Google

in some twenty different towns in England, Scotland, and Ireland, to audiences varying in size from two hundred to twenty-six hundred. So remarkable a growth in interest in the subject in so comparatively short a time is abundant evidence that Christian Science is fully meeting the greatest need of the people today,—its need of a religion which shall satisfy the reason as well as the conscience. Those who will listen attentively and sympathetically to the lecture this afternoon will, I believe, go away feeling that they have indeed been given a reason for the hope that is in them.

Correspondence.

Lectures to be Delivered

ARKANSAS—Little Rock: Jacob S. Shield, Crystal Theater, Eighth and Main Streets, 8 p.m., May 4.

CALIFORNIA—Alhambra: Clarence W. Chadwick, Alhambra High School Auditorium, 8 p.m., April 29.

Los Angeles (Fifth Church): Virgil O. Strickler, Woman's Club House, 7078 Hollywood Boulevard, 6:45 and 8:30 p.m., May 4.

Los Angeles (Sixth Church): Clarence W. Chadwick, Shrine Auditorium, 655 West Jefferson Street, 3 p.m., April 30.

Mountain View: Virgil O. Strickler, Swall's Hall, 8 p.m., May 1.

Oakland (Third Church): Virgil O. Strickler, Macdonough Theater, 3 p.m., April 30.

Pomona: Clarence W. Chadwick, Belvedere Theater, 8 p.m., May 1.

South Pasadena: Virgil O. Strickler, Woman's Club House, 8 p.m., May 5.

Stanford University: Virgil O. Strickler, Room 100, Inner Quadrangle, 8 p.m., April 30 (open to present and former members of the University).

Woodland: Virgil O. Strickler, Unitarian Church, Lincoln Avenue, 8:15 p.m., April 29.

CANADA—Sherbrooke, Province of Quebec: Bliss Knapp, Art Hall, 8:15 p.m., May 2.

COLORADO—Cripple Creek: Frank Bell, Eagles Hall, 8 p.m., April 27.

IDAHO—Moscow: Frank Bell, Strand Theater, 8 p.m., May 4.

Pocatello: Frank Bell, Auditorium Theater, 3 p.m., April 30.

ILLINOIS—Champaign (First Church): William D. McCrackan, Orpheum Theater, 3 p.m., April 30.

Chicago (Thirteenth Church): Prof. Hermann S. Hering, 2139 West 111th Street, Blake Hall, Morgan Park, 8 p.m., May 2.

Chicago (Fourteenth Church): Bicknell Young, Ravenswood School, Montrose Avenue and North Paulina Street, 8 p.m., May 1 and 2.

Chicago Heights: Dr. Francis J. Fluno, Masonic Temple, 8 p.m., May 2.

DeKalb: Clarence C. Eaton, Church Edifice, Third and Oak Streets, 8 p.m., May 2.

Galesburg: Prof. Hermann S. Hering, Universalist Church, Prairie and Tompkins Streets, 8 p.m., April 28.

Geneva: Dr. Francis J. Fluno, City Hall, 8:15 p.m., May 1.

Joliet: Charles I. Ohrenstein, The Auditorium, 8:15 p.m., May 5.

Prophetstown: Clarence C. Eaton, Dudley's Auditorium, 8:15 p.m., May 5.

Wilmette: Prof. Hermann S. Hering, Church Edifice, Central Avenue and Tenth Street, 3 p.m., April 30.

INDIANA—Fort Wayne: William R. Rathvon, Majestic Theater, 8:15 p.m., May 1.

Gary: Prof. Hermann S. Hering, Gary Theater, 8 p.m., May 1.

La Porte: Prof. Hermann S. Hering, Masonic Temple, 8 p.m., May 5.

Valparaiso: Bicknell Young, Schelling Music Hall, 3 p.m., April 30.

Whiting (auspices East Chicago): Bicknell Young, High School Auditorium, 8 p.m., May 4.

IOWA—Eldon: Willis F. Gross, The Moose Hall, 8 p.m., April 27.

KANSAS—Hutchinson: Clarence W. Chadwick, Convention Hall, 8 p.m., May 4.

MAINE—Bangor: Bliss Knapp, Christian Science Hall, 3 p.m., April 30.

Waterville: Bliss Knapp, Unitarian Church, Main Street, 8 p.m., May 1.

MICHIGAN—Battle Creek: George Shaw Cook, Post Theater, McCamly and Jackson Streets, 8 p.m., May 1.

Bay City: Clarence C. Eaton, Church Edifice, Sixth and Van Buren Streets, 8 p.m., April 27 and 28.

Detroit (First Church): Clarence C. Eaton, Arcadia Hall, Woodward Avenue and Stimson Place, 4 p.m., April 30.

Flint: William D. McCrackan, Masonic Temple, 8 p.m., May 2.

Kalamazoo: John W. Doorly, Church Edifice, Park and South Streets, 8 p.m., May 2 and 4.

Muskegon: Bicknell Young, Woman's Club House, 8 p.m., May 5.

Niles: Charles I. Ohrenstein, Library Auditorium, 8 p.m., May 4.

Oxford: William D. McCrackan, Opera House, 8 p.m., April 27.

MINNESOTA—Stillwater: William R. Rathvon, Auditorium, 8:15 p.m., May 5.

Willmar: William R. Rathvon, Church Edifice, 8:15 p.m., May 4.

NEBRASKA—Exeter: Willis F. Gross, Auditorium, 8:15 p.m., May 2.

NEW JERSEY—Camden: George Shaw Cook, Towers Theater, Broadway and Pine Street, 3:30 p.m., April 30.

NEW YORK—Batavia: Charles I. Ohrenstein, Odd Fellows Hall, Ellicott Street, 8:15 p.m., April 27.

Geneva: William R. Rathvon, Smith Opera House, 3:30 p.m., April 30.

Lockport: Dr. Francis J. Fluno, The Auditorium, Walnut and Pine Streets, 8 p.m., May 5.

Watertown: Charles I. Ohrenstein, High School Auditorium, 8:15 p.m., April 28.

NORTH DAKOTA—Dickinson: Dr. Francis J. Fluno, Elks Building, 3 p.m., April 23.

OHIO—Cleveland (First Church): John W. Doorly, Church Edifice, East Forty-sixth Street and Cedar Avenue, 8 p.m., April 29; 3 p.m., April 30; and 8 p.m., May 1.

Fremont: William D. McCrackan, High School Auditorium, 8 p.m., April 28.

OREGON—Ashland: Virgil O. Strickler, Elks Temple, 8 p.m., April 27.

TENNESSEE—Memphis: Jacob S. Shield, Church Edifice, Dunlap Street and Monroe Avenue, 3 p.m., April 30, and 8 p.m., May 1.

WASHINGTON—Colville: Frank Bell, Odd Fellows Hall, 8 p.m., May 2.

Pullman: Frank Bell, Masonic Hall, 8 p.m., May 5.

WISCONSIN—Neillsville: George Shaw Cook, Opera House, 8 p.m., May 4.

Oconomowoc: William R. Rathvon, Auditorium, 8 p.m., May 2.

Plymouth: George Shaw Cook, Lyceum Hall, 8:15 p.m., May 2.

Testimonies of Healing

I wish to testify to a most wonderful healing in Christian Science, that of my little daughter. From birth she had been subject to convulsions, and as time went on they became more frequent, of longer duration, and more severe. From the very first, normal action of the bowels was unknown, consequently all sorts of material means were employed to bring about the desired result. Her stomach also caused great distress, although she always seemed ready to eat; but just as soon as she swallowed even a little milk, convulsions would follow. She was born with a dislocated shoulder and curvature of the spine, so that she could not lie on her back, and her clothes had to be made very large in order to get them on. She was also unable to hold up her head. The back was very much deformed, and one side was entirely too large to correspond with the rest of the body. The right arm was drawn back, the left arm extended, and the legs were in a similar condition.

After trying all sorts of doctors and specialists here, we took the baby to the Johns Hopkins hospital in Baltimore and left her there to be examined. I went back to see her in a couple of days, hoping the physicians had located the trouble and could help her, but was met by the head doctor and told that I might take her home, as she had not long to live, and that they could do nothing for her, as there was no cure for a case like hers. He said they had diagnosed the case and found a condition of the brain which had rendered her an idiot. He also said that if she did happen to pull through she would be subject to epileptic fits, would never walk, and never have her right mind, but that I might expect the end at any time. On arriving home from the hospital the child became violently ill and was under the influence of an opiate for three days. The attending physician said there was absolutely no hope, that her death was only a question of a few hours. When apparently at the point of death, however, she rallied, much to the surprise of every one, and continued to live. After she became stronger we tried massage, but this, like everything else, failed to bring even temporary relief.

Later a friend recommended Christian Science. While I knew nothing whatever of it, I doubted its ability to heal or even to help so hopeless a case; but as the last resort I decided to give it a trial, and treatment was taken up the latter part of January, 1914. The child was then eighteen months old. With the first treatment the convulsions ceased, and the little one was able to take a full bottle of milk without any ill effects. She also had natural action of the bowels for several days. Then this stopped, and having been instructed to do away with all material means I was almost overcome with fear as to the outcome. I went to see the practitioner very early in the morning and she gave me an audible treatment. The demonstration over fear was made right there. That evening things took a turn for the better, and they have been all right ever since. The morning after the second treatment, when giving the baby her bath, I lifted her right arm to wash under it, when I heard something crack. I first thought I had twisted the arm in some way and broken it, but on examining the child I found that the shoulder had slipped into place. The child's teeth had also caused her much suffering and were so imperfect that they soon crumbled away; but the suffering was soon overcome in Christian Science and a better condition was manifested.

Besides all this the little one was perfectly normal, and as bright and intelligent as any child when she was a little over two years old. She could say quite a list of words, while before coming into Science she never made a sound other than to cry. She could also move her head in any direction, and the little back was perfect. Her arms and legs were down in normal position, and she was learning to walk. This healing was brought about inside of six months. She is now over three years old. I am certainly thankful to God, and grateful to Mrs. Eddy for all Christian Science has done for me.

MAUDE A. WINE, Washington, D. C.

I wish to corroborate the foregoing statement of my wife regarding our little girl, and will say that it is correct in every detail. Her cure is wonderful, and I wish to express my gratitude for the great good derived from Christian Science.—ALDEN K. WINE.

✧

As a grateful recipient of many blessings from Christian Science, I feel it my duty and pleasure to relate the following experience. About three years ago, while spending the night at the home of a friend, I attempted to reach the bathroom through a dimly lighted hall, but mistook the opening of the stairway for the bathroom door, and fell down the stairs, striking my head on the fourth step from the bottom. There my hostess, who was the only other adult in the house, found me. I heard her say: "Do not be afraid; you are not hurt. God is Love. God is right here." The power of God was soon manifested in my being able to get into a sitting position at the foot of the stairs, while my friend telephoned to a practitioner who lived near by. It was midnight, but the practitioner said she would come immediately. Meanwhile I felt a desire to return to my room, and "leaning on the sustaining infinite" (Science and Health, Pref., p. vii), I went up-stairs a few minutes before the practitioner arrived.

There was a deep gash over one eye, from which there was a great loss of blood; also a painful wrench in the wrist; but the pain was overcome by the loving work of the practitioner. I was made comfortable for sleep, and after awaking at the usual time much refreshed, I enjoyed my breakfast sitting up in a chair. My healing was rapid and thorough, and to mortal sense seemed the more remarkable because of my age (I was in my ninety-second year). I am now in excellent health, go up and down stairs several times each day, and enjoy a sense of freedom and happiness which is due to Christian Science.

I indeed owe a great debt of gratitude to the teachings of our Leader, who explored the path and lovingly showed us the way to know and to use the loving power of God.

MRS. A. M. ROBERTS, Battle Creek, Mich.

✧

It is with sincere gratitude for the many blessings Christian Science has brought me that I give this testimony. For fifteen years my hearing had been failing, and in the winter of 1913 it became so bad I could not retain my position as a locomotive engineer, which I had held for thirty-five years. In March, 1914, I was asked to attend a Christian Science testimony meeting. Though I could not hear a word that was spoken, I entertained myself by reading the mottoes on the walls. The one which read, "Ye shall know the truth, and the truth shall make you free," especially appealed to me, so that following the service I asked for help to learn what this truth was, in order to be made free. Through the study of the Lesson-Sermons, and "Science and Health with Key to the Scriptures" by Mrs. Eddy, together with the aid of a practitioner, I learned the truth, and have been healed of deafness and other physical ailments.

Several years ago I fell from my engine, dislocating my shoulder and breaking the collar-bone. When I left the hospital, physicians told me I would never be able to lift my right arm above my head or close the hand so as to hold small articles, such as pens or pencils. This was a constant hin-

Digitized by Google

drance to me in making out reports and in many other ways. After trying specialists in every known school of medicine but receiving no relief, both the hand and arm were freed in one week's treatment in Christian Science. I was also healed of a lame back, with which I had been troubled for twenty-five years. Sometimes I would be unable to get down from my engine after a trip without assistance, and I was never able to walk far at one time. Now I enjoy walking and feel no weariness afterward.

In October, 1914, I took the regular medical examination of locomotive engineers required by the company every two years, and was pronounced in perfect physical condition. Both my wife and I are trying to show our gratitude by learning more of Christian Science and living daily what we learn. This is bringing us great peace and harmony.

AUSTIN W. COTTON, Cleveland, Ohio.

✧

[Translated from the German]

My sister became afflicted at the age of eleven with what was pronounced a disease of the blood, and of which she had several returns increasingly severe. Every time she became thus afflicted she had to stay in bed several weeks, and on one occasion spent three months at a hospital. One day the disease again manifested itself, this time very severely and accompanied by high fever; and when much larger spots appeared than ever before, we sought the assistance of a Christian Science practitioner. After the first treatment the fever subsided, and with a few more treatments my sister was completely freed of the affliction. This was about seven years ago, and there has been no return of the illness during that time.

My brother was healed of rheumatism, an affection of the heart, and St. Vitus' dance, through Christian Science. When on one occasion he had a severe attack of rheumatism, he was taken to the hospital, where various means of relief were tried, none of which proved successful. Finally the physicians believed that hot baths might produce a cure. The effect, however, proved the very opposite, for heart trouble and St. Vitus' dance in the most aggravated form were the result, so that it seemed impossible he should ever be restored.

We had attended Christian Science services previous to this time, and in our distress now asked a practitioner for help. We told our brother that he should set all his hopes on God and that Christian Science treatment would be given him. The practitioner treated him absently, and from the first improvement was so marked that at the end of a few weeks he was able to leave the hospital healed, to everybody's surprise. At a conference of physicians before which my brother was brought and in which his disease was made the subject of a discussion, he became aware that his cure had caused the greatest astonishment among the medical men. This occurred about six years ago, and my brother has had no return of these or of any similar troubles since.

MARTHA PISTOLL, Hamburg, Germany.

✧

In Psalms we read, "Blessed be the Lord, who daily loadeth us with benefits." I want to testify to the daily blessings I receive, and to express my thankfulness for them, as well as my gratitude to Mrs. Eddy for showing us the way through Christian Science to claim and appropriate these blessings.

Ten years ago I was healed of an aggravated case of rheumatism. I had an acute attack when about nine years old, and after recovering from it was told that I had a tendency to rheumatism and must be very careful. I grew up with that conviction, and the consequence was that when I had any other physical ailment there was generally the complication of rheumatism to contend with also. Finally, after an attack of typhoid fever I realized that this enemy had possession of me, and after weeks of medical treatment, during which the lameness was steadily becoming worse and the suffering increasing, I went to a Christian Science practitioner. In three weeks I walked much better and had little pain, but treatment was continued two weeks more, and I have been free from rheumatism since that time. I have been healed twice of a badly injured ankle. Once, though the sprain and bruise were very bad, in two treatments I was perfectly well.

For the encouragement of those to whom healing comes slowly, I want to tell of the overcoming of severe headaches, for they completely prostrated me. When I began the study of Christian Science, I was having them three and sometimes four times every month. The suffering was so intense that the dread of them was correspondingly great, and I could generally say with Job, "The thing which I greatly feared is come upon me." Through Christian Science treatments and my own study and growing understanding of the truth they became less frequent, several times three months elapsing between the attacks; and it is now a year since I have suffered in that way. Only those who have been in bondage to such a belief can understand my thanksgiving to God for setting me free, and my gratitude to Mrs. Eddy.

King Darius said to Daniel, "Thy God whom thou servest continually, he will deliver thee." It is the continual obedience to God's law, thinking God's thoughts, that will bring entire deliverance, and if we are faithful the healing will surely come. I am grateful beyond expression that some one's thought was pure enough to discern the truth and give it to us.—EMMA W. DIMOND, Belvedere, Cal.

✧

I desire to add my testimony of the healing power of Truth. After having spent most of my life in the vain pursuit of worldly pleasures, I found myself about three years ago a moral, physical, and financial bankrupt. In this state of despair, through the loving persistency of my wife I consented to read Science and Health. After continuously reading it for twelve hours or more, I found myself healed of the desire to end this mortal existence. The drink habit with its accompaniments of stomach, liver, and bowel troubles vanished; also the belief in the necessity of wearing glasses for reading. I found my vision to be perfect after reading the text-book for about two hours, when I was compelled to take my glasses off and have not had to use them since.

I was formerly a pharmacist, and served as an acting hospital steward in the United States army both here and in the Philippine Islands, and had proven to my own satisfaction the fallacy of *materia medica*. As the truth of being dawned on my consciousness I saw the unreality of the material sense of existence, and the holy desire to know God and serve Him aright was firmly planted, and has since been the governing motive of my life. By making God's business my business I have had all things needful added unto me. I know that only by right living, based upon the Christ-principle as taught by Mrs. Eddy, can I pay the debt of gratitude I owe to God for His loving-kindness.

JAMES HAYDEN STEVENSON, New York, N. Y.

I wish to add my testimony to that of my husband, and also to bear witness to the healing power of Christian Science as revealed to us through the study of Science and Health. I was led to seek Christian Science in the desire to help my husband, and thereby I found what I had always been seeking, even the contentment which comes from the firm understanding that I had at last found the right conception of God and the universe, including man. New blessings are coming

Digitized by Google

to us day by day as we seek to know and realize more of God's loving care for His children. For all the blessings I have received I am indeed grateful.

LOUISE VALLENTINE STEVENSON.

✧

Six years ago I was healed in less than six months of all the symptoms which had been pronounced those of tuberculosis. It was through the earnest, loving work of a Christian Science practitioner that the demonstration was made, for when I asked for Science help I was not in a mental condition to give much cooperation. I would read page after page in "Science and Health with Key to the Scriptures" by Mrs. Eddy, but my only thought at the end of each page was that my grief was spelled with a much larger "G" than was God, good; but at last I did realize that God is good.

Two years ago I was healed of a large swelling on the neck, which is now perfectly normal. Not long ago I had reason again to be very grateful for Christian Science. In falling down a stairway my foot was twisted, so that I suffered severe pain, and my parents insisted on a medical examination. This disclosed that the ligaments had been torn and a blood clot formed, so I was told to keep off the foot. I however used the foot as much as it was possible for me to use it in such a condition, and in less than a week it was all right.

For these healings I am grateful, but for the knowledge of a God who did not create man to suffer as I have seen loved ones suffer, I am even more deeply grateful. I am better physically than ever, and am more thankful every day for a clearer understanding of God.

GERTRUDE S. TRELOAR, Philadelphia, Pa.

✧

Some time ago I was suffering from a serious condition of the ball of my foot, and it caused me much pain. I had Christian Science treatment, and was progressing very favorably until the thought crept in that pus had accumulated under the skin and the only way to get it out was to have the foot lanced. Accordingly I called a physician, in the mean time informing the practitioner that I did not require his services any longer. After the foot was lanced twice it became decidedly worse, being terribly swollen; then the swelling began to creep up my leg. My family wished me to have a consultation of doctors to decide what should be done, but having had several experiences with the healing efficacy of Christian Science prior to this time, I was now ready to leave all material means and put my whole faith in the power of Truth. I accordingly turned to Christian Science, this time with my whole trust, and in four days was walking around again.

For this healing and for many others, both physical and spiritual, I am very thankful to God, and grateful to Christian Science and to its Founder, Mrs. Eddy.

ROBERT J. VAN BOCHOVE, Kalamazoo, Mich.

✧

Several years ago I came face to face with a case of physical healing under Christian Science treatment. My fiancée, now my wife, who at that time had been interested in Christian Science only a few weeks, was incapacitated by a poisoned foot. A message was sent to a Christian Science practitioner, and absent treatment was given, with the result that the pain vanished that night. The practitioner called the next morning and gave further treatment. Healing was complete by the afternoon and the foot could be used as well as ever. This occurred in London, and the letter I received in Manchester informing me of it removed my objections to Cliristian Science,—objections based, I regret to say, on hearsay only. My interest in this teaching steadily grew thenceforward, fed by occasional pamphlets issued by The Christian Science Publishing Society, and later by some copies of the *Sentinel*, which I eagerly read from cover to cover.

Six months after this healing I borrowed a copy of Science and Health. I had read many books on philosophy, comparative religion, and kindred subjects, and they had convinced me that true religion was broader than any denomination I then knew of; but I was left in a mental quagmire, since my ignorance of true religion had been brought home to me without teaching me anything of much value concerning Truth. The reading of the text-book, however, gave me real instruction concerning true religion, and in a logical way, proving each point by deductions from divine Principle. There was the added test of practical experience that a training in physical science had led me to expect from any system claiming to be science, and this was met so satisfactorily in Christian Science that I was early convinced of its truth.

Through reading the text-book I abandoned dieting and special "health" exercises, and from that time my health has steadily improved, and my capacity for continuous work, both mental and physical, has never been so good as now. Further, I have learned to place full reliance on God, as taught in Christian Science, to heal all sickness and overcome all difficulties. I am grateful for the faithful help rendered by Christian Science practitioners, especially in a severe case of hay-fever, which was quickly relieved and in about ten days fully overcome. Formerly this complaint had troubled me through the whole summer. Whereas formerly each day seemed to bring me discouragement and perpetual trouble from small mistakes and lack of concentration in my occupation as an electrical engineer, it is now an increasing joy to me to endeavor to give the best possible service. I know that the only way to happiness and success lies in doing right by others, and to do so one must first learn how to serve God aright, and this Christian Science is teaching me to do.

My healings have been permanent, and they are but a portion of the blessings we have received through Christian Science. I should like to say how very grateful we feel for the Christian Science periodicals. Many, many times they have helped us while following a seemingly thorny path.

D. ALAN TRICKETT, Fairfield, England.

✧

In the fall of 1912 I was advised by physicians in Wyoming to seek a climate where I might find relief from bronchial asthma, a trouble from which I had been suffering for several years. During that time I had tried different climates, lived at sea-level, at twelve thousand feet above, and at intermediate points, also consulted physicians everywhere, only to be told that there was no cure. I kept getting worse until the time mentioned, when the attacks became so severe that the doctor said I could not stay where I was and live a year. I had not been able to leave the house for weeks when my husband put me on the train for Denver on my way to the South. A gentleman on the train was reading *The Christian Science Monitor*, and in a few minutes handed it to me with the remark that it was a very fine paper and I might find something which would interest me.

That was the first Christian Science literature I had ever seen, and after looking it over and reading some good articles, I asked why it was called a Christian Science paper. He explained about it and then took out of his pocket a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy and told me to look at it. I read the chapter on Prayer and thought it the most beautiful thing I had ever read. The gentleman then told me about Christian Science as a healing agency, gave me the address of the reading-room in Denver, and advised me to visit it. I did so the following

Digitized by Google

day and was impressed by the number of earnest students congregated there. A few days later, when my husband joined me, I told him what I had heard about Christian Science, and simultaneously an old friend of his, whom he had not seen in years, called and told us how his wife had been healed through Science and that it would surely help me. We were willing to try it, so an appointment was made with a practitioner, and the following day I began to take treatment. I improved from the first, and in a few days was able to walk several miles. In less than two months I was well and went back to my home in Laramie, Wyo., where I had been told I could not live, and remained there, with the exception of a few weeks, until the fall of 1914.

At the time I left Laramie for the South in 1912 I had been wearing glasses for three years, and the oculist told me I would never be able to do without them; but after the second Christian Science treatment I sat down to read and forgot to put the glasses on. I read for two hours and found that I did not need them, and have never had them on since, my eyesight being perfectly normal. These are only a few of the benefits received through Christian Science; many more could be added. Nervousness and minor ills have disappeared, and best of all, the Bible, which formerly was to me incomprehensible and obscure, has been found to contain the word of God, the living truth, and God has become a friend, who is at all times able and willing to help.

IDA A. STEWART, Denver, Col.

✧

[Translated from the German]

It gives me great pleasure to express my gratitude for the many benefits which I have received through Christian Science. In December, 1913, I became afflicted with shooting pain in the back, and it caused me much distress in breathing. I applied for help to a practitioner, who willingly rendered assistance. Immediately after the first treatment I felt very much better, so that my work suffered no interruption. A few days later, however, attacks of coughing set in, and as I worried somewhat over this condition, I had a physician make an examination. He stated that I had gotten over a serious attack of pleurisy, and seemed very much surprised that I should have been able to work under these circumstances. I put my trust solely in God, and was soon freed from the trouble. A few months later the same ailment seized me again. This time I suffered great pain in my feet and could neither stand nor walk. I again asked the practitioner for treatment, which was lovingly given, and within a few days I was completely relieved. I thank God, and I am grateful to our dear Leader, Mrs. Eddy, for showing us again the way to Truth.—FRIEDA SENN, Basel, Switzerland.

[Written for the *Sentinel*]

His Will Be Done

LAURA GERAHTY

WE have no fear,
Since God is here,
Who knows no distance, heeds no war's alarms,
And I and mine
With thee and thine
Dwell safely in Love's everlasting arms.

Rest now in prayer,
For everywhere
Our pure desires by Him are understood;
My will and thine
With His combine,
So all is well, for His is only good.

From Our Exchanges

[*The Christian Work*]

Saints and seers of ages past have pointed us toward the same distant goal. In moments of illumination we have seemed to see it for ourselves, and then darkness has closed around our path again. There are times when we would be content never to reach it, but we go on because we have chosen our path and cannot turn back. At length, even in this world, there comes to a few that interior revelation of our spiritual home, which is as the awakening of heaven therein, and we know that nothing is real or lasting but the love of God. The Christ arises within us in power, and we know with a certainty of which no man can rob us that we are reposing at the heart of the eternal good. That which used to be outside us, so to speak, and toward which we had to climb with aching hands and bleeding feet, we now know to be our very life, the reality beyond which there is nothing. We maintain that this is a true presentment of the experience of every soul that is seeking the divine. We begin by feeling the power of something beyond us, and come in time to realize it is within us.

[Rev. William Milton Hess, Ph.D., in *New York Herald*]

We today see the breaking up of creeds, because we are at last realizing that they are mere human statements. Idle tradition is no longer allowed to hold sway. Precedents are without authority unless they can justify themselves. Only as past tradition or precedent has intrinsic value today can it live. Only now, here and there, is humanity preparing to welcome the new-old religion of Jesus and the prophets. This religion of deed, of righteousness, of character, is the twentieth century electric-light type of religion. We have passed through the candle-light and gas-light stage of the Christian religion. The pressure today is toward the electric light, or the light of the noonday sun.

A glorious day is ahead for real religion,—the religion of deed rather than of creed; the religion of moral character rather than of dogma. Religion is a living force, not a dead principle. It is something for seven days in the week, and something that affects human conduct every hour of the day. This, we today believe, is the religion Jesus stood for,—a religion that is fundamental and non-sectarian,—and this is just the religion that the really civilized and progressive world is looking for.

[*American Lutheran Survey*]

In a broad way we Americans must learn to look upon all plans for preparedness. Our preparedness must first begin with the inner conviction that we are a mighty brotherhood, and that, however much we may differ in domestic policies as against the world, we are one in mind and in spirit. It is not primarily a question of the number of battleships that we should have, the size of the standing army we should have, whether our forts are up to date or obsolete; but it is of supreme importance that we as a people be spiritually prepared, that we learn to stand together for common ideals and common policies, and that we are trained to believe that Americans are fellow citizens, equally loyal and patriotic, of whatever descent they may be. The spiritual unification of the American people is the most crying need of the hour, nationally speaking.

[*The Christian Intelligencer*]

How did the church ever get away from this central fire of the Christian faith? How is it possible that we of the twentieth century, with all our enlightenment, have so lost sight of the first principles of life and work in the Spirit? How

Digitized by Google

can we explain our tense efforts in the direction of external efficiency, while ignoring to such a deplorable extent the one source of power? How has the materialism of the modern world hypnotized us into believing that money and machinery could effect the redemption of mankind? We are brought face to face with the fundamental need, shared by all Christians and all churches, of the Holy Spirit.

[*The Advance*]

To most of our readers the difference between an idea and an ideal is perfectly simple. Both are valuable possessions of the inner life. They are not interrelated to the extent that one may not have one without the other. We have seen many persons who had a wealth of ideas but not a solitary ideal. On the other hand, it is not necessary to be intellectually prosperous to have the highest ideals. Fixity in ideals, that is, the possession of definite standards by which our conduct is measured, or goals which we strive to reach, is a moral asset of the greatest value. The north star to the mariner, with or without a compass, is what a fixed ideal is to character. It is almost as bad to have variable ideals as to have no ideals.

[*The Church Times*]

The ideal priest knows that religion is no mere matter of belief and formalities and artificial codes of conduct, but a life; and the most real of all experiences enables him to explain to others how necessary and joyous a thing religion is. A converted and instructed clergy is the first need of the church, now as always; and the process of conversion must always be maintained. In every age and in every region the priesthood tends by insensible degrees to be conformed to the standards of the world about it, to mistake formality for piety, to confuse respectability with virtue, to be content with the minimum of achievement.

[*The Christian Advocate*]

In every age "the gleam" has burned before the eyes of men, and the men of powerful faith, the men of daring and exhaustless courage, have gone forth to follow it. No mountains have been too high to climb, no ways too long or terrible or desolate. With the passion of the quest in their hearts they have gone forth on the adventure of faith.

Genuine religion is a glorious adventure. It takes risks in the name of God. It trusts the eye of faith and knows the world as God's world, even when evil seems triumphant. It is a personal adventure, as the soul casts itself into the arms of the invisible God.

[J. Stitt Wilson in *The Christian Socialist*]

The one supreme need of our race, in Europe and America,—West and East,—is a mighty spiritual awakening, a great religious revival, a tremendous moral transformation of the souls of men. We need a quickening of the ethical impulses, and an illumination of the spiritual nature of man that shall sweep up like an ocean tide, over the cross, cruel world spirit, over and against the walls of oppression and injustice, washing our hearts clean of sins and of sin, catching us up in a divine passion for the spiritual salvation and material well-being of the last and the least of our fellow men.

[*The Christian Register*]

What we need now, and it is a crying need, is a thought of God which will be grand and great enough to match the immensity of the universe. From all the reeking battle-fields of Europe comes to our ears the cry, "Where now is thy God?" All the neutral world looks on in amazement, and turns in vain to the churches and the doctors for an answer to the question.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Publishing Society

"Law and Work" is the title of a new pamphlet containing the following articles: Love Fulfils Law, The Logic of Christian Science, Undisturbed, God's Law of Adjustment, Authority.

The increased cost of binding the periodicals has necessitated making an advance in the selling price of the bound volumes. The new prices, which take effect April 1, are as follows:—

JOURNAL.—Volume 32 (April, 1914 to 1915). Cloth, $3.00; half calf, $3.75.

SENTINEL.—Volume 16 (September, 1913 to 1914) or Volume 17 (September, 1914 to 1915). Either volume, cloth, $3.25; half morocco or half calf, $4.00.

For all other bound volumes of *Journal* or *Sentinel* write for prices.

DER HEROLD.—Volumes 5 to 12 in cloth, $2.75 each; volume 4 to 7 and 9 to 12 in half morocco, $3.50 each; volumes 4, 5, 9, 10, 11, 12, in half calf, $3.50 each.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

Digitized by Google

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Miscellaneous

A Catalogue of Selected Bibles will be furnished upon application, and quantity rates on other items specified below will be found in the current catalogue in *The Christian Science Journal*.

BIBLES. 01483 x. Clarendon Brevier, heavy-faced, distinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.75.

01440 x. Brevier, light-faced type; self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.50.

Morocco slip case to hold pocket edition of Science and Health, *Quarterly*, and Bible, $1.25.

Two other sizes of slip case listed in the current issue of the *Journal*.

Covered morocco case with handle and purse on outside, $3.50; without purse, $3.25.

01683 x. Large type Bible, 10¾ x 8 inches, bound in Alaska seal. Specially adapted for use of second readers, $9.25.

The improved Index will be added to any Bible listed in our catalogue for an additional charge of 35 cents. Catalogue No. 22 of selected Bibles will be mailed free upon application.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. 132 pages with index. Paper covered, 15 cents; cloth binding, 85 cents.

THE LIFE OF MARY BAKER EDDY. By Sibyl Wilbur. 424 pages. Cloth, $2. Edition de luxe, $5.

"PERSONAL CONTAGION" and "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Paper cover, 10 cents.

THE MOTHER CHURCH. By Joseph Armstrong. A history of the building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated, 107 pages. Cloth, $1.50.

CHRISTIAN SCIENCE: ITS LEGAL STATUS. By Judge Clifford P. Smith. 128 pages, paper covered, 10 cents.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, $1.15; half morocco, $1.40; full morocco, $2.50; levant, $3.50; pocket edition, size 4⅝ x 6⅝, $3.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission, have been set to music as follows: "The Mother's Evening Prayer," 75 cents; "Christ, My Refuge," 75 cents; "Love," 40 cents; Communion Hymn—"Saw Ye My Saviour?" (Johnson), 50 cents; "Blest Christmas Morn," 27 cents; "O'er Waiting Harpstrings of the Mind," 27 cents; "Shepherd, Show Me How to Go," 27 cents; "Saw Ye My Saviour?" (Root), 27 cents. The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing. 8-inch (mount 12 x 16), $1; 12-inch (mount 15 x 20), $2; 16-inch (mount 21 x 29), $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18 x 24 inches, $5; on India paper without remarque, $3. Smaller reproduction, size 11 x 14 inches, on Japanese vellum, $1. Photogravure post-cards, reproduction of the picture of the Church Edifice and Publishing House, 5 cents.

QUARTERLY COVERS in black morocco, $1.15; with purse, $1.40.

ALUMINUM LESSON MARKERS. Set of thirty, with paper shields, 50 cents. Extra paper shields, one hundred, 15 cents.

PRICE LIST OF BIBLE CONCORDANCES and DICTIONARIES OF THE ENGLISH LANGUAGE supplied on request. Express charges collect on delivery.

REPRINTS (not printed in English). Two-page leaflets, 14 subjects in French and Swedish; 19 subjects in German. Ten copies to one address, 10 cents.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Send all orders for the works of Mrs. Eddy, with remittance by New York or Boston draft or money order, direct to Allison V. Stewart

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

Engineers have been at work for three years on plans for flood prevention in the Miami (Ohio) Valley district. Completed plans and reports have now been presented, and it is believed that actual work on these improvements will begin in the spring of 1917. The official plans propose an outlay of $23,539,872. This, according to experts, will give protection against floods at least 10 per cent greater than was the record-breaking high water of March, 1913. It is expected that all legal entanglements will be out of the way by the latter part of this year, so that contracts may be awarded in time to start work in 1917. Five retarding basins for dry reservoirs, as they are commonly called, will be formed by dams built across valleys of the Miami, Mad, and Stillwater Rivers and on the Twin and Loramie Creeks, according to the present plans. More than twenty-five thousand maps have been made and thousands of tests conducted throughout the entire valley since the flood prevention plans were first developed, and on an average thirty engineers have been busy for three years gathering data for the official report.

In a report on the mining resources of Cuba, the director of mines of the Cuban Government declares that the island's mineral riches have developed to ten times what they were a few years ago. The province of Pinar del Rio appears to be the richest in mineral resources, although it is only recently that these deposits have been worked to any considerable extent. New mines in this region are being opened constantly. In one of them 800 men are employed, and in a period of five months 27,285 tons of copper ore were extracted. A copper company in Oriente is now exporting 28,168 tons of copper ore to the United States annually, while the Juragua Iron Company has in the past year exported 386,888 tons of iron ore. Mining engineers are quoted as declaring that some of the deposits of manganese in Cuba are without a superior in any part of the world. There are also many asphalt mines throughout the island, and two or three deposits of gold have been found in Holguin.

It is said that emmer is likely to become one of the most important crops of Colorado, especially in the non-irrigated districts in the eastern part of the state. Emmer is an original type of wheat which grows wild in Palestine. There it has a sharp, spinelike beard which clogs threshing machines and makes it unsuitable for cattle to eat, but by experimenting a beardless emmer has been produced, and Colorado farmers who have grown it without irrigation are delighted with the results. On about two thousand acres the average yield has been from forty to fifty bushels an acre, and it has run as high as seventy-five bushels. As stock feed it is said to be superior to oats, and it produces much more heavily. It is also useful for making a very nutritious black bread.

The secretary of the American Board of Commissioners for Foreign Missions has just forwarded to the state department in Washington a comprehensive account of the American institutions of higher learning established by Americans in Turkey during the last sixty years. The statement enumerates twenty-two organizations, which represent an investment of American money to the amount of some forty million dollars, and which today hold real estate buildings and equipment to the value of over eight million dollars. The fact of the existence of these colleges, hospitals, and other charitable institutions is called to the attention of the state department in order that adequate measures may be taken for their protection.

The Vice-President of the United States presiding in the Senate, laid before that body the attorney-general's refusal to transmit, in response to the Kenyon resolution, the department's report of investigations of the oil interests, especially the Standard Oil Company and inquiries relating to gasoline. The Senate later adopted the preamble of the Martine resolution which was recently laid on the table. It instructs the attorney-general to make a gasoline investigation and refers to the Standard Oil Company as a trust.

The Agricultural Museum at Buenos Aires, Argentina, in accordance with its purpose of encouraging the country's industrial production, is exhibiting a collection of petroleums from the various fields of the republic. The directors of the museum believe that the dissemination of information concerning these natural resources will result in their further exploitation and will cause the oil to be used more widely in the industries of the country. They are especially pointing out the great use which can be made of gasoline motors on farms.

The state of Oregon has realized $13,141,166.78 from the sale of its school lands and interest on the irreducible school fund for the last forty-six years. The unsold acreage in school lands is now approximately six hundred and twenty-five thousand acres. These lands are scattered throughout twenty-seven counties and for the most part consist of arid and grazing lands.

A portable telephone, made of aluminum and weighing two and a half pounds, the invention of a forest officer, will be a part of the regular equipment of patrolmen in the national forests during the coming field season. This instrument is regarded as a great improvement over the set formerly used, which weighed ten pounds. It is said that a field man equipped with this telephone, a few yards of light emergency wire, and a short piece of heavy wire to make the ground connection, can cut in anywhere along the more than twenty thousand miles of forest service telephone lines and get in touch with the headquarters of a supervisor or district ranger.

The fish canners of Norway, who have been trying to become independent of other countries for their supply of tin-plate, have been successful in their attempts to secure sufficient capital for the erection of rolling mills at Stavanger. The plans for the new mills provide for a yearly production of at least 80,000 tons; their erection will cost more than £200,000, and they will employ between four and five hundred men.

According to report, mining prospectors have unearthed a vein of iron ore in Durham and Granville Counties, N. C., that is expected to yield 14,800,000 tons of the crude product. The mining district embraces 2000 acres of land. The expert testimony of a former state geologist, it is said, supports the claims of the mining prospectors as to the quantity of the find.

The military affairs committee has favorably reported to the House of Representatives, by a vote of 15 to 6, the Tillman $11,000,000 Government armor-plate factory bill, which has been passed by the Senate. The action is in disregard of persistent efforts of the present makers of armor-plate.

Out of 450 elk shipped from the Yellowstone National Park this winter, Colorado got 100 head. Fifty of these were turned at liberty near the automobile road to Pikes Peak, to serve as an added attraction to tourists. There are about five hundred antelope in Yellowstone National Park, and fully thirty thousand elk.

The United States Supreme Court has dismissed the appeal of the St. Louis Street Railway lines from the decision of the Missouri courts, which upheld the ordinance by which the city of St. Louis collects a tax of one mill on each street-railway passenger. The city will realize about three million dollars in back taxes.

No adequate legal regulation of oil lands so as to protect unworked oil bearing land from being drained by the operation of wells in adjoining land has yet been devised. As the law stands today, an operator can work his wells as long as oil flows, even though oil may be flowing in from adjoining property.

Efforts are being made by the Italian Government to extend as far as possible the use of water-power for the production of electrical energy in substitution for coal, as Italy is entirely dependent on importation for her coal supply.

All previous production records in the automobile industry were broken at the Ford Motor Company plant in Detroit, Mich., on Saturday, March 25, when 2768 cars were built. During the month of March 58,829 cars were produced.

The Storthing of Norway has agreed by 91 votes to 14 to amend paragraph 1250 of the fundamental laws, thereby enabling women to be appointed members of the council of state.

A bill to establish a national park and acquire national forests in the Mt. Katahdin region of the state of Maine has been introduced in the House of Representatives.

The deficit this fiscal year in the United States treasury is $51,756,055, against a deficit of $90,982,129 last year, exclusive of Panama Canal and public debt transactions.

The amount expended on alcoholic liquors in the United Kingdom during the year 1915 was £181,959,000, as compared with £164,468,000 in 1914.

Christian Science Healing

JUDGE CLIFFORD P. SMITH

ONE is often impelled to inquire these days why it should seem incredible to Christian people that the law and power of divine good operate and are available to overcome every phase of evil. There is no Christian reason. A thoughtful reader of the New Testament, especially its parts which are historical, can find plenty of evidence that the Christian religion, as practised by its Founder and the early Christians, included the loosing of men and women from the bondage of disease. And though the greater part of the New Testament was written many years after the personal ministry of Jesus, it contains nothing to indicate that the practice of healing had ceased, nor any reason why it should cease. On the contrary, the practice of healing is consistently referred to in the New Testament as a continuing service, and as distinctive or characteristic of the Christian ministry.

Why did the practice of Christian healing cease? And why does any one resist its revival? There is one answer to both of these questions, and that is, Because of the failure to see the Principle, as distinguished from the person, in the healing work; and the tendency of human thought, even that which is religious, to cling to a material sense of all things. But for this failure and tendency, and the sense of sectarian interests, the Science of Christian healing would be welcomed universally.

These observations can be illustrated by an article which appeared not long ago in a periodical that is published in the interest of one of the Christian denominations. It was written by the editor, and was headed "A Speech and Some Letters," with the following subtitle: "An investigation into evidences of some Christian Science cures presented by Senator Works to the United States Senate." This "investigation" consisted in sending letters of inquiry to eight out of the sixty-nine physicians whose names were furnished by Senator Works. One of the doctors to whom this inquiry was sent did not reply. In this case a child was so abnormal from birth that more than one physician said it could never walk and would be an idiot. The physical and mental changes which ensued upon Christian Science treatment were clearly evident to all who knew the child's condition; and she has now been described by the Washington *Times* as "a three year old Washington child romping and playing about its home, as happy and as active as her playmates."

Another doctor of whom this editor made inquiry replied that he had no record or memory of any such case. Since being furnished with the date and place where he examined the patient, and the names of the persons who were present, he has found an entry in his diary corresponding to these circumstances. He was called only as a consultant and made no record of his conclusions. Another consultant examined this patient with the same family physician nearly two years later. This was the case of a girl about thirteen years old when the last consultation was held in February, 1908, at which time her case was diagnosed as valvular heart disease, and the prognosis was made that she would not live more than a year at most. Her mother now has written with reference to her as follows: "In April, 1908, we turned to Christian Science, and after three or four weeks' treatment she was up and about, doing everything a healthy child should. From a pale invalid she has blossomed into a beautiful young woman, a splendid swimmer, a strenuous dancer, an indefatigable walker, who goes to business every day and is a joy to behold." The father of this young lady is a well-known man, a consulting engineer by profession and a member of the Massachusetts legislature.

Another doctor of whom the same editor made inquiry replied that his diagnosis was not tumorous cancer but cancerous tumor, a distinction which he admitted makes no great difference. The patient, he also said, when he saw her, was "wonderfully improved." The replies made by the other five doctors could be fairly described by saying they showed varying degrees of anxiety to minimize the benefits of Christian Science. Without further inquiry, the editor in question committed himself to the following conclusion: "The claimed power of Christian Science to cure disease is seriously believed only by persons whose minds are not analytical enough to trace cause and effect, and whose prepossession in favor of the religion they have espoused makes them unable to relate facts with clear-sighted discrimination."

By way of comment on this conclusion it can be said that the writers of the New Testament who reported cases of Christian healing took the evidence of the persons healed. Some of these sufferers had been attended by physicians, but neither the Master nor the gospel writers held that a spiritual mode of healing must depend for its evidence on the representatives of an opposite system. For the same reason it would be sensible and logical to accept the evidence of such persons as the witnesses in the cases cited by Senator Works. With reference to their mental capacity it can be said that he and another of them are United States senators, and men who have achieved notable success in a profession that requires ability to weigh evidence. One was a justice of the supreme court of California; the other was the attorney-general of Minnesota.

Another of the witnesses cited is a graduate of West Point and a major in the United States army. Yet another is an alumnus of a well-known medical school, who was on the surgical staff of its hospital and one of its instructors, and another is a member of the board of trustees of a college. Another is the proprietor of a large wholesale grocery business. Another is a judge of a superior court, while another is a former judge of such a court. Another is a school teacher, and another was a professional nurse who had risen to the position of chief night nurse in a large city hospital. These are a few of the beneficiaries of Christian Science who related their own cases of healing and allowed Senator Works to report them as he did. If the minds of such persons "are not analytical enough to trace cause and effect," or they are "unable to relate facts with clear-sighted discrimination," the conclusion must be that dependable intelligence is the possession of only a very few persons.

The application of spiritual causation to the recovery and

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

maintenance of health would not be denied if disease and health were regarded metaphysically. Thus analyzed, not only disease and health but mortality and immortality are opposite mental states, resulting from contrary modes of thought. On one hand is material sense, which has no principle, no cause or substance, and which is simply an illusion, a dream of pain and pleasure in matter that includes sin, disease, and death. On the other hand is spiritual sense, which is created and sustained by God, the divine Principle of all true being. What Paul wrote to the Romans on this subject is both Christian and scientific: "To be carnally minded is death; but to be spiritually minded is life and peace." In these words he explicitly declares that life is a condition of mind or thought, and causation is analyzed as wholly metaphysical. The mentality which sickens and dies is carnal, that is to say, material; while the thought which lives and enjoys the abundant attributes of Life is spiritual, that is to say, inspired and controlled by Spirit, or God. In other words, it is Spirit, God, the divine Mind, which gives life, health, and happiness to man, and they are imparted as consciousness or thought.

Health, therefore, is primarily a mental and spiritual quality, and is to be gained and preserved as such. Disease, on the other hand, even the most physical disorder, is the palpable evidence of false belief. It is a condition incident to the supposition that man is a material selfhood governed by a law of suffering, disability, and death,—governed by laws which divine Love, divine Principle, could never make. Every lack of health, from beginning to end, is only a subjective state of mortal thought; it is a product of the false and mortal element in human consciousness; it is a particular result of the general supposition that life inhabits matter and is mortal.

Scientific treatment of disease, therefore, depends on the distinction between absolute or real being and the human or mortal concept thereof. Freedom from disease follows the absolute knowing of the truth concerning God and man. To cope successfully with disease it must be resolved into false belief, and dealt with on a mental plane in accordance with the divine law by which Truth destroys error. Healing comes to pass when the supposed law of disease and death is broken by the actual law of Life, and the unity of being is such that one individual can help another to obtain this victory. In this manner Christian Science is making practical the ideal of worship and service set forth by Isaiah: "To loose the bands of wickedness, to undo the heavy burdens, and to let the oppressed go free, and that ye break every yoke."

Health and Holiness

PRISCILLA C. GOODWYN

ONE day, while standing in the waiting-room of a railway station, I heard some one behind me say to another who was leaving her, "Well, keep your health." It was to me a new form of good-by, arresting my attention and calling for thought. The words "keep your health" led back to the old days when health and holiness, or wholeness, were synonymous terms, and it seemed an appropriate and beautiful last word before parting, though differing little in essential meaning from the ordinary "farewell," "good-by," and "adieu" in general use. These latter have become, in the main, mere mechanical expressions, with little thought back of them. The popular "Well, by-by; be good and you'll be happy," has the vigor of good cheer in it. It is as though one said, "I give to you, as we part, my best thought for your happiness: be good."

We can indeed rejoice that humanity everywhere uses in some form the same words as a parting benediction, "Keep your health,"—your holiness, which is the only true health. The speaker's words may have been uttered in a merely perfunctory way, conveying only a material thought of health, but they were words "fitly spoken," and in their higher meaning held in themselves a blessing and a promise for those ready to receive them.

In Christian Science we learn that health is a quality of Mind; that matter can take no cognizance of either health or disease, and that what the so-called personal senses aver, has no basis in Truth. On page 374 of Science and Health Mrs. Eddy says that disease originates "in human belief before it is consciously apparent on the body, which is in fact the objective state of mortal mind, though it is called matter," and she directs thought to the eternality of health as one of God's gifts to man, a fixed quality of Mind. The realization of health and holiness is therefore man's normal condition, for man in Science is "the offspring of God," and we read in Science and Health (p. 475) that man "has not a single quality underived from Deity."

The Risen Christ

GEORGE SILAS HADDOCK

A SENSE of deepest joy comes to all who discern the teaching of Christian Science as to the risen Christ. That which confounds Christ with person and relegates the divine idea to a remote past will not stand the light of inspired reasoning. If Christ left earth for a distant heaven two thousand years ago, then the comforting words, "Lo, I am with you alway," cannot be true. The recognition that Christ, as the divine idea, had never left us but was ever near,—this inspired Mrs. Eddy to say with earnest conviction (Poems, p. 12),—

> And o'er earth's troubled, angry sea
> I see Christ walk,
> And come to me, and tenderly,
> Divinely talk.

Jesus at one time asked the direct question of the Pharisees, "What think ye of Christ? whose son is he?" And then when the answer, "The son of David," seemed to imply a human personality, Jesus rebuked them in the words, "If David then call him Lord, how is he his son?" Pointing out that the one whom David called Lord and whom he desired to have beside him until all enemies were made his footstool, was evidently the divine idea, expressing the truth about God and man, the impersonal redeemer from ignorance, fear, and falsity of every kind.

Christ is defined in Science and Health as "the divine manifestation of God, which comes to the flesh to destroy incarnate error" (p. 583), and to reveal man as God's idea, upright and pure. The Christ as thus understood abides at God's right hand, because spiritual consciousness, the true idea, is an emanation of divine Mind, ever one with that Mind and ever discerning the things of good. This makes true the beautiful words, "Son, thou art ever with me, and all that I have is thine." Christ expresses the eternal nature of God and blesses all mankind in that expression. To the sorrowing and heavy-laden, Christ, Truth, brings a sweet sense of peace, a wonderful recognition of good coming to dispel the gloom; to the discouraged and fearful the Christ is as a cheering message, ready to come in and sup when the door of consciousness is opened; to the outcast, the sufferer or sinner, Christ is a guiding star leading into a safe harbor.

Mrs. Eddy says, "Jesus demonstrated Christ" (Science and Health, p. 332). He proved for all mankind that the true or spiritual idea presents the things of Mind aright, and

Digitized by Google

that it destroys their suppositional opposites, things fallen, impure, and evil. The apostle Paul said, "Now is Christ risen from the dead, and become the firstfruits of them that slept;" in other words, it is the true consciousness, free from every taint of evil, the pure sense which abides in Spirit, revealing to us all that is worth knowing or having. If this right sense of things, or true idea, is not uppermost, we know that our expectancy of good is without foundation. We are still in the realm of unreality, the turmoil of false belief.

Because the material senses with their craving for gratification through the medium of matter have seemed to hold sway, the spiritual or Christ sense, with its power to disclose all that is real, lasting, and good, seems dead. But since the only power of error is to destroy itself, and since this self-destruction goes on "through the sore travail of mortal mind" (Miscellaneous Writings, p. 15), the right or spiritual idea comes forth, born of God, one with Love and Truth, "to give light to them that sit in darkness . . . to guide our feet into the way of peace."

Who would not rejoice if, finding himself enmeshed in a tangle of briers, some one came to bring release by cutting away the thorny bonds? So thousands today are glad because through the revelation of Christian Science, Christ, as the true spiritual idea, is indeed risen in their hearts, bringing with it the first and only fruits of peace, joy, health, harmony, and good. They realize that their own feeble efforts against superstition and the false teaching of the ages were fruitless, and only seemed to tighten the bands; but Christian Science, the clear, definite word of Truth, came to sever their shackles with a sharp stroke, and the joy of a liberated consciousness was soon experienced.

In one of the poems written by our revered Leader are these lines (Poems, p. 29):—

Thou gentle beam of living Love,
  And deathless Life!
Truth infinite,—so far above
  All mortal strife,

Or cruel creed, or earth-born taint:
  Fill us today
With all thou art—be thou our saint,
  Our stay, alway.

Along with the realization of this new-found freedom comes a song of gratitude to the one whose thought was transparent enough, through overcoming, to allow the light of Truth to shine out to hungering hearts.

✧

God's Perfect Creation

LETTIE HUNTINGTON

For weeks the writer had been striving as never before to see only God's creation, and to see man as His manifestation, "the compound idea of infinite Spirit; the spiritual image and likeness of God; the full representation of Mind," as we read in Science and Health (p. 591); but the clouds of material sense seemed to hang heavy and low, and thus to shut out the perfect vision.

It chanced that just at this time a Scientist friend came for a week's visit. So far as the weather was concerned it proved to be a week of continuous storms and clouds, so typical of my own condition of thought that we decided to seek a mental realm in which there was no gloom. This was easy to do, as we had the Lesson-Sermon and all of our dear Leader's writings, and could read them together, enjoying them all the more because of unity of thought. The periodicals came in for their share of attention, and those who have had a similar experience can picture the pleasure and profit we each received, the spiritual uplift which dispelled all sense of gloom and depression.

The morning of my friend's departure came, and we arose betimes, as she had to leave on an early train. As we peered out through the gray of the early dawn, we beheld a beautiful picture,—the earth was clad in a robe of purest white. Later the sun shone out with wonderful brilliancy, and I stood as one entranced, gazing upon a vision which time can never efface. I thought of St. John, when he saw "a new heaven and a new earth" and heard the voice saying: "And God shall wipe away all tears from their eyes, and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." The words of our Master, "Ye shall know the truth, and the truth shall make you free," seemed to flash across the horizon, and my heart overflowed with gratitude to that faithful friend through whose labors Truth has again been revealed.

✧

Man's Dominion

ALICE BALE

One day while pondering over the many wonderful instances given in the Scriptures of the power of Spirit over matter, a student of Christian Science turned by chance to the account of the fall of Jericho as found in the book of Joshua. The first lesson which came to her from this wonderful story was that of obedience. Through his communion with God, Joshua perceived the one way in which the task before them could be accomplished, and he obeyed the command to march around the city. He did not stop to listen to the arguments of mortal mind, that no city could be taken without a battle after the approved fashion, but he gave the order to the people, who in turn obeyed without question. The ark was before them, which Mrs. Eddy has defined as "the understanding of Spirit, destroying belief in matter" (Science and Health, p. 581); then followed the armed men, girt, we may well believe, with the "whole armor of God."

Six days they "compassed the city," once each day, and on the seventh day, the day of victory, they did more than on any other. Seven times they marched about the walls, speaking no word, according to the command. Did they, it might be asked, ever think their work was useless, to no purpose, that they were accomplishing nothing except to go around in a circle? When their work was finished there came the command, "Shout; for the Lord hath given you the city." Their leader was confident of the power of Spirit before he saw its manifestation, even as Jesus, standing before the tomb of Lazarus, could say, "Father, I thank thee that thou hast heard me." Then all doubts and questionings were put away. Again was the voice of Spirit obeyed, and "the wall fell down flat, so that the people went up into the city, every man straight before him." They did not hesitate, but every man went "straight before him." Each did the thing that was his to do at that instant, and as a result the wall, as a type of error, gave way before them, was put under their feet. The victory was complete, but it had not been won by material methods.

Here we recall the crossing of the Red Sea and the Jordan on dry ground, when the Israelites went forward without faltering. Although the chronicle reads, "The feet of the priests that bare the ark were dipped in the brim of the water," still they pressed on, and "stood firm on dry ground in the midst of Jordan," even at the flood time of the year. So we after making a start are often called upon to stand firm, and not for one moment fear that the waters will come down upon us. We may remember the three Hebrews in the burning furnace; also that Jesus walked on the water and stilled the tempest with a word; that he passed through solid walls and removed himself from one place to another in an

Digitized by Google

instant; indeed his whole life, even from birth, was on a plane far above that of material law, so called.

As these great demonstrations grow upon our thought, we may well rejoice that through the understanding gained in Christian Science we can realize that dominion is for us even as for them, that Spirit is as potent now as it was in ages past, and matter as powerless, though it be expressed in wind, wave, or flame. Truly this dominion is for all who stand firm "in the midst of Jordan," and know, as our Leader tells us on page 566 of Science and Health, that "as the children of Israel were guided triumphantly through the Red Sea, the dark ebbing and flowing tides of human fear, . . . so shall the spiritual idea guide all right desires in their passage from sense to Soul."

"To thought only"

CHARLES T. ROOT

INTERESTING instances are related of the seemingly accidental discovery of gold or other valuable minerals in ground over which the feet of men, even those of searchers for such deposits, had often passed unheeding. Always present and always available, the scarcely concealed treasure only waited for the seeing eye; and at last some trivial happening, the casual displacement of a pebble or a clod, revealed to the delighted vision a new source of as yet unmeasured riches.

The writer was reminded of such an occurrence by an experience of his own. He had read page 182 of Science and Health often enough to warrant the feeling that at least it could hold no surprises for him. One day, however, on opening the book at that place, his eye fell upon a sentence which he could hardly believe had been there before and which now stood out as though it were alone upon the page. Because God is infinite, it follows that His children do not necessarily have identical experiences. Perhaps no one else ever received a similar impression from this sentence; but when it now for the first time reached the consciousness of the writer it was as though the apocalyptic trumpet proclaimed, "The demands of God appeal to thought only."

Why should there have been such an effect produced upon even a beginner in Science? The words are simplicity itself, and their general import is reiterated many times in the Bible and in Mrs. Eddy's writings. It is the word "only" which gives this statement its tremendous significance and makes of it one of the most revolutionary propositions to be found in our text-book. Consider the far-reaching effect upon the average human being of the realization that Principle takes no direct cognizance of words or deeds, but is concerned solely with the inmost thoughts of the heart. What a sweeping away of old landmarks this involves! What a collapse of self-righteousness, with its carefully prepared policies of speech and action! What a bankruptcy of calculated piety and philanthropy! How futile and pitiful appear hypocrisy and every pretense intended to be seen of men, in the blazing light of this impersonal truth which paralyzes every effort at self-deception!

There is no denying that this saying, "The demands of God appeal to thought only," is a hard one to the carnal man. It tears away every prop by which he seeks to maintain his belief in a self apart from God. It closes every door of escape from the straight and narrow path and demonstrates the folly of every attempt at climbing up "some other way." It even adds emphasis to the kindred Scriptural postulate, that as a man "thinketh in his heart, so is he," by specifically excluding every other factor of character. It gathers and focuses all the statements of Scripture which deny materiality and affirm spirituality. It locates, beyond the possibility of mistake, the field from which "every plant, which my heavenly Father hath not planted, shall be rooted up," the one and only arena in which the battle must be fought and the victory won over everything that is unlike God, good.

For the man or woman who is striving to progress in Christian Science there is no line in the text-book which it is more important to keep mentally in sight than this; not that its implications render the warfare with error less strenuous,—rather the reverse,—but it simplifies and clarifies the plan of campaign. Human nature uninstructed in Science, believing in good and evil, Spirit and matter, manifests this sense of duality in daily living by bestowing its chief care upon speech and act, while permitting thought to roam in secret and almost at will, often in directions quite at variance with the outward conduct. When, however, it is learned that words and deeds, no matter how lofty in seeming, unless they are the outpouring or effect of righteousness, are not regarded by or even known to the divine Mind, which marks thought only, a reversal of effort is seen to be necessary.

There dawns at once the perception that to "stand porter at the door of thought" (Science and Health, p. 392) is not only a duty, but the one duty of him who aspires to recognized sonship; not because the character of speech and action has become less important, but because it is seen that harmonious expression is more certain to result from correct thinking, by which the outward and actual are determined, than from the most painstaking exercise of the human will. At first, and perhaps for a long time, the task of portership will be found far more difficult than such regulation of external conduct as suffices for the requirements of human society; but this task must be undertaken and untiringly pursued by every individual who would recognize in himself and others the divine image and likeness, for only those who bring "into captivity every thought to the obedience of Christ" can claim in their fulness the rich rewards which are promised to "him that overcometh."

Unerring Guidance

BELLE KANT

IN Proverbs we read, "A man's heart deviseth his way: but the Lord directeth his steps." The truth contained in these words was most clearly proved to me by an occurrence which took place a number of years ago during a visit to the seaside. This experience of Mind's guidance impressed me deeply at the time, and left a vivid impression which has often come to me during periods of trial since, and which has never failed to encourage and cheer.

My hostess had planned a drive into the surrounding country. After the long, beautiful afternoon was over we returned the horse and cart to the stable in the little village, attended to necessary shopping, then descended to the beach, and in the sunset glow strolled for a mile over the sands in the direction of her home. It was nearly dark when we turned in through the garden-gate. The peace and harmony of the pleasant twilight hour dropped from me, however, as I suddenly realized that my pocketbook, which I had carried when we started out, was gone. Seemingly this was a serious loss, as the pocketbook contained my railroad ticket and a considerable sum of money, besides papers of importance; but instantly, through a small knowledge of Christian Science, I corrected the sense of loss, declaring that to God, Mind, "the all-knowing, all-seeing" (Science and Health, p. 587), nothing was hidden, and that God's image and likeness reflected to human sense the penetrating vision from which nothing could vanish.

Acting on my friend's advice and my own inclination, I

Digitized by Google

retraced my steps. Through the gathering dusk I hurried along the shore, holding fast to the truth; but though I traveled in the path made by our own footprints, no pocketbook appeared. A search of the cart in the stable also proved fruitless, and the shops we had visited in the village were closed. Returning to the house, I resisted all sense of fear and apprehension, refusing to outline any means of meeting the contingency of the purse not being found. The expressions of sympathy and offers of assistance from my friends were likewise smilingly put aside, and thought was steadfastly held to the knowledge that as a child of God I could lose nothing necessary and useful, and that my every human need would be met by our heavenly Father.

On the next day we drove over the ground covered the afternoon before, made inquiry at the shops, and scoured the beach with no better success than that of the previous evening. As I broke my way through the thick undergrowth which clothed the downs before the house, discouragement whispered that I had looked everywhere, and that I had better give up; but this was silenced with the realization that nothing is hidden from the omniscient, and that Love and wisdom would open my eyes. Just then a projecting manzanita root caught in my low shoe. Intent upon the search, I attempted to kick my foot loose from the impediment, but I was compelled to stoop to free myself from it. As I did so, there at my feet lay the pocketbook!

In Jeremiah we find this declaration: "O Lord, I know that the way of man is not in himself: it is not in man that walketh to direct his steps," and in Science and Health (p. 424) Mrs. Eddy says, "Accidents are unknown to God, or immortal Mind, and we must leave the mortal basis of belief and unite with the one Mind, in order to change the notion of chance to the proper sense of God's unerring direction and thus bring out harmony." The pæan of praise and gratitude to God that welled up from my heart that day has become stronger with every added demonstration of the guidance of infinite good, and each day I grow more thankful to Mrs. Eddy for the purity and integrity of purpose which enabled her to be the revelator to this age of the power of Truth over error and of man's dominion as the child of God.

[Written for the *Sentinel*]

Truth the Victor

REV. EDMUND B. GEARHART, PH.D.

Not in this war
Shall ye with fierce, embattled foes contend,
Nor spear nor breastplate use to pierce or fend.
Your glittering sword shall know no bloody play,
Your shining armor shall undented stay,
No vicious thrust shall helm or harness mar;
Ye shall not fight today.

Not now, nor nigh,
Nor e'er again, upon the ensanguined field
Shall ye your life-blood to the foeman yield;
Not in this mortal battle shall ye fight.
'Tis not by human power, by earthly might,
"But by my spirit," saith the Lord Most High,
And He doth guard the right.

Truth, Love alone,
Whose banners, streaming ceaselessly abroad,
Wage silent battle for the child of God,
Driving our foes before us, one by one,
As morning mist is scattered by the sun;
The battle and the victory are His own,
And He the field hath won.

Selected Articles

[Judge Clifford P. Smith in *Brooklyn* (N. Y.) *Eagle*]

Recently a special number, Christian Science extra, *The Bible Students Monthly*, has been scattered broadcast in a number of American cities, including Brooklyn. One of the items in this *Monthly* was printed originally as a letter in the *Scranton* (Pa.) *Times* of April 26, 1906. In October, 1906, it was reprinted in the *Old Theology Quarterly;* later it was reprinted in the *People's Pulpit*, and subsequently in *The Bible Students Monthly*. In this manner certain persons have kept this article in circulation for about ten years, and have by its terms continually accused Mrs. Eddy of teaching that she is God. The letter in question contains other misrepresentations, but this one is the most important and the most offensive.

From time to time Christian Scientists spoke of this letter to the person who wrote it and to other persons responsible for keeping it in circulation. For example, the Christian Science committee on publication for New York wrote to one of them about it in August, 1914. In reply, this official received the following letter from the Rev. C. T. Russell, dated Aug. 26, 1914, and mailed at Butte, Mont.:—

"Yours of the 12th inst. reaches me here in the far West. As you may surmise, I am not giving much personal attention to *The Bible Students Monthly*, although I have a general supervision of it. I am sorry if it at any time contained anything that could be construed as unkind or personal, or anything doctrinal that was untrue or unfair. Be assured, while we believe that only the people's doctrines are proper subjects for public criticism, we always wish to be gentle, kind, just, truthful. I have suggested that some early number of *The B. S. M.* take opportunity for an expression of this kind."

Neither the bland surprise nor the fair assurance expressed in this letter proved to be of any avail. No retraction was made, and the circulation of the statement that Mrs. Eddy claimed to be God continued without abatement. Moreover, three months did not pass after the date of the letter just quoted before the writer of it referred to Christian Science, in a sermon published at advertising rates, as a device of Satan. Such a condemnation is, however, of comparatively little importance, since it is not so likely as a more specific statement to misinform or deceive. Christian Scientists do not ask opponents of their religion to speak favorably of it, but ask them to abstain from misrepresentations, and for the statement that Mrs. Eddy claimed to be God there is not even a plausible pretext.

In April and May, 1915, after preliminary announcements, two sermons by Mr. Russell, directed entirely against Christian Science, were published in a considerable number of newspapers at advertising rates. Now these sermons and the letter containing the statement that Mrs. Eddy claimed to be God have been reprinted with other incidental items and put in circulation again. Shortly after the sermons in question were first published, a lady who is not a Christian Scientist made the following comment on them in the *Brooklyn Eagle:* "In his two sermons Pastor Russell has misrepresented Christian Science. I have read and reread Mrs. Eddy's book, Science and Health. I do not agree with it, but above all things I must admit its chief merit is consistency. I disagree with its premises, but those who accept its premises must accept its conclusions. Let those who wish really to understand Christian Science read the pages written by Mrs. Eddy, who after years of invalidism was made into a strong, energetic leader by the Science she expounds."

Digitized by Google

This comment on these sermons by an independent reader can be emphasized by a more detailed analysis. In the first of these sermons the speaker disclosed his attitude toward Mrs. Eddy's motives and teaching in the following words: "She would hold to the Bible, even though perverting its teaching. She would not make her teachings too antagonistic to other theories. She laid principal stress on healing, and settled all doctrinal difficulties with the dictum that there is no evil, no sin, no death; that what have been so called are merely errors of the mind."

Whoever assails the motives of another needs to support his assertions with facts in order to convince fair-minded bystanders. No fact having any reasonable tendency to impeach Mrs. Eddy's motives has ever been presented; and no such fact can be found, for none exists. There are as many expositions of the Bible as there are religious teachers, and surely the fact that one of them differs from others, either little or much, is no evidence of bad motives. So long as Christendom accepts the Master's test, "Ye shall know them by their fruits," Mrs. Eddy's motives will be safe in the estimation of all who knew her, and of all who know of the results which have ensued from her life-work. The religion she taught and founded has converted unnumbered persons from disbelievers or passive believers into earnest and active Christians; it has increased the beneficial effects of Christianity with nearly all its adherents, and it has been the means by which goodness, health, and happiness have come to a great multitude of people. As was said of Mrs. Eddy in 1908 by one who knew her personally and was capable of justly estimating her work, the late Clara Barton, founder of the American Red Cross, "She is the one person, regardless of sex, living today, who has done the greatest good for her fellow creatures."

The contention that Mrs. Eddy "settled all doctrinal difficulties with the dictum that there is no evil, no sin, no death; that what have been so called are merely errors of the mind," was only an effort to make Christian Science absurd by reducing it to a set of denials. It would be as fair to say that Jesus solved the problem of human life by saying, "The flesh profiteth nothing." This denial of matter is indeed one of his most important sayings, but it cannot be understood apart from the affirmative truth on which it rested, namely, "It is the spirit that quickeneth [giveth life]." For the same reason no critic of Christian Science can deal fairly with its denials without mentioning the affirmations on which they depend.

The basic truths of this teaching are just as accessible as its denials. For instance, the following excerpts from pages 108, 109 of "Science and Health with Key to the Scriptures" by Mrs. Eddy, correspond to the denials mentioned by this opponent: "All real being is in God, the divine Mind," "The only realities are the divine Mind and idea." It was not Mrs. Eddy's plan to compose theological strife with a dictum. She depended on teaching and proof. This fact appears implicitly or explicitly throughout her writings. For instance, we read on page 466 of Science and Health: "Science will declare God aright, and Christianity will demonstrate this declaration and its divine Principle, making mankind better physically, morally, and spiritually." Can any one offer a more feasible plan, or one that relates more directly to the present and future welfare of men?

With regard to the stress Mrs. Eddy laid on healing, it is to be observed that she followed the teachings and example of Christ Jesus. She stressed healing, in the broadest sense of this term, as he did and because he did. Describing the work done by the Master, St. Peter said he "went about doing good, and healing all that were oppressed of the devil." This was the perfect practice of Christianity; and whichever religious teacher or denomination comes nearest to doing likewise today is nearest right. Christians who do not practise Christian healing yet cavil at others because they do, only try to clothe a failure in the garments of a virtue.

✧

[Daniel M. Ely in *Basil* (Ohio) *Record*]

It is unfortunate that the reverend gentleman whose attack on Christian Science appeared in a recent issue of the *Record* should have based his remarks upon a tract instead of gaining his information from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. These tracts attacking Christian Science, which have been distributed in large numbers, in almost every instance are largely made up of quotations from the text-book which have been separated from their context in such a manner as to rob them of the meaning Mrs. Eddy conveyed.

Christian Science teaches that God is Life, Truth, Love, Mind, Soul, Principle. These terms express the nature of God—His oneness and allness. It also teaches that God is not a person in the sense of finite personality; God is not a man magnified. On page 336 of Science and Health Mrs. Eddy says: "God is individual and personal in a scientific sense, but not in any anthropomorphic sense. Therefore man, reflecting God, cannot lose his individuality." Christian Science teaches that man is the image and likeness of God; never that man is God, but that man does coexist with God, in whom he lives and has his being. "Human philosophy," Mrs. Eddy tells us, "has made God manlike. Christian Science makes man Godlike" (Science and Health, p. 269). It teaches that Jesus was the son of a virgin, that he demonstrated the Christ and is the Wayshower. Speaking of his human relationship, Jesus called himself the "Son of man." When referring to his inseparable relation to God the Father, he declared himself to be the "Son of God."

As defined in Science and Health "the spiritual essence of blood is sacrifice" (p. 25); and in proportion as we live the life of Jesus, following in his footsteps and having that Mind in us which was also in him, do we indeed drink his blood and eat his flesh, not in worship of the symbol, but as he said all true worshipers should worship—"in spirit and in truth." Science and Health is not intended to supersede the Bible, but is what its subtitle indicates—a "Key to the Scriptures." The Authorized Version of the Bible is used in all Christian Science churches and Sunday schools, and the followers of Christian Science subscribe to this tenet, which is given on page 497 of Science and Health: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life."

Christian Science does not teach that "lying is a virtue," or "train its devotees to declare that they are not sick and in pain when they are suffering and dangerously ill." Christian Scientists realize that sickness as well as sin needs to be healed, and they do not neglect those who are suffering. To one who has made a study of Christian Science and has demonstrated its teaching, the unreality of sin and sickness will become more and more apparent, and the Master's wonderful declaration, "Ye shall know the truth, and the truth shall make you free," will be expressed with practical results.

✧

[Henry Deutsch in *Duluth* (Minn.) *News Tribune*]

Christian Science exemplifies the Master's promise, "Ye shall know the truth, and the truth shall make you free." This is the truth about God and man's relation to Him, and is taught in Christian Science with the primitive simplicity which was characteristic of the teachings of the Master. Christian Science does not deny the seeming existence of pain,

Digitized by Google

sin, and death as mortal experiences, but it does show, even as the Master taught, that by imbibing his precepts and bringing them out in daily practice, even as he overcame and destroyed those conditions, so we today accept of and receive the fulfilment of his promise, "He that believeth on me, the works that I do shall he do also."

Christian Science service is work in the cause of Truth, effort in the direction of the establishment of the kingdom of heaven here and now, and those who perhaps were indifferently interested in other forms of religion change their attitude through Christian Science because it presents to them that which is both practical and demonstrable and thus becomes a part of their daily lives. Men's views of religion differ in greatly varying degrees, and instead of ridiculing or condemning we should be grateful for any change in a man's attitude which indicates that he has cast his net on the side of God,—however feeble his efforts,—instead of drifting on the side of indifference, infidelity, atheism, or agnosticism.

Who gave the speaker referred to the right to judge between the true and the false? And by what authority does he arrogate to himself the privilege of asserting that he is right and earnest followers of other creeds are wrong? There is only one thing true, and that is the truth. Everything must be tested by it, and the result, if correct, must be demonstrated, and Christian Science furnishes this in every instance where it is conscientiously applied.

✧

[Martin Sindell in *Eau Claire* (Wis.) *Telegram*]

If our critic, the evangelist, will read the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, or any of the Christian Science periodicals, he will not find from cover to cover in any of them a single unkind remark about the Baptists or any other religious denomination. The Scientist has so much of the truth; he loves it so well, and it means so much to him, that he does not need to go beyond its borders to find something to talk about. In fact it has no "borders," for being of God it is unbounded, infinite, beautiful, healing, and saving.

One of our greatest and most respected literary men, Hamilton W. Mabie, says, "Most of our criticism of others is either idle or unjust, because it does not take into account the obstacles overcome and the progress accomplished." The greatest opposition and the most unjust criticism Christian Science has met with have come from the clergy. History is repeating itself, since it was the same class of men who opposed and persecuted Christ Jesus. He could heal as well as preach; they could not. He understood truth; they merely believed it. He taught, "By their fruits ye shall know them." This is true of those who demonstrate truth as well as of those who merely talk about it; who urge others to shoulder burdens which they themselves will not touch with one of their own fingers, as Jesus said. He commanded his followers not only to preach the gospel but to heal the sick.

✧

[Virgil H. Clymer in *Syracuse* (N. Y.) *Herald*]

In your news columns we find a clergyman reported as saying that a Christian Scientist is not a Christian, first, because he does not accept "Christ's death as a necessary factor in the salvation of his soul," and second, because he does not "admit the deity of Christ." Christian Scientists have no desire to criticize the religious or theological beliefs of others, but on the other hand feel that those who differ with them should at least state correctly the Christian Science viewpoint. Christian Scientists follow the gospel teaching and distinguish between the human Jesus and the Christ. This our critic has failed to do, if he is correctly quoted. As to the Christ, Jesus said, "Before Abraham was, I am," thus teaching that the Christ, Truth, is divine and deathless; while as to his human manifestation Jesus said: "Why callest thou me good? there is none good but one, that is, God." "My Father is greater than I." "The Father that dwelleth in me, he doeth the works." The Scriptures show that Jesus made this distinction throughout his entire ministry, and why should not Christian Scientists follow his example?

The test of a Christian is to what extent he daily reflects the Mind of Christ. Jesus was the Wayshower, and he instructed his followers to heal as well as to preach, and further taught them that all who believed could do the healing works that he did. History records that this healing work continued for three centuries after the crucifixion. The healing proof was the standard set by Jesus. When John's disciples were sent to Jesus to ask if he was the one that should come, Jesus told of his healing work as proof of his Messiahship; likewise Christian Science points to its healing of sin, sickness, and sorrow through the same deathless Christ, Truth, as proof of its Christianity.

✧

[Avery Coonley in *Peoria* (Ill.) *Star*]

A contributor whose article on "The New Theology" recently appeared in the *Star*, has assigned to himself what would seem to be a very difficult if not impossible task when he undertakes to account for the growth, continuity, and prosperity of the Christian Science movement by attributing to its Founder selfish motives and unworthy aims. Ignorance, selfishness, and greed are not commonly credited with being the source of anything worthy, much less of that which elevates, purifies, and spiritualizes thought, as does the teaching of Christian Science. Nor is the other explanation offered, namely, the credulity of the public, based on sound logic. The present is an age of practical achievement. The conservatism of the past is giving way to a broader outlook and a clearer vision in the field of religion, as along other lines, that which does not justify reason and demonstrate its utility finds no permanent place in the world's activities.

That Christian Science does satisfy reason and fulfil its promise of present redemption from sickness as well as from sin is established beyond the possibility of successful contradiction. During the period of nearly fifty years since Christian Science was first introduced it has afforded abundant proof of its practicality and availability in the healing of all forms of disease and in the overcoming of sin, discord, and evil of every name and nature. Its beneficiaries are to be found in all parts of the civilized world, and wherever the power of God as taught in Christian Science has found expression, thought has been lifted to a higher sense of life, a better understanding of God, a keener perception of the brotherhood of man; and nothing can stay the tide of gratitude that goes out to the one whose life was pure enough to discern the present availability of Jesus' teachings and brave enough to present her discovery to an incredulous world.

The life of Mrs. Eddy is an open book. It needs no defense, and no amount of misrepresentation or falsification can take from her the honor due to her loving and consecrated work. From her thoughtful, studious childhood, with its deep religious experience, to the time of her recovery from a serious injury through her application of the truth found in the Bible, her experiences were but preparing her for her great work in behalf of suffering humanity. How faithfully, patiently, and lovingly this work was fulfilled can be understood only by those whose thought has been so lifted as to discern in some degree the true import of her mission; but the world is increasingly according her a foremost place among the benefactors of humanity.

Editorial

Judged by Their Works

It is not strange, perhaps, that in the forty years the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, has been before the public and its teachings have been publicly practised, there should occasionally be a case which fails to respond to treatment and the patient passes on. As a matter of fact the percentage of these cases is surprisingly small when it is considered that as a rule people accept Christian Science treatment only as a last resort, and usually after a thorough course in *materia medica* has failed to bring relief from their distresses. In some communities these occurrences are accepted as a matter of course and pass without comment; but occasionally unpleasant situations develop and in consequence the practitioner and the family are haled into court. To the credit of Christian Science it may be said that when these cases come to trial the weight of evidence as to the efficacy of this mode of treatment which is submitted in defense is usually sufficient to secure release from the charge.

A great many of these instances naturally have to do with children, it being assumed that the parents are guilty of negligence in failing to provide medical attention for them. Particularly is this the claim when the disease is of a so-called contagious character, it being urged that the child would have recovered if a physician had been called in the early stages. The fallacy of this claim has been proved again and again, but it still does duty when nothing else avails. As a matter of fact Christian Scientists believe they are fulfilling their highest duty in putting their trust in Truth, and in the thousands of homes where Truth is relied upon for the overcoming of every phase of error, the parents recognize no more necessity for calling a physician to treat a case of one kind than another, although they are always careful to obey the law which requires the reporting of certain contagious diseases and the observance of quarantine regulations. A comparison of vital statistics in a given community will show that their faith in the power of Truth to overcome all error is justified in the results.

It is with pleasure, therefore, in view of the public interest which usually attaches to cases of this kind, that we note the action of the prosecuting attorney in Wayne County, Ind., as given in the *Richmond Evening Item* of recent date. It seems that several months ago charges of practising medicine without a license were preferred against two Christian Science practitioners who had attended a case of diphtheria. Within a few days motions to dismiss these charges have been filed by this attorney with the judge of the Wayne circuit court, who it is expected will dismiss the cases from the criminal docket. The point we wish to emphasize is brought out in the statement made by the attorney, to the effect that he is uncertain whether he did not do the two women an injustice when he filed the charges. To quote from the *Item*, "he said that since he filed the charges he had been observing the work that the Christian Science church is doing, and he believes that the workers are to be commended for and encouraged in their work." This is eloquent testimony indeed to the power of good works.

"Let us hear the conclusion of the whole matter," said the wise man of an earlier age: "Fear God, and keep his commandments: for this is the whole duty of man. For God shall bring every work into judgment, with every secret thing, whether it be good, or whether it be evil." This counsel is equally applicable today, and it is precisely this obedience to the divine commands which Christian Scientists are daily endeavoring to render. As followers of the great Master they are healing the sick and the sinning, and they are entirely willing to be judged on the merits of their work, in keeping with his declaration, "Ye shall know them by their fruits." One has only to scan the testimonies which appear in our periodicals to find case after case of marvelous healings of children under Christian Science treatment, and very many instances where the little ones themselves, through their clear apprehension of Truth's power to heal, have been the means of bringing speedy help both to themselves and to their elders.

On page 342 of Science and Health Mrs. Eddy says, "He that decries this Science does it presumptuously, in the face of Bible history and in defiance of the direct command of Jesus, 'Go ye into all the world, and preach the gospel,' to which command was added the promise that his students should cast out evils and heal the sick." To do such good healing as shall command the respect of the community and disarm even the hostile critic is the aim of the Christian Scientist, and this consistent course can but succeed.

ARCHIBALD MCLELLAN.

"I was afraid"

THE paralyzing and stultifying effects of fear are perhaps nowhere more plainly set forth than in the case of the third servant referred to in the parable of the talents. In the three significant words, "I was afraid," we may find the secret of his inaction, his inefficiency, and his condemnation. They fully account for the sloth which, despite equipment and opportunity for service, could make no return when called to an accounting, save in the halting statement: "There thou hast that is thine."

The immediate result of this fear was secrecy. The servant went and hid his talent, and in this act he buried his possibility of growth and his capacity for usefulness. Instances of the same kind are not lacking today. One has perhaps received help through Christian Science, and instead of going out among men and showing his appreciation of it by his patience, humility, unselfishness, and good deeds, he allows fear of criticism, of being looked upon as heretical or peculiar, to dominate him, and so with the implements of fear he digs the hole in which he hides the treasure committed to him. What wonder if sooner or later the inevitable command comes, "Take therefore the talent from him."

Unexercised spiritual perception is sure to slip from our grasp; but through constant use and prayer it grows into fuller discernment. True gratitude for blessings received always prompts one to follow the example of Andrew and Philip, who immediately began to preach the gospel to those near them, saying, "We have found him"—the Christ. It begets the love of ministry, and it is this activity of gratitude which naturally brings about an increase of every good already possessed. The pianist is ever playing in order both to perfect and increase his technique; and so, as Mrs. Eddy has said, "in order to apprehend more, we must put into practice what we already know" (Science and Health, p. 323). This is the natural and logical order of human development, and it is no less true in the matter of spiritual growth than it is in that of artistic attainment. If we would make a fair showing when called to account for heaven's gifts, we must certainly acquire the habit of putting them to practical and purposeful use every day. He who buries his ability to do good, violates the most fundamental requirement of Christianity, namely, love for God and love for one's fellow men.

When traced to its primal source the cause of inaction is

Digitized by Google

usually found to be the self-depreciation which refuses to recognize man in God's image, the man who can "do all things through Christ," or the lazy listlessness which is but a phase of selfishness. Indeed, selfishness and fear are always found to be close friends; they go hand in hand. The servant in the parable merely followed the line of least resistance, trusting that the matter would work out all right in the end. This is one of the most specious inducements of unenlightened human sense. A matter can never work out rightly unless it is begun rightly and continued according to the requirements of brave, unhesitant justice, mercy, and love. Problems are never solved by shirking them. We never gain by trying to dodge the real issue, and the effort to do so can but compel the statement, "There thou hast that is thine."

The servant who buries his talent renders it impossible for him to know the sweet joy of tasks achieved and victories won, of hearing the gracious commendation, "Thou hast been faithful over a few things." And who that has heard these words would surrender the blessedness of such a moment for all the world might offer? With such a commendation there always comes the assurance of being made "ruler over many things," the consciousness of having gained clearer spiritual perception, and that glad willingness to serve which expresses the fearlessness of genuine faith, for it knows that it is ours not to do, but simply to present the conditions under which ever-present and omnipotent Love, working in us, may accomplish all things. Then we cannot be afraid.

JOHN B. WILLIS.

"Knowing the time"

THE wise man declares that there is "a time to every purpose under the heaven." He then presents a long list of human purposes and activities in which evil and good are so evenly balanced that no hope of overcoming the evil is introduced. Indeed it is little wonder that the summing up closes with this sad reflection: "What profit hath he that worketh in that wherein he laboreth?" Happily, however, the wise man goes on to tell us that God made everything beautiful, and that it is ours to enjoy the divine bounty. He also adds this significant phrase: "That which hath been is now; and that which is to be hath already been." Christian Science teaches that the realization of all good is possible at all times, since to God good alone is real.

In going back to Solomon's sermon one is reminded that mortals are very uncertain as to the right time to do anything, but the student of Christian Science knows that he must leave behind him all the shadows of mortal belief and come out into the life-giving sunlight of Truth and Love. Paul deals scientifically with the question of human unfoldment when he speaks of "knowing the time," and at once declares that "now it is high time to awake out of sleep." The awakening to truth may be said to be the very first step in real living, and we are reminded of this many times in the Bible. In her Message for 1902 (p. 17) Mrs. Eddy says, "Many sleep who should keep themselves awake and waken the world." Our Master said that it was while men slept that the enemy sowed tares in the field.

If we are awake to the truth of being, we shall know the time in the fullest sense. We shall see the misery of the mortal outlook at all times, whatever the delusive promises of material sense, but we shall also know that when mortal mind has done its worst we may then prove the might and majesty of Truth, knowing too that this is the time of "God's opportunity," also ours to forward the cause of Truth. Having agreed that error is entitled to neither time nor place, we are privileged to consecrate all our time to the activities of Truth. A most beautiful and inspiring passage in our text-book reads: "In the figurative transmission from the divine thought to the human, diligence, promptness, and perseverance are likened to 'the cattle upon a thousand hills.' They carry the baggage of stern resolve, and keep pace with highest purpose" (Science and Health, p. 514). These manifestations of spiritual activity, upon the human plane, are inseparable from progress and success. In Exodus we read that the children of Israel were commanded to hearken "diligently" to the divine voice, then to obey, and the reason given was this: "I am the Lord that healeth thee."

If we were always diligent in listening for the voice of Truth, we would never have occasion to fear the threatenings of error, whether of sickness or misfortune, for we would learn what to do and when to do it. It sometimes seems as if the lack of promptness is one of the gravest flaws in human character. Once we see a duty we should bend our mental energies to the task called for, without a moment's delay for the arguments of error. This recalls the words of Christ Jesus, "Agree with thine adversary quickly, whiles thou art in the way with him;" that is, we should settle the whole question promptly by denying the arguments of error as did our Master in his temptation in the wilderness. If we wait to be sure that we are ready to do what Truth requires, our lack of promptness may find us faint-hearted for the task, which should be approached with courage and joy.

Promptness implies readiness to obey, and it calls for perseverance. We do not labor for ourselves alone, but for the universal welfare. Even if we have begun to possess our divine heritage, symbolized by "the cattle upon a thousand hills," we must persevere until with added strength, gained in unselfish endeavor, no task shall seem toilsome. Thus "knowing the time," we shall see that the long night of materiality is "far spent" and the day of Spirit at hand, when we shall "put on the armor of light."

ANNIE M. KNOTT.

Among the Churches

Current Notes

PORTLAND AND SALEM, ORE.—For the past three years the Christian Science organizations of Portland and Salem have been holding services in the various penal and public institutions in this community. At the Multnomah County Poor Farm services are held every sixth Sunday, at the Multnomah County Jail every two weeks, and at the State Penitentiary in Salem on the third Sunday of each month. The attendance at all the institutions is marked by the close attention given to the services.

In October, 1915, a lecture was given in the State Penitentiary at Salem by Clarence C. Eaton. It was attended by five hundred inmates, and close attention was given by all. A short time ago cards were distributed among the men, asking them if interested in the study of Christian Science and wishing to have the literature sent direct to them to return the card with name signed. The committee in charge received one hundred and twenty-eight cards, which is 25 per cent of the inmates. Many requests for treatment have been received from the men at various times, and quite a number have their own copy of Science and Health.

The officers in charge at both the county and state institutions are very friendly and give us all the assistance they can. The growth in the work is marked. There have been many testimonies given by the men at various times, and they look forward with pleasure to the dates when the services are to be held. The order of service followed is along the line of the Wednesday evening meeting, giving an opportunity for testimonies.—*Correspondence.*

IRELAND.—Literature has been distributed in Leinster and Munster, outside the city of Dublin, as follows: 335 *Sentinels*, 31 *Journals*, 22 *Heralds*, 9863 *Monitors*, 35 pamphlets, 888 miscellaneous pieces, making a total of 11,174 pieces. An analysis of this distribution shows that 10 *Monitor* subscriptions for nine months and 8 for three months were presented to the U. S. Consulate at Queenstown, to a newspaper, to reading-rooms, hotels, library, and to individuals. Parcels have been sent regularly to R. I. Constabulary, lighthouses, coast-guards, and families, who are very grateful. One hundred copies of the *Monitor* with the editorial on the Montessori system, and copies of Thursday and Saturday issues, which contain such interesting articles for educators, have been sent to schoolmasters and schoolmistresses from a carefully prepared list. Editors, judges, lawyers, and other prominent men and women, have received marked copies, many of which have been acknowledged with appreciation. A selected list of Jews receive marked copies gladly. One hundred copies of Senator Works' great speech in Congress, reprints from the *North American Review*, and 250 *Irish Weekly Mails* with the full report of Clarence W. Chadwick's lecture have been sent out by the postal committee. In County Kilkenny, 173 *Sentinels*, 15 *Journals*, 1672 *Monitors*, 24 other pieces, in all 1884 pieces of literature, were distributed.

In the city of Dublin during 1915 the literature distribution committee put out 29,511 pieces, making a total of 40,685 pieces distributed in the two provinces of Leinster and Munster in the year. Besides this, through the generous provision made by the Trustees under the Will of Mary Baker Eddy, there were distributed to sailors and soldiers 1292 *Sentinels*, 673 *Journals*, 298 *Heralds*, 9951 *Monitors*, 1611 pamphlets. A special grant of 7 *Monitor* subscriptions to regimental centers at the Curragh and of some of Mrs. Eddy's works to the Garrison Library was also made by the Trustees. The National Library of Ireland has agreed to receive all of Mrs. Eddy's works.—*Committee on Publication.*

MONTE VISTA, COL.—The Christian Scientists have fitted up the Stein Building for use in holding their services and for a library and reading-room. From a very small beginning four or five years ago, the Scientists have grown until they can fill this commodious building. There are about thirty children in the Sunday school.

San Luis Valley Graphic.

HARRISBURG, PA.—Early last summer a lot on Front and Woodbine Streets was purchased by the Christian Scientists. It has been announced that a chapel will be built there in a short time, and later, as the funds are secured, a larger building erected. The building lot has a frontage on Front Street of 100 feet and is 170 feet deep.—*The Patriot.*

Admission to Membership in The Mother Church

The next admission of candidates will be June 2, 1916. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 10, 1916.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

Winchester, Mass.

An audience of fully six hundred people in the Town Hall listened attentively to the lecture on Christian Science by Jacob S. Shield. In introducing the lecturer John J. Flinn spoke in part as follows:—

Whether you are disposed to agree with us wholly or partly or not at all, so far as our religious tenets or practices are concerned, you have, I think, known us long enough and well enough to believe that what we are striving for is the making of healthier, more wholesome, better and therefore happier men, women, and children. In a period of the world's history such as we are passing through at present,—or in any period,—this striving is surely worthy the recognition of all right thinking people. The religion we profess, the faith we hold, and the understanding we have gained of the Principle discovered, defined, explained, and made practicable by our revered Leader, Mrs. Eddy, have impressed themselves upon the mentality of our times and have entered, I am satisfied, either directly or indirectly, consciously or unconsciously, into the personal experience of every one of you, for there is now hardly a considerable group in this or in any other civilized country in which the healing efficacy of Christian Science has not been demonstrated.—*The Winchester Star.*

✧

St. John, New Brunswick, Canada

The introductory remarks of H. Farmer Hall at the lecture on Christian Science by George Shaw Cook were as follows:—

Perhaps there has never been a time in all human experience when men were more earnestly seeking for an intelligent statement of God, His nature and His relation to human affairs, than at present. Today as we look around we see on all sides so much of sorrow, sin, disease, and death, that we try to turn from an outlook so depressing, away from the temporal and material, and endeavor to rest our gaze on those things which are spiritual and eternal. In this search for a better understanding of God there are very many, however, who feel that their endeavors in this direction have been met with nothing but failure, and in their discouragement they echo the cry of Job, "Oh that I knew where I might find him!"

Christian Science has come to this age at a time when it was most needed, and furthermore, it has come answering satisfactorily the innumerable questions that well up in human thought and demand solution. It is revealing one infinite Father-Mother God and His infinite universe. It tells us of Him who forgiveth all our iniquities, who healeth all our diseases.—*Correspondence.*

✧

Wakefield, England

Dr. Gilbert J. Fowler of Manchester, in introducing Clarence W. Chadwick, who lectured on Christian Science, said:—

It is a particular pleasure to me to preside at a Christian Science lecture in Wakefield, as I first became interested in this teaching while on a visit to a friend in this town. I was not a little skeptical at first, and was determined thoroughly to test the statements of Christian Science before accepting them. It is my business in life to make investigations and to prepare critical reports, and I can honestly say that I have never made a more thorough inquiry into anything than into the truth or otherwise of Christian Science, because I saw that if it was true, it was of the utmost

Digitized by Google

importance to humanity. After six years' experience I can state my absolute conviction that Christian Science is indeed the truth which was first brought to the world by Jesus of Nazareth. It is the Science of Christianity.

I have myself experienced, and have seen in my family and among my friends, the healing of disease through the understanding of Christian Science; and not only the healing of disease, but of wrong and discordant conditions of every kind. My experience is that of hundreds of thousands of others all over the world. There is nothing esoteric or occult in this new-old religion. Any one who honestly desires to do so can prove the truth of its teachings for himself. These lectures are given in order that Christian Science may be correctly presented to such honest seekers for Truth.—*Correspondence.*

Lectures to be Delivered

ARKANSAS—Pine Bluff: Jacob S. Shield, Shriners Temple, Seventh and Main Streets, 8:15 p.m., May 5.

CALIFORNIA—Los Angeles (Ninth Church): Virgil O. Strickler, Church Edifice, 430 South New Hampshire Avenue, 8 p.m., May 8.

Oxnard: Virgil O. Strickler, Oxnard Opera House, 8 p.m., May 6.

Riverside (Second Church): Virgil O. Strickler, Loring Opera House, 8 p.m., May 9.

San Bernardino: Virgil O. Strickler, New Polytechnic Auditorium, 3 p.m., May 7.

Santa Rosa: George Shaw Cook, Columbia Theater, 8 p.m., May 11.

Sawtelle: Virgil O. Strickler, Woman's Club House, 8 p.m., May 7.

Templeton: Virgil O. Strickler, Clausen Hall, 8:15 p.m., May 2.

CONNECTICUT—Norwich: William D. McCrackan, Davis Theater, Broadway, 3 p.m., May 7.

ILLINOIS—Alton: George Shaw Cook, Temple Theater, 3 p.m., May 7.

Carbondale: John W. Doorly, Amuse-U-Theater, 2:15 p.m., May 7.

Chicago (Tenth Church): John W. Doorly, Rosalie Hall, 5704 Harper Avenue, 8 p.m., May 5 and 6.

Hoopeston: Prof. Hermann S. Hering, Church Edifice, Third and Washington Streets, 8 p.m., May 8.

Riverside: Jacob S. Shield, Auditorium, Berwyn (Ill.) Club House, 8:20 p.m., May 12.

Rockford: Clarence C. Eaton, Church Edifice, 515 N. Main Street, 8:15 p.m., May 4.

INDIANA—Grand View: Willis F. Gross, City Hall, 8 p.m., May 11.

Hammond: Prof. Hermann S. Hering, Masonic Temple, 47 Muenich Court, 8 p.m., May 9.

La Fayette: Clarence C. Eaton, First Christian Church, 8 p.m., May 9.

Shelbyville: Prof. Hermann S. Hering, Strand Theater, 3 p.m., May 7.

Winchester: Clarence C. Eaton, Orpheum, 3 p.m., May 7.

IOWA—Des Moines: John W. Doorly, Coliseum, 8:15 p.m., May 9.

Eldora: Willis F. Gross, Wisner Opera House, 8 p.m., May 8.

Marshalltown: Willis F. Gross, Church Edifice, Main and Fifth Streets, 8 p.m., May 9.

KANSAS—Horton: Willis F. Gross, City Hall Auditorium, 3 p.m., April 30.

Seneca: George Shaw Cook, Church Edifice, 8 p.m., May 8.

MASSACHUSETTS—Reading: Dr. Francis J. Fluno, Church Edifice, Lowell and Sanborn Streets, 8 p.m., May 9.

Winchester: Dr. Francis J. Fluno, Town Hall, 8 p.m., May 7.

Worcester (Second Church): William D. McCrackan, Horticultural Hall, 18 Front Street, 8 p.m., May 6.

MICHIGAN—Adrian: Clarence C. Eaton, Public Library Auditorium, 8:15 p.m., May 8.

Bangor: Bicknell Young, Miller's Opera House, 8 p.m., May 6.

Lansing: Bicknell Young, Prudden Auditorium, 8 p.m., May 8.

St. Johns: Bicknell Young, Circuit Court Room, 3:15 p.m., May 7.

MINNESOTA—Minneapolis (First Church): William R. Rathvon, Church Edifice, Nicollet Avenue and Twenty-fourth Street, 8 p.m., May 8 and 9.

MISSOURI—Joplin (First Church): Charles I. Ohrenstein, Church Edifice, Sixteenth and Wall Streets, 3 p.m., May 7, and 8 p.m., May 8.

Kansas City (Second Church): Charles I. Ohrenstein, Church Edifice, Thirty-first Street and Troost Avenue, 8 p.m., May 11 and 12.

Kirkwood: William R. Rathvon, Church Edifice, Washington and Clay Avenues, 8:15 p.m., May 12.

St. Louis (First Church): John W. Doorly, Church Edifice, Kingshighway and Westminster Place, 8 p.m., May 8.

Springfield: Charles I. Ohrenstein, Church Edifice, 330 East Center Street, 8 p.m., May 9.

NEW HAMPSHIRE—Dover: William D. McCrackan, Banquet Hall, Opera House, 8 p.m., May 12.

Nashua: Bliss Knapp, City Hall, 3:30 p.m., May 7.

NEW JERSEY—Cranford: John W. Doorly, Church Edifice, Springfield Avenue and Milne Street, 8:15 p.m., May 11.

East Orange: John W. Doorly, East Orange High School, 8:15 p.m., May 12.

NEW YORK—Oneonta: Bliss Knapp, Woman's Club, 8 p.m., May 12.

Potsdam: William D. McCrackan, Town Hall, 8 p.m., May 8.

Poughkeepsie: Bliss Knapp, Church Edifice, 111 Market Street, 8 p.m., May 11.

Yonkers (Society): William D. McCrackan, Philipsburg Hall, 16 Hudson Street, 8:30 p.m., May 5.

OHIO—Cincinnati (First Church): Prof. Hermann S. Hering, Music Hall, 8:15 p.m., May 12.

Newark: Bicknell Young, High School Auditorium, 8:15 p.m., May 12.

Sandusky: Bicknell Young, Carnegie Library Building, Adams Street and Columbus Avenue, 8 p.m., May 9.

Springfield: Prof. Hermann S. Hering, High School Auditorium, South Limestone Street, 8 p.m., May 11.

Testimonies of Healing

In 1904 I became afflicted with catarrh. After having treatment from four of our local physicians without relief, I went to a specialist in another town, who succeeded in relieving the discharge; but I was left quite deaf, and with a continuous roaring sound in my ear that at times was almost unbearable. I then consulted a specialist in a town forty-five miles away, making weekly trips for treatment. Obtaining no relief, I tried other methods of treatment, but all without result. In February, 1906, I went to Minneapolis, where I was treated for seven weeks by one of the best specialists in the West. He tried everything that medical science could suggest and gave up the case as incurable, saying that an operation might stop the noise, but that I would always be deaf. I came home discouraged and gave up consulting doctors.

From August, 1906, till about the same time in 1907, members of my family were ill continually, so that I became very nervous and my general health much impaired. This condition aggravated the deafness and noises in the head, until it seemed as if I would rather die than live. The first of October, 1907, I went to Boston, stopping in the home of a gentleman who had become a Christian Scientist through his own remarkable healing. At that time I had heard of some of the healings Christian Science had accomplished, though I knew nothing of its teachings and gave the subject little thought or credence. One day, however, I told this gentleman that if he or Christian Science could do anything for my head, I wished he would do it. He said he would gladly try to help me, although he advised me to go to a regular practitioner, as he was only a beginner; but I preferred his treatment. I retired that night feeling rather disappointed that he did not keep me up and pray over me, or do something, I hardly knew what; but I slept peacefully all night and awoke the following morning well. The noises have never returned and my hearing is normal. I feel that I am completely cured of the trouble.

In August, 1912, I was in Minneapolis again, and at the request of my brother called on the specialist who had treated me, requesting an examination. He pronounced the ear normal. He also said that he remembered my case perfectly, and asked who cured me. When I told him, he only remarked, "I have known of the Christian Scientists doing some very remarkable things." Since this healing I have used no material remedies and have tried to order my life by the teachings of Christian Science.—C. L. M. Bugbee, Newport, Vt.

✧

I write this testimony in loving gratitude for all that Christian Science has done for me. On one occasion I awoke in the morning feeling unable to do my work. I am a nurse to young children, and at this time was taking care of a little boy of three. As his mother was away and I did not feel that there was any one with whom I could leave him, a sense of fear came over me. With difficulty I dressed myself and the child, and then, taking up my copy of Science and Health I sat down and treated myself. Instantly all fear left; in five minutes I was perfectly well, and rose joyfully to take up the day's work which a few minutes before had seemed impossible. At another time I was threatened with what seemed to be heart trouble. I felt weak and ill, and suffered a good deal of pain. With the help of a practitioner, however, this difficulty was entirely overcome in a few weeks.

In my work with children I can never be grateful enough for Christian Science, and I wish that all those who have the care of little children could know of this saving truth. Not only does it help one to understand how to overcome childish ailments, but the little lessons of every-day life are so simply learned and are made so easy by the understanding of what God really is,—Love.

The Christian Science literature is a great help. My heart is full of thankfulness to God for all the blessings I have received, and I am deeply grateful to our Leader, Mrs. Eddy, who has shown us that Christianity is demonstrable in every age.—Gertrude Sinnock, Bristol, England.

✧

A few years ago I became despondent, and was without hope or aim in life. Christian Science came to me through an aunt who has been a student of Science for a good many years, and who recommended that I read Science and Health. I read continually, and at once began to put off the old man with his ways and to put on the new man. About this time, however, a trouble manifested itself in my ear. The fact that an aunt, having had a similar affection, became deaf, made me somewhat more fearful; but I read Science and Health, and though my understanding was small I was soon relieved.

I have had many opportunities to interest others and help them find the way to peace and happiness. A member of my family was advised to have an operation,—to be performed within five days, otherwise a malignant growth would set in. In the mean while he had Science treatment, and when the fifth day came, on examination the physician found nothing on which to operate. He was also healed of the morphine habit. Christian Science has shown me my supply. I can truly say, God is my All-in-all, and words cannot express my gratitude for the peace, rest, and understanding of God's nearness that this truth has brought me.

Helen Weiss, New York, N. Y.

✧

I wish to express my gratitude for the many blessings received in our home through Christian Science, as we have been greatly helped physically, mentally, morally, financially, and above all spiritually. About six and a half years ago I came to Christian Science when in sore need of it for physical and nervous troubles and when laboring under a great sense of sorrow. I had been under a doctor's care or some form of treatment the greater part of my life, being considered delicate, but thanks to Christian Science I was healed after taking a few treatments and reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, together with other Christian Science literature.

We are a family of six, and Christian Science has met our every need in the years we have relied on it. We have had many demonstrations of physical healing; colds, throat affection, bronchitis, inflamed eyes, measles, blood-poisoning, and many other ailments have been overcome. These healings have meant much to me. One case was that of my youngest child, then not quite two years old. Sores began to break out on his face and other parts of the body, and every little scratch or speck of dirt caused inflammation. One nostril was closed, and the stomach and bowels became so disturbed that he could not retain any food. I tried to treat him as best I knew how, but finally called on a practitioner for help. Almost immediately the condition of the stomach and bowels improved and in a day or two this trouble had been overcome, but the sores were very slow in healing. Then the thought came to me very forcibly to treat him for stoppage or obstruction, and I did so for several days. One morning a stick three quarters of an inch long came out of his nose, and from the condition of the stick I knew what had seemingly caused the blood-poisoning. The healing was very rapid after this.

Digitized by Google

To mortal sense this seemed a wonderful demonstration, as it proved to me the truth of Jesus' words, "Ye shall know the truth, and the truth shall make you free," as step by step the error was uncovered and destroyed.

This same child was born under Christian Science treatment, and this was a blessing. I am grateful for the help my four children derive from the Christian Science Sunday school, as they are learning each day to put their teaching into practice, and many times they do their own work as taught in Christian Science without calling on any one for help. I am so grateful they know where and how to apply for help in time of need. I want to give thanks for our literature, as it is a great help to me. I thank God for sending us one pure enough to apprehend the truth and make it plain for us, and hope to show my gratitude to all who have helped me along the way by living and proving each day the truths taught in Christian Science.

IDA M. DANIEL, Los Angeles, Cal.

✧

To me Christian Science means everything that signifies good. My first experience with it was the healing of rheumatism. This ailment, which had made me a cripple at ten years of age, had baffled the best medical advice obtainable for many years and at times had rendered me helpless. Under Christian Science treatment I was healed in a day, and in a few days all manifestations of the trouble had disappeared. My second experience was the healing of an illness which the physicians, after a thorough examination, pronounced either gall-stones or Bright's disease. I called on a Christian Science practitioner next morning for not over thirty minutes, and have never had a return of those terrible attacks since. Each of these healings was realized in one treatment and was practically instantaneous.

More recently I again had a severe tussle with error, manifested in a very painful form, of which an accorded authority in medical practice said at a time of physical helplessness and great suffering, "No doctor on earth can heal him; it is incurable." He doubtless told the truth so far as he knew it, but as was proven, his knowledge of Truth and its power was limited. Thanks to the fidelity of the practitioner and the members of my own family, I was again restored to health and strength through Christian Science. The manifestations of this illness were a hardening and stiffening of the joints.

It would be impossible to express my thankfulness to God for Christian Science, or my gratitude to the Wayshower. I am also very thankful to Mrs. Eddy for what understanding I have gained of its present adaptability to our every need, as well as for the many benefits and blessings which have been received by members of my family and myself.

B. A. BRANCH, Chicago, Ill.

✧

[Translated from the German]

It is five years since I first heard of Christian Science, and I am most deeply grateful to God that I became acquainted with its teachings. At that time I was in a hopeless condition both physically and mentally, and despite medical help things grew steadily worse. I could take scarcely any nourishment, was unable to sleep at night, and any attempt to work only made me worse the next day. Life was to me a misery, and I almost envied those who were freed from their sufferings through death.

It was then that an acquaintance called upon me and drew my attention to Christian Science, whereupon I applied to a practitioner for help. Treatment was taken up lovingly and my condition soon improved; but much patience was needed on the part of the practitioner, as doubts would try to keep me away from the truth. Eventually, however, I did understand and realize that God is Love. Now I am well, feel stronger than ever before, and have had many proofs of God's protecting care. My dear mother has been freed of a serious stomach trouble of long years' standing, and she too enjoys good health.

I am very grateful for the spiritual uplift which has come to me, and my greatest desire is that I may make daily progress on the road which leadeth unto God.

MARIE RÜFENACHT, Bern, Switzerland.

✧

I have every reason to feel grateful to God for the immediate healing of my boy, nine years of age, from the results of an accident which occurred at our home. In trying to slide down the railing of a long outside stairway he lost his balance and fell, striking on his head. The physician who was summoned pronounced the case concussion of the brain. After taking the powders that the physician left, the boy would sleep, but when he awoke his head ached worse than before and he vomited often.

A short while before, I had become interested in Christian Science. I bore the child's suffering as long as I could and then sent for a practitioner, who was with the boy about half an hour when a wonderful change took place. In a short time he was able to eat and there was no more vomiting; the pain in the head also had departed. I sincerely thank God for being brought into Christian Science, as it has lightened my burdens in many ways.—ELLA G. DENNIS, Norwich, Conn.

✧

After being told of a wonderful case of healing through Christian Science, my mother decided to try it for me, as seven physicians had said that they had done all they could and that if we knew of anything else we had better try it. She felt that Christian Science could do me no harm, even if it did me no good.

For four years I had never been free from terrible pain in the back. Being in very limited circumstances, however, I had felt obliged to work, the result every time being a complete nervous breakdown. Every physician treated me for something different. I was experimented on for lung trouble, kidney and bladder trouble, liver complaint, sciatic rheumatism, and dislocated hip. At times the pain was so severe in the back of my head that I was almost unconscious, and for months I did not know what it was to sleep at night. The last five months before turning to Christian Science I was confined to my room, in bed most of the time.

After one week's treatment in Christian Science I was able to have my clothes on and ride two miles over rough roads with very little pain. In two months I was completely healed. Soon afterward I was given the privilege of working on the same machine that I had broken down on three times before. With lots of hard mental work and the realization that God is the only power, I have mastered my fear of it entirely and have proven that I can work every day without being the least bit fatigued. I am so happy to know this truth which Christ Jesus said would make us free from pain and sin.

Although I am very grateful for the physical healing, which has indeed meant much to me,—life, health, contentment, and peace,—I am more grateful for the true conception of God, and of man as His image and likeness; for the consciousness that God is All-in-all, that He made everything and it is good, and that in Him I live and move and have my being. This consciousness enables me to deal with my fellow man honestly and lovingly. Christian Science has taught me to love my neighbor as myself, and for this alone I owe my life's work to it.

Digitized by Google

In the fall of 1914 I had the privilege of class instruction, and it did wonders for me. Not a day passes without some proof of God's tender love and watchful care, some healing of pain; or erroneous thought, self-consciousness, or oversensitiveness is rebuked and overcome. I am grateful for our literature and for the reading-rooms provided for us through the foresight of our beloved Leader, Mrs. Eddy. They are both an inspiration to me, as is also the Christian Science Hymnal, which plays a great part in my devotions, for when error is tempting I often go to the piano and play those grand truths in song, and I come away feeling like a different girl. I have been healed of discouragement many times by just being willing to do my part.

My earnest prayer is that some one who is seeking Truth may be encouraged to strive on, and know that "God is no respecter of persons," and that "no good thing will he withhold from them that walk uprightly;" that His promises are not only positive but safe and sure.

MINNIE LOUISE HURLBUT, Springfield, Mo.

✧

[Translated from the German]

It is with a heart filled with gratitude that I wish to tell of the benefits received through Christian Science. In March, 1914, I was seized with an attack of bronchial catarrh, to which pleurisy was added in the latter part of April. When the trouble reached its height and the pain seemed almost unbearable, my attention was called to Christian Science by dear relatives, whereupon I immediately requested the help of a Christian Science practitioner in Basel. Following the first treatment there was an improvement, and within a short time I was able to resume my occupation. Now I am able to attend to my work without difficulty.

Through Christian Science we have learned that today as of yore divine Love is an omnipresent help in times of trouble, and we have had every reason to be grateful. Our endeavor is to assimilate more of divine Truth and to continue in the way pointed out to us by our beloved Leader, Mrs. Eddy.

FRIEDRICH KARLIN, Mappach (Baden), Germany.

✧

While I have always tried to love God and trust Him, I did not seem to know how to do so until I came into Christian Science and learned the truth about God and His creation, that He is ever present and can supply all our human needs. I had been frail from childhood, and for a number of years a semiinvalid. I had doctored, and tried nearly everything, including change of climate, besides undergoing several operations. While I was better at times, I was never well until I took up Christian Science, to which I turned as a last resort, not knowing what this teaching was until I began to read the literature.

The healing came through reading and without the aid of a practitioner. My eyes were in such a condition when I began that I could read only part of a page at a time, and although glasses were used, I had not been able to do even coarse mending. In two or three weeks I was able to read several hours a day without glasses. My general health began to improve from the first, and gradually I grew stronger, until now I am in robust health. We have a little boy a year old, our first child. According to *materia medica* this experience was impossible to me.

While I am grateful for the physical healing, I think I am more so for the spiritual betterment. I used to be always worrying, but now I am learning that God lovingly governs all; that we do not have to be sick or lack anything we need. All that is necessary for us is to learn the truth about God, and live it the best we can. I am thankful to God, and grateful to our Leader, Mrs. Eddy, for all these blessings, as well as to older students in Christian Science who encouraged and helped me when I was sometimes discouraged. I am also grateful for the Christian Science literature, from which I receive so much good. It is my desire so to grow in grace as to be worthy of the name Christian Scientist, and to help others to know the truth.—MARY F. BRECHTBILL, Grants Pass, Ore.

✧

Having experienced many wonderful demonstrations both physically and mentally, I feel very grateful for Christian Science. A number of years ago I was healed of a spinal trouble, but the healing did not bring me to a realizing sense of the omnipotence and ever-presence of divine Love. In course of time I had a severe nervous breakdown, and was again brought out of darkness by Christian Science. Four years afterward I was stricken with what would be called appendicitis and a complication of diseases in a very serious form. Under *materia medica* an operation would have been imperative, but I am happy to say that Christian Science was my only help. I have also been healed of almost constant headaches. Jesus' words, "Ye shall know the truth, and the truth shall make you free," were surely proven true in my case.

Words cannot express my thankfulness to God, and my gratitude to our beloved Leader, Mrs. Eddy, also to the faithful workers who so patiently labored to help me back to health and a better understanding of God. I feel very grateful for all these blessings.

MRS. A. N. DRURY, Winthrop, Mass.

✧

We have received many blessings through Christian Science. My wife and I have been able to demonstrate the truth of its teachings many times in the past four years. Through the help of a Christian Science friend, in the spring of 1914, our little girl was healed in a few days of an eruption on the face, which was covered with what seemed to be warts.

On another occasion we had a beautiful demonstration of the power of Truth. In pouring some boiling water into a small basin I accidentally spilled part of it on this little girl's head and face. She began to scream, but I took her into my arms and began to declare the truth audibly. In a few minutes she had quieted enough to repeat the declarations of truth, and almost immediately she smiled and said she was all right. The only effect we could see was a slight redness of the skin.

For these healings, and for many other blessings received through Christian Science, we are very grateful.

J. J. WOOD, Hazen, Nev.

✧

I was always considered delicate, but had no thought that the Christ-healing was for me. I first sought to know the truth; in other words, whether Christian Science was the Comforter promised so long ago by the Master. I began to attend the Sunday services, and these appealed to me as being the worship of God "in spirit and in truth." Next I took up the study of the Lesson-Sermons, and very soon glasses that I had worn for years were laid aside; also, although unnoticed at the time, other ailments disappeared. Last July I entered upon my eighty-first year of human life. I am active, enjoy walking out, and in the home duties do my part, can sew, make crochet lace, and am never idle for any length of time. I read the *Sentinel*, *Journal*, and *Monitor* by daylight or by lamplight,—all this without having to turn to glasses.

I hope this testimony may encourage some struggling

Digitized by Google

sister or brother on the straight and narrow way by showing what Christian Science has done and is doing for me. For these demonstrations of Truth's power, and all other blessings, I am truly thankful, and with the psalmist would say, "Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men!"

LYDIA FRANKLIN SMITH, Skowhegan, Maine.

✧

[Translated from the German]

It is with a sense of deep gratitude that I would like to tell of how I was healed through Christian Science. In 1907 I went to Frankfort-on-the-Main to visit my daughter. We walked a great deal and I climbed many stairs, when I suddenly became aware of my feet being swollen. I did not pay much attention to this condition at first, as in such a case, while at home, one treatment in Christian Science would usually relieve me. This time, however, things became worse each day, and the swelling extended to the legs; in fact I felt ill all over. Those around me, not being convinced as to the truth of Christian Science, were most emphatic in their desire to call a physician.

As we had been adherents of Christian Science for years, my one desire was to return to Hannover, and consequently I was removed to that city. Christian Science treatment was taken up immediately upon my arrival, and I tried to do my share by declaring the truth to the best of my knowledge and by holding fast unto the thought that God is our life and that nothing can harm me. In less than a week my feet and legs, which had been in a dreadful condition, were entirely normal, every vestige of disease had left the system, and I felt well and strong, although I had already reached the age of seventy. I have not been troubled with that condition since.

I need give no words of assurance with regard to my grateful feeling, and to my sense of indebtedness to Mrs. Eddy for having pointed out the way of truth which through God's love I have found in Christian Science.

FRAU E. HUSEMANN, Hannover, Germany.

✧

Christian Science means much to me; every day I find something new about it. It has healed me of nervous troubles, stomach disorders, and intestinal indigestion, and has made me well when before I was weak and miserable. I had always been greatly disturbed because the world seemed in such a muddle. People who were good and belonged to the church were most of them miserable in health and had all sorts of troubles. I felt that there must have been some way provided by God to keep things harmonious, if one only knew how to find it; and we have found the way in Christian Science. Mrs. Eddy has taught us how to apply the law that has always been provided for us, the wonderful law of Love; and it is free to all, and within reach of all who want to live happier and better lives.—MATTIE HAMILTON, Belmont, Cal.

✧

After fourteen years of suffering, during which constant search for health was made through surgery, *materia medica*, climate, and the like, with little or no relief, Christian Science found me, and from the first hour of reading Science and Health I was healed of severe headaches and a catarrhal inflammation of the stomach. Since that time all of the distressing conditions which had bound me have disappeared, as help has been given by practitioners or as I have gained a fuller knowledge of the truth that makes men free and applied it. The Christian Science literature always brings food for thought. I am indeed grateful for this teaching.

EVELYN LEGE, Eastlake, Fla.

From Our Exchanges

[The Christian Intelligencer]

The contrast between the apostolic church and the church of the present day in the matter of finely finished services, beautiful edifices, inspiring music, and useful adjuncts, is sufficiently patent to all. The conditions of persecution and hardship which then prevailed are almost infinitely removed from the "flowery beds of ease" of modern worship. But those early days were days of power, of spiritual grasp, of tremendous courage, of abounding joy, of wonderful achievement, and of supernatural conquest for God. Many churches today would scarcely dare contend that their spiritual life and vigor could be spoken of in the same breath with the divine energy of those early Christians.

[The Christian Register]

It is in the interest of the permanence of creeds that they should seem not to be permanent, that they should be capable of growing and changing, putting off old forms and taking on new forms, receiving and casting off, getting rid of doubtful and disputable things, and simplifying into the things found to be reliable and vital. To this tendency all the churches are confessing; all are showing some signs of realization that truth is the only foundation of a creed instead of a creed being the foundation of truth, and that the oftener a creed puts itself into line with truth and shows that it can live with new and fewer words, and even without words, since our strongest religious constitutions are ever unwritten, the more people will trust in it and incline to believing instead of denying.

Then we can all think alike in one creed at least, the creed of creeds, the belief in believing, and in making belief honest and deep, so that the love of God shall be with all the mind and all the heart and so with all the life.

[The Christian Commonwealth]

True spirituality is to reconsider and revalue everything human from the point of view of its highest meaning and destiny—*sub specie æternitatis* (in the light of eternity), as the philosophers say. That this gives power, freedom, happiness to the individual; that it enables him to find unexpected beauty in ugly things and goodness in unpromising material; that it provides a refuge from the troubles and difficulties of life, is as certain as anything in the world. Nor need it be a strained or unnatural attitude so long as "Spirit" is widely interpreted, and the fruits of the Spirit recognized, as all the saints have recognized them, in the humblest virtues and the most ordinary ways of life. Here is the ground of the true symbolism, which finds in all human concerns hints and beginnings of divine truth.

[The Christian]

We are not surprised that so many are turning to systems which seem to offer more solid comfort than an adulterated and emasculated gospel, which too often is all that the churches have to offer. This is indeed their hour and the power of darkness. But is not the professing church largely to blame for this? Does not the ultimate responsibility rest upon its officers who teach these things, and its members who love to have it so? And do not these present days—which for all we know may be the ushering in of the day of the Lord—call us all to honest self-judgment in this same respect?

[The Christian Work]

Men everywhere are writing, and everywhere men are speaking, and in every land men are working to hasten the day when war shall be no more. What goads them on in this

Digitized by Google

arduous quest? Why do they toil in order to accomplish an apparently impossible thing? I know of no explanation so reasonable as this: They hear the song of the angels! It haunts them day and night, and they say, "Woe is me, if I do not do what I can to bring the world into a happier day!" If it were not for the angels, those spiritual forces which rain down on us from the skies, we should not be so disturbed by the woes of others, and our hearts would not cry out in such pain in the presence of war. It is because men wage war while the angels sing peace that we are all distracted and unhappy, and anxiously look around seeking for something which we can do.

[Rev. Charles E. Jefferson, D.D., LL.D., in *Broadway Tabernacle Print*]

Christian Science is a protest against the awful materialism of our age. When it started forty years ago, a little band of English writers had made it difficult to believe that Christ worked miracles. John Tyndall, Thomas Huxley, Matthew Arnold, and George Eliot by their inimitable style caught and held the attention of the world and breathed into the minds of men on both sides of the sea a distrust of all stories of the miraculous. Even ministers of the gospel were affected by the atmosphere in which they lived, and in many a pulpit there preached a man who did not emphasize the mighty power of God.

It was at this crisis that the Founder of Christian Science arose, and in defiance of the opinion of her day not only claimed all the miracles of Jesus of Nazareth as genuine, but asserted that just such mighty things can be done today. Her teaching was a protest against the entire materialistic conception of man.

[*The Universalist Leader*]

If we are immortal we shall exist as long as God does; and He will never let us alone until He has had His way with us. The injury which sin inflicts is not the alternative to the practice of righteousness, because there is no alternative. It is like the awakening from his fevered dream of unhallowed pleasure to the retribution of cold and hunger and loneliness that caused the prodigal to say, "I will arise and go to my father." What God now commands He will forever insist upon, for "he is in one mind, and who can turn him?" Through all the joys that reward our virtues, all the retributions that scourge our vices, He says to us, "Be ye perfect in all righteousness;" and He will keep on saying it until the command is obeyed.

[*Western Christian Advocate*]

After all, there is but one masterpiece of human character; but one composition in which there is no discord; but one man by whose perfections any clear-sighted, honest, earnest soul can measure himself. "Not failure, but low aim is crime." It is our shame, not that we fall so far below the character of Jesus, but that we fail so wretchedly in our aspirations and resolutions to be like that beautiful, fascinating, irresistible person whom the world unites to applaud and so few follow devotedly. He who alone has scaled the utmost summits of life, and who walks those shadowy and cloud-piercing heights in the freedom and power of a manhood which he wants each of us to share, calls men to come after him and promises us the victory because he himself has overcome.

[*The Methodist Times*]

Speaking generally, the war is teaching the world the tremendous power, for good or bad, of spiritual and intellectual ideals, as well as the marvelous effectiveness of education in propagating them.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Law and Work" is the title of a new pamphlet containing the following articles: Love Fulfils Law, The Logic of Christian Science, Undisturbed, God's Law of Adjustment, Authority.

The increased cost of binding the periodicals has necessitated making an advance in the selling price of the bound volumes. The new prices, which take effect April 1, are as follows:—

JOURNAL.—Volume 32 (April, 1914 to 1915). Cloth, $3.00; half calf, $3.75.

SENTINEL.—Volume 16 (September, 1913 to 1914) or Volume 17 (September, 1914 to 1915). Either volume, cloth, $3.25; half morocco or half calf, $4.00.

For all other bound volumes of *Journal* or *Sentinel* write for prices.

DER HEROLD.—Volumes 5 to 12 in cloth, $2.75 each; volume 4 to 7 and 9 to 12 in half morocco, $3.50 each; volumes 4, 5, 9, 10, 11, 12, in half calf, $3.50 each.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

Digitized by Google

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages. Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

The Supreme Court of the United States, in a decision just handed down, holds in effect that mail advertisers, even though they give purchasers value received for their money, are guilty of fraud if by exaggerated advertising propaganda they have led clients to expect more. The opinion was announced by Justice McKenna, reversing the decision of the district court in southern Florida, which held that if a purchaser received his money's worth exaggerated propaganda was not fraud. Justice McKenna took the position that it was an offense if the article sold did not serve the purpose represented, no matter what the value might be. He said: "When the pretenses, or representations, or promises which execute the deception and fraud are false, they become the scheme or artifice which the statute denounces. Especially is this true in the purchase of small tracts for homes."

Creosoted wood blocks, already extensively used as paving material for city streets, have been coming into use as flooring for the last four or five years in factories, warehouses, machine-shops, foundries, various types of platforms, wharves, and docks, and for such miscellaneous purposes as hotel kitchens, hospitals, laundries, and slaughter-houses. Most of the blocks for these floors are now made of southern yellow pine, but hemlock, larch, Douglas fir, black gum, beech, and maple are also used. The blocks are sawed from long sticks of timber and are treated with creosote to prevent decay of the wood and also to prevent shrinking and swelling of the floor after it is laid. The blocks are laid with the grain vertical, so that the most wear-resistant surface is exposed, and usually on a concrete foundation.

The purpose of the establishment of a higher elementary school in Cairo, Egypt, has been explained by a recent note submitted to the superior council of the ministry of education in connection with the educational budget for 1916-17. The primary certificate attracted to the primary schools many pupils who had no prospect of continuing their education to the secondary stage, but who were actuated by ambitions which were often disappointed. In order to cater to the needs of this particular class the ministry is desirous of establishing schools for the provision of more advanced and also more practical instruction than is given in the primary schools. Manual work would be an essential part of the course, especially in the rural schools, in connection with country occupations.

A progressive form of inheritance tax is provided for under the law recently effective in Peru. The percentage imposed is on a scale in inverse ratio to the closeness of relationship. The rates are from 1 per cent in the case of inheritance of children from parents, or vice versa, up to 10 per cent on inheritance between very distant relatives or persons not related. But if the amount of the inheritance is over one hundred and twenty thousand dollars the rate increases. There is no tax on the bequests to charitable or public institutions.

St. Louis, Cincinnati, Pittsburgh, and Chicago have under way a test to ascertain the amount of soot that will fall in the respective cities for the year ending April 1, 1917. Thirty-six glass jars, four inches in diameter and ten inches deep, have been placed in various sections of the city, on the roofs of low buildings, where they will not be disturbed by air currents. Once a month the jars will be collected, the contents weighed and analyzed, and comparisons made with other cities.

Of 1094 passenger train cars under construction for the railroads of the United States on Jan. 1, 1916, 1075, or 98.3 per cent, were all steel; 16, or 1.5 per cent, were of steel underframe construction, and only 3, or 0.2 per cent, were of wood. The number of wooden cars in service on Jan. 1 was 41,382, indicating the retirement from service of 6714 wooden cars in three years. The number of all-steel cars in service has increased from 629 in 1909 to 11,286 on Jan. 1.

Objection to the United States Government renting office buildings instead of building new ones, and also an objection to the building of a power-house on the mall near the Washington Monument at Washington, were made before the executive committee of the board of directors of the American Institute of Architects in Cincinnati. It was announced that the taking of steps looking toward the elimination or the remedying of these two matters will be recommended to the institute.

The German Government has agreed, it is reported, to permit exportation to the United States of 15,000 tons of dyestuffs, lack of which has seriously affected American textile manufacturers. Such shipments must be made under guaranty which will satisfactorily assure the safe arrival of the dyestuffs in the United States for consumption by the American manufacturers and under adequate provision against their reexportation to countries at war with Germany.

Cultivators in the Delta are this spring putting under cotton the biggest acreage ever known in Egypt,—something like 10 per cent more than the acreage planted two years ago, before the war. In many places they are even cutting down their beans and selling them green, in order to make way for cotton. The increase of area is most marked in the northern part of the Delta.

The Michigan Central, New York Central, Wabash, and Pere Marquette Railroad companies have entered into an agreement with the city of Detroit, Mich., to do $2,000,000 worth of grade separation work in the western part of the city. The railroad companies will assume all the cost of separating the grades at crossings of a dozen streets, and the city must pay whatever damages result to abutting property owners.

The Quaker Oats Company is not operating in violation of the Sherman act, according to a decision by judges of the United States Circuit Court of Appeals. The finding came after two days of argument based on testimony taken in various cities of the country since the suit was filed in June, 1913. The majority of the court found that the Government had failed to make out a case. One judge dissented.

The Australian prime minister recently announced that the Federal cabinet had sanctioned plans to establish a "Scientific and Industrial Institute" in the commonwealth. It will undertake research work for the promotion of industries in Australia and will collect industrial information for dissemination among those engaged in industry.

The state department of education of Texas has compiled data showing that 154 school districts in Texas are now providing homes for teachers. Of this number 150 are for white teachers and the rest for negro teachers. The movement to build teachers' homes in rural districts is adding greatly to the teaching efficiency in these districts.

The United States Steel Corporation has announced another advance amounting to 10 per cent in the wages of its employees, effective May 1. This follows a 10 per cent advance made in February. Both together represent a total increase in wage payments of between twenty and thirty million dollars.

The Oregon-California land grant bill, designed to reserve to the Federal Government title to 2,300,000 unsold acres of the original grant to the Southern Pacific Railway, has been completed by the lands committee of the House of Representatives.

The sum of $30,000,000 has been appropriated by industrial concerns for the construction in the Pittsburgh district of by-product coke ovens, while an additional $10,000,000 will likely be appropriated in the near future.

During the past two years over two million dollars have been expended for roads in the state of Rio Grande do Sul, Brazil, in spite of the fact that economic conditions were considered as not generally favorable.

Twenty-two new oil wells were recently started in a single week in the California oil fields. This brings the total number of wells drilled from the first of the year to the middle of April up to 143.

The first of a fleet of all-steel self-propelled barges, which are expected to do much toward reviving traffic on the Ohio River, has been completed for the Inland Navigation Company at Jefferson, Ind.

The business of the port of Philadelphia, Pa., for the year ended April 1, 1916, amounted to $201,910,000. Exports for the year were valued at $132,437,000, and imports at $69,473,000.

The treaty by which the United States acquires canal route rights and a coaling station on Fonseca Bay for $3,000,000 has been ratified by the Nicaraguan Congress.

In a recent conference of the cabinet officers of Argentina the sum destined for public works because of the present European war was fixed at 24,000,000 pesos.

On April 1 there were approximately 44 per cent more apples in cold storage in the United States than at the same date one year ago.

Making Knowledge Practical

SAMUEL GREENWOOD

THE key to human destiny lies in the correct answer to Pilate's question to Jesus,—"What is truth?"—which has been bandied about the succeeding centuries as if truth were an enigma to which there is no available solution. Yet not only must every human being at some time know what truth is, but he must make that knowledge practical, since there is no other way whereby freedom from error can be won. Mortals continue in bondage to evil conditions because they are ignorant of the truth, or knowing it fail to obey it. Some would answer Pilate's question academically, endeavoring to satisfy human need with doctrines and theories; but the Master's teachings imply that more than intellectual belief is required, and that is demonstration, the individual living of the truth. It is safe to say that until the things of God's kingdom become the positive realities of one's daily consciousness, he is not knowing the truth in the full sense indicated by the Master.

Truth is the divine verity and permanency of things. It includes all that is real. It constitutes the only being or consciousness known to God or to the perfect man. This being so, should we not ask ourselves what is the truth to us,—the divinity which Jesus called good, or the errors that mortals name evil? Do we find our reality in the realm of so-called material consciousness, or in the realm of spiritual consciousness? "How important, then," Mrs. Eddy writes in Science and Health (p. 481), "to choose good as the reality!" And why? Obviously because human consciousness is filled to overflowing with indescribable discord in consequence of choosing evil as reality. The Master foresaw and foretold the coming to humanity of the "Comforter," the whole truth about God, whose mission it is to lead mankind "into all truth," and consequently out of all error.

This revelation has appeared in Christian Science; and we who call ourselves Christian Scientists have declared, in taking that name, our choice of reality to be on the side of good. We have accepted the divine Principle, Love, defined by St. John as God, as being the only power and intelligence of the universe. This is well; but to what extent are we making this avowed choice effective in our lives? In what measure is divinity allowed actually to permeate our consciousness and our thinking, deciding our motives and directing our acts? Much if not all of the underlying cause of lack of progress lies in the fact that the student is not making practical all that he understands of Christian Science. Selfishness opens the door to known errors, and apathy leaves it unguarded, until perhaps one awakens with a shock to find that instead of practising the truth he has in effect been practising its suppositional opposite.

As a rule, the failure to apply Christian Science practically to one's problems is due to unwillingness to rely upon its Principle in time of need. Here is the sure testing point of one's choice between good and evil. One's faith always swings to the side one believes most to be true. If we regard evil as a power, we are naturally afraid of it, and to that extent we do not rely wholly upon God. The one command and demand of Truth is that we shall acknowledge nothing else. "Trust in Truth," Mrs. Eddy said, "and have no other trusts" (The First Church of Christ, Scientist, and Miscellany, p. 171); but while we believe in other powers we can but have other trusts.

One who has learned only a little of mathematics knows that he can use that little, and the student of Christian Science should have the same confidence. He should feel that though his understanding is very limited, what he has is immediately practicable. We may not, for instance, have sufficient understanding that Spirit is the only life of man to enable us to abstain from material food, but our understanding may be sufficient to destroy our fear of food, and thus overcome or prevent the so-called ills of indigestion. This means a right beginning and some progress, and if continued will ultimately bring one to "that perfect day of understanding" referred to on page 388 of Science and Health, when we shall no longer "eat to live." This holds true all along the line of one's endeavor. There must be the beginning, however feeble, practically to apply the truth, and the increase will be according to one's diligence and fidelity.

There is also the temptation at times to rest in a dreamy contemplation of the letter of Christian Science, without attempting to adapt its teachings to one's experience. The unfoldment of the perfection of creation, as God's spiritual manifestation, is beautiful to meditate on, but the great need is to make that truth practical. This is not accomplished by idle admiration of the picture, but by striving to make one's self like it. We should never lose sight of the perfection of man as he eternally exists in Truth, but this necessitates turning from the contemplation of the false beliefs about man. Alternately looking at the true and the false will not facilitate progress or give one an understanding of Truth. To lay hold of the true we must let go of the false, and this letting go is what the student sometimes finds so difficult that he may yield to discouragement and say that he cannot make Christian Science practical.

Right Christian practice involves the right disposal of one's reliance, obedience, and service. On what do we rely as the source of good? What do we think of as constituting our support and protection? What do we acknowledge as having dominion over us? In whose service do we give our time, thought, and desire? Upon whose shoulders do we consent to have the government placed? These are not questions to be passed over lightly, but they should be taken into our closets for honest examination and decision.

If our confidence does not rest in Truth, we should know the reason therefor. If we declare God to be supreme, we should know the reason for that position also, lest in the stress of conflict we are tempted to change sides. If like Paul we know in whom we believe, we shall like him be satisfied to leave our affairs in His keeping. We are not depending upon the all-power of God while we submit to fear and worry. False belief is not conquered without a struggle; but if we have all faith in Truth, we shall fight with courage and confidence instead of misgiving, else error may overcome us through our very fear of it.

Christian Science practice is not merely the denying of wrong things, it is the living of right things. It is being

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

honest with what we believe. It is summed up in the Scriptural injunction, "Let God be true." This does not mean that we shall be terrified at or ignore the assertions or the evidence of evil, but that we shall actually let God take care of us,—that we shall actually let good be our health, our strength, our substance, our all. It means living in Truth, being alive to the spiritual sense of things instead of being dead in material sense. To mortals it means the resurrection, the coming to spiritual life in the recognition of the nothingness of evil and the allness of God.

Making Christian Science practical means inexpressibly more than the attempt to treat away physical disease. To be a Christian Scientist means inexpressibly more than to profess a belief in Christian healing. It means the putting into daily practice of its uncompromising ethics. It means unequivocal honesty in every transaction. It means unfailing truthfulness, honor, and uprightness in business and out of business. It means letting God's idea be our man. The healing of sickness is all important and essential to the prosperity of our cause, but it is not the whole of Christian Science, nor the thing by which its adherents will be judged. The world will appraise the worth of Christian Scientists by their practice of righteousness and brotherly love, and happy shall it be if we are not found wanting.

"The guest of God"

WINIFRED M. BENJAMIN

"STRANGER, thou art the guest of God." These interesting words, found on page 254 of Science and Health, at once awaken the query, "What does it mean to be a guest?" In social experience this privilege involves the propriety of coming at once into agreement with the plans of one's host, and to become the guest of God surely requires no lesser exaction. The Scriptures, read in the light of Christian Science, present a divine plan for our contemplation. Through the institutions of the various covenants, the laws of sacrifice, of Sabbatical observance, there appears a federative idea or a recognition of a bond between the sacrificer and God, the salvation of mankind from everything unlike God and His attributes being accomplished through the observance of certain rules, the divine purpose being brought to the human sense at one time by the commandments, and at another by the beatitudes. In proportion to his observance of these one finds his unity with a divine plan, and perceives their idea to be federative rather than expiative.

Until God's purpose is understood and we recognize that one's place in the kingdom is that of guest rather than host, the kingdom of God will be meaningless to us, and the belief that man is a creature of chance will never give place to the conviction that man and the universe are alike governed by divine Principle. The Sabbatical observances of the older Scripture were designed to lift the thought of the Hebrews above the sense of absolute ownership of anything, the great underlying law of God's ownership of man's time and property being developed, unfolding a law of assured supply as well as certain demand; and in addition, of spiritual salvation from covetousness and from the fear of limitation or lack. Of old the psalmist wrote, "The earth is the Lord's, and the fulness thereof; the world, and they that dwell therein." Who then can question the divine authority?

The Sabbatical observances consisted of a system of tithes: one day in seven to be God's day, the tithe of time; the seventh month, the tithe of the first fruits of the harvest; the seventh year, the tithe of the land, in which the land was to enjoy its Sabbath, or rest, after six years' sowing. In the twenty-third chapter of Exodus we read: "Six years thou shalt sow thy land, and shalt gather in the fruits thereof: but the seventh year thou shalt let it rest and lie still; that the poor of thy people may eat: and what they leave the beasts of the field shall eat. In like manner thou shalt deal with thy vineyard, and with thy oliveyard." After seven of these years of rest the year of jubilee followed, a season of rejoicing in work well done and its sequence, spiritualized consciousness, or at-one-ment with God. In spirit and in truth were they found to be guests of a bounteous host, in fulfilment of the prophecy: "Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

This wondrous privilege of covenanting with God was not sold for the pottage of coveting their entire crops, until the time came when the instructions regarding the seventh month, as outlined in the following words, were violated: "Thou shalt not make clean riddance of the corners of thy field when thou reapest, . . . thou shalt leave them unto the poor." In Isaiah we read of the violation of this law in the laying of many fields together, that there might be fewer corners for the poor; in consequence of which the expiatory unfruitfulness of the ground was promised: "Woe unto them that join house to house, that lay field to field . . . Of a truth many houses shall be desolate . . . Yea, ten acres of vineyard shall yield one bath, and the seed of an homer shall yield one ephah," meaning, as a correction of covetousness, that ten acres of vines should produce but seven gallons of wine, or one acre should yield less than three quarts; thirty-two pecks of seed should bring a crop of only three pecks, or in other words, nine tenths of the seed sown should die in the ground, producing nothing—but one tenth remaining. The question is asked by Malachi: "Will a man rob God? Yet ye have robbed me. . . . In tithes and offerings."

In violating these covenants, putting no difference between holy and profane, in holding their eyes from the Sabbath and vexing the poor and needy, the law of supply and demand is seen to fulfil itself in the measure of its observance. By rendering unto God the things which are God's, we find ourselves able to render unto Cæsar the things which are Cæsar's, and no longer need we tremble over the seeming certainty of demand and the seeming uncertainty of supply. We give thanks to our beloved friend and Leader, Mrs. Eddy, for the message of spiritual import and good cheer found on page 254 of Science and Health: "Pilgrim on earth, thy home is heaven; stranger, thou art the guest of God."

Operating Unspent

PERCY PHILLIP VYLE

So accustomed are we unconsciously to give reality to limitation in its various phases,—the fault of education burdened with materialism,—that without objection we accept the theories of physics that all power, force, action, friction, wear, progress, germination, in brief, life and the universe, cannot operate without becoming spent. We are persuaded that by the simple fact of its own volition, motion, action, all movement is self-consuming and continually loses a proportion of its actuating impulse and inherent vitality; that movement is self-deteriorating, self-destroying, and by reason of its trend toward dissolution is finally spent. As the actual and spiritual scientifically reverses the mortal and material, we begin through the study of Christian Science to grasp the idea that real progress is without wear, friction, or reaction;

Digitized by Google

that it is not self-consuming, but self-radiating, without deterioration or destructiveness. Mrs. Eddy says (Science and Health, p. 283): "Mind is the source of all movement, and there is no inertia to retard or check its perpetual and harmonious action."

Among the instances of good operating unspent is the work of *The Christian Science Monitor*. Every week-day, year after year, with automatic regularity, without faltering, loss of impulse, or lack of vitality, the *Monitor* comes to my desk within forty-eight hours after leaving its printing-press fifteen hundred miles away. No matter what history-making events are shaking the foundations of the world of belief, or the volume of mortal clamor defying harmony, the *Monitor* is ceaseless in its efforts accurately to reflect news in proportion to its actual value, thus maintaining the standard outlined in the first announcement regarding the issuance of a daily Christian Science newspaper: "The aim of the editors will be to issue a paper which will be welcomed in every home where purity and refinement are cherished ideals" (*Sentinel*, Oct. 17, 1908).

The *Monitor's* worth is being constantly enhanced. Its broad viewpoint, kindly criticism, vigorous stand for inalienable rights and love of equity, unsurpassed originality, and quaint, quiet humor, has classed the editorial page among the most widely quoted in the country. Frequently, by the force of sane reasoning, the *Monitor* will focus attention on an otherwise obscure item of the day's news, thus giving it its rightful proportion of news value, and just as often it will print exclusive information from sources unavailable to the ordinary news-gatherer. As to its Home Forum page, Scientist subscribers are all deeply appreciative of the daily spiritual interpretation.

In the biography of Mrs. Eddy, by Sibyl Wilbur, the intent of our Leader's removal from Concord to Chestnut Hill is unfolded as having been primarily for the realization of that necessity of which she was impelled to write, "At this date, 1883, a newspaper edited and published by the Christian Scientists has become a necessity" (Miscellaneous Writings, p. 4). It was not, however, until Nov. 25, 1908, that a Christian Science daily newspaper was given to the world. In the first editorial of the initial issue of this newspaper, which she named the *Monitor*,—"to spread undivided the Science that operates unspent,"—its Founder wrote, "The object of the *Monitor* is to injure no man, but to bless all mankind" (The First Church of Christ, Scientist, and Miscellany, p. 353), an introduction bright with the radiance of good intent.

The circulation statement furnished to the post-office department by the publisher of the *Monitor* in April, 1915, is of vital interest to each student of Christian Science. This statement shows an increased daily circulation of more than seven thousand copies over the report of October, 1914. This steady increase should bring comfort and good cheer to every Christian Scientist, and especially to every distribution committee. Yet, although an analysis of the total circulation would indicate that a great work has been done, a greater work yet remains to be done, and nearly all of the greater *Monitor* work lies within the capabilities and province of the individual. Possibly there may be some who have not realized the necessity for this so acutely as did its Founder.

Probably another reason why the *Monitor* does not reach many thousands of homes where it ought to be, is that all Christian Scientists have not thoughtfully considered its mission and influence in relation to themselves and to the educational advance of all the members of the family. Mortal mind suggests many devious excuses, as, for instance, that people have no time to read a paper not fresh from the printing-press; but news unread is always new, and there is nothing in the *Monitor* the reading of which will waste time. Again, mortal mind may suggest that you never read newspapers anyway; but remember, the *Monitor* is not just a newspaper. Local newspapers, in general scope, outlook, and comprehension of what constitutes news, cannot be considered as substitutes for the *Monitor*, whose world-wide vision is from the same viewpoint as your own.

The *Monitor* will be more widely read when it is more widely known. None can limit the influence of such a newspaper well read and well distributed. As a pebble thrown into a pond causes ripples to reach and encircle the shore, so in aiding the *Monitor* "to spread undivided the Science that operates unspent," we have a separate, individual, yet correlated responsibility.

✧

Divine Manifestation

ISRAEL PICKENS

From time immemorial there have been many concrete instances of the manifestation of God to man. Especially is this true in Biblical history, wherein God's presence and power were revealed in almost innumerable cases; but the life of our Master furnishes the most remarkable illustration. His tutelage from on high, both preparatory to and during his actual ministry, is therein shown to have been a process of spiritual unfoldment, so eminently above that realized by any other man as to make him for all time the great Exemplar.

After a rare revelation of the power with which God had equipped him, Jesus found himself in Nazareth, the home of his boyhood. Standing in the synagogue he read these prophetic words of Isaiah: "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the broken-hearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord." This occasion had been preceded by a most remarkable spiritual unfoldment. He had passed through baptism in the Jordan, and this was followed by the baptism of the Holy Ghost, which, as Mrs. Eddy tells us on page 35 of Science and Health, means "purification from all error." He then proved the irresistible power of Truth over every temptation of mortal mind,—appetite, fear, pride,—and fully realized that his divine mission was the overcoming of sin, disease, and death. He now knew that divine Love had given him power over these enemies.

In the words above quoted the Master undertook to awaken the consciousness of his hearers to the spiritual life which alone offers complete salvation from all error, while at the same time rebuking the religionists of his day and with unmistakable divine authority calling their attention to the meager results of their own lives. It was here that this dauntless exponent of God crossed swords with ecclesiasticism, and set out upon a mission that was to be the dawn of history's greatest epoch. Here it was that persecution followed the efforts of the fearless Nazarene, and he was driven from among them, but only to rise to such towering heights that the word of God spoken from his stainless lips would render evil forever void and nullify every phase of human error.

It is worthy of note that shortly after this glorious illumination the Master's next experience was not that of preaching, but of healing the sick. This work was from that time to be the most prominent characteristic of his ministry, a ministry culminating in his crowning triumph, when, as we read in Science and Health, "he proved Life to be deathless and Love to be the master of hate" (p. 44). This "divine manifesta-

Digitized by Google

tion of God, which comes to the flesh to destroy incarnate error" (p. 583), was the unfolded Christ-consciousness that made Jesus' career a consummate example for us. He presented to us the whole garment of the Christ, which mortal mind would seek to divide. This is the vision that in some degree was caught by prophet and apostle, and by all who have been ready to obey the call of Spirit. It came into the life of Jacob and changed the man from a herdsman to a prince. How gloriously it must have illumined the consciousness of Paul, when, shortly after his persecution of the followers of the Christ, he too was transformed by this power from on high into a heroic soldier of the cross.

Christian Science means the reinstatement of these same works of the illumined Man of Galilee. It brings to light the beauty and sublimity of his priceless sayings; it unfolds the rule of perfection that only a correct understanding of God and spiritualized man can comprehend or demonstrate. It heals sickness and disease, transforms human consciousness, and dethrones sin. Error of every nature ceases to be thought of as a power or entity in this clarified right thought, and thus is brought to light man as the true reflection of God.

Those who in this age have partaken of this Christ-teaching have learned in large measure the wondrous meaning of these words of the Saviour: "He that loveth me shall be loved of my Father, and I will love him, and will manifest myself to him." They cannot be too grateful for the life and work of the one whose purity and humility enabled her to gain this beatific vision and give to a world, which for centuries had been fettered by falsely imposed ordinances of a merciless materialism, this great truth which, we are told in Science and Health (p. 68) "presents unfoldment, not accretion; it manifests no material growth from molecule to mind, but an impartation of the divine Mind to man and the universe."

✧

Working for the Church

ANNA W. HOLLEBAUGH

Not long ago a member of a branch church was reproaching himself for not working more for the church, and on being asked how he worked for the church he replied, "Oh, I work for the readers and the board, and the ushers, to know they cannot make mistakes." While the motive was a kindly one, the work in itself was as grave a mistake as one could make, first in its interference with God's government, and next in the presumption involved in working for another unasked, thus taking from the individual the privilege of a choice of helpers.

To work for the church is not to work for persons, but to know that the evil influences which would overthrow the various institutions or fortresses represented by the church have no power whereby to accomplish evil purposes. In the second book of Chronicles we read, "Now, my God, . . . let thine ears be attent unto the prayer that is made in this place," the house of God; while in the Manual of The Mother Church (Art. VIII, Sect. 5), we find a rule for prayer in church as follows: "The prayers in Christian Science churches shall be offered for the congregations collectively and exclusively."

What better example of such prayer could be found than that in Mrs. Eddy's dedicatory sermon for The Mother Church as found in "Pulpit and Press" (p. 10): "Divine presence, breathe Thou Thy blessing on every heart in this house. Speak out, O soul! This is the new-born of Spirit, this is His redeemed; this, His beloved." A clear realization of that divine presence and of a consequent spiritual manifestation as expressed in the assembled congregation as newborn of Spirit and redeemed, and not an assemblage of material personalities, would surely open "the windows of heaven, and pour . . . out a blessing," that there would not "be room enough to receive it," overflowing the whole community and blessing them, even though they might not know from whence it came. Thus it would be exemplified that the daily bread for which we pray blesses all, while our own sense of creation as God knows it would become more spiritualized, until at last we would lose sight altogether of the church militant and become conscious only of the church triumphant.

✧

Having Other Gods

ELDO STEDFELD

My young son recently found a calendar and brought it home. At the bottom of each page was a letter from some one setting forth the merits of the patent medicine in the interests of which the calendar had been issued. The little fellow kept turning over the pages, and after a while he said, "Do you know, mother, some of these letters remind me of the testimonies in the *Christian Science Sentinel*." I said to him, "Look a little farther and see if you can find in what way these are not like the testimonies in the *Sentinel*." Now this boy has been a member of a Christian Science Sunday school for several years, and has some measure of that spiritual understanding which contact with and study of Christian Science always brings, so it was only a few minutes before he answered me. "I see one reason why these testimonies are not like those in the *Sentinel*," he said; "it is because they do not say anything about God."

Indirectly the little fellow had hit upon the great difference between the healing gained in Christian Science and relief sought through material means. On page 484 of Science and Health we read: "Drugs and hygiene oppose the supremacy of the divine Mind. Drugs and inert matter are unconscious, mindless." The one who is healed in Christian Science knows that his healing has come from God. He therefore has a better comprehension of God's love and goodness than he had before the healing took place, and by this better comprehension of God's nature he is necessarily in some degree spiritually benefited, and becomes a better man. He does not therefore turn the great tide of gratitude which floods his heart, away from the one God into praise and eulogies of some senseless drug. His faith and confidence in God is fostered and strengthened by this experience of healing, and eventually he comes to know that in finding physical help in Christian Science he has also been lifted into and helped farther along on the road which leads to the peace that passeth understanding.

✧

Teaching in the Sunday School

AIMÉE E. FRALEY

When one is asked to teach a class in a Christian Science Sunday school, he is frequently confronted with the problem of how to maintain order and hold the interest of the pupils. In thinking along this line, I have listened very carefully to what parents and school-teachers had to say about children, for it is they who come in touch most closely with the child life. I have found this thought very generally voiced by them: "A child manifests so much life; indeed, is full of life,"—a statement which was almost invariably followed by the narration of some act of disobedience, a disregard of rules and regulations, so that it would seem as if life expressed itself in the activity of error.

Mrs. Eddy says, "Truth cannot be reversed, but the reverse of error is true" (Science and Health, p. 442). All Christian Scientists are learning to recognize God as the only Life, the only cause, so with this statement of our text-book

Digitized by Google

in view I went to work to solve the problem. It became very clear to me that Life is expressed in activity, and when we accept the Bible statement that God made man in His image and likeness, we see that each child of God must necessarily be an avenue for what God is; therefore the human child should manifest only the activity of good, expressed in order, obedience, purity, attentiveness, and receptivity. Truth would also express itself through the child in honesty, humility, and truthfulness, and we must strive to realize that there is nothing which can prevent the child from knowing, realizing, accepting, and reflecting the qualities of Truth. Our Master said, "Ye shall know the truth, and the truth shall make you free,"—free to rejoice in God-given dominion over the belief of the activity of evil or error.

God being Mind, intelligence, the child should be looked upon as an avenue for intelligence to express itself in mental alertness, a perfect memory, and the ability to think clearly and logically. "Mind alone possesses all faculties, perception, and comprehension," we read in Science and Health (p. 488). God being Love, the child, spiritually understood, should be regarded as an avenue for the activity of Love, expressed in kindness, unselfishness, and love for God and man, which we know destroys all hate, envy, malice, or jealousy. Then with the realization of God as omnipresent, omnipotent, and omniscient, we seek to bring into demonstration in each child a complete harmonious activity, or in other words, God's child. The Sunday school teacher must be alert to recognize that he or she is merely the avenue for right teaching, and the true motive is given on page 454 of Science and Health: "Love . . . is the true incentive in both healing and teaching."

Climbing

KATE L. CRUMP

While on a visit to a large ranch that is almost surrounded by mountains, a friend and I set out on a bright afternoon to scale one of the peaks. We selected one that rose slopingly from a deep cañon. Apparently it had not been much traveled, for we soon encountered masses of undergrowth, fallen trees, and stones, and as we began the ascent we required each other's help to avoid slipping. When one gained a higher step, a helping hand would reach out, and after thus climbing for a time, we found to our surprise that the way grew smoother as we neared the top; indeed it was comparatively clear, for there was neither tangled undergrowth nor rocks.

This seemed a parallel to my experience when Christian Science found me. The "tangled barbarisms of learning" (Science and Health, p. 195) had brought me only discontent, suffering, and unhappiness. I was seriously contemplating a surgical operation for physical trouble, when with gentle persistence one who saw my dire need urged me to go to a Christian Science practitioner first; and I soon found myself beginning the long climb out of the dark, tangled undergrowths of false belief.

My steps were slow, and sometimes I was hampered by opposition and ridicule, but stimulated and sustained by the loving counsel of faithful friends until I gained an abiding assurance of Truth's power, I climbed ever upward, until now, though not at the summit by any means, I find fewer obstacles in the path and have gained glimpses of the glories which await those who "faint not," but press onward and upward. Gratitude for the pure thought of our Leader which opened the way for us, and for the faithful ones at headquarters who send us such constant helps, fills me with longing to reach out a helping hand to others on the upward journey.

Selected Articles

[Henry Van Arsdale in *Pasadena* (Cal.) *Star*]

In a published sermon are some statements which indicate the difficulty men face in the endeavor to reconcile the presence of evil, or sin, in a world created by a wholly good God. This difficulty has always faced mankind, and in the endeavor to solve it there has been produced a vast volume of literature. Indeed it may be said that the intellectual efforts of the human race to solve this problem have resulted in the production of a greater number of books than have been produced on any other subject. There are but two positions which can be taken in this matter, and a choice must be made between the two. Either God created and permits evil and sin, in which case sin is eternal and unescapable, or else God did not create it, does not know of it, cannot be said to permit it, and therefore man can free himself from it.

It may be of interest to many of the readers of the *Star* to know of the position of Christian Science as to the reality or actuality of evil and sin. Christian Science teaches that God made all that was made; that what God has made is real and true and eternal; that this creation is wholly good, and contains nothing which does not partake of the nature or attributes of God. Christian Science teaches that the whole arena of the seeming activity of sin is in the human mind, and that a sinful act is the result of sinful or wrong thought; that the thought always precedes the act, and therefore the remedy for sin is a correction of the thought which produces sin.

The Christian Scientist does not ignore sin, but in his denial of it he means that he refuses to admit the truth of any statement that sin is real because it emanates from God, or that God is in any way responsible for sin. It will be noted, therefore, that this denial is based on the positive affirmation that sin can be no part of the nature or creation of God. The Christian Scientist does not assume from this that he is a better man than his neighbor; he only knows that as contrasted with his own past he is a better man because of the teachings of Christian Science. He does not compare himself with other individuals; he only compares his present experiences with his past experiences.

In the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we read (p. 339): "A sinner can receive no encouragement from the fact that Science demonstrates the unreality of evil, for the sinner would make a reality of sin,—would make that real which is unreal, and thus heap up 'wrath against the day of wrath.' He is joining in a conspiracy against himself,—against his own awakening to the awful unreality by which he has been deceived. Only those, who repent of sin and forsake the unreal, can fully understand the unreality of evil." In this connection also, the third tenet of The First Church of Christ, Scientist, as given on page 497 of Science and Health, will be of interest: "We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal. But the belief in sin is punished so long as the belief lasts."

No Christian Scientist denies that the human experiences as to sin, which are detailed in the sermon above referred to, will continue so long as men think wrongly and act from that basis. Paul wrote the church at Rome: "Be not conformed to this world: but be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God." When we act upon this statement by Paul and refuse to conform to the world's belief as to the eternal reality of evil—all sin and sickness and abnormality—the result is a present renewing of the mind, and the will of

Digitized by Google

God appears as good only; action is then on this basis, and sin is being surely if but slowly destroyed.

In considering this subject it is very necessary to bear in mind that the word real is used as dealing solely with the actual, as opposed to what may be the mere appearance; as dealing solely with the true, as opposed to what may be mere opinion. The actual and true come from God, are eternal, and can include no element of destruction.

✧

[J. Arnold Haughton in *Rochdale* (England) *Times*]

A reverend critic of Christian Science attempts to prove that the way to heaven is to feel wicked, and in the process quarrels with Christian Scientists for feeling "very good." Let it be added that Christian Scientists only "feel very good" when they have become good by doing good, and this is their foretaste of heaven. "The Scientists' way to heaven," he says, "is to feel very good. The Bible inculcates the opposite." Then immediately following is the remarkable statement, "This is my reason for calling the system anti-christian."

The Christian Scientists' claim to perfectibility is based upon Jesus' command, "Be ye therefore perfect, even as your Father which is in heaven is perfect." Either Jesus gave a command impossible of fulfilment, or our critic is wrong when he says "the Bible does not teach that people can absolutely cease to sin in this world." It is probable our friend has become involved in this logical debacle by a confusion of ideas consequent upon his lack of understanding of the teaching of Christian Science as to the distinction between mortal belief and immortal man. The quotations given, such as Job's "Behold, I am vile," must of necessity refer to a mortal, and not to immortal man made in the image and likeness of God; and this view of mortal man's depravity is emphasized in Christian Science.

The reverend gentleman's disclaimer that he called Science and Health "blasphemous" is noted with pleasure. Notwithstanding his otherwise unabated disparagement of Science and Health, the fact remains that this book has caused the Bible to be more faithfully read and better understood by an ever-increasing class of intelligent people. If in his opinion "the master offense" of Christian Scientists is that they do not adopt the ways and means of *materia medica* for the healing of the sick, it is pertinent to ask him as a minister of the gospel whether Jesus in his healing ministry employed drugs or instructed his followers to use them. He included within the mission of his followers the healing of sickness as well as the saving from sin, and his statement was, "He that believeth on me, the works that I do shall he do also."

✧

[George A. Law in *Hartford* (Conn.) *Courant*]

One pertinent fact which our critic perhaps fails to consider, is that a large majority of those in the ranks of Christian Science were formerly associated with other churches; also that the old ties were severed only after the healing of sickness or the redemption from some phase of sin had shown that Christian Science offered them something not to be obtained in the other churches. Having had experience with both, they choose to cast their lot with the one which has provided for them better health and more happiness.

The critic is quoted as having said that Christian Scientists "take upon themselves the right to judge and condemn all creeds and interpretations of Scripture except their own." This statement is not only false but absolutely contrary to the facts. The constitution grants to each individual the right to worship God according to the dictates of his own conscience. The Christian Scientist not only claims this right for himself, but fully recognizes the right of his neighbor to a like choice without interference.

Christian Science healing is a spiritual healing, and is identical with that employed by Jesus, who directed his followers to preach the gospel and heal the sick. Christian Scientists are complying with both commands. Would it not be wiser for those who are failing to regard the second injunction, to refrain from finding fault with those who with some measure of success are heeding Jesus' command, thus proving that to a degree they understand the Master's teaching; for did he not say, "By their fruits ye shall know them"?

✧

[John L. Rendall in *The Estherville* (Iowa) *Enterprise*]

In an issue of your paper a clergyman has taken occasion gratuitously to attack the lecture on Christian Science recently delivered in your city. It is true that Christian Science differs from the teachings of scholastic theology, and because of this difference many preachers have undertaken to prove that its teachings are erroneous. In this, history repeats itself.

A careful reading of the critic's article leads one to the conclusion that he has only succeeded in proving that he does not in the least comprehend the essential mission of Christian Science, does not understand its fundamental propositions, and is therefore not in a position intelligently to criticize its teachings. Those who understand Christian Science, and there are hundreds of thousands of them, are daily proving to their own satisfaction, and to the satisfaction of those who are willing to listen, that its teachings are in exact accord with the teachings of Christ Jesus pertaining to Christian healing and the salvation of humanity.

The import of Jesus' mission is very plain. No amount of sophistry can change the fact that he and his disciples healed the sick and reformed the sinner by the same process, through their spiritual understanding of God's allness and all-power. St. Paul, who was not an immediate disciple of Jesus, also did this. The early Christians for three hundred years after Jesus' time were healers of the sick. Mrs. Eddy, the Discoverer and Founder of Christian Science, on page 146 of Science and Health states: "The ancient Christians were healers. Why has this element of Christianity been lost? Because our systems of religion are governed more or less by our systems of medicine. The first idolatry was faith in matter. The schools have rendered faith in drugs the fashion, rather than faith in Deity."

This minister occupies much of his space in the effort and endeavor to prove that Christian healing is not an essential element of the Christian religion. It occurs to me that as a minister of the gospel he should properly be engaged in proving the verity of God's healing promises instead of being engaged in ridiculing and berating those who have sufficient faith in God's promises to trust Him absolutely, in times of sickness as well as in times of health. His statement that Christian Science takes the position that "there is no sickness" and "there is no sin" is misleading, incomplete, and inadequate. No intelligent individual who reads "Science and Health with Key to the Scriptures" from an unbiased standpoint and with the desire to be fair, can fail to be impressed with the fact that Mrs. Eddy taught that sin and sickness are to the human sense of things very real and that they must be overcome. On page 460 of the text-book it is stated: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being." Also on

Digitized by Google

page 270 we read: "Mortals think wickedly; consequently they are wicked. They think sickly thoughts, and so become sick. If sin makes sinners, Truth and Love alone can unmake them."

This proves conclusively that our critic in his presentation of Christian Science has not taken sufficient care to be either fair or just. It is possible from a biased viewpoint to read into the Bible, Science and Health, or any other book, that which does not properly belong in it, and this is what our critic evidently has done. I find also that he requires of Christian Scientists much stronger proofs of Christian faith than he requires of himself. For instance, he takes one of the texts used by the lecturer, namely, "The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give," and he asks: "But, Mr. Christian Scientist, why don't you fulfil the rest of the great commission? Why don't you 'cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give,' and not place charges upon your prayers?"

Answering this I will say that Christian Science is healing the sick, it is cleansing the leper, it is raising the dead, at least in the same sense that his church defines it, namely, "dead in trespasses and sins;" and not only this, but it is actually raising from death-beds those whom doctors had given up to die, and restoring them to health and harmony, not only in one instance but in hundreds of instances. It is casting out devils in the sense that the word devils in this case is used, referring to evils. The only devils there are, are the evil thoughts in human consciousness, and Christian Science is cleansing thought of evil purposes, motives, impulses, and desires. It is reforming the sinner, healing the drunkard and debauchee; it is cleansing and purifying the lives and characters of an innumerable multitude of people.

✧

[Charles W. J. Tennant in *New Days*, London, England]

With reference to the article "The Great Denial," in no sense can St. Paul's reference to our Lord becoming poor for our sakes be construed to mean material poverty in the popularly accepted sense of the word, else the latter part of the verse, "that ye through his poverty might be rich," would be absurd. Would any one be considered poor who possessed the power to produce at any moment the necessities of life, and who could transport himself from place to place in a moment of time; in fact, who had such a spiritual understanding of divine Principle as to be able to lay aside every so-called natural or chemical law?

We are told that the Son of God came not to destroy, "but to fulfil;" to do "the will of him that sent me," as he said himself. Every so-called miracle performed by Jesus was done in conformity to spiritual law. It must be remembered that as declared in the Old Testament Scripture the prophets, nearly one thousand years before Jesus was born, multiplied meal and oil, made iron to swim, raised the dead, healed the sick, and performed other miracles. This shows us clearly that there lies behind these works in all ages a divine Principle, the understanding of which enables one to do them. This divine Principle is exactly what Mrs. Eddy has discovered and given to humanity in Christian Science, that all who desire may learn of it and prove their understanding by "signs following."

One is surprised that our critic does not agree with the definition of reality given on page 335 of Science and Health, for if it is not correct, then God does not exist. Christian Science, in conformity with the Bible, teaches that God is Spirit, Life, Truth, Love, harmonious, immortal, divine, and eternal. Since God is also infinite, All-in-all, it stands to reason that only these conditions can be real in the absolute sense of the word.

The whole question of misunderstanding on our critic's part is that he has failed to discern when Mrs. Eddy is speaking of the absolute or eternal, and when of the relative or temporal. He makes an illogical statement when he says, "The kingdom of God is truly within the hearts of men, but they have still to pray that He may come and reign over it." It is not possible for omnipresence to be absent for a moment from His kingdom, or to cease for a moment from governing it. The kingdom of God is a state of spiritual consciousness bestowed by God on any one humble enough to receive it. By humility is meant, of course, the willingness to give up the human will or mind for the divine Mind, the Mind "which was also in Christ Jesus."

Christian Scientists have divine authority for pointing to their works of healing and regeneration as a proof that Christian Science is of divine origin. Did not our Master say, "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them;" and, "He that believeth on me, the works that I do shall he do also"? Those who cannot produce these signs are hardly in a position to judge those who can. On page 97 of Science and Health Mrs. Eddy writes, "Christianity is again demonstrating the Life that is Truth, and the Truth that is Life, by the apostolic work of casting out error and healing the sick."

✧

[Robert L. Ross in *Amsterdam* (N. Y.) *Recorder*]

In the days of Jesus the people were steeped in the letter of religion; but they had largely lost sight of the Scriptures in their spiritual signification, and because of this their religion had largely degenerated into form and ceremony. Consequently when Jesus appeared on the scene, giving the spiritual, original, and scientific meaning of the sacred writings, the very people who should have been mentally awake enough to recognize the looked-for Messiah or spiritual deliverer, rejected him.

A striking illustration of this opposition to spiritual understanding occurred when Jesus healed a man of dropsy. Criticized for doing good on the Sabbath day, Jesus turned on his critics and cried, "Which of you shall have an ass or an ox fallen into a pit, and will not straightway pull him out on the sabbath day?" His aim was to point out that it is always right to do good, and that without this accompaniment religion is mere mockery. Christianity as Jesus taught and lived it was lost sight of a few centuries after his departure, only to be permanently reestablished through the discovery of its Principle as revealed in Christian Science.

If today Christian Science meets with opposition from students of the Scriptures, this indicates that these students have failed to grasp the sacred writings in their true sense; for the Christianity of the Scriptures and Christian Science are one. This can be proved to the entire satisfaction of all who will sincerely study the Bible in the light of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Jesus declared healing by spiritual means to be one of the "signs" which follow them that understand his teachings. Christian Science is daily enabling its students to heal all manner of disease and sin.

Editorial

The Fifth Commandment

It may be only a characteristic consequent of a rapidly growing and prosperous people, or it may be the swing of the pendulum from one extreme to the other, but it seems to be quite generally conceded that the tendency of the present generation to look upon the fifth commandment as obsolete or out of date is one that may easily have serious consequences. It is an age and a people where freedom of speech and action may unwittingly be carried to an extreme, yet there should be a happy medium between this and the rigid obedience exacted from the children of earlier generations that would make for mutual comfort in the home. Just recently Governor Brumbaugh of Pennsylvania, speaking on the dignity and potency of law, said:—

> Is it at all conceivable that we regard the infraction of law too lightly? Have we, perhaps, in the discipline of the home and of the school grown so lax that the youth of today attach too little meaning to law? Many years' experience in the training of children leads me to long for a return to simple but effective discipline in our American homes and in our American schools. I plead not for harsh, but for resolute treatment of children. They need to know the value and necessity of obedience. For if in the games they play and in the studies they pursue they are not required steadily to do the thing they are set to do, it will be difficult later on to impress upon them the meaning and the necessity of living under law.

One does not have to go about a great deal to note in public places of all kinds exhibitions of wilfulness and temper on the part of children which indicate a lamentable lack of discipline in the home,—an indulgence of whims, instead of the teaching of self-restraint, that does not augur well for the future happiness and welfare of either parents or children. A child who is not taught true self-government has many unpleasant things to encounter when he gets out into the world. The public school may eliminate some of his sense of self-importance, but by the time he is well along in his professional or business career he discovers that there are many disagreeable experiences he might have been spared if as a child he had been brought up in the good old-fashioned way of obedience and deference to his elders, in accordance with the divine law which says unequivocally, "Honor thy father and thy mother: that thy days may be long upon the land which the Lord thy God giveth thee."

Very likely a goodly proportion of this non-observance of the fifth commandment is due to a lack of knowledge of the Scripture teaching. Taken as a whole we are a different people from the pilgrims who came to the shores of the new world three centuries ago seeking "freedom to worship God." Familiarity with the Scriptures was a part of their daily living, but succeeding generations have drifted farther and farther away, and not always to their good. It is on this line of resistance that Mrs. Eddy has rendered significant service to the world at large, a service which will be more and more recognized and appreciated as the years go by. As a result of the study of Christian Science there are thousands of homes today where the Bible has been restored to its rightful place as a daily counselor and guide,—a power for good that cannot be measured.

It is perhaps in the Christian Science Sunday school that the most signal service is rendered, in that the decalogue is a part of the first lessons and the children are made thoroughly familiar by precept and practice with the requirements of the commandments. And here it is that Christian Science parents have the opportunity to put into operation the leaven whose influence shall permeate the neighborhood, the school, and in later years the business world. Children trained in Christian Science homes and Sunday schools are to have an incalculable influence on the coming ages. Mrs. Eddy voiced this when she said, "Ah, children, you are the bulwarks of freedom, the cement of society, the hope of our race!" (Pulpit and Press, p. 9.) This places a responsibility on Christian Science parents which should not be ignored and of which they cannot too often be reminded.

How keen was our Leader's recognition of the importance of obedience to the command to honor father and mother was evidenced in her own life, and her teaching on this point is unmistakable. "Children should obey their parents," she writes on page 236 of Science and Health; "insubordination is an evil, blighting the buddings of self-government." Emphatically it is the parents' responsibility. They cannot expect to govern others rightly until they have first learned to govern themselves and thus command the respect as well as the love of their children. Paul's counsel was: "Children, obey your parents in the Lord: for this is right. . . . And, ye fathers, provoke not your children to wrath: but bring them up in the nurture and admonition of the Lord." If we as Christian Scientists do our part, the time must come when these precepts will be observed in every Christian household.

ARCHIBALD MCLELLAN.

The "Word" that Heals

The 107th psalm presents in a remarkable way the struggles of mortals by land and sea in their efforts to escape from the bondage of sin, disease, and the dread of death. It is curiously interesting to see how little the problems of mankind, under the influence of material belief, have changed throughout the years. That which shines like a great light through this record of mortal experience, however, is the fact that divine Love is forever irresistibly drawing humanity away from mortal illusions to the truth which overcomes all evil. As we read this psalm we are reminded of our Leader's words (Science and Health, p. 323), "Through the wholesome chastisements of Love, we are helped onward in the march toward righteousness, peace, and purity."

Many and varied are the types of human character presented by the psalmist—those who are hungry and thirsty for Truth, those who are in darkness and affliction "because they rebelled against the words of God," and others who are sick and sorrowful; but we are told of all who cried to God for help, that "he sent his word, and healed them." The student of Christian Science loves to linger over these words, the truth of which he is daily proving, because he knows that it is always the divine word which heals, whether it come through an inspired writer or through some one who understands what the word of God can do. Even our Master did not claim that he himself healed the sick, but that it was the word of Truth which he declared, as when he said, "The words that I speak unto you, they are spirit, and they are life." After witnessing his demonstrations and listening to his teaching, it is little wonder that the people said, "What a word is this!"

Strange indeed it is that the Master's professed followers in this age should be so ignorant of the power of the divine word that they never think of invoking it in their distress and even condemn those who through Christian Science have learned to do so. In strange contrast with this spiritual blindness is the clear vision of the centurion who came to Jesus seeking help for his servant. When the Master offered to go with him, the centurion declared he was not worthy of such honor; "but," said he, "speak the word only, and my servant shall be healed." We are told that Jesus marveled at this man's faith, and said he had not found the like of it in Israel. The story ends with the statement that the servant was healed that very hour.

Digitized by Google

All through the gospels and in the epistles the healing power of the word runs like a life-giving stream. The wonder is that we should so long have been blind to its gracious promise; but St. Paul explains this when he says that "the god of this world hath blinded the minds of them which believe not." The psalmist tells us of "the fool" who says in his heart, "There is no God." Now most people would strongly object to being classed with such a one, but when they deny the divine power to heal today as in the time of Christ Jesus, they virtually take their stand with the one who denies God altogether.

As the great revelation of divine Truth, called Christian Science, unfolds to human sense, there are more and more who are healed by the word itself as given to mankind in the Bible and in Science and Health; and for this we may well rejoice. Oftentimes the practitioner's work seems laborious, especially when the sick and those around them pour out unceasing complaints; but this burden can be lifted if the worker will encourage the patient to go direct to the divine Word and, with the strength thus gained, do his own work. This is by no means a reflection upon the work of the practitioner—far from it; rather is it meant to make that work better understood and appreciated. In the final sense, however, "The Word of God" as presented in John's apocalyptic vision must be seen as the only conqueror of sin, disease, and death. Should we not, then, seek a better acquaintance with this Word, and press on to receive the divine commendation, "Thou . . . hast kept my word, and hast not denied my name."

ANNIE M. KNOTT.

✧

The Way of Ascent

PRESENTATION of an exalted ideal may stimulate or it may discourage. If the contrast with present achievement is startling, as is usually the case, and no clear way of gaining the higher plane is disclosed, the outlook can but prove depressing; but if even the beginning of an ascending path is definitely located, and one has an honest disposition to climb, then the struggle into light will have begun. The difficulties of every ascent are essentially vanquished the moment the undertaking is entered upon with vision, with noble purpose, and with good cheer.

One of the greatest weaknesses of Christian believers generally, outside of Christian Science, inheres in the fact that they do not think of the conquest of material sense in the Master's way as a feasible proposition. The annulment of material law through the apprehension of spiritual truth is looked upon as visionary, and the effort to accomplish it as evidence of abnormality. It is this denial of the presence of the saving Christ which has interdicted spiritual progress, and it is just here that the teaching and demonstration of Christian Science become revolutionary, and in so far destructive to the existing status of Christian thought. In elucidating the philosophy of spiritual ascent and in proving the present-day practicability of this philosophy, Christian Science has supplied a vision of that ideal for the realization of which aspiring souls have ever prayed. And only as this vision is gained are men impelled to the heroisms of faith which presage success.

How splendidly this was illustrated in the stirring life of the great apostle to the Gentiles. He had to overcome inherited and educated bias, together with all those difficulties and antagonisms to which he graphically refers in the eleventh chapter of his second letter to the Corinthians. At every turn in the road he had to wrestle with the world, the flesh, and the devil, and yet spiritually illumined sense and dauntless consecration made him, as he was wont to say, more than a conqueror "through Christ."

To the Christian Scientist this phrase "through Christ" is big with meaning, even as it surely was to the great apostle. It is the Jacob's ladder which establishes a constant communication between earth and heaven. To the contented materialist, one who bases his assurance of reality upon physical testimony, the spiritual can make no appeal. To him expressions of adventurous daring after righteousness seem foolish vagaries, but to the idealist—to him who is "in Christ"—the supersensible world, as Shairp has said, "is more real and of higher import . . . than that to which sight and sense have witnessed;" and it is apprehended, as he adds, "by other faculties than those through which physical science works, though it is in no way opposed to science—it simply transcends it."

Nothing can be more obvious than that the way of redemption must ascend. We can begin with things as they seem, but we must rise progressively to the realization of things as they are, and it is this fact which gives such quality to Mrs. Eddy's statement that "when we learn the way in Christian Science and recognize man's spiritual being, we shall behold and understand God's creation,—all the glories of earth and heaven and man" (Science and Health, p. 264). The verification of this statement in personal experience supplies the rock foundation on which assurance of the truth of the gospel is being builded anew in all the world today.

This way of ascent in Christian Science is an appeal to the reason, to the imagination, and to the affections. It enables one to see that the realization of the highest concept of the ideal which we entertain is involved in the intuitive sense that it ought to be, and the sincere longing that it may be. Moreover, the healing of sickness and sin already chronicled in Christian Science proves the rightness of the direction in which it points the wayfarer, and that continuous advance therein will bring him to his desired haven. The summit of the mount may be hidden from view betimes, but the consciousness that we are rising, though slowly, removes all doubt as to our ultimately reaching it. We are following the ascending path, and there is "now no condemnation."

JOHN B. WILLIS.

✧ ✧ ✧

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston Street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk Streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon Street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

PEORIA, ILL.—During the year 1915 there were distributed 54,552 pieces of Christian Science literature. These included 2951 *Sentinels*, 521 *Journals*, 127 *Heralds*, 50,147 *Monitors*, 195 pamphlets, and 162 miscellaneous pieces. The committee delivered *Monitors* regularly to five hair shops, to eight municipal offices in the City Hall, to twelve shoe-shining parlors, to twelve dentists' offices, to sixteen garages and livery-stables, to twenty-nine restaurants and hotels, and to thirty

Digitized by Google

barber shops. To most of these places the papers were delivered daily.

Many other places were also included in our regular distribution work, such as the employment bureau, car barns, theaters, G. A. R. Hall, Masonic Temple, telephone offices, and some twenty additional places. About eleven hundred *Monitors* were distributed each month through the railroad and interurban stations of our city. There are now twenty copies of Science and Health at our two public libraries, and the librarians report a constantly increasing demand for the book.—*Joint Distribution Committee.*

LANCASHIRE, ENGLAND.—Committees on publication now have the privilege of assisting the Trustees under the Will of Mary Baker Eddy in their plans for distributing Christian Science literature in connection with the war, and presenting Mrs. Eddy's writings and the Christian Science periodicals to free public libraries. Churches and societies have had the opportunity of distribution work among soldiers encamped in their districts or at military hospitals. Christian Science literature provided by the Trustees has also been sent from this office to the detention camps at Douglas, Knockaloe, Handforth, and Queensferry, the number of pieces sent during the twelve months ending Oct. 31, 1915, being 960 *Herolds* and 1152 pamphlets. Letters have been received indicating that this literature is meeting a sorely felt need at these camps.—*Committee on Publication.*

NEVADA.—Christian Science literature has been distributed during the year as follows: 6596 *Sentinels*, 1151 *Journals*, 188 *Herolds*, 24,030 *Monitors*, 1987 lectures in newspapers, 721 pamphlets, 2485 miscellaneous, totaling 37,158 pieces. All of the periodicals were given to the Nevada Building at the Panama-Pacific exposition at San Francisco, and much of the literature will shortly be given to the battleship "Nevada."—*Committee on Publication.*

SALT LAKE CITY, UTAH.—The corner-stone of Second Church of Christ, Scientist, on east South Temple Street, was laid yesterday noon [Feb. 17]. Ground for the new church was broken in August, 1915, and it is expected the edifice will be completed about the middle of the coming June. The cost of the structure complete will be sixty thousand dollars.

Salt Lake News.

MOLINE, ILL.—The progress of Christian Science in Moline was never so marked as now, as is evidenced by the growth in attendance and membership and the interest taken in the work of the church through its committee on the distribution of literature.—*Correspondence.*

✧

Admission to Membership in The Mother Church

The next admission of candidates will be June 2, 1916. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 10, 1916.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 5, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

Logansport, Ind.

In introducing George Shaw Cook, who lectured on Christian Science at the High School auditorium, Attorney D. C. Arthur said:—

It is probably known to most of you that I am not a member of the Christian Science church. I have, however, read some of its good sense and wholesome philosophy. My attention was first called to Christian Science a number of years ago by the many bitter attacks upon Mrs. Eddy and her work, so prevalent in the pulpit and press of that time. Later I noticed in our law reports that it was getting into the courts, and thus some real facts were registered which were dependable and enlightening. I also read the writings and speeches of such men as the Hon. Clarence A. Buskirk, Judge Clifford P. Smith, Senator John D. Works, and others of like caliber, along with the works of Mrs. Eddy herself, and reached the conclusion that Christian Science is a fact in the world's history which cannot be ignored.

I know personally many of the members of the local congregation, and have observed their manner of life; I know that they go in and come out among us without ostentation, and conduct their affairs with a modesty becoming and exemplary. We know that they do not engage in controversies with their neighbors about religion—or anything else; that they do not thrust themselves into public notice or clamor for public recognition; that they do not proselyte or seek to draw others away from their own church connections; that they do not meddle in other people's affairs. I understand that these things are a part of the teachings of their religion.

I understand also that Christian Science teaches that the truth about God and Christ is knowable, and that the knowledge of this truth constitutes the Science of Christianity; that this Science of Christ and Christianity is at once understandable and demonstrable, as are other sciences, and that when understood and demonstrated it is immediately practicable in our ordinary affairs. If the claims of Christian Science are true, or anything like the truth, it is my conviction that its discovery is the most important world event since the crucifixion.—*Logansport Pharos-Reporter.*

✧

Harrogate, England

Walter Wilding of Manchester took the chair for Clarence W. Chadwick's lecture on Christian Science in the Kursaal. In his introduction he said in part:—

A new revelation has come to this age. To sick and sorrowing humanity Christian Science holds out a message of hope. Before accepting Christian Science, nearly twenty years of my life were spent in the study and practice of medicine, and I should be sorry to acknowledge how frequently conditions of disease reached a crisis when all the medical knowledge of the human mind was helpless. In the practice of medicine, when certain physical symptoms arise death is believed to be inevitable, the medical knowledge of the human mind is helpless, and help can be found only in the understanding of that Mind "which was also in Christ Jesus."

The marvelous healing by Christian Science of what were otherwise incurable cases in my medical practice fifteen years ago, made me study this Science, and as I read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I saw that Christian Science is the truth, and that it is the understanding of this truth which heals. It heals today as it healed in the days of the Master, and as it always will heal, because it is the understanding that is a "wellspring of

Digitized by Google

life unto him that hath it." Since ceasing to practise medicine I have had many years' experience of the healing power of this new yet old understanding of the Christ, and have seen "all manner of disease" healed.—*Correspondence.*

Kansas City, Mo.

The introduction by James N. Russell at a crowded noonday lecture on Christian Science, given for business people in Schubert Theater by Bicknell Young, was as follows:—

In this age of keen competition as regards business relations, we are looking for men who will get results. Then why not, in our desire for truth, strive for a religion or God that not only promises but rewards abundantly? The adherents of Christian Science have found it to be eminently practical. Contrary to the opinions of many, a Christian Science lecture is not a defense of Christian Science, and is not intended as such. For those wishing for information before deciding, this is an opportunity to learn from an accredited exponent on the subject what Christian Science really is.

Correspondence.

Lectures to be Delivered

CALIFORNIA—Oakland (Sixth Church): George Shaw Cook, Claremont Theater, Telegraph Avenue and Fifty-first Street, 8 p.m., May 12; and Seventh Church Edifice, Harrison Boulevard, near Twenty-third Street, 8 p.m., May 13.

San Francisco (Fifth Church): George Shaw Cook, Dreamland Rink, Steiner Street, near Sutter Street, 3 p.m., May 14, and 8 p.m., May 15.

Stockton: George Shaw Cook, The Auditorium, El Dorado at Channel Street, 8 p.m., May 16.

COLORADO—Colorado Springs: Virgil O. Strickler, The Burns Theater, 8 p.m., May 15.

Salida: Virgil O. Strickler, Opera House, 3 p.m., May 14.

IDAHO—Black Bear: Frank Bell, Mace Hall, 7:30 p.m., May 16.

Lewiston: Frank Bell, Temple Theater, 8:30 p.m., May 18.

ILLINOIS—Chicago (Second Church): William D. McCrackan, Church Edifice, Wrightwood and Pine Grove Avenues, 8 p.m., May 15 and 16.

Chicago (Sixth Church): William D. McCrackan, Church Edifice, 11321 Prairie Avenue, 8 p.m., May 18.

Chicago (Eleventh Church): Jacob S. Shield, Logan Square Auditorium, Logan and Kedzie Boulevards, 8 p.m., May 18 and 19.

Chicago (Twelfth Church): Hon. Clarence A. Buskirk, Temple Sholom, 3760 Pine Grove Avenue, 8 p.m., May 15 and 16.

INDIANA—Anderson: Charles I. Ohrenstein, Grand Opera House, 3 p.m., May 14.

Crawfordsville: Bicknell Young, Music Hall, 8:15 p.m., May 18.

Hagerstown: Bliss Knapp, I. O. O. F. Hall, 8 p.m., May 19.

Kokomo: Jacob S. Shield, Sipe Theater, 3 p.m., May 14.

Marion: William R. Rathvon, Indiana Opera House, 3 p.m., May 14.

KENTUCKY—Lexington (First Church): William R. Rathvon, Woodland Auditorium, Woodland Park, 8 p.m., May 15.

MICHIGAN—Charlotte: Jacob S. Shield, Masonic Temple, 8 p.m., May 11.

MISSOURI—Trenton: Virgil O. Strickler, Majestic Theater, 8 p.m., May 18.

NEW JERSEY—Rutherford: Clarence C. Eaton, Masonic Temple, Park Avenue, 8:15 p.m., May 12.

NEW YORK—Malone: Clarence C. Eaton, Grand Theater, 3:30 p.m., May 14.

New York (First Church): John W. Doorly, Church Edifice, 1 West Ninety-sixth Street, 8 p.m., May 15.

New York (Sixth Church): John W. Doorly, Bronx Masonic Temple, 1931 Washington Avenue, 3:30 p.m., May 14.

Port Jervis: Clarence C. Eaton, Deerpark Club, 8:15 p.m., May 16.

Richmond Hill, L. I.: Dr. Francis J. Fluno, Garden Theater, 3:30 p.m., May 14.

Staten Island: John W. Doorly, Curtis Lyceum, Stuyvesant Place and Wall Street, New Brighton, 8 p.m., May 16.

OHIO—Akron: Bliss Knapp, Church Edifice, Fir Street and East Buchtel Avenue, 3 p.m., May 14, and 8 p.m., May 15 and 16.

Ashland: Prof. Hermann S. Hering, Opera House, 8:15 p.m., May 15.

Bucyrus: Bicknell Young, Hippodrome Theater, 3 p.m., May 14.

Columbus (Second Church): Bliss Knapp, Memorial Hall, 8 p.m., May 18.

Conneaut: Prof. Hermann S. Hering, City Hall Auditorium, 8:30 p.m. (Eastern Standard Time), May 16.

Geneva: Jacob S. Shield, Armory, 8:15 p.m., May 16.

Lima: William R. Rathvon, Faurot Opera House, 8 p.m., May 18.

Mansfield: Jacob S. Shield, Memorial Opera House, 8 p.m., May 15.

Marion: Prof. Hermann S. Hering, Marion Theater, 3 p.m., May 14.

Piqua: Bicknell Young, High School Auditorium, 8 p.m., May 19.

Toledo (First Church): William D. McCrackan, Coliseum, 3:30 p.m., May 14.

Xenia: William R. Rathvon, Opera House, 8:15 p.m., May 16.

Youngstown: Bicknell Young, Masonic Temple, 8:15 p.m., May 16.

Zanesville: Bicknell Young, Memorial Hall, 8 p.m., May 15.

UTAH—Provo: Virgil O. Strickler, Columbia Theater, 8 p.m., May 11.

Salt Lake City (First Church): Virgil O. Strickler, The Auditorium, 8 p.m., May 12.

Salt Lake City (First and Second Churches): Virgil O. Strickler, American Theater, Noon Hour Talk, May 12.

VERMONT—Barre: Dr. Francis J. Fluno, Howland Hall, 8 p.m., May 11.

Lyndonville: William D. McCrackan, Music Hall, 8 p.m., May 11.

WASHINGTON—Puyallup (Society): Frank Bell, I. O. O. F. Hall, 8 p.m., May 11.

Walla Walla: Frank Bell, Whitman College Chapel, 8:15 p.m., May 15.

Walla Walla (auspices all churches and societies in state): Frank Bell, Washington State Penitentiary Chapel, 7 p.m., May 14.

WISCONSIN—Appleton: Charles I. Ohrenstein, Congregational Church, 8:15 p.m., May 19.

Marinette: Charles I. Ohrenstein, Church Edifice, Stephenson and Liberty Streets, 8:15 p.m., May 16.

Oshkosh: Charles I. Ohrenstein, Opera House, 8:15 p.m., May 18.

West Bend: Charles I. Ohrenstein, Commercial Club Hall, 8:15 p.m., May 15.

Testimonies of Healing

I would like to express my gratitude for what Christian Science has done for me. One of the greatest blessings that could come to me is the privilege of having my children go to the Christian Science Sunday school. When they first began to attend, the boy, then about ten years old, did not enjoy it, but we never compelled him to go; instead, we talked to him of the truth and what it would mean for him to understand it. After about a year of irregular attendance a different teacher was given him. Her beautiful demonstration of loving interest in him soon had a marked effect, and he went every Sunday and did whatever she asked him to do.

About six months later the little fellow's health failed. I had been a very busy mother, so had read Christian Science literature but little and had not attended church services often. I did not know how to use Science for the boy, so I used all the simple home remedies I had ever known; but he gradually grew weaker. When I sat down one day to talk it over with him, he told me that if I would let him have Christian Science treatment he would get well, but if I made him have a doctor he would just die, as an aunt had done. It was a hard problem for me, for this aunt had passed away from tuberculosis after five physicians had done all they could for her. I had no faith in what they could do for my boy, and yet I knew so little of Christian Science that I had no faith in its healing power either. I soon decided, however, to have Christian Science treatment, and a practitioner came to see the child. Although there was some improvement at first, there were days when he was worse, and it was very hard for me to go on with the treatment; but he had no fear. In the seventh week he took a decided turn for the worse, and I practically gave up hope. One evening, after a very trying day, I telephoned to the practitioner that if there was anything more to be done I wished she would do it, for it seemed as if the boy had only a few hours to stay with us. She tried to help me overcome my fear and said she would do all she could for us.

As I was thinking things over, the thought came to me that if I understood God aright He would do as much for me as for a practitioner. Accordingly, I soon took the Bible and Science and Health and sat down to read, earnestly desiring to know the truth about God. I read long after all the family had retired, and it was after midnight before I went to sleep. About three o'clock I awakened with an almost overwhelming sense of fear, and to every material sense the boy was passing away. I turned my back to him, and with more confidence than I had ever been able to have I declared the truth audibly. My fear was nearly all gone, and I went to the boy and assured him he was all right. When I asked him if he wanted his father to come, he said, "No; just God is all we need." His voice was so tender and pleading that I felt greatly rebuked that I had not been able to have more faith from the first. I soon told him to sleep if he wanted to, but I had to work again to overcome my fear.

Next morning I slept at least two hours later than usual, and when I left the bedroom the boy was still sleeping peacefully. I went about my duties in another part of the house, singing because I thought the boy was much better; but I was not prepared for what I saw when I entered the bedroom. The boy had arisen and was almost dressed, although for nearly three weeks he had not been able to stand alone. Three days later he began making a bird house, and the fifth day he climbed high into a tree and fastened the box there. One side of his chest was very much sunken, and those who had known most about his sickness believed he had lost the use of the right lung. He could not raise his arm much on that side and there were other symptoms of disorder, but Christian Science treatment was continued, and in a few weeks he was perfectly well.

Some time after this it was necessary for the boy to go through a physical examination in order to take part in a certain sport in which he wanted to join. After the physician had examined him he said, "My boy, I wish all our boys of your age were as sound and well built as you are; we would soon have a better generation of people." Today the boy, now over eighteen years old, is a well-built young man, more than six feet tall and in perfect health. All these years since that sickness I have taken his words, "Just God is all we need," and have been able to work out many problems beautifully. I am glad I know God as taught in Christian Science. The child's faith in what he had learned in Sunday school from an earnest, loving teacher led to his own healing and to my full faith in Christian Science.

I could not tell of all the happiness that has come to me through the knowledge of this truth. I am grateful to the dear church people here who have so lovingly helped me in many ways, and I send this word that all Sunday school teachers may be encouraged to faithfulness in their work. They may never know what great happiness results from their earnest effort, which may reach unnumbered thousands of the future. God has promised that His word should not return unto Him void, but should accomplish the work whereto it is sent.

Christian Science means much to our other children. St. Vitus' dance, a gathering in the head, colds, and fevers have all been quickly overcome through this great truth. The children use it in their school work, and in many ways this beautiful teaching has brought peace and comfort to us. I am unable to express the gratitude I feel for all these evidences of a God who is Love, Life, and Truth.

CHARITY BRUBAKER, Evanston, Ill.

✧

At the time of my healing through Christian Science I was suffering from a combination of diseases, namely, a throat difficulty, congestion of the bowels, and organic heart trouble, the last being pronounced incurable by several physicians who had been called for a final consultation. I was in a semicomatose condition on account of the opiates taken to ease the intense pain from the bowel congestion. It was then, when the family physician had called for the last time, leaving no hope, that a friend advised my mother to try Christian Science for me. In accordance with the old adage that "where there is life there is hope," a friend who was also a Christian Science practitioner was called, and in less than twenty-four hours I was sitting up in bed eating, a thing I had not done in four days. Since that time, three years ago, I have not been ill a day.—HORACE W. BAKER, Brooklyn, N. Y.

✧

At the end of 1911 my health was most unsatisfactory. I was suffering from many internal troubles and was planning to go into a nursing home for examination prior to an operation, as the doctor was of the opinion that I had a growth. Just at this time a friend spoke of Christian Science and took me to a practitioner, who most kindly gave me treatment. The acute symptoms disappeared, and in five treatments I was healed. That was four years ago, and the healing has been permanent.

I cannot express my gratitude for this physical healing; but what I appreciate still more is the knowledge that it was

Digitized by Google

God's healing. It has taught me to know Him as I never did before. When I first heard of Christian Science, my circumstances were sad and the outlook was gloomy. Now divine Love has indeed opened up many channels quite unexpectedly, and all the conditions of my life have become brighter, changed for the better in every way. I am glad to take this opportunity of letting others know that "with God all things are possible," and am grateful to our Leader, who, as God's messenger to this age, has given expression to this glorious truth which raises mankind spiritually, physically, and mentally.—KATEY GODFREY, Hyde Park W., London, England.

✧

In June, 1914, a Christian Science practitioner came to our home with an old friend. That day my suffering had been worse than usual, and having lost faith in every one and every thing, I did not think there was any good in Christian Science, so naturally my greeting was not very cordial. But the practitioner had such a spiritual understanding of the all-power of God, divine Truth, to heal the sick, that I was soon convinced of my error. In a few minutes all pain was gone and my clouded thought was normal. When she said I was healed I knew it was the truth, and accepted it with all faith. After such a demonstration of instant healing I could never doubt God's loving-kindness.

I had suffered great physical pain and extreme nervous trouble for over six years, had some internal injury caused by a fall, and had endured great suffering on account of an unusual trouble with my teeth; in fact, I was always an invalid. I had passed several years in hospitals and at sanitariums, also had undergone several serious surgical operations with only temporary help. During my last illness the pain was so severe that I could obtain very little sleep or rest, and could not retain even a small amount of food. I was so seriously affected mentally that I was nearly insane for over two years, and the worst feature of the mental trouble was that I fully realized my condition.

Since this instantaneous healing I have been in a perfectly normal condition. I have also had several beautiful demonstrations of God's power in giving almost instant help from accidents. Since coming into Science the spiritual uplift and understanding of the truth have brought great peace and joy, and I have been given the happiness of reflecting God's love in helping others.

Mere words could never express my thankfulness and joy for the health and freedom that is mine through the healing power of Christian Science. My husband is very happy in the knowledge that the truth has made me free. The Bible and the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, are our daily study. We sincerely hope this testimony may help others to find the truth.

MARY E. GORDON, Gunnison, Col.

✧

Deep gratitude to God, also to our beloved Leader, Mrs. Eddy, impels me to send this testimony. When less than a year old I had an attack of rheumatic fever, and throughout my childhood I suffered from it many weeks at a time each winter. As I grew older the attacks became more frequent and of longer duration, until physicians declared they could not hope to cure me, but merely to alleviate my suffering, and that I would soon be able to move about only in a wheel-chair. My hands were almost as useless as my feet, and the future did not seem very bright. At this time my fear of a throat affection was so great that if I was in a room with one who had recently had an attack I at once came down with it.

That "man's extremity is God's opportunity" was then proven to me. I had been led to see that there was something higher and better than could be found in the teachings of my former church, but I little thought I should find it in Christian Science. My mother became interested in this teaching and tried to interest me, but it was not until my feet, which had become distorted from rheumatism, had regained their normal shape that I would listen to her. It is nearly seventeen years since that first demonstration was made for me by my mother, and not only has the healing been permanent, but I am today manifesting a degree of health never known before coming to Christian Science. During the early months of 1914 I was so situated that I was exposed to very unpleasant weather conditions, spent hours of each day in an uncomfortably cold room, even staying for hours with thoroughly wet feet, but with no ill results.

These physical benefits are, however, but the smallest part of the good that Christian Science has brought me; the spiritual and moral uplift has been far greater. The absolute certainty that there is a God who is Love, who is ever present and omnipotent, to whom I can take every problem and know that if I go to Him in the way taught in Christian Science it will be correctly solved, has brought a peace and joy "to worldly minds unknown."

ANNE M. PAINE, Worcester, Mass.

✧

I have long delayed sending my testimony of the happiness that Christian Science has brought to my wife and myself. I was very bitter against this teaching, but one day my wife asked me to let her read to me from "Science and Health with Key to the Scriptures" by Mrs. Eddy. I asked where she got the book, and when she answered that it was borrowed from a friend, I said: "Well, they seem to be very much interested in you. Can it benefit them to look after you? Don't waste your time, then, in rehearsing their words; if you want a copy of Science and Health get one of your own." I little knew what I had done in thus giving my consent that Science and Health be brought into my house. I had opened the door for God and His blessing to enter.

I can hardly say how it happened, but a few evenings later I found myself reading the book instead of my daily paper, and although it seemed a blank, yet something urged me to go on. The more I read the more light I got, and I began to understand that God is Love, and that He is All-in-all. At this time I was taking medicine daily, as I had been for twelve years, on account of stomach trouble, from which I had been a constant sufferer, and I now grew willing to try anything to better my condition. Since I began to read Science and Health I have not taken a drop of medicine, neither has the stomach trouble returned.

I surely have reason to rejoice daily that I thus turned to Truth. Not only has this ailment disappeared, but a number of others have been overcome by my wife and myself. As yet, however, we are only infants in Christian Science, but I am thankful to God, also grateful to our Leader, Mrs. Eddy, for the much needed truth we have already gained.

C. C. WHITE, Chico, Cal.

✧

To me it seems a privilege to give thanks to our heavenly Father through the pages of the *Sentinel* for the peace and joy that are mine because of the gift of Christian Science. An article in this publication some time ago brought out the thought that we must dwell in the ark, meaning the consciousness of ever-present good, and while pondering over it and what it meant to me personally, I saw a blaze in the kitchen. I had no fear, but went immediately and found my thirteen months' old child standing before the remains of her celluloid

Digitized by Google

doll, which she had stuck into the gas flame of the range and carried, on fire, about eight feet. The hem of her flimsy little white dress had been scorched but not a hair of her head had been harmed. How happy I am to know what it means to dwell in the ark.

For five years Christian Science has been our only physician. It has met our every need, and from past experience we know that it will never fail if we do our part. I am trying to live each day aright, expecting grace and my daily bread, and in this way fear and worry are eliminated and it is easy to rejoice, for each day is so full of God's love and tender care. I have put aside glasses, and we, a family of three, have been healed of many ills; but the greatest blessing has been the spiritual uplift and the true knowledge of God's abiding presence.—Vesta Hinkley Moore, Kansas City, Mo.

✧

For some time I have felt that I should tell of what God has done for me through Christian Science. In the spring of 1912 I had a bad attack of sciatic rheumatism, and after doctoring with one of our best physicians for about two weeks, was no better. About this time I was drawn on the state federal grand jury at Indianapolis, but I thought it would be impossible to serve on account of the rheumatism. My daughter was visiting us and advised me to try Christian Science, so on the morning I was to start for Indianapolis I was taken to a practitioner's home. I was in misery on the way there and expected to be till I finished my journey, but after having treatment I felt much better, and during the rest of the trip I was comfortable. I was away about a week and came home perfectly well.

In the fall of the same year I met with an accident. The boy with me was driving my horses, a spirited young team, and they started to run before I could get the lines. They ran against a street-car pole, and I was thrown about twelve feet, landing on my chest and crushing it in till I could scarcely breathe, also cutting my limbs. I got up in a dazed condition declaring that no harm could come to one of God's children, but when I got home my family were frightened. My boys were telephoned for, and when they came they said I must have a doctor; but I told them it was not necessary. In the morning a Christian Science practitioner was asked for help, and I was soon well again. I was also healed of deafness in one of my ears with these same treatments.

Although nearly seventy-two years old, I am well. I own a farm and look after it myself. I do not do all the work, but attend to the marketing, and could do a good day's work if it were necessary. I have not had a sick day or taken a drop of medicine for a number of years. I have a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and am taking the *Sentinel*, which I think is a splendid paper. I am very grateful for all the literature and kind friends in Science.—J. L. Judson, Bristol, Ind.

✧

For four years I suffered from what was pronounced an organic disease. During that time I had medical treatment almost constantly and underwent one operation, but was not cured. I was at last told by the physicians that the affected organs must be removed. I expected to have to submit to this operation, as there was no alternative, and was in great dread of it; but just at this time I went to my parents, who were studying Christian Science. I knew nothing about this teaching and did not believe it could heal any physical disorder; but for some reason I began to read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. After reading a few pages I was impelled to continue, as I found it the most logical book I had ever read. It was not like my former thought of religion as cold and theoretical, but appealed to me as the absolute truth. After several weeks of almost constant study of Science and Health I was completely healed of this disease. It has been almost four years since this healing, and not a single manifestation of the old trouble has ever returned; and I know none ever can, because the real causes, fear, hate, malice, jealousy, false appetite, and the like, have been destroyed.

When I began to study Christian Science I had a double curvature of the spine, which threw my body a little out of shape and caused one leg to be an inch shorter than the other. I wore a cork sole on one shoe and was under a physician's care for several months. At the end of a year, finding no improvement, I gave up all hope of ever being straight. I now find that as my thoughts are straightened with purity and love my body is straightened also. I was a sufferer from pleurisy, hemorrhoids, and headache, but since gaining the understanding of God as Love and the only power, all these false beliefs have vanished. One can imagine how grateful I am for all these physical healings; but Christian Science has done more than all this for me. Formerly, I sought happiness in matter and found pain; I craved constant excitement, but never found joy until I turned to Science, and then I found that peace which passeth understanding.

I knew very little about the Bible, but Christian Science has made it my chart of life. I am very grateful for the privilege of class instruction, and for the unselfish searching of the Scriptures which enabled Mrs. Eddy to discover the Principle of the Christ-healing. It is indeed the "pearl of great price."—Gladys Parvin, Chicago, Ill.

✧

To tell of the many blessings that have come to me through the study of Christian Science would be like trying to count the stars or to number the sands on the seashore. My appreciation for this practical Science is boundless, for I have been lifted from the depths of agnosticism to the heights of faith. Having been reared under the belief of spiritualism, predestination, and future punishment, I found myself when quite young without hope, and doubting the existence of a God. I drifted on in this state of mind for years, in darkness, discontented and selfish, looking for happiness but finding none, until I reached the point where I was a mental wreck. At this time, about six years ago, I turned to Christian Science for help, as I had not succeeded in my work as a teacher in the public schools and also was laboring under a severe attack of influenza. I gladly lifted my eyes to the hills whence cometh help, and I can truthfully say that help did come, and abundantly, for God is good, and giveth without measure to those who seek Him aright.

At times my progress has seemed slow, but it has been sure, and the thing I am most grateful for is the spiritual uplift,—that pure, exalting influence which follows the application of Science, and which lifts us above the false pleasures of material sense. I am indeed thankful for the periodicals, the *Sentinel*, the *Journal*, and the *Monitor*, and to the board of lectureship. Above all I am grateful to our dear Leader, who so bravely faced the world to reveal the way of salvation to suffering humanity.

Mary E. Kline, Meridian, Miss.

✧

I should like to express my gratitude to God for the many blessings that have come to my family and myself through Christian Science. For fifteen years I was a constant sufferer, and was twice operated upon without results. I have had the best physicians in our city, and just before I turned to

Digitized by Google

Science they said I would have to submit to another operation. Like many others, I was in the depths of despair and often thought that life was not worth living. Then Christian Science was presented to me, and I went to see a practitioner, who lovingly consented to help me. In a short time I was healed, and since then have really enjoyed life, for I am entirely free from pain. Doctors could not give me even temporary relief during those years of trial, but now I have gained in weight, and my friends can hardly realize that I am the same person.

For this healing and for the spiritual uplift, likewise for the various healings that have come to my family during the past three years, I cannot find words to express my gratitude to Christ Jesus the Wayshower, and to our dear Leader, Mrs. Eddy. Christian Science is teaching me to love God with all my heart, and my neighbor as myself. I hope this testimony will be of some benefit to those seeking after the truth.—Mrs. A. E. Block, Baltimore, Md.

[Translated from the German]

About a year and a half ago I became acquainted with the teachings of Christian Science. Previous to that time we had been working along the lines of character improvement. We faced a rather hard test in November, 1913, when my wife became afflicted with what seemed to be a serious pulmonary trouble. For three weeks she suffered greatly and could take no nourishment. Our faith in Christian Science was sufficient at that time to enable us to see that since so many others had been helped by it there was no reason why we should not be benefited in a similar way. We consulted no physician, but secured treatment in Christian Science; then, as the trouble seemed to grow more serious, we were beginning to feel impatient, when the underlying cause of her condition was discovered. It seemed that my wife was under the impression that she had a dreaded disease of the lungs and must therefore die. After this fear was removed the healing made rapid strides and she was able to take nourishment. A few days later she arose and attended to her household duties, and there has not been the slightest relapse.

We have also had beautiful instances of spiritual healing in our family in cases of fever, pain, and wounds. With regard to the children's work at school and on examination days we have relied on divine intelligence, and it has never failed. In the way of protection we have experienced the power of ever-present divine Love in two instances. My brother-in-law is a customs collector on the Russian frontier, and when the war broke out his position demanded that he stay there. For weeks we heard nothing of him, but read in the papers of distressing conditions. Finally we received a letter from him telling us that he was back home, well and happy, having been delivered after three weeks of dreadful experience. To us this was no chance occurrence, for we had continually declared the truth in his behalf.

I wish to express my gratitude to God, and would not fail publicly to acknowledge my indebtedness to our dear Leader, Mrs. Eddy.

Theodor Loeben, Feuerbach b. Stuttgart, Germany.

Church work has become a kind of technicality. Church-workers have become a sort of caste. The true church-worker is as wide as the whole activity which the church inspires. Wherever any man of the congregation is doing anything honest or merciful out of any impulse that he has gathered here, he is about church-work. Whenever any woman puts the spirit of the Sunday service or the week-day meeting into her household, and does her little to purify and Christianize society, she is a church-worker.—*Phillips Brooks.*

From Our Exchanges

[*The Sunday School Times*]

All of us see and approve of many new courses of action, and we would like to get the enlargement that they promise, but we cannot see how it is going to dovetail in precisely with what has gone before, and so we resist the new impulse instead of throwing ourselves in with it cordially and fully. It is natural and right to appraise at its full worth what has been so well done hitherto; we do not wish to imperil it, and because we can find no formula that makes the new start in life perfectly consistent with what has gone before, we refuse our opportunities. New and enlarged righteousness is apt to seem dangerous to us, or risky, and we forget that what has already been gained was gained principally by the very risks and daring that we now refuse.

Yes, it is just this fear of getting things out of joint that keeps thousands of us from responding to the visions and impulses, the appeals and the experiments that are always offering us a larger life. A new order of living no sooner suggests itself than we ask: "What will people think? What will people say? Is Saul also among the prophets?" We dread calling attention to ourselves. It will seem to people as if we confessed that what we had been doing hitherto was mistaken. The new course will imply that the old one was at fault. If we could glide into it without making any appreciable break, well and good, but when it entails the making of comparisons and the tacit confession of failure, we dread it. There is hardly a good thing we would not do if it could only be done without a break, but most improvements in life do not come without something of the nature of a leap or a plunge. They justify themselves afterward and not before.

[*The Christian Register*]

A "profession of faith,"—why do so many decline to make it? Because they lack the faith, or because they have it too deeply to profess it? And a public avowal of that which is of its own essence spiritual modesty, meets a shrinking which many a fine and sensitive soul has felt to mean cowardice and guilt, but which really meant a sense of sacredness and a fine regard for the confidences of God. We bring no manners to a test of a proclamation of them, try no love by its willingness to publish its sanctities, and common honesty will say nothing for itself, but waits for eyes that can see and ears that can hear the truth. That people feel uncomfortable under a certain kind of religious ministration, and avoid it, is an evidence of religion in them. It is no virtue to make religion feel like a vise and work like a narcotic. God and the soul would get together oftener if there were fewer people engaged in well-meant but embarrassing efforts to bring them together.

[*The Christian Work*]

Into every best effort that has ever been made for the advancement of truth and righteousness there has been poured vastly more of unselfish energy and devotion than the result has seemed to justify. Our blessed Lord himself lays everything on the altar of divine love, and his reward is the cruel cross of Calvary. Socrates summons the youth of his native city in austere heights of self-devotion, and is presented with a poison-cup. Savonarola persuades his countrymen for a while to simplicity of life, and in the end they strangle him to death and burn his body at the stake. And there have been individuals in human history of whose name no record is kept whose noble self-sacrifice has been as grand in its way as any of the masters I have named, save our Lord himself. The truth is that what we see here matters comparatively

Digitized by Google

little; the true spiritual result that we are working for is, after all, in the great beyond, and every task to which you put your hand has spiritual significance, eternal value, or it is not worth doing. You do not see what God is making, you only see what you think He is making. You may see true as far as you see, but what you do not see is immeasurably greater than what you do.

[Canon Alexander in *The Guardian*]

It is well for us to be reminded of a side of Christianity which we are rather apt to lose sight of. Meekness and pity, gentleness and humility,—rightly are these beautiful graces and virtues emphasized in the gospel, both by word and by glorious example. Some of them were not even regarded as virtues when Christ was born; and at all times, and not least at the present day, the world has need of them. But if we think only of the passive and negative virtues, and ignore the active and progressive, we lose one half of the heritage of the church, and we get a very meager and one-sided view both of the character of our Lord himself and of what the Christian life, in its fearless strength and untamable enthusiasm, is meant to be.

[*The Christian Intelligencer*]

It will be remembered that when Jesus was on his way to raise the daughter of Jairus, an invalid woman touched the hem of his garment, and because of her faith, however ignorant, selfish, and imperfect, received healing. Of all those who thronged Christ that day, only this poor, sickly, forlorn woman touched Christ with confidence and longing. Is the proportion still the same? Do the many who attend public worship go away unblessed because they sought and expected nothing? It was not without purpose that Jesus said, "Blessed are they which do hunger and thirst after righteousness: for they shall be filled." Still rings the Bible challenge, "O taste and see that the Lord is good."

[*The Congregationalist and Christian World*]

The world will never be redeemed save by the outgoing of spiritual forces made incarnate in lives which are "hid with Christ in God." Whatever establishes God in life, and life in God, will secure all for which we seek; and only as the channels are opened between us and them can He come in to possess and empower us. The weeks which lie ahead will mean much for Christ and the church, for us and our world, if we cleanse the tideways of the Spirit. We have only to open our souls to God—He will do the rest.

[*Zion's Herald*]

Christianity is individualistic. It works itself out into the social body, but it must first take hold of the individual. The social body, the sum of individuals, we know is more than a multiplied multitude; there is a subtle something added to the sum total known as the social spirit, and this also must be made Christlike. But in the final analysis that transformation rests upon the individual man.

[*The Universalist Leader*]

Will it work? That is the test we must apply to our religion as to every harnessed force. When it comes to the decision as to whether we are to do one thing or another, whether we are to accept one form of faith rather than another, put it to this test: Will it work?

[*The Living Church*]

Along with preparedness to meet the conditions that prevail in the world today, we must have the stern resolve to change those conditions. Military preparedness meets symptoms and effects only. Greater preparedness yet must deal with causes.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Law and Work" is the title of a new pamphlet containing the following articles: Love Fulfils Law, The Logic of Christian Science, Undisturbed, God's Law of Adjustment, Authority.

The increased cost of binding the periodicals has necessitated making an advance in the selling price of the bound volumes. The new prices, which take effect April 1, are as follows:—

JOURNAL.—Volume 32 (April, 1914 to 1915). Cloth, $3.00; half calf, $3.75.

SENTINEL.—Volume 16 (September, 1913 to 1914) or Volume 17 (September, 1914 to 1915). Either volume, cloth, $3.25; half morocco or half calf, $4.00.

For all other bound volumes of *Journal* or *Sentinel* write for prices.

DER HEROLD.—Volumes 5 to 12 in cloth, $2.75 each; volume 4 to 7 and 9 to 12 in half morocco, $3.50 each; volumes 4, 5, 9, 10, 11, 12, in half calf, $3.50 each.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

The irrigation of Egypt is dealt with in the recent report of the under-secretary of state on the ministry of public works. Two important undertakings, he says, have been concluded in the department of drainage and construction since the beginning of the European war. These are the main works of the Cairo drainage scheme and the Gezireh bridge. Of new works remaining to be done the largest is the reclamation of uncultivated land, such reclamation to be supplemented by the extension of perennial irrigation to the yet unconverted areas of Upper Egypt. The undertakings in prospect demand a heavy expenditure but promise large returns, for upon their completion 1,000,000 acres, only half irrigated at present, will have been furnished with deep drainage and efficient irrigation, and 1,800,000 acres of entirely new land, properly watered and drained, will have been provided. During the past thirty years an annual average of 30,000 acres of entirely new land has been added to the taxable soil of the country and now produces two crops a year. There are altogether 2,400,000 acres of uncultivated land which may be made to produce two crops a year, and there are 1,200,000 acres which may be made to produce two crops a year instead of one, as at present. It is estimated that beyond the supply available at present, an annual storage of about eight billion cubic meters of water will be required. Toward the extra supply ultimately necessary in normal years the White Nile reservoir would probably contribute an effective storage of three billion cubic meters. More water might be obtained from works on the Blue Nile, and the training of the river in the sudd region and regulation of one or more of the Great Lakes might complete the work.

Protection of the Rittman gasoline process from monopolistic control is sought in a resolution passed by the United States Senate. It authorizes the secretary of the interior to accept Rittman's patent rights and to issue permits for the use of the process to individuals or corporations on terms requiring permittees to patent in the name of the Government all improvements made in the process. The authority was asked by Secretary Lane, as without it he could not accept the Rittman rights and they might revert to Rittman or to some corporation to whom he might desire to transfer them. Secretary Lane says:—

"The Rittman process for the production of gasoline and of benzine and toluene has been proven commercially practicable, but in the further commercial development of these processes improvements will undoubtedly be made. It is quite possible that some of these improvements may render still more successful and economical the operation of the processes, and if any concern making use of the processes is to be allowed to patent in its own name the improvements that may be developed, the result may be the establishment of a virtual monopoly in the hands of the concern securing such patents."

An experiment which may prove of great importance is being carried on by the Pennsylvania experiment station of State College at Snow Shoe, several miles from the college, where there is a tract of about fifty thousand acres which has been laid waste by the operations of the Lehigh Coal Company. Its vegetation is scrub oak and pine, emerging from berry bushes and a tangle of briers and brambles. In this area last year a plot was marked off 50 by 100 feet and subdivided into four sections. The lower section was well limed, and alfalfa and three varieties of clover were planted across the entire area of the plot. The crops on the lower section, which had been plentifully sprinkled with lime, flourished, while the upper sections were bare and unproductive. The experiment is being carried out on an extensive scale this year. As nearly as can be determined now, the land may be turned to valuable pasturage if properly planted and cared for.

The first year's operation of the agrarian pledge law, which went into effect on Dec. 1, 1914, was recently reviewed in a report submitted to the Argentine department of agriculture. This law has been looked upon as very opportune and profitable to the producers, especially at a time when their facilities for borrowing money to meet their ordinary expenses were considerably reduced by a general restriction of banking credits. The law provides that loans may be made on (a) machinery in general, implements, and working tools; (b) animals of whatever species and their products, as also movable goods utilized in rural exploitations; (c) produce of any nature corresponding to the agricultural year in which the contract is made, whether such be pending, on the hoof, after separation from the plant, as also wood and timber, mineral products, and products of national industries.

Resolutions urging Congress to create a national highway commission to investigate and report upon the most economic and beneficial method for the Federal Government to participate in the building of good roads, are being submitted by the National Highways Association to state legislatures, chambers of commerce, and civic organizations in all sections of the country. They provide that the commission shall locate highways connecting all state highway systems by interstate trunk lines, thus making a national system of highways which will correlate the state systems.

On July 1 next the new Federal law on barrels becomes effective. This law specifies that barrels used in the sale of fruits and vegetables, after the date mentioned, must contain 7056 cubic inches, which means approximately three bushels. The dimensions of the barrels may differ, but they must hold the proper cubical contents. With this law in effect and its enforcement by Federal, state, county, and city officials of weights and measures, with the cooperation of the trade, the so-called "standard" barrel as provided by the law will become a fixity in trade channels.

General Botha is proposing a far-reaching educational scheme to meet all the needs of South Africa with its large area and scattered population. He proposes to establish three great universities: the University of South Africa, the University of Cape Town, and the University of Stellenbosch. The first will be a federation of a number of colleges over the whole country. The second will be a residential university on the lines of Oxford. The third is a new name for the historic Victoria College, which has educated some of the leading statesmen of South Africa and which is in sentiment predominantly Dutch.

A more intelligent method of dealing with the erection of United States Government buildings in the various cities and towns by the establishment of a bureau of estimates to examine into the needs and necessities of the localities, is proposed in an article in a recent issue of the *Journal of the American Institute of Architects*, following similar contributions in other less technical magazines.

The national Congress of Provincial Councilmen of Cuba has passed a resolution urging the Government to make international ports out of Santiago de Cuba, Santa Cruz del Sur, and Cienfuegos. It is held that these ports, because of their position as regards the Panama Canal, should be free ports of entry, and the proposition is being given serious consideration by the Government.

A bill to establish twelve regional land mortgage banks as part of the rural credits legislation program favored by President Wilson, has been perfected by the banking committee of the House of Representatives. The proposed banks would make loans on land through national farm loans associations.

The task of working out details of the most comprehensive exploration of the Pacific Ocean ever attempted has been entrusted to a committee of scientists by the National Academy of Sciences of the United States. It is expected that the exploration will occupy from ten to twenty years.

An industrial exposition lasting two months will be held in Santiago, Chile, beginning Sept. 15. Samples of tools, machines, instruments, and apparatus manufactured in other countries will be admitted, although the exposition is primarily for the display of home manufactures.

A bill authorizing the appropriation of $45,000,000 for the protection of the Mississippi River against floods and $5,600,000 for flood protection of the Sacramento River, to be spent in five years, has been agreed upon by the House committee on flood control.

Experiments are being made in several Minnesota counties by the State College of Agriculture to find methods by which peat lands can be made tillable and thereby reclaim an area estimated at 2,000,000 acres that is now unusable.

Harpers Weekly has been acquired by the Independent Corporation and is to be incorporated into the *Independent*. The latter is sixty-eight years old, while the former is fifty-nine.

The revenue derived by the Chinese Government in 1915 from its salt monopoly amounted to $69,000,000, which was $10,000,000 more than the preceding year.

A mothers' pension law providing a maximum of $40 a month has been passed by the legislature of Michigan.

"The valley of decision"

CLARENCE W. CHADWICK

MENTION is made in the third chapter of Joel of the valley of Jehoshaphat, or "the valley of decision," and Bible interpreters are quite agreed that these terms are only symbolic. To the student of Christian Science, however, who thinks more of mental and less of material conditions, this whole chapter is most interesting and instructive.

In the first place it is noted that all nations are to be gathered together in the valley of Jehoshaphat, the valley of God's judgment, and that God will plead with them there. Later on we learn that there He will assemble and "judge all the heathen round about;" so literalists have interpreted this as significant of the probable scene of the final day of judgment. This view however makes no practical appeal to the student of Christian Science, knowing as he does that the calendar of time will never record a final judgment-day, but that this day of judgment is ever present and continuous so long as there remains any false sense of sin or evil to be destroyed. On page 291 of Science and Health Mrs. Eddy says: "No final judgment awaits mortals, for the judgment-day of wisdom comes hourly and continually, even the judgment by which mortal man is divested of all material error. As for spiritual error there is none."

When to human sense does God's law become operative for the individual? The moment he enters "the valley of decision" and resolves to take his stand on the side of right and to let God's will be done. One whose only desire is to serve the living God is glad to enter this mental state, wherein he is enabled to distinguish between right and wrong and to serve good with his whole heart. Until he reaches this point of decision he will not be separating the tares from the wheat, but will unknowingly be calling evil good and good evil.

It is cause for sincere rejoicing that today there are multitudes entering "the valley of decision," there to let the judgment of Truth and Love take place in individual consciousness. The God of Israel ever stands ready to comfort, cheer, and heal human consciousness; but not until this human consciousness is desirous of having the way of truth pointed out to it and proves the sincerity of its desire by forsaking matter for Spirit, does it enter the valley of God's judgment. Those who through ignorance or force of false education cling to the use of material means in the hour of trouble have not reached the vital point of decision in the pathway of progress. Some might go so far as to say that they were not making any headway at all so long as faith in matter remains unshaken; but experience has proved itself a valuable teacher, softening and molding through its very failures the human heart out of which proceedeth all that is evil.

Every human failure to derive help from matter may indeed be called a step heavenward, in that it is leading—slowly perhaps, but surely—to the point where man's extremity becomes God's opportunity. Hundreds are daily and hourly approaching this point of decision to turn through faith in good from things finite and perishable to the unchanging realities of Spirit. It is then that God's judgment becomes pregnant with meaning to them, and is no longer associated with the suggestion of divine displeasure, anger, wrath, or retribution, but is recognized as the loving invitation of an all-merciful parent, divine Love, to turn from the darkness of mortal sense perception to the light of spiritual discernment. The *Fiat lux* of Genesis is no longer attributed to an anthropomorphic God speaking in a remote past, but is heard in healing assertions of Truth and Love in human consciousness, denying evil or matter and acknowledging the allness of Spirit or Mind.

God has but one demand upon the children of earth, and that is that they acquaint themselves now with Him, "and be at peace." To meet this demand they must renounce the spirit of indecision, embracing as it does a lack of settled purpose and of firmness, and resolutely decide to serve one master, Mind and not matter. When resolution finds expression in action, false pride is laid upon the altar and the speech of people is adjudged of less importance than the love of Christ. Then follows the practical demonstration of God's power to bless and save mankind, an experience which does not enter into the every-day life of men and women before they have congregated in "the valley of decision," there to be judged by the righteous "Judge of all the earth."

Some may perchance believe that a resolute stand for the right, to serve Spirit and not matter, is not essential to their happiness and general well-being. One gleam of Christian Science will soon dissipate any such mental deception, and it will be found that "the day of the Lord is near in the valley of decision." This "day of the Lord" is in no manner associated with the human factor of time; it is a state of consciousness in which the Word of God is recognized to be the one and only channel through which God makes Himself known to humanity. When one reaches this point, where spiritual appetition and action meet, he is prepared to leave all for Christ. Until then he is but drifting with the changing currents of human thought, "ever learning, and never able to come to the knowledge of the truth."

The practical results of entering "the valley of decision," to let God's will be expressed in human affairs rather than obey the dictates of human wisdom, are daily in evidence in Christian Science practice. Mrs. Eddy had a clear sense of the importance of eliminating any wavering or vacillating mental state when dealing with disease or sin. On page 463 of Science and Health she writes, "To decide quickly as to the proper treatment of error—whether error is manifested in forms of sickness, sin, or death—is the first step toward destroying error." With the Christian Science practitioner there can be but one decision, regardless of so-called physical or mental conditions, and that is to take a firm stand on the side of Truth and to let God, omnipotent Mind, have the right of way. The word of God is quick and powerful to annul the merciless verdict of matter. To know this in Christian Science, and to decide accordingly when the evidence of the outward senses would advise to the contrary, is the first forward step out of darkness into light.

Wide-awake physicians as well as Christian Scientists know that most desperate cases of disease are being healed in Chris-

tian Science. While the physicians do not understand the modus of the cures effected, they cannot help admitting that their own honest opinions based upon physical diagnoses of these cases have usually been completely reversed under Christian Science treatment. A recent experience which has been brought to the attention of the writer will serve as a practical illustration of this statement. A physician was called in to diagnose a case of suffering which he pronounced most critical, advising an immediate surgical operation as the only means of saving the young girl's life. He frankly admitted that he saw little if any hope of recovery. The girl's parents immediately communicated with a Christian Science practitioner, who began to work according to her understanding of Christian Science. In two weeks' time the child was completely healed and reentered school, well and happy.

When such practical results confront us, is it not worth while to enter "the valley of decision," where human will and human knowledge are subjugated to the spiritual understanding of God's power and willingness to heal and "to save . . . to the uttermost"? Let us then awaken from this sense-dream, and "think on these things."

Joy of Love

JANE ADAMS SELDER

During the early years of her study in Christian Science the writer often wondered why the joy which so many find in Christian Science was not a part of her experience, and impelled by her contact with others who she felt sure had found this joy, she began a faithful study of Mrs. Eddy's writings with the solution of this question in view. During this study it became clear that the absence of joy came from a lack of love, and she found that she had been trying to understand divine Love without first learning to love her fellow man. That this love was necessary was proven from the statement on page 234 of "Miscellaneous Writings," where Mrs. Eddy tells us that "in love for man, we gain a true sense of Love as God; and in no other way can we reach this spiritual sense, and rise—and still rise—to things most essential and divine." It thus became apparent that we must enter by this door, even as the apostle says, "He that loveth not his brother whom he hath seen, how can he love God whom he hath not seen?"

The question then arose, How can we have this love? An answer to this came in Jesus' words to Simon the Pharisee, namely, "To whom little is forgiven, the same loveth little." Christian Science teaches that "sin is forgiven only as it is destroyed" (Science and Health, p. 5); hence we must look to the destruction of sin for this better sense of love. Christian Science also teaches that we are to look into our own thought for the error which needs to be destroyed, and not at our neighbor. The phase of evil which most often blinds us is that of criticism. It seems so easy to criticize even the testimonies offered at the Wednesday evening meetings, if they are given in terms which do not meet with our approval, and thus we are straining at gnats and swallowing camels, a fault which undoubtedly comes from a lack of love. We may also rob ourselves of many valuable lessons which are to be found in the articles appearing in our Christian Science publications, by thinking that they are for those less advanced than ourselves.

The writer can truthfully say that an effort to overcome this one phase of error has brought rich reward, and she can see a little more clearly "what manner of love the Father hath bestowed upon us," thus learning that only as we love those who do not see just as we do, and leave all questions to Principle for decision, are we worthy to be "called the sons of God." This cannot be made plainer than it is on page 117 of "Miscellaneous Writings," where our dear Leader tells us that "we see eye to eye and know as we are known, reciprocate kindness and work wisely, in proportion as we love."

✧

Mind and Myself

HENRY R. CORBETT, PH.M.

Individuals differ widely as to the meaning of the words "mind" and "myself," yet all agree in attaching to both these words very great importance. The chief concerns of human experience are vitally related to right thinking about them, and yet few words have been more generally misunderstood. It is indeed strange that the word "mind" has been almost universally applied to an inconsistent kind of thinking which is supposed to have its basis in brains and to recognize matter as substance, which often prefers evil to good and always ends in death. With matter as its basis and with death as its destiny, what could be more confusing than to apply the term "mind" to such mindless and self-destructive elements?

Christian Science has done much to clear away this confusion. It denies that the word "mind" can rightly be used for unintelligence. Its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, teaches that "what we term mortal mind or carnal mind, dependent on matter for manifestation, is not Mind. God is Mind" (p. 311). This Science makes it clear that Mind is infinite, perfect intelligence; that it knows no substance except itself; that it recognizes no power but its own; that it is not dependent upon brains; and that from the perfect standard of good it never departs for an instant, not even as a supposed means to some good end. This divine Science has therefore given to the study of Mind a fixed standard, and has thus enabled mankind to distinguish real intelligence from its counterfeit.

It should be clearly understood that in speaking of this false mind we do not mean any person or any class of people, but an irrational imitation of thought which usurps in consciousness the place of real intelligence. It takes an inverted view of substance and calls it matter. It hoards its counterfeit of real, enduring riches and calls it wealth. It stands in constant fear of sickness and death, and has devised systems of material medicine, not knowing how to prove that God's free gift to all is abounding, indestructible life. Although divine Love is the only power, omnipotent, and therefore effective everywhere, mortal mind, imagining the absence of God, creates the fear of a thousand woes, and then assumes to supply the only refuge from these, its own brood of ills. For instance, in the guise of a health campaign it scatters broadcast the infectious descriptions of disease and then claims the sole right to protect the public health, and would even treat as criminals those who, seeing clearly the real situation, practise the ministry of the divine Mind to erase the nightmare of disease from the experience of its victims.

Being a counterfeit of intelligence, the carnal mind habitually contradicts itself. It looks upon itself first with shame and then with pride. It is appalled by its own folly and failure, and supplies all the self-condemnation and remorse that mortals suffer; while on the other hand it vaunts its ability and wisdom and gives to mortals all their vanity and egotism. It identifies itself with reason, and arrogates to itself, under its so-called laws, not only the solution of material problems but the final decision of all questions concerning God and the spiritual universe. It lavishes compliments upon itself. In its various processes it persistently magnifies the importance of "brains," and so sings its own egotistic praise.

Digitized by Google

The Bible does not endorse this self-complacency, but presents a very different view, declaring that "the carnal mind is enmity against God," and that it does not perceive and cannot know the things of the Spirit, of God, but regards them as foolishness, even when they are plainly declared. Since its thinking is thus opposed to God and is contrary to the one omniscient Mind, it only simulates real intelligence. It cannot comprehend how Mind can be substantial. To regard God's thought as substance, the source of irresistible power, is foolishness to it. It cannot understand that divine Mind is the sole producer, unfolding and sustaining all the varied forms of creation. It clings eagerly to food, clothing, luxury, power, and pleasure, as if they were primary instead of secondary, and cannot understand how to gain them by seeking "first the kingdom of God." It cannot see that existence is spiritual and perfect, like its creator, or that the children of infinite Spirit, made in His likeness, are not material, or even partly material, but wholly spiritual. All these facts which are manifest to spiritual sense are unknown and absurd to this false mortal mind, which has nevertheless arrogantly constituted itself the ultimate wisdom, the final court of appeal.

As we have already seen, this non-intelligence is not person, but only a spurious thought, and is not entitled to the name of mind. If rejected and disregarded, it remains harmless and absurd. But suppose one is deluded into regarding such thought as his own, calling it "mind" and "myself." Suppose, too, that he identifies it likewise with other persons and regards these so-called minds as men. It can easily be seen what serious disorder for all concerned results from such error, especially when it becomes quite general among mankind.

The Bible teaches that man images forth God's likeness, that his thinking reflects the one infinite Mind, so that his real selfhood is expressed only in what is good. The mortal concept, which is quite commonly mistaken for man, expresses chiefly the carnal mind, and generally without knowing it, since this false claimant assumes to be the real self. The most subtle trait of the carnal mind is that it deceives one into calling it "me." Beliefs which belong only to this impersonal deceiver are accepted as personal experience without discovering the imposition; so that a mortal actually feels and acts as if these beliefs were his real self. Yet they are utterly devoid of power, and would not have even the appearance of influencing any one, were it not for the subtle deception by which they assume to be the real man himself. Rebuking such false beliefs, Jesus said: "Ye are of your father the devil, and the lusts of your father ye will do . . . for he is a liar, and the father of it."

"Lulled by stupefying illusions," we read in Science and Health (p. 95), "the world is asleep in the cradle of infancy, dreaming away the hours." This is the work of the devil, the one evil, which Christ, Truth, is destroying whenever and wherever a human consciousness which has believed itself to be aware of evil, becomes instead aware of God's presence. This awakening is gradual, but once begun the dream itself brightens, and its various beliefs begin to grow better even before they disappear. This transforming process is described on page 216 of Science and Health in these words: "The understanding that the Ego is Mind, and that there is but one Mind or intelligence, begins at once to destroy the errors of mortal sense and to supply the truth of immortal sense. This understanding makes the body harmonious; it makes the nerves, bones, brain, etc., servants, instead of masters." These words of Mrs. Eddy state the basis of Christian healing. The ills of the mortal-mind dream are mine just so long as its false sensations are mistaken for the ego and called "myself." They disappear as I emerge from that delusive dream. "I shall be satisfied," the psalmist says, "when I awake, with thy likeness."

Jesus was undeceived by mortal mind. Man's true selfhood was never obscured to his perception; he realized it fully for himself and for those who were healed and saved by him. From his clear, spiritual thought the deceiver slunk away, while health, harmony, and plenty stood revealed as the true status of man in God's creation. To transform the human self and help others into the true selfhood is to follow Him. This transformation is the new birth. It heals sin, sorrow, pride, and hate, as well as sickness, poverty, and all fear, including the dread of death. All these are imposed upon experience by the carnal mind, the mental pretender, the primal liar, masquerading as "myself."

Lessons from the Birds

HARRIET T. YOUNG

Some years ago we moved from a house where there were no trees into one that was surrounded with them. It was in the early springtime, before the leaves had unfolded, so that the birds could be plainly seen on the branches. My little daughter said one morning, "Mother, I have been watching every day, and not a single robin ever comes to our trees." I answered that God gives man dominion over the fowls of the air, and repeated the text, "Delight thyself also in the Lord; and he shall give thee the desires of thine heart." Every morning after that the child would go to the window as soon as she awoke and repeat this statement. One day she came to me with glowing eyes and said, "Mother, our yard is full of robins."

Two of these friendly creatures built their nest close to the kitchen door, just as near the house as possible, and greeted us each morning with their cheery songs. When their little fledglings were old enough to leave the nest, I learned a valuable lesson from watching the father bird teach one of his babies to pick up worms. The little bird would reach for one or two, and then like a naughty child would refuse to make any further effort. The father bird always placed the worm in front of him, and talked and encouraged and pointed out the way; then if the little bird persisted in being contrary, he would pick up the worm for him and hurry away to bring another, patiently repeating the performance again and again in the same cheery spirit. He knew that finally the little bird would be willing to do his own work.

This was a lesson to me in patience, but I applied it then only to my children, while today it has a fuller meaning. I can look back and remember when I was in the same state of mind as the little robin, and my practitioner expressed the same cheerful, loving willingness that characterized the parent bird. Like Martha of old, I was "troubled about many things" and "cumbered about much serving." I might have picked up a good deal more for myself than I was willing to grasp. I seldom thought I had time to read the whole Lesson-Sermon; sometimes I read only one section of it, again not even that. When I needed help I wanted to go to the practitioner and take a treatment; I wanted to be fed. I telephoned to her whenever it suited my convenience,—just before church, or just as it was time for her to be starting to a lecture, or in the night,—and I never hesitated to take all the time I wanted to tell either my joys or sorrows; but her patience never wavered. She talked to me, encouraged me, and pointed the way. It is for this patient, loving service that I have such occasion to be grateful.

This spring I learned yet another lesson from the robins. I was obliged to rise very early to start a member of my

Digitized by Google

family off to his work. At first I greatly enjoyed the quiet morning hours, as there was time for mental work and study; but later, as house cleaning and other duties came, and I heard it said that I could not do so much, I let self-pity come in and began to think that I was going beyond my strength. One morning I awoke with a great sense of weariness and discouragement, when suddenly I heard a robin singing. Immediately the thought came that the little bird thanked God first, and as I listened to his glad anthem of praise I said to myself that a robin with a nest full of birdlings is just as busy as a mother with a house full of children, and works as hard in proportion to her strength. A bird does not know exactly where he will find his breakfast or how much there will be of it, but he is never in such a hurry about it that he forgets to thank God first. The earlier the sun rises the earlier he is up in the morning, and after he has sung his song of gladness he hurries to his many duties and is busy until sunset. I then saw that if a little bird could "enter into his gates with thanksgiving, and into his courts with praise," so could I. Then all sense of weariness vanished and in place of darkness there was light.

A Place of Refuge

ETHEL SWEET STEVENS

MANY times when spending a quiet hour in the Christian Science reading-room, the writer has been impressed with and grateful for the by-law which stipulates that in the rooms where the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is either published or sold, "no idle gossip, no slander, no mischief-making, no evil speaking shall be allowed" (Manual, Art. XXV, Sect. 7). Often I have asked myself if we as Christian Scientists realize as we should what a privilege it is to have these places of refuge, places where we are assured of rest and quiet and where we know all are welcome; that though we may go to them as much and as often as we desire, there at least we may be sure no gossip or evil speaking will be heard.

The reading-room so wisely provided by our Leader is a blessing which, if we understood its value, would surely be utilized more than it is. It may be that some do not realize what great treasures these rooms contain. Besides all our Leader's writings, "Science and Health with Key to the Scriptures" and her other works, we have the two concordances, which enable the student to find any passage in her earlier and later writings. We have also the bound volumes of the *Sentinel* and *Journal* of past years, veritable storehouses of garnered wisdom, in addition to the current issues of the periodicals; and all these treasures are free for us to use as much and as often as we will. Then the quiet and peace of the room is so helpful, the feeling that for a while we can leave outside the many things that press about us in our every-day life.

It is not always the big things that bear most heavily upon us; many times it is just the little ordinary trials and perplexities which come to us day after day in our home or business life, but which we want to forget for a while and be able to turn to God and rest. How grateful we ought to be that here we can be sure to find just that rest and quiet, the place and opportunity for thought or for reading that we need in order to get a right viewpoint on our problems. Truly the reading-room is one of the blessings symbolized by the prophet Isaiah in his phrase, "as rivers of water in a dry place, as the shadow of a great rock in a weary land."

Another thing for which to be grateful is the kindly interest and helpful service of the librarian or person in charge. To answer the many questions that are asked calls for much love and patience and tact. Kindness is always shown the visitor, and the atmosphere of welcome is comfortingly present. The writer is especially grateful for this privilege, because she has received much help and learned much in her use of the reading-room. There were many months when it seemed as if the only peace to be found was in that quiet place. Some days it was simply to sit quietly and say over and over again, "In quietness and confidence is my strength," until the storm which seemed to rage had passed, and the peace of God, that peace "which passeth all understanding," had taken its place. Some days it was for hours of stimulating study, some days only to ask a question, and always the answer was there and the need was met.

For young students it is a very great help to form the habit of using the reading-rooms, for there they may ask questions and be told where to look in our Leader's writings to find what they need. It is good for older Scientists, too, for if we ourselves do not set the example of using the reading-rooms, how can we expect others to do so? Mrs. Eddy would not have provided the reading-rooms if she had not foreseen the good they would do and the blessings they would bring. That she did so is reason enough why we should do all in our power to bring others to them and be seen there ourselves. As Christian Scientists we cannot afford to neglect any opportunity to learn more of this saving truth, and the reading-room is one of the privileges freely offered to us. In Science and Health (p. 3) Mrs. Eddy says: "Are we really grateful for the good already received? Then we shall avail ourselves of the blessings we have, and thus be fitted to receive more."

Truth the Healer

BESSIE L. BIGNALL

THE clear understanding of the truth of being which in Christian Science effects the healing of mankind from sin and disease is impersonal. Reliance upon a finite personality, instead of God, divine Principle, is a subtle temptation which would hinder the progress of the student of Christian Science and retard healing. This fact was clearly seen by the writer at a time when a friend sought relief from severe physical distress. To this condition was added much fear, because the one upon whom she had been relying for treatment was absent from the city. Instantly came this thought, that the water to quench our thirst is drawn from the one reservoir,—we are "satisfied" by Truth and Love. The thought of the patient was then directed toward Him who, as the psalmist saith, "forgiveth all thine iniquities; who healeth all thy diseases," with the result that the erroneous condition was almost immediately overcome. The practitioner becomes the channel through which the quickening Spirit is imparted to the discordant consciousness, resulting in harmonious physical and mental conditions. On page 495 of Science and Health we read: "God will heal the sick through man, whenever man is governed by God."

Dependence upon finite personality to heal our diseases is just as much of an error as placing reliance upon any form of mortal belief,—drugs, hygiene, and the like,—and it is likely to create a tendency to stray from the straight and narrow path which leads to perfect, scientific demonstration. When the unreliability of material means to restore health or happiness has dawned upon one, and he reaches out for divine help, he is not seeking mere physical relief, but rather is he responding to the Christ, Truth, who is knocking at the portal of human consciousness. When he has reached his Father's house, where his hungry heart will be fed with the bread of Life, he will drink of the water of Life, feel himself enfolded within the great heart of Love, and know that all is well.

Digitized by Google

This wonderful experience will some time come to every one, and well is it if our own thought be so purified and purged of self-love and self-glorification that we shall not place one stumbling-block in the path of any, but turn their thought away from person to Principle. Our Leader, Mrs. Eddy, pointed out this danger when she said (Miscellaneous Writings, p. 308): "Whosoever looks to me personally for his health or holiness, mistakes. He that by reason of human love or hatred or any other cause clings to my material personality, greatly errs, stops his own progress, and loses the path to health, happiness, and heaven."

In the eleventh chapter of the gospel of St. John is recorded the illness and death of Lazarus, the beloved brother of Martha and Mary. The sisters sent unto Jesus, saying, "Lord, behold, he whom thou lovest is sick;" but Lazarus had lain in the grave four days when the Master came. Mary, weeping bitterly, said unto him, "Lord, if thou hadst been here, my brother had not died." When Jesus beheld her grief, and the weeping of the Jews also, he "groaned in the spirit, and was troubled," because of their unbelief. Had their trust been placed in God, divine Principle, rather than in the human personality of Jesus, they would have realized that there was no cause for grief, for Jesus had declared, "This sickness is not unto death, but for the glory of God, that the Son of God might be glorified thereby." The clouds of doubt, fear, and dependence upon personality had hid from consciousness the ever-presence of the healing Truth, and the power of the Word which was soon to waken Lazarus from the dream of death.

As with Thomas the disciple, to the extent that our thought is fixed upon corporeality there will remain, consciously or unconsciously, a doubting sense of the substantiality of Spirit and the nothingness of matter. As the student continues to study the letter faithfully and manifest its spirit, the fact of God, divine Principle, as the healer of sin, disease, and death, will no longer seem intangible, and in time of inharmony scientific thought will, as our Leader says (Science and Health, p. 458), "turn naturally from matter to Spirit, as the flower turns from darkness to light."

Wise Wishing

NELLIE B. MACE

If I could have one wish for thee,
And only one,
And I in faithless vanity
Should summon wealth, and thou wert won
To gilden bravery,—
False to my trust I'd be.
Our needs are few; false wants are slavery.

I need not wish success,—it crowns
All work well done;
Nor yet would I invoke renown's
Bright coronal; friends thou hast won,—
More loved thou needst not be.
May power to love abound
In consciousness,—this is my wish for thee.

May true and tender deeds engage
Till Love's kind air
Envelops thee as purest pledge
Of immortality; so rare
Thy dower when thought aspires
To love,—thy heritage
Is liberty,—fulfilled thy high desires.

Selected Articles

[Editorial in *The Asheville* (N. C.) *Citizen*]

Nothing can be more repugnant to the American sense of justice than the persistence with which the courts of various sections of the country, doubtless aggravated by special interests of a selfish nature, hound that ever-growing body of religionists known as Christian Scientists. For the third or fourth time this year the great state of New York has lent itself to a form of persecution which seeks to convict a man who practises the art of healing with prayer. The strangest part of each proceeding is found in the language of the warrant which charges the accused of "practising medicine without a license." If prayer is to be incorporated into *materia medica*, then every mother who has knelt beside the cradle of her sick child, and every minister of the gospel who has asked the prayer of his congregation for some afflicted member, has been equally guilty and has practised medicine without a license.

It seems that Christian Scientists so accused are held guilty of the death of a patient when death ensues; yet when we enter the recognized circles of medical practice, where the death totals run up into the thousands every year in given sections, no one is held responsible, nor should any one be. The annual report of the New York state department of health shows that there were approximately fifty-five hundred deaths from pneumonia alone during the last year, all under one form or another of medical treatment. Naturally, there was no talk of "investigation" at the hands of the state authorities.

In one of the cases under discussion the Christian Science practitioner was indicted on the ground that he had accepted a fee. Here again we have a glaring case of inconsistency, for if "the laborer is worthy of his hire" in other walks of life, surely he who prays and believes that "the prayer of faith shall save the sick," is worthy of it when he enters the religious field; otherwise, all ministers of the gospel should serve without pay. To our way of thinking, he who seeks to cure without resort to quackery or fraud should enjoy the measure of liberty which is accorded all other classes of citizenship in a free and enlightened country.

[Fred R. Rhodes in *Huddersfield* (England) *Examiner*]

As reported in your columns, a lecturer, speaking on the subject of "Mystery," showed the alleged power of suggestion, "while keenly criticizing the claims of Christian Science." It seems difficult to see how any one can truthfully criticize a subject while totally ignorant of its teaching, and yet the critic couples suggestion and Christian Science together, whereas in reality they have nothing whatever in common; and he is most certainly not "keenly criticizing" the teachings of Christian Science, but his own misconceptions.

On page 101 of "Science and Health with Key to the Scriptures" Mrs. Eddy writes: "If animal magnetism seems to alleviate or to cure disease, this appearance is deceptive, since error cannot remove the effects of error. . . . In no instance is the effect of animal magnetism, recently called hypnotism, other than the effect of illusion. Any seeming benefit derived from it is proportional to one's faith in esoteric magic." There are a great number of other references which prove conclusively that Christian Science teaches that the human or carnal mind, from which all suggestion emanates, and which is capable of believing both good and evil, and as St. Paul wrote "is enmity against God," can never heal a case of sickness or sin, or bring real harmony to the human consciousness. This true sense of harmony, or the kingdom of

Digitized by Google

God, can only be acquired by the constant and conscious endeavor to transform the body by the renewing of the mind; this is the only knowledge or truth which can make us free.

The experience of healing and regeneration which has come to many thousands through the teaching of Christian Science has been brought about by the recognition that all inharmony is the result of wrong thinking, for as a man "thinketh in his heart, so is he." Consequently as we learn to think rightly we are abiding in the shadow of God's loving care and protection, and nothing can in any way defile or dethrone this true sense of man.

✧

[Robert S. Ross in *Newburgh* (N. Y.) *Journal*]

In a recent issue the *Journal* credited a critic with the following statement in a sermon: "A certain woman, Mary Baker Eddy, rose up and flourished and founded a church. She even went so far as to say that if Jesus Christ had been more perfect in Christian Science, he would not have died."

In reply thereto, permit me to state most emphatically that Mrs. Eddy did not make that statement. If she said that Jesus could have avoided the crucifixion, that is another matter. Jesus himself said practically the same thing. In avoiding the crucifixion, however, Jesus would have deprived the world of his marvelous and much needed demonstration of eternal life. "Thinkest thou that I cannot now pray to my Father, and he shall presently give me more than twelve legions of angels? But," he continued, "how then shall the scriptures be fulfilled, that thus it must be?" The man who was Christianly scientific enough to walk on the waves, go through closed doors, and pass unseen through the mob that was about to throw him over the precipice, was certainly capable of escaping the clutches of the Roman soldiers who seized him in the garden of Gethsemane.

No, Mrs. Eddy was too humble a disciple of Christ to make such a vainglorious statement. "Today," she writes of herself on page ix of the Preface to Science and Health, "though rejoicing in some progress, she still finds herself a willing disciple at the heavenly gate, waiting for the Mind of Christ." It would be the height of presumptuousness for one to weigh in the balance the works of Christ Jesus without first arriving at his plane of spiritual understanding. But even then the trials and triumphs over self necessary to this accomplishment would inevitably make one a servant instead of a critic. The farther one follows the path Jesus trod, the more one must marvel at the stupendous task so successfully undertaken by him nearly twenty centuries ago.

✧

[Samuel Greenwood in *The World*, Vancouver, British Columbia]

In a sermon recently delivered in Vancouver, which appeared in *The World*, Christian Science is denounced as false teaching, and classed with Mormonism, spiritualism, theosophy, and the like. As the statement given in the synopsis of the sermon is entirely unsupported by either argument or evidence, one must infer that the preacher intended his judgment to be accepted as true and final, without the formality of confirmatory evidence.

Now, while I have no reason to question this clergyman's motive in thus condemning the religion of other people, I do most emphatically question his authority to pronounce such judgment. I have no doubt that he finds it impossible to reconcile Christian Science with his own particular viewpoint, but that is not conclusive evidence that Christian Science is false, nor does it justify him in attacking it. One who understands Christian Science at all would never classify it as of like lineage with the isms with which it has been—no doubt thoughtlessly—associated; and one who does not understand Christian Science in some degree is hardly in a position to render a decision as to its teachings.

Christian Scientists are as a class quite as earnest, sincere, and practical in their understanding of Christianity as are other Christians, a fact which should command an honest critic's respect, even though he may disagree with their views. It can also be said that Christian Scientists never preach against the religion of others, and the exercise of Christian charity would accord them the same courtesy. Surely those who demand religious liberty for themselves should be willing to grant it to others, and to let the religions of which they may not approve live or die on their own merit.

Unfortunately critics are much more ready to denounce Christian Science than to give the world something better in its place. Since all men do not think alike on religious matters, it is always easy to say that your neighbor's religion is wrong; but this does not make it so, nor does it verify one's own position. There is a pointed lesson in the incident recorded in the ninth chapter of Luke, where one of the disciples said to Jesus: "Master, we saw one casting out devils in thy name; and we forbade him, because he followeth not with us. And Jesus said unto him, Forbid him not: for he that is not against us is for us."

Christian Science has certainly come in response to the heart hunger of humanity for the understanding of God as an ever-present help in their trouble; and Christian Science is meeting this heart hunger, as its many thousands of adherents all over the world gladly testify. The continuous growth of the Christian Science movement, and the ever-increasing interest manifested in its teachings, indicate that it is not the ephemeral thing our ministerial friend would have us believe, but rather that it will remain, in the words of its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy (p. 150), "as a permanent dispensation among men."

✧

[S. T. Downs in *The Columbia City* (Ind.) *Post*]

A genuine Christian Scientist is striving constantly to follow the commands of the Master to preach the gospel and to heal the sick,—both preach and heal. A Christian Scientist understands that he must humbly and meekly strive to live what he preaches, and that he must follow the great Teacher in a sincere effort to heal himself of everything that is ungodlike. Christ Jesus proved for himself first and then gave to the world the wonderful truism that we must first eliminate the beam from our own eye before we can see to remove the mote from our brother's eye, and Christian Science reiterates this teaching.

The self-satisfied Pharisees tried to belittle the works of the Master with the claim that he cast out devils through Beelzebub, the prince of devils. When a similar charge is brought against Christian Scientists, history but repeats itself, and we have the spectacle of those who regard themselves as orthodox reiterating what was said against Christ Jesus and against every follower who has attempted to obey his command to heal the sick. Christian Science, through the discovery and life-labors of Mrs. Eddy, has restored to Christianity the works that belong to it in the healing of every known disease, the alleviation of every form of suffering, and the destruction of discord and misery of every name and nature, by the understanding and application of spiritual law. In the words of the great Wayshower it asks, "For which of those works do ye stone me?"

The statement that Mrs. Eddy claimed to be the Christ would not be made by one who has sufficient understanding of Christian Science teaching to know what he is talking about.

Digitized by Google

In "Pulpit and Press" (p. 74) we read that when asked at one time if she were the second Christ, she replied: "Even the question shocks me. What I am is for God to declare in His infinite mercy. As it is, I claim nothing more than what I am, the Discoverer and Founder of Christian Science, and the blessing it has been to mankind which eternity enfolds. . . . There was, is, and never can be but one God, one Christ, one Jesus of Nazareth."

✧

[Editorial in *Wenatchee* (Wash.) *World*]

An evangelist recently holding meetings in Wenatchee took occasion to point out the fallacy of the other man's religion, which move only shows that there is still existent a touch of old-time religious bigotry. There are still many who think that they have a monopoly on pure religion.

When essaying to attack the other man's religion it is well to remember that all these organizations are formed with the idea of promoting and fostering the highest ideals of the human race. Each recognizes the existence of a higher power. All organizations differ in many non-essentials. Each man acts according to his light. Each organization is made up of men who make mistakes every day. It ill behooves any religious organization to talk or act against another such organization, since the other may be right.

✧

[H. L. Eddison in *Portsmouth* (England) *Times*]

In an article entitled "The War and Christianity," which appeared in the *Portsmouth Times*, the writer expressed the conviction that pain and misery are sent by God and inevitable. Surely such views are not in keeping with the teachings of Christ Jesus, whose mission was always to heal suffering by the destruction of sin, disease, and death. Referring to this ministry of good, Jesus declared, "The Father that dwelleth in me, he doeth the works." Is it then possible to conceive that the Father worked through the Son to reverse His own will,—that He was responsible for conditions Jesus persistently destroyed?

Is it not time for Christians of all denominations to recognize that the Master, far from attributing pain and misery to God, labored by word and deed to deliver humanity from all suffering? When he healed the sick and sinning, when he raised the dead, did he not prove the power of God, who is Love, to destroy the works of the devil? In unmistakable terms he spoke of the woman who had a "spirit of infirmity eighteen years" as one "whom Satan hath bound." When about to raise Lazarus from the dead, he acknowledged the fact of eternal life in his gentle reproach to Martha, "Said I not unto thee, that, if thou wouldest believe, thou shouldest see the glory of God?" And this same Christ Jesus, who rebuked the fever, opened the eyes of the blind, fed the hungry, and raised the dead, still speaks to all who suffer, saying, "If I with the finger of God cast out devils, no doubt the kingdom of God is come upon you."

Christian Science, in complete accord with the Master's teaching, not only urges upon all Christians the imperative necessity of obedience to the divine command "Heal the sick," but also offers proof, in innumerable cases of the healing of "mind, body, and estate," that Mrs. Eddy is correct in her assertion that "God will heal the sick through man, whenever man is governed by God" (Science and Health, p. 495). Christian Scientists do not deny the existence of pain to the material senses. On page 460 of Science and Health we read: "Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being;" and on page 23 it is written that "suffering is an error of sinful sense which Truth destroys," and that "eventually both sin and suffering will fall at the feet of everlasting Love." Today, as yesterday, whenever and wherever the belief of life divorced from God sins and therefore suffers, Christian Science, in obedience to the Christ of the gospels, still offers salvation through the right understanding of God, in whom "is no darkness at all."

The Lord's Prayer, which, as Mrs. Eddy has said (Science and Health, p. 16), "covers all human needs," should be offered to God alone. There is but one way out of suffering, one healing balm for human pain,—the Christ, who is always "the way, the truth, and the life," whose supplications sought no earthly shrine, but were and are addressed in perfect confidence to Him who "healeth all thy diseases," our Father-Mother God.

✧

[Thorwald Siegfried in *Centralia* (Wash.) *Chronicle-Examiner*]

Christian Science recognizes that mortals suffer from sin, disease, and death; the large part which it has played in overcoming this baneful triad in the lives of thousands of people is proof that it is not indifferent to the happiness or misery of human existence. Nor does it attempt to progress by hypnotically affirming that to be true which the senses say is not true, intending to mesmerize the patient into believing something which he wishes to be the fact without regard to its truth. On the contrary, the process just outlined, be it known as hypnotism, mesmerism, mental suggestion, New Thought, or occultism, is the exact opposite of Christian Science and has nothing in common with it, however estimable and well intentioned the adherents of these false systems may be.

Your surprise at the statement that disease is nothing, is not so great as it should be at the claim that disease is something. It has never been isolated, measured, weighed, or otherwise sensibly perceived, except as attached to some form of matter. Now it is true that matter has no intelligence, and the mind which believes that matter is a lawgiver is known in Christian Science as "mortal mind," to distinguish it from the divine Mind, or Spirit, God. In ordinary human experience, uninstructed by Truth, matter and its diseased consequences seem very real. They continue to seem real until Christian Science affirms and proves their temporary, mortal, and illusive nature. It does this by showing that this seeming material existence is only an illusive counterfeit of the real, spiritual life of man; that man was originally made in the perfect, spiritual likeness of God, infinite good; and that the real man is now perfect, unfallen, healthy, and sinless. It is needless to say that this perfect and real man is not to be confused with a corporeal, sensuous, mortal concept of man.

Of course in taking such a stand Christian Science contradicts the senses. The senses indeed have always been considered in need of occasional correction, but it remained for Mrs. Eddy to point out that the senses are invariably in error. On page 129 of "Science and Health with Key to the Scriptures" she says, "If you wish to know the spiritual fact, you can discover it by reversing the material fable, be the fable *pro* or *con*,—be it in accord with your preconceptions or utterly contrary to them." Consult the senses and the sun seems to move around the earth, though the reverse is true; ask the senses about God and they must say that He is nowhere, when in truth God is everywhere, is omnipresent, and there is no other presence or power.

Editorial

"Be courteous"

MERE courtesy, what the world terms politeness, is an art which may be easily acquired by those who are willing to devote sufficient time to the observance of certain accepted forms and conventions for reputation's sake, but courtesy in its truest sense is that outward manifestation of kindliness and consideration for others which springs from an inward grace. That is why we sometimes find the most exquisite courtesy tendered by those from whom, as the world judges, one would least expect it.

We are accustomed to think of Peter as the Master found him, a rough fisherman, unlettered, untutored in the gentler arts, and yet the story of his life from the day when with loving compassion he said to the man who lay helpless at the temple gate, "Silver and gold have I none; but such as I have give I thee," is an exemplification of that grace which comes from the heart alone. It is he who counsels the members of the early Christian church, "Be ye all of one mind, having compassion one of another, love as brethren, be pitiful, be courteous." How he had come to perceive the necessity for and the occasion of this grace is very simply told by the chronicler of the acts of the apostles: "Now when they saw the boldness of Peter and John, and perceived that they were unlearned and ignorant men, they marveled; and they took knowledge of them, that they had been with Jesus." Peter had listened to that gentle voice which still speaks to earth's burdened ones, "Take my yoke upon you, and learn of me; for I am meek and lowly in heart," and had learned the secret of Jesus' "power . . . over all the power of the enemy,"—he loved God supremely and his neighbor as himself.

Nowhere is the Master's loving-kindness more clearly manifested than in his tender compassion for the sick and the sinning. The multitudes thronged him; they brought their sick and helpless ones and laid them at his feet, and we read that "he healed them all." He dealt gently yet justly with the sinning; in his intercourse with all men he sought ever to demonstrate the supremacy of good and the consequent nothingness of error. It is this same loving compassion of the Master, the love, the pity, the courtesy which he who had been with Jesus urged, that Mrs. Eddy has embodied in the teachings of Christian Science, the Science epitomized in that gentle precept, "Whatsoever ye would that men should do to you, do ye even so to them."

It is because Christian Scientists have themselves tasted and seen that the Lord is good, because they have proved God still hears the prayer of a righteous man, that they are obedient to the Master's command to heal the sick and bind up the broken-hearted. They have learned to be truly courteous,—that "the tender word and Christian encouragement of an invalid, pitiful patience with his fears and the removal of them, are better than hecatombs of gushing theories, stereotyped borrowed speeches, and the doling of arguments, which are but so many parodies on legitimate Christian Science, aflame with divine Love" (Science and Health, p. 367). If they too have been with Jesus, if they are striving to exemplify the golden rule in thought, word, and deed, as he did, they will heal the sick and comfort the sorrowing till all tears are wiped away.

There are many other ways in which the gentle art of courtesy may find expression. Paul's counsel is, "Be kindly affectioned one to another with brotherly love; in honor preferring one another." This courtesy is not necessarily limited to our own, it is likewise the right of the stranger within our gates, the people with whom we come in contact daily; in other words, a courteous regard for the rights of others, doing as we would be done by, will lighten many a burden and smooth many a rough path. There are those who are heart-hungry, who need the friendly handclasp, the word of good cheer we may so easily give if we will.

We are afraid oftentimes to give vent to our kindly impulse to speak to the stranger at the church service or at the lecture, afraid lest we be thought unconventional or officious. There is, of course, no occasion for an "official" welcome, but if each member of the church family should regard it a privilege to greet quietly and graciously those who have come to share the hospitality of our Father's house, no one need ever go away from a Christian Science service or lecture with the thought that he was unwelcome. Mrs. Eddy sets us a gracious example in the letter and spirit of Article XVI of the Church Manual. It is another way of saying "Be courteous,"—"in honor preferring one another."

ARCHIBALD MCLELLAN.

Personality and Power

THE self-estimate of wholesome men is likely to be weakly modest if not mean. They have had such experience of past inadequacies that, though firm believers in the Scripture, they draw back from Jesus' statement to his disciples, "Whatsoever ye shall bind on earth shall be bound in heaven," and begin to wonder what he could have meant. That God will sustain the rulings of the court of human judgment, that men are privileged to do what it would seem pertains exclusively to the divine prerogative,—this impresses all who misapprehend the nature of true selfhood as a hazardous assumption. Nevertheless our Lord not only declared and demonstrated his own fulfilment of heaven's high decree, but in these unequivocal terms he averred that the judgments of those who truly follow him will be honored by the supreme tribunal, so that they indeed become the fully empowered plenipotentiaries of the government of God.

The acceptance of this teaching of Christ Jesus and Christian Science is a test of faith from which it is not surprising that many shrink abashed, and the amazement awakened by the fact that Christian Scientists dare to consider the possibility of exercising such a function becomes altogether explicable. For centuries the identification of man as a sinning mortal has rendered any expectant thought of the fulfilment of this assurance of the Master quite impossible. When, however, one apprehends that man is related to his source as is an idea to divine Principle, an equation to mathematical law, the normality of the authority which Jesus said the spiritually quickened were to exercise, and the naturalness of the wonder-works they were to do, becomes apparent. His sayings, "I can of mine own self do nothing," and "The Father that dwelleth in me, he doeth the works," coupled with Paul's declaration that it is the "word of God" which "effectually worketh" in the true believer, reveal the transcendent fact that while illumined men present the channel of manifestation, God is always the active agent.

On page 6 of Science and Health we read that "God is not separate from the wisdom He bestows." Spiritual efficiency is but the natural expression of that divine ever-presence which none can question, the power of Truth always inhering in the knowledge and expression of truth, even as heat and light radiate from everything that reflects the sun. On page 14 all this is embodied in a single paragraph by Mrs. Eddy, when she says: "Entirely separate from the belief and dream of material living, is the Life divine, revealing spiritual understanding and the consciousness of man's dominion over the whole earth. This understanding casts out error and

Digitized by Google

heals the sick, and with it you can speak 'as one having authority.'"

Christ Jesus often addressed material sense, as when he said to Peter, "Thou art an offense unto me." At other times he addressed spiritual sense, the true individuality, and the possibility of the verification of his statement is thus seen to depend simply upon the possibility of understanding spiritual law, even as the pupil is able to do the work of his teacher when he gains a command of the truth which the teacher has imparted to him. There thus dawns the dignity and godlike authority of Christlike men to whom, as Jesus said, is given "all power," and it is this "wider span" of manhood of which the poet speaks, perchance far better than he knew, when referring to

> That swift validity in noble veins,
> Of choosing danger and disdaining shame,
> Of being set on flame
> By pure fire that flies all contact base,
> But wraps its chosen with angelic might.

Recognized and understood in Christian Science, this nobler, more inspiring sense of the power and possibility of Christian living is brought home to one, and it is establishing in the earth "a new imperial race," they who are not afraid to be called "the children of the Highest," who dare to be and to do in God's name.

JOHN B. WILLIS.

Murmurings Stilled

ST. PAUL gives very sound counsel when he says in his epistle to the Philippians, "Do all things without murmurings and disputings." The American Standard Version gives the last word as "questionings," and this is very significant to the thoughtful student of Christian Science, who knows that the tendency to ask "why" one is not speedily delivered from all his difficulties is closely allied to the disposition to murmur because Truth calls for unceasing self-sacrifice until nothing remains but God's perfect idea, all the dross having been consumed in the irresistible fire of divine Love.

As we read in the Old Testament the experiences of the children of Israel on their way from bondage to freedom (and this really meant something far beyond a mortal and material sense of freedom), we see that most of them were unwilling to pay the price demanded, and they even intimated that their slavery in Egypt was not so bad after all, for they had the "flesh pots" if little else. Their abject submission to cruel tyranny did not speedily give place, in the experiences of the wilderness, to any noble sentiment, for the record tells of frequent murmurings against Moses and his loyal supporters. In the first epistle to the Corinthians we have a solemn warning against this same tendency in modern times, in these words: "Neither murmur ye, as some of them also murmured, and were destroyed of the destroyer." It is true that the experiences of the wilderness may have seemed severe, but the effort to rise above the material sense of things develops a heroic spirit which faces each new difficulty not only with courage, but with actual gladness for the opportunity to prove one's strength. The tendency to murmur always indicates spiritual short-sightedness, and shows that the gaze rests upon material conditions, the clouds unpierced by any rays of light, a mental state which sooner or later expresses itself in disease. Mortal belief then asks why God chooses to afflict one in such a way, when a thoughtful analysis would show that the physical ill is really a product of a mental condition.

Mrs. Eddy leads thought away from materiality when she says in Science and Health (p. 369), "It is error even to murmur or to be angry over sin." No one can make another person sinful, he must himself consent to the wrong, either through fear or love of it, before he can become a participant in wrong-doing. Christian Science carries this logic into the so-called physical realm as well, and teaches that one need not be sick because others believe in sickness, for the real man's birthright insures for him dominion over all evil. It also crowns him with the spiritual understanding which rules out all occasion for murmuring. The earthly life of our Master is a record of unceasing toil and sacrifice, of privation and persecution; but not once do we find him murmuring over this. On the contrary, he said to his followers, at a time when the clouds seemed darkest, "My peace I give unto you." Following this glorious example, Paul says, "I am exceeding joyful in all our tribulation," and he also tells us that afflictions can never separate us from the love of God. In his experience trials only helped to develop the latent heroism which is assuredly bestowed without stint or measure upon every child of God, but which is never a characteristic of murmurers and complainers.

Those to whom physical healing comes slowly could do wonders for themselves if instead of questioning the outward demonstration they would eagerly look for and rejoice in the measure of spiritual illumination which they receive, with eyes wide open for the first glowing tints which tell of sunrise. This counsel, be it said, is based on no mere theory, but is the fruit of actual experience. Reality is never lessened or even shadowed by material evidence, and spiritual evidence gives cause for rejoicing, not murmuring, at every step of the way. In her beautiful poem "Satisfied" (Poems, p. 79) our Leader says:—

> It matters not what be thy lot,
> So Love doth guide;
> For storm or shine, pure peace is thine,
> Whate'er betide.

ANNIE M. KNOTT.

Lecture in The Mother Church

The First Church of Christ, Scientist, Boston, Massachusetts, announces a free public lecture on Christian Science by Prof. Hermann S. Hering, C.S.B., a member of the Christian Science board of lectureship, in the church edifice, Falmouth, Norway, and St. Paul Streets, Back Bay, Friday evening, May 19, 1916, at eight o'clock. The public is cordially invited.

Among the Churches

Current Notes

SAN FRANCISCO, CAL.—Bids are in and a contract will shortly be awarded for the structural steel work and concrete work in connection with the construction of Second Church of Christ, Scientist, to be erected at the southeast corner of Cumberland and Dolores Streets at a cost of sixty thousand dollars.—*San Francisco Examiner.*

RACINE, WIS.—The Christian Science literature distribution committee reports the distribution of 12,380 pieces of Christian Science literature during the year 1915. A booth was maintained at the "Made in Racine" exposition, held June 7 to 12, and three thousand copies of the *Monitor* were distributed. A mailing list, by which those wishing Christian Science literature can receive it, is one of the activities of the committee. The public schools of the city receive the *Monitor* daily.—*Literature Distribution Committee.*

TULSA, OKLA.—The literature distribution committee of First Church of Christ, Scientist, gave out during the year 1915 the following literature: 3356 *Sentinels*, 250 *Journals*, 18 *Heralds*, 10,859 *Monitors*, 3 *Quarterlies*, 1 Science and

Digitized by Google

Health, 71 pamphlets, 42 lectures, 202 copies of Senator Works' speech, a total of 14,802 pieces. This literature was distributed in 114 different places, each place being visited twice a week. The State Penitentiary was also presented with a year's subscription to the *Monitor*, and the subscriptions to the *Sentinel*, *Journal*, and *Monitor* for the local public library were renewed. The committee distributed during 1915 over three times as much literature as in 1914.

Literature Distribution Committee.

MILWAUKEE, WIS.—Services have been held at our two penal institutions since Jan. 9 of this year. The distribution committee has charge of this work, and has arranged for services every other Sunday afternoon at half past two o'clock in the House of Correction. These services are given for the men and women alternately. At the men's service about two hundred and fifty attended the first time, and more than that were present at the second service. The men join heartily in both the singing of the hymns and the responsive reading, and listen attentively to the Lesson. There are at present only five women at the House of Correction, but they also take active part in the services. Arrangements have been made at the county jail for a service on the second Sunday of each month at half past nine o'clock in the morning. Here there was an attitude of expectancy and readiness when we arrived to hold the second service, and generous cooperation on the part of the officials.—*Correspondence.*

MONTCLAIR, N. J.—It has been decided by the board of freeholders to permit First Church of Christ, Scientist, of Montclair to conduct services at the Essex County Penitentiary. There was some opposition to the plan from two of the members, who claimed that the varying and lengthy services now being held there made it almost impossible to find any time for the Scientists. But other members were in favor of giving all creeds an equal chance, and the matter was left with the warden, who is to arrange a suitable program so as to include the Scientists.—*Montclairian.*

LANARKSHIRE, SCOTLAND.—By the kindness of the Trustees under the Will of Mary Baker Eddy there have been distributed during the year ended Jan. 31 to troops and prisoners' camps the following pieces of literature: 68 *Sentinels*, 60 *Journals*, 48 *Heralds*, 1481 *Monitors*, 354 pamphlets, a total of 2011 pieces; to the public libraries of Glasgow, 60 copies of Mrs. Eddy's works, and to the Paisley Public Library, 8 copies.—*Publication Committee.*

EVANSVILLE, IND.—The new building of First Church of Christ, Scientist, on Mulberry Street, will be occupied for the first time Sunday morning [March 19]. The church cost twenty-seven thousand dollars. Though the new auditorium seats five hundred people, the attendance is increasing so rapidly that it is expected it will soon be necessary to repeat the regular Sunday service in the evening.—*The Press.*

CHARLES CITY, IOWA.—At a church meeting held last Monday evening [Feb. 28], First Church of Christ, Scientist, voted to buy the property on the corner of Hulin and Milwaukee Streets, opposite the Manual Arts Building, for the purpose of erecting a church building in the near future.

The Charles City Press.

MEADVILLE, PA.—One of the most impressive services held in the city yesterday [March 5] was that conducted in the afternoon in the county jail by members of Second Church of Christ, Scientist. The Scientists hold monthly meetings in the jail, and prisoners look forward to their visits with a great deal of interest.—*Meadville Messenger.*

The Lectures

Gloversville, N. Y.

Jacob S. Shield, who lectured on Christian Science to a large and attentive audience in the Globe Theater, was introduced by the first reader, Charles L. Troutwine, who said:—

We are living in an age of intelligent truth-seeking, when more thought is given to and greater efforts are expended in the development of human character, when love for humanity is stronger, when more people are seeking to come nearer to nature and to nature's God than ever. So we are here, many of us, to hear and to learn if there is a better way of living than the one to which we have been accustomed, to learn if we may come nearer to nature and to God. We want to know what Christian Science really is, what it means for us and for the human race.—*Correspondence.*

✧

Detroit, Mich.

The Hon. Clarence A. Buskirk lectured on Christian Science in Arcadia Hall. He was introduced by Mrs. Blanche G. Woodall, who said:—

In behalf of Third Church of Christ, Scientist, of Detroit, it is my privilege to introduce to you one who is well qualified and prepared to expound and explain Christian Science, which for a half-century has done so much for mankind in regenerating, inspiring, healing, and saving humanity, breaking down superstitions, dogma, and fear, comforting the sorrowing, reforming and restoring the sinner to a life of usefulness and unselfishness.

In spite of opposition from pulpit and press, Christian Science has stood the test; it has returned good for evil and given "beauty for ashes," the oil of gladness for the spirit of heaviness. It makes life livable, health demonstrable, and gives prosperity and peace of mind to all who have availed themselves of it.—*Correspondence.*

✧

Holyoke, Mass.

A large audience gathered at the City Hall auditorium to hear Willis F. Gross give an explanation of Christian Science. Judge R. A. Allyn introduced the lecturer, saying:—

Christian Science is growing every day, but is a much criticized religion. The critics might be divided into two classes,—those who do not want to know anything about it, and those who know nothing about it. It is based on the Bible, and claims that God is Mind, Spirit, Life, Love, and that the only way to worship Him is spiritually. The world is tired of profession without proof and of dogma without demonstration. People are turning to Christian Science because they find in it something practical. Christian Scientists maintain there is no reason why the "mighty works" done by Christ Jesus and his disciples cannot be repeated today, and they certainly have Christ's word for this in the Bible.—*Holyoke Transcript.*

✧

Greeley, Col.

Clarence C. Eaton, who lectured on Christian Science in the Sterling Theater, was introduced by the Hon. Charles E. Southard, who said in part:—

While I am not a Christian Scientist, I own to a profound and deep respect for my friends and acquaintances who are, because, although not able to understand their belief, I cannot disregard the fact that they are receiving and giving comfort and happiness by and through it. Any religion, any philosophy, any belief which brings comfort and happi-

Digitized by Google

ness to right-minded and pure-thinking people, is entitled to the highest commendation and to support, even though one may not in his sincere and honest belief be able to embrace such religion or belief or philosophy.—*Correspondence.*

✧

Fitchburg, Mass.

Nearly seven hundred persons assembled at City Hall to hear a lecture on Christian Science. The lecturer, Charles I. Ohrenstein, was introduced by the Rev. Edward B. Saunders, who said:—

Henry D. Thoreau once declared that to appreciate Christianity one must be outside, that is, be a non-Christian. But Thoreau lived before Christian Science was made known. Christian Science is best appreciated by those within, who have seen its vision, caught its interpretation, and applied its teachings to their daily lives. Those on the outside have gained their own impression of Christian Science. They cannot fail to see how it has meant a new awakening in religion in an age that seems to have lost interest in the Bible and public worship. A new emphasis has been given to Jesus' teaching and practice. Many have found a more direct application of the New Testament to their daily thought and conduct.—*Fitchburg News.*

Testimonies of Healing

Just four years ago I was healed in Christian Science of the morphine habit, after having used the drug for eleven years and being a slave to it for nine years. The drug was first given to me by physicians in the East for severe attacks of asthma, after every other known remedy had been tried. My parents spent large sums trying to find a cure for this ailment, but nothing relieved the terrible agony until the drug was used. At first there seemed to be no danger that the habit would be formed, as these attacks were many weeks apart; but they soon became more frequent, so that the last eight weeks spent in my eastern home I sat in a chair day and night, the opiate being administered daily. When I left Vermont the physicians gave my husband authority to administer the drug, as he had had much experience in that line. They also expressed much sympathy for me, saying I would always have to take it.

When we arrived in Chicago I was much better, and this was the time to have stopped taking the drug; but my husband being ill the physician told the nurse that they would not take the drug away from me, as it would help to keep me up. It was only a short time before the asthma returned with greater severity. Many sad things happened as a result of using this drug, one of which I will mention. My husband and myself were both members of a church in Chicago, and the rector made us many visits. One afternoon when he called he found me suffering from a severe attack of asthma and using the opiate. He said: "I have come to excommunicate you and your husband from the church because you have the morphine habit and your husband is administering the drug; but I will put you on three months' probation, and if at the end of that time you can prove to me that you have given up the drug habit, I will welcome you back to the church." I do not mention this with any feeling of resentment, for the man did what he considered was his duty.

A few months later we arrived in Los Angeles, where my husband passed away in a short time. I was left alone among strangers, in ill health, a so-called "drug fiend," and obliged to earn my own living. Believing that my strength depended upon the drug, I used no discretion, and this of course prevented my holding a position for any length of time. This continued for five years, until I was cured in Christian Science. My healing was beautiful and complete. When I went to see the practitioner, I was using an enormous amount of the drug, but in less than two weeks I handed all I had of it and everything that went with it over to the practitioner, never expecting to use it again; and I never have. My sense of suffering during the twelve days that followed was very great, and I ate comparatively nothing. I could not sleep and lost greatly in flesh, but I was clear mentally and was not troubled for an instant.

This healing took place in the city of San Diego, Cal., and I shall be very glad to answer any questions regarding it. I have had many tests to prove whether I was really cured, but have stood all these without wavering. Nearly three years ago I married again and came to my present home. My husband has become interested in Christian Science and depends upon it wholly for help. My thankfulness to God and my gratitude to Mrs. Eddy is boundless. If Christian Science were doing no other work in the world today than curing people of the drug habit alone, it truly would be of untold value to mankind.—Mrs. D. H. Switzer, Bellows Falls, Vt.

The above testimony was subscribed and sworn to before a notary public.—Editor.

Before Christian Science came into my life I thought I was "of all men most miserable." I had been confined to my bed three or four times, each time more hopeless than before, with nervous prostration. I also had stomach and intestinal trouble, had suffered from asthma more or less ever since childhood, and at times in its worst form. Then too I was in bondage to fear, afraid I could not live. Doctors and medicines, nurses, change of climate, and practically everything that had been recommended to me was tried without any lasting benefit.

It was here that Christian Science found me, wretched and weary. I sought a practitioner and was told to go to work, that I could do whatever it was my duty to do. I did so, and have been able to work ever since. While my healing was not instantaneous, yet I received benefits from the start. At times the way seemed very dark, but with these trials there came a way of escape, and I always found the help needed. The Bible, which was a closed book in our home, is now our daily companion. Through the study of it, with the light which Christian Science gives, I am finding the real God, "whom to know aright is Life eternal" (Science and Health, Pref., p. vii).

I am grateful not only for the blessings, both spiritual and physical, which I have received, and for the channels through which they came, but also for the dear ones who have become interested in this beautiful truth through my healing. This testimony is given with the hope that it may be a light in some one's path, and if it helps just one who is searching for the healing and saving truth, I shall be grateful.

Martin L. Rittenhouse, Santa Cruz, Cal.

It is now five years since I first became interested in Christian Science through a friend, who loaned me Science and Health. As I read this book, it seemed as though God Himself were talking to me, and before I had finished it I was healed of wearing glasses, although they had been used for a number of years; and I have never needed them since.

I was healed of headache during one of the Wednesday evening meetings. I had been suffering severely all that day and had great fear in regard to attending the service; but during the meeting I felt much better, and before I went home the headache was all gone. I had been subject to this trouble for years, but have had only one attack since this healing, and it was overcome by realizing that the "scientific statement of being" (Science and Health, p. 468) is wholly true. I have also been healed of a number of other ailments. In the spring of 1914 I awoke one morning with a throat affection and influenza, and for five days and nights I could not eat or swallow. On the fifth night I placed all in God's hands, knowing that He alone could heal me, and in the morning I awoke with a sense of peace, for I was healed.

The following week I was taken with severe pain in the limbs, which proved to material sense to be due to varicose veins. Then an internal abscess developed, causing great swelling and pain. For several days I could only hobble about with the aid of two canes. Members of my family were much opposed to my having Christian Science treatment and felt I should have an operation; but I kept steadily at my study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, knowing that the truth would heal me. The following Sunday a Christian Scientist called and talked with me. I told her to tell a practitioner of my condition and ask her to help me. She did so, and I began to improve at once. The swelling went down and I could walk; the abscess broke and disappeared. In a short time I could do the housework again, and in about three weeks I was

Digitized by Google

able to go to see the practitioner. After that I grew strong and well, and now I weigh more than ever. I am still proving the truth in my daily life.

I am very grateful for the understanding gained in Christian Science, so that I am able to keep in perfect health. I have all of Mrs. Eddy's writings and enjoy reading the *Sentinel* and *Journal*. Words cannot express my thankfulness to God, also to Mrs. Eddy, who was pure enough to receive God's message and place it before the world so that all may have its healing power.

MARY A. WARREN, Stoneham, Mass.

✧

For four years Christian Science has been our only remedy for all sickness, sin, and discord, and it has never failed us. Before coming into Science I was a physical wreck. Two leading physicians said medicine would not help me and that I must submit to an operation. When asked to try Christian Science, I said I would try anything if only I could regain my health. A practitioner was called and treatment was begun. The healing was not speedy, but at the end of two months it was complete, and since then I have been well and strong, able to attend to all my home duties. For the physical healing I am indeed thankful, but words can never express my gratitude for the spiritual healing that came to me. I have been taught to pray, to love and serve God as never before. It surely has been a wonderful revelation to me. Sometimes the way has seemed hard, but Christian Science teaches us that "trials are proofs of God's care" (Science and Health, p. 66), and the good Shepherd is showing me how to rejoice all the way.

Our three children have been healed of chronic diseases, and other ailments have been overcome, among them scarlet fever and rheumatism. These are just a few of the healings that have come to us in Christian Science; many blessings have come to us since we began its study, and each day brings us greater proof of God's loving care. The Sunday school means so much to the children, who are daily unfolding more love and truth. It is my greatest desire to rise above all materiality and to become more spiritual; to have that Mind "which was also in Christ Jesus."

IONE HILL, Peoria, Ill.

✧

Words fail to express my gratitude for what Christian Science has done for me. A few years ago I fell down an elevator shaft, three stories and a half, and sustained severe injuries; but through the loving work of a Christian Science practitioner I was back at my work, perfectly healed, in sixteen days. Some years before, under the same conditions, although cared for by a doctor every day, I was in bondage for fourteen weeks. Divine Love has met my every need since this healing. Not quite two years ago I fell on the slippery pavement and broke a rib. We called a Christian Science practitioner and in one treatment I was perfectly healed. The liquor habit of thirty-five years' standing was also overcome instantly.

I am indeed grateful to God, also to our dear Leader, Mrs. Eddy, for the many blessings that have come to me and mine through the understanding of Christian Science. I am striving each day to be more worthy to be called a Christian Scientist.—HARRY DE BAR, Chicago, Ill.

✧

After suffering from what the doctors named an ulcerated stomach, I am now perfectly healed through Christian Science treatment. Several years ago I had a sudden collapse and hemorrhage from a wound in the stomach. After calling in a doctor I was at once removed to the hospital and treated there for six weeks. I was then discharged as cured, but in about two years the trouble returned. This time, on the advice of a friend, I had Christian Science treatment, and I wish I could express half of what has been done for me. I not only know that I am perfectly healed, but I also know that the healing is permanent.

Besides this, the little understanding I have of the truth is giving me a very different outlook on life. The more I comprehend of the allness of God, the more I wonder why I have been so long blind. To say that I am grateful for the teaching of Christian Science poorly expresses what I feel. I am at present enjoying better health than I have done for a number of years, and my most earnest desire is for the time when we all shall know the truth, for then we shall be free.

HELEN H. ALEXANDER, Winnipeg, Canada.

✧

A few years ago Christian Science completely healed a tubercular growth on my neck. This demonstration was made when beliefs of resentment, fear, and self-pity were destroyed, and I realized that in true being there are no material beliefs or believers. For years I entertained the belief that I was opposed in my search for truth in Christian Science, but with the understanding that God is the only power, freedom and harmony have surrounded me.

With freedom came supply. The day before I was to leave home for Montana, where I had accepted a position to teach, after all preparations had been made, even to the purchase of my ticket, I realized that if I followed the dictates of divine Love I could not go. I therefore telegraphed my refusal of the position. This left me with no prospects for teaching that year, as the following day most of the schools were to begin their year's work; but I shall never forget the peace which enveloped me that afternoon. It was a sufficient answer to all doubts I might have entertained as to whether I had taken the right step. The next morning I was asked to fill a vacancy in a school in my home town, and I did so with a grateful heart. This experience, though the most obvious answer to my prayer to be led aright, is only one of the many proofs I have had that he who seeks to do the Father's will, will be led "beside the still waters" to the table prepared for him, even though in the presence of enemies.

I am indeed grateful for the daily healing which comes to me as I grow in the understanding that God is All, and that He is good. I am thankful to God, and grateful to Mrs. Eddy, also to all the consecrated workers who have helped me to know more of the reality of being. My earnest prayer is to live up to the commandment, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

CLARA MILLARD STRYKER, Madison, Wis.

✧

"Where the Spirit of the Lord is, there is liberty." I never read this quotation but there comes a desire to tell from what bondage Christian Science has freed me. My father was a physician and surgeon and my mother had studied medicine along certain lines. At the age of seventeen I took up the profession of nursing and practised some eight years. It was my whole life, and I talked, ate, and slept with medical law as my guidance. Needless to say it finally became my Waterloo, and during my years of nursing one complaint followed another until the time came that I recognized I was a mental and physical wreck.

No organ in my body was in a healthy condition. I was

Digitized by Google

said to have Bright's disease, heart trouble, chronic ulcer of the stomach, also bowel disorder and anemia. I had undergone five operations, and was helped somewhat, but other complications set in which were worse than those that had before existed, among them nervous prostration, the drug habit, also despair of ever being well. Several times I had attempted to take my life, and I learned that drugs or poisons cannot kill unless there is fear of them. There was nothing I desired more, or a thought I clung to more closely, than death as a deliverer and friend.

It was while in a semiconscious state, as the result of another attempt to end existence, that a blessed messenger of Love, in the form of Christian Science, with a hope of life, health, and usefulness, was brought to me. I was healed within a week, and for two months I tasted joy and relief such as I had never expected to know again. Unfortunately I was not ready to give up all for God, and when there came a call from a friend to nurse her through an illness, I went to her, and my study of Science was neglected entirely. Then for a year and a half I lived through all the old torments, besides many others.

Among other things I had typhoid fever with peritonitis, and was told I could not live twenty-four hours. When this was told me I had a few moments of reason, and asked to have a telegram sent to my former Christian Science practitioner. I then forgot all about it, being too ill to remember; however, I was up and left the hospital in ten days. Still it was months before I was ready to turn to Science; my lesson was yet to be learned, for not one jot or one tittle was to be removed from the law until all was paid.

Finally the light came, when I had been refined as by fire, and I arose cleansed and purified. No one can realize what a wonderful freedom I felt; what a surge of life and health, joy and uplift, was experienced when I went back to that practitioner and told her I was ready to take up the study of Christian Science and asked her to lead me again to the narrow way. From then on my progress was one of peace, joy, and regeneration; I was indeed "born again," mentally and physically. Many were the trials of my faith, but each one was a stepping-stone that lifted me nearer to the goal. I had worn glasses twenty years and had twice been threatened with blindness. When, two years after turning to the truth, I laid them aside, I realized that "where the Spirit of the Lord is, there is liberty."

To say that I am grateful for all that has been done for me, all that the study of Science and Health has taught me of the Bible, of God, and of my fellow man, for all the love, health, and renewed usefulness, is so inadequate. I can only bow my head, remember my blessings, and thank God for Christ Jesus the Wayshower, for Mrs. Eddy who found the way, and for all her devoted followers who reach out in love to lead the straying ones into the path of Life.

HELEN STANLEY, Antrim, N. H.

✧

About a year and a half ago I was, together with my six months' old son, spending the day with my mother. In the afternoon, while carrying a kettle of water with the baby in my other arm, I stepped on my dress and fell, spilling the boiling water on the baby and myself. In spite of his screams I was able to repeat, "Our Father-Mother God, all-harmonious," the first line of Mrs. Eddy's spiritual interpretation of the Lord's Prayer (Science and Health, p. 16), and in about fifteen minutes he was asleep, while the pain in my arm and hand, both of which had been badly scalded, had entirely subsided. This fact proved to me that "whatever holds human thought in line with unselfed love, receives directly the divine power" (Science and Health, p. 192), for while treating the baby with no thought of self, I too was healed. After several hours he awoke and began to play as usual, and from that time on there was nothing to indicate that the burns caused him any suffering. There are no scars on either of us.

The same evening I treated my mother for a very severe headache, realizing that if Truth would heal burns, a headache could be overcome as well, and after a few moments she declared that her head no longer ached. In my own family I have seen goiter, rheumatism, rupture, chronic bowel trouble, colds, as well as other ailments, overcome through the power of Truth. Not only have these healings been permanent, but they have served to uplift those who witnessed them to the knowledge of the truth which frees from bondage, as well as to strengthen those who were healed.

My earnest and constant desire is to live Christian Science so that others may see its wonderful power and be led to the kingdom. It is a daily help in all my duties and pleasures.

ELIZABETH LINCOLN CARTER, Columbus, Ind.

✧

When I was investigating Christian Science with the hope that it might give me strength to care for a very sick child, my little girl, then five years old, was healed of tuberculosis, adenoids, enlarged tonsils, deafness, and sore eyes. Three physicians had declared that nothing could be done for her. She was unable to walk, and was dreadfully wasted. As she was an only child, I became a nervous wreck through anxiety, and I took up Christian Science to steady my nerves, not believing it was good for anything else. I however read Science and Health to her every evening.

One evening my daughter seemed very much worse and in great pain. I was unable to get the doctor, and when I told her this, she asked me to read Science and Health to her. I did so to satisfy her whim, as I thought at the time, but after I had read about twenty minutes she said she felt much better and asked me to read more, and I continued to do so for half an hour. She was up the next day, free from pain, and improved right along. In eight months she had gained in weight, and her hearing and sight are perfect. She goes to school, is out in all kinds of weather, and is perfectly well. She attends the Christian Science Sunday school, and is able to apply the truth to all the little problems that come up in her class daily. She has to go ten blocks to school twice a day and return, but experiences no sense of fatigue. Last year, out of sixty children, forty-three were away from her class with the whooping-cough, and many wondered how she escaped.

Children are very receptive to the truth, and they understand and grasp more than adults give them credit for. I find it a wonderful help to go over the Lesson-Sermon daily with my little girl. For this healing I am most grateful, also for the knowledge of the truth, and that one does not have to be in Science years to gain a healing, as this experience came to us when I had been interested in Christian Science only three months. Since then many other blessings have been ours.

JENNIE H. COMMOSS, New York, N. Y.

✧

It is about nine years since I became interested in Christian Science through the healing of my wife. Since then I have earnestly studied the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I find that whereas I was sick I am now well, and whereas I used to indulge in the use of tobacco, liquor, and profane language, I am now entirely free.

Since studying the Bible and Science and Health together

Digitized by Google

with the Lesson-Sermons, the mountains of ignorance of God have melted away, and I now see that there is a continuous life if we live in the truth, because the truths of Christian Science are the very life of man. I have had many proofs of God's care and am gaining a better understanding of goodness day by day.—JOSEPH W. WEIN, Spokane, Wash.

✧

My deep gratitude for Christian Science can only be expressed in a great desire to prove by deeds this never-failing, practical, and demonstrable religion. Although I was reared in a Christian home, my blind faith in God did not meet my every need. It was not until I knew the truth as discovered by Mrs. Eddy that the great Principle by which all problems can be solved was made clear to me.

One night I was taken with severe pain. Acute stomach disorder and poisoning were mentioned by members of the household as a possible cause of the intense suffering, and different material remedies were offered but refused. After hours of great pain and loss of strength, the help of a Christian Science practitioner was called for. Immediately the healing thought was received and I knew the meaning of the Master's promise, "Ye shall know the truth, and the truth shall make you free." In less than ten minutes I fell into a most restful sleep, from which I wakened with a sense of perfect peace and comfort, confident in the knowledge that Life is divine Mind, Soul, Spirit.

This experience is only one of the countless daily blessings which prove to me that God, infinite good, is All, and I am indeed grateful for Christian Science.

SOPHIE E. COATS, Grand Rapids, Mich.

✧

This testimony is sent with the desire that it may bring some one the peace, health, and happiness that have been mine since finding Christian Science. Before investigating this teaching I had been a lifelong sufferer. I was like the woman spoken of in the Bible who "suffered many things of many physicians," but I did not give up hope of getting well until the doctor told me I had lung trouble. Even then I turned to Christian Science only when man's extremity proved to be God's opportunity.

One week after writing to a Christian Science practitioner for treatment I was out on the porch rinsing clothes in cold water. Before that time I had been so weak that some days I could only speak in a whisper and could not raise my hand. I at once discarded flannels and chest protectors, though I had been told they must be worn all the time, and put on thin clothing without any fear of taking cold. It is almost three years since my healing took place. I am absolutely well in every way, can go out in all kinds of weather, and am able to do any kind of work that it is my duty to do. I have also found Christian Science a great help in traveling from place to place. By standing porter at the door of thought, as our Leader counsels (see Science and Health, p. 392), I have proved that change of climate or water can have no power over God's child.

My little girl was healed of a skin disease in two days, also of every symptom of acute appendicitis. Twenty-four hours after calling for help she rode quite a distance with me on the street-car to attend Christian Science services. I am thankful for these and many other blessings that have come to me through Christian Science, but I am more grateful for the illumination of the Scriptures through reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, that good woman who was spiritual enough to point out the truth that Jesus said would make free.

OLA E. MCARDLE, Cumberland, Md.

From Our Exchanges

[The Christian Register]

There is no reason why in a religion a good deal of risk of being supposed egotistic should not be taken, so long as it is a risk and not a fact. Confidence in something one has from above himself is pretty quickly distinguishable from vain self-exploitation, and a little boldness in exposition may be pardonable in a prophet of the soul, since it is held praiseworthy in those who offer wares of less value. If a man has something he cherishes and adores, and loves to find other people have too,—something it would be a joy to him to make many people share,—then he will unavoidably seem a little presumptuous in saying so; but those who have said so are not put down among the proud and haughty who have been brought low. They have been acclaimed as redeemers and guides of the race, sages and bringers of light, saviors, and messengers of God. If they had remained, as they felt, bashful and tongue-tied, their modesty might have been admired, but it would have been admired apologetically as an excuse, never as a virtue. "The secret of the Lord," it is true, "is with them that fear him." At the same time, the blessing of the Lord—and of men—is with them who proclaim it; and if it is only the Lord they fear, and not what men will say, they will not be afraid of anything else.

[Pacific Christian Advocate]

Always a few chosen souls stand so close to the rim of the unseen that they can catch messages from the invisible and by their lives translate them into great experiences for the race. Tyndale, in prison, labored to give his persecuting generation the Scriptures, though he knew he would gain neither money nor liberty thereby. Saints in your neighborhood and mine have transactions with the infinite which enable them to be in the world and yet not of it.

God gives every one the possibility of using the unseen resources of the spiritual world. To be good and to pray, to forgive and to love, to aspire and to worship, transmits power to the soul as surely as the wire transmits electricity. To be conscious of God and to obey Him, to yield in willingness to the Spirit's guidance and to rejoice, to be an instrument of the higher might, brings divine energies to a man as surely as steam in an engine generates force. It is thus that souls are saturated with righteousness.

[The Congregationalist and Christian World]

The Christian has a right to serenity of temper when other men are troubled and confused. Having asked himself the question of where his own duty lies, he leaves affairs that lie outside that sphere of duty in the hands of God. If half the world is insane with hate and fear, the world's need of his serenity is only greater. Let us not deceive ourselves! The quiet life is the normal life. We must sympathize and give and pray,—but the excited world today more than ever needs the witness and the power of sane and normal living. The waste of war needs the productive works of peace. God, who has given us a place exempt from war, expects us to show how peaceful men should live in righteousness.

[American Lutheran Survey]

In the midst of the tumult and confusion of the times there are many who are engaged in sober reflection. Many are seeking for the larger significance of the great transpiring events. Men are looking out into the future and back into the past. A new impulse has been given to the study of the philosophy of history. All thoughtful, honest students of

Digitized by Google

history agree that there is a philosophy of history. Great, significant events have never been detached from great, significant movements, which movements have their beginnings far in advance of the events which mark their course of development, and then finally merge themselves into other movements long after the events which mark their progress have become history.

Even those who avow unbelief in the God of the Bible are forced to admit a design and development in history which can be accounted for only through the recognition of a supreme and overruling power; and to the believer in revealed truth it is clear that this supreme and overruling power is no other than the God of the Bible. To the Christian the providence of God and the philosophy of history are identical, and he sees the hand of God just as clearly in His permissive providences, which leave men, even wicked men, free to exercise their wills, as in the direct and immediate providences through which God leads the obedient to the fulfilment of His revealed will. The same God who rules in those who acknowledge Him, overrules the wicked courses of those who deny Him.

[*The Christian Work*]

Our time is full of wonderful quickenings of the conscience of mankind, deep stirrings of the human heart, passionate enthusiasms for humanity, growing determinations to rid the world of some of its age-long cruelties, highly organized warfares against lingering crimes. There has been a new birth of the social consciousness, which is manifesting itself in a sense of the oneness of humanity. A new society and a new world are rising upon the vision of select souls in every nation. The preacher of today must see in this the revelation of God's will and purpose, as of old the prophets saw it in the operations of Israel's national life. He must be able to discern the secrets of the times and lead men in the building of the city of God. He must believe that the final purpose of God for this world is, as Christ declared, the founding of the kingdom of God in the earth, and he must see that these enthusiasms of our time are His methods, as well as revelations of the nature of the kingdom.

[*The Methodist Times*]

There is no opposition between the spiritual service of the nation and the evangelism which seeks to reach those who are outside the churches, one by one. The nation is made up of individuals, and no religious appeal will affect the whole body that does not transform the individuals who compose it. At the same time, those who would profoundly influence the personal life of men and women, especially in this age when denominational ties have been loosened, must rise altogether above a narrowly sectarian outlook. It matters little whether the sect be large or small, influential or the reverse. The people must be the objective of every great church; and the people taken not only individually, but in their whole spiritual environment and in their collective aims.

[James H. Snowden, D.D., LL.D., in *The Biblical World*]

Faith is the opposite of fear. It stands for an undiscourageable optimism in the face of a world that is full of inexplicable pain and evil. It means the unshakable assurance that God is good, that His thoughts and plans for men are those of love, and that His resources of power and grace are such as will ultimately bring these plans to pass in spite of all our ignorance and infirmity. Fear means doubt and uncertainty and pessimism; it paralyzes the very springs of life. Faith is inseparable from joy and expectancy and service, and knits up our flagging resolution to ever new effort and determination.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Publishing Society

"Law and Work" is the title of a new pamphlet containing the following articles: Love Fulfils Law, The Logic of Christian Science, Undisturbed, God's Law of Adjustment, Authority.

The increased cost of binding the periodicals has necessitated making an advance in the selling price of the bound volumes. The new prices, which take effect April 1, are as follows:—

JOURNAL.—Volume 32 (April, 1914 to 1915). Cloth, $3.00; half calf, $3.75.

SENTINEL.—Volume 16 (September, 1913 to 1914) or Volume 17 (September, 1914 to 1915). Either volume, cloth, $3.25; half morocco or half calf, $4.00.

For all other bound volumes of *Journal* or *Sentinel* write for prices.

DER HEROLD.—Volumes 5 to 12 in cloth, $2.75 each; volume 4 to 7 and 9 to 12 in half morocco, $3.50 each; volumes 4, 5, 9, 10, 11, 12, in half calf, $3.50 each.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to page four in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for the year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.25; half calf or half morocco, $4.00. On earlier volumes write for prices.

Items of Interest

Willis L. Moore, former chief of the United States Weather Bureau, in an editorial written for *The National Editorial Service*, commenting upon the long-distance weather forecasting of W. F. Carothers of Houston, Texas, as based upon variations in the intensity of solar-radiation, says:

"A working hypothesis that satisfies the requirements of science with regard to this discovery may be stated as follows: That the passage of the earth through a shaft of extra heat, due to rifts in the sun's photosphere, expands the lower air at the equator more than it does at high latitudes, causing the air at the equator to bulge upward until huge masses, like avalanches of snow on a mountainside, break loose and slide down the incline toward the poles. These masses crowd each other because of the converging of the meridians of longitude, have their northward movement checked, and drop or settle down to the earth in the form of cool or cold waves in the middle latitudes or near the arctic circle. They settle over continents in winter and over oceans in summer, because the plane on which they slide is steeper over land in winter and over oceans in summer. As they settle they cause rotating cyclonic storm-eddies to ascend on both their eastern and western sides, and thus indirectly cause rain and snow fall."

The tract of land on Mount Desert Island which President Wilson is asked to accept on behalf of the Government as a national park and memorial to early settlers, covers about five thousand acres and includes a greater part of the mountainous center of the island, sections that have little value beyond their natural beauty and the lumber on them. Among them are the lands around Eagle Lake and Jordan's Pond, bodies which furnish water for Bar Harbor and Seal Harbor respectively; the top of Green Mountain, from which may be had the finest distant view in southern Maine; the Green Mountain carriage drive, running up the side of the mountain; Picket Mountain, a small eminence overlooking the village of Bar Harbor; parts of Newport and Dry Mountains, and a strip comprising the greater part of the chain of mountains in the center of the island; Fawn Pond and its shores, including Beehive Mountain and part of the famous ocean drive; the southerly ridge of Newport Mountain, and Barr's Hill, which overlooks the village of Seal Harbor.

The Ontario Government has received a formal note from Secretary of State Lansing, forwarded through the British ambassador at Washington to the Canadian department of state, saying that the Government of the United States "cannot look with favor" on the proposed Chippewa Creek power development scheme at Niagara Falls. The chief objection of the United States Government to the proposed development is that it diverts water from the Niagara River to such an extent that the scenery of the famous Niagara Gorge would be harmed. The scheme, authorized by Ontario legislation, provides for a flow of water from the Niagara River above the falls by an overland canal to the escarpment near Brock's Monument at Queenston, and then turning it back into the river, thus attaining a development of 600,000 horse-power for commercial purposes. Mr. Lansing's note points out that this diversion would result in taking 6000 cubic feet per second from the river between the two points.

A decision in the so-called California oil cases, in which the United States Government is seeking to oust certain oil-producing companies that have operated in spite of the Taft withdrawal order of 1909, has just been rendered in the United States district court in favor of the Government, this opinion declaring that the defendants in the Maricopa fields equity cases "had no right, title, or interest in or to the property in controversy or possession thereof or its contents." The property involved is about four thousand acres in extent, is valued at three to five million dollars, and is located in the Maricopa oil fields in Kern County. The decision in question involved six cases, and twenty similar suits are pending. Since the suits were begun the companies have been producing under a receivership, and the Government has impounded about three million dollars, which, if the present decision is sustained, will be returned to the Government.

Progressive Chinese scholars and statesmen are proposing to run ruthlessly through the dialects and vocabularies of China and save a residuum of five thousand words for universal use in the eastern republic. This proposal is said by a correspondent of the *New York Globe* to meet with the approval of President Yuan Shi-Kai and the minister of education and to be under general discussion in the Chinese press. One of the immense gains of such a simplification and standardization of Chinese text-books would be to bring the various provinces together, whereas at present, so far as the unlettered part of the population goes, they are virtual foreigners to one another.

Encouragement of the tenant farmer to become a farm owner is cited as one of the main objects of the rural credits bill, in the House banking and currency committee's report filed with the House recently. "Under the operation of this system," says the report, "specially designed to meet his needs, the farmer will receive ample mortgage-credit accommodation on the most favorable terms, and the tenant or other purchaser of the land for agricultural use will find greater opportunity to become a farm owner."

The state railroad of Uruguay, known also as the Pan-American Railroad, has been opened. "The republic of Uruguay with an area of 72,172 square miles, had in 1913 a railroad extension of 1639 miles," according to a commercial report. "By the various lines composing this system the interior of the country has been opened up, and communication has been well developed with the principal seaport, Montevideo, in the extreme south as a center. There has been, however, need of other lines which will serve as feeders to the main lines already constructed, or acting independently of them to accomplish this purpose. A plan based on this idea of an interior line, and developed about thirty years ago, has been carried out in the new line just opened." The Government conducts an experiment farm on a tract of a thousand acres of fertile land in the department of Colonia, about 140 miles northwest of Montevideo and 50 miles east of Buenos Aires. One of the chief objects of the enterprise is the production of seeds of the best quality, which are supplied to small farmers on liberal terms.

After extensive and convincing experiments made last year, Bottineau County, N. Dak., early this spring began a systematic campaign for the complete extermination of gophers, which, it is estimated, destroy more than a million and a half dollars' worth of grain in the state every year. If the results are satisfactory a state-wide campaign will be instituted.

The Cuban Congress has passed a bill appropriating $170,000 for the purchase of a site and the construction of a legation in Washington, D. C. It is planned that the new home shall be dedicated to its future service May 20, 1917, the fifth anniversary of the transfer of full control of her own affairs to Cuba by the United States.

The market value of the grape crop of California for 1915 was more than $25,000,000. Of this the raisin crop yielded a heavy contribution, the selling price of the 248,000,000 pounds marketed being given as $10,000,000, netting the producers a profit of $2,000,000.

Norway's export of planed wood and other kinds of timber during the two last years amounted to a total of 1,872,529 cubic meters in 1915, and 951,941 in 1914. The export of matches for the past year amounted to 5747 tons.

By the organization of the $70,000,000 Sinclair Oil & Refining Company, most of the independent oil concerns of the Oklahoma field will be merged under one head and will form the largest competitor of the Standard Oil Company.

Throughout southern Oklahoma there is increasing interest in the peanut crop. Oil-mills that were driven by the high price of cottonseed to make experiments last year on peanuts have been encouraged by the results.

The incorporations in the United States during April of companies with a capital of $100,000 or over, involved $223,908,900. In the same month a year ago the total was $77,466,000. For March this year it was $261,627,000.

Actual work has been begun by the Cincinnati Southern Railroad preliminary to the erection of a new $1,000,000 bridge across the Tennessee River at a point six miles north of Chattanooga, Tenn.

The sealing season of Newfoundland, just closed, was one of the most successful in years, the catch reaching a total of 255,000 pelts. The total value is estimated at $750,000.

Four bills, involving in all $1,280,000, for various improvements in New York harbor, have been introduced in the United States House of Representatives.

Twenty-three million bushels of grain were shipped through Portland, Maine, to Europe during the six months ending May 1.

Vol. XVIII May 20, 1916 No. 38

"The sharp surplus of materiality"

HAWLEY O. TAYLOR, PH.D.

THE more familiar one is with the details of some lines of human investigation, the more he is impressed with the aptness of Mrs. Eddy's views on that phase of thought as brought out in the text-book, "Science and Health with Key to the Scriptures." This has been my experience, as a physicist, when reading the definition of electricity on page 293 of this book: "Electricity is the sharp surplus of materiality which counterfeits the true essence of spirituality or truth,—the great difference being that electricity is not intelligent, while spiritual truth is Mind."

About a century ago electricity was considered to be a fluid which passed from one body to another, and if a body possessed more than the normal amount, it was regarded as positively electrified, but if less, as negatively electrified. Electricity was therefore not regarded as the real substance of a body, but rather as a fluid possessed by it. This was the view generally held when Mrs. Eddy wrote, "Electricity is not a vital fluid," as we read on the page above referred to. After the discovery of radium in 1898, the study of the construction of the atom was greatly stimulated, since the radium atom was found to be in process of disintegration,—a phenomenon at variance with the former theory of the indestructibility of the atom. As a result of this study, atoms are now considered to be minute solar systems, each having for its nucleus, or sun, a positive charge of electricity, and for its planets electrons, or negative charges of electricity, circling with velocities in the order of one hundred thousand miles a second around this nucleus.

According to this theory there are myriads of these little solar systems in every drop of water and in every grain of sand, and when they are undisturbed and in a state of equilibrium, no electrical phenomena are observed. Atoms differ in the number and arrangement of their electrons, and in some substances they have a stronger hold on their electrons than is the case with other substances; again, there are substances having atoms prone to pick up stray electrons. Thus, catskin gives up some electrons with comparative ease, while hard rubber clings to its own and picks up others. Rub these two substances together and the hard rubber will rob the catskin of electrons, and thus having more than its normal number, will exhibit negative electrification; that is, when touched by the hand it will give off its excess of electrons, which we see or feel as a spark of electricity. The catskin, being deficient in electrons, will exhibit positive electrification; that is, when touched by the hand, electrons will pass from the hand to it as a spark of electricity. The rubbing had disturbed and loosened some of the electrons of the catskin and they were picked up by the atoms of the hard rubber.

A more vivid illustration of the "sharp surplus" may be observed during a thunder-storm. Nature seems always to tend to maintain equilibrium; when a cloud which has a large surplus of electrons and is thus in an unstable state, approaches another cloud which is relatively deficient in electrons, there is a sharp passage of these electric charges from the former toward the latter, in the effort to restore equilibrium, and we see the flash of lightning. At present, therefore, matter is regarded as made of electricity rather than merely possessing it, as was generally held by physicists until recently. This accords with Mrs. Eddy's statement made long before, "Electricity is the sharp surplus of materiality;" that is, the phenomenon of electrification is matter with an excess of its essence present, and this essence "counterfeits the true essence of spirituality or truth," being non-intelligent, while "spiritual truth is Mind."

A field of influence called an electric field is present in the medium surrounding an electron. This field is a region of strain in the ether, and a force is exerted on electric charges which happen to be present in it. When a normal number of electrons are collected about the nucleus of an atom, the resultant field beyond the limits of the atom is neutralized, but an excess of charges in the atoms of a body disturbs this balance, and the body then electrified is surrounded with an electric field. In this case the electric field is between bodies oppositely charged, and these bodies if free to move will drift into contact and the charges be neutralized; if held apart, the air between will be in a state of strain, that is, the electrons of the atoms of the air will be urged to break with the atoms, and will do so if the strain is great enough, when equilibrium will be restored by the passage of electricity. Thus, wherever this "sharp surplus of materiality" is present there is a strain or abnormal condition in all the surrounding region.

This "surplus of materiality" is shown also in another recent finding of the physicist. Circling between astronomical solar systems are comets which do not belong to any particular system but wander from one system to another. In the same way, between atomic systems circle electrons which are not attached to any particular atom but wander from one atom to another. They are called "free electrons," and the extent to which they are present in a substance determines the degree of the electrical conductivity of the substance. Thus the metals, being good conductors of electricity, are rich in free electrons; while glass, rubber, and air possess practically none. The drift of these free electrons in a substance, as in a wire when placed in an electrical field (in a battery circuit), constitutes an electric current. The exhibition of electrical phenomenon (the electric current) is thus again due to excess of materiality (the free electrons).

But all this beautiful framework to explain the presence of matter is merely a more or less clearly defined concept in the mind of the physicist, who seeks to grasp the meaning of the truth he dimly sees and who regards his present sense of it as very transient, for he well knows that tomorrow, through his efforts to gain more light, his concept is bound to change. He has reduced the old concept that matter is solid, to the new concept that matter is vibrating electric charges or forces, "the least material form of illusive consciousness," as we again read on page 293 of Science and Health. The next step seems to be that this "least material form of illusive consciousness" must yield to the truth that "the universe, like man, is to be interpreted by Science from

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

its divine Principle, God, and then it can be understood; but when explained on the basis of physical sense and represented as subject to growth, maturity, and decay, the universe, like man, is, and must continue to be, an enigma" (Science and Health, p. 124).

Thus the human mind, being overcharged with a surplus of erroneous concepts, will in the presence of the truth of being, the truth that makes free, be discharged; the error will be neutralized by the dawning of spiritual understanding, be reduced to nothingness, even as the Bible teaches, and man will then be seen in his normal and stable state, the idea of divine Mind.

Expectation

KATE W. BUCK

If the question, What are you expecting at this moment? should suddenly be asked of a large concourse of people and each one was compelled to give an absolutely honest answer, there would doubtless be a collection of chaff and wheat which might require much winnowing, and probably very little wheat would be left when the process was finished. Many of those questioned would probably be astonished when confronted by that which they found themselves half unconsciously expecting, and would earnestly wish it had been otherwise. The things which from earliest childhood we have been carefully trained to expect, are not pleasant to contemplate,—disease, disaster, failure, deceit, and their kind. Even the pleasures which were not withheld had usually a note of warning thrown in as to some danger lurking about, ready to pounce upon the unwary. These very pleasures were to be found solely along material lines, things which could be reported only through the medium of the five senses, while through these same channels might be communicated suffering as well.

The old adage that what we look for we are apt to find, has become a truism, and that of itself should teach us all to look well to the quality of our hopes and expectations. The dictionary defines expectation as "looking forward with certainty," an added reason why we should be on guard continually as to what we expect, since it is thus coupled in our belief with fulfilment. With pitiful readiness mortals constantly expect evil in various forms. They predict direful happenings and accept and believe they will come to pass. Prophesy disaster, want, and woe, and this sort of reply will generally be forthcoming: "I know it;" "I suppose so;" "Just what I expected." These same people would be quite likely to oppose vigorously any suggestion of good or happiness on the ground that it was too good to be true. Yet good is really the only thing that is, was, or ever will be true.

False education has much to answer for, in that it has instilled into the human mind the teaching that "man is born unto trouble, as the sparks fly upward." While this was justly written of the material man, the real man, made in God's image, is given "richly all things to enjoy." If each one would but recognize and claim his true birthright and the treasures pertaining to it, he would speedily be free to use the dominion God gave man. Complete dominion exists now for him who appropriates it in the true way, and nothing but doubt and fear-filled thoughts, believing in and trusting evil, can shut it out from one's realization and acceptance.

David knew how and what to look for, and it is with confidence and joy that he writes, "My soul, wait thou only upon God; for my expectation is from him." In Romans we read that "the earnest expectation of the creature waiteth for the manifestation of the sons of God," the manifestation of God in His reflection. The latter quotation leads us "to take heart of grace" and gird up our loins afresh, because it indicates plainly where the trouble has been and how to escape it. When mankind shall actually awake to know themselves "sons of God," they will, and of necessity, wait only upon Him, expect only that which is good. So the "creature" waits for the redemption and return of the children of men to the joyous acknowledgment of "one eternal Father, one eternal home."

On page 208 of "The First Church of Christ, Scientist, and Miscellany," Mrs. Eddy voices her gladness at the receipt of a letter from one of our branch churches, and says she was "waiting in due expectation of just such blessedness, crowning the hope and hour of divine Science." What happens when one looks forward with certainty to the coming of good only? He brings only good into his experience, and evil is crowded out by its bright, assuring presence. As surely as the darkness, which is nothing, must needs vanish at the coming of the light, so evil must disappear at the coming of good, for the one is false and the other true, and Truth is eternally omnipotent. Simply through scientifically right, joyous, positive expectation can one gain dominion that makes him the master and not the slave. Hope is a form of expectation, for it is desire and expectation blended, making a strong combination, since it thus becomes a prayer of certainty that the thing looked for is sure of achievement. This righteous prayer will remove mountains, however mighty they appear, of fear, doubt, discouragement, and pessimism.

Mrs. Eddy counsels the wisdom of "trusting God with our desires, that they may be molded and exalted before they take form in words and in deeds" (Science and Health, p. 1). Desires are "molded and exalted" when the merely human wishes and longings, justifiable as they often seem, give place to spiritual desires; having arrived there, we no longer "ask amiss." When people begin to receive the "daily bread" promised to those who "hunger and thirst after righteousness" before all things else, they speak with new tongues, since thoughts and words, as well as deeds, partake of the same blessed influence.

Surely the first wistful desire that is born as one drops the human yearnings that have become burdensome through hope deferred, is to know God and be conscious of His presence. One way to know Him is to have faith in good as the only reality, and consequently to set aside as false everything opposed to good, for God is good; to have faith in Love, its power and inexhaustibleness, regardless of contrary manifestations, for God is Love; to have faith in Truth, which stands firm and unshaken, the Principle which underlies all creation, for God is Truth; to have faith in Life as eternal and ever present, everywhere, for God is Life.

In positive language Paul writes: "God, willing more abundantly to show unto the heirs of promise the immutability of his counsel, confirmed it by an oath: that by two immutable things, in which it was impossible for God to lie, we might have a strong consolation, who have fled for refuge to lay hold upon the hope set before us: which hope we have as an anchor of the soul." What does the glorious phrase "the heirs of promise" lead us to expect? We have but to recall a few of the promises made to them that love God and desire to serve Him—and who does not—to recognize our inheritance, and therefore know that fear of or belief in any power apart from the great I AM, who stands unchangeable throughout all eternity, is as nothing. It is but a mist which may indeed darken for a time, but never touches and can never destroy the perfect Mind, which knows nothing of the shadows because they are not.

The only man there is, is godlike, an unchanging expression of an unchanging God; and a sense of freedom and strength

Digitized by Google

comes with the thought that he is therefore an emanation of that infinite intelligence which is constantly radiated through its ideas. All the trouble there is comes from the mistake of not boldly and gratefully asserting our right to all things good and perfect as our legitimate inheritance. Carlyle must have had some perception of this when he wrote, "Culture is to let each become all that he was created capable of being." Children of the King, we believe ourselves paupers, and darkened and restricted by this belief draw our tatters about us and pity our forlorn condition, which is entirely of human origin, and which can therefore be dubbed a lie and the producer of lies.

Well has Christian Science been called the religion of optimism, for its entire expectation, every second of every hour and every day, is of good. This destroys fear in all its forms, for no one is afraid of that which is good; only expected evil makes one cower and shrink. One who has confidence enough in God really to commit his way to Him, sure that in so doing only good can come, is saved from much so-called "wear and tear." Mrs. Eddy lovingly points her students to the omnipotence of God and the power of His love,—the Father of whom Jesus talked and whom he so faithfully portrayed. How gladly and with what rejoicing does one accept the teachings of Christian Science, when after years of hope deferred and much wading through various ologies and isms in the search for Truth, he has come at last to recognize a God who is Love, a God such as man-made creeds have never revealed.

As the full value of the word expectation dawns upon us, we can surely resolve to interpret it aright. We shall no longer look forward to the coming of evil, but overcome that tendency, with its disastrous effects, by a looking forward with at least as strong a certainty to the coming of good. Thus is born a knowledge that God is all good, and there is quietly if gradually established in our consciousness the actual kingdom of God, "in earth, as it is in heaven." This is done through faith in the power of God, good, a faith which is, in the language of Scripture, "the substance of things hoped for, the evidence of things not seen." In Science and Health (p. 426) we are told that "when the destination is desirable, expectation speeds our progress." Every one should expect to know and realize the love of God; and since it shall be as a man saith (not as he pleads), who "shall not doubt in his heart," affirmation that the good desired is already won, unerringly leads us to become conscious of the one all-wise, ever-loving Father. This establishes a brotherhood among men which can never be overthrown, because it was from the beginning, and is to be again, as surely as God is omnipotent.

The Church Organ

J. M. BURRISS

An article in the *Sentinel* of May 22, 1915, on "Our Church Singing," impels me in a spirit of kindly criticism to say a few words with reference to the pipe-organ as it relates to our congregational singing. During a considerable number of years the writer has heard a great many organs in our churches and those of other denominations, and he has reached the conviction that all who give the matter their attention will agree that as a rule the instrument is played entirely too loud during the singing of the hymns.

It is provided in the Manual (Art. XIX, Sect. 1) that "the music in The Mother Church shall not be operatic, but of an appropriate religious character and of a recognized standard of musical excellence," it being our Leader's evident desire that the music should comport with the quiet dignity and simplicity of the church service. No criticism is here lodged against the character or standard of the music rendered, which in the main is satisfactory, the writer's thought being that a roaring organ, which baffles the attempt of members of the congregation to discern and follow the part they may be endeavoring to sing, and which drowns the melody of the hymn in its own powerful intonations, no more comports with the dignity of our church service than would a blatant reader. Furthermore, under such conditions the efforts of the soloist to lead the singing of the hymns are practically nullified, for it is very seldom that the soloist's voice can be heard beyond the desk.

The writer of the article referred to advises the congregation "to listen to and sing with the organ." One of the difficulties in the way of heeding this admonition is that the organ, as frequently played, does not lead, but rather overwhelms the voices of the people, so that in the confusion of sound the individual singer is usually unable to hear his own voice, and therefore does not know whether he is adding discord or harmony, either in time or tune, to the ensemble. During the playing of preludes and postludes there are passages where a full organ may be necessary to a proper rendition of the selection, but it seems to be characteristic of organists in general to use the full organ, or nearly so, during congregational singing. In the writer's opinion this is a mistaken practice,—certainly so in connection with the singing of hymns in Christian Science churches.

The writer does not at all attempt to qualify as an expert critic of pipe-organ playing, but is impressed with the improvement which would be wrought in our congregational singing, the present excellence of which calls forth much favorable comment from strangers, if the hymns were played in a distinctly melodious style.

Seed-time and Harvest

ETTER H. FOSTER

CHRISTIAN SCIENCE was first presented to me many years ago in Boston, by a friend who was reading "Science and Health with Key to the Scriptures" by Mrs. Eddy merely as a new treatise on metaphysics, and who intimated that reading it might interest me in the same manner. I glanced through the book to please my friend, but being young, immature in thought, and having no need of physical healing, I gained at that time very little understanding of the wonderful import of its teaching. I read far enough, however, to discover the four "fundamental propositions" on page 113 in the chapter entitled Science, Theology, Medicine. They are: "1. God is All-in-all. 2. God is good. Good is Mind. 3. God, Spirit, being all, nothing is matter. 4. Life, God, omnipotent good, deny death, evil, sin, disease.—Disease, sin, evil, death, deny good, omnipotent God, Life."

The faultless logic and originality of these statements arrested my attention, appealing strongly to my awakening sense, and the seed of Truth was then and there planted in my thought, afterward to bear fruit. A few months later the recollection of these words prompted me to send for a copy of the text-book, and returning to Boston a short time after this, it was my privilege to hear a sermon preached by Mrs. Eddy. Her words were like distant music, with little meaning for my dull ears; but the music was sweet and never to be forgotten, and the tones of her voice still linger in my memory. I knew that some day I would desire to know more of Christian Science, but like one of old, I went away with the thought that there would be a more "convenient season." The time came when ill health, unhappiness, and a great fear induced by the verdict of a leading specialist, forced me to seek with

Digitized by Google

all my heart for a God who could heal me,—a God at hand, an ever-present help in trouble. I knew instinctively where to find Him, and again turned to Christian Science.

My old copy of Science and Health was eagerly sought among my books, and it became, with the Bible, my constant companion. I found it to be indeed a "Key to the Scriptures," opening the door of the human understanding which "no man can shut," and enabling us to enter into the kingdom of heaven here and now. From this hour my life was changed, and there has been no turning back. The physical healing was almost lost sight of in the deep quest for spiritual understanding; but when in a measure I was able to forget my body "in remembering good and the human race," as our Leader tells us (Science and Health, p. 261), the healing came naturally and unconsciously.

In following this line of spiritual thinking it has been my privilege to witness the healing of all manner of diseases through this ministry of Truth. Though great is the joy of knowing that "devils [evils] are subject unto us through Christ's name, incomparably greater is the joy of learning that our names "are written in heaven;" that our lives are "hid with Christ in God," where all is good and there is no consciousness of evil. In this consciousness of ever-present good man is found to be spiritual and perfect; and this understanding is heaven, where man's name is forever written.

Christian Science Practical

A. WARENDORFF

THAT Christian Science is a practical religion for men in business and one which they can demonstrate and prove, has been fully tested recently by the writer. On page 128 of Science and Health Mrs. Eddy says: "A knowledge of the Science of being develops the latent abilities and possibilities of man. It extends the atmosphere of thought, giving mortals access to broader and higher realms. It raises the thinker into his native air of insight and perspicacity."

I am engaged in a business which deals exclusively in perishable goods, namely flowers, which must be handled quickly. On holidays, such as Christmas, New Year's day, and Easter, there is a great demand for them, and it has always been a problem to know just how much stock to purchase. As a rule the advance orders are small, not even five per cent of the business done. After five years of earnest study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, in connection with the Bible, and of effort to apply its teachings at all times, I was able to make what I consider a clear demonstration in this way.

About a week before Easter, 1915, I threw the entire burden upon the Lord, and studied the definition of the word "angels" on page 581 of Science and Health, "God's thoughts passing to man," also the article entitled "Angels" on page 306 of "Miscellaneous Writings," in the course of which Mrs. Eddy says, "God gives you His spiritual ideas, and in turn, they give you daily supplies." Holding fast to this thought all the week, I sought to realize that under the government of divine Mind I could not buy too much or too little, since divine intelligence can make no mistake. I reasoned that because there is only one Mind or intelligence, what I had to do was to rely upon this intelligence, and so be instructed how much to buy.

Toward the end of the week temptations began to assail; but I am glad to say that they were always from without and never from within. For example, the employees remarked that they thought the "boss" was getting in too much stock. At the first intimation of this, an angel came to me in the form of a thought from God, which said, "Love never faileth" (Rev. Ver.). Temptations kept coming strongly on the Saturday before Easter, which, it may be noted here, brought a blizzard, the worst weather we had had all winter. People who telephoned said they were sorry for me, for they knew what a day like this must mean to people in the flower business; but always the thought of the Love that never faileth was strong with me. Soon there were telephone and mail orders, with patrons calling in the shop, and in due time all our stock was disposed of.

I never appreciated this demonstration so much as I did on Sunday evening, when my wife said that for several nights she had not slept because she was so anxious, and that she was especially so on Saturday when it stormed, for she thought that all our labor was for naught and that we would lose heavily as the result of our hazard. I assured her that I had not worried for a moment, but instead had faith in God, and that she must have more faith, for according to Christian Science worry and fear are beliefs of lack or limitation and are illegitimate. As I examined myself I saw that this demonstration measured up to Jesus' words to his disciples, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them," for in this text we find a condition which must be lived up to,—we are not to doubt, but to believe.

I am learning that the truth can be applied to problems of health, social life, or business with equal reliance. Whereas in former years business seemed a drudgery, it now means to me to be about the Father's business and to do His will, whether it be selling merchandise, helping a friend, or whatever the call may be; in short, thinking good and doing good. In the Book of Psalms we read, "I have been young, and now am old; yet have I not seen the righteous forsaken, nor his seed begging bread."

"Rise up, and stand forth"

ETHEL M. MC CANDLESS

CHRISTIAN SCIENTISTS sometimes wonder why their problems are not solved more quickly; why so-called physical disorders seem so hard to heal. They may even yield to discouragement, because they have worked so long and as they believe faithfully, and still seem to be in the dark. The writer received great help and enlightenment along this line when she read in the sixth chapter of Luke an account of Jesus going into the synagogue on the Sabbath day and teaching. Among those who listened to him was a man with a withered hand. Now the scribes and Pharisees were watching to see whether Jesus would heal on the Sabbath, and this man must have known of their feeling of antagonism, must have been conscious of the thought of envy and malice that was directed toward this wonderful teacher: nevertheless when Jesus said to him, "Rise up, and stand forth in the midst," he obeyed instantly. No doubt it took courage for him to do this, to separate himself from the throng, although he was sadly in need of healing. He probably had to quiet his fear of criticism and of the accusations which he knew would be hurled at him; but "he arose and stood forth," and thereby received his healing.

We all have heard the call of the Christ, Truth, to "rise up, and stand forth," and some of us have obeyed at first: but this call is continuous and the demand constant. Sometimes the standing forth means the giving up of some self-indulgence which we are hugging to our breast, or perhaps it calls for the sacrifice of some personal pleasure in order

Digitized by Google

that we may make a larger contribution to the cause of Truth. Or it may be that we have been depending on a practitioner to do our work for us, thinking we can pay some one to usher us into the kingdom. We shall find, however, that activity is always demanded of us, as it was of the man in the synagogue; and just as he received his healing when he performed his part, so shall we if we obey.

In the realm of the spiritual, as in the commercial, we do not get something for nothing, and a very common example of trying to do this is the neglect to make a due return for the treatments or help we have received. Oftentimes that very thought of ingratitude, for such it is, would obstruct the truth which is being poured into consciousness through the faithful work of the practitioner. Let us therefore watch, that the throng of jealous, envious, self-seeking, ungrateful, and apathetic thoughts do not press upon us and prevent us from hearing the Christ-call to "rise up, and stand forth." The promise to such as are obedient reads, "Then shall thy light break forth as the morning, and thine health shall spring forth speedily."

[Written for the *Sentinel*]

As a Man Thinketh

JAMES NOBLE HATCH

Oh, I heard the ceaseless sighing of the winds of discontent,
Heard it when the day was dying, heard it ere the morn was spent;
From the broad plain and the mountain,
From the lowland and the sea,
The one sound was the same sound that was wafted back to me;
A sound beset with sadness from the realms of blighted dreams,
A plaintive song of a world all wrong, where hope no radiance gleams.

As I heard the dire complaining I complained in sympathy,
Lent my aid toward maintaining all the gross inharmony;
In the sunlight or the shadow,
In the hurry or the pause,
All the world seemed carried forward by the same discordant laws,—
Laws that brought forth thorns and thistles as the product of the soil,
Laws that brought defeat and chaos to reward all honest toil.

And it seemed that gloom beclouded every highway to success,
Till I cried out for deliverance, cried out in my dire distress,
Raised my eyes and searched for guidance,
Raised my voice and asked the way
That would lead out of the valley where the shadows deeply lay.
Suddenly faith's light triumphant shone through all the shades of doubt,
And the truth in bright effulgence shed its rays all round about.

Then I heard a sound of singing echoing through the busy day,
Heard a melody in keeping with my own heart's roundelay;
And the harsh sounds ceased annoying,
And the shadows lost their gloom,
As good hope o'er all presiding left for discord scanty room.
Thus I find the world grows brighter as I add my mite of cheer,
For I've learned that as man thinketh so all things to him appear.

Selected Articles

[Thomas E. Boland in *Philadelphia* (Pa.) *Ledger*]

If it be true, as an evangelist in his criticism said at Atlantic City, that he does not understand "any two consecutive paragraphs of 'Science and Health with Key to the Scriptures,'" the Christian Science text-book, the gentleman's own statement would exclude him from consideration as a qualified critic of the teachings of this book. He proceeds, nevertheless, as reported in a recent issue, to discuss that which he declares he does not understand, and says Christian Scientists "are trying to get away from the fact of sin."

Christian Science does not teach that God created sin or sent sin into the world, or that sin is an eternal fact of being from which there is no escape. God is wholly good, therefore He could not create evil or send it upon mankind, for this in itself would be an evil thing, and it is unthinkable that God should sin. The Christian Science concept of this matter is indicated in the following excerpts from Science and Health: "Sin will receive its full penalty, both for what it is and for what it does." "The way to escape the misery of sin is to cease sinning. There is no other way" (pp. 542, 327). It then becomes evident that in the view of Christian Science the individual is not freed from sin and the suffering it entails until its power over him is broken. His release, therefore, is not hastened, but on the contrary is delayed, if he regards sin as an inexorable and eternal part of the scheme of things.

The full acceptation by Christian Science of the divinity of the Christ ought to be clear from the definition of Christ as given in Science and Health: "The divine manifestation of God, which comes to the flesh to destroy incarnate error" (p. 583). This definition does not "rob" the Christ of anything. Quite the reverse, it declares the Christ-mission to be the expression—manifestation—of God, divinity. If the critic, however, intends to find fault with Christian Science for not saying that Jesus is God, then the testimony of Jesus himself on this point ought to be considered. Jesus never said he was God; he spoke of himself as a man. He virtually denied that he was God, and several of his sayings are flatly inconsistent with the theory of his deification. Peter also spoke of him as "Jesus of Nazareth, a man approved of God." Christian Science, therefore, renders unto Jesus exactly what he desired, namely, not to be deified but to be glorified. Moreover, it accepts the Scriptural account of the conception which led to his birth, and attaches much importance to his origin and to his knowledge of it.

✧

[E. M. Ramsay in *The Shetland Times*, Lerwick, Shetland Isles]

In reply to a letter in *The Shetland Times*, I would like to state that the students of Christian Science have no wish to disturb those who are fully satisfied with their present understanding of the Scriptures, and who find the teachings of the church to which they belong satisfying alike to their heart and their reason. To such we would say as Abram said to Lot, "Let there be no strife, I pray thee, between me and thee, . . . for we be brethren." We are at-one with the other Protestant churches in our desire to adhere to the teaching of the Bible, at-one with them in our effort to rise above sin and live in accordance with the law of God, although we differ from them as to the means by which this may be accomplished.

The message of Christian Science is to the increasing number who are dissatisfied, to whom religion as they have been taught it seems vague, impractical; who are hungering for more light and longing for a "closer walk with God." To these Christian Science offers the full gospel. We use these words

Digitized by Google

advisedly, for we maintain that there is no other Christian church which is founded on the recognition that Christ "is the savior of the body," as St. Paul says. Let any unprejudiced seeker after Truth study the gospel narrative with an open mind and he cannot fail to be impressed with two facts,—first, the large amount of time during the three short years of his public ministry which our Lord devoted to healing the sick; and second, his reiterated command to his followers to do the same, culminating in the remarkable statement recorded in the sixteenth chapter of St. Mark's gospel, which remains as a test of the true believer throughout the ages: "These signs shall follow them that believe; In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover."

Indeed in this connection I would draw attention to the reply which our Saviour made to his disciples when they asked him why they had failed to heal a case: "Because of your unbelief;" and he added, "This kind goeth not out but by prayer and fasting." These words are most significant. Faith in the ordinarily accepted sense of the word the disciples certainly possessed; what was required was a deeper spiritual understanding, which they could attain by closer communion with God and by separating themselves more completely from things material. Is this injunction less binding on the Christian of today?

Thousands of people all over the world are rejoicing over their deliverance from all manner of evils, from sickness, disease, and sin, through the realization of the power and presence of the healing Christ as revealed to them in Christian Science. Thus to them the words of the Saviour's promise is fulfilled: "Lo, I am with you alway, even unto the end of the world."

✧

[Avery Coonley in *Bureau County Tribune*, Princeton, Ill.]

In reading the report of a lecture in the *Tribune*, one is constrained to wonder why, if Christian Science is not successfully healing disease of all kinds, this critic should have had occasion to refer to it at all. Nearly half a century has elapsed since Mrs. Eddy first proclaimed it to the world as the reinstatement of "primitive Christianity and its lost element of healing" (Manual, p. 17); and if it had not been doing that which Jesus and his followers did and which it boldly declares is just as possible today as it was then, it would certainly have collapsed instead of constantly drawing to it a larger and larger constituency of intelligent people.

The fact is that our critic does not accord to the healings accomplished through Christian Science the same recognition he would if they had been brought about by the method in which he has confidence. The healing through Christian Science of a long list of serious diseases, including cancer, tumor, tuberculosis, hernia, has been a matter of public knowledge and susceptible of investigation for more than two score years. One cannot repudiate these cures without discrediting the diagnoses of hundreds of reputable physicians. Even so it would tax human credulity to declare that out of hundreds of thousands of diagnoses only those particular thousands had turned out to be mistakes which had had Christian Science treatment, the balance having been correct. The only rational course is to recognize the fact, which is gradually becoming common knowledge, that already Christian Science is to be reckoned as one of the great healing agencies of the present day.

Possibly one of the reasons why the lecturer could not bring himself to credit the healing record of Christian Science is that he mistakenly believes this teaching to be nothing more than superstition. Indeed this is the estimate he places upon the whole subject of divine healing, for it is stated of Christian Science, "and all other beliefs for the cure of the ills of mankind," that he attributed them "to the . . . sincerity of the believer, rather than the efficacy of the religion." By this process, whether he realizes it or not, in order to make the records check with his views on the subject of healing, he has impeached the testimony of the Bible and expunged the healing record of the great Physician; for if spiritual healing is superstition, then it is so in one age as well as in another, and was so in the first few centuries of the Christian era.

But there is no reason for sharing the critic's incredulity. If we accept the words and works of Jesus for what they plainly mean, then he not only healed the sick through the power of God, but his followers did likewise, and he promised that "these signs shall follow them that believe," which surely should include all Christendom. Christian Science is daily proving the validity of this promise.

✧

[John M. Tutt in *The Bates County Record*, Butler, Mo.]

In a recent letter to the *Record*, "A Wanderer," writing of the Bates County of thirty years ago, wandered from his subject to ventilate his opinions concerning Christian Science. In so doing he expresses some evident misconceptions. It is but fair that your readers, and "Wanderer" himself, should be set right upon a subject so profoundly affecting the welfare of humanity.

The deeply religious character and Scriptural origin of Christian Science is shown in its teaching that God is the author of all that really exists, and that all His creation partakes of His divine nature; hence is wholly good. The illusive, unreal nature of all that is unlike good is a logical conclusion drawn from premises unreservedly acceptable to all Christians. The "apparent inconsistencies" alluded to by our critic apply reversely to the so-called orthodox beliefs of a creation of God so inherently imperfect as to contain the seeds of discord, evil, disease, and death. In denying reality to matter, sin, disease, and death, Christian Science exalts God and His creation and restores even human life to a normality, a soundness, which cannot be hoped for under a system that seeks to harmonize good and evil, Spirit and matter.

To seek to eliminate sin and disease from human experience on the ground of their destructibility, which involves their unreality, will be found to conserve rather than, as "Wanderer" avers, "to disorganize a normal dealing with life." The opposite attempt to get rid of these errors while affirming their reality has not in all the centuries advanced the world to a position of sinlessness. No man can be deceived by counterfeit money when he has learned its unreal character, and certainly it is consistent practice to eliminate it from circulation. Christian Science wars against sin and disease, "not as one that beateth the air," but as having expectation of victory over counterfeit concepts about God's creation, man and the universe.

✧

[W. G. Watkins in *The Northwestern*, Oshkosh, Wis.]

The world has heard much about "the devil," but it remained for Mrs. Eddy to explain that the devil is purely mental, and that it had its origin in the "fleshly mind," alias the belief of life in matter, which is ever at "enmity against God." Mental pictures of the devil, or evil, designed to terrorize people into heaven, have never resulted in bringing any permanent surcease from the world's bitterness and woe. What humanity really needs, and the only thing that will ever enable one to acquaint himself with God "and be at peace," is a right apprehension of Him whom St. John defined as Love.

It is well said on page 357 of "Science and Health with Key to the Scriptures" by Mrs. Eddy, that "if mankind

Digitized by Google

would relinquish the belief that God makes sickness, sin, and death, or makes man capable of suffering on account of this malevolent triad, the foundations of error would be sapped and error's destruction ensured." The Master, who knew better than any one else the remedy for devil or evil, said that a grain of faith would remove mountains; in other words, a little genuine dependence upon God would do wonders for humanity. Evidently the world has heard enough about its troubles. Its one great need is to know more about the remedy, and this can be found nowhere except in the realm of right thinking, in the realization of the kingdom of heaven, which is ever within consciousness.

There is nothing in the realm of justice that warrants unkind reference to Christian Science, and there is no explanation for it, except that it is history repeating itself. I think we can all agree that the world will be much improved when the ministry of the gospel comes to mean more demonstration and less faultfinding. This kind of ministry would exclude aught else than the healing of the sick and the reforming of the sinner, in conformity with the Master's teaching and practice. It must be said of Christian Science, and greatly to its credit, that it is teaching its adherents to acquire the much needed art of being about their Father's business and incidentally attending to their own.

✧

[F. W. Fearnsides in *The Northern Whig*, Belfast, Ireland]

Your correspondent's statements seem to imply that a Christian Scientist should be infallible. It is kind of him to esteem Scientists so highly. However, the Christian Scientist does not claim to do more or better work than did Jesus' early disciples, and your correspondent will recall how, as recorded in three of the gospels, these disciples on one occasion failed to heal a child. As I indicated in a previous letter, your correspondent's charge of failure is not against Christian Scientists, it is against humanity itself, for there is surely none of your readers but has at some time, perhaps many times, failed to receive something hoped for and paid for, although from the nature of things it could not be positively promised. The ranks of Christian Scientists contain innumerable persons who, after vain and expensive search for health in other directions, have at last found it in the healing truth as revealed in Christian Science. One of the Master's most imperative commands was, "Heal the sick."

✧

[Frank C. Barrett in *Lewiston* (Maine) *Journal*]

Mrs. Eddy, the best authority on the subject of Christian Science, says: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being. If Christian healing is abused by mere smatterers in Science, it becomes a tedious mischief-maker. Instead of scientifically effecting a cure, it starts a petty crossfire over every cripple and invalid, buffeting them with the superficial and cold assertion, 'Nothing ails you' " (Science and Health, p. 460). From this it must be quite clear that Christian Science treatment does not depend upon will-power or the declaration that "nothing ails you."

Jesus said, "Ye shall know the truth, and the truth shall make you free." Truth frees us from that which is false, no matter what the error may be. When the Master spoke of the woman "whom Satan hath bound, lo, these eighteen years," he did not speak of her as having been bound by Truth, but by Satan, whom he declared to be a "liar." His knowledge of Truth enabled him to detect the false bond of the liar, or deceiver, and free the woman from its false claim. This process of eliminating evil through an apprehension of the truth of being, which destroys evil, is not will-power, but spiritual understanding.

Christian Scientists have learned to think of all evil, sickness, and disease as discord, error; and in order to free themselves or others from any discordant condition it is necessary to rise in consciousness beyond the reach or taint of evil and dwell "in the secret place of the most High," and there "abide under the shadow of the Almighty." When one is thus "hid with Christ in God," and realizes that man made in the image and likeness of God is always protected by his heavenly Father, then the promises in the ninety-first psalm are renewedly fulfilled, where it says, "There shall no evil befall thee, neither shall any plague come nigh thy dwelling," and "With long life will I satisfy him, and show him my salvation." This most holy communion with God is the method of Christian Science practice, and cannot be confused by the most casual reader with mental suggestion or will-power. Mrs. Eddy says that this spiritual sense "is a conscious, constant capacity to understand God. It shows the superiority of faith by works over faith in words" (Science and Health, p. 209).

Jesus never resorted to drugs, surgery, will-power, hypnotism, or such things. He healed every kind of disease by the same process, and said, "He that believeth on me, the works that I do shall he do also; . . . because I go unto my Father." He was going away, but he expected his works to be perpetuated by his followers. How, may I ask, is it possible to do the works he did except by his method? No one questions the surgeon's skill with the knife or the physician's ability to set a broken bone any more than one would question the ability of a carpenter to hew and join timbers. Both require knowledge and skill and are more or less mechanical operations. But cutting off a limb does not cure it, nor does setting a broken bone mend it. Christian Science has proved its efficacy in relieving pain and reducing inflammation in surgical cases; in fact, it has often been successfully resorted to in preference to having a dreaded surgical operation performed. We should not presume to limit God even in this direction, because though sometimes "with men it is impossible," it is not so with God, "for with God all things are possible," as the Master said.

Until we learn to have absolute faith in God and understand that "in him we live, and move, and have our being," we shall have difficulty in drawing the line between "faith on one hand, and drugs, surgery, will-power, and the like, on the other."

✧

[Willis D. McKinstry in *The Wellington* (Kan.) *News*]

Christian Science is not a mere "think you are not and you are not" method of healing. It is founded upon a divine basis, or scientific truth, with a Principle and rule of application. Man's being is not a happen-so proposition; he is the child of God, who is "the same yesterday, and today, and forever." Therefore man created in God's image and likeness must be, and is, as perfect and indestructible as the source of his being.

The question of misfortune and accident belongs to what St. Paul chose to call the "carnal mind," and such conditions have no place in the realm of reality or spiritual existence. Yet Christian Science does not disregard or refuse to take notice of these manifestations, but gives them a hearing at the bar of Truth and deals with them according to divine justice. As the spiritual fact of being is realized by mortal man, he is able, as was Christ Jesus, scientifically to correct every discordant and unnatural condition of human belief. Thus, through the process of spiritual discernment, the human misconception of existence yields to an understanding of the divine creation, into which nothing can enter that defileth or maketh a lie.

The Memorial Fund

Rochester, N. Y., May 6, 1916.

To the Board of Directors of The Mother Church, The First Church of Christ, Scientist, Boston, Mass.

Dear Friends:—We the members of First Church of Christ, Scientist, Rochester, N. Y., in regular quarterly meeting assembled, desire to pledge our loving loyalty to the Board of Directors of The Mother Church on the occasion of the annual meeting, and as a token of our love and loyalty, both to our Leader and the Board, we are enclosing a draft for one thousand dollars ($1000) for the memorial to Mary Baker Eddy.

Very sincerely,

C. E. Wilson, Clerk First Church of Christ, Scientist.

[In response to the many inquiries from the field in regard to the memorial fund, the treasurer, Mr. Dickey, desires to say that contributions may be sent to him at his office address, Suite 500, 236 Huntington Avenue, Boston, Mass.]

"Pray without ceasing"

One of the readily available assets of the Christian Scientist is that of unceasing prayer. Wherever he is, however pressing the emergency, instantly he may lift his heart in prayer to the omnipotent and all-loving Father, with the same assurance that it will be heard and answered as Jesus had when he affirmed, "Father, I thank thee that thou hast heard me." The Christian Scientist has learned that to "pray without ceasing" means a constant striving to enter into the kingdom, to labor to the end that in thought, word, and deed he may be obedient to the great commandment which bids men love God supremely and their neighbor as themselves. If, therefore, in his daily living he is manifesting love, it may be truly said of him that his life is an unceasing prayer.

Such prayer, Mrs. Eddy tells us, "is answered, in so far as we put our desires into practice" (Science and Health, p. 15). If our desire is for holiness, for health, for protection, then our part is to begin at once to manifest holiness or health, for the promise to those whose supreme desire it is to do always the things which are pleasing to the Father, reads, "Before they call, I will answer." Everything that is good is already ours; the prime necessity is that we realize our heritage. If we are children of the King, we must live up to our obligations. If our Father is omnipotent, we cannot for a moment admit even the possibility that there is any other power. When we come to see this clearly, we shall speak and act "as one having authority," and find the answer to our prayer in the overcoming of all that is unlike good.

Paul strikes the key-note of true prayer in one brief phrase, "In every thing give thanks." To many people this requirement seems quite as unreasonable as that which calls for continual prayer. How can any one be thankful when he is sick, or needy, or sorrowful, is their plea; and then they waste time and energy in explaining how long this particular error has held them and how long—years, it may be—they have had treatment, yet their healing has not come. Surely there is something to be thankful for even so. Who can say how much heavier the burden would have been but for the faithful work of the practitioner, the unceasing affirmation that because Truth is omnipotent, evil is powerless! No declaration of the truth can fail in its final accomplishment. The woman whom Jesus lifted up had been in bondage eighteen years, yet the bond was severed as if it had been of yesterday's forging. She had come into an understanding of the truth, and she found her freedom.

The grateful heart will always be able to find something for which to give thanks, and the spirit of thanksgiving will be voiced in loving deeds, calling forth more gratitude; until the balance is overwhelmingly on the side of good. When this kind of prayer has become habitual with us, doubt and discouragement will have been left far behind—we shall know of a surety that God is Love, and that Love is unfailing good. The constant declaration of good and the denial that evil has either place or power, no matter what personal sense may affirm, is the open door to freedom when we suit our action to the word. Old beliefs must be cast off, their assertions of power disclaimed, until the new man with his dominion over evil is disclosed and our prayer is answered.

Jesus taught his disciples to pray for daily bread—not the supply for tomorrow, but for today. On page 17 of Science and Health we find the spiritual interpretation for this "daily bread" is "grace for today,"—grace from the never-failing fount, yet grace which must be sought daily, hourly, over and over again, if we would realize Love's bounty in all its rich abundance. Even so must the Christian Scientist be faithful in his daily prayer for the establishment of the "reign of divine Truth, Life, and Love" in his own thought, with its attendant denial that evil can find entrance to a consciousness thus defended (see Manual, Art. VIII, Sects. 4, 6), if he would have that wholeness of being which can claim with joyous assurance, "I will fear no evil: for thou art with me,"—the unceasing prayer of faith and understanding.

Archibald McLellan.

"In spirit and in truth"

The fourth chapter of John's gospel is much studied by Christian Scientists, because it presents in such definite terms the distinction made by Christ Jesus between spiritual reality and mortal belief. We have in it a vivid picture of the great Teacher sitting beside Jacob's well, "wearied with his journey," hungry and thirsty, and waiting for his students to return with some food. As he sat there a Samaritan woman came to draw water, and it seemed natural that he should ask her for a drink. The woman, however, at once voiced racial and religious prejudice, and tacitly refused to grant his request. Instead of arguing the case from a material viewpoint, Jesus at once declared for the spiritual basis of existence which makes all men kin. He began by telling her of "living water," and although she was evidently well grounded in dogma and tradition, she failed to comprehend his words: but nothing daunted, he went on until that immortal declaration was reached: "God is a Spirit: and they that worship him must worship him in spirit and in truth."

It would seem that this woman was a thinker, but without any true moral standard, as are so many today; indeed this standard can never be found anywhere except "in spirit and in truth." She had sought happiness in drinking from the shallow cisterns of material belief,—where it can never be found,—and now she was to learn, from one who knew, of God as Spirit and man as a spiritual being. Her heart must have been deeply touched when Jesus told her that the Father was seeking the true worshipers, and that spiritual worship is not a characteristic of time or place, but a vital fact which lays hold upon eternity. On page 78 of Science and Health we read: "Spirit blesses man, but man cannot 'tell whence it cometh.' By it the sick are healed, the sorrowing are comforted, and the sinning are reformed."

In spite of mortal and material belief, there is no true

Digitized by Google

healing, comfort, or reformation until one is awakened to the fact that because God is Spirit man is spiritual. Then for him true worship and true living must ever be in spirit and in truth. Most people are willing to admit that if there is a future life man will then be spiritual, but it is generally held that he is material now, though some would say that he is both material and spiritual. Christian Science, however, unequivocally teaches that "Spirit is God, and man is His image and likeness. Therefore man is not material; he is spiritual" (Science and Health, p. 468). The Master said to the Samaritan woman, "The hour cometh, and now is, when the true worshipers shall worship the Father in spirit and in truth," and to these words we may well cling.

We read that when the disciples returned, bringing material food, Jesus refused it, telling them that he had other meat than that of which they knew, and that it was found in doing the Father's will. The momentary appeal of the physical senses in hunger, thirst, and weariness had been silenced by his declarations of spiritual truth, and he saw, far beyond that hour, the harvest time when humanity would live by truth spiritually discerned, and we rejoice in knowing this at the present day. Christian Scientists have at times to meet strenuous objections to their efforts to include in their divine service or "worship" the healing of the sick without material means, but the student of Christian Science finds his authority and support in the Master's words, "Whosoever drinketh of the water that I shall give him shall never thirst; but the water that I shall give him shall be in him a well of water springing up into everlasting life."

This divinely provided remedy for human want and woe is ever with us, and though the well is deep, it cannot be said that we have "nothing to draw with." Little did the Samaritan woman know that the understanding of Spirit and of Truth reaches infinite depths and brings up the living water, but we know it today through the faithful work of our revered Leader, Mrs. Eddy, and rejoice in being able to prove for ourselves the truth taught by Christ Jesus.

ANNIE M. KNOTT.

Forbidden Fruit

THE history which in general belief has followed one of the episodes of the story related in the the third chapter of Genesis is a gigantic illustration of the truth of the proverb which saith, "Behold, how great a matter a little fire kindleth!" So simple an incident as the fall of an apple within the visual angle of a great thinker is said to have resulted in the discovery of a law with which every earthly creature and thing has to do, and that every instant. Physicists would very likely name the perception of the truth that all bodies attract each other directly as the mass and inversely as the square of their distances, a truly monumental milestone in the history of thought. Nevertheless how relatively trivial the significance of Newton's observation, and his deductions therefrom, when compared with what Christian belief has ever attributed to Eve's disobedience in eating an apple.

The sixth verse of this chapter is the heart of the story, and as understood in Christian Science the following verses simply describe the systole and diastole of error, the order and sequence of the mesmerism of that false belief which is common to all mortals. Here the alluring subtleties of untruth assumed their fairest guise. The fruit seemed good, its eating pleasant, its assimilation conducive to the gain of wisdom. Hence its use seemed a worthy life-end, and this thought is still entertained by the many. How vast the number of those who link their concept of happiness, of ideal conditions, to certain material possessions! They might hesitate to say that this was their life-end, in view of the disappointment and wretchedness historically associated with worldly abundance, but their daily doings make this, their sense of values, clearly manifest. The contention of every temptation of material sense places us all and always at this point of determination, the parting of the ways. The moral quality of every act is fixed at the moment we choose between a higher and a lower motive, so that the story of the garden is not a far-away affair. It enters into every human life every hour of the day.

There is no man who has not heard the voice of the serpent, and the practical redemptive value of Christian Science is found in the fact that it enables one to foresee the outcome of consent to the appeal of material sense, and effectually deny the asserted necessity or mortal law which impels us to dishonor our noblest concept of life. No teaching of this Science is more fundamental and far reaching than its declaration that the false sense-testimony, which is well-nigh universally believed, is the forbidden fruit, the eating and acceptance of which has entailed all the sorrows and sufferings of human experience. "Human hypotheses," writes Mrs. Eddy, "first assume the reality of sickness, sin, and death, and then assume the necessity of these evils because of their admitted actuality. These human verdicts are the procurers of all discord" (Science and Health, p. 481). Upon the testimony of material sense physical scientists have for the most part based their every conclusion respecting the nature of being and the constitution of man. Here they have found what is named the data for sane and legitimate deductions; hence the teaching of Christian Science that this basis is altogether deceptive, and that to honor it is to interdict the gain of a demonstrable knowledge of Truth, becomes revolutionary.

The forbidden fruit is not the overindulgence of a legitimate appetite. It is illogical to say that matter is good and of God, but that excessive materiality, the dominating rule of this asserted good, is evil. Such belief is rebuked no less surely by common sense than by Christian Science; and though this Science has greatly astonished the world in its insistence that to believe in and rely upon the material is to repeat Eve's offense and invite the penalty which attended it, nevertheless it is certainly true that no more needful service could be rendered mankind than in the perception and proclamation of this fact.

JOHN B. WILLIS.

A Letter from Mr. Buskirk

The following letter from the Hon. Clarence A. Buskirk is self-explanatory. The Directors are appreciative of Mr. Buskirk's years of faithful and loyal service, and they wish him the fullest measure of success and well-earned satisfaction in the continuation of his work as a Christian Science practitioner.

South Bend, Indiana, April 21, 1916.

To the Board of Directors of The First Church of Christ, Scientist, in Boston, Mass.

Dear Friends:—After due consideration I have concluded to request your Board not to reappoint me to be a member of the Christian Science board of lectureship for the year beginning on the first of next July.

In this connection I wish to express my profound and grateful appreciation of the fact that I have been deemed worthy of a place in this important branch of service in our movement during the last eleven years. I wish also to speak of the great joy and manifold benefits which have come to me in this sacred service, but I desire to be able to devote more time to the other general activities pertaining to the life of a

Digitized by Google

Christian Science practitioner, and feel that in withdrawing from the lecture field I am only exchanging one line of activity and labor for other activities and labors in our movement.

In taking this step I wish to express my unqualified appreciation and gratitude for the very great and constant kindness, consideration, and courtesy invariably shown me by all the members of The Christian Science Board of Directors during the last eleven years, and for the loving helpfulness evidenced by the Board during all that time.

Most sincerely and truly,

CLARENCE A. BUSKIRK.

Among the Churches

Current Notes

GLASGOW, SCOTLAND.—First Church of Christ, Scientist, has distributed during the past year 6019 *Sentinels*, 1332 *Journals*, 29,921 *Monitors*, and 2926 miscellaneous pieces, a total of 40,198 pieces. The *Journal* is supplied to eleven hotels and one hydropathic. The *Sentinel* and the *Herold* are in the libraries. Forty-eight *Monitor* subscriptions, of which twenty-eight are donated, come to the committee weekly, direct from Boston. One goes to the U. S. Consulate and ten to the libraries.

The weekly distribution from the office of the publication committee includes: six army headquarters, sixty-five barber shops, seven docks and ferries, thirteen fire stations, ten garages, eighteen hotels, twenty-two institutions, forty lighthouses, thirteen railway stations, five reading-rooms and clubs, four Red Cross rest rooms, thirty-six restaurants and tea rooms, six theaters, and five miscellaneous.

Distribution Committee.

LOS ANGELES, CAL.—The beautiful new home of Sixth Church of Christ, Scientist, is to be built in the near future, according to an announcement made by those in charge of the work. Already plans and specifications have been approved and contracts awarded for the erection of a church building on Forty-second and Wadsworth Streets which will cost thirty thousand dollars.—*Los Angeles Express.*

The Lectures

Cedar Rapids, Iowa

Frank Bell delivered a lecture on Christian Science in the edifice of First Church of Christ, Scientist. William Chamberlain, former city attorney, in introducing the lecturer said:—

Since the earliest days of recorded history, mankind has been seeking for the truth. In the arts and sciences the search has gone on unceasingly and successfully. But in no field of human thought has the desire to know the truth been so earnest and sincere as in that of religion, and though nearly two thousand years have passed since the birth of the greatest teacher of all time, it is inspiring and encouraging to feel that we now have those among us who are learning to know and practise the truth as he knew and practised it, and as we believe he intended us to.—*Correspondence.*

❖

Grand Forks, N. Dak.

Bicknell Young lectured on Christian Science at First Church of Christ, Scientist. He was introduced by William H. Greenleaf of the extension department of the University of North Dakota, who said:—

It is not my province to express to you my own conception of Christian Science; but in presenting the lecturer of the evening I may perhaps point out the force and vitality of the Christian Science movement and call your attention to the opportunity and the necessity of knowing the truth about it, for it is developing as never before throughout the world. If Christian Science be founded upon a fallacy or upon a false assumption, then we should know it, that we build not our house upon shifting sand; if it is based upon that ultimate truth which all the world is seeking, then we should know it, for if it is of the truth, neither you nor I, nor all of us together, can ever stop its course.

In speaking of the vitality of the Christian Science movement, I am impressed with the fact that it never saw such sweeping progress as it sees today. For nearly fifty years its opponents have awaited its passing as one of the transitory religious phenomena of the world. Christian Science has been attacked, ridiculed, and buried by its opponents a thousand times, yet today it has a greater hold upon the thinking world than ever. People who had thought that this movement was based upon a single human personality and that it must go down with the passing away of Mrs. Eddy, find it difficult to explain the fact that during the present year there are seven times as many Christian Science *Quarterlies* used as there were in 1909. During the past fiscal year eighty-six new organizations have been formed, and there has been an increase of one hundred and sixty-eight recognized practitioners, who devote their time to the healing work, while the movement has grown perceptibly throughout the entire world. Fifty years ago there was a single Christian Scientist; today the influence of that one Christian Scientist is felt in millions of lives.

Numbers are not always the most convincing argument, even of the vitality of a cause. To me a stronger evidence of the force of the Christian Science movement is the power which it seems to possess to draw all types of men. Christian ministers who once attacked it as antireligious have today in more than one instance accepted its philosophy as the logical culmination of their religious seekings. Lawyers and judges of standing who once ridiculed the "schoolboy logic of an impossible theory of life" are today among its prominent defenders. Physicians who once opposed this teaching as a foe to public health are today members of the Christian Science church. Men with university degrees in science who once saw in this religion an attack on the great progress of natural science are today active in the study of an absolute Principle which, its followers claim, underlies but does not overthrow other forms of scientific thinking. Men with keen intellects, who have had what we may call the philosophic viewpoint toward the world, have seen the simple statements of Christian Science which they once tossed aside as too childish to answer, broaden into a deeper logic and a philosophy of life that would give their intellects room for all the exercise of which they are capable. The unlettered workman, untrained in thinking and investigation, has just as truly found the thing he wanted, and he has applied a Principle which he believes he can prove is true.

The lives of thousands have been reformed and the sick have been healed through the acceptance of the Christian Science viewpoint,—that point of view which has attracted men of every type and condition, and which intellectual pride and prejudice, whether learned or unlearned, will never disclose. The last evidence I will mention of the vitality of the Christian Science movement is this: that today much of the world's thinking along the lines of natural science, of philosophy, and of religion, is approaching quite near to the point of view of Christian Science. This is a fact which is

Digitized by Google

surprising in its significance, and one for thinking people to face.

My purpose this evening is neither to support nor to condemn the philosophy of Christian Science, viewed as a study in itself. I am here to express the belief, if you will, that for one reason or another the greatest single force toward better living and nobler accomplishment in the world today is in the Christian Science church, and that no movement in the world today and no movement in the past century has had the essential vitality which marks the spread of Christian Science. I submit that we who want the truth, whatever it is, should seek to know the truth, without fear and without prejudice, and that we should face the issue squarely. I am not speaking hastily or carelessly, for this is a serious subject, but I venture the assertion that we must face the issue, for with Christian Science the world will have to deal.

Correspondence.

Lectures to be Delivered

CALIFORNIA—Sacramento (Second Church): Frank Bell, Tuesday Club House, 3 p.m., May 28.
San Rafael: Frank Bell, Red Men's Hall, 8 p.m., May 27 (instead of April 27).
CANADA—Chatham, Ontario: John W. Doorly, I. O. O. F. Auditorium, King Street, 8 p.m., June 1.
Fort William, Ontario: William D. McCrackan, City Hall Auditorium, 8 p.m., May 29.
Port Arthur, Ontario: William D. McCrackan, Lyceum Theater, Cumberland Street, North, 8:30 p.m., May 30.
St. Catharines, Ontario: Bliss Knapp, Griffin Family Theater, 8:15 p.m., May 28.
Welland, Ontario: Bliss Knapp, Grand Theater, 3 p.m., May 28.
Winnipeg, Manitoba: Clarence C. Eaton, Church Edifice, River Avenue and Nassau Street, 8:15 p.m., June 1 and 2.
COLORADO—Trinidad: George Shaw Cook, West Theater, 8:30 p.m., May 22.
ILLINOIS—Chicago (Third Church): Virgil O. Strickler, Church Edifice, Washington Boulevard and Leavitt Street, 8 p.m., June 1 and 2.
Chicago (Ninth Church): George Shaw Cook, Woodlawn Masonic Temple, University Avenue and Sixty-fourth Street, 8 p.m., May 29 and 30.
Glencoe (auspices Highland Park): Charles I. Ohrenstein, Public School, 8 p.m., May 27.
Morrison: Bicknell Young, Church Edifice, Genesee and Wall Streets, 8 p.m., May 25.
Ottawa: Virgil O. Strickler, Church Edifice, 116 Lafayette Street, 8 p.m., May 30.
Waukegan: Bicknell Young, Armory, County Street, near Grand Avenue, 8 p.m., May 27.
INDIANA—Logansport: Bicknell Young, New High School Auditorium, 8:15 p.m., May 30.
Muncie: Bicknell Young, High School Auditorium, 3 p.m., May 28.
IOWA—Waterloo: Virgil O. Strickler, Waterloo Theater, 8 p.m., May 22.
MAINE—Bath: Clarence W. Chadwick, Music Hall, 8 p.m., May 29.
Calais: William R. Rathvon, Church Edifice, Germain Street, 7:30 p.m., June 1.
Vinal Haven: William R. Rathvon, Christian Science Hall, 8 (instead of 7:30) p.m., May 25.
MASSACHUSETTS—Amesbury: Jacob S. Shield, Washington Hall, 8 p.m., June 2.
Brockton: Jacob S. Shield, City Theater, 4 p.m., May 28.
Cotuit: Dr. Francis J. Fluno, Freedom Hall, 8 p.m., May 29.
New Bedford: Jacob S. Shield, Church Edifice, Mill and County Streets, 8 p.m., June 1.

Testimonies of Healing

I desire to give my testimony of healing through Christian Science in deep gratitude to this teaching and in thankfulness that it came my way; also because all the literature, including the expressions of gratitude in testimonies, helps me every week. While it is now three and a half years since I first read Science and Health, it has only been during the last year that I have gained something of the peace "which passeth all understanding." I have delayed giving my testimony until this peace became more permanent, as I knew I had not arrived at the spiritual uplift I longed for. My healing has been slow, the result, no doubt, of impatience and the assumption of a load that was beyond my present understanding and strength. After being in bed five months with severe internal inflammation, due to a wad having been left after an operation two years previous, I sent for a copy of Science and Health.

I had suffered for several years and had undergone treatments and operations repeatedly before coming into Science, but none of the operations were successful and the last one was supposedly to prevent me from being an invalid for life. Even then I did not get the health anticipated, and in preference to another operation I wrote for Christian Science literature to a friend who had mentioned the subject some months before. I read Science and Health, but without understanding the full import of the teaching, and though grateful, I found it difficult not to believe in *materia medica* for some other long standing ills which seemed stubborn.

Now I can most gratefully mention the healing of several ills, and I am fast realizing what it is to be well and not feel tired continually. I am grateful for the kind help received from others, for there have been times when I have needed it very much. The renewing of the mind indeed lifts us to a higher plane of thought, and in the crisis we are now going through in England and other countries we need to gain an understanding that will help where help is so urgently needed, that help which heals. I shall hope and strive to give as much as I have been given.

CONSTANCE MCNEILL, Norfolk, England.

Christian Science came to me in 1910, when I was visiting a friend, a Christian Scientist. I was so impressed by her loving life that I wanted to learn more of the truth she lived, and so determined to take up the study of Christian Science in earnest. At that time my physical condition did not disturb me so much as the mental, for I was very unhappy. I was not at all satisfied with the God I learned about at church, a God who sent suffering and sorrow, and to whose will we must submit even though, as we believed, that will had been to send sickness and inharmony to the members of our family. Talks with my pastor and those who seemed to be earnest Christians only confused me, because they never gave me a God whom I could understand as the "gentle presence, peace and joy and power" (Poems, p. 4).

When Christian Science found me I was laboring under a constant sense of discouragement; it seemed impossible even to smile, and I felt bitter toward God and man. I had a most disagreeable disposition and constantly criticized those about me. Coupled with the necessity of earning my living was a feeling of incompetence and great timidity. I tried to be good, but seemed the more sure to fail the harder I tried. I hungered and thirsted after righteousness, but did not know how to find it. What Christian Science has been to me no words can tell. Only a lifetime of consecration can even partially express my gratitude to our dear Leader for her love and purity, her closeness to God which brought us this truth.

Christian Science has given me a God who is with me every moment, a peace that passeth understanding, and a happiness of which I had never even dreamed. This knowledge of the presence and power and allness of God healed me of chronic stomach trouble and weak back, of influenza in one night, of colds, headaches, throat trouble, and many other ailments. A seeming loss of memory, the result of an operation, has also been replaced by a very good memory. As I see more clearly the perfect man of God's creating, I feel a greater love for all mankind, which displaces the old feeling of criticism and bitterness. Material conditions are vastly improved, and there is continuous progress, even though it may seem slow, with an ever-increasing sense of freedom and harmony. Not a day passes that Christian Science does not help me to work out many problems.

In my efforts to understand Christian Science I value most highly the class instruction which I have received. It is my constant prayer that I may help others as I have been helped, —expressing the same tender sympathy and wondrous love, a reflection of the infinite love of God, that has been shown to me.—NINA DE GROFF, Baltimore, Md.

When Christian Science found me I was most miserable, having been an invalid for eighteen years with a complication of diseases. Fifteen doctors had tried to relieve me of my sufferings but without avail, and each succeeding year found me getting worse, so that the outlook was dark indeed. My illness kept me from attending church, but that did not seem a hardship, particularly as I failed to see wherein the people who went were following the teachings of Jesus. I used to tell my mother that if I knew how to pray, God would heal me. My people were orthodox, and one dear brother was a minister, but although loving and kind he was never able to satisfy my desire to know how to pray aright.

The chapter on Prayer in Science and Health gave me that for which I had so long been looking,—the ability to realize the ever-presence of God in time of trouble. The following diseases have been healed through Christian Science treatment: stomach disorder, which caused terrible distress upon eating the simplest foods; lumbago, the pain from which caused many sleepless nights; influenza, which was a regular winter visitor; neuralgia, which accompanied every exposure to cold air; kidney trouble, which was so bad at times that it seemed almost impossible to stand the pain. My sufferings made me long for death, as I felt that God would forgive me for my sins after I had passed out, and relieve me from all my fears and sufferings.

When I read in Science and Health that my birthright was health, freedom from pain, dominion, I began to try to regain that inheritance, and I can truthfully say I have been healed of all the diseases before mentioned, and many more which did not seem so important. Self-pity, self-righteousness, unforgiveness, faultfinding, criticism, and hate, are some of the mental conditions which have been largely overcome. I have learned to love every one of God's creation, to know that God loves my neighbor just as well as He loves me, and that I must see the child God loves and not the counterfeit.

Some of the healings came quickly, others somewhat slowly; but through the loving help of a patient practitioner I felt assured that God's promises were true, and would be manifest in my case if I was faithful. When Christian Science found me I was so weak I could hardly walk; but last year, through the passing out of a dear one, I was called on to prove the ever-presence of divine Love, and was wonderfully sustained

Digitized by Google

throughout the trying experience. I had learned that God is my strength, and I was able to do much physical work. Again, the thought of being parted from one I loved most dearly was met by the assurance of no separation in the realm in which God's child lives, moves, and has his being.

For the past five years divine Mind has been my only physician, and for all the blessings that have come to me through the understanding of Christian Science I am indeed grateful to God, the giver of all good, and thankful to Mrs. Eddy for having so clearly and lovingly shown us the way to eternal harmony.—Louise T. Harris, Cresskill, N. J.

I rejoice in the privilege the *Sentinel* affords of giving my testimony of healing. The testimonies of others have cheered and strengthened me a great many times, and I hope these words may also help some one in need. When sixteen years of age I was examined by a surgeon of high standing, who said I had a "malignant growth of a tumorous nature" and advised an operation within two days, saying the growth was near the heart and should not be allowed to go on. This examination was made in accordance with the wish of my father, who was not a Christian Scientist, but after the diagnosis he consented to my having Christian Science treatment for a time.

The practitioner was steadfast in her faith in God's power, and in the course of a few months I was healed. I did not spend one day in bed, so far as I remember, though at times the pain seemed severe. The healing has been permanent, and I am now a strong, well woman. I only recall the conditions when I want to tell others of my healing, so they too may know that to God there are no incurable diseases and that He loves us all without partiality. I have had the added blessing of class instruction, for which Mrs. Eddy has so lovingly provided, and the association meeting each year is very helpful and corrective, clearing away the mists and establishing lofty ideals of work for the coming year.

I would like to take this opportunity to thank the Publishing Society for the genuine helpfulness of the weekly *Sentinel* to us here, as we are shut off from communication with many other Scientists. It is surely doing a great deal of good and we are grateful for it. I would also express my appreciation for all the Christian Science periodicals. To one to whom church privileges seem to be denied at present, they are especially full of meaning and joy.

Leona Jaqua Tomlinson, Tokio, N. Dak.

I have received so many benefits from Christian Science that I can never cease to be grateful for the peace and joy that have come into my life. From childhood I had been subject to stomach and bowel trouble, and finally became almost helpless. A physician who diagnosed my case as appendicitis treated me for a long time, but there was no permanent benefit. Then I went to other doctors and an operation was advised. I was refused life insurance because the examining physician said that I was afflicted with chronic catarrhal appendicitis, and unless an operation were performed there was little to hope for. Another physician was consulted, and he said that an operation would be useless, as the trouble could not be reached in that way. I became very despondent at the gloomy outlook. Everything I ate disagreed with me, and because of weakness I was compelled to give up my position.

Although I knew of Christian Science, I did not think it could heal me; but having taken all the medicine that was given and having tried everything in a material way without any more than temporary benefit, I determined to try Christian Science, thinking it might relieve the worry anyway. A practitioner told me a little about this teaching and gave me a treatment. The relief was instantaneous. The pains and distress in the stomach and bowels were forgotten within half an hour after I left the practitioner, and a bowel trouble that had been very stubborn vanished in a few hours. This occurred over five years ago and none of the ailments have ever returned.

After taking up the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, my gain was rapid. In about a week I was able to lay aside glasses that had been worn for several years, and my eyesight is better now than it ever was. I have been eating whatever I wished without fear of disastrous results, and am strong and well, even capable of great exertion. My physical appearance changed so rapidly that I had to be introduced to some former acquaintances.

That which causes even more gratitude than the physical healing, however, is the change in my disposition. Before coming into Christian Science I was cranky, quick-tempered, eager to take offense. Through the little understanding gained of the reality of being, I have learned to look at my brother with love and speak to him with gentleness; and I receive love and gentleness in return. This one thing has done more to change my life than anything. The renewing of the mind has transformed the clouds of gloom and hate into the sunshine of cheerfulness and peace. My gratitude for Christian Science is very sincere.

Ernest Gehrung, Los Angeles, Cal.

I was perfectly healed of tubercular disease of the lungs in my first Christian Science treatment. At the time I knew little about Christian Science, and what I had heard was mostly against it. Since babyhood I had suffered from weak lungs, and I steadily grew worse, until in 1903 physical conditions became aggravated. My relatives were hopeless and for a year I struggled against the fear of death. In the spring of 1904, while a sophomore student in high school, I consented to have Christian Science treatment.

One morning, after a terrible night of coughing, my mother asked if I wanted a lady who was a Christian Scientist to pray for me. The friend was a girlhood chum of my mother, and for months previous had kindly brought Christian Science literature to us, but as we were members of another church we gave it little attention. The day of the treatment, which was an absent one, I felt relieved. I rested well that night, and the next morning went to school, healed! I was given the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, to read, and from it I gradually learned what had healed me. From the first of my healing I recognized a great power and loved it.

I continued my high school studies free from sickness, and later entered a university. When eighteen years old and at college, I began to attend the Christian Science Sunday school. There I gained a practical understanding of the Principle which is Life and Truth. During the years since then I have learned that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). All that I have I owe to Christian Science, and I am one of its grateful beneficiaries.—Florence E. Nichols, Salem, Ore.

My first interest in Christian Science came through reading some *Sentinels* that were given me. After reading the testimonies I was so impressed with their sincerity that I said to myself that nothing but the truth could accomplish this healing. Ever since then I have enjoyed the testimonies of others,

Digitized by Google

and I am so grateful to those who have told their experiences that I feel like thanking them all.

Words cannot express my gratitude to those who write the articles for our periodicals. From the time I read my first *Sentinel* until now I have never failed to find the rebuke, help, comfort, or inspiration I needed, in whatever periodical came to hand. At one time I was healed of a severe cold by reading an article in the *Monitor* in which the writer quoted the verse of Scripture ending, "Therefore with lovingkindness have I drawn thee." The true meaning of "lovingkindness" was brought out so clearly that I seemed for the first time to understand it. I had always thought it easy enough to be kind,—often it is much easier and pleasanter to do the little kindness than not,—but was I always "loving" in my "kindness"? I gave myself a careful examination on that question, and then I realized how love, the love that reflects divine Love, must underlie every thought, word, and deed if we are truly to bless those we try to help. By the time I had finished the article and the "mental house-cleaning," so much of a discordant condition of thought had been destroyed that the cold was gone and I felt entirely free.

My gratitude for the physical healing was indeed great, but the spiritual light that had flooded my consciousness and purified my thought enough to make the healing possible, was cause for even greater rejoicing. I cannot do enough to prove how grateful I am to God that I have found Christian Science. To Mrs. Eddy, who discovered this truth and presented it to the world, my heart goes out with constantly increasing gratitude and appreciation. My constant desire is to help others to come into this great truth.

Emily M. Tispel, Muskogee, Okla.

✧

I am very grateful for what Christian Science has done for me. Several years ago I was healed of what would be called tubercular disease of the throat. I could not sleep, and could not eat without forcing the food down. I was much reduced in weight, and was so tortured by mortal mind that I cannot express myself as to the way I felt, but I was weak and full of fear and worry. I could not attend to my duties, and at every opportunity I would have to lie down.

I went to a Christian Science practitioner, as my mother was determined I should go, but I had very little faith that she could help me. I can truly say, however, that relief came immediately, as I slept soundly that night for the first time in eight months. Although my healing was slow, I can say today that the same world which seemed so dreary a few years ago looks brighter than ever to me. I am thankful for the spiritual uplift and the understanding of God, and for the harmony which it has brought into our home.

For all these wonderful blessings I am sincerely thankful to God. I am also grateful to our beloved Leader, Mrs. Eddy, and to all those who helped me find this saving truth.

Bertha Wiedeke, Dayton, Ohio.

✧

I owe a debt of gratitude to Christian Science, which has revealed to me the power, presence, protection, loving-kindness, and goodness of God. When this teaching was presented to me in London, England, some nine years ago, I was a wreck, both physically and mentally. The mental condition was such that I could not put a sentence together, and the physical condition seemed almost hopeless. A diet cure was tried, and for three weeks I had practically nothing to eat. At the end of that time I was worse than before, and this means of cure had to be relinquished. Then osteopathy was tried, but it had no permanent effect. Finally, nothing was left for me but to find a religion which would satisfy, and I turned to the Bible for help. It was then that I found Christian Science. My first healing was instantaneous, and came through the reading of Science and Health. An organ which was displaced returned to its position. Other conditions yielded slowly, but for four years I struggled on and to a certain extent gained my freedom.

It is, however, for a more recent healing that I especially desire to express my gratitude, since this experience showed me just what Christian Science stands for and what it means to be a Scientist. I was again a physical wreck from nervous breakdown. For several weeks the improvement was gradual, until there was brought to my consciousness the spiritual truth that we have the Christ with us, and in that moment, just for a second, I caught a glimpse of the meaning of that wonderful declaration of Jesus, "I and my Father are one." For several days these truths stayed with me, and an article in one of the *Journals* was most helpful. I saw not only what the accumulation of right thought meant and was going to mean to me, but that I was simply adding my quota to the accumulated right thinking of the world which is to bring in universal peace, universal salvation.

As I pondered these things I became grateful. Gratitude had been unknown to me for years, and in proportion to my gratitude Science and Health became a new book; its pages were illumined. Soon I experienced the sense of being regenerated, strong, free,—free in the freedom of spiritual law, strong in the might of divine Mind,—and I again felt the joy of living; the joy of overcoming not alone physical suffering but wrong thinking; the joy of knowing God was with me, that where I went He went, and that He was taking care of me. I am grateful for the realization of these truths which bring health, holiness, harmony to mankind, and the consciousness of the kingdom of heaven on earth.

Agnes Aitchison, New York, N. Y.

✧

Early in 1913, while attending school, I was taken ill with a severe case of bowel trouble. At this time I was working nights, and although after supper I went to my place of employment as usual, I was compelled to return home immediately. Previous to this I had had several attacks, and on one occasion was under a physician's care for two weeks. This time, however, I was interested to a certain extent in Christian Science, so we called on a practitioner for help, and after the first treatment I was greatly relieved. At the end of a week I was able to return to school and to work, and have been in perfect health ever since.

For this healing, and for other blessings, I am sincerely grateful to Christian Science, and to all who have helped me in my study of it.—Raymond Fritscher, Chicago, Ill.

✧

Christian Science found me almost a complete physical wreck. For many years I had tried material remedies and my case had baffled many doctors. While traveling in the hope of regaining my health, this truth was presented to me. At that time I was very much discouraged and had little faith in anything, but I am glad to say that I consented to have treatment. I have found in Christian Science the "pearl of great price," for my healing was instantaneous. I had heart trouble of long standing, and the doctors considered it of a serious nature. I was deaf in one ear and gradually becoming so in the other, as a result of taking medicine prescribed by the doctors to keep the heart in action. I had stomach disorder and bowel trouble, the bowels being paralyzed, and nervous chills would set in at the least exertion. These ills and many others have been overcome.

We are theatrical people, a family of six, and are all

Digitized by Google

interested in this great truth that makes free. Each one has been healed many times of different ailments. My youngest daughter was healed of tubercular disease of the glands, and the eldest of a severe case of skin disease. My son, who is before the public at all times, being a singer, was instantaneously healed of hoarseness by absent treatment. Before asking for help he could not speak above a whisper, and within an hour after sending a telegram to a practitioner he was able to sing as clearly as before the trouble appeared, thus proving how powerful the truth is when we put our full trust in God, and also plainly showing that divine Love meets "every human need" (Science and Health, p. 494).

Mercifully for us, God does not withhold His blessings, although we often delay in giving expression of our gratitude until the truth forces us to acknowledge our benefits. I give my testimony with the hope that it may benefit some one as I have been benefited by reading the testimonies of others. I am grateful not only for the healing of sickness through Christian Science, but for the spiritual uplift that turns night into day and leads me "beside the still waters."

FLORENCE S. ANDERSON, Ogden, Utah.

✧

[Translated from the German]

I wish to express thanks for the proofs of God's goodness that I have received through Christian Science. This last winter my face, ears, and hands became badly frost-bitten, and this caused me to worry greatly. My face was very red and swollen, and there was a discharge. I was afraid to go on the street, as people would look at me with a frightened expression. The physician whom I consulted being unable to relieve me, I applied to a Christian Science practitioner for treatment, with the expectation of being helped, and it took but a few days for a cure to be effected. There was a marked improvement on the second day, when the swelling went down and the pain ceased. I would also mention a fine instance of healing when on one occasion I badly bruised a finger. I can but say that the thanks which I am expressing herewith are given in a spirit of great joy and deep sincerity.

WILHELM SCHWARICK, Neustadt i. Sa., Germany.

✧

It has been about twenty years since Christian Science came to me, when I was a physical wreck in both mind and body. There was a complication of ills,—nervous prostration, heart disease, liver and kidney trouble, and stomach disorder; indeed I was all broken down and did not care to live. I could not sleep or eat, and the last doctor told me I could live but a short time. Then I turned to Christian Science, and am now in perfect health. I am grateful to Mrs. Eddy for giving us this truth, and sincerely thank God for my healing. I am earnestly striving to live in obedience to the Mind of Christ, and I love my Science work more and more each day; it is my all.

MRS. M. J. FLANDERS, McGregor, Iowa.

✧

I have been healed through Christian Science of chronic catarrh of the stomach and bowels, of appendicitis, spinal trouble, extreme nervousness, heart disease, severe headaches, and a skin disease of ten years' standing. Before coming into Science I was operated on for the removal of an abnormal growth, which I always feared would return; but this fear has been overcome. I was also healed of ovarian troubles and other ailments too numerous to mention. I had been a great sufferer since childhood, and for ten years I visited the doctors. I am indeed thankful to God and grateful to Christian Science for the many blessings I have received, and also for the spiritual uplift.—ROSE OLSON, Chicago, Ill.

From Our Exchanges

[Junius B. Remensnyder, D.D., LL.D., in *The Constructive Quarterly*]

Christians were meant to constitute a brotherhood. Our Lord's great sacerdotal prayer was, "That they all may be one." I cannot believe that this was meant to be merely a spiritual unity. Moreover, if there was a true spiritual unity we would not dwell apart. But it is precisely diversity of faith that causes these different denominations. Schisms in the faith are the cause of schisms in the church. It almost broke the mighty heart of Luther to strike the blow that severed the visible unity of the church in the middle ages; but it was an imperative necessity to save the true faith.

The deplorable schisms in the church come from two causes,—some insist on too little, while others demand too much. Rationalists would make the platform so broad that one holding the essential Christian faith could not conscientiously stand upon it, while conservative reactionaries would narrow it to traditions untaught in Scripture. Only by avoiding both these extremes can we come together. That we should constitute one great universal church there can be no doubt. Our Lord and head must be deeply interested in this unity of those who call themselves after his name.

[*The Homiletic Review*]

As never before the Christian world has challenged its systems of philosophical theology. Doctrinal religion, centered in a plan of individualistic salvation, has so utterly failed to master the world conscience that it is today openly discrowned and rejected. When the world's hour of supreme need arrived,—nations confronting each other in fear and jealousy and hate,—individualistic theology was futile as a dream. It had no world concepts, no world language. Its formulas for saving souls were "well meant" for mint, anise, and cumin, but for a world need they were as a "rule of thumb" against a continent. The nations needed salvation from their old traditions and customs; those destructive theories of government and international relations had grown and ripened under a system of religious thought which ignored their existence. Theology was interested in souls, not in men. Its business was to get as many men as possible safely out of the world, instead of making the world a better habitation for all men. If the church has been convicted of the sin and folly of its individualistic teaching, as we may hope and believe it has, when peace and sanity return the social gospel of Jesus Christ will be preached to the nations with something of its original authority and power.

[*The Advance*]

Jesus never thrust himself between the soul and God. He came, not to obstruct the way to God with a scheme difficult to understand, but to facilitate the way to God and to guide the way. "I am the door," he said. "I am the way, the truth, and the life." "I came . . . not to do mine own will, but the will of him that sent me." There is no intrusion of the Christ. Christ is divine; his divineness is from God. The Son is subject to God the Father, and God is all-in-all. Christ is the way; he is not in the way. He is a vehicle, not an obstruction.

[*The Universalist Leader*]

The new evangel is what all are looking for, some through crude and outworn fashion, others along hasty paths of speculation, where the new is ever greeted as the true. But after all, is not the one thing we seek, not the gratification of the selfish, not safety self-seeking, but, as it is put in the newer language of the new time, the Christianizing of this

Digitized by Google

every-day life? And what more can be needed? To take our Christianity as the dominant motive power of our every thought and every act! This between two men, and there is peace; this between two groups of men, and there is peace; this between nations, and there is peace. When we begin to think of our Christianity, not as a theological speculation, not as a creed to commit to memory, but as a program of life in all its relations, with ourselves, with each other, and with God,—this is the new evangel, to Christianize every-day life.

[*The Christian Work*]

The most hopeful thing about the new spiritual consciousness that is dawning on the world is the fact that its great word is realization, not renunciation. For centuries men have believed that the only path to the spiritual life led away from the real world of action. So the anchorite fled to the desert, and the monk prayed alone in his cell! But if so-called spiritual vision half starves the body, impoverishes the natural affections, weakens the mental powers, producing a pallid, ghostlike, anemic personality, the modern world will not consider it of high value, and the modern world will be right. Not through leanness, but through fulness of life, not through renunciation, but through realization of all the wealth of resources that lie potentially within every individual, is found the pathway to attainment for the new mystic of today.

[*The Christian Register*]

Prophets themselves, if they could come down after a thousand or two years to see how God has actually brought things to pass, would learn much of His will which their foresight did not reveal. Before things happen, and men have only reason and insights and arguments for their guidance, the will of God must seem to them to be contained in their conclusions. But after they have happened there is a clear and infallible revelation. It is the revelation of what He has done, and what in the course of human events has become established.

[*The Biblical World*]

No man is a Christian who believes that anything injurious is right. No man has the spirit of Christ who is content to permit wrong to live quietly. Personal comfort, life itself, is as nothing compared with the giving of justice for which Jesus himself died. That is a heroism quite other than that of the soldier who seeks to aid a good cause by injuring its enemies.

[*Pacific Christian Advocate*]

Not many names are applauded, but there are always enough torch-bearers to pass the light of truth from hand to hand until it reaches some giant who lifts it aloft, blazes his name among the stars, and makes the greatness for which he stood a potent thing in the thought and deeds of other men.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

Every sorrow, big or little, is a summons away from what is only of the flesh and a beckoning toward what is rooted in the spirit. Nothing can ever really be taken from you that has ever been yours in the spirit; it only ascends, so to speak, and you are called to follow it.

[*Zion's Herald*]

There are plenty of things on which good people may unite without needlessly multiplying words and arguments about non-essentials. The "world within our reach" is that for which we are in some measure at least responsible. We should make it better!

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Law and Work" is the title of a new pamphlet containing the following articles: Love Fulfils Law, The Logic of Christian Science, Undisturbed, God's Law of Adjustment, Authority.

The increased cost of binding the periodicals has necessitated making an advance in the selling price of the bound volumes. The new prices, which take effect April 1, are as follows:—

JOURNAL.—Volume 32 (April, 1914 to 1915). Cloth, $3.00; half calf, $3.75.

SENTINEL.—Volume 16 (September, 1913 to 1914) or Volume 17 (September, 1914 to 1915). Either volume, cloth, $3.25; half morocco or half calf, $4.00.

For all other bound volumes of *Journal* or *Sentinel* write for prices.

DER HEROLD.—Volumes 5 to 12 in cloth, $2.75 each; volume 4 to 7 and 9 to 12 in half morocco, $3.50 each; volumes 4, 5, 9, 10, 11, 12, in half calf, $3.50 each.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Miscellaneous

A Catalogue of Selected Bibles will be furnished upon application, and quantity rates on other items specified below will be found in the current catalogue in *The Christian Science Journal*.

BIBLES. 01483 x. Clarendon Brevier, heavy-faced, distinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.75.

01440 x. Brevier, light-faced type; self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.50.

Morocco slip case to hold pocket edition of Science and Health, *Quarterly*, and Bible, $1.25.

Two other sizes of slip case listed in the current issue of the *Journal*.

Covered morocco case with handle and purse on outside, $3.50; without purse, $3.25.

01683 x. Large type Bible, 10¾ x 8 inches, bound in Alaska seal. Specially adapted for use of second readers, $9.25.

The improved index will be added to any Bible listed in our catalogue for an additional charge of 35 cents. Catalogue No. 22 of selected Bibles will be mailed free upon application.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. 132 pages with index. Paper covered, 15 cents; cloth binding, 85 cents.

THE LIFE OF MARY BAKER EDDY. By Sibyl Wilbur. 424 pages. Cloth, $2. Edition de luxe, $5.

"PERSONAL CONTAGION" and "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Paper cover, 10 cents.

THE MOTHER CHURCH. By Joseph Armstrong. A history of the building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated, 107 pages. Cloth, $1.50.

CHRISTIAN SCIENCE: ITS LEGAL STATUS. By Judge Clifford P. Smith. 128 pages, paper covered, 10 cents.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, $1.15; half morocco, $1.40; full morocco, $2.50; levant, $3.50; pocket edition, size 4⅝ x 6⅝, $3.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission, have been set to music as follows: "The Mother's Evening Prayer," 75 cents; "Christ, My Refuge," 75 cents; "Love," 40 cents; Communion Hymn—"Saw Ye My Saviour?" (Johnson), 50 cents; "Blest Christmas Morn," 27 cents; "O'er Waiting Harpstrings of the Mind," 27 cents; "Shepherd, Show Me How to Go," 27 cents; "Saw Ye My Saviour?" (Root), 27 cents. The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing. 8-inch (mount 12 x 16), $1; 12-inch (mount 15 x 20), $2; 16-inch (mount 21 x 29), $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18 x 24 inches, $5; on India paper without remarque, $3. Smaller reproduction, size 11 x 14 inches, on Japanese vellum, $1. Photogravure post-cards, reproduction of the picture of the Church Edifice and Publishing House, 5 cents.

QUARTERLY COVERS in black morocco, $1.15; with purse, $1.40.

ALUMINUM LESSON MARKERS. Set of thirty, with paper shields, 50 cents. Extra paper shields, one hundred, 15 cents.

PRICE LIST OF BIBLE CONCORDANCES and DICTIONARIES OF THE ENGLISH LANGUAGE supplied on request. Express charges collect on delivery.

REPRINTS (not printed in English). Two-page leaflets, 14 subjects in French and Swedish; 19 subjects in German. Ten copies to one address, 10 cents.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Send all orders for the works of Mrs. Eddy, with remittance by New York or Boston draft or money order, direct to Allison V. Stewart

For literature listed above address orders and make remittances payable to

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to page four in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for the year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.25; half calf or half morocco, $4.00. On earlier volumes write for prices.

Items of Interest

The National Geographic Society in a bulletin says: "If the United States and Denmark strike a bargain and the three islands which comprise the Danish West Indies are transferred to the former, the sale will mark the culmination of a bit of bartering which began nearly fifty years ago, when the American Government offered $7,500,000 for the 138 square miles of territory in the Antilles. The sale was not concluded because the United States Senate failed to ratify the treaty. Fourteen years ago negotiations were renewed, and a price of $5,000,000 was agreed upon, but this time the Danish Parliament refused to sanction the sale.

"These three islands of the Virgin group—St. Croix, St. Thomas, and St. John—were discovered by Columbus in 1493. Spanish, British, French, Dutch, and Danish flags have floated over one or all of the islands at various times. St. Croix, lying sixty-five miles southeast of Porto Rico, has an area of eighty-four square miles, and is the most prosperous of the group. St. Thomas, which lies only forty miles east of Porto Rico, was at one time the chief distributing center of West Indian trade. The chief port, Charlotte Amalie, with a population of less than ten thousand, mainly negroes, is still an important coaling station for steamers in the West Indian trade. With a depth of from twenty-seven to thirty-six feet of water, the roadstead can accommodate the largest merchant ships which sail these seas. St. John, the least important of the islands, lying four miles to the east of St. Thomas, has an area of twenty-one square miles. It is scarcely more than a ten-mile mountain ridge with but one distinguishing feature, Coral Bay, the best harbor of refuge in the Antilles."

A well-known landscape architect, to whom the chairman of the conservation department of the General Federation of Women's Clubs referred the question of a planting scheme for the Lincoln Highway, says: "In a general way I believe that the highway should be broad, not a mere insignificant roadway, but one that would exemplify the character and the greatness of Lincoln. I figure on a 150-foot road, including the planting spaces, leaving the highway itself 60 feet wide. This in time would permit a trail for pedestrians where cities are closer together, or perhaps a bridle path. The planting scheme should be so devised that it would represent the best trees and shrubs and native flowers of each state. Architecture should be subservient to the landscape and built out of native material,—everything simple and friendly.

"Where the highway passes through cities, the character of the country should follow the roadway through the city, and in that way distinguish the Lincoln Highway from any other city road. We want strength and dignity by using our best trees and by making the road broad. We want those things that the birds love, so we may have their company. The road should possess the character of the country and not of the city—by that I mean that the less of architectural expression we introduce the more we will have of that free and open country that Lincoln knew and that Lincoln loved."

According to an article in the *Manufacturers' Record* by Charles Catlett, an eminent chemist, potash as a by-product in iron making is now feasible to an extent which will greatly lessen the cost of iron production and make available a supply of potash which can be increased to meet the fullest needs of the country. Taking as an illustration of what may be done certain iron ores in Alabama which carry a large percentage of potash, he states that even at prices prevailing before the war the potassium cyanide by-product in furnaces operating on these ores would be equal in value to twenty-four dollars a ton for every ton of iron made. He takes the ground that where ores such as these potash-bearing ores are used, more than six tons of potassium cyanide can be saved as a by-product for every one hundred tons of iron produced. On other general runs of ore there is a possible saving of from one to two dollars a ton, or an aggregate saving in our iron production that may run from forty to eighty million dollars a year in the cost of the iron output of the country.

The United Coast and Geodetic Survey, department of commerce, is about to make a resurvey, by the wire-drags method, of Massachusetts Bay, between Nahant and Cape Ann, and of the western part of Cape Cod Bay between Plymouth and the Cape Cod Canal. Similar surveys in the vicinity of Boston last year had such important results that the work is to be continued. A number of new buoys are in position, several of the old buoys have been shifted, and the accepted deep channel to the Cape Cod Canal is over a mile farther off shore than previously.

Alnwick, a private home, together with 400 acres of the surrounding estate, has been given by a will to the people of Youngstown, Ohio, for an art gallery and public park. The total value of the bequest is something over a million dollars. Alnwick is a massive stone pile of recent construction containing sixty-five rooms, including a ballroom with a large pipe-organ. The structure is located in a 1000-acre tract, from which it is directed that 400 acres shall be taken for the development of a public park when the dwelling is converted into a gallery.

Work has been completed on the Elephant Butte dam, a United States reclamation service project which, by damming the Rio Grande 120 miles north of El Paso, Texas, forms the greatest storage reservoir in the world. This reservoir will feed an irrigation system that will water 185,000 acres of land in New Mexico, Texas, and Mexico. It will store the entire flow and flood of the river, for its full capacity will be 115,000,000,000 cubic feet of water, which reclamation service experts say would cover the state of Delaware to a depth of two feet. Confined to a four-foot pipe this body of water would encircle the earth seventy times.

Announcement is made of the closing of options by the United States Government on about fifty thousand acres of the famous Biltmore estate in Asheville, N. C. The Government holds options on about eighty thousand acres of this estate. The land in question lies in Henderson and Transylvania Counties, and will be added to the Appalachian forest reserve. The consideration is said to have been about two hundred and fifty thousand dollars.

A public attorney, to whom could be submitted all questions of law by the poor and unfortunate of a community and who would prosecute and defend all cases where one of the litigants had no funds, is proposed for Kansas. Three years ago a bill of this kind was introduced, but failed to pass because it was such an innovation.

A bill has been introduced in the Cuban Congress which if it should become a law would seriously affect every foreigner owning or hoping to own property in Cuba or its adjacent islands, inasmuch as it provides against foreigners acquiring property there and requires those who are owners already to dispose of their holdings within ten years.

The Eastman Kodak Company has appealed to the United States Supreme Court from the decree of the New York Federal district court, which held the company was imposing a restraint on interstate trade in photographic supplies, and ordered a division of its property into separate corporations of distinct ownership.

A preliminary statement of the general results of the 1914 census of manufactures for the leather industry has been issued. Reports were received from 767 establishments having a total output valued at $347,512,939. During 1914 there were tanned in the United States 138,547,692 hides and skins of all kinds.

All railway safety records were broken in 1915 when 325 American roads, reporting to the bureau of railway news and statistics of Chicago, went through the entire fiscal year to June 30 without a single fatality to a passenger in a train accident. The roads reporting operate 161,948 miles of line.

Mount Washington's famous old Tip Top House, which was burned last year, is to be rebuilt. This house, which succeeded the first shelter erected by Ethan Allen Crawford in 1823, was put up in 1853, and has been familiar to generations of visitors to Mount Washington.

Commerce reports say that a law recently passed by the Chilean Congress and approved by the council of state authorizes the President to invest 10,000,000 pesos ($3,650,000) in the construction of public buildings on sites now held by the Government.

A favorable report has been made to the House of Representatives by the public lands committee on the Kent bill to establish a bureau of national parks.

During the past winter season unusual catches of fish have been made on the west coast of Norway. Prices ran high and large profits were made.

The Massachusetts Institute of Technology will dedicate its new buildings on the Charles River Basin, across from Boston, June 12 to 14.

Yale University has just received by will a bequest of $500,000 to be used for general purposes.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII May 27, 1916 No. 39

Safeguarding the Home of Thought

IRVING C. TOMLINSON, M.A.

Two would-be visitors are ever awaiting admission to the home of consciousness, and the kind of reception which we extend to them, strange as it may seem, determines our peace, health, and comfort. Giving access to one, we bring discord, discontent, and distress upon ourselves. If we receive the other, we have in our mental home the light, the peace, and the comfort of Love. It is an axiom that true or false thinking determines the coming or going of our guests, whether welcome or unwelcome. If the homekeeper's thoughts are full of self, ignorance, or sin, one of these two will be absent, while the other will become an ever-usurping tenant. On the other hand, if the good host is cherishing unselfishness, charity, and meekness, then the honored guest makes frequent calls and is a welcome member of the family, while his dishonored counterfeit fails to find the latch-string out at his approach.

Each of these visitors brings with him a goodly supply of apparel in which he seeks to clothe his host. The one has new raiment of the finest texture, free from soil or rent. The other coaxes the owner of the house to garb himself in tattered garments, stained and bedraggled. The curious situation is, that once having admitted these guests and thereby given them dominion, he can but robe himself in the clothing which they provide. If the entertainer is cordial toward the agent of discord and disease, he will find himself garbed in the soiled, torn rags of impurity and hypocrisy; but if he extends a glad reception to the representative of Truth and Love, he will be clad in "the robe of righteousness" and "the garment of praise."

The thoughtful reader has already guessed that these two visitants who ask the hospitality of the fireside are spoken of in the Bible as "the Son of man" and "the prince of this world." Of the first it is said, "When the Son of man cometh, shall he find faith [receptivity] on the earth?" Of the other it is written, "The prince of this world cometh, and hath nothing in me." The Son of man is "The Prince of Peace." The prince of this world is the false god of discord and disruption. The dwelling-place of the former is the kingdom of heaven, the regnancy of wide-flung harmony. The abode of the other is the realm of fear and hate, the domain of warring human will-power.

The companions of the Son of man are angel thoughts of peace and good will. The associates of the prince of this world are the demons of disunion, discord, and disease. Of the former it is written that he shall "arise with healing in his wings." Of the latter it is said, "Ye lade men with burdens grievous to be borne, and ye yourselves touch not the burdens with one of your fingers." The Son of man begets in those about him tender compassion, spiritual love, eternal life. The prince of this world engenders bitter strife, widespread suffering, and untimely death. The Son of man is the reflection of Truth, and when he comes, if he finds trust in Principle and faith in good awaiting him, then he takes his place in the family circle, an abiding presence. He enters into the inner recesses of the heart, and human consciousness is flooded with blessings.

On page 270 of Science and Health we read, "The pride of priesthood is the prince of this world." Among its other names are human will-power, fear, selfishness, doubt, envy, resentment, uncharitableness, and ingratitude. When this prince of darkness appears, if he finds responsiveness to his base suggestions he makes himself at home, and soon the easy-going householder learns that he is entertaining a sorry company who pass by the names of sin, suffering, discord, disease, and death. How vastly important, then, for the welfare of the master of the house, is the character of the reception he extends to the representative of Truth and the representative of error when they knock for admittance. Both cannot be entertained at the same time. He who plays host to the prince of this world repels the coming of the Son of man; but where the Son of man abides, there the prince of this world is never admitted.

When the great Master said, "The prince of this world cometh, and hath nothing in me," he must have fully realized what it would mean to him to make good his declaration. It is written of him that "he came unto his own, and his own received him not." Those to whom he brought the light of Truth, the peace of God, rejected and crucified him; yet in his bitter experience he did not lose faith either in God or in himself. He manifested no false sense of self-depreciation, but held fast to the Father's love and to himself as the divine idea of infinite Mind. His true follower will therefore refuse to notice a slight, and will not give heed when unkind words are spoken, but knowing the false as unreal, and holding firmly to the truth of being, free from self-condemnation or justification, he will remain calm and joyous, reposing ever in the sunlight of good, thus proving, as did the Son of man, that the prince of this world finds in him no response, no place in the home of his consciousness.

When Jesus was betrayed by Judas, how truly was it shown that the prince of darkness had nothing in the Prince of light! This base act of ingratitude aroused in the Master no sense of resentment. All the bitter experiences of the crucifixion made him in no way resentful toward either God or his fellow men. Likewise with the Christian Scientist, should a friend prove false or seem neglectful, if this wide-awake disciple overlooks it and holds only love in his thought, then he puts off sickness and puts on health. Resentment is an open door for the incoming of discord and its attendant ills, while love dwells in "the secret place of the most High," and so the forgiving one abides "under the shadow of the Almighty," far remote from this world's ruler.

Perhaps the severest test came to Jesus when he was deserted by his friends; yet even then there was no sense of self-pity, no indication that he gave way to despair. Through his strong confidence in the ultimate victory of Truth he paved the way for final and complete triumph. So with the present-day disciple; if under the maltreatment of those who should be his friends he puts aside everything like self-pity and thinks only of the many things for which he has to be grateful, continually knowing that man is God's reflection, he

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

will shut the door in the face of the prince of this world, and furnish indisputable proof that the Son of man is come and has found an abiding-place in his heart.

Mrs. Eddy gave careful instructions to her followers to be ever on guard for the coming of the welcome visitor and the rejection of the unwelcome one. She wisely selected as the name of our weekly messenger of Truth, *Christian Science Sentinel*, and for its motto she chose the well-known words of Jesus, "What I say unto you I say unto all, Watch." Of this scientific, literary representative of "The Prince of Peace" she says that it is "intended to hold guard over Truth, Life, and Love;" and elsewhere she writes: "There is no door through which evil can enter, and no space for evil to fill in a mind filled with goodness. Good thoughts are an impervious armor; clad therewith you are completely shielded from the attacks of error of every sort" (The First Church of Christ, Scientist, and Miscellany, pp. 353, 210).

The watchful doorkeeper, true to his trust, allows only such visitors to cross the threshold as are welcome to the family. No rebels, no traitors, no enemies to God are permitted to enter. Contrariwise, the door is flung wide open to the coming of that visitor whose presence means strength, inspiration, and enlightenment to every member of the family. If one is true to the teaching of Christian Science, the prince of this world will never be admitted to the sacred place of consciousness, while the Son of man will ever be a welcome and abiding guest.

A Lesson from the Sunshine

LOUISE KNIGHT WHEATLEY

In a certain sunny window there hangs a small cut-glass prism, which, delicately swaying with every passing breeze, catches the sunbeams as they wander by, holds them for an instant, and then by the magic of its touch sends them into the room transformed into dancing rainbows. Into this rainbow room there entered once a young girl who seemed to be carrying a load of care truly greater than she could bear. Her story was like that of many others,—just the simple story of a belief in a great weight of responsibility; that loved ones were dependent upon her efforts, and that constant demands must be met which were far in excess of her slender income. After a long and desperate struggle, with no prospect of relief in sight, she had at last sought to find a way out of her difficulties through Christian Science. All through the recital of the conditions involved, the rainbows gleamed and glimmered, and as she finished, one of them lay at her feet, a long, tremulous shaft of light. Somehow the beauty of it seemed for the moment to crowd out all more serious thought, and the care-worn face relaxed a little as she glanced toward the window. "It just needs the sun, doesn't it?" she said.

It thus became a simple matter to point out to the eager listener the truth taught in Christian Science,—that as the rainbow is formed by the sun and receives its color and activity from it, so man, the child of God, is an expression of the divine nature, pure, beautiful, and good. It is so easy to see that a rainbow can be and do nothing of itself. Gloriously lovely though it is, if the sun were taken away it could not maintain its existence for a single instant. All this is equally true of man. Since God is Spirit, as the Master declared, man, God's image and likeness, is, must be, wholly spiritual. The belief that man is not wholly spiritual, but in part material, has resulted in a heritage to the human race of endless complications. We have been educated to believe that we all depend in some way upon one another, and an intricate fabric of human relationship has been woven from this supposition.

Humanity seems to be divided, in spite of itself, into two classes,—those who lean, and those who are leaned upon; those who are pushing and dragging, or those who are being pushed and dragged. Yet does not our gentle visitant the rainbow point out a better way, God's way? How obvious it is that none of its colors push or crowd or drag upon one another in their effort to exist. There is room for all, enough for all, a place for all. Does any one color have to shoulder the responsibility of the other six? Yet this is practically just what many a patient, overworked, overconscientious human being, staggering along life's highway, is trying to do. He is trying to carry the whole rainbow himself, and is tired of the struggle.

The one who had come carrying a burden, went away with a song in her heart instead. True, no sudden change had taken place in the outward situation. Nothing strange or spectacular had happened while she had been away from home. Her income had not been augmented since she left, nor had the demands upon it diminished; but her viewpoint had been changed, and that is sometimes the greatest thing that can happen to one. The weight of personal responsibility which had been crushing her to the earth was gone. She saw that her one responsibility was to know that the responsibility was not hers at all, but God's. As the wonder of it grew, she drew a deep breath of relief for the first time in years. She did not stop to analyze or question; she only knew that the weariness was gone, and as she made her way home she was so happy that she even stood still a moment to hear the birds sing, a thing she had not done since she could remember.

As time went on the simple, vital truth was learned that while human relationships are not to be ignored, nor human obligations to others lightly canceled, yet the right idea about these same relationships and obligations, held continually in thought, must inevitably result in the removal of all wrong and unjust conditions; and it was seen that in Christian Science there is indeed a way out of every human difficulty, no matter how hopeless it may at first appear. Even with their feet in the stocks, Paul and Silas sang songs of praise in the prison; and a little later "the foundations of the prison were shaken: and immediately all the doors were opened, and every one's bands were loosed." It is a significant fact that not only were the bands of Paul and Silas loosed, but freedom came to every one else in the prison as well.

Just so when relief from any wrong situation is obtained through the correct, scientific thinking which Christian Science enjoins, it must result in a blessing not to one only, but to all concerned. When and how the doors shall be opened and the foundations of the prison shaken is not for us to say. The Father knows, and in His own wise way, not ours, in His own good time, not ours, He will bring it to pass. The one important thing for us to do is to hold steadfastly to the truth which underlies every human situation, no matter how complicated, remembering always that a faithful, persistent mental effort in the right direction cannot fail to bring about that glorious freedom which is the rightful heritage of every child of God.

And here we are reminded of Mrs. Eddy's words on page 295 of Science and Health, where she says: "The manifestation of God through mortals is as light passing through the window-pane. The light and the glass never mingle, but as matter, the glass is less opaque than the walls. The mortal mind through which Truth appears most vividly is that one which has lost much materiality—much error—in order to become a better transparency for Truth. Then, like a cloud melting into thin vapor, it no longer hides the sun."

Christian Science says to each weary one: Your task is

Digitized by Google

easy, after all. You have only to maintain such crystal-clear transparency that the light you send forth may be beautiful and bright. After a while a tired world will catch the gleam of Truth's rays, and will rest a moment from its workaday grind to note their radiant loveliness and to wonder whence they come. It will not think of you at all,—and that is well. With eyes that have long been awearying for the vision, the world will look through you and beyond you to where shines the sun.

✧

Ark of the Covenant

GEORGE AUSTIN ANDERSON

MEN write history which subsequently is read by other men, and while it seems more than we may expect that every historian should write with discerning wisdom, it is nevertheless within the possibilities of every individual reader's attainment to read human history with a divining consciousness of the vast range of man's real being, and to see the incidents therein contained, not as facts in any final sense, but as symbols.

Since all history is typical of states through which every man in some sense passes, the interest which all come to feel in it is easily explained, and this is especially true with regard to the history of the people of Israel. In his essay "History" Emerson says: "There is no age or state of society or mode of action in history to which there is not somewhat corresponding in his [each man's] life. . . . This life of ours is stuck round with Egypt, Greece, Gaul, England, war, colonization, church, court, and commerce, as with so many flowers and wild ornaments grave and gay. I will not make more account of them. I believe in eternity." Though he reasoned well, the fact that this great writer failed to make due distinction between the divine Mind, whose expression is spiritual understanding, and mortal mind, whose function is idolatry, marks the inadequacy of his philosophy.

Throughout the ages mankind have acknowledged a power outside themselves and have looked to it for approbation, condemnation, and guidance. The essential unity which exists between God, the infinite good, and the real man, is counterfeited in the material concept of creation which simulates the divine. Here the order is reversed. Mortal man has made his gods in his own image and likeness,—whether this take the form of a graven image patterned after his physique, or whether he worship and serve his inner beliefs, his mortal mind misconceptions, the more general form of idolatry today, misnamed natural law. Both are phases of the belief of life in matter and of man as a creator, even the belief of a material birth and its subsequent growth, maturity, and decay.

From time to time men of God have moved among their fellows and made their mission felt even unto generations then unborn. Such indeed was the influence exerted by Abraham, Jacob, Moses, and the prophets. These men were the acknowledged leaders of their people. They were far more spiritually enlightened than their followers, and constantly taught and exhorted all such to be obedient to God's law; to uphold the covenant God had made with them and renewed from time to time after their various transgressions.

As we learn in Christian Science that matter is nothing, we find the incidents, places, and people in all Scriptural history to be indicative of states of mentality, for outer conditions are but the expression of inner being. Viewed in this light, Noah's experience in the ark is particularly helpful. On page 592 of Science and Health we are told that Noah stands for "knowledge of the nothingness of material things and of the immortality of all that is spiritual." Noah's faith, his spiritual understanding, was his saving ark; the spiritual concept supplying his every outward need at that time. The flood typifies mortal mind, tempestuous, turbulent, treacherous, and unstable, engulfing all who venture on its stormy surface unsustained by the ark of spiritual consciousness.

Christ Jesus was able to walk upon the waters because he was sustained by his understanding of Truth. True, in this experience there was no material symbol of an ark sustaining him; but this only shows the vast difference between the spiritual apprehension of Jesus and that of Noah. It is possible for each of us to be provided with this saving ark, which embraces all the ideas emanating from divine Mind, even as in Noah's ark were representatives of all living things. God is Mind, and from Mind emanate all things; God is the sole creator. We can conceive of Mind as expressing itself only in ideas, and these will be found in the ark of spiritual understanding.

Though to sense-testimony during the flood all was at the mercy of mortal mind, the ark rode securely, the only thing not engulfed. Spiritual understanding always has been, is now, and ever will be, above the testimony of the senses. Within this ark is perfect safety, and if we are content to abide here we shall eventually find ourselves firmly anchored on the mountain top of the revelation of divine Truth. Even now this mountain has appeared above the surface of the troubled waters, and winged thought has already brought to those within the ark the olive leaf, the spiritual evidence of abiding peace, the promise of a full salvation from sin, disease, and death. Mrs. Eddy defines ark as "safety; the idea, or reflection, of Truth, proved to be as immortal as its Principle" (Science and Health, p. 581). In this ark we may find refuge at all times, and there rest secure in the understanding of infinite Love.

✧

"Ye have need of patience"

ELSIE V. ALBERT

A MOST helpful illustration of the unfailing power of Truth as revealed to us in Christian Science came into my experience recently. About the middle of October I invested in six narcissus bulbs, thinking that by Thanksgiving day they would be in bloom. It was however found that the bowl was only large enough for five of them, so the sixth was placed by itself in another jar. Almost immediately the five began to thrive. In a couple of weeks the leaves and flower-stalks had unfolded and shot up. Then the buds burst forth, and about the middle of November the blossoms were full blown and fragrant. Even then the stalks kept on growing, and finally had to be supported.

The one lone bulb, on the other hand, had shown no sign of unfoldment. It lay there, an ugly brown thing,—and how many times the temptation came to throw it out as unworthy of any care! It was changed from one window to another, but all to no purpose. Often it seemed in the way, but the thought expressed by Paul would come again and again: "I have planted, Apollos watered; but God gave the increase." These words from Science and Health (p. 520): "Growth is the eternal mandate of Mind," were recalled, also this passage from another of Mrs. Eddy's works (No and Yes, p. 8): "We can rejoice that every germ of goodness will at last struggle into freedom and greatness." And so the days passed into weeks, until it was nearly Christmas time. At last a tiny green sprout told that the law of growth was there, and day by day the unfoldment went on slowly but surely, until a tiny bud appeared, and finally burst forth in perfect blossom, fragrant and sweet. It brought more joy than the other five, because of its wonderful lesson of patience, and it lasted when they were faded and gone.

Digitized by Google

Every one who has learned how to pray in the light of Christian Science has had abundant proof of the power of the word to heal instantly both physical and mental discords, and no one can be less than deeply grateful for the understanding which is "instant in season, out of season," for Truth, the ever-present remedy for all human ills. But the larger, deeper lessons come sometimes only after long weeks or even months of patient endeavor, persistent effort, and prayerful activity in endeavoring to let the Mind which was in Christ Jesus be also in us, and rule out of us the carnal thoughts of self-love and self-will in their insidious phases of evil. And how stubborn and tenacious seem these errors of mortal mind which so persistently refuse to yield to the sunshine of Truth and the gentle, persuasive ministrations of ever-present Love! Despite our stubborn, relentless obstinacy, however, the great Father-Mother Love, brooding over all earth's tired children, with infinite patience and tenderness leads each one to push through the tight wrappings of his self-enswathed mortal belief and step out of mental darkness into the liberty of Life and light.

Should we not therefore leave the unfoldment of each individual to the unerring wisdom which guides and controls every one of God's pure and perfect ideas, knowing that Truth and Love can furnish the only aids in this infinite task? Quick demonstrations give us courage and conviction, but those problems which seem harder of solution are fraught with supreme value to each one of us, because only through the persistent knowing and application of the truth are the divine attributes reflected. Only through "patient continuance in well doing" can we expect to win and wear the crown of the faithful.

James says, "Let patience have her perfect work, that ye may be perfect and entire, wanting nothing." And how clearly does our beloved Leader express the same thought on page 242 of Science and Health: "In patient obedience to a patient God, let us labor to dissolve with the universal solvent of Love the adamant of error,—self-will, self-justification, and self-love." Our part is to do our work, and then wait patiently for the divine influence to be manifested through the human concept.

Can we do less than strive to follow the perfect example of him who said, "I judge no man," and that of our Leader, who knew so well what it meant to wait patiently for a sin-sick and sorrowing world to accept the light she was pure enough to receive and impart. Paul says: "Cast not away therefore your confidence, which hath great recompense of reward. For ye have need of patience, that, after ye have done the will of God, ye might receive the promise."

✧

Being a Blessing

RACHEL NELKIN

THE promise, "Thou shalt be a blessing," quoted in a recent letter to the writer by a friend, recalled vividly to her thought how the application of the truths of Christian Science fulfils in the experience of its students this Scriptural promise to Abraham.

About three years ago, after the writer had caught her first glimpse of the unerring adaptability of Christian Science to every human problem, and experienced many blessings as a natural reward of its study, she became imbued with a great longing to share these blessings with all who came intimately in contact with her. In speaking of this impelling desire to her practitioner, who was also a faithful teacher, she voiced the fear that the spiritual gift she had to offer might be misunderstood and rejected. Being a Jewess, and moving mainly in a Jewish circle, she had often anticipated in thought the many difficulties she would encounter; at the same time she realized that she could no longer find any pleasure in following barren pursuits, nor enjoy or enter into idle, purposeless conversation and pastimes. The practitioner's reply brought light and joy, for it embodied the declaration that the student had a rich, spiritual gift to bring to her fellow men, and that she must be true to herself, the only self which forever reflects wisdom, spirituality, and truth. This advice was earnestly heeded and followed.

In "Miscellaneous Writings" (p. 354) Mrs. Eddy writes, "Experience shows that humility is the first step in Christian Science, wherein all is controlled, not by man or laws material, but by wisdom, Truth, and Love." These words made a deep impression upon the writer, and she rejoices in the many blessings she has received through the application of this truth. She has been healed of false and foolish pride, which is ever a stumbling-block to genuine friendliness and affection and a robber of spiritual riches.

With the loosening of the shackles of false pride and self-distrust, and the putting on of "the whole armor of God," prayer to be among those who strive to follow the Master and spread his loving and saving gospel, has been abundantly answered. Opportunities seem constantly to arise in which we may make—

> life most sweet, as heart to heart
> Speaks kindly when we meet and part,

as this thought is so lovingly expressed by Mrs. Eddy (Poems, p. 7). If we are alert we shall find that occasions multiply when it is possible to express the helpful, healing thought, to speak the encouraging word, to give the friendly smile, the audible thanks for the hitherto unnoticed courtesies often impersonally shown us, but which nevertheless help to make us comfortable and happy; to offer gifts spiritual and gifts material, out of the fulness of the heart.

Always, when thinking upon the blessings which Christian Science has brought her, the writer feels inexpressibly grateful for the unfathomable depths of this demonstrable religion made available for mankind by the efforts and devotion of Mrs. Eddy. Experience teaches how futile often is the explanation of the letter of Christian Science, but the spirit of it, the reflection of divine Love, is irresistible, and can always be lived and practised.

✧

Enlightenment Born of Experience

PETER V. ROSS

HEALING in Christian Science means vastly more than simply the alleviation of physical or mental suffering, however much to be desired that may be. It brings, among other things, that quickening of the understanding which makes possible the discernment of the process whereby truth is made to operate in human affairs and establish harmony where before discord had reigned. It also brings to light the method by which truth is utilized in order to maintain an already existing harmonious state against the attacks of evil in the various forms of sin and sickness which it attempts to assume. The writer has seen this illustrated in the experience of one who when he began the study of Christian Science was suffering from an eye difficulty for which glasses had been worn and treatment received from oculists for years without bringing more than partial relief. Through the application of Christian Science, however, the glasses were discarded and the sense of sight became normal.

A gentleman who had been told of this experience, called on the one who had been thus relieved, for confirmation of what he had heard, and in the course of the conversation he remarked that he could understand how Christian Science

Digitized by Google

could cure some disorders, but that he could not see how its processes, which are purely mental, could reach a condition due to malformation of the eye, to faulty curvature of the cornea. How, he asked, could the shape or form of a physical organ be changed by a metaphysical process. It then began to dawn upon the one whose sight had been restored that the physical eye, like the rest of the body, is simply the product of the human mind, that it is merely what human thought makes it. Hence the eye and the sense of sight will incline toward perfection or imperfection according as the human mind and its thoughts are perfect or imperfect. Wrong thinking is externalized in imperfectly developed organs and disordered functions, while right thinking manifests itself in human conditions which approach perfection, as we learn in Christian Science.

Obviously, therefore, if any structural defect or functional derangement exists to mortal sense, the thing to be done, in order to bring about a right condition, is not to treat the human body, but to correct that thought which controls the body and all its organs. In Science and Health (p. 228) Mrs. Eddy tells us that "mortals will some day assert their freedom in the name of Almighty God. Then they will control their own bodies through the understanding of divine Science." This is clearly a mental process, whereby the human mind with its erroneous and eccentric thoughts is brought under the compelling rod of the divine Mind and made to think healthful thoughts, a process which naturally brings about healthy bodies, for divine Mind knows and produces perfection only. As human sense is instructed by and brought under the control of the divine Mind, it takes on more and more the qualities of that Mind, and thus enlightened and governed it presents a more harmonious concept of man.

Possibly the figure of the compelling rod may suggest in this connection too much of force and coercion, something akin to human will-power, which is quite foreign to Christian Science practice. Human sense is perhaps to be corrected rather than compelled. Mrs. Eddy says, "If mortal mind knew how to be better, it would be better" (Science and Health, p. 186). What needs to be done, therefore, is not to coerce, suppress, or destroy human sense, but to enlighten it, free it from erroneous beliefs and concepts, so that the true idea of man may be gained and express itself accordingly in individuals, free from deformities and infirmities. Such instruction, however, necessarily effects the dissolution of mortal mind in due time, for when the images of disease are erased and errors are removed, mortality is swallowed up of immortality. The process is not, therefore, one of compulsion but of enlightenment.

In his letter to the Ephesians Paul says that "we wrestle not against flesh and blood, but . . . against powers, against the rulers of the darkness of this world." So in the application of Christian Science to the cure of the ills of the flesh we are dealing not with a condition of the human body or of its organs, but with a state of the so-called human mind; not with disease, but with the thought which believes in or produces disease. When metaphysical practice is viewed in this light, mystery no longer enshrouds its *modus operandi* in restoring health and harmony for spiritually advancing humanity.

When error seeks my sturdy craft
To wreck it on the reefs of fear,
I'll hoist the sail of faith aloft,
Nor doubt that God my course will steer.

FLORENCE E. GOLDTHWAITE.

Selected Articles

[Käte Weber in *Das Kleine Journal*, Berlin, Germany]

Since the article here following is a reply to an article which appeared in our columns, and since we wish to observe the rule of justice that one attacked should not be denied a word in his own defense (even though the attacked be "Christian Science"), we shall not refuse Fräulein Weber, publication committee for the Christian Science movement in Germany, a hearing. Our own point of view, however, remains unchanged by the acceptance of this article.—*Editor Das Kleine Journal.*

In *Das Kleine Journal* of Dec. 2 there appeared an article entitled "Hocus-pocus," referring to a sect in the east of Berlin claiming to heal the sick by means of magnetic influences said to be similar to the methods used for healing in Christian Science. I know nothing of this sect, but to judge from the article its tendencies have no similarity to those of Christian Science, whatever may have been said to the contrary in recent times. The prevailing notions about Christian Science may well be classified as "hocus-pocus," but this does not in any way connect them with Christian Science. They are illusions that exist only in the minds of those who hold them, and nowhere else.

The real life is conscious, spiritual activity. The sun never rotated around the earth and the earth never was flat. Spirits, witches, and sorcerers never existed, but for mankind they seemed to live as long as these false beliefs were held in thought. Slaves and bondmen never were necessities, but for millions of men this disgraceful condition was equal to a law of nature. And why? Because they believed in slavery as a necessity. Just as spirits, witches, sorcerers, were idols which existed only in human minds and nowhere else, so were slavery and bondage, and they had to be corrected there before they could disappear from experience. So it is with all things. The world, life, is for us as it appears to the consciousness of each, and this is why we all live in different worlds.

The thoughts of men are constantly changing, and all human conditions change with thinking. We live in a different world than did our savage forefathers, because our thinking is different from theirs. The changed thought is always the cause of changed conditions, in large and in small things. All discoveries that have been made are the result of improved thought. Mankind reaches out for truth and perfection, and truth and perfection are reflected in consciousness, and can only be manifest to us after we recognize them.

Mrs. Eddy, the Discoverer and Founder of Christian Science, knew that Jesus understood and taught spiritual law. She recognized that as life implies consciousness, all the functions of the body must be dependent on thought. She saw that all that is manifest to us materially is the result of our material consciousness. This material consciousness she recognized to be a mental activity made up of false thinking, and she named it mortal mind. By this she designated it as a condition of thought which is mortal because it is false. For everything that is wrong has to pass from human consciousness,—it never existed anywhere else; and that which is mortal never was true, never was real. Material, false thinking is not true mental activity, but rather a dream condition.

Mrs. Eddy recognized false thinking, mortal mind, as the cause of all inharmony. As a result of experience and observation, also through experiments in homeopathy, it became clear to her that this mortal mind controls all the activities of the human body. When emotions produce changes in the body, this is the proof that man controls his body through thought; and if this is true, he always controls it through thought, not in exceptional instances only. It is impossible that corporeal consciousness, made up of false thinking, can be the basis of existence. There must be a first cause, a primal Mind, an original consciousness. Mrs. Eddy says

Digitized by Google

(Science and Health, p. 278), "Spirit is the only substance and consciousness recognized by divine Science." The divine Mind must be perfect, for it must be eternal; and only perfection can be eternal, because perfection only is free from change and has stability. In reality perfect consciousness is the only consciousness there can be, for all false thinking is not real, not based on truth or reality, and it disappears as soon as the truth is recognized.

The failures of medical science, the uncertainty, the contradictions, the unreliability of its knowledge, and the statements of many prominent physicians, must lead thinking men to consider whether *materia medica* is really the means whereby mankind can obtain absolute and permanent health. Medical science has had plenty of time and opportunity to reach absolute conclusions. If Christian Science is right in this, that all is mental, the uncertainty and the lack of success of medical practice are explained. Medical science is based on materiality; it treats a material man as a being dependent on matter, and it consequently meets with contradictions and enigmas. It tries to explain the different effects on different individuals by the different so-called constitutions of men.

These constitutions are perhaps the greatest obstacle which the physician meets; and if they are the result of different conditions of thought in men, much becomes clear that seemed obscure before. The healing practised and recommended by Jesus would be an impossibility if men were a variety of machines inhabited by human souls, but it becomes clear when life is understood to be spiritual consciousness. Christian Science healing is based on the understanding that God is the only real, perfect consciousness, the idea of which is man. God is unchanging, and His creation must therefore be like Him,—perfect and unchanging. It is the understanding of God's law which heals man, and it is the fear of dangerous material laws which makes men sick.

The Bible teaches thinking on the basis of perfection; it teaches an omnipotent God, one perfect consciousness from which man in reality never can be separated, for he lives only because God lives. Without cause, there can be no effect. All separation from God is in consciousness only; it is false thinking, and false thinking has no reality; it is not eternal, but disappears together with its effects as soon as the truth is known.

No one will deny that mankind will yet go through many phases of thinking. What is this constantly changing thinking but the endeavor to reach Truth, the understanding of the laws that result in eternal harmony, in full happiness, for which we are all longing because our nature demands it. In matter we shall never find it. Sooner or later we shall recognize the emptiness of material life, of material pleasures. What leads to sorrow can never lead us to happiness. Material thinking has the seed of destruction in itself, for it leads to suffering. "By their fruits ye shall know them." Wrong thinking that leads to suffering must be corrected by right thinking, and this will lead to happiness. The clearer we see that wrong thinking is related to suffering as is cause to effect, the sooner we shall turn away from wrong desires and false pleasures, the more we shall strive to learn how to think right and know good. Mrs. Eddy says in her text-book, "Science and Health with Key to the Scriptures" (p. 322), "The sharp experiences of belief in the supposititious life of matter, as well as our disappointments and ceaseless woes, turn us like tired children to the arms of divine Love."

Every man will finally reach this point; but only when we recognize that matter has no consciousness, but rather is the result of material thought, do we begin to understand the truth which Jesus said would make us free. Our salvation consists in the recognition of man's spiritual nature. If man were material, subject to material laws, he could never be saved and gain happiness, and life could rightly be called a most cruel and absurd institution. "Ye shall know the truth, and the truth shall make you free," said the great Nazarene. What else could deliver us? That which is not true will ever lead into bondage!

✧

[Charles W. J. Tennant in *Croydon* (England) *Guardian*]

In his sermon at the George Street Congregational Church the clergyman is reported as having referred to people who today are turning aside from Christianity and the church of Christ and embracing the "gratuitous irrelevancies of Christian Science." Those who have adopted Christian Science have done so because they have found therein Christianity in its original purity, healing the sick and reforming the sinner. On page 26 of Science and Health Mrs. Eddy writes: "Our Master taught no mere theory, doctrine, or belief. It was the divine Principle of all real being which he taught and practised. His proof of Christianity was no form or system of religion and worship, but Christian Science, working out the harmony of Life and Love."

It is rather interesting in this connection to note that John the Baptist was in doubt whether Jesus was the Messiah or not, and so sent two of his disciples to ask Jesus if he were. They received this reply: "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them." This answer signified the signs by which Jesus intended Christianity to be known for all time; therefore it is quite as necessary today that it should be proven with "signs following" as at any other time in the world's history; in fact, the need has become more apparent with the advance of so-called material knowledge. Any one who gains an understanding of Christian Science can to this extent prove for himself that its teaching is in absolute conformity with that of Jesus the Christ.

✧

[Thorwald Siegfried in *Puyallup* (Wash.) *Herald*]

I would be glad to have space for comment on your statement in a recent issue, that you have been unable to find the source of Christian Science healing outside of certain movements which deal with the speculations and theories of the human mind. Having in mind the attempts of the necromancers of the Old Testament to duplicate the works of the prophets, we find in the words of Jesus a scientifically accurate rule by which to distinguish the one from the other. In the seventh chapter of Matthew he concludes the Sermon on the Mount with a warning against "false prophets," and declares that they will claim to have prophesied and cast out devils in his name. "Then will I profess unto them, I never knew you: depart from me, ye that work iniquity."

The point of Jesus' warning is contained in the last word, "iniquity." It is the translation of a Greek word meaning "contrary to law," and indeed in the thirteenth chapter of Luke the same point is made still clearer by the use of the Greek word translated "iniquity" but meaning "without principle." These meanings harmonize with the question of Christ Jesus in Matthew immediately preceding this warning. "Do men gather grapes of thorns, or figs of thistles?" Obviously they do not, for the law is that good does not proceed from evil.

So real is disease to the human mind that in their fear of it people resort to everything but Truth, God, in the endeavor to obtain health, until, as Mrs. Eddy has said, "the sharp experiences of belief in the supposititious life of matter, as

Digitized by Google

well as our disappointments and ceaseless woes, turn us like tired children to the arms of divine Love" (Science and Health, p. 322). Now the lawlessness of the human mind is seen in its belief that it is first really sick and then really well; first thorns, then grapes. In fact there may be less fundamental reality in the human mind's so-called health than in its disease, for the reason that true health is not a condition of matter but of consciousness, and that person who believes that his health is in matter fulfils the Scripture, "If therefore the light that is in thee be darkness, how great is that darkness!"

Christian Science, however, is unique in its teaching of the wholly metaphysical nature of all reality, including the real man; and it heals disease because that teaching corresponds with the ultimate facts of existence, and because the real man, who is thus brought into consciousness, is now and always has been as God created him, healthy, sinless, and perfect. It teaches that God, infinite good, never created evil. That is not only logical; it is the everlasting fact and law.

If our perception is not keen enough to distinguish "good seed" from tares before they are sown, we still have the Master's directions for the "harvest," and therein he clearly shows that all beliefs "which do iniquity" shall be destroyed. The seed and harvest of Christian Science are both of "wheat," because it operates by the law of Spirit. That is why those who practise it diligently find each day richer than the one before.

✧

[John V. Budd in *Milwaukee* (Wis.) *Sentinel*]

Recently I attended a lecture on Christian Science given at a church of that denomination in this city. The speaker was a man unknown to me, and probably to most of those who attended the lecture, and yet the spacious church, seating normally I should say about fifteen hundred, was crowded to the limit, even the speaker's platform being filled, while many people were standing. I am told that hundreds were turned away. The previous evening the same lecture had been delivered before a like crowd in the same place.

The lecturer talked quietly and without oratorical effort or embellishment, and yet for an hour and a half he held the close attention of that vast throng, and so far as I observed not one of the people left, not even those who were standing. One notable feature was that a large percentage of the audience was men. I am told that this is the ordinary course of affairs when this denomination gives a lecture.

All this impressed me greatly. Without having any particular religious bias myself, I could not help considering what would be the result if a lecture by an unknown speaker on almost any other subject should be offered. One is forced to the conclusion that there is a great and vital interest in this new movement; that the people see in it the fulfilment of a hope, the promise of something they do not find elsewhere.

✧

[Robert S. Ross in *New York* (N. Y.) *Herald*]

Christian Science declares that God, Spirit, Mind, is the perfect Principle of all that really exists; that the real universe, including man, is spiritual, perfect, harmonious, intact now and forever, and that this spiritual fact can never be changed. According to Christian Science the man of God's creating does not need to be healed or saved, because this man is neither sick nor a sinner. The realization of the spiritual fact corrects the mortal or Adamic concept of man and brings about what is known as Christian healing.

"Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick," Mrs. Eddy writes on page 476 of "Science and Health with Key to the Scriptures." When the student of mathematics corrects an error in a problem he does not suggest it away; he applies to it the basic rule of mathematics and the error disappears. When the student of Christian Science undertakes to heal the sick he does not use will-power; he realizes the truth of being. Referring to this purely metaphysical process, Christ Jesus said, "Ye shall know the truth, and the truth shall make you free." Christian Science and the Christianity of Jesus are identical.

✧

[Duncan Sinclair in *Dumfries and Galloway* (Scotland) *Standard and Advertiser*]

In a review of a book of addresses recently published, it is stated that the author of them pronounced Christian Science "to be 'founded on a scheme of metaphysics which is crudely absurd,' but the faith built upon that unsatisfactory foundation he regards as 'entitled to all respect.'" There is not the slightest doubt but that the respect which Christian Science is now receiving from all classes in the community is due entirely to its intrinsic merits. On the face of it, does it not seem ridiculous to ask any one to respect any system, faith in which is said to be based on a "scheme of metaphysics which is crudely absurd"?

It is because the metaphysical position of Christian Science is absolutely sound that it is doing such unprecedented healing work today. And what is the metaphysics of Christian Science? It is that God is infinite Mind, Soul, Spirit, divine Principle, Life, Truth, Love, infinite good. That is the basis of all Christian Science deduction and Christian Science practice. As a system Christian Science is perfectly logical. It never deviates from its allegiance to the spiritual fact that God is infinite, and that He is therefore omnipresent and omnipotent.

The Founder of Christianity, Jesus the Christ, was the greatest metaphysician the world has ever known, and at the same time the most scientific of men, because he knew most of Truth. Humanity continually seems to forget that Christ Jesus in every healing of sickness or sin, and by every demonstration he gave over the elements, such as his walking on the water and his stilling of the tempest, proved the supremacy of spiritual law over so-called material law. He showed conclusively that the truth which he taught could destroy a belief of sickness as readily as it could a belief of sin in the human consciousness; hence the Christ is, as the Christ ever was, or as the Christ shall ever be, "the savior of the body," as well as the deliverer of mankind from every phase of erroneous thinking.

Christian Science is faithfully endeavoring today to follow in the steps of the Master by obeying his commands, not only to spread the truth about God, but to heal the sick, as the Nazarene did, through the Mind of Christ, or the spiritual understanding of God and of man made in God's image and likeness. In the text-book of Christian Science, "Science and Health with Key to the Scriptures" (p. 358), Mrs. Eddy writes, "Christian Science, understood, coincides with the Scriptures, and sustains logically and demonstratively every point it presents."

Take Notice

We wish to caution members of The Mother Church in regard to the frequent solicitations they receive by mail and otherwise to invest their money in enterprises which purport to make a special appeal to Christian Scientists.

In the business world it is not customary to exploit the church affiliations or religious experiences of those connected with business enterprises seeking to sell either their stock issues or their merchandise. When such a course is adopted it should not be considered as recommending the soundness of the investment.

It is hoped that every Christian Scientist will make an effort to discourage the use of the directory of practitioners and churches in *The Christian Science Journal* as a mailing list for the literature of stock-selling schemes and business enterprises.

The Christian Science Board of Directors.

Boston, Mass., Dec. 29, 1915.

"Judge not"

While it is unquestionably true that those who are seeking "first the kingdom of God" are assured and do attain the peace "which passeth all understanding," this plane of achievement does not by any means carry with it exemption from trials of their faith and even persecutions because of their faith. Jesus made no secret to his followers that tribulation was likely to be their earthly portion, but he also gave them this comforting assurance, "Blessed are they which are persecuted for righteousness' sake: for theirs is the kingdom of heaven." Mrs. Eddy's teaching is along this same line. On page 97 of Science and Health she says, "Earth has no repayment for the persecutions which attend a new step in Christianity; but the spiritual recompense of the persecuted is assured in the elevation of existence above mortal discord and in the gift of divine Love."

There is need, therefore, for careful discrimination and loving thought in our judgment of our fellow men. The superficial assumption that a Christian Scientist who to sense has been given many and serious problems to meet is therefore lacking in a clear understanding of Truth, borders perilously near an infraction of the divine command, "Judge not." Even though there be a seeming failure to measure up to the highest standard, who can forget that dramatic scene when the accusers of the woman brought before Jesus slipped away one by one under the search-light of Truth: "He that is without sin among you, let him first cast a stone." Instead of criticizing and perchance condemning the one who is passing through deep waters, how much more Christlike, how much more helpful to our brother and to ourselves it would be, to realize the truth that because God's children are reflections of the one Mind they must have a perfect understanding, and that this brother or sister is being "persecuted for righteousness' sake,"—not because of too little understanding, but because envious error always seeks to obstruct an open channel for Truth.

Mrs. Eddy puts a pertinent question when she asks, "Have you shared the blood of the New Covenant, the persecutions which attend a new and higher understanding of God?" (Science and Health, p. 33.) Error found it worth while to be more active than ever before when it discovered the works which Jesus, the greatest exponent of Truth the world has ever known, was doing. When that persecution culminated in the crucifixion, even those closest to him wondered if he could have been correct in his understanding of God's omnipotence and omnipresence, else why had this shameful thing come upon him. Our beloved Leader trod the same thorny pathway to the kingdom. She whose clear understanding of God and His law made her a chosen vessel for the revelation of Truth anew to mankind, knew to the full what it meant to be persecuted for righteousness' sake. She sacrificed all that earthly ambition might crave in order to give to the world her discovery of the Principle of the Christ-healing in its wondrous perfection, and in so doing passed through deep waters such as few have been called to share. Nevertheless, it was through these very trials she attained to heights the limited vision of her judges could not reach. It was hers to "rejoice, and be exceeding glad," for it had been her privilege to share in the cup of sorrow and suffering which all must drink if they would be accounted worthy of the kingdom.

The darts of error were leveled against Mrs. Eddy because she was strong in her understanding of God's allness; but having put on "the whole armor of God," she could stand against them unmoved, for she knew that "when these things cease to bless they will cease to occur" (Miscellany, p. 143). In their own experience Christian Scientists find that through earnest study and practice of the teachings of Christian Science they have been uplifted to a plane of exaltation whereon they are able to meet the error which would have crushed them but for this higher vision. To such is vouchsafed the joy of saying with Paul, "I reckon that the sufferings of this present time are not worthy to be compared with the glory which shall be revealed in us." To them the world's judgment of their accomplishments matters not.

Archibald McLellan.

Conformity to Law

All who are interested in noting the happy adjustment of means to an end cannot fail to be impressed as they look upon an up-to-date printing-press, a Jacquard loom, or any other of the thousand mechanical devices which figure so largely in modern so-called civilization. To observe the ease, the exactness, and the rapidity with which difficult things are done nowadays is simply fascinating, and one follows many of the intricate processes with something of the feeling with which he would watch the masterful performance of a great artist. In both instances there is manifest a marvel of intelligent command which in the one case is identified with a single personality, in the other with all who have contributed to the unfoldment of a complex idea.

It has been a long way from the first use of the wheel, the lever, and the wedge to the present perfection of the many wonder-working inventions which have so largely made the modern manufacturer a mere onlooker, and this gulf has been spanned by that patient coordination of right ideas which, as Christian Science is proving, has no less certainly to do with humanity's spiritual advance. Studious and persistent effort to find and profit by an unvarying and universal order explains all these mechanical achievements, and it also explains, as Mrs. Eddy has outlined on pages 226 and 227 of Science and Health, that triumph of spiritual understanding, that gain of "the prize of the high calling of God," the overcoming of sickness and sin, which is the glory of the Christian Science movement.

For most of us the attainment of eternal life involves a patient trying-out procedure, in which we demonstrate and

Digitized by Google

so finally accept and assimilate real values for ourselves by subjecting the ideas communicated to us to that repeated test which is rightly named scientific. The perception and utilization of divine law, even as inventors have discovered and applied material laws, points the one way to individual and world redemption; and here every genuine good that has been gained in past religious history is conserved and added to, in that going on "unto perfection" which the knowledge of the Christ Science stimulates and makes possible. To realize and profit by the higher potencies of faith in Christian Science is to honor every right and every noble deed of all mankind in all the past,—and what a blessing it would prove if all religionists would but awaken to this fact!

In attributing a perfect expression to the spontaneity of individual greatness, the instinct of true genius, we are likely to forget that such an achievement is but the unimpeded play of the activities of ever-existing law, in the fulfilment of which man, the God-governed man, appears. Thus all the astonishing increase of the facilities for accomplishing things gives inspiring intimations of that inheritance of good which in all its richness and amplitude but measures the capacity of him who has awakened to the spiritual truths of being.

When the machine is perfected, everything is done automatically. The crudeness and the failure of its imperfect antecedents is forgotten; it is now adequate to every demand upon it. And here again it illustrates the larger, the freer, the nobler concept of man which in Christian Science becomes the abiding inspiration of all who hunger and thirst after rightness. The ability to do the right thing the first time, which one has defined as skill, is to be gained only through conscious conformity to spiritual law. It is to have that sense of unfettered freedom which is ever preening its wings "for a skyward flight" (Science and Health, p. 261) and which expressed itself in the glad cry of the psalmist, "I delight to do thy will, O my God: yea, thy law is within my heart."

JOHN B. WILLIS.

"Faith and unfaith"

A WELL-KNOWN poet says that "faith and unfaith can ne'er be equal powers," a sentiment with which most thinkers would agree; and yet, sad to say, there is much more unfaith in human experience than faith. What is perhaps even worse, there is a great deal of misplaced faith, that which goes out to an unworthy object. Though this kind of faith may for a time seem to act as a motive power in personal endeavor, it must fail sooner or later, because its supposititious object has no real existence. Knowing the falsity of all belief which rests upon material objects or the carnal mind, Christ Jesus said to his disciples, with the sublime confidence of spiritual understanding, "Have faith in God." On page 430 of Science and Health Mrs. Eddy says, "Faith should enlarge its borders and strengthen its base by resting upon Spirit instead of matter."

It is simply astonishing to see how professed Christians excuse themselves for want of faith; indeed they sometimes seem to regard this mental state as commendable rather than otherwise. This is because they confuse faith with mere credulity, which have in fact no relation to each other. Credulity is always an outgrowth of material sense and never rises above mortality, whereas faith of the kind that Christ Jesus taught and demonstrated reaches out toward the things of God, to spiritual reality. Now it is true that one's faith may seem faint and feeble, but if it lays hold upon the divine it will grow into greatness and power as a well-nourished child. More than once the Master said, "O ye of little faith;" but even this little was better than none, and it is deeply touching to read the Master's words to Peter before the testing time of his trial and crucifixion. Jesus said to him, "I have prayed for thee, that thy faith fail not." It sometimes happens that this is the best service which a Christian Science worker can render to the one who seeks his aid, for in Revelation we read that those who come unharmed through fiery trials are they who "keep the commandments of God, and the faith of Jesus."

The writer of the epistle to the Hebrews tells us in the eleventh chapter, which has been called "the great epic of faith," that "without faith it is impossible to please" God, not merely difficult, but impossible; so we are here surely dealing with the most vital question of human experience. Optimists tell us that we should have faith in ourselves and in our fellow men, but it always happens that when we let material sense have the ascendency we disappoint ourselves, and we need not be surprised if others disappoint us for the same reason. The Master's faith did not rest upon mortal man, for he told his disciples that one of them would betray him, another deny him, and all of them forsake him. Yet in spite of this Jesus' faith in God and in the power of divine Truth remained unshaken, for he declared that although heaven and earth should pass away, his words, the words of Truth, should never pass away.

It is too often forgotten that faith can never find a secure resting-place in materiality, nor be strengthened by material evidence. If one rejoices overmuch in the evidence of physical improvement, he is apt to miss the real healing of Christian Science, the mental awakening and the spiritual uplift, and the glimpse of faith will not unfold, as it should, into spiritual understanding and strength. Our revered Leader tells us (Science and Health, p. 429) that "we must have faith in all the sayings of our Master," and Christian Scientists are striving to do this through the understanding gained in Christian Science and their daily and hourly demonstrations of the truth.

On the human plane the farmer who drops seed into the soil has faith that it will germinate and grow if rain and sunshine are not withheld. The Christian Scientist goes farther than this in looking to divine Principle and the spiritual law of growth for the protection of all that expresses God, good; and his assurance increases as he looks away from the material to the spiritual, praying ever, as did Jesus' disciples, for an increase of that faith which is allied to divine power.

ANNIE M. KNOTT.

Among the Churches

Current Notes

SOMERVILLE, MASS.—This church for the year ended Dec. 16, 1915, distributed 4409 *Sentinels*, 771 *Journals*, 33 *Heralds*, 15,676 *Monitors*, 28 *Quarterlies*, and 97 pamphlets. Subscriptions to the *Monitor* have been given to four public libraries, four engine-houses, and seven fraternity houses at Tufts and Jackson Colleges; police station, car-barns, city farm, and high school, and is received in two newspaper offices in exchange. The *Sentinel* and the *Journal* are in four city libraries and the *Sentinel* is at the Home for the Aged.

Distribution Committee.

MCMINNVILLE, ORE.—Adherents of the Christian Science faith have definitely determined to construct a church building on their lots at the corner of D and Pine Streets. The estimated cost is about three thousand dollars. Construction will begin as soon as there is promise of favorable weather.

Telephone Register.

Digitized by Google

PARIS, ILL.—Some of the steel work which will be used in the construction of the Christian Science church has arrived and is now on the ground. Much of the lumber has also been placed, and according to those who have the matter in charge, work will commence in earnest about April 1. The Scientists expect to have the new building ready by the latter part of summer at the furthest.—*Paris News.*

HOBOKEN, N. J.—It was learned today [April 1] from an authoritative source that the handsome Mattlage mansion with adjoining grounds at 410-412 Hudson Street, opposite Hudson Square Park, was purchased by First Church of Christ, Scientist, for twenty-four thousand dollars. The Christian Scientists expect to make all necessary repairs or alterations at once, so that by May 1 they may move from their present quarters at Washington and Third Streets into their new home. One of the church-members said that they do not anticipate building just yet, but it is possible they will do so in a very short time.—*Hudson Observer.*

MIAMI, FLA.—With the purchase yesterday [March 22] of the lot at the northwest corner of Eighth Street and the Boulevard came the announcement last night of the proposed construction of a church edifice on the property by First Church of Christ, Scientist, of this city. The location for the new structure is one of the best, being on the bay front and in the central residential section, where property values are considered above the average. According to one of the members of the building committee, the new edifice will cost in the neighborhood of twenty thousand dollars.—*Miami Herald.*

DUNKIRK, N. Y.—The Christian Science Society has bought property on Washington Avenue, opposite Washington Park. The lot has a frontage of 90 feet and a depth of 180 feet. The house on it will be remodeled for temporary use by the society, and later will be removed and a church built.—*Buffalo Express.*

HOOD RIVER, ORE.—Construction work on the edifice for First Church of Christ, Scientist, is progressing rapidly. The auditorium will seat two hundred and fifty persons.

The Lectures

Council Grove, Kan.

Willis F. Gross, who delivered a lecture on Christian Science at the Commercial Club rooms, was introduced by Will McConnell, principal of the High School, who said in part:—

History is one illuminated story of man's tireless effort to answer an inner longing for things divine. Creeds have arisen and perished. Dogmas have flourished for a time and then have become time worn and unsatisfactory. Ever the church has stood out as a pioneer and a martyr in the cause of righteousness. It has drawn into its ranks the best that the age has to contribute. Yet nowhere is change more apparent than in this institution which has permanence for its very foundation. The unprecedented multiplicity of creeds in the Christian churches of today all attest to unrest and uncertainty of detail.

The nineteenth century has done much toward destroying the contributions of the past, but it has placed us centuries in advance along many lines. It has robbed government of its mystery and corruption, it has placed the sciences in the realm of the known, it has put before us the great social problems that our country must face; and who is to say but that in these later days it has given us a religion which will clarify much that heretofore has been questioned? We have studied this religion but little, consequently we know but little. We have learned that it substitutes science for mysticism and reason for dogmatism; that it welcomes all who are serious and sees an opportunity for every one; that many who have come to scoff, have remained to pray; and that it has wielded a powerful daily influence in the lives of many people. These things commend Christian Science to us for our gravest consideration.—*Correspondence.*

✧

Marion, Ohio

Charles I. Ohrenstein delivered a lecture on Christian Science in the Elks Hall. He was introduced by D. R. Crissinger, who said in part:—

It was my pleasure many years ago to introduce the speaker at a Christian Science lecture. At that time there was much ridicule, considerable doubt, and some honest criticism. Now there is thoughtful consideration of and honest inquiry into Christian Science. The skeptical have learned to believe and are followers, and the honest critic has found comfort. This religion has had a phenomenal growth, and it is a natural and worthy growth.

Christian Science ever puts to the fore the good, the right, the lofty, also happiness and love, and leaves to the realms of forgetfulness the bad, the wrong, the low, as well as despair and hate. Is it then any wonder, in these days, that intelligent men and women are flocking to Christian Science for help? They have tired of the teachings of passion, prejudice, and fear. They come to Christian Science because it offers something that satisfies the cravings of the heart and mind and points the way to correct living. That something is the simple faith and teachings of Christ Jesus, and is strictly spiritual. It comforts, heals, and brings peace of mind, contentment, and love.—*Correspondence.*

✧

Oakland, Cal.

Joseph B. Mills in introducing William D. McCrackan, who lectured on Christian Science at Masonic Temple, San Leandro, said in part:—

The world is being awakened to the understanding that health, happiness, and success are normal and natural, that the religion of Christ Jesus offers a full salvation, and that it meets humanity's full need. We have long been taught that salvation was limited to the next world, and that it could be attained only by patiently submitting to the trials and afflictions sent upon us by an all-wise God. This definition has never been satisfying, and because of this men began to cry out for a practical religion, one which could be applied to their every-day life, and which would prove to the world that the promises of the Bible could be taken without any discount.

Jesus' whole career showed what mighty works could be done in Truth, while Christian Science shows how the same works may be done today by the same power. Christian Science is a religion of works, and not of words only. Our Master said, "By their fruits ye shall know them," and is it not significant that in all his recorded sayings he never established any other test of discipleship than that of works? He knew that men might talk rightly and live wrongly, but he knew also that they could not accomplish the works which he accomplished without thinking right themselves.

Mrs. Eddy declares that the teachings of Jesus, when rightly understood and rightly applied, are sufficient, without the aid of anything else, both to regenerate the sinner

Digitized by Google

and to heal the sick. If this be true,—and thousands are testifying to it daily,—then the most important thing that can engage the attention of thinking men and women today is to gain that understanding.—*Correspondence.*

✧

Cleburne, Texas

Bliss Knapp delivered a lecture on Christian Science to a large audience at the Carnegie Library. The speaker was introduced by W. M. Odell, who said in part:—

The real seeker after truth in any field is not he who with dogmatic intolerance refuses to listen to the views of his fellow man, or who blindly leads where others follow, but he who lends his ear to every man, and then forms his opinion according to the promptings of his own judgment and the dictates of his own conscience.

The great truths upon which the religions of Christianity are based are not new; they have existed through all ages. Within recent years, as time is measured, there has arisen a great religious order which has offered to the world a new vision of these truths, and which has within a short time taken a prominent place among the great organizations which are seeking through the Scriptures to solve the problems of life and eternity. To those of you who believe that through its teachings you have found the light of divine Truth, it will be a privilege to hear its lessons from one of its distinguished exponents. To those of us who have sought the light along different paths, it will be a pleasure to hear him.

With toleration for the views of every man, with the highest respect for the religious views of all men, with a willingness to seek information from every source, and with admiration for any cause which has for its purpose the spiritual betterment of mankind,—as one who stands for this spirit, it is my pleasure to introduce the speaker.

Johnson County Review.

✧

Miami, Fla.

The spacious auditorium of the Central Grammar School Building on Avenue C was filled almost to its capacity on the occasion of a lecture on Christian Science by Clarence W. Chadwick. V. W. Helm in introducing the lecturer said in part:—

The remarkable progress of Christian Science is due to the fact that it has restored and made available to mankind the drugless healing power of primitive Christianity. Through the beneficent application of this new-old truth, thousands have been healed of supposedly incurable diseases, and have gained that peace and harmony of mind which makes for real happiness. In its operation Christian Science is essentially and intensely practical,—a religion to be lived, not merely believed; a religion of common sense; virtually the Science of right thinking, which can be applied to one's daily needs and problems of whatever character. Moreover, it does not direct its appeal to the fickle emotions, but rather to the calm and logical thought.—*The Miami Metropolis.*

✧

Waupun, Wis.

A lecture on Christian Science was delivered in Scenic Theater by George Shaw Cook. The Rev. A. G. Wilson, former pastor of the Congregational church, in his introduction said:—

I have been chosen to introduce the speaker of the evening because of my attitude of neutrality toward the issues of Christian Science—the policy of patient waiting for more reliable information on the subject. We should have hospitality and the receptive mind toward those who are capable of this illumination. Christian Science presents the alternative of being either the greatest and most important discovery of human history or the most stupendous error ever urged upon mankind. The people who are helping to settle this question are entitled to our gratitude. If the movement stands for a true principle of reality it belongs to all. It was not a human creation.

However, our Christian Science advocates should remember that they are putting forth claims that appeal to the average man as both absurd and impossible; statements that are opposed to all that inheritance of accepted knowledge which has come down to us through the process of centuries of patient thought and investigation. It is not to be expected that such a claim would be readily and cheerfully accepted. But this is exactly what would be expected at the introduction of a new and vital teaching. No great discovery in the history of progress has been at once and universally received. All have fought their way to favorable consideration. Christian Science must be subject to the same rule and test. All great scientific discoveries were at first considered with distrust and aversion. Christianity at the beginning had few friends; its Founder was nailed to the cross. Truth must walk in a thorny path.—*Waupun Democrat.*

Testimonies of Healing

It was about twenty-five years ago that Christian Science was introduced to the quiet little Wisconsin village of which I was at that time a resident, and well do I remember the manner in which it was received by those who did not then accept its teachings. The objections to what we supposed it to be were pronounced, and we tried to persuade those who accepted it to drop it. It did not seem to us possible that the healing power of Truth as demonstrated by Christ Jesus and his followers in the days of primitive Christianity could be discovered by a woman of our day. We were so very skeptical that our prejudice was not destroyed even though we witnessed the proofs, the healing and reforming value of Christian Science.

I did not then understand the kindness and patience which the Christian Scientists exhibited, but I can now see how they had grown in grace until they would not see the evil by which we were allowing ourselves to be influenced, as being anything real or a part of the real child of God. The time soon came, however, when I too needed help. *Materia medica* was given a trial for several years, until I was told by a specialist that I had a form of skin disease that he could not cure, as he had exhausted all the means at his command without success. In the mean time Christian Science had been recommended to my wife and boy, and treatment given to them with very satisfactory results. I was finally ready to ask for help, and then and there the seemingly great wall of prejudice melted away and the journey from sense to Soul began.

Physical healing and spiritual uplift were one and the same to me, for after the first treatment I laid off glasses, and a moral reformation and a new interest in the study of the Bible began. It was about two years before all evidence of the eruption was gone. The healing seemed slow, and during this time those of my family who had recommended Christian Science became discouraged and suggested that I return to the specialist; but perseverance and the loving patience of the practitioner kept me studying until the healing was complete. I have since been a daily student of the Bible, as well as of Science and Health and other Christian Science literature, and have received untold benefits. It has become a real pleasure in the home, the church, the office, and everywhere, to know something of the joy of service, how to rest in action, and to seek my own in another's good. (See Science and Health, p. 518.)

This testimony is given as further evidence of my appreciation of the help I have received through the illumination of the Scriptures which has come as a result of reading Mrs. Eddy's writings, and through the church services and meetings. It is now very clear that when we let that Mind be in us "which was also in Christ Jesus," our words and lives are acceptable to God, and then only do we begin to express the perfect man made in His image and likeness.

E. Everett MacGill, St. Paul, Minn.

✧

I feel impelled by a great sense of joy to tell what Christian Science has done for me. I did not come into it for physical healing only, but through a desire for spiritual light, a longing to know God. By profession I am a trained nurse, and have for years handled cases in the old way, helping patients through gloom, doubt, and despair without any seeming ray of light other than chance; but with the dawn of this new light, this change of concept, all things seem new. My work is a real joy, for while administering in their material way to the material bodies of my patients I can also know the truth which heals and makes free.

After attending the Wednesday evening testimony meetings for over two years, I was attacked by what to mortal sense would be called a slight stroke of paralysis and asked for Christian Science help. The practitioner came from church, and after talking with me for a while, gave me treatment. I was healed instantaneously; strength and light flooded my consciousness. I prepared my grip that evening, walked ten blocks to a new patient, and was able during the case to perform my duties with efficiency, feeling no effects of my previous illness. My healing has been permanent, and the spiritual uplift has been such that I am able to demonstrate the truth for my family and others as well as for myself. I am practising what I know, and am indeed happy to glorify God in declaring the truth of the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures."

In my new-found joy I have but one desire,—to put on the Mind which was in Christ Jesus, to give the message to others, and thus help to bring the kingdom of God on earth. I am thankful to God for the spiritual light, and to our dear Leader for giving us this new-old truth.

Maria Louisa Johnson, Stege, Cal.

✧

The Preface of Science and Health opens with the words, "To those leaning on the sustaining infinite, today is big with blessings" (p. vii). This great truth has been proved to me in many ways. Soon after leaving school in 1902 I was attacked with a severe stomach trouble, which was not overcome until Christian Science found me in 1911. In September of that year a friend told me about the healing accomplished in Christian Science. At that time I had been confined to my room about nine days with what the doctor called malarial fever and other complaints, and my eyes were badly affected. My friend almost insisted on my going to see a practitioner, even though I did not care to go and thought I was not able to do so.

The practitioner asked me if I believed in Christian Science enough to lay aside all material means and trust God. I said I did, but my thought was that I would try it a few days, and if it failed to help me I would return to my medicines. She then gave me a silent treatment and had me read aloud the Lord's Prayer with its spiritual interpretation as given on page 16 of Science and Health. When I asked her what I could eat, she told me I could have anything I wanted, saying the food God provided never made any one sick. That night I slept well, a very unusual thing, and the next morning arose feeling all right. I went to work, and found that I could walk without getting tired, something I had not done for a long time. It rained heavily and I stopped for a while, then went on with no harmful results. That was the end of my illness.

My eyes were so badly affected that I could not read more than twenty minutes at a time; but now my sight is perfect. Corns and bunions have disappeared, also a throat trouble which I thought was hereditary. In April, 1913, I was overcome with a painful spasmodic ailment. I worked four hours declaring the truth, but as the difficulty had not been overcome, I again called for help, and the trouble disappeared within an hour. It has been over three years since I took any medicine.

I have been attending Christian Science services since I was healed, never missing a meeting, and have found the spiritual food which satisfies. In August, 1912, I bought my first copy of Science and Health, and have read it through ten times. I have come to love the Bible, which was not the case in former times. I am now a member of The Mother Church, and have had many beautiful demonstrations for

Digitized by Google

myself and others. I am grateful to know that I can help others, particularly my own people (the colored race). As I have been benefited by the testimonies of others, I hope some one will be helped by mine. I am grateful to Mrs. Eddy for this Christ-teaching, and thankful to God for the spiritual understanding.—JOHN H. PITCHFORD, New Orleans, La.

When Christian Science came into my life five years ago, it found me a physical wreck and unhappy. I had tried many physicians and material remedies, but was at last told I must undergo an operation, and if I lived through it I might be better. Again and again I had been told that it was only a question of time until I would have a paralytic stroke. There was a complication of kidney and liver trouble which grew worse continually, and no encouragement was given me that it would ever be overcome. Those were dark and hopeless days. I had been a church-member for twelve years, and had prayed that God would hear and answer my prayers; but at last I only looked for something to ease my suffering until, as I thought, death would set me free.

I did not want to be healed through Christian Science, but "man's extremity is God's opportunity." From the first treatment I was greatly benefited, and that night I slept peacefully, something I had not done in a long time. Before this I could not sit up all day and did practically no work. Now I am perfectly healed of all these ailments and many more, so that I am able to do all the housework and help my husband in the store. I was also healed of acute lung trouble in less than twenty-four hours.

We have proved that God is an ever-present help in times of sorrow as well as in sickness. The physical healings have been wonderful, but the spiritual uplift that has come to me through the study of Christian Science is indeed more wonderful. For all this I am grateful to God, also to Mrs. Eddy.

ANNA KINGREY, Galena, Kan.

With a heart filled with gratitude I wish to acknowledge the many blessings I have received through Christian Science. In the Christian Science text-book, "Science and Health with Key to the Scriptures," our beloved Leader writes (p. 120), "Science reverses the false testimony of the physical senses, and by this reversal mortals arrive at the fundamental facts of being." About eight years ago all the hair fell out from my right eyebrow. I consulted the most eminent physicians but received no help, as the skin had become shiny. As a last resort I accepted Christian Science treatment, and through the loving, patient help of a practitioner I was completely healed. I have also been healed of severe throat affection and coughs.

I am thankful to God for His goodness and for this truth which I have found in the study of the Bible as explained in Science and Health; also for our periodicals, those silent messengers of Truth, which have helped me wonderfully on my journey from sense to Soul. I am particularly grateful for the unfolding of Truth which has made it possible for me to become an active member of the Christian Science church and a teacher in its Sunday school.

MARY FREDERICA HEINZ, Berkeley, Cal.

[Translated from the German]

It has been my privilege to experience God's care and omnipotence since I have learned through Christian Science that man is His perfect offspring, hence forever intact. My little two year old boy was playing indoors at my side, when a set of heavy roebuck horns dropped from the wall and struck the child on top of the head. As may easily be imagined, my sense of fear was very great at first; still I was at once able to declare the truth of being. The child's head was bleeding and he was crying loudly, but I tried to realize the presence, omnipotence, and abiding love of God. On washing the little head I saw two holes caused by the points of the horns, yet without allowing myself to entertain any sense of worry I quieted the child, and after a short time he was bright and playful, then took nourishment as if nothing had occurred, and went to sleep. I used no remedies of any kind, neither did I observe any hygienic law. Two days later the holes had entirely disappeared.

I think of this instance of help received as an especially beautiful proof of the care of ever-present Love, although it is but one of many which it has been my privilege to receive. I would like also to express my profound gratitude to Mrs. Eddy, the Discoverer and Founder of Christian Science, for having shown us the way to Truth, and for imparting through her works a vital knowledge of God and the truth of being.

FRAU MARGARETE KUEBUSCH, Stuttgart, Germany.

Four years ago I began the study of Christian Science, after having been constantly under medical treatment for nine years. I had undergone three surgical operations at different times during these years, the last one for gall-stones. Then I gradually grew worse, and became so frail that the attending physician forbade any attempt to sit, stand, or walk. The doctor who was treating me at this time called in a very prominent surgeon to diagnose the case for him, as he had been treating me for Bright's disease without any success whatever; in fact I seemingly was growing weaker all the time.

The diagnosis was gall-stones, and an immediate operation was declared necessary. On being told that I attributed my present condition to just such an operation, when it was claimed that the gall-bladder had been removed, the surgeon became very thoughtful, and finally said the gall-bladder had not been removed, that gall-stones were in the ducts, and that the operation had been but partial. The surgeon had become frightened and quit when he found the gall-stones in the ducts. I decided that the operation would have to remain but partial, as I would never submit to another one.

At this refusal both doctor and surgeon left me without care, except what a nurse could give. Some days passed in this condition, when a friend prevailed upon me to try her doctor. After much quizzing and examining this doctor said I was nearly dead from theories and medicine, so he gave me no medicine whatever, but used all the means known to him to cleanse the system of poisons. In six weeks' time I could walk in my bedroom. The doctor then told my husband to get me out of this climate; that I would die if I stayed here, and might do so on the way to the Pacific coast, though to the sea-level I must go. I went, and after remaining there eight months, came back very little improved in health.

One day, while sitting on the porch, a neighbor brought me Mrs. Eddy's works, all except her latest book. This gentleman is not a Scientist, but he has a partner in business who is a good Scientist and who gave the books to him. I mention this as a proof of how Love does its work. After much reading, and with more right thinking than reading, I began to understand. The first lines in the chapter on Prayer in Science and Health (p. 1) seemed to show me that I would be healed by this prayer and faith: "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God."

While the understanding came slowly, it has been a constant source of inspiration, unfolding to me the relation of God to His spiritual creation, and showing me that divine

Digitized by Google

Love is an ever-present help. The constant reading of Science and Health has taught me to trust a higher power than the man-made laws or material medicine on which I had depended for years. It has given to me a God I can reach through the demonstration of His truth and find relief,—relief not only from pain, but from the fetters that had bound me as only sin can bind.

I have been healed of a hasty temper, an unforgiving disposition, and resentment with all vexatious problems of life. As I have progressed in the demonstration of this new-old religion the way of life has become brighter, for it has shown me how to forgive a wrong which at the time it was done it seemed impossible to forgive. I did not want to forgive it, and even said God would not ask any one to forgive such an offense. Christian Science teaching has so filled my heart with love that hatred, wrongs, and fears are all forgotten.

I am very grateful to Mrs. Eddy, our Leader, who has done so much for the betterment of mankind.

Virginia M. Pritchard, Wilmette, Ill.

✧

As one who has received untold blessings through the teachings of Christian Science I desire to express my gratitude for this practical revelation of the truth which has healed me of sickness and sin and brought peace and joy into my life.

Since becoming interested in Christian Science I have been completely healed of liver complaint, weak eyesight, owing to which I was compelled to wear glasses when reading or writing, and very severe headaches, besides many other physical troubles. Then too I have been healed of the desire for strong drink and tobacco. Impure desires and moral temptations have also been overcome through the realization and application of the truth revealed in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

This wonderful healing did not all take place immediately; it came about gradually, as the inevitable result of the unfoldment of the truth to my awakened consciousness and the spiritualization of thought. Sometimes I despaired, when it seemed as if no progress was being made; but the help of a loving Christian Scientist reassured me, and the text-book was studied with renewed energy, until I began to realize that healing is going on all the time, since the divine Mind is ever active and omnipotent.

Christian Science has never failed me, and I would not have been spared one of those experiences which have driven me with greater determination to the study of Science and Health to learn more of the healing truth for myself. It has meant everything to me, and I can never be grateful enough to Mrs. Eddy for having revealed the truth to this age, and for giving to the world a practical and demonstrable religion.

Frank C. Treacher, Highgate N., London, England.

✧

Christian Science healed me of a malignant growth on the face, from which I had suffered for twenty-five years. I read Science and Health and as many of Mrs. Eddy's other writings as I can get. Every ailment which troubled me has been healed since I began this reading. I had taken medicine for eighty-nine years, but I know now that Truth is the only true remedy. I am thankful I found the truth in this life.

Nannie G. Wilson, Mulberry, Kan.

It is with a deep sense of gratitude that I confirm the above statement. My grandmother not only suffered for twenty-five years from a malignant growth, but had acquired the drug habit, morphine having been recommended by her physician as the only means of easing the pain. She asked for Christian Science treatment in September, 1914. There was immediate relief from pain, and the drug was gradually reduced until she was able to rely wholly on Christian Science treatment. By Thanksgiving day her face was partly healed, and in January, 1915, there was not a sign of the trouble, not even a scar. She was also free from the drug habit. A physician had stated that she could not live if the drug was taken from her, but she is perfectly well today, has gained flesh, and is as active as she was years ago. Although ninety years old, she occasionally attends our services and lectures.

When treatment first started there was no encouragement, as the condition was so serious. The belief in old age prevailed, and all the things which attend it were manifest, but the saying, "One on God's side is a majority," was proven true, and also Jesus' statement, "Ye shall know the truth, and the truth shall make you free." Our home life has been turned from misery into harmony and praise, and I rejoice always that we have a practical understanding of God, divine Truth, with which to relieve human suffering and sin. I am grateful for the labor and perseverance which our beloved Leader, Mrs. Eddy, put forth in order to give to humanity this demonstrable knowledge.

Marie Hawley Bell, Mulberry, Kan.

✧

Several years ago I received the first Christian Science literature I had ever seen. It came from a relative living in a western state, and found me in a very much discouraged and melancholy condition, as I had experienced a sorrow and loss from which it seemed impossible for me to recover. Although I had united with a church when quite young and had been active in Sunday school and other church activities, the teaching I had received and the way I interpreted the Bible gave me no comfort. I read in the *Sentinel* of many people being healed and wondered why I could not be also. On July 22, 1913, I borrowed a copy of Science and Health, bought a *Quarterly*, and began reading in earnest. Soon afterward I was entirely healed of appendicitis in one day, with two absent treatments.

For over thirty years I studied the words of the Bible, so to speak, without understanding them; and when my work here was interrupted by sorrow and loss and I was left alone, as I thought, to fight the battles of this life for two children and myself, I became confused and could not find the way; but I am very glad to say that through the study of Science and Health, in connection with the Bible, I am being helped to find it. I certainly feel thankful to God, also grateful to Mrs. Eddy for this revelation.

Minnie A. St. John, Canton, Ohio.

✧

I had known of Christian Science for a number of years and owned a copy of Science and Health, but did not think seriously of Science until confronted by the necessity for an operation. About eight years ago I was suddenly taken very ill, and the physician who was called in pronounced the trouble appendicitis. My fear of the operating table was so great that in my extremity I turned to God for help.

A Christian Science practitioner was called over the telephone and asked to take the case. She consented, and said she would give me an absent treatment immediately and see me the next day. That was about eight o'clock in the evening, and in an hour's time I was quietly sleeping, all pain and discomfort having subsided. I was healed in a comparatively short time, and I speak advisedly when I say healed, for in eight years there has never been the slightest return

Digitized by Google

of the trouble. Many other ailments have assailed me, but one and all have been met by Science, which I have indeed found to be "the Comforter which leadeth into all truth" (Science and Health, p. 127).

My heart overflows with gratitude to God for giving us this revelation of Truth through our beloved Leader, Mrs. Eddy, and I am truly thankful that through the study of Christian Science I have been able to gain a clear and demonstrable understanding of the spiritual import of the word of God and its healing power.

EDITH HIDEN, Birmingham, Ala.

I have a deep sense of gratitude for the blessings that have come to me through Christian Science, and it is with a desire to tell others about it that I send this testimony.

About seven and a half years ago I was a physical and mental wreck, suffering all the tortures that a diseased body and mind could inflict. At this juncture I turned to Christian Science, not that I had any faith in its curative power, but simply because it was the only thing I had not tried, and the thought was that if it did not do me any good it could not harm me, as nothing could cause me to be in a worse condition than I then was. I now look back upon the day when I first consulted a Christian Science practitioner as the most blessed day of my life, for it started me on to find a better condition of health than had ever seemed possible, and more than this, a happiness which like the peace of God "passeth all understanding."

Up to the time I turned to Christian Science my thought from earliest childhood was that I was doomed to fill a consumptive's grave, as I was the only one left out of a family of eight, my mother, father, four brothers, and a sister having passed on with this dreaded disease. To mortal sense there was good reason for me to think that I too would follow in the same way, for I had always suffered with severe colds from the beginning of winter until spring, and rarely knew what it was to go through a night without coughing until nearly exhausted. Now I rarely have a cold, and if I do, it is quickly overcome through the power of Truth.

I have proved that an understanding of God as gained through Christian Science heals not only disease but grief as well, for in those days which now seem a hideous nightmare to me, I was eating my heart out with a longing for human love and was looking to personality for the one and only thing that would make life bearable. Yet reason told me that I could not have the thing I so much desired. This condition was not quickly overcome, and many hours of anguish were spent in fighting it. The final triumph did not come till one day, when this longing seemed more than I could bear, I fell on my knees and said, "Father, Thou knowest what is best for Thy child; Thy will, not mine, be done," and then and there the demonstration was made. From that hour I have been convinced that earth has no sorrow which divine Love cannot heal.

There are many other discords too numerous to mention that have been destroyed, and there are still some to be mastered; but I know that if I am faithful, eventually all discords will fall before divine Love, and I will be "every whit whole." For all the blessings vouchsafed me I am most grateful to God, and thankful to Mrs. Eddy for bringing us this blessed truth, also to the practitioners who have ever shown a spirit of loving-kindness and have been to me a tower of strength in times of discouragement.

BESSIE C. BROWN, Baltimore, Md.

We gain the strength of the temptation we resist.

EMERSON.

From Our Exchanges

[Rev. Henry Kingman, D.D., in *The Biblical World*]

So long as the world has vividly before it the memory of Jesus and of his irrepressible confidence and hopefulness through days of evil fortune, and so long as it has with it in every generation his followers, of a like spirit of indomitable good cheer, it will refuse to take the mere acceptance of the inevitable as an adequate discharge of life's obligation. There must be a better success than this. It is victory that men want,—the victory of a self-possession undaunted and expectant in the face of every problem and disappointment that the world can yield. . . . Our only chance of winning is by the way that Jesus found sufficient so long ago,—the way of faith in God. His faith, his teaching, and his spirit still afford the only way to such an undiscourageable optimism as was his.

[Bishop Ryle in *The Guardian*]

We know indeed that there are those who exclaim that contemporary events only prove that Christianity is a failure and that a new gospel is wanted. They seek for comfort in occultism, and think they have found hope in spiritualism. Secret mysteries, without moral responsibility and without corporate duties, have a special attraction for those who regard the church as obsolete and unsympathetic. Endor is often the refuge of those who shun the thought of Calvary. Men seek for any vision but that of a God who forgives sin and who asks for self-surrender of will. Those who have no wish for the vision of God will not find it. On the whole, men get what they seek,—it may be pleasure, self-indulgence, or self-satisfaction, or it may be the very drug of spiritual life, the deadly narcotic which seeks to stifle pain in self-absorbed expedients. But it is not so much a revised gospel that we need as a purer and more humble spirit to receive and welcome the old one, Jesus Christ, "the same yesterday, and today, and forever."

[*The Christian World*]

There are scholars preoccupied with their own dogmas; they are forever expounding them and explaining away any disturbing factors. There are others who, with all that is given to them, keep the still mind, and are listening. The one scholar will not learn because he is not ready to hear; the other will have the reward of the humble, he will inherit the new reaches of knowledge. None but the humble can inherit this portion in the earth.

This is abundantly true of spiritual knowledge. It is kept from the noisy throng, who never give themselves time to listen. It is given to the quiet spirits who in stillness are waiting, as the operator waits in a wireless station, to catch tidings from the world unseen. It is impossible to hear except in silence. That is why the speaker upon religious themes needs silence more than other men.

[*American Lutheran Survey*]

One of the most difficult problems following the European war will be the prevention of class legislation and the furtherance of policies which inure to the advantage of all the people. A sense of social obligation will permeate the nations more and more to the displacement of mammon worship. Already there is evidence that the people are wearied of the supremacy of crass materialism and are turning to a better conception of the philosophy of life, involving as it does the awakening of the consciousness of the duty of a larger measure of service to society. In this growing consciousness of the duty of the individual toward his fellow men, even at the sacrifice of his

Digitized by Google

own interests, is the most hopeful sign of a more just and equable distribution of the wealth of the nation, and with it the increased happiness and development of the people.

[*Unitarian Word and Work*]

Out of all the illusions and guesses and superstitions that have been associated with the Founder of Christianity, there emerges one vital and indisputable fact, viz., that it was not, after all, the death of Jesus, nor anything that may have occurred to him after his death, that bears directly upon the welfare of the world today, but the life he lived when he moved among men. Scarcely had he disappeared from mortal view when his very enemies began to recognize his spiritual greatness and exclaim, "Surely this man was a son of God." Scarcely had the sun risen on the morrow than people who had been spiritually blind began to see that life was something different from the house of clay in which it had been confined.

[*The Continent*]

To Jesus Christ Christianity was a life,—a vital, self-perpetuating force which must scatter through the world spiritual seed to reproduce after its kind wherever it fell on good ground. How it might grow—under what exterior forms it might flourish—he cared not, if only the life was still the life that truly came from him. Housed in one form of church or another, what could that signify, provided only men were being made new creatures in himself? More unthinkable than all else is that the Lord Jesus would set artificial limits on spiritual forces. He was not creating in the earth a monopoly of grace; he was giving his grace to the whole world as a free gift for all men.

[*The Christian Register*]

The happy prospects in life depend much more upon the way people look than upon what they have to look at. If they think mostly of the discouraging things, that is what they will see; if they keep their minds resolutely fixed on the far purposes and hopes of good, they will see visions and glorious possibilities. Just now we seem shut in by the darkness of what is closing around us; but there are rifts,—and glimpses appear of heights in light. If we keep on our way and steadfastly look upon what is beyond, we shall see the horizons. Inevitably we shall find in time that we are all the while faring toward them.

[*The Advance*]

Jesus came, not merely that those dead in sin might have life, but that those who had life might have it more abundantly. Had there been no sin, still God must have given us proof by living example that the life of God is, and that the life of man must be, a life of love, manifest in sacrifice and in service. Had there never been sin, but only innocence growing slowly and darkly toward the good, there must have been at-one-ment. For God's life is not mere innocence; it is character. And the life that is at-one with God must be a life of character.

[*The Christian*]

Our every sense of incompleteness confirms us in the belief that God is still at work upon us, restoring us to the dimensions of His unchanged purpose, of which we have come so far short by wilful waywardness. And herein is our confidence, both for our own lives and that of the nation. He will complete that which He has undertaken. Only let us make no mistake about this—upon us, as individuals, rests the determining responsibility of the fulfilment or frustration of omnipotent grace.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Law and Work" is the title of a new pamphlet containing the following articles: Love Fulfils Law, The Logic of Christian Science, Undisturbed, God's Law of Adjustment, Authority.

The increased cost of binding the periodicals has necessitated making an advance in the selling price of the bound volumes. The new prices, which take effect April 1, are as follows:—

JOURNAL.—Volume 32 (April, 1914 to 1915). Cloth, $3.00; half calf, $3.75.

SENTINEL.—Volume 16 (September, 1913 to 1914) or Volume 17 (September, 1914 to 1915). Either volume, cloth, $3.25; half morocco or half calf, $4.00.

For all other bound volumes of *Journal* or *Sentinel* write for prices.

DER HEROLD.—Volumes 5 to 12 in cloth, $2.75 each; volume 4 to 7 and 9 to 12 in half morocco, $3.50 each; volumes 4, 5, 9, 10, 11, 12, in half calf, $3.50 each.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $6.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

It is reported that tungsten ore, the most sought-for mineral in America, has been discovered in the Quitman Mountains of western Texas. Samples have been assayed and are said to run high in this ore. The prospectors claim that the specimens are to be found in many places in the Quitman Mountains. Recently there was made from Tucson, Ariz., a shipment of tungsten ore which was valued at $6180. This mineral has been discovered in the Tule Creek district of Arizona, near Prescott, and there is much activity in that district at present. A reduction plant has been established in the Bradshaw Mountains, near Prescott, and the tailings of the old Tiger mine there, which was abandoned a number of years ago, are to be worked for this ore, which was dumped out when the mine was being worked for rarer metals. This practice is being followed in a number of mines of Arizona and New Mexico, and many mining men are making a good stake by leasing the dumps and tailing piles of the old mines and working them for tungsten. There are said to be millions of dollars in tailings of tungsten on the dumps of the Southwest, waiting to be taken out.

A decision just handed down by the full bench of the Massachusetts supreme judicial court declared unconstitutional a legislative enactment which forbade the courts to issue injunctions in labor disputes unless it appeared that "irreparable damage" was about to be done. The decision says in part: "No discussion is required to show that it is beyond the power of the legislature to declare that without any process at law a well-recognized kind of property shall no longer be property. Lawful property cannot be confiscated under the guise of a statute. A further effect of the present statute is to deprive the plaintiffs of the usual protection of the laws. The statute provides in substance that the property rights of labor of any individual or number of individuals associated together shall be recognized in equity as property when assailed by a labor combination, unless irreparable damage is about to be committed, and that no relief by injunction shall be granted save in like case for which there is no relief in law."

It is estimated that as the result of reductions in tariffs charged by the Central Railroad of Peru there will this year be a total production of wheat in mountain sections which are contributory to this road's territory about three times as great as in 1914, when the freight rates on this road were considered practically prohibitive for the transporting of grain from the mountains to the coast sections. Most of the wheat now used by the milling industry, which is located in coast cities, is imported from Australia and California. The prompt response in increased acreage of wheat, which followed the introduction of cheaper rates of transportation, has called attention to other sections where there is much land available for wheat raising and which would undoubtedly similarly respond to cheap and easy transportation facilities.

In line with the program of the Massachusetts Fish and Game Protective Association to establish a chain of bird preserves throughout the state, the work of stocking a large preserve at Dudley, Mass., has begun. A member of the association has offered the use of his own country farm and woodland estate of 400 acres, and several neighboring properties amounting to 800 acres, as a game preserve, under the support of the association. The series of bird preserves which the association expects to establish throughout the state will be looked after primarily by the respective landowners with the association's help and advice. It is hoped that other landowners will come forward and enroll themselves under similar conditions.

Six hundred grain elevators, to be owned and operated by the Peruvian Government, will be built in various parts of Peru during the next five years. They will be uniform in construction, made of concrete, and about one hundred feet in height, and will be located along the Transandine Railway, some of them being placed at an altitude of almost three miles. The farmers will bring their grain direct to these elevators, and it will be purchased there by the Government, which will store and resell it in accordance with the state of the market. These elevators will for the first time provide a means for placing the large grain crops of the fertile valleys on the market at a low production cost.

The famous Niobide, the disputed ownership of which aroused much public interest, has been given to Italy. The statue was discovered eight years ago during digging operations executed on land belonging to the Banca Commerciale upon the site of the ancient Gardens of Sallust. Due notice of the find was given to the authorities, and the expert archeologists sent to examine the statue pronounced it a Greek original of exquisite workmanship and great value. Ownership was disputed by the municipality of Rome and the Banca Commerciale. The statue will be added to the collection in the Museo delle Terme in Rome.

The administration shipping bill, designed to upbuild the merchant marine and strengthen the navy, passed the House of Representatives by a vote of 211 against 161, virtually in the form in which it was introduced. The bill proposes to appropriate $50,000,000, to be raised by Panama bonds, for the purchase, charter, or lease of ships by the Government. These ships would be sold or leased to private capital as rapidly as possible, with the Government reserving the right to call them back into service as naval auxiliaries.

The canal under the mountain between Marseilles and the river Rhone, described as one of the most notable engineering achievements of modern times, was officially opened on May 7 in the presence of the French Cabinet and other officials. The waterway runs for five miles in a tunnel under the mountain and links Marseilles with the inland cities of Lyons, Avignon, and Valence. It also gives Marseilles a direct water connection with Havre and the North Sea.

The sundry civil bill, carrying a total appropriation of $127,287,221, $4,535,000 of that amount being for the Panama Canal, has been reported to the House of Representatives. The bill carries great increases for Panama Canal fortifications, for armories and arsenals, and for barracks in the Hawaiian Islands.

President Wilson has approved the act of Congress increasing the limit of deposits in postal savings banks. The depositor may now have an account amounting to $1000 upon which interest will be paid. Formerly $500 was the maximum amount a depositor could have to his credit.

The combined value of the gold, silver, copper, and zinc produced at mines in Tennessee in 1915 was twice that of the 1914 output. The value of the gold, silver, copper, lead, and zinc produced at mines in Virginia in 1915 was $303,957, against $47,877 in 1914.

A contract for seventy-five freight locomotives of the Mikado type for the Pennsylvania Railroad lines east of Pittsburgh has been awarded the Baldwin Locomotive Works. The order represents an expenditure of $3,000,000.

The Boston & Maine Railroad has closed contracts with the American Locomotive Company for delivery as early as next November of sixty powerful locomotives at a cost of about one million four hundred thousand dollars.

A new record for the transcontinental trip by automobile from Los Angeles to New York was made a few days ago, when the trip was completed in 7 days, 11 hours, and 52 minutes. The distance covered was 3471 miles.

The agricultural area of Alaska (mainly in the interior valleys) is as large as the combined areas of Pennsylvania, Maryland, Delaware, New Jersey, Connecticut, Massachusetts, Vermont, and New Hampshire.

The state of Oklahoma is producing at the present time more than three hundred thousand barrels of crude oil a day. In 1915 the state produced in all 118,000,000 barrels of crude oil.

The sugar production of Porto Rico for the season now drawing to a close will be in excess of 463,000 tons, as compared with 345,000 tons last year.

During the first four months of this year 28,751,070 money-orders, with a value of $153,004,832.76, were paid by the post-office department.

A Russian Government bureau is organizing a scientific expedition to make a thorough investigation of the mineral resources of Siberia.

The Spanish Government is planning to build an electric railroad from Madrid to the French frontier, to connect with French lines.

Vancouver Island, it is estimated, alone can supply 1,000,000,000 feet of merchantable timber a year for one hundred years.

In February 987,516 barrels of crude oil were shipped to the United States from Tampico, Mexico.

Spain is credited with producing more than three quarters of the world's supply of olive oil.

Fully sixty million cocoanut trees are under cultivation in Ceylon.

Education in Truth

ROBERT NALL

THE spread of Christian Science, the scientific knowledge of God and the real man, is revealing the disastrous effects of false education. These can be seen on every side. To the observer there is an appalling mass of evidence showing irrefutably that the human race is the victim of its own mistaken apprehension of what constitutes true education. And yet this is not surprising when we remember that many leaders of thought have been misled in the same way.

Matthew Arnold, for instance, in his "Thoughts on Education" denied that the aim and office of education was to make "a man a good citizen or a good Christian." Its prime, direct aim, he said, "is to enable a man to know himself and the world." Arnold of course was writing from the purely materialistic or naturalistic standpoint; and that is just where his pronouncement lacked vital force. Spiritual consciousness would have impelled him to recognize that education in its highest sense relates to the true nature of God as Spirit and of man as spiritual. Once that is conceded, then for a man to know himself is to know his spiritual capacities and powers, his real status in the universe, his eternal unity with his divine source, his rightful place in the kingdom of heaven.

In every civilized community perfectly legitimate stress is laid on the education of children, but in the light of Christian Science it is beginning to be seen that there is right and wrong education. Pedagogy is often nothing more or less than an effort to cram into the minds of the young a mass of useless information. Now "information itself," as Bishop Butler once said, "is really the least part" of education. True education is the unfoldment as well as the impartation of truth; it is the dispersal of ignorance, especially the ignorance which presents itself in the concrete form of incrustated false beliefs to which mortals cling with such tenacity. A knowledge of the world may and frequently does mean merely that race beliefs about supposititious laws of matter and mortal mind are more securely held until of course the awakening comes and the whole educative structure topples over because it was a mass of erroneous concepts. It is now very generally admitted that the most highly honored material theories are usually given up within a decade, displaced by other material theories which in their turn are rejected for those that are less cumbersome and have at least a greater promise of good for mankind.

It is here that one turns with relief to the clear light thrown upon this momentous question by Mrs. Eddy. On page 62 of the Christian Science text-book, "Science and Health with Key to the Scriptures," she says: "The entire education of children should be such as to form habits of obedience to the moral and spiritual law, with which the child can meet and master the belief in so-called physical laws, a belief which breeds disease." If all down the centuries such education had been practised, the wonderfully purifying, uplifting, and redemptive effect upon humanity would have been immeasurably greater than we can conceive. A grave responsibility rests upon Christian Scientists everywhere to see that this Science—this knowledge and understanding of Truth—which they love so well shall in this respect be "given free course, and be glorified" in its beneficent administration.

Are we not all "children of a larger growth"? What Christian Scientist has not had to become like a little child before he gained even a glimpse of Life as God? Has he not realized the awful bondage of entirely wrong concepts about God and man and the laws of unerring, infinite Mind? Does he not know that nine tenths of what he has been taught had to be discarded before he could know the truth that made him free? He has had to unlearn before he could learn, and reject before he could receive. Have we not all been expected to master or memorize a whole curriculum of alleged facts relating directly or indirectly to religion, theology, heaven and earth, the present and the future, which we have been glad to jettison as soon as the light of the knowledge of the gospel of Christ Jesus, when interpreted aright, streamed into the consciousness?

Knowing, therefore, what error is and what its demoralizing influences are, the way for education in right beliefs is now open. And here let it be remembered that erroneous hypotheses, or wrong concepts, or ignorance of the truth, are anachronisms. They do not belong to nor have they any connection with the real, spiritual man. He, as the immortal idea of God, possesses all true knowledge, and is never misled, nor does he suffer from false education. The education which blesses and comforts, sustains and enlightens, is the unfoldment to the human mind of this true knowledge—that which apprehends God as Life, Truth, and Love, as divine Principle, and therefore that which effectually destroys any belief in the reality of sin, sickness, and death.

But is not that beyond mortal apprehension? some one may ask. Mortal thought is the foundation and the precursor of all evil; mortal knowledge leads to discord and decay. In Christian Science human sense is educated out of its false beliefs and man is governed by divine Mind, which comprehends all infinity and embraces all truth. It is in this way that sickness and sorrow are overcome. The physical sufferer, bowed down with pain, and with only the prospect of death before him, learns in Christian Science that his condition is abnormal, because God never intended that he should be sick, nor did He send sickness to him. The physical condition is simply the product of wrong education. So long as mortal mind is allowed to rule, so long will the sufferer remain in ignorance of the healing power of Truth, and be burdened with that most flagrant educated falsity, the belief of life in matter. To all such the Christ appeal, "Learn of me, . . . and ye shall find rest," is of profound significance.

Human sense may thus be instructed, and the errors which constitute much experience made to disappear before the omnipotence of Truth. The process may be slow, but it is certain. Mrs. Eddy says, "Mortal thought does not at once catch the higher meaning, and can do so only as thought is educated up to spiritual apprehension" (Science and Health, p. 349); but yield it will, and the result is what we know as salvation. "And they shall be all taught of God," Jesus said, quoting the prophets. "Every man therefore that hath

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

heard, and hath learned of the Father, cometh unto me." It is thus that God, who is Love, leads into all truth. It is thus that Spirit quickens, enlightens, teaches, imparting that spiritual understanding which as true Science (knowledge) is the activity of divine Mind, and the redeemer of every one who flees for refuge to God.

"The king's meat"

J. LILIAN VANDEVERE

As in the days when Jesus held a wide-eyed little listener in gentle durance as an object-lesson to the contentious disciples, so even now the child is in our midst, a subject for sincere consideration. The importance accorded childhood today is seen in the tendency of the age toward attempted betterment along the lines of infant mortality, child labor, and child study, as epitomized in the movement for "better babies." The cry is, "Let us give to them, and make of them the very best." Our revered Leader has never failed to recognize the needs of childhood, and has always acknowledged the child's readiness to accept the truth. On page 237 of Science and Health she says, "Children should be taught the Truth-cure, Christian Science, among their first lessons, and kept from discussing or entertaining theories or thoughts about sickness."

A captive Jewish lad was once summoned to the Babylonian court. He was to reside there three years under the tutelage of the wise men of the land, learning their language and mystic lore and being fed with the bounty of the royal table. Surely a promising outlook for a boy of ambition! Yet he begged of the head eunuch a simple diet, and communed diligently and daily with the God of his fathers, counting this the one needful object of understanding. Alarmed for his charge's chance of royal favor, the eunuch demurred; but the boy offered a fair and businesslike proposition. Let a ten-day trial be made; then the eunuch might compare his condition with that of those who had "fared sumptuously every day." This was agreed to, and when the time for a decision came, the young face, smiling assurance, showed a health and fairness surpassing all the others. When the time of study and training was ended and the boy stood before the king for a final test in keenness of mentality, the understanding which God had given him was proved tenfold that of the king's wise men.

This story of Daniel shows the application and result of a method which fairly parallels the rearing of children according to the understanding of divine law gained through Christian Science. The tenderness and joy of family life is enhanced, for it is a new and transcendent "best" that we find for them in the realm where Love guides; and all that is given up are the fearful thoughts, those driving worries which, as one mother said, "look for rashes and sore throats, and always find them."

People searching for the best of modern methods can but be attracted by the aspect of the countless children raised today without medical care, and noting their sturdiness and vigor they must admit them a superior stock, "fairer and fatter in flesh." This is divinely natural, for they are fed on the real substance, which in its nourishing and sustaining qualities is proved vastly superior to "the king's meat" of ordinary care. This "bread of life" is broken for them in the Christian Science Sunday school with its wisely selected lessons, and the way the little ones are enabled to meet their small problems, and even those of the grown-ups, shows the spiritual instruction imparted there to be practical and pertinent. Like Daniel, these children have their times of trial, and come through accident, contagion, and various vicissitudes more than conquerors. As parents see the beneficent effect of this law of Love, anxious watching and the false ties of human relationship lose their power, while awakened consciousness sees for the lambs of His flock one Father-Mother God, and that they and the little ones are alike His children.

The child Jesus grew in understanding and in the human manifestation of manly stature, but the treasure hid in Mary's heart was not the added cubits, but the words of Life spoken by her son. So little has mortal thought apprehended this better part, that even the disciples concerned themselves busily about material food, only to be met with the Master's rebuking assurance, "I have meat to eat that ye know not of." Children are never too young for the "sincere milk of the word," these ideas of Truth and Love. Indeed they behold the Father's face when mature thought oftentimes sees neither cloud by day nor fire by night. We who seem the instruments of care for them may ponder this, looking for sustenance for both them and us to that bread which if a man eat he shall never die.

Called Out of Darkness

REV. CHARLES D. REYNOLDS

THE Scriptures refer to light as a synonym for God, but more often God's manifestation in human consciousness is spoken of as light, and those having an understanding of God are constantly referred to as those having light, or as walking in light.

David said, "Thou art my lamp, O Lord," and we read again in the Psalms, "Thy word is a lamp unto my feet, and a light unto my path." Speaking of the divine manifestation, John declared, "God is light, and in him is no darkness at all." Referring to the power of the spiritual understanding which he and his disciples were bringing to mankind, Jesus said to them, "Ye are the light of the world," and of himself, "I am the light of the world." Paul, writing in the same strain to the converts at Philippi, said, "Ye shine as lights in the world," and it was he who testified that he saw a light at midday "above the brightness of the sun." Peter refers to the redemptive power of the light revealed by Jesus and the feeling of gratitude it inspires in those who have been called "out of darkness, into his marvelous light."

In Christian Science the term is figuratively used in the same way to denote spiritual understanding and to illustrate its transforming work in human consciousness. When this understanding comes to human sense, its first impression is that of light. The perception of spiritual truth brings with it an illumination that can be best described by the impression produced by light on one who has been in darkness. The legitimate and only possible effect produced by light is to reveal that which is invisible because of the darkness. The relation between light and darkness illustrates the relation between spiritual understanding and the testimony which the material senses seem to present. The power of light demonstrates the fact that what appears to the senses to be darkness is in fact not a reality or entity, but an illusion.

Similarly, to accept the testimony of the material senses and believe that the objects of creation are as they appear to be, wholly material, is mental and spiritual darkness, "the night of materialism" referred to on page 562 of Science and Health. But as the perception begins to dawn that man and the universe, all real existence, is spiritual,—and this is the testimony of spiritual sense,—and what the corporeal senses report as matter and its discords begins to vanish, the conclusion cannot be avoided that the phenomena presented by the material senses are deceptive, fictitious, unreal, and must be corrected before one can know the facts.

Digitized by Google

Having hypothetically assumed that it is not the sun but the earth that moves, the astronomer was soon compelled to conclude that what seems to be the motion of the sun about the earth is an illusion; so Mrs. Eddy, having found the proof that the objects of creation, including man, are spiritual, was compelled to conclude that what appears to the senses as matter is illusion. Spiritual understanding removed the deception. Spiritual understanding is a state of consciousness which rejects and expels material evidences as automatically as light dispels darkness. When the true evidence appears, the false disappears. The only chance for a deception is to escape detection. The Scriptures constantly refer to the darkened state of those who are without spiritual understanding, and the need of striving for spiritual knowledge as the only means of escape from sin, the false evidence of the senses, deception, vacuity, darkness, suffering; in a word, materiality. In spirituality lies the only chance human sense has of extricating itself from the mystery and darkness of materiality.

Picture for a moment a person lost in darkness, in a strange land, groping amid dangers to find his way. After much effort and reflection upon the seeming hopelessness of his position, he faintly observes in the distance a man walking along a road with a lantern in his hand. Picture now what his thoughts and emotions would be at the expectation of what that light might do for him. Could he look at it indifferently or turn his back upon it? No. His first impulse and desire would be to reach the light and to overcome every obstacle that might lie in his pathway. He would know that the nearer he came to the light the more light he would have, and conversely the less darkness. If while hastening toward this light he should recall the prophecy of Isaiah, foretelling the power of spiritual understanding over the mental darkness of those who know only what the material senses report, "The people that walked in darkness have seen a great light: they that dwell in the land of the shadow of death, upon them hath the light shined," he would comprehend as he never had before how the knowledge of God brings to men a salvation infinitely greater than that which a human sense of light brings to our sense of darkness.

As revealed in Christian Science, the parallel is clear, —there is no salvation from darkness except by gaining the light of Truth, spiritual perception or understanding. Though the lantern's rays which reach us may be weak and the darkness may yet seem dense, there is no other hope, no other promise of safety, peace, and satisfaction. No matter how faint the ray of light that is seen, it inspires hope and courage, and the vision is never forgotten. The trials, struggles, and difficulties encountered by those who have seen the light and who are trying to follow where it leads, were never more faithfully or graphically depicted than in Bunyan's "Pilgrim's Progress" in the character of Christian and those who journeyed with him, or attempted to do so. Their goal, the Celestial City, here typifies the attainment of perfect spiritual understanding, light, harmony, heaven.

As a light shining in darkness, Christian Science comes to every one of its followers. And it is in the teaching of Christian Science that he finds a sure guide and a "Key to the Scriptures." The Bible tells us that the redeemed shall "need no candle, neither light of the sun; for the Lord God giveth them light," and this is in accord with our Leader's words on page 461 of Science and Health: "Only by the illumination of the spiritual sense, can the light of understanding be thrown upon this Science, because Science reverses the evidence before the material senses and furnishes the eternal interpretation of God and man." In the words of Jesus, "If thy whole body therefore be full of light, having no part dark, the whole shall be full of light, as when the bright shining of a candle doth give thee light." To come out of darkness is the most momentous call to which humanity is listening today, and it is becoming clearer at every step of the way.

Simplicity of Christian Science

ANNE MAY LILLY

One often hears from those who are investigating the teachings of Christian Science such remarks as, "I cannot understand Christian Science; I am not sufficiently intellectual," and other statements of like character. As a matter of fact, however, material education or intellectual ability is not essential to a grasp of spiritual truths. It is oftentimes the humble thought, unbiased by the world's opinions, which soonest grasps the spiritual truths. Little children, especially, prove apt pupils of Christian metaphysics. Mrs. Eddy illustrates this on page 237 of the text-book, "Science and Health with Key to the Scriptures," when she writes: "A little girl, who had occasionally listened to my explanations, badly wounded her finger. She seemed not to notice it. On being questioned about it she answered ingenuously, 'There is no sensation in matter.' . . . It might have been months or years before her parents would have laid aside their drugs, or reached the mental height their little daughter so naturally attained."

The great Teacher often expressed his affection for this pure child-thought, with its receptivity to Truth and Love. The gospel narratives contain many illustrations of his tenderness toward them and of his efforts to impress on his hearers their need to gain a like degree of simplicity and love. A characteristic example of this is found in the eighteenth chapter of Matthew, where we read: "And Jesus called a little child unto him, and set him in the midst of them, and said, Verily I say unto you, Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven. Whosoever therefore shall humble himself as this little child, the same is greatest in the kingdom of heaven."

In a majority of cases where difficulty is experienced in gaining a measurable understanding of the fundamental propositions of Christian Science, it will be found that the inquirer is trying to graft the conclusions of this Science on the material premises held in his own thought, and this cannot be done. The basic facts of Christian Science are that God is Spirit, that He created man and the universe after his own likeness, and they are therefore spiritual and not material. All real being is Spirit and spiritual. This proposition, which is demonstrable as well as supported by the Bible teachings, must be taken as the basis of all right reasoning. Starting from this standpoint, even though it be accepted at first only as a working hypothesis, the glorious truths of Christian Science speedily become luminous and susceptible of proof by demonstration.

It must be kept in mind, however, that Science and Health is not a book which can be comprehended by a casual reading, or indeed by innumerable perusals. To expect this would be as irrational as to suppose that a working knowledge of mathematics could be gained by reading through a volume on arithmetic without attempting to solve a single problem. Of one who was complaining of the difficulty of understanding Science and Health a more advanced student inquired, "Is there not one sentence in the book which you can understand?" "Oh, yes," came the reply. "Then," said the other, "put into practice in your daily living the little you now

Digitized by Google

understand and more will unfold daily." This is wise counsel, and if faithfully adhered to, great growth in spiritual understanding must follow. The offspring of Spirit naturally love and comprehend the things of Spirit, and the realization of this must tear away the veil of materiality which would darken our vision.

To aid in gaining a truer understanding of Deity, which is mankind's great need, Mrs. Eddy gives (Science and Health, p. 465) a number of synonyms for God, among them being Mind, Principle, Life, Truth, and Love. Let the one desirous of gaining a working understanding of the Science of Life take as his starting-point any one of the above synonyms which particularly appeals to him,—for example, Love. Then let him start the day with the thought that man is the offspring of Love. Let him strive constantly to reflect this divine Love to all with whom he may come in contact, and it will be in turn reflected back to him. Love is ever with its own ideas, guiding, guarding, pointing out and illuming the path, and will meet every need. One who puts forth a conscious effort even for a single day to be governed by divine Love in all that he says and does, opens wide the channels through which Truth must flow into his consciousness, with healing and cleansing in its train. This personal experience will give him an idea of the real meaning of Christian Science which could not be gained by years of mere academic research.

Growth in spiritual understanding is simply a question of attaining the humble, receptive thought, which faithfully puts into practice that which it comprehends, be it much or little. There is nothing in this mental attitude, moreover, which can rightly be scorned, even according to mortal standards, since it is he whom the world deems wisest who is most conscious of the limitations of human knowledge, and he is always the first to follow the gleam of a new light. Endless vistas of revelation open up progressively to the man of unprejudiced mind, and the promise contained on page 558 of Science and Health is fulfilled in his own experience: "To mortal sense Science seems at first obscure, abstract, and dark; but a bright promise crowns its brow. When understood, it is Truth's prism and praise."

Divine Protection

EARL E. HARRIS

As a conductor in the employ of an electric railway company, I have had many opportunities to prove the truths of Christian Science. The prevention of accidents to our passengers is a duty of first importance, and "Safety first" is our motto. Our officials caution us in this way: "Be sure your course is clear before you act." "Don't take chances." "Observe the rules." While the advice is important and is usually heeded, accidents still seem to occur, even when all the rules have been obeyed.

This only goes to show how finite are the laws of mortal mind. In Science and Health (p. 424) Mrs. Eddy says, "Accidents are unknown to God, or immortal Mind, and we must leave the mortal basis of belief and unite with the one Mind, in order to change the notion of chance to the proper sense of God's unerring direction and thus bring out harmony." By acknowledging this statement as a fundamental fact, and by dropping the mortal beliefs concerning accidents, I have been able in my work to realize and demonstrate to a degree this wonderful truth.

One day last summer, while on duty, a sense of impending accident came to me,—a picture of two cars colliding. The picture presented was so vivid that the terrible crash appeared as real as if the collision had indeed taken place. This ended my mental experience, for as I remembered Mrs. Eddy's words, "Stand porter at the door of thought" (Science and Health, p. 392), I knew that such a mortal suggestion should not be entertained, and then I saw that I should hold firmly to the fact that divine Mind governs, and that man is always under God's government. Although an accident would seem unavoidable under the conditions suggested, I knew that God governs all, and that He is ever-present intelligence. By meeting this suggestion of mortal discord with the spiritual facts, the truths of Christian Science, it was shown to me how such an accident was preventable. Several hours later the worth of this revelation was proven to me, and I am indeed grateful.

During the evening rush we reached our terminal late. The car of the other line was not there, but we concluded that it had arrived and gone again, as was often the case on that trip. All was clear for us, we thought, since on the return trip we did not meet the next car on our own line until we reached the double track one mile below; so our car was fed up to top speed and we were gaining, when all at once the car of the other line swung into view from around the corner and was upon our track before the motor-man saw us. The emergency brakes were applied, and the passengers jumped to their feet and stampeded to the back of the car. My motor-man, thinking that a crash was inevitable, left his post to avoid injury. For a moment I felt helpless; then all at once I remembered what I had been thinking only a few hours before and what had been shown me in the way of prevention. I signaled the motor-man to back the car, and he jumped to the controller and reversed, only having time to back eight feet; but it was enough. The space between the cars was barely a foot, but neither had been damaged and no one was hurt, as would have been the case had our car remained where it was first stopped.

While the motor-men and passengers were talking of the narrow escape, I was filled with such a sense of gratitude that I had not a word to say. This was to me a great proof of God's ever-presence, and I realized then as never before the truth of this passage from Science and Health (p. 424): "Under divine Providence there can be no accidents, since there is no room for imperfection in perfection." Even though a rule governing the operation of cars entering single from double track had been disobeyed by the other motor-man, placing so many in danger, all were protected through the operation of God's spiritual law.

"Christ in you"

MAUDE V. PATTERSON

In his epistle to the Colossians, Paul uses this expression: "Christ in you, the hope of glory." Again he says in Philippians, "Let this mind be in you, which was also in Christ Jesus." It is obvious that the Mind which was in Jesus did not belong to him alone, was not his personal possession, or we would not be told to have the same Mind in us. In proportion to our letting or allowing, therefore, will we express as did Jesus the Mind of Christ. Jesus was the perfect channel, because he knew absolutely the oneness and allness of Mind, and the consequent impossibility of the existence of minds many.

In the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy repeatedly affirms God to be the only Mind or intelligence, and Christian Scientists the world over are gratefully proving, with "signs following," the truth of this statement. This seemed very difficult for the writer to understand, during her first few years'

Digitized by Google

study of this book. Even after many satisfying proofs of God's loving and protecting care, which came as results or answers to scientific prayer as taught in Christian Science, she still believed intelligence to be a product of the human brain, and the following experience is told so that others may profit by it.

Several years ago, when my little son was about two and a half years old, we had in our garden a quantity of beautiful sweet peas. The summer of that year was unusually warm, with intensely hot winds which seemed to scorch all vegetation. There had been no rain for weeks, and the sweet pea vines became so dried and brown and lifeless that I had determined to pull them up. The child listened carefully as I audibly voiced my regret that the hot sun and wind had destroyed the flowers. Without a moment's hesitation he stretched out his hands toward them and said, "Dear little sweet peas, the hot sun can't unbloom you, because God is Love." Then he ran away to his play, leaving the problem with God. That very day the transformation began, and from the seemingly dried and brittle plants came forth green leaves and a profusion of most beautiful blossoms. They were the wonder of the neighborhood, being the only flowers of the kind to survive, and they lasted until after the bitter frosts came.

This occurrence was followed by another of a different type. A severe illness attacked me, and the child, noticing my inability to be about, asked the reason. I told him briefly that error was trying to talk to me. After a short silence he said, "Don't you know error has no power over God's child?" The healing followed instantaneously.

In pondering these proofs of God's goodness, which came as direct answers to a little child's loving trust, my eyes were opened to the truth that I had so long been struggling to realize. Reasoning from a material basis, every one believes that the brain of a child two years old is not sufficiently developed to think deeply enough to make such statements, and all the human reasoning in the world has never of itself wrought the wonder of physical healing. Then I knew that the Mind which was in Christ Jesus, which is "the same yesterday, and today, and forever," reflected through the pure consciousness of this little one, had wrought the miracle. I realized too that when we children of a larger growth can sufficiently purify our thought and become as receptive as the child, we too will be perfect channels through which the divine Principle, or Mind, may be manifested. The understanding that intelligence is not dependent upon the development of the brain, has brought a freedom never before experienced, and an ever-increasing gratitude to our dear Leader, Mrs. Eddy, who has made this understanding possible.

[Written for the *Sentinel*]

"The secret place"

LILLIAN BARKER BEEDE

WITHIN Thy secret place, O Love, I kneel:
The door is shut; no sinful sense can steal
Across the threshold of this holy place
Where I have come in search of truth and grace;
My lips are mute; here thought alone doth pray
For revelation of the Christly way.

Mind's white-winged angel-thoughts come from above
And thrill my being with the voice of Love;
Down through the centuries the message still
Proclaims the peace on earth, toward men good will;
The Christ is here, world wars destroying naught;
God's universal peace abides in thought.

Selected Articles

[Judge Clifford P. Smith in *Watertown* (Mass.) *Tribune-Enterprise*]

After a lecture in any community by a member of the board of lectureship of The First Church of Christ, Scientist, in Boston, it is not uncommon for some of the ministers of other churches to compare their respective religions with Christian Science, and conclude that the latter has no benefits to offer which cannot be gained through the former. These comparisons and conclusions are usually offered from pulpits, but wider audiences are sometimes sought by means of letters in public print. Christian Scientists have no objection to either of these expedients. It is to be presumed that ministers who continue in other churches continue to prefer the religions thereof, and their right to preach their own views is not questioned by Christian Scientists. Sometimes, however, the sermons and letters delivered in these circumstances seem to ignore the equal right of Christian Scientists to preach the gospel as they understand it, and are preached or written in a censorious manner.

The letter from a Congregational minister which appeared in the *Tribune-Enterprise* last week after a lecture by a Christian Scientist had been reported the week before, purported to be a public correction "in the interest of truth," of the "many erroneous statements or inferences" said to have been contained in the lecture to which it referred. It is to be observed, however, that the alleged errors of the lecturer consisted only in speaking the truth as understood in Christian Science as distinguished from the views entertained by our censorious friend. I am glad to say, however, that the letter in question was written with an evident intent to be fair and courteous. When the writer of it said that Christian Science "claims to be very different in its methods from that of Jesus," he may possibly have said more than he intended, for no statement could have been farther from the actual fact. Christian Science aims to be, in teaching and in practice, identical with the religion of Jesus the Christ, and there is no basis in Mrs. Eddy's writings for any other conclusion.

Christian Scientists are disposed to agree with the writer of the letter in question that important changes have recently occurred in the popular views of God. Indeed, we would agree with a recent author, not a Christian Scientist, who has said that the changes in religion during the last fifty years "are more marked than those, we may almost say, of all the time preceding." More of these changes have been wrought by Christian Science than have come to pass through the avowed acceptance of its teachings. It is a fact, which can be easily verified, that the most important changes in the people's views of God during the last fifty years have followed the course taken by Mrs. Eddy. This does not mean that all Christendom has accepted Christian Science, or that no important difference remains between it and other interpretations of the Christian religion. It can be said, however, that Christendom is reading the gospels anew in the light of Christian Science, and is getting a clearer, more definite concept of God. Incidentally, certain other churches besides the Church of Christ, Scientist, are beginning to speak of spiritual power over disease.

The main contention of the letter in question was a reproof of the Christian Science lecturer for applying the Master's words, "Ye shall know the truth, and the truth shall make you free," to freedom from disease. Our authoritative friend would limit the application of this promise; would confine it to freedom from sin. His statement was that "there is nothing in the whole eighth chapter of John about disease;" and he contended that there is no warrant for the broad applica-

Digitized by Google

tion which Christian Science makes of this utterance. Such a contention illustrates the fact that all people do not find the same thing in the same Bible.

As I read the eighth chapter of John, not only are the words, "Ye shall know the truth, and the truth shall make you free," unlimited by anything in the context, but the context includes particular references to "life," a term which Jesus used with infinite meaning, and to "death," a term which he used in such a manner as to cover all that might be the cause of death. Thus we read, "He that followeth me shall not walk in darkness, but shall have the light of life;" also, "If a man keep my saying, he shall never see death." That death is the opposite of life, and that immunity from death would include freedom from disease, are self-evident propositions. It is to be observed, moreover, that Jesus specifically spoke of disease as part of the bondage of evil. (See Luke xiii. 11-17.)

Christian Scientists would say, therefore, that the context of the words in question furnishes no warrant for limiting their meaning, but does authorize the conclusion that "the light of life" is the truth of being, and is applicable to all and aught that might produce death or reduce the full abundance of perfect life. In other words, borrowed in part from St. Paul, sick people are "alienated from the life of God through the ignorance that is in them," and the appropriate remedy for this darkened understanding will restore them to "the glorious liberty of the children of God."

Concerning the true remedy for sin and disease, Mrs. Eddy has said, "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love" (Science and Health, p. 1). These words are plainly based on the teaching and practice of original Christianity, and their truth is again being confirmed by the results of Christian Science.

✧

[Thorwald Siegfried in *Okanogan* (Wash.) *Independent*]

For a rapid-fire succession of misleading statements about Christian Science it would be difficult to find the equal of the pamphlet recently distributed in your community, in which a minister attacks a man of straw of his own making and calls it Christian Science.

The pamphlet mentioned was written in 1903 and makes statements which even the author might not make again at this date, because events have proved them groundless. Thus the author states his belief that Christian Science is a scheme for enriching the Founder. Since the statement was written the fact that practically the whole of Mrs. Eddy's estate is devoted to the spread of the wholesomeness of Christian Science over the world has become public property, and is known to any one who takes the least care in informing himself on the subject. People everywhere are being blessed by the missionary activity of the writings of Mrs. Eddy and of the periodicals founded by her; these are to be found in public libraries, church lending libraries, and other places where they are placed by those who are carrying out Mrs. Eddy's directions in the disposition of her estate.

It is worthy of note that both ancient and modern objections to the financial side of the purchase and sale of Christian Science literature come only from those who by reason of their antagonism to Christian Science have no occasion to buy the literature. Those who actually buy it and make use of it, find a value in it compared to which the purchase price is a mere incident. It recalls the Scripture about the merchantman "who, when he had found one pearl of great price, went and sold all that he had, and bought it." Christian Science literature brings the "pearl" of infinite truth into the human experience, and enriches humanity by displacing its fears and superstitions with knowledge of God.

To the well-meaning people who are being used to attack Christian Science in your community, we can say that the statements in the pamphlet referred to are generally not more applicable to Christian Science than to primitive Christianity. The results of Christian Science can be traced in the lives of its adherents, each of whom is a better man than he would have been without its sustaining influences, and these results are contrary to the predictions of the pamphlet. Finally, if its would-be critics will study Christian Science sympathetically, before uttering hasty condemnations of it, no condemnations will follow, as many Christian Scientists can testify out of their own experience.

✧

[Avery Coonley in *Chicago* (Ill.) *Israelite*]

An article in the *Israelite* contains disparaging remarks about Christian Science, but it might be left without comment did it not purport to give information about this religion while conveying, unintentionally perhaps, false impressions of some of its teachings. It cannot properly be said that the article "exposes the fallacies of Christian Science and pricks its illusions," for it is evident that its author has not made such study of Christian Science and its accomplishments as would enable one to know whether or not it contained fallacies. If he had, it is safe to say that his article would never have been written, for an unprejudiced investigation would have convinced him that Christian Science is substituting happiness for unhappiness, contentment for suffering, and health for disease; and fair-minded people everywhere have an inherent respect for that which alleviates suffering, even if they are unwilling to admit that these results are brought about by the power of God, but instead attribute them to purely superficial and fortuitous circumstances.

One could only be driven to the conclusion that the remarkable list of achievements which Christian Science has to its credit were all coincidences, by an utter inability to conceive that God could so manifest Himself. And to maintain that unusual manifestations of protection such as those referred to as "miraculous" healing cannot be attributed to God's presence and power, seems to involve a repudiation of notable evidences of such power which the Bible credits to prophets and patriarchs.

Christian Science does not try to "convince a hungry man that he is not hungry." Shallow sophistry would neither prevent hunger nor cure disease, nor would a religion built upon it satisfy thinking people, either Jew or Gentile. The Christian Science practitioner does not say that "there is no sickness" in the sense in which such a statement would be generally understood. He does maintain, however, that sickness is not of God, who made all that was made, "and, behold, it was very good," but that on the contrary it is the result of false consciousness, which a right understanding of the allness of God corrects. Let it be recalled that the soundness and the practical utility of such statements have been sustained for nearly fifty years, and in thousands of cases by the healing of disease of all kinds in accordance with them.

The charge that Mrs. Eddy made sordid business out of her religion is disproved by the well-known facts of her life. While her book "Science and Health with Key to the Scriptures" and her other writings gradually came to be in enormous demand because of their great benefit to mankind, and eventually produced a large income, she neither hoarded money nor lavished it upon herself or in display, but lived a simple, retired, active life, devoted to good works and

Digitized by Google

unmarred by any form of selfishness,—a life wholly inconsistent with the theory of covetousness.

There are no data to support the idea that such Jews as have become Christian Scientists have done so in pursuit of a fad or a fashion. That many have continued to find satisfaction in this religion for a long period of time is testimony to the contrary. Indeed, the fact that members of the Jewish race have turned to Christian Science in sufficient numbers to warrant a two-column article in the *Israelite* is pretty good evidence that something both rational and practical is to be found in that teaching.

✧

[Ezra W. Palmer in *The Grand Junction* (Col.) *News*]

Considerable space has been given recently in the *News* to the reporting of lectures in which spiritual healing by prayer was discussed. The speaker is quoted as saying that "the Bible taught healing according to promise, according to statute, according to atonement, and according to the commission given to the disciples and to the church." It is gratifying to note this frank statement, since Christian denominations for centuries prior to the advent of Christian Science have ignored the commands of Jesus to heal the sick. When Christian Science proved that healing by prayer was an inseparable concomitant of genuine spiritual understanding, it was met with opposition, denial, and denunciation. But indisputable facts cannot be explained away by sophistry or innuendo, and so it has come to pass that spiritual healing is being slowly acknowledged outside of Christian Science churches, even though the truth is more or less obscured by confounding it with autosuggestion, hypnotism, and various other subtleties of the human mind.

This clergyman attempted to label as "cults" outside of the church all religious denominations which teach spiritual healing of body as well as of mind. By so doing he casts an aspersion, perhaps unwittingly, on the Christian Science church. The Christian Science church accepts the words and deeds of Jesus, whose final commission to his followers was, "In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." It is difficult to see on what rational grounds the critic can classify the Christian Science church among the "cults" when it obeys all the commands of the Master, in both healing the sick and reforming the sinner. Jesus disposed of all such artificial classifications when he said, "Ye are my friends, if ye do whatsoever I command you."

Jesus never taught that healing the sick was a "minor" part of the work of the church, or that her "major" work was the salvation of the sinner. This distinction made by the speaker has no Scriptural foundation. Jesus knew that sickness and sin were effects of the same cause, "the works of the flesh," and he healed them both, impartially and without distinction. In the case of the man sick of the palsy, as recorded in Matthew ix. 2-7 and Mark ii. 3-12, Jesus clearly showed that sickness and sin were both errors of the human mind and are cast out and destroyed through divine knowledge of God. Jesus said, "Whether is it easier to say to the sick of the palsy, Thy sins be forgiven thee; or to say, Arise, and take up thy bed, and walk? But that ye may know that the Son of man hath power on earth to forgive sins, (he saith to the sick of the palsy,) I say unto thee, Arise, and take up thy bed, and go thy way into thine house." On page 318 of Science and Health the question is asked, "Is the sick man sinful above all others?" The answer is, "No! but so far as he is discordant, he is not the image of God."

The world for centuries has been devastated by sickness, epidemics, and death, because Christian churches have failed to see that the robe of Christ is seamless and cannot be rent asunder, and is available for the full redemption of men from sin, disease, and death. Mrs. Eddy says, "He that touches the hem of Christ's robe and masters his mortal beliefs, animality and hate, rejoices in the proof of healing,—in a sweet and certain sense that God is Love" (Science and Health, p. 569).

Healing the sick through the power of God has its counterfeit in hypnotism and suggestion, the erroneous action of one human will upon another. This counterfeit has borne different names at various times and places. In the time of Jesus it was known as witchcraft, sorcery, necromancy, healing through Beelzebub, and so on. The Pharisees in their attempt to discredit Jesus, charged that he used this counterfeit action of the carnal or mortal mind. Jesus repudiated this charge and affirmed the true spiritual mode of healing the sick. He said, "But if I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." Contrary to the teachings of the speaker, hypnotic healing is never legitimate, and its continued use brings disaster, mental and physical, upon both the operator and his victim. On the other hand, spiritual healing, as Jesus taught and practised it, has no disastrous reaction, and brings the freedom, joy, health, and peace that only the sons of God can know. Such healing is not limited, but destroys mortality and brings to light immortality, verifying the words of Jesus, "Whosoever liveth and believeth in me shall never die."

When Paul said, "It is appointed unto men once to die," he was speaking of men under the law, the law of mortal belief which produces sin, disease, and death. Paul knew full well the mighty power of God to break the law of mortal belief, for on another occasion he wrote these immortal words: "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

✧

[Charles W. J. Tennant in *The Medical Press and Circular*, London, England]

There seems to be a prevalent belief among the medical profession that Christian Science practice is a form of suggestion, according to the statements made by a lecturer as reported in a late issue. This is not the case, however. Suggestion is a system based wholly on the exercise of the human mind, and as this human or carnal mind contains within itself all evil, it is not capable of producing anything really good or godlike. Good can only proceed from God, the infinite cause of all that is good, and not from that which St. Paul terms "enmity against God."

To understand Christian Science healing one must discern the line of distinction it draws between the absolute and the relative. When Jesus declared, "Ye shall know the truth, and the truth shall make you free," he of course referred to the absolute truth, that which is "the same yesterday, and today, and forever." The study of Christian Science enables one to understand this truth, which is the sole means of Christian Science healing. It was always something which Jesus knew, never anything he blindly believed, that enabled him to heal the sick and the sinning and to raise the dead. He did not heal through suggestion, but, as he himself declared, by the finger, or Spirit, of God. That he expected his followers to heal by his method is evidenced by his declaration, "He that believeth on me, the works that I do shall he do also."

Editorial

"What she could"

In the opening verses of the fourteenth chapter of Mark's gospel is recorded an incident so striking in its simplicity of narrative and in the recognition accorded for the service rendered, that the lesson it is intended to convey cannot well be ignored. Superficial and pharisaical judgment would condemn the seeming waste of precious ointment, but the ever-compassionate Saviour divined the motive of the offering, and throughout all time his commendation will be remembered: "She hath done what she could." Could anything be simpler! As some one has phrased it,—"Not what she could not do; not what she thought might be done; not what she would like to do; not what she would do if she had more time; not what somebody else thought she ought to do: but 'what she could.'"

Inspiration and opportunity do not always go hand in hand, but we may be very sure that if the motive is a right one, if it is to do good, occasion for the doing will not be lacking. So many times we limit ourselves by thinking we have not the money, or the time, or the ability to help as we would like to do; but wherever we are and whatever our condition, there is always some needy one to whom we may proffer Love's ministry, some one to whose parched lips we may hold the cup of living water,—the blessed assurance that today as of old the healing Christ is with men. If we are willing to do what we can, when and where and to whom we can, so long as we are in Love's service, we shall merit the same reward as did the woman who gave the best that she had for the Master's anointing, since the promise reads, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me." The one who comes to Christian Science for relief from sin, from sorrow, or from suffering, may be even as the beggar that lay at the rich man's gate, it is none the less an opportunity to do what we can,—to bid the sufferer, in the name of him who was servant of all, rise up from his wretchedness and go forth a free man. Such good deeds are not lost, though they pass unrewarded even by the giving of thanks.

Christian Science is essentially a religion of service, and its opportunities are boundless. On page 570 of Science and Health Mrs. Eddy writes: "Millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching for rest and drink." Truly is the harvest great and the laborers few in this world-wide movement for the abolition of sin, disease, and death! And the call is one which cannot be ignored. It comes alike to the toiler in the fields, the man in business, the woman in the home, the child in school or at play: "If ye love me, keep my commandments." Nor must it be forgotten that this love is best expressed in the doing of the works which marked Jesus' ministry,—healing the sick, binding up the broken-hearted, opening the prison doors to those bound fast in trespasses and sins.

It is well to remember too that we are all workers together. Because one is not a reader, an officer of the church, or a practitioner is no bar to service in Christ's name. When Moses built the tabernacle hewers of wood and drawers of water were quite as necessary to its completion as the more skilled artisans, and the same motive is needed today as when the children of Israel "brought a willing offering unto the Lord, every man and woman, whose heart made them willing to bring for all manner of work." No service is insignificant that is done unto God, and oftentimes those who are quietly and faithfully living the Christ-life,—doing what lies next at hand the best that they can,—are witnessing quite as effectually to the omnipotence of Truth and Love as those in the garish light of publicity. It may seem a thing scarcely worth mentioning to pass along a copy of our periodicals, to speak the loving word, to lend the helping hand where it is needed,—and even the humblest worker in Christian Science can do that much,—but if it is the best one can do, if thereby one more be added to the hosts of the redeemed, He who knows the motive of the deed will not fail to accord the tribute: "She hath done what she could."

ARCHIBALD MCLELLAN.

Sunday School Work Progressive

ALL superintendents and teachers in Christian Science Sunday schools are supposed to be thoroughly acquainted with the by-law in the Manual of The Mother Church which relates to the work of the Sunday school. Indeed all the activities of the Christian Science church lay hold upon vital truth, and are therefore of interest to every one who attends the services, and all should be deeply interested in this nursery of Christian character. We should never forget our Leader's statement that "progress is the law of God" (Science and Health, p. 233), and this certainly relates to the work of the Sunday school as well as to individual unfoldment. Progress means that teachers and pupils alike should be doing better work today than they did a year ago, and bringing forth fruits in accordance therewith.

In the Sunday school of The Mother Church, in Boston, it is customary for the superintendent to read on the first Sunday of each month the whole of Article XX, relating to the Sunday school, as given on pages 62 and 63 of the Manual, and the teachers cannot fail to be deeply impressed by the requirement stated in Section 2, which reads as follows: "The Sabbath school children shall be taught the Scriptures, and they shall be instructed according to their understanding or ability to grasp the simpler meanings of the divine Principle that they are taught." The next section deals specifically with the "first lessons," but here too the requirement of the preceding section holds good, for it deals with the Scriptures. It also insists that "the instruction given by the children's teachers must not deviate from the absolute Christian Science contained in their text-book." The Scripture teaching must therefore be in accord with Principle, and not mere personal opinion, and this calls for progressive spiritual unfoldment on the part of both teachers and taught.

Just here it is well to remember that Christ Jesus was evidently a very close student of the Bible, for he used the inspired word as his weapon in every encounter with error. His great victory in the wilderness was won in this way, and after his resurrection we find him bringing to his disciples such an understanding of the Scriptures as made their hearts burn within them. Should not we strive to do the same for the children today? We are told that Paul was mighty in expounding the Scriptures, but this was after he had learned the difference between the letter which killeth and the spirit which giveth life. In his epistle to the gentle Timothy he says, "From a child thou hast known the holy scriptures, which are able to make thee wise unto salvation." Our Master said, "Search the scriptures; for in them ye think ye have eternal life," and this is what the Christian Science Sunday school is designed to bring to the children,—life manifested in health, purity, truthfulness, and loving obedience.

We are here reminded that the children are to be "taught

Digitized by Google

the Scriptures," not taught about the Scriptures, and experience has shown that it is usually best to confine the instruction to the Lesson for the day. This is always limitless in its possibilities, and the teacher should be rich enough in spiritual lore to answer in an inspiring way the questions of the pupils, whether these deal with Moses, David, Daniel, Christ Jesus, or with the truth revealed through Mrs. Eddy's discovery of the divine Principle of the Bible. In the earlier years of Christian Science work a great effort was needed to rise above the material sense of the Scriptures, which denied the present availability of divine Truth, and which dealt in a vague way with prophecy; as if its meaning could be gathered from dates, past or present, when its real value depends upon its daily fulfilment in individual experience.

Our great need is to know the Bible better, love it more, and practise its teachings through the spiritual illumination gained from Science and Health. These two books that God hath "joined together," we must not "put asunder" in our Sunday school work, but let them gently lead the children step by step into heaven,—harmony, health, happiness.

ANNIE M. KNOTT.

Exposure

IN looking over a western newspaper recently, a Christian Scientist came upon the heading "Christian Science Exposed," and instead of being disturbed thereby his discovery had a distinctly exhilarating effect. "Splendid," he thought; "just what is needed—nothing could render the world so great a service—let the good work go on until the truth is fully known!"

In his letter to the Philippians, Paul calls attention to the incongruous fact that while the many who were disseminating the gospel were impelled by good will, some were preaching Christ "even of envy and strife," and he adds, "What then? notwithstanding, every way, whether in pretense, or in truth, Christ is preached; and I therein do rejoice, yea, and will rejoice." Christian Scientists have frequent occasions for this kind of joy and rejoicing, since even would-be destructive attacks upon the teaching they honor are constantly bringing forth good. They do not enjoy, much less do they rejoice in, the aspersions of antagonism, but they do court that exposure which effects the disclosure of the content of their faith; and the size of the contribution to their propaganda efforts which is unwittingly made by those who are laboring under the mistaken conviction that they are opposed to this movement, would confound them if they but had eyes to see.

The famous career of Don Quixote well illustrates the nature and outcome of the tilt which self-satisfied religious prejudice is wont to have with wind-mills of its own erection, and the result would assume the dimensions of little more than a joke, were it not for the fact that nothing is more unfortunate in its reactions upon the individual than the heroic espousal of an unwarranted undertaking. When endeavor has no better basis and impulsion than some blind sense of determination or some bias of religious education, the result is sure to be inglorious and likely to be disastrous to one's spiritual life. Let him, therefore, who essays to write upon this subject, make sure, first of all, that it is actually Christian Science which he is exposing and not his grotesque misapprehension of it.

It is apparent that Mrs. Eddy's undisturbed calm in the presence of criticism of Christian Science resulted from the fact that she knew it would help rather than hinder the truth's advance. Speaking of the matter, she says on page 110 of Science and Health, "This book may be distorted by shallow criticism or by careless or malicious students, and its ideas may be temporarily abused and misrepresented; but the Science and truth therein will forever remain to be discerned and demonstrated."

From its beginning, the Christian Science movement has been very earnestly and intelligently devoted to the enterprise so lightly set for himself by the writer of the article referred to. Furthermore, all its worthy representatives are humbly trying to "expose" Christian Science in the best possible way,—namely, by their daily doings, their walk and conversation before men,—and the sooner all who call themselves Christian Scientists become altogether awake to this fact, and the more quickly its teaching and spirit are thus revealed to all men, the sooner will the world be Christianized and God's kingdom come. The declaration and exhibition of the healing and uplifting power of divine Truth, which is effected by every true working Scientist, is the thing that contributes positively to the radiation of this redemptive Christ-ideal, and at the same time it serves to reverse the statements of that inept criticism which brings about the fulfilment of the saying that even the wrath of men shall be made to render a service to good.

JOHN B. WILLIS.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston Street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk Streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon Street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

PASADENA, CAL.—During the year 1915 the literature distribution committee gave out 49,188 pieces of literature as follows: 17,125 *Sentinels*, 2172 *Journals*, 888 *Heralds*, 24,237 *Monitors*, 2836 pamphlets, 244 leaflets, 1161 papers containing lectures, 25 copies of "Editorial Comments on the Life and Work of Mary Baker Eddy," and 500 copies of Senator Works' speech. The committee has placed forty subscriptions to the various periodicals in libraries, clubs, hotels, institutions, fire houses, and schools. Fifty-seven copies of Mrs. Eddy's works have been added to the public library and the loan library connected with the local church.

Correspondence.

WACO, TEXAS.—A booth was maintained for the free distribution of Christian Science literature at the Texas Cotton Palace, and over twelve hundred pieces of literature were given away. Much interest was manifested, not only in the booth, but in the subject of Christian Science, and many people stopped to get information.—*Correspondence.*

CHICAGO, ILL.—Twelfth Church of Christ, Scientist, has purchased a plot of ground on Grace Street, between Pine Grove Avenue and Sheridan Road, on which it intends to erect a church building. The location is five hundred feet from the lake. This church was organized in 1913, and is now holding its services in the edifice of the North Shore

Digitized by Google

Hebrew Congregation. The land purchased lies a half-block east of the present location and is considered one of the most beautiful sites on the North Shore.—*Chicago Examiner.*

ELKHART, IND.—At a meeting held yesterday [March 14], the members of First Church of Christ, Scientist, accepted the plans that had been prepared for their new church edifice, which is to be erected at the corner of Second Street and Lexington Avenue. The structure will cost twenty-five thousand dollars.

It is probable that the contract will be let about May 1, and it is thought that the building will be ready for occupancy by December. The main auditorium will seat five hundred and twenty-five people, and provision is made so that a balcony can be added later. This will increase the seating capacity to seven hundred and fifty.—*Elkhart Truth.*

FRESNO, CAL.—The edifice of First Church of Christ, Scientist, will be ready by Oct. 1. The contract for the building has been signed and work will begin at once. The main contract was for forty-five thousand dollars, with smaller contracts amounting to fifteen thousand dollars. The church is to be located at the northwest corner of Calaveras and N Streets. The main auditorium will seat between eight hundred and fifty and nine hundred.—*Fresno Herald.*

HEMPSTEAD, N. Y.—Work on the new building for the Christian Science Sunday school began today [April 5]. The structure will be 31 by 10 feet, and will face on Franklin Street. Plans for the church edifice have not yet been decided on. The rooms in the Hempstead Bank, now occupied by the society, will be given up July 1.—*Brooklyn Times.*

EVERETT, WASH.—Negotiations with First Church of Christ, Scientist, were closed today [March 22] whereby three lots on the southwest corner of Wall Street and Hoyt Avenue passed into the hands of that organization. The sale price was five thousand dollars.—*Everett Herald.*

NEW BEDFORD, MASS.—The new twenty-five thousand dollar edifice of First Church of Christ, Scientist, at County and Mill Streets, will probably not be ready for occupancy until some time in May.—*New Bedford Standard.*

NEW BRITAIN, CONN.—Extensive alterations have been made by First Church of Christ, Scientist, on the chapel at the corner of West Main Street and Park Place.

New Britain Herald.

✧ ✧ ✧

The Lectures

Boston, Mass.

Prof. Hermann S. Hering delivered a lecture on "The Science of Christian Healing," under the auspices of The Mother Church, The First Church of Christ, Scientist, in the Church Edifice, Falmouth, Norway, and St. Paul Streets. He was introduced by H. Cornell Wilson, first reader, who said:—

You have been invited to listen this evening to a lecture on Christian Science. Lectures on this subject are given by members of the Christian Science board of lectureship of The Mother Church, and constitute one of the means Mrs. Eddy adopted for bringing a correct statement of Christian Science to public attention.

There are other ways, also established by the Discoverer and Founder of Christian Science, which make it easily possible for the investigator to gain a correct understanding of this teaching. These ways are found in the church services on Sunday and the Wednesday evening testimony meetings; the free public reading-rooms, maintained in communities where there are Christian Science organizations; and the publications of The Christian Science Publishing Society, chief among which are five periodicals, including a daily newspaper,—*The Christian Science Monitor.* With the lectures, these various means provide opportunities whereby misconceptions of Christian Science, which may prevail in the public thought, can be corrected.—*The Christian Science Monitor.*

✧

Manila, Philippine Islands

Virgil O. Strickler lectured on Christian Science in the gymnasium of the Y. M. C. A. He was introduced by Irving B. Dexter, who said:—

The desire to find the kingdom of heaven has been inherent in mankind throughout all ages. As the world advances in civilization this desire becomes more intense. Generally speaking, man has throughout all time bravely struggled with the ills that beset mortals on this plane, hoping to find the kingdom of heaven somewhere beyond the grave. Tonight we shall listen to a lecture on Christian Science, a religion which declares the kingdom of heaven to be a present possibility.

Thousands of men and women from all parts of the civilized world are daily expressing their gratitude for deliverance from sin, sickness, want, and various other ills of suffering humanity, through the practice of its doctrine, and are bearing testimony to the efficacy of its teachings in the achievement of happier, better, and higher lives. This, together with its phenomenal growth during the last fifty years, has made it the center not only of universal interest but also of much unjust criticism by those who do not understand its tenets.—*Correspondence.*

✧

Ashland, Ky.

The lecture on Christian Science given by Jacob S. Shield at First Church of Christ, Scientist, was largely attended. The lecturer was introduced by the Hon. E. B. Hager, who spoke in part as follows:—

Those of this audience who belong to the Christian Science church, as perhaps those who do not, know that I myself am not a Christian Scientist. My knowledge of its influence and beneficence is purely local, and my information concerning its teachings is distressingly limited. Yet never having been dominated by prejudice against it or blinded to the good that the Christian Science church has accomplished in our midst, I have not failed to observe that its influence has been for the best in ameliorating suffering and in ministering not only to the spiritual but also to the physical well-being of its votaries.

The progress and growth of Christian Science has been marvelous. Whether it is because other churches are losing their influence upon the people, or whether it is because the Christian Science church has healed the spiritual wounds that the other churches could not reach, is unimportant to consider. The fact remains that Christian Science is growing at a rapid rate and extending its beneficent influence over every part of our globe. It is not a faith of the ignorant and unthinking, but is the faith of intelligent, refined, and prosperous people, from whose countenances constantly radiates the happiness they enjoy in their faith and the physical and spiritual health it produces in them.

The purpose of the Christian Science church, as I understand it, is to relieve the suffering and the sorrowing, to redeem them from their sins and heal them of their diseases.

Digitized by Google

That seems to have been the mission of Christ Jesus on earth; and if this new faith in carrying out its purposes even approaches the great good accomplished by him upon whose faith and teachings it has been established, it will have rendered mankind an inestimable service and will have established itself firmly in the hearts of the people. Is the faith accomplishing its purpose? I am not fully informed; but every day we read and every day we hear of some wonderful healing of the sick which has been accomplished by the Christian Science faith, and some wonderful regeneration of the sinful that it has brought about.

Teachings that can accomplish these results are certainly entitled to consideration, and to the respect of thinking men and women, whether or not they adopt them for their own.

Ashland Independent.

Lectures to be Delivered

CALIFORNIA—Long Beach: Clarence C. Eaton, Auditorium on the Pier, 8 p.m., June 16.
Los Angeles (Seventh Church): Clarence C. Eaton, Elks Hall, San Pedro, 8 p.m., June 15.
Monrovia: Clarence C. Eaton, Woman's Club House, 8 p. m., June 12.
Redlands: Clarence C. Eaton, Contemporary Club House, Fourth and Vine Streets, 2:45 p.m., June 14.

CANADA—Berlin, Ontario: Virgil O. Strickler, Star Theater, Queen South, 8:15 p.m., June 13.
Grenfell, Saskatchewan: Prof. Hermann S. Hering, Windsor Theater (Moving Picture), 8:45 p.m., June 13.
Medicine Hat, Alberta: Prof. Hermann S. Hering, Empress Theater, 8 p.m., June 15.
Virden, Manitoba: Prof. Hermann S. Hering, "Auditorium," 8:30 p.m., June 12.

COLORADO—Aspen: Dr. Francis J. Fluno, Church Edifice, 100 West Main Street, 8 p.m., June 15.
Glenwood Springs: Dr. Francis J. Fluno, Methodist Episcopal Church, 8:15 p.m., June 16.
Longmont: Bicknell Young, Auditorium, 8 p.m., June 16.
Montrose: Dr. Francis J. Fluno, Armory, 8:15 p.m., June 13.

CONNECTICUT—Bridgeport: Charles I. Ohrenstein, Lyric Theater, 3 p.m., June 11.
Greenwich: Jacob S. Shield, Havemeyer Building, 8 p.m., June 12.
Hartford (First Church): Willis F. Gross, Palace Theater, 3:30 p.m., June 11.
Norwalk: Jacob S. Shield, Regent Theater, 3:30 p.m., June 11.

DELAWARE—Wilmington: Hon. Clarence A. Buskirk, Church Edifice, Park Place and Van Buren Street, 3:30 p.m., June 11.

ENGLAND—Leicester: John W. Doorly, Cooperative Society's Hall, High Street, 8 p.m., June 27.

ILLINOIS—Chicago (Seventh Church): Virgil O. Strickler, Church Edifice, 5318 Kenmore Avenue, 8 p.m., June 16, and 3:30 p.m., June 17.

INDIANA—Attica: Hon. Clarence A. Buskirk, 8 p.m., June 16.

IOWA—Albia: Bicknell Young, Kings Theater, 8 p.m., June 13.
Chariton: Clarence W. Chadwick, Temple Theater, 8:15 p.m., June 12.
Oelwein: Bicknell Young, Orpheum Theater, 3 p.m., June 11.

KANSAS—Kansas City: William R. Rathvon, Scottish Rite Temple, 8 p.m., June 16.

KENTUCKY—Ashland: Frank Bell, Church Edifice, Seventeenth Street, 8 p.m., June 16.
Louisville: Frank Bell, Macauley's Theater, 8 p.m., June 15.
Newport: William R. Rathvon, Hippodrome Theater, 8:15 p.m., June 12.

MAINE—Augusta: Clarence W. Chadwick, City Hall, 8 p.m., June 9.

MARYLAND—Cumberland: Frank Bell, City Hall Auditorium, 8 p.m., June 13.

Testimonies of Healing

Christian Science was first brought to my attention in 1896, when my wife's mother was healed of an abnormal growth. About three years later, while stooping to examine some flowers, she punctured one of her eyes by striking it against a stick which held the flower upright. The injury was healed and her sight completely restored in less than a week. My wife, after being an invalid for years, had taken up the study of Christian Science and had been greatly benefited in both health and disposition. My boy, who was born with a double hernia and at five years of age had worn out four retaining bands, was healed in one night. These healings so impressed me that I determined to look into the merits of Christian Science for myself. Some time after taking up this study I discovered that for several years I had escaped the attacks of influenza which formerly had given me quite a tussle every spring and fall.

Some years ago a small spot appeared on the little finger of my left hand. At first I did not pay any attention to it, but the trouble spread rapidly until finally it covered both arms above the elbows and both legs above the knees. Different practitioners treated me during the three and a half years that I was in this state, but while they helped me greatly, the healing was not completed. At times I allowed myself to be very much discouraged, as my position compelled me to meet a good many people and some of them wanted to know why I always wore gloves. The thought was constantly with me that this work of overcoming the error was mine, and as time went on it became more and more insistent. My wife often tried to make me see that so long as I used any material means for relief I was not leaning upon God, and she lovingly told me that she did not think I would ever be healed until I put all my trust in Him.

One day the conviction came to me very forcefully that God needed no assistance from any source. I discontinued putting anything on my hands to keep them soft, put on gloves that were dry, and held fast to the truth as taught in Christian Science. For three days my suffering was terrible, but whenever it seemed unbearable I communed with God, placing myself absolutely in His care. After the third day my arms and hands were not so red, and from that time on I could almost see the error fade away. My arms and legs became whiter every day, and within a month hardly any traces of the disease were left, although it took almost a year for the finger-nails to grow into their rightful shape.

I was also thoroughly healed of the smoking habit some sixteen years ago. At another time I awakened one night in a heavy perspiration, and was so weak that I could hardly raise my hand. At first a great fear came over me, but I soon realized I must do my work, for there was no truth in that condition. For some time I could not get my thought clear, but after mastering the fear it suddenly came to me that the previous evening I had had a glass of ice-cream soda which did not taste quite right. I declared the truth that God's child could not be poisoned, and while working along this line of thought fell asleep. When I awakened in the morning the experience seemed like a dream to me, for my strength had fully returned.

These demonstrations have taught me many valuable lessons, for which I thank God constantly. I have the proof that God is always ready to destroy the sense of discord if we will come to Him as little children, without any doubts or fears, always knowing that "we live, and move, and have our being" in good. I am very grateful to those who helped me along the road to Truth and Love, for our literature, and for those faithful workers in Boston and all over the field through whose efforts mankind are being led into that truth which makes men free. It is my constant effort so to live that I may be a credit to Christian Science.

ALBERT W. SEEGERT, Chicago, Ill.

✧

I heard of Christian Science when it was first introduced in England many years ago. I was then suffering from acute rheumatism in my arm, and although not actually laid up with it, I was never free from pain. I had been to many doctors, and they sent me abroad to take waters and baths, but the pain continued. Then a friend lent me a copy of Science and Health, and I read it with great interest and was quickly healed. There has been no return of the trouble during all this time. I have also had countless other blessings and have been greatly helped through many dark days. I am deeply grateful for all that Christian Science has done for me, and can never half express my gratitude to Mrs. Eddy for showing the way, through this teaching, out of trouble and into a new and happy life.

HENRIETTA M. COCKERELL, London, England.

✧

It seems to me that all my life I wanted something good and true, that brought peace and not strife. Christian Science literature was placed in my hands, but at the first reading I was not willing to admit the healing power of divine Truth; however, I felt that I must have a copy of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and immediately purchased one.

For nearly a year I had been subject to attacks of neuralgia, and could not gain even temporary relief, except by taking an opiate. The day I secured Science and Health I felt one of these attacks coming on and decided to take nothing, but to wait until I could quietly read the book for which there was so much claimed, so that I could make sure of the healing power. This was not done in a skeptical way, but every line was read with a prayer to God to show me if it was the truth. In a few hours every thought of pain had left me, and it has never returned. Since I took up the study of Christian Science in earnest and discarded medicine I have not used anything but the healing power of Truth to overcome pain or any supposed physical ailment. That was nearly ten years ago. Up to that time I had, so it seemed to me, been sick most of the time. Periodical pains, for which I had to be under the influence of opiates for several days at a time to get any rest, were overcome, and I seem to be normal in that respect now. My general health is good, and I find that the only sure way to keep it so is to bar out all that is unlike God, good.

The teaching of love and brotherly kindness was what appealed to me when I first read Christian Science literature. It seemed a most beautiful thing that people studied a religion in which there was no strife or pulling for place and power, a religion that taught one so readily to forgive his enemies. But the time came in my personal experience when I had to learn how to forgive my enemies, and I thank God for a religion that teaches the only true way,—teaches one to lose sight of the mortal, material man, and see only God's image and likeness, to know that the only enemy is in one's own thought, the thought entertained that shuts out the Christ-idea. I came to the point where I had to stand still in Christian Science or see this in the right way, and everything I read or studied cried to me of the activity of the divine Mind and the fact that there is progress only through devoted effort. It has been a struggle, a wrestling, but the

Digitized by Google

light is breaking. I owe all I have of health and happiness to Christian Science, and since it would be impossible to enumerate the benefits for which I am grateful, I only hope that I may be able to bring a little of the light so abundantly shed in my own life into the experience of others.

I feel very grateful for the struggle Mrs. Eddy made in the pioneer days of Christian Science, for the faith and fidelity that enabled her to leave this religion as a legacy to the world. I am thankful to God for again sending us the divine Comforter in the form of Christian Science. I know of myself I could do nothing, and my life would be a blank without the knowledge of God and a renewing of the teachings of Christ Jesus as revealed in Christian Science.

GUSSIE RANSOM, Houston, Texas.

✧

It is with a heart full of love to God, and gratitude to our Leader, Mrs. Eddy, that I testify to what Christian Science has done for my little daughter. Early in the summer of 1914 she was suddenly stricken with paralysis. She lost complete control of her left side and would fall every few steps, not being able to control one limb. The hand also was useless. After five weeks of faithful treatment by a Christian Science practitioner she was completely healed. She is today well, strong, and happy; is a pupil in the Sunday school of First Church of Christ, Scientist, of Brooklyn, and her perception of the truth is very inspiring and helpful.

This is only one instance of the power of Love in our household. Another was when this same little girl had measles in an aggravated form, but after ten days of absent treatment she was up and around our home. For these and many other demonstrations I am extremely grateful.

ELIZABETH W. SWIMM, Brooklyn, N. Y.

✧

It is a duty as well as a great privilege to tell others what Christian Science has done for me. Several years ago I called a practitioner for childbirth, and in about an hour after she arrived I was free from pain or weakness and rejoicing over the free delivery. A severe hemorrhage took place, however, and I became unconscious; but I soon awakened, and in a short time was free again from both the hemorrhage and its effects. In thirty-six hours I got up and dressed, and when the baby was three days old I commenced doing the housework for a family of six and suffered no ill effects.

Christian Science has been a great blessing to our family, and we have had many demonstrations of the efficacy of its healing truth. It has proved far more sure and given much quicker relief than *materia medica* ever did. I am truly thankful to God for giving us one pure enough to reveal this saving truth to the world.—SARAH E. DURHAM, Merrill, Ore.

✧

Christian Science came into my life when I was in extreme need of help physically and mentally. I was on the verge of *delirium tremens* when a friend mentioned Christian Science to me, and while not clear mentally, I was nevertheless aware of my great need of help, so decided to try it as a last resort. During twenty years of slavery to drink I gradually acquired the use of a dangerous drug, which I took hypodermically when whisky seemed too weak to satisfy the craving for stimulants. When I started on my first visit to the Christian Science practitioner I was worse than drunk, but I was healed in five treatments of both the liquor and the drug habit, and there has been no desire for stimulants of any kind since. I was healed at the same time of the cigarette habit, although I had previously smoked to excess.

Few people go deeper into misery than I went as a result of drink; friends, positions, everything that is said to make up the sum of life's happiness, left me, and Christian Science found me cynical, pessimistic, and lonely. Everything is different now, for I live a better, larger life. If happiness consists in praising God constantly and possessing that peace which passeth understanding, in the ability to look out on the world no longer as a pessimist but as a genuine optimist, then I am happy. The drunkard's home with all its misery has been transformed into a home where the Bible is read every day and Christ is the head of the house, and this transformation was brought about entirely through Christian Science.

Words fail me when I try to say how grateful I am for this change. I thank God that I was led to read Mrs. Eddy's wonderful book "Science and Health with Key to the Scriptures."—JAMES LAWRENCE, Chicago, Ill.

Through my husband's healing in Christian Science I was led to study the Bible, together with Science and Health, and much is being made clearer to me. Though a graduate nurse I now rely entirely upon Christian Science for help in times of sickness or trouble, and with the aid of practitioners I have wonderfully improved in health. Words fail to express my thankfulness to God, and my gratitude to our Leader and to all who have helped bring us to this saving truth.

MILLICENT H. LAWRENCE.

✧

My people are not Christian Scientists, but I am happy to say they are very kind in their attitude toward it. There are no Christian Science churches or even societies near here, but I realize that God is here just the same. I live on a farm, and in August, 1914, when I went into our smoke-house, a heavy fish net that was hanging from the ceiling fell, and a hook caught in my lower eyelid, tearing the flesh from the bone for several inches down my face. My family wanted to send for a doctor, but I called a Christian Science practitioner over the telephone, and then went to my room and washed my face. That evening one of my brothers took a note to the practitioner, nine miles away, and our daily affairs went on the same as usual. I only covered my face with a cloth. The wound did not swell or get sore, and in two days I took up my household duties. In a week only a scar remained, and now that is scarcely to be seen. All I can say is, that I could not do without Christian Science.

My daily prayer is to know more of this truth, to know more about this Principle that is so wonderful, and to stand by it.—KATHRYN LAMMERT, McGirk, Mo.

✧

Many years ago an eminent medical man told me that I was beyond all human aid. Other physicians, including friends, examined me and independently of one another arrived at the same conclusion, that I was a mental and physical wreck. Among the many ailments were said to be valvular disease and enlargement of the heart in an advanced form, causing malformation of the chest bone, together with the usual accompaniments of extreme nervousness, irritability of temper, sensitiveness, chronic stomach disorder, an internal displacement, varicocele, and functional trouble of a serious nature, also the early stages of paralysis on one side.

As anticipated by the medical men, my eyes began to fail, and my nights were sleepless, until at last the strongest opiates were of no avail. My circumstances were such that I had to follow my employment, and so I determined to disappear when unable to continue it. Relief was sought in a variety of ways, some of which were extremely drastic. As I was not religiously inclined, all hope or desire for God

Digitized by Google

vanished, and when I tried to read the Bible for a short time it was found to be anything but helpful; in short, I became an agnostic. My father and grandfather having passed on at an early age from the same physical causes, according to the so-called law of heredity which my condition seemed to manifest it is probable I also should have passed away, as predicted, very early, if Christian Science had not come beautifully into my life.

At the time I did not think of healing, but the teaching appealed to my intellect; and I refused all offers of help which were made to me, with the result that I studied the letter of Christian Science twelve months without the slightest improvement. I then became desperate and appealed to a practitioner for treatment. The healing came practically instantaneously, and I began to feel like the man who sat at the feet of Jesus "clothed, and in his right mind." Self-will and self-love are vanishing, and each day is bringing blessings untold, while the Bible has become my constant companion. Several years have now passed, and I have not had the slightest return of the above mentioned troubles.

Words are inadequate to express my gratitude to Christ Jesus the Wayshower, and to our Leader, Mrs. Eddy, for her life of devotion and self-sacrifice, and my thankfulness to God for all.—Jervis Jones, Bristol, England.

✧

I have been healed in Christian Science of rheumatism, also of blindness in one eye after an unsuccessful operation. Our little boy has been healed, sometimes almost instantly, of whooping-cough, hysteria, and many other so-called children's complaints. His mother has been healed of severe throat trouble and of neuritis of long standing; in fact, she has been saved from the operating table.

Divine Principle has been the only preventive and curative agency in our home for many years. The truth of Christian Science has been our daily supply, its spiritual idealism has had an uplifting influence over our moral and social life, and it has brought peace and comfort to our home. These are but a few of the blessings for which we are thankful, and this statement hardly does justice to what we owe to Christian Science. We realize that we can best express our gratitude by being of service to others, and this we are trying to do to the best of our ability.

Ludwig F. Baechle, Birmingham, Mich.

✧

Nine years ago, while reading one of the Christian Science pamphlets to please a friend, I was instantaneously healed of chronic bowel trouble, from which I had suffered since early childhood. Material aid had failed to bring this healing, though I had resorted to many drugs and other remedies. After a serious illness brought on by this malady some years before Christian Science found me, I was told I must wear a bandage, and would probably have to do so the remainder of my life. Under this law the bandage was worn for a good many years, but when Christian Science healed me I was released from fear, and in a short time was able to remove the bandage without anxiety or any bad after effects. I slept that night like a babe, and awoke refreshed. I did not realize I was healed, but felt very happy and wanted to know more about Christian Science. I attended the meetings and in a short time bought a copy of Science and Health.

While my heart is overflowing with gratitude for all my physical healings, and the overcoming of the fear of everything and everybody, even to a draft of fresh air, I am most grateful for the spiritual uplift, for the joy and peace in the understanding of God as Principle and of man as His image and likeness, the consciousness of the power of Truth and Love to meet every need. I am also grateful for the light that has been thrown on the Bible, which was once a sealed book to me, but which I now love to read and study. I had been a great slave to medicine,—indeed it was a god to me; but I soon realized I would need it no more, and for nine years God has been my only physician, ever present and always available.

The little things in life are what count, and there are none too poor to give a pleasant smile, a kind and encouraging word, or do a kind act, for the world needs love, and surely we can all reflect this. I am happy in the understanding that heaven is not a locality which one has to die to reach, but a state of consciousness here and now. The Bible says, "The kingdom of God is within you," and surely a happy consciousness is a taste of heaven. I give this testimony with deep gratitude, and with the desire to help some weary searcher to find the truth. No matter what the need, by applying this truth with understanding we may find the Comforter that never faileth.

Words cannot express my thankfulness to God for all my blessings, or my gratitude to our revered Leader, Mrs. Eddy, for what she has done for humanity. My desire is to work with an honest and a good heart and try to serve in obedience and humility, to prove myself worthy to be called a true Christian Scientist.

Harriet Louise Weikert, Kansas City, Mo.

✧

My heart overflows with gratitude to God for the teachings of Christian Science. I joined a church at the age of eighteen and tried to live right in the sight of God, but soon became weary of the weekly round of churchgoing, since it gave nothing that satisfied. I took up another thought which for a few years seemed the truth and gave me much satisfaction, as it taught many valuable lessons. Later I was left with two little children to rear, and the outlook was indeed dark, since ill health and financial difficulties had left me in a hard way for the battle of life as I saw it then.

I became bitter toward my religion, although outwardly trying to cling to it through a sense of duty, and because by nature I was religiously inclined. In my anguish I would lie awake nights and ask why God had forsaken me. Finally in my despair I wished I could die. Once more I went to my church, seeking for some teaching to help me on, but came away with the thought that I never wanted to go again, for instead of leading me to God it was making an infidel of me. All I heard that afternoon was the tearing down of other platforms, while I only wanted to learn God's way.

At this time I was visiting a Christian Science practitioner, and I know now I was being prepared for the good seed. She never urged me to try Christian Science, but lovingly asked me if I had ever read "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had always thought Scientists discarded the Bible, but found it much in evidence in her room, and this set me to thinking and aroused a curiosity to read the text-book. She asked me one day if I could get it at the library, and that was all I needed to start me aright. I soon had Science and Health and eagerly absorbed it. When I read the interpretation of the Lord's Prayer as given by Mrs. Eddy (see p. 16) I was perfectly satisfied.

Christian Science is making me happier, my surroundings more harmonious, and is teaching me that I have all I need every moment. It is so helpful to trust in God and work out each problem as it is set before me. While I did not come to Christian Science for physical relief, I have been healed of a catarrhal condition of the stomach and of hay-fever. Through

Digitized by Google

the understanding of divine Love, croup, loss, and many other perplexities, have been overcome.

I am thankful for our heavenly Father's guidance, and I am likewise grateful for the loving help of practitioners and friends, and for our literature, also for Mrs. Eddy's untiring love in presenting this truth to the world. Truly Love never faileth.—Maggie Opel Oglesby, Denver, Col.

✧

[Translated from the German]

In gratitude to God for all the blessings I have received through Christian Science, I would like to testify to the following. As early as 1912 I was suffering with very painful rheumatism, which became so severe as time went on that it was barely possible for me to stay out of bed even for a short time. My wife had to dress me and assist me in every way. The physicians from whom I sought relief were unable to help me. One said the trouble was gout, and that before another year had gone by I would be utterly helpless.

I went on suffering in this way until the fall of 1913, when dear relatives drew my attention to Christian Science. At first the thought of it did not exactly appeal to me, but when cases of healing through Christian Science were proved to me to be true, I decided to give it a trial. I then applied to a practitioner for treatment, which was taken up lovingly. Although he took a great deal of trouble to point out to me the love and goodness of our heavenly Father, things did not improve. I then had recourse to other means, but soon felt that it was not the way that would lead to healing, and thereupon I went back to Christian Science. Through the practitioner's renewed treatment and loving encouragement the error finally yielded, for which I am most deeply grateful. In about half a year's time I was able to walk without any difficulty, and now, despite my age of sixty-five, am in full health and strength. I am sure that the healing which has come to me through Christian Science is due solely to the infinite goodness of divine Love.

Through reading the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have reached the point where I joyfully trust Him who gives bountifully and helps those that rely on Him. I thank God from the depths of my heart, and am grateful to our faithful Leader, and to all who have helped me in my endeavor to know Him.

Fridolin Zimmermann, Bilten, Ct. Glarus, Switzerland.

✧

After my child was born I was in a terrible condition, and for a whole year was under a physician's care; but I had to be operated on after all. Later, two more operations were performed, followed by a nervous breakdown. In spite of all that was done for me I was a nervous wreck for eight years. In August, 1914, a neighbor told me of Christian Science and asked me to attend church with her. I did so, and finding a large number of intelligent looking people there, I thought there must be something in Christian Science. The following week I went to see a practitioner, and after four treatments was completely healed.

Words cannot express my gratitude for this wonderful healing and the harmony it has established in our home, also for the many blessings we receive daily.

Kate Kehrein, Milwaukee, Wis.

✧ ✧ ✧

What is life? he dumbly questioned year by year.
God is Life! back came the answer swift and clear.
What is love? again he questioned anxiously.
God is Love, and All-in-all eternally.

Maude Dale.

From Our Exchanges

[Richard Roberts in *The Constructive Quarterly*]

There are those who tell us that nations cannot from the nature of the case act unselfishly. That this is a perfectly gratuitous and unwarranted assumption needs no serious proof. There is no reason why, if any group of people can act from unselfish motives, a nation should not likewise be able so to act. The national nexus is not in its nature essentially different from the social nexus which binds any group of people together; and to deny that groups of people can act Christianly is to decline into the kind of pessimism which summarily hands the world over to the devil.

It is true, as any observer of human phenomena knows, that a group of people may in certain circumstances act collectively on a plane morally lower than any individual in the group would by himself be likely to do; but this is only one half of an important truth. Groups may no less act collectively on a plane and reach a height far higher than would be possible to the individual. The sense of solidarity may reinforce the timid and wavering motives of individuals and enable them to act together with a force and a consistency which would otherwise be beyond their power. The problem of Christianizing a nation is not that of converting every individual in it.

[Editorial in *Dayton* (Ohio) *News*]

Phillips Brooks said that "the Church of Christ ought to be a universal solvent, lying back of all our differences and composing them." The church has an opportunity today to demonstrate this claim. The crying demand is for something that will unite all that is helpful in humanity and discard all that injures. Not many, except those engaged in bitter conflict, defend national prejudice, class strife, or religious bigotry. The church can show her power to unify by unifying. This is no day for men or churches to sit in a dark corner hugging dear non-essentials, while great movements march by to victory. The vision of some is for a church as broad as the spirit of Christ in its sympathy, as businesslike as modern industry in its methods, and as far reaching as human need in its helpfulness.

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

Indeed, the whole burden of the sin of this war rests on the church. We are not able to condemn politicians, diplomats, or newspaper writers. They do not share our views. Along the line of their presuppositions they are perfectly justified. But the church ought to have found the meaning of the cross and followed it centuries ago. If she had done so, one of two things would have happened by now: either the church would have been destroyed, which to a churchman is unbelievable, or the world would have been redeemed by now from the delusion, the futility, and the crime of war.

[Rev. Henry Kingman, D.D., in *The Biblical World*]

From what root does moral victory at the highest grow? The answer to this inquiry is not far to seek. Yet let us be sure at the outset that our judgment is not made worthless by the suggestion, openly made or half-consciously entertained, that Jesus won a triumphant manhood because he was a god sojourning on earth, victorious over human besetments by virtue of a divine birthright that separated him from all his fellows. We must give full weight to the unmistakable facts on which his early friends laid such stress, to forestall just such error. He was a man born of a woman, made in all things like unto his brethren, tempted in all points as we are,

Digitized by Google

made perfect through suffering, learning obedience through the things that he suffered, and though with strong crying and tears, yet carrying his obedience even unto death. The victory he won in the face of all life's ills was a victory of triumphant manhood, and the principles by which he triumphed are eternally valid for his brethren. His moral victory grew out of his perfect adjustment to a certain realm of ideas apprehended only by faith.

[*The Christian Work*]

What this age needs more than anything else is prophets. The age of great preaching will come again when great souls speak face to face with God, and then go from Him with His word for His people. The great value of the Bible is not that it tells us what the prophet said, that we should merely repeat it, but that it is the divinely given way to the realization of similar first-hand experience of God. Jesus himself said that he was the "way" to the Father, and prayed that his disciples might enjoy his own intimate relationship with God. The minister of today should speak authoritatively, as one who has himself seen God. It is a critical, incredulous, and empirical age. It demands, with Thomas, to see the proof. It is not even satisfied with the authority of the Bible. If one preaches the love of God to it, it will straightway demand, "How know you God is love?" The prophet can always say: "I have experienced that love. I have been face to face with God;" and he begins his message with a "Thus saith the Lord," or with an "I know Him in whom I believe." It is a great and holy office, this of prophet, and it calls to young men of great souls and power of vision.

[*The Christian Register*]

"Traitors to Christianity" are to be condemned on the merits of their action and conviction, not on some one standard of what fidelity requires, nor by minds so obsessed by one view as to become fanatical and unable to see any other. A man may reserve the right to have a mind of his own and use the courage of his convictions without thereby surrendering any deep discipleship he may maintain to Jesus. The world needs that kind of discipleship more than any other.

[*The Standard*]

Right thinking must result in right doing. Unless orthodoxy produces orthopraxy it is only a pseudo-orthodoxy. It is supremely important that we have a true perspective of our Lord's person and work, but it is nevertheless more important still that this perspective be spiritual as well as intellectual, related not to our heads only, but to our hearts and hands. "Ye are my friends, if ye do whatsoever I command you."

[*The Universalist Leader*]

A life in which, like Jacob, we are forced to wrestle with the angel whose blessing we covet, a life in which we inherit by overcoming, is the most satisfying for those who prove equal to its demands. The green pastures and still waters are pleasantest to those who have reached them by following the shepherd's guidance over perilous and toilsome ways.

[*Zion's Herald*]

The cross of Christ becoming potent in the life of the individual believer means a new life in all relations. The ethical concept of the crucifixion is life guided in all things by the principles of Christ. This is the great message that comes out of the Lenten season with its emphasis upon the cross.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Law and Work" is the title of a new pamphlet containing the following articles: Love Fulfils Law, The Logic of Christian Science, Undisturbed, God's Law of Adjustment, Authority.

The increased cost of binding the periodicals has necessitated making an advance in the selling price of the bound volumes. The new prices, which take effect April 1, are as follows:—

JOURNAL.—Volume 32 (April, 1914 to 1915). Cloth, $3.00; half calf, $3.75.

SENTINEL.—Volume 16 (September, 1913 to 1914) or Volume 17 (September, 1914 to 1915). Either volume, cloth, $3.25; half morocco or half calf, $4.00.

For all other bound volumes of *Journal* or *Sentinel* write for prices.

DER HEROLD.—Volumes 5 to 12 in cloth, $2.75 each; volume 4 to 7 and 9 to 12 in half morocco, $3.50 each; volumes 4, 5, 9, 10, 11, 12, in half calf, $3.50 each.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church.—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $5.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on Wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages. Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

Regulations have been issued under which private individuals and corporations may without further delay begin the leasing and operating of the vast coal fields of the territory of Alaska. Ten years have elapsed since the Alaskan coal fields were withdrawn from private entry and development. The regulations are accompanied by maps and important general information regarding the lands in question. There are about 33,370 acres of coal-bearing lands in the Bering River country, and about 13,920 acres in the Matanuska section restored to entry. Small areas in each of the fields have been reserved, as required by law. Areas of leasing units vary in size from 320 to 1200 acres in the Matanuska region, and from 200 to 1280 acres in the Bering River section. Both regions contain high grade bituminous and anthracite coal. Leases will be granted for a period of fifty years. The Government exacts a royalty of two cents a ton the first five years, and five cents a ton for the succeeding twenty years. After this period of twenty-five years, it is provided that the royalty shall not exceed five per cent of the selling price of the coal.

The value of the annual production of oil from the needles of various cone-bearing trees is about fifty thousand dollars. Black and white spruce and eastern hemlock produce very similar oils, forty to fifty thousand pounds annually, worth forty-five to sixty cents per pound. Red cedar produces fifteen to twenty thousand pounds of oil having the same value per pound as the spruce and hemlock oil. A few other species furnish the rest of the conifer-leaf oil produced in the United States. Besides the home product, small quantities of needle oil are imported from Europe. One of these, silver fir oil, brings four dollars a pound. In most cases these oils have a pleasant odor. A few are disagreeable when first distilled, but become pleasant with age.

The greater portion of the oil produced in the United States is distilled by small farmers in New England during the winter months, when farm work is slack. The process of distillation is very simple. Steam is passed through the needles, usually at atmospheric pressure. The oil volatilizes, and the mixed vapors pass into a cooling apparatus where condensation takes place, leaving a layer of oil and a layer of water. Distillation by steam pressure is more rapid and produces more oil.

Dimes, quarters, and half dollars of new design will be minted after July 1, according to an announcement by Secretary McAdoo. For the first time since 1891 a change will be effected in these pieces. The announcement disclosed that the half dollar has fallen virtually into disuse. The face of the new half dollar bears a full length of Liberty, with a background of the American flag flying to the breeze. The goddess is striding toward the dawn of a new day, carrying laurel and oak branches, symbolic of civil and military glory. The reverse side shows an eagle perched high upon a mountain crag, wings unfolded. Growing from a rift in the rock is a sapling of mountain pine, symbolic of America. The design of the twenty-five cent piece is intended to typify the awakening of the country to its own protection. A full-length figure of Liberty is shown, stepping toward the country's gateway, bearing upraised a shield from which the covering is being drawn. The right hand bears an olive-branch of peace. Above the head is the word "Liberty," and below the feet "1916." The reverse bears a figure of an eagle in full flight, wings extended.

A bill to recover title to 3,200,000 acres of land, worth more than $30,000,000, granted to the Oregon & California Railroad by the United States Government fifty years ago, has been brought up in the House of Representatives. The measure would authorize suit against the railroad for recovery of funds received for the sale of 800,000 acres of land at more than $2.50 an acre, contrary to the provisions of the original grant. An injunction against the disposition of the lands issued Dec. 9 last by the Supreme Court of the United States expires June 9. The measure is of special interest to sixteen thousand persons to whom agents sold the land and who were deprived of their rights by the Supreme Court decision. The bill would provide for the classification of the 8,200,000 acres as water-power sites, timber lands, and agricultural lands, and for the sale of timber tracts and homesteading of non-timber tracts at $2.50 an acre.

At Niagara Falls, Ontario, Spanish engineers have recently constructed an aerial cableway, which is 1800 feet long, across the whirlpool for the transportation of passengers. It is the longest aerial scenic tramway in the world, and probably the safest, says the *New York Times*. There are six parallel carrying or track cables in the installation. The passenger-car is suspended from a running gear which travels on these cables, and many provisions are made to insure safety. The car provides for twenty-four passengers and standing room in a raised aisle in the center for twenty-one more, besides the conductor. The weight of the car empty is three and a half tons; fully loaded, seven tons. Recently it was tested at a weight totaling 39,019 pounds.

The storage dam just completed at Elephant Butte on the Rio Grande by the United States Reclamation Service cost approximately five million dollars. This service has spent altogether for similar projects $43,000,000. This plant will provide for the steady irrigation of 180,000 acres. Irrigation has been enormously developed in other lands. India has 40,000,000 acres under irrigation; Egypt 6,000,000; Italy 700,000; Spain 2,800,000; France 400,000; while the United States has 10,000,000.

Boston ranks third among American ports on a basis of aggregate foreign commerce, according to a report issued by the United States department of commerce. The same report gives her second place in the United States in the value of imports. New York has succeeded London as the greatest commercial seaport, and Boston is nineteenth, outranking such ports as Manchester, Shanghai, Glasgow, Melbourne, and Petrograd.

A cargo of freight from Omaha to Kansas City, Mo., the first that has come down the Missouri River in many years, arrived there recently by the steamer "J. F. Silber." Merchants of Omaha are enthusiastic over river navigation, and they have guaranteed the "Silber" profitable cargoes in an effort to demonstrate the possibilities of the river in expectation that Congress will improve the stream for navigation.

By the application of "safety first" principles to the handling of freight, 112 of the principal railroads in the United States last year reduced their payments for claims for loss and damage to freight by over $7,500,000, as compared with 1914, says the *Railway Age Gazette*. The total payments for loss and damage for the 112 roads amounted to $31,916,548 in 1914, and only $24,290,024 in 1915.

Use of petroleum as locomotive fuel increased 18 per cent last year, according to a statement issued by the United States Geological Survey. It said 87,000,000 barrels were used as against 80,000,000 the year before. The increase is attributed to the relatively low price of crude oil and to the production of more low-grade oil. Oil fuel is used on forty railroads in the United States.

Recently a library of 10,000 volumes, composed of works by citizens of the United States or works written about the United States by people of other countries, was sent by the American Association of International Conciliation to the Musée Social Argentino in Buenos Aires. The opening and presentation of the library will take place on July 4.

The general results of the 1914 census of manufactures with respect to the cast-iron pipe industry, as issued in a preliminary statement of the department of commerce, showed that reports were received from sixty-nine establishments, the total products of which for the year amounted to 1,094,208 net tons, valued at $27,574,773.

A new fair rents court for New South Wales has been set up by the State Government to deal with disputes between tenants and landlords in regard to house rents. In the first case heard the rent of a member of Parliament was reduced on the evidence of a Government architect as to the value of the land and the cost of erecting the house.

Since Jan. 1 the New York grain trade has shown total receipts amounting to 69,670,000 bushels. According to figures published, 84 per cent went into the export trade, averaging 3,466,000 bushels a week. During the past year New York alone took 39.4 per cent of the receipts at the seven seaport outlets for grain, a total of 218,612,000 bushels.

The American steamship "Ventura," in her voyage from San Francisco to Sydney, New South Wales, reports that she picked up a wireless message from the station at Tuckerton, N. J., when 9000 miles distant from that point. This is said to be a world's record.

Philadelphia voted on May 15, by more than one hundred thousand majority, for a $100,000,000 bond issue for subway and other transportation improvements.

Christian Science Sentinel

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII June 10, 1916 No. 41

True Courtesy

WILLIAM R. RATHVON

THERE are reasons why the courtesy of Christian Scientists should be spontaneous, unstudied, characteristic, since true courtesy is but the outward expression of that mental attitude which Christian Science inculcates, wherein brotherly love and thoughtful consideration for others are accentuated. "Be courteous" is the admonition Peter gave to the converted pagans and Christianized Jews in Asia Minor to whom his epistles were addressed. His words did not refer merely to the formal observance of the externals of manner and behavior. If he could but reach their hearts, their manners would need no looking after at his hands.

The word which has been translated "courteous" has a much higher meaning than is conveyed by our word courtesy as commonly used today. It is a composite of two Greek roots, *philos*, love, and *phronos*, mind, so that to be courteous is to have a loving mind. It is easily conceivable that Mrs. Eddy may have so interpreted it when she refers to "God's courtesy" (The First Church of Christ, Scientist, and Miscellany, p. 341). In a world of sham, manners may rank above sincerity, but a highly polished surface may hide a decayed interior. True courtesy is never a veneer. Studied politeness, courtly mannerisms, and the like, are admirable enough when accompanied by sincerity, but they are not of themselves characteristic of the genuine courtesy enjoined in Scripture.

In Christian Science no thought, word, or action stands by itself unrelated to any other,—each experience may recall another similar in quality, each word affect a listener, each action offer an example that may attract or repel. Not one of these is too little to be regarded as of no consequence, for if not rightly shaped or rightly placed it may mar or impede the development of greater things, just as the smallest screw or pinion in a watch, if misplaced, may make the timepiece still as a stone. Nothing is insignificant when considered in its relation to other things, and in Science relationship is universal; hence the importance of giving heed to the little things that enter so largely into Christian Science activity. "Trifles make perfection, and perfection is no trifle," is an oft-quoted saying of one whose colossal achievements in sculpture, painting, and architecture have never been excelled. But the Christian Scientist need not turn to Michael Angelo for wise words about little things as well as great; he gets them from a gentle woman whose words and works will be treasured in the hearts of men in all the years.

The metaphysics of Christian Science reveals that every form of wrong is a form of error, whether it consists of unideal behavior or of wrong thoughts about our neighbor. A lack of consideration for others, disregard of accepted rules, and selfish indulgence of personal preference, are not only discourteous but ignoble and degrading. This is especially true in connection with our church services, in which from the first note of the organ to the last word of the benediction there are calls, some audible and others silent, to reverent worship of God and to that unfoldment of understanding which characterizes our Lesson-Sermons. No act of ours, then, however trivial or unimportant it may seem to us at the moment, if it prevents, obstructs, or disturbs our own or another's reverent worship, is to be regarded as a triviality, but rather as a transgression.

Let us lovingly and impersonally consider a few common forms of thoughtlessly discourteous behavior among people when gathered for divine worship, and note how they may best be eliminated, that we may thereby add to the sanctity and serenity of our services. A habit without defense is that of turning to look at those who come in after the service begins. Harmless enough it may seem at first thought, but what does it indicate and what does it induce? Is it not prompted by inquisitiveness, and does it not show that gratification of our curiosity seems at the moment of greater consequence to us than the words of Truth which are being given us from the readers' desk?

How general this habit is, can be best understood by those who face an audience and see rows of heads turn when a diversion occurs in one part of the hall by a late arrival or by some one rising from his seat. Not only is this a gratification of idle curiosity and hence a self-indulgence, but it displays a lack of thoughtfulness and consideration for others. Let us remember that we are committing an act of discourtesy to those addressing us when we thus allow thought to follow profitless inclination. The habit is mesmeric, and therefore unscientific and reprehensible; but to discover how deep-seated it is one has only to watch his own impulses when he notes a late arrival or an unlooked-for movement in the church. It is a fault, but not a difficult one to eradicate after it has been uncovered.

Unnecessary coughing at our services is another inexcusable physical indulgence. It is safe to say that two thirds of this would be eliminated if the offenders would scientifically resist the inclination. This of course does not include the individual who may be laboring with an ailment which he has not yet fully mastered. Coughing and other noises are voluntarily suspended to a large extent at our services during the period of silent prayer, but when audible prayer begins the throat batteries are frequently unmasked, and for a moment confusion dominates. Whatever tends to confusion, unnecessary noise, or disturbance at a service, is to be recognized as an indication of animal magnetism and therefore error. This is true whether the offense is merely the effect of habit or the thoughtless indulgence of a passing impulse.

Another inadvertent habit quite general at our services and which has no defense, is that of dropping the hymnal into the rack or on the seat as soon as the last words of the hymn are sung. In large congregations the noise and confusion so caused are inexcusable. That it is not more disturbing to many is because most of us at the moment are offenders ourselves, and when one is making a noise himself he is not apt to be annoyed by the noise others are making. We do what we see our neighbors do, and thus aid in spreading the contagion of a mischievous habit. It approaches the

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

ludicrous to see how many of us hasten to get rid of our hymnals at the same moment, as though all the books had suddenly become hot or heavy. By holding them until the benediction has been pronounced, we shall avoid breaking the solemnity of the climax of an impressive and uplifting service; to do otherwise is a senseless yielding to the mesmerism of suggestion. The closed hymnal, the convenient book-rack, the sight of our neighbor dropping his book, affect us like a yawn, and we unthinkingly do likewise.

Accuracy has been called the child of Truth, a statement the Christian Scientist should keep in mind if he is given to habits of exaggerated thought or speech. Extravagant expressions that might pass unnoticed from another, when uttered by one whose religion inculcates exactness, accuracy, and balance, challenge attention and comments which are sometimes none too helpful. Such colloquialisms as "I was scared to death," "I thought I'd die laughing," and the like, when coming from a Christian Scientist not only startle the thoughtful, but indicate a lack of appreciation of what the speaker has learned about Life. To imply even in thoughtless exclamation that life is at the mercy of fright or laughter, is to declare what we know is not only inaccurate but untrue. In quoting from the Psalms after he had counseled his readers to be courteous, St. Peter said to them further, "He that will love life, and see good days, let him refrain his tongue from evil; and his lips that they speak no guile." We are not to complain if the world expects not only that our speech be free from guile, but also from indiscretions and looseness, and as a matter of fact this is precisely what the world is expecting from us.

As we recognize that perfection is the goal toward which Christian Science is ever pointing, we should discard as we never did before the things that savor of imperfection, even the so-called little things. As we seek the truth and all that belongs to it, we instinctively become more exact in our thought and more accurate in our speech. In the giving of public testimonies it is gratifying to note that heedlessness and carelessness are diminishing in our meetings, thanks to the repeated admonitions that have appeared in our periodicals and from the readers' desk.

One of these practices is the well-intentioned statement so frequently heard at the close of a testimony, "I bring you greetings from First Church," and so on. As a matter of fact, the greetings the speaker brings are from himself and not from his church, unless his church has specifically authorized him to bring them. If it seems desirable to the visitor to announce his residence, it is sometimes fittingly done at the close of the testimony by a brief statement that he is a member of First Church of Christ, Scientist, of the city from which he came, or that he attends a certain church.

It may come as a surprise to many who have not previously given the matter analytical attention, to note how often we have thoughtlessly transgressed in these so-called little things. On the other hand, it may be pleasing to discover how easily these lapses may be corrected and avoided. But in this corrective process there must always be humility, or we may find ourselves smugly complacent, not to say self-righteous, as we note wherein others are still indulging what we have just overcome. Error is too shrewd rashly to attempt to force upon us the mental attitude expressed by the words "I am holier than thou," but it may succeed in tickling our ears by suggesting, "It is quite remarkable how many otherwise good Scientists are still delinquent in these simple matters."

It is well to be grateful for our progress, but we taint gratitude with self-righteousness when we compare what we have achieved with what our brother has not. The parable of the Pharisee and the publican does not carry a rebuke to the man who is humbly grateful, but to him who rejoices because he is not "as other men are." True courtesy, like true gratitude, does not seek to find another's faults or to exalt one's own virtues, but knows that in Christian Science every error is a falsity and all good is from above; therefore it is neither "mine" nor "thine."

Truth-filled Thought

GRACE SQUIRES

THE transformation of mortal thought, whereby old things pass away and all things become new, is to the Christian Scientist the royal road whereon Paul met Christ. If, like Paul, the vision blinds him with its overwhelming promise, he too has a probationary period when he finds himself in the desert of human belief, there to work out his problem with God. The voice of spiritual understanding remains still and small until it finds its utterance in the minutiæ of daily life, when, like the grain of mustard-seed, it displaces all else with its own growing vigor.

The transformation of one's whole concept of life from the material to the spiritual seems a vast undertaking at first sight, and one may easily despond if to his sense the desert period discounts his vision's hope with its long struggle. The fault lies not in the vision or in the desert, but in our own failure to apply the truth. Christian Science is simple. When one does not find it simple, it is his own confusion and not the truth which is at fault. Christian Science is founded on the gospels, and the Master's admonition to become as a little child points to its simplicity, while his loving invitation to the weary and heavy laden to come unto him fulfils its promise of rest for those who have found its truth.

We are wont, however, to be wise in our own conceits. Mortal mind is insistent, and we unconsciously carry its conceit and its insistence into our demonstration and make shipwreck of our faith. One's mental work or argument in too many instances is divided against itself. Mortal mind cannot win out. All it can do is to step out and stay out, and this is the least that it wishes, for its subtlety to preserve its own selfhood exceeds that of the serpent.

The one goal toward which every Christian Scientist is making his way is the understanding of spiritual truth. Christ Jesus said, "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth." He knew it, and was therefore its revelator; but mortals do not know it. What they think they know is the suffering experiences of mortal life, hence their need to lay constant emphasis on that which they must attain. To "deny sin and plead God's allness" (Science and Health, p. 15) is the true prayer. In literary form the emphasis always falls on the last member of the sentence. Studied in this light, to "deny sin" is the weak member of this sentence, and to "plead God's allness" is the vital message which is heightened, not lessened, by its antecedent.

Perhaps some of us reverse the meaning of this sentence, and human experience adds its full quota to this tendency. We outline evil in our mental work, unconsciously turn toward it even while we think we are turning away from it; see it when we think we are blind to it, deny it when in reality we are pleading for it. The struggle necessarily is on, and in its pain we increase our efforts, grow more confused with each defeating thought, wonder how one ever finds his way out of such a maze, and like Achan still cling to the "accursed thing." The soliloquy of Eliphaz, "Should a wise man utter vain knowledge, . . . should he reason with unprofitable talk? or with speeches wherewith he can do no good?" is again in order.

Digitized by Google

To one suffering with the strain and defeat of such fruitless hours, the opening lines of "What Our Leader Says," on page 210 of "The First Church of Christ, Scientist, and Miscellany," fall like dew upon parched and thirsty ground: "Beloved Christian Scientists, keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them." After this flood of light, sentence after sentence flows into consciousness with a radiance that awes one with its inspiration. With renewed energy he now puts aside the material sense of things, and however loudly it clamors for recognition, trusting to its deceptive insistence as before, he ignores its clamor and pleads God's allness. He finds that he has been doing exactly what he was cautioned against doing; that is, seeking truth through finite sense. Let one base his denials on the truth, and not base his truth on his denials. The one will heal, and the other may prove the broad way "that leadeth to destruction."

Truth is apprehended through spiritual vision, and one sees most when mortal thought is so humbled and crushed with the failure of its own sufficiency that it literally denies itself and so follows Truth. The transformation of the human sense is new work to every would-be Scientist. Throughout his life he has been its tool, never its master, and Paul has truly said, "To whom ye yield yourselves servants to obey, his servants ye are." To turn about and demand obedience from that which has ruled us, requires strength of purpose and unceasing vigilance, yet this task is the work of each.

To watch the kaleidoscope of mortal mind for one hour is informing, and leaves one in little doubt as to our need of a definite standard. Christian Science is that standard, including all good, all harmony. The understanding that thought is scientific and definite, proceeding from one vital center, even infinite Mind, "at once the center and circumference of being" (Science and Health, p. 203), instead of a confused medley that seemingly sweeps through the brain, gives one courage to turn his face in the right direction. Truth determines that direction. Jesus' prayers were profound affirmations of truth, because he always saw man perfect as the Father is perfect, and these facts are correlative. To know the truth is to see the perfect man, and for all Christian Scientists this is the pattern shown in the mount.

Distribution Work

FREDERICK R. RHODES

Some years ago, when the distribution of literature was first introduced into our city, it fell to the writer's lot to interview the manager of the largest hotel to ask his permission to place some Christian Science literature in the reading-room of that hotel. At first he refused to have any religious papers in the place, but after a few words about the teaching of Christian Science and its practical use in everyday life, he related an incident which had taken place over twenty-five years ago, and which had affected his whole future. He said he was then suffering from an unsightly blemish on the back of his hand which was pronounced incurable, and which seriously threatened to mar his business career as a hotel manager. While on a visit to an aunt, she had noticed this trouble, and asked him, after being told it was incurable, to let her seek divine help for him. He consented, and in a few days the hand was quite healed and the disease has never returned. He was very grateful for this experience, and therefore quite willing to allow our literature to be placed on the table in the writing-room, in order that some one might be led to the healing truth as an indirect result of his own experience of God's goodness.

The distribution work in our churches is of the utmost importance to the Christian Science movement, and the writer has experienced some wonderful yet natural results of this constructive part of our church activities. In Science and Health (p. 291) our Leader says that "universal salvation rests on progression," and church-members should see the necessity of doing their utmost to help this work in every way which lies in their power. Suppose that one is entering upon this work, what should be his mode of procedure?

It is important first of all, in doing our mental work, to know that we are going to give to the recipients of our periodicals an opportunity to learn that God is a present and available help in their every need, and that nothing can hide this fact from them. In the next place we should see that "order is heaven's first law," and so we should endeavor to deliver the literature as regularly as possible, and try to make sure that it is neat and clean. Besides this we should strive to know that it can arouse no opposition, hatred, or blind prejudice, but will be received in the same loving spirit in which it is offered.

This one channel is open to all church-members to do good work for their cause, and in the taking out of papers, the regular bringing in of papers as soon as conveniently possible, the attending of the monthly distribution meetings, in looking out for fresh places in their districts, as well as in other ways, they can prove true these beautiful words of our beloved Leader (Poems, p. 12):—

Then His unveiled, sweet mercies show
Life's burdens light.

Let us all give our most earnest efforts toward the unveiling of the "sweet mercies" which, as objectified in the *Sentinel*, the *Journal*, and the *Monitor*, will indeed make many a burden light.

God Revealed Through Man

FRANK P. EBERMAN

The writer of the epistle to the Hebrews opens that remarkable appeal for a more spiritual interpretation of Judaic symbolism with the proposition that God "hath in these last days spoken unto us by his Son, . . . by whom also he made the worlds." The thinker of today is thus pointed to one of the great rudimental facts of Christian Science, namely, that man reflects the power of the infinite, whereby divine Mind manifests His whole creative activity, and that therefore specifically every divine impulsion of Life, of Truth, of Love, is first of all whispered to individual consciousness in tender plea for expression, effectiveness, entity.

While, as our Leader says, "Jesus' teachings and demonstrations" gave to his disciples "a faint conception of the Life which is God" (Science and Health, p. 47), they waited many days for the direct message from its infinite source, and then there came a great influx of light and power. A significant circumstance attending this revelation of divine Science which so illuminated the sense of thousands on the Pentecostal day and which is now being repeated, was that "they were all with one accord in one place." No solemn conclave had been called, no specious conventions were in force, no contract hampered, no personal ties bound them. They were there of their own desire and accord, because each man knew for himself the call of Spirit. It had not been communicated from Peter to John, nor from John to Thomas, but one and all knew only an individual unison with and drawing to God.

This same sweet appeal entered directly the individual consciousness of Abraham as he climbed Moriah's side, intent upon the sacrifice of the boy whom the angels had foretold and guarded. And so, even while the whetted blade was poised

Digitized by Google

in obedience to what he undoubtedly believed to be the call of God, but which was rather a merciless dogma of his old but unforgotten Chaldaic mysticism,—

> Even as our cloudy fancies take
> Suddenly shape in some divine expression,—

so the "Father of the Faithful" gained a clearer light, earned anew his title, and entered upon a fuller understanding of life and its divine immunities.

The angels of God's presence constantly renew, revitalize, and reveal the substance of individual, spiritual man. To them belongs the holiest ministry, for "they come in the night-time of sorrow and care;" or mayhap, as the surgeon's knife is poised and life is in the balance, they awaken the sufferer to a sense of man's spiritual identity, to cleanse consciousness of the false claims of matter, to dispel the painful dreams of the flesh, and to externalize in effective demonstration an actual alliance with Life omnipotent.

Such spiritual intuitions find their pathway only from God to spiritual man, the child of God. Preachers may expound, friends may appeal, saints prophesy, but it is man's capacity to understand God which is the saving sense. To the dull ear, the stiffened neck, the gross heart, the Saviour denied himself. Paul may plant and Apollos water, but it is God that giveth the increase, for, as Mrs. Eddy has said in Science and Health (p. 506), "understanding is a quality of God, a quality which separates Christian Science from supposition and makes Truth final."

Gratitude for Our Sunday Schools

SARA DODGE

All students of Christian Science are familiar with the activities of the movement, the work of practitioners, of the local church, of the publication committees, of the lecturers, and of the Publishing Society with its missionary work in the publication of authorized Christian Science literature. Much is said about the importance of the Sunday school in this connection, but not so much about the fruition of this department of the church work. Perhaps this is due to the fact that as yet few people look back upon a childhood with thought developed by Christian Science.

The writer feels most grateful that for nearly ten years she had the privilege of attending a Christian Science Sunday school. During this time a high school course was completed, and later college work begun, when the help of the Sunday school was inestimable. Problems many and varied, which arose from intercourse with people opposed to or not in sympathy with Science, were solved; ill health was overcome; many discordant conditions were conquered, and great benefits, both material and spiritual, were realized. It would not be just to appear insensible to the help received from other Scientists, from practitioners, and from her family; also from lectures and from the periodicals. But the foundation gained through the Sunday school teaching of the commandments, the Lord's Prayer, with its spiritual interpretation by Mrs. Eddy, and the beatitudes, with the Lesson-Sermons, as outlined in the Manual of The Mother Church (Art. XX, Sect. 3), during this period of development, led to a wonderful growth in the understanding of Christian Science, which was manifested in physical redemption, intellectual progress, and the upbuilding of character.

Mrs. Eddy's words in the article "Youth and Young Manhood," in "The First Church of Christ, Scientist, and Miscellany," are applicable here. She says (p. 274): "Right thinking, right feeling, and right acting—honesty, purity, unselfishness—in youth tend to success, intellectuality, and happiness in manhood. To begin rightly enables one to end rightly, and thus it is that one achieves the Science of Life, demonstrates health, holiness, and immortality." When the time came to leave the Sunday school, an understanding of the presence and power of Life, Truth, and Love had been gained to a certain extent, and proved through demonstration, so that uniting with the church was a larger unfoldment in the development so sacredly begun.

With a few years of perspective a broader apprehension of the Sunday school work has been gained, and the desire is to awaken others to the value of the Sunday school in the training of the young people. In Isaiah's prophecy we read, "All thy children shall be taught of the Lord; and great shall be the peace of thy children."

✧

A Practical Religion

WILLIAM CAPELL

Statements are frequently made in our Wednesday evening testimony meetings to the effect that Christian Science is a practical religion. Every healing through Christian Science is indeed a proof of its practicability; and because it does meet the needs of humanity this new-old religion has attracted unnumbered thousands of the weary and heavy laden, who in the demonstration of its teachings have found rest and peace. The following is one of the many instances in which a realization of the spiritual facts of being has brought about harmony in human affairs.

A young machinist who had been employed in a factory about six years was notified that because of the dull times his services would be required only a few days longer. He had been healed through Christian Science about two months previously and had become an earnest student of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Accordingly, he sought the assistance of a Christian Science practitioner, for he felt that he must have employment, as he had a family to support. He had already been to several factories in search of work but had not met with success. Knowing of his predicament, some of his fellow workmen had advised him when making application for a position to state that he was competent to do work which he himself did not feel capable of doing. They told him that by using this deception he would be more likely to secure a position. He did not follow their advice, however, but agreed with the practitioner that without honesty one could not expect to succeed in working out the problem scientifically.

The practitioner endeavored to point out certain spiritual facts concerning man, and told the young machinist that the truth would reach out to his occupation and his source of supply. Thus his eyes were opened and he saw that man's work is to reflect God. He also perceived that man could never lose aught that God gives and could never be without abundant supply. As a result of the interview he gained a new basis for his thinking, and instead of entertaining thoughts of lost position and consequent lack, he felt confident that divine Love would supply his need. Thus fear and anxiety gave place to peace and assurance.

When the young man arrived home after his last day's work at the place where he had been employed so long, he found a message asking him to report ready for work the next morning at a factory about two minutes' walk from one where a few days before he had sought work but without success. He held this new position until a still better one was open to him, and his companions afterward remarked how lucky he was to go from one position to another without losing an hour's work. What they attributed to good fortune, how-

Digitized by Google

ever, he recognized as the outcome of his own changed consciousness.

On page 494 of Science and Health is found this assuring declaration: "Divine Love always has met and always will meet every human need." Christian Scientists are daily proving the truth of this statement. They know that Christianity is just as practical now as it was when Jesus was on earth proving his words by his works, and in proportion to their understanding of and fidelity to the teachings of Christian Science they are able to follow the Master in the way of demonstration.

True Loyalty

ABIGAIL DYER THOMPSON

HER discovery of Christian Science brought to our Leader the vision of a demonstrable religion, a church that should stand for salvation from sickness as well as from sin; and for many years the world has witnessed the outward and tangible proof of her inwardly perceived ideal. Christian Science today is fulfilling its mission with "signs following," and those who would assist in carrying on this great cause in obedience to their Leader's plan will "cooperate" and not "coelbow." (See Miscellaneous Writings, p. 138.) They will be grateful for Science and Health, for the Christian Science movement, and for the organization and activities of the Christian Science church.

In Christian Science an idea cannot be separated from its expression, and therefore an attempt to do so indicates ignorance of Principle. It is inconsistent to say that we accept one and reject the other. The subtle argument that this can be done, should be met and resolved into nothingness by all Christian Scientists. On page 560 of Science and Health we read: "The great miracle, to human sense, is divine Love, and the grand necessity of existence is to gain the true idea of what constitutes the kingdom of heaven in man. This goal is never reached while we hate our neighbor or entertain a false estimate of any one whom God has appointed to voice His Word. Again, without a correct sense of its highest visible idea, we can never understand the divine Principle."

In order to fulfil both the letter and the spirit of the last line of the Lord's Prayer, "Thine is the kingdom, and the power, and the glory, forever," it is not necessary to discredit the honest efforts of mankind. Even today there is great cause for rejoicing in the fact that the world is witnessing in large measure the rich fruitage of Christian Science as a result of the splendid work accomplished by its representatives. Through divine guidance our beloved Leader outlined in detail the activities and operations for the progress of Christian Science; and while through her clear vision she has perceived and prophesied of the time to come when material organization should be outgrown, that exalted experience will never be ushered in through criticism and condemnation, but through the fulness of brotherly love. Then shall echo back through the ages the song of the angels,—"Glory to God in the highest, and on earth peace, good will toward men."

✧ ✧ ✧

We never see the stars
Till we can see naught but them. So with truth.
And yet if one would look down a deep well,
Even at noon, we might see those same stars
Far fairer than the blinding blue—the truth;
Probe the profound of thine own nature, man!
And thou may'st see reflected, e'en in life,
The worlds, the heavens, the ages; by and by,
The coming come.

PHILIP JAMES BAILEY.

Selected Articles

[John M. Tutt in *Joplin* (Mo.) *Globe*]

An evangelist is reported as saying in his discourse on prayer that Christian Scientists do not pray. "It is impossible for them to pray with their theology," he is said to have declared; "Christian Science with one stroke of the hand does away with the blood of Jesus Christ."

Christian Science may not agree with this critic's concept of prayer and atonement, but this does not mean that Christian Scientists do not pray, nor does it mean that Christian Science does away with the atonement. As evidence of the prime importance in which Mrs. Eddy held prayer and atonement, the first chapter of her book "Science and Health with Key to the Scriptures" is devoted to an exhaustive treatment of the former, while in the second chapter she thoroughly expounds the latter. These intelligent expositions will convince the unprejudiced student that in them Mrs. Eddy departs only from the crass materialism of dogma and ritualism, while to the purely spiritual teaching of Christ Jesus on these subjects she is unwaveringly faithful. Christian Scientists understand by the atonement (at-one-ment, see Webster) that Jesus, through his possession of the Christ, through his understanding of Truth, demonstrated man's essential unity with his Maker by the overcoming of sin, disease, and finally death itself, thus perfecting a reconciliation of man to God. But that he did man's work for him is held by Christian Science to be unreasonable.

Jesus proved his claim, "I and my Father are one;" and his statement, "I am the way," lays upon every disciple of Christ the necessity of such proof. No man is saved from sin, sickness, and death except in proportion to his understanding and demonstration of man's true relationship to God. As we follow Jesus in the way of this demonstration, material blood can never take the place of spiritual understanding. St. Paul said, "For if, when we were enemies, we were reconciled to God by the death of his Son, much more, being reconciled, we shall be saved by his life." Jesus' goal was not the cross, but he endured the shameful attempt to destroy Christ, Truth, that he might offer indisputable evidence that the sum total of the way from the manger to the sepulcher, and thence to his final material disappearance, was a progressive demonstration of what Mrs. Eddy has termed the "passage from sense to Soul" (Science and Health, p. 566). Jesus said, "If any man will come after me, let him deny himself, and take up his cross, and follow me."

How do Christian Scientists pray? The Scripture enjoins prayer without ceasing. How is that possible? Christian Science alone gives the answer: Prayer is mental; it is the desire and determination to do right and, being a mental mode purely, even though at times formulated into words, it alone can be, as it should be, ceaseless. Christian Scientists explain prayer, then, to be the unceasing effort to think rightly and therefore to act rightly, for they subscribe to the Bible teaching concerning man, "As he thinketh in his heart, so is he." Accepting the Christ as his Saviour, acknowledging Jesus' vicarious sacrifice as the spiritual essence of his blood, and finding himself in agreement with the spiritual import of Jesus' life, the Christian Scientist erects no such barrier of false theology between himself and God as this critic would impute. Entering into his closet and closing his mental doors, the Christian Scientist communes secretly with God, and the "Father which seeth in secret" rewardeth openly. True prayer does not ask for material things, but always pleads for "an understanding heart." Therefore the Christian Science prayer is unselfish; it asks not that God shall

Digitized by Google

bestow unwisely or unworthily; it does not ask God to do or to be good; it does not seek to limit the Almighty in any direction. Conversely, it seeks to realize God's unfailing and illimitable beneficence and to recognize His unchanging law.

✧

[Daniel M. Ely in *Bellefontaine* (Ohio) *Examiner*]

In a criticism of Christian Science which appeared in a recent issue, the statement was made that Christian Scientists "have substituted a human philosophy for religion,—a philosophy which is cold, without soul or heart-throb. They want not a grain of sympathy. It is unreal, impractical, almost impossible." To the contrary, Christian Science is not based upon human philosophy. The first tenet of Christian Science is: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). It is founded upon the teachings of Jesus of Nazareth. It is a religion of Love, which not only enables man to learn of God but to use that knowledge in the healing of sickness as well as the overcoming of sin. It is a religion which is practical, because it embodies not only the words of the great Teacher, but his works as well.

The test of all true religion is in what it does, and the thousands who have identified themselves with the cause of Christian Science are giving abundant proof that this religion makes for the betterment of mankind. It destroys fear and lack; it turns its followers away from hate and jealousy; and it has to its credit the healing of all manner of disease. On page 113 of Science and Health Mrs. Eddy says: "The vital part, the heart and soul of Christian Science, is Love. Without this, the letter is but the dead body of Science,—pulseless, cold, inanimate."

✧

[Carl E. Herring in *Hastings* (Neb.) *Tribune*]

The two different accounts of creation as given in the first and second chapters of Genesis are always interesting. After the young student of the Bible, who may be old in years, has had his attention called to the fact that in the first chapter God creates man in His own image and likeness, while in the second the Lord God made man from "the dust of the ground," he becomes interested in reading the chapter on Genesis in "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Without entering into detailed criticism of the definitions given by your correspondent, we assume that Webster's dictionary will be regarded as standard authority, and we find there that a Christian is "one who believes, or professes or is assumed to believe, in Jesus Christ, and the truth as taught by him." Surely this definition is broad enough to permit its use by Christian Scientists, for however much our friends may differ from us as to what Jesus taught, and however much they may deprecate the emphasis we place on the commands of Jesus to heal the sick, surely it is only a difference of opinion as to the teachings of Jesus, and cannot be augmented into a deprivation of our right to be properly included under the definition given by Webster for the word Christian.

Again, science is defined as "knowledge of principles and causes," "ascertained truth or facts." This leads us again simply into a difference of opinion as to what truth is, which is a question as old as the ages, and under the dogma laid down in the article under review two hundred and forty-nine out of a possible two hundred and fifty religious organizations in the world would be deprived of the use of the word truth.

Christian Science recognizes the phenomena of matter, but its Science must not be confused with natural or physical science, and therefore excerpts from Science and Health which contradict the testimony of the physical senses cannot be measured by the rules of physical science, but must stand or fall by the philosophy of the spiritual realm as unfolded in the Scriptures and elucidated in Christian Science. It is unnecessary for the argument, but it is interesting to note that natural or physical science is not at variance with Christian Science as to the final analysis of matter, for chemistry teaches that matter is composed of molecules, and molecules are made up of atoms, and atoms consist of electrons, and electrons are formed from energy. In other words, to quote from Charles Baskerville, Ph.D., F.C.S., professor of chemistry in the College of the City of New York, "Matter is an assemblage of energy systems; there is no matter."

We are aware of the fact that Christian Science must stand the test placed upon it by thinking people, and for this reason we are desirous that students of the Bible and searchers after truth should not hastily dismiss the subject as too chimerical to be considered, but that they should pass the point of curiosity or prejudice and realize that they are entering into the domain of absolute spiritual truth in the study of Christian Science.

✧

[Ezra W. Palmer in *Pueblo* (Col.) *Chieftain*]

A clergyman in his farewell sermon is reported as declaring that "that which is neither Christian nor scientific ought not to be encouraged, even though it be called Christian Science." Christian Scientists will fully agree with the first part of the reverend gentleman's declaration, but the unproved assumption that this defines Christian Science will meet with objection, because the statement is not true. The flippant charge that Christian Science is neither Christian nor scientific is not original with this minister. It is a glib catch-phrase which thoroughly begs the question, and may mislead the uninformed only so long as the premises on which it rests are not examined. When they are, the nothingness of its assumptions is exposed.

Christian Science is Christian because it teaches the theology and practises the works of Christ Jesus, the Founder of Christianity; it is scientific because it is strictly logical, unfolding all its premises and conclusions from the fundamental basis of allness,—the omnipotence, omnipresence, and omniscience of God. Christian Science is true to the definition of science given in the dictionary: "knowledge classified and made available in work, life, or the search for truth." Christian Science classifies and makes available the truths of the Bible, so that the earnest seeker for truth can find spiritual strength, surcease from sorrow, freedom from sin, healing of disease, and a priceless sense of the ever-protecting care of divine Love. It will therefore be seen at once that the assumption of the reverend critic has no foundation in fact.

This brother used as the text for his sermon this passage from the third epistle of John: "Beloved, I wish above all things that thou mayest prosper and be in health, even as thy soul prospereth." Christian Scientists fully accept the desire expressed in this verse; they are in full accord with the thought of the beloved disciple that health prospers "even as thy soul prospereth." The spiritual insight of the beloved disciple clearly discerned that health of body is an inseparable concomitant of a spiritually inspired mind. Christian Science teaches that health—and the Greek word translated health in this passage also means wholesomeness, soundness—is a quality of mind given to man of God, and is not dependent on climate, drugs, electricity, hypnotism, or other material remedies.

Christ Jesus, his apostles, and the prophets furnish indisputable evidence that health is restored and that sickness

Digitized by Google

disease, and death are destroyed through the understanding of the divine nature of God. Thanks to Christian Science, this understanding, which renders spiritual healing available, is in this age within the grasp of all who seek to know the truth. In Science and Health (p. 380) Mrs. Eddy says, "Many years ago the author made a spiritual discovery, the scientific evidence of which has accumulated to prove that the divine Mind produces in man health, harmony, and immortality."

The speaker declared that "Jesus Christ was interested in the body as well as the soul," and with this we heartily concur. Jesus healed all manner of disease, cast out devils, and raised the dead; in fact the greater part of his ministry was taken up with the healing of those who were sick and diseased. But he laid no stress on climate as a factor in the healing process, as did this reverend gentleman. Jesus knew that the might of Spirit was sufficient to heal the sick, and he never used drugs or recommended climate. He declared: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Who can deny, in view of the works and words of Jesus, that these things that "shall be added unto you" include health of body as well as health of mind?

✧

[Robert S. Ross in *The Standard*, Watertown, N. Y.]

In a recent editorial entitled "To Charm Business," the reference to Christian Science may have led some readers to believe that this Science is a mortally mental method by which one may get what he wants, no matter how selfish that want may be.

In reply thereto, permit me to state that the practice of Christian Science is based upon divine Principle, unchangeable good. So long as the Christian Scientist lives in obedience to this Principle, he knows that God will supply everything he needs. What he does not need, the Christian Scientist does not want, for want usually involves selfishness. "Selfishness does not appear in the practice of Truth or Christian Science," Mrs. Eddy writes on page 410 of Science and Health. "If mental practice is abused or is used in any way except to promote right thinking and doing, the power to heal mentally will diminish, until the practitioner's healing ability is wholly lost."

✧

[W. G. Watkins in *Antigo* (Wis.) *Journal*]

A summary of what our critic had to say would tend to make God responsible for evil as well as good,—a kind of logic which the Scriptures declare to be a "house divided against itself." Christian Science recognizes God to be spiritual, and, as stated in the account of creation, "God saw every thing that he had made, and, behold, it was very good;" furthermore, "without him was not any thing made that was made." God is "of purer eyes than to behold evil," and cannot look on iniquity. The real man, created in the image and likeness of God, is also spiritual, and what seems to constitute his material existence has its place in the realm of mortal belief,—wholly apart from the true creation.

No greater evidence could be forthcoming, and surely none is more satisfactory to suffering humanity, than the results which are being wrought out in Christian Science practice in the healing of all manner of disease as well as sin. Christianity as a mere theory is being supplanted by that which is practical. Feeding on husks of material opinions as to what the Scripture teaches is giving way to an ever-increasing realization of the power and presence of Him in whom "we live, and move, and have our being."

Our brother says, "The way to abolish pain and sickness and death is to get this world converted to Christ, all the races transformed into His likeness, and then the groaning will cease." Christian Scientists heartily agree to this, but they are not satisfied with merely believing it; they are proving it. In their daily experience they are finding the truth of Whittier's words:—

> The healing of the seamless dress
> Is by our beds of pain;
> We touch him in life's throng and press,
> And we are whole again.

Christian Scientists recognize that sin, sickness, and death have a relative existence which is to be dealt with according to Scriptural teachings, for only "he that overcometh shall inherit all things." Adherents of this teaching are from all walks of life; they include many who were in good standing in orthodox churches, and no one is better able than they to give a reason for the hope that is in them.

If Christian Science were nothing more than our brother declares, this earth would not be dotted with hundreds of Christian Science organizations, supported by multitudes of people of at least average intelligence, whose redeemed lives are daily bearing testimony to the efficacy of Mrs. Eddy's discovery. Many indeed have already been able through Mrs. Eddy's teachings to escape from the belief in a far-away God, and have found that He is an ever-present help in time of trouble, even to the healing of so-called incurable diseases. Surely this is finding the "God of Abraham, of Isaac, and of Jacob," of whom Jesus said to the Samaritan woman, "They that worship him must worship him in spirit and in truth."

✧

[Avery Coonley in *Elgin* (Ill.) *Courier*]

In the report of a sermon by an evangelist is found a reference to Christian Science which misrepresents its teachings regarding the nature of sin, and by implication imputes to it a method of dealing with sin which is entirely foreign to it. In classing Christian Science with ethical culture, new thought, and the like, the evangelist shows his misunderstanding of this religion and its mission. Such systems of mental healing depend on the action of the human mind or will. Christian Science is based on the understanding of God and the operation of His unchanging law, which reforms the sinner and heals the sick today as in the time of Jesus.

The teaching of Christian Science on the subject of sin is definite and unmistakable, and its success in healing the most inveterate forms of sin during the period of nearly fifty years since it was established by Mrs. Eddy, constitutes sufficient proof of the value and practicality of this method of dealing with sin and evil. While Christian Science declares the unreality of evil as any part of God's creation, it nevertheless teaches that on the human plane sin brings inevitable suffering, and that its pardon can only be gained through its destruction. In "Science and Health with Key to the Scriptures" Mrs. Eddy says (p. 201), "Grafting holiness upon unholiness, supposing that sin can be forgiven when it is not forsaken, is as foolish as straining out gnats and swallowing camels." Again on page 6 she says: "We cannot escape the penalty due for sin. The Scriptures say, that if we deny Christ, 'he also will deny us.' Divine Love corrects and governs man. Men may pardon, but this divine Principle alone reforms the sinner."

✧ ✧ ✧

God respects not the arithmetic of our prayers, how many they are; nor their rhetoric, how neat; nor their geometry, how long; nor their music, how melodious; nor their logic, how methodical; but their divinity, how heart-sprung they are.—ANON.

Editorial

"Fear hath torment"

"WHERE ignorance is bliss, 'tis folly to be wise," runs an old saying, and it was never more aptly illustrated than in the fear-producing wisdom which is the outcome of the preventive campaign of enlightenment that has been waged so vigorously the last few years under the guise of the public good. Disease has been so persistently harped upon, compulsory examinations of children and adults have aroused so much fear, that the intended good to be accomplished thereby has become largely a negligible quantity. In other words, people have worried themselves sick over troubles which doubtless never would have materialized if their thought had not been dominated by the horrible presentations of disease constantly thrust upon them. Here and there the thinking public is awakening to the perniciousness of this practice, and in a recent editorial the *Philadelphia Inquirer* gives its readers some very pertinent observations as follows:—

The United States public health service is engaged in sending out all sorts of bulletins regarding health. The doctors have been telling us that the span of human life has been increasing. According to the health service it is not. That is to say, there is longer life among the young, but among those who are over forty-five the death rate is actually increasing. The doctors have been saving babies—or the mothers have because of better care—so that not so many of them die at a tender age, and once they get a start they live to become men in increasing numbers. But old age is becoming rarer. The saving of life is at the beginning, not at the other end.

And yet the medicine men have been overwhelming the public with all sorts of advice and all sorts of "don'ts." They have discovered germs and bacteria and have told us how to fight them. In the old days—when, it seems, more men lived to greater ages—such things as germs and bacteria were unknown. So were many of the modern diseases. Men were not bound down by all sorts of rules. They were not aware that death lurked in everything they ate or drank. They pursued the even tenor of their way oblivious to danger and they lived longer. We could not have believed this had not the public health service of the United States so informed us through its official bulletin.

How is this to be accounted for? Let the doctors do the accounting. But they have evidently not succeeded. Is it because they have failed to cure that the best of them are losing faith in medicines and devoting much more attention to prevention? The truth about our friends the doctors—good men who have been doing all that they can—is that they have not yet brought the practice of medicine to a scientific basis. Their art has very largely been one of experimentation for centuries. And the experiments are constantly changing. Meanwhile, despite all the discoveries and all the rules drummed into the brain of the human, beginning with his school days, average life after forty-five is growing shorter. So reports the public health service. Perhaps if men were not frightened at every turn by the constant harping on disease they would not be so prone to fall victims to it. In any event the sermons on disease which the health authorities constantly spread through the public prints apparently do not produce the results aimed at.

At least that is the inference to be drawn from the report of the public health service which, by the way, tells us in the same bulletin that "bad temper is sometimes merely a symptom of bad health." Is it? Might it not be nearer the mark if that statement had read: "Bad health is the effect of bad temper"?

That the motive of this education of the public is good, no one will question; but that already its methods are deplorable in their results, must be conceded. Indeed one can but wonder what the effects will be when the present generation of children, their thought imbued with fear from the beginning of their school life, arrives at maturity. The world is slow to recognize that in its desire for health and long life it has departed from that divine wisdom which assures those who dwell "in the secret place of the most High" deliverance from "the pestilence that walketh in darkness" and "the destruction that wasteth at noonday,"—the very evils *materia medica* is so industriously combating, but with far different weapons,—and is thus serving "other gods," inviting the trouble it fain would escape. On page 173 of Science and Health Mrs. Eddy says: "The idols of civilization are far more fatal to health and longevity than are the idols of barbarism. . . . Is civilization only a higher form of idolatry, that man should bow down to a flesh-brush, to flannels, to baths, diet, exercise, and air? Nothing save divine power is capable of doing so much for man as he can do for himself."

There is only one kind of fear which Christian Science countenances, and that is the fear of sin, for the outcome of sin is disease and death. It believes in prevention, in the understanding of divine Truth and Love which casts out all other fear and induces that sound mind which is the precursor of a sound body. This is thoroughly in accord with the teaching of the beloved apostle, who declared that "perfect love casteth out fear: because fear hath torment." Mortals know only too well the influence of fear, for many of them go through life in the grip of this relentless taskmaster because of their ignorance of the omnipotence of Love to cast out the destroyer of their peace. How essential then that we who have been privileged to know the truth which makes free should do our utmost to promulgate the true gospel of health, of that wholeness of mind and body which tends to length of days, even to life eternal. It is sound common sense which Mrs. Eddy gives us on page 167 of Science and Health, when she points out that "our proportionate admission of the claims of good or of evil determines the harmony of our existence,—our health, our longevity, and our Christianity."

ARCHIBALD MCLELLAN.

Doing and Becoming

IN denial of the claims of evil, Mrs. Eddy declares on page 428 of Science and Health that there is "no inaction, diseased action, overaction, nor reaction," and this thought is reaffirmed on page 419 in connection with the asserted relapse of sickness. On page 109, however, she quotes approvingly Jesus' saying, "If any man will do his [God's] will, he shall know of the doctrine," thus making clear the teaching of Christian Science that while the seeming action and reaction of evil are without basis or warrant, the incidental effects of the activities of good, of Life, Truth, and Love, belong to the verities of being and are of the highest significance to spiritual growth.

Christian believers very generally accept the sequences of evil as natural, and inviolable as the sequences of good; nevertheless it must be seen that the destruction of sin's law and order is involved in every instance of spiritual healing or true forgiveness, and that it is thus proved they have no authority and no right to be, and hence merit no respect. On the other hand, through the reaction of Truth's activities in human consciousness, the doing of good always means the gain of good to one's self. We gather as we give, and this fact realized, opens up the Christlike way of working out one's own salvation. It focuses right impulse and molds Christian living. We begin to grow as we begin to know the truth, and we truly know when we do. This is the heart of the teaching of Christ Jesus, it is the gist of St. James' discussion on faith and works, and it is constantly pressed upon the reader's attention in our Leader's writings.

One of the most interesting things about a dynamo serves well to illustrate this law and order. The essential of an electric generator is a magnet, a piece of steel which has a power of attraction. When the generator is still, this power, which is technically known as residual magnetism, is slight, but the moment the armature begins to move, the magnet begins to be energized, and its strength is speedily intensified a thousandfold as a result of the flow of the incited current through innumerable coils of wire which enwrap it. The

Digitized by Google

doing of the generator is its continuous becoming, and while unable to explain the "why-so" of this fact, the physicist's ability to transmit energy in any of its forms to distant homes and factories is wholly dependent upon his recognition and utilization of it. What is thus true of the dynamo is peculiarly true of every Christian life, and this is illuminatingly revealed in Christian Science. Here as elsewhere laboratory work is a doing that one may know or become. This is the inevitable effect of spiritual demonstration. It involves the activity of whatever residuum of faith we may have and insures its continuous increase. Faith is thus transformed into spiritual understanding, confidence and hope into demonstrable knowledge. An unexercised capacity means depleted capacity, a truth clearly taught by Jesus in the parable of the talents.

All this is seen the moment we recognize that "God is substance and man is the divine image and likeness" (Science and Health, p. 301), that he is an idea of divine Principle, and that we attain to true selfhood as we awaken to the truth of being. This awakening is manifestly hastened by our right mental activity, our use of the true thought we command, or as the Scripture writers would have expressed it, our exercise of the grace already given us. We become or attain in the measure of our honest endeavor to do, and this is not only an abiding stimulus to effort in Christian Science, but it likewise affords us a reliable means of determining at any time whether or not we are making progress in the Christian life.

JOHN B. WILLIS.

✧

"Sound doctrine"

STUDENTS of Christian Science may ofttimes ponder with profit Paul's admonition to Titus: "Speak thou the things which become sound doctrine," words which are followed by wise counsel as to our conduct in dealing with our fellow men. In reading this epistle it is easy to see that some who professed to be Christians were not living up to the Master's teachings, and what is even worse, they were seeking to lead others astray. The apostle in uncovering this error enjoins honesty, purity, fidelity, and says that we should deny "ungodliness and worldly lusts," and should "live soberly, righteously, and godly, in this present world."

It is hardly necessary to call attention to the fact that throughout her teachings Mrs. Eddy insists upon unvarying obedience to the demands of moral law as found in the Bible, and especially in the teachings of Christ Jesus. Furthermore she insisted and provided that the children in Christian Science Sunday schools should be carefully taught the necessity for obedience to the ten commandments, this being designated in the Manual (Art. XX, Sect. 3) as one of the "first lessons." It is therefore of the utmost importance that children and adults alike should exemplify the righteousness which exalts both men and nations, and which is the outward result of right thinking.

The demands of Principle are so unvarying and so far reaching that no mere quibble in the way of personal opinions or personal interests can be admitted. The truth itself can never be perverted, but even sincere seekers may be turned aside by shallow and specious arguments, though these can never really mislead the diligent student of our Leader's writings, which are strictly in accord with the teachings of the Bible. It seems, however, that the question is sometimes raised by beginners as to whether "lands" and "houses," and other earthly possessions do not belong to one person as much as to another, since God provides impartially for all His children. If the first part of this argument were admitted, the eighth commandment would not be needed; yet Jesus said that he who would break even one of the least of the commandments, "and shall teach men so, he shall be called the least in the kingdom of heaven." The children in the Christian Science Sunday schools are certainly taught to obey all of the commandments, and much emphasis is laid upon the tenth, which insists that we shall not covet or desire "anything" that belongs to another.

At this point it may be well for us to recognize the fact that while divine "Love is impartial and universal in its adaptation and bestowals" (Science and Health, p. 13), yet we must strive very earnestly to avail ourselves of the divine provision. Indolence, a marked characteristic of mortals, must be rooted out. The gentle Master himself did not hesitate to pronounce the severest sentence upon the slothful servant who buried the talent given him, and this lesson applies equally on the spiritual plane and the material so called. The demands of God's law, like rays of light, are very far reaching, and honesty in thought, word, and deed is certainly a divine demand. It reaches out to the pupil in school who might be tempted to argue that another pupil's worked-out problem belonged to him as much as to the one who had worked it out, but if he ventured to copy the other's work he would really be robbing himself, and he would be classed with the dishonest. The one who takes an article belonging to another robs himself of the opportunity to prove that all real good is within his reach if he will but take right means to secure it. He may also injure by dishonesty the neighbor whom he is bidden to love, an error which will react upon himself sooner or later.

It is very helpful to look up in the Bible and in our Leader's writings all that is said upon the subject of honesty. Christ Jesus said that the seed of Truth must be sown in an honest and good heart in order to bring forth fruit to perfection. Paul, who inculcates sound doctrine and true living, bids us "adorn the doctrine of God our Saviour in all things."

ANNIE M. KNOTT.

A Letter from Mr. Shield

New York, May 25, 1916.

To the Board of Directors of The First Church of Christ, Scientist, Boston, Mass.

Dear Friends: Permit me to express my gratitude for the kindly spirit with which you have accepted my request to be relieved of further service as a lecturer.

The lecturing has brought me much joy, and I leave it with heartfelt love and gratitude to God, to you, to my dear coworkers in the lecture field, and to all those beloved ones whose helpful cooperation and loving generosity have so largely contributed to the measure of success my effort has attained.

Fraternally yours,

JACOB S. SHIELD.

The Lectures

Lecturers Appointed for the Year Ending June 30, 1917

Frank Bell, C.S., Post Office Box 452, Harrisburg, Pennsylvania.

John Sidney Braithwaite, C.S., 1 Clarence Terrace, N.W., London, England.

Clarence W. Chadwick, C.S.B., 2235 Howard Street, Omaha, Nebraska.

George Shaw Cook, C.S.B., 525 Orchestra Building, Chicago, Illinois.

John W. Doorly, C.S.B., 38 Boar Lane, Leeds, England.
(Address for all correspondence relating to lectures in America and Canada, Box 13, Fenway Post Office, Boston, Massachusetts.

John Randall Dunn, C.S., 4958 McPherson Avenue, St. Louis, Missouri.

Clarence C. Eaton, C.S.B., 719 South Union Avenue, Tacoma, Washington.

Dr. Francis J. Fluno, C.S.D., 1732 Franklin Street, Oakland, California.

Willis F. Gross, C.S.B., 505 Berkeley Building, Boston, Massachusetts.

Prof. Hermann S. Hering, C.S.B., 42 North State Street, Concord, New Hampshire.

Dr. H. Walton Hubbard, C.S.B., 324 Hutton Building, Spokane, Washington.

Bliss Knapp, C.S.B., 11 Hawes Street, Brookline, Massachusetts.

William D. McCrackan, C.S.B., Post Office Box 779, New York, New York.

Charles I. Ohrenstein, C.S.B., 722 Ackerman Avenue, Syracuse, New York.

Ezra W. Palmer, C.S.B., 1515 Adams Street, Denver, Colorado.

William W. Porter, C.S.B., 206 West Eighty-sixth Street, New York, New York.

William R. Rathvon, C.S.B., Post Office Box 25, Denver, Colorado.

Paul Stark Seeley, C.S., 144 North Nineteenth Street, Portland, Oregon.

Virgil O. Strickler, C.S., 219 West Eighty-first Street, New York, New York.

Bicknell Young, C.S.B., Virginia Hotel, Chicago, Illinois.

In making engagements for lectures to be delivered, the work of both churches and lecturers will be greatly facilitated if the churches will make immediate application to the individual lecturers for the date or dates desired during the year ending June 30, 1917. If the engagements for the entire year can be made as soon as possible after July 1, 1916, the lecturers can arrange their routes more satisfactorily to all parties.

Letters and telegrams sent to the addresses given above will be duly forwarded. Use these addresses, unless for a special occasion a different address is given.

✧

Notice

Mr. Doorly will be available for lectures in America and Canada during the months of September, October, November, and December, 1916.

Mount Vernon, Ind.

An attentive audience listened to a lecture on Christian Science by Willis F. Gross at the Court House. Attorney George Zimmerman in introducing the speaker said:—

We have assembled here tonight to hear an explanation of the doctrines of Christian Science. While I am not a Christian Scientist, yet neither am I opposed to its teachings. I am only one of the many who through lack of opportunity or from indifference and apathy have not become sufficiently acquainted with the subject either to accept or reject it. But whatever view we may take of this movement, the remarkable progress made by it in the comparatively few years of its existence, coupled with the fact that this teaching has been enthusiastically embraced by so many intelligent and worthy people, ought to entitle its advocates at least to a respectful and impartial hearing, regardless of any preconceived opinions we have acquired as to its merits.

Humanity is prone to criticize and ridicule most that concerning which it knows the least, and no doubt Christian Science, like all other religions and creeds, has suffered from this fault of mankind. It may be that Christian Science has marvelous and powerful truths which are well worth our consideration but which some of us have overlooked or do not understand, and if so, it cannot be suppressed by abuse or ridicule. On the other hand, if it is corrupt and false, how shall we account for the testimonies of its thousands of satisfied followers? If its progress had been only among ignorant and wicked people, we might contend that it was occasioned not by reason of its merit, but on account of its being in harmony with some prevailing errors or corruptions. The class of followers which Christian Science can boast of, however, forces us to reject the latter theory, and this leads us to the conclusion that it has some great truths well worth knowing. Therefore in listening to this lecture let us keep our minds open to receive these great truths, if such exist, with the hope that the message to be imparted is one of "glad tidings of good things."—*Correspondence.*

✧

Milwaukee, Wis.

Clarence C. Eaton, who lectured on Christian Science in the edifice of First Church of Christ, Scientist, was introduced by F. T. Woodford, who said:—

Jesus startled the age in which he lived by the daring assertion that he knew God. He said, "Ye have not known him; but I know him," and then he gave the proof of this knowing by destroying the works of evil,—sin, disease, and even death. Through Mrs. Eddy's marvelous discovery of this same spiritual law which Jesus demonstrated, the world has again been startled by the declaration that all may know God.—*Correspondence.*

✧

New York, N. Y.

Campbell MacCulloch, first reader, in introducing Charles I. Ohrenstein, who lectured on Christian Science for First Church of Christ, Scientist, said:—

In the minds of most people the word science is usually associated with invention, discovery, chemistry, astronomy, or some process of industrial advancement; yet science is but another name for exact truth, and to ascertain the science of any subject is but to reach the truth about it. For centuries religion has been considered as merely theoretical, as based upon faith, belief, or conviction, and not upon accurate knowledge. In fact, it was not until Mrs. Eddy discovered that the religion Jesus the Christ taught was based upon a fundamental Principle, and that consequently it was possible

Digitized by Google

to arrive at exact or scientific knowledge of the spiritual law involved, that the world began to understand that science and religion are not necessarily opposing terms.

For many, many years men and women have been working their way to heaven by hope rather than by actual knowledge. Christian Science is come to show us how to reach that haven by provable spiritual law, and how to use it in overcoming sin, banishing so-called incurable disease, and triumphing over the grief and poverty that have been deemed inevitable. In a word, Christian Science, or true knowledge of God, is here to set us free from the chains of evil that have embittered human experience. The lecture to which we are to listen will outline how this knowledge may be obtained and how used, and will be delivered by one who has himself spent years in proving the truths of which he will tell us.

Correspondence.

✧

New York, N. Y.

The remarks of Frank Sisson in introducing Bliss Knapp at a lecture on Christian Science given in Second Church of Christ, Scientist, New York City, were in part as follows:—

The distinguished English author, scientist, and physician, Sir Arthur Conan Doyle, in an article in *Collier's Weekly*, makes this comment: "We are drifting into regions which are stranger than fiction. The unknown and the marvelous press upon us from all sides. They loom above us and around us in undefined and fluctuating shapes, some dark, some shimmering, but all warning us of the limitations of what we call matter, and of the need for spirituality if we are to keep in touch with the true inner facts of life." The need for spirituality is the great need of today in the lives of individuals, communities, nations, and the world, and to that need the speaker of the evening will address his remarks, and on that need the movement for which he stands is focusing its activities. Christian Scientists accept the dictum of the Bible, "God is a Spirit: and they that worship him must worship him in spirit and in truth," and to that increase of our spiritual understanding they are devoting their efforts. They have dared to take Christ Jesus at his word and put into practice the Christ-teaching.

To the philosophical observer it can but seem marvelous that out of the teachings of the meek and lowly Nazarene should have sprung such a variety of sects, creeds, and churches, each in his name. Nothing could have been more simple than the Christ-life and the Christ-teaching. The simple summary of Jesus' doctrine of life was, "Love one another," and his code of ethics was condensed with luminous clearness into the requirement, "Whatsoever ye would that men should do to you, do ye even so to them." This is the sum and substance of the Christ-message, and the sum and substance of Christian practice.

It would seem to the man of the street, and also to the philosophical observer, that there was never a time in human history when the need for spiritual guidance was so great as today. There was never a time when the human heart longed so sincerely to know the fatherhood of God and the brotherhood of man. Christian Science with its message of love is addressing itself to this need in the most effective manner, and it invites your attention.—*Correspondence.*

Testimonies of Healing

Nothwithstanding many opportunities of being at least casually if not intimately acquainted with the subject of Christian Science, I had never heard this term used, or at any rate it had never left an impression on my consciousness, until nine years ago, when I was overtaken by a malady generally admitted to be beyond the help of medicine. This complaint is described as nervous prostration, but the name conveys only a faint description of the sense of terror and helplessness it brings upon the sufferer. I became quite incapacitated for business, and the family physician could do nothing more than advise quiet and rest, with various remedies for an aggravated bowel derangement. This treatment bringing little if any relief, at the suggestion of my physician I went to one of the most famous rest resorts in the East. Here I seemed to improve for a time, but upon seeking to take up my business duties again, the old trouble came back worse than before. I next tried the "outdoor remedy," and this treatment too seemed quite efficacious; but as soon as I attempted to resume business I was again overtaken and became so completely discouraged that I practically gave up hope.

About this time (the summer of 1906) a member of my family, an officer in the United States navy, was healed by Christian Science of a complaint that seemed somewhat similar to my own. He insisted on my seeking a cure in Christian Science, and notwithstanding my ignorance of what it purported to be, I went to Boston to secure the healing of which I was so desperately in need. I shall never forget the acts of kindness, the words of sympathy, and the expressions of the love which heals that I received from the Scientists in Boston during this stay there of some four or five weeks.

My case was committed to a practitioner, who quickly won my respect and confidence. While I knew that I was being benefited right from the start, at each visit I complained of the condition of the bowels, which at that time seemed to my frightened sense the principal cause of my ailment. The practitioner, however, appeared to be not in the least disturbed, knowing that I would finally secure relief; but it did not come until eleven days had passed. With this relief came also the disappearance of my fear, and in its place a sense of freedom that had been a stranger to me for many months. The healing was complete then and there, and in the midst of rejoicings with friends and the faithful wife who had accompanied me in all this quest, I returned home and again resumed my business.

That I took up Christian Science for the physical healing alone is further proved by the fact that on returning to my former manner of living, including active membership in a church, scarcely any thought was given to what had really been my salvation. The result was that the trouble returned, after I had been free from it for over two years, in what seemed a more aggravated form than ever, and which finally resulted in a violent case of so-called typhoid fever. While I had let slip a good deal of the letter of Science, I had managed to hold on to enough of its truth to realize that I was quite beyond the reach of any medical aid, and although so weak physically that I could scarcely raise my hand, I was strong enough to place myself in God's care again by appealing to a Christian Science practitioner. With my restoration to health came the desire to make Christian Science my religion as well as my physician. I took up its study in earnest, threw myself into the work of organizing a local society, joined The Mother Church, and received class instruction, having long since reentered my old business calling with more enthusiasm and greater pleasure than ever.

All are grateful that God is "a very present help in trouble," but it took our Leader to discover for this day and age how to "find grace to help in time of need."

MEEDY SHIELDS BLISH, Seymour, Ind.

❖

My first healing in Christian Science occurred about seven years ago, when I was instantaneously freed from nervous trouble. While from that time I always believed in Christian Science, I have since learned that I did not study as I should to get a clearer understanding of the truth. Several members of my family had passed on from what was termed heart disease by *materia medica*, and as I had been with my favorite sister during her suffering, fear took hold of me during a recent attack. I am thankful now that my last healing was slow, as it enabled me to gain a better understanding of the truth through persistent study.

I was very much discouraged and impatient, as my thought was filled with fear on account of my symptoms being the same as those of my sister before she passed on. I do not know when the healing took place, but I had treatment from a faithful practitioner for three months. Day after day it would seem as if I could not stand the awful suffering any longer, but each day the practitioner would give me wonderful words of comfort. For two months I lay awake night after night. I could not rise from my bed without help, but tried to realize that God was ever present, and that since I had been healed before, He would surely help me again. Faith in His power to heal was not lacking, but fear in mortal consciousness was keeping me from realizing the truth. After three months my breathing became normal, and the swelling in my limbs began to disappear. Gradually the sleeplessness also left me. I was still weak, but the dreadful nervousness was gone, and I gained strength until I became perfectly normal. I had wasted away to almost a shadow of my former self. About the fifth month I started to gain flesh very rapidly, and after a while was back to my usual weight. I am now entirely well.

The *Sentinel* and *Journal* were a great help to me in my distress. I am indeed grateful to Mrs. Eddy for Christian Science.—GRACE MENZIES, San Francisco, Cal.

I desire to verify the above testimony of my wife, also to add my own as to the cure of the tobacco habit of long standing through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the cure of ear trouble of serious nature after treatment by a practitioner. I have had many other helps through my study of Christian Science.

I am thankful to God for the spiritual uplift, and grateful to our Leader, Mrs. Eddy, for bringing us this wonderful truth.—F. A. MENZIES.

❖

Fifteen years ago I was healed through Christian Science of a lingering disease of the lungs, supposedly inherited. My father had passed away with it, also my sister. I was healed in less than twenty-four hours, although I had become unconscious. Since then two children have been born to us without medical attendance, physically perfect and healthy. They have never had a drop of medicine. Although they have manifested several of the so-called children's diseases, they have quickly recovered with the aid of Christian Science. I presided at our dining-table the evening after our little daughter arrived, and having occasion to go out took her with me when she was four days old.

To those seeking help in Christian Science the physical

Digitized by Google

healing seems very wonderful, but as one begins to understand a little of the beauty of this teaching, the physical healing is seen to be a perfectly natural result of corrected thought. I cannot express in words my gratitude for the transformation which has come into my life, for a completely altered disposition and temper, and for the consciousness that heaven has begun right here and now. The peace of God, which passeth all human understanding, has come into my life through the little knowledge I have of Christian Science. I am truly thankful to God, and grateful to His messenger, our beloved Leader, Mrs. Eddy, who has revealed the practical, demonstrable religion and mission of Jesus to this age.

Lucy J. Roe, Brooklyn, N. Y.

✧

I owe a debt of boundless gratitude to Mrs. Eddy for what "Science and Health with Key to the Scriptures" has given me. The Bible is as refreshing and inspiring to me now as a running brook to a thirsty traveler. I was completely buried in mortal débris, until I came humbly to the foot of the cross and through Christian Science was taught the truth about God, Spirit. The Bible is a revelation to me. For twenty years I was a member of a church, converted as I thought; but I realize that I had then only a belief in God. Now I have an understanding of the divine nature. Through close study of the Bible, together with Science and Health, I have had many proofs of God's ever-presence. How my eyes opened up when that thought was first presented to me, for I had seemed to pray to a God afar off.

I am most grateful for all the Christian Science literature. The *Monitor* is a daily message to me from God; in fact the first spiritual insight I gained was in the summer of 1913, when one day in reading the Christian Science article on the "Home Forum" page the scales fell from my eyes, and for the first time I began to study myself. I praise God, and am grateful to Mrs. Eddy, for the wonderful spiritual insight I am gaining. I have learned to love the Bible; it is the Book of books to me, whereas before it was a dead letter.

My husband is a physician and surgeon, and for fourteen years I assisted in office and sanitarium work until I was filled with medical theories and I had what seemed to be a nervous breakdown. For three years I had suffered from spinal trouble, and no medicine seemed to relieve the pain and suffering; effects were only temporary. I grew worse, until finally I lay in a comatose state, under the influence of an anesthetic, which was the only thing that relieved me. As doctors advised a change, I decided to go to my mother, who is a Christian Scientist and has been for nineteen years, and who has had marvelous healings.

It had never occurred to me that I needed Christian Science. In fact I did not care for it at all, although I would pay my mother the respect due her by attending her church when I visited her, which was once in about three years, and then only for about ten days. This time I went home sick and discouraged. On my arrival my mother advised me to try Christian Science, but I said nothing. On Sunday, sick as I was, almost too sick to be out of bed, I went to church, and I thank God that I did so, for that day at the service I was instantaneously healed during the reading of the Lesson-Sermon. A few days later I returned to the sanitarium, where I resumed my work and duties as before.

A month later I broke down with what seemed worse than the former trouble, and my husband as well as several other physicians said nothing but an operation would make me a well woman. Up to this time I had been continually assisting in the operating room and doing most of the important nursing of the sick. My husband was rapidly failing in health also, and at the end of six months we were obliged to sell our place on account of his health as well as my own. I realized my healing in that Sunday service and could not forget it, but I was not yet ready for which I have since been gaining.

After the sanitarium was disposed of, my husband went to another sanitarium for a cure and I returned to my mother's home. While I knew nothing about the study of God's Word through Science and Health, I took it up in earnest, and as I have sought, trusting, praying, and watching, the Father has opened the way, and I have been made "every whit whole." Severe headache, biliousness, rheumatism, neuralgia, and stomach disorder have gone to their native nothingness. I was irritable most of the time, but this has been overcome as I have gained a higher and better way.

For the physical help I am grateful, but the spiritual blessing I am and have been gaining is more to me than all else. I had lived so many years in *materia medica* and in drugs that I rejoice I have been made acquainted with a better way, the way to present and full salvation. I am most thankful I have been able to rise above mortal débris into the presence of divine Mind and put into practice what I have learned as the Bible is unfolded to me.

Madolin Hayes, Westfield, Pa.

✧

I would like to express my gratitude for what Christian Science has done for me. While in the southern states I had an attack of swamp fever and was obliged to return home. My mother, who had been reading Christian Science literature, recommended that I call a practitioner, but fear came into the home and a doctor was sent for. The ailment was pronounced typhoid fever in its most malignant form. I could not retain anything in my stomach, and I suffered untold agony. The doctor came three times a day for three days and admitted the case was a puzzle to him, so I dismissed him. He plainly told me that I would be the "sickest" fellow within three days and would very likely have to be strapped in bed. I then decided to try Christian Science, and asked my mother to telephone for a practitioner. After being treated for three days I could eat anything I wanted without the least distress, and within two weeks I was perfectly well.

While I was ill my mother fell on the back porch and barely escaped serious injuries. She asked for Christian Science treatment, and within three days all manifestation of stiffness and soreness was gone. For this healing and many other blessings we are grateful to Christian Science, and our hearts are full of gratitude to Mrs. Eddy. We hope to be able to help others as we have been helped in the truth.

P. H. Guiles, Salina, Kan.

I want to add to the testimony of my son. What he has told you is true, but just the bare facts. The demonstrations of Truth's power in our home have turned several to Christian Science for that understanding of divine Love which casts out all fear.—Charlotte M. Guiles.

✧

I wish to express my gratitude for what the understanding of Christian Science has done for me. About fourteen years ago a friend sent me a copy of the *Sentinel*, and on reading the testimonies I thought it was almost too good to be true. I had been ill from stomach trouble and rheumatism, and had been treated by five different doctors, but none could cure me. For fifteen years I had what is commonly known as milk-leg and was obliged to wear a rubber stocking all the time in order to keep about. As I read those testimonies I thought that if Christian Science teaches how to know this God who is

Digitized by Google

the healer of our diseases, I must know more of it. I did not think I could be cured, but wanted to know of God, though I was prejudiced against Mrs. Eddy through adverse things I had read.

I wanted to read the book, "Science and Health with Key to the Scriptures," though I had no thought of buying it, nor did I know where I might borrow a copy; but one day a dear friend mailed me one for my very own. After reading the first two chapters I knew it was what I had been wanting for many years, and it seemed to me as if I could not read fast enough. The stomach trouble just disappeared, never to return, and before I had finished reading the book I discarded the rubber stocking. I have never had to wear it again or found any inconvenience in doing without it all these years. The leg troubled me again last fall, but the difficulty was soon overcome, and I am now free from it. By the time I had studied the book three months the rheumatism was entirely gone, and it has not returned.

My little girl of eight had suffered from organic heart trouble since birth, according to the physicians, and she got no help from the doctors; but she had treatment by a faithful practitioner for two weeks and has been well ever since. She is a picture of health and happiness. Many other demonstrations in smaller things have been made and I have been able to do the work for myself. Neuralgia, throat trouble, and last but not least, a sense of limited supply, have all been overcome.

I am deeply grateful for the benefits derived from Christian Science, for it gives me a glad and joyful heart every day to know that the Christ is with us, and that we can get rid of all our sorrows and troubles and know God here and now. I am always waiting for Saturday with pleasure, as the *Sentinel* comes on that day. It has been a wonderful help to me. I thank God daily for giving us Christian Science. I had been praying for thirty years, seemingly without effect, and could not understand; but now the light has come to me, and I know that God is ever present. I am very grateful to Mrs. Eddy, because her writings, with the Bible study, have shown me the way out of darkness.

Mrs. I. VanAtter, Paris, Ontario, Canada.

✧

[Translated from the German]

In December, 1913, I suddenly became very ill. The physician who was called in at once stated that it was a case of appendicitis and ordered my immediate removal to the hospital, where an operation was to be performed. However, my mother did not agree to this, and upon her request a Christian Science practitioner came to see me and took up treatment. The result was that in two weeks' time I was completely restored to health, and I have experienced no trouble of any kind since. For this I am most deeply grateful to God, and to our Leader, Mrs. Eddy.

J. Sauer, Stuttgart, Germany.

✧

I did not read "Science and Health with Key to the Scriptures" by Mrs. Eddy for any good I expected to get from it, but one day, having nothing else to read, I took up a copy of the text-book that I had borrowed from a friend. When I had finished the chapter on Prayer I knew there was no reason for me to be wearing glasses, though I had done so for nine years and an optician had told me I could never do without them. I took them off and have never required them since, though that was six years ago.

About two years ago, while I was out riding alone, my horse shied and threw me on to a very hard road, where I struck heavily on my head. I was stunned for a minute but soon recovered, and after catching the horse I rode home. That night there were terrible pains up the back of my neck to the top of my head. I tried hard to hold the right thought, but next morning I could hardly move my head at all. Then I was told of people having paralysis through just such an accident, and fear took hold of me; but I wired a Christian Science practitioner three hundred and fifty miles away, telling her what had occurred and asking her to help me. About three hours after sending the wire I could move my head quite easily, and next day there was no pain. These are only two of the many demonstrations I have had, and I cannot adequately express my thankfulness to God, and my gratitude to Mrs. Eddy, also to all who are helping to spread this great truth.—Ada Elliott, Brisbane, Queensland, Australia.

✧

As one who is truly thankful for Christian Science, I gladly testify to its truth. It has been to me the greatest comfort and joy I have ever known. It has revealed to me a God of love, who is ever ready and ever able and willing to help any of His children who call upon Him. I have been benefited in numerous ways; in fact, in every way. Christian Science is the greatest help possible in my work and has brought me health and happiness.

Through reading the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was healed of very bad headaches, from which I had suffered daily since childhood, also of defective eyesight, after having been told by two specialists that I would always be obliged to wear glasses; and various other ailments have entirely disappeared since my study of Christian Science. Words fail to express my thankfulness to God, and my gratitude to our beloved Leader, Mrs. Eddy, for this saving truth. By trying to live a little better today than yesterday, I shall steadily gain the name of being a true Christian Scientist.

Eva Timson, Windlesham, England.

✧

Words cannot express my gratitude to God for His loving-kindness shown me. About five years ago I became interested in Christian Science. At that time I had become a mental wreck, caused from worry. All that I am and ever expect to be I owe to Christian Science. It has shown me how to love humanity with a pure, unselfish, and uplifting thought, and for this I am indeed thankful to God, the giver of all good things.

Having suffered with headaches for a long time, I was obliged to wear glasses for relief, and did so for about nine years, during which time there were intervals when I suffered a great deal of pain in the eyes. Four and a half years ago I was healed of wearing glasses through the loving ministration of a Christian Science practitioner. I have also been healed of extreme nervousness and am being freed from a bad temper and fear. Instead of looking on the dark side of life I now look on the bright side, as I know that God is supreme and all powerful.

In gaining an understanding of divine Truth I feel profoundly grateful to the practitioners, and to every one who has given me a word of encouragement. I now know that so long as I am humble and willing to allow my thoughts to be governed by divine intelligence, I shall have peace and contentment. Christian Science has brought harmony into my life, and during my study of its literature I have lost all desire for strong drink. God is teaching me how to eliminate hatred, envy, jealousy, and wrong thoughts by replacing them with thoughts of love and kindness.

Digitized by Google

I thank God for all these blessings, and feel more grateful than words can express to Mrs. Eddy for having shown us the way up to the throne of God. The world will some day better appreciate what she has done for humanity in teaching men how to know God. I sincerely trust this testimony will prove beneficial to some one who is athirst in the desert of human belief.—LEONARD BERG, Chicago, Ill.

✧

[Translated from the German]

It is a pleasant duty to testify to the blessings I have received through Christian Science. I became interested in this teaching through the healing of my sister-in-law, and the results which I had the opportunity of seeing induced me to take up the study of Science and Health and other literature bearing on the subject. Since then I have been able to solve various problems with the help derived from these teachings, one of the results being that I got a better position. Besides this, colds in the family have always been quickly overcome.

When about three months ago my seven and a half year old daughter was taken ill with measles, I immediately asked a Christian Science practitioner for treatment, and the healing was brought about very quickly. Although a young child, she makes practical use of her knowledge of Christian Science. My younger daughter, four years old, was stricken with the same illness a week later, but was freed within a few days through the work of a practitioner. Recently, when we were moving from Hannover to this city, my oldest girl was taken with inflammation of the throat during the trip. I at once applied for help by letter, with the result that she was freed very quickly. In closing I would mention one more incident. During a recent walk, while picking flowers, I inadvertently reached into a bush of nettles; but I immediately applied my knowledge of Christian Science, realized the truth, and within a few minutes was free from pain.

Christian Science, when properly applied, has proved to us a never-failing source of good. I gratefully remember its Founder, Mrs. Eddy, through whom these things have been revealed to the world, and I am earnestly trying to live in accordance with truth as taught in her writings.

PAUL HORSTMANN, Bonn a. Rhein, Germany.

[Written for the *Sentinel*]

"It doth not yet appear"

FRANCES A. HALDANE

IT doth not yet appear how much of glory
May grace the dawning of another day;
How fair the earth may glisten in the sunbeams
When once the storms of error roll away.

It doth not yet appear how much of beauty
May bud and blossom in the wilderness,
Nor where are cooling springs of hidden waters
To give refreshment from the journey's stress.

Nor doth it yet appear how much of wisdom
God on the humble suppliant will bestow;
How much of radiant love and tender mercy
In some sad heart may swiftly flash and glow.

Faith holds its vigil through the darkness,
Hope sings of happiness to be,
Love ever keeps the open vision
To greet God's perfect day of liberty.

From Our Exchanges

[*The Christian Intelligencer*]

Has a nation a conscience? Can it be influenced by an inward power and inclined to right or wrong as are the men and women who make up the nation? Surely the answer is given by the definition or description of a nation—a body of individuals living under one government or subject to the same general conditions of habits, customs, and usages social and civil. If then a nation is made up of individuals and if individuals are more or less fully controlled by their convictions as to right and wrong, expediency or justice, so can a nation possess a national conscience and be subject to its guidance in the affairs of its common interests and duties. It follows that the conscience of a nation as well as that of an individual can be instructed and informed and made to have a real influence upon the thought and action of a nation. "Blessed is the nation whose God is Jehovah," says the psalmist. But Jehovah is not and can not be the God of any people who do not seek Him and serve Him consciously and conscientiously.

[Rev. Joseph Fort Newton, D. Litt., in *The Christian Commonwealth*]

Other nations had sacred books as a part of their literatures, but the literature of the Hebrews was wholly religious. The ruling trait of that race was its sense of the unseen, its vision of the moral law, its passion for God. Here was a folk whose government was a theocracy and whose patriotism was piety. Their poetry kindled its flame at the altar of faith. Their architecture was a house of prayer. The muse of their history was the spirit of holiness. Surely it is not a thing strange that the poets of such a people became prophets, their faces aglow with moral idealism, their lips speaking words of fire. Nor is it a matter of wonder that the most religious race in all history should have written the sacred book of mankind, the moral classic of the world.

One may say reverently that the life of Jesus, so far as we can understand it, was the consummate flower of the piteous, passionate, aspiring life of that mighty race—just as Plato was the crowning glory of a race of thinkers. On his human side Jesus was surely the focus, the glow-point, at which the God-inspired soul of his people, melted by sorrow and purified by fire, became incandescent with heavenly light. It was as if the scattered atoms of an old chaos had at last been gathered into a planet—yea, a sun to light our dark world; as if the wandering tones of many harps had found a home in the bosom of one sovereign harmony. This does not account for Christ, but it does help us to mark the path by which he came and the tradition in which he stood. It is only to say that God appeared to a race that had eyes to see and spoke to men who had ears to hear.

[Rev. S. J. C. Goldsack in *New-Church Messenger*]

As we look back through the centuries of the Christian era this one fact stands out most prominently: that it has been the spirit, the life of the Lord Jesus Christ, that has been the chief cause of human progress and civilization. The mere knowledge of the facts of the life of Jesus Christ, the mere spiritualizing of the historic records, could not, and never will, build up the Lord's kingdom; but the reception of his spirit and the inspiration of his love and wisdom as living realities and forces in individual human lives, have made pioneers and heroes and martyrs for the salvation of mankind. These have softened hard hearts, and consoled mourning souls, and given deep internal joy to thousands. At this day

Digitized by Google

the world stands in need of nothing more urgently than the spirit of him that liveth as the vitalizing force in those who profess to be his disciples.

[*The Universalist Leader*]

The trials that test our moral endurance do not create it. At the most, they merely serve to increase a power that already exists, as muscles are strengthened by exercise. The oak proves its strength in the tempest; but it does not get its strength from the tempest. It gets it from quite other sources during the tranquil summer weather. In like manner, moral emergencies demand the use of qualities gained from outward blessings in the days of peace and joy. It was from the mount of transfiguration that Jesus returned to cast out the evil spirit with which his disciples had contended in vain.

[*Zion's Herald*]

Resurrection was personal at the start and is personal still. It is individual men who are resurrected by the power of the living Christ. Unless, then, we have a conscious share in this process of spiritual resuscitation, a thousand historic resurrections will do us no good. An Easter in society is all very well, but the pressing question for each individual remains, Is there an Easter in my soul? Let ours then be the ideal of Paul, who cried, "That I may know him, and the power of his resurrection." Our petty lives are indeed most miserable unless they link in with the great Life.

[Ernest Rochat, D.D., in *The Constructive Quarterly*]

Human fraternity, if supplied with new strength, will bring about new modifications in the idea of God. We shall return to the conception of the God of Jesus, the All-Father, whom he understood in the ardor of his faith, contemplated in the limpidity of his conscience, and adored with all the power of his heart. That God will be no more the God of battles and of death. He will be that which He is, the God of holiness, justice, mercy, and love. When Christians cling to Him firmly and adore Him as Jesus did, then Christendom will enter on a new way, where it will no longer suffer and mourn as at the present hour. That Christianity which is the gospel will truly be the power of union, and of the life that the human heart desires and of which we already see new manifestations.

[*The Living Church*]

The church is not hopeless. Her failures are great, her spirit is inadequate, her realization of brotherhood is most incomplete, yet the Spirit of God is within her. Perhaps Christian people never felt the sense of their own helplessness, their own failure, their own littleness, as they do today. Perhaps there never was so great penitence for the faults of the church, so much realization of those faults, as there is today. That penitence, that realization, affords the grounds for hope. And it is hope that comes to us from the empty tomb. There can be no despair in the life of the Christian. The church will rise from her incompleteness and her littleness with Christ, and his resurrection is the guaranty that "the gates of hell shall not prevail" against her.

[James H. Snowden, D.D., LL.D., in *The Biblical World*]

Doubt is a sign of thought and is better than unthinking stagnation, but it is weakness and not strength. It may be good as a temporary state and a step toward clearer light, but not as a finality; positive belief is the rightful state of the mind. And when doubt is fairly faced and fought through, it often leads to a stronger, triumphant faith.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00, six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Publishing Society

"Law and Work" is the title of a new pamphlet containing the following articles: Love Fulfils Law, The Logic of Christian Science, Undisturbed, God's Law of Adjustment, Authority.

The increased cost of binding the periodicals has necessitated making an advance in the selling price of the bound volumes. The new prices, which take effect April 1, are as follows:—

JOURNAL.—Volume 32 (April, 1914 to 1915). Cloth, $3.00; half calf, $3.75.

SENTINEL.—Volume 16 (September, 1913 to 1914) or Volume 17 (September, 1914 to 1915). Either volume, cloth, $3.25; half morocco or half calf, $4.00.

For all other bound volumes of *Journal* or *Sentinel* write for prices.

DER HEROLD.—Volumes 5 to 12 in cloth, $2.75 each; volume 4 to 7 and 9 to 12 in half morocco, $3.50 each; volumes 4, 5, 9, 10, 11, 12, in half calf, $3.50 each.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to page four in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for the year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.25; half calf or half morocco, $4.00. On earlier volumes write for prices.

Items of Interest

That satisfactory wood-pulp can be made from a number of heretofore little known woods is evidenced by a Government publication, just issued, which contains seventy samples of paper manufactured by different processes, chiefly from woods heretofore practically unused for this purpose. It is pointed out that the spruce forests of the country are threatened with exhaustion, and that the cost of spruce pulpwood has steadily increased. If the price of news-print paper is to be kept at a reasonable figure, the experts say, more efficient methods of converting spruce into pulp must be developed or cheaper woods substituted for it.

The bulletin goes on to state that the method of manufacturing groundwood pulp has changed little since its introduction into this country in 1867. It was with the idea of developing new methods and improving the old that tests were undertaken at the forest service laboratories at Wausau and Madison, Wis. As a result, the relation to each other of the different steps in the manufacturing process has been definitely established and the merits of each treatment determined. The paper made from new woods was given a practical try-out by two large newspapers with satisfactory results.

The tests showed that eleven new woods give promise of being suitable for the production of news-print paper, while a number of others will produce manila paper and boxboards. Most of these woods are confined to the West, while the groundwood industry now obtains the bulk of its raw material from the East. It is thought that pulp-making plants must eventually move to points where they can obtain a plentiful supply of wood and an abundance of cheap water-power, two prime requisites in the business. The experts say that because the national forests contain immense quantities of the suitable woods and abundant opportunities for power development, they will undoubtedly play an important part in the future of the wood-pulp industry.

Wholesale grocers from all over the United States gathered in Boston, June 14, for their tenth annual convention, which lasted three days. Many topics of interest to the trade were on the program for discussion and reports were given from investigating committees. There was a general expression of views on how to end some of the wastes and unfair practices, how to lessen the uncertainties of the grocery business, how to improve business by more intelligent advertising, and how to plan savings by better accounting methods. The National Wholesale Grocers' Association has been largely instrumental in securing the passage of pure food legislation in more than thirty states. The association is now making an effort better to protect the public and the honest manufacturer from the unscrupulous, who induce salesmen to offer "something just as good for less money."

Full details concerning the steel merchant vessels under construction or contracted for in American shipyards on May 1 are contained in a bulletin just issued by the commissioner of navigation. The figures indicate that the Union Iron Works of San Francisco has contracted for the delivery of the largest amount of tonnage of any single yard, 151,458, but that both the New York Shipbuilding Company of Camden, N. J., and the American Shipbuilding Company of Cleveland, Ohio, lead this company in number of ships building or under contract, with twenty-five apiece. The total number of vessels shown by the builders' returns is 368, of 1,129,014 gross tons. The largest ships now being constructed are three for the Standard Oil Company of New Jersey, of about 10,900 gross tons each, in the yards of the Newport News Shipbuilding & Drydock Company of Virginia.

The scheme for the repatriation of Australian soldiers embodies proposals for more extensive planting of forests over new areas. Returned soldiers will be employed for this purpose. The planting of some seven million trees from the nurseries at Creswick will be undertaken, the plantations to consist mainly of pines and black wattle. The latter has a very valuable bark for tanning. Approximately twenty thousand pounds will be employed for this year's work; about fourteen thousand acres of land will be required, and a proportionate increase of labor, which will absorb some two hundred returned soldiers. Hitherto the largest number of trees planted in the year in Australia was four million.

A comprehensive plan whereby every child in Cincinnati, Ohio, will have an opportunity to preside over a garden plot, has been worked out by the director of the department of school gardening of the public schools. School children in all parts of the city, even in the tenement districts, will find it possible to grow flowers, vegetables, or fruits. The Garden Club of Cincinnati, composed of a number of prominent women, is doing much to increase interest in gardening and general beautification. Already the result of their window-box campaign is apparent.

On July 15 the Federal Reserve Banks will begin the collection of checks throughout the country for their member banks and for one another. The expense of operating the system of collection of country checks will be prorated among all banks of the district depositing checks with the Reserve Bank for collection and credit, and will be based upon the number of checks deposited and not on the amounts, as at present. The plan for the collection of checks, as proposed by the Federal Reserve Banks, is recognized by bankers as being based on sound banking practice.

The first short course for Indian farmers in Wisconsin was held recently at Kashena, on the Menominee reservation, and was attended by scores of interested tribesmen. Two instructors from the College of Agriculture and representatives of the Indian service of the department of the interior gave the Indians new insight into modern farming methods, which are being followed successfully throughout the state. Practice work in judging live stock, testing seed corn and grain, making out daily rations for dairy cows, identifying weed seeds, and other practices familiar to the every-day farmer who would keep abreast of the times, formed the main part of the course.

Provision for establishing a national park in Hawaii is made in a bill which is now before Congress. The park would include the crater areas and natural wonders of the three great volcanoes of Hawaii,—Mauna Loa, Kilauea, and the great extinct crater of Haleakala. By the provisions of this bill 75,295 acres would be set aside.

The largest single shipment of sugar ever sent from the United States in one lot left the Federal Sugar Refining Company's docks at Yonkers in the steamer "Eastgate" recently. The cargo, which was bound for Europe, consisted of 154,200 bags of refined granulated, valued at over one million dollars, and establishes a new high record.

In a summary of the crops condition it is estimated that this year's strawberry crop will be worth $20,000,000 to the growers, exceeding all previous records. It is also stated that the total fruit production of the country amounts to about two hundred and fifty million dollars annually.

A recent estimate shows that the Federated Malay States, which belong to the British Empire, have a population of 1,117,000. The chief industrial enterprises are the cultivation of rubber and the mining of tin. Vast territories are still wild and open to exploitation by capital.

In the early fall systematic campaigns will be begun in several cities in Massachusetts to secure the state's quota of $200,000 toward the fund for erecting a national civic hall in Washington, to be dedicated to the honor of George Washington.

Plans are being laid by the local committee in charge for the annual convention of the National Association of Stationary Engineers which will be held in Minneapolis, Minn., Sept. 11-16. Exhibits will be placed and meetings held in the National Guard armory. More than two thousand delegates are expected.

An order for seventy locomotives, involving an expenditure of about $2,800,000, has been placed by the Lehigh Valley Railroad Company with the Baldwin Locomotive Works of Philadelphia, Pa. Of these locomotives, forty are for freight and thirty for passenger service.

In a preliminary statement of the general results of the 1914 census of manufactures for the canning and drying of fruits and vegetables, based on reports received from 3199 establishments, it was shown that the products were valued at $158,015,893.

A plan to make Nottingham, England, a port by deepening the river Trent at a cost of $750,000 has been approved by the Nottingham corporation.

The naval appropriation bill, carrying a total of $241,000,000, has been reported to the House of Representatives.

The extension of a branch of the Siberian Railway for 500 miles has opened one of the world's greatest coal fields.

The state registration of automobiles in Iowa for the year has already reached more than one hundred and fifty-five thousand.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII June 17, 1916 No. 42

Annual Meeting of The Mother Church

GRATITUDE for a year of unparalleled growth in all its activities was the keynote of the annual meeting of The First Church of Christ, Scientist, which was held in the church edifice, Falmouth and Norway Streets, Boston, Monday afternoon, June 5. The church was well filled when shortly after two o'clock the meeting was opened by the retiring President, Edward A. Merritt of Cleveland, Ohio. The well-loved hymn, "Shepherd, show me how to go," written by Mrs. Eddy, was sung, after which Mr. Merritt read as a Scriptural selection the twelfth chapter of Romans, followed by correlative passages from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. A brief period of silent prayer and the audible repetition of the Lord's Prayer completed this part of the exercises.

As the first item of business Mr. Merritt announced the officers of The Mother Church for the ensuing year: President, Calvin A. Frye, C.S.D., of Boston; Treasurer, Adam H. Dickey, C.S.D., of Brookline; Clerk, John V. Dittemore, C.S.B., of Boston. In presenting the incoming President, Mr. Merritt's address was as follows:—

Our beloved Leader—in her address at the annual meeting held June 6, 1899—said, "Where God is we can meet, and where God is we can never part" (The First Church of Christ, Scientist, and Miscellany, p. 131). This we can appreciate only as we find that the revelation of Christian Science is spiritual, not material, and that man is immortal. She also tells us in the Preface of our text-book (p. xi) that "God with us" is "a divine influence ever present in human consciousness." Gaining in some measure the understanding of this divine influence, Christian Scientists are thereby overcoming the errors of sense and destroying the false beliefs of mortal mind.

We have met here today in unity of purpose and with a deep sense of gratitude for our progress in the understanding of the Christ. We are aware that it is the activity of this understanding, the activity of right ideas of Truth, which is the power of spiritual healing so necessary to the true progress of the cause of Christian Science and the salvation of mankind. Christian Scientists are a happy people, endeavoring to live in obedience to the law of God. Let us then stand as a solid phalanx with the revelation of Truth, and follow our Leader's admonition, where she says of a similar gathering: "Today you meet to commemorate in unity the life of our Lord, and to rise higher and still higher in the individual consciousness most essential to your growth and usefulness; to add to your treasures of thought the great realities of being, which constitute mental and physical perfection" (Message for 1901, p. 1).

One of the functions of these annual meetings is the retirement of one and the introduction of another President. Our next President is known to most of you. Many years of his life were spent in the home of our Leader, in untiring devotion and loyalty to her every wish, and I am persuaded that she would have rejoiced at this accomplishment today. It is now my privilege and pleasure to introduce to you, and I am confident you will all be happy to know, our next President, Calvin A. Frye.

Mr. Frye said in part:—

I can hardly realize that only thirty-four years ago (1882) there was but one Christian Science church, and that its services were held in the parlor of our revered Leader, Mrs. Eddy, in Lynn, Mass. At my first attendance on these services I found an audience of about eighteen persons, seated on plain camp-stools, the simple service being conducted by Mrs. Eddy. It seems impossible that from this small beginning the church has grown to such large proportions.

What wonders has God wrought through our beloved Leader's devotion to our cause, which she held in mind beyond all other things! Mrs. Eddy had no time for business matters, no time for society; her entire time was devoted to Christian Science and to its promulgation throughout the world. Her whole care was to watch its growth and to guard against the enemy's encroachments upon it,—to keep it pure, and clean, and holy. We know that from the beginning it bore fruits in health and spirituality far beyond anything we had ever experienced before. It taught us that there is a God, and that He is not a great king ruling over all, punishing all who do wrong and blessing those who are His favorites, but that He is a God of love,—loving all and providing for the salvation, the blessing of all. We do not have to go to a physician to get our health. God supplies our every need, and He is blessing us continually, even beyond what we can appreciate.

My friends, our beloved Leader was a dear mother to me, and to all mankind as far as she could reach them and prove available for their blessing. I went through class with our Leader in October, 1881, and what innumerable hosts have come into the work since then and have proved the blessings which Christian Science confers,—not in theory, but in practice,—in daily living and an uplifting of thought! Our dear Leader was a spiritually minded woman, or she never could have wrought this great work for mankind. Her goodness was felt as well as proclaimed by others, and we cannot speak enough in her praise. Mrs. Eddy was a reflection of the divine Mind. She lived it,—proved it in her daily life.

Christ Jesus said, "I and my Father are one." Mrs. Eddy said, "Follow your Leader, only so far as she follows Christ" (Message for 1902, p. 4). She did not set aside the Saviour. She knew his worth and his work, and she tried to bring to the world the import of that work. To be successful in our work as Christian Scientists, we have to take into account the belief of evil and resist it. As the apostle James says: "Resist the devil, and he will flee from you. Draw nigh to God, and he will draw nigh to you."

REPORT OF THE TREASURER

The report of the Treasurer of The Mother Church, for the year ending May 31, 1916, which was read by Mr. Dickey, presented several items of unusual interest and a

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

most satisfactory evidence of growth. It showed the church to be in excellent financial condition. The Treasurer stated that since the opening of the European war relief fund of The Mother Church there has been subscribed all told the sum of $193,544.36. Of this amount $187,788.18 has been forwarded to the committees of Christian Scientists which have been entrusted with its distribution. Money is being sent to England, France, Germany, Switzerland, Holland, and other European countries. Those who have received help from this fund have also had an opportunity to learn something of Christian Science, and a great many letters have been received from all the countries mentioned, expressing deep appreciation of the generosity of the Christian Scientists of America. Announcement was made that the fund is still open for contributions.

It was reported that the total receipts of the Mary Baker Eddy memorial fund have been $104,791.64, and that the total cost of the memorial and the establishment of a fund for its perpetual maintenance will approximate $150,000.

Mr. Dickey also read the report of Edwin L. Pride & Co., certified public accountants, who had audited the books and accounts of the Treasurer and certified to their correctness.

Report of the Clerk of The Mother Church

By Mr. Dittemore.—In accordance with the provisions of the Manual we are assembled here today for the twenty-first annual business meeting of The Mother Church. As upon similar occasions, words are inadequate to express the gratitude we feel for the blessings which have come to us as Christian Scientists, both individually and collectively, during the past twelve months. The consecutive records of these annual meetings constitute a history of the growth and development of the organized work of Christian Science, and today, as in previous years, we are able to record the fact that divine Love has prospered this church in every way during the past year. Its numerical growth, as well as the increased recognition by the world of the influence of Christian Science for good, has by no means failed to justify our expectation.

The present turmoil of the world's conflicting forces has given special opportunity for the ministry of Christian Science to prove its faith by its works. In those countries vitally affected by the war, unusual opportunities are constantly presenting themselves for the practical demonstration of Christian Science, both in the healing of sickness and sorrow and through the relief of suffering by contributions from the war relief fund of The Mother Church. This fund deserves continued support. It is accomplishing far-reaching results as a practical expression, to thousands unfamiliar with Christian Science, of the prompt and definite effects of its teaching and demonstration.

Some are here today from distant fields who have not visited The Mother Church since that memorable occasion, just ten years ago, when this edifice—The Mother Church extension—was dedicated. It may not be amiss, therefore, to allude briefly to the progress that has been made during this decade as well as during the year just passed.

According to the report of the Clerk of The Mother Church at the annual business meeting on the day following the dedication, there were then 949 Christian Science organizations; today there are 1616,—an increase of seventy per cent. During these ten years the growth in membership of The Mother Church has increased one hundred and sixteen per cent. The Christian Science periodicals have shown a much greater percentage of increase than have either the branch organizations or the church-membership. Within this period *The Christian Science Monitor* has been launched and the publishing house building constructed and enlarged to its present capacity. During approximately the first half of this period we were blessed by the wise leadership and direction of Mind through our Leader's personal presence. During the last five years the good which has come to this movement has come through adherence to the impersonal guidance of divine Mind as it has operated through the channels Mrs. Eddy provided for us, as recorded in the rules and by-laws of the Church Manual and her other works. The events of this later period have made strong demands upon Christian Scientists, and we may again repeat with assurance Mrs. Eddy's words as recorded in "The First Church of Christ, Scientist, and Miscellany" (p. 12), counseling patience and encouragement: "Whatever needs to be done which cannot be done now, God prepares the way for doing."

Speaking more specifically of the visible fruits of the past twelve months, the number of new members just received into membership in The Mother Church exceeds the number elected at any time of admission. There is also evidence that greater care has been given by those in the field who approve applications, than heretofore. We would again remind the members of The Mother Church that it is their individual responsibility, as approvers of applications, to see that each new member shall be a strengthening rather than a weakening unit.

The net increase in Christian Science organizations during the year has been 65, included among which are churches or societies in South Africa, England, British West Indies, and Panama. It is estimated that in addition to the more than sixteen hundred regular organizations listed in *The Christian Science Journal* there are now over three thousand unorganized groups of people throughout the world holding Christian Science services, some of these being in the most remote and inaccessible parts of distant lands. Each one of these gatherings is of course a nucleus for a Christian Science church or society.

During the past twelve months 2245 Christian Science lectures have been given, an increase of 716 over the previous year. The attendance at these lectures has been about one million five hundred and sixty thousand persons, an increase over the estimated attendance of last year of approximately three hundred and seventy thousand, or thirty-one per cent. The total annual attendance at Christian Science lectures has more than doubled within the past four years.

It will be of interest to state that 283,000 pieces of Christian Science literature have been distributed locally by The Mother Church. Throughout the field there is a need for more careful and more intelligent distribution of literature. Indications are not lacking that an immense quantity of Christian Science literature is being distributed throughout the field, but there is much evidence to show that this work is not always handled in a way to produce the maximum of results. Error's satisfaction in wasteful distribution would be second only to its satisfaction in no distribution.

The circulation of the *Monitor* is steadily increasing. During the year more Christian Scientists have given evidence of an awakened willingness to comply with Mrs. Eddy's loving request in regard to *The Christian Science Monitor*, namely, that "every Christian Scientist . . . subscribe for and read our daily newspaper" (The First Church of Christ, Scientist, and Miscellany, p. 352). Christian Scientists may remember with profit that Mrs. Eddy made only such requests of her followers as brought blessings to them. The growth in influence and in the evidences of appreciation of the *Monitor* by those outside the ranks of Christian Science has been little short of marvelous. That which Mrs. Eddy foresaw as the mission of this newspaper is step by step becoming a demonstrated fact.

Digitized by Google

There have been indications during the year that members of The Mother Church realize to a greater extent the responsibilities of their membership. At-one-ment in thought with the aims and purposes of The Mother Church is a necessary preliminary step toward assuming the active duties which true membership requires.

In material organizations founded upon a democratic basis there is a distinct difference between the ideals of government perceived in thought by their founders and the variable and limited human expressions of these ideals. We learn, however, in Christian Science that democracy, scientifically demonstrated, expresses the unerring rule of Mind reflected by each individual. As this scientific discernment takes form in the consciousness of the individual, it is seen that this "spiritually organized" Mother Church (see Retrospection and Introspection, p. 44) is the one organization on earth capable of becoming through demonstration an expression of perfect democracy. He also understands that he cannot be deprived of his part in bringing forth the complete demonstration of the Church of Christ, Scientist, when he is alive to the responsibility he has assumed by naming the name of a Christian Scientist and fulfils that responsibility.

It is the constant realization of the ever-presence of Mind and its unerring direction by the members of The Mother Church which will guide this cause in the way God has pointed out through His wayshower to this age, our revered Leader, and which will unfailingly hold up the hands of the officers of The Mother Church. When we destroy in consciousness a personal sense of government and direction and demonstrate the fact that there is but one Director, then we understand that upon His (Mind's) shoulders the government steadfastly and safely abides.

Statement by the Trustees under the Will of Mary Baker Eddy

By Mr. Neal, chairman.—For your information and encouragement the Trustees under the Will of Mary Baker Eddy desire to present a report of their activities for the year ending June 1, 1916, as follows:—

Lecture Work.—The Trustees have paid all traveling expenses in excess of $25 for each engagement toward 67 lectures given outside of the United States and Canada. The total expenditure has been $6558.56.

Because of the disturbed conditions of travel in the war zone, no lecturer has visited central Europe since the last annual meeting.

Last year it was announced that any church or society giving its first lecture, or any church or society giving an additional lecture, between Jan. 1, 1915, and July 1, 1916, might receive assistance in paying the expense of such lecture. As a result, 829 organizations applied and were helped in this way, to the extent of $80,219.15.

Free Distribution of Literature.—From this fund 959 churches and societies engaged in the free distribution of authorized Christian Science literature have received the sum of $69,764.25. This payment represents sixty per cent of the amount contributed by these organizations for the purchase of literature, postage, and wrappers, for the year ending Oct. 31, 1915. This sum does not include a premium on the money paid to these churches last year from this fund and used by them for the distribution of literature.

The total amount actually paid for literature distributed by these organizations, and for postage and wrappers used, was $173,683.85. Of this amount $116,273.75 was contributed by the churches and societies themselves, and $57,410.10 was contributed by the Trustees, as reported last year.

Lending Libraries.—Donations have been made to Christian Science free circulating libraries as follows: Science and Health, 2554; German translation of Science and Health, 370; Miscellaneous Writings, 877; The First Church of Christ, Scientist, and Miscellany, 624; Concordance to Science and Health, 146; Unity of Good, 514; Retrospection and Introspection, 454; Pulpit and Press, 352; Rudimental Divine Science, 428; Rudimental Divine Science (for the blind), 146; No and Yes, 391; Messages to The Mother Church, 369; Christian Healing and The People's Idea of God, 387; Church Manual, 373; Christ and Christmas, 327; Poems, 319; The Life of Mary Baker Eddy, 821; Editorial Comments, 268; Christian Science: Its Legal Status, 281; The Mother Church, 279; Personal Contagion, 123; pamphlets, 6075; Christian Science Hymnal, 188;—making a total of 16,666 copies.

Public Libraries.—The following donations of literature have been made to public libraries: Science and Health, 1887; German translation of Science and Health, 441; Miscellaneous Writings, 1005; The First Church of Christ, Scientist, and Miscellany, 890; Unity of Good, 849; Retrospection and Introspection, 789; Pulpit and Press, 799; Rudimental Divine Science, 830; Rudimental Divine Science (for the blind), 182; No and Yes, 769; Messages to The Mother Church, 829; Christian Healing and The People's Idea of God, 805; The Life of Mary Baker Eddy, 883;—making a total of 10,958 copies, together with 6122 annual subscriptions to *The Christian Science Journal*, *Christian Science Sentinel*, *The Christian Science Monitor*, and *Der Herold der Christian Science*.

Literature Distributed in Countries Engaged in the European War.—A total of 757,643 pieces of literature, including *Journals*, *Sentinels*, *Herolds*, *Monitors*, pamphlets, and reprints, has been distributed among soldiers, sailors, and war prisoners, in hospitals, in training camps, on board ship, and at the front.

Church Edifices.—Last year the Trustees reported the receipt of 26 applications for assistance in the erection or purchase of church buildings. During the past year 80 such applications have been received, making a total of 106. No money was paid out in response to any of these applications until after the Trustees' report was read last year. Since then $146,742.70 has been paid to 37 organizations. Also the sum of $160,579.41 has been set apart for the use of 36 other churches and societies whose applications have been approved, but who have not yet complied with all the requirements of the Trustees. The applications of the other 33 organizations are not yet in proper form for approval by the Trustees. No doubt the requirements will all be met, so that these applications will in due time receive favorable action.

This statement was followed by the singing of hymn 86, "Make channels for the streams of love," after which H. Cornell Wilson, first reader of The Mother Church, read a few out of the many written reports which were received from the field:—

First Church of Christ, Scientist, of Halifax, Nova Scotia, reported increased activity in the distribution of Christian Science literature, much of which has found its way to the soldiers and sailors, in military and naval hospitals, and among men on transports.

First Church of Christ, Scientist, of Baltimore, Md., expressed gratitude in the anticipation of the early dedication of its new church edifice.

The Christian Science organization of Wellesley College (Mass.) sent loving greetings and expressed appreciation of the literature provided for their college library by the Trustees under the Will of Mary Baker Eddy.

Digitized by Google

Dedication last November of the new church edifice at Bloomington, Ill., was reported by First Church of Christ, Scientist, of that place.

Third Church of Christ, Scientist, of Indianapolis, Ind., reported holding its first church service in May, 1916, its organization being made necessary by the greatly increased growth of Christian Science in that city.

The progress of Christian Science in Ireland, especially with regard to the lectures, was related in the communication from First Church of Christ, Scientist, of Dublin.

The holding of the first service in the new church edifice recently built in Cedar Rapids, Iowa, was reported.

Loving greetings were read also from Seventh Church of Christ, Scientist, of London; First Church of Christ, Scientist, of Des Moines, Iowa; Third Church of Christ, Scientist, of Los Angeles, Cal.; and from St. Paul, Minn.

At the conclusion of these written reports, reports from numerous fields were given personally by visitors. These reports were from Evansville, Ind.; East Orange, N. J.; Glendale, Cal., where a new church edifice is soon to be occupied; Minneapolis, Minn.; Dayton, Ohio; Kansas City, Mo.; Cincinnati, Ohio; St. Louis, Mo.; Ancon and Cristobal, Canal Zone; Norfolk, Va.; Philadelphia, Pa.; San Francisco, Cal.; Detroit, Mich.; Melbourne, Australia; and Los Angeles, Cal. The speakers told of the growth of Christian Science through the regular church channels, and also in public institutions such as reformatories, jails, and the like.

The meeting adjourned following the singing of the Communion Doxology from the Hymnal.

✧

True Neutrality

JUDGE LEWIS R. WORKS

ONE of the earliest and ablest of the secretaries of state of the Union, in explaining the word of which we hear so much in these momentous times, says, "The state of neutrality recognizes the cause of both parties to the contest as just—that is, it avoids all consideration of the merits of the contest." The law of nations demands the outward manifestation of such a state of mind by the "government" of every non-combatant power. Nevertheless the above statement of John Quincy Adams, and the whole body of international law upon the subject of neutrality, are based upon the dictum of mortal mind that there is a right side and a wrong side in every war and that each war is commenced by the act of some person, persons, or government.

In the midst of the turbid maelstrom of mortal thought upon this ever-important question, it is imperative that the Christian Scientist keep ever in remembrance what the "state of neutrality" demands of him. There are but two sides to everything which presents itself to thought,—the right and the wrong. The right side is in understanding, in knowledge, and is therefore actually existent. The wrong side has no residence but in belief, in wrong thinking, and is therefore without foundation and non-existent. Accordingly, when we contemplate the idea of war, we realize that the right side of the thought about it is that no real person or government ever started war, that nothing ever was or ever can be gained by war, that there never was and never will be anything good about war; in short, that war has no foundation in Truth and is nothing but the manifestation of wrong thinking. War, big and appalling as it may appear to frightened sense, springs from the same causation as our minutest inharmonies or physical distresses; that is, again, wrong thinking. If this be so, what is to rid the world of war? There is but one answer; namely, right thinking.

What, then, does the "state of neutrality" demand of the Christian Scientist? Not that he should recognize "the cause of both parties to the contest as just," not that he should avoid "all consideration of the merits of the contest," for the contest has no merits. While realizing this potent fact, however, while knowing that the contest itself is nothing holy or right, but is altogether unholy and wrong, the Scientist will place the combatants on an exact equality in his thought. He will know that man and all God's ideas are the perfect children of a perfect Father, and incapable of waging war. He will neither charge people with the commencement of war nor blame them for its maintenance. He will understand that war is possible only as the result of wrong thinking, and that right thinking about God and man will end it.

Further, the Scientist will see that the bigness of war cannot prevent his thinking rightly about it, just as he thinks rightly about the problems of his daily life. And to help him to think rightly about it he will bear in mind Mrs. Eddy's words, found in "The First Church of Christ, Scientist, and Miscellany" (p. 279): "The First Commandment in the Hebrew Decalogue—'Thou shalt have no other gods before me'—obeyed, is sufficient to still all strife. God is the divine Mind. Hence the sequence: Had all peoples one Mind, peace would reign."

Intruders on the Scene

AMY C. FARISS

As the student of Christian Science advances, hundreds of incidents that before were heedlessly passed over now show forth distinct lessons, and to illustrate some point in his argument he is likely to find himself referring to this or that happening. Some time ago such an illustration came to the writer's attention, and it has since stood out as an example of the tenacity with which the human mind clings to its utterly incongruous but pet beliefs.
