Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

The area of the Chugach national forest, Alaska, which is to be crossed by the railroad that the government is building from Seward to Fairbanks, is reduced nearly one half by a proclamation, signed by President Wilson, returning approximately 5,802,000 acres to the public domain. This action follows classification of the land by the forest service showing that the areas involved are not of high enough timber value to warrant government protection, and means the largest elimination of national forest land ever made by single presidential proclamation. The boundaries of the forest as redrawn contain approximately 5,818,000 acres, supporting about eight billion feet of merchantable timber. On the area thrown out there is in the aggregate a large amount of timber, but so sparse and scattered as to be of little or no commercial value. The land remaining within the forest, however, contains the largest and most accessible supply of timber for the development of the great mineral fields to the north of Bering river, and is the region in which the Alaskan engineering commission has been authorized to cut 85,000,000 feet of timber for use in constructing the government's new railroad.

Lassen volcano, in California, spent most of its energy in its violent eruptions of last May, according to reports received by the forest service, and it is believed that there is little likelihood of further destructive outbreaks. Since the upheavals of May 20 and 22, the volcano has been under the observation of officers of the Lassen national forest, in which the peak stands. The investigations have confirmed the opinion that the recent eruption when a river of mud was blown out of the north side of the crater and down Hat creek with considerable damage to government and private property, was caused by the melting of the snow on the peak, the snow water running into the crater and being converted by the molten lava into steam. Although it is possible that the volcano is simply conserving its energy for another outbreak, the indications are, according to the government volcanologist on the ground, that no further eruptions are likely to occur, at least until next spring, when another influx of snow water may cause a slight disturbance.

The marketing of farm timber presents some of the difficulties, but in an aggravated form, that the farmer meets in selling other crops, says a forest service contribution to the year book of the department of agriculture, just issued. The farmer finds it hard to get enough for his timber. Most farmers now sell their saw timber on the stump to a mill man, such sales ordinarily being made for a lump sum. The mill man, experienced in estimating, goes through the woods and sizes up the quantity and value of the timber he wants. The owner, being a farmer and not a lumberman, seldom knows anything about estimating timber and has only the vaguest idea of what it ought to bring. The consequence of this condition is, that the farmer often receives only a small fraction of the actual market value of his stumpage.

The government's herd of buffalo on the Wichita national forest, in Oklahoma, which is also a federal game preserve, has been increased by the arrival of ten calves. The herd, which now comprises thirty cows and heifers and thirty-two bulls, is in good condition. It is said that the other game animals in the preserve, including the elk and antelope, are also increasing, due to the protection afforded not only against hunters but against wolves, wild cats, and other predatory animals, which committed serious depredations from the establishment of the preserve in 1905 until measures were taken to stop them.

At the close of business on June 30, was ended the fiscal year which included all the period during which the Panama canal had been open for commercial traffic. This period extended from Aug. 14, 1914, to July 1, 1915. During that time the canal was used by 1,088 vessels, having an aggregate gross and net tonnage of 5,416,787 and 3,843,035 tons, respectively, and carrying a total of 4,696,792 tons of cargo. Vessels of fifteen nations passed through the canal in the period under consideration. The tolls levied during the ten and a half months, exclusive of $80,872.79 levied on vessels of the United States government, amounted to $4,313,383.69. The current expenses for operation and maintenance were $1,112,550.48.

The contest for the preservation of the Missouri river as a utility, rather than as a nuisance, was made the problem of the Greater Mississippi valley when the delegates from eight states indorsed a formal report to the engineering board at Washington, asking for a hearing early in October. The assembly also adopted a resolution calling to the attention of Congress the fact that the conservation of land benefits in the Missouri valley are inseparably linked with navigation advantages, and should be considered with the latter in determining the worth of river improvement.

A leaflet on city and town planning for use by the children of the public schools is in preparation by the homestead commission of Massachusetts. On July 29 the commission indited a letter to the city and town planning boards of the state, asking if they could circulate a reasonable number of such leaflets among the pupils of the schools in their various communities, and has received so many favorable replies it has decided to issue one. The leaflet will be based on one prepared by the board of education in Newark, N. J., for the schools in that city.

All the barriers against the return of the Jews to Spain have been formally removed. Negotiations with this object have been in progress for some time. For more than four hundred years Spain has been regarded as forbidden country to the Jews, and of the eleven and a half million of them in the world it is reckoned that not more than two or three thousand are in the country now. When they were banished in 1492, it is believed that about eight hundred thousand left the country.

During the fiscal year ended June 30 last, the area of public land decreased, through entries and sales, over 11,200,000 acres. On July 1, 1915, in the twenty-five public land states, 279,544,494 acres were reported as unappropriated and unreserved, of which 172,987,912 acres were surveyed and 106,556,582 acres unsurveyed. Missouri reported the least public land, 923 acres; and Nevada the most, 55,417,746 acres, of which 29,834,403 are surveyed.

The interstate commerce commission's report on its investigation of Rock Island Railroad financial affairs, just made public, shows millions of dollars in losses in stock transactions, charges the railroad officials with misrepresentations in their reports to stockholders, discloses great profit to promoters of the Rock Island holding companies, and arraigns the syndicate operations which began in the early nineties.

It is announced from Tangier that the first engine having reached Taza recently, more effective communication will now be established between Morocco and Algiers. The linking up of Taza with the railway is a great step toward the pacification of the country.

With the spread of civilization due to the transformation of Terra del Fuego into a sheep country during the last few years, the Indians that have inhabited this remote region are fast changing their former habits and customs and are becoming civilized. They are now working on the numerous sheep estancias or hunting, and have radically changed since the famous Magellan first saw them.

With illuminations on the tops of forty-three peaks of the White mountains simultaneously Saturday night, Aug. 21, the members of the Appalachian Mountain Club formally opened the new Summit House, on the top of Mt. Washington. The illumination was visible in five states.

Holland has taken action to rescue the bird species of her East Indian possessions that were being killed and sold for millinery purposes. It appears that throughout the whole of her vast island empire in the Malay archipelago, 3,000 miles long by 1,000 miles wide, all bird species save three are now absolutely protected against the feather trade, with a probability that eventually no exceptions will be made.

Urgent necessity for a well planned state highway department, thoroughly correlated with the county highway departments and affording continuity of effort, was expressed at the closing session of the joint meeting between the County Judges and Commissioners Association and the Texas Good Roads Association at the Agricultural and Mechanical College recently.

More than six hundred amateur radio stations, located in thirty-eight states of the Union, organized into the American Radio Relay League, Inc., with headquarters in Hartford, Conn., are offered to the United States government as an auxiliary to the navy or army in working out plans for greater national defense.

The state railways of Chile will shortly invite bids for 700 freight cars.

Vol. XVIII September 4, 1915 No. 1

Habit of False Belief

HON. CLARENCE A. BUSKIRK

In his first epistle to the Corinthians, Paul very truly says that "the Greeks seek after wisdom." We find today many evidences of this in their wonderful sculptures, and even more in the writings of their poets and philosophers; but from the standpoint of Christianity these indicate a reaching out after divinity rather than an assured sense of God's ever-presence. Indeed Paul tells us that "the world by wisdom knew not God," but this was because its concept of wisdom dealt almost wholly with the things of sense; and this is not so very different from the attitude of the average mortal at the present time. Christian Science, however, bids us turn away from shadows and look toward the spiritual, the substantial. In Science and Health (p. 261) we read, "Fixing your gaze on the realities supernal, you will rise to the spiritual consciousness of being, even as the bird which has burst from the egg and preens its wings for a skyward flight."

It is however deeply interesting to trace the mental steps of those who were seeking after wisdom at an earlier day, and the writings of Plato undoubtedly direct thought away from the passing shows of materiality. In his noted book "The Republic" this great Greek philosopher has an instructive dialogue known as "The Image of the Cave," with his brother Glaucon. He imagines human beings living in a cavern with a mouth open toward the light; that they have lived there since earliest childhood, so fettered that they cannot turn their heads and can see only before them. At a distance above and behind them is the light of a blazing fire, and between them and the fire there is a raised way, and a low wall built along the way, like the screen which marionette players have before them and over which they show their puppets.

Persons who are hidden by the low wall pass along the way, some talking and some silent, and many of them holding objects which appear above the wall, like various vessels and figures of men and animals which are made of wood, stone, and other materials. Hence those imprisoned in the cavern, as explained, see only their own shadows and the shadows of the objects which are borne along the way behind them and before the blazing fire. In talking to one another, Plato writes, they would speak of the passing shadows and of the shadows of one another as if they were objects really before them rather than shadows; and if the cave had an echo they would fancy that they heard the voices of the passing shadows instead of the voices of the people concealed behind the wall. To those fettered unfortunates the truth would be just nothing but the shadows and the echoes.

Then this philosopher proceeds to imagine the prisoners released and taught that what they had seen were shadows only and what they had heard were echoes only. At first the glare of the light distresses them and they are unable to see the people and things which had cast the shadows they had formerly looked at; but when they begin to see these better, and some teacher explains to them that what they saw before were only illusions, the majority of them are likely to fancy that what they formerly looked at were truer than what are now shown to them as the realities. Many of them may prefer their habit of contemplating the shadows and listening to the echoes as pleasanter and easier to them. If they should be brought into the clear and unclouded sunlight, none of them at first might be able to see the realities which are affirmed to them to exist, and many would be inclined to scoff at their teachers.

By this allegory the ancient Greek philosopher sought to teach his brother, among other things, that the world of sight and hearing resembles the cave with its deceptive shadows and echoes, and that the assent of its prisoners to the verities above them, difficult to all and stubbornly objected to by the majority, represents the progress of men intellectually and spiritually to the heights of truth. The imprisoned unfortunates have always possessed faculties of vision capable of seeing truly; otherwise they never could be brought to see truly at all. Plato thus urges that men are always capable of discerning intellectual and spiritual truth, else they never could be brought to discern it at all.

All of this is quite intelligible to Christian Scientists, who clearly discern the dangers arising from habits of false belief, which is the obvious lesson from Plato's dialogue. Take for example the common illusion that good can come out of evil. Is it really thinkable that infinite intelligence can reason or entertain the belief that in the economy of the universe it can ever be useful to employ evil as an instrumentality for the accomplishment of good? Surely the infinite Being does not need to do that. "Error, not Truth," Mrs. Eddy tells us, "produces all the suffering on earth" (Science and Health, p. 386); while the Bible assures us that God's vision is too pure even to behold iniquity. Whence then comes the false notion on this subject? It comes from the observed circumstance that sometimes when people suffer they seem to be purified and bettered morally thereby.

It is not however the evil that effects the betterment, but the turning to good which suffering may in a given instance impel. This might have far better come about as the result of a turning to good for the love of good. It is a confused reasoning that imputes self-contradiction to divine intelligence. His experience with boils may have made Job a better and more grateful man, but it is far from following that Truth caused his boils. It is self-evident that "Science includes no rule of discord, but governs harmoniously" (Science and Health, p. 219). Men are prone to imitate the supposed divine example of employing evil, and therewith justify to themselves all sorts of abominations,—wars, persecutions, and tyrannies; and a vast and awful sum has thus been added to the reckoning up of "man's inhumanity to man" which makes "countless thousands mourn." Illusions regarding life and mind are sometimes destroyed through suffering, because every false belief is sure to find some way for its own destruction.

Another instance of the habit of false belief is presented in the notion that science is materialistic and rests alone upon material facts and the inductions of human reason therefrom. But why refuse to relate our cognizance of truth to spiritual facts, when it is surely reasonable to say that the laws which

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

govern the universe are themselves non-material and spiritual, just as their source is non-physical, is "Spirit," as Jesus declared? Why refuse to relate our cognizance of truth to spiritual discernment and intuition, which may cooperate with what we call reason, or even at times rightly control as well as energize and inspire reason? Do not uncounted experiences, together with the inspired pages of the Bible, irresistibly point to a spiritual source of our cognizance of truth? Is not the habit of denying such a source much like the unfortunate habits imagined by Plato in his allegory "The Image of the Cave"? How often has history turned its warning finger to nations whose material belief has led to their downfall and has fully justified the words of Solomon, "Where there is no vision, the people perish"!

The New Tongue

ALBERT E. MILLER

CHRISTIAN SCIENCE is in truth the new tongue foretold in the gospels. It bears constant testimony that God is indeed dwelling among men; that His promises as set forth in the ancient days are fulfilled in this very hour. Observing the signs of the times, one can but recognize that "to those leaning on the sustaining infinite, today is big with blessings," as Mrs. Eddy wrote in the Preface to Science and Health (p. vii). Looking over and beyond the materialism of this hour, one sees the gradual awakening in human consciousness, and this resurrection of hope and faith is likened in this same Preface to "the first faint morning beams, ere cometh the full radiance of a risen day." Continuing, Mrs. Eddy says: "The time for thinkers has come. Truth, independent of doctrines and time-honored systems, knocks at the portal of humanity. Contentment with the past and the cold conventionality of materialism are crumbling away. . . . Though empires fall, 'the Lord shall reign forever.' "

The world is learning by experience that good and evil are irreconcilable. God is not the author of evil, therefore evil has in reality no origin and no ultimate. Jesus denounced the devil, alias evil, as "a liar, and the father of it," declaring that he "abode not in the truth, because there is no truth in him." In other words, evil is no part of God or of God's creation. This denunciation placed the stigma of untruth and therefore unreality upon evil for all time. Then why try to reconcile good and evil by including them both in the one divine creation?

We recognize evil's impotence as we withhold reality and power from it. The prophet Habakkuk says of God: "Thou art of purer eyes than to behold evil, and canst not look on iniquity." Then to petition God to remove that which does not exist in His sight, as we did until enlightened by a better understanding of His nature, was asking God to take cognizance of something which is not included in His perfect creation and which would deny the existence of His omnipresence and omnipotence. To dignify disease and sin by attributing their origin and existence to divine will, makes them in a sense irresistible and immutable. In Genesis we read that God made man in His own image and likeness, and made him to have dominion over all the earth. Then what of this concept of man born of the flesh, born to sin, to suffer, and to die? It is but a false belief. Let us banish it, and elevate our thought of man until we recognize his divine status.

Infinite Love will liberate us from this false bondage of belief when as men and women we are ready to accept the truth. Insisting upon the truth about man, in contradiction of the error, we demonstrate in ever increasing degree his perfect being, his oneness with the Father, and his indestructible, eternal harmony. This will go on until that glad day promised by St. John, when we shall see God and know Him as He is, for we shall be like Him. In that day there will be no more sorrow, and all tears will be wiped away. The glorious fact to us now and here is that through the teachings of Christian Science we can bring this heaven into our present experience proportionately to our understanding of God at any given moment, and demonstrate that Christian Science is indeed the religion which heals, mentally, morally, and physically.

The mode of operation in Christian Science is simple and effective. God is recognized and understood as omnipotent. In other words, God is the Principle of Christian Science. The regeneration of mankind, mentally, morally, and physically, follows the application of this Principle to human problems, just as the application of mathematical rules solves mathematical problems. In working upon any human problem, it is found that the truth about the particular matter under consideration, when known and applied, corrects and governs the situation. The truth about three times three is that it makes nine, and the knowledge of this truth, when applied, saves endless discord in computation.

Matter of itself has neither the intelligence nor the power to produce disease. Wrong thinking and false belief are alone responsible; therefore the process through which mankind is healed is purely mental. It consists of right thinking, based upon divine Principle. It is the recognition that the truth concerning man and his relationship to God, made active in human consciousness, casts out the evil and brings to light the harmony of existence. "Ye shall know the truth," said the great Teacher, "and the truth shall make you free."

The real man in Christian Science, the man of God's creating, is recognized as the image and likeness of God, perfect and eternal. He expresses or repeats the divine qualities and is incapable of expressing discord. One may perhaps think that this perfect type of manhood is a long way from the kind of man we see daily in every walk of life. That is quite true, yet this perfect man is the ideal of the Christian Scientist. It is what he is striving to be, and what he knows he must be and eventually will be, for Jesus commanded, "Be ye therefore perfect, even as your Father which is in heaven is perfect." If the perfect ideal is held constantly in thought, and one prayerfully fashions his copy after this model, progress will surely be made in correcting the mistakes of daily experience, mistakes which can be corrected, happily for us, and their repetition guarded against. The ability to do healing work accompanies the true understanding of the new tongue, and proves the vitality of Christ Jesus' teaching.

Ambassadors

JULIA WARNER MICHAEL

How marvelous is the experience when into the land of personal darkness, doubt, and fear there one day shines the light of Christian Science, dispelling sin and disease and bringing the radiant revelation of the kingdom of God, good, as at hand! How the heart overflows with joy and thanksgiving as a new-found liberty leads our feet into hitherto unknown paths of privilege! Then as the recipient of divine benefits begins earnestly and faithfully to study and understand the divine Principle which has brought health and wholeness to him, he gradually becomes fitted wisely to transmit the blessed message to others, and in due time the "King of kings" summons him to go forth to humanity as an

Digitized by Google

ambassador of heaven. Clothed in humility, crowned with peace, his motto, "Not my will, but thine, be done," he fares forth to fulfil the highest calling and the deepest trust ever conferred upon man.

Now an ambassador is of the highest diplomatic rank, an official messenger whose credentials contain an "assurance that the sovereign by whom he is despatched will approve and confirm whatever is done by the ambassador in his name." Every Christian Scientist needs to ponder deeply this explanation, for it relates most nearly to himself. As a representative from the realm of good, what is the message his sovereign has given him to deliver? Is it not the message of infinite Truth, eternal Life, unselfed Love, a message designed to bring about perfect health, holiness, spirituality? Yes, it is all this, and under no condition is he warranted in delivering any other to humanity. Never should the false messages of worry, poverty, envy, malice, fear, sin, disease, discouragement, and death pass his pen, his lips, his thought. Such an act would be a violation of his trust and would proclaim him a traitor to his king and country. His every word and deed must be able to bear the test of his credentials as above quoted. Such a test faithfully and unselfishly applied in each life will necessarily eliminate many daily experiences which are clearly seen to be devoid of divine authority and therefore illegitimate.

History informs us that the perfect personal security of one invested with this high rank has been from time immemorial an essential and fundamental principle of the law of nations, and that his house and household share his inviolability. Let him who is tempted at any time to fear to deliver the message of Christian Science, remember this assurance. His position as God's ambassador should give him protection against insult, abuse, injury, prosecution, persecution, or destruction. Respect, consideration, and honor are his due, and these he should receive in proportion as he realizes and enters into his ambassadorship. Wonderful examples of this are found in the histories of Joseph and Daniel.

One of the important privileges belonging to an ambassador is the free exercise of his religion, and experience "has proved that the object of his mission is best secured by relying on no arts but those of sincerity, forbearance, and truth." How simple this makes the mission of a Christian Scientist, at once eliminating self-effort, self-seeking, service of self either in himself or another! Flattery, extravagance, compromise, suggestion, mesmerism, human will, duplicity, accomplish nothing, and are forbidden assets in the service of our sovereign. Humility, universal love, purity, patience, moral courage, "sincerity, forbearance, and truth," are the insignia and power of this divine office. So let him who takes the name "Christian Scientist" realize the high calling this title confers upon him, the duties and privileges to which it assigns him, and the message with which it entrusts him. He needs to watch and pray lest he enter into any affiliation with mortal sense or serve its heathen gods while sojourning in the strange land.

Whether a Christian Scientist is few or many years old in the understanding of Truth; whether he lives in the solitude of the mountain forest or in the crowded city street; whether he is a private citizen or a public official,—if he has received and understood the message of Spirit, he is become God's ambassador to humanity. All other vocations become secondary considerations, and in them he is successful in so far as he first fulfils the duties of his ambassadorship. At all times and in all places he should strive to remember Solomon's proverb: "A wicked messenger falleth into mischief: but a faithful ambassador is health."

On page 146 of "The First Church of Christ, Scientist, and Miscellany," Mrs. Eddy most forcibly outlines the Christian Scientist's ambassadorial message to the world in the following words: "Christian Scientists hold as a vital point that the beliefs of mortals tip the scale of being, morally and physically, either in the right or in the wrong direction. Therefore a Christian Scientist never mentally or audibly takes the side of sin, disease, or death. Others who take the side of error do it ignorantly or maliciously. The Christian Scientist voices the harmonious and eternal, and nothing else. He lays his whole weight of thought, tongue, and pen in the divine scale of being—for health and holiness."

Let us become more familiar with this message, more accurate in its delivery, more worthy of the high calling whereunto it has pleased our spiritual sovereign to appoint us, remembering ever that now "we are ambassadors for Christ."

✧

Our Mission

WILLIAM B. HARRISON

THAT memorable scene in the judgment hall which is depicted in the eighteenth chapter of John's gospel, is of vital interest to every disciple of the Master. Without the palace of the high priest an angry, irresponsible rabble clamored for a quick decision that would permit them to satiate their mad passions; within the temporary representative of Roman authority stood face to face with the earthly representative of spiritual power.

It is probable that Pilate intended to examine Jesus after the haughty manner of Roman rulers, but he found himself overwhelmed in the Master's presence. As the interview proceeded, the calm, fearless, and conscious superiority of the accused caused Pilate to tremble, and he would gladly have closed the scene had not the clamorous crowd persistently increased its demands. Hesitating not to rebuke Pilate for asserting that as procurator he was possessed of power to decide his fate, Jesus spoke of a spiritual kingdom whence all power emanates. Pilate, perhaps thinking the answer to the question he was about to propound would bring Jesus within the pale of the Roman law, asked, "Art thou a king then?" To this question the Master replied, "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth."

Jesus was the Wayshower, hence his followers must endeavor to walk in his footsteps. When he answered Pilate in those few words, giving his own purpose and mission, he outlined distinctly and definitely the real purpose and mission of every human being. It is the duty and privilege of every Christian who understands the Master's teachings—and we are not really Christians until we do understand those teachings in some degree—to bear witness to the truth; and that should be each one's aim, hourly and continually. Personal ambition, self-seeking, the pursuit of material pleasures and possessions, can have no place in the life of a true Christian Scientist. Each endeavor must be subordinated to and in line with the demonstration of the might of right; it must be the seeking of God's kingdom first, as Jesus commanded.

Is pain or disease clamoring for recognition at the portals of our consciousness? Knowing that these are no part of God's creation, have no foundation in truth, we can bear witness to this fact by casting them out through a realization of the nothingness of matter and the allness of God and His perfect creation. Does want or poverty attempt to establish around us a kingdom where God and His abundance are not known? We can prove, through an understanding of Love's unlimited and ever present supply, that our heavenly Father

Digitized by Google

prepares a table before us in the very presence of our enemies, and thus bear witness to the truth of His tender, omnipotent care. Does envy, hatred, or malice strike at us with venomous fangs? We can know that these belong not to His children, that they are powerless except to effect their own destruction, and we can thus bear witness to the power of infinite Love.

"Ye are my witnesses, saith the Lord." Every day is a new opportunity to fulfil our mission through the overcoming of error with truth. We must stand as witnesses for one or the other; there is no half-way position. If we permit error to handle us unopposed, we witness to its assumed power, and have no right to call ourselves followers of him who was a witness to the truth. What is this truth to which we are to bear witness? Pilate knew not, but Jesus knew. To Pilate no doubt, as to any other materialist, the world seemed to spring from lawless chance and to be governed by ceaseless change, a mingling of health and harmony with discord and decay,—the goal oblivion. Little wonder he asked, apparently without expecting an answer, "What is truth?" for in such a universe truth would be unknown. But one who has the Mind of Christ knows how flimsy and fleeting are all things material, and how solid and substantial are things spiritual. Such a one knows too that the spiritual alone is real and true, and that consequently the temporal is unreal and untrue. The spiritual discernment and understanding of this fact brings conclusive demonstration.

It is our mission, as it was the Master's, to overcome error of every kind, and thus bear witness to the truth. If we understand this mission, and realize that omnipotent power gave us this work to do and works through us, it will be as impossible for inharmonious and evil manifestations to continue in our consciousness as for darkness to remain in the presence of light. How Jesus fulfilled his mission, how constantly and triumphantly he carried the banner of Truth aloft throughout his public ministry, is illuminatingly set forth in those wonderful words with which John closed his account of the great Wayshower's earthly career: "And there are also many other things which Jesus did, the which, if they should be written every one, I suppose that even the world itself could not contain the books that should be written."

What a glorious opportunity awaits the Christian Scientist who accepts the Master's definition of his life's purpose and endeavors honestly to bear witness to the truth under all circumstances and conditions, as did he. This ideal is finely outlined by Mrs. Eddy on page 160 of "The First Church of Christ, Scientist, and Miscellany," when she says, "To live so as to keep human consciousness in constant relation with the divine, the spiritual, and the eternal, is to individualize infinite power; and this is Christian Science."

✧

Opening the Way

F. MAUD TURNER

THE well-known saying, "If at first you don't succeed, try, try again," was aptly illustrated for the writer by some moving pictures which showed how ice-trawlers make their way through the ice-floes. The trawler approaches the ice-floe through which a passage is to be cut, and sometimes only after several attacks does the ice-floe split apart. Through the passage thus made the ship sails until another ice-floe is met, and this has to be attacked in the same manner.

In our passage from sense to Soul the ice-floes that confront us may be physical or temperamental difficulties, business, family, or household worries, and these obstructions may seem to present a very determined front. If, however, we approach them with the conviction that the spiritual power which is impelling us to face the problems honestly will also sustain and uphold us through them, we shall recognize that to be repulsed does not mean failure or defeat, for the apostle assures us that "in due season we shall reap, if we faint not." Just as the trawler plows her way toward the ice-floes, meeting repulses with renewed attacks, so must we meet unflinchingly the various problems which confront us in this human experience; not disheartened by repulses, not weighed down by the seeming magnitude of the difficulty to be compassed, but rather encouraged by the happy refrain found in Mrs. Eddy's Message to The Mother Church for 1900 (p. 2), "The song of Christian Science is, 'Work—work—work—watch and pray.'" The work of the Christian Scientist is to heal the sick as Christ Jesus commanded, and the result of such work must bring joy and gladness to all whose shackles have been removed.

When Jesus was preparing his disciples for the time which lay before them, when he their Master would be no more with them personally, he told them that "the Spirit of truth" would be their guide and protect them through all dangers. He foretold also that in the world there would be tribulation for them, but he added, "Be of good cheer; I have overcome the world." By this he showed that not only had he himself been the victor, but he implied that all who followed in his footsteps would also be victorious, otherwise the words "Be of good cheer" would have no meaning; rather would the assertion be a mockery, unless the overcoming were possible to all mankind. The Christian's aim is victory, not freedom from attack, and on this point we find help in the following statement from "Retrospection and Introspection" (p. 56): "Divine Science demands mighty wrestlings with mortal beliefs, as we sail into the eternal haven over the unfathomable sea of possibilities."

A Rebuke

SAMUEL JOHNSTONE MACDONALD

BENEATH the sycamore's deep shade
Retreat each day Kohela made,
That, free of earth's discordant din,
God's harmony might reign within.

And thus he sat one day to seek
If 'twere God's will with him to speak,
When lo, earth's discord sought him there:
And Love with discord may not share.

One came in haste, athirst to tell
His tidings from the haunts of hell,
Where those enslaved their dreams distil
In words of venom, winged to kill:

A tale of sorrow and of shame,
Of mortal error, mortal blame;
A tale oft heard by those who choose
To name unloving gossip news.

Kohela stayed him, loth to hear
The torrent poured upon his ear,
And said: Art deaf to harmony,
That discord thus thy choice should be?

Hath Love no message thou couldst bear,
Or Truth no freedom to declare?
Nay, words of blessing thou shouldst bring
And teach the sorrowing to sing!

[Frank Bell in *The Standard*, Hazleton, Pa.]

According to statements made in two sermons on Christian Science which were reported in your paper, it appears that we should "prove all things; hold fast that which is good," but should beware of reading the literature of Christian Science. The author of the sermons added that if a copy of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, in his hand were his own and not a borrowed volume, he would gladly have burned it, so that it might never be read; the inference being, of course, that it would be a good thing if every piece of Christian Science literature in existence were destroyed, so that no one anywhere might be able to read what Christian Scientists have to say in explanation of their religion. How the process of proving all things is to be facilitated by suppressing a portion of the proof is not made clear in the sermons. We do not believe the good pastor really wishes to place himself in the ranks of the book burners, because doubtless he has read religious history and knows where they invariably have stood and how they invariably have failed.

"Prove all things; hold fast that which is good," is a favorite text with Christian Scientists, and they urge its fullest application. It is their best assurance of the correctness of their own position; their strongest answer when charged with beliefs and practices which unprejudiced investigation will show to be without justification in fact. For instance, when an attempt is made publicly to discredit Christian Science by picturing Mrs. Eddy in uncomplimentary and unkind terms, Christian Scientists are aware that thinking persons will at once detect the irreconcilable difference between an alleged individual as thus described and the good works which Mrs. Eddy is known to have accomplished through her teachings and writings and through the institutions she established. Among those who heard or read the recent sermons, there must have been some who observed that one whose example inspired her followers to "occupy their minds with thoughts of purity, kindness, and love," could not have been herself the personification of opposite qualities. Others no doubt appreciated the incongruity of the admission in one place that Christian Science is to be thanked for "having reemphasized some important and helpful truths," and the subsequent attempt to prove that it "has not a single intelligible idea in it."

Statements made in the recent sermons against that which our good friend mistakenly supposes to be Christian Science, have been made many, many times since first this movement began to assume substantial proportions. Nevertheless it has gone right on, until today its church organizations, numbering something more than fifteen hundred, are to be found in virtually every country in the world, and are increasing at a rapid rate, nearly one hundred having been organized during the past year. One reason for this undoubtedly is the ease with which any one hearing such attacks may ascertain for himself that actual Christian Science is not at all the grotesque and reprehensible thing described. Correct literature on the subject is freely obtainable almost anywhere, and there is scarcely a community nowadays in which one may not find sincere, earnest, sensible men and women who cheerfully testify that through Christian Science they have been restored from sickness to health. Others have been rescued from sinful habits and tendencies. Many have acquired a satisfying knowledge of God, have been prompted to read and study the Bible much more than ever before and enabled to understand it better, have become more loving and charitable and considerate, have found increased capacity for labor or business or professional work, and have been transformed into better citizens and better Christians. Christian Science asks to be judged by its fruits and fears comparison with no other system on that basis. Christian Scientists do not consider it necessary to rush into public controversy in defense of a cause which so effectively defends itself.

The assertion that Christian Science dulls the benevolent instinct in its adherents, was most inopportune, for it so happened that on the very day it was printed the newspapers were carrying an official statement showing that the Christian Science churches in this country had contributed $127,667.94 for the relief of sufferers from the European war.

✧

[John L. Rendall in *Waterloo* (Iowa) *Courier and Reporter*]

My attention has been called to issues of your valued paper in which there appeared accounts of lectures delivered by the Rev. Mr. ——, in which he took occasion to denounce Christian Science. It is stated that "Doctor —— read the Scripture passages which clearly foretold that at the end of this age there should arise those who should teach false doctrines and doctrines of demons;" and further: "This age is now upon us. We are surrounded by these delusions. He then named them, Christian Science, Russellism, theosophy, spiritualism, etc." A favorite method with some critics, for the purposes of their criticism, is to read into Scripture passages meanings which were never intended to be there, without due consideration as to whether the resultant criticisms are valid or otherwise.

The interpretations of Scripture are many and varied, and the tendency is for each individual to consider his particular interpretation as the correct one. This has led to much by way of intemperate and unwarranted denunciation of the views of others, which views may perhaps more clearly accord with the real meaning of Scripture than those entertained by the critic. There is a very positive basis upon which may be determined the accuracy of one's interpretation of Scripture, namely, that given by Jesus when he said, "By their fruits ye shall know them." The arbitrary statement that Scriptural passages relating to "those who would teach false doctrines" are applicable to Christian Scientists, is pure assumption and altogether incapable of proof. In fact, the proof is on the other side. The effect of the Christian Science teaching upon the lives and characters of those who have embraced such teaching, is such as to preclude the possibility of this arraignment being true. Just what the "doctrines of demons" may be is an open question. It is certain, however, that this term cannot properly be applied to Christian Science or its teachings.

To designate Christian Science a "delusion" is utterly to fail to comprehend its essential mission, which briefly is the regeneration of mankind, physically, morally, and spiritually. Its teachings are freeing humanity from the delusions of sin and sickness, as well as the delusions incident to false appetites, sensuality, and the like. Instead, therefore, of being a delusion, it is that which destroys delusions, and is giving to mankind such a clear understanding of man's relation to God as to free humanity from the bonds of sickness and sin. To enter upon a discussion concerning the deity of Jesus the Christ, would perhaps require more space than is permissible in this article and would involve a theological discussion. Suffice it to say that Christian Science stands squarely on its teaching—which accords exactly with Scripture—of one God, "with whom is no variableness, neither shadow of turning." It teaches that Christ is "the divine

Digitized by Google

manifestation of God, which comes to the flesh to destroy incarnate error" (Science and Health, p. 583). Concerning Deity we read: "As the mythology of pagan Rome has yielded to a more spiritual idea of Deity, so will our material theories yield to spiritual ideas, until the finite gives place to the infinite, sickness to health, sin to holiness, and God's kingdom comes 'in earth, as it is in heaven'" (p. 339). A little better understanding of what Christian Science really teaches would perhaps restrain our critical friends from making statements which are entirely incorrect, and thus save them from considerable embarrassment.

✧

[Carl E. Herring in *Fremont* (Neb.) *Tribune*]

In a recent issue the Rev. Mr. —— is quoted as saying to the Dodge County Medical Society in effect, that the church should drop the business of healing when the doctor appears, and if the church is going to heal, it ought also to feed the multitude, in order to be consistent. Certainly there is no objection to the church feeding the hungry, but better, far better, is it to preach the gospel of good will the critic speaks of, in such a way as to have no hungry to feed, and this is healing synonymous with feeding.

With reference to leaving the field of healing clear to the medical fraternity, you should ask, "Has medicine established a claim to our entire confidence?" It is not necessary to ask the layman, but ask the doctor; he is an honest man and a gentleman, and he will tell you that at the best it is only experimental, with constantly shifting theories. A minister of the gospel and other followers of the Nazarene should also seriously consider what they are going to do with the repeated commands of Jesus to "heal the sick," as found in the gospels, and the examples he gave us as to how this healing should be done.

✧

[S. T. Downs in *Terre Haute* (Ind.) *Tribune*]

In a recent issue an evangelist made this statement: "The Christian is the one who loves those whom he does not like." The report also quotes him as saying in the same sermon, "It is not possible to be charitable without being a Christian." These statements seem the very limit of inconsistency, following as they do a tirade against Christian Science, and most followers of the Master would turn the second statement around to read, "It is not possible to be a Christian without being charitable." This attack, like all such attacks, will certainly turn a goodly number to investigate for themselves, and they will soon learn that instead of "foolishness, humbug, and nonsense," as our brother stated, Christian Science teaches the truth about God and man, and man's relation to God. They will find too that Christian Science has healed all manner of discord and misery, including every known disease, in proof of the accuracy of its teaching, and that its prayers, which were also criticized, are effectual.

The statement by the critic that Christian Science does not "allow for the sacred deity of Christ," calls for comment. It is possible, and quite probable, that the evangelist uses the terms Jesus and Christ as synonymous, but Christian Science does not; and this shows that if he had made any but the most superficial investigation of Christian Science before presuming to criticize it, he would not make the statement just quoted, since it is very much in error. In Christian Science the term Jesus is employed chiefly to distinguish the physical man, or humanity of the Master, from the eternal Christ he came to reveal. The definition of Christ as given on page 583 of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is, "The divine manifestation of God, which comes to the flesh to destroy incarnate error." Christian Science, on the other hand, neither deifies Jesus nor reduces him to the common level of humanity, and the best authority for the teaching that he was not God is the Master himself. Jesus never taught that he was God or equal with God, and a number of his sayings and the character of his mission are decidedly inconsistent with the theory that he was God, as, for instance, "Why callest thou me good? there is none good but one, that is, God." A great many other citations can be given to substantiate Christian Science teaching on this subject, a few of which are: John x. 33-36; xiv. 10-12, 28; xx. 17. If critics and searchers for the truth will but read the New Testament in the light thrown upon it by Christian Science, the soundness of this doctrine will become immediately apparent.

✧

[Robert Nall in *The Sun*, Sydney, Australia]

In further reply to Mr. —— permit me to say that the sacred name of Jesus of Nazareth is associated with Christian Science because his command to his followers throughout all time was not only to preach this gospel but to "heal the sick." Christian Scientists look to Christ as their example and wayshower. He taught his disciples how to heal, and the method that he expounded, and which they successfully adopted, is precisely that by which Christian Science is now being demonstrated as the power of spiritual law to overcome sickness and sin. This is no mere academic statement, as quite a host of witnesses can testify. This healing is the fulfilment, in part at any rate, of that confident declaration of the Master: "He that believeth on me, the works that I do shall he do also."

Your correspondent more than hints that Christian Scientists sometimes fail to heal. That is not denied. Christian Science, which is primitive Christianity, the knowledge or understanding of and trust in God, must be applied through human agency, and therefore it is subject more or less to human imperfection, but there is abundant evidence at the disposal of any unprejudiced inquirer that its percentage of successes is greater than that of any other method of healing known. In this there is no claim to perform miracles, as your correspondent suggests. The only claim that Christian Scientists make is that in the measure of their spiritual understanding or apprehension of Truth, they can reflect Christlike qualities and so demonstrate the power of God to heal.

✧

[John Ashcroft in *The St. Louis* (Mo.) *Republic*]

In a recent issue of the *Republic* there appeared a report of an address by the rector of the Church of the Ascension, in which he is quoted as including Christian Science in what he considers to be "freak manifestations of misdirected power." Our critic's phraseology is unfortunate to say the least. So to characterize the healing of the sick and the reformation of the sinner, as accomplished in Christian Science, is to ignore the fact that the only power recognized and relied upon by the Christian Scientist is the power of God. It is inconceivable that this power, inseparable as it is from infinite wisdom, could be misdirected or result in anything abnormal.

The purpose of the Church of Christ, Scientist, as stated by its Founder in its Manual (p. 17), is "to commemorate the word and works of our Master," to "reinstate primitive Christianity and its lost element of healing;" and to the thousands who have found freedom from suffering and deliv-

Digitized by Google

erance from sin in Christian Science, criticism of this character is necessarily futile. It could be quietly ignored if it were not apt to mislead those in need of what Christian Science has to offer. There is only one basis on which any one is competent to judge Christian Science, and that is a demonstrable understanding of its teachings. When this is attained, criticism is superseded by the glad recognition that the power of God is as available today as it ever was for the complete and present redemption of mankind.

✧

[Jesse Picard in *Buffalo* (N. Y.) *Express*]

The *Express* recently published a letter from a correspondent which deals in a rather general way with the religious teachings of Christian Science. It is put under the heading "A Religious Theory," but it is not quite clear whether the intention is to describe Christian Science or something wholly different.

Christian Science has no relation whatsoever to occultism, Oriental philosophy, mysticism, or mesmerism, nor can it ever have. This Science, founded upon a fixed and definite Principle, is demonstrated in the overcoming of evil according to very definite rules which are clearly set forth in its text-book. It is wholly in line with the Scriptural teachings of the superiority of Spirit over matter, of good over evil. It substantiates the Scriptural records of the early miracles, which illustrate the eternal law of divine Mind through which mankind was healed in Jesus' time and may be healed today. It utilizes spiritual truth to negative false beliefs in the human thought. It acquaints people intelligently with the God who is Love, or divine Spirit. As the truth of being comes into view through spiritual understanding, all men, as the psalmist says, awake in God's likeness; that is to say, they find their original or true being as the children of God, made, as the Scriptures declare, in the image and likeness of God, good, not evil.

Your correspondent refers to the origin of Christian Science in a way which might be misleading. Christian Science, or the "divine laws of Life, Truth, and Love" (Science and Health, p. 107), was discovered by Mrs. Eddy in 1866. This discovery of the Christ Science and its Principle was afterward set forth in her work "Science and Health with Key to the Scriptures," which is the only text-book on the subject. The study of this book enables the student to utilize the power of the divine Mind,—the Mind "which was also in Christ Jesus," and which the apostle Paul urged all Christians to have in them. The supremacy of this Mind over all evil is as eternally demonstrated as truth, and was indicated in the statement by the Master, "He that believeth on me, the works that I do shall he do also," namely, heal sickness and sin. Jesus also said, "Lo, I am with you alway, even unto the end of the world." Christian Science wholly eschews the use of will-power and eliminates the selfish element of the human mind, whence, because of its ignorance, fear, and sin, all ills proceed.

Finally, Christian Science is wholly practical. It is an active religious power, whose nature and influence can best be judged by its effect on the lives of thousands who have turned to it for help. The great Nazarene uttered the eternal wisdom when he said, "By their fruits ye shall know them."

✧

[W. G. Watkins in *Milwaukee* (Wis.) *Free Press*]

In one of his recent contributions to the columns of the *Free Press*, Doctor —— attempted an explanation of what Christian Science teaches in regard to the cure of a tumor. This is not the first time the doctor has referred to Christian Science, and in a manner which betokened his lack of understanding of the subject. It is no doubt a modest statement to say that many admirers and readers of the *Free Press* and of other papers are justified in feeling that undue and excessive use is being made of the press and other avenues for the purpose of exploiting disease and furthering the interests of *materia medica;* and it is with due respect to its adherents that attention is drawn to the history of medicine as disclosing altogether too many shortcomings to warrant the efforts that are being made to give it a dominating influence in the world.

Many well-meaning people who at one time agreed with the statement that "Christian Science is all right only where there is no organic ailment," have since learned through observation and experience that this Science has healed cases when the knife had been recommended as a last resort, and even after it had been made use of and when all earthly hopes had vanished. This result has not been accomplished through a mere "denial," or through the determination of the human will to disbelieve in disease; it has come about through discarding all human speculation, superstition, and irrational concepts concerning God and His intent and relation to man made in His likeness. Mrs. Eddy has well said on page 180 of the Christian Science text-book, "Science and Health with Key to the Scriptures," that "to reduce inflammation, dissolve a tumor, or cure organic disease, I have found divine Truth more potent than all lower remedies. And why not, since Mind, God, is the source and condition of all existence?"

✧

[Thomas F. Watson in *Mountain View* (Cal.) *Register-Leader*]

A writer in a recent *Register-Leader* "Signs of the Times" shows a lack of understanding of the subject of Christian Science, for nothing could be farther from the truth than the charge that Christian Science is a "mental narcotic," which "narcotizes the conscience and puts it to sleep;" rather does Christian Science quicken the spiritual perception and moral sensibilities of mankind. The study of Christian Science, as set forth in Mrs. Eddy's writings, arouses a greater desire to know more of God and man, and an earnest longing to know more of that truth which Jesus said shall make us free.

On page 342 of Science and Health we read: "Christian Science awakens the sinner, reclaims the infidel, and raises from the couch of pain the helpless invalid. . . . Who would be the first to disown the Christliness of good works, when our Master says, 'By their fruits ye shall know them'?" Science and Health does not teach us to disregard or ignore pain or disease, as this writer claims, but shows how they may be healed through a right understanding of God and His law; nor does it teach that sin is not real to mortal consciousness, for on page 426 we find this statement, "Sin brought death, and death will disappear with the disappearance of sin." Then in "Rudimental Divine Science" (p. 2) Mrs. Eddy states, "The emphatic purpose of Christian Science is the healing of sin."

The teaching of Christian Science that God is infinite good, omnipotent, omniscient, and omnipresent, is demonstrable truth, and our demonstration of it is in proportion to our understanding. Jesus commanded his followers to "preach the gospel" and "heal the sick." He also said, "If ye love me, keep my commandments." Christian Science rests more upon demonstration than upon profession. That it is demonstrable truth is being daily proved by the signs which Jesus said should follow them that believe (understand). In "Miscellaneous Writings" (p. 25) we read, "Christianity is Christlike only as it reiterates the word, repeats the works, and manifests the spirit of Christ."

Editorial

Omnipotence of Good

"The physical healing of Christian Science," Mrs. Eddy writes in the Preface to Science and Health (p. xi), "results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation. Now, as then, these mighty works are not supernatural, but supremely natural." The all too prevalent belief that whatever comes about in human experience by other than material means is of necessity supernatural, has through the ages done more than all else to keep mankind in bondage, and in destroying this belief through its apprehension of the truth of being, Christian Science has done much good. It has altered the old saying, "It is too good to be true," so often voiced in fear and trembling, into the understanding that nothing is too good to be true and only that which is good is true.

It must be apparent to every one who studies the Scriptures in the light of Christian Science, that in the ministry of Christ Jesus the healing of the sick and the redemption of those in bondage to sin, which are there recorded, were coincident. Indeed the mighty works which the Master wrought and which he declared would be possible to all who should follow him, included the destruction of both these phases of evil. Were it otherwise, if "the healing of the seamless dress" had passed with the close of Jesus' ministry, then necessarily the gospel which he left to his followers would be less effective now than it was during his earthly career.

How immeasurable should be our gratitude that in 1866 Mrs. Eddy discovered and demonstrated in her own experience that no change had come over this gospel, and that in this age even as in the time of the prophets "the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear." Faithful in its obedience to the divine command to "preach the gospel to every creature," the church was nevertheless strangely unmindful that the truth of its preaching could be demonstrated in a practical way. Yet when Mrs. Eddy made public her discovery, desirous only to share with mankind the priceless boon of the revival of the longed for Christ-healing, one can imagine the keenness of her regret to find it was at first pooh-poohed and later bitterly denounced by the very people she could reasonably have expected to champion it. She was forced to realize that single-handed and alone with God she must "fight the good fight" and establish forever in human consciousness the truth which Christ Jesus said would make men free. This, through her writings, through the church she founded, the periodicals and the various other channels for the dissemination of the unadulterated truth which she authorized, she has accomplished to so large an extent that Christian Science is no longer looked upon askance as something weird or amusing. In less than a half century it has logically acquired its rightful place as the one practical form of Christianity, and its healing work is known and appreciated in every quarter of the globe.

Previous to Mrs. Eddy's discovery of Christian Science, it was not thought possible to heal the sick as a logical and inevitable effect of Christian ministry, and if perchance it seemed that some one had been healed in answer to prayer, this was regarded as a miracle, a special intervention of divine Providence; that God, contrary to Scriptural authority, had become a "respecter of persons" and had set aside His own law. Is it any wonder that many a sufferer stretched on a bed of pain, hopeless of relief in *materia medica* and wearied of seemingly fruitless prayer in his behalf, has echoed Job's despairing cry, "Oh that I knew where I might find him! that I might come even to his seat!" The prayer that "availeth much" is vividly set forth in the opening sentence of Science and Health, "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love," and unnumbered thousands testify to the deliverance from the depths which whole-hearted acceptance of this inspiring declaration has brought them.

Christian Scientists are assured that God is omnipotent, and it is because of this they rest so firmly upon the basis that good alone is real. To them sickness and sin are equally illusive in character and are destroyed by one and the same method. When all men know that God is not the creator of evil, they will realize that there is no reality in evil, that when thought has been emptied of "the false stimulus and reaction of will-power," and filled with "the divine energies of Truth" (Science and Health, p. 186), they will be free from the fallacy that evil is or can be more natural and more powerful than good.

Archibald McLellan.

Service

At this time of the year Labor day comes to remind dwellers in American cities of the great human problem of service. There are perhaps few who pause to think that we are all either servants or slaves, which means when rightly viewed that all should willingly serve the world in some way, because all must be served; hence our needs are reciprocal. Mrs. Eddy outlines our duty in this respect when she says (Science and Health, p. 518): "God gives the lesser idea of Himself for a link to the greater, and in return, the higher always protects the lower. The rich in spirit help the poor in one grand brotherhood, all having the same Principle, or Father." This of course deals with spiritual reality, but it furnishes the true model for human relations and when faithfully applied it inevitably leads to harmony.

Those who do not choose to serve but are forced by their own need to do so, are veritable slaves who miss the inspiration which all honest work brings as its highest reward, and it is certain that all work well done leads to higher work. At this point it is well to remember that if we would advance in our work, whatever its nature, we must seek divine guidance and acknowledge God in all our ways, which means that we must express honesty, intelligence, and integrity in all we do. Failing to do this, we shall make slow progress and may be tempted to blame others, when the key to the whole situation is in our own hands. One may be known as an honest and intelligent worker, but if he ascribes power to evil and denies the actual supremacy of divine Principle even in human affairs, he will be virtually sentencing himself to suffer from the injustice of mortal mind by admitting its power over his destiny, and the temptation to do this is sometimes very great.

It is our privilege to be "laborers together with God," "workers together with him," to quote St. Paul, and we must be prepared to prove first to ourselves, then to all the world, our worthiness of this high honor. God's work never fails, not even a word that proceeds out of His mouth returns unto Him void, but accomplishes the thing whereto it is sent, so Isaiah tells us, and if we reflect the activity of the one Mind the same should be true of our words and work. The final test of our work is whether the doing of it ennobles us. If it does, the work itself will bless the whole world, though the worker himself may be unknown.

Digitized by Google

In Luke's gospel we read that at the last supper with his disciples Jesus presented his ideal of greatness when he said, "I am among you as he that serveth." We are told that there had been "a strife among them" as to which of them should be accounted greatest. Then the Master spoke of kingly and lordly authority and the desire of the great ones of earth to be regarded as "benefactors," and this led up to the words already quoted. Today we may well think upon them as we consider the work of any man, whether high or low in station, that we may determine its value in the light of this Christly ideal of service. The true servant, be he king or commoner, must obey Principle and thus mete out impartial justice, and also mercy, for thus alone can he bless his own time as well as the oncoming centuries.

One may choose to serve self and thus narrow down to the point of extinction his chance of being truly great, but all the time the voice heard by the seer of Patmos is saying, "I know thy works," and well is it for us if our sentence does not read: "I have somewhat against thee." If such be the case we cannot too soon discover wherein lies our fault and overcome it. Then we shall be ready to listen again and to hear this: "I know thy works, and charity, and service, and faith, and thy patience, and thy works; and the last to be more than the first." Yes, with charity and faith and patience all work will unfold into ideal service, especially if we are willing to scrutinize our own thoughts and acts as does the divine idea, whose eyes are "like unto a flame of fire." Work and manhood are inseparable, and both should be consecrated to the service of God and humanity.

ANNIE M. KNOTT.

✧

"What doth the Lord require"

MUCH is being said these days by those who would call themselves non-religious, of the essentials of true religion. The much-preached-to have become the preachers, and professed Christians are brought to bar and inquired of with a pertinent directness that brooks no evasion. With no small show of contempt the bulk of the so-called thinking and unthinking world has brushed aside creeds and confessions, all the paraphernalia of ritual and tradition, and demanded an accounting of Christian stewardship in terms of practical efficiency. Another interesting aspect of the situation is the further fact that this call for genuine, good Samaritan Christianity is entirely at-one with the divine requirement presented in the Lord's "controversy with his people" as declared by the prophets and supremely emphasized in the life and teaching of the great Wayshower.

Reminded of the loving patience and goodness with which the Lord had borne their backslidings, Micah represents Israel as crying out in sorrow and contrition, "Wherewith shall I come before the Lord, and bow myself before the high God?" And this answer for all men and all time is given: "He hath showed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?" In other words, we are informed that God will take care of the human problem if we but have the grace to be humble and Christian toward our brother man.

Over against this simple divine requirement let us note the growing conviction among men that, as Stopford Brooke has said, "there is nothing in the whole world at present of so grave and awful necessity as the doing of civic justice." The greatest social movement of history, a movement whose surges are beating today, and ofttimes thunderously, upon the threshold of every nation and every religious institution, makes essentially the same demand as that voiced by the ancient seer, namely, that professed Christians shall measure up to the standard of fraternal responsibility which Christ Jesus glorified in his life and reaffirmed for each one of us when he said, "Thou shalt love thy neighbor as thyself."

The world cares not a whit for the Christianity that champions creedal opinions and the accretions of "pious conformity." These are but chaff before the wind of such a protest as religious annals ne'er recorded before. The world is calling peremptorily for Christlike men, for an exhibition by you and me of that all-inclusive compassion and that healing efficiency which truly honors him who said, "He that believeth on me, the works that I do shall he do also," and nothing more directly witnesses to the residue of divinity in men than this present-day echo of the requirement of both the law and the gospel, this social insistency that professed Christians shall concretely manifest the spirit of brotherhood.

Just here we come upon a correlated and comforting fact of vast import, viz., that the teaching and practice of Christian Science is a reinstitution of the spirit and the humanities of that brotherhood life which blossomed among those who first heard and followed the Master, a life in every judgment and activity of which, as Mrs. Eddy has written, "Love inspires, illumines, designates, and leads the way" (Science and Health, p. 454). Only that love for mankind which springs from a perception of the all-fatherhood of God, which is both scientifically wise and redemptively self-sacrificing, can meet the divine requirements and the needs of humanity, and only in so far as we thus understand the meaning of the name "a Christian Scientist," and are honestly seeking to give that meaning practical expression, have we awakened to our high privilege and true vocation.

The only Christian life acceptable to God and to men is that which is no less sincerely and intelligently consecrated to the healing of social problems than to the healing of individual problems. To put the asserted faith within us into outward righteousness is indeed to "bring religion into life." To lead all who know us to think of our faith as a beacon in the dark, of our justice as a refuge for the oppressed, of our brotherliness as a harbor in the storm,—this is to meet the demands of Truth and Love, and prove to all men that we have perceived and are beginning to bring into demonstration the essentials of religion.

JOHN B. WILLIS.

Notice

Attention is called to the change in price on single copies of the following volumes of Mrs. Eddy's writings when sent by mail postpaid from the office of the publisher, Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Massachusetts:

Science and Health (cloth) from $3.18 to $3.00; Retrospection and Introspection (cloth) from $1.06 to $1.00; Unity of Good (cloth) from 65 cents to 60 cents; Pulpit and Press (cloth) from $1.06 to $1.00; Rudimental Divine Science (cloth) from 55 cents to 50 cents; No and Yes (cloth) from 60 cents to 55 cents; Messages to The Mother Church (cloth) from $1.56 to $1.50; Christian Science vs. Pantheism (pebbled cloth) from 26 cents to 25 cents; Message to The Mother Church, June, 1900 (paper), from 26 cents to 25 cents; Christian Healing and The People's Idea of God (cloth) from 60 cents to 55 cents; Christian Healing (paper) from 21 cents to 20 cents; The People's Idea of God (paper) from 21 cents to 20 cents.

The above changes do not constitute a reduction in the price of Mrs. Eddy's works, but save the purchaser the postage on single copies of the volumes specified.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a. m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

OAKLAND, CAL.—Impressive ceremonies yesterday [July 11] attended the dedication of the new edifice of Seventh Church of Christ, Scientist, on Harrison boulevard between 23d and 24th streets. The church was organized about a year ago to care for the overflow from other Christian Science churches, and has been holding its regular services in Ebell Hall, which it has now outgrown. Since the rainy season, building operations have been rushed so that the new edifice could be occupied on this date.

The auditorium is designed to seat seven hundred, with provision for enlargement, and already some discussion has taken place to the effect that this addition will be required in the immediate future if the attendance increases at its present rate.—*Oakland Enquirer.*

SAN ANTONIO, TEXAS.—The present house of worship being inadequate for the increasing congregation of First Church of Christ, Scientist, plans have been prepared for a new edifice to be erected at Fifth street and Avenue D as soon as the building now occupying the site has been removed. The present building is too small to seat the congregation comfortably, it is said, so a new one is a matter of necessity. The main auditorium will have a seating capacity of about eight hundred persons, the Sunday school room of almost four hundred.—*San Antonio Express.*

SUPERIOR, WIS.—Work on the foundation for the new twenty thousand dollar structure for First Church of Christ, Scientist, on John avenue and Nineteenth street, has been started. The church will occupy the space of three lots, and the structure will seat about five hundred persons.

The Superior Telegram.

SHELBYVILLE, IND.—With simple ceremonies, repeated three times during the day, the new church edifice of First Church of Christ, Scientist, at the corner of Tompkins and Jackson streets, was opened for regular public services yesterday [July 12].—*Shelbyville Republican.*

WILMETTE, ILL.—At a recent meeting of the members of First Church of Christ, Scientist, building plans which provide for an increase in the seating capacity to approximately five hundred were adopted. It is expected that the new church will be ready for occupancy Thanksgiving day.

The Lake Shore News.

TORONTO, CANADA.—The corner-stone of the edifice of First Church of Christ, Scientist, Toronto, northwest corner St. George street and Lowther avenue, was laid Tuesday morning, June 29, at quarter of eight.—*Correspondence.*

RAVENNA, OHIO.—The Christian Science Society, after holding services in a private home for the past eight years, has secured the Forresters Temple, formerly the Universalist church, where services are now being held.—*Correspondence.*

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 5, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, Oct. 13, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 4, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

Chicago, Ill.

Jacob S. Shield delivered two lectures on Christian Science for Ninth Church of Christ, Scientist. At the first he was introduced by George Edward Simmons, first reader, who said:—

Lectures of this nature are given from time to time in all parts of the civilized world for the purpose of telling the truth about Christian Science and what it is doing for mankind, and proclaiming to the world that the Christ is risen and is again seen to dwell among men. As Christian Scientists we know that this is true, for we see the sick healed, the lepers cleansed, the dead raised, and devils cast out,—the "signs following" referred to by Christ Jesus.

The introductory remarks of Mrs. Martha Cohn, second reader, at the second lecture, were in part as follows:—

What does the study of Christian Science promise us and our fellow men, and why are we seeking it? St. John tells us that "God is love," yet we find sin and trouble, sorrow and sickness, on every side. Does God permit this evil? May we perhaps find a solution for our hearts' problems here? In Isaiah we read, "Ho, every one that thirsteth, come ye to the waters." Where is the fountain of pure living water, from which we may drink, and thirst no more for sin? Is there an ark of safety, a refuge from the storm of despair and discouragement? These are indeed vital questions, and they touch each of us in one form or another.

In the twenty-first chapter of John we read how Jesus asked Peter the third time, "Lovest thou me? . . . And he said unto him, Lord, thou knowest all things; thou knowest that I love thee. Jesus saith unto him, Feed my sheep." Are we here because we seek this food, this bread from heaven? Are we heart hungry to hear the sweet message "Peace, be still," that will calm the turbulent waves of error and seeming destruction? In Isaiah we read, "How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace."

Let me tell you of one who nearly fifty years ago was struggling in deep darkness and despair. She earnestly sought the Bible, and there found a beam of heavenly light. A glorious revelation dawned upon her pure spiritual sense

Digitized by Google

which lifted her instantly from the "valley of the shadow of death." Rejoicing in her newly found freedom, this unselfish woman, Mrs. Eddy, embraced the whole world in her loving thought. She must needs bring this revelation of divine Love to all mankind, this Christ-teaching which healed and redeemed men on the shores of Galilee nineteen centuries ago. Did not Christ Jesus promise us another Comforter, that would abide with us forever, "even the Spirit of truth"? This blessed truth is today flooding the whole world with its glorious ministry of peace.—*Correspondence.*

❖

Moline, Ill.

The remarks of J. M. Cleaver in introducing Virgil O. Strickler, who delivered a lecture on Christian Science, were in part as follows:—

One of the greatest discoveries of the nineteenth century, in its practical value to the human race, was the discovery that the miracles performed by Jesus were but the practical application of the truth, and reliance upon the divine Spirit, the infinite God, the power that knows no limitations. The teaching of Christ Jesus to us was that we also could destroy evil and find perfect health, abundant strength, and the joy of living in the harmonious, eternal, intelligent Principle of life that actuates the universe and empowers mankind. It is not surprising that this discovery of the Principle of love and service to humanity should have originated with a woman, for to Mrs. Eddy, the Discoverer and Founder of Christian Science, is due the credit and the praise and the thanksgiving of all those many thousands who, like myself, have been helped or saved by this great truth.

Correspondence.

❖

Los Gatos, Cal.

The Christian Science lecture given at Ford's Opera House was well attended. The lecturer, William R. Rathvon, was introduced by Mrs. Lee McKinney, who spoke as follows:—

Men have ever been seeking the truth about all things. This is shown in their running to and fro, analyzing, weighing, and measuring thought and matter in their effort to find it. The thinking world is awakening to the fact that all ultimate truth lies outside and above the physical, and must be sought in the metaphysical. Jesus said, "Ye shall know the truth, and the truth shall make you free." This promise was not alone to a few followers of his day who did receive the blessing, but it was for all followers in all ages,—"for them also which shall believe on me through their word." Today this promise is exemplified through the teachings of Christian Science. The truth is again understood and practised. Thousands of men and women testify to its fruits by healthy, reformed, purified, and uplifted lives.

Los Gatos News.

Lectures to be Delivered

CALIFORNIA—Los Angeles (Second Church): Clarence C. Eaton, Church Edifice, 948 West Adams street, 8 p.m., Sept. 11; Auditorium Theater Beautiful, 3 p.m., Sept. 12.

CANADA—Berlin, Ontario: Dr. Francis J. Fluno, Church Edifice, 8:15 p.m., Sept. 14.

COLORADO—Glenwood Springs: William R. Rathvon, Orpheum Theater, 2:30 p.m., Sept. 5.

Gunnison: William R. Rathvon, Unique Theater, 2:30 p.m., Sept. 12.

Limon: William R. Rathvon, Limon Auditorium, 8 p.m., Sept. 10.

CONNECTICUT—Meriden: Prof. Hermann S. Hering, Poli's Theater, 3:30 p.m., Sept. 12.

ENGLAND—Harrogate, Yorkshire: Clarence W. Chadwick, The Kursaal, 3:15 p.m., Sept. 26.

Hull, Yorkshire: Clarence W. Chadwick, Royal Institution, Albion street, 8 p.m., Sept. 27.

ILLINOIS—Chicago (Seventh Church): William D. McCrackan, Church Edifice, 5318 Kenmore avenue, 8 p.m., Sept. 13 and 14.

Chicago (Fifteenth Church): Jacob S. Shield, Masonic Temple of Austin, 2:30 p.m. and 4:30 p.m., Sept. 12.

Wilmette: Dr. Francis J. Fluno, Village Theater, 1150 Wilmette avenue, 3 p.m., Sept. 5.

KANSAS—Great Bend: William R. Rathvon, Library Hall, 8 p.m., Sept. 17.

Hutchinson: William R. Rathvon, Convention Hall, 8:15 p.m., Sept. 16.

MASSACHUSETTS—Adams: Bliss Knapp, Universalist Church, 3 p.m., Sept. 12.

Buzzards Bay: Willis F. Gross, Town Hall, Bourne, 8 p.m., Sept. 3.

MICHIGAN—Detroit (First, Second, and Third Churches): Dr. Francis J. Fluno, The Arcadia, 3 p.m., Sept. 12.

Jonesville: Jacob S. Shield, Theater, 8 p.m., Sept. 17.

Ludington: Jacob S. Shield, Church Edifice, 402 Filer street, 8 p.m., Sept. 16.

Plymouth: William D. McCrackan, Church Edifice, Main and Dodge streets, 8 p.m., Sept. 17.

MINNESOTA—Minneapolis and St. Paul (community lectures), Bliss Knapp:

St. Paul, First Church, Summit avenue and Grotto street, 8 p.m., Oct. 1 and 3.

Minneapolis, First Church, 24th street and Nicollet avenue, 8 p.m., Oct. 4; Second Church, Second avenue South and Eleventh street, 8 p.m., Oct. 5; Third Church, Lake street and Holmes avenue, 8 p.m., Oct. 7; Fifth Church, University and Twelfth avenues S. E., 8 p.m., Oct. 8; Sixth Church, Summit and Hennepin avenues South, 8 p.m., Oct. 10.

MISSOURI—St. Louis (First Church): Frank Bell, Church Edifice, Kingshighway and Westminster place, 8 p.m., Sept. 16 and 17.

MONTANA—Billings: George Shaw Cook, Church Edifice, 8 p.m., Sept. 14.

Helena: George Shaw Cook, Unitarian Church, 8 p.m., Sept. 13.

Missoula: George Shaw Cook, Missoula Theater, 2:30 p.m., Sept. 12.

NEW HAMPSHIRE—Keene: Prof. Hermann S. Hering, Wildey Hall, Odd Fellows Building, Roxbury street, 8 p.m., Sept. 13.

NEW YORK—Buffalo (Second Church): Bliss Knapp, Elmwood Music Hall, 3:30 p.m., Sept. 19.

Franklinville: Bliss Knapp, Morgan Hall, 8:15 p.m., Sept. 17.

Newburgh: Bliss Knapp, Academy of Music, 8 p.m., Sept. 16.

NEBRASKA—Kearney: William R. Rathvon, Opera House, 8 p.m., Sept. 14.

OHIO—Bucyrus: William D. McCrackan, The Hippodrome Theater, 3:15 p.m., Sept. 12.

OREGON—Portland (Society): George Shaw Cook, Auditorium, James Johns High School, 8 p.m., Sept. 9.

SOUTH AFRICA—Cape Town: Col. William E. Fell, City Hall, 8:15 p.m., Oct. 5.

Testimonies of Healing

One year ago, when the writer entered as an inmate "the Michigan reformatory," and heard the clang of the iron gates as they closed behind him, the words, "All hope abandon, ye who enter here," took on a new and realistic meaning. There seemed not a ray of light or hope anywhere. While in jail awaiting sentence, he determined to end the farce of life, and was deterred from so doing only through the earnest efforts of a student of a different faith, who has since become an active worker in that cult.

This prisoner determined to postpone the day of his demise, look over the premises at the reformatory, prepare himself as best he might for the great change, and then bow himself out. That this was no idle fancy may be seen from the fact that he believed his case hopeless, that only failure and unhappiness awaited him in life. From what he had experienced of the injustice and duplicity of human kind, he reasoned that it were far preferable to stand at the judgment seat of a just God than to remain longer in a world governed by treacherous, unrighteous men. Faith in humanity was gone, and he eagerly looked forward to the long journey. The most serious phase of the situation was this: he had lost the desire to live—no motive for life remained.

A few weeks later, a vacancy having occurred in the library, the writer was assigned to the position of librarian's clerk, which office afforded much time for study and reflection. In looking over the twenty-five hundred volumes which the library contains, his eye fell upon a title which interested him. It was "Science and Health with Key to the Scriptures" by Mrs. Eddy. This was not the first time he had seen this work. The summer previous, while at Hong Kong, he had read the book in a desultory way, and had been greatly displeased with its doctrine. Now he seized it, with a thought that perhaps after all here might be hope and help, and forthwith began a careful study of its teaching. Very soon he timidly confided to the warden what he was doing, and to his surprise this gentleman in various ways encouraged the effort, and through his interest *The Christian Science Monitor* became a daily visitor at the prisoner's desk. One day the warden told this man that the desire for liquor came not from a physical need, but from "an inflamed imagination." No. 7641 now went to work with this thought in mind, and soon learned that Christian Science allays inflammation by proving the absolute nothingness of the objects of our fear. Side by side were placed Science and Health and a Bible given the writer twenty-five years ago, and then and there began the struggle for a man's soul.

Remember that "7641" was brought up in the orthodox faith, had made about seven "starts" in religion, turned from the church to rescue missions, was once mesmerized, and had taken the Keeley cure, all in a frantic effort to be rid of the appetite for strong drink. Many of his friends thought he was crazy, and even went so far as to have him examined by an alienist; but this gentleman pronounced the patient a chronic alcoholic, though otherwise sane.

This then was the condition of one who began the study of Christian Science in prison a year ago. Preparations were even carried on to fulfil the destructive purpose previously formed, but "7641" clung to his study,—it was all there was to which he might cling,—and soon was begun that strange change which Mrs. Eddy characterizes as "chemicalization;" the patient was passing from a desire for and a belief in death, into an understanding of God as Life and Love, because he was slowly coming to know that God is All, leaving no room for an opposite belief. He came to know God as One who works as Principle and not by caprice; in other words, all that was needful was to swing into harmony with the divine Mind, to cease from doing (or believing) evil, and learn to do (or think) well. Today the writer is wholly free from the liquor lust; more than that, he is at peace with his Maker. He is aroused from the dream of the physical, and is awake to the reality of the spiritual. For him all is changed, for God is All, and through Christ has brought deliverance nigh.

The comfort he has found is that of one who is a "new creature" in Christ Jesus, whose sense of heartache is destroyed because he has entered into the "holy place," into which cometh nothing "that defileth, neither whatsoever worketh abomination, or maketh a lie." After thirty-five years of heart hunger he has found shelter in a city which "lieth foursquare." And the gates of it are not closed at all by day, and there is no night there; for the glory of the Lord doth lighten it, "and the Lamb is the light thereof."

"7641," Ionia, Mich.

Above is a true copy of the experience of himself written by No. 7641, as is attested by a letter from the warden, Hon. Otis Fuller, which was attached thereto.—EDITOR.

✧

I suffered from anemia, stomach disorder, and lung trouble. Three doctors treated me at various times, but failed to effect a cure. When I was first told of the lung trouble I was in a most pitiful state of mind. The doctor's medicine was doing me no good, so a western trip was recommended; but the thought of dying among strangers almost drove me frantic. I was weak and miserable, and it was thought among my friends that when the leaves began to fall the end would come. Then in August, 1913, I came to Christian Science, feeling that in this lay my only hope. A friend loaned me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I read this book all my waking hours and also was treated by a practitioner. After the first treatment I was much better, fever, night sweats, and a bowel difficulty disappearing into their native nothingness.

At the end of five treatments I was a well girl, and since then have put on flesh and have not lost a day from work on account of sickness. I am very grateful for the improvement in my health, and my friends are all astonished at the change in my condition. I have laid aside glasses after wearing them for eight years, and which an eye specialist said I would always have to wear. A scar caused by the application of an acid on my face is gradually disappearing, although a doctor said it could not be removed. These benefits and numerous others make me very thankful, but the deeper gratitude is for the spiritual uplift, which does not come in any other way.

Christian Science is a practical religion; there is not a moment in our lives when we cannot apply it. "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). I am more grateful for Christian Science than words can express. It is my dearest possession.—ANNA M. FRANCK, St. Clair, Mich.

✧

[Translated from the German]

We read in Psalms, "Call upon me in the day of trouble: I will deliver thee." I have heeded these words, and may say with others, "The Lord hath done great things for us; whereof we are glad." For three years I walked in darkness. All material means had proved unavailing, and then through Christian Science light shone upon my path. I feel that I

Digitized by Google

must tell others of the blessings which I have experienced thereby. I am thankful to God for having led me to Christian Science, whereby I have found healing within a short time, and grateful to our revered Leader, Mrs. Eddy, for having again brought to light the truth which for centuries was lost, as well as to my helper, who knew how to make it clear to me that the disease was but an error of thought, which would vanish before the higher recognition as darkness does before the light.

For three years I was afflicted with catarrh of the bowels. I had long lost all faith in allopathy, and when there was no improvement after having been under the care of a homeopathic physician for two years and a half, I tried what is called "nature-cure" as a last resort. The head physician of the sanitarium declared he would be able to cure me within a short time, and after a while there was some improvement, but it was followed by a relapse. The physician expected to cope with this by prolonging and intensifying the treatment, but there was no change for the better, and even the medicines to which he finally resorted were ineffective.

When, therefore, I was left in no better condition than before, a friend called my attention to Christian Science, of which I had never heard up to that time, and I applied at once to a Christian Science practitioner. He directed my thought to the Christ-healing, which he described as "the same yesterday, and today, and forever." I bought a few copies of the *Herold*, and after reading them over several times, what the practitioner had said concerning this disease became clear to me. Treatment was taken up, and it was not long before I was rid of the ailment. Minor relapses occurred, but I was able to overcome these myself, with encouragement from the practitioner.

I have since purchased a copy of the Christian Science text-book, "Science and Health with Key to the Scriptures," and the good health which I now enjoy I owe to Christian Science, for through it I have been shown how to attain to well-being and how to preserve it. I was also healed of three ruptures during treatment for the above mentioned trouble. Though I had worn trusses, these were discarded when I began to have treatment, and during the year which has elapsed there has been no occasion to wear them again.

When I sum up the blessings which Christian Science has brought me, I am led to say with the prophet Isaiah, "They that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary; and they shall walk, and not faint."

H. Bähre, Ramlingen, Kr. Bargdorf, Pr. Hannover, Germany.

✧

Some time ago, while talking with a friend who had been beautifully healed in Christian Science, she seemed to think it strange that a certain ailment had not been healed. I told her we must be truly grateful for what we have already received before we can hope to gain more; but then I questioned myself. Had I been truly grateful for all the blessings that have come to me while studying the Bible with the light thrown on it by our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy? Had I not often let error prevent me from giving my testimony, although knowing the benefit I have received from reading those of others in our periodicals?

It is eight years since the truth dawned on my consciousness, and during all that time it has met every need. A bowel disorder of long standing, headache, an attack of influenza, a sprain sustained by a fall, an illness that I feel sure was malarial fever,—all have been destroyed by the power of Truth. Christian Science has taught me what it means through Principle to love one's neighbor as one's self, and has given me moral courage. My daughter, who is a member of the Christian Science Sunday school, and who is gaining a most remarkable and helpful understanding of the Bible and of Science and Health, has aided me as well as herself many times, and has overcome in herself a throat affection to which she seemed subject before coming into Science. Christian Science helps her to solve all the problems that come into a young girl's life, and I want to express my heartfelt gratitude for the Sunday school teachers who so lovingly give their time and thought to the work.

Words seem meaningless to express all the love I feel for Christ Jesus the Wayshower, and my gratitude to our revered Leader, who through her life and works has made all these things possible for us.

Amelia Stemler, Roslindale, Mass.

✧

About seven years ago I was healed through Christian Science of what the doctors pronounced a complication of diseases, after material remedies had failed to relieve me. Among these ailments were nervousness, bowel disorder, ovarian trouble, and an abscess. For a number of years I had not been well, and suffered dreadfully from female trouble and great weakness. I had several physicians and took many kinds of medicines, but with only temporary relief.

In February, 1906, while living in Denver, Col., I became very sick, and was worse than I had ever been. At this time I had two doctors. The second one told me that the fever was high and my condition serious, and that I must be removed to a hospital at once, as the best of care was necessary. Accordingly I was sent to a hospital, where I stayed almost two weeks. Then I begged to be taken home, although I was not well and could not stand alone, or even by the help of two others. I had to be moved from the hospital to the carriage in an invalid's chair, and the doctor and nurse said I must be put to bed as soon as I reached home, for I would be worse if I tried to sit up. The doctor visited me daily, each time telling me I was still seriously ill and giving me little hope of recovery. Then I began to pray very earnestly to understand God and to feel His help and presence here on earth.

It was at this time that I decided to try Christian Science, and I believe that this decision came in answer to prayer. I knew very little of this religion, and had learned what I did know from a friend who was studying the literature. I loved all that she explained to me of its teachings; it seemed more like the truth to me than my own religion, although I was a faithful member of another church. I had heard of a few cases of healing in Christian Science, and these gave me hope; but while I was sick no one asked me to try it,—simply taking it up myself as a last resort.

After making up my mind to have Science treatment a great relief came over me, for I believed Christian Science was the truth and would heal me. A friend sent me a *Sentinel*, and this was read with joy. The practitioner came that evening and began treatment. I slept better that night, and the next day dressed myself and sat up most of the day, —something I had not been able to do since my illness began. In a few days I could do all my work and was able to walk a distance of eleven blocks, while a week later I walked over three miles without any injury whatever. I continued treatment a little more than three weeks and was healed, and the old ailments have never returned. There are yet some problems to be worked out, but they will be solved as I rely upon divine Principle and endeavor to live obedient to Truth.

Prior to taking up Christian Science I always looked on

Digitized by Google

the sorrowful side of life and was very unhappy. I was not only healed of the physical ills, but of this condition of thought, and am now a truly happy woman. My blessings have been many, as I have had gratifying demonstrations for myself of the healing power of Christian Science, and have also helped others. By the aid of a practitioner I was healed of a severe attack of chills in a very short time.

Friends say there is a wonderful change in me since taking up Christian Science, and as a result a number of my family have turned to it. My mother's eyesight has been much improved, and every member of the family who has come into Science has been healed of some form of illness through this great truth. My sister's baby has recently been healed of spasms. Three of us have had class instruction, and I am now a member of The Mother Church. For all these blessings, and many more, I am indeed most grateful.

MAUD M. BOATWRIGHT, Indio, Cal.

✧

It is with a heart full of gratitude that I send this testimony of what Christian Science has done for me. It has changed a life of ill health and misery to one of peace and joy. More than twelve years have passed since Christian Science was first offered to me; but at that time I would have none of it, though, like many another, glad to turn to it when all else had failed.

I was suffering from a severe form of stomach disorder and had lived for more than a year almost entirely on liquids, so that I was starving for a good meal. Then too I had been in a hospital having treatment under four different medical men, but instead of getting better was gradually becoming worse. After all this suffering I was told that I must either submit to a severe operation, from which there was little hope of recovery, or a malignant growth of the stomach would probably result. I tremble to think of what might have been the consequences if Christian Science had not set me free. I went to the Christian Science church to hear the testimonies, but without any faith in this religion. Though every person there was strange to me, I was led to speak to a practitioner, who was able to set me right at once. After talking with her I put aside all my medicine and began to eat anything I fancied without suffering any ill effects. Then after a week's treatment one of the worst symptoms of my complaint disappeared never to return, and as I have gained understanding my healing has progressed.

This healing means a great deal to me; but what means more is the fact that my only child has been completely restored to health. She was suffering from severe attacks of acute stomach trouble, having had seven in three months. We would put her to bed quite well, and before morning she would waken in a high fever, sometimes followed by convulsions. Each attack left her weaker, and we lived in constant dread. Finally I applied for Christian Science treatment, and relief came almost at once. Instead of lasting from four to seven days as formerly, the attack lasted only twenty-four hours, and the child has never had another. She has not had a dose of medicine since April, 1913, whereas before that she took it almost daily. She has been able to put off glasses which the specialist said she would need to wear for a few years.

Both my little daughter and myself are perfectly well, for the healings are permanent and complete. I am around from six in the morning till nine at night and can truthfully say I am never fatigued. I have surely proved that "the joy of the Lord" is my strength. It is two years since our first healing, and it would be impossible to tell of the many demonstrations we have had since then. Many of them have been instantaneous and have come through our own understanding, for I prove the power of divine Love every day and every hour. I came to Christian Science for physical healing and got it, but this is not to be compared with the peace it brings. I am very grateful for all our literature, but especially for the helpful messages the periodicals bring us.

Words cannot express my gratitude for all these blessings, but those who have been in the same position know how great it is. I am deeply thankful to our Father-Mother God for His glorious truth, and grateful to our dear Leader, Mrs. Eddy, for giving us a book through which the Bible can be understood, since it indeed solves all our problems and gives to us that peace which passeth understanding.

MRS. M. THIRKELL, Victoria, British Columbia, Canada.

✧

Over eleven years ago I was sick, and had been for six months, not having one night's sleep during this time. I knew nothing about Christian Science then, but was told by a friend that I could be cured. I had suffered for so long that I was willing to try this healing truth, having proved medicine could not make me well; so my friend went with me to a practitioner. After the first treatment I slept all night and was free from pain. It was several months, however, before the bowel trouble was entirely healed. Then too my eyesight was restored, although at one time it seemed as if it were gone. The practitioner gave me a copy of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and told me to read it every day. On telling her I would like to do so, but could not distinguish one letter from another, and my eyes hurt me all the time, she lovingly said, "You can see;" and indeed this was proved to me. It was not a great while before I read Science and Health through, my sight having been gradually restored. Even that healing alone is something for which to be grateful always.

There have been many beautiful demonstrations since then, one instance being in connection with blood-poisoning. I tried to overcome this by reading the text-book, but at the end of a week was still in a very serious condition. My entire body was so stiff that I could scarcely move or dress myself without help, and all who saw me were much alarmed. I asked for Christian Science treatment, and the practitioner came to me for several days; then, as I improved, she asked me to come to her home. With help I was dressed, and my mother assisted me out of the house and down the steps. On starting to walk, it was only with difficulty that I kept on my way, and when I got to the home of the practitioner it was all I could do to get up the steps, being almost exhausted. After having treatment I felt well, and in two weeks was completely healed. Another beautiful healing was that of a severe pain in my right side, with a swelling so pronounced that I could not wear my clothes. I again called for help in Christian Science, and was relieved of this trouble in a short time.

Christian Science not only heals us of sickness and sin, but also of fear. Some time ago I had considerable work done on my teeth, and with a little help in Science it was completed with only slight pain. I was also helped very much during my mother's illness. Just a week from the day she was taken sick, she seemed to be passing away, and great fear took possession of me. Absent treatment was given, and mother went to sleep and did not wake for several hours, when her condition was greatly changed. I know it was through the help which was given me in Christian Science that I was able to nurse her for six weeks, as I had to lift and move her, besides having all the household duties to look after.

In the past few months I have been made more grateful to Christian Science for the help which I received during an experience with a felon. The condition was such that I could scarcely move around; indeed, some expected to see

Digitized by Google

me lose the finger. The healing was slow, but I am grateful for it. I was able with the help of Christian Science to dress the hand and attend to it myself, though without it that would have been impossible.

In these and other experiences, it surely has been proven to me that God is an ever present help in time of trouble, and my heart is full of love and thankfulness to God, as well as gratitude to Mrs. Eddy for Christian Science. I am also grateful for our literature, which is a great help to me every day.—Mrs. W. A. Trice, Willis, Texas.

✧

[Translated from the German]

I gratefully join others in telling of how I was led to the blessed truths of Christian Science. In 1906 I was taken ill with a severe affection of the throat. At first I had allopathic treatment, but failed to improve; in fact the trouble manifested itself so severely that I completely lost my speech and could make myself understood only by nodding and shaking the head. I then tried homeopathy, though with no better results,—indeed, the conditions were aggravated. The physician, as well as my mother and brothers, had decided to take me to a specialist; but I had no confidence in drugs, as an acquaintance of ours who had become afflicted with the same trouble had finally succumbed to it, despite medicine and an operation.

My sister, who had experienced many benefits through Christian Science, then advised me to turn to it for relief. I immediately wrote to a practitioner in Berlin to ask for help, with the firm trust that our common prayer would be answered. With one treatment I was able to speak and sing as formerly. A wonderful sense of joy came over me, and I shed tears of gratitude. This quick healing taught me that in order to have our prayers answered we must believe with all our hearts.

During the following four years I saw many glorious demonstrations, yet I overlooked the fact that I needed more purification of thought. This recognition came to me in 1911, when during a whole month I was unable to sleep at night. As I could not attain to clear thinking without some one's help, I wrote to a Christian Science practitioner in another locality, asking for treatment. Relief was immediately experienced, as on other occasions, and since that time I have enjoyed good sleep. It is quite clear to me now that we need not worry about material things, for we read in the Bible, "Humble yourselves therefore under the mighty hand of God, that he may exalt you in due time: casting all your care upon him; for he careth for you;" and I now understand the meaning of the words, "He is a buckler to them that walk uprightly." I also know that anything which keeps us from doing good is only error, and being the result of wrong thought, it would hinder our progress in truth. Let us therefore "stand porter at the door of thought," as Mrs. Eddy tells us (Science and Health, p. 392). I am indeed happy for having found the truth, and would not now want to live without it.

For the many blessings which have come to me through Christian Science I am profoundly thankful to God, and most grateful to our beloved Leader. I will endeavor to express my gratitude by growing spiritually and assimilating more and more of the truth.—Hermine Ney, Pölitz, Pommern, Germany.

✧ ✧ ✧

How happy it is to believe with a steadfast assurance that our petitions are heard even while we are making them; and how delightful to meet with a proof of it in the effectual and actual grant of them!—Cowper.

From Our Exchanges

[James E. C. Sawyer, D.D., in *The Christian Intelligencer*]

Spirituality is not fanaticism. It is not emotional eccentricity. It is perfectly consistent with common sense, sound business methods, the amenities of civilized social relations and pleasures, a reasonable religious creed, and an orderly and beautiful mode of worship. A crank may be a Christian; but he is not a Christian because he is a crank, nor is he a crank because he is a Christian. He is a crank because he is mentally or morally deformed. There have been very peculiar saints, but their holiness was not in their eccentricities. Spirituality promotes symmetry of character, intellectual, social, and moral. Strength and beauty are in the sanctuary of a really noble and holy character. The strength of Christ was beauty; the beauty of Christ was strength.

[*The Christian Work*]

It is an inspiring thought that all we are to be is already present to the mind of God and is being wrought out by His mighty hand. God has the ideal Jerusalem always before Him, the ideal city of God, the ideal humanity. Properly speaking, we cannot attain to anything which we are not already; we cannot outdistance what God eternally sees; we become what we are. This is a point which it is difficult to make clear, for the facts of every-day life appear to contradict it hopelessly. Nothing can seem much more absurd than to say of a savage or a scoundrel that he is something other than he seems to be even to himself, and that in this fact consists his chance of being delivered from the power of his baser instincts; but so it is. Nothing truly exists, or ever will exist, which is not externally present to the thought of God; what we call evil is merely the finite mind taking the shadow for the substance and allying itself thereto, as St. Augustine said. We may not always be able to help it; some people would tell us that we are not able to help it at all; but whether we are able to help it or not, evil is evil only because the corresponding good is hidden from our vision.

[*The Christian Register*]

We must not exalt "peace" to be our superlative of human conditions, for it is not that; there is a higher. "Righteousness" should stand at the top; "truth" should be seated on the throne. Mere "peace" may squat in a sty or doze on a green-scummed duck-pond; peace may consort with indolence and selfishness and cowardice. Truth and righteousness are tireless leaders with armor dented but untarnished. On the road to Jericho the priest and the Levite kept the peace, and the world has scorned them; the Samaritan altered his plans and responded to the appeal, and the world honors him. Pilate remained strictly neutral, but his washed hands have not averted the condemnation of mankind.

[*American Lutheran Survey*]

The only sane, sensible, and ultimately successful method of reforming society is the simple preaching of the Bible. It applies to every possible human relationship, public and private, national and international. It goes to the roots of every movement and of every human interest. It undermines and subverts everything that is evil. It sows the vital and potent seed of that which is permanently good. When our Lord said, "Every plant, which my heavenly Father hath not planted, shall be rooted up," he declared the revolutionary nature of Christianity as taught in the Bible.

The fault does not lie with the Bible; it lies with society, which refuses to take the Bible at its face value; it lies in the failure of men and of nations to give it an honest trial.

Digitized by Google

Men are dishonest in their treatment of Christianity. With mean hypocrisy they blame Christianity in order to justify their own wickedness. Many of the plain commandments of Jesus are a dead letter in the lives even of church-members. The cardinal truths which he emphasized concerning sin and salvation through faith in himself are repudiated by the would-be reformers of church and state. They propose to regenerate society and establish a Christian community. They start out by discarding God's method and God's means of bringing about that much desired consummation. They ignore God's demand for that which is central and vital, the salvation of the soul. They undertake to modify God's prescription by leaving out the only potent remedy,—the Word of God.

[*The Congregationalist and Christian World*]

Even more than peace, the world needs righteousness. Could peace be compelled, it would carry in itself no prospect of continuance unless the soul of humanity were controlled by the inward forces of good will. Peace by compulsion must always end in failure, as new generations come to the front with new ambitions and new leaders. The primal need is love of justice and obedience to God's law written upon the hearts of the people.

We shall make no real progress toward the end we all desire if we insist upon measures for peacemaking which go no deeper than our natural desire to be set free from suffering. Peace and righteousness must dwell together. Had God's law ruled in the minds of European statesmen, had they looked at the problems of neighborhood in the light of the divine good will toward men and the duty of brotherhood which is not limited by frontier lines, there would have been no war. If war has come in our time, it has come because the leaders of the people have forgotten righteousness. If war is to be banished from the earth and the way of peace made plain for our children, it must be because Christ reigns in righteousness.

[Rev. Charles E. Corwin in *The Christian Intelligencer*]

Among the many contrasts of Jesus' character we note that in regard to sin. Jesus knew all about sin. His indignation against cherished evil has never been surpassed; his sympathy for the penitent sinner has never been equaled. His awful pictures of the doom of sin are the most lurid upon the page of Scripture. But in him his friends could find no flaw. The closer they came to know him the more enthusiastic they became about his character. He was in their eyes not only without spot, but he was the life and the light of men, the image of the invisible God. His enemies searched him close, but their testimony, recorded in the Bible and in their own writings, can only accuse him of miracles wrought by magic.

[*The Universalist Leader*]

Our obligations are measured by our abilities and opportunities. The actual value of what the rich men cast into the treasury far exceeded that of the widow's mite. It is also probable that, being put to the same use, it did more good. Yet the widow was more highly commended because she had given more in proportion to her means. The same rule applies to any service that we may render, whether it is material, intellectual, or social. The essential question is, How near does it approach the limit of our possibilities?

[Bishop Theodore S. Henderson in *Western Christian Advocate*]

There are many people to whom religion is a fashion rather than a passion, and until our religion becomes a passion it will never become a power.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition" size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

The pamphlet entitled "The Father's Business," already printed in English and German, has been translated into Swedish, "I Faderns Tjänst," and is now published with the English and Swedish versions on opposite pages.

The article by Frederick Dixon entitled "Christian Science Healing *vs.* Mental Suggestion," originally published in the *Weekly Budget* of London, England, has been translated into Norwegian, "Christian Science Helbredelse i motsætning til Mental Suggestion," and is now published in pamphlet form.

The lecture by Bicknell Young, C.S.B., "Christian Science: The New Birth," has been translated into Norwegian, "Christian Science: Gjenfødelsen," and is now published in pamphlet form with the English and Norwegian versions on opposite pages.

"The Sons of God," a lecture by Col. William E. Fell, C.S.B., has been published in pamphlet form and is now on sale at prices shown on the opposite page for our regular pamphlets.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

During the last decade the forest service has classified as agricultural and opened to public entry more than 15,500 individual scattered tracts of land in the national forests, comprising more than 1,700,000 acres, says an article by the chief forester, published in the year book of the department of agriculture, just issued. Within the last two years, in addition, several large blocks have been eliminated, aggregating more than 2,500,000 acres, while nearly 2,000,000 acres more are now under consideration for elimination. All the remaining agricultural land in the national forests is confined chiefly in isolated tracts scattered here and there; to restricted areas requiring irrigation, where water cannot be obtained; and to certain river bottoms and benches which are not covered with very heavy and valuable timber.

A constant pressure is being brought to bear on the government by private individuals who want to acquire possession of these heavily timbered agricultural lands; single quarter sections of which often have a value as high as $20,000 for the timber alone. In spite of the fact that some of these lands have soil suitable for agriculture, to throw them open as homesteads would not result in farm development. This has been proven over and over again where lands of this kind, acquired under the homestead law, are today held not by homesteaders but by lumber companies, who promptly purchased them from the settlers as soon as title passed from the government, a speculative process which effectively prevents men of small means from acquiring land and establishing homes. The government is withholding from agricultural entry all such heavily timbered land until after the timber is cut off. As soon as this is done the land will be open to entry, and settlers will be able to acquire it directly from the government without cost, instead of having to pay from forty to sixty dollars an acre to land speculators.

At the recent convention in Boston, Mass., of the "House of Governors," a conference of governors of various states of the Union, some of the subjects discussed with the object of bringing about greater uniformity in state laws and state interests were: The governors' initiative, the functions of the executive department relative to the budget, the short ballot, abolition of capital punishment, state or national control of waterpower sites, conservation of natural resources, the state's duty in the matter of national defense, and the duty and responsibility of the governor in dealing with prisoners.

The Boston *Transcript*, in speaking of the conference said: From the social standpoint the convention was an unqualified success. Unfortunately, the serious problems were not given all the consideration they deserved. A number of the more prominent members remarked that the one fear has always been that the meetings would ultimately become "junkets" and that, in their opinion, the doubts of a few years ago apparently were well founded. If there is to be any criticism, it will be along the line that too many events, both entertainment and business, were crowded into the four all too short days of the council.

A contest which has been waged for the last three years between the Missouri Pacific and the Union Pacific railroad systems has just ended in a victory for the latter line and the prize, almost the entire traffic of the great "inland empire" of Idaho and parts of Montana, Utah, and Wyoming, will go to the winner. The interstate commerce commission has given the Union Pacific the right to refuse to divide business into the "inland empire" with its rival and competitor, the Denver & Rio Grande Railroad. Three years ago the Union Pacific, after having spent more than one hundred million dollars on its road-bed and equipment, announced that the interchange of traffic between its lines and those of the Rio Grande, which had taken place at Ogden for eighteen years, would no longer be in effect, but that, in future, business to and from exclusive Harriman points in the Northwest must be delivered to the Harriman road at Omaha, Neb., or Denver, Col., instead of at Ogden, Utah. The commission found that since Union Pacific trains cover the territory in eighteen hours less time than the trains of its competitors, the former road has the moral and legal right to take full advantage of its superior facilities.

The number of elementary and public schools in Chile increased nearly 50 per cent from 1906 to 1913, and in the same time the amount spent by the government on these schools was more than doubled. The public schools of Chile include one agricultural institute, five practical schools of agriculture, two mining schools, one graduate school of physical instruction, three industrial schools, thirty professional schools, four manual training schools, six military schools, one conservatory of music, twelve universities, sixteen normal schools, and eleven commercial schools. About fifty private schools also are mentioned.

Professor Nelson of the American Museum of Natural History, excavating ruins of the Taos, near Santa Fé, New Mexico, this summer, has cleared out 475 rooms and one kiva in six pueblos ranging in age from the time of the cliff dwellers to late Spanish days. In San Marcos pueblo he has outlined forty-three separate stone buildings with a total of 3,000 ground floor rooms. He has recovered and classified thousands of implements, pieces of pottery, bones of various animals, and perfectly preserved corn, beans, squash, and pumpkins. He also has outlined immense irrigation or water storage works built by the prehistoric dwellers in these villages.

The greatest total of internal revenue receipts in the history of the United States government is recorded in the annual report of the commissioner of internal revenue. The income tax from individuals was $42,000,000 under the amount estimated by the framers of the income tax law when it was enacted. The aggregate receipts during the fiscal year ended June 30, including the corporation and individual income taxes, reached $415,000,000 against $380,000,000 for the previous year. Corporations paid in $39,144,529 and individuals $41,046,166.

The Engineers Club of Rio de Janeiro in accepting the invitation to take part in the second Pan-American scientific congress, has named its delegates. The club regrets the short time available for the preparation of material for presentation to the congress, but will endeavor to make a good showing of the achievements of civil engineers in Brazil in such works as port and harbor improvements, railway construction, irrigation power development, plans for improving the cities of the coast and the interior, and so forth.

Chinese students, men and women, from the colleges and universities throughout the eastern United States gathered a few days ago at Middletown, Conn., for the opening sessions of the eleventh annual conference of the Chinese students' alliance of the United States. The sessions are being held at Wesleyan University. Among the questions are considered national defence, advancement of education, foreign relations, economics, and industrial reconstruction.

Plans for the erection of a high-powered wireless telegraph station at Ft. Adams, Newport, R. I., became known with the recent arrival of material for the plant. This station, it is understood, will be the first of a projected chain of towers which will establish radio communication between the principal army centers of the coast. The naval system already covers much of the coast line for that branch of the coast defense.

Representatives of thirty-nine college newspapers of the United States and Canada, having a total circulation of more than one hundred thousand, at a meeting held in New York city for the purpose of consolidating their business interests, decided to bar all kinds of liquor advertising from their columns.

The new wireless station in the grounds of the naval hospital at Chelsea, Mass., will be opened for business Sept. 15. It is to be the most powerful station on the Atlantic coast. The station at the navy yard will be run in connection with it.

American importers of figs have given up hope of securing shipments of new crop Smyrna figs in time for the holiday trade. Imports in normal seasons run up to 20,000,000 pounds, and a large part of this stock goes into consumption during the holiday period.

The Calcutta University Institute aims at introducing the social, artistic, athletic, and dialectical features of English university life into the conditions of the student lot of Calcutta. The University of Calcutta is purely an examining body.

Up to Aug. 1 the New York city public service commission had awarded $160,000,000 of construction and material contracts for its dual subway system.

A commission to consider changes in the constitution of New York state has been in session during the summer. It is considering among other things the proposal of a short form of ballot.

The official report of the department of mines of South Australia shows the value of the production of all minerals in the state as £600,855 for the calendar year 1914.

The total number of visitors to the Panama-Pacific exposition has passed the eleven million mark.

Confidence in Truth

SAMUEL GREENWOOD

"THE confidence inspired by Science," Mrs. Eddy writes, "lies in the fact that Truth is real and error unreal" (Science and Health, p. 368). Naturally in every case one's confidence is proportionate to his conviction of the truthfulness of things. Where this has been established and the rules for demonstration are seen to be universally available, the confidence of people is unshakeable; while on the other hand, what has been proved untrue commands confidence from no one except the unenlightened. In practical, every-day things one does not allow himself to be governed by what he knows to be unreliable, nor is one afraid of what he does not believe to be true.

Perhaps the simplest example of universal confidence in the reality of truth is furnished by the mathematical fact that one and one make two. No one dreams of venturing to doubt it, and in all the world's transactions it is relied upon absolutely. People never say of it that it is "too good to be true." They do not claim that the day for correcting mistakes or of changing the wrong for the right figure has passed. They know that if error occurs in their numerical reckoning, there is a fixed law or rule by which it can be set right. This confidence is inspired by the fact, proved again and again, that mathematical errors are unreal, that only the truth is real and demonstrable, hence practically applicable to the solution of their problems.

Knowing all this so well, and knowing too that error of any kind represents the unreal side of things, it is strange that mankind have so little practical faith in a Science of good whose rules can be relied upon to do for them in the more intimate things of consciousness what the science of numbers does for them in accounts. Is it less consistent with wisdom to believe that there is a divine law applicable to the correction of all human error, than it is to believe there is a law governing the relation of numbers which will prevent or remedy errors in one's computation? Is it too good to be believed by a Christian people, that the beneficent power which brought man and the universe into being is as scientifically available for the setting right of the wrongs in human consciousness, as is for instance the rule that one and one make two to set right what may be wrong in one's sense of number? It is at least to be regretted that so few Christian people are willing to test the efficacy of Christ's teachings by practical confidence in them. Unless the God we have been taught to serve has more power than the evils that we have been likewise, though inconsistently, taught to fear, it were no profit to serve Him; but when we acknowledge as truth the all-power of God, both honesty and self-interest demand that we make this truth the rule of our life.

Since Mrs. Eddy's discovery of Christian Science and her publication of its text-book, "Science and Health with Key to the Scriptures," the conviction has been steadily gaining ground that there is in operation an actual law of divine Truth, a Science of Christianity, which is capable of human understanding and demonstration, and which offers mankind redemption from their evil thought and experience. The law of divine Truth is logically the infinity of good. Popular religious belief practically declares that although God is present in some places, He is not present in every place; and that although good overcomes evil part of the time, evil triumphs the rest of the time. Such teaching is not of the nature to inspire confidence in God, because it does not teach that good can be depended upon at all times,—a mental attitude which is synonymous with fear and unbelief. Imagine one advancing the suggestion that there are times and places when one and one do not make two; yet it should seem just as ridiculous for a Christian to consent to a belief that good is sometimes unequal to the overcoming of evil.

Every rational person knows that nothing could possibly induce him to believe that the addition of one and one make any other sum than two, and that the case would be the same if it involved millions instead of units. He knows that any erroneous supposition to the contrary is powerless to make void the right result or to oppose his demonstration of what he knows to be true. Why, then, it might be asked, should the situation be different when the truth in the case relates to God and His laws? The humiliating answer is, that the truth about the supreme power and government of God is regarded by mortals as less practical, and therefore less available to benefit mankind, than the power correctly to compute the sum of a given number of units.

The great truth of all past ages and of all the ages to come is the eternal, infinite being of God, and that this divine being includes all reality, power, presence, substance, and intelligence. Abraham, Moses, and the prophets proved its potency to overcome evil and to meet human need. The Master and his apostles proved it, the early Christians proved it, and Christian Scientists are proving it today. It is taught, theoretically at least, in all the creeds and churches of Christendom. Is it not, therefore, at least remarkable that it fails to inspire professing Christians with as much confidence as does the simple fact of one and one making two? Is it because the truth about numbers is more reliable and trustworthy than the truth about God, or is it the influence of religious teaching that the average Christian thinks it easier and more practical to abide by a rule of numbers than to abide by the truth proclaimed in the gospel?

The truth of Christianity is summed up in the supremacy of God, and no contrary teaching can rightly be called Christian. Jesus did not teach that a power exists in opposition to God and that this power makes men sick and sinful. He did not teach that there is life separate from God and that this life dies. He did not teach that anything at all exists besides good. It was his knowledge or understanding that God alone is life and power that destroyed the illusion of death for himself as well as for others. The only possible inspiration there can be to Christian teaching is that God is the only power; hence to acknowledge evil as power would be to make a fable of Christianity. It is the fact that good is real and evil unreal that says to the grave, "Where is thy victory?" It is this fact, and this alone, that makes it possible for any one to be a Christian.

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

"In quietness and in confidence shall be your strength," the Scripture says. Confidence in what? Surely not in both good and evil. Belief in evil does not make men strong but inspires them with fear; whereas an intelligent understanding of the infinity of good brings strength and peace. "Error," Mrs. Eddy continues in the passage already quoted, "is a coward before Truth." Nothing is afraid but the belief which declares there is something besides God, and this false belief or supposition is all there is to evil.

It is well to remember these things in the hour of temptation, because the only temptation is to believe that error is real. Each day's experience discovers error to be a coward before an understanding of the truth. It is their conviction that the truth about things alone is real which impels humanity in every line of progress; and it is this fact that inspires Christian Scientists, for it furnishes the assurance of ultimate victory over all error.

What Shall We Render?

EMMA C. MERRELL

DURING one of my favorite rambles in a picturesque part of the country where I live, I was contemplating the beauties of nature, all the more enhanced as viewed in the light of Christian Science, when from a short distance away there came cries, as if from a child in distress. There appeared to be no one in sight, but recalling that some little while before, several children had passed in that direction, I hastened to the spot, and found a small boy who was unable to proceed any farther in a steep climb. Evidently the other children had bravely made the ascent, thoughtlessly leaving the little fellow to struggle up as best he could. He had reached a point where to have made a move backward might have proved dangerous, while to go forward seemed impossible, owing to the steepness of the way. I therefore picked him up and carried him to the top, then set him on his feet, and away he ran.

I should probably have felt amply rewarded if this little incident had simply served as a reminder of what it had meant to me as a student of Christian Science to be mentally set on my own feet, especially in the earlier stages of my experience, when certain problems came up for solution. One instance in particular is recalled, when I was quite young in my understanding of Christian Science and was trying to solve a seemingly difficult problem. No other Christian Scientists were living very near me at that time, and owing to the tenacity of mortal mind with its beliefs, my beclouded sense of things threatened to outweigh the little light I had to cast upon the question. On page 174 of Science and Health Mrs. Eddy says, "The angels of His presence . . . are our guardians in the gloom." So it proved, for as I was earnestly seeking for more light a knock came at the front door, the caller being a Christian Scientist whom I had met some time before. This "friend in need" stayed for about a couple of hours,—and what a helpful time it proved to be! How I drank in the truth this student had to impart! My fears were allayed, my problem was solved, and I found that a certain physical inharmony, which was very much in evidence when the visitor came, had practically disappeared by the time he left.

But to return to my little parable,—what affected me most, as I stood watching the boy, was this: when he had gone a little distance, he suddenly turned round as if he wanted to know who his rescuer was, and smiled back to me his thanks. I do not know whether he had really seen me before this, for when found he was lying with his face downward and I had approached him from the back; but when I took him up he ceased crying almost instantly, as if content to know he was being borne onward in a pair of arms which were holding him close.

When we realize that Christian Science has healed us of any particular physical ailment, does it awaken in us a desire to know more of the truth that has set us free? It is indeed well for us if we are not content to let it rest there. Again, when healing has taken place and we rejoice in the consciousness of having made the demonstration, while it behooves us as opportunity affords to be ready to testify to the same at our mid-week services, which were wisely instituted by our Leader for that purpose, yet do we always, first of all, at least smile back our thanks to God? I was sure this little fellow was rushing off to let his companions know he had "got up," and I felt he was quite justified in doing so, since he had not failed to recognize his deliverer; besides, he had given in return all that was his to give,—his best smile. And how that smile was appreciated! Do we expect God, divine Love, to look for less from His ransomed ones,—He whose "beloved Son," the Christ-idea, has wrought for us, as Mrs. Eddy has said (Science and Health, p. 39), "a full salvation from sin, sickness, and death"?

In the healing of the ten lepers, as recorded in St. Luke's gospel, Jesus' gentle rebuke is not without significance: "Were there not ten cleansed? but where are the nine? There are not found that returned to give glory to God, save this stranger." It is noteworthy that it was after the leper had returned to give thanks for his healing that Jesus said unto him: "Arise, go thy way: thy faith hath made thee whole."

How shall we best show our appreciation and gratitude for Christian Science as revealed to this age through our revered Leader, Mrs. Eddy, its Discoverer and Founder—for this "pearl of great price" to all who honestly seek it? Surely we can but say in the language of a famous poet:—

Were the whole realm of nature mine,
That were a present far too small;
Love so amazing, so divine,
Demands my soul, my life, my all.

Point of View

CAMPBELL MAC CULLOCH

INDIVIDUALS who are beginning the study of Christian Science not infrequently find difficulty in reconciling the presence of sin and evil in the world with the creation of a perfect man and a perfect universe by an infinitely good God, and they generally want to be informed as to where and how evil originated and how the originally perfect man fell from his state of created perfection. Coupled with this is the further question, If God is infinitely good, how could He, or why did He, create a man capable of sinning?

These questions are not particularly novel, for they are precisely those which confronted the early Christian church and resulted in the Gnostic controversy of the first three centuries. They are wholly due to an illogical point of view, to the putting of an effect before a cause, or to the supposition that because a thing seems to exist it must of necessity have had a cause. During all the ages humanity has pursued this course, and modern education seems to be largely predicated upon it, with the result that one of the chief difficulties with which Christian Science has to contend is the establishment of a correct view-point.

Philosophers and investigators in the realm of causation have generally begun their reasoning with the admission of the existence of what they have termed a series of well-

Digitized by Google

established and incontrovertible facts, and from these they have reasoned backward in the endeavor to find a cause which might satisfactorily account for them. The flaw in this type of reasoning is that the starting-point is fallacious, and consequently every subsequent step must be equally at fault. All such reasoning has been based upon the alleged reality of material phenomena, a predication no longer admitted by competent thinkers and no longer taught in the higher schools of education.

To one suffering from an illusion the specter is apparently without material tangibility, though it seems to be visible, and it is obvious that should an investigator endeavor to reason back from the seeming reality of the illusion in his search for an adequate cause, he is doomed to failure, since there can be no cause for an effect which has no real existence. Attempts to account for material phenomena on any such basis will always end just where the Gnostic investigators ended,—in confusion.

When Mrs. Eddy perceived the unsoundness of such reasoning, she made no effort to compromise with it, but with keen perception built on the inspired teaching of Christ Jesus, utterly abandoned the mis-logic of the effect-to-cause process, and replaced it with the proposition that an infinitely good cause can by no possibility produce anything other than an effect of like character. She saw that if God made man perfect, then man must inevitably remain perfect, and so does remain, despite the material evidence which seems to controvert this inference.

Accepting the Scripture declaration that "God is one," the only cause and the only creator, Mrs. Eddy reached the logical conclusion that "there can be no effect from any other cause, and there can be no reality in aught which does not proceed from this great and only cause" (Science and Health, p. 207). Summed up, the situation from her point of view is simply that if there are two apparently irreconcilable situations, one must be dispensed with so far as its recognition as actuality is concerned, and it remains to decide which of the two is to be discarded. Either the infinitely good cause or the finitely evil effect must go, and it is her instant decision upon this point that has placed her name so far in advance of the materialistic truth seekers of all ages. She elected to retain the infinite good and to dispense with the phenomena which seemed to controvert its infinity and goodness, and from this decision came the wonderfully clear-cut statement on page 468 of Science and Health denominated "the scientific statement of being," which in the last forty years has earned the unqualified endorsement of logical thinkers of all schools.

Philosophical reasoning on the assumption of the reality and indestructibility of matter is generally inductive, while reasoning from a known and established cause to a characteristic effect is deductive, and it is this radical difference in the points of view that occasions difficulty in the mind of the student, or those unacquainted with the teachings of Christian Science. Material philosophy says, Here is an effect, and consequently there must have been a cause for it; Christian Science says, There is but one cause, and any effect which is unlike that cause has no real existence.

It has been argued by beginners in the study of Christian Science that there must be a starting-point from which to begin one's reasoning, and this starting-point can only be obtained from observation of the things about one, the phenomena perceived. This situation is not unlike that referred to by St. Paul in his first epistle to the Corinthians, when he said, "For the Jews require a sign, and the Greeks seek after wisdom: but we preach Christ crucified, unto the Jews a stumblingblock, and unto the Greeks foolishness."

Christian Science starts with God, good, as the first and only cause, and insists that this is the basic fact on which to ground all deductive reasoning. It recognizes that a cause which is wholly good must be eternal, and vice versa. Had it the capacity to cognize evil, which would be necessary if any of its effects should manifest evil, it would then contain within itself the quality which would compass its own destruction and so destroy its eternality; thus converting itself from a cause into an effect, a wholly unthinkable and absurd position.

This Science further insists that the effect of a wholly good cause must be exactly like itself in quality, that is, wholly good, entirely devoid of evil or the capacity to manifest evil. It insists that these effects, or objects of creation, have remained wholly good, and do so remain today because they can never possess any other quality than that bestowed upon them by their creator, and it also declares that as there never was any other cause than one wholly good cause, no evil or sinful effect can be implanted in the effects of that cause, or the creation. It thus at once resolves all evil, sin, disease, and death, which seem to have established themselves in the universe, into exactly what clear logic insists they have always been and forever must be, namely, unrealities.

Logical deduction continues to affirm that if man was ever created perfect, he so remains today; that a sinning, suffering, imperfect mortal is an illusion and nothing more, and that in the proportion to which thought is held steadfastly to the concept of perfect man in the image and likeness (or character) of a perfect cause, so will the illusion disappear, be it sin, disease, or death. In other words, if the true view-point is attained, the reasoning from that point will be correct, and thus correct any illusion growing out of illogical reasoning.

✧

Withholding Does Impoverish

ADA BRUEGGERHOFF

In Science and Health (p. 79) Mrs. Eddy says, "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us." From time immemorial people have caught glimpses of the wonderful truth contained in this statement, but until our Leader discovered the scientific law of Love that governs this saying, few people really understood true giving. The Bible records several incidents which proved that giving did not impoverish, but these demonstrations were wrought only by people who lived in close communion with God. An illustration of one of these incidents was "the barrel of meal" and "the cruse of oil," neither of which failed, but abundantly supplied every need of the woman who was willing to be guided by the law of Love and give of what she had. She knew Elijah was a man of God, and therefore fully trusted in his ability to demonstrate sufficient substance to meet the demand for harmony. This Elijah did by realizing that in God's kingdom the law of Love is ever operative and always produces an abundant supply. Through this spiritual realization he proved that substance is not in the material, and that God's kingdom is on earth as in heaven.

A story is told of a miserly man who once caught a glimpse of the law of Love. A church brother came to his home one day and asked him to contribute a ham for a church festival, as the proceeds from these festivals were the only means by which this particular church was maintained. The man sat quietly for several minutes, with a stern look on his face, apparently engaged in a mental struggle. Then the stern expression suddenly changed to one of determination. He arose, went to his storeroom, brought in a ham,

Digitized by Google

gave it to the brother, went back and brought in another, and again went back and brought in a third. Then he said to the miserly thought, "Let me go, or I will give every ham in the storehouse." Through this man's determination to do right the desire to withhold was broken, and he was afterward a happy and useful citizen.

The thought to withhold was expressed by a person who entered the office of a Christian Science practitioner and asked for help. She said that she was not only physically disabled but also financially distressed to the extent that she had not a penny to pay for treatment. The practitioner took up the work, told her she could not be limited either physically or financially, for "divine Love always has met and always will meet every human need" (Science and Health, p. 494), and therefore divine Love does supply us with all that is necessary to meet our obligations. The sense of limitation was broken, and the woman was healed of lameness in the first treatment. She was soon supplied with means which enabled her not only to pay for the treatment but also to subscribe for the *Christian Science Sentinel*.

These incidents are proofs that through the demonstration of the divine law of Love our supply is inexhaustible and ever present. We are daily confronted with the problem of supply, but are learning through the teachings of Christian Science that divine Love is the giver of all good. Therefore all true giving is governed by the law of Love, which enables us to give freely, and thereby destroy the desire to withhold, which always limits and enslaves.

✧

Start Out

ANNE JONES GEARY

Those who know nothing of Christian Science and who make no effort to know anything about it, sometimes offer the plea, "But I do not understand how these things can be; I cannot believe that they are true." This happened in my experience lately, as it has happened many times before, and I said to a doubter: "Suppose we both wanted to see and know about something very desirable, which was at a considerable distance from where we were and required a good deal of effort to attain, and that you were willing to take the necessary steps to reach the place where you could get a clear vision and better knowledge. After various steps, perhaps including a trip underground, you finally reached the place of your desire, where you found things far more beautiful than you had dreamed,—treasures of priceless value, yours for the taking. Then on your return you found me just where you had left me, sitting in the same chair, but still wishing I could see those things of which you were speaking so enthusiastically, and still claiming that they could not be true because I myself had not seen them or even made an attempt to do so. What, may I ask, would you say to me? Would you not tell me if I would go where you had gone, make the effort you had made, I would have to believe, for I would see for myself?"

So it is in Christian Science. Those who wish to know of its teaching must start out. If they are unwilling to read a line of Christian Science literature or make the first effort toward research and understanding, how can they blame Science for being something beyond the grasp of all save a comparative few? On the contrary, if any one is willing to start out on the journey and go a step at a time, willing to become as a little child and learn, there is no reason why he should not finally know as much as there is to know. It is not, however, the work of a minute; it calls for daily and hourly striving, to be continued each day and every day, until gradually one finds that spiritual understanding destroys the false evidence of material sense and replaces it with truth.

On page 298 of Science and Health, Mrs. Eddy says: "Spiritual sense, contradicting the material senses, involves intuition, hope, faith, understanding, fruition, reality. . . . Spiritual ideas lead up to their divine origin, God, and to the spiritual sense of being."

✧

Gratitude

MARY FLOWERS MARBLE

One of the tendencies of human sense is to demand the material signs of divine plenty before giving thanks. Mortals, reversing all things, ask for physical well-being, material prosperity, harmonious relations with family and friends, congenial employment, and right environment, before expressing gratitude. Christian Science comes to us usually in the very midst of our most pressing troubles. Harassed without and within by a multitude of distresses, we hear the first faint sounds of its glad song of Spirit, and we turn for a moment from the crash of discord to listen to its notes of purity. In these moments of turning, the miracle is being wrought, for the illusive cause of human misery is fading away. It is being gradually displaced by a higher sense of life, which inevitably expresses itself in happier effects. The song of spiritual joy is always pouring itself into the consciousness of every willing listener, and in proportion to our spontaneous turning from discord we may follow every cadence of its melody.

Centuries ago a Chinese thinker, Lao-Tze, designated the material world as the "ten thousand things." He knew, as do we, that one thing only is worthy of our persistent and patient seeking, namely, spiritual reality. The effects of Spirit are spiritual: "love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance." If these mental qualities are present in human consciousness, the "ten thousand things" of the world will automatically disappear. True gratitude, then, need not wait for outward signs of comfort; it should follow freely the least discernment of the omnipotence and omnipresence of Truth and Love.

Truth

ROBERT E. KEY

There is a light—in heaven held supreme—
  Which day or night in luster shines the same.
It glides into the cottage corner mean,
  And glints upon the gilded temple vane.
Its beauty is the rose's fragrant breath;
  Its radiance is the mariner's delight,
As rocked upon the surging sea of death
  He steers his vessel for the harbor light.
To know it is to dwell in freedom's fold;
  To voice it is to have a perfect speech;
To see it is forever to behold
  The earth and heaven which the prophets teach,—
No sad suspense, no unavailing tear,
  No sighing from a surging sea of grief,
No stress of doubt or ragged rock of fear,
  No sandy shore of barren blind belief.
Oh, seek its shelter and enjoy its shade!
  Oh, hear its whisper and obey its call!
Let tattered trouble from thy figure fade,
  And on thy shoulders let Truth's mantle fall.

Selected Articles

[Frank Bell in *The Star*, Bradford, Pa.]

The remarkable spread of Christian Science is due to various causes. No doubt persecution has contributed somewhat to this result. Religious persecution is no longer a thing of prison, rack, or fagot, but of such devices as ridicule and social ostracism. Happily, these expedients have been no more effective for the purpose intended than were the physical tortures that preceded them. The blacker the picture painted of Christian Science in sermon or circular, the more likely are hearers and readers to be impressed with the irreconcilable difference between Christian Science as it is alleged to be and Christian Science as it manifests itself in its effects upon those who put its precepts into practice.

There must always be in any community numbers of thinking persons to whom the question naturally comes as to why those who think they have something so much better than Christian Science, should devote their time to saying unkind things about the latter instead of demonstrating the superiority of their own. The Christian Scientist is taught that the best and only way to promote his religion is to prove to mankind what it will do here and now for the sick and the sinning.

A little investigation will convince any unprejudiced inquirer that Christian Science does not in any important respect resemble the description recently given. No one who wishes to be well informed need take the word of any one else, for knowledge of Christian Science, like knowledge of mathematics, is not a matter of some one's say-so, but of individual test and experience. It has never been offered on any other basis, and it has become a world-wide religion in less than half a century, because it proposes to prove to the satisfaction of any earnest seeker that it is genuine and complete Christianity, the kind the Master said would be known by its fruits in the establishment of both health and righteousness among men.

✧

[Avery Coonley in *B'nai B'rith News*, Chicago, Ill.]

Now that the discussion of Christian Science by Doctor ——, under the caption "Jews and Christian Science," which began in the January issue, has been brought to a close, I should appreciate an opportunity to point out some of the misapprehensions regarding the religion under consideration which are created by the article. It is not my purpose to enter into the question at issue.

I have no hesitation in denying the charge that the members of the Jewish faith who have joined the Christian Science church have been induced to do so by misrepresentation and falsification. While no religion can control or speak for the acts of all its adherents, such methods are opposed to both the teaching and the practice of Christian Science. Dishonesty is bad, and were it practised by Christian Scientists, as is intimated, it would have exactly the opposite result from that attributed to it, and instead of attracting people to Christian Science, would have wrecked the movement. Nor are persons hurried into membership in the Christian Science church. On the contrary, applicants are not accepted until they have shown an adequate understanding and a reason for the hope that is in them. It may be safely assumed that those who have adopted Christian Science have done so for what they find it to be, not on the basis of false representation.

It would be readily conceded by any Christian Scientist that if this religion were in fact what the doctor conceives it to be, it would have amounted to little, and certainly would not have merited the extended consideration it has had in your publication. It is a matter of regret that in discussing a religion of such notable practical achievements he should have permitted himself to ridicule some of its fundamental postulates, which he admits he does not comprehend, such as, for instance, the Christian Science definition of God. The understanding of God and man's relation to Him, derived by Mrs. Eddy from the Scriptures, is the very essence of Christian Science, and although there are those who, like our critic, have failed to find this definition intelligible, this does not warrant him in ridiculing it, since there are thousands of others who have succeeded in comprehending it, and in such a practical way that their understanding has sufficed to heal them and others of sin, sorrow, misfortune, and disease in its most malignant form.

There are those also who deny that God is in fact omnipotent and that He made all that was made, and who deny that man is made in His likeness. Nevertheless, to subscribe to these statements of Scripture and to accept them as the fundamental facts of existence, does not require any irrational process. In fact, a very strong presumption of rationality is created when, on the basis of this conception, the sick are healed. With regard to this healing work the article in question conveys a wholly wrong impression, due no doubt to incorrect information.

That Christian Science in less than fifty years has taken its place as one of the world's great healing agencies, is a matter of fact, not of opinion. Our critic states in effect that the healing to its credit is confined to nervous disorders, but this is so far from the fact that I believe it may be stated that there is not one of the list of so-called incurable diseases whose cure has not been accomplished through Christian Science. Among these are tuberculosis, tumor, cancer, and similar afflictions, which can by no stretch of the imagination be classed as nervous disorders. Carefully authenticated cases of the successful healing through Christian Science of the above-named diseases, and many others, including heart disease, drink and drug habits, and rheumatism, may be found on page 1107 and the following pages of the Congressional Record of January, 1915, and testimonies covering disorders of various natures appear regularly in the *Christian Science Sentinel* and *The Christian Science Journal*.

Nor is there ground for the contention that Christian Science healing is the result of hypnotism or suggestion. In view of the unparalleled achievements of Christian Science, such a theory would necessarily mean that its practitioners were the foremost exponents of the practice of suggestion, a *reductio ad absurdum* resulting in making those who do not believe in, study, or understand hypnotism and suggestion, more skilled in their application than those who do. The fact is that hypnotism and suggestion are the antipodes of Christian Science. The premise upon which suggestion is based, that one human mind acts upon another, is denied by the fundamental theorem of Christian Science, that God, Principle, is the only Mind, and that true mental action proceeds only from God to man, not from man to man.

The healing of Christian Science is due solely to the power of God, "who healeth all thy diseases;" to the understanding, in its relation to human affairs, of the truth of that statement in Genesis: "God created man in his own image, in the image of God created he him." The healing which results from this understanding is accepted by Christian Scientists as the proof of its correctness.

Every denomination is faced by the necessity of reconciling certain apparently divergent statements in the Scriptures. Our critic is mistaken in thinking that Christian Science "for-

Digitized by Google

gets" that there is both a spiritual and a material account of creation in the Bible. On the contrary, an extended treatment of these two accounts will be found in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, in the chapter on Genesis, resulting in the acceptance of the spiritual as the true account, the other being understood as the false sense of creation presented in contradistinction to the true.

The Jew as well as the Christian Scientist has both accounts to deal with. If he queries what has been done with the material account, we may ask what disposition has been made of the spiritual account. Again, when asking what in Christian Science becomes of the material world, it becomes necessary to decide, if the Christian Science teaching be denied, what becomes of the omnipotence of God with omnipotent and indestructible matter accepted as a reality. In this connection our critic points to certain of the miracles of the Bible in which some material act was performed, and chooses to regard this material act as the essence of the miracle.

There are, however, many other miracles in the Old as well as the New Testament which involve no material act, and which therefore on a material basis become impossible of explanation. In Christian Science what are commonly called miracles are regarded as natural rather than miraculous manifestations of divine power, the result of the belief in and understanding of God's omnipotence. According to Christian Science, the same results would be seen today under the same exalted thought; and let me point out that Jesus' acts of walking on the water and stilling the tempest are deemed attainable by any one who could reach his state of consciousness.

Whether the members of the Jewish faith can consistently accept Christian Science is not for me to say, but if they are to give the question any intelligent consideration, it must be from the standpoint of what Christian Science really is, what it actually teaches and accomplishes, and this can best be gained by a study of its text-book and the Bible.

✧

[Brigman C. Odom in *Beaumont* (Texas) *Enterprise*]

A recent issue contained statements by an evangelist in regard to Christian Science, one of which characterized this teaching as a leech and a parasite upon Christianity. One definition of the word leech is "a professor of the art of healing." It is quite certain that our friend did not use the word in this sense; for if he realized the art of healing to be an essential element of present-day Christianity, and if he knew that in this respect Christian Scientists are obeying the Master's injunction to heal the sick, he could find no fault with their lives. Christian Science accepts the Master's teaching, "This is life eternal, that they might know thee," and the knowledge of God gained from Jesus' words and works is the life of the Christian Scientist. One of the tenets of this religion, as given on page 497 of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is as follows: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life."

The speaker is quoted as having further affirmed that "if Mrs. Eddy's followers would give half the time and study and put half the effort into working for Jesus Christ that they do in studying her doctrines, they would be most effective Christians." Christian Scientists spend much time in the prayerful study of the Bible as interpreted in Christian Science. As a matter of fact, they are unique among Christian denominations on account of their earnest daily study of God's Word; and the Scriptural truth thus gained is made practical in the overcoming of sin and sickness, sorrow and despair, not only in their own lives, but also in the lives of others. Is not this working for Jesus the Christ and effective Christianity in the light of the commands, "Go ye into all the world, and preach the gospel," "Heal the sick"? Are not these the "signs following" which our Saviour designated as the test of true discipleship?

✧

[S. T. Downs in *Madison* (Ind.) *Democrat*]

The sermon in a recent issue by the Rev. Mr. ——, in which he attempts to discuss the teachings of Christian Science, serves to show the injustice as well as the absurdity of taking a portion of an argument from its context and thereupon directing an attack. For instance, the statement quoted from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, "There is no matter" (Science and Health, p. 278), is a declaration of absolute truth, and the attempt to refute it by reading the first verse of Genesis certainly indicates that our brother has not read carefully what leads up to or follows the statement from Science and Health. There is nothing connected with the statement which denies the record of creation as expressed in the first verse of the Bible, nor does that verse, or the first chapter of Genesis, say a word about matter. Christian Science teaches, as did the Master, that God is Spirit, and that the first chapter of Genesis is the true record of creation, and sets forth the fact that the universe, including man in God's image and likeness, is really spiritual. It was Mrs. Eddy who pointed out the fact that the record of belief in the creation of matter is given in the second chapter of Genesis, and she shows by the record itself how the belief in an opposite to God, Spirit, has produced all the sin, sickness, and misery the world has ever known. Christian Science makes it very clear that Christ Jesus came to restore to us man's God-given dominion, as recorded in the first chapter of Genesis.

There is nothing in Mrs. Eddy's writings to justify the statement of the speaker that she "makes Christ out an impostor by claiming that he pretended to die," which is based on a quotation from page 45 of Science and Health, "Jesus' students, not sufficiently advanced fully to understand their Master's triumph, did not perform many wonderful works, until they saw him after his crucifixion and learned that he had not died." This quotation is part of the conclusion to a very clear and helpful discussion of the triumph of Love over hate, of the power of Life over death, and that the resurrection proved that man in God's image and likeness is spiritual, not material. The statement, in other words, is a part of Mrs. Eddy's great message of emancipation and deliverance from all error, as proved by Jesus in the victory over the grave and death, and she shows how the great Teacher revealed that death is the unreal, while "Spirit is the real and eternal" (Science and Health, p. 468).

The same lameness of argument and intent to disprove at any cost is shown in the statement that "Mrs. Eddy makes Jesus out a liar," when on page 75 of Science and Health, in referring to raising Lazarus from the dead she says, "Jesus restored Lazarus by the understanding that Lazarus had never died." Our critic could not have read this page without knowing that Mrs. Eddy bases her argument on the statement of Jesus, "Our friend Lazarus sleepeth; but I go, that I may awake him out of sleep," and the explanation which follows, "Howbeit Jesus spake of his death: but they thought that he had spoken of taking of rest in sleep." The critic to make his point quotes only the final statement by Jesus in the following verse: "Then said Jesus unto them plainly, Lazarus is dead." It is very evident that the Master made this statement out of concession to the spir-

Digitized by Google

itual blindness of his followers, and that his first statement was one of absolute truth. Jesus refused to make this concession when he raised Jairus' daughter, but he boldly said, "She is not dead, but sleepeth," and the record is that "they laughed him to scorn, knowing that she was dead." But he proved the spiritual fact that he audibly declared.

Then our brother trips himself again in the quotation from Science and Health (p. 468), "Soul cannot sin." This he attempts to disprove by the reference from Ezekiel, "The soul that sinneth, it shall die." Any one familiar with Christian Science teaching knows that in Christian Science, the word Soul when capitalized is synonymous with God, and that in the quotation mentioned the word Soul is used in the deific sense. In dealing with spiritual facts, Mrs. Eddy was compelled to use terms that have a material meaning, and this difficulty confronted the Bible writers also. Mrs. Eddy points out on page 482 that "the proper use of the word *soul* can always be gained by substituting the word *God*, where the deific meaning is required. In other cases, use the word *sense*, and you will have the scientific signification." This explains the meaning of the reference from Ezekiel.

In thus proving that all the reverend gentleman's references to Christian Science were decidedly erroneous, it seems well to conclude with the statement that Christian Science asks to be judged by its fruits. It has healed thousands upon thousands of sin and sickness, including every disease known to mankind, and it offers a haven of rest and "the peace of God, which passeth all understanding," to the sincere seeker after God and His righteousness.

✧

[Robert S. Ross in *The Advertiser-Journal*, Auburn, N. Y.]

The man who desires to help his fallen fellow man to become a useful member of society, does not tell him his case is hopeless and assure him that he is on the direct road to perdition. He who would lend a helping hand knows that the unfortunate needs the kind of encouragement that will enable him to throw off the evil that is besetting him and to choose good as his goal in life. With this method of helping the downtrodden the so-called evangelist, Mr. ——, will readily agree. Nevertheless, when the same method is applied to the man who is in bondage to the evil called sickness, he ruthlessly attacks Christian Scientists for their presumptuousness. He approves of the Christianity that helps the fallen to be free from sin, but disapproves of the Christianity that helps the sick to get well. In other words, he believes that God is omnipotent on some occasions and impotent on others, despite the assurances of the psalmist, who sang of Him "who forgiveth all thine iniquities; who healeth all thy diseases."

The Christianity of Jesus was a religion of works. Mere lip-service meant nothing to him. He healed sin and sickness by one and the same process, and reminded his followers throughout all time that the ability to repeat his works would be the only acceptable proof of discipleship. "He that believeth on me," Jesus said, "the works that I do shall he do also;" and at another time he said, "Heal the sick, cleanse the lepers, . . . cast out devils; freely ye have received, freely give." If our critic attacks Christian Scientists for healing the sick, it is to be assumed that he would attack Jesus for doing the same thing, were the Master on earth today, inasmuch as Christian Science is but a restatement of the Christ-teaching of the first century.

In classing Christian Science with occultism, our critic merely adopts the methods of the Pharisees, who accused Jesus of healing through Beelzebub. If hypnotism seems at times temporarily to relieve the sick, it certainly does not help the patient morally. On page 206 of Science and Health, Mrs. Eddy writes: "Will-power is capable of all evil. It can never heal the sick, for it is the prayer of the unrighteous; while the exercise of the sentiments—hope, faith, love—is the prayer of the righteous. This prayer, governed by Science instead of the senses, heals the sick." Christian Science has never entered the experience of a single individual without making that individual better physically and morally.

When Peter was led by a sense of rivalry to question the ability of John to do the Master's work, Jesus rebuked Peter, saying, "What is that to thee? follow thou me." This was Jesus' way of telling Peter to attend to his own affairs and to devote his time to the more profitable and convincing work of putting his Christianity into practice. Christian Scientists know it is as impossible to help a man to get well by telling him he is going to die, as it is to help a downtrodden sinner by telling him he is going straight to perdition. If our critic believes otherwise, that is his privilege. Before going out of his way to attack those with whom he does not agree, however, it might help him to meditate a while on the Master's rebuke to Peter.

✧

[Carl E. Herring in *Omaha* (Neb.) *Bee*]

It is a pleasure to undertake to answer "Bible Student," inasmuch as a scholar is always interested in logical sequence and is not averse to breaking away from interpretations which have only age to commend them. His premise occurs last, therefore we will begin at the bottom of the article and read up. Premise: Adam's transgression brought sin and death into the world, thereby making necessary a redeemer, and Mrs. Eddy attempts to show "that the Bible story of the fall of Adam was a lie."

Now, if we shatter the premise, it is going to make trouble for the conclusion, is it not? That two and two make five is a lie, but the child who makes the mistake is not a liar. That the Bible records the lie about man reflects only upon us if we fail to grasp the significance of the spiritual and material accounts of creation, the true and the false, the good and the evil.

The first chapter of Genesis and three verses of the second give the spiritual account of creation. "And God [Elohim] saw every thing that he had made, and, behold, it was very good." Then follows the material account of creation, in which the Lord God is said to have made man from the dust of the ground, but we are previously told that Elohim had created man in His own image. Both accounts cannot be true. A dust man is not the image and likeness of God.

Mrs. Eddy did not discover the two accounts of creation. Bible students have always recognized them, but some theologians unlawfully yoked them together, and the Bible students looked on helplessly because they did not know what to do about it. Mrs. Eddy did, and it makes her book Science and Health veritably a "key" to the Scriptures.

Let us read up on this and on the article of "Bible Student" to where he quotes from I John, "Try the spirits whether they are of God," and instead of going back to the fall of Adam, which has nothing to do with the case, we will accept the test Jesus made for himself when John sent messengers to find out whether he was of God, and Jesus sent back word, "Tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached."

Christian Scientists accept this test in its unadulterated simplicity and prefer it to the labored movements of the theologians of the middle ages.

Editorial

Spurious Literature

We are informed that the practice of circulating manuscripts which purport to be extracts from letters written by Mrs. Eddy to her students, alleged shorthand reports of instructions given by teachers to their pupils, and other papers of doubtful authenticity, is still going on in some parts of the field. Because of this we have been asked to repeat a warning which was given editorially in the *Sentinel* some years ago. This we gladly do, with the hope that these papers will no longer continue to hold the attention of those who have been led to believe them to be authentic:—

"These papers are not what they purport to be, and they have been disowned and repeatedly branded as spurious by their reputed authors. Their circulation is a fraud upon those who receive them in good faith and believe them to be clear expositions of Christian Science, when as a matter of fact they are positively harmful, because they are largely incorrect both in letter and in spirit, and therefore misleading to those who depend upon them as advanced teachings of divine Science. No one but the author of Science and Health has 'explained' this book without diluting the Science which it contains.

"The principal reason that the circulation of these manuscripts is harmful is that they rob the young student of his individuality and independence, and tend to make him dependent upon the *words* of another rather than upon his own demonstrable understanding of the teachings of our text-book.

"Another reason why these manuscripts should not be circulated is that most of them contain formulas for the treatment of disease and other manifestations of evil, whereas any person who knows anything of Christian Science must know that it is not the repetition of words that destroys evil, but the understanding of the truth of being—of God and His relation to the universe, including man—which heals the sick and destroys all error. Our Leader has given us in Science and Health and her other published writings the clearest and best elucidation of Christ's healing gospel, and for us to allow our attention to be distracted from these works is to waste both time and opportunity.

"Perhaps some of our readers will console themselves with the thought that what is written here about these manuscripts in general does not apply to the particular manuscripts which they have in their possession, but this will be a mistake."

We are glad to quote also from an article in the *Sentinel* of Aug. 15, 1903, written by one who has been greatly misrepresented by the circulation of typewritten reports of "talks" alleged to have been delivered by him to Christian Scientists. In this article he said in part:—

"Christian Science is *exact*, *profound*,—infinite in range and application. It cannot tolerate or coalesce with any error of premise or conclusion. Only those students of this Science who have a technically correct knowledge thereof are at all qualified to compose, edit, or revise its literature, and no wise student should be willing to jeopardize his own safe progress by reading or giving heed to any literary production on the subject of Christian Science which is for any reason doubtful as to authorship or correctness of statement.

"The habit of circulating copies of letters, 'notes' of class teaching, of 'talks to students' by lecturers, and many other papers of similar import, is in direct violation of the prudent rules which are designed to safeguard our entire educational system. The use and circulation of these fragmentary and unauthorized papers is harmful, because it has the effect of flooding the field with an illegitimate *quasi* literature, and for the further reason that the alleged authors thereof have generally found them to be so distorted and defective that they repudiate them as being perverted and unsafe. For these reasons our people should know that these things ought to be utterly and promptly discarded as a whole, and this habit abstained from for the sake of every one concerned and the general interest of the cause."

The above is plain speaking, and none the less to the point than when it was written more than a decade ago. If any of these documents come our way, let us not hesitate to speak the truth lovingly to the donor and then consign the manuscripts to the waste-basket.

Archibald McLellan.

Discord and Harmony

No human instinct is more universal or more closely related to the welfare of man than that witnessed to in the discomfort of discord. Normal people covet the freedom and safety of peace; hence the significance of the teaching of Christian Science that "Truth is affirmative, and confers harmony" (Science and Health, p. 418). We all perceive this sequence in the realm of mathematics, if not in the realm of human intercourse, and the vast number who have been healed through the ministry of Christian Science have gained a yet deeper apprehension of the verity of this fact.

Every scientific investigator is a seeker for evidence of the reign of law and of the unity of being. In the study of so-called nature, however, he is continually coming upon contradictions, apparent cross-purposes, which are wholly out of keeping with the Scripture teaching that the source of being and governor of the universe is infinitely wise and good; that God is ideal in nature and manifestation, a teaching which logically renders discord both illegitimate and impossible in His kingdom. A perfect cause must produce perfect and harmonious effects, but conformity to the so-called facts of human experience means in large measure enslavement to confusion. Things mundane all seem to move about a common center and to be governed by the same law, and yet they have fatedly interfering orbits.

To illustrate: The farmer plants a seed, and this embryonic seat of what we call life at once relates itself to the chemistry of the earth and air about it and to the rain and light that fall upon it. Thus endowed, it grows to be a tree and gives promise of abundant fruit. No sooner, however, does it put forth its blossoms than a worm appears which, working under the apparent government of law, feeds upon the tender leaves and threatens the destruction of both fruit and tree. For the farmer's relief there are birds which, according to their instinct, feed upon the worms, and they might thus save the situation did not sportsmen ruthlessly kill them for fun or food by means of another marvel of natural law. In his distress the farmer resorts to the use of nature poisons, which finally eliminate the worms and incidentally a neighbor's bees as well!

It is in the midst of this tragedy of warring forces, all of which witness to the activity of some so-called law of nature, that the farmer achieves whatever success he may, and his difficulties seem to multiply with every discovery of means for overcoming them. Yet it is written, "Let them have dominion"! What does this mean? The mastery of these antagonisms by the exercise of that educated alertness which tactfully pits one divine (*alias* natural) law against another and thus wins the game? This is the teaching of much science

Digitized by Google

and theology today, but it is in the face of a growing protest that conflict is not the order of wisdom's rule, but rather the universal harmony prophetically hinted at by Isaiah when he wrote, "The wolf . . . shall dwell with the lamb."

Educated ignorance never made a greater mistake than when it identified nature-tragedy with the reign of divine law and then thought of its dictum as Christian. Christian Science voices the deeper convictions of an ever increasing body of thoughtful believers in its unequivocal declaration that God, the infinite wisdom, is not the author of conflict or confusion, and that the knowledge of His law is adequate to the stilling of every storm, the destruction of all the discordant instincts and assertions of material sense.

Christian Science teaches that law means the activity of Love, and this alone. It always effects the reign of harmony, not discord; of life, not death. Until spiritual law is fully understood and obeyed, its presence may precipitate the struggle which pertains to escape from the dominion of past habit and educated disposition, but its will and end is peace. Mrs. Eddy has said that the understanding of "one infinite God . . . ends wars . . . and leaves nothing that can sin, suffer, be punished, or destroyed" (Science and Health, p. 340), and it is the ever enlarging demonstration of the possibility of this peace within and without which explains the hold that Christian Science has gained upon the aspiring thought of the world.

JOHN B. WILLIS.

✧

The Light that Heals

IF a Christian Scientist were asked what it is that heals the sick in Christian Science, he would unhesitatingly answer that it is spiritual illumination, and for this response there is abundant Scriptural authority. The mission of the Christ was prophetically described by Zacharias in these words: "To give light to them that sit in darkness and in the shadow of death." Long before his day, when to mortal sense all seemed dark, Isaiah had said, "Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee." To this he added, "The Lord shall be unto thee an everlasting light."

This latter promise becomes a vital element in the experience of those who are healed in Christian Science, for it is their privilege to be "children of light," a term used by several of the New Testament writers. We are told that at the transfiguration Jesus was such a transparency for the divine light that even his garments were radiant. The next day, when he came down from the mount, this light went forth to bring healing to the poor epileptic boy, proving that it is indeed the very life of men. It rests with us to "let" this light shine on and on, till all the darkness of mortal sense is dispelled.

On page 446 of Science and Health Mrs. Eddy makes it clear that it is not the human will which heals the sick, and she says: "Not human platitudes, but divine beatitudes, reflect the spiritual light and might which heal the sick." Our Master said, "He that followeth me shall not walk in darkness, but shall have the light of life." One who is in bondage to his own and the general belief in disease laws, and who must sooner or later suffer therefrom, is not following Christ Jesus in the way that he appointed. Indeed such a one is oftentimes in deep darkness, awaiting the blind decree of fate as to what may be the outcome of an illness. Happily, however, Christian Science has already shattered to a large extent the belief that God is responsible for the darkness which induces the disease, and this means much to mankind. Light is not only diffusive but penetrative, and its rays frequently find a chink in the dungeon wall of mortal sense and give promise of possible deliverance. Then comes courage to protest in the name of God and His Christ against an unjust sentence, and this itself helps to open the doors of the prison. Next comes in God's own way, and often most unexpectedly, the healing truth, and the belief in disease with its outward manifestation "totters to its falling before the battle-axe of Science" (Science and Health, p. 389). The unreal walls of materiality, believed in for ages, vanish as a dream before the light of real being, and as in St. John's vision all things are made new.

No one is healed in Christian Science without being conscious in some measure of the divine power and presence, and feeling in some degree the light and warmth of Love and Truth. Even a little child too young for reasoning processes will respond to the light as does the flower, and will reflect it by being happy, loving, and well! The man blind from his birth, who was healed by Jesus, at first knew only that he could see. The things around him had been there all the time, and the light had been there, but he was in darkness, physically and spiritually, as are so many sufferers today, and he could not see them. In mortal experience thought seems to center upon things, and quite forgets the light, but the one who is healed in Christian Science instinctively thinks of the light which has healed him and forgets the things, the shadows which crowd the darkness.

Jesus directed the erstwhile blind man to look for the Son of God, and when he saw him spiritually he bowed in lowly reverence before him. The one healed in Christian Science soon learns that he must at once take up the inspiring task of seeing man as God's idea, and of manifesting this idea so clearly that others shall see it and glorify our Father in heaven. St. John tells us of the glory of the heavenly city, in which is neither sin, nor disease, nor death, and he says, "The nations of them which are saved shall walk in the light of it." How many are we bringing to this light?

ANNIE M. KNOTT.

Among the Churches

Current Notes

HAMILTON, OHIO.—The committee on distribution of literature from July 1, 1914, to July 1, 1915, distributed 4,800 *Monitors*, 1,000 *Sentinels*, 237 *Journals*, 21 *Heralds*, 250 pamphlets, 2 copies of "Science and Health with Key to the Scriptures," 1 copy of "The Life of Mary Baker Eddy," 1 Church Manual, and 5 *Quarterlies*, making a total of 6,317 pieces.—*Correspondence.*

NEENAH, WIS.—The Christian Science Society of our two cities [Neenah-Menasha] has purchased the Episcopal church building on East Wisconsin avenue, and is holding services therein.—*Neenah Times.*

MORRISON, ILL.—The contract has been awarded for the erection of a church building for the Christian Science denomination and the contract price is six thousand dollars.
Sterling Standard.

MARQUETTE, MICH.—First Church of Christ, Scientist, of Marquette, has decided to erect a white granite church to cost fifty thousand dollars.—*Grand Rapids Press.*

RICHMOND HILL, N. Y.—With simple and impressive ceremonies First Church of Christ, Scientist, will dedicate its new church edifice in Greenwood avenue, between Jamaica

Digitized by Google

and Lexington avenues, Richmond Hill, Sunday morning [July 25].

This church had its inception when nine adults and seven children met at the home of two of their number on June 7, 1909, and took steps to hold Christian Science services, which finally resulted in the organization of a Christian Science Society on March 4, 1910. A short time after rooms were rented in Arcanum Hall in Jefferson avenue, where the first public services were held. The society grew in numbers until it was found necessary to look for other quarters, and in September, 1913, the society incorporated as First Church of Christ, Scientist, of Richmond Hill, N. Y., and then took steps to establish a building fund and secure its own property. The present site on Greenwood avenue was purchased, and the ground for the church edifice was broken at dawn of the New Year of 1914. The building progressed rapidly, so that it was opened for services July 26 of the same year.

The building, complete with site and furnishings, cost short of fourteen thousand dollars. It is now proposed to enlarge the church property by acquiring land on both the north and south sides of the edifice, which will give ample room for further building when the necessity arises.

Richmond Hill Record.

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 5, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, Oct. 13, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 4, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

St. Louis, Mo.

The introduction by Mrs. Katherine Tuckerman, second reader of Third Church, in presenting Virgil O. Strickler, who lectured on Christian Science at the Odeon under the auspices of the five Christian Science churches in St. Louis, was as follows:—

A new revelation has come to this age,—a revelation of hope; for the promises of the Scripture are being fulfilled. Thousands of us are bearing witness to this fact. No one can say today that there is anything too good to be true. We are finding out that only the good is true, and also that God, good, is a living reality. Listen to some of the promises. In Malachi we read, "Bring ye all the tithes into the storehouse, . . . and prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it." In Revelation we find: "And I saw a new heaven and a new earth: for the first heaven and the first earth were passed away; and there was no more sea. . . . And I heard a great voice out of heaven saying, Behold, the tabernacle of God is with men, and he will dwell with them, and they shall be his people, and God himself shall be with them, and be their God. And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." These are true, as Jesus proved to the people of his age; and to us of our age Mrs. Eddy has so clearly interpreted Jesus' teachings that we are also proving them true.—*Correspondence.*

✧

Bartlesville, Okla.

A lecture on Christian Science, under the auspices of First Church of Christ, Scientist, was delivered at the Odeon Theater by Clarence W. Chadwick. He was introduced by Alexander Calvert, first reader, as follows:—

Christian Scientists are deeply in earnest about their religion, and the question is often asked, What is the secret of Christian Science, that it makes such a tremendous appeal to its adherents? Christian Scientists are satisfied that they have at last found the logical answer to the most important of all questions: What is God, and what is man's relation to Him? Human experience has many ills, and the world is busily engaged in trying to find a remedy for these ills; but material remedies have generally proved disappointing. The many cases of healing, moral, physical, and financial, related in the Bible, justify us in expecting to find health in connection with our religion. Some years ago Mrs. Eddy discovered the Principle of divine Science as demonstrated by Christ Jesus and the early apostles. She revived divine healing, and as the result of her discovery and demonstration this healing is being practised by thousands of people.

Correspondence.

✧

Bay City, Mich.

William D. McCrackan delivered an address on Christian Science before several hundred people who thronged the Washington Theater. He was introduced by Postmaster Angus M. Miller as follows:—

It has been said that the brightest star in the religious heaven is the star of Christian Science. Just as the star of Bethlehem led the wise men of old to the cradle of the child Jesus, so the Christian Science star leads the wise of mankind to Christian truth. The Bible tells us: "Ye shall know the truth, and the truth shall make you free." Christian Science unfolds God to man as divine Principle, and to any one who will apply the rules of Christian Science, the truth is revealed. In the light of this teaching the cobwebs of mystery are swept away and Bible truths are revealed in their simplicity.—*Bay City Tribune.*

✧

Chicago, Ill.

George Shaw Cook delivered two lectures on Christian Science for First Church of Christ, Scientist. He was introduced at one by John T. Cowles, who said:—

It is indeed a rich inheritance that the Discoverer and Founder of Christian Science, Mrs. Eddy, has given to the present and coming generations,—an inheritance that reforms the sinner, heals the sick, and makes men free. I had met with experiences in my time that led me to believe there was no God. I was practically an infidel, a wanderer in the wilderness, without hope and without a God. At that time I was a sufferer from nervous prostration, bordering on insanity. Turning to Christian Science for help after *materia medica* had pronounced my case incurable, but with little faith in its doctrine, I was healed with one treatment. Need I say that I am grateful for this teaching? I am indeed grateful, for Christian Science has revealed to me an omnipresent God, a God of love. My greatest happiness for these many years, since my healing, has been and is, to pass a cup of cold water in Christ's name to my fellow men.

Digitized by Google

At the other lecture the introduction by Milton B. Marks was in part as follows:—

The regenerative and healing works of Christian Science serve as a continual invitation to mankind to investigate this inexhaustible subject. Today unprejudiced inquirers are numbered in the millions, and we gratefully recognize that God has supplied the means to meet their needs abundantly. The student of this Science proves its truth by demonstration.—*Correspondence.*

✧

Lompoc, Cal.

William R. Rathvon delivered a lecture on Christian Science in the Lompoc Theater. Richard A. Lazier, first reader of the Christian Science Society, in introducing him said in part:—

Whenever there is brought to us any good news, whenever there comes to us any particular "good luck," as we call it, almost our first desire is to tell our friends and neighbors about it. It was with this thought in mind that we arranged for this lecture here this evening. We have "good news" to pass along to you. Christian Scientists the world over are proving daily that God does heal sorrow and sickness and sin, and they are realizing more and more that "He is our refuge and strength, a very present help in trouble." We want you to know more about this wonderful power that is able to regenerate mankind.—*Correspondence.*

Testimonies of Healing

My first acquaintance with Christian Science was about sixteen years ago, when my mother was healed in a few treatments of stomach disorder and other chronic ills of ten years' standing. I then began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, and other Christian Science literature, but did not take much interest in the subject. I would study a while and then lay the book aside. This went on for nearly eight years, when it came to me that I was not getting much help from my reading. I began to look for the reason, and soon found that I was trying to make Christian Science conform itself to my will, instead of permitting myself to be governed by divine Truth. Thereupon study began in earnest, and as my own preconceptions were laid aside, I was better able to grasp the truth contained in our text-book, and benefits were received.

In 1903 I was compelled to quit work on account of malaria, and was in a very weak condition for six weeks, with no help from medical treatment. My mother finally prevailed and a Christian Science practitioner was called. She arrived in the evening, and being a friend of the family, remained that night. I had been unable for several weeks to eat any solid food, and was living on milk, which had become obnoxious to my taste. Christian Science treatment was given that night and the following morning. When dinner-time arrived I was ready with an appetite, for the fever was broken and my normal condition was not far off. I was at work again in two weeks from the time of treatment. About a year ago I was obliged to leave the office at noon on account of severe pain in my head and high fever. Finding myself unable to handle my own case, I asked my wife if she could assist me. She gave me treatment, and although I could have done my work the following day, I remained at home a day longer. No trace of this trouble has since manifested itself.

When our little girl was sixteen months old she fell against a gas-heater, burning her arm from the wrist to the elbow. Christian Science treatment was immediately taken up, and in not more than five minutes she stopped crying and was put to bed. She slept the night through as usual, and from all appearances suffered no pain. The arm was perfectly healed in a week, and not a scar could be found after two months. About two years ago my mother sprained her ankle. Being unable to help herself, after twenty-four hours of suffering she asked for help in Christian Science. Treatment was given at five in the afternoon and again at nine in the evening, and then she retired. The following morning she said she had slept the whole night and on awaking found her foot entirely well. At another time my wife's father stepped on a nail, which ran nearly through his foot, a mark showing on the upper side. He asked for Christian Science treatment at once, and, although his fellow workers warned him of ill results to follow, he was soon as well as ever, and needless to say did not experience the bad results predicted.

To show that benefits are quickly received by those of receptive mind, I wish to quote from a letter written to a member of my family for an aunt eighty-five years of age, who resides some one hundred miles from here. She says: "I am so thankful to God for what you have done for me, and to Mrs. Eddy for her teaching. I am a poor scholar and cannot understand her teaching much, but I think about it. My rheumatism has gone and I do not have pain any more." I might add that this lady was freed from rheumatism in a few treatments.

Greatest of all the blessings received has been the spiritual uplift, which enables us to look away from the mortal into the glorious liberty of the sons of God. And for this I thank God, and am grateful to our revered Leader, Mrs. Eddy, who was pure enough to dispel the mist and reveal to this age the ever present Christ and call her revelation Christian Science.

PETER S. JOHNSTON, Bridgeburg, Ontario, Canada.

✧

It is now over seven years since I first heard of this healing truth. While teaching school I boarded with a lady who was a Christian Science practitioner, and merely to find out what this religion was, I began asking questions. To my astonishment I found I was being relieved of a load which I had carried since childhood,—the fear of eternal punishment, not so much for myself as for my loved ones. My happiness in finding such a new-old truth knew no bounds, for I was simply a different person; I was free.

I studied Christian Science for a few months, then to please my parents I gave it up, and for five years lived without it, trying to find peace and comfort through the old thought, but never being satisfied. Something always made me think of Christian Science with a longing to take it up again. I had kept my copy of "Science and Health with Key to the Scriptures" in my trunk all this time, and one day I took it out and began to study it anew. From that day to this there has been hardly a day when my husband and I have not read the Lesson-Sermon together. We live on a farm, and often we have found the power of Truth "a very present help in trouble," for the animals as well as for ourselves and our two children.

I have never had better health than now, and I can accomplish as much work as would keep two persons busy, yet without feeling at all tired when evening comes. I am indeed thankful that I was led to the light, for I cannot see how I could ever live without Christian Science. While not yet members of the Christian Science church, we hope to be before long. Words cannot express our gratitude for the understanding of the Bible that has been revealed to us through the study of Science and Health. We are deeply thankful to God that we have found the truth.

MRS. J. A. ERICKSON, Brookings, S. Dak.

✧

[Translated from the German]

Some time ago I was seized with violent pain, and immediately declared the truth, without however meeting the trouble thoroughly, as we are taught to do in Christian Science. I expected a beneficent effect from a good night's rest, and so thought I would pay no further attention to the pain. This was a mistake, and a much greater one yet was that I thought such a thing as a diseased or sinful belief could not touch me after the beautiful demonstrations it had been my privilege to experience through divine Love; but, as the apostle says, "Let him that thinketh he standeth take heed lest he fall." At any rate, the pain became so severe the next day that I could not collect myself sufficiently to handle my own case. In the region of the liver there was a big swelling, and I was at a loss to account for my condition.

Having taken up duties in the home of strangers, I had to ask to be exempted from them for the day, and this of course attracted the attention and the mistaken sympathy of the inmates of the house. My condition steadily grew worse while I was being urged to use material remedies, since all kinds were held out as effective; in fact, the people in the house communicated with a physician against my wish, but I held fast to the thought that God is Love, and finally

Digitized by Google

succeeded in having a telegram sent to a Christian Science practitioner, asking her to take up treatment.

In the mean time it was evening, and without being aware of it I was made to swallow an opiate. The result was that my condition grew very much worse; still I was in a very quiet state of mind, with the conviction prevailing that I would experience help from God. Finally I cast up what I had taken; yet the pain did not subside until later, when the practitioner evidently began to treat me. The swelling also disappeared, and I was restored to my former freshness and sense of health. This experience meant a big stride to me, as it made me realize my lack of genuine humility, my failure to rely implicitly on divine Love, and daily to pray anew for the understanding of omnipresent wisdom.

Words fail to express my gratitude for the God-sent teachings of Christian Science. I thank the Almighty, and next to Him our brave Leader, Mrs. Eddy, and it shall be my endeavor to prove my gratitude by my life.

Irmgard von Petersdorff, Ralswick, Rügen, Germany.

✧

I have been healed of many ills through Christian Science. While in the Philippine Islands, during July, 1909, I fell from the roof of the hospital, where I had been fixing a glass in the skylight, and landed on a pile of rock. The right wrist was broken and my head was seriously injured. As it was a small post hospital, the doctors sent me to the division hospital at Manila, a distance of sixty-five miles. I was unconscious eleven days and twelve nights, awaking at about nine o'clock on the morning of the twelfth day, to find myself in a strange place and tied so I could hardly move. The first of September, 1909, I returned to my post, and a few days later, while at drill, the horse I was riding fell and threw me. His hoof struck my head in the place where it had been injured by my fall from the roof of the hospital.

At the conclusion of the regular inspection, on the Saturday following the second accident, while standing at attention in quarters, I had an attack of vertigo and was sent to the hospital, where at intervals I had some very violent attacks. The hospital authorities sent me to the United States in October, 1909, where upon the slightest contraction of the muscles I would have those same attacks. I seemed to get better, yet had no strength. I was discharged March 30, 1910, and went home to my parents, who were then living in Los Angeles. After considerable persuasion I was induced to take Christian Science treatment, and on May 2 went to work for a machinery concern, but could not keep it up because of my back, which was very weak as a result of the first fall. I have, however, been completely healed through Christian Science of the foregoing ailments, and in the past six months have felt better than ever before in my life and weigh a great deal more.

Another experience especially proved to me God's ever-presence and loving care. In November, 1913, a cold settled on my lungs. I concluded to go home, a distance of some twenty-five miles, and undertook this trip in an automobile with which I was not very familiar. When I was ready to return to the ranch, I decided to start early to avoid traveling in the dark. When about to go, it became evident that I had a fever, and a friend was asked to accompany me, as I did not want to go alone. When we were about eleven miles from home, my companion spoke to me and I did not answer, so she repeated her query, and then received a mumbled reply. I am unable to give any statement of what happened after this, except what was told me.

We had gone on several miles when my companion, feeling that I needed help, urged me to turn around and go back home. We were then about twenty miles from home and it was getting dark, but I made this distance, and some twelve miles of it in darkness, in a semiconscious condition. When about two blocks from home I had some kind of a spasm, but stopped in front of the house when told to do so, and unconsciously shut the engine down. The young lady went in and told my mother, who is a Christian Science practitioner, that I was sick. My parents came out to see what was the matter, and my mother states that my hands had to be pried from the steering-wheel and I was carried into the house. My mother immediately began treatment, and in two hours I was conscious and asked for something to eat. After eating I went to sleep, and did not wake until about seven o'clock the next morning. By evening all the soreness in my lungs was gone and I got up and ate dinner with the family. In a few days I was as strong as ever and have felt so ever since. I have worked under much the same conditions which brought about this attack, but have not had another. It has only been since this attack that I have made any great strides toward health and happiness. The healing then realized was the complete overcoming of all these discords. I would also like to mention that my father has been healed of the worst form of diabetes.

I am at a loss for words with which to express my thankfulness to God, and my gratitude to Mrs. Eddy, the Discoverer of this saving truth. I can only prove my gratitude by studying our Leader's teachings and by honoring them in my life.—Arthur E. Boyd, Los Angeles, Cal.

The above testimony is a correct statement of what happened on that auto ride. I know that it was only through the application of the very small understanding I have of Christian Science that we were able to finish the trip home in safety that night. I am thankful to God, our loving Father, for the protection and care He gives to His children, and grateful to Mrs. Eddy for the wonderful truth she has brought again to us.—Jennie E. Biggin, Redlands, Cal.

✧

The apostle John says, "He that feareth is not made perfect in love." When I began the study of Christian Science, I was so deep in bondage to fear that I seemed afraid of everything and everybody. I had an intense fear of death, and because of this would sit in my chair for hours at night, afraid to retire; but the understanding of God's love and presence immediately healed me of this fear, and I was able to retire and rest well. Again the apostle says, "Perfect love casteth out fear." I came to see that I had all fear and no love, and that this was the cause of my suffering; but I am glad to say that Christian Science is each day unfolding to me this "perfect love."

For years I had been dissatisfied with life and longed for something better. Each change that came I hoped would bring satisfaction, but I found no peace until I gained the right understanding of God as taught in Christian Science. Since learning even a little of how to love instead of fear God in times of sickness and trial, I have had that peace and joy "which passeth all understanding." When I took up the study of Christian Science I had an abdominal trouble for which I was wearing a support, and had undergone two operations without benefit. Soon after coming into Science, however, I was able to discard the support, and have had no further need of it.

My daily prayer is that I may so reflect divine Love that I may help others as I have been helped. I am willing to wait on God for that "perfect love," and say with our dear Leader, "Let us rejoice that we are subject to the divine

Digitized by Google

'powers that be'" (Science and Health, p. 249). I am indeed grateful for all the blessings I have received, and for Mrs. Eddy's teachings, which enable us to prove in such a practical way God's ever-presence and all-power.

CORA RANDLE, Dallas, Texas.

✧

[Translated from the German]

It is with a grateful heart that I wish to tell of the help and the blessings as well as of the instantaneous healings which I have experienced during the last three years through God in Christian Science. For a period of twenty years I could not make up my mind to become a member of any church,—yet I had often felt that there must be a church which would impart the right understanding of God and teach us to pray aright,—until one Sunday, when attending a Christian Science service, I immediately realized that this was the church for which I had so long been seeking.

My first experience was the healing of an ulcerated tooth after two physicians and two dentists had failed to relieve me. Through treatment given by a Christian Science practitioner I was freed from the dreadful pain and the attendant swelling. The second instance was that of a severe attack of cold accompanied by pain in the lungs, and consequently by great difficulty of breathing during one whole night. At eight o'clock in the morning treatment from a Christian Science practitioner was requested by telephone, for I was unable to lift my head from sheer weakness. At half past eight I arose, dressed, and worked all day without experiencing any fatigue; indeed, was entirely well. Again, after the physician had said he could do nothing more, Christian Science completely freed me in a month's time of asthma, with which I had been afflicted for five years. Next came a most serious case of neuritis. I would often have these attacks, and so severely as to be unable to go up and down stairs. The physician had given me no hope whatever of cure, but with every Christian Science treatment the pain grew less, until I was entirely freed from the trouble.

One day my right hand began to swell, intense pain set in, and there seemed to be an inflamed condition extending to the upper arm. I was unable to dress without experiencing great pain. The hand appeared to be paralyzed, and, although I did my best in trying to cope with the trouble, my efforts seemed to be unsuccessful. After five days of struggle I went to a Christian Science practitioner. This was at ten o'clock in the forenoon. Half an hour later all swelling and pain had disappeared, and thanks be to God, I regained the normal use of the hand.

From childhood on I never enjoyed a quiet, restful sleep, and what I had never lasted longer than a few hours. With advancing years the trouble grew worse, and at times there would not be more than one or two hours' sleep at night during a period of six weeks, and even then it was not refreshing sleep. I tried one Christian Science practitioner after another, apparently with but little success. I continued for a while having three or four treatments a week, and as a result had a few good nights; but as soon as the treatment stopped my sleep would be gone. I mentioned this to a Christian Scientist one day upon leaving church, and he said that every time I woke up, I should take Science and Health and read. That night I did as he had advised me and read until midnight. Then I fell asleep, and did not wake until three o'clock. This seemed hardly believable. The following night I read until one o'clock and then fell asleep, waking up at quarter past six. This seemed almost incredible. I thought something must be wrong with the watch, for it was the first time in thirty-eight years that such a thing had happened without my having taken some sort of a drug; even then material means often failed to produce an effect. I have had good sleep now for about a year, with the exception of a few nights due to carelessness in my Christian Science work. I am most grateful to God for the angelic messengers —good thoughts—which in this instance reached me through another's loving-kindness.

On another occasion, while having a cough, the attacks of which would last half an hour, some one's remark led me to a sudden realization of the unreality of this condition, the result being that I was freed instantly and had no return of the trouble. This was to me a miraculous experience. Again, I was desirous of knowing more of Christian Science, and at that time the opportunity presented itself for me to stay alone in an isolated house. My acquaintances all tried to dissuade me from doing so, but a Christian Science practitioner said that God is always with us; also that He was my light, and that I was never alone. I was greatly helped by putting all my trust in God. Often after the evening services I had to go to this house alone, as it was in the country, and had to enter it after ten o'clock in the evening; but with my thought constantly directed toward God I did not even experience a sense of fear and never spent a more delightful summer.

I am very grateful among other things for the opportunity I have had to acquaint myself with the teachings of Christian Science, and for having had the assistance of kind and loving practitioners, who lifted me out of sickness and above sinful thoughts. I am filled with thankfulness to God and with gratitude to Mrs. Eddy for all the help and the blessings received. My great desire is that I may make steady progress on the road to Truth, and gain constantly in the comprehension of divine omnipotence, wisdom, and love.

FRÄULEIN M. S. DAECHE, New York, N. Y.

✧

I wish to express deep gratitude for what Christian Science has done for me. During my school days I was always considered delicate, and I suffered from a weak throat until a few years ago, when this and one or two other ailments were overcome by the understanding of Christian Science. I am also grateful for the help this teaching enables us to give to domestic animals, for to the old way of thinking they seemed so helpless. For these healings, and also for having found in Christian Science a practical religion, I am most grateful.

GLADYS E. SLATER, Christchurch, New Zealand.

✧

For eight years the truth as taught in Christian Science has been our only help and physician. From a frail girl, seemingly heir to all the ills of the flesh, I have become a strong woman, able to do a mother's work. At the time I became a mother, the truth was my only physician, and brought me through perfectly, although condemned to suffer by physicians. I am very grateful that one was found in this age who was able, strong enough and brave enough, to teach us this truth so plainly that all who will may understand. Our little family owe all we are today to Mrs. Eddy's explanation of the Bible. It is a help every hour and every day, and I thank God that it is. This daily study is helping me to live above jealousies, and is banishing all hatred and revenge from my consciousness.

I was left a widow in my first year of married life, and neither the little one nor I would be here today but for Christian Science. My son is now almost six years old, and has never taken any medicine, but reflects a great deal of Love. I am very grateful for the Sunday school work. In the workaday world I find the daily Lesson-Sermon a great help; if the demonstration is not made, it is our own lack of understanding, for "Principle is absolute," as Mrs. Eddy

Digitized by Google

says on page 283 of Science and Health. I hope this testimony will be of help to some mother in her problems with the little one, as it is to me, and I pray that I may grow into a fuller understanding of the truth that sets us free.

PEARL I. BRIERLEY, Garden Grove, Cal.

✧

I feel it a duty as well as a privilege to give my testimony, hoping it may help some one who is still in darkness. As a child I always wanted to understand about God and longed for more light. Womanhood brought happiness, and life seemed like a sweet dream; but suddenly a great grief came upon me, and I cried out for more understanding. Ten long years I was searching for happiness. Health had failed me, and so had friends, until at last I was led step by step into Christian Science, and there found the true light. I was made whole, physically and mentally, and no one knows the joy that comes from within, although to mortal sense I had to give up everything. I have lost nothing but gained all. I was healed of a serious female trouble, also of a skin disease which had seemingly been inherited.

Seven years have passed and my health is perfect. I have not used any material remedy since my healing. There is no fear of the future now, for I know only good can come to those who dwell "in the secret place of the most High." I want to live in obedience to the divine Principle which our Saviour demonstrated. I love our dear Leader, who discovered and gave us this true light.

LIZZIE E. MILLER, Enon, Ohio.

✧

Words fail me when I try to express gratitude for what Christian Science has done for me in every avenue of life. From my earliest childhood there had always been a great desire to help the weak and suffering whom I saw all about me, and also to be able to bring peace where discord was rife. At the time Christian Science came into my life, I was starving for the God that seemed "afar off," for I could not accept the explanations of the Bible which had been presented to me; hence that wonderful book was closed to me until its spiritual interpretation was unfolded through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. Then what a transformation began immediately to be manifested! From a semiinvalid, constantly under the care of a physician, from spiritual starvation and a seemingly purposeless life, I awoke to the consciousness that God had answered my unspoken prayers, and that I was at last to be of real use to my fellow men through restored physical health and a constantly increasing understanding of God as the only lawmaker.

My gratitude grows day by day, and my thankfulness to the dear Father-Mother God who has given us through Mrs. Eddy this wonderful revelation of Truth, so simply stated that all, even the little children, may avail themselves of it.

MATTIE B. WILLIAMS, San Jose, Cal.

✧

[Translated from the German]

Sincere gratitude prompts me to testify to the blessings which I have received through Christian Science. My six months' old child became afflicted with epilepsy. After the little one had experienced several of these attacks, I called up a Christian Science practitioner and entrusted her with the case. She treated the child for a week, after which it was healed. It is now two and a half years old, and I have observed no trace of the trouble since. Christian Science has helped me in a great many ways, for which I am deeply thankful to God, and grateful to Mrs. Eddy.

LOUISE DAZINGER, Chicago, Ill.

From Our Exchanges

[The Living Church]

Let a man go through the world with his eyes fixed on the stars and he will see a vision of God. Man so often makes God like himself. A narrow man has a narrow God. A stern man has a stern God. The Pharisees were stern when they brought to Christ a woman taken in great sin. "Moses . . . commanded us, that such should be stoned." That is the law. Vast the difference between our Lord's judgment and theirs, a difference as great as between sunlight and frost. This was the verdict of a God of love. If we love darkness, our spiritual sight becomes darkened.

[Zion's Herald]

It is a pitiful sight to see one of our fellows standing disheartened and dismayed, and hardly caring what the morrow has in store for him. Whatever the unhappy train of events may have been which has brought him to such a pass, the fellow being who stands in our presence like that calls for prompt and persistent attention from us. It is for us to turn our best efforts toward putting courage into that one.

Putting courage into another means giving the best that we have. Nothing less than that will stay the sturdy qualities that are on the outward march in the breast of that other soul; nothing less will summon them back to rally there, and to turn the sad rout to a forward stepping move toward better things. If there is to go out from us a store of stoutness that is to render serviceable assistance to the man who is hesitating, faltering, falling,—because he has found his grip loosening and his courage ebbing away,—it must be such a store as is drawn only from where our treasures are. We must unlock the portals there, and give of the best that we have.

[The Congregationalist and Christian World]

The main source of our faith is to be found in the life and teaching of Jesus Christ. The nature and character of God, the relation of God to men, the relation of men to God, the relation of men to one another, the nature of sin and of holiness, the hope of immortality,—all of these themes have the clearest light cast upon them in the teaching and life of Christ. There is truth to be found elsewhere, but all must be brought to the test of his teaching. The Old Testament reveals God the creator, the Almighty Ruler of the universe; and nature and many religions contain revelations of God. But whatever in them conflicts with the character of God, the loving Father of mankind as revealed by Christ, is imperfect if not false. The primary necessity of the Christian is that he should know Christ. This means unceasing companionship with Christ, by the study of the gospels, by familiarity with his teachings, by obedience to his commands. Not that this will ensure the knowledge of all mysteries. There may be much even in the teachings of Christ that is hard to understand; but he who keeps in loving and loyal fellowship with Christ will be able to say with Peter, "Lord, to whom shall we go? thou hast the words of eternal life." We are to gain a sound basis of belief only by saturating our minds and hearts with Christ-given truth, so that we think and judge of all things under that influence.

[New-Church Messenger]

One has made great progress in spiritual knowledge when for the first time he clearly sees that God is love, and that love is at the heart of the universe. When the mind opens to this fundamental but sacred truth, a deep sense of satisfaction and peace is experienced. When it is truly acknowledged

Digitized by Google

that divine love rules, that all things are disposed as divine love would have them, consciously or unconsciously there must be resignation in a great degree to that rule of love. The things that trouble and offend have less power, because it is then known that a love surpassing our own disposes final results.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

Whatever else heaven may be, it will have to be the full and complete expression of life. No sensuous or esthetic gratification would be sufficient to satisfy the soul. Heaven would not be heaven without the fullest and completest expression of which individuality is capable; it would have to mean the release of all the dammed-up spiritual activities of those who on earth have aimed higher than they were able to reach. You have only to think for a moment in order to see that there can be no absolute heaven to a finite being, and no heaven of purely external glory which would satisfy every one; our heaven can only represent the highest attainment of the finite consciousness. Thus a materialized or animal nature may find a kind of heaven here which would be hell to a nobler soul. Woe to that man whose heaven consists in the satisfaction of his passions, and who has succeeded in obtaining it regardless of the call which human suffering makes upon him.

[*The Christian Work*]

Christ is not dethroned by any mode of evil. He lives, he loves, he reigns, and in all the chances and changes of mortal life he comes to succor and relieve. It is an unspeakable comfort to know this, and we can know it. If we live in close and loving fellowship with him, it is impossible to feel that some baleful power independent of the purposes of God interferes blindly every now and then to tear and crush human feelings and destroy the life of nations, as though there were no God to reckon with at all.

[*The Universalist Leader*]

Spiritual things are spiritually discerned. The human soul has always realized the existence of God because it has always beheld His face, heard His voice, and felt His presence, with a sensation as real as that which results from the influence of light upon the structure of the eye, the action of sound waves upon the nerves of the ear, or the resistance of a solid substance to the pressure of the hand. "The Spirit itself beareth witness with our spirit, that we are the children of God."

[*Pacific Christian Advocate*]

There is but one way to know the winsomeness and the power of goodness. It is not by dreaming of it; that alone makes an idle sentimentalist. It is not by talking about it; much talk about goodness quite frequently becomes a substitute for the reality. Really to understand goodness we must practise it. To transmute good desires into loving deeds keeps virtue sweet and sane.

[*The Advance*]

The beacon lights of history have largely been set aflame by men who were unlovely in their intolerance. Better be intolerant than indifferent, but, better yet, be tenacious of one's own principles and at the same time possessed of a love which causes us to recognize all men who are working for the same ends, no matter by how diverse a method, as our brethren in Christ and fellow heirs of the kingdom.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition" size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Publishing Society

The Publishing Society now has in stock a new Oxford Bible, 01683x, which is designed especially for the use of Second Readers. The Bible is printed from new plates in pica type on Oxford India Bible paper, bound in leather. The size is 10¾ inches long by 8 inches wide, to correspond with the large type edition of "Science and Health with Key to the Scriptures." One to five copies, $9.25 each; six to eleven copies, $8.75 each; twelve or more copies, $8.50 each.

The pamphlet, "Fulfilling the Law," has been translated into Danish and is now published and on sale. This new pamphlet has the English version printed opposite each page of the translation.

The pamphlet entitled "The Father's Business," already printed in English and German, has been translated into Swedish, "I Faderns Tjänst," and is now published with the English and Swedish versions on opposite pages.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

The project of harnessing the gigantic power of the Colorado river in the great depths of the Grand Canyon has passed the visionary stage. The United States department of the interior has granted permission to the promoters of the scheme to make the preliminary surveys for the proposed six dams that are to be built across the river in the canyon, also for the sites of the reservoirs and hydroelectric plants that are to be constructed. The preliminary work will be followed immediately by the making of permanent locations and the commencement of the actual construction of the first of the series of dams. It is announced that the project has been financed, and it is reported that interests closely identified with the Southern Pacific and the Atchison, Topeka & Santa Fé railroads are back of it.

The plans contemplate providing electric power for operating the Arizona divisions of these two railroads, the furnishing of electrical energy for operating the machinery of mines and industrial plants and for lighting systems of towns and cities over a large territory. The whole plant will have a total capacity of 400,000 horse-power. It is claimed that this prospective available electric power is but a small part of the total electrical energy that might be developed at other points in the Grand Canyon by the construction of dams and the harnessing of the stream.

Higher taxation of much of the unused land in Massachusetts as a means of forcing the owners to use it for timber or other purposes was advocated by State Forester Rane at a hearing given by the special commission on taxation. One difficulty encountered in arousing interest in the reforestation of land has been to convince owners of bare land that it has a potential value, said Mr. Rane. So long as there is a low tax there is little to prompt many owners to develop their land, but once the taxes begin to go up, he continued, then the owner is forced to do one of two things, to utilize his land or to sell it to someone who will. There are about one million acres of land in Massachusetts suitable for forestry purposes. Owners of woodland had been encouraged by the assurance that their taxes would not be raised over the regular tax on the land, no matter how high the timber grew. Under this system the owner registered his land with the local authorities, and when the timber was cut he paid, in addition to the taxes on the land which were paid each year, an amount equal to 6 per cent of the selling price of the timber.

The federal office of public roads has begun a series of tests to determine the amount of load that can be sustained by concrete bridges of the type used in all parts of the country to span culverts and small streams. An interesting test was made recently at the Arlington experimental farm of the department of agriculture. The platform of the bridge measured 16 feet wide and 32 feet long. It consisted of a solid slab of reenforced concrete 10 inches thick, and was supported by concrete abutments about four feet from the ground. The concrete slab was reenforced by three-quarter inch iron rods about eight inches apart extending across it. In the test hydraulic pressure was brought to bear on a point in the center of the platform. It was not until the pressure had amounted to 90,000 pounds that the concrete slab cracked. A pressure of 84,000 pounds was exerted until the center of the span had been depressed about eight inches, and yet the platform did not entirely give way.

The Chicago Teachers' Federation, considered one of the most influential organizations of its kind in the country, must disband within the next three months. By a vote of eleven to nine the board of education has voted to adopt the resolution calling for its abolition. The edict prohibits any teacher from membership in the federation or any kind of so-called labor organization. By the decision of the board, public school teachers are prohibited from belonging to the federation under penalty of a fine, suspension, or dismissal. Teachers now members of the federation, or any organization affiliated with the American Federation of Labor, must withdraw immediately and at no time in the future establish a similar association. Charges that both bribery and conspiracy played a part in the action of the board have been made to the state's attorney, who says that if there is anything on which to base an inquiry the matter will be presented to a state grand jury for consideration.

Fully six hundred miles of state and county roads are being constructed annually in the state of Washington in line with its good roads policy of being prepared to link up with the surrounding states on the transcontinental highways. Much of this road building is very expensive, some of the mountain highways costing $5,000 a mile for the clearing alone, not including the grading. The maximum grade of all roads throughout the state has been fixed at 5 per cent, thereby making them not only usable for ordinary traffic but practicable for heavy traffic as well. It is expected that the mileage this year will exceed that of last, which was approximately six hundred, built by the state and counties at an expenditure of more than $9,000,000. The regular annual automobile license tax, collected by the state on a horse-power basis, approximates $400,000 this year.

High school fraternities have become an issue in Springfield, Mass. The school committee has applied to the city solicitor, who believes that the board may prohibit membership in secret societies under a penalty of dismissal, if it can be shown that the societies are inimical to good order, discipline, and the best interests of the school. He believes that this authority holds whether or not the society uses the school name, meets on school property or during school hours, or whether membership is sanctioned by the parents. The board, he feels, has a perfect right to elicit a promise from the student that he will not join such a fraternity before it allows him to enter the school.

Forest preservation, with particular reference to New Hampshire, was the topic for discussion at the annual forestry conference which was in session three days last week at Profile, N. H., under the auspices of the Society for Preservation of New Hampshire Forests, the American Forestry Association, the Boston Chamber of Commerce, and the Western New England Chamber of Commerce. The topics were, "An Extension of the Weeks Act for the Purchase of National Forests," "The Relation of Forestry to New England Agriculture," and other papers on local forestry problems.

The ship channel connecting Houston, Texas, with the deep water of the Galveston jetties was formally opened recently. This waterway makes Houston a seaport. The city has long had water connection with the gulf by way of Buffalo bayou, but the passage has not at any time been satisfactory. The new waterway is fifty miles long, and it is in connection at Houston with splendid dock terminals and with seventeen railroad lines.

The Eastman Kodak Company of Rochester is a monopoly in restraint of trade in violation of the Sherman antitrust law, according to a decision handed down in the United States District Court. The decision grants the defendant company an opportunity to present a plan "for the abrogation of the illegal monopoly" on the first day of the November term.

Announcement of the adoption of an eight hour day by the Standard Oil Company of New Jersey has been made on behalf of the board of directors of that concern. Twenty-five thousand workers are said to be affected by the order, which becomes effective Sept. 15. The employees of the company heretofore have been working an average of ten hours a day.

Proof that the entire present main American battleship fleet, made up of four divisions of five ships each and a flagship, a total of twenty-one, could be passed through the Panama canal in one day, has been afforded by the handling of the naval academy practice squadron in the canal locks on its way to and from the Panama-Pacific exposition.

A large new packing plant has been opened by a United States concern in Buenos Aires recently, where various products of packing houses are to be manufactured for both domestic and foreign markets. The plant is almost entirely of steel and concrete construction.

Cooperative work in development of the fruit industry of Maine is expected to yield even greater results with the advent of the recently organized Maine Fruit Growers Exchange, which is planning an active campaign in the interests of the fruit growers.

For the first time in its history the United States leads the world as an exporter. The total American exports in the fiscal year 1915 aggregated $2,768,600,000.

During 1914 an area of 67,177 hectares of sugar beets was cultivated in the Netherlands, producing 1,990,000 metric tons of beet-roots.

In August 30,762 foreigners entered the United States, against 56,287 for the same month last year and 147,350 in 1913.

The California Walnut Growers' Association announces that the yield of walnuts for 1915 is estimated at 18,200 tons.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII | September 18, 1915 | No. 3

The Life-giving Voice

IRVING C. TOMLINSON, M.A.

THE vital message given in the fifth chapter of John, "The dead shall hear the voice of the Son of God: and they that hear shall live," is a prophecy which was proved true when the dead did hear and heed the voice of Jesus. The widow's son and Lazarus caught the Master's words and arose from the dream of death to life and activity. Those "dead in trespasses and sins" were awakened, the publican and the Magdalen heard the divine message and experienced a resurrection to truer, better living. Even so today the healing truth contained in the Bible and interpreted by the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is discerned by those morally and spiritually dead and it uplifts them into useful, helpful, joyous living.

The needful condition for the restoration of those who are deadened to health and peace is simply that the voice of Truth be heard and assimilated. St. Augustine thus beautifully phrases it: "Thou dost give audience everywhere, O Truth, to all who ask counsel of thee, and at once answerest, though on manifold matters they ask thy counsel. Clearly dost thou answer, though all do not hear." The action of Truth upon the unawakened is like the raising of a curtain to let in the sunshine, when the darkness necessarily vanishes. So to the open ear and receptive heart of the needy comes the stimulating and corrective voice of Truth, and the work of banishing the darkness of error is silently but surely accomplished. The psalmist says of God, "He spake, and it was done;" that is to say, the spiritual universe, including man, is the speech, the word, of divine Mind, eternal Truth, the one omnipotent God. Because the utterance of the Father is clear, distinct, and powerful, so the voice of the true man is spiritual, truthful, and loving. When a son of God so speaks, those apparently dead to Truth hear his voice and live.

The utterance which resuscitates is the voice that has in it the qualities of Truth, of Love, of Life and intelligence. This utterance is free from fear, from human will-power, from materiality of any form or nature. It is the expression of honesty, sincerity, gentleness, compassion, and it bears healing on its wings. The time is coming, and is even now at hand, when the desire of all people will be to echo this voice of Truth which brings to others healing, strength, and joy. The living message contained in the sacred Scriptures, and reaffirmed in Science and Health and the other writings of our Leader, testifies to the ever-presence of the "still small voice" of Truth, and they that hear, live. This life-giving voice is heard by those who attend the Christian Science Sunday services, or who at home quietly and prayerfully study the Lesson-Sermons aright; and all over the world those once deadened to Truth are rejoicing in this new-old message of peace and good will to men.

Discord of every name and nature signalizes an unawakened condition in some particular, and it is needful that such unfortunate ones hear this clarion call of Truth, for as the dawn dispels the night, so Truth banishes the darkness of error and men are wakened to life's full day. The Master questioned, "When the Son of man cometh, shall he find faith on the earth?" Faith, then, is the open ear through which the voice of Truth finds entrance. Only let mortals have perfect confidence that as the result of their abiding faith and expectation the voice of Truth will certainly be heard; then they will indeed be set free from every limitation and rightfully possess the "liberty of the children of God." Christ Jesus spake for all times, and it is as true here and now as it was in Galilee, that "the dead shall hear the voice of the Son of God: and they that hear shall live."

The psalmist writes, "He uttered his voice, the earth melted." This Scriptural declaration asserts the quickening and regenerating power of the voice of Truth. It is a divine announcement that the Christ-way of man's redemption is accomplished through the heart's response to the divine utterance, "Heaven and earth shall pass away, but my words shall not pass away." Not with material means and methods, not with cannon or bayonet, not with human will-power, but through the confident expression of all-conquering Truth and Love will material discord and distress be replaced by the harmonies of heaven. Science and Health reaffirms the declaration of the psalmist when it states (p. 97) that "matter will disappear before the supremacy of Spirit."

Mankind have vainly sought to hear the voice of Truth in the seats of the mighty and in various ologies and isms, but their listening was fruitless; the divine utterance was not there. Elijah's experience as it is recorded is after all very like that which comes to many another: "A great and strong wind rent the mountains, and brake in pieces the rocks before the Lord; but the Lord was not in the wind: and after the wind an earthquake; but the Lord was not in the earthquake: and after the earthquake a fire; but the Lord was not in the fire: and after the fire a still small voice." When this voice of Truth again spake through Mrs. Eddy, the Discoverer and Founder of Christian Science, the world was impelled to reject it; but many with the listening ear heard, as did the prophet, for in the "still small voice" of Truth God has spoken and is speaking, and those that hear do live.

"Mental swaddling-clothes"

KATE W. BUCK

ALL who believe in freedom, "life, liberty, and the pursuit of happiness,"—and who does not?—can but rejoice when a way is shown them by which they may escape from time-honored customs that have grown "stale, flat, and unprofitable;" and this way is made plain through the teachings of Christian Science.

The "mental swaddling-clothes" (Science and Health, p. 255) which bind us are of various kinds, and what might easily bind one does not necessarily bind another; but bondage in one form or another is here. We cannot judge for or condemn another, because it matters not at all what may be the texture of the bandages that restrict, retard, and obscure, each must be loosened and cast aside before the one it encircles can be freed.

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

Mankind are certainly wrapped in swaddling-clothes, well-nigh smothered by the anxieties, fears, and false beliefs impressed upon them by their so-called progenitors. Nevertheless the "seed is in itself," and that seed is the indestructible spiritual identity which must needs develop and expand, sooner or later, regardless of or in spite of any circumstances, conditions, or environment. God's will is done, and the God-idea eternally is, and only awaits recognition. As one becomes dissatisfied with the conventions of materiality, a restless longing and consequent reaching out for something better is born, and he begins to stretch and ultimately break the bands that would suppress the ideal. Thus it gradually comes to its native freedom and spiritual dominion.

As we learn through the teachings of Christian Science that Mind is All, we are roused to the fact that it is only through right thinking that one gains a legitimate mastery over every form of evil. "A thinking man," Carlyle writes, "is the worst enemy the prince of darkness can have." "Let there be light" is still the divine mandate. Let us then be willing to lay aside the mental bands of conventionality, habit, injustice, self-love, self-seeking, and the like; in fact, endeavor whole-heartedly to bring "every thought to the obedience of Christ." He alone is the true and perfect idea, having absolute dominion forever and ever, since he is in the Father and the Father in him. All errors exist in mortal thought, and it is there, therefore, that they must be destroyed. It is thought that is to be liberated and set free, till good is found to be the only reality and belief in the power and reality of evil exists no more.

When this is done, even in a small degree, we begin to find the perfect idea, "full of grace and truth,"—the "only begotten of the Father." Though one gain but a tiny glimpse perhaps of what the darkness may have so long obscured, but which, thanks be to God, can never be destroyed, one begins joyously and wonderingly to expand into a larger life,—a truer, freer sense of the meanings of existence as spiritual, as the conscious, continuous expression of good only. How eagerly we long at times to burst through all the swaddling-clothes at once; to "lay aside every weight" all in one and the same minute, and be done forever with all thought and remembrance of darkness and bondage. No wonder that this craving asserts itself, for it is but a vital recognition of man's birthright, and each child of the one Father will finally come into his full inheritance, into the glory and peace and fulness of joy to which he has been temporarily blinded.

For all of us this process is slower than we like, because it has taken much time to swathe ourselves about so carefully, and there are many layers to be cast aside. Then too there may be some few bands that we are loath to part with; we may have found them comfortable, learned to depend upon them, and it may require diligent effort and enlightened understanding before we come to know that, as Jesus said, "there is none good but one, that is, God." We have to learn, too, that our only dependence is on divine Mind, through which alone we can distinguish the true from the false. The belief in mortal selfhood is usually the tightest of all our bonds, the fond belief that we are actually something; while in fact, as we read in "Miscellaneous Writings" (p. 1), "humility is the stepping-stone to a higher recognition of Deity. The mounting sense gathers fresh forms and strange fire from the ashes of dissolving self, and drops the world. Meekness heightens immortal attributes only by removing the dust that dims them."

One can rejoice that he has even begun to unwind the bands that are about him, to let go the thoughts that have restricted his mentality, to deny the darkness and declare that he will arise and shine, for the God-created light is come, and is come to stay, despite any seeming shadows. God is ever on his side, in fact all about him, the center and circumference of all that exists, for God Himself is light, and man is inseparable from Him. Gradually loosening, through divine help, all the mental clamps that have held us tight and fast, we come into greater freedom of thought, speech, and action, until at last, made fully willing by wearying experiences, we lay our "earthly all on the altar of divine Science" (Science and Health, p. 55) and truly walk with God. Then we want no other mind, or will, or life, because we are trusting fully in Him who knows the way we take; that it is a good way, whatever the human thought about it.

Each individual life is in itself a revelation of God, and all mortal darkness is dispelled through the triumphant coming of the light wherein God is revealed as the only creator and man as His eternal reflection and expression. Then, every remembrance of swaddling-clothes entirely forgotten, the full-grown man, God's man, stands forth, having "the measure of the stature of the fulness of Christ." Truly, "every man that hath this hope in him" may be strengthened and encouraged!

✧

"Lovest thou me?"

VIOLET KER SEYMER

Remembering how promptly Christ Jesus rebuked the personal homage of a young man who had addressed him as "Good Master," we can rest assured that when our Master said to Peter, "Lovest thou me?" it was not with the purpose of exacting any personal worship from his disciple. In order to understand the deep significance of this appeal to Peter, it may be well to ponder a little the meaning which Jesus was attaching to this word "me." Is it not as if he had said, Lovest thou the Christ-idea, the pure, spiritual conception of man, the image and likeness of God, more than all else?

Was not this question a test to the somewhat vacillating disciple who had denied his Master and subsequently returned to his fishing-nets? In the light of Christian Science it would seem that Jesus, knowing the immense spiritual proclivities latent in Peter, was seeking to reclaim his disciple, testing him to the utmost and calling on him to gain true self-knowledge, appealing to him to reply truly and at all points to the Christ-query. And does not the same voice of Truth whisper to us many times a day, when we are hesitating on the brink of some error or mentally entertaining an erroneous suggestion, "Lovest thou me more than these?" Are we able to reply in the affirmative at all points?

Through Christian Science we perceive that the Father God is not in a distant heaven calling on humanity to offer up vocal praise, but that the ever present Principle of perfection is awakening us to realize and demonstrate man's true selfhood in Spirit apart from the flesh, calling on us to love this true individuality supremely, and to be satisfied with nothing less. It is a call to "put off the old man" at all points, and to "put on the new man." The test of a sincere love of good is quick response to its every call, and a willingness and watchfulness in rebuking every counter-call of error, ever ready with its siren song. In reality we can respond only to the call of good, for there is no other than the divine Mind calling, and none to respond save the true child of God.

Jesus exposed the seeming counter-attraction of material possessions and pursuits when he described the feast of spiritual blessings, and the excuses from the carnal mind connected with "a piece of ground," "five yoke of oxen," and so forth. Incidentally we may assume that there is no reason why these and similar acquisitions should hinder our prog-

Digitized by Google

ress, provided individuals do not set such undue store by them as to neglect their spiritual opportunities and meet the privilege of higher blessings with the prevarication, "I pray thee have me excused." Through the purification of our desires divine Mind gratifies every wish it has inspired.

Jesus' next test of his disciple's sincerity was the earnest appeal,—"Feed my sheep," also "Feed my lambs." Peter protested in words that he loved his Master, but Jesus wanted the proof in deeds, and called on his disciples to love "as I have loved you." The great point, then, for us all to grasp is the way in which Jesus loved. He said little and accomplished much. He reflected divine Love by healing the sick and the sinful, by comforting the sorrowing, by teaching those who were eager and receptive, humble enough to learn, and finally by raising the dead, so called. Then is there any other way of loving but this way? Jesus was bringing home to Peter this necessity for complete consecration to a life of ministry such as his own had been.

Jesus' reflection of Love was so great, so irresistible, that it drew the unhappy maniac out of gloomy tombs, right out of his chains, mental and physical, and healed him instantly, that is to say, awakened him. In this manifestation of the Christ the man found himself. To the woman at the well, also, Jesus revealed her true selfhood, and the good news spread, so that even her townsfolk "went out of the city, and came unto him." This call of Truth, when responded to, breaks all our fetters, sets us free, and feeds the latent hunger after righteousness and holiness. Deep down in the heart of every man, however low he may have fallen, there lies a dormant appreciation of goodness and a yearning to share in it. To be sincere, this yearning must be active, otherwise it will accomplish but little for ourselves and our fellow creatures; and we should bear in mind that we are not truly loving good when we are voicing error.

Jesus sounded the key-note of genuine and efficacious love when he said, "He that hath my commandments, and keepeth them, he it is that loveth me." The same fidelity that Jesus showed is required of us today, and in the wisdom and beauty of Christian Science we can learn to reflect the divine nature so fully that it will awaken the divine good in our fellow man as well as in ourselves, for goodness responds to the one good just as surely as love responds to Love. Thus we learn how truly kindred all goodness is, how it unites us to one another and to our common origin in God.

What opportunities we miss when not heeding the call to reflect the Christ-ideal and love it beyond all earthly treasures, and how it robs humanity of its right to emerge into light! Had the repentant woman been in the presence of true Christliness before that occasion on which she was drawn to the feet of Jesus, braving the scorn of the Pharisees in order to reach him, and was instantly regenerated by his demonstration of man's real nature, no doubt her release could have come about quite naturally long before this occasion. Is not this a call to cleanse the tablet of our thoughts in order to allow Truth and Love to appear thereon and recall every prodigal to his home in the consciousness of the Father? Is there not everything to gain and nothing to lose in cleaving with might and main to our highest conception of God and man, and braving the scorn of the world in pursuit of the altogether satisfying Christ-ideal?

In order to do this we must drop the pleasurable and painful beliefs of the flesh and let go our hold on them, for they have no inherent hold on us. Happiness consists in the recognition that our true nature is wholly spiritual, with no element of strife or struggle in it, for it is all of the one element, good. In proportion as we realize this scientific fact, all the conflict arising from the belief in a compound or dual nature will subside just as surely as the storm subsided when Christ Jesus gave the command, "Peace, be still;" and in our hearts there will come the same "great calm."

Mortals have sought happiness in a perverted way by seeking to reverse man's nature, by clinging to so-called material treasures, rather than by reflecting and radiating the substance, the qualities of Spirit, and so have mistakenly strayed into the blind alley of selfishness and missed the road to happiness. But the road lies open to the returning footsteps of every prodigal and every backslider, and when we see scientifically that there can be no selfish or materialistic instinct in man, because there is none in God, we shall by degrees cease to indulge or be misled by this miserable belief of selfishness which promises so much and fulfils so little.

When our daily lives are a genuine response to the Christ-appeal "Lovest thou me?" the multitudes will be regenerated all the world over, and man's spiritual dominion over every claim of corporeal sense will be demonstrated. Looking round at our own and the world's great need of spiritual regeneration, and thence to the everlasting facts of creation, their harmony and availability, we shall not hesitate to listen for the hourly call, and yield to it, not grudgingly but rejoicingly, as the faithful Peter learned to do.

✧

Overcoming of Self

JAMES EDWARD VON RHEIN

THE overcoming of self is a problem that faces every student of Christian Science, and until he has met this problem in a measure, he can do little toward helping others to overcome sin, sickness, and death. We hesitate before turning the search-light of Truth within, either because we are too self-righteous to admit that the evils we see in others exist in our own consciousness, or being conscious of their existence we are too cowardly to face them.

The mental condition which needs to be overcome is often left covered in the underbrush of dishonesty and pride, until the spring rains of conscience and the warm sunshine of Love cause the beautiful green blades of right desire to spring up amid the docks and cockle-burs of sensuality and self-love. Thus encouraged by a slight glimpse of heaven, we attack the débris of error and a wide pathway is cut through its hideous fields. Halting, we make a reconnaissance, and find our work showing the effect of haste; also that shoots are springing up over what seemed to be a clean field. It is then we discover that these errors must be plucked up by the roots and the ground sown with seeds of love.

Again, like "Mahmout the Persian," we tear down the wall of self that is darkening our abode, even though with many tears and bleeding fingers, until every stone of malice, hatred, revenge, temper, self-will, self-love, self-pity, is leveled to earth and the sunshine of Truth and Love can enter consciousness and dissolve the whole mass into the dust of nothingness. Having cast the beam from our own eye, we can point the way to others, and there remains no mote in our brother's eye, for we are enabled to see the perfect man. Then can we say with Paul: "I therefore so run, not as uncertainly; so fight I, not as one that beateth the air: but I keep under my body, and bring it into subjection: lest that by any means, when I have preached to others, I myself should be a castaway."

With all his unselfish devotion to his people, and though he faced with unflinching faith in God all the difficulties that confronted him in the wilderness, nevertheless Moses declared,

Digitized by Google

"I am not able to bear all this people alone, because it is too heavy for me." Our Leader says (Miscellaneous Writings, p. 118), "Be of good cheer; the warfare with one's self is grand; it gives one plenty of employment, and the divine Principle worketh with you,—and obedience crowns persistent effort with everlasting victory." So as one passes through the many experiences of error, through valleys of discouragement, fear, worry, and temptation, catching an occasional glimpse of a sunlit eminence ahead that is soon to be overshadowed by a cloud, he feels like saying as did Jeremiah: "Surely against me is he turned; he turneth his hand against me all the day. . . . He hath builded against me, and compassed me with gall and travail. . . . He hath hedged me about, that I cannot get out: he hath made my chain heavy. Also when I cry and shout, he shutteth out my prayer. He hath enclosed my ways with hewn stone, he hath made my paths crooked."

Again one may find, like Peter, that in walking over the troubled sea of error, instead of keeping his gaze fixed on the light supernal, which saves to the uttermost, he has kept it on self. Then he cries out, "Lord, save me," and the "still small voice" answers, "Fear thou not; for I am with thee: be not dismayed; for I am thy God: I will strengthen thee; yea, I will help thee; yea, I will uphold thee with the right hand of my righteousness." If faithful, he is delivered from his peril, and is led beside the still waters of peace and into green pastures of harmony.

✧

Search-lights

IDA HUME

One night, while on the pier at a favorite resort on the coast, we were greatly struck by the power and beauty, and especially the whiteness, of the search-lights. They were many miles distant, but they lighted the sea and coast-line for a very considerable distance. The air was unusually clear, and the flashing golden colored light from a distant lighthouse also seemed doubly bright and distinct.

All this brought to me a great sense of life and activity. Later on, when quietly sitting in my room, overlooking a wide expanse of sea and the beautiful coast-line, so distinct on such a clear, lovely evening, my thoughts recurred to a conversation I had that night with some friends. It referred to the present seemingly sad conditions through which we were passing in the storm and stress of war. My friends were not interested in Christian Science, and I felt I had been off my guard, had neglected to "stand porter at the door of thought," as we are bidden on page 392 of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and from those search-lights I learned a lesson which may perhaps help some one else.

I was reminded of how constantly, perseveringly, and persistently we should apply the search-light of Truth to help us see distinctly into our own thought, to aid us in that self-examination which we daily need to make, especially now, when we are facing conditions which have come to very few of us before. When thoughts of anxiety, resentment, unkind judgment, and condemnation try to make themselves felt, are we in earnest as we say, "Forgive us our debts, as we forgive our debtors;" or do we often enough recall our Master's words, "I judge no man," and his command to "judge righteous judgment"? I felt that I had been guilty of much wrong thought, and was so thankful for those great lights, waving round and round the coast and sea, and showing up all dark corners or objects there. They had been the means of bringing to my thought the better work to be done, and the need for a more scientific watch on the coast-line of my consciousness, that the enemy might not find a foothold and come in like a flood to overwhelm me.

Mrs. Eddy's counsel in "The First Church of Christ, Scientist, and Miscellany," came to me: "Guard and strengthen your own citadel more strongly. Thus you will grow wiser and better through every attack of the foe, and the Golden Rule will not rust for lack of use or be misinterpreted by the adverse influence of animal magnetism" (p. 213). As I sat by the window, watching and thinking, the brilliant flash of the lighthouse in the far distance gave me a clear idea of Love's light, flashing brightly and continuously, so that we may steer away from the rocks of error, hidden and so treacherously near.

Presently the wind rose, and within a short time a veritable gale blew, with sheets of blinding rain, so that except for the reflection of the search-lights, which beautifully penciled their rays on the sky, telling of their steady, unfaltering work, all was dark. The wonderful calm and clearness before, made one feel all the more strongly how keenly alert to secret danger we should be, for in days of ease and pleasure how often we let our heavenly armor be far from tightly girded on, and we are taken unawares. I then thought with much joy of a favorite text: "When the enemy shall come in like a flood, the Spirit of the Lord shall lift up a standard against him." God had graciously raised up a standard for me. The enemy had tried very hard to overcome me, but the search-light of Truth had done its work, and had come to my help. The flash from the lighthouse of divine Love had shown me the channel of safety away from the mines and rocks of erroneous thought. Then as this thought continued, the soft gleaming of a red light from a smaller signal of danger nearer to me on the coast, seemed like a message of comfort, a softening influence, telling me of divine Science with its unfoldment of Life, Truth, and Love. Even the red color brought its deeper thought of "fire," which is defined on page 586 of Science and Health as "affliction purifying and elevating man."

Thus these signals of danger, to human thought, were turned into symbols of safety to me, telling me of the only real warfare, namely, fighting error in one's self; and it is a glorious warfare, as our Leader would have us know. I went to bed feeling happy and calm, the storm still raging without, but Truth and Love holding sway within; and there was a blessing in my heart for the one who had stood so bravely at the front to show us the way to find peace and joy, actual and real, here and now. One thinks of her ever with tenderness and reverence, and with gratitude beyond words.

✧

[Written for the *Sentinel*]

"Where no fear was"

GWENDOLYN THOMAS

Father, all through the dreary night men call
To Thee from earth's wild phantom plains of woe!
I pray for one, yet Thou in truth dost know
Thy little ones, and brooding over all,
Dost cherish them. Yea, where the smoky pall
Looms ominous, there angels waiting know
Arm-clasp of love, depth unaccountable of peace,
And harmony wherein all tumults cease.

In atmosphere serene of lovely light,
Thy universe supernal, out of sight,
Knows naught of wound or thrust or deadly fall:
Life-giver, naught can steal man's life away.
Oh, dearest one! my comfort when I pray
Is that thy life is hid in His alway.

Selected Articles

[Judge Clifford P. Smith in *New Bedford* (Mass.) *Standard*]

One of the contentions of a medical doctor in a recent issue was that a person may become qualified to practise Christian Science by preparing to pass the examination of the state board of registration in medicine, and that the practice of Christian Science should therefore be confined to those who have passed such an examination. As a matter of fact, however, the preparation required for such an examination never qualified any one to practise Christian Science, and it is not intended to do so.

The practice of Christian Science is a ministry in which proficiency depends upon moral character and spiritual understanding. Moral character is of course desirable in a physician, and so is spiritual understanding, but if a physician should gain the understanding of spiritual being and power in a sufficient degree for the practice of Christian Science, he would naturally and inevitably change his practice from a material to a spiritual basis. There are a considerable number of persons who formerly practised medicine, but who now practise Christian Science. No one who comprehends both of these systems, however, will attempt to combine them while one continues to be fundamentally material and the other essentially spiritual.

Your correspondent also tried to establish a connection between Christianity, or Christian Science, and medicine, by saying, "One of Christ's disciples was a physician, and we have no record of his finding fault with this one's profession." There are two difficulties with this argument. In the first place, we have no record that Luke ever came in contact with Jesus. Luke was probably a resident of Antioch, in Syria, who became interested in Christianity through the missionary work of Paul. However this may be, the first few verses of the gospel according to Luke show that he was not an eyewitness of the events which he recorded. In the second place, there is no reason for believing that Luke continued to practise medicine after adopting Christianity. Professor Harnack, the famous theologian, who wrote a book entitled "Luke the Physician," concluded that Luke embraced the Christian religion for the very reason that "by its means, and by quite new methods, he would be able to heal disease and drive out evil spirits." Luke was the first physician to change his practice to a distinctly Christian basis.

Your correspondent seems willing to have medicine regarded as Christian Science for certain purposes, but not for others. On the question of compensation he shifts his argument. He would retain compensation for medicine, but he would deny it for the practice of Christian Science, because "Christ cured without pay." It is quite evident that a familiarity with the Bible is not required at medical schools. There is no evidence that Jesus refused to accept compensation in accordance with the custom of the time and country in which his ministry occurred. On the contrary, it is certain that he said, "The laborer is worthy of his hire," and that he said this to his disciples when he sent them out to preach the gospel and heal the sick.

✧

[S. T. Downs in *Goshen* (Ind.) *News-Times*]

Your kind report of a recent Christian Science lecture contains some inaccurate statements of Christian Science teaching. We refer to what was said about the mission of Christ Jesus, and particularly your statement that Christian Science denies the resurrection. These resulted in large measure, no doubt, from a failure to grasp fully that in Christian Science the term Jesus is employed chiefly to distinguish the physical man, or the humanity of the Master, from the eternal Christ he came to reveal. The definition of Christ as given on page 583 of the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is, "The divine manifestation of God, which comes to the flesh to destroy incarnate error."

Christian Science shows that the belief in God as corporeal, or as an enlarged physical being subject to change and human persuasion, has produced all the sin, sickness, and death the world has ever known, because a limited concept of God produces a like concept of man, since man is God's image and likeness. So, students who would clearly grasp and quickly demonstrate the truth about God and man as set forth in Christian Science, begin by fixing firmly in consciousness the definition of God, based entirely on Bible teaching, to be found on page 465 of Science and Health: "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love."

It will be seen that Christian Science, instead of denying that Jesus overcame death and the grave, proclaims his resurrection to be the proof that mankind will finally triumph over sin, disease, and death, through Christ, Truth. The resurrection proves the power of Life to annul the belief of death, and the power of Truth and Love to destroy hate, envy, jealousy, revenge, and all sin; and Jesus accomplished the wonderful work through his understanding of God, and the real man as God's image and likeness. In the present destruction of sin, sickness, disease, poverty, and all misery through the understanding that Christian Science gives, we begin to realize something of the glorious heritage that awaits us when through the power of divine Love and self-effacement we rise to the fulfilment of the Master's promise, "He that believeth on me, the works that I do shall he do also."

✧

[Frank Bell in *The Standard*, Hazleton, Pa.]

If the pastor whose three sermons have been reproduced in recent issues of your paper believes Christian Science to resemble in any important respect the picture he has presented of it, he has my profound sympathy, for it could not be a pleasant thing to contemplate a large and growing body of one's fellow men, apparently possessed of at least ordinary attributes of judgment and common sense on other subjects, submerged in a delusion so utterly fantastic and absurd as he has undertaken to describe. Impelled by a conscientious conviction that the teachings and practices of Christian Science are such as his sermons are evidently intended to imply, and from the standpoint of a further conviction that the moral and spiritual welfare of his congregation and his community are to some extent in his keeping and that the people cannot be safely left to make their own investigations and arrive at their own conclusions in such matters, I think I can apprehend how one could speak so unkindly of one's fellow men and their religion with an intent that might seem to one to be altogether commendable.

It is because I believe the pastor to be entirely sincere that I feel the more sympathy for him. I once thought of Christian Science very much as he does, having been content with similar sources of information, and while the occasion never came for me to offer in a public way my mistaken views with regard thereto, I seized such opportunity as came in a small way privately to try to dissuade others from giving a fair test to its proffered relief from conditions of sin and suffering. Knowing what I do today of the blessings that Christian Science has brought to me and mine and numberless others, I cannot imagine a regret more poignant than would come from the realization that some one who greatly needed the help which Christian Science so abundantly bestows had been

Digitized by Google

influenced, because of my misinformation on the subject, to reject the aid at hand.

Now briefly as to the statements in the third sermon, it is observed that our friend regards as conclusive the fact that two or three more or less eminent medical men say they have not found evidence that Christian Science heals organic disease, and he prefers to accept this purely negative testimony as against the mass of direct and specific evidence, such as Senator Works gave on the floor of the United States Senate last January, which included the names and addresses of persons healed of cancer, tuberculosis, locomotor ataxia, and many other diseases, with the names of the reputable physicians and surgeons who had diagnosed the cases. The official publications of the Christian Science church have printed the signed and carefully verified statements of approximately twenty thousand persons, explicitly setting forth how Christian Science has healed them, and many of these testimonies relate to the healing of organic and so-called incurable diseases.

In the public meetings in fifteen hundred or more Christian Science churches throughout the world each Wednesday evening, it is estimated that fully ten thousand persons, who are well known in their communities and whose statements are capable of easy verification, give similar testimony of the healing efficacy of Christianity as unfolded through Christian Science. Furthermore, the individual is rare nowadays who does not know of friends or acquaintances who have been restored to health by this method. It would therefore seem to be a reasonable assumption that Senator Works and the others have found evidence of Christian Science healing because they looked where it was to be found, and that the two or three distinguished physicians failed to find it because they did not look where it was to be found.

In the case of Doctor —— of England, who is quoted as disbelieving in Christian Science healing, it should have been stated in fairness that his "investigation" of two hundred alleged cases was a part of his preparation for the writing of a book designed to discredit Christian Science. It is not without significance also that despite this doctor's high standing in English medical circles, Christian Science has enjoyed a greater growth in England during the six years since he condemned it than ever before, there being today seventy-four Christian Science churches in England as compared with thirty-four when the doctor's book first appeared, indicating an increase of more than one hundred per cent among adherents of the teachings he so unqualifiedly disapproved. Another distinguished disbeliever in Christian Science whose word we are asked to accept as final, is doubtless the individual who is known to large numbers of persons only as the discoverer of something which nobody else before or since was ever able to discover, namely, that a man over fifty is unfit for useful endeavor.

A lady from India is quoted as having said five years ago, on her arrival in this country, that the thing explained to her as Christian Science was similar to the demoralizing philosophies of her native land. It was twelve years ago instead of five, and the lady said not only what our friend quotes, but considerably more, including the statement that Christian Science as then explained to her was a philosophy of "nothingness"—"You do not exist," "I do not exist," and so on, which in fact is the very opposite of the philosophy of Christian Science. A statement was printed some years later to the effect that when this lady learned what the true teaching of Christian Science is, she expressed regret over the unjust comparison she had unwittingly made. Those who still feel the need of quoting the opinion of one whose concept of Christian Science was admittedly formed on mere hearsay, doubtless are not aware that the lady withdrew her hasty comment, else they would of course cease repeating it.

The critic cites a case that came under his personal observation, where Christian Science treatment failed to save a life, and where he is quite decidedly convinced death could have been prevented by medical treatment. It so happens that yesterday I learned of the case of a young mother who took treatment for a minor ailment from a distinguished medical doctor, head of the staff of a great hospital, and she died under treatment, the doctor admitting in deep distress that she would be alive today but for his mistaken treatment. Is this an argument against the practice of medicine as a whole? Of course not. Then neither is the occasional failure in treatment under Christian Science a reason for disregarding the great preponderance of its successes.

Instead of denying the infinite personality of God, the Trinity, the divinity of Christ and the Holy Spirit, the atonement, the inspiration of the Bible, the efficacy of prayer, or the presence of sin, pain, and death in human experience, Christian Science offers a means by which the inquirer may reach an understanding of these and kindred points on a basis far more satisfying to reason and conscience than through the mere acceptance of a man-made creed. The first tenet of the Christian Science church, as found on page 497 of Science and Health, reads, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." Every member of every Christian Science church subscribes to that tenet, but each is entirely free to determine to his own satisfaction what the "inspired Word of the Bible" means to him. In fact, it is a basic teaching of Christian Science that one cannot actually know that which one has not actually demonstrated.

Of all denominational people Christian Scientists are freest from anything savoring of ecclesiastical control over their individual opinions. For instance, no one could accept a statement simply because Mrs. Eddy had made it, and with no other evidence of its correctness, without thereby departing from her teachings. Everything in every church which can be proved to be correct and good in individual experience is acceptable to the Christian Scientist. It is because Christian Science thus opens the way for each one to reach a convincing solution of questions of vital importance, that Christian Science has been the means through which large numbers of men and women have come out of unbelief.

[Avery Coonley in *Galesburg* (Ill.) *Mail*]

Christian Scientists do not refrain from the use of drugs and serums because of any prejudice against employing a physician, but because they have found a more effective remedy; hence this and certain other inferences carried by statements made in the "Health" column of the evening edition of the *Mail* of May 22 need correction. The article in question is an exhortation to the public by the editor of the department to use antitoxin as a cure for diphtheria, and since he believes in the efficacy of this serum, he is warranted in recommending it, irrespective of whether his confidence is justified or not; but he is not warranted in stigmatizing as prejudice the convictions of others (and there are many thousands of them) who do not believe in the injection of a foreign substance, and particularly of a diseased substance, into the blood as a means of cure or prevention.

The statement that diphtheria serum is "a cure" for diphtheria is one which Christian Scientists do not care to dispute, but it would seem to be seriously challenged by the fact, as reported by the Illinois board of health bulletins,

Digitized by Google

that the deaths from diphtheria have nearly doubled in the nine years since the state began to distribute antitoxin. Christian Scientists are prepared to deny, however, that the only cure for diphtheria "consists in the early use of diphtheria antitoxin serum," for no disease is excluded from those which have been healed by Christian Science, and diphtheria is as susceptible of healing by the methods used by Jesus as are heart diseases, tuberculosis, paralysis, tumor, cancer, and the whole list of so-called incurable diseases which have yielded to Christian Science treatment after other treatment had failed.

✧

[Jesse Pickard in *The Tribune*, New York, N. Y.]

In a recent *Tribune* there appeared a letter from Captain —— of Brooklyn, describing what he says was Christian Science treatment, taken some twenty-five years ago. This communication appears under the caption, "Deafness Treated as Error, Showing How One Patient Fared under Christian Science Treatment." Since the treatment described by the captain is not in the least similar to Christian Science treatment, it seems proper and just to object to the statement as published.

In this treatment the patient was informed that he was a spirit and not deaf, and that he must declare that he was not deaf. Now this has certainly nothing to do with Christian Science, which teaches that God is the one and only Spirit, and that healing is not brought about by any thoughts concerning the body or a personal self. Christian Science heals through the power of the Mind "which was also in Christ Jesus," the Mind which has to do with God only, and which fulfils the laws of God according to the method of Christ Jesus. It has nothing to do with the manipulation or willing of the human thought in any direction. It is not surprising that dependence upon such human thought, directed, as your correspondent describes, contrary to his human reason, should not have healed. It is not fair to call this the failure of Christian Science, which through the prayer of spiritual understanding has healed many cases of deafness and all other diseases, evidence of which can be easily obtained upon proper investigation.

✧

[E. M. Ramsay in *The Shetland Times*, Lerwick, Scotland]

As one who has been studying Christian Science for many years, you will perhaps allow me to explain a few points which may seem obscure to those who are looking into Christian Science for the first time.

Mrs. Eddy points out that every true thought, every good quality, whether manifested by man or beast, is a reflection of the divine nature. All false beliefs, erroneous theories, evil desires, are manifestations of that confused sense of things called by our Saviour "a liar, and the father of it." These false beliefs appear for a season to be true, have often the sanction of antiquity, or appear as the latest scientific discovery, but the time comes or will come when they are seen to be delusions and to pass away into the limbo of things forgotten. Thus theories once held by the learned are now known to be false by the man in the street.

The reality of matter is still for all practical purposes accepted by the world at large; the philosopher and the natural scientist may hold it unreal in theory, but they are as much at its mercy as the unlearned. Christian Science alone gives us an explanation of its nature which enables mankind to begin to get free from its trammels.

The first chapter of Genesis tells us that God created all, and pronounced all which He had created "very good;" but it will be seen that no mention is made in this chapter of matter or of a material creation. The account which is contained in the second chapter differs on all points from that which is given in the first chapter, and it is therefore plain that these two accounts cannot refer to the same occurrence.

If it fell to our lot to have to choose a traveling companion or a dairymaid, to appoint a school mistress or a general, should we not be looking in reality for certain mental qualities? Cheerfulness, unselfishness, honesty, skill, kindness, learning, originality, courage, genius,—none of these things are material. The perishable outward appearance of what we call a man bears no resemblance to God, who is declared to be "a most pure spirit, invisible, without body, parts, or passions," but the true qualities of heart or head are manifestations of God's nature. In the same way Ruskin has pointed out that the noblest buildings are the outward expressions of truth, purity, and other mental qualities: "Good architecture has life, truth, and joy in it."

Thus we see that what we call matter or material is not the essence, the inner reality of man, beast, or cathedral. The material senses cannot see God; how then can they see God's image or likeness? The glory and substantiality of the spiritual universe, the universe as God made it and which He pronounced very good, is discernible only to the "pure in heart." Christian Science—the scientific explanation of our Lord's teachings—is showing us how to attain to this purity, and every step on the road brings us into greater health and happiness.

✧

[John S. Rendall in *Creston* (Iowa) *Plain Dealer*]

In a recent issue I find a statement from Evangelist —— to the effect that an attack had been made upon him by Christian Scientists. This statement is as far removed from facts as it is possible to be. The fact is that Christian Scientists defended themselves from an unjust attack made upon them by this clergyman, which is a very different matter. Christian Scientists are clearly within their rights when they endeavor to present to the public a true and accurate statement of their teachings in contradistinction to misrepresentations made by evangelists and others who have but a superficial knowledge of what Christian Science really teaches.

The actual teachings of Christian Science need no apology. Their results in the healing of the sick, the amelioration of suffering, the regeneration of the sinner, and the general betterment among mankind, is their sufficient justification; and it is because of these works, because of these practical proofs of its regenerative mission, that Christian Science presents an impregnable front to those who think they oppose it.

It is to be regretted if this gentleman has made the statement credited to him, namely, that he has ordered one hundred copies of a booklet which "would take the peeling and bark off of every Christian Scientist in town." It occurs to me that this is somewhat incompatible with the teachings of the meek and lowly Nazarene whom all Christians honor. On one occasion Jesus said: "Forbid him not: for there is no man which shall do a miracle in my name, that can lightly speak evil of me. For he that is not against us is on our part." I would also commend to our critic the words of Gamaliel as recorded in Acts: "And now I say unto you, Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

There have been many sermons preached and many books and pamphlets written in the attempt to discredit Christian Science, all of which have signally failed of their purpose. To attempt to stem the tide of this healing ministry by any such methods is absolutely futile, and some day our evangelistic friends and others will awaken to this fact.

Editorial

"Inalienable rights"

ACCORDING to the *Anaconda* (Mont.) *Standard*, a physician, in addressing the state health officers' convention in session with the teachers' summer school at Bozeman, on the subject of the medical inspection of school children, said: "A desirable law on the subject would provide for a thorough physical examination of all public school scholars twice each year, with what might be termed an inspection during each of the other seven months." As an argument in favor of medical inspection, this physician quoted statistics to prove that over 73 per cent of the children examined in certain schools had been classed as defective. What is intended to be accomplished by the "desirable law" advocated by the doctor was quite plainly stated by him in closing his address. He said: "Wouldn't it be fine if we could induce the state of Montana to put our children on the same commercial basis with the hog! Then they could be legally inspected and scientifically treated with preventive and curative methods."

Rather a brilliant prospect, is it not! All of the school children to be put on "the same commercial basis with the hog," and 73 per cent of them treated by methods selected for them by the dominant school of medicine! Fortunately for the long-suffering people, some of the courts are not in favor of making the public schools the vehicle for exploiting medical theories without regard to the rights and desires of parents. We quote the following from a recent decision of the Illinois supreme court, in which Justice Vaughn, speaking in regard to compulsory vaccination, said:—

This case is an attempt to have a writ of mandamus issued compelling a school board to accept as a pupil a certain child that has not been vaccinated. This court does not find that a healthy child is a danger or a menace to pupils or teachers. Therefore, to deprive him of school privileges is to do him a wrong and an injustice. In the case at bar the child is not on trial. Of himself he could never be expected to go to a physician and ask to be vaccinated. All of his instincts are against the operation. This court does not attempt to decide whether vaccination is a prophylactic against disease. We merely hold that it has not been shown that a healthy child is a menace or danger to his fellows. That the young shall be educated is very desirable, and the attempt to deprive certain children of the right of public school advantages is a very serious matter. The dangers arising from ignorance and idleness are quite as imminent as those arising from smallpox.

To use the leverage of coercion or intimidation, with parental love as a fulcrum, and thus force parents to do certain things against their conscience, is neither ethical nor equitable. As a legal resort it is unjustifiable.

The St. Louis *Post-Dispatch* in commenting on this case pertinently said:—

This decision embodies such a clear and convincing statement of the principle involved in compulsory vaccination or the operation of any other law compelling medical or surgical treatment, that it is well worth reprinting. We have gone so far under the pressure of paternalism and medical interests toward overthrowing the fundamental right of personal liberty which gives every citizen control over his own body and his own destiny, that it is wise to take our bearings and retrace our steps.

In this case the value of vaccination is not questioned. There are wide differences of opinion among doctors and laymen. Some high medical authorities approve and some condemn vaccination. Some think it useless and some think it dangerous—more dangerous than the disease it is designed to prevent.

The decision, without deciding whether vaccination is good or bad, affirms the right of opinion and the freedom of choice on the part of the individual. It denies the right of school boards to debar children from the public schools, unless they are vaccinated, regardless of the consciences of their parents. The decision is good reading for the St. Louis Board of Education, which enforces an arbitrary vaccination rule against the convictions and protests of many parents.

Christian Science parents are frequently confronted with a so-called "desirable law," and while there is never any question as to obedience, this very necessity of rendering unto Cæsar should serve to make them more alert that such laws shall not find a place on the statute-books of any state. Writing on this moot subject of compulsory vaccination (The First Church of Christ, Scientist, and Miscellany, p. 220) Mrs. Eddy says: "Whatever changes come to this century or to any epoch, we may safely submit to the providence of God, to common justice, to the maintenance of individual rights, and to governmental usages." We need to remember that "life, liberty, and the pursuit of happiness" are the "inalienable rights" of mankind, and that the preservation of these rights demands watchfulness against aggressive action which would either limit or do away with them.

ARCHIBALD MCLELLAN.

Daily Bread

ALL Christian people presumably ask for daily bread, and it would be very interesting and instructive as well to learn what this means to a thousand different petitioners who make their requests to the one Father in heaven. We have all heard of the child who naively wished to add a little to the petition for bread, and while we may smile at this, it cannot be denied that most people want a good deal more than what is conveyed by a literal sense of the petition mentioned in the Lord's Prayer, "Give us this day our daily bread." Not many, indeed, would venture to say that simple food for the present day measured in any wise the desire underlying this petition. It is however likely that few if any would be ready to say just what they have in mind when they present this request, which is surely a proper one since it was framed by the Master. He taught that, whatever be the need, it is well for us to turn to "our Father" before we take a single step toward the securing of a supply. If our desires are narrow, selfish, and unworthy, as is too often the case, the approach to God will change them if we are at all sincere, and will purify us and our prayers.

In that wonderful eighth chapter of Romans Paul says, "We know not what we should pray for as we ought;" then he tells of the searching of the heart, and of the spiritual intercession which is "according to the will of God." No one can deny that prayer and desire need to be spiritualized because our real needs are spiritual, and we cannot too often remind ourselves of this. Even the deep spiritual significance of the Lord's Prayer may be obscured and the blessing missed by a material sense of need, but to one who is only beginning to understand the teachings of Christian Science the spiritual sense of daily bread as given on page 17 of Science and Health is almost startling. It reads: "Give us grace for today; feed the famished affections." Now we are told again and again that God is gracious, and we are also told that God's likeness, as manifested by Christ Jesus, was "full of grace and truth," so much so that people "wondered at the gracious words which proceeded out of his mouth." In this we find a true model for ourselves, and we may well seek this grace as part of our daily bread.

The second clause of the petition, which refers to "the famished affections," is undoubtedly more difficult to comprehend than that which relates to grace; yet they are essentially one, and nowhere is the deep spirituality of our Leader's teachings more clearly shown than in these words. From their earliest hours mortals crave love; even a little babe will ask for it in its earliest lispings; yet the affections are never satisfied until the divine source is understood. The wise man made no mistake when he said, "If a man would give all the substance of his house for love, it would utterly be contemned." The pity, the tragedy, of human experience is that mankind seek love from a mortal and material source, and instead of bread they find "a stone;" but not so does God

Digitized by Google

give. Those who lift up their hearts to divine Love "hunger no more" for affection, for Love feeds them and leads them "unto living fountains of waters," and all tears are wiped from their eyes, so we are told in St. John's vision.

If any ask how this living bread is to be secured, it may be answered that we must know God as Love and radiate love to all around us, remembering Jesus' words to his disciples in the presence of the five thousand hungry people when he said, "Give ye them to eat." It will not do for us to absorb love merely; we must reflect it, and thus we shall find that our affections are no longer famished, but fed. We shall also find that when this our greatest need is met, all the lesser needs will one by one be supplied.

St. Paul prays that we may be "rooted and grounded in love," and it is certain that unless we are, we can never really grow either in grace, in strength, or in symmetry. We may well ponder each day, when we seem to lack anything, these words of Christ Jesus: "Give, and it shall be given unto you; good measure, pressed down, and shaken together, and running over, shall men give into your bosom."

ANNIE M. KNOTT.

Flee from Fleshliness

EVIL has always succeeded in fooling the bulk of mankind, including most of the honestly well-meaning, by assuming a form or appearing in a garb which they have not recognized. To illustrate: The grosser type of sensuality with which lust is generally identified is repugnant to every pure-minded person, and hence brings them no temptation. Moreover its effects are known to prove an unspeakable blight, and this fact also acts as a deterrent upon impulse.

This single sin, however, by no means exhausts St. Paul's meaning when he speaks of the lusts of the flesh. There are unnumbered other forms of material obsession which are quite like it in essential quality, and which therefore contribute to the possibility of its rule in the event of unexpected temptation, and yet they are not customarily thought of even as serious faults. These beginnings of evil are the more seductive as they are the less obvious, and they are recognized and denied only as we gain a clearer vision of the Christ-idea, as we are more thoughtful in our analysis of motives and impulses and become more sensitive to ethical appeal. Their inherent nature is detected, and we are impelled to inaugurate an intelligent resistance to the tendencies of their influence in the measure that we gain and exercise that spiritual insight which is named in the Bible "the wisdom of the wise," and which alone is adequate to our protection from "the wiles of the devil."

It is here that the preventively saving influence of Christian Science begins to appear in the realm of habit, for it brings into practical relation to every-day determinations that strategic discretion referred to by the proverb which saith, "A prudent man foreseeth the evil, and hideth himself: but the simple pass on, and are punished." In his Sermon on the Mount Christ Jesus defined lust as a matter of thought, an initial mental attitude, and in numerous passages St. Paul dwells upon the multiplicity and deceptive nature of its manifestations, declaring the consummation of faith to be the crucifixion of the flesh with all its affections. In entire harmony with this point of view Mrs. Eddy defines "the dead" as those who are "satisfied with the flesh," who are "resting on the basis of matter" (Science and Health, p. 316). When lust is thus understood, it is apparent that the awakening to righteousness, the overcoming of the Christian life to which we are called in Christian Science, becomes very much of a personal, every-day affair. It is a learning not to strive for or even secretly long for the world, "neither the things that are in the world,"—such, for pertinent instance, as the satisfactions of the table, personal ease, luxurious surroundings and display in dress, the pride and vanity of place, social distinctions, and public applause, the excitations of amusement, the exercise of power over others, and money as a means of securing all these baubles of sense.

This does not mean asceticism, but it certainly does mean the living of a humble and finely simple life, the guarding against and the escape from the mesmerism of materiality, and that we practically and persistently remember these words: "Thou shalt have no other gods before me." It means that in Christian Science every impulse of human sense, everything that delays the realization of our true spiritual selfhood, or that interferes with our continuous advance and efficiency in demonstrating the sovereignty of the Christ-man, must be held in leash, and if necessary be laid aside, in keeping with that nobler, more exalted concept of life which led the great apostle to say, "I count all things but loss for the excellency of the knowledge of Christ Jesus my Lord."

The present European conflict of arms has been named the greatest war of history, but this is a mistake. A vaster struggle is that to which every man is called, viz., to resist the rule of the ofttimes innocently appearing seductions of materiality. In this war Christian Science is playing a tremendously important part, for the reason that it not only re-presents the Christ-ideal, but it awakens that perception of Truth and supplies that practical program of spiritual progress which renders it the Science of success for every one who is earnestly desiring to flee from all fleshliness.

JOHN B. WILLIS.

Among the Churches

Current Notes

HARRISBURG, PA.—Plans for a Christian Science church building to be erected in the near future at Front and Woodbine streets were approved last night [July 28] by the congregation of First Church of Christ, Scientist, which meets in the Board of Trade Hall. No date for beginning the work was set, and only tentative plans were announced. The plot for the new building has been in possession of the church for several years, and the erection of the building has been deferred only on account of insufficient funds.

The Christian Science church in Harrisburg has about one hundred members, and there are many more attendants at the services who are not enrolled as active members. The present rented quarters in the Board of Trade Hall are often crowded to capacity, and the need of a permanent church building has been felt for several years.—*The Patriot.*

CHICAGO, ILL.—Fourteenth Church of Christ, Scientist, has purchased for its church building site the lot at the southwest corner of Paulina street and Sunnyside avenue, fronting 142 feet on Paulina street and 165 feet on Sunnyside avenue, at a price of nineteen thousand dollars. The buildings, which were not included, are to be removed by the owner. Substantial payments have been made and the deed has been secured. The size, location, and surroundings make this one of the finest lots in Ravenswood.

The assembly hall of the Ravenswood school, Paulina street and Montrose avenue, where the church is now holding its Sunday and Wednesday evening services, contains 878 seats, and the number can be augmented to 1,050. The constantly growing congregations make the need of a new church home with larger seating capacity increasingly apparent. The new church will have a seating capacity of at least fourteen hundred.—*Ravenswood Citizen.*

ASHLAND, OHIO.—During home-coming week, July 26-31, celebrating the one hundredth anniversary of the founding of Ashland in 1815, the Christian Science reading-room was turned over to the committee on entertainment for the accommodation of ladies and children, with a Christian Scientist in charge. It was used during the week by a large number of people. Considerable literature was taken away from the room, and much appreciation was expressed. Many people thus became acquainted for the first time with our authorized literature.—*Correspondence.*

FORT DODGE, IOWA.—A new Christian Science church to cost about twenty thousand dollars and seat four hundred persons will perhaps be the next church building to be erected in the city. The present plans are to build the church in the northeastern part of the city, somewhere north of First avenue and east of Twelfth street north.

Fort Dodge Messenger.

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 5, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, Oct. 13, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 4, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

Newton, Mass.

A large audience listened to the lecture on Christian Science by Clarence W. Chadwick at Bray Hall, Newton Center. The lecturer was introduced by Alderman Abbott B. Rice of Newton Center as follows:—

I myself am not a Christian Scientist, nor do I profess any special knowledge on this subject. We all love the truth and do not care how or whence it may come to us. We must concede that Christian Science has brought health, joy, and peace of mind into thousands of homes. We also know that the men and women who follow Science are intelligent and refined, and command the respect of every community in which they live. Yet in spite of these facts Christian Science is constantly being criticized by those who do not understand its teachings. Its growth, however, has been so rapid and remarkable that those who once scoffed now listen.

Personally I am very glad to acknowledge the good which has come into my home through Christian Science. In my business career I come in contact with a great many Jewish people, and I have been impressed with the great numbers of these people who have accepted Christian Science. On a recent business trip to New York I visited the largest silk merchant in the United States. I was so much impressed by the magnitude of his business that I asked the clerk who waited on me what was the secret of this man's success. He said: "The head of this house is a devout Christian Scientist, and he attributes his health, happiness, and business success all to Christian Science." This thought and other observations which I have made lead me to believe that in the future Christian Science is going to be the one potent power which will do more than anything else to unify in faith Jew and Gentile. What this great power is we are all glad to know. To explain it is the real object of this meeting tonight.—*Correspondence.*

✧

Englewood, N. J.

Clarence W. Chadwick lectured on Christian Science at the Englewood Lyceum. Ralph T. Shultz in introducing him said:—

So much good has come into the lives of those who have become students of Christian Science that it is but natural to wish that every one might participate in its benefits and know the allness of good. Christian Science is constantly demonstrating throughout the world the power of right thinking by overcoming sin, sickness, poverty, and other discords in human consciousness, thereby allowing the freer expression of man's God-given heritage,—health and happiness, peace and plenty.—*Correspondence.*

✧

Quincy, Ill.

A lecture on Christian Science was given by William D. McCrackan at the Empire Hippodrome. The speaker was introduced by M. M. York, who said in part:—

Since the advent of Jesus of Nazareth, other religious denominations of the Christian faith, with but few exceptions, have interpreted the healings which were wrought by Jesus the Christ and his disciples in the light of miracles. Thus enshrouded in mystery, as it were, these healings have borne but little or no significance to humanity, apart from their beautiful and personal character. That Christian Science is true and demonstrable is attested by thousands of earnest men and women in all parts of the world. Through the daily application of the basic truth laid down in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, together with the Bible, Christian Scientists are bringing the deathless Christ to each individual consciousness; for with the dawn of the spiritual understanding comes the new birth, the second coming of Christ, Truth, referred to in the Scriptures.—*Quincy Herald.*

✧

Valparaiso, Ind.

Prof. R. A. Tallcott of Valparaiso University, in introducing Virgil O. Strickler, who lectured on Christian Science, said:—

As a citizen of Valparaiso interested in the religious work of our community, I consider it an honor and a privilege to be asked to introduce a man so widely and so well known in his particular field of labor. Christian Science began its service to the world with a small following, as did every other great religious institution. Today its adherents number among the hundreds of thousands, a fact which in itself attests to the appeal Christian Science is making in a decidedly materialistic age. Great doubts have been swept away, and people have turned from mockery and disbelief to at least an attitude of polite attention, which is rapidly progressing toward a desire to be instructed. Every year thousands are accepting Christian Science, and still greater numbers, although not yet identifying themselves with the faith, have long since ceased to ridicule and persecute and are turning their attention to a deeper and more thorough study of this religion. As one of those who desire to be instructed, I am here today to listen.—*Correspondence.*

Lectures to be Delivered

CALIFORNIA—Alhambra: Prof. Hermann S. Hering, High School Auditorium, 8 p.m., Sept. 27.
Los Angeles (Third Church): Prof. Hermann S. Hering, Church Edifice, 734 South Hope street, 8 p.m., Oct. 1 and 2, and Auditorium Theater Beautiful, 5th and Olive streets, 3 p.m., Oct. 3.
Oakland (Fourth Church): Prof. Hermann S. Hering, Municipal Auditorium, 3 p.m., Sept. 26.
Santa Ana: Prof. Hermann S. Hering, Grand Opera House, 8 p.m., Sept. 28.
Santa Monica: Prof. Hermann S. Hering, Woman's Club House, 4th and Wilshire, 8 p.m., Sept. 30.
ENGLAND—Croydon, Surrey: Clarence W. Chadwick, Public Hall, George street, 8 p.m., Oct. 9.
Leeds, Yorkshire: John W. Doorly, Harehills Picture House, 3 p.m., Sept. 26.
London (First and Second Churches): Clarence W. Chadwick, The Great Hall, Cannon Street Hotel, E. C., 1 p.m., Oct. 6.
London (Second Church): Clarence W. Chadwick, Church Edifice, Palace Gardens Terrace, Notting Hill Gate, W., 8:30 p.m., Oct. 7.
London (Third Church): Clarence W. Chadwick, Church Edifice, 8 p.m., Sept. 30.
Manchester (First Church): Clarence W. Chadwick, Town Hall, 1:20 p.m., Sept. 28.
GEORGIA—Atlanta: Clarence C. Eaton, Church Edifice, Peachtree and Fifteenth streets, 8 p.m., Sept. 28.
ILLINOIS—Biggsville: George Shaw Cook, High School Auditorium, 8 p.m., Sept. 28.
Chicago (First Church): William R. Rathvon, Church Edifice, 4017 Drexel boulevard, 8 p.m., Sept. 30 and Oct. 1.
De Kalb: Charles I. Ohrenstein, Church Edifice, Third and Oak streets, 8 p.m., Sept. 21.
Evanston: Bliss Knapp, Church Edifice, corner Chicago avenue and Grove street, 8 p.m., Sept. 28.
Freeport: Hon. Clarence A. Buskirk, Masonic Temple, 8 p.m., Sept. 28.
Highland Park: Dr. Francis J. Fluno, Church Edifice, 125 Hazel avenue, 8 p.m., Oct. 1.
Mattoon: George Shaw Cook, Grand Theater, 3 p.m., Sept. 26.
INDIANA—Gary: William D. McCrackan, Gary Theater, 8 p.m., Oct. 1.
South Bend: Clarence C. Eaton, High School Auditorium, 3 p.m., Sept. 26.
Tipton: Bliss Knapp, Martz Theater, 3 p.m., Sept. 26.
IOWA—Sheldon: William D. McCrackan, Opera House, 8 p.m., Sept. 28.
IRELAND—Belfast: John W. Doorly, Ulster Hall, 8 p.m., Oct. 12.
Dublin: Clarence W. Chadwick, The Abbey Theater, 8 p.m., Oct. 11.
KANSAS—Emporia: Dr. Francis J. Fluno, Theater Royal, 3 p.m., Sept. 26.
Iola: William R. Rathvon, Grand Theater, 3 p.m., Sept. 26.
MAINE—Augusta: Bicknell Young, City Hall, 3:15 p.m., Sept. 26.
Waterville: Bicknell Young, Unitarian Church, Main street, 8 p.m., Sept. 26.
MARYLAND—Baltimore (Second Church): Jacob S. Shield, The Lyric, Mt. Royal avenue, 8 p.m., Oct. 1.
MASSACHUSETTS—Medford: Bicknell Young, Pitman Hall, 180 High street, Winthrop square, 8 p.m., Oct. 1.
Rockland: Willis F. Gross, Church Edifice, Franklin avenue, 7:45 p.m., Sept. 30.
Salem: Bicknell Young, Ames Memorial Hall, Y. M. C. A. Building, 288 Essex street, 7:45 p.m., Sept. 28.
Woburn: Jacob S. Shield, Lyceum Hall, 8 p.m., Sept. 27.
MICHIGAN—Bangor: Bliss Knapp, Miller's Opera House, 8 p.m., Sept. 27.
Plainwell: Clarence C. Eaton, Adams Opera House, 8:30 p.m., Oct. 1.
MINNESOTA—Duluth: William D. McCrackan, Church Edifice, 9th avenue East and First street, 8 p.m., Sept. 26.
Fairmont: William D. McCrackan, The Strand Theater, 8 p.m., Sept. 27.
MISSOURI—Mexico: William R. Rathvon, Orpheum Theater, 8 p.m., Sept. 28.
St. Louis (Third Church): George Shaw Cook, Church Edifice, 3524 Russell avenue, 7:30 p.m., and 9 p.m., Sept. 30.
St. Louis (Fifth Church): Charles I. Ohrenstein, Victoria Theater, Grand and Delmar avenues, 3 p.m., Sept. 19.
Warrensburg: William R. Rathvon, Magnolia Opera House, 8 p.m., Sept. 27.
NEBRASKA—Fairbury: Clarence C. Eaton, Steele's Opera House, 8:15 p.m., Sept. 21.
Fremont: Clarence C. Eaton, Larson Theater, 8 p.m., Sept. 20.
NEW HAMPSHIRE—Claremont: Bicknell Young, Opera House, 8:15 p.m., Sept. 30.
Manchester: Willis F. Gross, Palace Theater, 80 Hanover street, 3:30 p.m., Sept. 26.
Portsmouth: Bicknell Young, Freeman's Hall, 8 p.m., Sept. 27.
NEW JERSEY—Riverton: Jacob S. Shield, Auditorium Public School Building, 8 p.m., Sept. 30.
Rutherford: Jacob S. Shield, Masonic Hall, 8:15 p.m., Sept. 28.
NEW YORK—East Aurora: Charles I. Ohrenstein, Millard Fillmore Theater, Main street, 8:15 p.m., Sept. 27.
Lockport (Second Church): Charles I. Ohrenstein, Universalist Church, 8 p.m., Sept. 28.
New Rochelle: Jacob S. Shield, Loew's Theater, 3:30 p.m., Sept. 26.
Oswego: Charles I. Ohrenstein, Church Edifice, 175 West 2d street, 8 p.m., Oct. 1.
Silver Creek: Charles I. Ohrenstein, Park Theater, 3:45 p.m., Sept. 26.
OKLAHOMA—McAlester: Dr. Francis J. Fluno, Church Edifice, Washington avenue at First street, 8 p.m., Sept. 28.
Miami: Dr. Francis J. Fluno, Church Edifice, corner 2d and Olive streets, 8 p.m., Sept. 23; Public School Building, Commerce, Okla., 8 p.m., Sept. 24.
OREGON—Portland (Second Church): Hon. Clarence A. Buskirk, Church Edifice, East Sixth street and Holladay avenue, 3 p.m., Sept. 19, and 8 p.m., Sept. 20.
PENNSYLVANIA—Johnstown (First Church): Frank Bell, Cambria Library Hall, 8 p.m., Sept. 28.
Meadville (Second Church): Jacob S. Shield, Court-house, 8 p.m., Sept. 20.
Monongahela: Frank Bell, Anton Theater, Third street, 3 p.m., Sept. 26.
Pittsburgh (First Church): Frank Bell, Carnegie Music Hall, Schenley Park, 8 p.m., Sept. 27.
West Chester: Frank Bell, Church Edifice, North High street, 8 p.m., Sept. 30.
WISCONSIN—Beloit: George Shaw Cook, Church Edifice, corner Bluff street and Garden lane, 8 p.m., Sept. 27.
Milwaukee (Second Church): Hon. Clarence A. Buskirk, Church Edifice, Highland boulevard and 27th street, 8 p.m., Sept. 30 and Oct. 1.
Watertown: Bliss Knapp, Masonic Hall, 8 p.m., Sept. 30.

Testimonies of Healing

Materia medica pronounced my trouble a quick decline. After a long night of mental depression, physical weakness, and a desire to die, Christian Science came to me in the way of treatment, and it is with gratitude and an aroused consciousness of the fruits of the Spirit that I send my testimony.

The first intimation I had of this quickening presence was in a desire to get well. A light had shined in the darkness, and I exclaimed: "I believe I will get well! Everything looks brighter!" At this time the physical condition showed no signs of being healed, but the peace remained, and after a number of days the physical symptoms began gradually to disappear. A good appetite took the place of a poor one, a reviving activity took the place of languor, and new interest took the place of loss of interest. One aggravating symptom seemed to hold tenaciously as Truth urged the healing, but it gradually lessened and after four months ceased to be. When I arose from my bed one morning and forgot to cough, my surprise and delight were so great that I wrote to my sister, who had given the absent treatment, to tell her of my complete recovery. Soon after this she invited me to her home and presented me with a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I was hungering for righteousness, and eagerly read the book, meanwhile loving the author for making clear to us God's "wonderful works to the children of men." Since that time God has been my only physician and divine Mind my only medicine.

This healing took place over twenty-eight years ago and has remained permanent, but the gain has been a continuous one, and I know that true healing in Christian Science is found in working out one's own salvation. While I am learning to count my blessings, I also count my trials as "proofs of God's care" (Science and Health, p. 66) and opportunities for demonstration. Today I am in splendid mental and physical health, and the spiritual unfoldment continues. For several years I had been unable to sing, and it was a great joy to me when my voice recovered its strength and I could sing our beautiful hymns. I am in my fifty-fifth year, according to the senses, and feel younger and stronger than when I was twenty. Christian Science has enabled me to do and accomplish more than I ever thought possible. I am enjoying the blessed privilege which the Christian Science work affords one, in destroying error, healing the sick, and improving the morals of men and women.

I can never cease to be grateful for the advent of Christian Science into my life. It has revealed a loving Father-Mother God and His Christ, who healeth all our diseases and forgiveth all our iniquities.—Kate Joy Gray, San Diego, Cal.

✧

It is with a heart full of gratitude that I write these words of thankfulness for what Christian Science has done for me. About ten years ago I had an enlargement of the neck, which was pronounced a goiter by our family physician. Though he was unable to reduce the growth, he did check it for a few months, but then it began to increase again. After being on my feet a few hours my head and neck would ache, and I could get relief only by lying down. Finally I went to a Christian Science practitioner, and with three treatments the pain was relieved, while with five or six more the growth had become smaller. Though treatment was then discontinued, in a short time my neck was reduced to its normal size, and it has never troubled me since. I have also been healed of a bad case of catarrh of years' standing, for which many remedies had been tried without relief. Then I was troubled with stomach disorder for a number of years, and had to diet until I came into Christian Science; but my health has been almost perfect since then.

For the many blessings that have come to me and my family, and for the spiritual uplift, I am indeed thankful to God, and grateful to Mrs. Eddy for showing us the way.

W. A. Sinsel, Waukesha, Wis.

✧

[Translated from the German]

I wish to tell the reason of my gratitude for Christian Science. Six years ago I sustained a fracture of a joint and was confined to my bed for months, suffering intense pain. During the years which followed I was afflicted with the consequences of this injury, the healing of which had remained imperfect, despite the use of many material remedies. Severe pain would set in at intervals of from three to four months, and cause me great distress in walking. Early last year (1914) it became almost impossible for me to walk or even to stand, and I was once more under the necessity of seeking medical advice. Two physicians recommended an artificial fracture in order to give the limb a chance to heal properly. They also said that in case I should fail to have this done from fear of the pain caused thereby, I might as well expect complete paralysis of the limb in probably less than three months' time.

It was then that I began to be interested in Christian Science and to acquaint myself with this wonderful subject. Several errors were overcome, and the assistance rendered me along Christian Science lines soon resulted in a beneficial change. Although the physicians' advice was not followed, I am standing more firmly on my feet today than ever before. I began to understand that God is my only physician and my help in times of need. I discarded all bandages which I had worn for years and am now able to take long walks without experiencing any pain. Only on one occasion did severe pain set in, evidently as a consequence of my own erroneous mental attitude. I had expressed my surprise at being able to undertake such extensive tours without difficulty, and behold—I had a return of the trouble. Still, it disappeared within a day or two, whereas formerly I used to suffer with it from three to four weeks.

Not only may physical ailments be made to disappear, but spiritual understanding brings hope and comfort for the dejected thought. After a youth devoid of love and joy I had grown into a shy and fearful woman, dissatisfied with myself and everybody else, and I could not and would not believe in a God whom I was not expected to understand. Since, however, I became familiar with Christian Science, a sense of joy and buoyancy such as had never been known before has come into my life, for I now realize that God's love and goodness surround us at all times, and that because of His ever-presence good only can come into my experience.

I am indeed thankful to God for having found the way leading to this blessed truth, and grateful to Mrs. Eddy, that noble woman through whom this Christ-teaching has been brought to light again to bless and heal mankind. I also wish to express my thanks to those who have helped me and are still helping me to walk steadily upon the way of Truth.—Else Petermann, Breslau, Germany.

✧

It is now about five years since we first learned of Christian Science. My husband was then recovering from an attack of sciatic rheumatism, from which he had suffered at times very severely. We became interested in the literature given us by a friend, and finally purchased Science and Health. Shortly after this we moved to Cuba, and while there my husband had another attack of sciatica. With our

Digitized by Google

slight understanding of Christian Science we seemed unable to overcome the difficulty, although it did not continue with so much severity as usual. Finally, almost in despair, I wrote to a practitioner in our home town for absent treatment, and in a short time my husband was well. He has never had a return of the disease. Another time he was able to overcome a sprained ankle in three days, when under similar conditions with medical treatment it was six weeks before he could use his ankle.

My little son was healed of a severe sore throat in half a day, and we have had many other proofs of the practicability of Christian Science in our daily life. We wish to express our thankfulness to God for the knowledge that is showing us more and more clearly the perfect way.

NAOMI LUNDQUIST, Grand Rapids, Mich.

It is with a heart full of thankfulness to God that I confirm the testimony sent by my wife, and I would also like to express my gratitude for the many benefits we have received through this teaching. Before we came into Christian Science, there was hardly a time that some one in the family was not taking medicine, but since then the understanding of Life, Truth, and Love as taught in Science and Health has been our only remedy.—CHARLES V. LUNDQUIST.

✧

I wish to join the glad throng of those who are voicing their gratitude for the benefits received through Christian Science. No words of mine could express what it has done and is doing for me. When I first started the study of Christian Science, it was not for the healing (though I needed that badly enough, as I was a physical wreck), but because I had lost vital interest in religion and was looking for something more sustaining than I could find in the established church. I have found all I had ever hoped for, and a great deal more. Christian Science has helped me mentally, morally, and physically.

In my own case the physical healing has been slow, but I have seen a very quick demonstration in the case of my sister-in-law, who was brought back to us by the faithful efforts of a Christian Science practitioner, when the patient seemed to be passing out. I have been studying this Science for over eight years, and during that time every problem which has come up has been solved by the application of this teaching. Our home is now happy and harmonious, whereas once it was full of fear and depression. It is therefore no wonder that my heart is filled with gratitude to God for the revelation of Christian Science to this age, and my prayer goes up that every needy sufferer may come to know this great truth which has come to set us free from every bondage.

ISABEL M. HODSON, Victoria, British Columbia, Canada.

✧

It is nearly eight years since I was led into Christian Science. Ten years ago a severe attack of acute inflammation left me with weak lungs, and later tuberculosis developed, according to the diagnosis of a recognized specialist. I was under medical care for over two years, but at the end of that time had lost all faith in doctors and was willing to try something else. Finally I decided to call on a Christian Science practitioner whose name had been given to me by my brother. I did not go expecting to be helped, but went to satisfy myself, and at the same time to prove to my brother, who had persistently urged me to try it, that Christian Science could do nothing for me.

The half-hour's talk with the practitioner did not seem to bring any satisfaction, and I refused to accept treatment. On leaving the office the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, was handed to me, and I was told to read it; but inwardly I felt doubtful whether the book would be read or not. That evening after dinner, however, two chapters were read, and then it was that I received the degree of understanding which proved that Christian Science is true. Next morning I was at the practitioner's office before office hours, anxious to have treatment, and it was not long before I was well and strong.

Shortly before my first visit to this practitioner, the doctor who attended our little son and who was a partner of the physician who had my case, told my wife privately that I had but a year to live. Four years later I made application for life insurance, and after the customary physical examination the physician said, "You should get down on your knees right here and thank God, for your lungs have been affected but are now perfectly healed." His remarks did not surprise me, as I had then been in perfect health for over three years. I have received much other help through Christian Science. The tobacco habit of several years' standing left me overnight. During the day I had used the customary amount of tobacco, but the next morning the desire for it was entirely gone.

These healings and many more, though grand, do not compare with the spiritual uplift that has come into my experience. When I closely follow the rules laid down in Christian Science, the ordinary troubles of the day, together with the remembrance of past failures, do not touch me, but instead leave me free indeed, and open the understanding to the recognition, as Mrs. Eddy says in Science and Health (Pref., p. vii), that "today is big with blessings."

I am thankful to God for my knowledge of Christian Science, and grateful to Mrs. Eddy for showing us how to come into the truth; also grateful to that brother who first brought Christian Science to my notice. For what I am and hope to be, I am indebted to Christian Science.

ERIC NORD, Minneapolis, Minn.

✧

We have been interested in Christian Science for over nine years, and have proved its efficacy to heal in many instances. Numerous physical ills have been overcome in our family of five by applying the rules of Christian Science. Cases such as a fractured elbow, the toe of one foot nearly cut off, a fall from a tree, appendicitis, measles, a severe scald, a sprained ankle, and other lesser ills, have come up. In most instances we have called on a Christian Science practitioner in a neighboring town, with the result that relief was soon obtained and complete healing quickly followed. We have applied our knowledge of God as the only source of supply, as taught in Mrs. Eddy's incomparable book, "Science and Health with Key to the Scriptures," and have found our financial condition invariably bettered by a radical reliance upon God, who is Love,—"the same yesterday, and today, and forever."

Better and dearer than the physical healing, however, is the understanding Christian Science gives, namely, that by a persistent endeavor to live according to its rules, and to see man in God's image perfect and sinless, we can grow each day better and purer, until finally we reach the goal for which all are striving. This of course takes time and sometimes we stumble and fall, but if we always remember that "underneath are the everlasting arms," we shall not be utterly cast down, and so can rise cheerfully, take up the cross, and turn more eagerly and with greater confidence than before to follow in the footsteps of Christ Jesus the Wayshower.

Christian Science confirms the Scripture teaching that "love is the fulfilling of the law;" and that there is no condition, however inharmonious it may seem, that is not bettered by persistently holding to love instead of hate, to good instead

Digitized by Google

of evil, as the only power. We must remember that Jesus said, "And I, if I be lifted up from the earth, will draw all men unto me;" also that our Father-Mother God is continually saying, "I have loved thee with an everlasting love: therefore with lovingkindness have I drawn thee." If we apply these sayings in our intercourse with all we meet, grown-ups and little children, we shall find that the problems which seemed so big to us, the conditions which seemed so inharmonious, will melt away as error must always do before the light of Love.

We have three small boys, and our daily prayer is that they may grow up to be loyal Christian Scientists, and with us learn to love and to live this grand truth that teaches how to love and obey God, good, supremely, and to follow Jesus' command to "preach the gospel" and "heal the sick."

I am glad to say that the healings have all been permanent. Since learning of Christian Science my interest in this healing truth has increased, and I am more and more awake to the fact that it is truly my greatest possession. Those who enter its ranks have found the only thing worth while, and when husband and wife are both trying to live up to its teaching, we know its influence for good is boundless.

JANET G. MONTAGUE, Belmont, N. Y.

✧

[Translated from the German]

I feel impelled to express my gratitude for the good which has come to me through Christian Science. For years I was afflicted every winter with a catarrhal condition of the lungs and had to consult physicians, without, however, experiencing any permanent relief, as the trouble seemed to return every year in an aggravated form. About two years ago I was led to investigate the teachings of Christian Science through an acquaintance. In December, 1914, the trouble set in again in a very severe form. My daughter, who is a faithful adherent of Christian Science, was watching me with a certain anxiety, in view of the fact that the other members of the family who did not know of Christian Science then insisted that a physician be called immediately. This was done, as they despaired of my recovery; but I refused to take medicine, knowing it to be useless. We wrote without further delay to a Christian Science practitioner, asking for help, and with a few treatments I was completely restored to health.

For this healing I praise God, and am most deeply grateful to the Discoverer of Christian Science for the truth as presented therein, whereby we may avail ourselves of it and realize its healing power. I am truly thankful that our steps were directed into the path leading to this glorious truth.

FRAU BALSIGER, Höfen bei Thun, Switzerland.

✧

It is with love and gratitude that I tell of my healing of a very painful ulcerated sore caused by the breaking of the veins in one of my limbs. I tried to treat myself, but could not overcome the pain, so I called a Christian Science practitioner, and after a few treatments healing was realized, so that there is not even a scar left. I am very thankful to God, and grateful to Mrs. Eddy for Christian Science.

CATHERN DOLL, Chillicothe, Ill.

✧

I desire to tell others what Christian Science has done and is doing for me, as we have had many beautiful demonstrations in our family of three children. I was healed of extreme nervousness, from which I had suffered for years. Medicine taken to quiet me and induce sleep would have the opposite effect, and I could not get relief. Since gaining a fuller understanding of divine Love and its healing ministrations, I have not suffered from any attacks, and for this I am more than thankful.

Every day brings a fuller realization of the statement that "to those leaning on the sustaining infinite, today is big with blessings" (Science and Health, Pref., p. vii). The Bible and "Science and Health with Key to the Scriptures" are truly a "lamp unto my feet, and a light unto my path." Whenever the way seems dark to mortal sense, a careful study of the Bible and our text-book dispels all illusions and shows the true way. We read in the fifty-fourth psalm, "Behold, God is mine helper . . . for he hath delivered me out of all trouble." I can say with countless thousands of other pilgrims who are journeying up the hill, that I am very thankful for the good work of Christian Science.

JOSEPHINE MULLINS, Simonton, Texas.

✧

It is about ten years since I first heard of Christian Science. My progress has been slow, for there was much to unlearn as well as to learn. In looking back to the starting-point, I find I have indeed traveled far, and am truly thankful to God for His loving-kindness and mercy, and grateful to our revered Leader, Mrs. Eddy, for the priceless benefit she has conferred on mankind through her unselfed love, her teaching, and her writings.

Before I learned of Christian Science I suffered constantly from headache, and when fatigued took it as a matter of course that my throat should be affected and my voice very weak. These conditions were, however, quickly healed without treatment; they just disappeared. I had also suffered at times for many years from rheumatic affection of the knee and shoulder joints, these becoming very painful and stiff, but it is now quite five years since I had any trouble of that sort. Then for some years I suffered from a skin disease, but I have been entirely healed of this through the application of the little understanding I gained of the truth through reading and studying Science and Health. Two chronic ailments, one the outcome of the other, have been healed.

In October, 1912, I returned from the country, where I had rather a large household to look after, feeling very ill, and as alarming symptoms appeared, my husband (who is not a Christian Scientist) became anxious and insisted on my having advice. Since he did not object to my having help in Science, I sent a messenger to a practitioner, but she was away from home and would not return until the following evening. I therefore tried that night to realize the omnipotence and omnipresence of God and the powerlessness of evil, and by morning I was considerably relieved of the pain. The practitioner returned that evening and began treatment, but sent word for me to call upon her the following morning. This I did, and walked into her office perfectly well.

A short time ago I injured my wrist late in the evening. It swelled a good deal, and though not very painful at first, I awoke in the middle of the night in great pain and found it difficult to use my fingers. I realized the truth to the best of my knowledge, and after a time fell asleep. The next day was Sunday, and though I could not use my wrist, I managed to put on my glove and go to church. On the way home I was able to hold my umbrella with that hand, though the stiffness of the wrist had not yielded, and later in the afternoon, while reading an article in the *Sentinel*, I turned without remembering the injured wrist and leaned on it. It was absolutely free from pain, stiffness, and swelling.

Apart from these helpful experiences in physical healing, for which I am truly grateful, I feel deeply thankful to God for the spiritual happiness and blessings which have come to me through Christian Science. Love, joy, and peace now

Digitized by Google

take the place of resentment, suspicion, and anxiety. I rejoice in more confidence in God, good, more faith and obedience, and do not feel tempted to brood over fancied injuries, while an irritable, excitable disposition is greatly improved. My home life is very happy, and I receive much sympathy and kindness from those near and dear to me who are not Christian Scientists. I became a member of a Christian Science church about five years ago, and later had the privilege of class instruction, which has been a great spiritual help to me. For these and countless other blessings I am deeply thankful to God, and also grateful to our beloved Leader.—Mrs. K. M. Henderson, Wimbledon, England.

✧

Since my wonderful healing, nothing gives me greater pleasure than to cast my bread upon the waters in the hope that some sufferer may find it, awake to the fact that God is ever present, and realize that he has only to reach out and touch the hem of Christ's garment to be healed. For about two years and a half I had suffered from what is called diabetes. About the first of October, 1913, it became very acute, and I began a rigid diet, as is customary in such cases. On the twenty-first of the month a physician was called, as I was suffering intensely, and he prescribed for me. After further examination, recognizing that medicine would do me no good, he put me on a more rigid diet; but I grew steadily worse, losing weight all the time. My family and friends became alarmed, for I seemed to be doomed.

About this time a Christian Scientist called and asked me if I knew anything about Christian Science. I told him I had heard of it but did not have much faith in it. He left a pamphlet or two and recommended that I take up the reading of Science and Health. I ran through a portion of "Science and Health with Key to the Scriptures" by Mrs. Eddy, but did not seem to grasp the truth. Finally, however, my wife insisted so much that I called a practitioner, and in three treatments I was entirely healed. I have gained in flesh and never in my life felt better physically. Now "I know that my redeemer liveth" and that He is ever present. I shall never cease to praise Him.

C. I. Angel, Seattle, Wash.

✧

I have received so much help from the testimonies in our periodicals that I wish to tell of my experience in Christian Science. I had been treated for chronic bowel trouble by five different physicians, but without relief. When my sister from California, who is greatly interested in Christian Science, paid me a visit, I was very miserable, as I had undergone several operations and had been under the doctor's care for about twenty years. She therefore asked me why I did not try Christian Science, and when I consented, she found in the *Journal* the name of the nearest practitioner and made an appointment over the telephone for that afternoon. After six treatments I was entirely healed. At the same time an annoying skin disease vanished. That was several years ago, and I have never taken any medicine since. I have been healed of two attacks of influenza, and also of severe cramps, which had lasted for hours before I asked for treatment.

It would be impossible for me to express in words our thankfulness for the wonderful healings which have taken place in our family. I am thankful to God that many times I am able to help myself by simply reading Science and Health, which certainly has opened up the Scriptures for me. I am deeply grateful for the understanding of God gained through the teachings of Mrs. Eddy.

Mrs. Howard Caffey, New York, N. Y.

From Our Exchanges

[*The Watchman-Examiner*]

The realism of life in the face of the great conflict has banished all relish for speculative reasoning, and trust in God and in His Son and in His Word are the dominating facts in religious thought and life.

It is only in the United States, which is as yet comparatively little affected by the great world war, that the remnants of the age of doubt still linger. Not yet have we felt this world disaster at its full force. But as the deluge swept the corrupt race of men from the earth, so this war is purging the earth of the doubt of the Word of God which [doubt] has been eating like a cancer into the vitals of modern Christianity. In times of ease and safety, men come to rely on their own powers, but in times of trouble they turn to God, because they realize that He alone can save. This lesson the world is learning today. Reliance on human wisdom is destroyed. Trust in God is our only refuge.

[*The Universalist Leader*]

If all true ideas concerning the character and will of God are the product of spiritual sensibility and moral experience, it follows that we can recognize them wherever found only by the test of our own reason and conscience. It is only because of its appeal to our esthetic sense that we can know that a picture is beautiful, a poem fine, or a musical composition excellent. A philosopher must convince our reason if we are to accept his theories. In like manner our only warrant for reverencing the utterances of a religious teacher as revelations from God is the fact that they harmonize with the witness of His spirit in our own souls, and find their warrant in our own experience.

[Rev. W. E. Orchard in *The Christian Commonwealth*]

Faith is a widely influential process. It takes us down to the very center of ourselves. Faith is never difficult but infinitely simple, because faith is what we all believe deep down. It is covered up in most of us by false creeds, fear, and stale custom, but we can always break through these things if we will. You say that you believe that nothing but force is now of any avail. You do not really believe it. That is simply the self-hypnotism of people obsessed by fear. Faith is thinking through your delusions until you come to the core of truth. Deal with yourself on your knees before God. Find out what you really believe, for since man is one we must all believe alike when we get down to the foundations. Fight the good fight of faith first of all in your own heart. Never mind what you think is practical or what you feel you can keep faithful to. Get to the truth of your deepest trust; accept the truth; and leave it to work out its own power. It is the fear and self-delusion in the hearts of those who profess the Christian faith which is keeping the world chained to this fatalistic damnation. The gaining of faith for yourself will liberate faith in others.

[George P. Mains, D.D., in *The Christian Advocate*]

This age, notwithstanding all the glitter of its material advantages, in so far as it is governed by materialistic motives, gives only poor assurance of any real superiority in its civilization. It matters little what else it may have, if it has in any measure lost its faith in the higher things of the spirit, it is by so much a losing age. That there will continue to be increasing knowledge and growing material wealth is an assumption I think hardly to be doubted. A supreme need is for a practical and radical revision of moral estimates, a

Digitized by Google

dynamic insistence for the placing of first things first. He that is rich must be rich toward God, rich in stewardship. He that is most knowing must be most worshipful before the throne of all knowledge. He that is crowned with greatest endowments must feel that he stands on secure ground, that he is moving toward his loftiest and best only as he gives himself in supreme discipleship to Jesus Christ. The supremacy of the spiritual universe, with its high, holy, and eternal sanctions, with its unfoldings of immortal growth for the individual soul, must be restored with renewed clearness to the universal view.

That these high consummations will surely come I can have no doubt. They are in the diagram of God's moral order. To be forced to doubt here would be to despair of the final outcome for civilization.

[*The Christian Work*]

There is a conscientious insight which enables us to perceive whether our character building delves to the rock and soars to the sky. The witness of that stern monitor within the breast and the ordeals of trial and temptations which we undergo combine to show the fiber of which we are composed. What work we do must be done from right motives. Ambitious pretense may occupy the field of vision and induce us to spread abroad a sounding name. But the time will come in our spiritual evolution when we shall be as much ashamed of self-exaltation and self-aggrandizement as we should be now of pilfering or the grossest conduct.

[John Reid Shannon, S.T.D., Ph.D., in *Western Christian Advocate*]

Our destiny is our thoughts crystallized. As our thoughts make us what we are, so what we are determines the kind of world in which we live—makes our destiny. Our thoughts are the seedlings of our destiny. As the acre-covering oak-tree is in the acorn, so our destiny is in our thinking. Within our own mentality we control what we are to be. The thoughts we entertain are the antecedents of our acts; our acts repeated are the antecedents of our habits; our habits when formed are the antecedents of our character; our character once made is the antecedent of our destiny.

[*The Living Church*]

What does it mean to follow after Christ? It means to get the Christly vision of sacrifice, to follow his steps in ministration over the hot sands of Judæa, to rebuke sin, hypocrisy, meanness, sham, littleness. It means to go to Gethsemane to make God's will supreme in our life, to walk the Via Dolorosa bearing the cross of service, to ascend the hill of Calvary, to crucify our selfishness and to enter into the immortal life of love. The bugle-call is the call to sacrifice. The victory is the victory over self.

[*Zion's Herald*]

In reading the words of our Lord as recorded in the New Testament we are impressed by the fact that the great Teacher used comparatively few qualifying or minifying clauses. What Jesus had to say he said directly, frankly, categorically. He spake with authority at first hand, and not craftily, casuistically, and hesitatingly, as did the ecclesiastical lawyers of his day. Jesus knew himself and his message; he needed not to revise his speeches, or to take back any former deliverances.

[*Western Christian Advocate*]

Christianity begins its work of transformation within by changing the heart, softening the temper, moderating the passions, kindling the flame of sympathy and love; and gradually revolutionizes the habits of our life, until we are "pure, . . . peaceable, gentle, and easy to be entreated, full of mercy and good fruits."

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

Attention is called to the change in price (see also last cover page) on single copies of the following volumes of Mrs. Eddy's writings when sent by mail postpaid from the office of the publisher, Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Massachusetts:

Science and Health (cloth) from $3.18 to $3.00; Retrospection and Introspection (cloth) from $1.06 to $1.00; Unity of Good (cloth) from 65 cents to 60 cents; Pulpit and Press (cloth) from $1.06 to $1.00; Rudimental Divine Science (cloth) from 55 cents to 50 cents; No and Yes (cloth) from 60 cents to 55 cents; Messages to The Mother Church (cloth) from $1.56 to $1.50; Christian Science vs. Pantheism (pebbled cloth) from 26 cents to 25 cents; Message to The Mother Church, June, 1900 (paper), from 26 cents to 25 cents; Christian Healing and The People's Idea of God (cloth) from 60 cents to 55 cents; Christian Healing (paper) from 21 cents to 20 cents; The People's Idea of God (paper) from 21 cents to 20 cents.

The above changes do not constitute a reduction in the price of Mrs. Eddy's works, but save the purchaser the postage on single copies of the volumes specified.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

The Publishing Society now has in stock a new Oxford Bible, 01683x, which is designed especially for the use of Second Readers. The Bible is printed from new plates in pica type on Oxford India Bible paper, bound in leather. The size is 10¾ inches long by 8 inches wide, to correspond with the large type edition of "Science and Health with Key to the Scriptures." One to five copies, $9.25 each; six to eleven copies, $8.75 each; twelve or more copies, $8.50 each.

The pamphlet, "Fulfilling the Law," has been translated into Danish and is now published and on sale. This new pamphlet has the English version printed opposite each page of the translation.

The pamphlet entitled "The Father's Business," already printed in English and German, has been translated into Swedish, "I Faderns Tjänst," and is now published with the English and Swedish versions on opposite pages.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $1.50; six or more, each $1.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

President Wilson, on recommendation of Secretary Lane, recently eliminated about seven hundred and fifty thousand acres of land from the Cleveland national forest, Cal. The unwithdrawn lands will be subject to settlement only under the homestead laws, beginning at 9 o'clock on the morning of Nov. 2, until and including Nov. 29, 1915, after which they will be subject to be taken up under the laws applicable thereto. The lands, which are rolling in character and covered mainly with chaparral, lie along the boundaries of the national forest in Riverside and San Diego counties in southern California, within the Los Angeles land district, and about three hundred and thirty-three thousand acres thereof are public lands and subject to entry.

The department of agriculture at Washington is making a highly interesting and thus far successful experiment in the publication of a daily market news service covering the movement of perishable crops. The purpose is to aid in the work of distribution, and thus encourage a lowering of retail prices to the consumer. This new service has not yet been made a permanent feature of the activities of the department, but is available by wire and mail to all who care for it. Six telegraph wires run direct into the headquarters of the department's office of markets. During the present summer four crops have been made the subject of this system of reports,—the strawberry, tomato, cantaloupe, and peach. Work on the last two is still under way.

The operation of electric trains for passengers between Philadelphia and Paoli, Pa., was inaugurated by the Pennsylvania Railroad Sept. 11. For the present the electric service will be limited to four round trips a day, the remainder of the schedule being continued with steam trains. As soon as practicable, however, more electric trains will be added and the steam service discontinued. The work of electrifying the main line between Broad street station and Paoli, a distance of twenty miles, consumed more than two years and cost approximately four million dollars.

During August about three hundred thousand acres of public lands have been temporarily withdrawn from entry by the secretary of the interior for the purpose of classification as to the value of the land for coal, and after such classification will be restored. This land lies mostly in Montana, Utah, Oregon, New Mexico, and Wyoming. Fifty-five hundred acres in various western states and in Alaska were placed in water-power reserves, while twelve hundred acres in Idaho were eliminated from water-power reserves.

For the movement of the Georgia peach crop to eastern markets during the season extending from May 27 to Aug. 17, the Southern Railway operated 187 special trains from Atlanta to Potomac Yards on fast passenger schedules, handling 3,636 cars, of which 3,574, or 98.3 per cent, made perfect schedule and were delivered to connections in time to make market on the date due. For the movement of peaches to western markets 35 special trains were run from Atlanta to Chattanooga, handling 219 cars, all of which moved on perfect schedule.

A brief on behalf of the government in its antitrust suit against the American Can Company has been filed in the United States district court at Baltimore by officials of the department of justice. The suit charging a monopoly in restraint of trade was instituted last year, and voluminous testimony has been taken since. The brief declares that the company is not a natural growth, but an artificial combination which controls more than 50 per cent of the trade.

The discovery of potassium deposits in several parts of Spain has aroused great interest, especially in government circles. The deposits are of a similar nature to those at Stassfurt and Alsace. The potassium was first discovered at Suria, in the province of Barcelona, and further deposits were found at Cadorna, as well as in Catalonia and Aragon. Large concessions of land have been applied for.

An apple sale, said to be without parallel in the history of the northwestern apple trade of the United States, has just been consummated by the North Pacific Fruit Distributors. The deal involves upward of five hundred cars of "C" or third grade apples of all winter varieties, and the transaction represents a money value of about two hundred thousand dollars.

Secretary Lane recently opened to entry under the enlarged homestead act, effective Oct. 11, 1915, more than one and a half million acres of land in the Bellefourche land district, South Dakota. Such of these lands as are vacant public lands may, after Oct. 11, be taken up as three hundred and twenty acre homesteads. Further information may be obtained from the local land office at Bellefourche.

Continued demand for motor-cars in this country and abroad has brought a remarkable increase in sales, the figures for the past year showing the production to have been 703,527 cars, valued wholesale at $523,463,803, which is an advance of 36 per cent in the number of cars and more than 10 per cent in value over the previous twelve months.

By order of the secretary of public instruction, the teaching of English in the public schools of Cuba has just been abolished. The secretary believes that the time of the pupils can be more profitably employed in other studies. Twenty-seven teachers are affected in Havana alone.

A system of "professional and domestic" instruction for the wives and daughters of Argentine ranchmen has been authorized by the academic council of the University of the River Plate, Buenos Aires. The course will be two years long, and the instruction is to be free, the faculty paying even for the transportation of pupils.

Important archæological discoveries have been made at the site of the ancient city of Cyrene, in the Barca region, Africa. These include a large statue of Jupiter, which is said to be equal in artistic value to the famous statue of Alexander the Great discovered at the same place last year.

In the first year of its operation, completed Sept. 2, the United States federal war risk insurance bureau wrote 1,245 policies on American ships and cargoes with a risk aggregating $82,709,689. The net premiums received amounted to $2,004,696, and losses paid to $720,653.

Forestry officials report an increase of 52 per cent in the sale of national forest timber in Colorado last year over that of the preceding twelve months. During the last fiscal year ending June 30, a little more than sixty-nine million feet of timber was sold at a stumpage value of $135,500.

On Sept. 2 the president of the Exposition at San Francisco passed a check for $110,159.02, the balance due on the indebtedness of the enterprise, to a representative of the San Francisco clearing-house which held a mortgage to that amount.

The latest figures given out for the apple crop in the Northwest districts for 1915 estimate the output at 11,375 cars. According to growers and shippers, the Yakima valley pear crop will not exceed 600 cars. The Northwestern peach crop will total at least twelve hundred cars.

The fifth annual report of the British road board was lately published. During the year ended March 31 last, applications for advances were made to the amount of £2,001,264. The receipts of the road improvement fund during the year amounted to £1,620,974.

Under the supervision of the state department of fish and game of Indiana ten fish hatcheries have been established, and laws relative to protection of localities made use of in the work have been rigidly enforced.

A large publishing house of Caracas, Venezuela, plans to bring out in a neat and compact form and at a small price a set of volumes comprehending the most meritorious works of Venezuelan authors and poets.

Conservative estimates of the present population of the three largest cities of Brazil place them as follows: Rio de Janeiro, the capital, at 850,000; Bahai at 500,000, and Sao Paulo at 380,000.

A message sent by Yuan Shih-kai, president of China, to the council of state, denies his intention as well as the need to make any change in the republican form of government.

State and county highway upkeep funds of California, from Jan. 1 to June 30 of this year, have been enriched $1,722,763.48 through the state automobile license tax.

In the first seven months of 1915 there entered the port of Buenos Aires 944 steamers and vessels, this being 197 vessels less than in the same period of 1914.

On Sept. 10 a revised constitution for New York state was adopted by the convention on revision by a vote of 118 to 88.

Vol. XVIII | September 25, 1915 | No. 4

What Leadeth to Repentance

WILLIS F. GROSS

THE teaching that repentance is necessary to salvation is so generally accepted by believers in the Christian religion that there has never been any occasion for controversy on this point. It may indeed be said that repentance is the first step to be taken; that it is the very beginning of a man's religious experience, but if not honest and sincere it will avail nothing. Mortal man may profess much, but if he does not sincerely repent of the evils he has indulged, it is impossible to experience the saving power of Truth. If it be true that there can be no salvation without sincere repentance, it is very important that one should have a clear realization of the meaning of the term. In the nature of the case, one cannot be obedient if he does not understand what is required of him. Hence the question, What is repentance? or, What is it that causes a man to repent?

To many repentance means little more than sorrow for the suffering which attends wrong-doing; they have no deep feeling that they have not done right. The consciousness of having done according to one's highest sense of good always brings joy, even though one's effort may not be clearly recognized and appreciated. Since good is "not to be repented of," it follows that repentance has to do with the turning away from evil. If there were no evil, or no belief in evil, there would be no occasion for repentance, for there would be nothing from which one could desire to be saved. Mortal man clings to whatever he believes is necessary to his enjoyment. He desires only to be delivered from that which causes him to suffer, or which disturbs his sense of harmony while indulging what he believes to be good.

It is apparent that in the beginning of his transformation, or regeneration, a man desires only to be saved from his sense of evil. From a material point of view all that confers pleasure is to be desired and enjoyed, and it is in this way that mortal man determines what is good and what is evil. He seeks to avoid that which he calls evil, and so turns naturally to what he believes to be good. It is always the mortal belief that there is pleasure in material living which is responsible for the indulgence of evil. When this belief is destroyed, evil is no longer a temptation; when accepted for what it appears to be, materiality seems to bring pleasure or gain, and so long as this continues, mortal man thinks it is good for him at least.

Since evil is a falsity, it is impossible that its true nature should forever be concealed. Sooner or later evil is uncovered and its nothingness is seen in the light of Truth. The suffering which evil occasions is oftentimes the beginning of its uncovering. At first the promise of pleasure seems to be fulfilled, and suffering is an unlooked for, or at least an undesirable, consequence. When suffering is experienced, it gives rise to a feeling of compunction, and for the time being there is a perceptible change in the mental attitude of the sufferer toward the indulgence of evil. However, the feeling of regret is not occasioned so much by the thought of sinful gratification as by the suffering which followed. Because he suffers, mortal man is partially convinced it would be well for him to forsake sin; but if he have no other motive for so doing, he is still in bondage to evil and his salvation is not yet accomplished. Mrs. Eddy clearly reveals the moral status of such a person when she writes, "A man who likes to do wrong—finding pleasure in it and refraining from it only through fear of consequences—is neither a temperate man nor a reliable religionist" (Science and Health, p. 322).

The fear of punishment is not of itself sufficient to reform the sinner, or even successfully to curb his inclinations, for at any time the belief of pleasure in sin may outweigh the fear of suffering, and he will then yield to temptation. He must be inspired by a higher motive if he would silence the suggestions of evil. Many theories of salvation fail to produce any lasting benefit because the fear of present or future punishment is made the chief incentive for turning from evil. The reality of evil is not questioned, nor is the belief of pleasure in sin destroyed. It is well for mortals to know that they cannot sin and escape the consequences. The statement of the Master, "Whatsoever a man soweth, that shall he also reap," is no less authoritatively final than unquestionably true, but this should not be the only reason, nor even the chief reason for ceasing to indulge sinful beliefs and practices.

In Christian Science "the axe is laid unto the root of the trees." When one turns from evil because he recognizes the falsity of the belief of sin, then it can be said that he has repented in the true sense of the word, and is no longer in bondage to the evil because he cannot be deceived thereby. What is it that brings about such a remarkable change of thought regarding evil? Surely the fear of punishment cannot accomplish such a wonderful transformation. The fundamental reason for the indulgence of evil is the belief that there is good in it, hence this belief must be destroyed before evil can be seen in its true light. A finite or limited sense of good having made possible the belief of reality in evil, it follows that the only effectual remedy for evil is a correct sense of good. The fear of evil, or dread of the consequences of wrong-doing, does not result in that turning away from evil which constitutes true repentance. Nothing less than the apprehension of good as All-in-all can effect any lasting change in human thought and action respecting evil.

In his epistle to the Romans Paul writes, "The goodness of God leadeth thee to repentance." The consciousness of God's goodness, love, and power rebukes and destroys the false sense of pleasure in sin. In Science and Health (p. 39) Mrs. Eddy writes: "Who will stop the practice of sin so long as he believes in the pleasures of sin? When mortals once admit that evil confers no pleasure, they turn from it." Christian Science is effectual in overcoming sin because it purifies and spiritualizes thought, leaving no motive for wrong-doing. When one learns that good alone satisfies, and that in good he has all things, he can no longer be deceived by the allurements of evil. He then ceases to sin, not because of the fear of suffering, but because he knows there is nothing in evil which can bring him any worthy or abiding sense of satisfaction.

The law with its "Thou shalt not" compels a turning away from evil, and the fear of punishment is a check on sinful indulgence; but nothing less than the goodness of God can destroy the belief of pleasure in evil and make men free indeed. In Science and Health (p. 264) we read, "When we realize that Life is Spirit, never in nor of matter, this understanding will expand into self-completeness, finding all in God, good, and needing no other consciousness."

Spirit the Only Attraction

VIVIAN M. KUENZLI

A LITTLE book on the planets, used by a younger member of the family, has proved helpful to the writer. Reading of the differing intensities of attraction possessed by the various planets, and the consequent determination of the weight of any given object on them, that is, the force with which that object is impelled toward and held fast by a particular planet, the force being determined apparently by the size of the planet,—all this turned thought naturally to the statement in Science and Health (p. 102) that "there is but one real attraction, that of Spirit." The force of attraction we feel toward other seeming centers is therefore influenced by our belief in, fear of, or longing for this particular phase of materiality, thus determining its size to our consciousness, and making it for the time being our center of attraction, although we often find as we approach it that we were deceived in believing that it had any power whatever.

Until we learn that God is the substance of all good and therefore the only center of attraction, we will find ourselves drawn toward one seeming center and another until our experience has led us to turn to the study of God and His creation. As taught in Science and Health, this study is more fascinating, beautiful, and wonderful than that of astronomy, since it is the understanding to which reference is made throughout the Bible as being more precious than all else. Through it we learn that man, regardless of sense-testimony, is spiritual, and has never been and can never be under the control of any lesser attraction than that of Spirit.

This question of attraction was given very clearly by one of our lecturers, who used as an illustration an object resting on a floor some distance from the ground, and separated from it by several obstructions. The object thus located is, of course, drawn toward the center of attraction (in this case called earth) as the obstacles are removed one by one. So too we seem to be separated from our divine Principle by many things, errors of different kinds, and we find that as these are removed from our consciousness we are drawn irresistibly to Him. Though the obstacles may seem many and the process of removal slow, there need be no sense of discouragement, for if we succeed in removing hindrances from our thought by overcoming the claims of evil, we may rejoice in the assurance that we are approaching the perfect realization of the infinitude of God, good, and that in fact we have never been apart from Him. Our work now is to strive earnestly, patiently, continually, for that Mind to be in us "which was also in Christ Jesus," knowing that nothing can obstruct our progress as we overcome our belief in evil, not because of any power or ability or grace inherent in us, but because of that attraction of Spirit which must needs draw us toward it just as surely as the object from which the supports are removed is drawn toward the earth.

Sometimes the thing to be removed has not been recognized as an obstacle, and the removal seems a grievous and uncalled for trial of one's faith. Perhaps, for example, we have been unconsciously relying on our physical sense of health and strength, and through the removal of this false sense we are compelled to learn that God is the strength of our life and the health of our countenance. Or it may be that we are leaning on another's personality or a belief in a material source of supply, through the removal of which we learn that nothing real has ever been or can ever be lost, and so are drawn nearer and nearer "to the great heart of Love" (Science and Health, p. 448). We begin to see that as the planets move harmoniously, each in its own orbit, never turned aside by any belief in a power apart from the Mind which made and governs them, so men, as the highest ideas of that Mind, should forever reflect the divine intelligence, the source of all real activity, and move in perfect harmony, always just where they belong, never interfering with or taking from any other idea, and never deprived of any good. To hold fast to this truth, whatever the error which may present itself, brings the realization that there is one creator and one creation, that, as Mrs. Eddy says (Rudimental Divine Science, p. 10), "God alone governs man," and "His government is harmonious."

Seven Churches of the Apocalypse

FLORENCE E. B. DONALDSON

THERE is no part of the work done by Christian Scientists that calls for more watchful care, more untiring vigilance, than that which has to do with the upbuilding of churches. Although this statement may be taken to refer chiefly to outward organization, it means rather the building up of the real structure, so clearly defined by our Leader in the Glossary of Science and Health (p. 583): "The Church is that institution, which affords proof of its utility and is found elevating the race, arousing the dormant understanding from material beliefs to the apprehension of spiritual ideas and the demonstration of divine Science, thereby casting out devils, or error, and healing the sick."

In the many compound units which go to make up a part of what will ultimately unfold as the great whole of the one church of God, there are necessarily apparent different states and stages of the work which is being done. In the parable of the sower Christ Jesus taught his disciples the importance, or rather the necessity, of good soil; that is, an honest and good heart in which to sow the seed of Truth, before it could grow up to perfection and bear fruit. Through the study of Christian Science we see how a church or congregation, taken in the aggregate, resembles an individual, and has to work out its salvation, its purification from error of all kinds, in much the same way. It is equally apparent that honesty and integrity of purpose must be assured as a foundation for all right work. The church itself must be formed in the right spirit, with good intentions and pure resolves. The admission of new members needs to be carefully guarded. If purpose and motive are right in those who seek to join the church, they will not be likely to stray willingly or very far from the path of obedience and loyalty.

It has been said that Christ Jesus formed no church organization, and gave no definite instructions on this matter. He did, however, indicate his purpose when he said, "Upon this rock I will build my church, and the gates of hell shall not prevail against it." We also see that as the revelation of the truth to Saul of Tarsus gave a mighty impetus to the cause of Christianity after the ascension, so the wonderful revelation to St. John on the isle of Patmos must have caused a great awakening and enlightenment, and have done much toward the progress and firm establishment of the early Christian churches. In the brief but comprehensive

Digitized by Google

account of the mental condition of the seven churches of the Apocalypse, as given in the second and third chapters of Revelation, Christian Scientists will find everything it is needful for them to know about,—to lay hold of or to avoid,—in the compound mentality of a church organization. In the loving commendation and encouragement meted out to the respective churches, there is comfort and exhortation and hope for every representative of Christian Science. Good deeds, active work, patience and loyalty in times of trial and tribulation, the laying up of spiritual riches, the proof of steadfastness in times of stress, loving service, and unshaken faith, are all testified to as counted to their credit and to the accomplishment of the task allotted to them. They are waymarks on the road we have to take, and direct us on our journey from sense to Soul. There is something to be learned too in this manner of taking the good first.

Turning to the other side of the picture, we are confronted with sharp outlines and strong contrasts. Clear warning is given against specific errors. Errors to which all human endeavor is liable, and to which the most zealous and devoted workers in Science know they must give heed, are all included in the short category. First there is that subtlest of errors, which would seem to lead to the resting on past efforts and successes, and then the mental apathy which would claim to dull the understanding and to stop all progress. The belief in both material poverty and riches is shown to be illusion. The culpability of failing to be watchful of letting in error, or false doctrine, is known to Scientists as failing to be alert to duty. Hypocrisy, lukewarmness, or letting things slide, self-deception, and self-complacency, are rebuked in decisive terms. And the reiterated injunction, "He that hath an ear, let him hear what the Spirit saith unto the churches," should rouse us all to a quickened perception and discernment of the sacred need to listen to the demands of Truth and to strive our utmost to obey them. We know that the compound mentality of any branch Church of Christ, Scientist, honestly seeking to be purified from all these erroneous beliefs, would go far to spread the cause of the redemptive mission of the gospel of good news. In the narrative of the vision the seven churches are described as "seven golden candlesticks." We can therefore the more readily see the need to keep our church light trimmed and burning brightly.

Another point of great helpfulness in the description is that of the Christ standing in the midst of the churches with the two-edged sword in his hand. In Science and Health (p. 538) we read, "Truth is a two-edged sword, guarding and guiding." The seven stars, or angels of the seven churches, are interpreted by our Leader as messages from Truth and Love. We know that we can do all things through Christ. The comforting statement: "Lo, I am with you alway," is a sure support. Christ, Truth, not only uncovers and discovers error, but also destroys error. If all the members of a Church of Christ, Scientist, are watchful and obedient to each demand to cast out quickly some uncovered error, and to manifest greater self-abnegation, the unfolding of the spiritual kingdom to their collective consciousness will be no less encouraging than their individual development. It will have the added strength of unity, and will be proportionately greater in good works and in showing forth the glory of the heavenly Father.

We cannot grasp the full signification of the true meaning of the promises made to those in the seven churches who should obey the command to overcome. Nevertheless the metaphysics of Christian Science gives us even now a glimpse of what it means to "eat of the tree of life;" to wear "a crown of life;" not to be "hurt of the second death;" to "eat of the hidden manna;" to gain the white stone in which a new name is written; to receive the gift of the morning star; to walk with Christ in white; to be a pillar in the temple of God, and to gain a new name from Him; then, as a final reward, to sit with Christ himself on his throne, as he also sits on his Father's throne. Surely the goal is worth striving for! It is in church work and organization that we best learn the universality of salvation and the impossibility of working successfully in selfish isolation, since unity of thought and heart and purpose are essential if we are to obey the command to "preach the gospel to every creature."

"Stationary power"

FLORENCE STRATTON WEAVER

Two friends were sitting together in the country just at sunset, when one said, "Let us keep perfectly quiet for about twenty minutes and listen." They did so and were amazed at and impressed with the countless sounds from birds and insects—the very air seemed vocal with sound! One of the friends exclaimed, "Why, it is just as though another world were in our midst all the while, but we are too noisy to hear it!"

This recalled the fact that Christian Science brings to light the hidden things of Spirit. Mrs. Eddy says, "Undisturbed amid the jarring testimony of the material senses, Science, still enthroned, is unfolding to mortals the immutable, harmonious, divine Principle,—is unfolding Life and the universe, ever present and eternal" (Science and Health, p. 306). Thus we learn that the word of Truth is heard only as we endeavor so to quiet the material senses, our noisy tumultuous thinking, that we may be able to hear God's voice. Isaiah's words bear this out when he says, "In returning and rest shall ye be saved; in quietness and in confidence shall be your strength." And we find that we can carry this great truth into all the details of daily life. No occasion is too trivial for this "returning and rest" in God.

A simple illustration of this comes to mind. A Christian Scientist with her children was making a day and night's journey on the train. She had placed an envelope containing quite a large sum of money inside of her waist, and about an hour before reaching her destination, she became conscious that the envelope and money were gone. The porter searched the berth and the dressing-room, and the car was almost instantly in confusion, as the news quickly spread. The Scientist was in a vortex of worry, when she was suddenly awakened to the absolute lack of Science in her own attitude. She then asked all to abandon the search, and quietly and alone went straight to God. Her consciousness became flooded with comforting passages from the Bible and Science and Health, and she soon felt that if she did not find the money she would never regret the experience; that her present quietness and repose were worth more to her than all the money in the world. While in this uplifted state, the thought came to her to look in the large suitcase, and when she did so she found the envelope with the money in it. The suitcase had stood open in the dressing-room, and while leaning over to dress the children, the roll of money had evidently dropped into it. As there was nothing in the suitcase but the night-robes, had it not been for this season of waiting on God it would not have been opened until night, and as it was then only eight o'clock in the morning, there would have been a whole day's sense of loss and anxiety.

We learn by this experience that rushing around never accomplishes anything, and that only as we wait upon God can we gain the guidance of the Bible promise: "Thine ears

Digitized by Google

shall hear a word behind thee, saying, This is the way, walk ye in it, when ye turn to the right hand, and when ye turn to the left." In "Retrospection and Introspection" Mrs. Eddy says, "The best spiritual type of Christly method for uplifting human thought and imparting divine Truth, is stationary power, stillness, and strength; and when this spiritual ideal is made our own, it becomes the model for human action." Again we have her inspired words, "Mind demonstrates omnipresence and omnipotence . . . and its power is displayed and its presence felt in eternal stillness and immovable Love" (pp. 93, 88). How often would we be spared trying experiences, in which human wisdom is powerless to aid us, if we were to remember and obey the command, "Be still, and know that I am God."

"Joy cometh in the morning"

WARWICK JAMES PRICE

Among the widely differing writings which, opening with Genesis and closing with Malachi, make up that uniquely wonderful volume the Old Testament, it seems safe to assume that no one book taken in its entirety has brought more of comfort and of peace to the thoughtful Christian than the so-called Psalms of David,—those strikingly sublime and increasingly beautiful hymns of repentance and thanksgiving, of supplication and joyful praise, which for more than thirty centuries have now whispered, now proclaimed abroad, their message of heartening, uplifting cheer. Among their many eloquent verses none perhaps more tellingly impart the assurance of the reward which follows understanding than that closing half of a canticle in the thirtieth psalm, when at the ceremony of the dedication of the house of David the greatest of the Hebrew kings announced, "Weeping may endure for a night, but joy cometh in the morning." Here was the tender touch that takes due note of sorrow, but with it came a clear-eyed vision which foresaw that this must end at last. The inspired realization is set forth in words which have spoken unmistakably through all the ages since.

David was but one of many poets to recognize the exquisite beauties which enrich the heavens, bedecked with moon and stars, when darkness falls from the wings of "sable-vested night." For thirty centuries the great verse of the world has held all but countless references to the exaltation of man's thought during the "speaking quietude of dim and solitary loveliness." And yet, to reverse the thought, full as many others have been all too aware of the mystery, even the oppressiveness, of the hours of darkness. The laureate Dryden was not the only one to feel that "the night seems double with the fear she brings."

Is not this generally true of the average human consciousness, unenlightened as to the true and the false? To the majority is not night's darkness, "when deep sleep falleth upon men," the instantly understood and most readily accepted symbol of ignorance and doubt as well as of crime itself? The Old Testament "terror by night" is elaborated in the New when Paul, writing to the Thessalonians, summarizes in such tensely inclusive phrases as were ever characteristic of his philosophic thought, the evils which find most persistent expression in human misdeeds during the hours that run their course between sunset and sunrise. It is, then, no more than natural that to most of mankind the mere idea of morning presents the longing of Job when he cried from the heart, "When shall I arise, and the night be gone?" Especially does the risen day of Truth quicken the hope of those yet bound by the belief of sickness. How many, imprisoned by mortal sense because of some infringement of its so-called law, count the dragging moments till again a lifting sun of Truth shall call out to the world the "Fiat lux!" of creation.

The very child, yet giving credence to empty fears of the night, sees earth made new for him at the coming of "the dewy morn," as Byron says, "with breath all incense, and with cheek all bloom." Nor is it merely that the youth of day brings with it a sense of rejoicing as contagious as the gladness of a happy infant, for they are indeed few to whom there is not then present some more or less ready appreciation that each day truly is a fresh beginning. However, the serious student of Christian Science cannot but go much farther than this. Every recurring morning should bring to him some sense of that vaster sunrise when "across a night of error should dawn the morning beams and shine the guiding star of being" (Science and Health, Pref., p. vii). To such a one the joy that "cometh in the morning" is no unreasoning or merely casual happiness; it is a rarer quality by far, and one surely permanent. It is the joy that Paul set second among the nine fruits of the Spirit, led only by love itself. It also includes the healing which makes of joy a permanent possession.

There is a yet deeper lesson in this thought that "joy cometh in the morning." In the purely physical definition of night as the absence of light, Christian Science qualifies the word "absence" by "supposed," thus declaring the darkness due only to a mortal sense, a mortal misunderstanding of a fact,—the fact that light as an attribute of divinity itself must be, indeed cannot but be, as permanent as God. When Mrs. Eddy wrote that "light depends upon Mind" (Science and Health, p. 393), she was but revoicing that which the Master declared to the unhearkening multitudes of Galilee more than nineteen centuries ago, and which was worded by St. John in Revelation, when he said of the redeemed, "The Lord God giveth them light."

To the discerning Christian Scientist morning is an awakening to a fuller and more complete realization of the omnipresence of the light of divine Truth. In this light comes the joy which is spiritual, and hence ever triumphant over sorrow, an enduring joy to fill and flood that daybreak in which we shall see light.

Love's Gift

NELLIE B. MACE

The Christ, Truth, whispered yesteryear to me,
Low, tenderly;
I listened, then I heard—'tis clearer grown—
God's thought of thee.
And oh, Love's thought of thee did make thee seem
So fair to me!
I saw thee then without the mask—His child;
Thy own true self.
Nor maimed, nor blind, nor poor, nor sick, nor faint,
But radiant, loving, noble, pure, and free—
God's thought expressed.

Love's thought of man hath healed me, friend,
Of loneliness, of grief, despair;
Hath blessed me so with deep, dear joy,
I fain would share yet more, and ask
That thou mayst hear and see with me
God's thought of thee and me and all.

I give thee, friend, my rarest gift,—
The thought of thee Love gave to me.

[Editorial in *Valley News*, El Cajon, Cal.]

A memorial to Mary Baker Eddy, Founder of the Christian Science church, is to be erected in Mount Auburn cemetery. The propriety of some action of that kind will be recognized by all. No matter what may be any one's opinion of the Christian Science denomination or the character of its doctrines or faith, the organization and growth of the church is one of the marvels of the time. The denomination itself, with its wonderful organization and unity of purpose, is a striking testimonial of the vitality of its teachings, and demonstrates that its Founder is entitled to be classed as one of the great characters of the century. Any one who has made such an impression upon the religious thought of the world as has Mrs. Eddy, should be memorialized in marble as well as in the hearts and minds of those who follow her teachings.

✧

[J. G. Alden in *Aurora* (Neb.) *Republican*]

It seems just a little curious that after thirty years of self-confessed silence on this important theme, Christian Science, our ministerial friend should now suddenly arise in great consternation and, like the fabled dame, seize his broom to sweep back the tide. For, far from being the frail creature of vague theory and crude negation which he would have his people believe Christian Science to be, it is a great and growing movement whose churches girdle the globe and whose less than a half-century of flourishing existence is one of the marvels of religious history.

It is also a little difficult to see why a clergyman professedly engaged in an unceasing warfare against sin should detach himself from his avocation to attack something which is seeking to accomplish the same end, though undoubtedly in a different manner. People who take the trouble to investigate have no difficulty in finding out that those who make up the Christian Science movement are law abiding, peace loving people, whose lives and characters have been enriched and whose health has been improved by their application of the teachings which make up the statement of this new-old religion.

The clergyman employed in his discussion of the Christian Science text-book a method which it was thought had become rather out of fashion, that of holding up to ridicule a sentence wrenched here and there out of its context. It is such a method as this, indulged in by critics of the Bible, which has been so warmly and justly assailed as unfair by the defenders of the integrity of that book. Such a way of dealing with a book or a philosophy by an unfriendly critic will always result in jumbled statements of contraries. "Science and Health with Key to the Scriptures" by Mrs. Eddy contains the full statement of the teachings of Christian Science, and studied with a view to discovering its merit instead of wilfully controverting its logic, it is invariably found to be an illuminating volume which interprets the Bible so that to thousands it is a new book and its spiritual meaning becomes its dominant aspect.

It will be generally agreed, I am sure, that the real test of religion is not adherence to a creed or intellectual assent to a high sounding ethical platform, but conduct. It does not matter so much what a man says he believes; it does matter greatly what he is, how he acts, whether he is honest and just, a good citizen and a kind neighbor,—whether he lives up to the accredited standard of what constitutes Christian conduct. To this test Christian Scientists the world over willingly and gladly submit themselves, and one need not travel far or read widely to discover that they constitute a considerable part of our citizenship; and their value as good citizens is universally established.

Christian Science long since passed the swaddling-clothes stage. It is just a little idle now for one to dispute its claims to serious consideration or its power to challenge investigation and win approval. The minister's attempt to make it out a conglomeration of opposing statements does not, of course, take anything away from the universal testimony of its adherents that it is an assertive and affirmative religious philosophy which depends not upon speculation and blind faith for its establishment, but upon actual demonstration in the overcoming of sin and the healing of sickness. It is a religion whose results are cashable in current funds. It does something more than promise a future reward for good conduct; it gives present-day returns in better lives, better morals, better health, a more satisfying spiritual life, and a content and peace of mind that is the recognized badge of Christian Scientists everywhere.

Christian Science is primitive Christianity restored, the healing works of the first and second centuries reestablished, and the consistent attempt of certain of his present-day followers to assume the undivided garment of Jesus' ministry and heal the sick as well as save the sinner. Neither fault-finding with its means nor failure to understand its method will operate to take away the smallest measure of its growing success.

The preacher's airy treatment of the Christian Science view of reality, in which he sought to have it appear that its adherents disclaim any interest in the present war, in clean politics, in the suppression of vice and the amelioration of wrong civic conditions, dismissing these things with the contention that they are not real, will hardly have serious consideration in view of the fact that Christian Scientists through their church organization have already raised and expended the sum of one hundred and twenty-three thousand dollars for the relief of want and distress in the foreign war zones, and many of its well-known men and women are prominently identified with nation-wide movements for the establishment of peace and for improving moral and physical conditions in our civic life.

Christian Scientists have no controversy with any religious denomination. They do not claim to have a monopoly of truth or a superior wisdom or intellectuality. They welcome cooperation with any and all movements, sectarian or unsectarian, which have for their aim the betterment of human conditions and the induction of higher physical, moral, and spiritual conduct. And in the practice of the tenets of their faith they should have at least the tolerance, if they do not command the good will, of their coreligionists.

✧

[Robert C. Love in *The Leader*, Ruston, La.]

A writer in a recent issue, commenting on Christian Science, infers that Christian Scientists "by mistake, ignorance, or misconception" disregard the constituted laws of the community in the conservation of public health, and classifies Christian Science practitioners in common with quacks and charlatans who practise in violation of the medical law.

It is but fair to say that our critic is not in accord with the views of some of the most reputable physicians, legislators, and citizens of this state and country, who understand that Christian Science practice is in no way associated with or an infringement upon the practice of medicine, nor is it dependent upon material remedies or means in any way. At the trial of a Christian Science practitioner in this state, indicted for alleged violation of the medical practice act, the judge in discharging the case had this to say: "The accused belongs

Digitized by Google

to a sect composed of a great number of people whose religious tenets provide for an invocation to God, through prayer, to heal the sick, a practice not limited to them alone, but one which ought to suggest itself to any individual appreciating the power and goodness of the Almighty."

To contend that Christian Science ignores suffering, that it dismisses the ills of the flesh with the claim that they are "only the imagination of the sufferer and to believe this is all that is necessary to restore the patient to health," is quite contrary to the teachings of Mrs. Eddy. Evidently the writer formed this impression from irresponsible comment rather than from a knowledge of its method of treatment, for on page 460 of "Science and Health with Key to the Scriptures" Mrs. Eddy says: "Sickness is neither imaginary nor unreal, —that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being. If Christian healing is abused by mere smatterers in Science, it becomes a tedious mischief-maker. Instead of scientifically effecting a cure, it starts a petty cross-fire over every cripple and invalid, buffeting them with the superficial and cold assertion, 'Nothing ails you.'"

Considering the history of mankind with its struggle for freedom from disease, sin, and suffering, it is well to ascertain what Christian Science has done and is doing to meet this demand. The steady growth and ever increasing attendance at its churches witnesses to the fact that it has supplied a way of deliverance, one not confined to a limited class or a select few but available to every honest seeker for truth. A Christian Scientist desires the best of everything that makes for the material betterment of humanity,—pure water, fresh air, good food, and comfortable and sanitary environments,—realizing that just in the degree that mankind is mindful of his temporal welfare can he appreciate those things which pertain to his spiritual well-being.

In endeavoring to conform to the teachings of Jesus in ministering to the needs of humanity a Christian Scientist is not remiss in his duty as a good citizen or neighbor, and it is fair to say that he has found a better regard for the moral and civil laws because of his increased appreciation for right. He is consistent in rendering "to Cæsar the things that are Cæsar's," he has a fuller sense of the golden rule than he had formerly, and he desires to contribute everything for the uplift and betterment of his fellow man.

"Religious liberty," our critic says, "is the most sacred right guaranteed to the American people," and it may be added that our constitution is equally liberal in according the individual citizen the right to have the practitioner of his choice in time of sickness. So long as Christian Scientists accord their neighbor this right, it is only fair and just that in turn they should be free to resort to that which has been proved ample to meet their needs.

Mrs. Eddy has set forth the simple rule of healing in these words: "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God" (Science and Health, p. 1). Such a method to be called a "dangerous practice" is dangerous in the same relationship that we use truth to correct a lie, light to overcome darkness, right to destroy wrong.

[George F. Chase in *Albion* (Mich.) *Recorder*]

I ask your indulgence upon my observation of the lecture on Christian Science, as recently given by Doctor —— at the Methodist church. That he is greatly concerned over the fact that many Christian people are becoming enthused about this new-old religion cannot be doubted, for men do not condemn a movement unless they feel its influence penetrating their prejudices and false positions and awakening them to unwelcome truth. The church has always denounced and persecuted whatever has not accorded with its inherited traditions and formulated beliefs.

That Christian Science is not Christian is most certainly false, for Christ Jesus said, "By their fruits ye shall know them," and also, "He that believeth on me, the works that I do shall he do also." Is the learned doctor following this command of the Master? The command was given to preach the gospel and to heal the sick. Does the doctor believe this? Does he practise the healing as well as the preaching? If he does not, then he is not following Christ's commands. "Show me thy faith without thy works," said the apostle James, "and I will show thee my faith by my works."

This critic's statement that every year a new edition of Mrs. Eddy's works and the Church Manual is published, and every member of the church is required to purchase a new copy, is absolutely false; also the statement that every member of the church is compelled to sell the literature. His statement that members of the church must sell their books or lose their membership is also absolutely false, as a perusal of the Church Manual, which any one is at liberty to examine, will show. His criticism of Christian Scientists for believing that pain and death are not real has no ground to stand upon, for the Scriptures state that God created man in His own image and likeness, that He made all that was made and "without him was not anything made that was made," and that He pronounced it all good.

Will the doctor tell me that pain and death are good, or that pain and death are created by God? For if not created by God, they most certainly are not real. Christ Jesus said, "God is a Spirit: and they that worship him must worship him in spirit and in truth." The statement that God could suffer is illogical, for Spirit cannot suffer. It is not denied that as a human being Jesus suffered; but the Christ, the spiritual man, the man made in God's own image and likeness, could not suffer. Does the doctor believe that Jesus and God were one person? His statement was to that effect. Jesus' saying, "I ascend unto my Father, and your Father; and to my God and your God," and numerous others, prove the contrary.

Does the doctor, as a representative of the doctrines taught by Christ Jesus, look to God for divine help in the hour of sickness and pain, or does he look for material aid in his hour of trial? Christ Jesus never taught a material religion or a material life. The doctor quoted from Science and Health (Pref., p. x), but why did he not finish the sentence? He quoted this: "No intellectual proficiency is requisite in the learner," and then casts ridicule upon this point, failing to finish the sentence, which says, "but sound morals are most desirable."

The critic's statement leads one to believe that the brain is the seat of all understanding. Christ Jesus says, "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life." What is the brain? Is it flesh, or is it spirit? This declaration fully convinces Christian Scientists that Spirit, God, is the only Life and the only power, and that brain, flesh, "profiteth nothing." Isaiah says, "Cease ye from man, whose breath is in his nostrils: for wherein is he to be accounted of?" Paul says, "Let this mind be in you, which was also in Christ Jesus." A study of the book "Science and Health with Key to the Scriptures" should convince any one that Mrs. Eddy was a willing disciple at the Saviour's feet, seeking for that Mind "which was also in Christ Jesus," and never vilifying any other denomination from the pulpit or from the press.

Digitized by Google

In answer to the doctor's statement that Christian Scientists do not believe in prayer, or that the only audible prayer they use is the Lord's Prayer, I will call your attention to Science and Health, page 15 line 20, page 2 line 1, page 1 line 6, page 4 line 12,—these and numerous other statements on prayer can be verified by a perusal of the book, which can be obtained at the public library or at the reading-room of the church any afternoon except Sunday. Did Christ Jesus teach his followers to shout their prayers from the housetops, where they could be heard by men, or did he say, "Enter into thy closet, and . . . pray to thy Father which is in secret; and thy Father which seeth in secret shall reward thee openly"? This means a withdrawal from the material senses in prayer, for God, being Spirit, knows all and is ever present.

There has never been known to be any antagonism exhibited toward any other church by Christian Scientists, nor has any Christian Science lecturer ever denounced another religion or sought to turn any one from his God-given right to worship as he deems best; and I do not believe that a single person has ever been asked or influenced to join the Christian Science church. Slurs cast upon the beliefs of those who do not agree with you are no proof whatever of their being wrong, nor will the representatives of any church be able to build up their own church by seeking to tear down another.

I am not a member of the Christian Science church, and my only desire is to correct the false statements of one who it seems to me would be serving God and his own church much better by attending to the affairs of the church of which he is a leading representative.

✧

[S. T. Downs in *New Castle* (Ind.) *Courier*]

Toward the close of his revival, according to a recent issue, the preacher said considerable about the ravages of sin, and then stated: "There are but two classes of people who dare not argue against sin,—Christian Scientists and fools." This statement places Christian Science in an improper light, because Christian Science not only agrees with much that he said about sin, but it goes still farther, and declares that all the sickness, disease, misery, and death the world has ever known are the results of sin (which implies ignorance of God and His law), and that Christian Scientists are engaged in a warfare against all sin.

The erroneous thought back of the statement can only be accounted for by the somewhat prevalent notion with those who have not investigated thoroughly, that Christian Science denies that sin seems real to mortals. Just the opposite is true, however, because Christian Science says that sin seems very real to misguided human consciousness, but that God has no consciousness of it, hence the real man in God's image and likeness cannot know sin. Christian Science gives the spiritual understanding of God's word, and this destroys the seeming reality of sin and brings to human consciousness a realization of the substance of what St. Paul called the "fruit of the Spirit,"—"love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance."

✧

[Percy Taylor in *Calgary* (Alberta) *Herald*]

Our critic quotes Jesus' refusal of the temptation to cast himself down from the pinnacle of the temple, because such an act would deny the submission of the body to physical law. That Jesus refused to perform what would have been merely an act of bravado was no reason why he should not overcome the human belief in physical limitation when the law of Love bade him do so. He never refused to set aside physical law when it was necessary to do so in order to heal the sick. He walked on the waves, stilled the tempest, healed the sick, raised the dead, and performed many acts which were entirely opposed to such so-called law.

A law that can be broken is no law. It is certainly not the law of the unchangeable God. God is not mortal or material, neither can His image and likeness be, and we read in the first chapter of Genesis that God made man in His image and likeness. The Scriptures also state that "in him [God] we live, and move, and have our being." Can that which is unlike God dwell in Spirit? If man dwells in Spirit, God, he cannot also dwell in the material. The material and the spiritual are opposites. That which would dwell in the material could be only the mortal concept of man, not the man that the infinite God conceives or perceives. In I John we are told that "we shall be like him; for we shall see him as he is."

When we perceive the real nature of God, we shall know what His image and likeness is, and shall reject the mortal, material concept and accept the spiritual as our real being. Christian Scientists are learning to "put off the old man" and "put on the new man, which is renewed in knowledge after the image of him that created him."

✧

[Thorwald Siegfried in *The North End News*, Seattle, Wash.]

The difference of belief between the idealism of Christian Science and materialism has never been harmonized and never will be for the reason that one is the opposite of the other. As St. Paul phrased it in Galatians, "These are contrary the one to the other," and dualism is simply the endeavor to reconcile the irreconcilable. To illustrate: in astronomy men once believed the earth to be the center of the solar system; now they believe the sun to be. One is the opposite of the other; one is true, the other false, and he would be on a vain quest indeed who should endeavor to explain solar and stellar phenomena on the theory of a dual system involving a shifting center, sometimes having the earth revolve about the sun and again having the sun revolve about the earth. It may have seemed difficult years ago to believe that the earth was not fixed; it may seem difficult now to believe that matter is not eternal. Both become easy in the degree that the truth is proved to human consciousness.

Answering your question whether the works of Christian Science are not due to the power of suggestion, may I call your attention to the fact that evil is suggested among those who believe in suggestion and its power; and that which can do evil ever, can never do good. The mere fact that a particular case is believed to have been healed by the suggestion of the human mind, aided or unaided by a fetish or drug, proves little until it is known that permanent healing can only come from mental and moral regeneration, due to a better acquaintance with God.

Good things come not by suggestion, but by being understood. Who would try to teach numbers by suggestion? A lie, a mistake in mathematics, a wrong course of action in working out a problem, often is suggested to those open to suggestion, but not to one who knows the truth. It follows that in working out the problem of sin, disease, poverty, and death, only the truth, understood, can solve the problem.

✧ ✧ ✧

God does not weigh criminality in our scales. God's measure is the heart of the offender, a balance so delicate that a tear cast in the other side may make the weight of error kick the beam.—Lowell.

Editorial

"Heal the sick"

NOTWITHSTANDING the belief of many religious persons, and the continued assertions of many religious leaders, that the healing works which Christ Jesus and the disciples and apostles performed at the beginning of the Christian era were intended only for a limited time and for a limited purpose, the question of spiritual healing will not down in the churches. The faith which found expression in the psalmist's words, "God is our refuge and strength, a very present help in trouble," has continually turned mankind to the Father for help in sickness and distress.

That this faith has not always been rewarded, has been a stumbling-block to many deeply religious people and has had much to do with the forming of that great mass of humanity so frequently and almost flippantly described by social and religious reformers as the "unchurched" portion of the world. The fact is that many of these people are "unchurched" simply because the churches have not met their needs, others through force of example, but not a few because of a feeling that without spiritual healing the churches are failing to supply a vital necessity of their members. Occasionally we find an instance where the religious leaders are recognizing these demands and striving to comply with them, and a typical example of this was recently shown in the proceedings reported in the *Wellington* (New Zealand) *Evening Post* of July 10, as follows:—

"The deliberations of the Anglican Synod were continued in St. Paul's Schoolroom, Sydney street, yesterday afternoon. Bishop Sprott presided.

"The Rev. R. H. Hobday moved: 'That this Synod desires to draw the attention of the clergy and laity of the diocese to the importance of the study of the subject of spiritual healing, and recommends that a committee be set up to consider ways and means of furthering such study, and to report to next Synod; such committee to consist of the Revs. H. Watson, G. Y. Woodward, R. Bray, and E. I. Sola, and Messrs. G. G. Bridges and R. L. Button, and the mover.' In the course of the debate that ensued, the opinion was expressed that the church should take means to investigate the subject; otherwise the Christian Scientists would take away many of the present adherents of the church. The motion was carried."

The only strange thing about this is that these earnest religious men should have waited so long before making such an investigation, until they feared that "the Christian Scientists would take away many of the present adherents of the church" unless the church should make this healing work a part of its ministry. The fact that spiritual healing was accomplished by the prophets, by Christ Jesus and his disciples, and by the Christians of the first three centuries, should be sufficient to prove the possibility of this healing. That it assumed such proportions as it did in Jesus' ministry, and that he commanded the twelve and the seventy to practise it, is sufficient proof of the sanctity and Christianity of this work; but these are not the only warrants present-day Christians have for practising healing. In our Master's final words to his disciples he established for all time a test by which his followers might be known. He said: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

The early Christians accepted this responsibility as a test of their understanding, and it is recorded that works of healing, and even the raising of the dead, were not uncommon among them. That similar healing can be done at this time, and is being done, is amply proved by the experiences of Christian Scientists, and it is to be hoped that this New Zealand committee will avail themselves of the opportunity to consult with persons of this denomination on this subject, and obtain from them the reason for the faith that is in them. Unless this is done, these men will have shut themselves off from the best means available at the present time for obtaining authentic and needful information in a matter which is vital to themselves and to their church, and this surely would be a great misfortune.

ARCHIBALD MCLELLAN.

Efficient Forgetting

THERE are few negative habits, surely, which play a more prominent part in the drama of human experience than that of forgetting, a habit which, as generally understood, stands for weakness, not strength; for loss, not gain. It is not a virtue, and it is in no sense commendable. Nevertheless in his letter to the Philippians St. Paul speaks of a forgetting which evidently has a significant relation to spiritual advance. He says, "Forgetting those things which are behind, . . . I press toward the mark." This "forgetting" renders a distinct service, and it therefore merits thoughtful consideration.

There are few mature people who do not have some "burden of recollection." They have had painful, nerve-trying, or heart-hurting experiences with the memory of which they would gladly part company forever; and yet an anomalous impulse leads most of them to talk much of just these things. They are not only reverted to, but their causal relation to present conditions is assertively traced and enlarged upon, so that in fact they are wrought into a system of law and order and constitute an influential part of present belief and experience. Past weakness, sickness, and sins are thus clung to, if not canvassed, by the conscientious, until every hour of their day, perchance, is embittered by some remembrance, and their growth and effectiveness diminished in the same degree.

The poisoning effects upon the physical body which result when its decaying past is not thrown off, serve to illustrate the inevitable ills attending the retention of effete experience. It not only manacles thought and banishes joy, but it interdicts growth, and this lamentable fact gives special point to St. Paul's statement, and as well to the teaching of Mrs. Eddy on page 165 of Science and Health, that the remedy for human ills is found in forgetting them. The only profit derived from any stumbling in thought or deed is the lesson enforced by its penalties, a wisdom which were better gained, as it certainly may be, in another way; and happily the possession and use of this wisdom does not call for the continuous rehearsal of the experience by which it was acquired. The progressive spirit clings only to good, to the ideal.

Educational advance becomes possible only as the stupidities of ignorance are discarded, and that this is particularly true of spiritual advance is constantly emphasized in Christian Science. This teaching is not indifferent to the claims of error, as is constantly averred by its critics; it simply reduces them to their native nothingness by that scientifically intelligent denial which is the basis of efficient forgetting. We all know that untruth passes, is forgotten, in the degree that truth absorbs our thought, is accepted and acted upon; and here again the common sense of Christian Science becomes impressive. In "The First Church of Christ, Scientist, and Miscellany" (p. 210) our Leader says: "Keep your

Digitized by Google

minds so filled with Truth and Love, that sin, disease, and death cannot enter them." This involves that scientific forgetting which has immediately to do with the escape from the rule of sickness and sin to which Christian Scientists are joyfully witnessing in all the world today.

The moment one perceives that all causation is mental, that right ideas, thoughts of Truth and Love, are the only nourishing, upbuilding, and happifying things of life, that moment the wisdom, yea, the absolute necessity, of "forgetting those things which are behind," all that must be parted with in the attainment of the Mind that was in Christ Jesus, begins to dawn, and one's realization of the extent and embrace of this profitless past is immensely enlarged. He sees, too, that the giving up of every phase and manifestation of untruth, all thought of and belief in error, together with every habit springing therefrom, including sickness and sin, is his highest duty and privilege; and to this endeavor every worthy Christian Scientist daily devotes his thought. He grows ever more thankful, too, that he is consciously escaping from the thrall of the falsities and failures of the past, that in coming to his own he is getting rid of, truly forgetting, a long-encumbering and utterly dead self. This is the one sacrifice to which we are called in Christian Science, that we shall live not in the past of error but in the present of truth.

JOHN B. WILLIS.

Finding One's Self

THE wise man says, "Most men will proclaim every one his own goodness: but a faithful man who can find?" Again he asks: "Who can find a virtuous woman? for her price is far above rubies." Here the Christian Scientist may ask, How may one find himself,—a self that is both faithful and virtuous? As we read the wonderful parable of the prodigal we have a picture of one who expressed neither of these qualities until his illumination came. Failing to link his thought to Principle, he failed in everything until he was ready to give up his material and sensual concept of man. When he was ready to do this, "he came to himself;" more than this, he found the true self well worth knowing, one worthy of the father's loving embrace, and fit to wear "the best robe," the ring, and the shoes which betokened sonship. This happy experience is well expressed by Mrs. Eddy's words on page 171 of Science and Health: "Through discernment of the spiritual opposite of materiality, . . . man will reopen with the key of divine Science the gates of Paradise which human beliefs have closed, and will find himself unfallen, upright, pure, and free."

In thinking upon the prodigal's experience it would at first seem that it was a case of instantaneous healing, as a Christian Scientist would term it; but the story shows the working out of spiritual law, which proved first the utter wickedness of mortal belief, and next its entire failure to satisfy man's immortal cravings. It presents a slow and painful process on the human side, up to the point when the whole of the mortal concept was abandoned as worthless and the man found himself. We are not told much about this new-found self, because the greatness and goodness of the father so fills the thought; but richer far than any jewel was the rare and beautiful virtue of humility with which it was adorned, and we are told that "by humility . . . are riches, and honor." We also read that such an ornament is "in the sight of God of great price."

The student of Christian Science will readily see in this parable a hint of the vital fact that the infinite Father never loses sight of His own idea. He never ceases to know this idea, and it is almost startling to human sense to be told that He was apparently unconcerned about the wanderings of the false concept known as the prodigal. The wanderer had evidently started out as a devotee of pleasure in the senses, and on his quest had wasted all his substance, till at length grim want stared him in the face; but it is not necessary to assume that he was merely a sensualist. The prodigal is simply a type of mortal man who strays as far as it is possible to do from the Father who is Spirit, Mind, and the "riotous living" may mean that one believes he can revolve in a self-chosen orbit and compel all others to bow before his sway. Mortals alternately indulge self-conceit and self-condemnation, oblivious of the fact that neither of these mental states has any relation to the true selfhood which delights in doing the Father's will and deserves His commendation.

Many great names in the world's history represent the dire delusion that mortal man can exalt himself, oppose the divine law and order and substitute for it a human concept, a product of the tree of the knowledge of good and evil; but one after another these attempts to dominate mankind have failed, as fail they must. Of old the God of Israel said: "He that ruleth over men must be just, ruling in the fear of God." Each must find himself at any cost, the ruler and the ruled alike, and when spiritual awakening comes the first step is humility, the next service. Yet at this stage every need is met, for even the hired servants in the Father's household "have bread enough and to spare."

When one gives up the false belief that he is both material and spiritual, and that he has a mind separate from God, he is ready to know his own true being with all its divinely bestowed capacities to be and to do. Our Master asked, "What is a man advantaged, if he gain the whole world, and lose himself"? Christian Science shows that when the true self is found it is neither sick, nor sinful, nor sorrowful, but like the Father and known of Him.

ANNIE M. KNOTT.

Among the Churches

Current Notes

HAMBURG, IOWA.—The Christian Science Society has rented the lower floor of the Woodman Building. This will give it a good room on the ground floor.—*The Reporter.*

TOLEDO, OHIO.—Because its membership has increased to more than the church capacity, the congregation of First Church of Christ, Scientist, has been divided. Second Church has leased Collingwood Hall temporarily and will hold services there commencing on Sunday [Aug. 1]. The new church has two hundred and fifty to three hundred members.

Toledo News-Bee.

LAKE COUNTY, IND.—The various Christian Science organizations of the county are contemplating placing a tent at the fair ground during the county fair the latter part of September for the convenience of members and the public in general. Arrangements have been completed to that end by committees from each organization at a meeting in Gary Tuesday evening [Aug. 17].—*Lake County Star.*

NEW ROCHELLE, N. Y.—The trustees of First Church of Christ, Scientist, in this city, decided last night [Aug. 2] to go ahead with the erection of a brick addition at the rear of the present church edifice on Locust avenue. It is said that no time will be lost, once the work is started, so that the addition will be completed by the middle or late fall.

New Rochelle Standard.

Digitized by Google

PEORIA, ILL.—The *Journal* presents today [Aug. 1] the first sketch ever printed of the proposed elevation of the new edifice of Second Church of Christ, Scientist. This beautiful building is to stand in the 200 block on Barker avenue, and will cost between thirty-five and forty thousand dollars.

The congregation of Second Church is a part of the original First Church of Christ, Scientist, membership. It was found some time ago that the congregation of First Church was overcrowding the building on Hamilton boulevard, so a plan was devised whereby all members of First Church whose homes were on the West Bluff were to become members of the new congregation. This portion of the old congregation at once withdrew and perfected their own organization as Second Church of Christ, Scientist.

Peoria Journal.

ROCHESTER, N. Y.—The estimated cost of the new building for First Church of Christ, Scientist, is one hundred and fifty thousand dollars. The excavation work for the new church has been completed and the foundation walls are up. The new building will be 108 feet long, 212 feet wide, and 55 feet in height. A simple ceremony marked the laying of the corner-stone of the new edifice Aug. 6. The ground was broken last fall, and it is expected that the building will be enclosed within a few months, so that it may be used before December.—*Rochester Times.*

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 5, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, Oct. 13, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 4, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

Charleston, W. Va.

Before an audience which completely filled the orchestra floor at the Burlew Theater, Virgil O. Strickler lectured on the subject of Christian Science. Introductory remarks were made by Frank Conklin, first reader of the local church, who said in part:—

Mankind has long been in bondage to the material senses, a slave to the belief that there is life in matter; that the five physical senses testify to the truth when they affirm that the body is discordant, sick, and diseased. Mrs. Eddy reversed this testimony when she wrote, "There is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468). She set at naught the work of physical science, which had been seeking to find the cause of all action and force in matter, and established the eternal truth through demonstration,—that God is the only cause, the only Life, Truth, and intelligence.

With the understanding of one infinite God, good, who is available at all times, Christian Science offers to unhappy mankind full salvation from all its sickness, sin, and distress. It says through the "still small voice," "Come unto me, all ye that labor and are heavy laden, and I will give you rest." This healing is accomplished not through any occult or hidden power, but by knowing God scientifically, knowing Him as Jesus knew Him; and in "Science and Health with Key to the Scriptures" Mrs. Eddy has made clear to us the Principle and the rule by which this knowledge can be obtained. She labored to give this knowledge to the world. One of her wise provisions was to appoint a board of lectureship, and these lectures are intended to give the public the privilege of hearing the doctrine of Christian Science correctly stated and explained.—*The Charleston Gazette.*

Wellesley, Mass.

William D. McCrackan delivered a lecture on Christian Science in the Town Hall. He was introduced by Carrington Howard, who said:—

"Ye shall know the truth, and the truth shall make you free." Christian Scientists are convinced that they are learning the truth about the nature of God, and therefore about the character of His creation, in proof of which they are experiencing liberation and freedom from all the troubles that flesh and human consciousness are heirs to. So they are anxious to spread the gospel and perhaps to help some of their friends and neighbors to gain that "pearl of great price,"—the spiritual understanding of Truth,—which is setting them free from sin, sickness, and even death, and from the fear of any of them.—*Correspondence.*

Gary, Ind.

The remarks of A. B. Harris in introducing Jacob S. Shield at the lecture on Christian Science were as follows:—

The purpose of Christian Science is not to supplant primitive Christianity but to render our understanding of it more complete and practical, and to teach that the ruling providence of God should find practical expression in all the affairs of men. Its mission is to spread abroad an enlarged spiritual explanation of the infinite personality of God as Spirit and thereby increase human faith and trust in Him. It is a spiritual message, a call to us all to gain a clearer understanding of God and a more exact knowledge of His relation to His creation, man. We know that this scientific relation exists by practical demonstration thereof through the works of Christian Scientists in healing the sick, comforting the sorrowing and reforming the sinner.

Christian Science does away with the idea of an angry and vengeful God and replaces it with a God of love and mercy. Truly it is a message of health, hope, and happiness; of Life, Truth, and Love.—*Correspondence.*

Deadwood, S. Dak.

Clarence C. Eaton gave a lecture on Christian Science at the Deadwood Theater, and it was closely followed by one of the largest and most interested and intelligent audiences ever assembled in Deadwood to listen to the discussion of a religious subject. The speaker was introduced by Senator Robert C. Hayes, who spoke in part as follows:—

The teachings of the Nazarene have exercised over the minds of men for twenty centuries a most profound influence. The hearts of men today respond to these influences as in past ages. In this, a most material age, a devout Christian woman presented to the world the old and simple truths in a new form, under a new name,—Christian Science,—and her followers became legion. Men flocked to her standard as

Digitized by Google

formerly they gathered about the leaders of the crusades; for the spiritual nature craves immortality even as the physical nature craves air.

The members of the Christian Science church daily exhibit the faith that blesses them and to which they have consecrated themselves. Any one, whether a Christian Scientist or not, can appreciate this great good. It is said that the day will come when creeds shall be no more, and when all churches will unite in spreading the simple faith of Jesus everywhere on God's earth. God speed that happy day! I speak not as a professed Christian, but as a member of the great human family, conscious of the fact that the birth of the Christian religion was the most wonderful event in the history of the race, and that any manifestation calling anew to the minds of men its beauties and sublime truths, must be fraught with the greatest good; conscious of the fact that that event has worked and ever will work marvelous changes in the thoughts, beliefs, and aspirations of humanity.

The Deadwood Pioneer-Times.

Lectures to be Delivered

CALIFORNIA—Oxnard: Prof. Hermann S. Hering, Oxnard Opera House, 8 p.m., Oct. 4.
Sawtelle: Prof. Hermann S. Hering, Woman's Club House, South Sixth street, 8 p.m., Oct. 7.
CANADA—Ottawa, Ontario: William D. McCrackan, First Church Edifice, corner Metcalfe and Gilmour streets, 8:15 p.m., Oct. 5.
Westmount, Quebec: William D. McCrackan, Victoria Hall, 8:15 p.m., Oct. 4.
COLORADO—Denver (Second Church): Charles I. Ohrenstein, Church Edifice, corner South Grant street and East Bayaud avenue, 8 p.m., Oct. 7 and 8.
ENGLAND—Cambridge: Clarence W. Chadwick, The Guildhall, 5 p.m., Oct. 16.
Richmond, Surrey: Clarence W. Chadwick, The Hippodrome, The Green, 3:30 p.m., Oct. 17.
Sheffield: Clarence W. Chadwick, Montgomery Hall, 8 p.m., Oct. 14.
GEORGIA—Atlanta: Clarence C. Eaton, Church Edifice, Peachtree and Fifteenth streets, 8:30 p.m., Sept. 28.
HAWAII—Honolulu: Virgil O. Strickler, Opera House, 8 p.m., Oct. 29.

Testimonies of Healing

I have long desired to tell what Christian Science has done for me and mine. Three years ago my son, who was twelve years of age, became suddenly ill. We thought he had sprained his ankle, as there was acute inflammation and swelling, so we did our best in Christian Science for a few days. Then we saw the case was critical and I consented to call a doctor, thinking Christian Science treatment could be taken up afterward. The doctor, however, ordered the boy sent to the hospital, where he was immediately operated on for the removal of diseased bone and an abscess. A poisoned condition of the blood followed, and for several days he lay in a semiconscious state. At length all hope of his recovery was given up and I was sent for. He was then unconscious. At last I called on a Christian Science practitioner for aid. She advised me to sit beside the child and read Science and Health and she would treat him.

When I went to the hospital, to mortal sense my son seemed to be passing away, but I clung to the truth and knew that disease could not stop the manifestation of Life, for God was his life. In a short time, to the surprise of the nurses, he was able to recognize my voice as I read to him. One nurse afterward told me that it was no human aid which restored the lad that day, and she asked permission to read my copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. When the boy was admitted to the hospital he was asked his religion. He said he was a Christian Scientist, and this fact was recorded on a card at the head of his bed, as is the rule with all the patients. He began to show signs of recovery, but in three weeks the trouble appeared on the other leg and another operation promptly took place. These operations were regarded as extremely painful, and directly he began to rally after one, another would be considered necessary on a different part of the body, until about eight were performed in as many months. The doctors when asked not to operate would say, "If you can tell me how to remove diseased bone without cutting and scraping it out, do so," and the operations went on, till the child seemed about to pass away; but even then another operation was expected.

One Sunday the Lesson-Sermon was "Ancient and Modern Necromancy, *alias* Mesmerism and Hypnotism, Denounced," and the first reader's selection from the Bible was from the seventh and eighth chapters of Exodus, where the magicians failed to do all the works of Moses and acknowledged, "This is the finger of God." From that moment I determined to take my child home, and notified the doctor of my intention. He asked me if I realized what I was doing, and spoke of the seriousness of the case, saying that I was going against the advice of the medical staff and must sign a paper to that effect, adding that they might refuse to readmit the patient. The nurses and all were deeply concerned at my act. The doctor had said it would be impossible for inexperienced hands to dress the numerous wounds, as I could easily realize when I saw my son's body. The district nurses therefore came daily to do this until I could do it myself.

I sent for the practitioner as soon as the boy arrived home, and he made rapid progress toward recovery, the wounds healing one by one. For several months we had the same conditions to meet as occurred in the hospital; the pain, swelling, and inflammation would suddenly appear, and sometimes the child would be delirious. I would read Science and Health and declare the truth, and in the daytime, when the nurses came, there would be nothing to indicate what we had passed through during the night. For about six months I wheeled him to the practitioner. For many months pieces of bone continued to work out of different parts of the body without any trouble. It was found that the muscles of one arm and leg were contracted, but this too was overcome by Christian Science, so that he was able to walk about. After six months he went back to school. Some time later another swelling came on the cheek-bone and caused much comment and fear, but the boy went to the practitioner again, and soon was able to go to her carrying two pieces of bone that had worked out without pain, proving that there is another way to remove error than cutting and scraping it out.

My boy has frequently been stopped in the street by those who knew him in the hospital and by whom he was regarded as a dying child, and all are ready to acknowledge that the power of God as taught in Christian Science healed him when everything else failed. He is now well and active, and for ten months has not missed a day at school. He is a living witness to the power of Truth. No words can fully describe the wonder of this great proof of God's power to heal. I am truly thankful to God for His loving help. I also wish to express my deep and heartfelt gratitude to our beloved Leader for her ministry to human need.

CAROLINE HOOD, Christchurch, New Zealand.

✧

I have been interested in Christian Science about three years, and during that time have overcome many discordant conditions. At the age of nineteen I had reached the climax of suffering, having been a cripple for six years with curvature of the spine. After being treated by our home physician without success, a specialist prescribed a brace, which was worn for two years and a half; but as I was becoming more nervous and weak, Christian Science was resorted to because there was nothing else to try. I had heard it spoken of, but in a very unfriendly manner. My mother, however, who had been healed of a serious chronic ailment, told me of the wonderful revelation which is found in "Science and Health with Key to the Scriptures" by Mrs. Eddy, and of the power of Truth to heal; but I could not grasp the idea.

After graduating from high school I went away from home for the summer, and Science and Health was placed in my suit-case and I was asked to read it. Three months later my glasses and the brace were cast aside, for I was perfectly healed, not only physically, but mentally and morally. In the physical examinations in college and elsewhere, no doctor has found the slightest defect in the spine. I have no desire to study medicine now, as I realize that there is only one way to heal, and that is through the power of Truth. My healing came through the reading of the book, although it came slowly; yet as I understood I demonstrated, and where Christian Science was expected to be difficult and possibly absurd, it was found to be simple and logical. It is a source of great joy to me that I found the truth so early in life.

JOHN B. HOWE, New York, N. Y.

In regard to the testimony given by my son, I wish to vouch for all that he says. His healing came about after he left home a few years ago.

MRS. ROBERT M. HOWE, Independence, N. Y.

✧

[Translated from the German]

For a period of three years I had to be under medical care almost constantly, on account of a distressing abdominal trouble of long standing. When after that time the pain ceased, I most gladly accepted the physician's assurance that my healing was complete. All the keener was my disappointment and discouragement, therefore, when after a

Digitized by Google

few weeks the ailment manifested itself again with great severity. The professor whom I then consulted informed me that a radical cure could not be effected without an operation. During these days spent in fear and worry, I first heard of Christian Science and trustingly applied to a practitioner for help. With two treatments I was entirely freed from the pain and suffering, and have never had a return of the complaint. Great indeed has been the mercy and love of our heavenly Father! We have also experienced the help of Christian Science in many minor instances in our family, for which my heart is filled with gratitude.

I feel impelled to testify to one more healing, in the case of my little boy. During the first weeks after his birth he was healed of four ruptures and the pain occasioned thereby. The suffering would often cause the little fellow to cry for a long while, and as a result the ruptures would protrude considerably. Then I asked the practitioner to take up treatment. All the neighbors who had heard the child crying accused us of carelessness, thereby making it necessary for us to consult our former family physician. His opinion was, that if the babe's vitality permitted, he should be operated on at once, as he would not get well otherwise. In view of the child's condition, however, an operation seemed fraught with danger. Great, therefore, was my joy, when after a few treatments in Christian Science our darling improved perceptibly. We had discarded the trusses, knowing that the wearing of them would not heal him. The child is now fifteen months old, has never had a return of the ruptures, and is well and happy.

We praise God for the blessing which has come to us through the activity of divine law as explained in Christian Science, and our desire is that many fellow beings who are hopeless and afflicted may receive the glad tidings.

Frau E. Riesen, Bern, Switzerland.

✧

I desire to express my heartfelt thanks for all that Christian Science has done for me. I was very delicate from childhood, and for thirteen years before hearing of Christian Science was confined to my bed every winter with what *materia medica* called nervous prostration and lung trouble. Finally, when acquaintances had given me up and I was, according to my own thought, about to pass on, a friend left some Christian Science literature at my door. I read of the healing work and reached out for help. A practitioner was called and after two treatments I arose from bed and was able to go about. I had worn glasses constantly from childhood, but since then have done so only when reading. After three months of study I gained strength and the coughing entirely stopped.

I then found a little society where the Lesson-Sermon was read every Sunday, and received a healing every time I attended, the ailments passing to their native nothingness. After enjoying good health for about a year, I fell and severely injured my wrist. Acquaintances recommended that a surgeon set and replace the bones, and advised against trusting to Christian Science; but I did not bind up the wrist in any way, and by trusting to Truth and reading persistently, knowing that all things are possible to God, it was perfectly healed within two months.

I want also to tell of a healing from grief following the passing on of a sister. I had gone to church, but became so oppressed with grief that it seemed as if it would be impossible to remain through the singing of the first hymn; yet I felt I could not face the audience, so managed to stay, working for myself. When the second hymn, which was written by our Leader, was sung I was able to join in the verse beginning, "Oh! make me glad for every scalding tear" (Hymnal, p. 240), and there followed a sweet sense of peace, and I was completely healed. My healing has been permanent. I am sixty-eight years old and have walked one and a quarter miles every day to work at the Christian Science reading-room for nearly three years. When error tries to tempt me, I know where my help comes from and am well again. I could not turn back, for there is nothing to turn back to. I cannot express my gratitude for what our beloved Leader, Mrs. Eddy, has done for us.

Arlintha Beam, Mansfield, Ohio.

✧

With gratitude I give my testimony of healing in Christian Science. In 1902 I began to raise blood, and from December, 1905, until July 18, 1906, I grew steadily worse. The only Christian Scientist I knew treated me for lung, female, bladder, and kidney troubles, and I felt that I was healed in three days, though treatment was continued for three weeks. The doctors had given me no hope, one telling me that if I went to Colorado and lived in the open air I might live six months or a year. Since my healing I have been a well woman and able to do all of my work.

My son, when fifteen years old, had a very disagreeable eruption on his face. He went to a doctor and used medicine about a month, then he called for Christian Science treatment and began to get better after the first day. He was healed in two weeks, and all indications of the trouble were gone in less than three weeks. My husband had had five attacks of rheumatism, each lasting six weeks or longer; but under Christian Science treatment, after a similar attack he went to the store in less than two weeks. Four of my children have accepted Christian Science and my husband attends most of the services.

For all these blessings I am indeed thankful to God, and grateful to our Leader, Mrs. Eddy, for showing us the truth about God. I also wish to express gratitude for the Christian Science literature and to state that since coming into Science I have made several demonstrations.

Rebecca E. Hays, Crowell, Texas.

I herewith testify to my wife's healing as being true. I am very grateful.—J. F. Hays.

✧

As I was led to take up the study of Christian Science through reading a testimony in the *Sentinel*, mine is sent in the hope that it may be the means of bringing some poor sufferer to health, happiness, and God.

In February, 1910, I was taken ill, and gradually grew worse until July, when our physician advised me to go to Seattle for the summer to escape the hot weather, and also because the change of climate might be beneficial. Upon arriving in that city we decided to try another kind of treatment in which I had great faith at that time. The first two weeks there was considerable improvement, but I suddenly became worse and was confined to my bed. All that doctors and loved ones could do seemed of no avail, and after spending three months there I was taken home, worse than when I went away. That winter I was absolutely helpless, with the exception of being able to move myself a little in bed. I did not suffer much pain but seemed to be completely exhausted, the slightest exertion leaving me weaker.

In March, 1911, a friend sent me a *Sentinel* containing a testimony from a lady whose case was similar to mine, and I at once said that if Christian Science healed her, it would

Digitized by Google

me. My husband immediately wrote to a practitioner in Spokane, and I began to improve with the first treatment. At first I was not able to read, so my husband spent all his spare time reading Science and Health to me, and soon was as deeply interested in it as I. The healing came slowly, but I had read enough to know I had found what I had long been looking for,—a God who is Love and an ever present help. The first of June we went to Spokane, where we could talk with the practitioner and attend church. I was then able to sit up only a few minutes each day, but from that time on the gain was rapid, so much so that when I returned home, six weeks later, all who had known my previous condition were surprised.

Many other ills have been overcome since that time, and I know that one by one the remainder will disappear. Glasses which had been worn for sixteen years have been laid aside, although I had been told that I was born with defective sight. I now use my eyes for very fine work at any and all times. For four years I had suffered from an abnormal condition of one kidney. The doctors advised an operation, but to this I would not submit. Within a short time after beginning the study of Christian Science I was healed of this disorder. I am constantly gaining in health and flesh and never miss a day at my work.

Christian Science has proved to be an ever present help, not only in overcoming physical ailments, but in solving the problems of daily life as well. The Bible, which formerly was not found interesting, has been taken from its hiding-place and, together with our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is a constant companion. The physical healing was wonderful, but the demonstrable understanding of God means more than all else. I am indeed thankful to God, and grateful to our dear Leader. My prayer each day is that I may be worthy to be called a Christian Scientist.

Mrs. J. M. Stoddard, Waterville, Wash.

I am pleased to say that the testimony of my wife is not overdrawn in any way; in fact it would be impossible to tell of the many blessings and benefits we have received since taking up the study of Christian Science. It becomes more beautiful and more real each day as we journey from sense to Soul.—Joseph M. Stoddard.

✧

Some years ago I was at a standstill in my position. For about five years I had enjoyed the services in The Mother Church, but had never thought that I might progress and gain a larger knowledge of God by trying to give more. I felt that regular attendance at the services and daily study of the whole Lesson-Sermon, together with financial support, was doing my all; but I found out that I could also offer my services in a small way, and this has opened the channels for untold blessings. When a new national law was causing confusion to banking and financial interests, I was able to obtain a practical knowledge of this law, and thus be of greater value to my employers through the realization that God is infinite intelligence, and man, as God's idea, reflects all intelligence.

I have been healed of acute lung trouble, stomach disorders, headaches, and fear, all through Christian Science. Through daily study I am proving that God is an ever present help in every business relation or physical need; but greater than all this is the unfolding of man's relation to God. I am truly grateful for Christian Science.

My healing has been permanent, and for over eight years Christian Science has been my only physician. I might also add that while I am grateful for the physical healing, I am more grateful for the purification of sense and self and for the daily unfoldment of the knowledge of God through the study of Christian Science.

Gordon E. Musselman, Brookline, Mass.

✧

Having received much help from Christian Science during the past five years, I feel it my duty to express my gratitude. I had attended the services now and then, but was not really awakened to the power of Truth until after my mother had received great benefit from Christian Science treatment. Since then we have had many beautiful demonstrations in our family. I have been healed of colds; of severe headache, to which I had been subject from childhood; and also of grief and loneliness after passing through a great sorrow. If it had not been for my knowledge of the sustaining power of divine Love, this sorrow would have been unbearable. Class teaching, so wisely provided by our Leader to aid in this study, has been of inestimable value to me.

My heart is filled with thankfulness to God for these blessings, and with gratitude to our dear Leader for the sacrifices she made to give us an understanding of this wonderful healing religion, and for the uplifting thoughts one receives through the reading of her books and the Bible. I am also grateful to the many friends who so lovingly and patiently helped and guided me to this healing truth that makes men free.—Emma Kohl, Milwaukee, Wis.

✧

[Translated from the German]

Gratitude prompts me to send in these lines as a testimony to the many blessings which I have received since becoming acquainted with Christian Science. From childhood I had been very delicate and weak, and later years found me with but little strength, so that any kind of work meant an exertion. The physicians held that the trouble with me was general nervous debility, and they treated me accordingly. In 1911 one of my acquaintances gave me a copy of the *Herold* to read, and from then on I also had the assistance of a friend who had studied and practised Christian Science for quite a while. I was greatly benefited thereby, and together with this improvement came a constantly increasing recognition that God is an ever present help in our troubles, and that He delivers us from all evil. Because of the realization of this fact, today I feel stronger than I did ten or twenty years ago. Work is no longer an exertion, I have much greater endurance, and there is no trace of nervousness.

After a few treatments in Christian Science I was able to lay aside glasses which I had worn for over thirty years; moreover, I have experienced a great many blessings in my work within the last few years. For all this I feel that I cannot be too thankful to God, and I am also deeply mindful of our revered Leader's work in behalf of mankind, in showing us the way leading unto salvation.

Hermine Boehmer, Düren (Rheinland), Germany.

✧

I have experienced so many proofs of the power of Truth that I would indeed be ungrateful not to give thanks for what Christian Science has done for me and mine. I did not come into Christian Science for physical healing; it was brought to me by a dear sister in an hour of need, when there seemed no ray of light and the deepest sorrow and despair would soon have overwhelmed me. I can safely say to those who are in need of help that there is no condition, however

Digitized by Google

hopeless it may seem, that cannot be healed through Christian Science. This teaching has brought to me the peace "which passeth all understanding." When a loved brother passed from our sight, the thought of God as the only Life destroyed the sense of separation which otherwise would have been unbearable; and when my husband, who was not a Scientist, passed on last fall, I was wonderfully sustained and comforted. I cannot find words to express my gratitude to our beloved Leader for teaching us to know that divine Love does bind up the broken-hearted and comfort them that mourn.

Since coming into the understanding of Christian Science many ills have been overcome, among them organic bowel trouble of more than twenty years' standing, stomach disorder, and neuralgic headaches. My daughter, now sixteen years of age, has not tasted medicine since she was three years old. She has been healed of infantile paralysis, intermittent fever, and almost all the ills that children are believed to be heir to. She is a regular attendant of the Christian Science Sunday school, and since a small child has been able to work out her own little problems, besides making many beautiful demonstrations for others.

For all these blessings I am deeply grateful, but even more so for the understanding of divine Principle, for the spiritual regeneration, and for a better understanding of the Bible, which has destroyed the sense of fear, worry, and a tendency to criticize, teaching me to love my neighbor as myself, and bringing peace and harmony into my home. Christian Science helps me to know each day that the promises of our dear Master are for us here and now, and that as we put our understanding into practice in our every-day life, they are fulfilled. Thus I have reason to be grateful for all the gates that lead to the city that "lieth foursquare." I am deeply thankful to God, who is our guide, protector, counselor, and friend. I am also very grateful for the privilege of class instruction.—CLARA CANTONWINE, Walla Walla, Wash.

I have known Mrs. Cantonwine for a number of years and can truthfully vouch for her statement. I would like to add that I have been helped onward in my study of Christian Science by her kindly and loving words of truth. I myself have been so wonderfully blessed and have had so many beautiful healings in Christian Science that words fail in giving thanks for this wonderful truth that makes us free.

MRS. R. C. BADE, Walla Walla, Wash.

✧

I wish to express my gratitude for what Christian Science has done and is doing for me. Three years ago I took up the study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, for the healing of physical ailments, and was healed in three weeks' time of rheumatism in the feet and ankles, also of a very bad corn. The physical healing was nothing, however, compared with the spiritual uplift that gave me a better understanding of God. I was a member of an orthodox church, but did not get a good understanding of the Bible until I began to study it in connection with Science and Health and the Christian Science Lesson-Sermons; then it became a new book to me, and things I did not understand before were made plain.

I am deeply grateful to our beloved Leader for having given us a priceless treasure in our text-book, and that earnest students of Christian Science can be scientific Christians. Then too I am thankful for the help I get from our periodicals. I am studying to be a workman "approved unto God," and my desire is to be worthy to be known as a Christian Scientist.—SARAH L. BUSBY, Tulare, Cal.

From Our Exchanges

[The Christian Intelligencer]

The religion of the Bible is not only to be studied, but to be practised. Christianity makes its appeal to the reason, to be sure, but also to the conscience, to the affections, and to the will. The knowledge of God is not an exclusively intellectual proceeding. Salvation is not the monopoly of scholars. Many of the deep things of God are matters of intimate experience and come through obedience to the known will of God. "If any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself." It is entirely unreasonable to reject Christ because of intellectual difficulties. He has done enough for the world to be entitled to a man's trust and obedience. To bring Christianity to the bar of imperfect individual intellectual standards and then to reject Christ because he will not accommodate himself to man's inferior categories is rank impertinence. It is sin. It is blasphemy against the Son of man. If Christ can break the power of reigning sin and can deliver the soul from the guilt of sin, he has a right to say, "Follow me." Now Christ is able to do all that he claims, and a man has no right to reject him on intellectual grounds without having tested his grace and power in daily life.

[The Christian Work]

Do you remember when you were a child how heavy the burden was upon your little heart if there was anything on your conscience, or if you knew you were in the wrong about a certain thing and yet persisted in the fault, and how dark the world looked while you were bearing it? You might try first one distraction and then another to compensate you or make you forget, but you never really did forget. You could not feel at peace, no matter how much you told yourself you were happy or how much you tried to lay the blame upon some one else. The only thing to do, and you had to do it in the end, was to defy all consequences and get right with those you had wronged, be perfectly straight and true. Any pain you might suffer afterward was heaven compared to what you went through before.

We are still little children, God's wayward little ones, and we are trying to resist Him, trying to find joy in some other way than in the fellowship of His holiness and love. And it cannot be done. "Acquaint now thyself with him, and be at peace." Are we persecuting our Redeemer, crucifying the Son of God afresh, and putting him to open shame? We are engaged in an unequal contest, and he will win. "It is hard for thee to kick against the goad" (Rev. Ver.). Let us yield ourselves to the living God, our soul's best friend, the mighty Master in whose hand is our eternal good, and He will make us His own forevermore and cleanse our souls from every stain.

[The Christian Register]

The old idea of religion was that it led to a spiritual condition in which the convert was safe. He had been delivered both from the spiritual perils of this world and from whatever dangers waited in the world to come. He had reached a turning-point at which his face was set permanently in the right direction, and he had faith to believe that a new power had been added to his soul which would make failure or apostasy impossible and would keep him safe until the temptations of this world had disappeared from his dying eyes and that which is perfect had come. This faith has tended to disappear along with the old scientific idea of catastrophes or sudden changes in the world in which man lives. One con-

Digitized by Google

sequence of this change of view has been the decline in the "revival" policy of the churches. There may be yet strata of the religious world in which the sudden change is still the ideal of the preacher and of the church, but they are fast being buried under the deposits of new ideas and policies. It may be said, without intention of any slur upon its value in some circumstances, that the revival has given place to Christian endeavor on the part both of those who work and of those who are worked upon. Religion has come to be considered a matter for growth, not of inoculation, and the aim of the sermon to be that of developing and training a seed according to its inherent capacity rather than of transforming it into something alien or hostile to its nature.

[*Northwestern Christian Advocate*]

To have one who performs a kindness for another rewarded with inappreciation is a moral tragedy. Better imagine an enemy a friend, than a friend an enemy. After all, there is far less hatred in this world than folks imagine, and much that actually exists has in many cases been cultured by suspicion on another's part, for it takes two to grow a hate. Time was when but few blossoms, relatively, were classified as flowers. Today the flower family has been enlarged to include the erstwhile humble roadside weed. Some of the daintiest, most delicate flowers we have are of plebeian stock once termed weed. It is much a matter of classification,—a process involving knowledge of the human heart,—whether our list of friends is comprehensive or meager. To be able properly to classify our friends is an art of the highest order, well worth cultivating—not alone for the friends' sake, but our own.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

The finite cannot comprehend the infinite; even so we can apprehend but cannot comprehend the love of Christ. Oh, that poverty of ours, and the greatness it misses! And yet how glorious that, however high our aspirations rise, they can never outdistance the unsearchable riches of Christ!

Something has seized upon my heart this morning which I long to communicate to yours. Perhaps some of you—who knows?—are longing to communicate it to me. It is this mystery of mysteries, the fact of the love of Christ. The world does not know of it, does not understand it, does not realize its presence, but it is always near, always mighty, always inexhaustible and free. Everything in the universe tells of it, if we were only able to read the language. It is hidden away in the heart of all existence, ever seeking new manifestation and taking advantage of every opportunity it receives to make itself known.

[*Zion's Herald*]

If we have made some one happy during the hours that have passed since the morning light called us to our tasks, the day has not been a failure. We may say that it has had its measure of success, if there has gone out from us some considerate bit of living that has helped to put the song upon the lips of a tired traveler who was trembling beneath his load. It has been a good day if that has been accomplished, and we have been about a good business; for making people happy is one of the choicest efforts we are privileged to set about.

[*New-Church Messenger*]

No, there is nothing vicarious in Christianity. It is the most virile, practical, real, rational, and actual thing in the world. It is so to abide in the Lord, and he in us, that we think, love, do, and live from the principles that he did, and by power from him conquer our sins as he conquered, and thereby reign with him in his kingdom of spiritual light, love, and eternal power.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

Attention is called to the change in price (see also last cover page) on single copies of the following volumes of Mrs. Eddy's writings when sent by mail postpaid from the office of the publisher, Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Massachusetts:

Science and Health (cloth) from $3.18 to $3.00; Retrospection and Introspection (cloth) from $1.06 to $1.00; Unity of Good (cloth) from 65 cents to 60 cents; Pulpit and Press (cloth) from $1.06 to $1.00; Rudimental Divine Science (cloth) from 55 cents to 50 cents; No and Yes (cloth) from 60 cents to 55 cents; Messages to The Mother Church (cloth) from $1.56 to $1.50; Christian Science vs. Pantheism (pebbled cloth) from 26 cents to 25 cents; Message to The Mother Church, June, 1900 (paper), from 26 cents to 25 cents; Christian Healing and The People's Idea of God (cloth) from 60 cents to 55 cents; Christian Healing (paper) from 21 cents to 20 cents; The People's Idea of God (paper) from 21 cents to 20 cents.

The above changes do not constitute a reduction in the price of Mrs. Eddy's works, but save the purchaser the postage on single copies of the volumes specified.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

The Publishing Society now has in stock a new Oxford Bible, 01683x, which is designed especially for the use of Second Readers. The Bible is printed from new plates in pica type on Oxford India Bible paper, bound in leather. The size is 10¾ inches long by 8 inches wide, to correspond with the large type edition of "Science and Health with Key to the Scriptures." One to five copies, $9.25 each; six to eleven copies, $8.75 each; twelve or more copies, $8.50 each.

The pamphlet, "Fulfilling the Law," has been translated into Danish and is now published and on sale. This new pamphlet has the English version printed opposite each page of the translation.

The pamphlet entitled "The Father's Business," already printed in English and German, has been translated into Swedish, "I Faderns Tjänst," and is now published with the English and Swedish versions on opposite pages.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¼ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under those titles in this price list.*

Items of Interest

The most radical reconstruction of New York city's school system ever recommended by a city official is contained in a report made to the board of estimate by Comptroller Prendergast, who is also chairman of the board's committee on education. The principal recommendations made are as follows:—

The total elimination of any increase in the budget of the board of education for 1916. The total elimination of part time and overcrowding in the schools. This is to be accomplished by intensive use of school buildings as they now exist. New construction will be limited almost exclusively to new districts, or where present buildings are in bad condition. The extension of the school year of forty weeks to forty-four weeks. The lengthening of the school day from five to six hours. The total elimination of extra pay to teachers for service in vacation schools, and other forms of extra pay for persons employed on annual salaries. A reduction of 10 per cent in the number of positions for teachers. This is made possible by lengthening the school day and the school year. A change in the system of promoting teachers, whereby merit alone shall control. The reduction of the common school course from eight to seven years. Mr. Prendergast commends the application of the "Gary plan," as specially worked out for New York.

The twenty-second annual convention of the International Irrigation Congress began in Stockton, Cal., Sept. 13, and ended in San Francisco Sept. 20. Meetings were also held in the cities of Fresno and Sacramento. This convention gave serious and extended consideration not only to the administrative and technical phases of the subject, but to the pressing humanitarian problems involved in the settlement of the irrigated lands. The subjects discussed included, first, the problems of land settlement, embracing those humanitarian problems growing out of the settlement and development of irrigated lands throughout the West; second, methods and results, within which are included such practical questions as engineering, application of water to land, irrigation law, and irrigation districts; and third, financial problems, including the subject of rural credits, marketing, and means whereby irrigation securities may be strengthened.

One of the important acts of Idaho's legislature at its last session was the passage of the farm markets law. The law was approved in March and the department established May 8. The law empowers the director to promote, in the interest of the public, economical and efficient production and distribution of all farm commodities, to maintain a market news service, and to act as information clearing-house between producer and consumer. He is also to cooperate with the producers and consumers in devising and maintaining economical and efficient systems of distribution and to accomplish the reduction of waste and expense incidental to marketing. The bureau is also expected to help improve country life and to provide greater equality of opportunity for the farmers.

El Mercurio of Valparaiso, Chile, recently published a short description of the Victoria factory of Puente Alto. The establishment was founded in 1898, and incorporated in 1905, with a capital of 1,800,000 pesos. Its buildings of limestone and brick cover two city blocks, and have large, commodious workrooms. The company has built houses for its office force and 400 operatives, all of whom have them rent free, with electric light furnished by the company. The factory produces knit goods of all kinds, such as stockings, socks, underwear, sweaters, and the like, to the extent of 200 different varieties, for which purpose it is equipped with the most modern machinery. It has a capacity of 25,000 dozen pairs of hose per month.

The Pan-American road congress, which is perhaps the largest and most important good roads congress that has even been held, was in session in San Francisco and Oakland Sept. 13-17. The organizations participating in the congress are the American Road Builders Association, the American Highway Association, the Pacific Highway Association, and the Tri-State Good Roads Association, which includes the states of Oregon, Washington, and California. The object of the congress is to bring together in one great convention those from all parts of the United States, Canada, Central America, and South America who are interested in the subject of highway and street improvement.

It has been discovered that the once despised Australian salt-bush, which is found in abundance in Washington, Oregon, Idaho, Montana, and other western states, and which thrives in soil where nothing else will grow, is one of the best forage crops for sheep to be found anywhere in the United States. There are literally millions of acres of the salt-bush in the West, and at a conservative estimate they are now worth millions of dollars a year as feed for sheep. In the past this crop has been allowed to go to waste. A remarkable thing about the salt-bush is that it grows better in hard, firm soil than on loose, well-cultivated land, and after once getting a stand it requires practically no attention. The weed grows so fast than an ordinary flock of sheep cannot keep a field of good size clear of it, and there is considerable left to be harvested.

Already 76 kilometers of the 120 necessary to complete the new Transandine Railway being built from Antina, Chile, toward the Argentine, have been completed. The most difficult part of the construction is over. Later on this line will be carried forward to Chosmalal in the Argentine and link up with one of the government railways in that section. The chief advantage of this new line is that it will not be subject to the winter interruptions that the Uspallata line experiences. Moreover, it does not ascend over 1,600 meters, while the latter line reaches the extreme height of 3,188 meters.

As a part of the canal that will ultimately connect Marseilles with the river Rhône, French engineers are driving a tunnel with a larger cross-section than any heretofore constructed for any purpose, being 72 feet wide and 46 feet high,—large enough to pass two canal-barges of the type plying the Rhône and allow a six and a half foot path on each side. It is called the Rove tunnel, and pierces a headland which separates the bay of Marseilles from the inland sea Etang de Berre. It is driven through rock, using compressed air hand drills and compressed air haulage. The excavation was begun in 1910, and the length completed will be about three and three fourths miles.

Four hundred and sixty-five miles of experimental post-roads of different types, benefiting twenty-eight different counties, are now under construction in thirteen states, which are cooperating with the federal government. The federal government pays one third, and the state or county benefited must defray two thirds, of the cost. The entire sum of $500,000 of federal funds and $1,000,000 of local funds will be expended under the supervision and checking of federal highway engineers. As rapidly as these roads are constructed the department is endeavoring to interest the local authorities in inaugurating systematic maintenance to keep them in condition.

The work of the international boundary commission, which was established in 1903 to supervise a survey of the American-Canadian line and to place the boundary monuments, is now complete, except for a matter of about 450 miles. Since 1903 the commission has directed a survey of 4,164 miles, including the Alaskan boundary. The unsurveyed 450 miles comprise a section in the Rainy lake region of the Minnesota boundary, one in the Megantic region of the mountain chain portion of the Maine-Quebec boundary, and another on the St. John river portion of the Maine-New Brunswick boundary.

Stonehenge, most ancient of British stone monuments, has been sold at auction for $33,000 to C. H. E. Chubb, an Englishman. The remains of this great prehistoric structure is on Salisbury Plain, Wiltshire, England. It consists mainly of a circle of vast stones, nearly half of them now prostrate, which originally supported horizontal stones, and of several pairs of huge stone columns arranged within an inner circle of much smaller stones.

Five members of the Smithsonian Institution expedition which left Seattle, Wash., under Johann Koren, the Norwegian naturalist, in June, 1914, to collect specimens in the Arctic, have returned to Nome, Alaska. They brought with them a large collection of Arctic fossils and birds. Koren and the other members remain in Siberia another winter.

The municipal art commission of Boston has decided to locate the statue of former President Sarmiento of the Argentine Republic near the Museum of Fine Arts in the Fenway. The funds for the statue are being raised by public subscription among Argentinians.

An official report from Vilhjalmar Stefansson, the explorer, confirming earlier reports that he had discovered new land in the northern waters of Canada, has been received in a message from Nome.

Property totaling more than one hundred million dollars is now owned by the Young Men's Christian Association in cities throughout the United States.

Vol. XVIII October 2, 1915 No. 5

Righteousness: Its Realm

WILLIAM D. MC CRACKAN, M.A.

CHRISTIAN SCIENCE is conferring upon mankind the inestimable benefit of showing them the way of right thinking. It is pointing out this way with a refreshing certitude that avoids all the wavering hypotheses, the limiting "ifs" and "buts" of conventional religion and philosophy. Mankind has in its aspiring moments agonized over the uncertainty of all things human, and when it has turned to teachers authorized by public opinion for the assurance of stability, it has usually been met with vague promises for the future which are not binding upon the present. This future has been enshrouded in so much mystery that even the most glowing prospects of ultimate relief were not potent to dispel the fears, the sins, and the sufferings of today. The apostle's declaration that "now is the day of salvation" has been a dead letter, and not even a signal of hope to many who sought help from their religious guides, while under these same circumstances the calm, joyous security of Christian Science bathed the feverish temples of doubt and uncertainty with the touch of cooling, cleansing waters.

What is it to think right? Even to think in accordance with Truth. Christian Science teaches that God is Truth. Therefore to think truthfully is to think in a godlike manner. Right thinking places the aspiring Christian in the attitude of unity with God, brings to pass the atonement,—the at-one-ment,—and constitutes the silent communion which fulfils the demand, "Pray without ceasing." The psalmist sang: "As for me, I will behold thy face in righteousness: I shall be satisfied, when I awake, with thy likeness."

Only through righteous thinking can men experience the spiritual joy of beholding God's face, that is, realizing His character, entering into the enjoyment of knowing Him as He truly is, the ever active source of infinite bounty, of all harmony, beauty, happiness, and heavenly bliss. Then it is clear that all unrighteous thinking must operate to hide God's face from men, must act like a veil to prevent the clear recognition of Truth, must counteract one's prayer, and make the desire for at-one-ment and communion of none avail. Are we certain that such misconceptions are not at this very time trying to cut us off from receiving what we need and legitimately desire of God's infinite good? The belief that God is the author of evil as well as of good would have this effect, because it would color prayer with the dread of receiving evil in answer to our request for good. In our dealings with our fellow men, even a suspicion concerning their honesty has a tendency to mar our joy. How much more would this be the case if we indulged in the misconception that omnipotence was capable of knowing, that is, of harboring or entertaining evil. To think right about God is productive of constant blessings, definite answers, great rewards.

Only by right thinking, by the spiritual understanding which is at once Christian and scientific, can mankind hear the voice of the good shepherd calling to his sheep which have strayed in the mountains. Jesus once explained, "He that is of God heareth God's words," and when he stood before Pilate he made the statement, both comforting and full of warning, "Every one that is of the truth heareth my voice." To be "of the truth" is to be truthful, to think right and so act right. Christian Science is showing mankind how to take advantage of this communion with Truth in order to reflect it to others and thus save the sinner and heal the sick. The great Wayshower defined the suppositious source of evil, generally called devil, as "a liar" and said that the truth abode not in him. Evil and its effects are devoid of truth. Evil is error, and it is to be corrected in human experience first by being recognized as error, and then by being made to give place to truth. To be "of the truth" means to be in that attitude of mind which is constantly uncovering the untrue and proving it to be unreal. This process applied to sin and sickness destroys them. Truth is ever wiping out error, and the realization of this fact operates as the effectual prayer referred to by James as potent not only to save the sinner but to heal the sick as well.

This is the practice of Christian Science, to realize the activity of Truth in overcoming error, of good in destroying evil, of Life in proving everything unreal and untrue that would try to limit man's dominion. These healing works are proofs of spiritual understanding. They come to him "that is of God" and to him that is "of the truth," to the sincere servant of God who seeks to dwell in the understanding of Truth. Right thinking inevitably results in right acting; correct Christian teaching, in works of saving and healing; true preaching, in scientific practice. Thus the Science of Christianity can never be separated from its art or application.

Truth is powerful. One cannot understand it and yet remain passive. Truth is never quiescent. Once it has entered human consciousness, it begins to transform that consciousness into the likeness of the anointed; it is effective in making it conform to Truth's image and likeness. Those who are wholly uninstructed in Christian Science, but who hear the spoken word at a Sunday service or at a Wednesday evening meeting, or who attend a lecture on Christian Science and there catch a glimpse of Truth's infinite power, or who read of it in Mrs. Eddy's writings,—all who through any of these ways come into mental touch with the truth set forth by Christian Science, receive the imprint of an abiding influence. It may not show itself immediately, yet this seed of Spirit will surely push through the soil of materialism, and the harvest of good will follow in due time.

A careful spiritual education is needed to fit one to practise Christian Science. Though in the face of the infinitude of good he may constantly feel like a beginner at school, nevertheless there will be progress in response to conscientious effort. As his understanding of the truth grows, so does the efficacy of his reflection of it. The privilege is great and the task sacred. Those who are engaged in this reformatory and healing work are constantly reminded of the need of faithfulness and whole-souled consecration. On page 40 of her work entitled "No and Yes," Mrs. Eddy writes:

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

"I instruct my students to pursue their mental ministrations very sacredly, and never to touch the human thought save to issues of Truth; . . . never to take away the rights, but only the wrongs of mankind." A prayer of unrighteousness would be helpful neither to the one who thought it nor to the one in whose behalf it was given. Such an effort would involve human will-power of some sort, and would bear the mark of mesmerism or hypnotism. Christian Science utterly repudiates such thinking, and shows that it has no connection with the prayer of faith or spiritual understanding, except as an example of a supposititious opposite.

Spiritual certainty and satisfaction await all those who will take up the joyous task of learning to think right. Every question as to man's true origin and genuine potentialities will be answered as the student progresses. No problem of the individual, of the community, or of the nation can baffle the irresistible logic of Christian Science, based on divine reason and revelation. The world conditions of today will find their final solution tomorrow in the vast, all-embracing, Christian, and scientific realm of righteousness.

Church

ROBERT L. SAWYER

ALL who anticipate joining a Christian Science church will find rich profit in a careful study of the definition of church as given on page 583 of "Science and Health with Key to the Scriptures," for it is fitting that we should have a clear conception of what this step means in order that the line of separation from whatever is foreign to the nature of our new alliance may be sharply drawn. Humanly speaking, there is a vast difference between knowing and doing; yet according to the Bible one without the other is incomplete. Jesus told his students that only as they continued in his teaching were they truly his disciples, and that if they fulfilled this condition, they would be able to do the same works which he did. At another time he said, "If ye know these things, happy are ye if ye do them." This is the true motive for joining a Christian Science church, that we may be "doers of the word, and not hearers only."

In this instance church is defined by our Leader as "the structure of Truth and Love," and only that which is constructively true and loving can be a part of this church. We may rest assured that our concept of this structure can never be too high or too pure, nor shall we ever be in danger of guarding its portals too persistently. We read in the first chapter of Job that "when the sons of God came to present themselves before the Lord, . . . Satan came also among them." While it goes without saying that no student of Christian Science has yet attained anything approximating perfection, still each should watch that sympathetic mesmerism does not induce him to allow error entrance to that which symbolizes our highest concept of church.

As the flowers of the field manifest the measure of God's love by their quiet loveliness, so the true Christian Science church seeks to manifest only "whatever rests upon and proceeds from divine Principle," in accordance with Mrs. Eddy's further definition of the true meaning of church. Here again we see that understanding of the letter alone is insufficient as a qualification; we must not only rest upon or know Truth, but we must proceed from or express Principle. Honest seekers for admittance to a Christian Science church have no cause for discouragement if they are asked to wait until further preparation shall make the new step more true to the natural order of progress and growth. If there is real love for the inquiring one, the application committee must in his interest see that he is reasonably free from that which may become a disability both to himself and the church body of which he wishes to become a member.

While every member of a Christian Science church will necessarily receive rich blessing from the united effort of all the members to bring this gospel of Truth and Love to all nations, we should bear in mind that its prime object is not in behalf of its membership, but rather for those who are still wandering in the desert, who have not yet entered the path that leads to Truth. In the definition already quoted, we are told that the church "affords proof of its utility and is found elevating the race." It is not a hospital, as that word is generally used; it is the proving or testing place for seekers after righteousness. Students of Christian Science should not join the church from selfish motives, not even for physical healing, but because of blessings already received. Each should come with the sole desire to be allied with this institution and with the intention of doing his utmost to forward its vital purpose as declared in Science and Health.

It is not the water in the ocean but that which finds its way into the ship that causes it to founder. Constantine thought the church needed affluence, and as he opened wide the door the world came in; then as the tide of ecclesiastical ambition crowded out the atmosphere of Love, spiritual buoyancy with its supporting and healing influence was lost to that age. Mrs. Eddy saw the need of Truth's dynamic quickening influence and its demonstration, and to this end she established The Mother Church and the branch churches, thus giving unity and directness to the united efforts of those brought into a saving knowledge of Truth, God.

A church is more than a temple, more than a body of people. Its support rests not in numbers or personality. Its authority is independent of creed or tradition. No better statement of its status and the quality of thought that should comprise its membership can be found than that given on page 35 of the Christian Science text-book: "Our church is built on the divine Principle, Love. We can unite with this church only as we are new-born of Spirit, as we reach the Life which is Truth and the Truth which is Life by bringing forth the fruits of Love,—casting out error and healing the sick."

Pleasure Seekers

MARIE H. CROCKETT

DURING the summer season there are none more in evidence than those whom we term pleasure seekers. At every steamboat dock, at every railway station, on the trolley and in the motor car, we are wont to see a vast and busy throng intent on one purpose,—that of breaking away from the routine of work or ordinary occupations and finding pleasure in the new activities or relaxations of a summer vacation. These efforts are successful or otherwise according to varying conditions, circumstances, motives, and temperaments. Yet there are pleasures which are dependent upon none of these things, in which there are no mockeries of hope, no uncertain fulfilments; and not only this, but we are told exactly where they may be found without questionings or mistakes.

That all God's children should become preeminently a body of true pleasure seekers is evidenced by the fact that we are told in the Scriptures of abundant pleasures already provided for all; yes, and "fulness of joy," which awaits those who rightly seek it. Is not the fact that the heavenly Father has provided these pleasures, this "fulness of joy," sufficient proof that He intended His children to seek them, to possess them, to rejoice in them?

But, it may be asked, where are these pleasures to be found? For answer we turn to the Bible, where we read, "In

Digitized by Google

thy presence is fulness of joy." Now let us pause a moment, let us put our shoes from off our feet, put aside every material sense, for the ground on which we stand is holy, and let us listen to these other words of the psalmist: "Whither shall I go from thy spirit? or whither shall I flee from thy presence? If I ascend up into heaven, thou art there: if I make my bed in hell, behold, thou art there. If I take the wings of the morning, and dwell in the uttermost parts of the sea; even there shall thy hand lead me, and thy right hand shall hold me." Again, "Lord, thou hast been our dwelling place in all generations." Even in this generation, then, we are all dwelling in Him, and it matters not where we may go, we cannot get away from His presence.

Here, then, at this moment and in this place, we are in the midst of that presence in which is "fulness of joy." Yes, we are truly in the very presence of that Mind which "made all and includes all" (Science and Health, p. 206); the Mind in which was "every plant of the field before it was in the earth, and every herb of the field before it grew;" the Mind that "stretcheth out the heavens as a curtain, and spreadeth them out as a tent to dwell in," in whose hand "are the deep places of the earth: the strength of the hills is his also. The sea is his, and he made it: and his hands formed the dry land;" the Mind that "maketh Arcturus, Orion, and Pleiades, and the chambers of the south." In God's presence, in the presence of this Mind which includes all wonder and beauty, "we live, and move, and have our being;" and this is true not only of ourselves, but of all our dear ones, whatever may have been their experiences, and it is true of every one of God's children everywhere. What can be more satisfying than this?

We are wont to feel in a measure content if a fair proportion of our anticipated joys and pleasures find realization, and we do not complain even though they last but for a season; in fact, we consider it quite worth while to spend time and money and strength in the search for pleasures which we know must come to an end, whether they be of shorter or longer duration. In the Scriptures, however, we are told of pleasures that have no ending, of joy, the perfection of which finds expression only in the term "fulness;" in other words, the complete fulfilment of all our desires, without one smallest item forgotten or lacking.

Many are still asleep to this great fact, some are just awakening, and others have pressed on still farther. Through the spiritual interpretation of the Scriptures, our dear Leader has taught us again the meaning of that guide which points to the ultimate of all attainment. "At thy right hand there are pleasures for evermore." Whom and what do we find at God's right hand? The answer is found in Colossians, where we read, "Seek those things which are above, where Christ sitteth on the right hand of God." Here, then, at God's right hand we find the Christ, the perfect Son, the understanding, the consciousness, of God, good, infinite Mind. We also find our true selfhood and joy, infinite Mind's reflection, the perfect unity of God and His idea, the Mind "which was also in Christ Jesus."

In this presence, therefore, is "fulness of joy," and in the awakened consciousness, which understands its unity with the Father, "there are pleasures for evermore." These are indeed the pleasures which have no ending, and this is the joy which "no man taketh from you." As we seek the true joy, the real pleasures, and find them in the right place, in our Father's presence and at His right hand, and as we abide in this consciousness, we shall apprehend the truth of what our Leader says in Science and Health (p. 261), "You will bring these into your experience proportionably to their occupancy of your thoughts."

With this awakened consciousness, this kingdom within, the whir of machinery will become as the singing of brooks; the tree which we see from our window, the meager glimpse of sky, the chirping of sparrows, and even the tiny blade of grass springing between the stones,—all will speak to us of the Father's love and point to the more abundant life. "For the Lord thy God bringeth thee into a good land, a land of brooks of water, of fountains and depths that spring out of valleys and hills; a land of wheat, and barley, and vines, and fig trees, and pomegranates; a land of oil olive, and honey; a land wherein thou shalt eat bread without scarceness, thou shalt not lack any thing in it." "For ye shall go out with joy, and be led forth with peace: the mountains and the hills shall break forth before you into singing, and all the trees of the field shall clap their hands."

Sunrise

ADELLA M. FISHBACK

Not long ago, I saw for the first time a glorious sunrise on the ocean, and the whole experience seemed typical of the transformation wrought in my life when the dawn of Truth as revealed in Christian Science awakened me to spiritual sense. Before this experience there was gross darkness, physically, mentally, and spiritually. Not one smallest ray of light penetrated the gloom. A dear friend then told me of the brightness that had illumined her life through the study of Christian Science and the subsequent faithful application and practice of its teachings. Faintly, very faintly at first, the gray dawn began to break in my weary thought, and hope like a flitting shadow trembled upon the horizon even as it had that morning when I awoke, while birds were beginning to twitter their notes of melody, reminding us of the giver of every good and every perfect gift. I congratulated myself that at last I was awake in time to realize my hope of seeing the sun come up over the ocean on a clear summer morning.

As the mists cleared I looked out toward the east, across the trackless deep, for the first appearance of the sun's rays. Imagine my disappointment on seeing a great bank of dark clouds spreading itself across the eastern horizon, and I began to lose hope of realizing that which I had so long waited to see. There were only clouds where I expected to see sunlight, but something seemed to whisper, "Let patience have her perfect work." Suddenly, away out where the rolling sea and the clouds seemed to meet, there was a little rift in the blackness, and I saw a gleam of deep red, which widened until a ball of glowing crimson was visible. Just a moment and it was gone, then I saw only clouds and sea again, and to mortal sense there was no sun at all. But waiting and watching, I presently saw, away up on the top of that bank of darkness, a gleam of bright yellow light, changing quickly into a wide band of pure gold. Then I realized that surely the sun was shining, and as in mental experience, that if I doubted not, nor ceased to work, watch, and pray, I would see it face to face.

My expectant faith was soon strengthened, for from the very depths of that cloudy mass there suddenly burst forth such an effulgence of splendor that I could not continue to look upon it. Glancing away, I saw to my great delight that the whole earth was bathed in brightness and beauty. Looking out over the shining water, there appeared before me a glowing pathway, leading direct to the sun, and it seemed a fitting type of the straight and narrow way of Truth over which the weary pilgrim may travel out of sense into Soul. On either side was the surging sea, symbolizing materiality, yawning deep and wide, ready to swallow one up in hopeless oblivion if he were faithless to the trust or ceased to keep his

Digitized by Google

feet in the glowing path revealed. As I remembered my blessings, there came such a sweet sense of gratitude to our Father-Mother God in knowing that this brightness and beauty were for all of His children, everywhere. A vision of it will lift up every one who is deep down in the mire of human experiences. It will fling wide open the prison doors of those who today are in bondage to sinful sense. This radiant light of Truth and Love can regenerate and form anew the fallen; it can heal the broken heart, cool the fevered brow, cause the glow of health to return to pallid cheeks, and give strength where only weakness seemed to be.

Had I slept on, dreaming the morning hours away, I could never have seen this beautiful sunrise, and because of my lassitude those whom God had graciously given me to bring to this light might never have known the joy of being born into the kingdom of Love. Thus I would have forfeited my right to the promise, "They that be wise shall shine as the brightness of the firmament; and they that turn many to righteousness as the stars for ever and ever."

Love versus Fear

GERTRUDE JUBB

In his first epistle St. John tells us that "there is no fear in love; but perfect love casteth out fear." In fact, he puts before us very plainly that in so far as we hold fear in our consciousness, we are lacking in the realization of God's love to us, and of our debt of love to our fellow man. Nevertheless, this terrible fear, which has been latent in mortal mind ever since the beginning of the Adam-dream, attended by its corresponding lack of love, is generally the antagonist that opposes our first steps in the way of Christian Science.

Fear may manifest itself in many forms,—in sickness, sin, or limitation; in any case, there it is, confronting us with stern and menacing attitude, or else subtly lying in ambush until the moment arrives when it finds us negligent and unguarded, and lets fly its poisonous darts of evil. It is as if one were suddenly left alone on the edge of a vast morass, stretching out gray and somber on every side. The darkness deepens every moment, and each step slowly but surely sinks farther down into the horrible mire. Very soon, as the blackness of darkness covers all things, the lonely and distraught traveler loses all hope. An agonizing cry for help goes up to the great "I AM," and the mandate is issued, "Let there be light." Then the lesser light, which God made to rule the night, shines forth, and is sufficient to guide the weary feet to a place of safety on higher ground.

Even so it must be with all of us who have started on the road that our Master trod before us. We must go forward step by step, ever onward and upward, ever gaining a clearer realization of the Christ, until fear and sin, and even death, are overcome, and we wake to know that all past trials and difficulties are but as a dream which is gone forever, and realize that all things which are pure, harmonious, and at-one with God, remain; such is the full assurance of Love. We who have set out to follow the Master, must go every step of the way he traversed, and drink of the cup from which he drank, before we can find our way out of the valley and reach the mountain tops where fear is unknown, and where we can see the unreality of everything material and know that God is All.

On page 52 of Science and Health Mrs. Eddy says, "The 'man of sorrows' best understood the nothingness of material life and intelligence and the mighty actuality of all-inclusive God, good." And Christ Jesus said, "No man cometh unto the Father, but by me;" meaning that only by following his example and obeying his commands can we attain to what St. Paul designates the Mind "which was also in Christ Jesus," the Mind which is filled with the power and love of God, for through Christ, Truth, it is at-one with God.

We are sure to be fearful if we harbor a sense of sickness, impurity, or hatred in our mentality. In one of Mrs. Eddy's hymns are the following beautiful words: "Wait and love more for every hate, and fear no ill,—since God is good" (Hymnal, p. 240). This is the love which concentrates thought on God, rather than on man; on health, rather than on the material and oftentimes loathsome evidences of disease; on the "unsearchable riches of Christ," rather than on the limitation and poverty of this world; and on harmony, rather than on strife and discord. According to the measure in which we possess this love do we become Christlike; then our thought heals the sick quickly and thoroughly. Instead of lack, the affluence of heaven will manifest itself round about us, and our thoughts of good to our fellow men, whether we have before looked upon them as friends or enemies, will bring us the consciousness of peace.

As mankind rises higher and higher in this consciousness of peace and love, wars will cease, and nations will no more fight each other; for men will have no fear that a brother man can harm them, and each will see his own prosperity in the good of another. This recalls the words of the prophet Micah, "They shall beat their swords into plowshares, and their spears into pruninghooks: nation shall not lift up a sword against nation, neither shall they learn war any more."

[Written for the *Sentinel*]

Our Father

SAMUEL JOHNSTONE MACDONALD

YUSSUF BEN OREM went to pray,
And one he met upon the way
Said, Whither goest thou, my friend,
And may I on thy way attend?
I go to pray, and if thou deign
To honor me, mine all the gain;
Together, friend, then let us fare,
Together let us make our prayer.

To whom, then, prayest thou? said he.
To whom but God alone? Can we
Find other god to whom to pray,
Who doth create and who doth slay?
And thinkest then that He who lives,
And life unto His children gives,
Can slay the children of His love?
Is this thy God who reigns above?

Couldst thou, a father, have the will
The offspring of thy love to kill?
And thinkest thou thy God hath less
Than thine own human tenderness?
If God create us, are not we
His offspring then, and must not He
A father's sweet affection know
For all His children here below?

Then, brother, to our Father pray,
Who is our guardian, guide, and stay,
Who loves and ever for us cares
And ere we ask doth heed our prayers.
Yussuf Ben Orem at his feet
Knelt low and cried: O Master sweet,
How hath thy words my heart enticed:
I know thee now, the living Christ!

Selected Articles

[Judge Clifford P. Smith in *Newburyport* (Mass.) *Herald*]

Your report of a sermon delivered at Newburyport presented an incongruity which is one of the signs of these times. "The sermon was of an evangelistic nature throughout," so your report read, yet it included an attack on Christian Science.

A genuine evangelist is one who proclaims good tidings. Such is the meaning of the title, and such has been the nature of truly evangelistic work since the time of Philip, the original evangelist mentioned in the book of Acts. An evangelist must be willing, and in some degree able, to speak as did the evangel who heralded the beginning of the Christian era: "Behold, I bring you good tidings of great joy, which shall be to all people." It would seem, however, that the adjective "evangelistic" has been taken at Newburyport, and elsewhere, to describe the manner and method of a preacher who is censorious and oracular concerning other religions than his own.

The feature of the sermon which you made most prominent was this: "Intellectually weak enough to be a Christian Scientist." A more thoughtless gibe was never delivered by a minister or headlined by a newspaper. In the very utterance of these words the reverend gentleman furnished evidence of the fact that a Christian Scientist must have the strength of thought and character which will enable one to think for himself and follow his religious convictions, in spite of jeers from the representatives of older churches. In this situation, a Christian Scientist can say, as did Paul, "When I am weak, then am I strong."

It is well to know that the Christian Science movement has made steady progress despite a clamor of opposition. Observant people have also had occasion to notice the lack of good reason for the cavil at Christian Science. A collection of everything which has been said to turn people away from this religion would contain little or nothing that could be justly called evangelical. The whole of it would neither induce nor enable a single person to love God supremely or his neighbor as himself. Nor has the denunciation of Christian Science produced any better effect than to move a considerable number of thoughtful people to study Christian Science for themselves.

The ultimate and evident fact is, that Christian Science is a thoroughly wholesome influence in the lives of its adherents, for it is a way of thinking and living that finds its chief inspiration, its perfect illustration, as well as its complete proof, in the teaching and example of Christ Jesus.

[Avery Coonley in *Oak Leaves*, Oak Park, Ill.]

In a recent issue of *Oak Leaves* the sermon of a local clergyman was reported, most of the space being given to "taking issue" with Christian Science. The reverend gentleman describes himself as taking "loving issue" with another religion, but he is unsuccessful in making his criticism loving or even fair, for while purporting to present his hearers with the truth about Christian Science, he dresses up his misconceptions of its teachings in so unsympathetic and unfriendly a way as to make them nothing less than grotesque and wholly unrecognizable.

A consideration of the quotations he selects throughout the article makes it clear that instead of trying to portray its teachings fairly, he takes only such quotations as would when separated from their context convey an unfavorable impression. Those unacquainted with the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, who may be tempted to credit the caricatures presented, should do the subject under consideration the justice to read for themselves the passages to which he refers, taking the disconnected sentences he selects together with the context essential to convey their meaning and with related statements upon the same subject.

Our critic has seized recklessly upon a demand for literal construction in each passage in the Bible, and has undertaken to make of this requirement a broadaxe with which to annihilate Christian Science, with the result, of course, that it descends upon his own head. He condemns Christian Science for attributing to God "pure-mindedness," the inability to know evil, this being as he assures us "flatly contradictory of the Bible." We will leave him to debate that question with the prophet Habakkuk, whose statement about God, "Thou art of purer eyes than to behold evil," it becomes his problem to explain away.

If our critic's idea of what Christian Science teaches regarding prayer is set forth in his description of it, there is little wonder that it does not commend itself to him, but he certainly did not get it from Science and Health. The text-book opens with the chapter on that subject, which begins with these words: "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love. . . . Prayer, watching, and working, combined with self-immolation, are God's gracious means for accomplishing whatever has been successfully done for the Christianization and health of mankind." A more unjust representation of the attitude of Christian Science toward Jesus than that given by our critic it would be difficult to imagine. Reverence for the Master and for his wonderful life and work pervades and characterizes the text-book from cover to cover.

It would probably be conceded that next to an understanding of life, the human experience which it would be most profitable for humanity to comprehend and which is least understood, is the experience termed death. It would be well to give heed to what Christian Science has to add to the small sum total of knowledge on that subject. This is based upon the premise that life is not material but spiritual; not temporal but eternal. In "Unity of Good" (pp. 41, 42) Mrs. Eddy writes: "Resurrection from the dead (that is, from the belief in death) must come to all sooner or later; and they who have part in this resurrection are they upon whom the second death has no power. The sweet and sacred sense of the permanence of man's unity with his Maker can illumine our present being with a continual presence and power of good, opening wide the portal from death into Life; and when this Life shall appear 'we shall be like Him,' and we shall go to the Father, not through death, but through Life; not through error, but through Truth. . . . That man must be vicious before he can be virtuous, dying before he can be deathless, material before he can be spiritual, is an error of the senses; for the very opposite of this error is the genuine Science of being."

Our critic roundly condemns this teaching regarding death and regarding Jesus' crucifixion and resurrection. He lays great stress on certain words in the Bible, such as "killed," "died," and so on, which in his opinion prove that Jesus was dead beyond question or recall. To show that his citations do not disprove the contention of Christian Science that rightly understood life is uninterrupted, we need only point to two other instances of the same experience upon which Jesus expressed himself in a way not in harmony with our critic's conclusion. In the case of Jairus' daughter, the by-standers

Digitized by Google

laughed Jesus to scorn, "knowing that she was dead," when he declared, "She is not dead, but sleepeth." This was manifestly not a difference of evidence but of understanding. The same thing is made even clearer in the account of the resurrection of Lazarus, in the eleventh chapter of John.

Christian Science undertakes to "reinstate primitive Christianity" (Manual, p. 17), and through spiritual means alone to heal the sick. It has done this for over forty years with such success that not only have the sick been healed, including hundreds of cases pronounced hopeless by the most advanced medical science, but multitudes of the sorrowing have been comforted and the sinning reformed throughout the civilized world.

Christian Science does not seek the endorsement of either pulpit or press. All it asks is that when it is discussed its teachings shall be fairly represented. Religionists will do well to give hospitable consideration to a spiritual interpretation of the Bible which is so vital that without external accessories or the pomp of ceremony it fills churches in an age commonly characterized as irreligious, an interpretation which accepts in good faith and puts into daily practice the promises of the psalmist regarding God, "who healeth all thy diseases," and the command of the Founder of Christianity who not only said, "Preach the gospel," but also, "Heal the sick."

[Brigman C. Odom in *Our Country*, Kansas City, Mo.]

A recent issue of the *Baptist Standard*, published at Dallas, Texas, contained an editorial entitled "Christian Scientists and Healing." The *Standard* editorial writer, after having made a careful study of "The Psychology of Orthodoxy," a work on suggestion by Edwin L. House, in reviewing the same endorses that author's recommendation that the churches make use of "this long neglected source of power" as a cure for disease. After referring to a chapter entitled The Forces of Suggestion, the editor affirms that "the author is reverent and orthodox in his teaching." In other words, through the official organ of the Baptist church a leader of that denomination urges that his people make use of mental suggestion (previously known as hypnotism) in the healing of disease. This he offers his church as a Christly method of cure for the sick and as an antidote for Christian Science, which latter he asserts heals by means of mental suggestion. We fail to see how, from his standpoint, the critic proposes to antidote that which he conceives to be suggestion by another form of suggestion.

The first misstatement of facts in the above-mentioned editorial is that "Christian Science does its work, not by its false philosophy nor by prayer, but by suggestion." A demonstrable religion is a stage beyond philosophy, which is a theoretical explanation of cause and effect. Christian Science reasons from the one cause and creator, God; hence its conclusions are wholly Scriptural and scientific. In the second place, Christian Science absolutely discountenances the use of suggestion. On page 106 of "Science and Health with Key to the Scriptures" by Mrs. Eddy one will find: "God has endowed man with inalienable rights, among which are self-government, reason, and conscience."

Thus it is apparent to the unprejudiced mind that Christian Science disapproves any domination of one human mind over another, which domination is the basis of mental suggestion. Christian Science agrees with the editor that "much medicine cures through the power of suggestion rather than through any inherent value of the drug," and that "many people have been cured by taking bread pills and colored water." Many illustrations are given in the Christian Science text-book indicating such action of the human mind. But this is not the method of Christian Science. In the chapter on Animal Magnetism Unmasked, Mrs. Eddy strongly points out the evils that have been wrought and the crimes that are possible through the manipulation of one human mind by another. It is there shown that the human mind is a dangerous remedial agent, and that it must be instructed out of its methods into prayer to God, divine Mind, in order to be saved from itself. On page 102 Mrs. Eddy quotes from the *Boston Herald* as follows: "It [mesmerism, suggestion] implies the exercise of despotic control, and is much more likely to be abused by its possessor, than otherwise employed, for the individual or society."

Thirdly, notwithstanding the editor's misconception to the contrary, Christian Science does its healing work through prayer—prayer to the God who has made man in His image and likeness, prayer to the ever available God with whom "all things are possible." Christian Scientists rely absolutely and confidently upon Jesus' promise that "all things, whatsoever ye shall ask in prayer, believing, ye shall receive." Just as the Pharisees of yore attributed the healing works of Jesus to Beelzebub because they were blinded by prejudice, just so not a few of today attribute the healings of Christian Science to mental suggestion; but in neither case does the manifest misconception alter or impede the beneficent and powerful work accomplished through the recognition of the omnipotence and omnipresence of infinite Love.

"We believe in petitionary prayer," says the writer, "while with Christian Science what is termed prayer is nothing more than an affirmation." Christian Science lays emphasis on the fact that Jesus gave his disciples one brief prayer, thereby establishing a precedent for all Christianity. This prayer is more affirmatory than petitionary. The Master advised, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." "Believe that ye receive them" is the behest which Christian Scientists strive to obey in their praying. Realizing that man's wisdom does not warrant his advising God, the Christian Scientist's prayer is more of faith, praise, and thanksgiving than of petition. Instead of asking God to be God, they strive to bring themselves to remember what God is and what He has done and is constantly doing for His children. This line of a favorite hymn illustrates the profound importance accorded in Christian Science to prayer: "Prayer is the Christian's vital breath." In view of these facts, little credence could possibly be given the following statement in the *Standard:* "Many Christian Scientists have said, 'Since I became a Christian Scientist I can't pray any longer.'" In Science and Health (p. 1) we read, "Prayer, watching, and working, combined with self-immolation, are God's gracious means for accomplishing whatever has been successfully done for the Christianization and health of mankind."

Again, our critic says, "The Christian Scientists put emphasis on the healing of the body, while we put the emphasis upon Christ as an atoning Saviour who saves from sin." Here the writer's superficial knowledge of his subject is apparent when one considers these clear statements from Science and Health (p. 150): "The mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world." Physical healing is dependent on the laying off of the beliefs which would limit God and His power to bless His creation. The

Digitized by Google

sin of denying man's sonship and inheritance as God's image and likeness, must be forsaken. There must be regeneration within, if man would receive from his Father his birthright of health and holiness.

Again, the critic upholds a statement by this author on psychology that, in spite of the fact that there is no record of a single meeting of the apostolic church where physical healings were recounted, this is the "staple speech of Science meetings." He seems to forget that about one third of the New Testament is devoted to accounts of the healings by Jesus and his apostles. If this healing work is not an integral part of Christianity, it is strange indeed that the Scriptures should so stress it.

✧

[F. Elmo Robinson in *The Oregonian*, Portland, Ore.]

The misrepresentation of the teaching of Christian Science concerning evil has been so frequently corrected through the public press that it seems almost anomalous for an intelligent speaker at this time to reiterate the charge contained in a sermon which appeared recently in *The Oregonian*. Christian Science is therein pointed out as one of three delusions offered as remedies for man's unhappiness. In order even to seem to establish his claim that Christian Science is a delusion, the critic has found it necessary to misrepresent its teachings.

Any one who will take the pains to read, with a reasonable degree of fairness, the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, can readily discover that Christian Science does not teach us to ignore sin, pain, or anxiety. On the contrary, Christian Science teaches that these conditions are experiences of the carnal or mortal mind, and that they may be overcome by letting that Mind be in us "which was also in Christ Jesus." Ignorance is not overcome by ignoring it, but by gaining knowledge; nor is evil overcome by ignoring it, but by letting the supremacy of good be made manifest in our thinking and in our conduct. Evil only maintains a semblance of reality by appearing in the guise of good. Just as long as mortals believe in evil as something, as having power to give pleasure or satisfaction, they will love it and indulge it. When evil is recognized as inherently powerless, it will cease to attract; hence as its nothingness becomes apparent, it will disappear from human consciousness. Since the Master said, "None is good, save one, that is, God," and since that one is infinite, the claim of any good apart from God is false. Christian Science teaches God's allness, His infinitude; and it is the analysis of evil in the light of this teaching, and not the ignoring of it, which overcomes it.

No one better understands than the genuine Christian Scientist that a "godly life" is the only road to happiness. More than this, Christian Science is showing him exactly how to live this godly life.

✧

[S. T. Downs in *Indianapolis* (Ind.) *Times*]

To say that the Eskimos of the frozen north developed the out-of-door cultivation of roses could not be more absurd than the statement to the effect that Christian Science is based on the teachings of Plato, as made by a speaker at the Y. M. C. A. meeting.

Platonism teaches no well defined idea about Deity, and whether Plato regarded God as a personal being it is impossible to determine, while on page 587 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy defines God as: "The great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; all substance; intelligence." Among many other idealistic claims made about matter, Plato taught that matter is eternal and infinite principle, and the critic's own statement that "matter is divine" seems to parallel the teachings of Plato. The antithesis of Platonism is found in the Christian Science definition of matter as "the opposite of Truth; the opposite of Spirit; the opposite of God; that of which immortal Mind takes no cognizance; that which mortal mind sees, feels, hears, tastes, and smells only in belief" (Science and Health, p. 591).

The speaker's statement that Christian Science is not new, even though not intended as complimentary, is exactly correct, because Mrs. Eddy learned Christian Science from the Word of God, and it explains the works of the prophets, the Master, and the apostles through the spiritualization of the Bible. Christian Science is, in other words, the Science of divine Mind which instructs human consciousness out of its belief in matter, as demonstrated in the life and works of our Wayshower, Christ Jesus. There could be nothing new in the truth about God and man's relation to Him.

Christian Science is bringing the kingdom of heaven to mankind through the healing of every form of sin by stimulating in mortals a longing to be guided by purer thoughts and desires; it is destroying envy, jealousy, strife, and hatred by giving to mankind a practical understanding of Love; it is healing every disease known to humanity, and is destroying poverty, lack, and human misery by a demonstrable understanding of God as omnipresent, omnipotent, divine Principle. Through these "signs following" thousands upon thousands of grateful people in all parts of the world are giving testimony through healthier, holier, nobler lives to the fact that God cares for His children in every way, as set forth in Christian Science.

✧

[Frank C. Barrett in *Biddeford* (Maine) *Journal*]

My attention has just been called to Doctor ——'s reference to Christian Science as reported in a recent issue. Without questioning his motive for condemning on a wholesale plan very nearly everything in the universe excepting his own particular doctrine of salvation, it might not be impertinent to inquire why he should waste time referring to other religions which he considers false, for in the words of a wise counselor of olden time, one Gamaliel by name, "Now I say unto you, Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

Christian Science is today taught and practised in every civilized country in the world, as well as in some of the lands which Doctor —— says refuse to accept Christianity until they are convinced that the Bible is true. Christian Science is proving that the Bible is true by doing the works Jesus said would follow the practice of his teaching. "He that believeth on me, the works that I do shall he do also." Thus spoke the Master, and that Christian Science is accomplishing these works in a satisfying degree is attested by hundreds of thousands from all over the world.

If it is a "waste of time" to heal the sick, reform the sinner, bind up the broken-hearted, and bring health and happiness where sin, sickness, and misery existed, then Christian Scientists must plead guilty. If our reverend critic is endeavoring to spread the gospel, we shall wish him Godspeed in whatever good he may do and trust he will learn to be more sparing in his condemnation of those who may be doing as great a work, even though they may be more humble and less spectacular in their methods than he.

Editorial

"Preach the gospel"

LETTERS received by the editors of the *Sentinel* from members of newer and smaller branch churches indicate that frequently much perplexity is experienced over the question as to whether or not a Sunday afternoon or evening service should be held by these churches in addition to the regular morning service. Some seem to feel that a second service should be held only when the first has become so overcrowded as to make it imperative that something further be done to accommodate all who wish to attend the services of the church. On the other hand, some believe that a second service would be such a display of hospitality as would attract those who otherwise might not be able to attend church service in the morning, as well as those who might consider themselves under obligation to attend the forenoon service of a church of some other denomination.

Of course the editors are not in a position to decide these questions, and as there is no by-law or rule of The Mother Church which makes it obligatory upon churches of our denomination to hold a second service, it may fairly be assumed that the branch churches should be governed in this matter by local conditions and requirements. It has, however, been the experience of most of the branch churches located in the larger cities, that there are many persons who do not find it convenient to attend the morning service, and yet are glad to avail themselves of an opportunity to attend a later one; also that some considerable portion of those who attend the second service are strangers or persons whose regular church affiliations have taken them elsewhere in the forenoon. This would indicate that as a general rule the afternoon or evening services should not be regarded solely as overflow services, but rather as additional opportunities for presenting the healing gospel of Christian Science to all who wish to hear it. Observation of these conditions has led most of the Christian Science churches in the principal cities to believe that it is profitable to hold a second service, even though the morning service may not be overcrowded; but whether this would hold good in the smaller cities and towns is a question to which the good judgment and experience of those locally interested must furnish the answer.

On page 322 of "Miscellaneous Writings" our revered Leader says, "Your dual and impersonal pastor, the Bible, and 'Science and Health with Key to the Scriptures,' is with you; and the Life these give, the Truth they illustrate, the Love they demonstrate, is the great Shepherd that feedeth my flock, and leadeth them 'beside the still waters.'" The primary object of a religious service is the worship of God in such manner and at such time as will best meet the needs of the greatest number; and since many persons bear testimony to the fact that they have been healed of disease and spiritually elevated by the public services in the Christian Science churches, it would seem wise not to limit the number of services. If a church is founded upon Christ and preaches the full and complete gospel which the Master preached and exemplified, it will do good at every service it holds; and while it may not seem practicable for the smaller churches which meet in rented quarters to hold more than one service each Sunday, there appears to be no reason why churches which occupy their own buildings should not hold two services, unless some local conditions make this inexpedient.

Another and somewhat similar question asked by some of the societies is in regard to the establishment of a reading-room. This too is a matter which must be decided by the local society, since there is no by-law of The Mother Church which obliges a society to maintain a reading-room. It may be said, however, that the establishment of a reading-room at the earliest convenient time is something to be looked forward to by every society; and when it is established it should be made as inviting, attractive, and hospitable as possible. This does not mean that it should be extravagantly or even expensively furnished, but it should be neat, attractive, and well kept. One of the mistakes made, we think, in a few instances in regard to these reading-rooms is, that they are not kept open every week-day and at the most convenient hours. When the reading-room is open only an hour or two on one or two days each week, it is rather difficult for the public to keep track of these days and hours and to adjust other duties and arrangements to them.

ARCHIBALD MCLELLAN.

Impartial Love

On page 13 of Science and Health Mrs. Eddy says, "Love is impartial and universal in its adaptation and bestowals," a statement which accords with St. Peter's declaration, "Of a truth I perceive that God is no respecter of persons: but in every nation he that feareth him, and worketh righteousness, is accepted with him." The apostle's words nevertheless show that while God is impartial, a distinction is made between those who do that which is right and those who do wrong, a discrimination which is maintained by other Scriptural writers who declare for the divine impartiality.

In spite of the unequivocal declarations found in the Scriptures, there are some who are confused as to the issues involved, and the old belief in predestination seems to hold sway to the extent that material evidence is accepted where one person is apparently protected by divine power and another seems to be cut off from this aid. Even the outpourings of thankfulness on the part of those who have been healed in Christian Science or preserved in time of danger, are sometimes misconstrued, as implying that these persons were special recipients of divine favor, but this is a most incorrect assumption. It goes without saying that the one who consistently follows his highest sense of right is under its protection to the extent of his recognition of divine law. The question is not, however, a negative one; it is positive in its demand that all power be ascribed to God, good, and this of course implies a denial of any power in evil.

The ninety-first psalm illustrates in a remarkable way the Christian Science teaching as to divine protection, and the strange thing is that Christendom should so long have missed its wonderful lessons. Great is our joy, however, in this harvest hour that the veil of material sense has been lifted through Mrs. Eddy's inspired teachings, and that not a word of truth is found wanting. This psalm not only offers complete deliverance from evil but makes known the conditions under which perfect security may be realized. It is "because" one makes God his refuge that the promise is given, "There shall no evil befall thee, neither shall any plague come nigh thy dwelling." Neither pestilence nor destruction shall harm the one who abides "under the shadow of the Almighty," even though ten thousand others fall at his side; but this protection no more indicates the bestowal of special favor than does the fact that one who knows how to swim is preserved where one without this knowledge is not.

Let no one, however, think that we are ever independent of the divine Mind in whom we "live, and move, and have our being." Fear may at any moment assail the one who does

Digitized by Google

not at all times make God his refuge, and whether on land or sea he needs to know, as we are told on page 306 of Science and Health, that "man cannot be separated for an instant from God, if man reflects God." Paul assures us that neither height nor depth, nor things present, nor things to come "shall be able to separate us from the love of God, which is in Christ Jesus our Lord." We must, however, preserve intact the consciousness of man's spiritual likeness to God, as did our Master, and rise above the clogging belief in materiality which is responsible for all the harm that could ever come to us.

Too long have mortals turned away from the divine protection so freely offered to all who will avail themselves of it. They have bowed before the unreal things of mortal sense, and in thought if not in word have even accused God of partiality when others seemed more favored than themselves. Balaam was blind to the presence of the angel that had come to warn him of the danger of wrong-doing, but the creature on which he rode was in this respect wiser than he. The psalmist says, "He shall give his angels charge over thee, to keep thee in all thy ways;" but to recognize these divine thoughts, and so be delivered, we must set our whole heart upon the reflection of Love, and then we need fear no foe, for we shall have the "long life" that satisfies, and the answer to every prayer inspired by Love.

ANNIE M. KNOTT.

Little Ministers

FOR the most part for all, and altogether for the many, life is made up of a multiplicity of incidentals. Hence for those to whom these have only their superficial significance the bulk of experience is relatively meaningless. The unfathomed inconsiderables of "the daily round" may serve to consume time, but they utterly fail to constitute true living. When, however, little things become symbolic or otherwise suggestive of large things, in our thought, then we may both minister and be ministered to every hour of the day, since little things are always in sight and little events are always happening, even as little words of illumination and little deeds of kindness are always possible. The value of our gains from these lesser experiences is limited only by the depth of our vision, our capacity to interpret. Tennyson put this finely when he wrote of the flower in a "crannied wall,"—

> If I could understand
> What you are, root and all, and all in all,
> I should know what God and man is.

A physicist would probably say that the man who succeeds in making an atom fully intelligible will have mastered all the secrets of the universe, and however extravagant this may seem, it is certainly true that the compass and apprehension of the least divine idea opens the door to the command of all true wisdom. "He is a true teacher," says Professor Curry, "who can direct the attention of others to the deepest truths in the least things;" and in this too Christ Jesus was ever "the greatest." When he counseled men to "consider the lilies of the field," he linked the observation of a wayside flower to the discovery of immeasurable values. In this he disclosed the genius of the teacher and the art of the poet,—yes, and more for us, namely, the art of thinking right and doing good. Pleasure finding and pleasure giving may be well worth while, but to perceive the spiritual truth symbolized or suggested in a trivial thing, and to lead others tactfully to the same discernment, is to be both inspired and inspiring. The perception of the deeper meaning, the heart of little things about us, will minister both to our spiritual exaltation and to our usefulness no less surely than did the starlit firmament to him who, rapturously beholding it, exclaimed, "The heavens declare the glory of God."

We become not only poets but prophets, "a light to lighten" all we meet, in the measure of our spiritual insight; and like every other grace this is to be thoughtfully cultivated, until for us there are no longer any little things, and we cease to barricade our way to the possession of greatness by indifference to its least beginnings. A beam of kindliness may become a lifetime benediction. The writer once looked into Whittier's face when it was compassed by a smile whose radiant wealth has never been forgotten. It was like a burst of morning sunshine after a week of rain.

Men remain unperceptive, hence uninterpretive, because they are unthoughtful and unobserving, and it is this fact which renders the statement on the first page of the Preface of Science and Health, "The time for thinkers has come," such a clarion call. Soul-sensitiveness, better named intuition, is usually thought of as an endowment, but in an important sense it is also an acquisition. The opening of a shutter does not create the light, but it does let it in, and our possibilities of growth and of usefulness are increased a thousandfold the moment we purposely begin to coordinate so-called trifles with infinite Truth. A great man has said that the highest interest of a flower is not its fragrance or beauty, but its concreteness. We may have talked much of law and order and other abstractions, but they have been without real content. Here in a single bloom we have the miracle itself. It ushers us at once into the presence of an inscrutable intelligence, an infinite beauty, and no possible experience can do more.

Every true Christian Scientist is on the *qui vive*. He is made alert by the constant expectation of the discovery of good, and more and more he learns both to gain and to give through the ministry of little things.

JOHN B. WILLIS.

Lecture in The Mother Church

The First Church of Christ, Scientist, Boston, Massachusetts, announces a free public lecture on Christian Science by George Shaw Cook, C.S.B., a member of the Christian Science board of lectureship, in the church edifice, Falmouth, Norway, and St. Paul streets, Back Bay, Monday evening, Oct. 11, 1915, at eight o'clock. The public is cordially invited.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

SALT LAKE CITY, UTAH.—First Church of Christ, Scientist, in the winter of 1909 had grown to such an extent that the church building was not large enough to accommodate

Digitized by Google

all those desiring to attend the services, so it was decided to branch out and form a second church. This was done in December, 1909. Services were thereafter held by Second Church of Christ, Scientist, in various halls, and a building fund was established. During the following year a plot of ground was purchased in a most desirable location. In the mean time the building fund continued to grow, until it reached a point where it was considered wise to commence the erection of a church. A building committee was appointed from the membership, a contract let, and ground was broken on Aug. 23 for a church edifice with a seating capacity of seven hundred and fifty, and with suitable Sunday school rooms, committee rooms, cloak rooms, and so on. The building, which is to be completed by April 30, 1916, with the organ and furnishings, will cost approximately sixty thousand dollars.—*Correspondence.*

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 5, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, Oct. 13, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 4, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Suite 550, 236 Huntington Avenue, Boston, Mass.

The Lectures

The Dalles, Ore.

The circuit court chambers of the county court-house were crowded to capacity when Bliss Knapp delivered an eloquent and inspiring lecture on "Christian Science: The Revelation of Divine Power." Francis V. Galloway presided, and in introducing the speaker he said in part:—

I am not a Christian Scientist, and probably there are many in this audience who are not Christian Scientists, so I feel like speaking a word for myself and for them in saying that we all hope and expect to be reasonable persons, broad-minded and tolerant citizens, and when a distinguished visitor comes to us with a message or words of enlightenment concerning some great movement, we owe it to ourselves to give him a thoughtful and attentive hearing. I have noticed that the speaker of this evening has not been heralded to us as an evangelist or propagandist, but as a lecturer,—one who expounds and explains that which to many of us would otherwise be an unopened book.

Now whether or not we believe in Christian Science, we all have profound respect for it. There are several reasons why we should not be hide-bound skeptics on this subject. The first reason I see is that such skepticism is the badge of a shallow mind and reflects discredit only upon itself and those who hold that opinion. The second reason is that Christian Science is too big a thing to be despised. Christian Science today numbers its churches by the hundreds and its devotees by the thousands. Right here in our own community some of our most intelligent and worthy citizens hold to that belief. It is not for me or any one to criticize their creed or to profane the altar at which they worship. If for no other reason than the very practical one of policy, we should respect them in their belief. We get along better when we do.

I shall not attempt to conduct you into the edifice of Christian Science, because I know very little about it; but what I do know is that somewhere among its foundation-stones you will find permanence, truth, and power for good. The mere fact that Christian Science has existed so long and is such a powerful organization, is argument enough for me that it is here to stay, and that the world is immeasurably better for it.—*The Dalles Chronicle.*

Long Beach, Cal.

Indicative of the interest in Christian Science manifested by the citizens of this rapidly growing city, is the fact that an audience of twenty-two hundred people gathered in the Auditorium on the pier and listened with close attention to the lecture on Christian Science by Bliss Knapp. The speaker was introduced by Attorney Herbert M. Haskell of the board of education of this city, who said in part:—

In the twelfth chapter of Romans Paul says: "And be not conformed to this world: but be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God." Christ Jesus, the great Wayshower, made this statement: "Ye shall know the truth, and the truth shall make you free." The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, states the truth about God and His laws with such scientific accuracy that every honest and unprejudiced seeker for the truth may demonstrate, in part at least, that one need not conform to this world's commonly accepted beliefs as to the necessity for either sickness or sin. It also shows how one's "mind" may by a process of correct thinking be renewed, and thus for himself "prove what is that good, and acceptable, and perfect, will of God."

The effect of a better understanding of God, through a changed mental concept of His laws, restored me to health after all the material means which seemed to be at my command had failed, and has given me a measure of peace and harmony I had not known. And what it has done for me and the members of my family I find it is doing for many of my friends and acquaintances.—*Correspondence.*

Louisville, Ky.

Jacob S. Shield addressed a large audience at Macauley's Theater on the subject of Christian Science. He was introduced by A. R. Cook, who said in part:—

Christian Science has no quarrel with any other religious belief or doctrine, nor does it proselyte among other churches or denominations to add to its members. Its phenomenal growth is the natural result of its work in the cause of humanity. It wages war only on sin, sickness, and death, and in its forward march against these enemies of mankind it blazes the way and illumines the path for all to follow that would give heed to the voice of him who said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."—*The Courier-Journal.*

Lectures to be Delivered

CALIFORNIA—Berkeley (First Church: Charles I. Ohrenstein, High School Auditorium, 8 p.m., Oct. 14.
Delano: Prof. Hermann S. Hering, New Masonic Temple, 7:45 p.m., Oct. 12.
Napa: Charles I. Ohrenstein, Novelty Theater, Randolph street, 8 p.m., Oct. 15.

Testimonies of Healing

In January, 1913, my throat began to trouble me, but because of other cares I tried to forget about it. One morning, however, I was to all appearances much worse. The trained nurse engaged to attend my husband, who was ill, pronounced the ailment serious. She called a physician, and his verdict coincided with her own. Accordingly he injected a serum into the left shoulder, and the pain in the throat disappeared; but the trouble then seemed to lodge in the head, so that it ached terribly and I became entirely deaf. My ears also began to trouble me and the pain increased. As the doctor's medicine did not cure me, I consulted another physician, who said he could not help me, for the disease must take its course.

The physician attending me allowed the use of a drug sparingly, this being my earnest wish, and as a result the pain would disappear; but when it returned I used the drug more freely. Being previously warned against this course, also knowing the after effects on the system, and fearful of what might happen, I became so alarmed that I stopped using it. Then I turned to Christian Science, with the thought that if through its teachings others could be permanently cured, I could be also. I had heard a little about Science and knew of some wonderful healings, so I wrote to a practitioner and she gave me absent treatment, starting Jan. 22. From that date the severe pain in the ears ceased entirely, although my head and ears were still in a critical condition, being much swollen and sore.

My husband and friends became greatly alarmed at this condition, and I again consulted a physician, who informed me that there was but one source of relief,—a surgical operation; otherwise spinal meningitis might set in. My faith in Science was sufficiently strong to cause me again to consult the practitioner, and after explaining to her over the telephone the physician's report, she assured me no operation would be necessary. "Hold on a little longer and you will be well," was her reply, and I resolved to do so. A copy of "Science and Health with Key to the Scriptures" was sent to me, and I became an ardent student of Mrs. Eddy's wonderful work, although it was hard to gain or retain what I read, as everything seemed to dance before my eyes. The cheering letters from the practitioner were a great help, so that instead of becoming impatient and discouraged I took on more courage, simply trusting implicitly in God's great love.

At times, however, I almost doubted my recovery, when the healing seemed to tarry so, and when the weakness increased until I had to remain in bed. I was urged to return to medicine, but refused. The pain had disappeared, and I felt sure all would be well in the end, as I had read in Science and Health (p. 410) that "the more difficult seems the material condition to be overcome by Spirit, the stronger should be our faith and the purer our love." One day, while reading the text-book, I happened to note one of the testimonies in the chapter on Fruitage. As I read it, I seemed to be filled with the divine Spirit, and everything became sweet and restful. I had been healed, but was awaiting some sign. I declared I was healed, got up, dressed, called my husband, and went down-stairs. My husband immediately informed the practitioner, and her reply was, "Keep fear out," and that helped me. From that day I gradually grew stronger, and within a short time my hearing was fully restored.

Gradually the operation was performed without the aid of a surgeon's knife. A gathering similar to a boil formed at the back of my head and the matter which had gathered inside forced its way out. Never for one moment since my healing has any symptom returned. I have never been so healthy in my life, and I attribute it to Christian Science. Since this healing there have been numerous demonstrations in the family, and in nearly every instance the treatments have been absent. We can never be grateful enough for the help we have received mentally, physically, financially, and above all spiritually.

My husband has been entirely cured of deafness. In a great many ways and instances I have been of assistance to the children by applying the truth in my small way, and my understanding is growing constantly. Recently I was almost tempted to seek the aid of a practitioner, but I felt that God had given me a talent which could and should be used to the best of my understanding. The Bible, at one time seemingly a jumble of words, is becoming to me a great help and comfort.

Christian Science has brought much happiness and love into our lives. We enjoy the literature, and will be ever grateful to Mrs. Eddy for her beautiful, inspiring thoughts. We are more than thankful for the understanding of God as Love, an ever present help, the only source and supply, the one Mind and one power.

ELIZABETH A. CARAH, Detroit, Mich.

My heart is full of gratitude for what Christian Science has done for me. For about two years I was under medical treatment for bronchial asthma, at one time taking several different kinds of medicine each day. Then for six months I was unable to do any work, and during this time my wife passed on after a long illness and I was left with a little girl. I began to work again, though continuing to have attacks of this trouble as before.

For a long time friends had told me about Christian Science, but like many others I refused to accept it. Finally, when I first attended a Christian Science service I was living in the country sixteen miles away. At that service I ordered a copy of Science and Health, and received it in two days. Then I began to read it, and immediately saw that I had found something for which I had been looking thirty years in an orthodox church. Accordingly I moved nearer to the church and attended the services regularly, then looked up a practitioner and began to take treatment. For a long time I had been unable to sleep at night unless there were two or three pillows under my head, but the practitioner told me I need not use them, and now for over four years I have been using only one. I was completely healed in two weeks' treatment, only having one slight attack afterward, and have been able to follow up my work regularly as well as to work many extra hours.

Two years ago I married again, and it was through my wife that I first knew of Christian Science. We are trying to live daily as true Christian Scientists and to show others the way. I am thankful to God for health, strength, and happiness, and grateful to Mrs. Eddy for giving us "Science and Health with Key to the Scriptures," which teaches us to know the right way. Indeed, all I have I owe to Christian Science.—JAMES LEACH, New Bedford, Mass.

I wish to confirm all that my husband has written concerning his healing. My heart is filled with gratitude for Christian Science, since it has been my only physician for nine years. It has brought a great deal of harmony and happiness into our home, and we have proved daily that God is "a very present help." My earnest prayer is to reflect continually God's love.—ALICE LEACH.

Digitized by Google

I did not come to Christian Science for the healing, but because I was interested in it after witnessing the healing of a disease pronounced incurable owing to the advanced age of the patient. We are told that "by their fruits ye shall know them," and so I was convinced that in Christian Science there must be an answer to the query of mortal existence as to where to find that which is true and worth while. Our family had searched for an answer in isms and ologies, but Christian Science found us eager to grasp at a teaching that could show such proof of something better than we had discovered. That search has indeed been rewarded, for the farther we searched and the more we applied, the more of Truth we found in it.

My physical health had always been good, but I found, as Mrs. Eddy says in "Miscellaneous Writings" (p. 298), that "the true consciousness is the true health," and in finding this true consciousness I became aware of conditions mental, moral, and spiritual that needed to be eradicated; conditions that had caused much inconvenience and unhappiness but for which I had never supposed there was a cure. These are disappearing as right thinking takes place. I am very grateful for the definite purpose Christian Science gives me, and for the sweet assurance that there is an answer to every problem in life.

No one but myself knows the comfort this truth has been to me in the birth and care of twins. At the age of eighteen months one of them developed what two specialists diagnosed as an ulceration of the gland under the tongue with a malignant tendency. A strong drug was prescribed with the hope that it might dissolve the formation, but the specialists were told that I was a Christian Scientist and desired Christian Science treatment. One specialist said: "Christian Science is all right, but it will not be quick enough. The child is in a very serious condition and must have immediate relief." Christian Science treatment was begun immediately, and within three days the changed appearance of the enlargement under the chin was acknowledged by those who were not in favor of my choice of treatment. Within a week all outward manifestation had disappeared, and contrary to the prediction of *materia medica*, it has not returned.

I am very grateful for every proof of the power of Truth; for constructive criticism that has helped me to detect wrong thoughts and substitute the right; for every added glimpse of the eternal unfolding of Life, which the Bible says is to know God. There is nothing for which I would exchange my understanding of Truth, and I find no higher joy than in reading and studying the literature which leads to its greater unfoldment. I wish to express my gratitude also for Mrs. Eddy's consecrated life, the results of which are our daily supply in seeking to know more of God through the text-book, "Science and Health with Key to the Scriptures," and the publications from The Christian Science Publishing Society, which bring us ever renewing activity and interest through our periodicals.

SARAH E. BRITTINGHAM, Richmond Hill, N. Y.

✧

I would like to express my gratitude for Christian Science. It has always been my desire to work for God, and I have tried to do what was right. When I heard of Christian Science, I had been wandering about from one religion to another, always feeling dissatisfied, and when told I could prove that Christian Science is the truth, I immediately wanted to try. During the years devoted to the study of this religion, I have become stronger and stronger all the time. I was healed of bronchitis, from which I suffered every winter, in three days; of neuralgia, of the effects of a bicycle accident, and of many other discordant conditions, in much shorter time than I would have thought possible before hearing of Christian Science. What I am most grateful for, however, is the better understanding I am gaining of God and man. It is enabling me not only to help myself, but also to help others.

I am in the English civil service, where a strict record of all sick leave is kept, chiefly for pension reasons. Before I heard of Christian Science, I had to be away from business each winter for three weeks or a month at a time; but for about six years I have not had to be away at all on account of sickness, and Christian Science has been my only remedy. I can also say that I am a better, more intelligent, and more honest worker than I ever was before or ever hoped to be. My chief desire is to gain more and more understanding, so that some day I may be able to devote all my time to the work I love so well. I am doing my best to live the truth as far as I understand it.

DOROTHY M. LANSLEY, Warrington, England.

✧

From early childhood I suffered almost constantly from one disease or another and lived in fear. I was afraid to eat, even afraid to talk for fear of saying something I should not. While quite young I was obliged to earn my own living. I would work for a while and then have to stop for days, sometimes weeks, on account of ill health.

In January, 1906, I went to work in a small town and was directed to a Christian Science family, where I found board and room. This was the first time I had ever heard of Christian Science, and I learned while there what it would do for those who faithfully studied and practised its teachings. The mother had been an invalid and was healed. I watched very closely this mother and her three daughters, and every attack of disease and discord was overcome through their understanding of God and man as given in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

I was married in October, and when I went to my new home I took with me an old copy of Science and Health. I found my husband to be what is called a periodic drinker, and he started drinking the day we were married. He told me he had tried in every way to stop and would be thankful if he could, and I believed him and promised to help him. Then I started to read Science and Health and the Bible, and for three months sought to find in them, if possible, a way to help my husband. Discouragement crept in, however, though I still clung to the thought that some day he would be free through God's help.

The next two years were terrible. Financially we were always embarrassed, for my husband was not able to work half the time. On Thanksgiving day, 1908, after a few weeks of soberness, he again started to drink, and came home that evening in a terrible condition. Usually these spells lasted two or three weeks. The next day, however, he was a different man, firm and confident in his declaration that he would never drink again. Something told me that this time he meant it and that he was healed. This proved to be so, and I am sure the healing would have come sooner if I had continued to study the Bible and Science and Health.

This experience taught me a wonderful lesson in patience, but even after this demonstration of what the power of Truth would do, I failed to see the necessity of studying the Christian Science text-book. I felt satisfied that the storm was over and thought I had nothing more to worry me, so returned the borrowed copy of Science and Health, thinking I could get along without it. I soon began to realize that my physical condition was anything but harmonious; in

Digitized by Google

fact, I was a nervous wreck. More to please a friend than through any desire of my own, I consented to see a physician, who gave me a thorough examination and stated that there was not a sound organ in my body. I had lost faith in *materia medica* and would not listen to his offer to treat me, as physicians had never permanently relieved me. I continued in this condition till March, 1910, when I purchased a copy of Science and Health and started to study in earnest. In a short time I began to improve and in a year was in perfect health. My husband then took up the study, and together we have continued to work, growing better physically, mentally, and morally.

I am thankful for all these blessings,—thankful to God for giving us His perfect expression, Christ Jesus, and grateful to Mrs. Eddy for the discovery of Christian Science.

LENORE CLARK, San Diego, Cal.

I wish to testify to the truth of the testimony given by my wife. It has been five years since I tasted liquor or had any desire for it. I have also been healed of the tobacco habit, which had bound me for thirty years. It would be impossible to tell of the harmony, peace, and joy we have experienced in our home since we began the study of Christian Science. I am indeed thankful that I have learned, as Mrs. Eddy says in Science and Health (p. 196), that "sin makes its own hell, and goodness its own heaven."—STEPHEN CLARK.

✧

Knowing that every testimony of healing is sure to benefit some one who is in need of help, I feel that, having received so many blessings, I can best show my gratitude by telling about some of them. It is six years since I became acquainted with Christian Science, and during that time I have been healed of acute lung trouble, a severe stomach disorder, biliousness, blood-poisoning, an ulcerated tooth, and a bowel difficulty. My daughter was healed of rheumatism, nervous exhaustion, and a throat affection. Five years ago my son was healed of a malignant growth of the throat, and has been perfectly well ever since.

For all of these blessings I am indeed thankful. I am also grateful for the knowledge of God as taught by Mrs. Eddy in Christian Science.

EMMA C. MCPHETRIDGE, Indianapolis, Ind.

✧

In January, 1911, I became ill with influenza, and according to medical diagnosis just escaped acute lung trouble. After apparent recovery I pursued my customary vocation until the following spring, but did not regain the flesh I had lost or my normal strength. I was then stricken with a nervous breakdown, suffering all the physical and mental distress which accompanies this condition, including sleeplessness, loss of appetite, and a derangement of every function of the body. All that will-power, the kindly doctor, medicine, loving friends, and change of scene could do to relieve me was done, but with only temporary relief. After remaining in the mountains for about four months and a half, I returned home somewhat improved, but soon relapsed into a condition fully as bad as before.

I realized that material means did not bring a permanent cure, and so, knowing that God as understood and revealed by Christian Science had healed those who had accepted it, and being advised and encouraged to try it by one who had experienced its healing power, I did so, after some hesitancy. I had been for a number of years a churchman, a student as well as a teacher of the Bible, loving its teachings and meeting with some success. God, however, overruled my hesitancy and led me to a practitioner, who gladly responded to my needs. In seven days, to the joy of myself and family, I was able to attend to my duties with health and comfort.

Friends who did not understand Christian Science, advised me not to take up my past vocation, predicting that I would soon have to give it up; but the practitioner told me to take up any work that I desired to do, and to go back to the former position if it was still open to me. This I did, and during the busiest season. Nevertheless I steadily gained flesh, so that in a short time my weight exceeded that previous to my sickness.

Several years ago I was very fond of tobacco, but without any effort on my part to give up its use, the desire to indulge in it left me, and I did not again resort to it until in the sickness of 1911 the belief that smoking would be a comfort took a strong hold upon me. I smoked six to eight cigars a day, but when I received healing in Christian Science for the nervous breakdown, the desire for tobacco entirely disappeared and has never returned.

I am in excellent health, and friends say they never saw me looking so well. During the past few years we have had many proofs of the ever present help mentioned in the ninety-first psalm. Christian Science has brought relief for myself and family from all sickness and discord, blessing us with a deeper and fuller knowledge of God, for which I most heartily thank Him and His Christ. I am deeply grateful for the pure and loving thought that inspired Mrs. Eddy to give to the world the wonderful and practical book, "Science and Health with Key to the Scriptures," which has enabled so many to find the truth that makes free. I am also thankful for the Christian Science literature, which is a daily help, furnishing that spiritual food which we are ever seeking.

SAMUEL H. MILLER, Hyde Park, N. Y.

✧

I turned to Christian Science for physical healing. I had what is called paralysis of the bowels, and the doctor pronounced an operation necessary, although he said that he could not promise a permanent healing. It was expected that I would make my decision and go to the hospital the next day. During this period of doubt and indecision a Christian Science friend came in. When I informed her of my problem, she asked why I did not try Christian Science, saying that she had been healed of a similar condition, and it was God's work and permanent. I said, "If it is God's work, He is 'no respecter of persons,' and He will do as much for me."

I engaged a practitioner, and the healing was complete in five days. My happiness was unbounded at this freedom from bondage, as I had been afflicted since childhood, and had tried all the medicines recommended, but they would gradually cease to give relief. I had no Bible, but I never purchased anything so willingly as the Bible, also Science and Health. It seemed to me the nights were not long enough to read all I wanted. I cannot express my joy in knowing God as divine Mind, for I had believed in a personal God, and this seemed so impossible that I had grown to dislike to attend church. Jesus said, "Ye shall know the truth, and the truth shall make you free."

The first few years of my study of Christian Science seemed to be a test of my loyalty, and I surely had to prove each assertion I made. I felt so grateful for the change it had brought into my life that I wanted to tell all in whom I was interested, although I had been told not to talk too much. During one of these conversations the lady with whom I was talking asked me what I would do if I were suddenly attacked with appendicitis. I said I would depend on God. This seemed to make a great impression, but I resented her

Digitized by Google

attitude. A few months later I had to prove my statement, as not only did I have a severe attack of appendicitis, but other complications were manifested. The Christian Science practitioner worked faithfully, and though the case yielded rather slowly, the healing was perfect. I am grateful for this experience, as through it I gained an invaluable lesson. On page 392 of Science and Health Mrs. Eddy says: "Stand porter at the door of thought. Admitting only such conclusions as you wish realized in bodily results, you will control yourself harmoniously."

I am exceedingly grateful for the advantages I have had in gaining a better understanding of God. Christian Science is used daily in our home to meet all problems that present themselves, and we find it not only a curative but a preventive in overcoming and mastering all forms of error. I thank God for this Christ-teaching, and am grateful to Mrs. Eddy for bringing it to this age in such form that we can understand and demonstrate our oneness with God. My desire is to use the understanding I have, assimilate more of this truth, eliminate from my consciousness all that is unlike God, and love my neighbor as myself.—Rose Ellen Todd, Chicago, Ill.

✧

[Translated from the German]

I gladly avail myself of the opportunity to express my thankfulness for the benefits derived from the study of Christian Science. In October, 1914, my daughter, then thirteen years old, became afflicted with an abnormal condition of the toe-nail, and as she had been obliged to submit to an operation twice before on account of the same trouble, I seemed at first to be overcome by fear. The child, however, clung to the truth and asked to be treated in Christian Science, so we went to a practitioner, who lovingly took the case. We had severe struggles to go through, much of the difficulty being caused by my own fear, but the practitioner worked on with unflinching faith and love and kept leading us into the right way. The healing took place in the beginning of December, and great indeed was our gratitude.

Some time ago the same trouble manifested itself in my own case. This time, however, I remained firm in the consciousness of Truth, knowing that the blessings of which my daughter had been the recipient were also for me. I wrote to the practitioner and endeavored to maintain a childlike attitude of thought in order that I might quickly respond to the touch of Truth. The healing was accomplished with a single treatment,—I sensed a decidedly beneficial effect, and knew that my letter must have reached the practitioner. It would be impossible to recount all the blessings which we have received through Christian Science. Our desire is that many others may be led to accept this glorious teaching which makes us happy and contented. We are deeply thankful to God, and grateful to the Discoverer of Christian Science.

Frau Clara Ergo, Neukölln bei Berlin, Germany.

✧ ✧ ✧

Whatever in love's name is truly done
To free the bound and lift the fallen one,
Is done to Christ. Whoso in deed and word
Is not against him, labors for our Lord.
When he who, sad and weary, longing sore
For love's sweet service, sought the sisters' door,
One saw the heavenly, one the human guest,
But who shall say which loved the Master best?

"By Their Works," *Whittier.*

From Our Exchanges

[The Christian Register]

The shallow optimist has said, "I don't care what happens so long as it doesn't happen to me." He is shallow because nothing happens that does not happen to him. No man can separate himself from his fellows or wholly escape the evil results of any act committed by any other. In the unity of life we are so closely bound together that no man can be hurt without injury to all. There is no event that occurs anywhere that has not its universal influence for good or ill. Sane selfishness demands that a man should care not only for what happens directly to him, but for that which indirectly just as surely affects his life and happiness. A realization of this closer interrelation of humanity will do much to create that broader sympathy and interest which is so essential in the betterment of social conditions today. The wise optimist declares, "I must care what happens, for it happens to me."

[The Christian Intelligencer]

Written large on the page of history and looming big on the horizon of current events is the truth that the word of the Lord shall stand forever. God's word of wrath at all sin and ungodliness is having abundant expression. God's word concerning the wages of sin and the value of righteousness to a nation is being declared like a writing on the wall. We are finding out that a nation's sin will find her out, that pride cometh before a fall, and that the only thing which emerges triumphant out of the drama of human life and history is the word of the Lord, the will of God, the commanding purpose of the Almighty in all His ways and works.

Must we then all go down into inevitable doom? Not at all. But the duty of the present is to hearken to the word of the Lord, to acquaint ourselves with what God has spoken concerning sin and salvation, to accept the word of God in all its claims and promises, its warnings and pleas, to accept it, believe it, appropriate it, and obey it, and to fashion life and ideals according to the enduring word of God. Our duty is repentance and faith, surrender and obedience, consecration and loyalty; for if we return unto the Lord, so great is His mercy toward us that He will take our lives up into His commanding purposes and deliver us from the bondage of corruption. "The word of the Lord abideth for ever;" and that eternal word contains this unalterable dictum: "He that doeth the will of God abideth for ever."

[Zion's Herald]

Our best is our best. Our best is far removed from what we are. We never come to our best until we have reached our final bit of staying power; until we have been ready to spend the last remnant of love and patience and generous living. Our best is to be found at the end of all that is good and pure and wise and brave and holy. A man never reaches his best until he has traversed a way that cries out for every ounce of manly stuff that he has in him. That is what our best is; and there are few who have it in them to give of their best. We may strive with what we like to think is heroic effort and give—our second best; but our best—ah, we are not ready to give that—it means so much, and the effort draws so upon our time and strength and intellect and resources. And so God and our fellows get that which is not our best.

We could give our best if we were willing. We possess all the faculties that are needed. We are intelligently informed as to the process. We have strong, steady, and sturdy qualities well within our grasp, which once we have laid hold of

Digitized by Google

them would put us in fine fettle for doing our best; and what is more, there are few hours in the day when there are not some things which touch our lives that suggest the attractiveness of such a course. The best could be made to fit in a normal way into the every-day affairs of most of us. And yet there are too few of us who are ready to undertake the task of doing our best.

[*Western Christian Advocate*]

Elijah's victory over the prophets of Baal was a victory of the spirit, . . . It is not probable that the people wholly understood the spiritual nature of that victory. It is certain that Elijah did not comprehend the real character of his inward strength. To him Jehovah was too much the power made manifest in thunder and fire and torrent. He forgot to seek his God as an inward presence. Hence his mad panic when the fire had burned out on Carmel and the rain and the wind had ceased. He did well to go from Mount Carmel to Mount Horeb. There were certain inner mysteries that the former had failed to teach him. He assumed that he was in the counsels of the Almighty and that divine power had been remiss in its action. Therefore Jehovah led him out on the mount. A "strong wind rent the mountains, . . . and after the wind an earthquake; . . . and after the earthquake a fire." These were Jehovah's ministers, but Jehovah was not in wind or earthquake or fire. Then there spoke a "still small voice." When Elijah heard this voice he put his mantle before his face and went out. He had received his lesson.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

Be not deceived; today Christ is moving on to fresh conquests and you are called to be on his side. In all the tumult and upheaval of the hour, behold the outcry of the powers of evil as they recognize him who alone has power to cast them out. Christ needs a voice: do you be his voice. He needs a soul through which to shed his light upon dark places of the earth: do you be that soul. He needs courageous and faithful hearts whereby to manifest his love and compassion: give him yours. As his instrument you will be invincible, though all the powers of hell compass you about and threaten the destruction of the good you hold in trust. The strongest man on earth today is the man, whoever he may be, through whom Christ casts out devils. The world may not know it, but the devils do.

[*Northwestern Christian Advocate*]

The question comes, Why not cultivate a spirit that looks upon none as stranger and all as friends? Such a broad and generous spirit is no vagrant thing. The art of recognizing earthly friends is worthy of fondest cultivation. How useful such an accomplishment would be in effectually guarding against enmities that so often a too meager knowledge of each other engenders. If we should apply ourselves in the spirit of the Master, who always gave forth a kindly and winning word, even unto the Samaritan, we think there would be a happy discovery of a host of hitherto unfound friends whom we would learn to know and esteem.

[*New-Church Messenger*]

God has provided the Bible as the rule of life and as the instrument through which He reveals Himself. Unbounded is the gratitude for the divine opening of His Word, that we do not have to pursue an endless search into doubtful historical conclusions to find God. The true idea of Him is found only in the Word, and now the Word is divinely opened to the rational mind, showing the way to a true and satisfactory idea of God, the Father in heaven.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

Attention is called to the change in price (see also last cover page) on single copies of the following volumes of Mrs. Eddy's writings when sent by mail postpaid from the office of the publisher, Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Massachusetts:

Science and Health (cloth) from $3.18 to $3.00; Retrospection and Introspection (cloth) from $1.06 to $1.00; Unity of Good (cloth) from 65 cents to 60 cents; Pulpit and Press (cloth) from $1.06 to $1.00; Rudimental Divine Science (cloth) from 55 cents to 50 cents; No and Yes (cloth) from 60 cents to 55 cents; Messages to The Mother Church (cloth) from $1.56 to $1.50; Christian Science vs. Pantheism (pebbled cloth) from 26 cents to 25 cents; Message to The Mother Church, June, 1900 (paper), from 26 cents to 25 cents; Christian Healing and The People's Idea of God (cloth) from 60 cents to 55 cents; Christian Healing (paper) from 21 cents to 20 cents; The People's Idea of God (paper) from 21 cents to 20 cents.

The above changes do not constitute a reduction in the price of Mrs. Eddy's works, but save the purchaser the postage on single copies of the volumes specified.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Publishing Society

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

The pamphlet, "Fulfilling the Law," has been translated into Danish, "Lovens Fylde," and is now published and on sale. This new pamphlet has the English version printed opposite each page of the translation.

The pamphlet entitled "The Father's Business," already printed in English and German, has been translated into Swedish, "I Faderns Tjänst," and is now published with the English and Swedish versions on opposite pages.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

Connecticut College for Women, at New London, the first institution of its kind in the state, opened this fall with an entering class of more than one hundred students. The buildings stand on a wooded eminence overlooking the Thames river, with a panorama of hill and valley, sea and shore. More than three hundred acres of woodland and field are included in this property, which stretches from one of the highest points in the city down to the bank of the river. The curriculum includes not only the usual academic subjects, but also departments in music, fine and applied arts, and vocational training. Three Hartford women, now members of the board of trustees, started five years ago the movement which has resulted in the opening of this college. Various places in the state offered sites for the institution. A campaign for the raising of $100,000 in New London was conducted with such enthusiasm that $35,000 more than the required amount was secured. Later Morton L. Plant gave $1,000,000 as an endowment fund, the income to be used in defraying the running expenses of the institution. The college plant as thus far constructed consists of a large natural science hall, two dormitories erected with an additional $120,000 given by Mr. Plant and to be known as Plant and Blackstone houses, and a refectory, which is to be called Thames Hall.

Five hundred and sixty-nine acres of land have been added to the state experiment farm operated under the supervision of the University of Tennessee, Knoxville. It was through the efforts of the Knoxville board of commerce that the movement for the purchase of this additional land was launched and carried through. The purchase price was $140,000. It is the plan of the dean of the college of agriculture to make of Knox county a model in rural school organization and agricultural development. He estimated that from ten thousand to fifteen thousand farmers will visit the experiment station annually from all parts of the state. It is thought that this expansion of the farm plant will enable the college of agriculture to attract, through the future growth of the institution, national live-stock and agricultural meetings that are quite impossible at the present time. A bill is now before the state legislative body which, when passed, will give the university $200,000 additional to spend in the improvement of its buildings during 1915 and 1916.

American and Honduran planters are constructing a railroad through the Mosquitia district of Honduras. This district, extending from Iriona to the boundary of Nicaragua with over eighty miles of seacoast, and extending back into the interior an equal distance, is one of the richest in natural resources of any district in the republic. Mahogany and other hard and cabinet woods are found in the forest, and the virgin land, when cleared only by the axe and the machete and planted to bananas, yields bountifully. The lower lands produce rice in abundance, while rubber grows wild in the forest and under cultivation. There are also thousands of acres of land suitable to cattle raising on a large scale. Many of the creek beds have yielded placer gold. The lack of men is a serious labor problem.

The United States forest service has standardized trail construction in the western states, and settlers, miners, and range users realize that the construction of these trails through the mountains will contribute to the prosperity of both individuals and communities. Mere ways through the forest, constructed by unskilled builders, are not matters of permanent forest improvement. A forest service trail today is a narrow highway over which a pack animal can travel with safety during the usual period when the need for a highway exists. Such trails are constructed under the immediate supervision of forest rangers educated and trained in the skill of highway construction and have all the essential features of a substantial wagon road.

The state of Mississippi has recently completed its title to the ground on which its Capitol is built, the department of the interior having within a short time issued a patent establishing once and for all the right to this property. The act of Congress creating the state of Mississippi made provision also for ceding to that state all public lands within its boundaries held by the United States. But in order to make the transfer of land complete, it was necessary for Mississippi subsequently to secure from the public land office a patent on the federal lands thus included. This formality was only recently complied with.

The western water-power conference at Portland, Ore., discussed the Ferris bill. The report of the minority of the resolutions committee opposing anything that savors of federal control of the water-power within the several states was adopted by the conference. It declared that the leasing clause of the Ferris bill is objectionable. The resolutions adopted contain a preamble in which it is declared that the public lands have been disposed of by the government at bare cost, and any departure from this policy in the matter of disposing of water-power would be un-American.

The good roads congress will meet in Worcester, Mass., in December, and it is expected that more than one thousand delegates from various sections of the United States will be present. The governors of the six New England states, also the mayors, city engineers, and street and county commissioners of New England, are to be invited to attend.

If the United States Coast and Geodetic Survey can obtain enough money from Congress it will carry out its present plan of "wire-dragging" Boston harbor. During the year just drawing to a close the survey has covered some two hundred square miles of the bottom of the sea in the approaches to Boston. This method of charting the floor of the harbor is much more thorough than is possible with soundings.

Bird-houses are being placed by boy scouts in the trees of the Alameda, Santiago, Chile, and it is promised that the police will assist them in protecting the birds. A number of secondary schools are trying to interest their pupils in similar work in the parks and on San Lucia hill.

The government executives of Argentina have just authorized the payment of $444,436 m/n (paper dollars) to the management of the new port works of Buenos Aires for further construction. This is one of a series of payments being made to construct an elaborate harbor system for the city.

Movements of the slides on the east and west banks of the canal at Culebra, Panama Canal, caused a suspension of traffic through the cut from Aug. 7 to 10, and again from Sept. 4 to 9 inclusive. The section of channel affected by the two Culebra slides extends a distance of 2,800 feet.

The National Retail Clothiers Association, at its recent convention in Chicago, instructed its resolutions committee to draw up a resolution favoring the establishment of the dye industry in the United States so as permanently to take care of all American needs.

The capital invested in the mineral water industry in the southwestern portion of the Cape province, South Africa, amounts to £180,000. Four hundred employees are engaged, and the annual output is in the region of twenty million bottles of a value of about £125,000.

The receiver of the Chicago, Rock Island & Pacific Railroad Company has brought suit in the supreme court at New York to recover $7,500,000 from the directors of the Chicago, Rock Island & Pacific Railroad Company.

The Union Pacific Railway carried 8,951,364 passengers in the fiscal year ended June 30, 1915, without the loss of a single life. This includes not only passengers on trains but passengers getting off and on trains.

The Wheeling & Lake Erie Railroad has ordered 750 gondola cars from the Standard Steel Company and 200 automobile cars from the Western Steel & Foundry Company.

For the twelve months ending with Aug. 31, 1915, exports from the United States aggregated $3,035,033,280. Twelve months' imports of merchandise totaled $1,669,698,934.

Denver boy scouts during a two weeks' encampment at Glenisle constructed a trail two and a half miles long in the United States forest reserve on the Caribou trail.

The yield in the "grape belt" of New York is estimated at seventy-two thousand tons. Six thousand cars will be required to transport the product to the markets.

The government expert of Argentina who has charge of the distribution of seed, has just finished distributing 2,550,000 kilos of wheat seed and 600,000 kilos of flax.

Since 1811, when the first contribution to the "conscience fund" in the treasury department of the United States was made, it has grown to the sum of $453,000.

The number of state employees in Massachusetts is 25,065, and the annual payroll amounts to $7,281,339.24.

Fruitful Testimony

ROBERT NALL

If as loyal Christian Scientists we were called upon to take our place on the witness-stand of a court of justice or inquiry, and testify on behalf of our faith, what would be the character of our testimony? Would we be ready to declare boldly and without reservation the truth as far as we know it, and to affirm our abiding conviction in the fundamental doctrines of the Science of Christianity? Would we be prepared to say that we rely wholly upon God as infinite Mind and divine Love to heal sickness as well as to destroy sin? It is for each one to answer for himself. But there is this to be remembered: that we cannot evade witnessing in our daily lives, and that the quality of our testimony may indicate our progress in Science and our courage and capacity to refute material sense, to extirpate false beliefs, and to grow in the consciousness of Life and immortality.

One can never forget the experiences of Peter as related in the gospel narratives. Carried away by emotion, there was a day when he vociferously proclaimed his willingness to die rather than be recreant to the Master; yet not long after he "followed afar off," doubting, timorous, unhappy, until when put to the test of public avowal he plunged headlong into a reversal of his previous protestations of fidelity. Fortunately the graphic story does not end there. How could it? Next to John, one thinks that Jesus must have had a special love for Peter, for in him he recognized mental qualities that would make him valiant and true.

Is this not why the angelic messenger singled out Peter by name in the message given to the women at the sacred sepulcher, "Tell his disciples and Peter"? What a gentle, gracious, loving reminder that denial had not shut the door of hope, a reminder which was confirmed in the memorable assemblage of the Master and his followers at the sea of Tiberias after his resurrection! And the sequel? Read it in the early chapters of the Acts; and behold the transformation! Was there ever a more inspiring illustration of the power of Truth to be victorious over mortal sense? In substituting for the "old man" that "new man, which after God is created in righteousness and true holiness," Peter was one of the first to be endued with power, and to become a witness for Christ in a world buried in materialism and the worst forms of idolatry. And of the fruits of his witnessing there can be no end.

It is always refreshing and stimulating to think how much we owe to the faithful testimony and labors of others, but more than that, how much we owe to divine Love; for "the Spirit itself beareth witness with our spirit, that we are the children of God." Does not this mean that we are coming to know the spiritual man, to gain some glimpse of the spiritual sense of harmony, to discern our birthright in God, "heirs of God, and joint-heirs with Christ," and to be assured that there is no human power which can deprive us of this possessory title to all good? Moreover, there is divine and human testimony for our edification and encouragement. Jesus said that the "works" which the Father had given him to do bore witness of him; and then he added, "The Father himself . . . hath borne witness of me."

Who can avow that the "works" are not an integral part of the gospel of eternal salvation? And are we not "compassed about" with a great "cloud of witnesses"? Because of their faith, their loyalty, their perfect trust, their continuance in well-doing, we are emboldened to pursue the path of truth, recognizing that in the activity of good we find our most fruitful environment. On this road spiritual poverty or decadence will find no lodgment in our experience. If we have even in a measure demonstrated the truth and touched even the hem of vital Christianity, it is our privilege to thank God for the sweet and sacred presence of Love and of Love's redemptive work, and to be so lifted up in spiritual understanding that we shall be continuously bringing tithes into the divine storehouse, to be followed by proof that God is ever faithful and pours out His blessings beyond our capacity to receive. To this end, see how the nature of our testimony is guarded when we are true to the Bible and to our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. A theologian has just written that "the one certainty, the one true orthodoxy, is love, and the one heresy its lack," and he appositely quotes John, "He that loveth not knoweth not God; for God is love."

Here then is the very quintessence of all that our Leader taught as she followed Christ. In an address at one of the annual meetings of The Mother Church she affirmed that "the fulfilment of divine Love in our lives is the demand of this hour—the special demand" (The First Church of Christ, Scientist, and Miscellany, p. 131). This is the only gospel of the kingdom. And while it is perfectly true that Christianity is not a creed but a life, Christian Scientists are specially favored in expounding and witnessing to this life. They are not tempted to wander into theological by-paths in search for truth. Theirs is not academical or theoretical testimony; nor is it qualified by those hypothetical elements whose nature is so distracting and disturbing as to make it impossible for the student to arrive at anything like certitude. Conviction, if it is to be an auxiliary in redemptive efficacy, can only be based upon sound reasoning, and there can be no such reasoning except that which acknowledges spiritual causation for all that is real and eternal. Hence it is that mankind has now a positive, rational, and logical exposition of truth in the writings of our Leader and in the Lesson-Sermons. These are accomplishing a beneficent work beyond conception in clarifying and unifying human consciousness, and leading to that happy time when the consensus of thought will be that the "signs" which "follow them that believe" are those only which testify truly to God's presence and power in the operation of spiritual law.

All true testimony is work for others, the highest spiritual altruism. We love because we are loved. We give because we have received. Christian Science and selfishness are at opposite poles; the two cannot exist side by side. If we would be victorious, necessity will impel the cultivation of every spiritual quality. "The advancing stages of Christian Science," Mrs. Eddy says, "are gained through growth, not accretion" (Miscellaneous Writings, p. 206); that is, there can be no extraneous addition to that unfoldment of truth which is our surest passport to fruitful consecration. Our

Digitized by Google

spiritual lives are like a well watered garden when we are about our Father's business. What that is, we can each one learn. The spiritual aroma which comes from daily communion with our divine source is a reflection of Love that will penetrate into the darkest mentality and sweep away the musty cobwebs of educated fallacies and exploded beliefs, arousing the sick and weary ones to a sense of human failure to give relief. We are sponsors for a wealth of blessing that has come to us; and our charter, the messages in the books we daily study, emphasizes our obligation to distribute this wisely and well. Thus we shall fulfil our Leader's admonition when she said (Miscellaneous Writings, p. 207), that her "life-purpose" was "to impress humanity with the genuine recognition of practical, operative Christian Science."

Spiritual Discernment

MILDRED SPRING CASE, A.B.

MAETERLINCK once said, in substance, that if our eyes were made differently, we could see through leather just as readily as we can through glass. If, for instance, our human vision were as penetrating as an X-ray, the objects beyond the leather would be as discernible as the objects beyond the glass. The difficulty is evidently with our discernment, for obviously the things beyond the leather are no farther away than the things beyond the glass. So it is with the belief of death. God's children, who dwell forever as ideas in the eternal Mind, can really never pass away or leave us, but by wrongly thinking of them as material, we put the belief in death and separation, or a belief in a material life which has been lost, between ourselves and others of God's children. In reality they are spiritually just as near us now as before we believed them dead. It behooves us, therefore, to clear our perception of all that pertains to the material, to see through the opaqueness of material beliefs with the eyes of spiritual discernment which are really ours.

Some time ago I had a quarrel with a very dear friend. For days I saw that friend as the embodiment of all that was unkind, unjust, and disloyal. Now in reality this friend was unusually radiant with kindness, justice, and loyalty, but I was putting between us the barrier of material, erroneous belief, so I could not see her as she really was, and consequently the sense of separation was very strong. Even when in the same room, we might as well have been a hundred miles apart, so far as any sense of nearness existed between us. Eventually, however, the truth cleared away that mist, the misconception, and I saw the real child of God, loving, kind, a perfect reflection. Immediately the sense of separation was dispelled, and the oneness of all God's children in infinite Mind was established.

Similarly, so long as we think of our friends as made up of inanimate bones, brains, flesh,—in other words, as material beings who have died,—we are putting an opaque, erroneous belief between ourselves and them. When they were with us, it was the spirit of love, kindness, unselfishness, happy humor, the expression of God's ideas, which we loved in them, not the material body, which is but dust. Then why should we so suddenly change and think of a friend as a lifeless corpse? Are not our dear ones still the eternal manifestation of God's eternal qualities? Until we see them as God's spiritual children, forever existing in divine Mind, there is a sense of separation between ourselves and them. To realize again our spiritual oneness with them, we must clear away the mist of material beliefs from before our eyes, our inward vision, then the unity of all God's children will no longer be thought of as transient, a dream soon shattered, a myth without actuality in our own experience; but with the realizing sense of God's ever-presence will come the corresponding nearness of all God's children.

Obviously, so long as our own consciousness is full of unloveliness, we cannot see the reflection of Love in those around us, for we cannot put new wine into old bottles and expect it to be pure and clear. We must first clear our own consciousness of all that is unlike God, good, then our perception is no longer blurred, and we can see God's children as near and dear, existing with us in the one infinite divine Mind, for God is All-in-all.

Jesus, who said of the supposedly dead maiden, "She is not dead, but sleepeth," also said that we cannot serve both God and mammon. We cannot expect to discern spiritually those who seem to be dead, so long as we see them as material. In Science and Health Mrs. Eddy tells us: "Perfection is not expressed through imperfection. Spirit is not made manifest through matter, the antipode of Spirit." Again, "Spirit is not materially tangible" (pp. 72, 78). Jesus could not have raised Jairus' daughter from the dream of death had he admitted that matter ever had power to separate Life from its manifestation and to darken human experience with sorrow and death. On page 386 of the text-book we are told of the grief and sorrow that was experienced because of "a blundering despatch, mistakenly announcing the death of a friend." Mrs. Eddy says that we think our anguish is occasioned by our loss, but when another message comes stating that the first one was false, that the friend still lives, this heals our grief, proving that it was our own sense of loss, our belief in death, that caused the grief.

Christian Science has come to reinstate the knowledge of God as the only Life. It is correcting the old message of death by the higher realization that in God "we live, and move, and have our being," now and forever. It is declaring the forever fact that life is now and always has been purely spiritual, assuring us that if there ever was a time when God's reflection could die, God Himself would cease to be a living entity. We are awakening, consequently, to our responsibility as children of the eternal Father-Mother God, for to believe in death would be to dishonor God, who is Life. Christian Science enjoins us to clear away the mists which blur our spiritual discernment, the discernment which alone can see through the solidified material beliefs, and to know constantly and actively that our life is "hid with Christ in God."

"No variableness"

FRANCES S. WEAVER

PERHAPS no aspect of Christian Science appeals more strongly to mortals than the teaching that God is divine Principle. The writer recalls the shifting scenes of her girlhood, the constantly changing conditions and environment, the lack of tenacity in friendships, the discords, and the ceaseless unrest amounting to agony. Contrasted with all this is the great peace and contentment which came with the dawning consciousness of God as Spirit, Principle,—fixed, immovable,—Love unchanging, Truth invariable, and Life harmonious. Here we may remember that the ten commandments were written on tablets of stone, significant of their unyielding basis or Principle.

In the so-called material universe nothing is permanent, nothing is stable. With the ever changing theories as to cause and effect, the material wisdom of yesterday is the foolishness of today; the firm friends of today are the avowed enemies of tomorrow. Happiness dependent upon the senses, material circumstances, or human associations, or

Digitized by Google

resting upon the false teaching of the schools, is not enduring happiness, since at any moment one may be plunged into intense misery. Health which is the result of the mesmeric influence of belief in drugs, soothing and quieting the human mind, or upon any material condition whatsoever, is not permanent health, since at any instant the condition may change to belief in extreme suffering. In fact, as Mrs. Eddy has said (Science and Health, p. 374), "it is like walking in darkness on the edge of a precipice."

How different are the happiness and health attained through the understanding of God and of man's relation to Him, states as unchanging as God Himself. The consciousness that the real universe is spiritual and perfect, that man is God's child, spiritual and good (not material and evil), the object of His tender care, a part of His plan, created for a purpose and forever sustained, directed, and protected by divine Love,—this gives a happiness that no experience of mortal existence can ever dim, since the material universe, with its injustice and misery, is seen to be illusory and unreal and not the fact of being. There is but one universe,—the spiritual; and man is God's spiritual child. Likewise, health which is the result of the understanding of God's law of harmony is permanent, irreversible, forever above and beyond the illusion of matter and its supposed laws.

So, to the discontented mortal, without anchor, seeking happiness, health, and peace in the material, and never finding them, the consciousness of the unchangeableness of God, good, and His laws, brings buoyancy and tranquillity. When we learn that "outside the material sense of things, all is harmony" (Science and Health, p. 489), the beliefs of materiality lose their power to terrify, and the whims and caprices of mortals no longer disturb. Mortal man (the counterfeit man) alone is variable, unstable, vacillating. God's child, the spiritual real man, is as constant and tenacious in good as is God, divine Principle.

Testimony Meetings

GENEVIEVE THOMAS PIERSON

THE Wednesday evening testimony meetings were not appreciated by the writer when she first began the study of Christian Science. They were thought to be good only when all of the testimonies were strong, clear, and concise, and when given by experienced Scientists. This state of consciousness was, however, regarded as anxiety for the Christian Science movement, so it was not recognized as egotism and criticism. There was an insistent desire to stay away from these meetings, and a suggestion presented itself that the Sunday morning service was enough for spiritual growth,—an argument which, if heeded, would lead to the elimination of these mid-week meetings of manifest fruitage.

Thanks be to the impulsion of the one "only wise," that a religion which declares the word of God and brings forth fruit is revealed in Science and Health and all our other Christian Science literature, and that the testimony of healing has now a metaphysical significance. The Sunday service is enriched by the word declared, and the Wednesday evening service is its fruitage. Soon after the temptation to stay away from these meetings, the first reader of the church which the writer attended, was heard to say that he had greatly enjoyed the preparation of the Wednesday evening readings. He was asked more about this work, and an explanation was cheerfully given which showed something of the time and care bestowed upon this branch of the Christian Science movement that heretofore had not been properly valued by the writer.

Interest was aroused to trace for one's self the symmetrical unfoldment of the subject presented, and the hymns held a higher place in consciousness than ever before. As appreciation of the endeavor of the reader grew, thought was purified and made ready to perceive beauties heretofore hidden in the simplest testimony. There also came the realization that this was a most wonderful school in which to learn to affiliate with our fellow men, an opportunity to accept gratefully the good and to pass over that which seemed to be of less value. Many lessons were learned after the meetings were over, in listening to expressions of gratitude to the different speakers, and what held little value to one was seen to be of great importance to another. This too was a blow to egotism, personal judgment, and the mistake of comparing one with another.

With growing wonderment at the greatness of the Christian Science movement, as seen from spiritual and educational standpoints, came the desire to add one's own testimony. An effort was put forth to find what was considered an ideal testimony, so two or three hours were spent in the reading-room for research on this subject. The Church Manual, as well as the testimonies in the *Sentinels*, was read and found most helpful. Recently another afternoon was spent in the reading-room, and the librarian placed before the inquirer the early and late *Sentinels* which were bound and indexed. In these were found articles which contained a few "don'ts" regarding the giving of testimonies which would be helpful to all earnest workers, and especially to those who delight in expressing thanks for the Christian Science literature and all that has come to them through the loving efforts of our beloved Leader, Mrs. Eddy, who tells us that "gratitude is much more than a verbal expression of thanks" (Science and Health, p. 3). To give a testimony including gratitude for our periodicals and not to observe some of the simplest and most explicit directions contained therein, would be barren thanks indeed. The following are some of the direct and implied helps gleaned from the research.

In giving testimonies, descriptions of symptoms and disease are discountenanced, as are also preaching and exhorting, with the rehearsal of conversations and unnecessary details, as well as technical terms and overemphasis of speech and manner, all of which tend to turn thought to personality instead of to God. A sense of levity in testimonies is entirely out of line with the dignity and solemnity of our meetings. The wayfarer does not come to be amused, but to learn of the works of Christian Science. It is also made clear that while a spiritualized thought which accompanies an experience of healing may be given, yet the explanation of texts either from the Bible or from Science and Health or any other of Mrs. Eddy's works is to be avoided.

We are reminded that the Bible and Science and Health are "our only preachers," as stated in the Explanatory Note of *The Christian Science Quarterly*, and the admonition that readers "shall make no remarks explanatory of the Lesson-Sermon at any time" (Church Manual, Art. III, Sect. 6), is significant of the attitude expected of a church-member at the Wednesday evening service. A Christian Scientist may find lessons everywhere; for instance, an article that appeared in a popular farm journal was found helpful. It contained these words: "The farmer does not want to be talked at; he does not want to be told what to do; he simply wants to know what has been successfully done." Is not this the attitude of the "stranger that is within thy gate"?

Very early the opportunity came to the writer to help in establishing a Christian Science church in her home city, and the sense of responsibility which persisted in presenting itself to her as a new board member was oppressive. This was most

Digitized by Google

noticeable during pauses which occurred occasionally during the time given for testimonies on some Wednesday evenings. At a board meeting which followed such a service, the members reported that they had endeavored to spiritualize their own thought in trying to realize the completeness of the divine presence during such periods. Anxiety over these seemingly long periods of silence was erased when it was found that healing occurred during those moments and that subsequent meetings manifested an unusual sense of freedom. It was learned that no apology by any individual was needed for the seeming lack of gratitude evidenced by silence, and that reference to the error only enlarged the sense of lack; whereas, by holding to the fact that gratitude is present, we help the willing ones in the congregation to tell of blessings received through the application of Christian Science. Often one who had never before given a testimony would be led to speak at this time, and so "filling in" testimonies would be found unnecessary. There is no occasion for anxiety in the unfoldment of church work in Christian Science, since Truth heals the sick and we should rejoice that we are given the privilege of telling about it to those who need its aid.

Fear Proved Baseless

JAMES PEDDLE

It was between times, neither light nor dark, and the sun that had slowly passed behind the distant hills a while ago, seemed loath to yield, even for a few short hours, his sovereign rights to those lesser luminaries that one by one glimmered in the somber sky. It was the time when details soften, when all conditions make for thought and meditation, and when, besides, imagination may if uncontrolled carry us on its visionary pinions into the realm of dream things. The writer was quietly strolling through the streets of his home suburb that lies on one of the hills rising from the waters of Sydney's beautiful harbor. Few people seemed to appreciate the charm of time and place, or few perhaps had leisure to enjoy it, for scarcely a human being had appeared to disturb the solitude, until at the end of half an hour's walk, upon turning a corner, a child was seen a few yards away leaning against a garden fence, his face buried in folded arms, his tiny frame shaken with sobs.

The touch of a warm hand and a few minutes' friendly talk by one who, being a man, would seem to the baby thought too big for trouble to reach, brought some relief, and the little one began to tell in broken words the cause of so much woe. "I'm afraid of them things on the ground," he said. After finding out what the child meant, I saw that the "things on the ground," a few feet away, were a handful of dead leaves which had fallen from a near-by tree and were moving gently in the evening breeze. I took the boy by the hand and we walked along together; we looked at the dead leaves, handled them, saw them for exactly what they were, saw how foolish it was to believe that they could possibly hurt anybody, then directed our steps toward his destination half a block away. As we walked along we talked, and when I left him at the door of his parents' home we could both laugh at his trouble, and he promised that he would never again be afraid of dead leaves.

I continued my stroll, thinking of the incident and of the little fellow's distress when there was nothing to fear. It was almost impossible to think of anything with less innate power either to help or to harm than those few dried relics of the summer. As there was nothing in them that could by any means arouse fear, its cause was not in them; it was in the pictures of the child's imagination which he associated with the rustling foliage but which had no foundation in fact. Then I thought of the foolishness of grown-up folk, too, for I was myself even then afraid of some troubles which had loomed large and threatening for many weeks, and memories brought to mind the fact that most of the friends we know, most of the people we meet, are as full of fear as the little chap I had just left. Fear dominates mortal thought. Men are afraid of one another, afraid of sickness, afraid of poverty, afraid of calamity, afraid of death; with faces averted and eyes covered, they crouch trembling and terrified at a thousand things they think they foresee, things they believe are there to do them harm. Yet the great Teacher whom we profess to believe and love was constantly saying to those he was helping to know the Father, "Be not afraid."

Sad to tell, for long years even the Master's professed followers forgot this, until Mrs. Eddy discovered the truth about the things that make men afraid; discovered that they are only pictures of mortal sense, dream-shadows that no strength of conviction, no weight of sense-testimony, can make real, for they have neither entity nor Principle. Finding mankind full of woe, like the child of my story, and prompted and sustained by unselfed love, she devoted her life to the purpose of making known the truth she had discovered. This truth, set forth in the Christian Science textbook, "Science and Health with Key to the Scriptures," is an antidote for every distorted picture, every false dream. On page 469 Mrs. Eddy writes, "With one Father, even God, the whole family of man would be brethren;" and when this truth about man, the real spiritual man, comes into human consciousness, trust and confidence and mutual help are manifested in human relationships, instead of fear, suspicion, and doubt. Then on page 494 we read, "Divine Love always has met and always will meet every human need." As this truth about supply and the protecting care of our heavenly Father comes into our consciousness, poverty and calamity, and the fear of them, pass out of our experience.

When we begin to recognize the one supreme Mind, God, sin and sickness begin to disappear, and as understanding grows, these errors, and finally the experience of death itself, will be seen for what they really are, false beliefs of mortal mind, and they will vanish away, be completely destroyed. Seen in the light of eternal verities, in which all is harmony,—God's children living in an atmosphere of divine Love,—the woes "that flesh is heir to" will have no more power to frighten or to harm us than the dead leaves had power to harm the child as they rustled in the wind on that autumn evening.

Fantasy—Reality

ADA JANE MILLER

Imprisoned? No! There are no bars between
Us and our good. What seems to hold us fast
Is but illusion's fancied bond, dream-woven:
The warp, the woof, the weaver,—all are but
A fantasy, imagination's child,
Fear born, fear nurtured, and by fear enthralled.

Imprisoned? No! This fearsome, earth-born child
Is not of God or of His image, man.
Man knows no fear: he knows no Mind but God;
And man does aye express the wisdom, strength,
The beauty and the power of Life and Love,—
The Christ, who ever comes to heal and save!

[Judge Clifford P. Smith in *The Republican*, Springfield, Mass.]

Now and then a minister tries to dispose of Christian Science by identifying it with the Gnosticism of the second century. Your correspondent at East Northfield has just registered the latest effort of this kind. It does not appear that any particulars were given which would indicate a similarity between Gnosticism and Christian Science, and it would seem that the speaker offered his opinion that the latter is "the direct descendant" of the former as sufficient for his hearers. Since you have regarded this opinion as worth reporting, I trust that you will also publish a brief reference to certain pertinent facts.

It is to be observed, in the first place, that practically all the information regarding Gnosticism which has survived until now is contained in the polemical writings of its opponents. For this reason our information concerning Gnosticism may be somewhat like the information about Christian Science which a man might get by listening to ten or a dozen sermons against it. This is to say that we may have but little authentic information regarding the Gnostics. Such information as we have, however, does not disclose so much agreement between Gnosticism and Christian Science as it does between the Gnostics and the present majority of Christians. In the new International Encyclopedia we are told that the aim of Gnosticism was "to describe how the cosmic order was originally projected, then lost, and finally restored." This observation reminds one of creeds which are as yet more popular than Christian Science, particularly the doctrine of fallen man. In contrast with such theories and with Gnosticism, Christian Science, as Mrs. Eddy has said in Science and Health (p. 471), "holds the divine order or spiritual law, in which God and all that He creates are perfect and eternal, to have remained unchanged in its eternal history."

In several reference books we read that the Gnostics accepted Jesus as the Saviour of the world and revered Paul above other apostles, but rejected the Old Testament with its teaching of only one God. Such a position may be somewhat akin to the more personal forms of modern Christianity, but it could not be reconciled with Christian Science. In the same reference works we also learn that the Gnostics attributed the presence of evil in the world to the same cause to which it ascribed the presence of good. This view may correspond to a certain extent with the common belief that God permits or makes use of evil for good purposes, but it is utterly contrary to Christian Science.

We are told by several authors that the Gnostics were divided by practice into those who insisted on the necessity for an extremely ascetic manner of living and those who went to the other extreme and defended licentiousness. In practice, therefore, Gnosticism differed from Christian Science as much as it did from other branches of Christianity, which inculcate neither asceticism nor licentiousness. The goal which Christian Science sets before its adherents is to be attained gently, naturally, lawfully, "through better health and morals and as the result of spiritual growth" (Science and Health, p. 485).

As for the word "gnosis," or knowledge, which may hint a relation between Gnosticism and Christian Science because knowledge is related to science, the following quotation from the Encyclopedia Britannica is pertinent: "If we wish to grasp the peculiar character of the great Gnostic movement, we must take care not to be led astray by the catchword 'gnosis.'" The gnosis of the Gnostics was not what is commonly called knowledge or science, but was a peculiar esoteric concept depending on their classification of men into different orders with different capabilities. The gnosis or epignosis of Christian Science is simply spiritual understanding, which is regarded as the divine heritage of all men.

[G. S. Paine in *Clark County Review*, Las Vegas, Nev.]

In connection with the good editorial mentioning Christian Science in a recent issue, let me say that the teaching of Christian Science is indeed that the mortal mind produces, as the editorial declares, a belief in the reality of the diseases which it self-consciously looks for. Christian Science, however, does not maintain that this same mortal mind—a person's mortal thought—can cure anything. On page 251 of "Science and Health with Key to the Scriptures" Mrs. Eddy shows how the Christian Scientist should govern the body "from the higher understanding that the divine Mind makes perfect, acts upon the so-called human mind through truth, leads the human mind to relinquish all error, to find the divine Mind to be the only Mind, and the healer of sin, disease, death." An understanding of Christian Science enables one to turn thought persistently in the right direction, toward God and His perfect creation, which is all there really is, and thus to reduce even a latent fear of disease to its native nothingness.

✧

[Brigman C. Odom in *The Noonday Sentinel*, Marshall, Texas]

"Christian Science Dissected" was the sermon-subject at the Christian Church in Marshall not long since, and as it was reported an effort was made to show that Christian Science is "a philosophy without wisdom; a science without facts; a religion without rational worship; a theology without God, and a Christianity without Christ." The mildest and most modest thing that can be said of these assertions is that they are wholly untrue. The test of wisdom is the practical results that follow the application of basic laws understood. Applying this rule, one can find no evidence for the conclusion that Christian Science is devoid of wisdom. Rather would an unprejudiced mind be forced to see, on account of the manifold good works of Christian Science, that it is applied wisdom. The wisdom of Christian Science is based on the understanding of God and His creation; hence, it is the most profound wisdom, the knowledge of which is life eternal.

One correctly informed could hardly make the statement that Christian Science is "a theology without God, and a Christianity without Christ." God and Jesus the Christ form the center and the circumference of Christian Science, which accepts one God, even the "true God, and Jesus Christ, whom thou hast sent." Christian Science is Christian because it admits of no deviation from the commands of Jesus the Christ, even including his injunction to heal the sick. It makes no concessions to evil and stands for justice and right. It is science because it is demonstrable knowledge—in this case knowledge about God and man, available in the improvement of every distressing human condition. Christian Science teaches absolute truth, even the truth of which Jesus spake when he said, "Ye shall know the truth, and the truth shall make you free." The admonition of Jesus, "If thou wilt enter into life, keep the commandments," is regarded seriously and practically by Christian Scientists. In the authorized Christian Science literature scarcely a paragraph can be found in which the thought of God and Christ Jesus is not emphasized. For example, on page 497 of "Science and Health with Key to the Scriptures" Mrs. Eddy writes, "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ."

Digitized by Google

By rational worship is surely meant reasonable, intelligent, sane thinking and acting in matters pertaining to religion. Rational worship is plainly the application of the Master's teaching to preach the gospel and to heal the sick. Christian Science does not understand that this work should be left to a few ordained workers, but emphasizes the importance and necessity of daily deeds of love and good will by all its members. Christian Science is a most reasonable form of Christianity, appealing to reason more than to emotion. It explains logically and Biblically many points of Christianity over which scholastic theology has quibbled for centuries. It does away with inherited dogmas which do not stand the test of the commands of Jesus.

From the foregoing it will be seen that Christian Science is not only the Science or philosophy of life, but it is also the Science of redemption. It regenerates the human self; it awakens mortals to the truth about God and man, and so overcomes for them sin and disease, and gives a solution to every other human problem. Christian Science therefore appeals to suffering humanity. It not only tells them that they should escape from the prison-house of evil, but it tells them how to do it. It brings again to hopeless humanity the vision of Isaiah when he said, "Look unto me, and be ye saved, all the ends of the earth: for I am God, and there is none else."

[F. Elmo Robinson in *Tillamook* (Ore.) *Herald*]

An understanding of Christian Science is not attainable by a "two weeks" study of the subject; neither can so vast a theme be elucidated in a single article. The only possible way to obtain an understanding of Christian Science is through the study of its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which may be had at any Christian Science reading-room and at most public libraries. The book should be thoroughly studied with an honest and open mind, and its teachings faithfully applied. In this way alone can Christian Science be understood.

The writer of this article, himself a minister for about eight years in the same denomination as our critic, pursued just such an investigation of Christian Science. After four years of earnest but fruitless efforts to gain health through *materia medica*, physical culture, the practice of autosuggestion, and prayer as he then understood it, he began the investigation of Christian Science. This investigation was thorough and critical. Everything available on the subject of Christian Science was thoughtfully read. Having made a careful study of suggestive therapeutics prior to his investigation of Christian Science, he felt quite certain, until he had become familiar with the teachings of Christian Science, that the healing was accomplished by means of mental suggestion, but that Christian Scientists themselves were unaware of it.

After three or four years of earnest investigation, the writer became thoroughly convinced that Christian Science is in perfect accord with the Scriptures and is indeed the religion of the Bible, and that the healings in Christian Science are the result of prayer. Of this healing prayer Mrs. Eddy says, "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love" (Science and Health, p. 1). In view of this fact it is quite apparent that a right understanding of God can no more be considered mental suggestion than a right understanding of the principle of mathematics could be so considered.

In attempting to state the basis of Christian Science our critic quotes the opinion of a writer on psychology as follows: "This system is based upon the assumption that matter has no real existence." I wish to state emphatically that Christian Science is not based upon the assumption of a series of negations or denials, but on the contrary is based upon the positive Scriptural teaching that "the Lord he is God; there is none else beside him." The Master taught that this God is Spirit, and the acceptance of these basic truths demands that we refuse to accede to matter, the suppositional opposite of Spirit, any power or reality. The denial of the existence of matter is therefore the logical result of the acknowledgment of the infinitude of Spirit.

Referring to Mrs. Eddy, our brother says, "It is not known whether the worthy lady, founder of the school, ever stopped to reduce her foundation principles to the form of a syllogism." Those who have really become familiar with Mrs. Eddy's teachings well know that they are the outgrowth of a long and prayerful study of the Bible, and that before giving her discovery to the world she thoroughly tested it by reason and demonstration. This is the way her basic teachings look in the form of syllogism: God is Spirit. Man is God's image and likeness; therefore man is spiritual. Our Master said, "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit." From this we can only conclude that creation is spiritual and not material.

A great stumbling-block for many critics seems to be their failure to understand the sense in which the words "reality" and "unreality" are employed in Christian Science. Because of this they fail to understand the sense in which Christian Scientists deny sin, disease, and death. The Scriptures declare that "all things were made by him; and without him was not any thing made that was made." From this statement of Holy Writ it may be reasonably concluded that all that has real existence God made, and it is said that "God saw every thing that he had made, and, behold, it was very good," and further, that "whatsoever God doeth, it shall be forever." The term "reality," as used in Christian Science, is applied to that which is God-created and eternal, and the term "unreality" to that which is not God-created and hence is temporary, an appearance, an experience of the carnal or mortal mind. For example, from the standpoint of the science of mathematics the statement "Five and five are ten," is real and true; but from the same standpoint the statement "Five and five are thirteen," is not real or true. Indeed, it is inconsistent, and may be said to be only an appearance to the mentality which believes it.

Our critic would have us believe that Christian Science treatment consists solely in telling patients there is nothing the matter with them; again insisting that Christian Science is based upon a negation. As a matter of fact, Christian Science teaches the allness of God and man's unity with Him. It teaches with the psalmist that "he that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty," and that "a thousand shall fall at thy side, and ten thousand at thy right hand; but it shall not come nigh thee. . . . There shall no evil befall thee, neither shall any plague come nigh thy dwelling." Numerous well authenticated cases of healing of children through Christian Science treatment are on record. In not a few instances these cases had been abandoned as incurable by *materia medica*. It is a notable fact that the simple trust of children in God has made them specially responsive to Christian Science treatment.

This critic has made the very great mistake of confounding Christian Science with mesmerism and mental suggestion. Now he may be quite familiar with mesmerism and mental suggestion, but it is evident that he knows very little about Christian Science, or he would not attempt to confound it with its polar opposites. So important is this distinction

Digitized by Google

regarded by Christian Scientists that twice in each year there is carefully prepared for use in Christian Science services a sermon entitled "Ancient and Modern Necromancy, *alias* Mesmerism and Hypnotism, Denounced."

Not remembering the necessity of "comparing spiritual things with spiritual," some fail to comprehend Mrs. Eddy's teachings and declare that they contradict the Scriptures. Those, however, who have endeavored with an honest purpose to get Mrs. Eddy's view-point, have found Science and Health to be indeed a "Key to the Scriptures," inasmuch as it makes available and practical the teachings of the Bible which scholastic theology long ago relegated to the dim and distant past. Hundreds of thousands of earnest, intelligent people are studying Science and Health in conjunction with the Bible and find no contradictions there, but through this study they are being helped to a better understanding of God and His Christ, are being healed of their sins and diseases, and are enjoying in larger measure "the peace of God, which passeth all understanding."

Christian Scientists accept all that Jesus said about himself. They accept the entire New Testament narrative of the earthly career of Christ Jesus, including the virgin birth, his wondrous healing works, his crucifixion, resurrection, and ascension.

It is quite true that Christian Scientists do not claim to have demonstrated all of the vast possibilities of Christian Science. In fact they are grateful to have made even a small beginning. Christian Science practitioners, like ministers of the gospel, get compensation for their services from those whom they serve, and not from "fishes' mouths."

One of our critics says that Christian Science ignores God-given facts, and that hence Mrs. Eddy's use of the word "Science" is improper. This Science does not, however, ignore "God-given facts," but rather teaches that all truths are God given. Since God is Spirit, God-given facts must be spiritual. It is upon the basis of an understanding of these facts that Christian Scientists are enabled to destroy material beliefs,—sin and disease,—and thereby prove their nothingness.

Far from presenting the Christ "as a phantom Saviour who disappeared more than eighteen centuries ago," Christian Science is presenting a living Christ, able to heal here and now both sin and disease. In subscribing to the religious tenets of Christian Science, its students accept the inspiration and sufficiency of the Bible; they acknowledge one God, and the one divine Christ; they acknowledge God's forgiveness of sin, Jesus' atonement, and man's salvation through Christ.

[Robert S. Ross in *The Recorder*, Amsterdam, N. Y.]

Not long ago *The Recorder* published in full a learned paper entitled "The Definition of Insanity," which was read before the Albany County Medical Society by Doctor ——. The implication of this paper was that for one to attempt to get well in any but the way approved by the allopathic or so-called regular school of medicine was little short of insanity.

Perhaps the critic did not realize where his line of reasoning would lead him, for if to depart from material medicine for the treatment of disease is an indication of mental deficiency, then Jesus of Nazareth, his followers for at least two hundred years, and finally the thousands upon thousands of intelligent people who are today living witnesses of the healing power of Christian Science, would have to be included among the mentally deficient. Despite the fact that our civilization is based upon the teachings of the one who without the aid of drugs or material remedies of any kind proved himself to be the most successful healer the world has ever known, so-called medical scientists have in their search for light consciously or unconsciously overlooked the all-important method by which Jesus performed his wonderful works. History does not record that he failed in a single case.

Being willing to depart from customary grooves in her efforts to find a more reliable healing system, Mrs. Eddy was led step by step to the Bible for her answer, and there after three years of study, during which time she did little else than search the Scriptures, she finally discovered the Principle underlying the Master's demonstrations and named her discovery Christian Science. In 1875 she published the Christian Science text-book, "Science and Health with Key to the Scriptures," and since then by reading this book vast numbers, among them some of the world's most intelligent people, have been healed by Christian Science after *materia medica* had failed.

If the critic will take the time conscientiously to investigate Christian Science, he will find, even as many another critic has found, that its representatives are uniformly well and happy, and that Christian Science, instead of being the hobby of queer people, is today, even as in the early Christian era, proving itself to be the world's most efficacious healing system.

✧

[Charles W. J. Tennant in *Cambria Leader*, Swansea, Wales]

In an article by Mr. —— appearing in a recent issue the writer makes the statement that "self-suggestion seems to be the principle that forms the foundation of Christian Science, or, at least, of what I understand by Christian Science." Now Christian Science, as expounded in the works of Mrs. Eddy, is a very different thing from what this gentleman imagines it to be. Autosuggestion, or self-suggestion, is nothing more or less than the exercise of the human will in endeavoring to displace one false belief with another equally false. Christian Science, on the other hand, is the application of the spiritual understanding of the words of Jesus, "Ye shall know the truth, and the truth shall make you free." Referring to the means by which he healed the sick and the sinning, Jesus said, "If I cast out devils by the Spirit of God, then the kingdom of God is come unto you." The outstanding distinction between Christian Science healing and that of other methods is the moral change for the better and the spiritual uplift which the patient receives through its study and assimilation.

✧ ✧ ✧

Let justice hold her scale, and truth divide
Between the right and wrong; but give the heart
The freedom of its fair inheritance;
Let the poor prisoner, cramped and starved so long,
At nature's table feast his ear and eye
With joy and wonder; let all harmonies
Of sound, form, color, motion, wait upon
The princely guest, whether in soft attire
Of leisure clad, or the coarse frock of toil.
And, lending life to the dead form of faith,
Give human nature reverence for the sake
Of One who bore it, making it divine
With the ineffable tenderness of God;
Let common need, the brotherhood of prayer,
The heirship of an unknown destiny,
The unsolved mystery round about us, make
A man more precious than the gold of Ophir.
Sacred, inviolate, unto whom all things
Should minister, as outward types and signs
Of the eternal beauty which fulfils
The one great purpose of creation, Love,
The sole necessity of earth and heaven!

WHITTIER.

Editorial

"Let your light so shine"

SOMETIMES, as we try to take in the vast proportions which the Christian Science movement has assumed, we are almost overwhelmed at the magnitude of our indebtedness to its Discoverer and Founder, our revered and beloved Leader. Mrs. Eddy's task was that of the pioneer, he who ventures upon an unknown and perchance perilous way. Hers was the vision of the seer, the calm and unflinching faith and courage of those early Christians who counted not the cost to themselves if so be they might serve God. She had heard the command of the Master, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven," and her every endeavor was directed to its fulfilment.

We cannot think of those early years and what it meant then to let one's light shine, without an inspiration to be yet more consecrated to the work of preaching the whole gospel of Jesus to all mankind. We can scarcely conceive of what it meant to labor in the vineyard when implements for breaking up the soil of indifference and prejudice were few and the laborers however willing must be patiently trained ere they could wield them. Why should we not do great things in this and coming generations with all that the wise foresight of our Leader has provided for our assistance! In her writings, in the church services, the literature, the lectures, and the work of the publication committees, we have all that is needed to direct attention to Christian Science.

There is perhaps no one of these many aids to the spreading abroad of the gospel of healing that does its work so quietly and yet so efficaciously as our publications. In one way and another they reach those to whom the church services and the lectures, even if they knew of them, would make no appeal. One has only to read the testimonies of healing given in these periodicals to appreciate how often a copy of some one of the publications established by our Leader has been the instrument under God for the moral and physical regeneration of one who otherwise would have yielded to despair. The white-winged messenger of peace to mind and body has opened the way to a wider acquaintance with the teachings of Christian Science, for the study of Science and Health and attendance at the church services seem to be natural consequents when one has grasped however feebly the possibilities of this new-old truth of the Christ-healing. Did we prize as we should the wealth of literature at our command, we could never have too many copies to scatter abroad their message of hope and healing.

It is always well, however, to temper our zeal with discretion, both in the public and private distribution of our literature, that like the seed which fell upon good ground it may bring forth much fruit. Quite aside from the usual avenues of distribution is the placing of a supply where the public can have free access. There are so many places where the literature is welcomed and will give no offense, that it is surely wiser to withhold it where the dominant thought is a hostile one or where any feeling of an attempt to proselyte is held. It should never be thrust upon any one, but always given judiciously, lest its precious substance be trampled under foot. A few words of loving inquiry will often open the way to an eager acceptance, for there are so pitifully many who even now, though longing for deliverance, have never heard of this life-giving truth.

The same thoughtfulness should be exercised when sending copies by mail or in offering a subscription. We know that our periodicals, and particularly our daily newspaper, make their own place in a household when once they become known, but it is unnecessary and unwise to provoke hostility in our haste to win acceptance for them. It is also a needed courtesy, especially when sending a marked copy, to let the recipient know to whom he is indebted. This is easily accomplished, when a large number are to be sent out, by means of a rubber stamp. In any event we shall have proved that we have the courage of our convictions.

On page 570 of Science and Health Mrs. Eddy writes: "Millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching for rest and drink." May we be so eagerly alert to our opportunities, so earnestly desirous of letting our light shine, that not one of these needy millions shall fail of that cup of living water which "shall be in him a well of water springing up into everlasting life."

ARCHIBALD MCLELLAN.

Bases of Unity

THE lack of unity of belief and of efficient cooperation among professed followers of Christ Jesus which has characterized Christian history in all the long years, is equally unfortunate, unbecoming, and unnecessary. That its occasions are all relatively unimportant is now universally conceded, and though it still abides, it is rebuked by the prayers and the common sense of the great body of Christian people. As one thinks of it, how amazing it seems that with the dawn of the modern scientific spirit Christian teachers and preachers should not have been reminded of the Master's conformity to its rule and order and his commendation of it. This spirit always addresses itself to the work of convincingly proving the truth or error of every proposition, and had it been duly honored, the church would long since have been impelled to undertake the establishment of Christian faith on that scientific basis which would manifestly effect the same at-one-ment among religionists that obtains among chemists and mathematicians.

The recognition of this one right way to remove all separating differences of belief, together with the successful endeavor to demonstrate it which the Christian Science movement has inaugurated, is its most distinctive feature. Mrs. Eddy splendidly epitomized all her teaching respecting this matter when she wrote: "There is but one way to heaven, harmony, and Christ in divine Science shows us this way. It is to know no other reality—to have no other consciousness of life—than good, God and His reflection, and to rise superior to the so-called pain and pleasure of the senses" (Science and Health, p. 242). This expresses the scientific attitude toward God and toward every possible circumstance and event of human experience. It supplies the formula for the solution of all problems, the rule for all right living, and it surely voices that wisdom whose price is above rubies.

This is the totality of Christian Science teaching and requirement: that we have right thought of being, of God and His universe, including man, and that this right thought shall be established and maintained by the daily demonstration of its authority over sickness and sin. If this were honestly undertaken by Christian believers, it would speedily end every creedal conflict. As one reads the story of the Master's life and works, it is impossible to escape the conviction that the spiritual law he enforced, the truths he taught, were to be subject to this test of demonstration and thus to constitute a provable science. The healing work he instituted was always to supply a satisfying basis of unity respecting the essentials of faith, and the absence of these convincing proofs of the verity of accepted interpretations fully explains the dissensions which have marred the annals of the Christian church.

Digitized by Google

Despite all existing creedal differences, however, there remains yet another ground of Christian unity, namely, brotherly love. Though Christian people conscientiously differ in their interpretation of the Scriptures, they all have a common interest and a common goal, a common guide in the Bible, and a common ideal in the life of Christ Jesus; and with mutual consideration and respect for each other's opinions, they can minimize their disagreements in the exhibition of that charity which all covet and all need. This would lead to the emphasis of agreements while working together to bring to all men the Master's own words, leaving each to work out his salvation under the guidance of that light "which lighteth every man that cometh into the world."

If for the present men cannot agree in their interpretation of the Master's teaching, they can and ought to maintain the bonds of unity in love, not condemning or judging one another, but rather leaving each one perfectly free to work out his own problems in loyalty to his highest sense of Truth. This is fair to all, and its reasonableness and wisdom must appeal to all who are not hopelessly dominated by prejudice. We must be true to our highest concept of Truth, else we are unworthy of either affection or respect; and Christian Scientists ask but this privilege at the hands of other Christian believers. They grant all they ask, and they seek only to help humanity by obedience to Jesus' command to "preach the gospel" and "heal the sick."

JOHN B. WILLIS.

Reverence and Brotherhood

IN his eloquent discourse at Athens Paul said that God had "made of one blood all nations of men." From this basis he argued for the brotherhood of all men, and one fatherhood, spiritual and perfect, implying of necessity a spiritual offspring, unrecognized by the physical senses. In passing along the streets of a modern city we see representatives of many nations, differing from one another not only in appearance, manner, and speech, but also in mental and moral characteristics. In thinking upon this recently the query arose, What are we doing in modern times to establish the brotherhood which is such a vital thing in spite of all mortal blindness to it? It goes without saying that a true Christian Scientist would at once reach out in thought for the man of God's creating, the only real brother, and though no word might be spoken, the one thus recognized would feel a touch of that true nature which makes all men kin, and also "kind," as some one has added.

This line of thought presented itself as several representatives of different races passed the writer on the street, and with it came as a sort of challenge the query, How are we as a people accustomed to think and speak of them? It was recalled, and with a deep sense of regret, that many foreigners are designated by opprobrious nicknames which would be bitterly resented if addressed direct to the individual. It was also seen that this is no merely superficial distinction, but indicates an utter disregard of the command, "Thou shalt love thy neighbor as thyself," and with the parable of the good Samaritan there can be no quibble as to the meaning of "neighbor." It was further seen that there can be no love without reverence, and this granted, it must be apparent that our love for our fellow men should broaden and deepen until it reaches the poet's ideal of the one

> whose love is passionate and grand
> For all the stricken human race.

On page 18 of "Miscellaneous Writings" Mrs. Eddy urges her students to forward their own new birth in Science by closer obedience to the commandments "Thou shalt have no other gods before me," and "Love thy neighbor as thyself." She explains the spiritual significance of these laws in saying, "Thou shalt love Spirit only, not its opposite, in every God-quality, even in substance; thou shalt recognize thyself as God's spiritual child only, and the true man and true woman . . . as of spiritual origin." She adds that with the recognition of this truth one "would necessarily entertain habitual love for his fellow man." Emerson says: "What we commonly call man . . . does not, as we know him, represent himself, but misrepresents himself. Him we do not respect, but the soul, whose organ he is, would he let it appear through his action, would make our knees bend."

Christian Science comes as a wonderful revealer of the reality of man's being, and healing is a discovery of this very thing. When one begins to think of himself and others in the clear light of spiritual being, the kingdom of God has come nigh to him and for him all things have become new. As in St. John's vision spiritual beauty and sublimity begin to replace the things of sense, man and the universe are glorified, for both reflect and express infinite Mind, our Father-Mother God. The gates of pearl are found wherever a pure thought shuts out an impure one, and as the Christian virtues unfold to awakening sense we understand what is meant by "all manner of precious stones" in the symbolism of the Apocalypse. We all have an innate love of beauty, and this is well, but we need to relate it so closely to spiritual reality that the sight of anything beautiful will at once make demand upon us for the reflection of the spiritual qualities which outward things but poorly typify. Then we shall seek for the "beauty of holiness" with unquenchable ardor, and as we find even faint intimations of it in our fellow men, we shall not quench the smoking flax but fan the sacred flame with gentle reverence and the brotherly love so often enjoined in Holy Writ.

ANNIE M. KNOTT.

Notice to Branch Churches and Societies

Branch churches and societies which have commenced building church edifices since Jan. 1, 1914, and those which contemplate building within the next year will please communicate by mail with the Trustees under the Will of Mary Baker Eddy, Room 102, 107 Falmouth Street, Boston, Mass.

Among the Churches

Current Notes

SPRINGFIELD, MASS.—In 1912 the increase in attendance at Christian Science church services in Springfield necessitated either the removal of the organization of First Church of Christ, Scientist, from its present edifice at the corner of State and Orleans streets to larger quarters, or the formation of a new organization. After examining the situation carefully it was decided that it would not be advisable to form a second church in Springfield until growth of interest in Christian Science would permit the erection of a larger and more permanent type of building for the present church. Accordingly it was decided temporarily to provide for the overflow of First Church by forming a Christian Science Society. In October, 1912, a Christian Science Society was formed and began to hold public services in Touraine Hall, 182 State street.

The steady growth of both organizations during the past three years encourages the belief on the part of Scientists that the time is not far distant when building operations on the new church edifice may be begun, though as yet no definite plans have been adopted. To facilitate cooperation to this end First Church of Christ, Scientist, recently invited the Christian Science Society to reunite with the church,

Digitized by Google

which invitation it was announced last evening [Aug. 25] had been unanimously accepted by the society. Beginning Sunday the twenty-ninth, and for the time being, the united organizations will hold services as First Church of Christ, Scientist, in Touraine Hall, as this hall is the larger of the two auditoriums recently used by the two bodies.

The Republican.

PATERSON, N. J.—The first services in the new twenty thousand dollar chapel of First Church of Christ, Scientist, at Fair and Auburn streets, were held yesterday [May 2]. The building was only recently completed. The ground was broken last fall and workmen have been kept constantly busy since that time. One half the cost, or ten thousand dollars, has already been raised among the members. No outside aid was asked or accepted. The dedication will not be held until all indebtedness is paid.—*Paterson Press.*

SALEM (ORE.) STATE PENITENTIARY.—On May 30 the inmates of this institution again enjoyed the regular fifth Sunday service held here by members of the local and Portland Christian Science churches combined. Through the Christian Science publication committee for Oregon, we receive four copies of *The Christian Science Monitor*, four *Sentinels*, and two *Journals;* also through some unknown friend two copies of the *Herold* are sent to us each month. Almost all the works of Mrs. Eddy have been placed in the library, including six copies of "Science and Health with Key to the Scriptures."—*Lend A Hand.*

✧

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 5, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, Oct. 13, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 4, 1915, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Suite 550, 236 Huntington Avenue, Boston, Mass.

✧ ✧ ✧

The Lectures

New London, Conn.

Bicknell Young delivered a lecture expounding the Principle of Christian Science and describing the inspired work of Mrs. Eddy, at the Crown Theater. He was introduced by Mrs. Rosemary O. Anderson, who said:—

Although Christian Science is in large measure conceded to be demonstrable, scientific Christianity, and there is scarcely a community in this great country that is not the better for its beneficent influence, it still seems necessary to provide channels for public dissemination of its teachings.

Mrs. Eddy, the Discoverer and Leader of Christian Science, the Founder and teacher of its spiritually scientific method of mental therapeutics, wisely foresaw the necessity for maintaining under the auspices of The Mother Church, The First Church of Christ, Scientist, in Boston, dependable sources for the teaching and promulgation of authentic Christian Science. Chief among these authorized channels is the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and her lesser writings, together with the many periodicals issued by The Christian Science Publishing Society; then there are the Sunday services and Wednesday evening meetings maintained by all Christian Science churches and societies, free reading-rooms, duly qualified teachers and practitioners, and the Christian Science board of lectureship.

This board of lectureship is composed of men whose demonstrable knowledge of the Principle and teaching of Christian Science has eminently fitted them to present the truth of divine healing and worship as taught and practised by Christ Jesus, our great Wayshower, and it is this truth which is the foundation of all Christian Science practice. Our Master said, "I am come that they might have life, and that they might have it more abundantly," and it is of this life in all its abundance that the speaker will tell you.—*The Day.*

✧

Bayonne, N. J.

A lecture on Christian Science was given by Virgil O. Strickler at the Lyceum Theater. Elmer W. Demarest, former city attorney, in introducing the lecturer, said:—

When invited a few weeks ago to introduce the speaker of today, I demurred, because I am not a Christian Scientist and so am not familiar with the teachings of Christian Science. Being informed, however, that these requirements were unnecessary, I consented, and am here, as are most of you, an interested listener. In these days of advanced intellectuality and reason, creed is no longer an inheritance. Time was when a man's creed was that of his ancestors, and to violate tradition was to merit ostracism. But in these days of advanced enlightenment, education breeds a desire for further knowledge, and men now select the particular creed or religious belief that appeals to their conscience and reason. The religion of man has therefore passed from a veneer to a conviction, and this can only be accomplished by an understanding of those things of which the business man must be enlightened. This is the foundation of a better world. A broad and receptive mind is therefore necessary to an unbiased understanding of this subject.—*Correspondence.*

✧

Birmingham, Ala.

At a lecture by Willis F. Gross given at the Lyric Theater under the auspices of the Christian Science Society, the introduction was made by Israel Pickens, second reader:—

In this period of rapid transition from one stage of progress to another, and the consequent disintegration of once accepted theories, millions today are pondering as of old the question of the ages,—"What is truth?" Despite the various quests for knowledge and the helpful discoveries in all departments of human life, mankind, still under the yoke of bondage to sin, sickness, and sorrow, are groping about in darkness and despair for relief,—as yet unable to lay hold upon a solution to this all-inclusive query. The life and works of Jesus constituted a profound exemplification of the great fact that he understood Truth in its fulness. When confronted with doubt and skepticism the Master on one occasion said, "Believe me for the very works' sake." On this same basis Christian Science asks to be heard.

The world today is witnessing the growth of this mighty movement, which is of unbounded scope and magnitude. Christian Science has aroused the attention of earnest thinkers from all walks of life. That it is of far greater import than a mere philosophy of the human mind whereby man may expect to live and die, is attested by its remarkable results. It has proven to be a reinstatement of the healing works as taught and practised by Jesus, awakening man-

Digitized by Google

kind again to a demonstrable knowledge of Truth. Around us may be seen multiplied evidences of health supplanting disease, and of exultant joy of sin forgiven because forsaken. The universal application of this truth brings with it complete liberation from every ill of the flesh.

Correspondence.

Lectures to be Delivered

CALIFORNIA—Merced: Charles I. Ohrenstein, Merced Union High School Auditorium, 8 p.m., Oct. 21.

San Francisco (Third Church): Charles I. Ohrenstein, Dreamland Rink, Steiner street, near Sutter street, 3 p.m., Oct. 17, and 8 p.m., Oct. 18.

San Jose: Charles I. Ohrenstein, Victory Theater, 8 p.m., Oct. 19.

San Rafael: Charles I. Ohrenstein, Red Men's Hall, 803 Fourth street, 8 p.m., Oct. 16.

CANADA—Halifax, Nova Scotia: George Shaw Cook, Y. M. C. A. Hall, 8 p.m., Oct. 19.

Montreal, Quebec: George Shaw Cook, Windsor Hall, 8:15 p.m., Oct. 22.

St. John, New Brunswick: George Shaw Cook, Imperial Theater, 3 p.m., Oct. 17.

Truro, Nova Scotia: George Shaw Cook, Academy Hall, Prince street, 8:15 p.m., Oct. 18.

COLORADO—Colorado Springs: Willis F. Gross, Burns Theater, 8 p.m., Oct. 21.

Las Animas: Clarence C. Eaton, Opera House, 7:45 p.m., Oct. 21.

CONNECTICUT—Norwalk: William D. McCrackan, The Regent Theater, 8 p.m., Oct. 15.

ENGLAND—Birmingham: Clarence W. Chadwick, Town Hall, 8 p.m., Oct. 29.

London (Fourth Church): Clarence W. Chadwick, Municipal Hall, Tottenham, N., 8 p.m., Oct. 28.

London (Sixth Church): Clarence W. Chadwick, Putney Hippodrome, Felsham road, Putney, S.W., 3:30 p.m., Oct. 31.

ILLINOIS—Chicago (Fifth Church): Prof. Hermann S. Hering, Church Edifice, 4840 Dorchester avenue, 3:30 p.m., Oct. 17, and 8 p.m., Oct. 18 and 19.

Chicago (Sixth Church): Jacob S. Shield, Church Edifice, 11321 Prairie avenue, 8 p.m., Oct. 22.

Chicago (Tenth Church): Frank Bell, Rosalie Hall, Harper avenue and 57th street, 8 p.m., Oct. 21 and 22.

Chicago (Thirteenth Church): Willis F. Gross, Valentine's Hall, 1451 West 103d street, 8 p.m., Oct. 14.

Harvey: Jacob S. Shield, Soenksen Hall, 154th street, 8 p.m., Oct. 16.

Hinsdale (auspices La Grange): Bicknell Young, Hinsdale Club House, 8 p.m., Oct. 21.

Princeton: Bicknell Young, City Hall, 8 p.m., Oct. 22.

Salem: Clarence C. Eaton, Lyric Theater, 2 p.m., Oct. 17.

INDIANA—Columbia City: Prof. Hermann S. Hering, Tuttle's Opera House, 8 p.m., Oct. 21.

Evansville: Jacob S. Shield, Evans Hall, 8 p.m., Oct. 18.

Franklin: William R. Rathvon, High School Auditorium, 8:15 p.m., Oct. 12.

Goshen: William R. Rathvon, Irwin Theater, 8:15 p.m., Oct. 11.

Indianapolis (First and Second Churches): Jacob S. Shield, Tomlinson's Hall, 3:30 p.m., Oct. 17.

New Albany: William R. Rathvon, Maennerchor Halle, 8 p.m., Oct. 19.

IOWA—Maquoketa: Prof. Hermann S. Hering, Olympic Theater, 8 p.m., Oct. 22.

KANSAS—Council Grove: Willis F. Gross, Commercial Club Rooms, 8 p.m., Oct. 19.

Junction City: Willis F. Gross, Junction City Opera House, 8 p.m., Oct. 18.

KENTUCKY—Ashland: William D. McCrackan, Church Edifice, 17th street, 8 p.m., Oct. 21.

Bowling Green: William D. McCrackan, Bowling Green Opera House, 8 p.m., Oct. 22.

Lexington (Second Church): Jacob S. Shield, Auditorium, 8 p.m., Oct. 19.

Testimonies of Healing

Within the past two years I, as well as several of my friends and acquaintances, have been led to look upon Christian Science from an entirely different standpoint. Upon having access to some of the Christian Science literature, I began to read the articles and testimonies, soon becoming interested to such an extent that I attended services in the Christian Science churches in Los Angeles and was much impressed with the peaceful, happy contentment pervading these meetings.

I had been engaged in educational work for a number of years, and in the spring of 1913, feeling the need of a change, started north on a business trip. It was during this period that I began to read and study with increasing interest more of the Christian Science literature which was sent me from time to time by relatives and friends. For several months I had not been feeling strong either mentally or physically, but I soon noticed that a decided improvement was manifested as the light of Truth came into my consciousness. Especially was this true shortly after my arrival in Santa Cruz, where I was visiting prior to my return home. In this beautiful seaside city, where for upward of thirty years I had resided with my family and taught as principal of grammar schools, I received from God the help and healing I had so much desired. It came through the unfolding of the truth manifested in the study and understanding of Christian Science literature, and especially through the spiritual uplift gained from Science and Health. Here also I met a number of Christian Scientists, who by their understanding of Life, Truth, and Love were enabled to effect a change in my mentality from a lower material plane to the higher plane of spiritual consciousness.

In addition to general depression, I had for years suffered much from attacks of stomach disorder, severe pain at times in the left side, hemorrhoids, hernia of many years' standing, and kidney trouble, but now I am indeed happy in the realization that all these, with their attending annoyances, have vanished. I had but one treatment in Christian Science, and that while I was in Santa Cruz. Immediately after the treatment and before I left the room I knew, as I still know, that I was healed. Formerly when starting on a trip I carried in my valise a miniature drug-store, but I am glad to say that it was not long before I consigned the drugs to oblivion and filled in the space with the Bible and Christian Science literature.

For more than twenty years, until within the last year, I have continuously worn long-distance glasses. I have no more use for them, and only use my reading-glasses at certain times. Through the careful reading and study of Science and Health and attending and taking part in the Christian Science services, the understanding of various seemingly conflicting statements in the Bible has been so unfolded to me that I am thus enabled to grasp the truth more clearly. I certainly have good and sufficient reasons for feeling thankful to God, and I am also grateful to Mrs. Eddy for the great benefits I have received in Christian Science.

ALBERT WARREN SUTPHEN, Los Angeles, Cal.

✧

When I was thirteen years old I suffered from what is called spinal curvature. One night the pain in my back was so severe that my parents called in our family physician, who said that I must not again stand on my feet, as he feared there was an abscess. I stayed in bed at home for a month, suffering intensely, and was then taken to the hospital. After many doctors and specialists had seen me, they finally agreed to encase my body in a cast, in order, as they thought, to straighten and strengthen the spine. I had worn this jacket four months when Christian Science was presented to me by an earnest and loving Scientist. After a diligent study of Science and Health, and under the careful guidance of this Scientist and a few helpful friends, I was completely healed in three months.

My healing was not instantaneous, but I learned many beautiful statements of the truth during the time it consumed, and they fell like balm on my troubled sense. The most wonderful part of my demonstration was the removing of the cast. Before coming into Science it took two physicians and three nurses with implements to remove it when it had to be changed, which was supposed to be every two months; but by constantly knowing that God is the source of strength, I removed it without any trouble. And how beautifully dawned the consciousness that God was with me! I stood free, unsupported by any material means whatever, and have done so ever since, though the doctors told my parents that I would have to wear the cast indefinitely.

While deeply grateful for this healing, I think I am more grateful for what this beautiful new-old truth teaches me, for the awakening which enables us to see man and the universe spiritually. In my school work I find that Christian Science meets every need, whatever it may be. These words of Mrs. Eddy's are forever true: "Every trial of our faith in God makes us stronger. The more difficult seems the material condition to be overcome by Spirit, the stronger should be our faith and the purer our love" (Science and Health, p. 410).

To mention all that Christian Science has done and is doing for me would take a great deal of time and space, but I am truly thankful for these proofs of God's allness, and also grateful to our beloved Leader, Mrs. Eddy, as well as to the one who brought this teaching to my notice.

LILLIAN WHEELER, Methuen, Mass.

✧

With deepest gratitude I testify to my experience in Christian Science during the past six years. I was ignorantly prejudiced against it, but was finally attracted to it by the spiritual interpretation of the first line of the Lord's Prayer as found on page 16 of Science and Health,—"Our Father-Mother God, all-harmonious." From my earliest recollection I had thought very much about "Our Father which art in heaven;" and when I realized through Mrs. Eddy's phrasing what this really meant, I was greatly comforted.

Early in life I joined a church and tried to be a Christian, but God seemed far away. To mortal sense for years, even from childhood, I had been deceived and wronged by those of my own family, and as time passed on I was filled with resentment and worry, fear and unkind thoughts. I had prayed until it seemed as though the heavens must be brass, yet I clung to the thought that God is just, and so I came to Christian Science gladly, as a tired child goes to its mother's arms. I shall never forget the kind and loving look on the practitioner's face the first time she came to see me. She radiated peace and cheer, and patiently guided my footsteps along the path of truth. I came to Science only for comfort, as the teachings of my church did not satisfy me, and in this Science problems almost without number have been solved. My family have been greatly helped physically, along financial lines, and in spiritual ways.

One night at dinner, soon after I came into Christian Science, a fish-bone lodged in my throat, so far down that a physician who was our next-door neighbor could not even

Digitized by Google

see it. He said that I would have to go to a specialist in the morning and have it removed, but it was so painful that I sent word to a Christian Science practitioner, who treated me for two hours and a half. At the end of that time the bone was dislodged without any effort on my part, although it proved to be barbed. Christian Science has cured my children of discharges from the ears, coughs and colds, measles, whooping-cough, and mumps, very severe bowel trouble, and an annoying skin disease.

A few years ago we lived in a small town near Flint. One hot morning in the summer the children, who were barefooted, went up-town. While playing behind a drug-store, they found a bottle, and spilled its contents over their feet and hands. The flesh was burned severely, so that large blisters appeared. They ran home crying from fright and pain, but I treated them as best I could. Then because I had so much fear I started to ask for help, but my little son said, "Why don't you help us yourself, mama?" I felt rebuked, and so sat down on the couch with a child on each side of me. After reading aloud to them for a few minutes from the Bible and Science and Health, they said they were all right and went out to play. That was the last I heard about the burns, although the children still bear the scars.

One day in the summer of 1912, as my little boy was coasting down-hill in his wagon, he fell out and struck the back of his head on the cement sidewalk. He was brought home unconscious and with every symptom of what is called concussion of the brain. Several of the neighbors came in, but I assured them that I could take care of him, and as soon as possible I telephoned to a Christian Science practitioner. The child was very sick all the afternoon, but he passed a good night and the next day was out of doors.

It may be a help to others to know that since I have been interested in Science, the treatment has been absent with two exceptions. The most wonderful demonstration of all occurred Oct. 27, 1913. My boy was suddenly taken with an acute illness and had great difficulty in breathing. I called up a Christian Science practitioner and gave his symptoms; but as my husband is not a Scientist, he called a physician, who said he feared a serious throat condition, and if the child was no better in the morning he would be obliged to administer antitoxin. Though the practitioner worked all night, the child was so ill that he did not open his eyes, and we had to speak very loud to attract his attention, while about sunrise the next morning a grayish pallor spread over his face. I communicated all this to the practitioner, and at my husband's request also informed the doctor that there had been no change for the better. The physician then decided the trouble was what he had predicted and ordered that the little girl be sent home from school. I again called up the practitioner and told her what the doctor said, for I was filled with fear, but she told me to be brave.

I soon went to the boy's side and was astonished at the change in his condition. He was decidedly better and opened his eyes and smiled at me. The doctor came soon after and was amazed; he could scarcely believe there could be such an improvement. After a thorough examination he said that all evidence of the disease had disappeared. The next day the boy was up, and in three days was down-town, and none of the rest of the family were affected. Have I not good reason to say: "Bless the Lord, O my soul: and all that is within me, bless his holy name . . . who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with lovingkindness and tender mercies."

The Bible and Science and Health are my most precious possessions, and I feel that the rest of Mrs. Eddy's writings and the Christian Science literature are of great value in working out my problems. No one but an ingrate would withhold praise and gratitude from Mrs. Eddy for the discovery of the greatest boon that has ever blessed mankind since the days when Christ Jesus was here on earth, and for so presenting her spiritual apprehension that even a little child can understand and demonstrate the truth that makes us free.—Mabel Thorpe Smith, Flint, Mich.

✧

A deep sense of gratitude prompts me to give my testimony for the *Sentinel*, a copy of which, some fifteen years ago, was the means of bringing me into this practical and provable religion. I did not take up the study of Christian Science because of any great physical need, but because its teachings appealed to me purely from a spiritual standpoint; yet Christian Science has done much for me in every way. It has freed me from the bondage of glasses after having worn them for several years. It has also freed me from much fear and anxiety, and has enabled me to overcome a lot of foolish pride and the habit of critical and sarcastic speech; in fact it has helped me greatly in the daily problems that come to all.

The sustaining and uplifting power of divine Truth in time of sorrow has been proved to me. On Thanksgiving day, 1913, my father was taken ill with acute lung trouble and in a few days passed away. When he first became ill I was filled with fear, having gone through a like experience with him some years before, and so I asked help from a Scientist for myself. My father was not a Christian Scientist and of course was attended by a physician. Divine Love most wonderfully strengthened and sustained me, and gave me great patience all through this experience. On the last night of my father's illness, when the testimony before the material senses was particularly sad and trying, my sister, a Scientist, brought me the Christian Science Hymnal opened at a familiar hymn, and told me to read it, as it would help me. I read it over many times, making it a prayer, and it was answered in that very hour beyond anything I could have hoped or dreamed. When tempted to give way to a sense of grief, I would at once remind myself of what God is, of what man is, of what Life is; and this would speedily soothe and comfort me. Since then I have indeed found God "a very present help." In another testing time in Christian Science I found this religion to be indeed the promised "Comforter," and I have been most wonderfully cared for. Christian Science has been teaching me many valuable lessons,—how to adapt myself more and more to changed conditions, how to take this truth into all the little every-day affairs of life, and best of all how to depend on and trust God as I never have before.

A few years ago I had the great privilege of class instruction in Christian Science, and in two weeks I learned more about God than in all my previous study. I do feel deeply thankful to God for this present-day revelation of Truth, and very grateful that Mrs. Eddy was good enough, pure enough, and ready enough to receive it. I am likewise most grateful for much wise and loving counsel, for many little acts of love from dear Scientist friends, all of whom have done so much to help me on my way.

Grace C. Williams, Syracuse, N. Y.

✧

I have received so much benefit from Christian Science that my great desire is to let others who may be in need of help know where it can be found. I suffered for many years from stomach disorder, female weakness, and nervousness. Many physicians were tried, the last one a professor, but I did not get well. The stomach trouble was thought by some

Digitized by Google

to be inherited, as my father had passed away from the same ailment. At last I could eat only certain kinds of food and was afraid to drink even a glass of water, as it always brought suffering. I became very sick and feverish, an abscess having formed, and had to be in bed for a time. All this made me very weak, as the abscess was supposed to have poisoned the system. Then another difficulty set in for which I was treated for a while, and which the doctor thought a slight operation would relieve. Accordingly I was operated on, but was unable to walk even the two blocks to the nearest street-car for over a year afterward, or until I had been healed in Christian Science. During that year I could not do my housework, and most of the time was spent in lying on a couch.

At last, not knowing what else to do, and knowing no medicine could help me, I went to the country for complete rest. While there a friend told me of Christian Science, and after all I had gone through I was willing to try anything. I wrote to a practitioner for treatment and had her help for about three months. In that time I had learned that God is my strength, and this truth has never failed me. Now I can eat my meals without fear and am doing all my work, including washing, and feel better than I have for years. I first found Christian Science in June, 1912, and no medicine has been used for myself or our little boy since then.

I am thankful to God for the understanding I have gained of this saving truth. It has helped me to overcome the fear I held over our boy, who seemed to have a weak stomach. Formerly I was always very careful what I gave him to eat, but since I learned that God is able to care for all His children, the boy can eat what he likes and it does not harm him. I have indeed found that God is "a very present help in trouble," for through my own understanding the slight difficulties that have come up have been overcome. Words can never tell how thankful I am to God for His benefits, and how grateful to Mrs. Eddy for showing us the way to overcome sin and disease and all inharmony.

Mrs. Carl Almquist, Chicago, Ill.

It is with a heart full of gratitude that I wish to tell what Christian Science has done for me. About ten years ago I received help for chronic bowel difficulty. Since that time I have passed through many hard trials, depending entirely on God for guidance. I am learning more and more what it means to watch our thoughts. If we allow wrong thoughts to gain admittance, ere long our body will manifest what these thoughts lead to. Then our work is, or should be, constantly to have and entertain only good thoughts. Mrs. Eddy tells us on page 211 of "The First Church of Christ, Scientist, and Miscellany," what this evil is, and on the opposite page, in "What Our Leader Says," she teaches us how to overcome it. My healing has been wonderful, and I am beginning to know the peace, joy, harmony, and health that come from the understanding we get of the Bible through studying "Science and Health with Key to the Scriptures" by Mrs. Eddy, for which I am more grateful every day.

Mae D. Neal, Marine City, Mich.

I send this testimony in the hope that it may benefit some one who is in need of immediate help. An acquaintance gave me a bottle of liniment, saying it would relieve me of severe bowel disorder, to which I had been subject for a long time. She did not, however, tell me how to use it. I was seized with one of the usual spells and ran at once for the remedy; but instead of applying it externally I took it internally, in all about a tablespoonful. I began to feel dizzy, and more alarming symptoms manifested themselves, until finally I could not move a limb. My mother was called, and being a Christian Scientist, she at once went to a practitioner to ask for treatment. I was in agony when she left the house, but was sleeping peacefully when she returned. Upon awaking shortly afterward I was seized with nausea, but went right to sleep again and slept for an hour or so. When I awoke my limbs were free and I walked around the room feeling perfectly well. I slept peacefully the rest of the night, and arose quite early the next morning none the worse for my condition the night before. The bottle was taken to a local drug-store and the druggist said the contents were poisonous. He inquired whether any one had taken any of the liniment, and on being told I had taken a tablespoonful, he said it was impossible, for a much smaller quantity would have killed me.

I thank God that relief came to me instantaneously, for I am sure if my mother had not asked for Christian Science treatment I would not be here today. This was my first experience in Christian Science, and I have never had any return of the bowel trouble since.

Mrs. Lyndon Gibson, Guelph, Ontario, Canada.

It is with a deep sense of gratitude to Mrs. Eddy that I tell of my physical healing and spiritual regeneration through the study and apprehension of divine Truth. By unceasing labor throughout her long life at the vast undertaking of founding and establishing the religion of Christian Science, our revered Leader has rendered a service to the world of incomparable value, and the beneficent influence of her teachings is proving the greatest boon that mankind has enjoyed since the days of the master Christian.

Christian Science has wrought a tremendous change in my life. Where before was often discouragement and always trouble and worry of some kind, I am now coming somewhat into the comprehension of that mental poise which constitutes the kingdom of heaven. I am learning what a great influence my old concepts of God and man and right and wrong had upon my health. Step by step, and with gratitude for each bit of knowledge and freedom gained, I am enabled to break away from old thoughts and beliefs into understanding and peace, health and happiness. I feel that I am gradually coming into a better knowledge of "the living, palpitating presence of Christ" (Science and Health, p. 351), the "way" by which the goal of spiritual existence is finally reached and proportionately attained in this world.

In attempting to enumerate the blessings received from the study of Christian Science I always think first of the gaining, though in a small degree, of that "peace of God, which passeth all understanding," and which students of this Science learn is of very practical and inestimable value in their daily lives. The feeling of security that comes from the apprehension, even in a small way, of this divine repose has proven to me most comforting and helpful; but the physical healings I myself have enjoyed, as well as those my wife has experienced, are indeed numerous and to sense truly wonderful.

About a year before beginning the study of this healing truth I had been obliged to consult an eye specialist and be fitted with glasses. I was advised that it would be necessary to wear them permanently, and perhaps a stronger lens for one eye a little later on. When I found Christian Science, about a year after having been forced to the constant use of glasses, I was living in the little city of Beaumont, Texas, where we made the acquaintance of a Christian Science practitioner. Her untiring and loving efforts to direct us to

Digitized by Google

Life were of great help in grasping the rudiments of this religion. One afternoon while we were enjoying an automobile drive with this lady, as we passed a rough place in the road my glasses dropped from my eyes. Picking them up I said I would not wear them again, meaning during the drive, but when the practitioner said, "That is right, you do not need them," I suddenly seemed to realize that in truth I did not. I am thankful to say that they have not been used from that hour, nearly four years ago. My wife gave me several treatments, and there have been no ill effects or need for resuming the use of glasses, although my eyes have since been put to every test that a demonstration of the healing would require, and the same has proven permanent and complete. I was healed of hay-fever, from which I had suffered two years, also of a case of chronic liver complaint, by the study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have also found relief from periodical attacks of stomach and bowel trouble through the study and practice of our beloved Leader's message of peace, health, purity, and happiness.

Knowledge of the truth has been and is of invaluable assistance to me in overcoming many other manifestations of minor physical ailments in my own case and in the case of my wife and child, and is an ever present and never failing help in the solution of the problems of daily life. All that I have I owe to the beneficent efficacy of the teachings of divine Science. No subject is of so great interest to me; no service is too great or too insignificant for me to render to the advancement of this sublime truth. I feel quite unable to express in words my gratitude for the privilege of working under divine guidance and government for the attainment of purity and the ultimate gain of Life eternal.

F. E. Heafer, Amarillo, Texas.

✧

I am deeply grateful to God for the healing of my son in Christian Science. When nineteen years old he was very ill with every symptom of lung trouble, together with kidney trouble and catarrh, for which he had medical treatment. He was thoroughly examined by a doctor and treated by him for some time. After that he got worse and was urged by the manager in the office where he was employed to have further advice. I was, however, sure he could be healed in Christian Science, so asked him to try it. This he consented to do, and after having absent treatment for a week, the night sweats, kidney trouble, and catarrh had disappeared, and the cough was much better. With treatment for three weeks he went up in weight and was entirely healed.

Eliza Gill, Nottingham, England.

[Written for the *Sentinel*]

When Shadows Fled

MANDIUS J. MUNSON

Into a deepened gloom
A burst of sunlight gleamed,
And beckoned forth to bloom
A faith where darkness dreamed.

A faith where darkness dreamed
Shone forth in heaven's hue,
And changed what only seemed,
As sun dispels the dew.

This faith to wisdom grew,
Sweet scented, golden bright,
And lo, all things were new
When shadows took their flight.

From Our Exchanges

[*Zion's Herald*]

There is something in most of us that sets the goal well in advance of our faltering steps. We see it far ahead,—gleaming, beckoning, almost extinguished sometimes, so far are we behind; but, thank God, it is always there, stirring us to fresh endeavor, arousing our flagging spirits, putting zest and courage and zeal into our weak strivings. That goal is always there, and however ingloriously we may fall, and however torn and trailing in the dust our colors may seem to be, there is something in us that bids us to stand upon our feet and to try again.

And we do, and we look far ahead and see the gleam there of the high mark that is ever drawing us on, and we listen, and almost—almost we think we can hear the words: "Lo, I am with you alway, even unto the end." And when there has been for us an experience like that, we are ready to push on and to overcome obstacles.

[*The Outlook*]

The tragedy of the coming and going of Christ was that "he was in the world, . . . and the world knew him not." Prophets and poets had predicted his advent, a people had rested their hopes again and again on his presence with them; they had waited for him at times with bated breath. Then he came and lived among them, healed their sick, raised their dead, spoke to them as men had never spoken before, lived the ideal life before their eyes—and they killed him. They killed him because they never saw him; they expected him to be born in one condition, and he was born in another; they looked for the evidence of his divine mission in one form, and it was given again and again in another form. The trouble with them was that they were not really looking for him; they were looking for the confirmation of their own ideas of him. They were not really waiting for him; they were waiting for the fulfilment of their own expectations.

And to this day men have made the same blunder. God has been always present, and they have not seen Him. They have prayed earnestly for His coming, and He has been beside them; they have cried out in agony for His presence, and He has stood beside them. Carlyle once passionately cried out that God should speak again as He had spoken through great souls and in great events in the earlier days, and God was speaking as clearly as He had ever spoken since time began. "He was in the world, . . . and the world knew him not;" He was speaking, and the world did not know His voice. It had its preconceptions of the ways in which His presence would be shown, and it was looking, not for Him, but for the fulfilment of its own expectations.

[William Elliot Griffis, D.D., L.H.D., in *The Christian Intelligencer*]

Many men and many nations have tried to do without religion. Sincere in their experiment, they would abolish God, revelation, altars, priests, Scriptures, and traditions, as well as abuses and parasites, and begin anew. With record blank they aspire to face only the future, with no ligament binding them to the past. Yet all history spells failure, and experience blue-pencils the whole program.

It is acknowledged that the great works of art, the things of lasting beauty, are religion's own children. Whatever inspires, exalts, or quickens imagination, springs from faith. Agnosticism means paralysis. Devotion to ideals is a spring of life. "For glory and for beauty" is a religious watchword, penned ages ago. Faith dead or in exile turns temples into ruins and cities into lairs for wild beasts. Shatter a

Digitized by Google

creed before it is replaced by another and a better one, and you bury civilization under sand or deep in the ooze of oblivion. Fanes become museums and once precious doctrines but dried specimens. Then a late generation, living on the same ground and wondering at triumphs of art and skill no longer possible, point to "giants . . . in those days" or invent myths or fairy tales to account for the wonders gone.

Religion fertilizes, makes oases and gardens. Unfaith, refusal to look at the unseen, means death and deserts. As long as man sees the invisible he will press on. Resisting decadence, he will endure and win. No bounds of sea, air, or earth—all visible frontiers—can hinder him. Faith is the motor of humanity's car named "Excelsior."

[Rev. R. J. Campbell, M.A., in *The Advance*]

Think kindly of any one, and you tend to call out his better and higher self; you give opportunity to the good in him. I do not say that it always will manifest accordingly, but the chances are in that direction, and they undoubtedly would not be if you hated him. Further, as the writer in Proverbs says, love has a wonderful way of covering up evil things out of sight altogether. If you can only love enough you can forgive anything,—nay, you do not think of forgiving; where love is in fulness there are no grudges, no reservations, no wrongs to be atoned. It is not that love does not know what it is doing; it knows perfectly well. It does not ignore the evil; it simply pours itself over it and suffers to destroy it. Hate desires to make its object suffer, and thereby increases the evil upon which it has arisen; love, on the contrary, by its very willingness to suffer for its object, counting not the cost, is to evil a consuming fire.

[*The Christian Work*]

The need of these times is to face the fact that the church is divided, and sadly divided. It has been divided so long that we are not so sensitive to the scandal as if the divisions had been the result of yesterday's transactions. The farther we get from any sin the less sinful it appears. We will never arise for a united church until the divided church sees the scandal of division. We must have a conscience on this sin as we are beginning to have on the sin of drunkenness in demanding the abolition of the liquor traffic. We need to see the weakness of a divided testimony in bringing people to Christ, the loss of spiritual power by division, and the waste of men and money by overlapping and wicked rivalry. Consequently the greatest issue of modern times is the union of the church of Christ.

[*The Congregationalist and Christian World*]

The mystery and beauty of the sea, lingering in our memory, should have some power to open our gaze to the depths of the human heart and the heights of God's loving thought for man. The breadth of the clear horizon should keep us free from petty limitations and narrow, hampering views. If we have sailed on dangerous waters and recognized in some hour of storm how much our lives depended on the knowledge and good will of captain and pilot, it should lead us to a simpler and more grateful faith in the Lord our God.

[The Venerable Archdeacon Wilberforce in *The Christian Commonwealth*]

It is only by individuals giving full expression in their daily lives to the divinity within them that humanity can be reinvigorated and moral corruption be arrested. If you have found your true relation to God, "creation groans" for you to distribute your knowledge and live your faith.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

Attention is called to the change in price (see also last cover page) on single copies of the following volumes of Mrs. Eddy's writings when sent by mail postpaid from the office of the publisher, Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Massachusetts:

Science and Health (cloth) from $3.18 to $3.00; Retrospection and Introspection (cloth) from $1.06 to $1.00; Unity of Good (cloth) from 65 cents to 60 cents; Pulpit and Press (cloth) from $1.06 to $1.00; Rudimental Divine Science (cloth) from 55 cents to 50 cents; No and Yes (cloth) from 60 cents to 55 cents; Messages to The Mother Church (cloth) from $1.56 to $1.50; Christian Science vs. Pantheism (pebbled cloth) from 26 cents to 25 cents; Message to The Mother Church, June, 1900 (paper), from 26 cents to 25 cents; Christian Healing and The People's Idea of God (cloth) from 60 cents to 55 cents; Christian Healing (paper) from 21 cents to 20 cents; The People's Idea of God (paper) from 21 cents to 20 cents.

The above changes do not constitute a reduction in the price of Mrs. Eddy's works, but save the purchaser the postage on single copies of the volumes specified.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

The pamphlet, "Causation," by Frederick Dixon, has been translated into Norwegian "Skapende Kraft," and is now published with the English and Norwegian versions on opposite pages.

The pamphlet, "Fulfilling the Law," has been translated into Danish, "Lovens Fylde," and is now published and on sale. This new pamphlet has the English version printed opposite each page of the translation.

The pamphlet entitled "The Father's Business," already printed in English and German, has been translated into Swedish, "I Faderns Tjänst," and is now published with the English and Swedish versions on opposite pages.

"Christian Science: 'The Resurrection and the Life,'" a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

The constitutionality of the federal law for the protection of migratory birds is being tested in the United States Supreme Court. The case comes up on appeal from the United States court of the eastern district of Arkansas, in which on May 13, 1914, the law was held unconstitutional. The brief is signed by 26 state conservation commissions; 3 state agricultural experiment stations; 4 national agricultural organizations; 3 national live stock breeders' associations; 2 forestry organizations; 3 national conservation organizations; 45 sportsmen's organizations—local, state, and national; and 5 miscellaneous. The brief holds that the interests of the people require such a law: that it is impossible for the several states to enforce their joint rights; that migratory birds are of great assistance in destroying the insect foes of crops and forests; that Congress has the power to protect the agency which preserves the property of the United States from damage and destruction; also that migratory birds are the property of the nation. The law whose constitutionality is called into question was passed March 4, 1913, and became effective Oct. 1 of the same year.

The Pearsite Company, which is a Delaware corporation capitalized at $2,000,000, is erecting a large plant near Cannel City, Ky., where it expects to produce 10,000 pounds of dye a day to meet the scarcity of dye material. The plant, which will consist of furnaces, oil distilleries, dye-houses, and laboratories, will not be completed until Nov. 1. The company operations will total between one million five hundred thousand and two million dollars yearly. One of the joint inventors of the cannel coal process in discussing the new enterprise has said, "We have had samples of our product examined by experts, who have advised us that our dye will stand every test of fastness." The furnaces that will be used are large cylindrical tanks 10 feet or more in diameter and 40 feet high, into which crushed cannel coal is poured from the top, oil and coke resulting from the oxidation. The coke is used in the furnaces, and the oils are carried through a distillation process and then treated in the dye-house, by means of which the dyestuffs and more than fifty valuable by-products are secured.

Some time ago the excavations at Patliputra, the ancient Asokan capital near Patna, India, which have been going on for years, disclosed among other buildings a gigantic hall containing a number of pillars. The Indian archeological department states that the plan of this hall bears a striking resemblance to the famous hall of a hundred columns at Persepolis, in Persia. This great edifice remained in use for several centuries, probably till about the beginning of the Christian era. Then a great flood, caused not improbably by the Ganges River changing its course, left a deposit of eight or nine feet of silt over the level floor. The destruction of the building was apparently completed by a fire which took place about the fifth century.

The packing of sardines, one of the most important industries of Maine, is undergoing radical changes as a result of the Government bureau established in Eastport last year. This bureau, in charge of capable chemists from Washington, has done much to aid packers in putting up an improved article of food under sanitary conditions. It has had to contend with long established bad habits of both fishermen and packers, but it is overcoming them. One of its hardest tasks has been to stop the packing of fish that have eaten "red feed," a floating substance which causes them to break in the packing and makes them unwholesome as food. Many packers have learned that hard, whole fish bring better prices.

The ship-builders of the Great Lakes have devised a freighting craft that will have distinct advantages over both the modern steamer and the big schooner. This lake type, of which Atlantic coast interests have ordered a considerable number, is a steel-built, five-masted schooner with a full spread of sail, and also a powerful engine of the Swedish crude oil pattern, so that she will be able to make fair speed in almost any sort of weather as well as save towage bills. These auxiliary five-masters will be of about three thousand tons, fit for offshore as well as coastwise business, and are figured to be the most economical craft yet devised for general freighting.

The two river arms of the great cantilever bridge over Hell Gate, New York, were connected Sept. 30. The bridge connects the New York, New Haven & Hartford Railroad with the Pennsylvania Railroad. Each of the arms stretched for just 508 feet and 6 inches, and the ends met with a variation of only one fourth of an inch. Each foot of the structure will be capable of withstanding twenty-six tons for weight of bridge and twelve tons for weight of load, a total of thirty-eight tons. The span of 1,017 feet springs from two enormous concrete towers, one in upper Astoria and the other built on pins resting on rock 120 feet deep on Ward's Island. The bridge will cost about twelve million dollars.

Judge Dickinson, in the United States district court at Philadelphia, Pa., has handed down an opinion ordering the dissolution of the so-called motion picture trust. The suit was brought by the Government, under the Sherman antitrust law, against the Motion Picture Patents Company and twelve other corporations, and eleven individuals engaged in the motion picture trade. The court, however, dismissed the suit against the Melies Manufacturing Company, one of the corporation defendants. The Government filed its dissolution petition on Aug. 16, 1912.

Five years ago Congress made an appropriation of $10,000,000 under the so-called Weeks law for the purpose of acquiring Federal forest reserves in the Appalachian region. The southern Appalachians have been extensively taken under the care of the Federal Government, and much of the White Mountain region has been saved from private and destructive exploitation. All but about five hundred thousand dollars has been expended. The price paid for the land acquired—some 1,285,000 acres—has averaged $5.25 the acre.

It has been discovered that bats will rid a whole community of mosquitoes. Both Italy and Austria have put this discovery into practice and Japan is studying it further. San Antonio, Texas, is the only American city to recognize officially the value of bats. It has even passed an ordinance which forbids any one to kill them; and it provides them with a home maintained at the city's expense. The "bat roost" is sixteen feet square and will house about a quarter of a million.

It is estimated that the total income for automobile licenses in Connecticut for the current fiscal year will amount to about five hundred and thirty thousand dollars. Licenses are being issued at the rate of about forty per day, and the total at the end of the fiscal year will probably reach fifty thousand. The total number issued last year was 36,698. All this income is turned over to the highway department for repairs on state highways.

After many months of experiment by a group of men, a million dollar corporation has been formed at Chester, Conn., for the manufacture of a recently discovered black dye which it is claimed will form the foundation for aniline dyes of various colors and shades. The concern further claims to have turned out the first pure carbolic crystals ever obtained in this country, an achievement which is said to be of great importance to the dye and acid trade.

Bangor, Maine, has rejected the act passed by the last Legislature providing for a commission form of government. The vote was 2,178 to 1,599. In March, 1914, at the regular municipal election, the commission government project was endorsed by a vote of 2,457 to 1,985.

Since the year 1889 a modern terminal station has been talked of in Buenos Aires, Argentina. The realization came true Aug. 2, when the President of the republic, Señor Doctor de la Plaza, turned the key that opened the gates of the new "Retiro" to all.

Ten months of the present fiscal year of the Massachusetts savings insurance banks, just ended, show a net gain of 1,467 policies and more than $700,000 of insurance. There is now more than $4,250,000 of insurance in force.

Gifts and bequests to Yale University during the fiscal year ending on June 30, amounted to $965,791.51. The total funds of the university are $16,152,835.10, representing an increase of 119 per cent in the last ten years.

The aggregate value of the total trade of the Bombay presidency, excluding Sind, during the year ended March 31, 1915, was 156,00,00,000 rupees (one billion five hundred and sixty million rupees).

The superintendent of schools for Pontotoc county, Oklahoma, is planning to get every school in the county to build one mile of model road. Money for prizes will be raised by subscription.

The people of Maine have in the last year spent $6,516,000 for automobiles, as estimated by the secretary of state. Automobile taxes have yielded to the state treasury $258,665.

The Brazilian Chamber has approved the arbitration treaty between Brazil and the United States.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII October 16, 1915 No. 7

Our Dependence

JUDGE CLIFFORD P. SMITH

ORIGINAL Christianity as taught by Christ Jesus included a perfect ideal for Christian endeavor. He expressed it in these words: "Be ye therefore perfect, even as your Father which is in heaven is perfect." Christian Science emphasizes this idea, shows how it can be put into practice, and points to the life-work of the Master as constituting a perfect example.

In the course of Mrs. Eddy's writing on this subject she has given warning of a persistent temptation: "Do you not hear from all mankind of the imperfect model? The world is holding it before your gaze continually" (Science and Health, p. 248). These words are extensive enough to warn us against copying the imperfections in one another. As students of Christian Science who have not yet attained perfection in practice, we have need to beware of accepting others as models. In that unique code of law, manual of instruction, and charter of rights, our Church Manual, we find this rule of action: "He who dated the Christian era is the Ensample in Christian Science" (Art. VIII, Sect. 3). Therefore for a Scientist to gage his demonstration of Science by that of any other person, or by the average accomplishment of the Scientists whom he happens to know, might tend to limit his success.

Akin to the error just described is that of dwelling on failures in the practice of Christian Science. If we are tempted to take account of what an imperfect practitioner has failed to do, we should remember what the one perfect Exemplar said to Peter: "What is that to thee? follow thou me." Whoever is proving the existence and operation of divine Principle, or even inquiring into this subject, should not give much thought to the observation of failures. For such an inquiry, the positive evidence of success is logically of far greater weight than the negative evidence of failure. Since Christian Science is based on absolute Principle and is demonstrated according to an invariable rule, it is verified by a single instance of healing brought to pass by the understanding of its Principle and conformity to its rule. Logically, the conclusion thus evidenced would not be disproved by many failures to understand or obey. They would not prove that Christian Science had been tried and found wanting, but that it had not been fully tried. So every one should look for the positive evidence of demonstration and not be discouraged by merely negative phenomena.

It must be admitted, however, that all sincere inquirers into Christian Science may rightfully expect it to be verified by the overcoming of evil with good in the practice of adherents or representatives. Since it is the Science of salvation as well as the Science of being, appropriate results should follow its practice, and nothing can take the place of these significant fruits. Our church services, our public lectures, the distribution of our literature, and the work of our committees on publication are suitable and necessary modes of disseminating authentic information concerning Christian Science; but none of these activities, nor all of them together, would be sufficient to satisfy the demands of those who seek a demonstrable religion. What humanity needs is Christian healing, or spiritual deliverance from the oppression of evil; and for humanity to perceive its need and recognize the law of its deliverance, the teaching of Christian Science must be accompanied by proof. The Leader of this movement has therefore said, "Healing the sick and the sinner with Truth demonstrates what we affirm of Christian Science, and nothing can substitute this demonstration" (Manual, Art. XXX, Sect. 7).

All that can be said against the demand which this rule makes on each Scientist is contained in the temptation to believe that Truth can be demonstrated by some persons but not by others; that is, not by one's self. This argument is the very reverse of a true idea, for it denies the reflection of God by man and involves a belief of human self-dependence. If Jesus had said, I can of my own self do some things, but other things are impossible to me, he would have spoken upon this plane of failure. On the plane of achievement he said, "I can of mine own self do nothing;" "but with God all things are possible." And his promises to his followers, that they should do as he did, were given without exception or limitation. Therefore Paul expressed the scientific attitude in a word,—"I can do all things through Christ which strengtheneth me."

"Hold fast that which is good"

CHARLES HENRY PHILIPS

IT is not an uncommon experience to come in contact with one who, having tried the recommendations and precautions of *materia medica* up to a point where both endurance and patience ceased to be a virtue, has reluctantly perchance, but determinedly, turned to Christian Science with a faint hope that the relief he has so far failed to obtain in the older and seemingly more pronounced school of healing might be forthcoming in the new, yet reserving to himself the alternative that in an emergency or an apparent crisis he could resort to a highly attenuated material remedy to further the work of metaphysical treatment. In the mental process leading up to the resolution to give Mind-science a trial, the mortal may have grown discouraged with much dosing, though not to the extent of having every least medicinal prop taken from under him. He is willing to know of something which seems to promise a speedier and more lasting benefit, though in a last analysis of his thought he holds to a threadbare belief that in a test case Mind could be helped and strengthened by the application inwardly or outwardly of some mild concoction.

The country tourist, luxuriating in the quiet pastoral beauty of the green meadows and rippling streams, wearies even of these scenes with their monotonous panorama, and turns regretfully perhaps, but longingly, to the hills and the wooded ravines for pastime and relief. Presently he comes upon a situation where to proceed farther would seem to his limited sense gravely hazardous. Then his thought reverts to the easy way of the gentle slope below (for the two have never parted company), and he would retrace his course

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

by the path of least resistance back to the beaten road of clay, even though it lead to the quicksand and the mire, rather than risk his further going up to the broadening vision of the abrupt ascent.

So the mortal, in his checkered experience along the winsome and to material sense not unfascinating way of medical allurement, anon is buoyant, then tires of the lessening prospect, and finally reaches out for newer methods of gaining ease. Under Christian Science treatment he is in a somewhat similar position to the one who has left the apparently smooth surface of the moorland and is beginning the upward climb. While his steps are trending forward and he is measurably rejoicing in the changing view, his thought, and not infrequently his eye, is directed to the less stirring vista of *materia medica* below, and he realizes, mayhap suddenly, that he has reached a point in the journey when he is unable to go on trusting absolutely to Mind's curative power. In an unguarded moment, just as it might occur to the one on the hillside to reverse his steps or to make them less difficult, the patient thinks of some trivial remedy that had formerly been efficacious, and unknown to the practitioner he avails himself of it. It may be merely a simple thing, an occasional bracer: indeed the thought may have become so minutely diluted as to offer itself in the cloak of a subtle suggestion that certain kinds of food prepared under well-defined culinary regulations (which are always so appetizing) will assist nature perceptibly.

The more aggressive and obnoxious a discordant physical manifestation becomes, the more unreal it is and the riper for destruction, because it patterns more closely after the mortal substratum of matter; while the thinnest veiled nicety of thought, hooded in a wily suggestion that food might come from its so-called opposite, would enter "where angels fear to tread" and would deceive the very elect. Thus the temptation which would attempt to assist the case by the intricate by-path of deceit, would not only rob the purpose of its fruitage, but would effectually hinder the moral, physical, and spiritual progress of the patient. This partial weaning from *materia medica* would have taken unto itself one still more false therapeutic suggestion, and the last state of that mentality would be worse than the first.

Just as it is with the traveler who is part way up the incline and anxious to reach the top, yet desires to climb up some other way and would fain go down into the plain a while and then come on by easy stages, forgetting the long retracing and the loss of time and energy, so with the would-be patient who is seeking help in Christian Science and yet fancies he can push on the healing by the stealthy use of other means. Such a one will not only utterly fail of getting relief, but he will stultify his conscience to the rightness of wholesome action, and his vision will be blinded to the apprehension and acknowledgment of the truth. The Christian Scientist must be scrupulously and uncompromisingly honest; he must not temporize, dally, or waver. Both for himself and for those coming to him for help, he must know that what is "spoken in the ear in closets shall be proclaimed upon the house-tops." His one remedy is the divine Mind and its activities; and he knows that to deviate from the rule in the most infinitesimal degree would be to break the first commandment, and therefore to disobey the other nine.

Our Leader says: "A Christian Scientist's medicine is Mind, the divine Truth that makes man free. A Christian Scientist never recommends material hygiene, never manipulates. He does not trespass on the rights of mind nor can he practise animal magnetism or hypnotism" (Science and Health, p. 453). It may be added that a Christian Scientist should not mentally trespass on the rights of others by intimating a course of procedure otherwise than "as ye would that men should do to you, do ye also to them likewise." In maintaining this radical but nevertheless consistent position, the Christian Scientist unqualifiedly realizes that even the taking of a spoonful of cold water, if motived by the thought that it might aid the healing, would not only defeat the end for which it was designed, but might positively nullify the metaphysical help, and in the measure that such means were either resorted to or recognized, would both practitioner and patient cease to give or to receive.

It behooves us, therefore, as earnest, prayerful followers of him who emphatically told us we could not serve two masters, to realize "the ability of mental might to offset human misconceptions and to replace them with the life which is spiritual, not material" (Science and Health, p. 428). Then when the needy wanderer comes to us for aid, his waiting thought may be so filled with the "beauty of holiness" that he will not hesitate or waver on the upward road, but with his eyes singled on the goal of spiritual ways and means (the quiet surface of error in the plain below having ceased to beckon or attract), he will go on and up the rugged but inspiring way of Truth and Love, until at last he can rest, "lie down in green pastures," and be led beside still waters, on the summit of consecration, no longer a doubting pilgrim, but a dweller in the Father's house.

Relying upon Divine Counsel

LUCY HAYS REYNOLDS

A CERTAIN experience presented to a student of Christian Science a question of vital consequence. Conditions were such that there was no one to whom she might turn for personal advice, so she reasoned over it for many an hour in her own way, listened to the discussion of others upon the subject, and weighed their pros and cons only to become more confused and disturbed. Then at length she turned wholly to divine intelligence. Gradually a calm assurance took possession of her consciousness; and at first dimly, then clearly, the answer began to unfold, until with illuminated conviction she was able to prove as well as to perceive the solution of her question.

How often we might have saved ourselves and others much wasted thought and time, if instead of depending upon unreliable human reason or looking to "the more experienced worker" to give us his well earned ideas, we had first turned in simple faith and asked the all-knowing Father for His counsel! Is not the answer to any question already existent in Mind? Then why not go direct to the source, and thus avoid the danger of accepting statements which are tainted with personal opinions as they pass from mouth to mouth? Who would not drink direct from the fountain rather than from another's cup?

Every man has within his consciousness a spiritual sense that holds him in direct communion with Truth. In the silence of meditation Truth is constantly voicing itself. The gold that lies hidden deep in the rocks is as nothing to the treasures hidden within the real man's consciousness, and which spiritual sense alone brings to human comprehension and service. It is ours to receive whatever counsel we need from God, and to rejoice in this realization, whatever the question or crisis that may come to us. We cannot turn too soon from human reliance to divine intelligence if we would escape from the clouds of ignorance and enter into the light of Truth.

Ofttimes after making a mistake we have been led to exclaim: "Why, I knew better than that, had I only given it a second thought!" If we had been keener listeners to the

Digitized by Google

voice within instead of to the voices without, the wise second thought would have been the first. We should look to spiritual intuition, trust it, and obey it, if we would become "wise," the seers and prophets of our time. Only through absolute reliance upon divine intelligence is consciousness made acute and sensitive to spiritual impression. In first seeking this counsel from others, even though it be wisely given, we may deprive ourselves of the wisdom which comes direct from God. No matter how great the problem or how small our understanding, if we seek the solution through divine Principle, it is ours to receive an unerring answer.

Sometimes, however, we unconsciously personalize another's understanding and feel that he is in a far better position to give us counsel than we are to get it for ourselves. But suppose our friend is possessed of a fuller understanding, he still may not be in a position to determine the solution of our problem as clearly as can we because of our more intimate acquaintance with the conditions involved. Why do we measure our own or another's understanding? The Scriptures tell us we are given the Spirit without measure. Let us watch that we neither limit nor overestimate individual understanding. Then we will cease to drag our burdens to our neighbor's door, and instead will rejoice in the sufficiency of divine illumination.

As a rule the human mind is too indolent to think for itself. It either unquestioningly accepts the consensus of human opinion or else clings dogmatically to established standards and customs. Thus in itself it is devoid of the illuminating inspiration that looks beyond finite knowledge and perceives the very substance of an idea. It loses the spirit in the letter, and is empty and unprogressive in its outlook upon life. Then too it has an innate proclivity for pouring out its doubts and fears to every listening ear, more with the hope of winning sympathy than with that of finding the true solution. Until such mistaken thinking is corrected, we free ourselves through personal advice from present troubles only to take on others. We therefore cannot be rid of error simply by unburdening ourselves to another and unthinkingly going our way. Bravely must we face every false belief in consciousness until each one is overcome through reliance upon spiritual understanding. In the Preface to Science and Health (p. vii) Mrs. Eddy tells us: "The time for thinkers has come. Truth, independent of doctrines and time-honored systems, knocks at the portal of humanity."

There are of course times when needed counsel is rightly gained through human channels, and then only self-will or pride would make us unwilling to seek it. Nevertheless, this counsel should come to us as a result of spiritual, not personal, guidance. Under such guidance our answer is often found through most unexpected channels,—through a book, a picture, a child, or perhaps, as in the case of Saul, through a stranger. In spiritual blindness Saul cried out to God for light, and behold the result! The Lord told Ananias to go "into the street which is called Straight, and inquire . . . for one called Saul, of Tarsus: for, behold, he prayeth." Then, regardless of the fact that the two men were personally unacquainted, and that Ananias knew Saul to be bitterly opposed to the Christians, he yet went and healed him. Had Saul first reached out for personal advice, is it probable that he would have found Ananias, or that the results would have been the same?

When we turn in this way for counsel, perhaps to a practitioner or a teacher, and our problem is once thoroughly handled, it is only a false sense of kindness that allows further discussion of the particular trouble. One can never do another's work for him and continue to be helpful; he who attempts it interferes with spiritual development. Frequently the most loving thing to do is to leave the clinging one alone, not with himself but with God. We read of no case when the Master listened to long rehearsals of past woes. He spoke the word that healed and then went on to others, leaving the seed which he had planted to the tender care of the Father.

Our first efforts to rely upon divine intelligence alone may produce many a struggle in Gethsemane. This may, however, indicate only the human yielding to the divine. And so, though troubled on every side, we will not be distressed; though perplexed, we will not despair. Simple and easy is the way if we will but search the Scriptures and study thoroughly our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Then will many things be left unsaid that never should be said, or even thought, and evil suggestions that continually tempt us will find neither expression nor multiplication. This does not mean that turning away from error which leaves it unhandled and operative, but it does mean the absolute annihilation through spiritual understanding of every false belief. In thus destroying error before it becomes externalized, who knows how many mental volcanic eruptions are forestalled?

Having once formed the habit of shutting the door upon outside assistance, until divine aid is first sought, we shall find in the moment of sudden fear that there will be no vain crying out of "Lord, Lord." Instead, we will have learned to listen to those angels of intuition closer to us than a brother, so that within all confusion will be silenced.

Awakened to divine counsel, we gain a wisdom that we had never realized before and that we had not thought of as naturally ours. In Christian Science we come to understand how right and inevitable it is for man to reflect divine intelligence, and through this understanding we come into possession of true self-knowledge, self-control, and self-containment, and prove ourselves the masters of ignorance and of circumstance. Oh, we of little faith! Where is so unerring, so simple, and so true wisdom found as that of spiritual intuition, the wisdom of the Holy Ghost? Let us recover from the impulse to lean on personal counsel in the hours of trial, and let us the rather open our thought to that "Counselor," that "Prince of Peace," upon whom forever rests the spirit of wisdom and might. Sitting at the Master's feet we shall be taught of him the simple truths of God, which reveal a satisfying answer to every problem, and we shall thus obey the wise admonition of our beloved Leader as given in "Miscellaneous Writings" (p. 137), that each one shall "work out individually and alone, for himself and for others, the sublime ends of human life."

Temptation Overcome

MARY H. MCALONEY

In the fourth chapter of Matthew's gospel we read: "And when he had fasted forty days and forty nights, he was afterward an hungred. And when the tempter came to him, he said, If thou be the Son of God, command that these stones be made bread." Jesus was just ready to begin his earthly ministry. He had been baptized of John in the Jordan, and we are told that the "Holy Ghost descended . . . upon him," that is, he had come into the full understanding of God; and yet he was for forty days thereafter in the wilderness, being tempted by the devil,—evil thoughts.

Mrs. Eddy gives as one of the definitions of wilderness: "Loneliness; doubt; darkness" (Science and Health, p. 597). For forty days and forty nights, in the darkness and loneliness of mortal thought, Jesus struggled against the evil thoughts which persistently presented themselves to him.

Digitized by Google

Human sense, struggling and fasting, became faint from the long vigil and hunger, and it was then that evil presented to Jesus' thought the most subtle of all temptations,—"If thou be the Son of God." Was this faint and hungry human being the divine Wayshower, who was come to earth to point out to all sin-sick and suffering humanity the path to eternal life? Then followed a strong temptation to test his power by material means and turn stones into bread, but immediately he rebuked the thought by saying, "Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God." He realized that the outward manifestation is but the proof of the inward understanding, that the demonstration must be made in his own consciousness; he must know the truth without the aid of material means.

Again the doubt presented itself to the Master, and again the subtle thought that he was not the true Messiah struggled for ascendency, but once more he rebuked it; yet so tenacious is erring thought that it essayed a third time to gain the supremacy. This time the temptation was to establish a material kingdom,—all the kingdoms of the earth would be his if he would bow down to a belief in the pleasures of materiality. This thought was severely rebuked by our Master, and we are told that when the devil had left off tempting him, "angels came and ministered unto him." On page 581 of Science and Health Mrs. Eddy gives us this beautiful definition of angels: "God's thoughts passing to man; spiritual intuitions, pure and perfect; the inspiration of goodness, purity, and immortality, counteracting all evil, sensuality, and mortality."

In Hebrews we are told that Jesus was "in all points tempted like as we are, yet without sin." If we take this conversely, we learn that he was not tempted in any point that is not common to all, so long as we remain in the flesh. One of the strongest temptations that come to beginners in the study of Christian Science is to doubt that they are the messengers of Truth and Love to this suffering world. How easy it is, when called upon to demonstrate this Principle, to be filled with doubt and fear, and to shift the responsibility to those who we feel are better fitted to bear it. We doubt our sonship with the perfect Father, and often remain in the wilderness instead of following in the footsteps of our Master, rebuking error and being about our Father's business.

A young woman, very young in Science, was once calling upon a friend who was taken sick. She was asked to give assistance, in fact to take the case. She spent many hours in the wilderness, fighting the evil thoughts that continued to present themselves to her,—first fear, then inability, and most insistent of all, doubt that she herself was truly God's child. The struggle ended, and Truth was the victor. She undertook the case, realizing that she was but the channel through which divine Love would work, and her friend was raised from what to mortal thought was her death-bed.

Jesus spent three years of his life manifesting to the world the power of divine Love, and when at the close of his public ministry his enemies crucified him, one of the last wicked taunts hurled at him in his hours of physical suffering was, "If thou be the Son of God, come down from the cross." This, however, was not a temptation to him. It could not have presented itself to him as a thought emanating from himself. The dense error that had permitted our Lord to be crucified was voicing itself through the Jewish rabble. He had proved beyond all cavil his perfect unity with the Father, and his love for all mankind was so great that he prayed for the forgiveness of his enemies. This is the love that, thinking no evil, knowing no evil, admitting no evil, makes the perfect and sure demonstration.

Love does not promise to keep us from being tempted, but it does promise to support and deliver us when we are tempted. We should hold fast to the declaration that "now are we the sons of God," and that "with God all things are possible." In Science and Health (p. 495) Mrs. Eddy says: "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea. Allow nothing but His likeness to abide in your thought." With this strong wall of defense around us there is nothing to fear. Temptations of all kinds can be met and overcome, with the full assurance that victory will be ours.

Gratitude and Healing

ABBIE Y. STEIN

WELL does Mrs. Eddy say on page 3 of Science and Health, "Gratitude is much more than a verbal expression of thanks." Recently, when the thought of unselfed gratitude was brought out in connection with some of our Science work, it reminded me of the way in which I had to develop this quality some years ago. When I first went to the Christian Science church and listened to the many expressions of gratitude, and then my own healing began, the thought came that presently I too would have that same feeling; but I did not, nor did I then think much about it. The process of healing was slow although steady, and I expected the gratitude would come; but as it did not, this fact began to worry me. I did have a certain measure of gratitude, but it seemed a very poor thing and something I was not at all pleased with.

At one of the Wednesday evening meetings I heard a woman say that gratitude with her had been a matter of demonstration, and that she had been in Christian Science a long time; so I began to think of it in this way. Soon the thought came that God's child cannot be ungrateful, that any seeming lack of this quality is only a phase of wrong thinking, and is to be overcome in the same way as any other wrong thinking. I worked for many months trying to see what gratitude was. Finally one night there flashed into my thought a most vivid and perfect picture of a summer morning, and immediately with the utmost clearness came the words, That is gratitude! Then it began to unfold, and the thought was that as you step out into the perfect beauty of a summer morning you do not look around and say, I am so grateful for the trees, the flowers, the grass, and the sunshine; you just love it. You love it for what you know is there, whether you see it all or not. You know, too, that beyond where the physical eye can see, the same beauty exists.

I saw there had been too much of self in my thought, and that gratitude should be not only for the good coming to me but for the good going forth. Just as I might see the particular beauty of the flowers or trees or landscape near me, so I could see in the healing and regeneration in my own life, and in the lives of those about me, the individual manifestations of the love of God; but that love was even more universal than the sunshine, and what came to me was only a part of the perfect whole. I learned that gratitude, to be real gratitude, must be broad enough to take in and rejoice over the good coming to all of God's children.

The universe is as full of truth and goodness as it is of light. And no more surely does the constant day return alike to the "just and unjust," than true lives will rebuke our untruth, and earnest opportunities rebuke our reluctant sloth of spirit by their brave and cheerful solicitings.

HENRY WILDER FOOTE.

Selected Articles

[W. G. Watkins in *Northwestern*, Oshkosh, Wis.]

In an article in *Scribner* reproduced in your paper, Dr. —— reasoned along the line of gathering figs from thistles in attempting to make Christian Science an emanation of what he termed "autistic" or emotional thoughts.

Critics have too long fancied that an understanding of Christian Science is obtainable from a preconceived premise; whereas the fact remains that in its every aspect this Science is knowable only in the degree of one's willingness to apply its Principle. Emotional thoughts are but phases of sensuous existence, traceable wholly to the belief of life in matter. It is this false sense of existence which is referred to in the Scriptures as the "fleshly" or the "carnal" mind. By reason of her spiritual perception Mrs. Eddy caught such a full import of Paul's words as enabled her to discern that every bodily and mental ill is traceable to the action of this same "carnal" or mortal mind which has its being in the temporal or finite realm wholly apart from spiritual existence.

Humanity is gradually awakening to the fact that righteousness consists wholly in right thinking, and that right thinking can come about only through a right apprehension of what the Master taught and practised. The whole aim of Christian Science teaching is to make known to humanity the true nature and availability of the Mind which was in Christ Jesus, and thereby enable mortals to make the distinction between thoughts that are real and thoughts that are unreal. Through the study and application of this Science the emotional or abnormal phases of mentality are giving place to that mental poise which alone insures health and peace. On page 109 of Science and Health Mrs. Eddy says: "Christian Science reveals incontrovertibly that Mind is All-in-all, that the only realities are the divine Mind and idea. This great fact is not, however, seen to be supported by sensible evidence, until its divine Principle is demonstrated by healing the sick and thus proved absolute and divine."

Instead of becoming estranged from their friends, as our critic avers, the adherents of this Science are experiencing the truth of Keble's words:—

> Old friends, old scenes, will lovelier be,
> As more of heaven in each we see.

✧

[John L. Rendall in *Waterloo* (Iowa) *Courier and Reporter*]

An evangelist who visited Waterloo recently took occasion to state in his sermons that Christian Scientists do not believe in the divinity of Christ. The same criticism of Christian Science has been made by many other ministers who perhaps did not fully understand just what Christian Science teaches in this respect. If they mean to include in their criticism that Christian Scientists do not believe in the divine origin of Christ Jesus, then their criticism is incorrect, for if there is any one thing in the teachings of Christian Science which stands out clearly and distinctly, it is the fact that Christ is divine. On the other hand, if "divinity" is used with the definite article, it must necessarily refer to God, the Supreme Being, the one infinite creator of the universe and man. Therefore, if this critic and others intended to convey the idea that Christian Scientists deny that Jesus is "the divinity," or God, then their statement is correct. Christian Scientists have Jesus' own authority for denying that he is God, and it might be difficult to find better authority.

If one carefully reads the gospel according to John, he cannot fail to be impressed with the fact that Jesus did not claim to be God, but "the Son of God," and again he referred to himself as "the Son of man." In John v. 30 and 31 Jesus stated: "I can of mine own self do nothing . . . I seek not mine own will, but the will of the Father which hath sent me. If I bear witness of myself, my witness is not true." In John vii. 16 and 17 we read: "Jesus answered them, and said, My doctrine is not mine, but his that sent me. If any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself."

The theory that God, infinite Spirit, could come to earth in a fleshly form is not accepted by Christian Scientists. They do, however, accept the teaching that Christ Jesus, "the Son of God," is of divine origin, and is the Wayshower for mankind. In "Science and Health with Key to the Scriptures" by Mrs. Eddy (p. 583) Christ is defined as follows: "The divine manifestation of God, which comes to the flesh to destroy incarnate error." On page 30 we read, "Born of a woman, Jesus' advent in the flesh partook partly of Mary's earthly condition, although he was endowed with the Christ, the divine Spirit, without measure." On page 25 we read, "The divinity of the Christ was made manifest in the humanity of Jesus," and on page 26: "The Christ was the Spirit which Jesus implied in his own statements: 'I am the way, the truth, and the life;' 'I and my Father are one.' This Christ, or divinity of the man Jesus, was his divine nature, the godliness which animated him."

These quotations could be continued indefinitely, and all would bring out the same thought. It will thus be seen that Christian Scientists claim for and concede to Christ Jesus all that he claimed for himself. A careful study of the passages from Science and Health here cited, together with the context, should be sufficient to convince any unprejudiced thinker that the Christian Science teaching concerning Christ Jesus is in exact accord with the spiritual interpretation of the Bible.

[John Oxendon in *The Buffalo* (N. Y.) *Commercial*]

That was a very generous and at the same time sagacious act on the part of the ever esteemed and exemplary *Commercial*, to wit, its publication in so thorough a manner of Professor Hering's address on Christian Science at the Teck Theater. It was worthy of the *Commercial* and must have been highly appreciated by our local Christian Scientists; nor can there be any doubt of it. For my part, I was so interested in the perusal of the address that I was moved to revive a lately broken habit of attending the Wednesday evening services at the Christian Science Church on the corner of Elmwood Avenue and North Street, that really fine and notable architectural structure which reflects so much credit upon its founders and builders.

Now what is there in Christian Science which so attracts and appeals to earnest men and women of a high order of intelligence and social reputation? For there can be no question of its doing so, and of doing so most effectually and beneficially. To me, as I looked over the congregation of clean, sane, earnest, and cheerful faces, and noticed the general appearance of those present, it appeared self-evident that there must be some strange, potential, and yet subtle and most beneficent underlying principle, or spiritual magnet, which thus drew together in such consonance such numbers of serious yet cheerful and well-balanced minds and kindly hearts. . . . The men are manly and the women lovely, because so sane and human. It seems then that there must be, as I have observed, some deep underlying, animating, and dominant cardinal and potential cause. I think we must admit that it is faith combined with common sense and a devout spirit, for Christian Science would actually seem to read and spell and mean Christian knowledge. It is a prac-

Digitized by Google

tical interpretation of the Christian spirit and of Christian teachings.

And yet I, who affirm so much and frankly believe it, am not a Christian Scientist or a professed member of the Christian Science church. I simply attest my admiration and respect for those who are, and to the Christian Science church as a potential, beneficent, religious factor, and a sound, reforming, and regenerative one. As such it fills a great human void and need, and should be joyfully and gratefully recognized by all earnest and liberal Christian people. Then again, there is this much to be said in behalf of Christian Science; viz., that it not only plainly comforts and cheers all who sincerely believe in its precepts and teachings, but it also stimulates and promotes frugal habits, sane living, and sound understanding, as well as fortifies racked brains and distracted minds, and comforts and revives oppressed nerves and troubled hearts.

Surely then there must be in Christian Science the very essence of Christ's teachings and example; and in its gospel all that the divine Master inculcated for the practical guidance and governance of the lives here on earth of his children. In effect, Christian Science not only reveals divine truths, but makes manifest in marked reality the first importance of consistent, practical morality, or the naked truths of all that such morality implies and involves in human relations; hence, Godspeed to Christian Science, which so signally and significantly tends to the promotion of the "simple life" and to the regeneration of human souls!

✧

[Brigman C. Odom in *Fort Worth* (Texas) *Record*]

An editorial referring to recent abnormal and inhuman acts of a certain individual says, "This victim of a deranged mind held many views in common with the teachings of Christian Science." This allusion to Christian Science is a crafty one, and the reader is left to draw his own conclusions as to what the writer meant. However, he seems to desire the reader to infer that Christian Science has teachings that are dangerous to the well-being of the individual and of society.

It may be said authoritatively that Christian Science has no kinship whatever with lawlessness, and that it teaches nothing that tends to desperation or that leads to destructive ends. On the contrary, it upholds law and order, and develops in every one who has the right conception of it and who applies its teachings, desirable physical and moral characteristics and a true regard for his fellow man. It is a well-known fact that the adherents of Christian Science are cheerful people, who do not seek death as a remedy for the ills of life. They do not wish to die themselves, and they do not practise violence of any kind toward others; hence it is a reasonable conclusion that the actions of the above-mentioned person were the result of beliefs absolutely antagonistic to those of Christian Science.

The test of a religious faith is seen in the character of results exhibited by its adherents. As for Christian Science, it bids one have the Mind which was in Christ Jesus. This truth, entertained and applied, reforms the sinner and heals the sick. It gives to one a purely spiritual concept of man's selfhood, and in this conception is no element of discord or derangement of any kind.

Christian Science includes all true demonstrable knowledge; knowledge that is true not only in the absolute, but knowledge that is true and available in practical human affairs. It not only helps one to get out of trouble when one gets into it, but it prevents trouble. It brings to realization the vision of Isaiah the prophet, "And it shall come to pass, that before they call, I will answer; and while they are yet speaking, I will hear." Proof is abundant to show that in almost every community throughout the world there are those who through a right apprehension and application of Christian Science are better citizens morally, physically, and spiritually.

Christian Science inspires one to search for wisdom and understanding, and shows one how to apply them in solving every human problem. It is a daily guide and protection. It assists humanity in working out all its difficulties, and lifts "humanity above itself into purer desires, even into spiritual power and good will to man" (Science and Health, p. 407).

If the individual in question had had the conception of God and His creation which Christian Science teaches, he would have been "clothed, and in his right mind," and would not have entertained any thought of violence for himself or for others; much less would he have reduced it to an actual experience.

✧

[Charles W. J. Tennant in *The Record*, London, England]

In a letter appearing in a recent issue the writer recommends Christians who are attracted by Christian Science to read the late Dean ——'s pamphlet. If he thinks that this will enlighten any one on the subject he is very much mistaken, for the pamphlet is merely an expression of violent opposition to what the dean imagined Christian Science to be. Does our critic suppose for a moment that any sane person would profess to be a Christian Scientist for five minutes if it were what the dean has described Christian Science to be? Christian Scientists are to be counted now by the million, and within their ranks are the cultured from out the civilized nations. Mr. —— will find through time that it is wiser to let people read for themselves the subjects they wish, and judge for themselves as to their merits.

✧

[F. Elmo Robinson in *Polk County Observer*, Dallas, Ore.]

Our brother says, "It has heretofore been the method of scientists and philosophers to observe the facts of nature and of history, and formulate laws and principles in harmony with the facts." He then goes on to remind us that Mrs. Eddy has departed from this old-time method. In this he is quite correct, but the numerous misconceptions of Christian Science contained in his article indicate unmistakably that he has failed to get Mrs. Eddy's view-point. Assuming that the old-time method of natural scientists and philosophers is the correct one by which ultimate truth is to be ascertained, and finding Mrs. Eddy's method at variance with it, our critic has at once jumped to the unwarranted conclusion that her teachings are "a collection of vaporings produced by an unbalanced mind."

In her search for truth Mrs. Eddy did not make an observation of the so-called "facts of nature and history, and formulate laws and principles" therefrom, but sought through long and earnest study of the Bible for an understanding of divine Principle, an understanding such as would enable her to interpret creation aright. Other thinkers have begun with effects and striven to interpret the cause from the standpoint of these effects. The great difficulty with this method has been its reliance upon finite sense-testimony. It is because of dependence upon sense-testimony that constant revisions have been necessary in the theories of scientists and philosophers. Mrs. Eddy has taken the stand that the only way to reach the ultimate truth about all things is to acquire an understanding of God, since He is the only cause and creator. Our Master taught that God is Spirit. His creation is "after his kind," and is therefore spiritual. The so-called material creation with its sin, sorrow, suffering, and death is but the

Digitized by Google

human misconception of God's spiritual, perfect, and eternal creation.

Those who are familiar with the teachings of the foremost physical scientists should not be startled by Mrs. Eddy's teaching of the non-existence of matter. Prof. Wilhelm Ostwald, of the University of Leipsig, Germany, writes: "Matter is a thing of thought which we have constructed for ourselves rather imperfectly to represent what is permanent in the change of phenomenon." Mr. Huxley has written: "After all, what do we know of this terrible matter, except as the name for the unknown hypothetical cause of states of our own consciousness." Mr. Huxley tells us its existence is hypothetical, and Professor Ostwald that it is merely a thing of thought produced by the human mind. Physical scientists' theories regarding matter have undergone a most radical change, and they are now practically unanimous in teaching that matter is a form of energy. These conclusions of physical scientists are not the teachings of Christian Science, but indicate that matter even from their standpoint is not what it has generally been believed to be.

Our brother says that "only an ignorant or insane mind ever soberly denies the testimony of the five senses," forgetful that we are constantly obliged to deny the testimony of the senses when we look out upon what appears to be a flat earth, or toward the eastern horizon in the early morning and see what seems to be a rising sun. Again and again in every-day experience we are compelled to let our understanding supersede sense-testimony. Only a few centuries ago, when one thinker ventured to assert that the earth was round instead of flat, he was not only thought to be ignorant and insane, but was believed to be a heretic as well. The prophet Isaiah in referring to the Messiah said, "He shall not judge after the sight of his eyes, neither reprove after the hearing of his ears: but with righteousness shall he judge the poor, and reprove with equity for the meek of the earth."

When Mrs. Eddy says, "Man is incapable of sin, sickness, and death" (Science and Health, p. 475), she means what John evidently meant when he said: "Whosoever is born of God doth not commit sin; for his seed remaineth in him: and he cannot sin, because he is born of God." Therefore when Mrs. Eddy writes of man as incapable of sin, it is to be understood that she refers to the spiritual, real man, made in God's image and likeness, and not to a sinful mortal. In teaching that man, God's image and likeness, is not material, is not made up of flesh and blood, and bones and nerves, our brother contends that Mrs. Eddy contradicts Jesus; but to correct this impression we need only to remember Paul's statement that "they which are the children of the flesh, these are not the children of God." Throughout her writings Mrs. Eddy draws a sharp line of distinction between the human and the divine, the relative and the absolute, the mortal and the immortal, the temporary and the eternal, the unreal and the real. It is for this reason that she capitalizes the word "life" when she uses it in the absolute sense and as a synonym for God, and does not capitalize it when she uses it to indicate the human sense of life.

Because Mrs. Eddy's explanation of the raising of Lazarus does not accord with our critic's view of it, he insinuates that she has never read the New Testament. It may be said that the thoroughness with which she studied the whole Bible, including the New Testament with its wonderful story of the Master's resurrection of Lazarus, is evidenced by her explanation of that remarkable demonstration of Christ Jesus. The Master said in the first instance, "Our friend Lazarus sleepeth; but I go, that I may awake him out of sleep." Jesus, not unaware of the human manifestation of death in the case of Lazarus but cognizant of man's spiritual and indestructible nature, uttered the foregoing statement. When his disciples, however, failed, because of their dulness of spiritual perception, to comprehend Jesus' metaphysical statement, he said to them plainly, "Lazarus is dead." As one reads the whole story of Jesus' work on this occasion, it is not difficult to see that Jesus' statement, "Lazarus is dead," was relative and was called forth by the inability of his disciples to understand his absolute statement, for farther on in this account the Master says, "Whosoever liveth and believeth in me shall never die." Christian Scientists believe, therefore, that the resurrection of Lazarus was made possible by Jesus' understanding of life and not by a belief in the reality of death.

✧

[Thorwald Siegfried in *Puyallup* (Wash.) *Herald*]

The kindly spirit of your comment on the large attendance at a recent lecture on the subject of Christian Science is appreciated by Christian Scientists. It will also be a kindness on your part to give me space in your paper to correct a few unintentionally misleading statements regarding this religion.

Christian Science is the Science of Spirit, or God, and the word "spiritualism" has come to be used in such a finite sense that it is not applicable to Christian Science. Christian Science has in it no taint of materialism, and may therefore be properly called the gospel of idealism rather than the gospel of spiritualism as you have used the term.

Christian Science teaches that the material body is not the likeness, or "vesture" as you say, of the soul, but rather its counterfeit and unlikeness. On page 280 of "Science and Health with Key to the Scriptures" Mrs. Eddy makes the statement, "Rightly understood, instead of possessing a sentient material form, man has a sensationless body." If God is what the Bible calls Him,—and He is,—Spirit and Love, then man as His likeness could not be material, for matter has never yet been found to manifest the attributes of Spirit and Love. The Christian Science practitioner's function is similar to that of a mathematician. When an engineer solves a difficult problem by the use of numbers, he has not created the numbers but only uses them; and numbers being mental, he could use them only by first understanding them. So the practitioner understands the great truth about God and man, the Christ in human consciousness, and through the realization of this truth sickness and sin go out of consciousness and disappear utterly.

Editorial

The Healing Word

It is a stock criticism of Christian Science that too much attention is given by the adherents of this religion to the exploitation of the healing of the sick. That there is an unimpeachable precedent for this so-called exploitation is ignored. Indeed, the fact that a very considerable portion of the New Testament is given over to the record of such marvelous healing work as was performed by Christ Jesus and his immediate followers, would seem to invalidate criticism of such of his present-day followers as are putting into practice his command to heal the sick.

When one has experienced for himself the results of this ministry of healing, he begins to wonder how it is that such a prominent and essential doctrine as was the Master's command to heal the sick should have been neglected for centuries and allowed to become an academic rather than a practical or demonstrable part of the Christian's experience. Take, for instance, Mrs. Eddy's own experience. In dire need of the physical healing which material means had denied her, she turned to God in her extremity, and was healed. A lifelong seeker for the truth, she realized that the healing thus vouchsafed was no mere exhibition of divine caprice, but rather the operation of a divine law, and at once set herself to the task of discovering not only this law and its complete scope, but also the divine Principle from which it proceeded. For three years she labored, the Bible her only text-book, a divinely appointed task which resulted in the reinstatement of Christian healing as an understandable and inevitable part of Christian doctrine and Christian ministry. Of this healing work and its place in Christianity Mrs. Eddy writes on page xi of the Preface to Science and Health:—

"The physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation. Now, as then, these mighty works are not supernatural, but supremely natural. They are the sign of Immanuel, or 'God with us,'—a divine influence ever present in human consciousness and repeating itself, coming now as was promised aforetime,

> "To preach deliverance to the captives [of sense],
> And recovering of sight to the blind,
> To set at liberty them that are bruised."

Again, on page 395 of this book, she writes: "The same Principle cures both sin and sickness. When divine Science overcomes faith in a carnal mind, and faith in God destroys all faith in sin and in material methods of healing, then sin, disease, and death will disappear;" also on page 210, "Jesus healed sickness and sin by one and the same metaphysical process."

Christian Scientists have proved the truth of these declarations, and this is why testimonies of the practical value of Christian Science are so freely given. Not all of these testimonies, however, are based on the healing of sickness, as can be ascertained by any one who will take the trouble to read the Christian Science periodicals or attend a Wednesday evening meeting. Perhaps as convincing an example as we have seen of what Christian Science does in a practical way toward the moral reformation of those who have seen the light and are guided by it, is shown in a letter which was received recently by the proprietor of a grocery store in a city of the middle West. This letter reads as follows:—

"Your advertisement in *The Christian Science Monitor* reminds me of a debt due you from myself of some ten years' standing. The amount enclosed ($18.48) is sufficient to cover same, with interest.

"I am grateful for having been healed of dishonesty through Christian Science, which has uncovered many wrong acts and given me the ability, and willingness as well, to repair them.

"Having fully discharged this just obligation, I prefer that my identity remain undisclosed."

The friend to whom we are indebted for a copy of this letter very pertinently says of the incident that it also exemplifies what Mrs. Eddy has written, namely: "The object of the *Monitor* is to injure no man, but to bless all mankind" (The First Church of Christ, Scientist, and Miscellany, p. 353).

Archibald McLellan.

"The Lamb of God"

The spiritual signification of Scripture, rising above the material, is illustrated in the first chapter of the fourth gospel, where we find John's characterization of Jesus in these words: "Behold the Lamb of God, which taketh away the sin of the world." Now John the Baptist was himself the son of a priest, and therefore was thoroughly acquainted with the sacrificial law which called for a lamb as an expiatory offering. At the same time he must have been familiar with the psalmist's words, "Sacrifice and offering thou didst not desire; . . . burnt offering and sin offering hast thou not required." The persistence in the Scriptures of the idea symbolized by "a lamb without blemish and without spot" calls for more than passing notice. In Science and Health (p. 590) Lamb of God is defined as "the spiritual idea of Love; self-immolation; innocence and purity; sacrifice." On page 334 we read of "'the Lamb slain from the foundation of the world,'—slain, that is, according to the testimony of the corporeal senses, but undying in the deific Mind." Here it is pointed out that the divine idea can never be separated from its divine origin; hence its immortality. It would seem, however, that this great truth has been missed in the religious teachings of mankind, and death rather than life has been given prominence in these teachings.

Nowhere is the oppositeness of material sense and of spiritual understanding more apparent than in the Bible statements respecting the lamb as a type of sacrifice. Through long years men believed that the killing of a gentle animal would free them from the effects of sin, but they evidently did not test themselves in order to find whether the sin had been destroyed when the lamb was slain. Even the Baptist's inspired utterance respecting "the Lamb of God" has been taken to mean that Jesus was to die for the sins of the world, whereas he came to bring life "more abundantly" to all who would accept it, and this he did, not by submitting to death, but by overcoming it both for himself and for others. Here it may be said that death could never have been overcome by one who was in bondage to sin, nor for one who was its willing slave. From his boyhood Jesus was about his Father's business, namely, the unfoldment and establishment in human consciousness of all that expresses God. Paul tells us that Christ Jesus "knew no sin;" it had no place in his consciousness, which was "without blemish and without spot;" therefore he was fitted to take away the sins of the world, and its sufferings as well.

In all the Bible there is nothing more wonderful than the unfolding to human consciousness of the divine idea typified by the Lamb as presented in the book of Revelation. In the

Digitized by Google

fifth chapter we read of a sealed book which no man was able or worthy to open. Then we are told that "the Lion of the tribe of Juda" would do so, and at once "in the midst of the throne" appears "a Lamb as it had been slain," that takes the book and opens it. Thus we find meekness and might essaying the stupendous task of human redemption which begins with the opening of the spiritual sense of the Word. In following this great drama as given in Revelation we must not lose sight of the fact that the Lamb of God is in each successive act taking away the sins of the world, bringing the redeemed out of great tribulation, leading and feeding them so that they neither hunger nor thirst any more.

The twelfth chapter presents in no uncertain terms the casting down of "the accuser of our brethren," the cruel enemy that has made discord from age to age between men and nations, and this victory comes through "the blood of the Lamb," the vital currents of the divine Life and Love, which regenerate all mankind. In the fourteenth and fifteenth chapters we have the Lamb triumphant, not slain but victorious, and surrounded by those who have gotten the victory over the beast, and over his image. All this is in the midst of strife and carnage, to mortal sense, but Babylon is fast approaching its utter annihilation, since the spiritual idea is forever blotting out all that is unlike God.

The question for each of us, therefore, is whether he is letting this divine idea take away all his sins; whether he is following its gentle yet unerring guidance. Those who follow must be faithful; and for them the book has been opened, so that they can join with the "many angels" in saying, "Worthy is the Lamb that was slain to receive power, and riches, and wisdom, and strength, and honor, and glory, and blessing."

ANNIE M. KNOTT.

"As thyself"

DESPITE all the confusions of Christian belief, the timidities and manifest uncertainties of the many who are sincerely seeking to be guided of God, it still remains true that the divine address to human sense is so specific as to render the misapprehension of essential duties quite impossible. The iteration and reiteration of the prophets respecting individual life and conduct is a distinctive feature of all their writings, while the teaching of Christ Jesus and the apostles is no less characterized by careful, oft-repeated directions.

This is well illustrated in the Master's words respecting our fraternal obligations. The loving of our fellow men is to be simply in the manner and measure that we love ourselves. This instruction is so perfectly lucid that all who have the will to obey can have no possible difficulty in determining how to do it. And yet how frequently one hears Christian people express the thought that they are quite at sea respecting their civic and communal responsibilities. They realize that they are their brother's keepers, and that the wrongs and injustices which burden the race can never be eradicated until Christian men and women are actuated by the spirit of brotherhood which fulfils the second commandment, which expresses genuine Christianity, and which if it were as universal today as is asserted faith in God, would speedily transform this turbulent world into a paradise of peace. Nevertheless they "don't know just what to do."

"As thyself"—these are the definitive words, and how fully explanatory they are! We all know the nature and the measure of self-love. At its best it is continuous. There is never any let-up to its assertion and activity, never a moment when we are forgetful of our interests so far as they are discerned and apparently imperiled. In this sense, sunshine or storm, the average man is always "on deck." Self-love never dies, never weakens or becomes torpid; it lasts like the stars.

Self-love is also forethoughtful; it anticipates and plans for prospective needs. It lays by for the rainy day, and when a given endeavor to better ourselves fails us, self-love simply finds a new form of expression in self-pity. Moreover our love for self is always insistent upon its rights; it protests against injustice, demands a fair chance, appeals to Cæsar, and if necessary fights for the things it thinks it ought to have. Then too it is self-compassionate. If there have been stumbling and mistakes, it is mindful of every mitigating circumstance; it is always merciful to itself. These are some of the ways we are wont to love ourselves, and their recall discloses how seriously our interest in our neighbor's welfare falls below that divine requirement which the Master both named and honored.

Christian Science immediately begins to heal this sin by discriminating between man, God's perfect idea, and the human sense which has fallen "among thieves" and is in sore need of our ministry, and by relating the intelligently prayerful believer to his every neighbor by the radiation of right thought. In reading the good Samaritan story Christian men have always been oppressed with a sense of the hopelessness of the task of attempting to minister to universal humanity, left "half dead" as Jesus described its condition; but the revelation of the healing power of scientific right mindedness in Christian Science at once "connects up" the faith-filled consciousness with its every neighbor. The healing touch of that looking to Christ, Truth, that abidance in the knowledge of God and man in His likeness, which effects the redemption of self, is thus brought into touch with every "wounded" wayfarer.

To know the truth about our brother is to love him with a genuinely helpful hand, and it is to be impelled to all those wisely compassionate ministries which render our love, our healing thought, comfortingly intelligible to the suffering sense. The philosophy of true neighborliness, that all-inclusive love which is of practical avail, is expressed by Mrs. Eddy when she says (Science and Health, p. 275), "Truth, spiritually discerned, . . . casts out error and heals the sick."

JOHN B. WILLIS.

Among the Churches

Current Notes

FRESNO, CAL.—The chairman of the building committee in charge of plans for a forty thousand dollar Christian Science church edifice to be erected in Fresno next fall, accompanied by the architect, will go to southern California to study church design. Tentative sketches of the new building have been prepared.—*San Francisco News Bureau.*

MONROE, MICH.—A church building lot has been purchased by the Christian Science Society and the last payment was recently made upon it. We now have a building fund started and hope to be able to start work soon. The lot is 42½ by 60 feet on the south side of the Gilmore lot, located at the corner of North Macomb street and Elm avenue, and is a prominent location with pleasant surroundings.

Correspondence.

PEORIA, ILL.—Bids for the construction of the edifice of Second Church of Christ, Scientist, on Barker avenue, will be in this week [Aug. 23]. The cost of the structure is to be in the neighborhood of forty thousand dollars.

Peoria Journal.

Digitized by Google

SEATTLE, WASH.—First, Second, and Fourth Churches of Christ, Scientist, have appointed readers for the prison work, and there are at present fifteen engaged in it. Every Sunday the Sunday service as given in the Manual of The Mother Church, with the exception of the singing and Bible selection, is read in five departments at the county jail, in the county stockade, in three departments at the city jail, and in the municipal home. Testimonies of healing are given by the readers wherever it is wise to talk to the men and when the time will allow. The men have repeatedly expressed their gratitude for the reading, and some at the county jail have begun the study of Science and Health. When we know of men that are interested and are going to Walla Walla penitentiary, the names are sent to the committee in charge of the penitentiary work and the men are given a welcome into the group at that institution who are reading the text-book.
Correspondence.

ALBIA, IOWA.—Some years ago those interested in Christian Science in Albia, three in number, met in one of the homes and began regular Christian Science services each Sunday morning. Later, midweek testimony meetings were held. In 1906 seven of those interested met and took the necessary steps to form an organized society, and their first meeting thereafter was held in Yeoman Hall in March of that year. In September, 1907, a Sunday school was established.

On March 15, 1915, another forward step was taken when the present quarters in the Peterson Block were secured and furnished. They are used as a reading-room and also for the regular services each Sunday and Wednesday.
The Albia Republican.

CANTON, OHIO.—The new edifice of First Church of Christ, Scientist, located in Cleveland avenue N.W., just above the Harter estate, is nearing completion. It is being erected at a cost of thirty thousand dollars, and it is expected that it will be ready for occupancy early in December. The Sunday school room on the lower floor will be finished first, and will probably be used before the remainder of the building is finished.—*Canton News.*

SYRACUSE, N. Y.—The auditorium and connecting parlors of the edifice of First Church of Christ, Scientist, 704 East Fayette street, will be enlarged. To provide for the present excess attendance at the church, two meetings will be held on Wednesday, one commencing at seven o'clock, and the other one hour later.—*Syracuse Herald.*

✧ ✧ ✧

The Lectures

Gloucester, Mass.

An interesting lecture on Christian Science was given at City Hall before a large audience, the speaker being Bicknell Young. The introductory remarks of Mayor Barrett, who presided, were as follows:—

While I am not a Christian Scientist, I am free to say that I have taken a considerable interest in the work, as some of my nearest relatives and friends are members of this church. I have already accepted an invitation from them to attend the services in the near future, a promise which I certainly intend to fulfil, hoping by so doing that I may get a better and clearer understanding of the teaching, which I have seen exemplified throughout our city with such good results. I believe this is the era of free thought, when the wishes and will of intelligent people cannot be denied; and if Scientists utilize the spiritual sense which God has given us all, not only with benefit and help to themselves but for all humanity, certainly no one can say that their work has been in vain. I believe the time has come when all feel that the Christian Science church is a fact which is here to stay. As proof of this, one has only to recognize the gigantic gain in membership which it has attained during the past few years.—*Daily Times.*

✧

Eureka, Cal.

The beautiful new church edifice of First Church of Christ, Scientist, at Eleventh and H streets, was filled to overflowing with interested people who gathered to hear the lecture on Christian Science by Clarence C. Eaton. Judge C. H. Connick introduced the lecturer, and in doing so said:—

The greatest minds of the ages have dedicated their highest service to the search for the hidden treasures of Truth. As was expressed by that wonderful woman, the Discoverer and Founder of Christian Science, Mrs. Eddy, "the time for thinkers has come." "The wakeful shepherd beholds the first faint morning beams, ere cometh the full radiance of a risen day" (Science and Health, Pref., p. vii). What eye but seeks to scan the pages of the book of knowledge! Innumerable as the sands upon the shore are the unsolved problems of human life, but far above and beyond all others is that of man and his true relation to the eternal and infinite Mind.—*Humboldt Standard.*

✧

Akron, Ohio

At the lecture on Christian Science by George Shaw Cook the introductory remarks of Grover C. Walker were in part as follows:—

Christian Science is not new. It has always existed and has been apprehended and practised to a greater or less degree by the spiritually minded in all ages. Yet although it is in strict accord with the teachings and practice of Christ Jesus, by some it will be misunderstood and misrepresented. This is not strange, in view of the fact that our beloved Master's sacred doctrine was not perceived by many in the first century. And although he proved his words by his works in healing "all manner of sickness and all manner of disease," there were still those who would not believe.

When questioned by Pilate, Jesus made reply: "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth." So Christian Science today bears witness unto the truth, proclaiming that Truth has always corrected error and always will do so, whether that error be manifested as sin and sickness or as any other discordant condition.—*Correspondence.*

✧

Quincy, Mass.

Virgil O. Strickler, who lectured on Christian Science at the Wollaston school hall, was introduced by the chairman of the school committee of Quincy, John D. Mackay, who said:—

Christian Scientists are highly esteemed in Quincy because of the fact that they mind their own business and mind it hard, never assailing or interfering with other sects. Even a slight acquaintance with them will convince any discerning person that they honestly endeavor to translate their doctrines into life and, as it were, transmute their ethics into character. The visible evidence of the practice of Christian Science

Digitized by Google

challenges our admiration, even though we may not fully understand the *modus operandi*. It is therefore no wonder that I appreciate the honor you have done me in asking me to come here to introduce your lecturer.—*Correspondence.*

Lectures to be Delivered

CALIFORNIA—Fresno: Charles I. Ohrenstein, City Auditorium, corner Kern and L Streets, 8:15 p.m., Oct. 22.

Los Angeles (Fourth Church): Charles I. Ohrenstein, Ebell Club House, 131 East Avenue 57, 3 p.m., Oct. 24, and 8 p.m., Oct. 25.

Oakland (First Church): Clarence C. Eaton, Municipal Auditorium, 3 p.m., Oct. 24.

Sacramento (First Church): Clarence C. Eaton, Tuesday Club House, Twenty-eighth and L Streets, 8 p.m., Oct. 25.

Stockton: Clarence C. Eaton, The Auditorium, 8 p.m., Oct. 26.

CANADA—Chatham, Ontario: George Shaw Cook, I. O. O. F. Auditorium, King Street, 8 p.m., Oct. 26.

Toronto (Third Church): George Shaw Cook, Church Edifice, Caer Howell Street and University Avenue, 8:15 p.m., Oct. 25.

DISTRICT OF COLUMBIA—Washington (First and Second Churches): Bliss Knapp, Poli's Theater, 3 p.m., Oct. 24.

ENGLAND—Blackpool, Lancashire: Clarence W. Chadwick, Grand Theater, Church Street, 3:15 p.m., Nov. 7.

Hornsea, Yorkshire: Clarence W. Chadwick, Public Rooms, 3:15 p.m., Nov. 4.

Huddersfield, Yorkshire: Col. William E. Fell, Temperance Hall, Princess Street, 8 p.m., Nov. 11.

London (First Church): Clarence W. Chadwick, The Queen's Hall, Langham Place, 3 p.m., Nov. 1, and 8:30 p.m., Nov. 2.

ILLINOIS—Berwyn (auspices of Riverside): Frank Bell, Auditorium, Berwyn Club House, 8:15 p.m., Oct. 26.

Champaign (First Church): Frank Bell, Illinois Theater, Urbana, 3 p.m., Oct. 24.

Chicago (Ninth Church): William D. McCrackan, Woodlawn Masonic Temple, University Avenue and Sixty-fourth Street, 8 p.m., Oct. 25 and 26.

Elgin: Jacob S. Shield, Universalist Church, 8 p.m., Oct. 26.

Galesburg: Jacob S. Shield, Auditorium, 8 p.m., Oct. 28.

Testimonies of Healing

Four years ago it was my privilege to become acquainted with the truth as revealed in Christian Science, and it has wrought such a wonderful change in my consciousness, and therefore in my life, that I take this opportunity of expressing through our periodicals my deep gratitude for all the good I have received.

It was not for relief from physical disease that I was led to seek aid from Christian Science, but because of a mental state which made me dissatisfied and intensely unhappy, a condition that I often used to wish might be exchanged for some bodily ill. I was of a supersensitive nature, which Christian Science has shown me how to overcome, and was given to brooding over many of the sadder conditions of mortal experience. Then I was brought face to face with very inharmonious conditions in our home, so that like Job I cursed the day I was born. Nevertheless, having always been deeply interested in all religious and philosophical subjects, I searched book after book dealing with explanations of the Bible, for I believed that the true help could be found only in the Scriptures. I prayed to be shown the way to harmony, and endeavored to say with sincerity, "Thy will be done," although believing like others who have not learned the truth as presented in the writings of our beloved Leader, that it was God's will for me to remain as I was.

My prayer was answered during a business trip in the United States. Out of mere curiosity I picked up a copy of the *Christian Science Sentinel* in the lobby of a hotel in Tiffin, Ohio. It took but a few minutes to be convinced that I had found that for which I had many years been searching, and I eagerly devoured the pages devoted to testimonies of healing. From that moment I never once doubted that Christian Science was the truth. In response to a request sent to Boston for the address of a practitioner in Chicago, I received a copy of the *Journal*, but as I was then proceeding to Madison, Wis., I took no further steps in the matter until I arrived there, when no time was lost in calling upon a practitioner, who patiently and lovingly started me on my journey from sense to Soul.

Since that time I have received many benefits from Christian Science and have relied upon it absolutely in every case of need. I feel profoundly grateful for all it has done for me, especially for having brought me true happiness and a joy and peace that nobody can take from me. Not my least reason for blessing our dear Leader is the fact that through her spiritual teachings of Truth my mother has been healed of chronic neuralgia of long standing, and a brother of seemingly incurable stomach disorder. Our home is now more harmonious than ever before, and we have veritably a foretaste of that perfect harmony which is called heaven.

WALTER W. GIBBONS, London W., England.

✧

I came to Christian Science as simply and trustingly as a little child, for I knew absolutely nothing of its meaning. I had suffered from stomach disorder all my life, although I had been treated by many doctors, had changed climates, and had sought every known means of relief. I had given up any hope of ever being well. Finally I began to have a severe pain in my right side. This lasted for several months, until one evening in December, 1910, I was in such agony that my husband called the doctor, who gave me medicine which quieted me; but I suffered terribly for six days. The doctor, one of the best surgeons and physicians in Seattle, sent me to the hospital, and there three nurses, besides this doctor and his assistant, worked over me forty-eight hours to give me relief. I never tasted even a drop of water, though I begged for it. The suffering was intense. At the end of five days the doctor said an operation was necessary, as I had gall-stones in the worst form known to medical science, and appendicitis with it; also that I could not live long without an operation.

When my husband came to see me that evening we talked the matter over, and I told him I could not and would not be operated on. Something seemed to keep telling me I would get well without an operation, and instead of listening to the doctor and nurses I begged to go home. The doctor was very angry and said it was like committing suicide. He thought, however, that I would call for him in a few days to perform the operation, but he begged me not to wait too long. I am happy to say that I have never called a doctor since or asked the advice of one. A kind friend took me home in her automobile. I was as one at sea and lost, for I knew not what to do or to whom to look for help; I was distressed and suffering all the time, consequently I was willing to try anything any of my friends recommended.

I then wrote to my younger sister in Moscow, Idaho, telling her of my condition and the doctor's verdict. Her daughter had been sick many years, and had been operated on by this same doctor, but still was not well. Unknown to me, however, she was now taking Christian Science treatment. She came to my rescue, urging me to try Christian Science, and saying that she was getting well; and I may add that she is in better health now than she ever was. She also sent me a copy of the *Journal*, which I read and reread but could not seem to understand. I felt that Christian Science was just what I wanted and needed, and said so to my husband; nevertheless I lingered until well on in February, when my husband came home and found me just able to talk, apparently to human sense passing away. His anxiety seemed to awaken me somewhat when he said, "Oh, I wish you had gone to a Christian Scientist." I wished so, too, and promised that if God would spare my life till the next day I would go.

God heard my desire, for in about ten minutes I got up from the chair in which I was sitting, apparently cold to my knees and stiff, and walked to the bed and lay down. My husband simply looked at me in astonishment and said, "You are better." I answered, "Yes, I do feel better." I now know it was the light that "shineth in darkness; and the darkness comprehended it not." I slept quite well all night, and my husband insisted in the morning that I should carry out my promise of the night before. About ten o'clock I dressed with difficulty. My side was so sore I could not touch it or ride on the cars, so I had to walk ten or twelve blocks, but I was surprised to do it so well. I now understand that divine Love was with me all the way. I went to a dear friend who was a Christian Scientist, and she told me of several practitioners. After selecting one I went to see her, and told her I did not even know what Christian Science meant, but I was very ill and wanted help. She replied so earnestly and lovingly: "You have done your part; you have come. God will do His part and will heal you." Those words sank deep into my consciousness and I caught a glimpse of heaven. I realized instantly that I was healed.

I spent an hour with the practitioner and told her I had tasted no food for twenty-four hours; but she told me to eat what I wished. When I left her room I was so hungry I would have eaten anything. I now went as fast as possible to a café, and after I had eaten I went to my husband, two blocks farther on. As soon as he looked at me he knew the joyful news. I went back to my Christian Science friend and stayed to supper, then went with her to the Wednesday evening meeting. I went home on the car that night, rejoicing all

Digitized by Google

the way. My husband, who was waiting for me, rejoiced with me when I told him all, but we said nothing about my experience, as instructed, until we could explain it with some understanding. Science and Health was studied daily for months. I took in all five treatments, but the gall-stones were slow in leaving my side and I felt them for many months, but without any fear or misery at all. The night of the twelfth of August I awoke about eleven o'clock, and vomited for hours, though I did not suffer. In the morning I telephoned the practitioner, who treated me at once. I then went to bed and slept all day, having got rid of a great quantity of gall-stones. That was the last trouble I had with them.

Since that time I have overcome many ills, one a goiter, which began to give me great trouble. It completely faded away in a few hours, after I fully realized that God had not given it to me, that it was an error, and Truth had fulfilled its perfect work. My husband also was healed in five weeks' absent treatment of a malignant growth on the tongue, and saw the practitioner but once. The doctor had told him he would lose his tongue, and if he did not have the growth taken out the condition would prove fatal; but he trusted God, and under Christian Science treatment the growth faded away, not even leaving a scar. That was in January and February, 1913. All of this I gladly give to the world as my experience in Christian Science.

MARY A. PROCTOR JAMISON, Seattle, Wash.

✧

Christian Science is the greatest blessing that has ever come into my life. A few years ago I began the study of this teaching in order to help, if I could, in the healing of my husband, who turned to Christian Science as a last resort after all material means had failed to relieve him of severe headaches. It was truly man's extremity and God's opportunity, and I am more grateful than words can express for this wonderful study of the truth, as it has brought not only health, but peace, contentment, and love. I have had many beautiful demonstrations through the power of Truth. I was healed of pleurisy in one treatment, and have also been healed of neuralgia and influenza. The Christian Science literature has been a wonderful help to me. I am, however, most grateful for the spiritual understanding of God and my relation to Him that unfolds each day in the study of the Lesson-Sermon. I am indeed thankful to God, and grateful to Mrs. Eddy for this saving truth which I know makes free.

MARY A. KNAPP, Chicago, Ill.

✧

I wish to express my deep gratitude for the many blessings received through Christian Science. It is over twelve years since I first heard of the truth that makes free from sickness and sin. At that time I was suffering from what the doctors called Bright's disease and dropsy of the heart. I do not think I ever knew what a well day was until I came into Christian Science. I had been under the care of many physicians, but without any lasting benefit, until I finally grew discouraged and gave up doctors altogether, for the more medicine I took the worse I became. One of my neighbors asked me one day if I believed healing could be done now the same as when Jesus was on earth. I said that I did, for God is "the same yesterday, and today, and forever." She then told me that her sister-in-law, a Christian Scientist, was visiting her, and she would send her to see me. It was through this lady that I sent for "Science and Health with Key to the Scriptures" by Mrs. Eddy. After reading the chapter Footsteps of Truth, I, who had known nothing but suffering, was free, and I knew myself as God's child. Since then I have had many beautiful demonstrations.

One evening I happened to be alone and was looking over some *Sentinels*, when a queer feeling passed over me and I thought I would get Science and Health. As I left my chair these words came to me as clearly as if some one had spoken them in my ear: "Fear thou not; for I am with thee: be not dismayed; for I am thy God." That was all I knew, and how long I lay unconscious I cannot tell. My one conscious thought was a declaration of the truth. When I regained consciousness I was covered with a cold sweat like death, and it was a hard fight, but I knew God was with me. About midnight I fell asleep, and at three in the morning I awoke, healed. The next day a Christian Science friend called to see me and I told her of my experience. She exclaimed, "Why, there is not a trace of it now;" and there was not, for I got up the morning after the attack and did my work as usual.

I was healed of a bad case of rheumatism about four years ago. It was a severe struggle for a day and a night, but the ailment left me very suddenly, never to return. In the summer of 1914 I was seized with appendicitis. When I had a similar attack about twenty years ago, a doctor attended me for two weeks, and I suffered untold agony. This time I was all right in twenty-four hours, and was up and doing my own work the next day.

My thankfulness to God and my gratitude to Mrs. Eddy for this wonderful truth are beyond words. It has been my blessed privilege to be of service to others, and what a joy it is to know we are coworkers with Christ. I am a member of The Mother Church, and am striving daily to live so as to be worthy to be called a Christian Scientist. I am also grateful for the periodicals, which are very helpful.

SARA ELIZABETH BRANDOW, Athens, N. Y.

✧

I came to Christian Science for the healing alone, for I was a firm adherent of an orthodox church. I had met with an accident to one of my eyes, and although one of the best oculists in the state treated me, I did not receive the expected help. He conscientiously did all in his power to relieve me and could not understand why he failed. As a last resort I turned to Christian Science, but knew nothing about it except that Christian Scientists claimed people could be healed through its teachings. After a few months' treatment the difficulty was overcome. Since then I have been instantaneously healed of fever, acute bowel trouble, toothache, and the sting of wasps. The last was destroyed by realizing the truth of the "scientific statement of being" (Science and Health, p. 468). Since coming to Long Beach, a troublesome tooth has been removed, after treatment by a practitioner, without discomfort.

I have had many proofs this past year of God's loving care, and that He is an ever present help in time of trouble. One morning last winter I was almost overcome by gas. For a short time I felt somewhat weak, but as soon as the room was clear of the fumes, I went over the Lesson-Sermon and felt stronger. I was able to attend church, and by the close of the service was entirely free, and there were no after effects.

Last fall while in the ocean I unconsciously got beyond my depth. I do not swim, and as a far-out wave towered above me I was filled with terror, for I realized that I was powerless; but at that instant, which I thought was my last, came the quiet, calm assurance that God was with me. It was the "Peace, be still," to my frightened consciousness, and although I was knocked over and carried down and down beneath the wave, that thought never left me, and it dispelled all fear. It was the clearest realization of God's presence I have ever had. I was borne toward the shore, and

Digitized by Google

when the wave had expended its strength I came to the surface. I had not even strangled or swallowed any water, for which I was thankful. I knew that the "everlasting arms" were indeed around me and had brought me into safety.

For these and other proofs of God's loving care I am deeply thankful. I must also express my gratitude for all our literature. The Lesson-Sermon is a daily help, and every number of the *Journal* and *Sentinel* contains something helpful to me. I have learned to look for this help and am never disappointed. I am more grateful all the time as I realize, even in a small degree, the value of Mrs. Eddy's work for all mankind.—Kate E. Schwing, Long Beach, Cal.

✧

I wish to relate an incident in illustration of the healing power of Truth as revealed in Christian Science. When four years old, our little daughter was suffering from a fever, and as some of the older children had been having chicken-pox we supposed this was the cause of her illness. I treated her with what understanding of Science I had, but she grew much worse and began to break out with what is known as the scarlet-fever rash. As afterward developed, she had both scarlet-fever and chicken-pox at the same time. The fever grew very high and she became delirious. As the conditions were very alarming we wired a Christian Science practitioner who had helped us before. That evening the fever went down a little and the next morning it was entirely broken. The change in the first twenty-four hours was indeed an unmistakable proof of the power of Truth. In a few days the child was herself again, with none of the after effects which sometimes follow ailments of this kind.

We have had many other cases of the healing of sickness in Christian Science, and also of its availability in meeting other problems. It is indeed a sacred privilege to have the truth explained so as to make it practical for every-day use, as it is in "Science and Health with Key to the Scriptures" and other writings by Mrs. Eddy, and in the literature issued by the Publishing Society.

R. C. Norris, Maywood, Neb.

✧

[Translated from the German]

It is a well-known fact that many a disease or bodily ill is traceable to, or rather is the result of, a patient's mental condition. Care, sorrow, worry, hate, and the like, may cause a person to become sick, and yet in the opinion of the many the healing can only be accomplished through matter or by material means. Christian Science, however, has made the world begin to see that, in accordance with Jesus' example, disease can be really cured only through divine Truth and Love, not with the aid of matter, and we best attain to this recognition by experiences in our own lives.

I am indeed happy and grateful for having experienced in my own case the spiritually healing and regenerating power revealed in Christian Science, and would like to tell of an instance which made a lasting impression upon me. A few years ago I was laboring under a sense of great sorrow for several months. I did not feel at all well, and one night woke up in great pain. When morning came I thought I would ask a Christian Science practitioner for help, but on leaving my bed I became unconscious. When I came to myself I felt very miserable, and in the course of the day had to lie down again. In the mean while Christian Science treatment was taken up for me. The following day there were unmistakable signs of jaundice in a severe form. I was unable to take nourishment, could not even drink water, and when trying to leave my bed would faint away. A friend who stayed with me day and night most tenderly cared for me, yet I seemed in an inexplicable state of depression, and on the third day, during a momentary sense of great weakness, told this friend that I had lost all desire to live. She quietly replied that I was ungrateful.

This answer so startled me, despite my suffering condition, that I immediately began to reason about it. I did begin to see that I was ungrateful, but such darkness encompassed my thought that despite all effort it seemed impossible for me to beget a feeling of gratitude. I told my friend so, and she advised me to try to recount the things for which I could give thanks, even though I felt no inclination in this direction. The thought thus expressed appealed to me, and I began audibly to enumerate the things which ought to elicit my gratitude, and at the second instance of help received through Christian Science I began to feel ashamed of myself. The sense of weakness soon left, and an hour later I ate my supper with a good appetite, slept quietly all night, and in getting up the next morning realized that I was healed,—the disease had disappeared. As soon as I was ready to let divine Truth and Love shine into consciousness I was healed physically. The seemingly great suffering had made me blind and ungrateful for the one universal good, the recognition of which, however, was attended by a beneficent influence on the body, thus healing me. Since then my greatest desire has been to entertain a better sense of gratitude to God for Christian Science and its discovery through Mrs. Eddy.

Fräulein Anna Six, Berlin-Wilmersdorf, Germany.

✧

After many years of effort in search of health I was told by a doctor whose remedies I had tried in vain, that owing to the long standing of my trouble, the symptoms were due to my mental attitude and could not be reached by *materia medica*. This turned my search into the mental realm to learn that fear, anger, worry, and the like, are the underlying causes of our trouble, but I found no practicable method whereby to eliminate them from consciousness. It was when I was without a ray of hope,—having some knowledge of discordant thinking and its dire effects on the body but no knowledge of a way to escape it, and standing between the twin terrors, physical decline and mental breakdown,—that Mrs. Eddy's work was brought to my attention. I read Science and Health and immediately there was a great change in me, and later with the help of a kind practitioner and good friends I was led wisely and quietly on in this to me new field of endeavor. Six and a half years have passed, years full of patience and hope while wrestling with the problems of life. My daily occupation is no longer approached in a sick and half-hearted way, but instead I am full of health and ability to perform whatever I am called upon to do. During this time I have been entirely free from any desire for intoxicants, tobacco, or drugs. Fear, anger, and worry have in some degree been overcome, resulting in greater freedom and calmness.

To enumerate the many ways I have been benefited would consume too much space. Early in my investigation of Christian Science I heard a testimony at a Wednesday evening meeting which inspired me with great hope. It was given by a teacher of violin who told of his inability to appear in public and remain calm and self-possessed, until Christian Science freed him from this condition. As a student of violin, handicapped by a similar affliction and an additional great fear of overstudy and overwork, I failed absolutely as far as professional work was concerned, but this testimony brought me hope and stimulated me to go on. I soon came to realize that a great desire to know more of the Science of Life had taken possession of me. This has since been the

Digitized by Google

more important issue, and in proportion to my effort to apply its Principle, I have been rewarded. My general health is better than at any time in my life, as I was frail from childhood. I never thought it possible to realize such freedom of mind and body.

Words seem powerless to express my deep gratitude. I can only follow the great multitude of beneficiaries before me in reiterating my appreciation of Mrs. Eddy's great work, which has made it possible for mankind now to acquaint themselves with spiritual law and be at peace.

BEN WEILAND, Joliet, Ill.

✧

I have been healed by divine Love through Christian Science of many ailments that seemed small, and have been lifted out of many sins that did not seem small. I have been guarded and supported, and guided out of tribulation and night into pleasant pastures and "beside the still waters." I have known the working power of the might of God, and I know that He is with me through all time, even to eternity.

MARIAN L. OSGOOD, Manchester, N. H.

✧

[Translated from the German]

It gives me joy to tell of my gratitude for benefits received through Christian Science. Some time ago I had an attack of rheumatism of the joints, and it grew more severe each day. Finally we called in a physician, but human help proved of no avail. I was in a state of great distress, when Christian Science was brought to my attention, and we asked a practitioner for treatment, which was given most readily and lovingly. The result was that within a few hours my healing was well under way. Our physician could hardly realize the fact, though I knew whom to thank for my recovery. I am deeply grateful for this proof of the divine power to heal, and I wish to thank all the dear people who have helped me in attaining a measure of understanding of the truth which makes us free.

MARIE MEYER, Herford (Westphalia), Germany.

✧

I gladly express my gratitude and give thanks for what Christian Science has done for me. I can truthfully state that I have not taken any medicine since 1903 and am enjoying the best of health. I have always found divine Love to be the remedy for any and all ailments which I have had since that time, whereas formerly I was obliged to use medicine continually. I suffered from liver trouble and all the ills that accompany it, but was healed through Christian Science. I have also been healed of malaria, headaches, and rheumatism.

I feel that I have great reason for giving thanks to God, and being grateful to Mrs. Eddy for teaching and showing the way to regain health and keep well.

MRS. H. BRACK, Stockton, Cal.

✧

I had been interested in Christian Science for a number of years and had received help for a mental trouble, but did not fully realize the physical healing until our son was almost instantly healed of a very serious attack of throat trouble and later of a bowel disorder. I have also been healed of gall-stones and varicose veins, the result of milk-leg, while my husband was cured of the tobacco habit and other ills. The physical healing is small, however, and unimportant as compared to the help to right thinking and a better understanding of the Bible. We are very grateful to God for Christian Science and the good it has brought us.

MRS. J. H. GOODRICH, Chicago, Ill.

From Our Exchanges

[*Zion's Herald*]

Of one thing, at any rate,—and it is the greatest thing of all,—we may be absolutely certain, namely, that heaven is wherever Christ is, and that to be with him in any world is "place" and promise enough for any believer. And then, too, heaven is a state of mind and heart. It is a disposition, a temperament, a kind of life, a sort of choice. . . . So the pious believer (we like that good old word "pious") may, even while living amid scenes of temptation and creature complaints, surround himself with a heavenly climate, a celestial frame of mind, which will keep him immune from the evils or the sorrows that afflict and disable his less prayerful or thoughtful associates.

We need to phrase the beatific experience less in quantitative and more in qualitative terms—less in material figures of speech and more in spiritual metaphors. Heaven is, after all, more what we are than where we are. Character is its own best climate, and when we are nearest Christ in spirit and aim we are most of all in glory. And if heaven be in us before we are in heaven, our whole lives will radiate hope and joy and love, and so prove most telling witnesses leading men home to God in Christ.

[William Elliot Griffis, D.D., L.H.D., in *The Christian Intelligencer*]

Something in man makes him restless for better things. Neither his present standard of life nor his past attainments satisfy him, if he thinks. He sees a vision of something nobler. He realizes that he could be more than he is. Conscience, even remorse and penitence, compel him to believe — what? That there is something nobler, some one less sinful, less polluted, more lovely than himself. He has the ideal of a possible better nature, of a grander man. Then he seeks to regain his lost estate, until, it may be, he has come again to his standard. The momentum drives him on. He discerns a still loftier potency of character. He strives to attain.

It is also true that sensitive souls, and those free from the goad of a seared memory without sinking to remorse, gain the vision of the beauty of holiness. From afar, it may be, on stormy sorrows, they behold the port of peace, the haven of calm. Out of the great, deep pits and wells of grief, sorrow, bereavement, disappointment, they descry new stars of hope. Truth seems to wear richer robes and present a fairer face. Yes, lovers of beauty in every age say she beckons, allures, reveals her countenance to those who climb the steeps to find her.

[Gaston W. Duncan in *The Standard*]

It is not that men are ignorant of the truth that what a man believes determines how he lives and what he does, but rather it is because men put this truth alongside of their observation of the similarity of the lives of men of divergent faiths and conclude that the tenets of each denomination contain enough of good to produce manly, godly lives. They reflect that what is held in common is probably more productive of real spiritual living than what is held distinctively. The source of their goodness is indeed that living One who "giveth to all men liberally." Like thinking leads to the formation of like ideals, like ideals tend toward a like manner of life, and a like manner of living leads to a common type of character. The spiritual unity of all Christians is acknowledged by all. Unity by conformity is a less noble ideal than unity in the midst of variety.

The distinctive dogmas that differentiate the denominations doubtless have contributed much to the present type of Christian character, but many think that they see in these

Digitized by Google

divisive tenets a force that has greatly retarded the development of compassionate, fervent-hearted Christians. The great mass of Christians seek in vain for the specific value contributed to holy living by the distinctive doctrines of their own denomination. Such a search usually ends in the conviction that distinctive doctrines are principally external and objective systems of thought over which devotees wrangle because the terminology employed carries a different meaning for each. Unless the devotees take a peculiar pleasure in intellectual soldiering with the maneuvering of arguments which do not build character, they themselves become disgusted with such a profitless, though pleasing, pastime. Such discussions are now considered in bad taste and are avoided by no small number of Christians.

[*The Christian Work*]

In the book of Hebrews, in a kind of parable, we have a striking interpretation of a great world-truth. The writer tells us of a mysterious man who met Abraham and to whom Abraham paid tithes. Then he vanished into the unknown, like a dissolving view or a vision of the night. But one significant thing is told us concerning the unknown: his name Melchisedec, which was evidently a title rather than a name, means "King of righteousness." And most significant of all, he dwelt in a city called Salem, which means peace. Those old Canaanites had pierced to the very heart of the thing when they called the "King of Salem" the "King of righteousness." Thus, says the writer of Hebrews, he is first "by interpretation King of righteousness, and after that also King of Salem, which is, King of peace." Here is a world principle which is a world program.

[*Northwestern Christian Advocate*]

To abide in Christ must of necessity bear rich fruit in a life of beautiful conformity. To slip away from that blessed association, though one carry with him a memory of early experiences, the recollection of precious hours on the mount of ecstasy, must inevitably result in a sensible lowering of the tone of living. Memory has its limitations, and the operation thereof fails to present Christ in his freshness and vigor. His mercies must be new every morning. A continual clinging to the cross and a constant attention to the promptings of the Spirit are essential to a proper interpretation of the will of God and a successful reproduction of that will in life. How often do we hear Christians whose message but imperfectly sets forth the "beauty of holiness"? They are imprisoned by the cares of the world.

[Rev. Frank J. Thompson in *Universalist Leader*]

There is a joy of successful achievement beyond that of hopeful anticipation and brave endeavor. The ideals that have been realized add tones of triumph that were wanting before; and what was glad and brave becomes grand and jubilant. There are also tender heart-notes furnished by the companionship of those whose friendship and affection have enhanced our joys and been the solace of our griefs. Thus it comes to pass that the music of mature life, with no essential loss of what belonged to youth and childhood, since all things survive in character and memory, is enriched with sweeter notes, more subtle melodies, and grander harmonies.

[*The Universalist Leader*]

This idea that we can believe the love of God in church on Sunday, and forget God all the rest of the week, that we can love all men on Sunday and cheat any man on Monday, is one of the most disastrous fictions ever cherished.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

Attention is called to the change in price (see also last cover page) on single copies of the following volumes of Mrs. Eddy's writings when sent by mail postpaid from the office of the publisher, Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Massachusetts:

Science and Health (cloth) from $3.18 to $3.00; Retrospection and Introspection (cloth) from $1.06 to $1.00; Unity of Good (cloth) from 65 cents to 60 cents; Pulpit and Press (cloth) from $1.06 to $1.00; Rudimental Divine Science (cloth) from 55 cents to 50 cents; No and Yes (cloth) from 60 cents to 55 cents; Messages to The Mother Church (cloth) from $1.56 to $1.50; Christian Science vs. Pantheism (pebbled cloth) from 26 cents to 25 cents; Message to The Mother Church, June, 1900 (paper), from 26 cents to 25 cents; Christian Healing and The People's Idea of God (cloth) from 60 cents to 55 cents; Christian Healing (paper) from 21 cents to 20 cents; The People's Idea of God (paper) from 21 cents to 20 cents.

The above changes do not constitute a reduction in the price of Mrs. Eddy's works, but save the purchaser the postage on single copies of the volumes specified.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

The pamphlet, "Causation," by Frederick Dixon, has been translated into Norwegian "Skapende Kraft," and is now published with the English and Norwegian versions on opposite pages.

The pamphlet, "Fulfilling the Law," has been translated into Danish, "Lovens Fylde," and is now published and on sale. This new pamphlet has the English version printed opposite each page of the translation.

The pamphlet entitled "The Father's Business," already printed in English and German, has been translated into Swedish, "I Faderns Tjänst," and is now published with the English and Swedish versions on opposite pages.

"Christian Science: 'The Resurrection and the Life,'" a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

PRICE, POSTPAID: Single copy 5 cents; twelve copies to one address 55 cents; fifty copies $2; one hundred copies $3.50. Orders for above pamphlets may be assorted as desired.

For table of English, German, Swiss, and French money equivalents, see inside front cover page.

Miscellaneous

For quantity rates on goods specified in the following list please refer to the current catalogue in *The Christian Science Journal*.

BIBLES. 01483 x. Clarendon Brevier, heavy-faced, distinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.75.

01440 x. Brevier, light-faced type; self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.50.

Morocco slip case to hold pocket edition of Science and Health, *Quarterly*, and Bible, $1.25.

Two other sizes of slip case listed in the current issue of the *Journal*.

Covered morocco case with handle and purse on outside, $3.50; without purse, $3.25.

01561 x. Large type Bible, 7½ x 6¼ inches, 1½ inches thick, bound in Alaska seal. Specially adapted for use of second readers, $7.25.

The improved index will be added to any Bible listed in our catalogue for an additional charge of 35 cents. Catalogue No. 22 of selected Bibles will be mailed free upon application.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. 132 pages with index. Paper covered, 15 cents; cloth binding, 85 cents.

THE LIFE OF MARY BAKER EDDY. By Sibyl Wilbur. 424 pages. Cloth, $2. Edition de luxe, $5.

"PERSONAL CONTAGION" and "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Paper cover, 10 cents.

THE MOTHER CHURCH. By Joseph Armstrong. A history of the building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated, 107 pages. Cloth, $1.50.

CHRISTIAN SCIENCE: ITS LEGAL STATUS. By Judge Clifford P. Smith. 128 pages, paper covered, 10 cents.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, $1.15; half morocco $1.40; full morocco $2.50; levant $3.50; pocket edition, size 4⅝ x 6⅝, $3.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission, have been set to music as follows: "The Mother's Evening Prayer," 75 cents; "Christ My Refuge," 75 cents; "Love," 40 cents; Communion Hymn—"Saw Ye My Saviour?" (Johnson), 50 cents; "Blest Christmas Morn," 27 cents; "O'er Waiting Harpstrings of the Mind," 27 cents; "Shepherd, Show Me How to Go" 27 cents; "Saw Ye My Saviour?" (Root), 27 cents. The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing. 8-inch (mount 12 x 16), $1; 12-inch (mount 15 x 20), $2; 16-inch (mount 21 x 29), $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18 x 24 inches, $5; on India paper without remarque, $3. Smaller reproduction, size 11 x 14 inches, on Japanese vellum, $1. Photogravure postcards, reproduction of the picture of the Church Edifice and Publishing House, 5 cents.

QUARTERLY COVERS in black morocco, $1.15; with purse, $1.40.

ALUMINUM LESSON MARKERS. Set of thirty, with paper shields, 50 cents. Extra paper shields, one hundred, 15 cents.

PRICE LIST OF BIBLE CONCORDANCES and DICTIONARIES OF THE ENGLISH LANGUAGE supplied on request.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $3.50; six or more, each $3.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 47 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $5.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

The attorney-general of the United States has issued the following statement on the subject of the proposed combination of independent steel companies:—

"It cannot be questioned that if it was lawful to unite through the United States Steel Corporation one half of the competitive units in the steel trade, the other half would also have the right to combine. And of course what could be done in the steel trade could be done in every other branch of trade, thus virtually putting an end to competition. But the decision of the circuit judges of the third circuit in the Steel case is not as yet the established law. It is because of just such consequences that the Government is appealing from that decision. Besides, in the Harvester case a court of equal rank took a very different view of the law. The question is now pending before the superior court. In the mean time attempts to combine able and efficient competitors affecting trade over a wide area will be subjected to the closest scrutiny of the department of justice."

Seven more names, six men and one woman, were added to the Hall of Fame in the fourth annual election just conducted through the New York University Senate, making a total of 56 names, 50 of whom are men and six women. The seven new names are: Mark Hopkins, former president of Williams College; Francis Parkman, historian; Elias Howe, inventor; Joseph Henry, national scientist, first secretary of the Smithsonian Institution; Charlotte Cushman, tragedienne; Rufus Choate, jurist, and Daniel Boone, pioneer. Of four names reconsidered under a new rule, John Paul Jones the sea-fighter and Roger Williams the clergyman failed of reelection.

The incorporation in Dover, Del., of the Federal Dyestuffs & Chemical Company of New York, with a capitalization of $15,000,000, is believed to mark the entrance of the Standard Oil Company and the Du Pont de Nemours Powder Company, either singly or in combination, into the dyestuff manufacturing field. According to the report of the incorporation, the new dyestuffs concern is authorized to "purchase, take over, own, and lease all kinds of mining rights and metaliferous lands, to produce and carry on a business of treating, refining, selling, and dealing in and with cotton fibers and salt solutions for the manufacture of dyestuffs of all kinds."

Professor Hussey, director of the University of Michigan Observatory at Ann Arbor and for the past two years connected with the National Observatory at La Plata, Argentina, where he has been engaged in making measurements and observations of double stars, says that one result of his work has been that three hundred stars formerly believed to be single have been definitely determined as double stars, and their measurements have been carefully checked and established. With his associates he has located three new comets, one of which, he said, was remarkable for its distance from the sun.

Tower Court, the first of three new dormitories to be completed at Wellesley College, is now occupied by the students. It has been erected near the site of the former College Hall at a cost of approximately four hundred and fifty thousand dollars, including the furnishings of the living rooms. The tower portion rises six stories, while the east and west wings are five stories. On each side of the building is space for future structures, to be built in the general style of Tower Court and connected with it by means of cloisters.

Steps have already been taken to call a great congress of all persons and organizations—state, national, and sectional—that are interested, in any phase of the water question, to meet in Memphis, Tenn., early in January next, for the purpose of formulating and urging upon Congress some comprehensive and practical water control and water development measure. Good roads associations will also be included in this congress, as the problem of good roads is intimately related to the water question.

More than one hundred million dollars has already been expended in the construction of the new dual subway system in New York City, and contracts aggregating $178,000,000 have thus far been awarded for subway and elevated work. On Sept. 1, 19,748 men were employed in subway work. When finished the dual system will consist of 620 miles of single track railroad, including 296 miles in the old subway and elevated lines. The total cost of the system when equipped is estimated at $330,000,000.

The greatest sustained wind velocity recorded in the United States since the establishment of the National Weather Bureau, was shown at Burwood, near the mouth of the Mississippi, during the recent tropical storm. Complete records show a maximum velocity, Sept. 29, of 122 miles an hour during a period of five minutes. For fifteen hours the hurricane maintained the velocity of more than seventy miles an hour, and during the period of twelve hours a velocity of more than eighty miles.

The international joint waterways commission, in session at Ottawa, Canada, has taken up the question of water division on the St. Croix River in New Brunswick. A division of power between two companies is the issue, and there is a great array of counsel representing the Canadian and United States governments, the province of New Brunswick, the state of Maine, and the St. Croix and Sprague Power companies, principals in the dispute.

To eliminate grade crossings on the Lincoln Highway will cost $8,340,000, according to the estimates submitted to the public service commission by the chief engineer of the commission, who has made a detailed study of the 3,310 miles of highway on the main route. His figures do not include the numerous crossings on the supplemental routes known as feeders. Of this sum, $5,100,000 would be needed to eliminate grade crossings in cities, $2,208,000 in boroughs, and $1,302,000 in country districts.

The exports of silk from Lyons, France, during the first seven months of the present year amounted in value to 192,000,000 francs, as compared with 240,000,000 during the corresponding period of 1914. Of this total, 58,000,000 francs went to the United States, as against 30,000,000 in 1914; England took the worth of 94,000,000 francs, as compared with 123,000,000. Eighty per cent of the French silk exports goes to these two countries.

A recent session of the Pan-American conference decided upon recognition for the Carranza party as the *de facto* government in Mexico. The time when or the form in which recognition would be extended has not been fixed. The governments of Bolivia, Uruguay, and Guatemala are expected to give their approval of the action of the United States Government, as Argentina, Brazil, and Chile have already done.

A successful trial passage of the Metropolitan line freighter H. F. Dimock through Cape Cod Canal has made possible a new schedule for the boats running between Boston and New York. Three hours' time was saved and no difficulties were encountered. Sufficient lighting and a depth of twenty-five feet at low tide in the waterway has made this new project possible.

The indiscriminate cutting of timber in recent years has so laid bare the hills around Caracas, Venezuela, that it is feared the water supply may be seriously impaired. The matter has been brought before the national Congress, and steps are now being taken to place the affair in the hands of a competent commission with full power to act as it sees fit.

Wireless telephonic communication was accomplished a few days ago between the Arlington station, near Washington, and Honolulu, a distance of 4,600 miles. The message was transmitted by the special wireless telephone developments which have been made by the engineers of the American Telephone & Telegraph Company and the Western Electric Company.

Maj.-Gen. George W. Goethals has withdrawn his resignation as governor of the Panama Canal Zone. His action was taken, he said, in view of the recent slides in the Gaillard Cut, which have closed traffic through the canal. General Goethals said he would remain in Panama until the condition of the canal would permit of his departure.

The Sunday closing of saloons in Chicago on Oct. 10, for the first time in forty-four years, resulted in the day passing with the lowest crime record in the history of the police department, according to the chief of police. Out of 7,152 saloons in the city, only twenty-eight were found to have violated Mayor Thompson's closing order.

Vassar College, Poughkeepsie, N. Y., celebrated its fiftieth anniversary last week. During the course of the exercises the president of the college announced that of the $1,000,000 fund which Vassar has been trying to raise, $686,000 had been pledged.

At a meeting of the International Peace Congress at San Francisco, Cal., the general topics of discussion were education, peace, women in their attitude toward war, and some important aspects of international relations.

The output of coal in the Union of South Africa for the six months ended June 30, 1915, was 3,909,714 tons, valued at £998,388.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII • October 23, 1915 No. 8

Modesty an Essential Virtue

ALFRED FARLOW

ST. PAUL said, "Let every man be fully persuaded in his own mind." This means that in his struggle to arrive at proper conclusions and practices one should be allowed the freedom of untrammeled individuality. He should be permitted to rely exclusively on divine guidance,—not a mere choice of his own will as distinctive from the will of others, but in keeping with the Scriptural text, "Thy will be done."

Numerous instances in the life of Mrs. Eddy, the Discoverer and Founder of Christian Science, demonstrate the fact that an unselfish and implicit reliance upon divine Mind insures a guidance which is far superior to one's own conviction of the right course. She was constantly being led into decisions and actions, not knowing at the time why, although discovering later the wisdom of the course.

All honest Christian Scientists and all well meaning religionists have proved this point in some degree. The chief benefit to the every-day life of a Christian Scientist is the intelligent guidance in human affairs which he gains by his faith in the allness of God; not faith in a new God, but in the God of our fathers, "the God of Abraham, of Isaac, and of Jacob," intensified through the understanding of Truth which Christian Science brings. One has considerable faith in a man who is well recommended by others, but his faith is largely increased if upon acquaintance the man measures up to the reputation he bears.

Christian Science increases our acquaintance with God. It affords a knowledge of the nature and essence of Deity; it broadens and clarifies our understanding of infinite Spirit, and enables us to know why God is trustworthy. The commotion and strife and conflict of the world are due to conflicting human opinions. Men are afraid of one another, and as a consequence nations are afraid of one another, because of the conflicting selfish desires and inclinations which are extant. The fear and consequent strife of the individual abate in the ratio of his reliance upon God; and in keeping with this, mankind in general will cease from conflict as they improve their understanding of God and deport themselves accordingly.

Christian Scientists have sometimes been criticized because they do not make a greater effort to urge the afflicted to have Christian Science treatment, or because they do not solicit members for the Christian Science church. Any strenuous efforts along these lines would be unwarranted in true Christian Science practice, while a modest invitation, courteously calling a neighbor's attention to that which cannot fail to benefit him, might be in order. An effort to argue the question with him might constitute an intrusion, a trespass upon his rights of conscience, an injection of human will which would interfere with the quiet, peaceful, uninterrupted development of wisdom in the individual. It is for this reason that the thoughtful Christian Scientist gives to his patient the unrestrained privilege of discontinuing as well as soliciting treatment; and while we consider church organization a present necessity, the Christian Science denomination concedes to beneficiaries the unmolested privilege of choosing their own time for identifying themselves with the church. When he crucifies every inclination or desire to interfere in his neighbor's affairs without being invited to do so, the would-be meddler gains quite as much as the person with whom he would meddle. No one can win his own immunity from trespasses unless he ceases to be a trespasser; hence the virtue of the Master's words, "If ye forgive not men their trespasses, neither will your Father forgive your trespasses."

In "Miscellaneous Writings" (p. 303) Mrs. Eddy says, "Knock instead of push at the door of human hearts." No one who has not already learned to withhold his own hands can consistently or effectively say "Hands off" to his neighbor. No one who violates this understanding by assuming a will of his own and then intruding it upon his neighbor, can win the divine protection which is vouchsafed by the understanding that there is only one Mind. Thus it may be noted that only the consistent, modest Christian Scientist can win a sufficient realization of the divine presence to merit his own security. The surprising fear which even Christian Scientists sometimes appear to entertain for one another, and the mental commotion and discord which follow, would cease if Christian Scientists were consistent with their teaching and thereby had grace sufficient to be modest and observe the golden rule. In "The First Church of Christ, Scientist, and Miscellany" (p. 279) Mrs. Eddy says, "The Principle of Christian Science demonstrates peace."

A much discussed question at the present time is as to whether war between nations is ever a necessity. We cast our lot on the negative side of this question; but whatever may be said on the subject, we believe the time has arrived when Christian Scientists and all religionists who believe in a God of love can eliminate strife and contention from their own lives, and the belligerent spirit thus silenced in the individual would of course be absent from the multitude. We would all do well to ponder the old adage "Live and let live." After all, none of us is very much wiser than his neighbor, and certainly not wise enough to assume the stupendous responsibility of guiding his neighbor's affairs. However, the question is not as to likes and dislikes, but as to what constitutes scientific practice, which alone insures the development of one's spiritual understanding.

One cannot advance in the realization that there is but one power while acting as though he believed there were minds many. One might temporarily beat his way by sheer force of human will, but in the long run he would be humiliated with the discovery that he has lost, not gained, in his apparent achievement. Success in a wrong line leads away from the right course, and necessitates the retracing of one's steps, thereby involving a loss of time. The more one relies on the belief in human will, the more surely will he miss his goal, since growth in the realization that there is but one power is contingent upon practice consistent with such an understanding.

In Science and Health we read (p. 480), "When the substance of Spirit appears in Christian Science, the nothingness of matter is recognized." When we claim no other Mind but God and live accordingly, we grow in the realization of

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

this fact, and consequently in the consciousness of the unreality of error or belief in human force. The power of truth takes effect in human consciousness as one learns to believe it and to demonstrate it by constant practice. That which we have most in consciousness, and which governs our deportment, must of necessity be most real to us; hence practice consistent with the proposition that there is but one Mind is not a mere matter of human choice, but of necessity. If we fail to conform our lives to that which Christian Science inculcates, we forfeit our opportunity for advancement.

The Bible teaches, "Blessed are they that do his commandments." There is no promise to those who know and do not. "Faith without works is dead." He who works not according to his faith, not only loses his demonstration but his faith also. A new-born belief brings refreshment with it, but like the manna of old it will spoil on our hands and disintegrate if not eaten up and digested by such practice as will enable us to assimilate the truth from which it springs and make it a part of ourselves,—our very own.

"The son of David"

ETTA M. GILBREATH

When Christian Science first awakens thought to the healing power of Truth, and we realize that God, divine Love, is ever present and all powerful, and that this truth needs to be demonstrated in order to experience the healing, there is apt to come the discovery that our "old things" must pass away; that the love we have hitherto cherished is on a material basis, while the demand of Science is for purely spiritual affection. In meditating upon this subject, there was presented a question which at first seemed to have no bearing on the point at issue. It was this: Why was Jesus called "the son of David"? Why could he not have been called the son of Solomon, or of some other Israelitish king?

In the Bible story David is first introduced to us when Samuel comes to Bethlehem, sent by God to anoint him king of Israel. Soon thereafter the call comes for David to go and play on the harp for Saul, with the hope that his music will soothe the king's torment. He does this, and Saul is healed. Next comes the fight with Goliath, after which we read of the beautiful friendship between David and Jonathan. Then the tide turns abruptly and we have a long account of persecutions. We see David fleeing from his country and friends. He is driven from home, and his life is sought everywhere.

We have a clear and detailed account of it all, but there is no word of malice in answer to malice, no fierce resentment, no self-pity, no complaint at the injustice of it all,—only a plaintive, humble statement, when the chance comes to him to rid himself of his enemy: "The Lord forbid that I should do this thing unto my master, the Lord's anointed, to stretch forth mine hand against him, seeing he is the anointed of the Lord." How easy, how human it would have been to open his ears to subtle suggestions of human injustice, inspired by resentment! David himself had been anointed by divine authority. This king, Saul, had disobeyed God's commands, had been unfaithful to his charge, and was a menace to Israel,—how easy for one whose heart was not stayed on God to feel that God had given his enemy into his hands to rid himself and Israel of him! Jesus once said to his disciples that the time would come when they who killed them would think that they did God a service.

There are moments in the experience of all of us when we are tempted to take vengeance on our foes instead of leaving all to God; when we feel that God is commissioning us to carry out a sense of human justice, "an eye for an eye," and this would impel us to do things that God would not do. If we hate our brother and some way opens by which we can at least expose his guilt, we indulge a mortal sense of resentment and are led to rejoice in his downfall or suffering. But Paul said, "If thine enemy hunger, feed him;" and James writes, "God cannot be tempted with evil, neither tempteth he any man." So we can rest assured that when we are tempted to rejoice in the downfall of any one, this feeling does not come from God.

David would neither have rid himself of torment nor protected Israel if he had killed Saul; he would simply have replaced Saul's wickedness with his own, and this would have been just as bad for Israel. He was, however, saved from these human mistakes by his love for God. He never seemed to forget God, and back of every question was this recognition that the kingdom was God's—Israel belonged to Him. He could abide in patient love, knowing as he did the Shepherd that watched the sheep.

Here it may be asked, How can one love a man like Saul, and would it not be loving error? To this we answer that David's thoughts did not rest on the human mistakes of Saul, but rather upon the fact that he was anointed to be king, and he bowed his head to that anointing. David loved and protected Saul because of his confidence in God. Could God have made a mistake and chosen wrongly? He dared not put himself above his enemy, because God alone was able to judge righteous judgment. In this case as in other instances David manifested the spirit enjoined by Christ Jesus when he said, "Love your enemies, . . . do good to them that hate you."

The story of Saul and David ends in a most dramatic way,—Saul and his son are slain, and as we read the tale, thought instantly turns to David to see how he will take the overthrow of an enemy. In thought we see the witness of the fight, who comes to David with the crown and bracelet. How are they received? We have no further mention of crown or bracelet; the story is only of David's cup of sorrow brimming over. The heart that God had seen at the anointing was not set on an earthly crown; it was too true for that. Jonathan's love had been more to him than any earthly diadem, and we read: "Thy love to me was wonderful, passing the love of women." After all these years it is still wonderful to us. In "Retrospection and Introspection" (p. 80) Mrs. Eddy says, "There are no greater miracles known to earth than perfection and an unbroken friendship." Here we have a true friendship, tried amidst the temptations of worldly place and power, and standing the trial, for Paul's words, "In honor preferring one another," were proved true at that early day.

Turning from the history of David to that of Jesus, we may now see more clearly why Jesus was called the "son of David," and realize that this relationship was wholly spiritual. Thus we note the difference between mere human love and that which is divine. Human love has always a taint of self,—it loves usually for what it can get in return, while a diviner sense loves its enemies. In Jesus' case, love never failed; he carried onward the good realized by David in an ever ascending scale, rising higher and higher at every trial, until we finally lose sight of the human in the divine. He said, "Love your enemies," and in keeping with this teaching he was continually forgiving. With what joy he must have said to the poor unfortunate, "Thy sins are forgiven"! To the woman brought to him in the temple he said, "Neither do I condemn thee." He healed the ear of the high priest's servant, who had doubtless listened to the error about him. He forgave the thief on the cross, and prayed for those who had put him there. His first words as he arose from the

Digitized by Google

dead included a special invitation to Peter. His tender and loving desire was to feed his sheep, and this recalls the shepherd king.

Divine Love is the only healer, and we are very grateful to Mrs. Eddy for her discovery of this great truth, and for her spiritual interpretation of the twenty-third psalm, as given on page 578 of Science and Health.

"Having done all, to stand"

EDMUND K. GOLDSBOROUGH

As an argument against absolute reliance on Christian Science healing, sometimes cases are cited where a sufferer has turned to Truth without apparent benefit; and the question is raised if it would not be wiser in certain instances to utilize material remedies as an aid in effecting a cure.

If assailed by doubt or discouragement during what appears to be a protracted healing, it would be well for those afflicted to turn to the seventeenth chapter of Matthew, in which it is related that Jesus instantly healed a case of one afflicted with dementia which the apostles had signally failed to relieve. The Nazarene's treatment of the case is especially interesting. His students had failed to realize the truth concerning the man, but even so Jesus did not advise the sufferer to resort to drugs, diet, change of climate, or hygiene. He proceeded to heal him then and there, proving conclusively the infinite power of Love and demonstrating its universal availability. Jesus then rebuked his disciples for their lack of spiritual understanding, implying that a grain of spirituality was sufficient to have effected a cure.

Truth is normal, natural, and beautiful, but through the ages the erroneous concept that man is matter, and that matter is intelligent, has been perpetuated in belief until the entire world seems environed by a shadow,—the sunlight of Truth being apparently hidden under the clouds of bigotry, bias, and superstitious ignorance. In spite of this, however, the light shines on eternally, melting the mists, annihilating the miasma of materialism, and the world is rapidly realizing the fact expressed on page 174 of Science and Health: "Truth is revealed. It needs only to be practised."

If a demonstration seems retarded and the healing light is not immediately discerned, instead of turning backward, as did Lot's wife, let us push onward, remembering once and for all the impossibility of serving two masters. The love bestowed upon us by the infinite Father is the leaven that will ultimately stir the entire mass of error. And what if we are seemingly surrounded by a horde of erroneous beliefs. Paul's faith never wavered, although he tells us that he suffered from a "thorn in the flesh," and Job, while struggling with a sense of disease, disaster, and countless afflictions, bravely declared, "I know that my Redeemer liveth."

Mountain Climbing

BERTHA V. ZEREGA

Every lover of mountain climbing knows the joy of ascending a blazed trail as it winds its way up through the silence of a soft-carpeted pine forest and out upon windy, unsheltered ledges of rocks and boulders, or as frequently happens, across treacherous bogs and slippery undergrowth near the course of a brook. The difficulties that attend the way only add zest to the undertaking, for each incident has its unique interest to the climber, and after a particularly aggressive obstacle in his path has been surmounted, he experiences a certain indefinable elation in pressing on with renewed purpose to the summit. Here and there a clearing in the trail gives him a happy glimpse of the unfolding prospect about him, and spurs him on with the promise of a wider and possibly an uninterrupted view of the horizon, if he but continue faithfully on and up.

During several vacation trips in the White Mountains, the writer has been led to compare certain aspects of such an experience with that mental journey which every Christian Scientist is engaged in taking daily in his progressive ascent toward the goal of spiritual understanding,—for have we not in the Bible, in Science and Health and the Manual of The Mother Church a well blazed trail to follow? Could any path be clearer or more definite? And while the belief in a selfhood apart from God, and other phases of materiality, confront us, and the way may seem at times interminable and beset with dangers, our gratitude should be unbounded that the path has been blazed so accurately and so lovingly that no one need stumble or wander, if he but keep mentally vigilant and follow the blazed path.

The experienced mountain climber realizes the great advantage to his progress in keeping alert. He must not only keep a sharp lookout on the path, to avoid loose stones and projecting roots, but he must constantly keep sighting the blazes ahead which point the way, that he may not wander heedlessly off the trail and become confused or lost. Unless he is careful to preserve the proper balance in this twofold visual occupation, he is certain to impede his advance, either by tripping over unseen pitfalls or by loss of time spent in searching for the path when he finds himself astray. He has learned the advantage of steady, even climbing rather than the hectic forging ahead of the novice, who is wont to loiter along easy portions of the journey, forgetful of or apathetic toward the work ahead.

In Proverbs we read: "Let thine eyes look right on, and let thine eyelids look straight before thee. Ponder the path of thy feet." Thus the twofold activity of the mountain climber is found to be the constant state which Christian Scientists must maintain in order that each day's journey may be progressive and scientifically exact. Love of self, apathy, and the illusion of mind in matter, if not resisted, would make us forget both to watch the path along which our aims and affections are leading us, and to keep mentally before our gaze those unerring guides that plainly point the way of selfishness and sin. How carefully we should scrutinize every motive, every desire,—yes, every thought,—to see that we are not being led inadvertently into the pitfalls of self-indulgence, or tempted unthinkingly to wander off into the mazes of material beliefs.

Sometimes the climber of an unfamiliar mountain, in making what he thinks is the final ascent, comes out into the open only to encounter another peak looming up ahead of him, showing that what he thought was the summit is only one shoulder of the mountain, and that his work is by no means accomplished. His disappointment is, however, only momentary, for cheerfulness, courage, and perseverance are qualities always to be found in the mental equipment of the true lover of mountain climbing; so, undaunted, he strides on, his imagination stimulated by the wonders of a more extensive view awaiting him, when, actually at the summit, he can throw down his pack and enjoy the rest and refreshment that he has so conscientiously earned.

How necessary for us, in working out our daily problems, to cultivate the active, constructive qualities of courage, joyfulness, and persistence, that the mesmeric arguments of fear, discouragement, self-pity, or love of ease, tempting us to turn back or loiter on our way, may be seen for the delusions they are and be quickly disposed of. What if, when we think a demonstration is complete, a new aspect of error or disease looms up to check our advance and to make

Digitized by Google

us faint-hearted! Our Leader counsels us to "insist vehemently on the great fact which covers the whole ground, that God, Spirit, is all, and that there is none beside Him. There is *no disease*" (Science and Health, p. 421). Then why should we be discouraged at the appearance of a crisis, a relapse, or fear the so-called last stages of sickness any more than the first or intermediate ones, since there are none in the truth of being, and that which says there are, is "a liar, and the father of it,"—self-constituted and self-destroying error, unable, in whatever guise it may take, to disturb the scientific truth of man's eternal freedom from evil under the divine protection.

When our gaze is mentally fixed on the metaphysical fact that man in God's likeness is perfect and indestructible, we are given spiritual strength to work calmly on, unmoved by fear or sense-evidence; for the promise reads, "In due season we shall reap, if we faint not." In every hour of trial let us ponder the significant words of our Leader on page 22 of Science and Health, "Love is not hasty to deliver us from temptation, for Love means that we shall be tried and purified," and prayerfully search our individual thought for the insidious, secret faults which undetected would arrest our progress and retard our demonstrations, remembering that only in humility do we reach "the heights of holiness."

Are there not many heavenly glimpses, clearings on the trail, to gladden us on our way? Each demonstration, no matter how small, brings us the blessed assurance of the final extermination of all error, and gives us a radiant perception of the realm of divine law, the kingdom of heavenly harmony, which unfolds all about us as we ascend step by step into the clarified consciousness of divine Love.

Righteous Prayer

WILLIAM BEARD

Men have believed somewhat in the efficacy of prayer from time immemorial; they have prayed to God with a blind faith that they will be answered in a material way outlined in their petition. In some cases their realization has been in accordance with the request, but more often the thing prayed for has been something to satisfy material sense or selfish motive, and the seeming disappointment has been bitter.

James said, "Ye ask, and receive not, because ye ask amiss, that ye may consume it upon your lusts," or your "pleasures," as the marginal reading has it. Toward the close of his wonderful epistle he says, "The effectual fervent prayer of a righteous man availeth much." This comforting and assuring statement has meant a great deal to struggling humanity in all ages, but when viewed from the standpoint of Christian Science it is fraught with yet greater joy, because we thus comprehend and prove what the "much" implies. Every prayer that was ever offered has in its true sense been a petition to an all-wise, all-loving Father for the healing of some discordant condition of humanity, and at the same time in many cases advice has been offered as to just how this healing should take place from a material standpoint. Jesus said, "Your Father knoweth what things ye have need of, before ye ask him," but, as we read in Romans, "We know not what we should pray for as we ought."

What, then, is "the effectual fervent prayer of a righteous man"? A righteous man is one who does not deviate from the right in thought, word, or deed; one who is wholly separated from evil. He expresses love for God and for his fellow man; he never desires his neighbor to be deprived of any part of good that he may be enriched; he does not attribute infinite goodness to God in one instance, and in another charge Him with being the cause of all the evil which seems to exist; he always thinks of God as infinite Love, unchangeable, eternal; "the same yesterday, and today, and forever."

On page 1 of Science and Health Mrs. Eddy says, "Desire is prayer," and the true man has no other desire than that all mankind may be infinitely blessed; and being so constituted in thought, he expresses and reflects "a spiritual understanding" of God, "an unselfed love," which is "the prayer that reforms the sinner and heals the sick." This spiritual understanding of God, that "all things were made by him; and without him was not any thing made that was made," and that he "saw every thing that he had made, and, behold, it was very good,"—this understanding does heal the sick, raise the fallen, open deaf ears, lead the blind in paths they knew not of, and lift the scales from their eyes. It does away with war, pestilence, famine, and devastation, and restores love, peace, happiness, and plenty; brings to us the understanding that life is eternal and not capable of being destroyed. Is not this the "much" which is available through the "prayer of a righteous man"?

Jesus said, "When ye pray, believe that ye receive" the things ye desire, "and ye shall have them." He not only preached this doctrine but he practised it. In the presence of seeming death he said, "Father, I thank thee that thou hast heard me," and he raised Lazarus from the dead. Although Daniel knew he was to be cast into a den of lions, he prayed believingly, and later was able to say, "My God hath sent his angel, and hath shut the lions' mouths, that they have not hurt me."

There are numerous instances of men in all the centuries who, by affirming the presence and power of God and expressing an unselfish love for their fellow men, have been delivered from all kinds and conditions of material bondage. It is no wonder that Christian Scientists are grateful to Mrs. Eddy as the Discoverer and Founder of Christian Science, when they remember that she has shown them how to pray in such a manner as to eliminate from their consciousness all fear, doubt, anxiety, sin, disease, and death; how to pray "the effectual fervent prayer of a righteous man," which "availeth much."

[Written for the *Sentinel*]

Compelling Love

BEATRICE CLAYTON

The eagle stirreth up her nest,
To which the frightened fledgling clings;
She drives it from the mother breast
Only that it may find its wings.

Wise Hebrew, Israel's guide and seer,
The wild bird taught to thee this truth:
That Love knows naught of coward fear,
Nor blinded is by timid ruth.

Love bids us soar. The trackless air,
Unbounded, waits our journeyings;
But faint hearts fail,—we cannot dare!—
Love thrusts away the hand which clings.

And we may weep, but we must rise.
Love that compelled our upward flight,
Watches with never slumbering eyes,
Knowing no cloud, abyss, or night,

But only Love, beneath, above,
Encircling space in endless bliss.
Love bids us learn that only Love
Supports and shelters all that is.

Selected Articles

[Judge Clifford P. Smith in *Salem* (Mass.) *News*]

Seeing that the recent lecture at Salem by a Swedenborgian minister on "Christ's Divine Healing Power," of which the *News* published a report, was evidently designed to minimize and discredit the healing work done by Christian Science, I assume that comment by a Christian Scientist may be in order. At the outset I am glad to observe that this lecture, as reported in the *News*, was more moderate toward Christian Science than some of the many other references to the same subject by the same speaker during the last dozen years. I hope that the time is not distant when he will have a more just appreciation of the efforts of those who are endeavoring, and with notable success, to do the healing work which was commanded by Christ Jesus. At present, however, our brother does not know of or does not acknowledge the success which actually has been achieved in the practice of Christian Science; and from the premise that Christian Science healing does not amount to much, he contends that it is not the same healing work as that which was done by Christ Jesus. In short, the reverend gentleman contends that a difference in degree of success proves a difference in kind of healing.

The same argument would impeach the healing work done by the original disciples of Jesus; for they were not always successful. It is to be observed, however, that when a case of their failure was reported to him, he did not disown them for it. What he did was to instruct and encourage them. (See Matthew xvii. 14-21.) If the one whose example was perfect could be so patient with the lack of perfection, would it not be well for the gentleman who lectured at Salem to withhold his cavil at Christian Scientists until he can do better healing work than they are doing?

The test of discipleship furnished by Christ Jesus was one of works, and these included healing. (See Mark xvi. 17, 18; John xiv. 12.) Also his commands, first given to his immediate followers and afterward made universal, included "Heal the sick." (See Matthew x. 5-10; xxviii. 16-20.) Should we not begin to deal with disease as he did until we can do as well as he did? Should we not obey at all until we can obey in full? The entire contention of our censorious brother depends on the answer to these simple questions.

With respect to the degree of success which has been attained in the practice of Christian Science, there is a general lack of information. Senator Works of California recently made a valuable contribution to the public intelligence on this subject. The proof of Christian Science healing which he adduced is now a part of the Congressional Record, in which it can be read by any citizen. In the course of his speech Senator Works read the specific and authentic evidence in fifty-seven cases, involving thirty-six distinct diseases, ten of these cases having been diagnosed as cancer. Whoever wishes to know whether Christian Science healing amounts to much can be assured that it does; and whoever gains an understanding of the Principle and method of Christian Science, as set forth in its authorized literature, is likely to conclude that its practice is applicable to every phase of evil and must be at least a powerful influence for good in the lives of its adherents.

✧

[Brigman C. Odom in *Our Country*, Kansas City, Mo.]

The *Baptist Standard*, published at Dallas, Texas, contained an editorial entitled "Christian Scientists and Healing."

If Jesus did not appreciate and expect expressions of gratitude from those whom he had physically healed, why did he ask the one grateful leper concerning the other nine? Expressions of gratitude are most acceptable praise, and one attending the Wednesday evening services at Christian Science churches will have ample evidence of the gratitude of hundreds who have been saved from sin as well as from disease. Indeed the testimonies invariably express greater gratitude for spiritual regeneration and uplift than for physical healing, although the latter is mentioned as among the promised signs following the practical application of Jesus' teachings. Physical healings in Christian Science are but the stepping-stones to that higher plane from which the light of God's love shines brighter day by day.

"Christian Science is not missionary," says the editor. "It does not try to win the lost, but goes to the churches for its disciples. It does not strive to remove the stumbling-blocks in modern civilization." In answer it may be said that the evangelistic methods of the Christian Science movement differ somewhat from those of other churches, and no effort is made to proselyte. No religious excitement is resorted to in order to obtain a following; no coercion, persuasion, or improper influence of any sort is employed in an endeavor to bring people out of other churches.

The Christian Science message of deliverance is to "the lost," whether in or outside of the churches, to those wearing out years of servitude to disease, sin, and sorrow. These are yearning for surcease, and when incidentally they hear of the healing of some friend, relative, or acquaintance through Christian Science, they seek the remedy. Christian Scientists know that intemperance is one of the greatest evils of modern civilization. In "Miscellaneous Writings" Mrs. Eddy says: "Strong drink is unquestionably an evil, and evil cannot be used temperately: its slightest use is abuse; hence the only temperance is total abstinence" (p. 289). Through the ministration of this Science thousands the world over are being healed of the appetite for liquor and opium, and are being rescued from vicious habits and practices. These individuals become pure, noble men and women, giving their lives and substance to the forwarding of this great work of redemption and regeneration.

This critic states further, "We believe in the personality of God, while Christian Science interprets God as Principle." The use of the word "Principle" as one of several synonyms for God, is employed in the Christian Science text-book for the purpose of making clear to human understanding the nature and attributes of Deity. It is used in the sense of cause, origin—one of the primary meanings given the word "principle" in the best dictionaries. Surely any definition of our creator which reveals Him more intimately to His creation cannot be a misnomer, especially when the definition discloses God's character sufficiently to arouse a faith in Him which heals and saves its possessor.

The editor seems perturbed because the interpretation of the mission of Jesus the Christ in Christian Science is not exactly in accord with scholastic theology. It teaches that "Christ is divine but not Deity," the editor says. The position of Christian Science on this point is based upon the statement of Christ Jesus that he was the Son of God, not God Himself. This statement does not conflict with that other of his sayings: "I and my Father are one." Here oneness of quality is indicated. Mrs. Eddy says, "As a drop of water is one with the ocean, a ray of light one with the sun, even so God and man, Father and son, are one in being" (Science and Health, p. 361).

Christian Science does teach that Christ is "the Way." On page 332 of Science and Health this assertion is made: "The Christ is . . . the Way, the Truth, and the Life." The Christian Science concept of the mission of Jesus the Christ is

Digitized by Google

summarized in the following brief statement: "His mission was to reveal the Science of celestial being, to prove what God is and what He does for man" (Science and Health, p. 26).

The statement that Christian Science does not recognize the Word of God as supreme authority, but takes Science and Health as its authority, is not true. It is disproved by the first tenet of Christian Science, given on page 497 of Science and Health, which reads as follows: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life."

No one who is qualified to speak concerning the question will deny that Christian Scientists are Bible students. Every real Christian Scientist is the owner of a Bible, and he reads and studies it daily. It is true that Christian Scientists value Science and Health, because this book has explained the spiritual meaning of the Bible and has thus opened up its treasures so long hidden from the majority of mankind by a material or literal interpretation. To Christian Scientists, therefore, the Bible is not a compilation of speculations and contradictions, but it has become a present help, a living power, a guide and protection. We heartily assent to the statement of the critic that "no man should add to or take from the Scriptures." The fact that Christian Scientists do not interpret the Bible in all respects as do other denominations cannot be used as a convincing argument that they add to or take from the Scriptures. The true test to be applied as to the right or wrong interpretation of the Bible is that given by Jesus himself when he said, "By their fruits ye shall know them."

✧

[Mrs. David Y. Stokes in *Chester* (Pa.) *Times*]

During an evangelistic service a few weeks ago a speaker made some untrue, unchristian, and ungentlemanly remarks concerning the Leader of the Christian Science religion. I have waited to hear some manly protest against such unchivalrous conduct,—the maligning and holding up to ridicule of one who is not here to speak for herself, whose life needs no defense, for all who came within its loving influence know that Mrs. Eddy lived what she taught. Today there are millions of people in this and other lands who are rejoicing in their freedom from the bondage of sin, sickness, and the fear of death through this knowledge of the law of God which Mrs. Eddy found in the Bible in her greatest need. When all material means had failed, she realized, as the 103d psalm declares, that God healeth all our diseases.

So I wish to voice my sincere gratitude for that loving, courageous woman whose understanding of God has brought to me and others health, harmony, and immortality, for it was courage born of God that enabled her to stand in the face of such great odds. Her character has been assailed; she has been most bitterly persecuted, maligned, and ridiculed; all kinds of false statements have been made about her personally. But her trust was in God, and she knew as Daniel did that God was able to deliver. As the result of her godlike life and teachings the beneficent effects of Christian Science are healing the sick and the sinful; homes that were desolate and unhappy have become happy and prosperous; the hopeless and sorrowing are comforted; those without God and the Bible have been awakened to a sense of a loving heavenly Father, and in their desire to know more of Him and His law have become daily students of the Bible. Now for which of these works shall Christian Science and its Leader be stoned?

For over seventeen years this teaching has met my every need, and each day my heart sings a song of thanksgiving for this demonstrable knowledge that Christian Science gives of God, for we have proven the statements: "Happy is the man that findeth wisdom, and the man that getteth understanding. . . . She is a tree of life to them that lay hold upon her: and happy is every one that retaineth her." Christian Science is the gospel of love, our physician is the great Physician, our medicine is Truth, for, as Jesus says, "ye shall know the truth, and the truth shall make you free." Christian Science teaches us to forgive our enemies, the greatest test of all, and we are learning to do this. So we forgive our brother and all who have ridiculed and made misstatements about Christian Science, for we know that when ignorance and prejudice (for they go hand in hand) give place to brotherly love and charity, God's kingdom will reign, and there will be one shepherd and one fold.

✧

[S. T. Downs in *South Bend* (Ind.) *News-Times*]

The statement by a recent contributor to the *News-Times*, that Christian Science is neither Christian nor scientific, probably voices the critic's opinion, although it is manifestly an opinion based on a very limited investigation and evidences that he has not tested Christian Science teaching for himself. The fact is, Christian Science is Christian because it is based on the words and works of Christ Jesus. It declares him to be the Wayshower, and has no teaching or practice that was not commanded or authorized by the great Teacher as recorded in the New Testament. Christian Science is scientific because it so sets forth the manner in which Christ Jesus performed his works that any sincere seeker may understand and prove it for himself. Witness the fruits of Christian Science in the healing of every disease known to mankind! Right in and about South Bend cases of sin and sickness not only have been healed, but are being healed day after day, and these healings are known to large numbers of people.

In an attempt to prove that Christian Science denies Bible teaching, our brother resorted to the ridiculous practice—sometimes used by those who would disprove at any cost—of comparing passages of Scripture with disconnected sentences, and even parts of sentences, from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Most of these comparisons are too absurd for further notice, but it will probably be well to refer briefly to those dealing with the Christian Science teaching of the unreality of sin, in order that your readers may not be left incorrectly informed. Christian Science teaches that sin is unreal because God did not create it and it is therefore not eternal. Only that which God created is eternal and real. Sin causes sickness, misery, and death, and these effects of sin will disappear in proportion as its true nature is understood and thereby destroyed. There have been thousands of testimonies that Christian Science destroys the love of sin and stimulates a desire to be more godlike. It makes for better and healthier men and women, better and healthier children, and thus contributes effectively to a larger and nobler citizenship among all classes of people.

✧

[Fred. R. Rhodes in *Yorkshire Gazette*, York, England]

The *Yorkshire Gazette* recently contained some references to Christian Science which show that the writer has no conception of what Christian Science really does teach, and therefore the criticisms are calculated to give a false impression. It is only fair to state the truth, and we can then safely leave your readers to draw their own conclusion.

The writer makes the common mistake of coupling Christian Science with "faith-healing, nature healing, higher thought," and so on, and thus falls into the error of thinking it is the human mind which is operating on other human minds in Christian Science treatment. In making the statement that

Digitized by Google

"miracles have been wrought in all ages of the world among people who looked for them and had faith in the magician or healer who professed to work them; thus they were performed not only by divine personages, etc.," it seems quite clear that our critic does not differentiate between the healing work of our Master and that of the "seven sons of one Sceva" as mentioned in Acts.

May it not be possible that the world is at last beginning to recognize that Christian Science is not in any way connected with the human mind, but is the transforming of the body by the renewing of the mind, and so is the healing promised to all those who endeavor to gain that Mind "which was also in Christ Jesus"? In nearly every city and town can be found proofs of the power of God, as taught in Christian Science, to heal the sick and uplift the sinner; and it would seem a pity that people should try to belittle its beneficent efforts simply because they have never troubled to investigate properly its teachings. Truth can never be discerned by a prejudiced mind.

As Mrs. Eddy tells us in "Science and Health with Key to the Scriptures," "Truth, independent of doctrines and time-honored systems, knocks at the portal of humanity" (Pref., p. vii), and humanity having become tired of other systems that do not bring any lasting health or permanent peace, are turning to the arms of God, divine Love, and finding that if they will bring their troubles of any and every kind, He will indeed prepare a table in the presence of the enemy. Our Master said, "By their fruits ye shall know them." Christian Science asks for no other judgment and can be affected by no other.

✧

[Robert S. Ross in *Buffalo (N. Y.) Express*]

When Peter questioned John's ability to work out his salvation in the right way, Jesus rebuked Peter, saying, "What is that to thee? follow thou me." In other words, the Master gave Peter to understand that if he was going to be a consistent and scientific Christian he would have to stop meddling with other people's affairs and devote himself to the more effective and profitable task of making Christianity the governing influence in his own affairs.

Peter's case was not an isolated one. It stands out merely as a striking example of that propensity of the human mind which busies itself more in trying to correct the faults of others than it does in trying to correct its own. A more recent illustration is the case of a writer whose sweeping denunciations of Christian Science and of all other religious systems but his own have from time to time appeared in your columns, including a recent issue.

It would be interesting, however, to learn just what our critic believes to be the true worship of God. Surely he will admit that it is more than belief in a mere human doctrine or the recital of a man-made creed. Inasmuch as Jesus was the Founder of Christianity, it is safe to assume that he best knew what constituted true worship. The New Testament contains the only available authentic record of Jesus' words and works, and it is there that we must look for our information. What do we find? Among other things the following: "He that believeth on me, the works that I do shall he do also," and "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

The Christianity of Jesus was a religion of works, not merely one of words; therefore the religious system which enables its followers to conform closest to the standard of Christian practice established for all time by Jesus must logically and indisputably come nearest to the Christ-ideal. On page 31 of Science and Health Mrs. Eddy writes of Jesus: "First in the list of Christian duties, he taught his followers the healing power of Truth and Love. He attached no importance to dead ceremonies. It is the living Christ, the practical Truth, which makes Jesus 'the resurrection and the life' to all who follow him in deed." The Christian Science of today, like the Christian Science of the first century, makes urgent demands upon Christendom for proofs rather than mere professions of discipleship. Christian Science says with the apostle James, "Faith without works is dead."

✧

[Frances Porter in *The Dundalk (Ireland) Herald*]

I am glad to find Mr. —— recognizing that Christian Science is a doctrine of Life—it is indeed the Science of Life, the Science of living as God means us to live. He seems to think that because Christian Scientists have not as yet been able to prove the more advanced problems of this Science it is therefore unreasonable; but I feel sure a little thought on his part will enable him to see that this is not so. Let us take a more commonly accepted science, the science of mathematics. Is this science proved unreasonable because some of its students have not yet mastered its rules sufficiently to work out the higher problems? Students of mathematics are willing to acknowledge that though they have not yet mastered the whole science, the proofs they have already had of its truth convinces them of the whole, and they are willing to accept from those who have been able to prove it the assurance that all may avail themselves of the rule and do likewise.

So it is with Christian Science. If your correspondent will study Christian Science with an open mind and apply its rules to his daily life, he can get the results for himself. The first and simplest ones will be better health, peace of mind, and more unselfish life motives; but let him not make the mistake of thinking he now knows all that Christian Science is. The proof that one understands it is that one is able to demonstrate it.

With regard to raising the dead, Christian Scientists are grateful that Jesus, the great Exemplar, did this and proved it part of the Father's will he came to teach. Enoch was translated, and also Elijah, and Christian Scientists know that if they are faithful in little things they will most assuredly be made rulers over many. With regard to our critic's request to let him have the doctrine of a full salvation, I will refer him to the Scriptures. He is mistaken when he says Christian Science repudiates any of the Bible teachings. It accepts them all.

[Written for the *Sentinel*]

Truth that Makes Free

CHARLES C. SANDELIN

WHAT peace and gladness they attain
Who perfect understanding gain,
And cast from thought the false, but hold
The facts of being that unfold!
They journey no uncertain way—
Love is their guide and Truth their stay.

Awake, ye loved ones that are sad,
And know the truth that maketh glad!
'Tis mist of erring sense conceals
The hallowed blessings light reveals.
Fear not the threat of evil's power,
For Love doth guard thee every hour!

Editorial

Medical Encroachment

WITHIN the past few years propaganda in behalf of enforced medical inspection and medical control of the people has assumed such proportions and developed such arrogant disregard of personal rights, as to call forth protest from even those who believe in medical practice. A case in point is the following editorial in the *San Francisco Chronicle*:—

Zeal for the protection of the public health is spreading at a prodigious rate, and people are astonished and shocked to learn that go where they may and do what they may they cannot escape the risk of deadly disease. The friend's hand which you so cordially shake when you meet him may just have left a strap of an overcrowded street-car, from which it conveys to you the germs of all known communicable diseases. There is no better means of assuring a universal commingling than the support of a street-car strap hanger.

Apparently, the only real assurance against contagion is the permanent isolation of everybody. Or, as an alternative measure, the laws may require that a fumigating closet be constructed in each building, wherein everybody shall fumigate himself before meeting anybody else, the doctors only being allowed to roam at large.

A good many are considering whether it is all worth while. Why should one wish to live if in order to do so one must omit all that makes life worth living? Some are coming to think that the fear of disease will do more to shorten life than the diseases themselves.

For years the medical profession has protested against the minute detailing of symptoms in patent medicine advertisements as calculated to induce disease in healthy persons who read them—if healthy persons do read them. But never in the worst days of soul-harrowing medical advertisements was there so much to terrify as in the common every-day reports of meetings of boards of health and medical conventions.

It would seem that the more one knows the more miserable he must be.

This so-called health propaganda has used the fear of disease as its chief weapon, and has done much harm by instilling this fear into the minds of people who have been taught to accept as final and not to be questioned the verdict of physicians, either individually or collectively. We do not mean by this that all physicians have indulged in this practice of frightening the people, but their spokesmen, whether self-appointed or not, seem to have given this impression with the sanction and the approval of both local and national medical societies. The wrong that is being done in this way is more far-reaching than is generally understood, and it is time that something more than mere sarcastic protest on the part of a few newspapers should be depended upon to turn back the tide of medical encroachment.

In the mean time the public should realize that enforced medical inspection has passed to such a stage that it is now being followed by a demand for enforced medical treatment. In view of this threatened abrogation of individual rights, it seems pertinent to inquire into the supposed infallibility of medical practice. When we do this we find that leading physicians are admitting that practically half of hospital diagnoses are wrong, that many diseases are considered incurable by any means known to medical practice, and that—occasionally at least—after medicine has failed even to relieve these so-called "incurable" diseases the patients have, despite medical pronouncement, regained normal health.

Certainly such facts as these do not justify the public in putting its rights and its liberties so unreservedly in the hands of the medical profession as is demanded by its spokesmen, especially since the history of the practice of medicine is very largely that of loudly heralded certainties which within a very few years, and sometimes within a few months, have proved to be nothing more than unsuccessful experiments. The practice of medicine, and even the professional theories in relation to the cause and nature of disease, are not the same today as they were but a few years ago, and unless the history of medical practice in the future differs radically from what it has been in the past, the practice and theories of today will soon be discarded for still other beliefs and practices.

In the mean time there has been a revival of Christian healing through Christian Science, which has proved that there is a scientific means of overcoming disease without the use of drugs or other material remedies. Thousands of persons are being healed by this system who would be denied the right of choice should enforced medical treatment become the law. If this is permitted, who will venture to say how long it will be until compulsory conformity to some particular form of religion will be again revived!

ARCHIBALD MCLELLAN.

The Heart of Things

No one can think of the unprofitableness of most of the things which consume humanity's attention, and at the same time have some sense of the seriousness of the problems which we are called upon to solve in this life, without feeling that waste of time and opportunity assumes, with the many, the semblance of a crime. There is constant movement but no progress, much banqueting but no satisfaction of hunger, a great deal of talk but nothing worth while said.

The unspeakably lamentable world-conditions of today witness in an overwhelming way to the manifest weakness of the hold of Christian men and nations upon those ideals of integrity, unselfishness, and brotherhood which they profess to know. Superficiality may be said to be the all-inclusive sin of modern civilization. It has little moral assertion, its piety has succumbed to its passion; in a word, it has no anchorage in Truth and Love. This is the most discouraging fact of the hour,—that the boasted civilization of Christian believers and races should have proved to be so like a house that is built upon the sand. Past history and present international relations alike give painful proof that real progress cannot be achieved apart from a practical embrace of "the deep things of God." There is nothing more pitifully incongruous than a mature Christian man or nation which is a spiritual dwarf. Such a state speaks indisputably for the rule of those "pasteboard passions and desires" which, as Lowell has said, are

> Content . . . for the guerdon of their toil,
> With the cast mantle truth has left behind her.

This is the inevitable outcome of ages of shallow living, of the unthinking drift of superficial intellectualism, no less than of listless ignorance.

Every great redemptive movement has been inaugurated by somebody's adherence to a deep spiritual insight, his hold upon reality. Luther's magnificent daring when summoned to face his enemies at Worms, and kindred heroisms of other non-conformists, have witnessed to the simple fact that their feet were planted upon eternal verities, that they had become conscious of an absolutely solid support. Christ Jesus' immovability was no less impressive than his gentleness. So too the distinctive feature of his immediate disciples was the fact that they could say, "I know," and prove it. This explains their poise and their power, and these virtues, as men may well reflect, are not builded on "other foundation" than that deep-laid spiritual truth which St. Paul named "the mystery of godliness." So too the great vitalizing significance of the Reformation and of Wesleyanism was measured in the phenomena attending the awakening of their leaders to the fundamental facts of spiritual being and their consequent escape from the thrall of sense beliefs.

Of all these superficialities of sense, none is so blighting in its effects as that of identification of substance with matter and of individuality with physical personality. This is the

Digitized by Google

bête noire of that well-nigh universal belief which "blinded the minds" of all Israel, but which is "done away in Christ." In marked contrast with general religious thought Christian Science fixes attention, first, last, and all the time, upon those vital truths of being, the nature of God and of His kingdom and rule, of which Mrs. Eddy speaks with such inspired conviction and dignity on page 339 of Science and Health: "The basis of all health, sinlessness, and immortality is the great fact that God is the only Mind; and this Mind must be not merely believed, but it must be understood."

This is the impelling nature of the appeal of Christian Science to aspiring thought. It has gotten at the heart of things. It has uncovered the enslaving fallacies of mere surface-seeing sense and so insistently fixed the gaze on "realities supernal" that its students can but "rise to the spiritual consciousness of being" (Science and Health, p. 261). Humanity's ailments are fully accounted for by the fact that the crudities of belief have supplanted the demonstrable understanding of God, and in reenthroning the scientific apprehension of divine Truth, Christian Science reveals the greatest possible good to men.

JOHN B. WILLIS.

"Christ in you"

IT doubtless called for great daring on the part of St. Paul to tell the Colossians that the "mystery" which had been hidden from mankind throughout the ages was made known in these words: "Christ in you, the hope of glory." In the same chapter where these words occur the apostle urges his readers to cling to this hope, and he declares the purpose of his ministry, with its toils and sacrifices, to be "that we may present every man perfect in Christ Jesus." He then makes it clear that it is not mortal man who is to attain to this perfection. On the contrary, he says that this mortal concept is "dead" and that "the old man with his deeds" must be put off, but he at the same time declares that Christ "is our life." Here it should be noted that it is not enough to put off the anger, malice, and filthy communications, which are all products of the false mortal concept, but the man of the flesh must give place to "the new man, which is renewed in knowledge after the image of him that created him."

To students of Christian Science all this is self-evident truth, but many of them can remember that they were startled if not shocked when they were first told that the sick are healed in Christian Science by the same power which Jesus of Nazareth exercised, and much spiritual illumination was needed before they were ready to accept Mrs. Eddy's statements on page 495 of Science and Health: "God will heal the sick through man, whenever man is governed by God. Truth casts out error now as surely as it did nineteen centuries ago." The second of these statements explains the first, but it is usually only after some great need is met, some severe suffering overcome, that the truth thus expressed is gratefully accepted. It does, however, seem strange that the Christian world should so long have been practically without "the hope of the gospel,"—"the hope of glory" urged upon the Colossians by St. Paul.

"Christ in you"! What vistas of spiritual possibilities are opened up in these words, and alas that these possibilities should ever be denied by any one who professed to be a follower of the Master, he who excluded none that accepted his teachings from the far-reaching provision, "The works that I do shall he do also; and greater works than these." With its usual perversity and subtlety the carnal mind has argued that these words had reference only to the time when they were spoken. Did not the Master himself say, however, that the truth they embody should be taught to "all nations," and are we not told that Christ Jesus is "the same yesterday, and today, and forever"?

Many good people unthinkingly accept this declaration as applying to God alone, and no one would think of denying that God must be the same in all ages. They fail to remember that this passage does not refer to God, but to "Jesus Christ." They also stop short of the inevitable application of the truth that the Christ-power is the same in every age. Were it otherwise, the healing work of the Master, his demonstrations of spiritual law, would have been without witnesses after his immediate disciples had passed from this plane of experience, and the "hope of glory" voiced by St. Paul would have ceased to light the path of the wayfarer. Furthermore, the inspired word which announces "Christ in you" would be entirely shorn of its significance.

Thanks to Christian Science, however, there is now no danger of this, for the witnesses are multiplying daily, those who have found for themselves beyond all question that the Christ-power to heal is "the same yesterday, and today, and forever." The Christ-presence ever with us is felt when one turns away from materiality and reaches out for divine aid, the first step being to acknowledge, even if with faint faith, the great truth thus stated. Then comes healing, sometimes with surprising swiftness, and this is followed by the spiritualizing process, the goal of which is "every man perfect in Christ Jesus," doing the works that he did and commanded his followers to do in "the full assurance of understanding."

ANNIE M. KNOTT.

War Relief Fund

THAT the money contributed by the Christian Scientists of America for the relief of those who are temporarily in need by reason of the war in Europe, has been wisely disbursed by the various committees to whom this labor of love was entrusted, is evidenced by the many letters from recipients, brief extracts from a few of them being given below.

"I cannot sufficiently express my gratitude to the Christian Scientists of America for the help so freely and lovingly rendered to me. It is a most beautiful proof of the real brotherhood of all mankind, 'children of the one Father.'"

"Need I say how deeply grateful I am to you and to all the Christian Scientists of America who have contributed to your fund, for the cheque received this morning. It has come just at the moment when most needed, a signal and timely manifestation that God is a very present help in our times of need."

"It is all so wonderful that even today with more time to think I can hardly realize that it is true. The joy and gladness, the encouragement, we greatly rejoice at, because it means so much to us to have learned one of the greatest lessons we have had to put into practice, to prove that God does supply all our need."

"One does learn in Science that all experience means progress, and we feel honestly glad of some of the seeming cloudy days, for we have learned in these months so much of Love's infinite resources. We have been working rather specially to know that 'Love is reflected in love' (Science and Health, p. 17), and here is the beautiful manifestation. If it is possible to convey to the givers our gratitude, I do feel I would like them to know that it is not so much the material supply but the proving of the truth that has given us such happiness."

"I am afraid words of mine can little express my gratitude to God, and to the dear brothers and sisters of The Mother Church in America, who have so lovingly and practically thought of us in our misfortunes through the war.

Digitized by Google

May I ask you to convey to them my intense gratitude for their timely help. It is indeed glorious to know that our heavenly Father is always mindful of His children, and that we need have no fear, for He is always our refuge from the storm and to whom we know we can come and ask for help and surely it is given."

"May I express my gratitude for the splendid gift of supply you have sent to my nephew. He has written me that 'it seems too wonderful to be true that he has such a gift from such a wonderful organization as the Christian Science church seems to be.' So I am feeling happy that a seed from the source of Love is planted where it will surely bring forth rich fruit."

"I am indeed deeply grateful for your cheque to hand this morning. If I could only get a grip on the essentials of your Science I feel that it would not be long before I should be in a position myself to help you with your good work. My children have much to thank you for."

"My most grateful thanks for the cheque. I do indeed appreciate the 'loving thought' that brings it. What a burden it lifts away from me and what a joy it will be to take it back to my church as soon as we can, so that some one else may share in this great gift. Perhaps you can realize how specially grateful I feel, because as you know 'tis impossible for people in our position to get any help and one has to endure quietly. The way in which it has been given has touched me greatly."

"It is almost impossible to describe the sense of God's nearness which I have experienced of late. While everything around me seemed dark, and I was on the verge of despair, I was led to see a Christian Scientist. I was shown much love and kindness, as well as sympathy and appreciation with regard to my condition, and I have now learned to recognize God in all His magnitude, and know that He will lead and guide me. I rely firmly on His infinite mercy, knowing that He forsaketh not."

"I beg to express my deepest appreciation for your benevolent and liberal assistance. The way in which it was given, far from leaving a feeling of oppression, called forth a sense of innermost satisfaction. One cannot help feeling—Here is true charity! What particularly impressed me was the fact that you seem to draw no line with regard to religion. Whenever on former occasions I would apply somewhere for help, I would at once be told to go to the Jewish community. The assistance from the war fund is very small, and seems all the more so in these days when the cost of living is high. Through your liberal help it has become possible for me to breathe more freely and to buy necessities."

"I felt that in some way, in a manner yet unknown to me, help would come. And, behold, there it came from America, and in so generous and noble a way, extended with such kindness of heart! It seems such an unusual thing to know that people whom I have never seen, and in all probability will never see, lovingly looked across the water and through love built a bridge so strong that no war implement may destroy it. These people have thought of us and of our need; yea, they have acted!"

"On the strength of your kind recommendation I was given relief, and would express to the donors my sincerest thanks. It is not easy for a woman of sixty-three to earn her living by manual labor in these hard times, but God has helped me so far and this is a great comfort to me. He does not leave him who trusts in His love."

"I am deeply grateful for the help which I have received quite unexpectedly. I see from this that the way of Christian Science is to help one in need and difficulties, for I thought I was lost. Then I learned at the right moment to know the love of God. Again I am most thankful for Christian Science, and shall strive to learn more about it, for the money indeed arrived just at the right moment."

From the chairman of one of the relief committees comes the following:—

"We are in possession of about five hundred letters, which all express in warm words the gratitude felt for help received through the fund of The Mother Church during these hard times. From the letters sent you will see what a healing influence this work had on those who already knew of Christian Science and what a surprise it was to those who had never heard of it and who, encouraged by the help received, took up the study. I am firmly convinced that the blessing of this work will be felt long after the war is over."

The Treasurer of the War Relief Fund reports that to date $155,901.69 has been contributed for disbursement. Those specially interested in relieving the Armenians who recently have suffered so terribly, will be glad to know that they are included among those that are now receiving assistance. Further contributions are needed, and will be promptly forwarded if sent to Adam H. Dickey, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Lectures

Boston, Mass.

George Shaw Cook on Monday evening [Oct. 11] delivered a lecture entitled "God is Good," under the auspices of The Mother Church, The First Church of Christ, Scientist, in the church edifice at Falmouth, Norway, and St. Paul Streets. H. Cornell Wilson, first reader, in introducing him said:—

As never before, mankind is becoming aware that the human mind engenders all strife, and is responsible as well for sin, sickness, and disease; but the source of relief from these self-imposed burdens is not so generally realized. To those, however, who have turned to Christian Science, the way of freedom has become an assured reality. In Christian Science it is found that the divine Mind, or God, is man's true and final recourse. Divine Mind is our sure means of deliverance; and through this Mind we gain dominion over the false human mind which has brought about the moral and physical undoing of humanity.

The world has great solace in the fact that thousands after thousands have already sought and found in Christian Science that effectual release from sin, sickness, and disease which is felt to be so great a need; demonstrating also that this divine help "is no respecter of persons," but is for all. The earnest inquiry for information about Christian Science, felt everywhere, is being answered here tonight by our lecturer, who is able to present clearly what Christian Science can do and is doing for those who seek it.—*The Christian Science Monitor.*

Lectures to be Delivered

ARKANSAS—Hot Springs: Bliss Knapp, Auditorium, 8 p.m., Nov. 2.

CALIFORNIA—Hermosa Beach: Charles I. Ohrenstein, Bank Building, Pier and Hermosa Avenues, 8 p.m., Oct. 23.

CANADA—Toronto, Ontario (First Church): Bliss Knapp, Odd Fellows Hall, Broadview Avenue, near Queen, 8 p.m., Oct. 25; Park Theater, Lansdowne Avenue, corner Bloor Street, 8 p.m., Oct. 26.

CHANNEL ISLANDS—Guernsey: Col. William E. Fell, St. George's Hall, 8 p.m., Nov. 2.

COLORADO—Boulder: William D. McCrackan, Curran Opera House, 3 p.m., Oct. 31.

Digitized by Google

Glenwood Springs (Christian Science Society): William D. McCrackan, I. O. O. F. Hall, 8 p.m., Nov. 4.
Longmont: William D. McCrackan, Dickens Opera House, 8 p.m., Nov. 2.
Victor: William D. McCrackan, Church Edifice, 117 South Fourth Street, 8 p.m., Nov. 1.
ENGLAND—Bolton, Lancashire: John W. Doorly, Grand Theater, Churchgate, 3:30 p.m., Nov. 14.
Brighton: Clarence W. Chadwick, Hove Town Hall, 3:30 p.m., Nov. 12.
Bristol: Clarence W. Chadwick, Victoria Rooms, Clifton, 3 p.m., Nov. 14, and 8 p.m., Nov. 15.
London (First Church): John W. Doorly, Bermondsey, Town Hall, 8 p.m., Nov. 8.
Rochdale, Lancashire: Clarence W. Chadwick, Church Edifice, Castlemere Street, 7:30 p.m., Nov. 16, and 3:30 p.m., Nov. 17.
ILLINOIS—Chicago (Third Church): Dr. Francis J. Fluno, Church Edifice, Washington Boulevard and Leavitt Street, 8 p.m., Nov. 4 and 5.
Clinton: George Shaw Cook, K. of P. Hall, East Washington Street, 3:15 p.m., Oct. 31.
Dixon: Willis F. Gross, People's Church, corner Hennipen Avenue and Second Street, 8:15 p.m., Nov. 5.
Oak Park: George Shaw Cook, Yale Theater, Madison Street and Fifth Avenue, Maywood, 8 p.m., Oct. 29, and Masonic Temple, Oak Park Avenue and Lake Street, 8 p.m., Oct. 30.
Riverside: Frank Bell, Auditorium, Berwyn (Ill.) Club House, 8:20 p.m., Oct. 26.
INDIANA—Fort Wayne: Prof. Hermann S. Hering, Majestic Theater, 8:15 p.m., Nov. 4.
IOWA—Albia: Jacob S. Shield, King's Opera House, 8 p.m., Nov. 5.
Burlington: Jacob S. Shield, Grand Opera House, 8 p.m., Nov. 4.
Des Moines: Jacob S. Shield, Coliseum, 3:30 p.m., Oct. 31.
Iowa City: Jacob S. Shield, Church Rooms, 211½ East Iowa Avenue, 8 p.m., Nov. 1.
Oskaloosa: Jacob S. Shield, Church Edifice, 8 p.m., Nov. 2.
IRELAND—Belfast: John W. Doorly, Ulster Hall, 8 p.m., Nov. 16.
KANSAS—Atchison: Bicknell Young, Church Edifice, 8 p.m., Oct. 31.
Fredonia: Bicknell Young, High School Auditorium, 8 p.m., Nov. 2.
Galena: Bicknell Young, Electric Theater, 8:15 p.m., Nov. 4.
Leavenworth: Bicknell Young, Church Edifice, corner Sixth and Spruce Streets, 8 p.m., Nov. 1.
Topeka (First Church): Bicknell Young, Grand Opera House, 3 p.m., Oct. 31.
LOUISIANA—Shreveport: Bliss Knapp, City Hall Auditorium, 8 p.m., Nov. 4.
MAINE—Calais: Dr. Francis J. Fluno, Church, Germain Street, Oct. 26.
Rockland: Frank Bell, Temple Hall, Main Street, 8 p.m., Nov. 2.
MASSACHUSETTS—Boston (Second Church): Frank Bell, Whiton Hall, Centre Street, Dorchester, 8 p.m., Nov. 4; Fauntleroy Hall, Wenonah Street, Roxbury, 8 p.m., Nov. 5.
Brockton: William R. Rathvon, City Theater, 4 p.m., Oct. 31.
Charlestown (auspices The Mother Church): Prof. Hermann S. Hering, State Prison, 9 a.m., Oct. 31.
Concord: William R. Rathvon, Church Edifice, Monument Square, 8 p.m., Nov. 4.
Franklin: Frank Bell, I. O. O. F. Hall, 7:45 p.m., Nov. 1.
Lowell: Dr. Francis J. Fluno, Colonial Hall, Palmer Street, 3 p.m., Oct. 31.
Malden: Prof. Hermann S. Hering, Ball Room, Auditorium Building, Pleasant Street, 8 p.m., Nov. 2.
Methuen (auspices Lawrence Church): Dr. Francis J. Fluno, Nevin's Memorial Hall, 8 p.m., Nov. 1.
Newton: Prof. Hermann S. Hering, Players Hall, Washington Street, West Newton, 3:30 p.m., Oct. 31.
NEBRASKA—Omaha (Second Church): William D. McCrackan, The Auditorium, 8 p.m., Oct. 28.
MICHIGAN—Alpena: Willis F. Gross, Temple Theater, 8 p.m., Nov. 4.
Ann Arbor: Willis F. Gross, Armory, 8 p.m., Oct. 29.
Detroit (Second Church): Willis F. Gross, Arcadia Hall, Woodward Avenue and Stimson Place, 3 p.m., Oct. 31.
MISSOURI—Columbia: Prof. Hermann S. Hering, Columbia Opera House, 8 p.m., Nov. 5.
Joplin (First Church): Bicknell Young, Church Edifice, Sixteenth and Wall Streets, 8 p.m., Nov. 5.
Kansas City (First Church): Bicknell Young, Church Edifice, Forest Avenue and Ninth Street, 8 p.m., Oct. 30.
St. Louis (joint lecture): Bliss Knapp, Odeon, Grand and Finney Avenues, 3 p.m., Oct. 31.
NEW YORK—New York (Fourth Church): William R. Rathvon, Church Edifice, 178th Street and Ft. Washington Avenue, 8 p.m., Nov. 1 and 2.
Rochester: Charles I. Ohrenstein, Temple Theater, 3:30 p.m., Oct. 31.
White Plains (First Church): Hon. Clarence A. Buskirk, Newell's Theater, 3:30 p.m., Oct. 24.
NORTH CAROLINA—Asheville: Hon. Clarence A. Buskirk, Majestic Theater, 3:30 p.m., Oct. 31.
OHIO—Cleveland and Lakewood (community lectures), Charles I. Ohrenstein:
Cleveland, Fifth Church Edifice, Franklin Avenue and West Fifty-eighth Street, 8 p.m., Nov. 1 and 2; Third Church Edifice, West Twenty-fifth Street and Mapledale Avenue, 8 p.m., Nov. 4 and 5.
Lakewood, First Church Edifice, Detroit Avenue at Arthur Avenue, 8 p.m., Nov. 6.
PENNSYLVANIA—Harrisburg: Prof. Hermann S. Hering, Orpheum Theater, 8:15 p.m., Nov. 1.
Philadelphia (Fourth Church): Frank Bell, Nixon Theater, Fifty-second Street below Market Street, West Philadelphia, 3:30 p.m., Oct. 31.
SCOTLAND—Edinburgh: Clarence W. Chadwick, Synod Hall, 8 p.m., Nov. 9.
SOUTH DAKOTA—Brookings: Clarence C. Eaton, Opera House, 8:15 p.m., Nov. 4.
TENNESSEE—Knoxville: Hon. Clarence A. Buskirk, Church Edifice, 531 West Fifth Avenue, 8 p.m., Nov. 4.
TEXAS—Texarkana: Bliss Knapp, Congregational Church, 8 p.m., Nov. 5.

Testimonies of Healing

In April, 1906, the greatest trouble and the greatest blessing came into my life. As I was making an Easter dress for one of my little girls, word was brought me that my husband, who had left me that morning well and happy, had met with a fatal accident. The news brought a host of kind-hearted people, anxious to comfort me, but all they could say was that it was God's will and I must be resigned. I however vigorously denied that God had anything to do with it, saying that if I believed such a thing I could never pray again.

Among those who came were only two who did not tell me that God had done this thing. I noticed it at the time and was thankful for it. Later, one of these people came to see me, and I asked her a question. I had heard her say several times to herself, as she was standing by the bier, "There is no death." So I said to her, "Why did you keep on saying 'There is no death'? Surely you could see that he was dead." For answer she put a book into my hands, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and it was then that the greatest blessing came into my life. Long after others had ceased to think about my sorrow, these two still came; the husband, though a very busy man, giving me help in straightening out my affairs; the wife cheering and comforting me. In the apostle's words, "Pure religion and undefiled before God . . . is this, To visit the fatherless and widows in their affliction, and to keep himself unspotted from the world."

I wanted to know more of a religion that could make people so kind, so I sat up half the night reading the book which had been handed to me. The first thing which impressed me was that it was written in beautiful English, and on going back several times and rereading the same chapter, a small ray of understanding began to filter into my consciousness. "Why, God does not send trouble," I exclaimed; "that is just what I have been holding on to all these years." The next Sunday I went to the Christian Science church, and have been attending it ever since. That was eight years ago, and although my growth has been slow, still I have been enabled to overcome seemingly insurmountable difficulties. There has been much seeming opposition to meet, but as I come into a clearer knowledge of the truth through the study of our text-book, I am learning that there is in reality nothing to meet but God's love.

About four months after taking up the study of Christian Science, being greatly harassed by those who were antagonistic to it, I began to suffer from depression, wondering if I was not running after a shadow and turning all my relatives against me for nothing. Then the wish kept coming to me that I might see for myself some healing work. The test, a fiery one, came suddenly one day when I was feeling very happy and quite confident. In the afternoon my second child, a girl of thirteen, had been using a poisonous acid for cleaning, and just before the children's bedtime I was suddenly startled by an agonized scream from my youngest child, who came running toward me. It is not possible to describe the fear that clutched at my heart. She was spitting, and gasped out "I am dying." She told me between her screams that she had drunk some stuff out of a bottle, which she thought was lemonade.

In the few seconds that elapsed, I could see the big headlines in the paper if the child died without a doctor's care, and one lived next door. I had to make the choice between God and man and do it quickly. Then into my consciousness came the "still small voice," which whispered, "If they drink any deadly thing, it shall not hurt them." I turned to the telephone and called up the dear friend who had brought the truth to me, telling her to come quickly for my little girl had taken poison. The answer was, "Nothing can harm God's child." Immediately the screaming stopped and a feeling that all was well came over me. In ten minutes the practitioner arrived, and taking the child in her arms went into the dining-room and closed the door. In about an hour the door opened, and she beckoned to me. The little one was lying on the lounge sound asleep. That night I went to bed with a sense of protection never before experienced.

Early the next morning I went into the room where the child slept with her sister, and asked how she was. "I'm all right," came the happy answer. Her tongue and lips never looked rosier. On turning to her sister I noticed that her lips were burnt, and when asked what was the matter, she said she had put some of the poison to her lips. The child who had drunk of it and received treatment in Christian Science was not marked. The other had simply put some to her lips and it had taken the skin off. I draw attention to this fact, because several people have said it was not possible that a child could drink this acid and live. I had been desiring a proof and I surely had it. I am grateful every day for the experience, as it has planted my feet firmly on the rock of Truth.

I have passed through many trials since then and Christian Science has helped me every time. Although the sense of limitation, which has been my hardest problem, is not entirely met, I nevertheless have had so many proofs of God's loving care that I can never fully express my gratitude to our revered Leader and to the dear friends who have stood by me and helped me.—C. Kate Beacom, Brooklyn, N. Y.

[Translated from the German]

After a long period of waiting I feel that I must testify to the blessings received through Christian Science. In 1908 I became afflicted with abdominal complaint in a very severe form, and upon the advice of a well-known physician for women's diseases submitted to an operation. I anticipated a favorable result and so had been looking forward with great expectations, but the outcome proved disappointing, for not long afterward the old condition set in and grew worse with every day, so that I was unable to walk about without assistance. I had to stay in bed almost constantly, and my relatives and myself believed that the end was near. In my great distress I asked my husband to call in our physician, but all the latter said was: "What do you want me for, my dear woman? There is nothing that I can do in a case like yours."

During these hours of despair a Christian Science practitioner came and talked to me, and she also brought me several copies of the *Herold*. Being incapable of doing any kind of work, I read them all day, and soon realized that I had found what I had been seeking. I have come to see that divine Love is an ever present help in time of trouble, and have had experiences to prove it. I saw that Truth is powerful above all else, and as I grew in the understanding of things spiritual I also realized that our "strength is made perfect in weakness." I began to clear my home of all the drugs which I had been using, with the clear recognition that they could afford me no help. After about two months' treatment in Christian Science I was able to attend to my various duties. About two and a half years ago I gave birth to a baby, and it is now a strong, healthy child. I enjoy good health, such as I hardly ever knew before in my life, and this beautiful experience of the efficacy of Christian Science induces me to write this testimony.

My daughter contracted blood-poisoning in her arm in

Digitized by Google

1913 through the sting of a fly, but the arm, which appeared to be swollen and discolored, presented a normal condition within a short time after I applied to a Christian Science practitioner. When my little boy was taken ill with measles and whooping-cough, Christian Science treatment was secured, with the result that the fever left him immediately, and three days later there was no trace of either measles or cough. My daughter, sixteen years old, became severely afflicted with rheumatism, all her joints being badly swollen; but after a short period of Christian Science treatment she was able to leave her bed, and is now in good health.

I am deeply thankful for the benefits bestowed upon us by our heavenly Father, and my desire is that I may be worthy to be called a Christian Scientist. I am grateful also to Mrs. Eddy, and entertain great love toward her for the blessed work which she has achieved in behalf of humanity.

FRAU MINNA KOCH, Bad Sachsa a.H., Germany.

✧

"And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." Christian Science proved to me the truth of this Scripture four years ago, when my daughter, then ten years old, was healed of what is known as St. Vitus' dance. She came home from school seemingly all right, but when she started to work out her arithmetic problems she could not hold the pencil. That was Wednesday evening, and I left her with her father and went to the testimony meeting. On my return she had no use of her limbs and could not speak. To look at the body there was no manifestation of life, and I had to look away from matter to "the imperishable things of Spirit" (Science and Health, p. 21).

Fear came in through my husband, and he called a physician. After examining her, the doctor said we were doing more than any one else could do, but he would like to come back in three days, and he did so. She did not take any medicine, but had Christian Science treatment. At times when it would seem that she could not live, I would declare the truth night and day, that flesh cannot be a veil to hide life, nor take life, for Life is God and God is man's Life. Then as she began to get better, she studied "Unity of Good" by our Leader and went over the Lesson-Sermons with me, till all was renewed and she was healed. She was taken ill in February and was out of school until the following term, when she reentered and went right along with her class. This is only one proof of the allness of God, good. I am filled with thanksgiving for this truth that leads man from sense to Soul.—EFFA L. MURPHY, Uniontown, Pa.

I was very frequently at the home of Mrs. Murphy during the illness of her daughter, and can verify every statement she has made. This demonstration has proven to me what Christian Science can do for all mankind through the realization of the allness of God.—ANNE MCFADDEN.

✧

It has been several years since Christian Science came into our home, and during this time we have had some beautiful healings. I suffered from kidney and bladder trouble, nervousness, female trouble, and neuralgia of years' standing which the doctors could not relieve. All hope of relief from medicine had been given up, but I was healed in one month after coming into Christian Science, through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy. My teeth were very sensitive and ulcerated at times, so that I would suffer for weeks; but they no longer give me any trouble.

Christian Science has brought peace and harmony into our home. My husband has been healed of the tobacco habit and a quick temper, and the children depend on God for help in every ailment, and for aid in their school work. The physical healing, however, is as nothing compared with the spiritual uplift and the fact that God's protecting care is always with us; also that the family can all study together. I am indeed grateful that Christian Science came into our home while my children were still young enough to attend the Sunday school. I am also grateful for the Christian Science literature, and that a channel was found for the revelation of this great truth to all mankind. My earnest desire is that each and every one of us may turn to God for help at all times.—FRANCES FINK, Ontario, Cal.

✧

Like many others I have great reason to be thankful for the blessings which Christian Science has brought into my life, and a deep sense of gratitude impels me to testify of my healing. I had worn glasses constantly for three years, not being able to read or do anything without them, but by constant study of the Bible and Science and Health, and by applying the truth to the best of my understanding, I was able to lay them aside. For this healing and many other blessings I am indeed thankful to God, and grateful to Mrs. Eddy for revealing this living truth to us. My highest desire is so to live that my life may attest my worthiness to be called a Christian Scientist.

MRS. A. FRITH, Christchurch, New Zealand.

✧

Christian Science came into my life about a year ago, and since then has wrought such a radical change in me that I can truly affirm that it surely heals, if sincerely and diligently followed. Reared by Christian parents, I went to Sunday school like other children, but at length rebelled against the incongruity of the teachings expounded. I recall asking my teacher why the miracles of the Bible did not occur today, but there was no satisfactory answer. I therefore dropped from church and religious life, and my parents had nothing better to offer me. With this religious vacuum, if I may use the phrase, I turned my energy to education, to the natural sciences, and on them started to build my structure of life. I studied and became proficient in several branches, and was content with my store of self-gained knowledge, little realizing that I was building without knowing the basic Principle, the very foundation of all else,—that of Truth, or good.

So this Babel-tower grew, then ceased to grow, then tottered. My life structure was nearly wrecked by breakdown, by mental strain, nervous exhaustion, and a gloom that seemed unfathomable. Constantly losing ground, I groped in the darkness for a something on which to build aright, for a relief from the oppression which was now manifest mentally, morally, physically; but I used the wrong weapons, for I tried will-power, dogged determination, and sharp sarcasm. I made no progress. On the surface, as if by mockery, I appeared a happy man.

Life at this stage had become despicable. Link after link of the false chain gave way. My eyes almost failed me,—to face direct artificial light was impossible, and to read by it, as I readily do now, not to be considered. It is, however, darkest just before the dawn. The light came slowly; it was a genial warmth, and was called Christian Science. Just as any growing thing reaches out for sunshine and light, so I reached for this truth, new to me. I was first drawn to Christian Science through reading an adverse article, a libelous one. By its very vindictiveness I was convinced that

Digitized by Google

an injustice had been done, so I handed the article to a Christian Scientist, and the fair, unruffled comment given in reply made me resolve to look further into the subject.

Then when I began really to study, I received a caution which may be of benefit to others. I was asked to read Science and Health not to find fault, as was my custom, but to find good; not to analyze and dissect, but to synthesize the thoughts gained. So then I, who was used to picking flaws, sought Truth, Life, Love, and found them,—found them in Science and Health, in every Christian Science service, and in the reflection of these same gracious qualities from every sincere Christian Scientist. The darkness and gloom disappeared. My understanding of God, good, increased, and all else followed. Eyes that should see, do so; weak heart action has become strong. Nerves that used to make me quail, now do as they are bid. Thoughts that used to wander are now in right channels. From pessimism to optimism, from fear to fearlessness, from discouragement to confidence, from breakdown to bounding health, from a god of gold to a God of good,—this transmutation of life has come in about a year.

There must have penetrated my words something of the gladness I feel,—something of the gladness that comes from understanding. And others are glad that I am glad. Better yet, those countless others who are needing the energizing touch of this glad new life, can find and are finding it daily in Christian Science.—T. A. Fitch, Los Angeles, Cal.

✧

"And it shall come to pass in the day that the Lord shall give thee rest from thy sorrow, and from thy fear, and from the hard bondage wherein thou wast made to serve." This promise from Isaiah was fulfilled in my life through the understanding of Christian Science. I had passed through great sorrow and was sick mentally and physically, being weighed down by fear; but this Christ-teaching has set me free.

I came into Christian Science through the healing of my little girl, who from birth had been considered delicate. She had been suffering from abscesses of the ears for four months, during which she was under a physician's care. The pain at times was intense, and the ears were constantly discharging. She did not receive any relief from material remedies, and finally the physician said he thought the only thing to do was to operate; and as this operation is considered a dangerous one, I was beset with fear. But "man's extremity is God's opportunity," and I called a Christian Science practitioner, not because of any faith in Christian Science but because several of my relatives had been healed through this treatment and it pleased my mother. Several hours later the abscess broke on the outside, and that was the last of the pain. In two weeks the manifestations were all gone and every mortal law as to after effects was broken. Several years have passed and the child has never had any return of the trouble. She was also healed of a stubborn case of bowel disorder, supposedly inherited, and I am indeed thankful to God and grateful to Mrs. Eddy for her complete restoration to health. She has recently been healed of whooping-cough.

Although never considered strong, and suffering from a number of disorders, one of them being chronic bowel trouble, I too have been lifted from weakness to strength and health. Christian Science is teaching me the real source of supply and freeing me from fear of lack, though my husband has passed on, leaving me with two small children. There was left to me a western ranch, which it was said could not be sold for cash and which was not yielding an adequate income; besides I was not situated so that I could manage it. After the understanding of Christian Science began to unfold to me, I applied for treatment for this pressing need and speedily sold the ranch for cash at a considerable profit. For all this I am indeed grateful, but especially for the spiritual awakening which has come to me.

A short time ago I met with an accident. An artery was severed, but after a few minutes' treatment the flow of blood ceased. I was in normal condition within an hour, using my hand as usual. I am convinced that Christian Science is the truth taught and demonstrated by Jesus, and I am indeed glad to be able to testify to its healing efficacy.

I am grateful to Mrs. Eddy for the literature which is so ably provided for us, and for the new understanding of the Bible which I am gaining daily. I know that the promises are being fulfilled for me.

Mabel Morrison Stopher, Loveland, Col.

✧

When I was first led to Christian Science a few years ago, I knew nothing about it, but felt if there was a true God I wanted to find Him. A friend loaned my wife some copies of the *Sentinel* and a *Journal*. We read these, and later got "Science and Health with Key to the Scriptures" by Mrs. Eddy. Before getting the text-book, however, I was entirely healed of a disability endured over twenty years. Physicians had said I could not be cured without an operation, and even then the relief might not be permanent. They also said that if the trouble returned it might be worse than ever. I therefore made up my mind to go through life a sufferer.

One day, shortly after I began the study of Christian Science, my condition was such that I could scarcely walk, when a neighbor asked me to go a couple of miles on horseback with him. It did not seem as if I could ride two miles to save my life, but my wife thought I could, so at last I saddled a mule and went. For a while it seemed impossible to go on, but finally I found myself riding along unconscious of any discomfort. The suffering was gone, not only for a short time but forever, and there has never been any return of the trouble.

My boy, when a little less than seven years old, was taken very ill. I telephoned to a Christian Science practitioner for treatment, and after that he was not confined to his bed all the time. The attack was a most serious throat condition; but, bad as it seemed to be, we relied entirely on Christian Science, and my son was healed in less than a week. He has enjoyed good health ever since and has been a more loving and obedient child.

These are only two of the many proofs of God's power to heal. I cannot find words to express my thankfulness to God for the many blessings that have come to me and mine through Christian Science, and my gratitude to Mrs. Eddy for this truth that makes us free.

B. L. Hough, Blackwell, Mo.

✧

[Translated from the German]

Deep gratitude impels me to testify to all that I and mine have received through Christian Science. When I heard of its teachings three years ago, I was complaining about a great many things, being sick in mind and body, but since I became an adherent of Christian Science much that formerly seemed insurmountable has been overcome. I had been wearing glasses for sixteen years, and if they were dispensed with one minute during the day my eyes would be in an inflamed condition. The physicians consulted designated the trouble as a structural defect, but today I do not wear glasses and my vision is clear and normal, although I have to use my eyes in sewing from morning till night.

Digitized by Google

My son was healed in three days of scarlet fever and severe inflammation of the throat, so diagnosed by a physician whom we consulted. We then confidently turned to Christian Science and found loving assistance and sure help. The physician was much surprised at the course of the child's illness. For my part I know that divine Truth alone healed my boy, no medicine having been administered. I would not give up this teaching for anything; it leads us to ever growing happiness and contentment while yet here in our present condition. We know now that the omnipotent creator is forever omnipresent and never withholds from us His love and protection.

FRAU FRIEDERIKE ABELD, Berlin, Germany.

✧

It is with heartfelt gratitude that I testify to benefits received in Christian Science. A few years ago I met with an accident which resulted in a broken leg and a badly injured ankle. There was much good work done for me in Christian Science at that time; but although I did not seem to be greatly helped physically by the treatment, I now know that I was healed of much of which I was not then cognizant. I also know that had I been healed speedily of that difficulty, I should not be where I stand in Christian Science today. Although I wanted to be healed and relieved of the pain, I did not wish to give up my own way in any particular, but wanted my own and God's way too. I found out I could not have both, and by study I have learned that just in proportion as I am willing to trust our heavenly Father for guidance, do I experience the peace that passeth understanding.

I have been healed of many ills in the past two years. Physical disorders have vanished, such as chronic headache, throat trouble, and backache. I am, however, more truly grateful for the overcoming of self than for the physical benefits. I am being healed of an ungovernable temper, resentment, criticism, and many other unlovely traits of character.

I am grateful that Christian Science has unlocked the Bible, which before was a closed book to me, and that it has given me a God that I can and do love. I am most thankful to God for giving us our dear Leader's pure, transparent thought, through which has been transmitted to us this wonderful light of Truth. My one desire is to prove that love by living each day ready to do God's will and to help others to find this straight and narrow path that leads to all good.

NELLIE E. ARNOLD, Riverside, Ill.

✧

It is with a heart thankful to God for Christian Science that I am writing this testimony of our baby's healing. She was seriously ill with what the doctors called inflammatory rheumatism, and her suffering was intense. We had two doctors in attendance, but they were unable to help her. At the end of two months I called a Christian Science practitioner, and the child was healed in a short time. She is in perfect health now, and has been ever since her healing. This is only one of the many blessings that have come to us through the knowledge of this saving truth. I am truly grateful to Mrs. Eddy for all her writings; they have lifted me out of darkness into light, and it is my desire to gain a better understanding of Truth.

ERDENA GSCHWIND, Owensmouth, Cal.

✧ ✧ ✧

He who feels contempt
For any living thing, hath faculties
That he hath never used, and thought with him
Is in its infancy.

WORDSWORTH.

From Our Exchanges

[Rev. Harry Emerson Fosdick, D.D., in *The Christian Advocate*]

This gospel of the Spirit is the supreme need of the church today. There never was a time when the church was so busily engaged in such a multitude of outward tasks, and hardly a time either when the church was more inwardly restless, more spiritually dissatisfied, and in many places more desperately inefficient. The danger of her practicalness is its superficiality. She is playing Martha in our generation. The Master has come; she rises to serve him, that his will should be done in government, in home and school, in all philanthropy and good citizenship; these are her anxieties. It is all noble and good, springing from Christian instincts, undeniably sublime; but what if in our busyness to do things for him we lose the attentive ear that listens to him and the ready heart that groweth like him? What if, like children, we fall to running many errands for a Father whom we do not inwardly know; and what if amid the clatter of our hurrying footsteps the Master once more were saying, "Martha, Martha, thou art anxious and troubled about many things: but one thing is needful"? For the real power of the church has never been the multitude of her tasks but the quality of her souls; the real business of the church has never been the multiplication of quantity in service but the production of quality in men. That men should be born anew, should become the organs and instruments of the vaster spiritual life of God,—that is the central business of the church, the biggest business of the world.

[*The Christian Commonwealth*]

The Christian Commonwealth stands for the belief that happiness depends upon righteousness, and righteousness upon religion. Only that individual or society or nation is truly happy which sacrifices all smaller and selfish interests to the ideal of righteousness. Only that individual or society or nation is able to do this fully and consistently which identifies the right with God and worships as well as loves the ideal. But we are not content with vague aspirations. "Happiness," "righteousness," "the ideal," are meaningless until expressed in terms of happy, righteous, and ideal lives. The life in which we would express them is the common life of our own nation, and (so far as this may be influenced by it) of the whole world. The common weal or commonwealth describes the scope of our endeavor.

Again, religion has little meaning apart from particular forms of religious experience and worship. Our nation has its own, and it is no accident that they are Christian. It is because we believe that Christianity gives the regenerating power of religion in its fittest and purest form that we look for a Christian commonwealth—"a city which hath foundations, whose builder and maker is God." No one who holds this faith can be content with the world as it is, or can trust it to travel by its own momentum along the road to commonwealth and Christianity. The men of faith are the driving force of the world's progress. The fewer they are, the weaker they feel themselves to be, the more depends upon their faithfulness. They must be prepared to criticize and to destroy much that is definitely wrong in society and religion, for there are times when to destroy is to construct and to construct is to destroy.

[Gaston W. Duncan in *The Standard*]

The distinctive doctrines of a man's particular denomination seem to many to exert no longer any powerful influence upon his manner of life when not engaged in worship. Because no one faith seems to produce a better article of

Digitized by Google

Christian living than other faiths seem to produce, and because each evangelical faith does induce godly living, some have come to feel that it makes no great difference, at least pragmatically, what one's denominational affiliations are.

The world is learning finally that men are to be loved and cooperated with in common service, rather than to be disparagingly criticized for their beliefs, whether true or erroneous. Men are lovable in spite of their ignorance, practice, and prejudices, and we are coming to recognize the primacy of love. Our day above all other ages is producing the cosmopolitan man. Men with variant views and every conceivable idea and ideal freely commingle in industrial, social, and religious activities. Seeing men of divergent faiths giving themselves with equal zest and efficiency to unselfish tasks and living lives of equal purity, men are led to question what difference denominational tenets make, anyway. Until we see the adherents of one denomination either surpassing in daily living those not of that faith, or retarded in godly living by their doctrines, men will continue to ask that question.

[*The Christian Intelligencer*]

Life is God's gift, and the best use of it consists not in frittering it away in idle speculation but in using it to develop its possibilities to the full. The supreme question is not "How did I come to be?" but "What may I become?" These pertinent questions are readily known. What is God's will for me? How may I know it and realize it in experience? What is God's will for the world? How may my life contribute to the divine plan for man? Our faces must be toward the future. War, intemperance, disease, and sin in every form must be overcome. Justice must be universally distributed; love must be enthroned in the hearts of men and the councils of nations. God's will must be done on earth as it is in heaven.

[*Zion's Herald*]

Our views of the gospel verities may enlarge and deepen and heighten as, taking advantage of the scholarship and spiritual experiences of those who precede us in history, we mount to a higher plane of thought and living, and so glimpse Himalayan ranges whose existence was only a name, or even unguessed, before. If we want to grow we may obtain all the growth desirable in measuring up more fully to the Alpine altitudes charted by Christ and his apostles.

[*Northwestern Christian Advocate*]

A man does not need to know all the subtleties of theology; he only needs to remember that God is just and holy, and that He requires in those who worship Him justice and holiness; to remember also that only as he is faithful to those simple but all-powerful ideas does he worship God in sincerity and truth and insure growth in true religion.

[*The Living Church*]

One thing is sure: every unkind thought toward another removes the soul farther from God. Great personalities, we find, pity the frailties of human life and make their estimate with greater and greater sympathy. How beautiful this is, and the reason is because as they go onward they are getting nearer to God.

[Rev. J. Frank Thompson in *The Universalist Leader*]

The facts of history and experience will doubtless justify the statement that every form of hardship and loss, provided it results from some imperfection in ourselves or our surroundings which admits of a remedy, is a price that humanity pays for some blessing which is worth more than it costs.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

Attention is called to the change in price (see also last cover page) on single copies of the following volumes of Mrs. Eddy's writings when sent by mail postpaid from the office of the publisher, Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Massachusetts:

Science and Health (cloth) from $3.18 to $3.00; Retrospection and Introspection (cloth) from $1.06 to $1.00; Unity of Good (cloth) from 65 cents to 60 cents; Pulpit and Press (cloth) from $1.06 to $1.00; Rudimental Divine Science (cloth) from 55 cents to 50 cents; No and Yes (cloth) from 60 cents to 55 cents; Messages to The Mother Church (cloth) from $1.56 to $1.50; Christian Science vs. Pantheism (pebbled cloth) from 26 cents to 25 cents; Message to The Mother Church, June, 1900 (paper), from 26 cents to 25 cents; Christian Healing and The People's Idea of God (cloth) from 60 cents to 55 cents; Christian Healing (paper) from 21 cents to 20 cents; The People's Idea of God (paper) from 21 cents to 20 cents.

The above changes do not constitute a reduction in the price of Mrs. Eddy's works, but save the purchaser the postage on single copies of the volumes specified.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

The pamphlet, "Causation," by Frederick Dixon, has been translated into Norwegian "Skapende Kraft," and is now published with the English and Norwegian versions on opposite pages.

The pamphlet, "Fulfilling the Law," has been translated into Danish, "Lovens Fylde," and is now published and on sale. This new pamphlet has the English version printed opposite each page of the translation.

The pamphlet entitled "The Father's Business," already printed in English and German, has been translated into Swedish, "I Faderns Tjänst," and is now published with the English and Swedish versions on opposite pages.

"Christian Science: 'The Resurrection and the Life,'" a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

The Massachusetts Forestry Association, to encourage reclamation, reforestation, and development in the state, has proposed a town forest contest. Fifty acres will be planted to three year old white pine transplants for the city or town which meets the requirements in the rules of the contest and obtains the highest number of points under stated conditions. The rules provide that the city or town entering must own at least one hundred acres of land and have it set aside officially as a "town forest." At least ten cities or towns must have entered the contest before the prize will be awarded, and all entries must be made before July 1, 1916. The points will be estimated on the following basis: area of the tract or tracts of land comprising the "forest, ten points; advantages for lumbering, and water and soil protection, twenty points; possibilities for recreation and esthetic development, fifteen points; fire protection, twenty-five points; general improvement,—roads, fences, reforestation according to modern methods and plans for development,—thirty points.

According to a bulletin issued by the department of agriculture, there has been an extraordinary increase in the water-fowl population of the United States during the past two years, and this increase, the government officials assert, is due almost entirely to the passage by Congress of the so-called migratory bird law. But even with this increase in the ranks of the mallard, the blue-winged teal, the canvasback, and the swan, the gross number of water-fowl to be found in the various states is estimated as not more than 10 per cent of those that existed before the extraordinary increase in recent years in rapid transportation facilities. For this reason a concerted movement has been put on foot by organizations representing sportsmen, farmers, conservationists, and stock breeders to have the provisions of the law extended in every possible way.

Further steps in the revision of its municipal program and model city charter, to keep pace with the rapid advances made in municipal government in the United States within a decade or more, are to be among the important features of the twenty-first annual meeting of the National Municipal League, to be held at Dayton, Ohio, about the middle of November. The league's program is based on the city manager plan of government. This league is composed largely of specialists from all parts of the United States who have made a study of various features of city government and administration, and who bring together and compare the results of their researches, both at the annual meetings of the league and in the pages of the *National Municipal Review*.

For the third time in the memory of court officials, a foreign jurist has just had the honor of sitting with the Supreme Court of the United States. The visitor was Baron Reading, lord chief justice of England. When court convened for the afternoon, Baron Reading walked in with Chief Justice White, who ushered him to a seat at his right on the bench. For an hour and a half the head of the English law courts listened to arguments on the constitutionality of the North Dakota tax on express receipts. So far as is recalled, the distinction has been accorded only twice before,—to Lord Coleridge, lord chief justice of England, in 1833, and Lord Herschell, British lord high chancellor, in 1899.

Production of commercial mineral potash, for which in the past Americans have spent millions of dollars abroad annually, is announced by Secretary Lane of the interior department of the United States. A report has just reached the department from a special agent of the geological survey telling how by a simple process potash had been produced from alunite found in a great vein in Piute County, Utah. As alunite is known to exist in large quantities in Utah, Colorado, Nevada, California, and Arizona, Mr. Lane believes that the discovery assures the country of an adequate supply of potash for agricultural purposes and for use in the manufacture of explosives.

Cuba stopped the teaching of English in its public schools because under the methods in use the children were failing to learn properly. The government intends to resume the teaching as soon as a more efficacious method can be devised. "The administration," says the Cuban minister to the United States, "realizes the great value of a knowledge of the language of the United States to Cubans, and its policy is to encourage the study of it in every practicable way." The government, he added, had been reluctant to take this study out of the schools. The courses were maintained at great expense, in the country districts as well as in the cities.

Announcement of a "Metropolitan City Planning Exhibition for City and Town Advance," has been made by the Council of Fifty, composed of representatives of "civic and social organizations interested in an adequate and practical plan for the development of the Boston district." The exhibition is to be held for ten days, beginning Nov. 12, in the State House at Boston. The main effort of the council now contemplated is a campaign of education that will inform the public as well as officials what is meant by city planning, and why a plan is a fundamental necessity to the welfare, or even the wise government, of the metropolitan Boston district.

The new Masonic Temple, headquarters of the Supreme Council of Scottish Rite Freemasonry for the southern jurisdiction of the United States, costing $2,000,000, was dedicated at Washington, Oct. 18, with elaborate ceremonies and in the presence of a large assemblage of Masons from many parts of the country. The structure is fashioned after the mausoleum erected for King Mausolus by Queen Artemisia at Halicarnassus, Asia Minor,—one of the seven wonders of the ancient world,—is unique among the many magnificent buildings in the national capital. It has been under construction since 1911, when ground was broken.

The first important Government suit under the Clayton antitrust act was begun last week by Attorney-General Gregory against the United Shoe Machinery Company. The petition filed in the Federal district court charged the shoe company with unlawful practices that substantially lessen competition and tend to monopoly. Permanent injunctions are sought. This suit is the third action brought against the company in the last few years. Suit to dissolve the corporation under the Sherman law is now pending in the Supreme Court, and suit under the criminal provisions of the same statute is still pending against some of the officers and directors.

Formal recognition by the United States of the *de facto* Government of Mexico, with Gen. Venustiano Carranza as chief executive, was accomplished at noon, Oct. 19, by the delivery to General Carranza's representative, Ellseo Arredondo, at the Mexican embassy at Washington, of a letter from Secretary Lansing. Recognition letters from the Pan-American conferees, similar in tone, were also received by Mr. Arredondo. Up to noon letters of recognition had been delivered by the United States, Argentina, Bolivia, Guatemala, and Colombia. The ministers from Guatemala and Bolivia delivered their letters in person.

The harvests of the United States this year will be the most valuable ever produced. With the wheat crop exceeding a billion bushels, the largest ever produced in one season by any country, and a corn crop which may prove to be the largest ever known, the Government's October crop report announces preliminary estimates which indicate record harvests of oats, barley, rye sweet potatoes, rice, tobacco, and hay.

Announcement of the formation of a new corporation, capitalized at $100,000,000, and to be known as the "Association of Sisal Hemp Producers," is made by a Mexican committee identified with the new powers in control in Mexico. The principle of the new organization is the same as that of the California Fruit Growers' Association.

It is estimated that the valuation of the flats around Boston harbor now lying partly under water and gradually being filled in under the supervision of the directors of the port, will be more than thirty-three million dollars, and this great future asset of state lands will be so developed in the mean time as not to increase the state debt.

Fifty tons of coal-tar dyes from Germany, consigned to Secretary of Commerce Redfield, arrived at New York a few days ago from England on board the steamship St. Louis. The dyes, coming in under a British government permit, are for the National Association of Cotton Manufacturers.

A detailed study of the Menam Valley, Siam, for the purposes of water control and irrigation, has been made. The estimated cost of giving effect to the various portions of the design is about £1,750,000.

Next year the United States Government will spend more money on Indians and less on irrigation than was spent last year, according to a statement by Secretary of the Interior Lane.

President Wilson on the 13th inst. laid the corner-stone of the memorial amphitheater at Arlington, Va., which is to cost $750,000.

Finite Intelligence

HON. CLARENCE A. BUSKIRK

MRS. EDDY reminds us that "erring, finite, human mind has an absolute need of something beyond itself for its redemption and healing" (Science and Health, p. 151). With all its apparent activities the finite mind is nevertheless incapable of comprehending the marvelous processes of infinite intelligence. Some questions in the realm of religious investigation always remain unanswered. This does not mean that they are in themselves unanswerable, for agnosticism is but the inexcusable wail of intellectual indolence, and to surrender to perplexing difficulties in any republic of knowledge, religious or secular, is to yield to ignorance and inefficiency and to recruit the forces of superstition and folly. Thanks to Christian Science, the realm of the unknown and seemingly unknowable is ever becoming smaller and smaller.

Men are constantly finding themselves face to face with problems of existence whose origin is traceable to human ignorance. Many of these are complex, mutable, kaleidoscopic, and for their solution recourse must be had to some source of fundamental and unalterable truth which is always accessible. Such source must be both religious and scientific, to use the words in their common import. Using these terms according to their exact meanings, we should affirm that that which is religious is scientific and that which is scientific is religious.

On page 342 of Science and Health we read: "If Christianity is not scientific, and Science is not of God, then there is no invariable law, and truth becomes an accident. Shall it be denied that a system which works according to the Scriptures has Scriptural authority?" To sanction the truth of Christianity is to justify, even to necessitate, the terms scientific Christianity and Christian Science, since that which is not scientific is not Christian. Infinite Truth embraces all truth, be it arbitrarily classified as scientific or religious or what you will. When for the sake of greater perspicacity we speak of a particular religious verity or of a particular pathway in scientific inquiry, we ought not to overlook the fact that we are speaking of partial presentments, or particular facets of truth, instead of separate things. We cannot know all there is to be known of anything real without knowing all there is to be known of everything. Every item of knowledge we gain helps toward the acquisition of other knowledge. For example, to become a better religionist is to become a better mathematician, a better astronomer, and so on.

Is it not a fact that mankind have gained certain items of what we will call religious knowledge (although at times mixed up with much falsehood), and glimpsed, imperfectly it may be, other items of such knowledge, independent of the so-called five physical senses and of any other imaginable physical senses of whose existence we are unconscious? Is it not a fact that mankind have discovered items of religious truth, as well as of other scientific truth, by intuition or other means wholly outside of human reason? Is it not a fact that deeds have been done on this planet which are incapable of scientific explanation on the assumption that man is a material and not a spiritual being? Is it not a fact that in their far traveling and sublime thoughts, aspirations, ideals, and even emotions, men at times experience that which has no explanation on the supposition that man is wholly material, but which furnishes a hint and awakens a hope that refuses to be denied by materiality? If any one of these truly momentous questions must be answered affirmatively, then Paul was justified in his triumphant and joyous cry: "O death, where is thy sting? O grave, where is thy victory?"

"Where there is no vision, the people perish." These words of the wise man have been justified many times in history. They dig very deep into spiritual causation and explain the decline and fall of many of the nations of the past. Are they not a profound revelation of the causes of the immeasurable cataclysm which is now devastating so much of the Old World? Has not the vision without which a people perishes, either been lost or never sufficiently attained? Has not the lust of material power, ambition, wealth, ostentation, degraded mortals and dimmed the light of that spirituality which alone can finally vitalize and energize both individuals and nations?

"I am the way, the truth, and the life," declared the Galilean Wayshower. He both pointed out and followed the one true path. With practical deeds to justify and emphasize his precepts, he exemplified the way to manifest one's love for his brothers and sisters. His way is for peoples as well as for individuals. His religious philosophy embraced the whole circumference of need, and of deliverance from the ills of suffering men, classify and locate them as we may. His words and works point out the way by which the vision that saves is attained and renewed. Thus is the unfolding sense of humanity, alike of individuals and of nations, assisted in reflecting more and more the divine intelligence.

It ought never to be forgotten that the solemn statement of Paul applies to peoples collectively as well as to each one of us: "To be carnally minded is death; but to be spiritually minded is life and peace." We read in Science and Health (p. 304): "It is ignorance and false belief, based on a material sense of things, which hide spiritual beauty and goodness. Understanding this, Paul said: 'Neither death, nor life, . . . nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate us from the love of God.' "

✧

"Owe no man"

EMMELINE HASKELL

"CHRISTIAN SCIENCE teaches: Owe no man." These imperative words of our Leader in "The First Church of Christ, Scientist, and Miscellany" (p. 114), reiterate St. Paul's advice, and many have heard the command and sought to obey it. Testimonies are frequently given of those who were encumbered by debt but who, through a realization of the divine Mind as the only source of supply, have regained their financial footing and rejoice in freedom from anxiety.

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

Notwithstanding these proofs of divine care, some fail to grasp deliverance, and for years remain under a sense of humiliation because of unfulfilled obligations. Such a condition of indebtedness tends to become chronic. Those who cease to struggle against what seem overwhelming odds, and who continue to borrow whenever opportunity presents itself, may argue with themselves that they have obtained a livelihood with possibly a show of luxury, forgetting that borrowed plumes indicate loss rather than gain and do not become a Christian. If the words "Owe no man" have ceased to awaken even a desire for obedience to the command, this mental state will militate against fruitful effort in other directions, and one will not be the helpful, active member of church or community which his natural gifts would warrant. To such as desire freedom from this condition, Christian Science presents a sure way of deliverance.

As we read this divine command, we should begin at once to obey it, and the decision to do so will prove both inspiring and refreshing. Error may argue that under the circumstances obedience is impossible, but Truth reminds us that "with God all things are possible," that "now is the accepted time," and experience will prove this to be so. If simple methods of frugality are insufficient and ordinary resolutions fail, one may make the method more radical, in the way of sacrifice and self-denial. He should see that possible heedlessness on his part may have brought much embarrassment if not trouble upon his creditors, and if there is a firm determination to do what is just and right, the way will be opened up to him. Meanwhile he may explain to each creditor that he will do his utmost to meet the obligation in full, and that his determination is never to incur debt again. If the sincerity of this action is proved by the avoidance of new obligations, even at the cost of extreme self-denial, creditors will see that it is the best they can hope for, and will treat one accordingly. Reform from the habit of living beyond one's demonstration is as necessary as reformation from any other form of dishonesty, and having done all in his power, one may like Paul thank God and take courage.

At this point one will surely find within his reach some humanly understood means of supply. The prophet's question may here be recalled, "What hast thou in the house?" This may be offered in exchange for what another may have to give in return. Talents are of various kinds. Paul's counsel was, "Work with your own hands;" and we also read, "Whatsoever thy hand findeth to do, do it with thy might." If faith falters in giving obedience to this universally applicable advice, it is usually because we choose to "receive honor one of another, and seek not the honor which cometh of God only." No honest labor is menial, and such as serve God in singleness of purpose will find joy in proving the promise, "As thy days, so shall thy strength be."

What is called the servant question has its solution in Jesus' words, "One is your Master, even Christ," and "I am among you as he that serveth." Regarding the thought of "caste," which exercises so much dominion over the children of men, Christian Scientists will have, in any honest and humble service, opportunity to aid those not yet enlightened as to the liberty of the sons of God. Domestic service has generally been shunned by the very persons whose talents and culture best fitted them to ennoble the calling. Jesus said, "He that is greatest among you shall be your servant," and though there be many different uses of this word servant, it will not suffer by its most humble application.

It may yet be found that there is no effort more needed at this time or more influential in shaping the future of our nation. Think what it would mean to have a host of men and women who would so well do what the world names "menial work" as to transform it into divine service; such workers having learned no longer to crave praise of men, but to "walk humbly" with God, thus loosening the hold of some of the more subtle mesmerisms, hypocrisies, and covetousnesses which bind the children of earth. Let us not forget that obedience to any one divine command opens the way for obedience to all. The apostolic word is, "Owe no man anything, but to love one another."

Love's Never-failing Hand

W. W. TOTHEROH, LL.D.

SOME mountain climbers who were bent on reaching one of the high peaks of the Alps, came to a point where the narrow path on a ledge overhanging a deep precipice was almost completely blocked by a great rock that had been loosened from its moorings by recent rains. The first thought of some on discovering the barrier was that the ascent would have to be abandoned, but the leading guide soon proved himself master of the situation. Placing himself securely in position, he extended his hand to aid the timorous to encircle the rock. One after another thus reached the other side in safety; but one woman became appalled as she gained a near view of the almost obliterated trail, and giving a look into the vale below, drew back in terror. The guide promptly met the need. With a kindly smile and a voice pulsating with cheery confidence he declared: "Come, don't be afraid. That hand has never lost a man." This incident is fraught with instructive thoughts.

The Bible abounds with passages in which the hand is figuratively employed to express God's power and influence. It is a helping hand; a hand overflowing with blessings. We are reminded of that reassuring and joy-giving promise to God's people voiced by the prophet Isaiah: "Fear thou not; for I am with thee: be not dismayed; for I am thy God: . . . I will uphold thee with the right hand of my righteousness." What more could be desired? This thought relates itself to the cause of all the ills and troubles that becloud the lives of mankind, the atheism of fear, doubt, and anxiety, the absence of faith in the one omnipotent God. Moreover, it serves to eliminate the discordant and injurious conditions from consciousness by bringing to view the constant immanence of God, whose hand is always able and ready to help. The Scriptures, which gather up the many and varied experiences of God's people in which they were afforded proofs of divine love and care, constitute a grand *Te Deum* of praise; but in our own times, when through Christian Science there has been a revival of the understanding that God is infinite, divine Mind, and that man is God's idea, and when all manner of healings are being experienced, the song of gratitude and praise is being repeated with a new fervor and is engaging happy voices in all lands.

The old theological concept of God as seated on a throne in a far removed heaven, where He had to be besought and "wrestled with" to gain His attention and to win His favor, naturally brought to men a sense of estrangement. This is dispelled by Christian Science in its spiritual interpretation of the Scriptures and in its unfoldment of the truth as to the nature of the Most High, and of man's relation to Him.

There is an endless variety of possible experiences which might be considered as analogous to that of the mountain climbers when they found their way hedged by the rock,—experiences which alarm, dishearten, and discourage. But, as in that case, the exhortation is applicable, "Be not afraid," and this because of the outstretched hand of Love that has never lost a man. In the old thought, when there were discords, sore trials, reverses, and distresses, these were usually

Digitized by Google

ascribed to inscrutable dispensations of Providence or to mysterious manifestations of the divine will, to which we were to submit humbly and await explanation. But in Christian Science it is learned that such things, instead of being sent by God, are rather proofs positive of an absence on one's own part of the realization of man's true relationship to God, the truth which means freedom from all that makes for unhappiness. When spiritual understanding has displaced mortal belief and the human will is obedient to the divine, then is there a conscious dependence upon God, a resting securely in His hand. Then all seeming evil is seen to be non-existent and the presence of divine good is realized.

Jesus' perfect understanding of the presence of God and His reflection, and the unreality of everything of a supposedly opposite nature, explains his power to dispel sin, disease, and death. The realizing sense that God is All and in all and that there is naught else, opens unlimited possibilities. As we attain to a knowledge of the saving truth, we can but recognize our indebtedness and voice our gratitude to Mrs. Eddy, whose teachings have made the Bible a new and attractive book by its spiritual interpretation and practical application, showing the unreality of sin, disease, and death, and consequently the powerlessness of evil; thus bringing to view a perfect God and His spiritual law, which works good and only good.

"Escape to the mountain"

J. LILIAN VANDEVERE

THE reader's clear voice gave the angel's summons to Lot, "Escape to the mountain," as a ringing call of today, individual and imperative. Startled to alertness, one of his hearers began to ponder the connection of Lot's warning with personal experience. At once came to mind the sense of uplift which one feels on a mountain top,—the purer air and wider outlook,—and the words of one of our hymns (Hymnal, p. 4) gave expression to the glad sense:—

> The freer step, the fuller breath,
> The wide horizon's grander view.

A mountain top finally reached, and the panorama scanned with an exultant thrill, we look back at the winding path of ascent. No one knew better its tortuous trails and precipitous steeps than did our Leader, Mrs. Eddy, and she voiced the prayer of all who follow it when she wrote, "Shepherd, show me how to go" (Poems, p. 14). Believing that Jesus was the Wayshower, even as he had said, she sought that way diligently, not with the despairing cry, "How can we know the way?" but with a certainty of success that made the search, as she has said, "buoyant with hope" (Science and Health, p. 109).

In the Master's words, uncomprehendingly repeated for ages by Bible students, Mrs. Eddy found definite direction and illumination, and to these ideas, gained in an hour of physical extremity, she gave expression. Some read with wondering scorn; others, awakened by the challenge, tested the verity of her startling statements, and to their joy found them true. The Bible promises were fulfilled when implicit reliance and understanding made demand and the healing power of Truth was manifested. The call of Christian Science is ever for elevation of thought, and the figure of the ascending path and the mountain, found so often in Mrs. Eddy's writings, illustrates her constant plea for spiritual perception and attainment.

As one follows the Bible narrative, he is impressed by the number of great events which transpired upon mountains. Meditating upon divine law while his flock grazed on the slopes of Horeb, Moses beheld the burning bush and became the divinely appointed ambassador to Egypt. Later, on Sinai, his thought grasped that law so clearly as to be able to voice it for the guidance of his fellow men. On Carmel, Elijah watched the attempts of Baal's prophets to evoke the believed in power of matter, and finally overwhelmed them with a fiery proof of divine omnipotence that "licked up" the very altar stones. Beyond the bare fact of geographical altitude we note the sturdy spiritual ascent which made possible these demonstrations, and far-away history is thus linked to present need, these glimpses of His presence coming as of old to all who work patiently upward for an unhampered view.

In the life of Christ Jesus the mountain again figures conspicuously. The Master's Sermon on the Mount, an epitome of our relations to God and man, is the essence of right living and leads to complete human beatification. On Olivet were held those quiet talks with the wondering disciples; there too he came alone to gird himself for the world's resistance. Mankind scoffed and threatened, but in the kindly shelter of the olive trees the great Teacher wrestled with material existence. Again we read that, "seeing the multitudes, he went up into a mountain." Step by step through all the gamut of experience he rose above the turmoil of mortal thought to the final triumph of his ascension.

As the ancient temple was built on Mount Moriah, so our concept of Truth must be built on clear spiritual vision, and this is accomplished only as thought mounts steadily spiritward. Each victory over material law gains for us a higher altitude, and leads ultimately to "the Horeb height where God is revealed" (Science and Health, p. 241) and the consummation of life in divine Science is realized.

✧

Rules and By-laws

FRANK W. GIBSON

AT some point in the experience of the beginner in Christian Science there comes to him the desire to join The Mother Church, and also his local branch church. This action impels an investigation of motives, and if the desire is not a self-seeking one, but rather that he may help in the orderly growth of our beloved cause, he will find many ways in which he may be made useful.

If he would properly fulfil the duties of membership, it is necessary for the beginner to study the Church Manual, also the government and rules of his branch church as found in its constitution and by-laws. In studying its government, he finds that, as Mrs. Eddy says, "the Magna Charta of Christian Science means much, *multum in parvo*,—all-in-one and one-in-all. It stands for the inalienable, universal rights of men. Essentially democratic, its government is administered by the common consent of the governed, wherein and whereby man governed by his creator is self-governed. The church is the mouthpiece of Christian Science,—its law and gospel are according to Christ Jesus; its rules are health, holiness, and immortality,—equal rights and privileges, equality of the sexes, rotation in office" (The First Church of Christ, Scientist, and Miscellany, p. 246).

Like the rules and by-laws of The Mother Church, it will be found that the rules for the systematic and orderly conduct of the affairs of a branch church are "not arbitrary opinions nor dictatorial demands, such as one person might impose on another" (Miscellaneous Writings, p. 148), but that their object is the transaction of the business of the branch church in the best possible manner. To attain this object, rules are sometimes necessary to restrain the individual member, so that they, rather than his wishes, may be

Digitized by Google

followed, no matter how well-meaning he may be. In considering these rules, it is well to bear in mind what our Leader says regarding the method of applying the Principle of Christian Science: "Whoever would demonstrate the healing of Christian Science must abide strictly by its rules, heed every statement, and advance from the rudiments laid down" (Science and Health, p. 462). Can we find a better rule to follow in trying to become a useful member?

If to the study of these rules and by-laws the beginner brings a knowledge of parliamentary practice, it is well; if not, he finds that some knowledge of that subject is necessary for his participation in the transaction of business at the business meetings of the church. It has been said to the writer upon several occasions, "I would have liked very much to have brought a certain matter before the meeting;" or, "I would have liked to have said something on that subject, but I did not know how or when to say it, or whether it would be in order or not." While no lengthy consideration of the subject of parliamentary practice could be given in such an article as this, a brief *résumé* of the essentials for a beginner may not be amiss.

It will be found that either the by-laws or standing rules contain the order of procedure for the opening and conduct of business meetings. Among other provisions is this: that all previous business must be disposed of before new business may be considered. In introducing any matter to the meeting under the head of new business, it is well, unless the suggestion is of very simple nature, to write out the subject matter to be presented in the form of a resolution, thus: "Resolved, that this church remove its reading-room from its present location to the corner of Pearl and Market Streets." Rise and address the chairman by his proper title of chairman or president. When recognized by him, you have the floor, and can then read your resolution and move the adoption of it. In order that this matter may properly come before the meeting and be discussed, it is necessary that another member should second your motion; without this seconding the matter is not properly before the meeting, and cannot therefore be discussed. After all those desiring to speak on the matter have been heard, the motion is then disposed of either by adoption or rejection.

It will often be found that there is a desire to modify or amend the original motion, to defer action upon it, or to stop debate on the subject. It is therefore in order for any member in favor of such action to rise, obtain the floor, and state how he wishes the original motion modified or amended, or to what time he wishes action deferred, or to object to the consideration of the matter. Before these modifications can properly come before the meeting for discussion, it is necessary that some one should second them, with the exception of the "objection to consideration," which does not require a seconding and is not debatable. The discussion is then upon the merits of the modifying motions, and disposition of them must be made before the original motion can be disposed of, provided the other motions do not dispose of it.

In the debate or discussion which follows any of these ordinary or secondary motions, it will be found that a more orderly meeting will result, and the business be transacted more harmoniously and expeditiously, if the members confine their remarks to the subject matter of the motion under discussion, and speak only once on any subject; but if it be found necessary to speak twice, the member should wait until every other one desiring to speak has been heard. There are several excellent works on parliamentary practice, and it will be found that most by-laws contain a provision providing that the rules contained in one of them shall govern in all cases not covered by the by-laws.

The presiding officer should be thoroughly familiar with the by-laws, and should not attempt to conduct the meeting without a standard work on parliamentary practice. For the new member there is a safe rule to follow, when in doubt as to the proper motion to make or the time to make it: namely, obtain the floor and state the matter to the chairman, who will see the purpose and advise the proper motion to make. If this is done, no one need go away from the meetings with a sense of disappointment over something left undone from which good might have come.

It will be found, furthermore, that the by-laws contain a provision that they cannot be modified or amended except after the proposal of such changes at a previous meeting, and only upon the affirmative vote of at least two thirds of the members present, thus showing the importance of protection from thoughtless and hasty action regarding the rules. The two thirds affirmative vote also insures that such modification or amendment shall reflect the thought of a substantial majority of the members.

Heaven Our Home

LUCY E. MANN

LOOKING from my window, over the storm-tossed sea, battle-ships are visible, passing rapidly across the horizon. A great sense of gratitude wells up for the teaching that enables us to turn things into thoughts and to "pray for the peace of Jerusalem," our city that "hath foundations." The faith that inspires this prayer is its impulsion, and it must be manifested in the harmony that overcomes discord. It enables us to reach a realization of the ever present Christ, "The Prince of Peace," and the government that "shall be upon his shoulder," and impels us to ponder our Leader's counsel to "hold thought steadfastly to the enduring, the good, and the true" (Science and Health, p. 261), regardless of stirring accounts of battle, of loss and gain, coming every now and again. This lifts thought above the beckoning confusion and brings quiet and assurance.

At first it seemed difficult to rise above the sympathetic mesmerism from within and without, which reminded one of those near and dear engaged in action. Truth however prevails, and the facts remain intact, that there is only one country, our mental home, and that heaven means purified understanding; also one government, namely, that of Life, Truth, and Love. Holding thought free from fear, because man is forever in the sanctuary of Love, one is enabled to realize the divine protection for each and all who belong to the one "family in heaven and earth," the children of the one Father-Mother God. Man as God's idea is not in any turmoil, nor is excitement and unrest the reality of being. The psalmist speaks of those who cry unto God when in deep distress and then we read: "He maketh the storm a calm, so that the waves thereof are still."

As at the dawn of the Christian era, the Christ is here and now stilling the troubled waters of mortal mind, silencing the voice of error, and overcoming the tempests of greed and passion with the word of Truth, the "Peace, be still," spoken of heaven, legions of ministering angels, and they are for us, commanding thoughts of peace and security, thoughts of love and compassion, uplifting and pure, bringing us into the promised land, and exalting us to spiritual heights, the altitude of Mind that was in Christ Jesus. Nothing can tempt us to leave our stronghold of Truth, for here we are in the "secret place" where we gain the poise and peace of the one Mind. As one has said, "Ours is not a storm center or a war center, but a peace center, for God is here."

Selected Articles

[Judge Clifford P. Smith in *The Republican*, Springfield, Mass.]

It was to be observed in a recent issue that a certain bishop injected an attack on Christian Science into the baccalaureate sermon which he delivered at Dartmouth College. I hope that your readers have noted the significance of such an occurrence. A revolution of religious thought is going on, and the rate of its progress is indicated by the nature of the opposition it has aroused.

As for the particular judgment which the right reverend gentleman pronounced, namely, that Christian Science leaves people to cure disease by neglect, it would be a weightier opinion from a more disinterested person. With many members of his church, and at least a few of the clergy, the question regarding Christian Science is not whether it is more reliable than medicine, but whether it can be fully enjoyed and utilized within the church. Of its efficacy and its spirituality they have been convinced by their own observation or experience. In these circumstances the dictum in question should not be regarded as convincing, even if its propriety should be admitted. Christian Science is the restoration of pure Christianity, with its spiritual power over evil, including disease. Therefore its present adherents confidently anticipate its ultimate acceptance by all people; and they are not concerned as to whether this development occurs within or without the denominations which now mark the division of Christendom into sects.

✧

[Harry I. Hunt in *Newark (N. J.) News*]

If critics of Christian Science who are fond of repeating that it is a mingling of idealism and pantheism would only study its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, they would save themselves from the charge of not knowing what they are talking about, for it may be said that there is no ground for such a statement. Christians will admit readily enough that the only true idealism is that preached by Jesus the Christ, the ultimate attainment of which is foreshadowed by St. John. That is the idealism of Christian Science, and it is about as far removed from pantheism as the east is from the west. Yet the world in general, and the theological world in particular, is slow to admit that the idealism of Jesus is practical, in spite of his positive declaration, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." "Pantheism," Mrs. Eddy writes on page 129 of Science and Health, "may be defined as a belief in the intelligence of matter,—a belief which Science overthrows." Any belief that God lives in matter has no place in the teachings of this Science.

Christian Science does not deify Jesus, but distinguishes clearly between the man "in all points tempted like as we are" and his Messianic title and office. In so doing Christian Science accepts the record of the Scriptures, showing that Jesus never said he was God, that he spoke of himself as a man, that several of his sayings are contradictory of the theory that he was God, and that twice he virtually denied he was God. Certainly the disciples did not regard Jesus as Deity, for Peter, when addressing the company of believers at Jerusalem after Jesus had passed beyond the range of human sight, spoke of "Jesus of Nazareth, a man approved of God," throughout the address referring to the Master as distinct from God.

It should be noted also that Christian Science accepts the Scriptural account of Jesus' origin, to which reference is made in Science and Health on pages 315, 332, and 539, on the last named of which we find this statement: "The divine origin of Jesus gave him more than human power to expound the facts of creation, and demonstrate the one Mind which makes and governs man and the universe." Jesus was aware of whence he came, for he said, "I proceeded forth and came from God," and so declared his spiritual origin. We need to know what he was and to know that his work for mankind was spiritually natural, in order to perceive the way of salvation which he showed—the "new and living way," "the way of truth."

In stating that Christian Science perverts the gospel into a mere system of metaphysical healing, our critic must surely have forgotten that the four gospels are largely given up to chronicles of metaphysical healing wrought by the Founder of Christianity, that the book of Acts records similar works done by the apostles, and that Jesus distinctly promised, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Indeed these words of the Master make it perfectly plain that a claim to Christianity must be supported by the ability to do, in some degree at least, the works which he did. To heal, therefore, is not perversion of the gospel, but rather is proof of one's Christianity.

It ought to be said here that the wonder with which the critic views the acceptance of Mrs. Eddy's teachings by rational beings should disappear with the knowledge that these teachings are accepted, not "without the shadow of proof," as our critic avers, but because of overwhelming proof that they are true. The rapid rise and growth of the Christian Science denomination is due to the fact that Christian Science is a demonstrable religion.

Our critic disposes of the healing work of Christian Science by attributing it to will-power, which is one way of begging the question. Nothing could be further from the fact than to associate will-power with the practice of Christian Science. Will-power is a product of human mind. Now the human or "carnal" mind is in no sense a healer, because it is, as St. Paul says, "enmity against God: . . . not subject to the law of God, neither indeed can be." It is plain, therefore, that the human mind, which is made up of beliefs that do not acknowledge or recognize God, can have no part in the healing work which Christian Science has been doing for nearly fifty years. Christian Science heals sickness and sin by one and the same process,—by the prayer of spiritual understanding, an understanding which makes operative the prayer of all Christendom: "Thy will be done."

✧

[S. T. C. in *The Graphic*, Los Angeles, Cal.]

Christian Scientists the world over, it is asserted, testify that having the Mind of Christ is the goal toward which they are daily striving, but which they could not find as the aim of the churches they left. Is the church afraid to venture on the purely spiritual life which all people crave? it is asked. To save itself it resorts to every kind of attraction to interest people. It deals with social, civic, economic, and political reforms, suggests large schemes for evangelizing the entire world, and uses newspaper space freely to advertise its specialties. Look abroad and say in what denominational church ninety per cent of its members attend the mid-week prayer-meeting, as is true of the Scientists. It is folly to ignore these phenomena. If the average churches cannot draw their people as the Christian Science church does, then it is time to search for the true germ, which the Scientists appear to have found, and inoculate the Protestant religion with its properties.

How the Scientist rejoices in his affiliation! At the California Club in Los Angeles the other evening a prominent

Digitized by Google

member of the Progressive party, whose recent adoption of Christian Science has transformed his life, appeared transfigured by the new faith that obsessed him. What it had wrought for him was his sole topic of discourse at the dinner-table, and although he apologized for monopolizing the conversation, there was no apology for the subject-matter. We were impressed by the notable change in our friend's demeanor. What Christian Science has done for him it has done for countless others, and we are not disposed to scoff at a religion that has accomplished such wonders and is so powerful a factor in the lives of so many hundreds of thousands of people whose spiritual unrest and bodily sickness have been dissipated by the acceptance of the theology of Christian Science.

What an enthusiastic propagandist is the average Christian Scientist! Not that he bores you with his belief, but how he glories in its possession! As a student of humanity in all its phases this tendency among Scientists is to us one of the most interesting revelations of the cult. As sowers of the seeds of Truth every member is a modern apostle St. Paul. Being at-one with God, the Christian Scientist believes that his individuality is no more his independent entity than an idea coming into his consciousness can be an exclusive possession. His life then is simply an expression of the infinite Life as an idea is the expression of universal truth.

To sum up, then: The churches must supply the truths that are so attractive in Christian Science and are so instrumental in enlarging its membership ranks, if they would regain their wonted strength. If healing is a fundamental factor, then Protestantism must include this as part of the religious duty. To destroy sin is, among our churches, largely a matter of egoistic will-power. The way of Christian Science is to see the sin disclosed by temptation and to bring into the consciousness the sense of Christ's truth which expels the sin. The old Aryan philosophy found that error, or a disturbance of the harmony of Truth, is the cause of sickness and sin; this is the Christian Science interpretation. False beliefs are expelled when Truth comes in. Discords, sickness, limitations, and want leave with the entrance of Life. When Love is admitted, fear, worry, and all forms of selfishness are cast out. Christian Science is waging an inspiring campaign to abolish the whole body of sin, poverty, disease, and death.

✧

[William G. Westle in *Birmingham* (England) *Weekly Post*]

In the column Health Hints by "Medico," there recently appeared a reference to Christian Science which might have achieved much in the chart of merit had its purport been that of stating merely what Christian Science practice is not. It however claimed to state what this practice is in certain particulars, and in this it signally failed, as can be readily discerned by any one more than superficially acquainted with the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

For instance, to suppose that a sufferer asking for Christian Science treatment would obtain relief through suggestion on the part of the practitioner, is to mistake the very nature of Christian Science practice. Remembering what Jesus the Christ indicated by the words, "He that believeth on me, the works that I do shall he do also," Christian Scientists are humbly trying to carry out the practical import of this indication in the same way as did Jesus himself, recognizing that what enabled him to accomplish the "works," and thereby heal the sick, was the realization in consciousness of God as the only Mind, or divine Principle, and of man as the reflection of this infinite, ever present Mind. Did he not say, "I do nothing of myself"? Mrs. Eddy has stated that "as mortals reach, through knowledge of Christian Science, a higher sense, they will seek to learn, not from matter, but from the divine Principle, God, how to demonstrate the Christ, Truth, as the healing and saving power" (Science and Health, p. 285). It is through this understanding, which is available today as of old, that Christian Science practitioners are enabled to be of benefit to those seeking their help.

Further, it is nothing but ignorance of facts which can cause an assertion that Christian Science is not able to heal "serious" as well as "simple" cases of disease, for abundant evidence is forthcoming in the shape of testimonies, either appearing in the authorized Christian Science periodicals or voiced by beneficiaries at the testimony meetings held in Christian Science churches throughout the world on Wednesday evenings, that thousands of cases have been healed which previous to Christian Science treatment had been considered incurable.

✧

[Robert S. Ross in *Palladium*, Oswego, N. Y.]

Not very long ago the writer heard a man publicly denounce Christian Science because a friend of his had died while undergoing what he understood was Christian Science treatment. When asked to prove that Christian Science was the treatment employed, the critic replied that he knew his friend had died under Christian Science because the treatment did not include the use of drugs. After further questioning, the point was established that the treatment was nothing more or less than osteopathy. This case not only illustrates how ignorant some people are of Christian Science methods, but it also illustrates how Christian Science is sometimes misrepresented by those who are inclined to condemn that which they do not clearly understand. With this class anything that departs from ordinary medical practice, be it osteopathy or naturopathy, hypnotism or voodooism, is believed to be Christian Science.

Now it may be that the religious system known as Tenrikyo, or so-called divine rationalism, referred to in your editorial of Aug. 19, resembles what your editorial writer believes Christian Science to be, but it certainly does not in the least resemble Christian Science as it really is. As I understand it, Tenrikyo is a system of occultism involving mental suggestion, clairvoyance, incantations, and other superstitious practices based upon the so-called human will. Christian Science, on the other hand, is the application of the truth of being as it was taught and practised by Christ Jesus, even the understanding of the allness of God, Spirit, the only Mind or cause, and the consequent nothingness and powerlessness of matter and evil.

"Those individuals, who adopt theosophy, spiritualism, or hypnotism," Mrs. Eddy writes in "Science and Health with Key to the Scriptures" (p. 99), "may possess natures above some others who eschew their false beliefs. Therefore my contest is not with the individual, but with the false system." And on page 83 we read, "Between Christian Science and all forms of superstition a great gulf is fixed, as impassable as that between Dives and Lazarus."

✧

[A. E. Brandt in *The Eagle*, Reading, Pa.]

An article in your paper quotes from the Catholic Truth Society's notes, in which the Rev. Dr. —— is said to have "paid his respects to modernism in religion," and states that "Christian Science robs Christ of both his cross and his crown, and puts the fool's cap upon the sober brow of reason."

This statement should not go unchallenged, first, because it is not true; second, while Christian Scientists do not fear or take offense at criticisms of their faith, they feel it to be

Digitized by Google

a duty which they owe to their fellow men and women, in consonance with the golden rule, not to allow anything so vital to the welfare of mankind as Christian Science to be openly misrepresented without at least attempting a correction in an equally open manner. This duty becomes almost imperative because of the widely acknowledged efficacy of Christian Science in working out the present salvation of mankind from sinful habits and diseased conditions, many of which were formerly considered incurable, and because of the many people who are in need of that healing truth.

Our critic is no doubt sincere in his belief that Christian Science teaching differs somewhat from his particular idea about the cross and the crown, and he has a right to his opinion. Christian Scientists will not attempt to rob him of it, nor of his concept of a "fool's cap upon the sober brow of reason," if he wishes to retain it; but that concept is not enlightening, leads nowhere, and certainly does not apply to Christian Science. If there is any one thing about the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, that impresses the student more than any other, it is its faultless logic, reasoning from premises to conclusions from which there is no escape, and by means of which truth may be discerned from falsity, reality from unreality, the seen and temporal from the unseen and eternal.

The reverend gentleman's statement is made without giving a single reason on which to base it. What his particular ideas about the cross and crown may be, concerns us little, but it does concern the world to know that Christian Science explains what the real cross is which Jesus bore so meekly and lovingly for the example and salvation of men, in a manner that satisfies the understanding and lightens its load for each individual, creating a willingness to bear it in the true Christian spirit.

Instead of robbing the Christ of his crown, Christian Science crowns him in this present age with a halo of his own spiritual light, hidden for centuries from the vision of men, but again being revealed and understood through the writings of Mrs. Eddy, and demonstrated by doing many wonderful works in his name and nature. There is no better way of honoring Christ Jesus than by obeying his precepts and following his example: "He that believeth on me, the works that I do shall he do also." "Heal the sick." "If ye love me, keep my commandments."

✧

[Ezra W. Palmer in *The Glenwood Springs* (Col.) *Avalanche*]

A local clergyman recently made an abusive attack upon Christian Science and upon Mrs. Eddy, its Discoverer and Founder. Christian Scientists have given no provocation to this brother to merit this assault, as they do not attack other religious bodies, but believe thoroughly that the religious freedom guaranteed by the Constitution of the United States and of the state should be respected both in letter and in spirit. The fact that interest in Christian Science is growing in any community is frequently heralded by attacks such as this clergyman indulged in. Of course if Christian Science did not produce results it would not be attacked.

Attempts to discredit Christian Science healing and the remarkable physical, moral, and spiritual improvement in Christian Scientists as a result of the application of Christian Science have not been successful in the past, and this attack in your city will have no effect in obstructing the progress of Christian Science. Humanity hungers for surcease from sickness, disease, sin, want, woe, and death; and Christian Science gives this freely to all who will study and strive to understand its teachings. Christian Science makes available to this age the spiritual healing which Jesus and his apostles taught and practised. Distortion, invective, and innuendo can no longer hide from the people this spiritual healing, the "pearl of great price;" nor can abusive personal attacks upon Mrs. Eddy alter the tremendous fact that Christian Science as she has stated and demonstrated it is the most potent and reliable healing agency in the world today. Christian Science heals the body and uplifts the thought to grasp spiritual truths, because it teaches full and complete reliance on God; it also teaches implicit obedience to the first commandment, "Thou shalt have no other gods before me." Drugs, electricity, manipulation, autosuggestion, and hypnotism are no part of Christian Science and are contrary to the commandment quoted.

Mankind has had quite enough of polemics and religious animosity. Attacks upon a more spiritual religion have never helped the race; on the contrary, they constitute the saddest pages of history. If the critits and traducers of Christian Science are earnestly seeking to bring the kingdom of God to earth, they will strive to emulate the good works of Christian Science in healing the sick and purifying the sinner, instead of arguing against the healing efficacy of divine, ever present Love.

These critics assume a grave responsibility when they repudiate the power of God to heal the sick. Let them remember the Master's warning about giving a stone when bread alone satisfies. Christ Jesus healed the sick; he commanded his followers to do likewise. Why should not this clergyman, as a follower of the Master, obey his commands, instead of smiting those who are seeking so to do? Surely there is work enough in the vineyard of our Master for every faithful Christian in overcoming sin, disease, and death, and in making available the riches of God's love for His children, without one worker attempting to discredit another.

✧

[M. I. Whitcroft in *Stroud* (England) *Journal*]

The remark that "Christian Science is capable of doing both harm and good," which appeared in your paper, is apparently the result of a misunderstanding on the speaker's part. It is as impossible for Christian Science to work harm as it would be for good to work evil, for the reason that its Principle is divine Mind, God, Life, Truth, Love. This divine Principle is demonstrated now as of old in healing sickness and sin, in the destruction of evil in whatever form it presents itself. As Mrs. Eddy says in Science and Health (p. 407), "Christian Science is the sovereign panacea, giving strength to the weakness of mortal mind,—strength from the immortal and omnipotent Mind,—and lifting humanity above itself into purer desires, even into spiritual power and good will to man."

✧

[Charles W. J. Tennant in *Musical Standard*, London, England]

Why a writer in a recent issue should refer to autosuggestion as a "sort of Christian Science," it is hard to imagine, for there is nothing in common between them. The latter, discovered by Mrs. Eddy, is the Science of absolute truth taught and practised by Jesus, and referred to by him in Luke when he said, "If I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." Autosuggestion is the exercise of human will-power, the effort to displace one false belief by another equally false. The kingdom of God has never come upon any one through autosuggestion. The cure for stage-fright will be found in the understanding which Christian Science gives of our Master's declaration, "Ye shall know the truth, and the truth shall make you free." This is the only way to real freedom.

Editorial

Freedom in the Truth

To the Christian Scientist all right thinking, all real progress, and all that makes for the good of humanity is the manifestation of infinite Mind, God. Only, therefore, as we understand God and man's relation to Him can we really progress along spiritual lines and rightfully claim to be Christians. Christ Jesus said that his mission was to help mankind to know God, and it was to be through this knowledge that men were to find life eternal. This knowledge of God was to be obtained through prayer and right doing; through communion with the Father, and through righteousness. On page 1 of Science and Health, in the chapter on Prayer, Mrs. Eddy writes, "Desire is prayer; and no loss can occur from trusting God with our desires, that they may be molded and exalted before they take form in words and in deeds."

In this same chapter Mrs. Eddy sets forth the difference between the prayer which seeks by much insistence to change the divine will, and the prayer of Christian Science, which has for its object the right apprehension of divine law, and is based on a desire to conform to this law. Through Christian Science it is manifest that there is an unchanging divine law, which is always in operation and always governing every right thought and desire. It is the law which the Master invoked when at the grave of Lazarus he prayed, "Father, I thank thee that thou hast heard me. And I knew that thou hearest me always." In the prayer which does not conform to Christian Science there is always the danger of attempting to instruct omnipotence, and also the danger of perpetuating whatever there may be of selfishness at the root of our petition. This is not possible, however, in the true prayer of Christian Science, for there can be nothing in it but the pure desire to do God's will and to be conformed to His law, a law which like its author is without beginning or end, "the same yesterday, and today, and forever."

In the one great prayer which the Master gave to his disciples a very striking and impressive phrase is, "Thy will be done in earth, as it is in heaven," and the thought which these words express is to be found throughout Jesus' ministry. The prayer of Christian Science necessarily follows this thought, and is not based on the belief that God is the creator of evil, or that in being submissive to evil we are submitting to His will. Christ Jesus never taught that God was the author of evil, and the prayer which healed the sick was based upon an understanding of the omnipotence of good and the unreality of evil. Christian Science prayer necessarily recognizes God, infinite Mind, as the only creator, and man as His image and likeness,—God the Father as Spirit, and man the son as spiritual. Through this recognition of the divine creation, mankind is brought into communion with God, and humanity is governed and guided as was Christ Jesus, who gave credit to the Father, who "doeth the works," for all he accomplished.

That it is not an "unknown God" such as the Athenians besought, God in a far-away heaven, but God the infinite Father, to whom Christian Scientists address their petitions, and that it is through the realization of His omnipotence and ever-presence the sick are healed and the sinning are reformed, is a truth which should ever be in the thought of those who pray. Along with this should be the understanding that the Father doeth these works not as a respecter of persons, nor in a changeable way, but only in fulfilment of divine law. "There is a law of God applicable to healing," Mrs. Eddy writes, "and it is a spiritual law instead of material" (Science and Health, p. 463). When we are ready to break away from the bondage of material belief, to realize and declare with Paul that we are not subject to the law of sin, sickness, and death, we shall find, as he did, freedom in the truth, in a knowledge of God which comes from obedience to that divine command never to be abrogated, "Thou shalt have no other gods before me."

ARCHIBALD MCLELLAN.

Differing View-points

A STUDY of the book of Acts and of the various epistles reveals the fact that considerable time and growth in grace were needed in order to reconcile the differing views of those who were at that day accepting Christianity. Not only did this apply to those of other nationalities who had believed in "gods many," but even those who had been brought up in the Jewish faith and who had become Christians were not always agreed as to the best way of advancing the cause which they had espoused. This shows that we can never be in entire agreement with our fellow men until we understand and obey the one Mind, God, and then we shall be truly tolerant of what may seem to us the slow steps of others who have entered the path which leads from sense to Soul. We shall also be willing to apply to others as well as to ourselves our Leader's counsel, given on page 485 of Science and Health, namely, "Emerge gently from matter into Spirit."

In the second chapter of Galatians we read of a controversy between some of the early workers respecting circumcision, Paul even charging Peter with dissimulation and saying, "I withstood him to the face, because he was to be blamed." Happily, however, this incident did not rupture their brotherhood in Christ, for we read in Peter's second epistle a touching tribute to his "beloved brother Paul," in which he speaks of "the wisdom given unto him." He adds that some of Paul's epistles contained "things hard to be understood, which they that are unlearned and unstable wrest, as they do also the other scriptures, unto their own destruction." These two noble and fearless workers had therefore reached in large measure that "unity of the faith" and that "knowledge of the Son of God" of which Paul elsewhere writes.

The experience of the two apostles above cited is similar to that of many students of Christian Science today. They indeed come from the north and the south, the east and the west, to find their places in the kingdom of God, and this in a far more vital sense than a merely geographical one. Their mental view-points are therefore different until they rise above the plane of mortal belief and experience. The same statement does not for this reason mean the same thing to two persons who may be equally sincere in their desire to grasp the truth, that is, until both have progressed farther.

A case might be cited of a person who had received class instruction in Christian Science, and when a friend asked her about the teaching she replied that the chief thing she got was a wonderful sense of the all-power of divine Love. To this the friend responded that she feared the teaching had not been so thorough as it should have been; that it should have dealt more with the subtleties of mortal mind and the need of wrestling with them. The student was in consequence somewhat confused and discouraged, yet she felt that her greatest need had been met and that fuller understanding would surely come to her. Now it happened that another student in the same class complained that the teaching had been so drastic in relation to the need of constant watchfulness, and alertness in the use of spiritual weapons, that he felt tempted to give up Christian Science altogether if it demanded so much. It may be well to say here

Digitized by Google

that each of these students advanced so as to hold clearer views of the demands of divine Principle with a correspondingly improved practice, and this is what we all need.

Before deciding that a brother's statement of Science is faulty, would it not be well always to seek from the Bible and Science and Health a clearer view of the question involved, remembering that the real issue is often obscured by the poor medium of human language. Even where one is nearer right than the other, as is doubtless the case in many instances, the Master's words to Peter may well be recalled and heeded, "What is that to thee?" also his command, "Feed my sheep." As we seek and find the green pastures on higher spiritual levels, our one desire will be to encourage others to reach them, that we may rejoice together in seeing Truth no longer "through a glass, darkly," but face to face.

ANNIE M. KNOTT.

"And greatly to be praised"

"WONDERFUL! How wonderful!" All were looking out of the car windows, feasting upon the beauty that lay like a radiant sunset upon the woods. Even the scraggly undergrowth of the wayside swamp had arrayed itself with indescribable splendor of color, and as one traveler heard approvingly the oft repeated ejaculations, he recalled Isaiah's use of the term "Wonderful" to describe the appearing of that divine idea which, alas! has ever been "despised and rejected" by the great majority of men. How different the subjective state and sequent vision of the prophet from that of those who "led him away to crucify him." To him "The mighty God, The everlasting Father," was made manifest in the divine idea, while they saw what they believed to be but an insufferably presumptuous Nazarene of whom they declared with bitter word and cruel deed, "We will not have this man to reign over us."

This historic failure to honor or even recognize the divine revelation is essentially repeated to our loss whenever we fail to identify all beauty, truth, and goodness as the expression of infinite intelligence, of the activity of divine Love. This wrong finds pertinent rebuke in the scientific declaration of Christian Science that "no wisdom is wise but His [God's] wisdom; no truth is true, no love is lovely, . . . no good is, but the good God bestows" (Science and Health, p. 275). Spiritual education begins with the issuance of the first commandment, which demands that we know and honor Truth and true things alone, and both perception and judgment are corrected as we begin to see, as St. Paul puts it, that every thought and thing is to be brought into captivity "to the obedience of Christ." This right sense of God and His infinite and perfect expression must surely embrace the wondrous beauty so prodigally displayed these autumn days, but which for those who have eyes to see is ever present and abounding. It is expressed not only in exquisite refinements and associations of color, but in that beauty of form and tracing, found no less surely in the heart of an agate crystal than in the heart of a rose; in the harmony, the order, the coordination and adjustment to ends which are to be seen in the little things as well as the large all about us, so that the psalmist was impelled to say, "Out of Zion, the perfection of beauty, God hath shined." How true it is that everything becomes wonderful the moment it can be dissociated from matter and recognized as "of God," and this because the perfection of His beauty can never become commonplace, nor its inner wealth exhausted.

A mote floating in a sunbeam seems a very center of scintillation, and yet we never think of this radiance of prismatic color as pertaining to a speck of dirt. On the contrary, it is always known and honored as none other than a child of the sun. In this we make no mistake, and yet how grievously and universally men have stumbled in failing to identify the ideal and the inspiring as a revelation of the infinite good. It is here that the fundamental teaching of Christian Science expressed in Mrs. Eddy's statement, "There is no life, truth, intelligence, nor substance in matter" (Science and Health, p. 468), relates itself to the right understanding and interpretation of experience. If there is no life in matter, then matter certainly cannot give expression to any manifestation of Life; hence wisdom, goodness, and beauty should be forever divorced from it in our thought, and all that quickens and delights our higher sense, all that inspires us to seek after nobleness and purity, after God, becomes for us a revelation of the nature and the presence of Him in whom man, and all the things that appeal to man, consist.

We may not be able to explain all the apparent associations which obtain in the realm of incongruous human belief in both good and evil, but we can refuse to consent that anything good, beautiful, or true pertains to any phase or condition of materiality. To habituate thought to this scientific classification is distinctly worth while, so directly does it contribute to that putting off of the old man, which means the putting on of the new, in Christ. To know every-day experience for what it really is, is more and more "to behold the beauty of the Lord, and to inquire in his temple."

JOHN B. WILLIS.

Among the Churches

Current Notes

LUDINGTON, MICH.—One of the most attractive churches in this city is the newly remodeled and redecorated edifice of First Church of Christ, Scientist, which was opened the last week of August after improvements had been made costing four thousand dollars. The society was organized in 1899 as a branch of The Mother Church in Boston, with a membership of twenty-four, only three of whom are still residents of Ludington. The church property was purchased for nine hundred dollars. The original building has now been improved by the addition of the porch and foyer in front and a Sunday school room at the rear. The funds for the alterations were raised by voluntary subscriptions, and they have all been paid for.—*Grand Rapids Herald.*

FREMONT, OHIO.—The homestead on the corner of Park Avenue and Ewing Street is to be the permanent home of First Church of Christ, Scientist, in the near future. The trustees of the church have purchased the residence for $5,650. Members of the congregation plan to occupy the present residence as their meeting-place and reading-rooms as soon as the dwelling, a splendid frame structure, can be vacated by the present occupants. Later it is planned to erect on the site a Christian Science Church. The property is most desirably located for church purposes, having a frontage of 82 feet on Park Avenue with a depth of 132 feet on Ewing Street.—*The Fremont News.*

MORRISON, ILL.—About three years ago First Church of Christ, Scientist, bought and paid for a building lot at the corner of Genesee and Cherry Streets, the purchase price being eight hundred and fifty dollars. Since then Genesee Street has been paved, and this has brought the cost up to about eleven hundred dollars. In July of this year the contract was let for a church edifice, and the foundation is now completed. The building is to cost, without furniture, six thousand dollars. We expect to be located in it by the first of next year.—*Correspondence.*

Digitized by Google

BURNS, ORE.—The Christian Scientists of this city recently purchased lots just back of the house on the corner toward the court-house, and this week [July 26] they bought a building which will be immediately moved upon the land and used as their church. They have secured a good location, and with some repairs to the building purchased they will have comfortable quarters.—*Burns Times-Herald.*

HONOLULU, HAWAII.—The new hall in the Odd Fellows' Building, formerly used as a roof garden, will be occupied by the Christian Science congregation for the first time this morning [Sept. 5]. The room has been rebuilt and decorated at a cost of approximately two thousand dollars and has a seating capacity of about four hundred.

Pacific Commercial Advertiser.

TERRE HAUTE, IND.—By an agreement consummated Tuesday [June 8], the Christian Scientists of Terre Haute will have the free use of the old First Baptist Church, Sixth and Cherry Streets, for a period of two years. The owner of the church building donated the use of the church to the members of this faith.—*Terre Haute Tribune.*

HOOD RIVER, ORE.—At the annual meeting of First Church of Christ, Scientist, Aug. 13, it was decided to proceed at once with the erection of a church edifice on the lot located on Ninth Street just south of the Park Street school.

Hood River News.

ABILENE, KAN.—The Christian Science Society has purchased three lots on the southeast corner of the intersection of North Fifth and Cedar Streets. This site will give the church edifice a space 75 by 80 feet.—*The Abilene Chronicle.*

OAKLAND, CAL.—Seventh Church of Christ, Scientist, was opened for its first service July 11. Its dedication will not take place for some time.—*Correspondence.*

◇ ◇ ◇

The Lectures

Harvard University, Cambridge, Mass.

Bicknell Young delivered an interesting lecture on Christian Science in Emerson Lecture Hall. The lecture was given under the auspices of the Christian Science Society of Harvard, and Mr. Young was introduced by the president of the society, C. A. Woodard, second year law student, who said:—

The true attitude of the student is well expressed in those words of Paul: "Prove all things; hold fast that which is good." Here in the university we are not expected to accept a proposition as true or reject it as false merely because our instructor believes it to be true or false. We are encouraged to do our own independent thinking; but we are taught that before we can determine whether any proposition is true or false, we must understand just what the proposition is and what it means. On the subject of Christian Science, also, the student should do his own thinking, realizing that he can form no correct opinion as to its truth until he understands its teachings. And just as the student who wishes to learn something about mathematics goes to a text-book on mathematics or to some one who can demonstrate its theorems, so also he who would learn something about Christian Science should go to its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and to those who can prove their understanding of Christian Science by demonstration.

The purpose of these lectures by members of the board of lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, is not to persuade any one to become a Christian Scientist, but to correct erroneous opinions about Christian Science and about its Discoverer and Founder, Mrs. Eddy, and to give reliable information on this subject.—*The Cambridge Tribune.*

◇

Cincinnati, Ohio

The introductory remarks by W. P. Rogers, dean of the Cincinnati Law School and president of the Cincinnati Business Men's Club, in introducing Jacob S. Shield, who delivered a lecture on Christian Science at Music Hall, were as follows:—

This is a splendid gathering. I do not remember of ever having stood before a more inspiring audience. You are to be congratulated on the fact that the basic truths of your religion have taken such hold upon the hearts of your people that they quickly respond to every call of the church. While the stated meetings of other churches are poorly attended, you are able without apparent effort to secure audiences such as this. While other churches are struggling for existence, you seem to abound with all those things necessary to the growth and maintenance of great institutions. I am not familiar with all your tenets and doctrines, but I believe you are doing great good in the world. I believe further that good can come only from righteousness. If I were familiar with your doctrines, it might be that I could not agree with all of them; but judging from what I have observed, I would still say that your work is toward the everlasting better, for which we should all be striving.—*Correspondence.*

◇

Springfield, Mass.

A large audience was present at the lecture on Christian Science in the Auditorium given by Dr. Francis J. Fluno, who was introduced by Harry C. N. Smith, first reader of First Church of Christ, Scientist, of this city, as follows:—

It is primarily gratitude to God for healing that makes these Christian Scientists supremely happy in having their friends and neighbors here to listen to this gospel of freedom and peace.

Christian Science first attracted me when I observed the conduct of some half a dozen men with whom I did business. These men, out of thousands of acquaintances and without mentioning their religion, convinced me that there was a principle and a power in daily life that made them more honest with themselves and others, and that made them free from the fear of failure and competition. There was a well-spring of clean, clear thinking, the visible result of which was success, happiness, and efficiency. When I learned that these men were Christian Scientists I immediately bought the literature and faithfully studied the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have found that Christian Science is the panacea for all human want and woe.—*The Springfield Union.*

◇

Wilmington, Del.

Col. William E. Fell lectured on Christian Science at the edifice of First Church of Christ, Scientist. Former Judge David T. Marvel presided, and introduced the lecturer with the following remarks:—

I deem it a privilege as well as a pleasure to be with you on this occasion. I must confess that I feel a strong desire to tell you some of the results I have observed of your work here in this city,—not only of benefit to individuals but also in the social uplift and advancement of its citizenship. But you have come not to listen to me, but to hear another discuss

Digitized by Google

some of the fundamental truths which we are all anxious to learn about; to learn something more of the universality of truth. Man, since his creation, has been seeking to discover and interpret the law of life; the law that governs and controls life and living, that makes for righteousness and if followed will bring all men into harmony with God. There have been great conflicts in interpretation and teachings. Much has been rejected, but we have today a more spiritual interpretation than ever before, and I believe that eventually we shall have full knowledge and understanding of that law or truth which is in full accord with righteousness and in complete harmony with the Spirit of God.

One of the latest interpretations is the teaching of Christian Science. While many of us are not acquainted with or do not have an accurate knowledge of this religion, we know that the basic law of its ethics is righteousness; and we have observed, as the Hon. Joseph E. Warner said, "that it teaches its apostle to think; that it banishes many ills and much mental disquietude; that it purposes a high type of citizenship; that it illumines life with the thought of ever present Deity; that it urges quiet example in place of pharisaical display; that it regards the spirit and not the letter; that it places Principle above person, and prefers practice to profession." We are all interested in these teachings that have accomplished so much, and will all be delighted to hear a discussion of Christian Science.—*Evening Journal.*

Lectures to be Delivered

ALABAMA—Birmingham (First Church): Prof. Hermann S. Hering, Lyric Theater, 3:30 p.m., Nov. 7.

ARKANSAS—Monticello: Bliss Knapp, Church Edifice, North Main Street, 8 p.m., Nov. 1.

CALIFORNIA—Eureka: William D. McCrackan, Eagles' Hall, 8 p.m., Nov. 9.

Fortuna: William D. McCrackan, Church Edifice, Seventh and D Streets, 8 p.m., Nov. 8.

Oakland (Fifth Church): William D. McCrackan, Masonic Hall, corner East Fourteenth and Hepburn Streets, San Leandro, 3 p.m., Nov. 7.

Pacific Grove: William D. McCrackan, T. A. Work Hall, 8 p.m., Nov. 11.

Palo Alto: William D. McCrackan, Marquee Theater, 8 p.m., Nov. 12.

COLORADO—Delta: George Shaw Cook, I. O. O. F. Hall, 8 p.m., Nov. 11.

Grand Junction: George Shaw Cook, Margery Hall, 8 p.m., Nov. 12.

Montrose: George Shaw Cook, K. P. Hall, 7:30 p.m., Nov. 9.

Salida: George Shaw Cook, The Rink, 312 F Street, 8 p.m., Nov. 8.

CONNECTICUT—Hartford (First Church): William R. Rathvon, Parsons Theater, 3:30 p.m., Nov. 7.

Testimonies of Healing

I regret to record that our family for many years scoffed at the thought of Christian Science healing, although help along this line was lovingly proffered from time to time by friends who were students of this great subject. It is now difficult for us to understand upon what we founded our prejudices, as not one member of the family had read a word of authorized Christian Science literature, nor had we sincerely sought enlightenment or authentic information from authoritative sources. We were simply enmeshed in theological self-satisfaction, and sharp indeed seem the experiences necessary to rouse the suffering human mind to admit the poverty of its perfunctory religious beliefs in time of need and cause it to seek surcease in other than the stereotyped channels. Not until the physical condition of my father had become especially acute, and material remedies were proving worse than useless, did we finally lay aside our foolish misconceptions of Science, go to a practitioner, commence treatment, and begin to read Science and Health.

My father had suffered for years from a wretched condition of head, stomach, and bowels, and I can hardly remember a day when he was able to be up and about his business without resorting to medicines. His improvement under Science treatment was gradual but unmistakable. The medicines were immediately discarded with no harmful results, and within a few days he began to eat articles of food which had been denied him for years. At the end of several months the improvement was remarkable, and it was not long before the nightmare of invalidism was wiped out of thought. This was eleven years ago, and he is today a splendid, wholesome specimen of manhood and an earnest student of Christian Science.

We next witnessed the healing of other members of our family. I myself seemed in no need of physical aid, but the study of Christian Science literature greatly appealed to me, since for years I had been heart-hungry for this very food. Some time afterward the opportunity came to prove in my own experience that the "healing of the seamless dress" is indeed "by our beds of pain," as Whittier so tenderly puts it. I seemed to go through a veritable "valley of the shadow," but can now truly say that I am grateful for the whole testing-time, for Truth was marvelously and naturally victorious, and like the Hebrew youths emerging from their fiery baptism, I lost therein much that had bound and enslaved me.

It would be difficult to name the condition under which I seemed to go down. Mortal mind might have called it brain fever or typhoid, acute lung trouble, paralysis, and numerous other equally terrifying names, for the well-known symptoms of the foregoing seemed loudly to assert their claims, and like Goliath of old to attempt to affright and overwhelm the faithful little band of workers who for three weeks never left my side day or night. But though error raged and drew up in gruesome array its diabolical arguments, the soldiers surrounding me, armed with the sword of Truth and protected by the shield of faith, never once faltered, never once gave up, and never thought of turning to other aid. They needed not to know what a material physician thought of the case, but what the great Physician was knowing about His child,—that He was beholding him unsullied, upright, strong, and free. When the last enemy seemed near, no material stimulant was thought of, but instead there was poured into my ear inspiring declarations of Life, and the glorious recognition of Life eternal called me forth from the dream of death as surely as the same truth vanquished the hosts of error on the shores of Galilee nineteen centuries ago. The convalescence, after I regained consciousness, was remarkable, and in a few weeks I had gained the strength and flesh which patients under *materia medica* usually acquire only after months of gradual betterment.

Mrs. Eddy's inspired writings have indeed opened up the Scriptures. The Bible, which had hitherto been a volume read only from a sense of duty, has become a vital, practical manual of living, the study whereof brings joy as well as profit. My previous religious training taught me to regard Jesus as a miraculous being, a supernatural worker of wonders, one whose personality was to be worshiped; and misinterpreting his marvelous mission thus, I see now why my religious beliefs were of so little avail in times of trouble. In fact, the proposition of one's religion smoothing out the mental and physical discords of earth, and accomplishing aught other than the preparation for the final giving up of mortal life, seemed never to be suggested to my thought. It was like entering another plane of experience, therefore, when through the reading of Science and Health I glimpsed the simple truths of Jesus' ministry and learned to look on him as the practical Wayshower, the one who truly knew the way out of materiality, and who came to show us the path to the Father's home,—to deliverance and harmony here and now.

Accordingly I, who have been so blessed by the light which the study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, has brought into my life, urge upon any who may read these words the prayerful study of this wonderful book. As it unlocks the Scriptures, bringing into your consciousness the understanding of what God is and man is, as spiritual sense lifts you out of physical and mental darkness, you will realize the gratitude I feel to that brave, pure woman-disciple who in this age said in the words of Samuel (see Retrospection and Introspection, p. 9), "Speak, Lord; for thy servant heareth," and afterward gave to us the heavenly harmonies which she heard.

JOHN RANDALL DUNN, St. Louis, Mo.

◇

When the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, was first presented to me, it was merely glanced through and laid aside. About five years later we bought a home, and upon opening a *Sentinel* which the previous occupant had left there, I read a testimony by a writer who had been healed of chronic bowel trouble through the reading of Science and Health. This was a complaint which had caused me great suffering for more than fifteen years, and having tried about everything *materia medica* had to offer without any lasting benefit, I was willing to try anything.

The idea of anybody being healed of disease through the reading of a book seemed absurd, but I nevertheless procured a copy of Science and Health from the public library, and before the chapter on Prayer was finished I knew that this was what I had always longed for. I had been reared religiously, but it meant nothing to me. Now I had found a God who is divine Love, divine intelligence, who never varies. I could not read fast enough, but wanted to know all that the book held for me at once, and after reading almost constantly for five days I was suddenly healed. That was nearly five years ago and the trouble has not returned. On Feb. 8, 1914, I awoke with severe pain in my head and eyes. I tried to use my understanding of Science, but the pain did not yield, and after suffering intensely for three days I telephoned to a practitioner for help, and was healed in ten minutes. This was my first absent treatment and I was overjoyed.

Digitized by Google

Words cannot express my gratitude for the help I have received through Christian Science. The *Journal* and the *Sentinel* are most welcome visitors in our home, and we find the testimonies in both periodicals very helpful. The Wednesday evening meetings are always a spiritual feast. I often wonder how I ever managed to get along before I began to study Christian Science. It is such a comfort in time of doubt to know that we can always depend on divine intelligence to straighten out our tangled affairs. I am deeply thankful to God for this wonderful truth, and grateful to Mrs. Eddy.—JOSEPHINE KNAAK, Denver, Col.

✧

It is with the deepest gratitude that I give this testimony of what Christian Science has done for me. I turned to it first for the healing of a badly strained throat, for which I was about to undergo an operation. Although able to understand very little of the spiritual import of Mrs. Eddy's book "Science and Health with Key to the Scriptures," I felt certain that it contained the truth, the healing, and the peace of God's word, and after treatment I found that my voice and throat were stronger than they had ever been before. I have used my voice a great deal since then, and its fulness and strength have always been apparent. Christian Science has also healed me of minor ailments, such as headache, cold, and toothache. Then too I have been able to lay aside glasses which had been worn incessantly for over thirteen years.

Wonderful as this physical healing has been to me, it is nothing compared with the change that is taking place in my thought. Christian Science has brought me a greater happiness and peace than I ever knew or dreamed of. More and more I realize the unfailing help and joy it is to be able to turn in all moments of doubt and difficulty to a God who is Love. I know now that God does not send our trials and diseases, but that they are the results of our own wrong thinking, and that instead God is "a very present help in trouble," always at hand and giving all good freely to those who turn in trust and confidence to Him.

I could not conclude this testimony without saying how grateful I am to those who have led me into the way of Truth, for their patience and loving-kindness; also for those wonderful messengers of good tidings to all mankind, the *Journal*, the *Sentinel*, and the *Monitor*. At this time in particular the *Monitor* is proving the greatest blessing in this country, bringing its healing message of Love and Truth, and it is surely one of the greatest educational factors in the world.

CONSTANCE E. FAIRBAIRN, Kensington W., London, England.

✧

Less than four years ago I was very sick, and life was almost unbearable. From early childhood I had been so unhappy, so unfortunate, as it appeared to me, that I became convinced there was nothing in this world but sorrow and sickness, trials and tribulations. I had received no religious training whatever, knew no God, nothing but misfortunes and deceptions. My mother had passed on when I was only eight years of age, and the life which then followed was of such a nature that it left its marks on me, all of which I am learning to forget by the aid of Christian Science. Before I was twelve I had begun to smoke and chew tobacco, and continued this practice in excess up to my healing in Christian Science.

About seven years ago, after having lost my position, I became so disheartened that in sheer desperation I took to the use of intoxicating liquors and was fast becoming addicted to their permanent use. My general health was naturally being undermined all the time and I was going from bad to worse. The heart and stomach were seriously affected, according to the doctors, owing to the amount of liquor and tobacco consumed. Furthermore, from my early years I had suffered from chronic bowel trouble, and after having tried nearly every new physician with whom I came in contact, and nearly every suggestion regarding diet, I finally gave up in despair, as nothing helped me. This was the condition in which Christian Science found me, a veritable wreck; but now there remains no trace whatever of these diseased and discordant conditions, and the happiest and most tranquil days I have ever known are the present ones.

I am indeed thankful to God and grateful to Christian Science for my salvation, and also for the myriad blessings that have come to me and my dear ones during these few years in which this great Christ-teaching, as revealed and given to us by our beloved Leader, Mrs. Eddy, has been an active force in my life.

ROGER GILBERT HERSHBERGER, City of Mexico, Mexico.

✧

I have been healed through Christian Science of painful corns, the fear of poison-oak, severe headache, an impatient disposition, and other weaknesses. For this I am very grateful, but yet more so for the spiritual understanding of the Bible gained through the study of Science and Health. At first I was not willing to study the Lesson-Sermon, always giving as an excuse that I did not have time. One day the practitioner lovingly asked if I did not feel the need of spiritual food just as much as material nourishment, and I have found that I did need it, and now look forward with pleasure to the time set apart each morning for the study of the Lesson.

Two articles in "Miscellaneous Writings" by Mrs. Eddy, "Love Your Enemies"(p. 8) and "Taking Offense" (p. 223), have been very helpful to me in overcoming a sense of hatred of many years' standing. Words are inadequate to express my appreciation of the Sunday services and Wednesday evening meetings, and of our literature with its loving messages. For all these blessings I am truly thankful to God, and grateful to our beloved Leader, Mrs. Eddy.

AGNES M. CHACE, San Francisco, Cal.

✧

One Saturday afternoon, right after dinner, my little girl, then two years old, sucked the top off of twenty-seven blue-tip matches. My husband is opposed to Christian Science, so I telephoned at once to a doctor, who came immediately and gave the child some medicine. He said she might not feel the effects of the poison for several days, but if she were taken with convulsions or bowel trouble, no time should be lost in calling a doctor. The following Monday night she went into a state of coma, from which it was impossible to rouse her, although she vomited every hour or so. My husband would not believe this was caused by the matches, so long a time had elapsed, but said to wait until morning and he would call a doctor. Early the next morning I took the child into another room, and I felt that her case was desperate. I thereupon telephoned a Christian Science practitioner, telling her how the case stood, and she said she would begin treatment right away.

When my husband came into the room and saw how serious conditions were, he hurried to call a doctor, but for some reason could not make connections. When he came back up-stairs the baby opened her eyes and asked for a drink. She seemed pretty well all that day, but the next morning lapsed into a state of coma again. The practitioner, how-

Digitized by Google

ever, told us not to be alarmed, for Truth had roused her once and could do so again, and Truth did. The child continued to improve, and in three days, when I took her to see the practitioner, she was all right.

For this wonderful healing I am more than grateful. It occurred about two years ago, and there has never been the slightest trouble from the poisoning since. The child is in perfect health.

Mrs. W. H. Shannon, Jr., Newburgh, N. Y.

✧

My first reading in the Christian Science literature taught me that to work out life's problems aright I must get a clear understanding of God, divine Principle. This demanded work,—the study of the Bible with the aid of Science and Health, and the putting into daily practice of what I learned. As a result of this course I have become a happy student of the Bible and have realized the fulfilment of many of the beautiful promises therein contained. I am daily being helped spiritually, morally, and physically.

A few years ago the application of this truth about God and man made the arrival of my little girl a most beautiful demonstration. I was up in less than twenty-four hours, but on account of my husband, who was not then interested in Christian Science, the doctor was permitted to make his usual number of calls, and so I stayed a little more closely to my bed than I would have done otherwise. Each time he called, the doctor told me many things that I must not do. His advice was not heeded in the least, however, because the Christian Science practitioner had assured me that God's ideas need no assistance from matter. My baby and I are both strong and happy.

Experiences during these few years have proven to me that "there is nothing from without a man, that entering into him can defile." At one time our baby swallowed a pin two inches long. My fear in this instance was overcome by the assurance given in the ninety-first psalm and in hymn 154 in the Christian Science Hymnal. There was no change in the baby's eating, playing, or sleeping. Although she was with my husband all of that day, he knew nothing of what had occurred until I showed him the pin the following noon. We have had no desire to seek help from any other source than God, who is all-presence.

I count it an added blessing each time I hear of some one taking up this study.

Elsa Christen Messler, Pasadena, Cal.

✧

[Translated from the German]

I am most deeply grateful to be able to testify to the many blessings which I have experienced through Christian Science. Three years ago I was taken ill with a very painful stomach trouble, and being able to eat only special kinds of food, I became so emaciated and lost so much in strength that it was impossible for me to attend to my household duties, small though they were.

It was then that I learned of Christian Science through a relative. Although I was rather diffident at first with regard to this new teaching, I called on a Christian Science practitioner, after I had attended the meetings several times, and asked for treatment. The very same day I ate food which had been strictly forbidden by the physician, and did not diet thereafter, having attained to the firm conviction that God alone is my helper and that He bestows harmony and health on every one of His children. Within four days I was entirely well, felt better than previous to my illness, and have had no trouble with my stomach since. With a few treatments I have also been healed of severe hemorrhages, from which I had suffered for many years and which in the physicians' opinion could be stopped only by means of an operation. The recognition of the fact that nothing can be lost in Mind, that God's children cannot sustain a loss, made it possible for me to recover a rather valuable object which was believed to have gone astray.

For these as well as for innumerable other proofs of the power of divine Love I am most deeply grateful. My endeavor shall be to grow in understanding, that I may at all times be able to lay hold on the good which is always nigh. Next to God I am profoundly grateful to Mrs. Eddy, our revered Leader, who was fitted to bring this sound teaching to the world.

Margarethe Freudenthal, Berlin-Friedenau, Germany.

✧

I am deeply grateful for the moral regeneration which comes through the study of Christian Science, for the overcoming of so-called human will and selfishness, and for the healing power of Truth and Love, which destroys all false beliefs and practices. I am ever grateful for my first physical healing, nine years ago, of chronic rheumatism and liver trouble, having been healed in three days' time while reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, our revered Leader. Since then Christian Science has met my every need.—Lottie M. Brown, Portland, Ore.

✧

I wish to testify to the rich blessings which have been mine through Christian Science. For many years I had been a constant sufferer from many complicated physical ailments, among them locomotor ataxia, kidney and bladder disturbances, rheumatism, neuralgia, and a constant pain in the face, all of which rendered life unbearable. I was a heavy burden to my family, both financial aid and constant care being required of them during the many years of my illness. Physicians could give but temporary relief, and as declining years approached all hope of recovery was given up.

In this deplorable condition Christian Science found me, and I was gently led to see the light of the guiding star of being for myself, even the very clear perception that there is no death. I have been entirely healed of all these ailments, and words are inadequate to express my gratitude. For my future guide I have God and the Bible. Mrs. Eddy's books are a rich legacy left by this inspired woman for the benefit of mankind.

I have just returned from a trip extending to the middle West, while before my healing I would have considered this an impossible ordeal. Although seventy-one years old and traveling alone, I had no sense of fear and no weariness, but a peculiar joyousness in the renewal of strength and the abiding peace which Christian Science has brought into my experience.

May the day-star of Truth dawn on all those who read these lines, and lead them to spiritual harmony through Christian Science. I know through the teachings of Science that Life, Truth, and Love are eternal.

Mary A. Smith, Portland, Ore.

This is to certify that I am fully acquainted with the facts pertaining to my mother's healing. The healing of the facial pains made a deep impression on me because they were destroyed within twenty-four hours after I had narrated to the practitioner a conversation in which my mother expressed her belief that they were caused by a malignant growth. The completeness and abiding nature of the healing are beyond question.—Mrs. C. E. Haney.

Digitized by Google

About four years ago I was healed of female trouble and other discords by the first reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy. This healing was permanent, and since that time our many needs have been met by Christian Science, often by our limited understanding of its teachings.

When only two months old our baby became ill with cold, which resulted in a severe cough with croup, while to this were added hives and sore mouth, all of which were very distressing. The condition failed to yield to my efforts, and my husband being away on business, I wrote to a Christian Science practitioner who had helped us at other times, asking for absent treatment. The first day there was marked improvement. In three days the baby was all right with the exception of a slight cough, and that disappeared before the week was over.

We are indeed very grateful for this healing, and for the many other blessings that we have received since we began to study Christian Science. We take the *Journal*, the *Sentinel*, and the *Monitor*, and feel that we could not do without them.—Mrs. D. B. London, Alanreed, Texas.

✧

With a grateful heart I feel that it is time for me to add my mite in the Master's name, in the hope that it may help some one as I have been helped by reading the testimonies in the *Sentinel*.

For many years I suffered from severe headaches and internal ailments, and for several years from stomach, bowel, and kidney trouble. In fact my whole body seemed a wreck. A few years ago I was led through desperation to ask for Christian Science treatment, realizing at last that *materia medica* could do no more for me, since three doctors had failed to give relief and all agreed that an operation was the only thing that would help me. A practitioner sixty miles away was asked to treat me, and almost immediate relief from the distress in the stomach was experienced, so that for the first time in many months I was able to eat whatever I wished without suffering.

While my healing has been somewhat slow, the headaches and internal trouble gradually disappeared, and they have not returned. In the spring I had an attack of the stomach disorder, but it was entirely overcome through Christian Science treatment. I am now stronger than ever before and can perform my daily duties without stopping to think what the result will be from extra exertion, while before coming into Science I never knew what a well day was.

For this healing I wish to express my thankfulness to God, and my gratitude to the dear woman who has so lovingly given us the true understanding of Christianity and helped us to know that "to those leaning on the sustaining infinite, today is big with blessings" (Science and Health, Pref., p. vii). My blessings have been many, and my prayer is for growth in knowledge each day, so that I may help others to know God's ever present help through Christian Science.

Ella Will, Harrington, Wash.

✧

I wish to acknowledge my gratitude for having been healed through Christian Science of defective eyesight. Because of this trouble I wore glasses for fourteen years, but have not used them for about four years, during most of which time I have been doing clerical work, and some of it at night. I have also been healed of the desire for tobacco and liquor and have been helped in overcoming financial difficulties. For all of these healings I am thankful to God, and grateful to our Leader, Mrs. Eddy.

John H. Collins, Santa Monica, Cal.

From Our Exchanges

[*Northwestern Christian Advocate*]

Jesus knew what was in man; that is, he knew what there was to come out of man if only the opportunity allowed. He looked down the centuries—down even past our present generation and a thousand years beyond it—and saw the man of the future, the perfect man; and it was to this man that he addressed much of his truth that seems hard to comprehend. When he spoke of faith, saying if we had faith as a mustard grain we could work wonders; when he mentioned the perfect man, stating that he could eschew all evil and be perfect as the Father is perfect; when he mentioned love and commanded that we should love even our enemies, that we should do good unto those who despitefully use us, we instinctively exclaim, as did his auditors then, "How can these things be!" We are inclined to squeeze these and kindred great truths into the narrow confines of our contracted hearts, and because there is a misfit say that such things cannot be so, such living is not ours to have, we cannot attain unto it; only one has done so, that was Christ.

Thus we do Christ and his work an injustice. Rather should we pray to grow that we might approach unto these truths, that we might magnify the heart rather than minify the Word. It would have been unwise for the Lord to speak half truths to accommodate our little existence. He spoke whole truth; he spoke to all that is within us, and it is our business to grow into that possession.

[*The Congregationalist and Christian World*]

It may be that peace waits upon the performance of a vast amount of preliminary foundation work all over the world. This work has to do, not with the technique of treaties or with questions of boundaries, disarmament, and indemnification, but with the springs of character, with the cultivation of a spirit, which is the essential element of any new and nobler order.

Is the church, which ought to be the leader and pathfinder, bestirring itself to this end? In its pulpits, its meetings of prayer, in its worship and its work, is the church preparing itself and others to meet the challenge of a new world situation? Can it reenforce the troubled faith of men? Can it make the truths in which it professes to believe operative in all fields of human activity? Christian preparedness—that is the duty of the hour for all who have found in Christianity a commanding ideal, a workable program.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

Jesus' followers felt quite certain that they had seen in him not merely a negative amiability but the positive expression on a limited scale of a life which never once thought of its own self-interest, and never left undone anything it could do for the common good. If history proves anything it surely proves that the men who knew and followed Jesus came to think of the ideal life as the life of love just because they saw it lived before them. They never saw in Jesus anything petty or mean, any desire for self-aggrandizement, any personal vanity or longing for applause. He never schemed for his own hand or thought of himself apart from his vocation.

[Rev. Harry Emerson Fosdick, D.D., in *The Christian Advocate*]

Creeds, rituals, organizations—how often these frozen forms of life have taken the place of inward, spiritual power, and yet men come still besieging the doors of the church and crying for strength to live. . . . This power which is

Digitized by Google

striving for entrance into and control over our lives is the same power which made the Master's life of patience and ministry, which was the soul in every deed of moral courage or generous service that makes his character sublime. God is no metaphysical abstraction, no barren and uninteresting hypostasis. He is the indwelling Spirit, rather, that made the quality of all our Master's virtues so that they come each one, like Moses, with a shining face from out the communion of his heart with God. They carry a glory not their own. They are begotten, not made. Like the sun breaking into the jewel room of a king and setting every separate stone ablaze, breaking up the fountains of the beautiful deep in every diamond, and sapphire, and emerald, and pearl—so this Spirit of his, gracious, patient, compassionate, undiscourageable, divine, illuminates with more than earthly glory the separate jewels of his character. You cannot distinguish divine from human there.

[Prof. George E. Dawson, Ph.D., in *The Homiletic Review*]

Faith as a mental attitude becomes effective only as it functions in conduct. Religious leaders should stop teaching that any sort of salvation may be achieved by a form of faith that is simply a mental state and not a mode of conduct and character. Faith as a passive, static quality of mind is worthless and harmful. This is the verdict of science, and it is the verdict of religious history. To teach men and women and children that they can be saved from their sins and converted into righteous characters through a faith in Christ that does not become dynamic in Christian living and in the reproduction of the qualities of Christ in human character, is to confuse truth and religious values. The character of nominally religious men and women in our civilization is suffering from this confusion in thousands and tens of thousands of instances. The Christian church itself is paying a heavy toll of indifference and contempt, and that, too, not wholly from the unamiable worldlings, because of this confusion of truth and of religious values. Let there be exaltation of faith in religion and in life as a whole, but let righteous conduct and character be the aim for which faith is exalted.

[Rev. J. J. Knapp, D.D., in *The Christian Intelligencer*]

St. James speaks of the "fervent prayer." And what are we to understand by this fervency? Our prayers are frequently faint and lukewarm, and this often causes us bitter regret. In answer to this question we say first of all that the strength of our prayers does not consist in the multiplicity or fervency of words. It is not fervency in the sense of excitement, but unction. Long prayers are not infrequently weak prayers. The fervency of prayer is not its length but its depth.

[*The Christian Work*]

Christianity, like Judaism, stresses its historical side in the earthly life of our Lord. But he was insistent in his disqualification of the senses as a means for the growth of the soul. Their extremely limited range takes no account of the vastness and splendor of heaven's purposes. Apostles of the grosser types of evolutionary theory have not succeeded in their bold attempt to subject the creator to their tiny realms of inquiry and hold Him in bondage to His own laws.

[*The Universalist Leader*]

The religious world is growing, but as all best things grow slowly, so religion is a thing of centuries, not of years, and those who seek the best need the long look backward to encourage them to reach the best that is forward.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

Attention is called to the change in price (see also last cover page) on single copies of the following volumes of Mrs. Eddy's writings when sent by mail postpaid from the office of the publisher, Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Massachusetts:

Science and Health (cloth) from $3.18 to $3.00; Retrospection and Introspection (cloth) from $1.06 to $1.00; Unity of Good (cloth) from 65 cents to 60 cents; Pulpit and Press (cloth) from $1.06 to $1.00; Rudimental Divine Science (cloth) from 55 cents to 50 cents; No and Yes (cloth) from 60 cents to 55 cents; Messages to The Mother Church (cloth) from $1.56 to $1.50; Christian Science vs. Pantheism (pebbled cloth) from 26 cents to 25 cents; Message to The Mother Church, June, 1900 (paper), from 26 cents to 25 cents; Christian Healing and The People's Idea of God (cloth) from 60 cents to 55 cents; Christian Healing (paper) from 21 cents to 20 cents; The People's Idea of God (paper) from 21 cents to 20 cents.

The above changes do not constitute a reduction in the price of Mrs. Eddy's works, but save the purchaser the postage on single copies of the volumes specified.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

The pamphlet, "Causation," by Frederick Dixon, has been translated into Norwegian "Skapende Kraft," and is now published with the English and Norwegian versions on opposite pages.

The pamphlet, "Fulfilling the Law," has been translated into Danish, "Lovens Fylde," and is now published and on sale. This new pamphlet has the English version printed opposite each page of the translation.

The pamphlet entitled "The Father's Business," already printed in English and German, has been translated into Swedish, "I Faderns Tjänst," and is now published with the English and Swedish versions on opposite pages.

"Christian Science: 'The Resurrection and the Life,'" a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $1.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the case of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

Uruguay has a good public school system, which was established some twenty-five or thirty years ago. It is copied after the educational system of the United States, and corresponds to the primary and grammar school grades only. The high school exists in the form of the National University, as it is called. In an enrolment of some fifteen hundred students only forty or fifty are girls. A campaign was started four or five years ago for the establishment by Congress of a women's university. There were many opponents of higher education for women and the measure was fought hard, but the President of the republic was in favor of such action and eventually a law was passed. In 1913 the women's section of the National University opened its doors. It was predicted that there would not be sufficient enrolment to warrant the continuance of the open door, but in the first year the enrolment reached close to the hundred mark.

The sale of public lands in the rural sections of Porto Rico to laborers for dwelling and farming purposes, provided for by an act at the last session of the Insular Legislature, gives some hope of providing better opportunities for the extremely dense population. Under the same act public lands in or near towns are to be sold for dwelling purposes only. There are approximately eight hundred thousand people, representing more than one hundred and fifty thousand families, who belong to the landless class, two thirds of the whole population. There are two classes of land that it is held can and should be placed within the reach of deserving laborers who now belong to the landless class. The first is the unused land, mostly in the interior, which is owned largely by non-residents, and the second is that portion of the land owned by the Government which is not needed for Government purposes.

By proclamation of its mayor, Newark, N. J., took a holiday a few days ago to celebrate the first public inspection of the great municipal work which is being done to reclaim thousands of acres of the Newark meadows. The day was celebrated as Port Newark Terminal day, for the city authorities, the members of the Board of Trade, the Traffic Club, and other business organizations plan to make the one time meadows one of the busiest shipping marts in the world, as well as a manufacturing and industrial center. The section now being developed includes nearly four thousand acres. Over three hundred acres have been filled in, and a channel 200 feet wide and 20 feet deep at low water has been dredged from the Government channel. The work has been in progress a little over a year, and the cost to date has been nearly two million five hundred thousand dollars.

From a Government resolution which has just been issued at Simla, it appears that the legislation introduced by the Government of India with respect to insurance companies operating in that country has been attended with the best results. The legislation in question was prompted by the growth of hundreds of insurance companies without governmental supervision, started practically without capital, and run by people who were ignorant of the rudiments of insurance business knowledge. Legislation of a fairly drastic order was therefore brought in, providing among other things for the deposit of all insurance companies of a considerable sum with the Government before they would be permitted to carry on business at all, and also insuring a rigorous official scrutiny of accounts.

Motorists of the United States will this year spend a total of $1,325,865,000 for their cars, the maintenance of them and expenses incidental to the use of them, according to a compilation made for the *Automobile Trade Journal*. On June 1, 1915, the number of automobiles in use in the United States for pleasure car purposes reached the 2,000,000 mark. This number is being increased at the rate of 700,000 cars a year, so that at present there are undoubtedly in use in the United States in the neighborhood of 2,235,000 automobiles. This does not take into consideration the 200,000 or more trucks.

At Arrowrock on the Boise River in Idaho there has been completed by the Government a dam 1,100 feet long, 348.5 feet high, 240 feet wide at the base, and 16 feet wide at the top. The time taken in construction was four years, and the cost $5,000,000. The dam impounds 211,300 acre feet of water. From thirty to sixty miles below the dam lie a quarter of a million acres of valley lands whose reclamation it has made possible.

Details of the Silver Lake (Vt.) power development plan, which is being backed by millions of dollars and is said by experts to be the greatest proposition of its kind in New England, have just been announced. The plan will allow the using of waters of approximately eighteen square miles of drainage area under a static head of 259 to 291 feet, and the waters of twenty-three square miles drainage area under a static head of 675 to 700 feet.

Formal recognition by the United States of the *de facto* Carranza Government resulted in all the morning newspapers of Mexico City being printed in American colors and containing extremely laudatory articles on President Wilson and the American nation. On all sides and in all circles cheers and praise for the American executive and for the people were heard.

Boston is to study Chicago's system of municipal labor efficiency to see if it would be advisable to incorporate any of its features into the working out of local problems. The action comes as an aftermath of a statement made by the president of the National Reform Association, to the effect that the Chicago system shows how Boston may in four years save $10,000,000 through the exercise of efficiency in utilizing city labor.

Seven communities of the South Shore of Massachusetts—Cohasset, Braintree, Hingham, Hull, Milton, Quincy, and Weymouth—have been chosen as a prospective site for the model city proposed in celebration of the three hundredth anniversary of the landing of the Pilgrims at Plymouth in 1620, according to an announcement by the sponsor of the plan. The plan provides for a canal from Weymouth to Fall River, and the development of the long water-front and the residential and business portions along intelligent constructive lines, in anticipation of a population of at least one million by 1940.

Since 1879 Montevideo, Uruguay, has had a water-supply system that is regarded as one of the best in South America. It is adequate for all wants, and equipped with modern methods of filtration, purification, storage, and distribution. The works, operated by a company formed with English capital and under English management, supply water free of charge to the city for its parks, streets, and fountains, and to various public institutions. The water-mains have been extended to every part of the city. Montevideo is a city of some four hundred thousand inhabitants, and consumes about twenty-two million liters of water a day.

The voice of an experimenter in Washington, D. C., was carried from the naval radio towers at Arlington, Oct. 21, by a wireless telephone, and was heard by listeners in Paris and Honolulu 8,000 miles apart. Telephone talks with the Orient without a relay at Honolulu are declared to be practically certain. The distance of about eleven thousand miles, it is believed, can be bridged eventually, although it is expected that considerable difficulty will be met, and considerable time required for machinery adjustments.

The organization committee for the congress of social sciences, which next year is to be in Tucuman, Argentine Republic, in connection with the national centennial celebration, has agreed upon the questions to be discussed by the various sections. These questions cover many topics in economics and finance, civil, commercial, and international law, immigration, education, politics, the press, and administration.

Some early paintings of Antonio Allegri, called Correggio (1494-1534), have been discovered in Mantua behind a framework covering a wall in the vestibule of the basilica of S. Andrea. They are not in good condition, but the subjects can be traced as representing a Pieta, Ascension, and Virgin and Saints.

Two national reforms, a permanent tariff commission and a national budget, are to be urged by the Chamber of Commerce of the United States through its seven hundred constituent organizations. These questions were submitted to the various bodies by referendum, and indorsement was practically unanimous.

Heavy travel by motorists going to and from the Pacific coast for the world's fair, or touring America, has caused Missouri to decide on the construction of two good cross-state highways. The routes selected are from St. Louis to Kansas City in one case, and from Hannibal to Kansas City in the other.

The seventy-six beet factories of the United States, located in seventeen states, represent an investment of about one hundred million dollars and require a thousand square miles planted to sugar-beets for their average season's operations.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII November 6, 1915 No. 10

[From *The Christian Science Monitor*]

Thanksgiving Proclamation

PRESIDENT WILSON, naming Thursday, Nov. 25, as the date, has in accordance with custom issued the following Thanksgiving proclamation:—

"It has long been the honored custom of our people to turn, in the fruitful autumn of the year, in praise and thanksgiving to Almighty God for His many blessings and mercies to us as a nation. The year that is now drawing to a close since we last observed our day of national thanksgiving has been, while a year of discipline because of the mighty forces of war and of changes which have disturbed the world, also a year of special blessing for us.

"Another year of peace has been vouchsafed us; another year in which not only to take thought of our duty to ourselves and to mankind but also to adjust ourselves to the many responsibilities thrust upon us by a war which has involved the whole of Europe. We have been able to assert our rights and the rights of mankind without breach of friendship with the great nations with whom we have had to deal; and while we have asserted rights we have been able also to perform duties and exercise privileges of succor and helpfulness which should serve to demonstrate our desire to make the offices of friendship the means of truly disinterested and unselfish service.

"Our ability to serve all who could avail themselves of our services in the midst of crises has been increased, by a gracious Providence, by more and more abundant crops; our ample financial resources have enabled us to steady the markets of the world and facilitate necessary movements of commerce which the war might have otherwise rendered impossible, and our people have come more and more to a sober realization of the part they have been called upon to play in a time when all the world is shaken by unparalleled distresses and disasters.

"The extraordinary circumstances of such a time have done much to quicken our national consciousness and deepen and confirm our confidence in the principles of peace and freedom by which we have always sought to be guided. Out of darkness and perplexity have come firmer counsels of politics and clearer perception of the essential welfare of the nation. We have prospered while other peoples were at war, but our prosperity has been vouchsafed us, we believe, only that we might the better perform the functions which war rendered it impossible for them to perform.

"Now, therefore, I, Woodrow Wilson, President of the United States of America, do hereby designate Thursday, the twenty-fifth of November next, as a day of thanksgiving and prayer, and invite the people throughout the land to cease from their wonted occupations and in their several homes and places of worship render thanks to Almighty God.

"In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

"Done at the city of Washington this twentieth day of October in the year of our Lord one thousand nine hundred and fifteen and of the independence of the United States of America the one hundred and fortieth.

[Signed] "WOODROW WILSON.

"By the President.

"ROBERT LANSING, *Secretary of State.*"

Scientific Mastery

WILLIAM R. RATHVON

ONE could hardly wish a greater good for another than that he should do all that he is capable of doing in Christian Science. A renowned philosopher defined a friend as one who makes us do what we can; but in Christian Science true friendship is not so much a matter of making another do something as of revealing to him what he is capable of doing. While a friend may describe to us the glorious splendor of the sunrise, if we would see it for ourselves we must awake early and rise promptly. In Christian Science the incentive may come through another, but the performance rests entirely with one's self.

Divine Love ever directs and invites obedience or compliance, but rarely compels it. So too with our work in Science, we must be careful not to confound the offices of impulsion with compulsion or of guidance with performance. If one points out to us the ways and means whereby we may come into a closer walk with God, he has done much; but if we walk with God, we have done more, for when we commune with Him we are bringing good into our consciousness, and therefore into our experience,—a thing which no one can do for us. The oftener we thus walk with God, the clearer becomes our vision, the smoother our path, the brighter the sun, the sweeter the flowers.

Smooth paths and bright flowers are not, however, the constant accompaniments of the wayfaring man; he often wanders far from them. Nevertheless let him rejoice that there is no hour in the day or night when he may not find them, and return to them if he will. In its present stage of development human consciousness is not capable of continuous or even greatly prolonged communion with God, but let us be grateful that we have progressed to the point where we may have it times without number, if not uninterruptedly. Knowing this, we need not be dismayed even if there appears an unwelcome mental intruder to becloud our thought, divert our steps, and loosen our hold upon the heavenly Father's hand. This may mean a struggle to retain that which is threatened, a trial of our faith, our understanding, our steadfastness, but let us not grieve over such experiences.

God does not send grievous trials upon us, though His loving care has provided us with the means of overcoming them, and thereby proving His goodness. In this way trials are seen to be "proofs of God's care" (Science and Health, p. 66). It lies with us to make of them what we will. We may cringe and whimper when they knock at our door; or we may see in them opportunities for growth, for fighting the good fight, for overcoming. Error would have us make

much of the attacks of adversity, but Truth shows us how to get much out of them. The pleasant things, the things which do not interfere with our comfort or serenity, are the things that generally find a welcome; but they are not the things that make for the greatest growth. The warm, ankle-deep waters of the inlet may be fine places for children at play, but the man who would learn to swim must be ready to breast the blue waves of the bay itself.

There is a sentence in Science in Health (p. 419) which tells us to "meet every adverse circumstance as its master." These few words are rich in helpfulness. Each one of them rings out as though shouted from a trumpet. They tell of the preparation, the going forth, the conflict, the victory. We should go forth to meet adversity, not retreat before it, nor yet wait timidly until cornered; but when we hear the challenge we should go forth valiantly, with that sense of mastery which comes from knowing that the battle is not ours but God's. A good way to meet an adverse circumstance, to surprise and disarm it, is to meet it with a smile,—not the smile of delight or of welcome, but the smile of confidence and readiness and mastery; the smile mental, which should be ours whenever we grip the sword of understanding, upon whose blade there is inscribed on one side, "Who is so great a God as our God?" and on the other, "To them that have no might he increaseth strength."

There is no distinction, no grade, no degree to be recognized in the ranks of error. There is no phase of it that is to be looked upon as more formidable than any other. The little word "every," in the sentence above quoted from Science and Health, disposes of that argument. We are to meet and master, not merely a few or all but a few, but "every adverse circumstance." With that one word "every" Mrs. Eddy indicates that there are no phases of error which are immune to the annihilating assaults of Truth; none so subtle that they cannot be uncovered, none so great that they cannot be shattered, none so high that they cannot be reduced, none so deeply rooted that they cannot be overturned. If David had been appalled by the bigness and fierceness of Goliath and so delayed his attack until he was strong enough to hurl a great boulder at the giant, the hordes of the Philistines would have routed the children of Israel. But a pebble and not a boulder was the instrument of error's downfall,—and who among us cannot throw a pebble when God furnishes us the sling and the skill to wield it? If the enormity of error seems overwhelming, it is worth while to remember that the bigger the mark the easier it is to hit and the harder it falls.

Our Leader here gives us also a valuable lesson on dominion. We are told not only to meet the foe, but to meet it as a master. Two contestants may struggle long and hard for mastery if at the outset neither believes himself superior to the other. But let one enter the conflict with the absolute knowledge that he is the master of his opponent, and though the fight may be fierce its issue is never in doubt. The man who enters the field of conflict as a master, leaves it as a victor. Hence the need of keeping ever in thought the truism that "one on God's side is a majority," and of striving constantly so to live that we may be enabled to share daily in this glorious at-one-ment with Him.

Another great lesson given us by Mrs. Eddy in this short sentence is to be found in the word "circumstance." Here with one sweep of the helm she steers us away from the rocks of personal domination that have wrecked so many crafts, great and small, in Christian Science activities and out of them. We are to master circumstances, not people. The mastery which Truth brings is to be exercised in Christian Science over conditions, not persons. Failure to observe this clear-cut distinction has been the cause of much trouble, misunderstanding, and dissension among those who should dwell together as brethren.

The understanding of Truth and its application, which gives one mastery over adverse circumstances, must not be misused in wilfully influencing another's thought, for such a course carries one across the line that separates mastery from malpractice. The mesmerism of achievement is ever inviting mortals to cross this line, and persuasion is not difficult, for the masterful man or woman is apt to be assailed by the specious argument that one who can master adverse circumstances is surely qualified to direct the thought of those who may be wrong, and is warranted in so doing even though uninvited. This sugared bait is too often swallowed eagerly, without considering the barbed hook it hides. The Christian Scientist, unsolicited, has no right intentionally to control the thought of his neighbor.

Many years ago the renowned scholar Von Humboldt caught the force of this when he wrote, "Man can do everything with himself, but he must not attempt to do too much with others." As Christian Scientists we may do much for others, but let us be cautious how we attempt too much with them. We know we have no right to meddle with the training of our neighbor's children. Let us similarly respect our neighbor's thoughts, the offspring of his mentality, and see to it that they are as free from our deliberate interference as are the children of his household.

The earnest student in Christian Science who directs his efforts to the conquering of adverse conditions and to self-mastery, will find a field so broad, so rugged, so greatly in need of cultivation, that he will have little time or desire to undertake to sway the thoughts of his fellow men. He will be content to allow the unceasing activity of good to bring about its own results in its own way and in its own time, and to that end he will mentally keep hands off his brother. He will also learn that it is greater to inspire than to manage, to uplift than to control. He will see that the world, even the Christian world, has a superabundance of those whose inclinations urge them to shape, influence, and control their neighbor's thoughts, and that it surely needs those who are gentle yet strong, those who are striving daily to walk with God as they see the way, who animate but do not sway, who illumine but who do not inflame their fellows.

This glorious ministry of impersonal good is within the reach of all through Christian Science, and its attainment means the mastery of self as well as of circumstance.

Possession

FRANK H. SPRAGUE

THE experience of Abraham when bidden, as he believed, by Jehovah to sacrifice his son Isaac as a burnt offering, holds a lesson of peculiar significance for those who are trying to work out their problems in the light of Christian Science. On page 579 of Science and Health we read: "This patriarch illustrated the purpose of Love to create trust in good, and showed the life-preserving power of spiritual understanding."

No more severe test could be imposed on any one's loyalty to Truth than the patriarch was called upon to face in relinquishing the idol of his earthly hopes, the son through whom he had expected to see realized the coveted boon of a glorious posterity. The spirit of obedience which prompted him, in the first instance, to take preliminary steps toward the enactment of a terrible tragedy, enabled him, as events progressed, to gain a more enlightened understanding of divine Principle and its demands on men. The chastening of mortal sense brought the conviction that God did not call for the slaughter

Digitized by Google

of a human being, that the sacrifice demanded was not that of flesh and blood, but of an idolatrous propensity which centered affections and hopes on human personality. Abraham had heard the voice of Truth but had misinterpreted the message.

Following this liberation of thought, the patriarch was led to descry what he had not before noticed,—a ram caught in a thicket. In substituting the animal type of offering for a human victim, Abraham approached a step nearer the impersonal, spiritual ideal of sacrifice brought out centuries later in the demonstrations of the Prophet of Galilee.

This episode in Abraham's career is typical of the experience of all who are seeking to live up to the Christ-ideal, for it shows how those who implicitly trust the guidance of Truth may confidently look for deliverance from the pitfalls of human ignorance and short-sightedness. The attitude which human wisdom pronounces fatal may lead to unexpected developments and prove a means of averting a catastrophe; while worldly expediency, which shuns the ordeal and seeks safety in material channels, makes shipwreck of hopes and ambitions. Even though it may seem blocked at certain points by impassable barriers, the path of spiritual demonstration leads eventually out into the open.

Abraham's forfeiture, to all intents and purposes, of the sole chance of realizing his cherished ideal, proved an open door to the fulfilment of the covenant of divine Mind on a plane higher than human vision could discern; for it enabled him not only to be the progenitor of a race mighty in numbers and renown, but what was of far greater account, it constituted him "the father of the faithful," the prototype of the spiritually minded in ages to come.

There comes a time sooner or later when every one is compelled to make a radical choice between Spirit and matter as the basis of his affections. If, as in Abraham's case, the test is met by acknowledging Spirit as the only substance, a tragedy of the senses may be averted. On page 296 of Science and Health Mrs. Eddy says, "Either here or hereafter, suffering or Science must destroy all illusions regarding life and mind, and regenerate material sense and self."

While to sense it may seem to be a material object which one is called upon to part with, it is really a mental state that is involved. The way to more spiritual conditions lies not in an arbitrary, forced renunciation of material symbols, but in the disposition to hold lightly the seemingly material things which come naturally into evidence in the development of relative human experience. The purification of thought which results in willingness to leave all for Truth, makes the world with which one has to deal seem a degree less material; for God's spiritual idea then begins to appear through the mist of materiality. So long as her hopes centered on a rapidly diminishing supply of meal, the widow of Zarephath was confronted with famine; but when she was ready to part with her earthly store at the call of Truth, she gained a sufficient sense of the infinitude of spiritual resources to effect the removal of physical limitations, so that her environment lost to some extent the attributes of materiality.

Although largely indifferent to material considerations which the world regards as essential to happiness, the Saviour of mankind possessed untold riches, because he had the consciousness of spiritual reality, the substance of which material possessions are but the shadow. He was simply stating an aspect of spiritual law when he declared, "Whosoever will save his life shall lose it; but whosoever shall lose his life for my sake and the gospel's, the same shall save it." Paradoxical as it may seem, all we really possess is that which we have given up for the spiritual; while that which we cling to materially is lost.

The great truths set forth in the writings of Mrs. Eddy, the Leader of the Christian Science movement, illuminate understanding and inspire a broad, deep, living faith which severs the affections from earth-born concepts. Their study enables us to follow St. Paul's counsel when he said, "Set your affection on things above."

Mental Breadth

BESSIE E. LANGDON

THE term "broad-minded" has been applied to many mental states; but though one's idea of the meaning of this term be indefinite, he is a rare person who does not like to hear it applied to himself. Not uncommonly, however, error tries to argue to the young student of Christian Science that this Science, working as it does on a basis of absolute, uncompromising truth, must make its adherents intolerant and narrow in their dealings with their fellow men. Yet when we study the life of our Master, the greatest of all Scientists, what do we find in this connection?

Let us consider, for instance, Jesus' manner of treating the sinful woman. He, the purest of mortals, was able to look upon her without scorn, because he realized how real the claims of error may seem to the unenlightened human mind. He realized too that this woman's sin was merely one of the workings of the lie that has deceived, in one way or another, the whole human race. No one can deny that this was an example of true mental breadth,—the ability to assume another's view-point, though differing widely from his own, and to be compassionate and just where superficial observers were merely scornful. Because the Master thus understood and refused to condemn the woman, he did not fail most emphatically to condemn the error which had enslaved her. Indeed the command "Go, and sin no more," was more than a condemnation of error; it was a declaration of the powerlessness of error to hold one who wished to be free. He did not say, If possible, sin no more. He did not imply that because the woman had been wicked she must continue, for a time at least, to be so. Because God is omnipresent and omnipotent, and because He is the Principle behind every sincere effort for reform, Jesus gave the uncompromising command "Go, and sin no more," knowing that it could be obeyed.

There was surely nothing narrow-minded, nothing of prejudice or intolerance about the great Teacher's attitude in this case. And what do the sentiments appear to have been which impelled him to deal thus with the case? First there was the reflection of divine Love, which destroyed in him all desire to condemn the woman; and next there was spiritual understanding, which enabled him to know that the error was without real foundation, consequently that reform was possible from that very moment. We thus see that if the exercise of two of the qualities which the Christian Scientist most earnestly desires, resulted in such breadth of thought in dealing with human affairs of the first century, they must bring about like results today. No life could be more free from narrowness and intolerance than that of Jesus, whom Mrs. Eddy characterizes as "the most scientific man who ever trode the globe" (Science and Health, p. 313).

Absolute intolerance of error is indeed a duty, but if we are impersonalizing error as we should, we shall love our fellow men none the less because of this duty. Indeed we must love them more, for in laying bare the falsity of error's illusive claims, we must continually see the individuality upon whom it seeks to fasten itself as God's perfect idea. This is true love, and in true love only we reach real breadth of mind and mental poise.

Digitized by Google

Of course if one considers that to be broad-minded is to overlook and excuse certain phases of evil as justified by circumstances, he must indeed give up such a belief before he can honestly call himself a Christian Scientist. But before he has progressed very far in the study of this Science, he will come to see that this belief is no more logical than it would be for the mathematician to overlook certain mistakes on the ground that the difficulty of the problem justifies them, and that they may in the end result as well as correct work would. For those who desire mental breadth there is one sure way, namely, to strive each day to reflect more and more that Mind "which was also in Christ Jesus." This one true Mind is indeed broad, even to infinity.

Love and Patience

RUTH INGRAHAM

THERE are probably few of us who would not own that from the time we left childhood until in the providence of God we came into some understanding of Christian Science, we little knew the real meaning of love, the only love, that which is without passion or prejudice, described in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy (p. 13), as "impartial and universal in its adaptation and bestowals."

Love is wonderfully portrayed in the thirteenth chapter of I Corinthians under the name of "charity;" but for one of us to claim now that we comprehend the fulness of this divine idea, would be for a bird on the wing to attempt to compass the unfathomable reaches of infinite space—his farthest flight could only convince him the more of its infinity. It has been said that while we cannot know all of God, we can at least know something of God's allness. The Lesson-Sermons are a continuous revelation to us of this allness, of the fulness of Love divine. In one for which the writer was especially grateful, the qualities inseparable from love—patience, humility, unselfishness, justice, steadfastness—were dwelt upon, and the emphasis laid on certain of these gave occasion for serious thought as to the significance of the statement: "Love suffereth long, and is kind" (Rev. Ver.).

In looking back over past experiences, perhaps we would again agree that those who have helped us most, who have influenced us most for good, have been those who loved us most. A sense of duty, untempered by love, has the negative value of an otherwise perfectly appointed home in which no fire burns on the hearth and no lamp glows in the window. The warmth and light of love must inspire to make one's thought welcomed and his service acceptable. Those were most our friends who showed forth most the patient selflessness of the one Love; those who pointed the way as best they could, urging the right from motives devoid of self-interest, but with the warm wish to see us happy; those who were too large-minded to watch for failure when we essayed another course from the one they counseled; who waited, always loving, to rejoice in our success or to receive and comfort us in our want of success, helping us to see the mistake, but never by so much as a look expressing the self-satisfied self-righteousness of mortal sense in "I told you so!"

"Love suffereth long, and is kind." How patient we need to be with one another, for how greatly do we all need another's patience! How prone we are, though full of fault, to render snap judgment, to rebuke hastily, to criticize mercilessly, to condemn perhaps wholly. The more we are at fault, oftentimes, the deeper we plunge into this error, prompted not infrequently by the desire to reinstate ourselves by placing blame anywhere but where it should be placed—on selfish self. On page 49 of Science and Health Mrs. Eddy speaks of the "divine patience" of our Master, and on page 4 she says, "What we most need is the prayer of fervent desire for growth in grace, expressed in patience, meekness, love, and good deeds."

A certain stanza from Byron's "Childe Harold" comes to thought, gaining force and impressiveness in the light of Christian Science. The traveler stands on the brink of a chasm, watching the cataract pour over a ledge and plunge into the self-created maelstrom of black waters, ceaseless in their turmoil. Above this roar and riot, this tremendous activity, albeit causeless and resultless, spanning it ever with the sign of the covenant, he sees a beautiful rainbow in the spray, and the poet likens this to "Love, watching madness, with unalterable mien."

Only as we reflect this imperishable Love can we draw mortal sense from its sad contemplation of error's vain dream to the realities spiritual and eternal. "Love suffereth long, and is kind." It is not to be separated from patience,—patience not with error, but with the aspiring thought groping blindly upward for light and Truth. Let us have at least that measure of patience with another's blundering efforts to do better that a mother has for her baby's stumbling attempts to walk; the love that is always waiting there to comfort and to set right for a new start, and which wisely allows the effort to be individual. It does not discourage with blame or weaken with false sympathy, but watches with "unalterable mien." We are all learning our way home together, and it is only by reflecting the full measure of such spiritual light as we have received that we may come to know how divine Love, in the words of our Hymnal (p. 231), "forever waits to bless."

The Burning Bush

SAMUEL JOHNSTONE MACDONALD

SOME years ago a friend of the writer was healed in Christian Science. It was a remarkable case, for he was not only reformed but transformed. When the writer first saw him after his healing, he stood amazed as at a miracle. On inquiring what had wrought this marvel, he was told that it was Christian Science, and then he was obliged to inquire further what was meant by the phrase. On being informed, he concluded very naturally that he must learn of this wonder-working power and win some share in its great good. Still he did not succeed. For fifteen years he lingered without the gates of the city, catching glimpses ever and anon of the light and joy within, but never able to win his way to its heart. It began to seem certain to him that he never would have part or lot with those happy citizens. Nevertheless, the day came when he had given up self entirely, and then like a little child he was gently led by the hand within the gates, where presently he began by degrees to behold the light, "for the glory of God did lighten it, and the Lamb is the light thereof."

Sometimes thought looked back to that healing of the friend fifteen years before, and wonder would arise that the truth had not then been seen and felt, and the apostle's searching question came, "Who did hinder you that ye should not obey the truth?" This question remained unanswered for some time, for more important thoughts called for attention and study; but the student waited in patience and meekness, knowing that every question will be answered in its own proper time, "for there is nothing covered," Jesus declared, "that shall not be revealed; and hid, that shall not be known."

One evening one of the "angels of His presence" (Science

Digitized by Google

and Health, p. 174) brought to thought the picture of Moses in the desert when he came upon his first great marvel,—the sight of the burning bush. "And Moses said, I will now turn aside, and see this great sight, why the bush is not burnt." This is the natural impulse of the human mind in presence of anything unusual. It is the motion which is usually styled among men "natural curiosity." It was inevitable at this point that the writer should recognize the parallel between his own experience fifteen years ago and that of Moses. What was it but the bush that "burned with fire" which he beheld in the marvel of the healing of his friend? Was not that too the manifestation of divine Love, the eternal ardor which glows continually but does not harm? Surely God is "the same yesterday, and today, and forever," and with Him is "no variableness, neither shadow of turning." What then had caused his eyes to be "holden" that they could not see at the time that his friend's healing was surely one of the manifold manifestations of divine Love? Let us look and see: "And he said, Draw not nigh hither: put off thy shoes from off thy feet, for the place whereon thou standest is holy ground."

Is not the answer now plain? If Moses had refused or failed to put off his shoes, would he have been chosen to lead his people out of bondage? Could he have gained the spiritual sight which beheld "the pillar of the cloud by day" and "the pillar of fire by night"? But we read that he "hid his face; for he was afraid to look upon God." In the presence of the manifestation of the power and the love of God, he was meek enough to silence the clamor of the corporeal senses, to turn aside from the assertedly godlike human reason, to worship and to fear only the ever living and true God, and to have no other gods before Him. Therefore he was accepted of God, understanding and power were given him, and God said to him, "Certainly I will be with thee."

The answer to the oft-repeated questions, Why did not all people believe who beheld the mighty works of Jesus? Why do not all those believe who behold or who experience the power of God in Christ Jesus today? is found here: They refuse to put off the "shoes" of natural curiosity and intellectual criticism. They refuse to cast down, break in pieces, and turn from the idol of human reason; to humble themselves before, to fear, love, and worship, the only living and true God.

In Science and Health (p. 200) Mrs. Eddy says: "The suppositional antipode of divine infinite Spirit is the so-called human soul or spirit, in other words the five senses,—the flesh that warreth against Spirit. These so-called material senses must yield to infinite Spirit, named God."

Offertory

EMILY HOUSEHOLDER

O NEW-BORN day, my chalice filled
I bring unto thy shrine,
Repentant dew from night distilled
To be transformed to wine.

O ripening noon, my listening ear
Awaits thy harvest call
To fields already white and near,
That not one grain may fall.

O vesper bell, unto thy song
I blend my own of praise,
To hear the echo sweet, Well done,
Rest now in Sabbath ways.

Selected Articles

[Judge Clifford P. Smith in *Omaha* (Neb.) *World-Herald*]

The second of the letters against Christian Science written for your columns by a Lutheran minister has disclosed the hiatus in his thinking. Evidently the crux of his whole contention is the unproved assumption that the Son of God is God. A member of the clerical profession who can fail to notice such a logical chasm as that has no license to speak against other people's religion. He needs to reconsider his own.

It is quite true that Jesus spoke of himself as the Son of God. In my former letter I cited John x. 36, where he said, "I am the Son of God," as a denial and correction of the charge that he claimed to be God. There is no process by which these words can be converted into a claim that he was God. Even the Jews who were trying to get proof of their accusation did not attempt to put that construction upon them. In order to understand the word "Son," as used by Jesus, we must consider his use of the word "Father," for each of these words is the counterpart and complement of the other. In the gospels we find that he spoke not only of "my Father," but of "the Father," "our Father," and "your Father;" and he used these titles interchangeably. This fact of itself proves that he did not regard himself as God.

It is also to be proved that Jesus spoke of other men as sons or children of God, and he expressed his whole aim and object in the words, "that where I am, there ye may be also." Furthermore, the words "Father" and "Son," as Jesus used them, expressed both kinship and likeness, both relation and kindred nature. They denoted that the nature of God is imaged or reflected by man; that is, by the real man. This is what Jesus meant when he said, "He that hath seen me hath seen the Father."

The object then of what is called the incarnation was fulfilled when God was made manifest to human thought through man; and the atonement, or at-one-ment, was revealed when the real man was proved to be inseparable from God and entirely separate from evil; in other words, written by Mrs. Eddy concerning the great Teacher, "through the magnitude of his human life, he demonstrated the divine Life" (Science and Health, p. 54).

The writer of the letters in question also said, "In John viii. 23 Jesus declared his deity in so many words: 'I am not of this world.'" This is an apt illustration of the way in which the simple and evident meaning of what Jesus said has been perverted by centuries of elaborate interpretation. On the face of these words there is no claim that he was God, and it is to be observed that he used the same words with reference to his disciples: "They are not of the world, even as I am not of the world." Did he mean to deify them?

The only saying of Jesus cited by our censorious friend which furnishes any evidence in support of his contention was this: "I and my Father are one." But in order to bend this saying into consistency with the doctrine in question, it has to be construed as if Jesus had said, "The Father and I are the same," "God and I are identical," or, "I am God." If the Master's words, "I and my Father are one," stood alone, the meaning which has been given them would be more defensible than most of the other attempts to find in his sayings a confirmation for his deification. But this is not the natural meaning of his words, and they do not stand alone. For example, Jesus said, "The glory which thou gavest me I have given them; that they may be one, even as we are one." Did he mean that we may lose our identity, or become the same as God? Surely not.

Digitized by Google

Our clerical critic has also challenged me to explain the words used by the disciple Thomas as shown by John xx. 28: "My Lord and my God." My reply is that these words were a mere exclamation, not involving the assertion of any fact, much less the proposition for which the reverend gentleman contends. It is to be observed that Jesus had previously sent word to Thomas and other men, as shown by the seventeenth verse of the same chapter, saying, "Go to my brethren, and say unto them, I ascend unto my Father, and your Father; and to my God, and your God." It should be quite evident that Thomas did not mean to contradict his Master.

In order to determine whether Jesus is God, due weight should be given to his every utterance, and if there is any conflict between what he said and what was said by others, surely as Christians we must accept his utterances as conclusive and final. When the subject is approached in this manner it is to be observed that Jesus never said he was God; he spoke of himself as a man. Twice he virtually denied that he was God, and several of his sayings are flatly inconsistent with the theory of his deification.

When Christians give up their supernatural views of Jesus the Christ and accept him for what he was and claimed to be, they will begin to get the full benefits of his teaching and atonement. If any readers of the *World-Herald* wish to pursue this subject further, they are cordially invited to read the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, especially the chapter headed Atonement and Eucharist. This book can be found in most public libraries or at any Christian Science reading-room.

[Ezra W. Palmer in *Sterling* (Col.) *Advocate*]

A pamphlet by Mr. ——, entitled "Why I am not a Christian Scientist," has been circulated in your city. It might be well for the gentleman to know that so long as he circulates or continues to voice the defamations given in his pamphlet, it would be impossible for him to be a Christian Scientist. Christian Scientists do not defame others, do not pervert the religious teachings of other churches, do not circulate falsehoods. They strive to live the golden rule and to obey and demonstrate the words and works of the great Master, Jesus the Christ. The pity of it is that exponents of religion in their attempts to injure Christian Science should permit themselves to resort to methods so unfair, and at the same time so contrary to the teachings and practice of the Master they profess to follow.

Christian Science came to the world because humanity needed a religion of works, a religion which would prove again the might of Spirit overcoming sin, disease, and death. This Mrs. Eddy gave to the world when she reinstated primitive Christian healing and proved that the healing power which Jesus and his apostles manifested was available here and now to free the sick, the suffering, the poverty-stricken, and the sorrowing. But the carnal, human mind has ever hated spiritual things, and as a result Mrs. Eddy was hated, persecuted, and maligned, as the Master was before her and as every pioneer of truth has been throughout the ages. But persecution, defamation, and abuse have not stopped the growth of Christian Science, and will not stop it. This great religious movement will continue its course, unparalleled in history except in the early spread of Christianity, of purifying human thought until the happy state foretold by the prophet Jeremiah is made manifest: "And they shall teach no more every man his neighbor, and every man his brother, saying, Know the Lord: for they shall all know me, from the least of them unto the greatest of them, saith the Lord."

Critics of Christian Science, whether evangelists or pamphleteers, should pause in their efforts, and seriously ask themselves if it would not be better for them to seek to emulate the good works of Christian Science instead of belittling them. The best system of religion will ultimately prevail, despite unfair attacks. If these critics cannot heal the sick, it behooves them to recognize that the cause of their failure is not Christian Science, but their own misconceptions of the plain teachings of the Master they profess to follow. Their plain duty, therefore, is to conform to the command of Christ Jesus when he said: "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." When they have accomplished this they will find they have no quarrel with Christian Science, but are living in conformity with it. Until they do bring their teachings and practice of Christianity into harmony with the Master's teachings, they will continue to have the troubles which result from living in glass houses.

✧

[Thorwald Siegfried in *The Aberdeen* (Wash.) *Herald*]

A statement as fairly applicable to poverty as to disease appears on page 460 of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and reads: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being." The conclusion of the same paragraph denounces "the superficial and cold assertion, 'Nothing ails you.'"

Now the "truth of being," an apprehension of which solves every problem, is not mere truth about relative things and sensible phenomena, but is "the" truth of which the Bible has much to say, which Jesus acknowledged as the very essence of his being and recognized as eternal, and a knowledge of which, he stated, would make us free. It is that truth which, when applied to any human relationship, brings absolute perfection to light. So wide is its application that in Christian Science it is always begun with a capital letter, Truth, when used as a synonym for God; and as men have perceived its application to human affairs they have chosen for its transforming effulgence those names which brought to them some hint of its power, none of which is better known or loved than that by which we call Jesus of Nazareth,—the Christ.

Christian Science does not consist in a mere repetition by rote of the words "nothing ails you," but by degrees it brings about a scientific understanding of all human relationships, including those of the business world. In the light of that understanding, poverty is not only imaginary; it is an illusion, from which one awakes just as he awakes from any other dream, when he learns that it is a dream and not the reality it seemed to be. To relieve a dreamer of his distress the most sensible course is to wake him up. The experiment of waking up to the truth about disease of "mind, body, or estate" can be easily made, and always brings about a better state of affairs.

[Carl E. Herring in *Omaha* (Neb.) *World-Herald*]

A sermon preached in Omaha in opposition to Christian Science assumed such a bias as to call for a few words of comment. It would seem that we might all agree to certain axiomatic propositions,—as that one should not make solemn and reiterated statements that the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is such a mass of jumbled confusion that no one can understand it, and then proceed for over two hours to expound its fundamental teachings and denounce them.

Further, the dispassionate listener is apt to be put on

Digitized by Google

inquiry when the church that admittedly has failed in its duty to obey the command to "heal the sick," admits that Christian Science is endeavoring to meet that duty, and yet denounces this religion as unscriptural and contrary to the teachings of Jesus. It brings one near enough to the shores of Galilee to hear the Pharisees say, "This fellow doth not cast out devils, but by Beelzebub the prince of the devils," and thus history repeats itself. "Whereas I was blind, now I see," has been accepted for centuries as the final word of argument, and so long as Christian Science submits to this test, it ill becomes any other church to denounce as blasphemous the works which it admits Jesus commanded and which it has failed to do.

No prolixity of discourse is needed to prove the fundamental teachings of Christian Science, nor should these be the occasion of any surprise or as if a mystery had been uncovered. That Christian Science teaches that God is Spirit, Life, Truth, is indeed true. The mystery lies in the fact that a minister of the gospel of a Christian church in an unusually intelligent community should find fault with the proposition. It is safe to say that there is not a member of the infant class in the critic's Sunday school who does not know that "God is love," and probably not one of them ever heard of Science and Health.

There is nothing in Christian Science that is not in the Bible, and Mrs. Eddy does indeed define God as All-in-all, omnipresent, omniscient, omnipotent, all-loving, eternal, Principle, "the great I AM" (Science and Health, p. 587). Do the schools of theology limit God in any of the above particulars?

Moreover, it is quite true that Christian Science draws a very sharp line of demarcation between the real man, made in the image and likeness of God, and the carnal or mortal man. In common however with the other teachings of Christian Science there is no originality in this. "The carnal mind is enmity against God," Paul declared, "for it is not subject to the law of God, neither indeed can be. So then they that are in the flesh cannot please God. But ye are not in the flesh, but in the Spirit, if so be that the Spirit of God dwell in you." What a wonderful theme for a denunciatory sermon if Mrs. Eddy had written that instead of St. Paul!

✧

[John L. Rendall in *The Grinnell* (Iowa) *Register*]

In a recent issue I find an article under the caption, "A Marshalltown Plan," which mentions a proposed sick benefit association to be promoted by churchmen of that city. Commenting on some phases of this proposed plan, the Rev. Mr. —— is quoted as stating: "The time has arrived for members of the Christian churches to do some healing in the practice of their religion as the Christ did. Preaching and teaching religion are all right and have their place in the work. Healing the sick also seemed to be one of the practices of the Christ, and should be followed by those who follow him." He further states: "The Christian Scientist seems to have grasped the idea that it is the function of faith and religion to destroy disease, but has gone about it along impractical lines in denying that sickness and disease is a material fact, when the Bible is full of accounts of it. However, the Christian Scientist is doing a good work in so far as the minds of the people can be lifted from their imaginary ills, and it remains for the members of Christian churches generally to roll up their sleeves and go about the practical business of curing those who are sick in fact."

It is evident from the above that this clergyman has awakened to the fact that the religion of Christ Jesus is a healing religion, and that the healing of the sick should go hand in hand with the reformation of the sinner. I would like to point out to him that during the past fifty years the Christian Science religion as discovered and founded by Mrs. Eddy, and as explained in "Science and Health with Key to the Scriptures," has consistently practised Christian healing as part of its redemptive mission and is in exact accord with the teachings of Christ Jesus that he mentions.

If our reverend friend will carefully read the text-book above mentioned, he will find that Christian Science does not deny sickness or disease as a seemingly "material fact." It does, however, deny that sickness and disease are any part of God's spiritual creation, and therefore it denies that these are any part of the eternally real, though to the human sense of things they seem to be very real. It is equally certain that humanity as a whole needs to have its thought lifted above matter, or so-called material things, to the contemplation of the realities supernal.

Now as to the statement that the Christian Scientist has gone about this healing work "along impractical lines," I will say that if the healing work demonstrated by Jesus was impractical, if that of his disciples was impractical, if all those instances of spiritual healing mentioned in the Bible were impractical, then also the healing of Christian Science is impractical, for it is all identical and based upon the same infinite, divine Principle. If it is true that "the time has arrived for members of Christian churches to do some healing in the practice of their religion as the Christ did," as the reverend gentleman states, then the time has arrived for members of Christian churches as a whole to adopt the methods of Christian Science, for the very good reason that these methods have brought about the most practical results possible in the overcoming of "all manner of disease among the people." The history of Jesus' life-work and that of his disciples, and the history of the early Christian church for three hundred years after Jesus' time, establishes the fact that healing the sick by spiritual means must be considered an integral and fundamental part of the Christian religion. This healing work should never have been discontinued by Christian churches.

It should not be a difficult matter to convince the ordinary church-member that those people who were healed by Jesus and his disciples were healed of what they believed to be real diseases and not of "imaginary ills." So too it would be an extremely difficult matter to convince the beneficiaries of Christian Science that the ills of which they were healed could be properly classified as "imaginary ills," as this term is ordinarily understood. Considered from the standpoint of their experiences and the opinions of the doctors who diagnosed their cases, these ills seemed to be very real. It is a matter of proof that very many if not all of the diseases which doctors have considered incurable or extremely difficult to cure, have been healed by the power of God as demonstrated in Christian Science,—and why should this not be so, since God is omniscient, omnipotent, and omnipresent Love?

How it is possible for this clergyman to find a more practical method or one that will produce more positive and definite results than those already produced in Christian Science, is difficult to comprehend. Any attempt to combine spiritual healing with material remedies must fail, for the reason that such an attempt is in effect trying to serve both God and mammon, which the Bible states cannot be done. If our friend understood more fully what Christian Science is accomplishing, and was more familiar with its methods, he would discover it to be consistently Christian in every respect, and would then find much more in its teachings to commend than he has already found.

Editorial

"I press toward the mark"

THERE is a tendency at times, with some Christian Scientists, in their honest desire to make known what great things Truth has done for them, to hark back too persistently to the past, to recall and rehearse with painstaking detail the sufferings endured or the trials undergone, until quite unawares both narrator and listener have etched upon their consciousness as a vivid reality thoughts which are as an open door inviting the return of the illusion of sickness or sin. Gratitude for deliverance from the thraldom of evil is right, but there is need for care lest unwittingly too much power is ascribed to that which in the light of the omnipotence of good cannot be otherwise than an illusion, and thereby what has been admitted to thought manifests itself in the body. Our Leader's wise foresight safeguarded public testimony-giving by excluding "a description of symptoms or of suffering" (Manual, Art. VIII, Sect. 24), and obedience to the spirit of this by-law should put us on guard against its violation in personal conversation.

The path to the goal in Christian Science leads ever onward, and he progresses most rapidly who casts from him the outgrown habits and beliefs of an inglorious and painful past and is clothed upon with new hopes and aspirations that strengthen and encourage him against the seen and unseen obstacles with which error would retard his progress. He knows that he cannot win freedom if he is constantly retracing his steps to seek out and display the bonds from which he has been delivered. Rather does he regard every victory over temptation as a mile-stone to mark his advancement, a fresh occasion for gratitude and rejoicing. Even so desire may outstrip achievement, and because he has fallen so far short of the perfection for which he is striving, he may magnify his seeming failure until, disheartened and discouraged, he drops out of the race.

In his letter to the Philippians the apostle Paul gives us a glimpse of his personal experience that is comforting in its very humanity. In his zeal to atone for past errors he had given earnest heed to the demand that the followers of the Master be perfect even as the Father is perfect, and apparently this was the task to which he had addressed himself. There had been mistakes doubtless, failures to realize the truth at all times; but he held to the course marked out for himself, and there is inspiration and a touching humility as well in his confession of faith: "I count not myself to have apprehended: but this one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark." Paul had the forward vision. The trials and disappointments of the past were behind him; they had ceased to be, so far as he was concerned. With his face set toward the goal, he pressed on, until he had indeed "apprehended," had laid hold on the truth of being, and in "the valley of the shadow of death" could triumphantly declare: "I have fought a good fight, I have finished my course, I have kept the faith."

In our own age we have been privileged to witness the forward vision, the "good fight" of another valiant soldier of the cross, and in one brief sentence (Science and Health, p. 226) our revered Leader has outlined for us her vision and the inspiration through which it was attained: "I saw before me the awful conflict, the Red Sea and the wilderness; but I pressed on through faith in God, trusting Truth, the strong deliverer, to guide me into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged."

"I pressed on"! There was no looking behind, no fearful holding back because of future conflicts, but a steady onward movement until the goal was won. This is the lesson for us today. Progress is inevitably onward. "In Christian Science," Mrs. Eddy points out, "there is never a retrograde step, never a return to positions outgrown" (Science and Health, p. 74). So that our faces are set toward the light, and our trust is in Truth, we can but attain. The past is behind us, and though the future may loom large, in reality it is only with today and its problems that we have to do, "for the morrow," the Master taught, "shall take thought for the things of itself." Perfection is a plant of slow growth, but its fruition is possible, else it would not have been demanded.

ARCHIBALD MCLELLAN.

"Out of the depths"

No one can familiarize himself with the book of Isaiah without being impressed that he has come into touch with a man of remarkable vision, one whose spiritual intuition was no less authoritative than rare. He had a comprehensive mental grasp of the problems of a race, and with prophetic exaltation and triumph of thought he portrayed the human status, and in a burst of glowing appeal called thrillingly to his people, "Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee." He was acquainted with the whole gamut of material ambition, pride, impulse, and asserted power, could speak knowingly of the burden of Tyre, of Babylon, and of Egypt, and name all the woes that attend the transgression of divine law.

Moreover, this prophet knew the source and power of the redemptive light which had already dawned upon his east, its ability to dispel every darkness of human sense, and so could comfort and inspire all the children of sorrow and of want. Voicing the word of Truth, he could say to the fearful and discouraged, "Fear thou not; for I am with thee: be not dismayed; for I am thy God: I will strengthen thee; yea, I will help thee; yea, I will uphold thee with the right hand of my righteousness." His attitude toward every condition of afflicted sense witnesses to his clear realization of that truth supreme, enunciated by Mrs. Eddy when she writes, "God is at once the center and circumference of being" (Science and Health, p. 203), and here he based his word of gladdening assurance for those whose feet had reached the level of despair.

"Who is among you," the prophet cried, "that feareth the Lord, that obeyeth the voice of his servant, that walketh in darkness, and hath no light? let him trust in the name of the Lord, and stay upon his God." These wondrous words bring vividly to remembrance the seemingly inexplicable fact that today there are those who, though God-fearing and obedient so far as they are conscious of their own purpose and desire, find themselves submerged, to human sense, in a sea of suffering, in a darkness that knows no light. "Out of the depths" there is sometimes heard again the agonizing cry, "My God, my God, why hast thou forsaken me?" and for many this is the supreme test of faith.

The delayed healing which is this cross for some, cannot be duly considered apart from the practitioner's "little faith" as Jesus described it; nevertheless it may witness not only to that inadequacy of present spiritual apprehension which must surely impel us all to "prayer and fasting," but to the seeming subtlety with which sin deceives; the possibility of latent unrecognized doubt, intellectual pride, longing for sense-satisfaction, or a looking to personality rather than to Principle for aid. Certain it is that the heart of educated material sense is desperately wicked, and in view of this the

Digitized by Google

holding of either practitioner or patient as responsible may well be eschewed. Evil is still "a liar, and the father of it," but over against seemingly tenacious error stands that unchanging almightiness of divine Truth, that unforgetting faithfulness of infinite Love, which none can doubt and upon which therefore the afflicted can "stay."

It is interesting that the great prophet does not question the possibility that to the God-fearing and obedient such an experience may come, and yet more, that he assumes the certainty of one's finding the solution of the hardest problem in faith's insistent reversion to the undisturbed integrity of God and His man. "The law of the Lord is perfect;" His judgments are "righteous altogether." This is the rock against which the waves of incredulity must ever beat, as they have ever beaten, in vain. There can be no afflictive experience from which I may not wrest a blessing, if in its every pang I am holding to the indisputable fact that "the Lord is my light and my salvation."

The heart of the gospel is reliance upon God, and Christian Science is but an emphasis of this fact. With the prophet it counsels him whose suffering has not yielded in the least, perchance, to the faithful ministry of others, daringly to appeal his case to the tribunal of Truth, to "stay upon his God."

JOHN B. WILLIS.

Harvest Lessons

THE great Teacher had much to say about sowing and reaping, and it is well for us to cling to the fact that the good seed and its fruitage were given first place in his discourses and their permanence was shown. It is true that he exposed the work of the enemy,—the sowing of tares while men slept,—but he told in no uncertain terms of the annihilation of evil, whatever its manifestation, when he said that the angels would gather out of his Father's kingdom "all things that offend;" not merely a few of them, but all, and that then would follow the triumph of the righteous, when they shall "shine forth as the sun in the kingdom of their Father."

Of old the promise was made to Noah that "while the earth remaineth, seedtime and harvest . . . shall not cease." In a paragraph where this promise is cited, Mrs. Eddy outlines in mental terms the great world-struggle and says (Science and Health, p. 96), "Love will finally mark the hour of harmony, and spiritualization will follow, for Love is Spirit." In a long discourse found in the thirteenth chapter of Matthew, Jesus says, "The harvest is the end of the world." This would imply that many existing conditions have been of slow growth, that is, to mortal sense, and these are the ones which most need to be reckoned with. In Christian Science we know that only good is eternal, but its upspringing in human consciousness often seems to be very slow. Christian Scientists however take refuge in the account of creation given in the first chapter of Genesis, where the seed brings forth "after his kind" and all the divine creation is pronounced good. In human history we read of thorns and thistles, but we are told that these are the outward manifestations of disobedience to God's law on the part of mortals.

It may be remarked here that many of the discords which spring up, whether sickness or sin, are due to ignorance of God's law rather than to wilful transgression; but just the same these must all be "rooted up," as the Master declared, not allowed to multiply in the soil of human belief, and this rooting up constitutes in large part the work of the Christian Science practitioner. It is at least an indispensable preliminary to the sowing of the good seed. Long ago Christ Jesus said that the harvest was plenteous but the laborers were few. On another occasion he reminded his disciples that "one soweth, and another reapeth," and this is a vital lesson for us today. If we are ever tempted to murmur because the results of our sowing do not quickly appear, we may well ponder Jesus' words, "I sent you to reap that whereon ye bestowed no labor: other men labored, and ye are entered into their labors."

How often do we remind ourselves that we are reaping in gladness that which "holy men" of olden time sowed in tears, and that our richest harvest of health, holiness, and happiness comes from the fields of spiritual experience sown by Christ Jesus. In admitting this with all thankfulness we must not forget that we were wandering in the barren deserts of material belief until we were led back to the Master's sowing by Mrs. Eddy's inspired teachings, and who that knows Christian Science would deny the boundless blessings which have in this way reached humanity, for the reaping of this harvest brings abundant supply for all human need.

There are at this hour many indications that the final harvest time draws on apace, the chief of these being the fact that the harvest of the good seed sown by "the Son of man" is being reaped; also the further fact that when human wisdom fails to deal with the "tares," as fail it must, the angels, "God's thoughts passing to man" (as we read on page 581 of Science and Health), come to our aid and with divine wisdom make eternal separation between God's ideas and "the children of the wicked one," between this false mortal concept and our true selfhood in God's likeness. This is the hour of separation, and in God's way and time will follow the harvest song of rejoicing over the unending triumph of Truth and Love.

ANNIE M. KNOTT.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston Street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk Streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon Street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

SUPERIOR, WIS.—The corner-stone of the new Christian Science church under construction at the southeast corner of John Avenue and Nineteenth Street was laid this morning [Sept. 29] at eleven o'clock. Work on the structure is advancing rapidly and it will be ready for occupancy by Dec. 15.—*Superior Telegram.*

TEXAS.—An increasingly friendly attitude toward Christian Science on the part of the press of Texas is reported. Many of the newspapers have quoted copiously from *The Christian Science Monitor,* while some of our foremost dailies have published Christian Science lectures in full. Other matter pertaining to Christian Science activities, and also articles expressive of the Christian Science attitude in regard to prevalent health theories and practices, have been courteously received by editors and published.

❖ ❖ ❖

The Lectures

Chicago, Ill.

Bliss Knapp delivered two lectures on Christian Science under the auspices of Fourteenth Church of Christ, Scientist, in the assembly hall of the Ravenswood School. Ernest C. Moses in introducing the lecturer said:—

A modern writer has said: "You cannot dispose of a great man by traducing him; you cannot get rid of a great question by ignoring it; you cannot thwart a great cause by misrepresenting it. The man, the question, the cause will persistently recur and will not down." All of this applies to the man Christ Jesus and to the Christianity which he established; and because Christian Science by the will of God is today giving to mankind clear explanations of the nature and power of the Christ-man, and is reestablishing primitive Christianity in human consciousness by demonstrations of its divine Principle in the healing of sin and sickness everywhere, this Science persistently recurs "and will not down."

The wonderful vitality of this Science of Christianity is not due to any might or power of human personality and organization. It exists and succeeds because it is an exact demonstrable Science, a revelation from God, divine Principle, which meets the great need of humanity for health, morality, happiness, and true prosperity. Christian Science demonstrates the tender, compassionate love of God; and to understand it is to love it, for it sweetens life, satisfies every aspiration of the heart, elevates human character, heals the body, and overcomes all the inharmonies of mind and estate. We can all know and feel this in some degree right here this afternoon. This cause, which is surely unfolding to mortals the true nature of God and His Christ, was established through the wisdom, patient love, faith, and fidelity of one consecrated Christian woman. Mrs. Eddy discovered and founded Christian Science, and she initiated and established every one of its institutions.

Donald M. Jones, first reader, said in introducing the speaker at the second lecture:—

The interest shown in a Christian Science lecture is indicative of the fact that those who come are seeking to know more about this movement which includes in its beneficences redemption from fear, disease, discouragement, worry, lack, and similar conditions which are wont to burden the hearts of mankind.

Our Declaration of Independence states: "We hold these truths to be self-evident; that all men are created equal; that they are endowed, by their creator, with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness." Christian Science brings to us a fuller realization of these rights and of how they may be acquired here and now, that we may have freedom and joy and life through the knowledge of God and the correct understanding of the words and works of Christ Jesus, who said, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." He also said, "I will pray the Father, and he shall give you another Comforter, that he may abide with you forever." It is evident that this Comforter was not to have mortal form, because He shall, as Jesus said, "abide with you forever," and he defined this Comforter in the fourteenth chapter of John as the "Spirit of truth; whom the world cannot receive, because it seeth him not, neither knoweth him: but ye know him; for he dwelleth with you, and shall be in you."

Now Christian Science is proclaiming to the world today that the Comforter has come, "even the Spirit of truth," and that we may now come into our heritage as children of God and prove our dominion over sin, sickness, want, woe, and fear.—*Correspondence.*

❖

Brockton, Mass.

William H. Dawes, first reader of First Church of Christ, Scientist, in introducing Dr. Francis J. Fluno, who lectured on Christian Science, said in part:—

There is ever present in the human thought a desire for better conditions, or a longing hope that in some place or time in the dim future we may be able to lead better lives; but the apostle says that "now is the accepted time; behold, now is the day of salvation." In the Christian Science textbook, "Science and Health with Key to the Scriptures," Mrs. Eddy tells us that this saying of Paul does not mean "that now men must prepare for a future-world salvation, or safety, but that now is the time in which to experience that salvation in spirit and in life" (p. 39). Right now, in our present day, we may gain freedom from the ills that seem to be the heritage of mortal flesh, and acquire a workable knowledge of God.

That Christian Scientists have attained, in some degree at least, the realization of these hopes and aspirations, is evidenced by their improved lives, mental, moral, and spiritual, as well as physical. When this experience is gained, they know that "joy is no longer a trembler, nor is hope a cheat" (Science and Health, p. 298), for they have reached a demonstrable understanding that God is infinite Love, infinite good, and sends only good to His children. Christian Science is not an experiment, nor is it a human theory or doctrine or blind belief, but it is preeminently a practical religion that can be taken into the daily life, and that enables mankind to solve the problems and overcome the difficulties that so frequently arise. It has no controversy with other beliefs, nor do Christian Scientists seek to proselyte, but they have received untold benefits and blessings which they are willing and ever ready to share with their fellow beings.—*Correspondence.*

Testimonies of Healing

I first heard of Christian Science on Thanksgiving day, 1904. Within ten days after that I fell and injured my ankle. After being unable to walk for a week I decided to try Christian Science, and absent treatment was given. In half an hour after help was asked for I was entirely free from pain and could walk without difficulty. Two days later I went to see the practitioner on account of a slight strain in the hip, and at that time was healed of an ailment which had held me in bondage for ten years. Glasses which had been worn for nine years were laid aside in two months, although I had been told that they must always be worn for a bad structural defect.

I had no more help in Christian Science until three years afterward, when through great suffering, both physical and mental, I was brought back to the straight and narrow path of Truth. My healing was slow this time, but because of that I have gained more understanding of God and His relation to man and am learning to love mankind. In the fall of 1913 my ankle was injured twice, but each time it was quickly healed. These are only a few of the numberless instances in which Christian Science has helped me, and I am most thankful to God, and grateful to our dear Leader for this truth that meets our every need.

LOTTIE C. FORBES, Chicago, Ill.

I wish to corroborate my wife's testimony, and add that her precarious mental condition has been so changed through the application of Christian Science that she is not the same woman. As for myself, Christian Science found me embedded in the mire of materialism, breaking the ten commandments in thought and deed, burdened with debts, and despondent; but I was aroused through the healing of my wife.

Only faintly did I see the light of Truth for a number of years. I appreciated the uplift, but it seemed that my progress was halted, while others were forging ahead. At times things were very discouraging, until finally I was brought to the full realization that I had to choose between God and mammon. Since deciding to follow the ten commandments to the best of my understanding, I feel as if a mighty mountain had been lifted from my shoulders. I have been healed through Christian Science treatment of gall-stones, all trace of them disappearing within thirty-six hours after the first treatment; also all the old obnoxious habits have disappeared, among them the use of tobacco.

I hope I may live a life which will attest my sincerity. My heart is full of thankfulness to God, who revealed to our beloved Leader, Mrs. Eddy, this wonderful truth.

HARRY B. FORBES.

✧

In the fall of 1903, after being ill five years and undergoing two serious operations, I was healed through Christian Science of chronic stomach disorder and abnormal growths. My healing was instantaneous, but I had no knowledge of Christian Science previous to this time and could not seem to become interested in it, so being a regular attendant and member of another church, I finally gave it up. Five years later I accepted a position to sing in a Christian Science church and became very much interested in the services. Even then I did not give much time to study, but my little daughter and I called a practitioner when we needed help, and this was often, although there has never been a return of the growths or the stomach trouble.

In January, 1913, I was taken with what seemed to be nervous breakdown, as my work had been very heavy and I had not had time for the study of Christian Science. I tried one physician after another, growing worse all the time, and finally decided to try Christian Science again, after a physician said I could not be relieved of pain in the back of my head for three months. A practitioner was called and the pain left in two days, while in ten days I accepted a position. I have learned what it means to "continue" in God's word, and know that as I live in obedience to the spiritual law of harmony, as I am grateful for what I have and work at my problems with "patient continuance," I shall receive the bread of Truth, "which cometh down from heaven;" that as I "put off the old man with his deeds," I shall be clothed in the spirit of Truth and Love, for, as our Leader has said, "obedience crowns persistent effort with everlasting victory" (Miscellaneous Writings, p. 118).

I never before enjoyed such good health as I have in the past two years and a half, and I am more thankful than words can express for it and for the happiness which the study of Christian Science brings to my little daughter and myself.

S. ELIZABETH PARKER, Venice, Cal.

✧

Through a copy of the *Sentinel* which my husband found in a railway carriage while on a journey to the north of Scotland, several years ago, we learned of Christian Science, and since then we have had many proofs of its healing power.

One morning my little girl was quite suddenly seized with acute pain, and I immediately telephoned to a Christian Science practitioner for treatment for her. In three hours the pain became less acute and the child fell into a quiet sleep. Day by day the pain became intermittent and less acute, so that in a week she was able to be up for a short time and in a fortnight was down-stairs. She looked much thinner but felt quite normal in every way, except that she could not stand erect and there was a stiffness round the part where the pain had been.

A fortnight later there was every appearance of an abcess beginning to discharge. The practitioner told me to call in a doctor, to satisfy some relatives who were antagonistic to Christian Science. The doctor found my daughter quite normal but told me to keep her warm and in bed. The discharge continued for three days, but there was no pain. The doctor was in daily attendance, watching the case but prescribing nothing. On the third day he remarked to me that he could not understand how such a thing could have formed without great pain. Then I told him the facts and my daughter was asked to show where the pain had been. The doctor said: "Well, that is the appendix. It seems a mystery to me, but you have got rid of that discharge in the easiest and most natural way possible, and there is no doubt but you have been spared a very serious operation." Two days later the girl got up. She could stand quite erect and was absolutely free. This happened three years ago, and there has never been the least return of the trouble.

I feel very grateful for the courage given me at this time to rely wholly on Truth in the face of many seeming difficulties. Words could never express our thankfulness to God for this healing, and our gratitude to Mrs. Eddy for the discovery of this saving truth which is daily giving us a better understanding of God and man's relation to Him.

MARY GARDEN, Leith, Scotland.

✧

I wish to tell of a few instances in which the efficacy of Christian Science as a healing power has been proven in our home. My mother took up the study of this truth when I was six years old, and was healed of invalidism by reading the literature. When I was quite a child she awoke one night

Digitized by Google

at ten o'clock to find me unconscious and to sense dangerously ill. She immediately began to treat me, at intervals rousing me and having me repeat "the scientific statement of being" (Science and Health, p. 468) with her. She continued her work until about two in the morning, when I was so much better that she lay down and slept the remainder of the night. In two days more I was entirely well. The illness was a serious throat condition.

In my home now with my two babies, Christian Science is an ever present help, for the little ones escape many things which mortal mind says children must have. When my elder child was four weeks old she passed a week with no movement of the bowels. At the end of that time fear entered in and material means were resorted to, but the same condition returned. My mother had been treating her, and about the fifth day of the second week she called my attention to a testimony in the *Sentinel* of a child with the same trouble, but much more serious, who was healed in Christian Science. After reading the testimony I felt that if the parents of that child could trust so firmly I certainly could with my small problem. In less than half an hour normal action was restored, and the child has never had the slightest return of the trouble. When my fear was allayed, the demonstration was complete.

Christian Science is a preventive as well as a curative. In October, 1913, a stubborn cold manifested itself with the children and would not yield to treatment. One afternoon my little girl manifested the usual symptoms of whooping-cough, but immediately I declared the truth, and as a result of the work which my mother and I did, my children suffered little inconvenience.

For the many proofs of God's loving care I am indeed grateful, also for our Christian Science literature. I thank God that there was one courageous and pure enough to give this religion to the world, and I want to learn more each day of this saving truth.

BLANCHE M. WETZELL, Kansas City, Mo.

✧

Before taking up the study of Christian Science (in 1912) I suffered from catarrh. Many kinds of medicine had been tried but all had failed to cure me. By the time I had read Science and Health through I experienced a great change. The disease at once began to disappear and the healing has been permanent. My slight understanding of Christian Science helps me to "cling steadfastly to God and His idea" (Science and Health, p. 495). I am deeply thankful to God, and grateful to our dear Leader, Mrs. Eddy, for this truth which makes us free.—LOUIS WAMPFLER, St. Joseph, Mo.

✧

When Christian Science came into my life, the clouds of sense hung so dark and so heavy that little light seemed visible. I had been a church-member from childhood, and had dearly loved the services and tried faithfully to follow in the way I was taught; but I was constantly reaching out for something that would help to solve my many problems. I was teaching a class of eighteen little boys and was very successful in the way of keeping them interested in Bible stories, but when it came to the point of making these stories practical I failed. With tears I would ask myself why I could not help the boys to overcome temper, impatience, and selfishness, and would have to acknowledge that it was beause I did not know how to overcome my own sense of evil. After a few years it was my privilege to teach a class in a Christian Science Sunday school, and such a joy it was to me, for I had found the "key" with which to solve not only the mental problems but the physical as well, and for fourteen years I have been able to prove beyond a doubt that I have found the Christ-method of overcoming evil with good.

My healing was in some instances quite rapid, and in others it had to be a process of regeneration. I found that when willing to resign myself to God's wisdom and let His will, not mine, be done, I responded to the healing power of God's dear love. Inaction of the bowels, supposedly inherited, was quickly overcome, although pronounced incurable by *materia medica*. Many other ailments melted away into their native nothingness as I obtained a clearer sense of God and His Christ as revealed through our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Christian Science has taught me how to be faithful in the little things of every-day life and to make all work a sacred task. It has made me a better wife and truer friend. It has helped me to see the cowardice of sarcasm, the cruelty of criticism, and the danger of gossip. It has made me willing to look within, has given me courage to persist in overcoming false beliefs, and has also made plain that evil is not personal.

I am grateful for our periodicals, and also to those who contribute so faithfully and lovingly to them. Our Lesson-Sermons keep us close to God if we follow the light they reveal. Words fail to express my gratitude to Mrs. Eddy, who had the courage, faith, and love to stand by her convictions and prove to a weary, sin-sick world that God, divine Love, is omnipotent, omniscient, and omnipresent, and who has taught us how to trust Him.

F. LILLIAN LANCASTER, Utica, N. Y.

✧

I have received so many blessings since taking up the study of Christian Science about five years ago, that I feel I would not be doing my duty to my fellow men if I did not offer my testimony for publication.

I had suffered for more than ten years from a skin eruption, had tried many remedies, and had the services of about nine physicians, no one of whom was able to relieve the pain or check the spread of the disease, and I was finally told by the last physician that he thought my case incurable. A short time after this a friend advised me to try Christian Science and gave me some literature. I then secured a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy and began my studies systematically and earnestly, so that with the aid of a Christian Science practitioner I was healed in a few months. I had also been under medical treatment for chronic stomach and bowel disorders and hay-fever for about ten years before I knew of the power of Truth, but all of these ailments, and many others of a minor nature, were healed very quickly by Christian Science. I can truthfully say that I have not tasted medicine of any kind since I began to read Science and Health.

When I became interested in Christian Science I was engaged in the saloon business and had about all the habits which go with that business, such as gambling in all forms, drinking, and dissipating in general. I had no desire to give up any of these habits, because I thought I was enjoying them and that they were all right so long as I could afford them. Probably if the Scientist who mentioned Christian Science to me had said it would be necessary to give up my business or any of these habits before I could be healed I would never have taken it up, for I only wished to be healed of my diseases. It did not take very long, however, for me to find out that Christian Science is a great deal more than a physical healing agency, for I had read the text-book only a few weeks when I noticed that there was no longer any desire to gamble, drink, or do many other things that I had

Digitized by Google

formerly enjoyed. Finally my business became uninteresting to me and I wanted to get away from it. I have now been out of it for nearly three years.

It was only a short time ago that our youngest daughter was sent home from school because she was not vaccinated, or more properly speaking the former vaccination did not take. We had her vaccinated, and the arm went through all the stages which *materia medica* holds to be necessary, but at no time did she suffer or become inconvenienced by the operation.

I am grateful for the many physical healings received since taking up this wonderful study; but when I think of the spiritual healing and regeneration, the physical seems indeed small. Before becoming interested in Science I had no God, no church, and not only myself but my wife and two daughters were in this condition; now we feel that we are becoming better acquainted with our Father-Mother God every day, and continually rejoice. I am also very grateful for our literature and our wonderful daily newspaper, for having had the privilege of class instruction, and last but greatest for the privilege of helping others.

SAM B. METCALFE, Louisville, Ky.

✧

[Translated from the German]

In April, 1910, I called on a specialist with my daughter, who was suffering from an affection of the eyes. After one year's treatment this physician declared that no further help was possible, as there was total atrophy of the optic nerve of the right eye. While my child was in such a distressing condition I heard of Christian Science through my brother-in-law, who advised me to give it a trial and see what it would do in this case. With full trust in God I went to a Christian Science practitioner and asked for treatment. This was in July, 1911. Three months later there was nothing left of the trouble, and the child now sees quite well with both eyes. Another of my children was healed within three days of a very serious difficulty.

In many instances I have been able to prove the power of Love, Truth, omnipotent good, thanks to the Discoverer of Christian Science, and my endeavor is to show my gratitude by holding fast to the teachings of Truth, thus partaking more and more of the fulness of God, to whom be glory.

FRAU SCHÄFER, Lehe a.d.W., Germany.

✧

It was several years ago that I accepted Christian Science. On various occasions I had been given up to die by attending physicians and surgeons. In April, 1908, I was suffering physically and mentally, and it seemed as if I could bear no more, having already undergone three severe operations and tried different treatments of a material nature, yet after all this being worse in every way than I was before. My home at that time was with Christian Science friends, and it was their love and kind ministrations and unselfish way of living which led me to try Christian Science for myself. I was suffering from a great mental sorrow, which never left me night or day, and I knew help must be had from some source, and that quickly. My healings have all been slow, but I am grateful for this, because it has been a great incentive for work and study on my part.

It has not been a royal road, but all the way I have learned something of real joy and peace. The mental burden was first lifted; then several of the old chronic ailments disappeared. Daily and hourly as I draw closer to God I gain in physical strength through spiritual refreshment. Christian Science helps me in every way. It sustains me morally, mentally, physically, and financially; more than all this it uplifts me spiritually. I am very grateful to all the dear friends who have helped me more than they know, and for the many blessings and privileges that have come to me in Science; also for the many useful activities that have come into my life, and the fact that I am able to some extent to help others as well as myself.

To God, the giver of all good and the healer of all diseases, and to our revered Leader, Mrs. Eddy, who has shown us the way to Truth, Life, and Love, I humbly lift up my heart and voice in loving praise.

RUTH H. BAILEY WALKER, Meredith, N. H.

✧

[Translated from the German]

In August, 1914, erysipelas manifested itself very severely on my face. The physician whom I called in designated the trouble as a very tedious and contagious one and interdicted my being with my relatives; but things took a different turn. I used no material remedies, but asked without delay for help from a Christian Science practitioner. My relatives had no fear of contagion, neither was there any ill communicated to them. When the physician called again he was very much surprised at finding me active in the store.

Last winter I suffered with cramps of the stomach, which recurred every week and finally every day. Through treatment along Christianly scientific lines this condition was healed, and I have not experienced any such trouble since. I am thankful to God and grateful to our dear Leader, Mrs. Eddy, for the help brought me in my need.

ERNA HÖFENER, Nordstemmen (Hannover), Germany.

✧

When I visited a Christian Science practitioner I was in the depths of despair and almost mentally unbalanced; indeed I had not passed a normal day in thirty years. The practitioner asked me if I believed in God, and I replied that I did; in fact I longed to understand something of the Bible, yet it always confused me. After treatment I went away feeling much better. The physical ailment was slow to yield, but in two weeks' time the mental condition was overcome. I knew then that the leaves of the Bible were for the healing of the nations and decided to work out my own problem. I began to study the Bible, also "Science and Health with Key to the Scriptures" by Mrs. Eddy, and to attend the Christian Science services. At the end of the year I was a new creature, and my gain in weight was a source of much joy, as I had been a mere shadow for the previous thirty years.

It is my desire to grow in grace so that I may be able to help others. For something over six years I have depended wholly upon God for help in every trial, and am not only well but happier than ever before. I hope this testimony will be a source of strength to some one who seems to yield slowly to the physical healing, for I find much joy in giving it.—MARY A. HOWE, Oklahoma City, Okla.

✧

I did not become interested in Christian Science through the physical healing, but honest curiosity led me to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. As this teaching unfolded itself to me, I became convinced that it was the solution of the problem of life; that it was the truth, the religion of Christ Jesus, and I wanted to have part in it. For several years I had suffered from various ailments and was continually under a doctor's care, but while reading Science and Health I was healed of an hereditary disease pronounced incurable, and glasses were laid aside. Other physical ills left gradually, and my disposition was improved in a marked degree.

Digitized by Google

As I read and studied I began little by little to prove for myself and children the power of God to heal. My little daughter brought home a signed report from the school physician, stating that she had nasal growths for which an operation was necessary, and that the matter must be attended to immediately. I went to see the teacher, and told her that the little girl should have treatment right away, but not an operation. The moment I read the report I affirmed that God's child could manifest nothing that was unlike perfection, and whenever the thought of a diseased condition came before me I corrected it by a declaration of the truth of being. Soon I felt that the healing was accomplished, and when the physician again examined the child a year later he pronounced her in perfect health.

Although these healings were wonderfully satisfying proofs of God's love and protection, yet the spiritual awakening, the realization of the purpose of existence, and of the meaning of Jesus' command to love one's neighbor as one's self, have meant immeasurably more. My heart is full of thankfulness to God for this blessed truth that sets free from every human ill, and of love and gratitude to Mrs. Eddy for her service to mankind. My prayer is that my life may give proof of this gratitude in my daily deeds.

MARGARET W. DYER, Alhambra, Cal.

✧

Very early in life I became a church-member, but I could never understand God, being taught to fear rather than to love Him, and to prepare for happiness at some future time rather than to realize it now. I did not come to Christian Science for healing, but gained my first knowledge of it by reading to one who did need physical help. Nevertheless I have been healed of many minor ills, and at one time a very severe cold disappeared almost instantly. Since then I have used no material remedies, finding that divine help is sufficient.

Of the many things for which I am thankful, the understanding of God as an ever present help in human need is the greatest. I am grateful for the knowledge I have gained of this great truth, and realize that I can show my gratitude only as I live according to the example left by Christ Jesus. Through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have gained some understanding of how to follow him. I am thankful for all our Christian Science literature; it is my daily food. Without the help of Christian Science my life would indeed be empty, and I fully recommend this teaching to any one in need.

JOSIE M. OWEN, Kansas City, Mo.

Answered Prayer

PEARLE M. WARREN

AT morn I prayed for harmony,—
For light, for love, for purity;
And as I prayed I seemed to feel
God would His light to me reveal.

At noon, when duty bade me leave
My cherished plans, and to believe
That all my ways are in His hand,
'Twas hard to trust—to understand.

At eve, obedient to Love's call,
When night was hovering over all,
The light was shining bright on me;
My answered prayer was—Harmony.

From Our Exchanges

[Rev. Edward F. Sanderson in *The Homiletic Review*]

The supreme thing is that you give implicit obedience to those high impulses, perfectly recognizable, which are forever pressing upon you. That is the heart of religion. It was the religion of Jesus. It has been the religion of the world's noblest and best. Jesus felt the pressure within himself of these impulses toward the highest,—the sense of ought, ideals, aspiration, the impulse to dare all for truth and righteousness and love,—and he named the power behind them Father. His one great desire was that all men should know that power within themselves which is making for the highest, and which he called Father. Jesus found supreme satisfaction in his relationship to that power. It was the Father, alive and closer than breathing, urging him on toward the highest.

Jesus had no revelation of God which was different in kind from the revelation which comes to us out of the deeps of our own spirits. His implicit obedience to that power earned for him the fuller revelation which always follows such fidelity. But the light within him was the same light which burns in diminished radiance in us,—the Light which lighteth every man coming into the world. The great phrase of Jesus, so often on his lips and so little understood today, was "the kingdom of heaven," or "the kingdom of God," which, he said, "is within you," and men have looked everywhere except within themselves to find it. To Jesus the kingdom of heaven was the filial relationship of a man to God.

[*The Christian Work*]

There can be no real and lasting peace in this world till justice is done and righteousness is established as the law of society. And so we might as well banish once and forever the empty and delusive dream of peace in society on any other terms than this: righteousness between man and man as the law of life. God's program must be our program; to begin at any other point is to make the confusion worse confused. Back of every other need today is the need of more righteousness, God's righteousness. Nothing can ever be a substitute for this. Legislative enactments that rest on policy, national policies that are a compromise of self-interests, can never advance society one inch toward the goal. The righteous will of the righteous God is the best politics, the best economics, the best ethics. Any national policy or legislative enactment or social system that does not square with the will of God is defective and will only lead to confusion and failure. In every such case "the bed is shorter than that a man can stretch himself on it: and the covering narrower than that he can wrap himself in it."

[*Zion's Herald*]

Our religious aims tend to remain only "pious wishes," while the great body of duties and desires concerned with our economic support, our pleasures, and our friendships, "instigates activity." We need a revival of religion which shall issue in the practical transfer of the Christian motive from the sphere of mere pious wishes into aims and motives that are hot and vital and create action. We need to be converted in our wills. Our minds are convinced; we feel kindly toward the Christian purpose, but we do not act with resolution and steadiness according to the distinct Christian aim. The great revival will not consist simply in the preaching of a new theology or the kindling of a new glow of love for Christ; it will finally issue in a new choice of a set of ruling motives for daily living. It will bring the purpose of

Digitized by Google

Jesus to reign in the purposes that control the practical life of his followers. This will be something far deeper than an "ethical revival;" it will be concerned with the creative energies out of which moral character is formed. One motive will master us; it will be the purpose of Christ.

[From an editorial in *The Mansfield* (Ohio) *News*]

There is something radically wrong with religions and religionists that cannot pursue the even tenor of their way with a worship of God according to dictates of conscience and allowing others to do the same. A religion that cannot thrive on the living of it, and without an attempt to belittle or destroy other religions that freely accord liberty of conscience to all mankind, is a mighty poor religion either to live by or to die by. If there is to be a universal prayer, the invocation should be a supplication for a greater degree of toleration and broad-mindedness relative to humanity's journey to that undiscovered country concerning which we hope so much and know so little. Just a little more kindness and charity as we go along will make the journey so much pleasanter, and make us all feel so much better, and so much better acquainted, if some time, somewhere, we are to spend an eternity together.

[Prof. Thomas N. Carver in *Harvard Theological Review*]

The simple fact is that the church today does not really and in its heart believe in the old doctrines of salvation and damnation. There is an acid test which may be applied to determine this. Speak of the devil or hell, not in too coarse a manner, but as a bit of gentlemanly persiflage, before a body of preachers of any large or influential church. If your allusions provoke a smile, you may be sure that they do not take these names seriously.

[Edward B. Reese in *Pacific Baptist Advocate*]

Holy joy, which was one of the characteristics of Pentecost, comes from being filled with the Spirit. The holy joy is the believer's inheritance, and when he comes to his own, a world grown sick with sin and fear and sorrow will look with longing eyes upon one so possessed and crave so blest a gift. No one can ever hope to be a representative of Jesus Christ in the world until filled with the Spirit. We can never live efficiently until this experience comes to us.

[*The Living Church*]

The divine life which the divine Christ promised is working more and more in our humanity, and the future far beyond the past will show vaster triumph. God's life in the soul must go out unto its own, until it reaches divine life. It is only a question of time and struggle when the divine shall triumph over the animal, when the love of Christ in the souls of men shall triumph over selfishness, greed, and pride.

[*Northwestern Christian Advocate*]

A man may be poor in this world's goods, but with the approving voice of God in his heart he has a peace beyond all earthly dignities; he may have untold wealth at his command, but with God's rebuking disapproval in his heart he is the poorest, weakest, and most miserable of men.

[William J. Hart, D.D., in *The Christian Intelligencer*]

Life at best is sufficiently complex, and can be simplified only by doing the day's duty and rejoicing in the day's opportunity without permitting today to be overshadowed by tomorrow.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition" size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Christian Science: The Religion of Divine Love," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

A new pamphlet, "What Went Ye Out for to See?" is now on sale. This pamphlet contains the four following articles, republished from the Christian Science periodicals: "Principle Not Person"; "Jesus of Nazareth"; "Jesus the Christ"; and "Jesus and the Christ."

The pamphlet, "Causation," by Frederick Dixon, has been translated into Norwegian "Skapende Kraft," and is now published with the English and Norwegian versions on opposite pages.

The pamphlet, "Fulfilling the Law," has been translated into Danish, "Lovens Fylde," and is now published and on sale. This new pamphlet has the English version printed opposite each page of the translation.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription rates, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 26 cents annually for postage. For subscriptions to countries not listed please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month noted on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Postage required for remailing this copy: 1 cent domestic and Canada; 2 cents other countries.

Entered at Boston, Mass., post office as second-class matter.

Items of Interest

Agricultural or farm schools are urgently needed in the Philippine Islands, according to the director of education, who says that at least one such school should be found in every province, and that equipment should be purchased and capable teachers employed to put not less than one special course in farming in every one of the 200 intermediate schools now in existence. Considerable has already been done in the way of making a real start along this line. Day schools, known as settlement farm schools, and dormitory schools for older pupils, are now being organized in several of the provinces, and these schools are being furnished with essential equipment. Filipino teachers are rapidly replacing American intermediate teachers, so that now they constitute two thirds of the intermediate teaching force. The American teachers are being pushed up into the higher lines of instruction and supervision, and here they will be needed for a number of years, as it will be a long time before the native teachers will be prepared to handle secondary instruction alone.

The Arizona antialien labor law, enacted by the initiative vote of the people, has been declared unconstitutional by the United States Supreme Court, thus affirming the decision of a special circuit court. Because several foreign governments had protested against the law, and because of its similarity to the land legislation in California, which restricts the ownership of real estate by Japanese, many lawyers looked forward to this decision for the indications it might give of the view the highest court might take of the California law if it ever got into litigation.

Justice Hughes said: "It is sought to justify this act as an exercise of the power of the state to make reasonable classifications in legislating to promote the health, safety, morals, and welfare of those within its jurisdiction. But this admitted authority, with the broad range of legislative discretion that it implies, does not go so far as to make it possible for the state to deny to lawful inhabitants, because of their race or nationality, the ordinary means of earning a livelihood. . . . The authority to control immigration—to admit or exclude aliens—is vested solely in the Federal Government. The assertion of an authority to deny to aliens the opportunity of earning a livelihood when lawfully admitted to the state would be tantamount to the assertion of the right to deny entrance and abode, for in ordinary cases they cannot live where they cannot work. And, if such a policy were permissible, the practical result would be that those lawfully admitted to the country under the authority of the acts of Congress, instead of enjoying in a substantial sense and in their full scope the privileges conferred by the admission, would be segregated in such of the states as chose to offer hospitality."

There will be sold at public auction to the highest bidder at different railroad points in the Choctaw and Chickasaw nations in eastern Oklahoma, from Jan. 3, 1916, to Jan. 31, 1916, inclusive, 31,700 acres of unallotted lands and 181,800 acres of the surface of the segregated coal and asphalt lands belonging to the Choctaw and Chickasaw tribes of Indians, at not less than the appraised value. No person can purchase more than 160 acres of agricultural land, nor more than 640 acres of grazing land. Residence on land is not required. Maps and full printed information may be obtained of Cato Sells, commissioner of Indian affairs, at Muskogee, Okla.

Plans to bring the 1917 convention of the National Canners Association to Boston are announced by the convention bureau of the Boston Chamber of Commerce. The bureau states that this convention would bring 5,000 visitors to the city, as well as an exhibition of some sixty-five thousand square feet of space, including elaborate machinery. The allied industries holding their conventions with this organization are represented by the National Canned Foods and Dried Fruit Brokers Association and the National Canning Machinery Association. The 1916 convention is to be held in Louisville, Ky.

The long awaited report of the committee on smoke abatement and electrification which has been studying these problems for several years at a cost of over five hundred thousand dollars, will be presented to the Chicago Association of Commerce at its municipal dinner to the mayor, cabinet, and city council, Nov. 11. The smoke and electrification investigation has been made at the expense of the railroads by a committee representing the roads, the Association of Commerce, and the city.

The secondary schools of South and Central America are showing a tendency away from their traditional policy of having as instructors men who are engaged actively in other professions and who conduct the school classes merely as a side line. These instructors usually have been men of broad culture, holding university diplomas and appointed by the Government, central or local, and the system has served to bring the students into touch with men of affairs.

At a conference held at Taumarunui to discuss a national highway from Wellington to Auckland, New Zealand, a deputation was formed to place the proposal before the prime minister. The road will pass through sixteen counties, the total distance being 442 miles. The proposal is that the Government shall provide half the cost of construction and maintenance, and the local bodies concerned contribute the other half.

Of the 688,922,000 board feet of timber cut on the national forests during the fiscal year ended June 30, 1915, 123,168,000 feet was taken under free-use permits given to settlers and others living in or near national forests. There were 40,000 free-use permittees, and the value of the timber they cut was $206,464.13. The remainder, or 565,754,000 board feet, was cut under sales contracts, for the most part with lumber operators, but including 19,246,000 feet sold at cost to farmers and settlers, as required by a special provision of law. The prices received for all sold timber varied from 50 cents to $4 the thousand feet, and the total value was $1,179,418.39.

The *North China Herald* declares that there is every evidence that the recently started campaign in favor of monarchial government, which has assumed important proportions in China, is officially inspired. It is generally considered that the Government is seeking to learn how the country and opinion abroad would regard the ascension to the throne of Yuan Shih-kai, but that the step is actually not contemplated unless it meets with some measure of approval.

The South African National Union is taking steps to enlarge a fund which is at present being administered by a Johannesburg newspaper so as to include the sending of children to farms as well as to the seaside. By this means it is hoped to bring home to the rising generations the attractions of country life, and so help to fill up some of the vacant spaces in South Africa.

Yellowstone Park tourist travel of all classes, since the first of August, the day that the park was opened to automobilists, has been compiled by the touring bureau of the American Automobile Association. The number of tourists who entered in conveyances other than automobiles was 24,293. The number of cars entering was 958, carrying 3,513 persons.

Cooperation of the entire country is solicited by Governor Haines of Maine for the preservation and restoration of the Henry Wadsworth Longfellow birthplace in Portland. Although the poet lived there but a few months, admirers of Longfellow feel that the house should be kept as a memorial to supplement the house on Congress Street in which he spent most of his youthful days.

Experiments in Cuba with the fiber of a plant known as "malva blanca" indicate that it produces an ideal fabric for sugar bags. The fiber is said to be soft and silky, to possess a tensile strength greater than that of hemp, to be capable of close weaving, and not to be susceptible to shrinkage if wet. It can also be woven by ordinary machinery.

What are said to be important documentary discoveries relating to Cuban history have been found in the royal archives in Seville, Spain. It appears that in the Archivo General de Indias there are thousands of bundles of documents relative to the history of Cuba from the year 1508 down to a very recent time.

Work has started on a two million dollar plant on the Chippewa River in Wisconsin. It will develop 50,000 horse-power to be electrically conveyed to St. Paul and Minneapolis. The dam is to be nearly a mile long and 600 feet high, forming a lake five miles long.

It is reported that the principal works of the British Dyes Company will be established at Huddersfield, England. The contracts for structures covering an area of 250 acres are already let, totaling £250,000. Eventually 10,000 men will be employed.

Bonuses totaling $700,000 will be distributed this season by Hawaiian sugar planters to their plantation laborers.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVIII November 13, 1915 No. 11

"No thought for the morrow"

WILLARD S. MATTOX

STUDENTS of Christian Science who are making discoveries, have learned among other things how futile and profitless it is for mortal man to make plans. When we are wise enough to realize that God forecasts every event of man's individual existence, we will have a well-poised understanding of the government of good. When we perceive that the unkind experiences of mortal man's daily life may be converted into blessings, we gain a new comprehension of the beatitudes.

"Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake. Rejoice, and be exceeding glad: for great is your reward in heaven." The deep meaning of these words of Jesus becomes apparent to the consciousness which is learning that the lessons which seem hard to human sense are actually a benediction. There is unspeakable comfort in our Leader's words in "The First Church of Christ, Scientist, and Miscellany" (p. 149): "Remember, thou canst be brought into no condition, be it ever so severe, where Love has not been before thee and where its tender lesson is not awaiting thee. Therefore despair not nor murmur, for that which seeketh to save, to heal, and to deliver, will guide thee, if thou seekest this guidance."

Under the inspiration of a growing trust and faith in divine Love, whose one purpose is to be infinitely kind and to guide us aright, individual consciousness acquires a placidity, a serene confidence, which precludes any anxiety or fear, or the necessity for making plans. Elizabeth Barrett Browning must have had a glimpse of "God's greatness" and the disquietude of mortal minds when she wrote,—

> And I smiled to think God's greatness flowed around our incompleteness,
> Round our restlessness His rest.

Jesus was the one man who knew in all its completeness God's benevolent intent and will for all His children. His declaration, "Your Father knoweth what things ye have need of, before ye ask him," brings a sense of peace and confidence to the fearful thought. When man begins to comprehend the advantage of being controlled and directed by infinite, unerring Principle, he is glad to give up the mortal will, which makes its own selfish plans, and to submit joyously to the will of Love, which orders wisely all events. John Burroughs says, "The friends I seek are seeking me." We may be sure that it was not an accident that brought three seekers after Truth, three wise men, unknown to one another and without prearrangement, to meet and continue together their journey to the manger in Bethlehem. They were guided by the one Mind.

Unity of action is the fundamental law of the universe. Every created thing is moving in obedience to the same Mind, and all right relationships between the sons of God are established by the one Mind. The prayer in Mrs. Eddy's hymn, "Shepherd, show me how to go" (Hymnal, p. 188), is equivalent to Jesus' statement, "Not my will, but thine, be done." When we comprehend the nature of Love and learn its infinite plan to bless Love's ideas, our thought will achieve a confidence and an understanding of dominion which can never be lost. We shall rejoice and be grateful for the loving control and guidance of our God, who never makes a mistake.

We should never try to steady the ark. Something unpleasant usually follows when we act upon a belief that we are responsible for anything in God's perfect universe. It was a mistaken zeal which prompted Uzzah to believe that he was responsible for the safety of the "ark of God," and the fatal results of such a belief are on record. Adam and his progeny have believed the lie of the talking serpent, "Ye shall be as gods." The error of believing that a mortal man is under any obligation to assist divine wisdom in governing the universe is equivalent to a usurpation of the divine prerogative, and incurs the penalty of the deific law which destroys all evil.

Christian Science declares that God is the only governor, and that He preserves the unity and integrity of the eternal "now." It is a joy to know that all we have to do is to depend upon ever present Mind, which would guide and govern and control our activities, movements, relationships, supply, and every detail of existence. When we know that God loves us, that Love protects us, and that our eternal existence is the perfection of being, we can never be afraid. The belief that we have grave and serious problems to solve, that human existence consists of a long series of questions which have to be answered, the argument that there is a sequence of events which threaten our happiness, harmony, health, success, and life itself,—these errors are healed by the understanding that in Science all the issues of life are guided and controlled by divine Love. We then find that God's plans for us are infinitely wise, and kind; that they include an abundant supply for all human need, a joy of life which can never be taken from us, and a permanent consciousness of immortal being.

Sooner or later we must appreciate the truth as well as the humor of Burns' quaint phrase,—

> The best laid schemes o' mice and men
> Gang aft a-gley;
> And leave us naught but grief and pain
> For promised joy.

Humanity has had so many disappointments, so many cherished plans have failed, the wonder is that it has not learned the wisdom of seeking for the remedy,—the saving truth which is always at hand and always available. When self-will decides what it wants or what it intends to do, the only results are discouragement and despair. When the habit of making plans is recognized for what it is,—a plot to rob man of peace and the poise which means a real appreciation of being,—when a man is sure that he is subject only to the will of divine Love, he will abandon the habit of making up his mind to execute certain projects and will rejoice in the freedom of the sons of God.

Love's protection is the only law that governs the affairs of the universe, including individual man. When we remem-

ber that God is always good, that His perfect universe holds nothing for us but bliss, then we have made the valuable discovery that there are no evil conditions which force us to plan a campaign of defense, nor on the other hand to have anxious thought about the question of supply, because we know beyond peradventure the source of our supply. The beloved disciple names a sufficient remedy for the fear which impels the human family to take precautionary measures, to guard against an imaginary foe, when he says: "We have known and believed the love that God hath to us. God is love; and he that dwelleth in love dwelleth in God, and God in him. . . . There is no fear in love: but perfect love casteth out fear." Mrs. Eddy brings the whole question to a conclusion in one sentence, "The Gabriel of His presence has no contests" (Science and Health, p. 567); and it follows that man under the government of Love needs no plan for defense against an enemy or a law of condemnation or penalty which has no real existence.

Giving Up and Going Up

LOUISE KNIGHT WHEATLEY

THE trend of the human mind for centuries has been to associate goodness with asceticism, and it is not surprising, therefore, to hear the beginner in Christian Science express a vague fear that if he continues his study to the point where he finally becomes what he terms "good," he will have to give up much of that cheerful exuberance of spirits which he has somehow grown to think is incompatible with the religious temperament.

No one, however, knows better than does the Christian Scientist that holiness is not synonymous with gloom or depression. Mrs. Eddy says, "I agree with Rev. Dr. Talmage, that 'there are wit, humor, and enduring vivacity among God's people'" (Miscellaneous Writings, p. 117). The joyless saint is a paradox. As a matter of fact, the better one grows, the happier he grows, for he is becoming more conscious of his oneness with God, the source of all good. So to those who seem to be entertaining a frightened sense that Christian Science is going to rob them of something in spite of themselves, let the comforting assurance be given that it never compels anybody to give up anything. It only shows us something so much better that we gladly let go of the old to find the new, just as a child will drop a worn-out toy to reach out with eager fingers for something more beautiful.

Christian Science never leaves the heart empty and unsatisfied. It never tears something rudely away and gives nothing in its place. The very fact that something is gone from human experience which was once deemed essential to happiness, is in itself proof that something else, and something better, has already come. God's ways are as gentle as the processes whereby a field of stiff little wheat-stalks is transformed into a sea of rippling gold. God's ways involve progress, unfoldment, accretion, not loss and deprivation. Nothing is lost when spring merges sweetly into summer,—hope is only exchanged for fruition, promise for fulfilment.

As one gathers a rich cluster of ruby grapes, does he sigh because the delicate fragrance of the early blossom no longer lingers on the air? Does the butterfly ever try to crawl back into his chrysalis? Without another glance at his empty cradle, he just flutters his wonderful new wings and disappears in a blur of gold. Why should it not be a matter for rejoicing to leave a thing outgrown? June would be without its roses if every little bud at the first touch of the summer sun should cry out in alarm, Don't shine on me, or I may have to give up being a rosebud. The desire to grow is as normal in a man as in a rose. "Christianity causes men to turn naturally from matter to Spirit, as the flower turns from darkness to light" (Science and Health, p. 458).

The Father's plan does not involve a giving up of anything. Through the study of the good, the true, and the beautiful, as revealed in Christian Science, thought is educated out of itself into loftier aims and ideals, but always in a direct line of spiritual advancement. "Giving up" is simply another name for "going up;" and it is so naturally accompanied by a grateful realization that nothing has been lost, nothing left behind, that unless this joyousness does attend the giving up, one may be very sure the thing has not really been done at all, no matter what the outside semblance may be.

Jesus once made this point very clear when he rebuked the thought which should even look with covetousness upon something forbidden. Is it not possible that the adversary sometimes deludes even very earnest workers into believing that they have given up something, when in reality they are clinging to it as desperately as ever? The human will has many disguises, some old, some surprisingly new, and one of its favorite diversions is to pass itself off as a Christian Science demonstration. It tells a man that he has given up some habit or appetite, yet every hour of every day he longs for the desired object. It tells a woman she has done the same, yet the lack of the thing desired leaves her irritable and hungry.

Unless there is a going up, there has been no giving up, we may be sure of that. Then let us turn the white light of Truth upon such a demonstration and look it squarely in the face. That which really demonstrates Love's omnipresence, leaves no lingering sense of deprivation. A trained musician would not feel deprived of anything because he could no longer stand entranced before that delight of every boyish heart, the circus hurdy-gurdy. He whose ears are attuned to heavenly harmonies, can well afford to relinquish the crudities of uninstructed childhood.

Heavenly harmonies, such as he never dreamed of before, are coming into the life of every earnest student of Christian Science. Things which he once found amusing, now seem stale and profitless. He suddenly discovers what is indeed the truth, that there is nothing in them, and finds himself beginning to take an interest in many things for which he has hitherto had scant regard. He begins to find himself attracted as never before to things genuine and simple, wholesome and unaffected. He likes simpler manners, simpler speech, simpler dressing, simpler modes of living. Better music appeals to him; his taste in art and drama becomes more refined; while as he grows more familiar with the unique, forceful English found in the writings of Mrs. Eddy, his appreciation of good literature is sure to grow ever more keen. Even his erstwhile favorite newspaper is likely to be laid aside in favor of *The Christian Science Monitor*, whose daily chroniclings uplift thought to behold the good, the useful, the beautiful, and the true.

These changes come about so gently, however, that the student is hardly conscious of them himself. He only knows that the old scenes wherein he once played so conspicuous a part know him no more. The very mental atmosphere they exhale would seem to him now as suffocating as the overperfumed, superheated air of some conservatory would be to one accustomed to the delicate freshness of the dew-wet morning. Perhaps new friends come to him, whose tastes and aspirations are akin to his own; but if the Father's plan for him does not for the moment seem to include the sort of human companionship to which he now instinctively turns, he knows that he is not in any way dependent upon it for

Digitized by Google

happiness. He sees that the lesson of the hour is for him to turn more unreservedly to God, to prove that since God is the infinite ever-presence, man, His child, is never alone.

Thus the student finds friends in the birds, the stars, the flowers, the rippling brook. The winds whisper him their woodland secrets, and the pine trees sing him a song which needs no words to be complete. The happy, innocent creatures of the woods grow dear to him, and he wonders how he could ever have believed it sport to overpower them either by strength or strategy, and to carry them home limp and lifeless, "butchered," like those of old, "to make a Roman holiday." In fact, he whose heart is going out in truer love for all things, both small and great, through his better understanding of the eternal facts of being, finds that he loves the sweetness of solitude as never before. The whole world has suddenly become for him one vast, ever changing panorama of delight; and as you sometimes meet him, on an early summer morning, returning from an hour alone with his books and the sunrise and his own happy thoughts, and he smiles at you in passing, you somehow remember it was written once of Moses that "when he came down from the mount," he "wist not that the skin of his face shone."

God is so good, and we are all surrounded by so many beautiful, true, right things,—just waiting. Let us rejoice if we can see that one by one the old things, all that belongs to "the old man with his deeds," are already slipping away, and that no matter how fair these sense-dreams of happiness may once have seemed, we can be glad, because we have found that in parting with them we are losing nothing. Some one has written:—

> I thank Thee that I know
> Those much-desired dreams of long ago,
> Like butterflies, have had their summer's day
> Of brief enchantment, and have gone. I pray
> For better things.

Let us then welcome any experience, however trying, which enables us to go up to find those "better things" which God hath prepared for those who love Him. They will be gained just in the proportion that we are willing to loosen our grasp on matter and reach out for those things of Spirit which have from the beginning constituted man's eternal heritage.

Resentment

JAMES N. HATCH

THE feeling of resentment for real or imaginary wrongs is one of the most subtle forms of error lurking in the human mind. It is among the hardest to detect and the easiest to excuse. One reason for this subtlety is the fact that the real character of the feeling is often unrecognized; or if recognized, it is excused under the guise of righteous indignation, or cherished as only a desire to administer just retribution to one who has committed an offense.

The dictionary defines resentment as "a sense of injury or affront with a feeling of anger or ill will in view of real or supposed wrong done to one's self or one's friends." It is therefore an indwelling sense of injury that rankles in the human mind; and as implied in the definition given, it may have for its foundation only imaginary causes, or in other words, no real foundation in fact. But the mental condition of the person harboring resentment is not changed, whether the wrong on which the feeling is based is real or imaginary; so that the results will be the same in either case, and the ill effect on his peace of mind, and incidentally upon his bodily welfare, will be the same no matter what may be the cause. It follows that whether the subject be viewed from the dictionary standpoint, where the cause is regarded as sometimes real and sometimes imaginary, or from the Christian Science standpoint, where the cause of all discordant and resentful feelings is declared to be unreal, is quite unimportant, since the question is one concerning the effect upon the person who allows this resentment to rankle in his thought.

In an extreme case, suppose a person permits the feeling of resentment to take the form of violent or uncontrollable rage to such a degree that he seeks to do violent bodily injury to the one who he feels has offered him the affront. Such cases are recognized by almost every one as most deplorable, and the victim of such an uncontrollable temper is pitied by most right-thinking people; but when a person is able to control his temper, extreme indignation is often looked upon in an entirely different light. In fact, great anger and intense indignation over supposed wrong are sometimes considered quite commendable qualities, and calmness under such conditions is supposed to indicate cowardice. It does not appear to be generally understood that this indwelling hatred does as much harm to the one who harbors it as would an outburst of the more violent kind. It should not be inferred that wrong is to be looked upon with equanimity, and that there is to be no resistance against wrong-doing; on the contrary, we should strive to overcome it wherever it may be found. This should ever be done with a desire to help the wrong-doer to change from his ways,—to do him good rather than harm; to help him to cast out the evil spirit, and assist him in freeing himself from the unhappy condition under which he is found to exist.

So long as one cherishes hatred in his consciousness, and longs for the opportunity to come where he can "get even" with his alleged persecutor by doing him the same injury that he feels he himself has received, just so long is he punishing himself with self-inflicted punishment. In "Miscellaneous Writings" (p. 223) Mrs. Eddy says: "To punish ourselves for others' faults, is superlative folly. The mental arrow shot from another's bow is practically harmless, unless our own thought barbs it. It is our pride that makes another's criticism rankle, our self-will that makes another's deed offensive, our egotism that feels hurt by another's self-assertion. Well may we feel wounded by our own faults; but we can hardly afford to be miserable for the faults of others. . . . Nothing short of our own errors should offend us. He who can wilfully attempt to injure another, is an object of pity rather than of resentment."

Instead of wishing to destroy our enemies, we should rather wish to destroy the enmity we have been cherishing in our thoughts. When this has been accomplished, we will discover that we have no enemies. In order to destroy thoughts of hatred, however, we must replace them with thoughts of love, and this is accomplished as soon as we bring ourselves to wish to do our enemies good rather than to do them harm. The question then arises, How can we do them good, when to all appearances they are awaiting an opportunity to offer us an affront, and will in all probability scorn any attempted good will on our part? This question was one over which the writer had been pondering for a long time and for which he could see no satisfactory answer. Meanwhile he had been harboring a well-cherished feeling of resentment against conditions imposed by others, which seemed to be such as to thwart his best efforts and to form a barrier against his growth in the line of his natural development. The answer to the question was revealed by a literal "handwriting on the wall," and in a manner that has left a deep impression.

The writer was spending a Sabbath day in the city of Washington and started out in the early morning to walk around the Capitol grounds. It was a glorious morning, with trees beautiful in their bright-colored autumn dress. The writer had hoped that he could leave all discordant feeling

Digitized by Google

behind and find peace for one day, but he found that the inharmony was from within, and that the brightness of the morning would not dispel the gloom, try he ever so hard to forget. In his walk he presently arrived in front of the new railway station and paused to study the architecture of this beautiful structure and to admire the grace and elegance of its splendid detail. Suddenly his eyes rested on an inscription graven in the stone façade, which read.—

> Be noble! and the nobleness that lies
> In other men, sleeping but never dead,
> Will rise in majesty to meet thine own.

Then a little farther down on another panel was the Bible quotation, "Ye shall know the truth, and the truth shall make you free."

With almost startling suddenness the light burst forth and the glories of the day were apparent. "Be noble" was the lesson. Stand forth as an example of nobility, regardless of who may see or hear, or how they may apparently regard it. Be exemplary in all your actions, whether in the presence of your friends or your enemies; and above all let your inner man fully verify to your own consciousness what your outer man displays to your friends. "Be noble!" Be broad-minded, charitable, forgiving, setting an example which all may be the better for following. This is the truth, and with the knowledge of this truth, freedom from the shackles of self-inflicted punishment will come.

True Sympathy

HELEN WARD BANKS

LIKE many other words, sympathy takes on a new meaning to the student of Christian Science. According to the dictionaries it stands for "suffering; passion; the quality of being affected by the affection of another." Among other baseless charges made against Christian Scientists is that of coldness and lack of sympathy for those in trouble. Such a statement is superficial and does not differentiate between true and false sympathy. True sympathy is always helpful; it lightens a load, or gives the sufferer a helping hand up a steep place. Untrue sympathy adds to the load or pulls down the one struggling upward to apathetic rest on a wayside stone. It is only the weakness and selfishness of self-pity that could desire such sympathy.

Two friends, Christian Scientists, alighted from a trolley-car with a half-mile walk before them over a rough road. One of them had hurt her foot, and on stepping to the ground she said, "It doesn't seem as if I could take that walk home." False sympathy would have said: "Oh, you poor thing, I am so sorry for you. How can I help you? Lean on me," and the two would have hobbled uncomfortably and anxiously down the road. But true sympathy said no such thing. It said: "You are God's perfect child, upheld by His power. You can realize the truth of the Scripture promise, 'He giveth power to the faint; and to them that have no might he increaseth strength . . . they shall run, and not be weary; and they shall walk, and not faint.'" As this was realized she leaned on Truth instead of a mortal arm, and her courage being strengthened by these words of true sympathy, she walked firmly toward home. In less than a quarter of the distance she was going freely over the frozen ruts without any sense of pain. Would it not have been the weakest of cowardly self-pity that would desire a so-called sympathy which would have hindered her progress, instead of the true words which helped her forward? And still, an outsider who knew nothing of Christian Science might have thought the words harsh which denied pain instead of condoling with it.

We can never get rid of evil by coddling it. It would seem easier at times to have our friends "sympathize" with us over our sensitive nature and its numerous hurts than to find a friend loving and strong and sympathetic enough to tell us that our sensitive nature is only another name for selfishness and weakness, and that self-pity is a hindrance to all progress. But which sympathy takes us farther into the kingdom of heaven?

Neither do we destroy evil by believing in it. When we hear of a terrible calamity, which is the truer sympathy, that which shudders and weeps and holds the awful picture in consciousness, or that which immediately proclaims the steadfastness of Principle, shutting out the thought of death and disaster, declaring the unreality of accident and the unlegality of mortal law? Which adds more of a burden to humanity, and which goes farther toward freeing mankind from its belief in the "vapid fury of mortal mind" (Science and Health, p. 293)? And if the so-called accident were close at hand, which person would give the quicker and better help,—he who knows the allness of good, or he who believes in the power of evil?

The Standard dictionary defines sympathy as "fellow-feeling." So sympathy depends on one's concept of his fellow. If he believes in a mortal man, he may by false sympathy place him still lower on the mortal plane. If on the other hand he is taught by Christian Science, he knows man only as God makes him, his fellow-feeling will be for God's man, and all sympathy given gently and lovingly will go to develop that ideal, no matter what carnality it destroys in the process.

If this sympathy at times seems strenuous, and if we have moments of self-indulgence when we think we would prefer condolence rather than correction, such moments grow fewer and fewer as we ascend the hill of Science. And always in our heart of hearts we know that our desire is to ascend that hill, and we know too that we do not go forward by leaning on any mortal personality, but by holding fast to Truth.

✧

"Act of God"

SAMUEL JOHNSTONE MACDONALD

UPON my desk is a legal diary, each leaf of which carries a daily statement of some so-called principle of (human) law. These "principles of law" are the crystallizations of centuries of argument and consideration by the greatest lawyers and judges who have adorned our human forums, and are the clearest statements of "law" of which the human mind has been capable. Three centuries ago Lord Coke, one of the greatest lawyers, judges, and legal commentators who have sought to clarify human reason, declared, *Lex est summa ratio* (Law is the highest reason), evidently meaning that through the combined studies, arguments, and consideration of the ablest and brightest of human minds, aided generation after generation by the labors of those who have gone before but who have left the records of their labors behind them, men are able to rise to clear statements of fundamental laws which are the ultimate of achievement of the human reason.

One of these statements of the "highest reason," approved and confirmed by the highest legal authorities for centuries and accepted today as absolute and unquestionable authority by every judge and every lawyer in every civilized country, now lies before me. Let it be transcribed exactly, so there may be no mistake:—

"Illness an Act of God.

"An 'act of God' comprehends all misfortunes and accidents arising from unavoidable necessity and which human

Digitized by Google

prudence cannot foresee and prevent. Illness, being beyond the power of man to control or prevent, is an 'act of God.'" —"Words and Phrases" (second series), Act of God.

This then is one of the clear statements of that law which is the "highest reason." It will be profitable surely to consider it for a few moments and see to what conclusions it unavoidably leads. If it be true that "illness is an act of God," then it must also be true that he who seeks to prevent or cure sickness must be resisting the "act of God." In other words, he must be seeking to frustrate or make void the will of God. Arrayed against God, he is an enemy of God. What other conclusion can be reached from this premise? Jesus of Nazareth, the greatest healer of all time, who healed "all manner of disease," must, according to the "highest reason," have been the greatest enemy of God; and the "kingdom of God" must therefore be divided against itself, with the inevitable consequence that it cannot stand. To this *reductio ad absurdum* does our "highest reason" lead us. Is not this a clear and unmistakable illustration of Jesus' words as given in Luke's gospel: "Can the blind lead the blind? shall they not both fall into the ditch?"

If God is omnipotent, then it is an act of futile folly to attempt to resist His power. And if illness is an act of God, of what avail can it be to seek to resist God? Mrs. Eddy says, "If sickness is true or the idea of Truth, you cannot destroy sickness, and it would be absurd to try" (Science and Health, p. 495). But if it be demonstrated "by many infallible proofs," as we read in the Acts of the Apostles, that illness may not only be prevented but also entirely healed, then the alternative is forced upon us that either God is not omnipotent or illness is not an act of God. Facing this alternative, can we halt between two opinions? Shall we not unhesitatingly declare with the apostle Paul, "Let God be true, but every man a liar"? And shall we not securely and unshakeably stand upon the scientific conclusion, not of the highest human reason but of clear spiritual understanding, as presented on page 472 of Science and Health: "That which He creates is good, and He makes all that is made. Therefore the only reality of sin, sickness, or death is the awful fact that unrealities seem real to human, erring belief, until God strips off their disguise."

Supply

A. GERTRUDE HULLEY

"My meat," the Saviour said,
"Is to obey."
No other way
Can I be fed.

Obedience, that is all,
To voice divine;
Supply's then mine.
Oh, bounteous call!

Always God's calling me
In tender tone;
Him will I own
And loyal be.

No irksome servitude
To me, but this
"Unfolding bliss"*
Is heaven's prelude.

*"Miscellaneous Writings," page 83.

Selected Articles

[Judge Clifford P. Smith in *Typographical Journal*. Indianapolis, Ind.]

When a man who is practising medicine says, "I use Christian Science in my work," he professes to practise two systems which cannot be combined, or else he uses suggestion. This comment is made with reference to an article by a medical doctor in a recent number. Christian Scientists sometimes employ physicians. In some states they are required to do so in certain cases, and they may do so voluntarily as a concession to the rights or the fears of other people. But if a Christian Scientist had occasion to employ a doctor, he would surely want one who was consistently practising medicine. He would have no use for a combination offer of both medicine and Christian Science, nor for any kind of mental manipulation.

✧

[John Ashcroft in *The Woman's National Weekly*, St. Louis, Mo.]

When the great apostle to the Gentiles confronted King Agrippa in the place of hearing in ancient Cæsarea, he summed up the incredulity of the human mind in regard to things spiritual in the trenchant question, "Why should it be thought a thing incredible with you, that God should raise the dead?" It is a curious illustration of the perversity of this mind that after forty years of contact with the teaching and practice of Christian Science, and despite the attestation of thousands of its beneficiaries that they have found God alone to be the healer of their diseases, it still insists that suggestion and not divine power is the agency by which this healing has been wrought.

That this mind has always sought to discredit anything tending to deprive it of its materialism and self-sufficiency, is evidenced throughout the Bible, culminating in the crucifixion of the greatest exponent of spirituality the world has ever known. The Scriptures are replete with illustrations of the effort of this mind to maintain its idols in the presence of a higher sense of things. The sorcerers and magicians who withstood Moses, the prophets of Baal who opposed Elijah, the Chaldeans who sought to destroy Daniel, were but the representatives of a condition of thought that is by no means absent from the world today, though it is known now under other guises and possibly more polite names. The entire experience of Christ Jesus and his immediate followers was marked by an ever recurring need of proving that, as Mrs. Eddy says in "Science and Health with Key to the Scriptures" (p. 454), "the superiority of spiritual power over sensuous is the central point of Christian Science."

It is therefore possibly not to be wondered at that those who know nothing of the practice and teachings of Christian Science err in regarding its effects as the product of the human mind, but it is regrettable that they occasionally embody their mistaken conclusions in public utterances calculated to mislead the uninformed. That the practice of Christian Science as a remedial force rests upon suggestion, is absurd to those who have even an inkling of what Christian Science really is. There is no more suggestion in its practice than in the practice of mathematics. Both depend for their respective results upon knowledge of the truth. When Jesus told the Jews who believed on him that if they continued in his word they should know the truth and the truth should make them free, he indicated at once the nature of human bondage and the only possible salvation from it.

It may not be generally known, but in the Manual of The Mother Church (Art. XI, Sect. 9) Christian Scientists are specifically forbidden to learn hypnotism. Much of Mrs. Eddy's effort has been directed to pointing out the impossi-

Digitized by Google

bility of human will being a healing factor in the cure of disease. It is furthermore impossible to work evil in the practice of Christian Science, because such practice involves the recognition and realization of the allness of God, divine Mind, and the consequent nothingness of all that is unlike Him. In Mrs. Eddy's own language (Science and Health, Pref., p. xi): "The physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation."

✧

[Samuel Greenwood in *The Hedley* (B. C.) *Gazette*]

A synopsis in your paper of a recent sermon indicates that the clergyman apparently misapprehends Mrs. Eddy's use of the word principle. In her Message to The Mother Church for 1901 she says: "To define Love in divine Science we use this phrase for God—divine Principle. By this we mean Mind, a permanent, fundamental, intelligent, divine Being, called in Scripture, Spirit, Love" (p. 3). Jesus said, "God is a Spirit," and the dictionaries define spirit as "an animating principle." Mrs. Eddy capitalizes this word principle and uses it in a deific sense, making the phrase "divine Principle" a synonym for God. This is vastly different from saying that "God is only a principle." If Deity is not the fundamental, creative, governing cause of all real being, we may well ask what is. Surely one who believes in God does not believe that creation was an accident or that man and the universe are governed by chance; and if creation is governed intelligently, that is scientifically, this government must be based on Principle, and we are not irreverent in naming this Mind, or Principle, God.

If your report is correct, this clergyman also mistakes and misstates the attitude of Christian Science toward sin, and most grievously so. The Christian Science movement—its publications, churches, and activities—was established and exists for the sole purpose of teaching mankind how to overcome and destroy sin. Christian Science churches are well attended, not because their congregations are taught that lying, drunkenness, and robbery are not crimes and that there is no sin in committing them, as one might conclude from your report of this sermon, but because Christian Science reforms the sinner.

The denunciation of Christian Science in the present instance, and in most others, is due to the failure to distinguish between the absolute and the relative, between absolute truth and relative human experience. Christian Science accepts the Scriptural teaching that God is All-in-all as being literally true; therefore to be loyal to that understanding of God it cannot consistently accept what is called evil as being true also. It is self-evident that you cannot destroy a reality. If evil is a real thing it is necessarily a part of God's creation, which would be an offensive thought; but if God did not make evil, if it has no divine approval, whence or from whom does it or can it derive reality, that is, permanence?

If the teaching which denies that aught beside the infinite God is real and powerful is immoral, as we have been urged to believe, where shall we look for the standard of right morals? If the teaching which steadfastly abides on the truth of the allness of God is an impostor, where indeed shall we look for genuine Christianity? We are taught that Jesus came to "destroy the works of the devil," not to acknowledge them.

Mrs. Eddy is not the author of the teaching that God is omnipotent and omnipresent, and that He made all that was made; nor is she responsible for the unavoidable conclusion that aught beside or outside of the infinity of good is impossible. When the Discoverer of Christian Science, speaking of that erroneous sense called the devil, or evil, quotes the declaration, "There is no truth in him" (see Science and Health, p. 292), it should be remembered that the Master first said it. When the apostle admonishes us to "awake to righteousness, and sin not," he evidently means that the sinner is asleep to the truth of his real being; then wherefore condemn Mrs. Eddy for taking the same position?

✧

[Robert S. Ross in *Western New York Post*, Lancaster, N. Y.]

Jesus said to his disciples, "It is expedient for you that I go away: for if I go not away, the Comforter will not come unto you." He meant, of course, that they should look away from his personality, which would not always be with them, to divine Principle, God, which would always be at hand to be understood and demonstrated. On pages 332-334 of "Science and Health with Key to the Scriptures" Mrs. Eddy makes a clear and logical distinction between Jesus and the Christ. If our critic is willing to accept the teaching that God, Spirit, is omnipotent, omnipresent, and omniscient, then he will doubtless be willing to admit that matter—the opposite of Spirit, God—is nothing, the testimony of the so-called material senses notwithstanding. Spirit, God, is All, or He is not. If He were not All, then a division of power would exist and God as the All-in-all would be a myth.

Jesus knew that human existence was not the reality of being; hence his statement, "If I bear witness of myself, my witness is not true." He also said: "Ye are of your father the devil, and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." Jesus was continually refuting and overturning the false claims of matter and material law. He healed those who were condemned to incurability, raised those admitted to be dead, changed the water into wine, walked on water, and fed the multitudes,—all through his understanding of the falsity of sense-evidence and the reality and ever presence of divine Truth, Life, Love.

Jesus not only proved for others that the testimony of the material senses does not constitute the truth of being, but he proved it for himself by displacing human belief with spiritual understanding until a true idea took the place of every false belief in his consciousness. Jesus knew that the human body and material existence were but subjective states of human belief. In the process of material elimination popularly known as the ascension, Jesus did not leave his body behind him, neither did he take it with him; it simply gave place to an understanding of his true selfhood. This exact, scientific thinking enabled the physical Jesus to be translated into the spiritual Christ.

Our critic is quite right when he declares that Christian Scientists deny the reality of sin and death. If God, who is Life, is ever present, there is no room for death or for anything that can say "I am dead." When belief in Christianity ripens into the understanding of Christ, Christians will fearlessly face the facts of being, and Christian Scientists will no longer be criticized for presuming through their understanding of God's allness to reduce sin, disease, and death to their native nothingness; instead, they will rejoice in the realization that death must inevitably lose its hold on human consciousness in the proportion that the Science of Christ is understood. "All things were made by him [God];" John wrote, "and without him was not any thing made." In the very next sentence this immortal scribe tells us that "In him [God] was life."

Digitized by Google

If our critic believes Christian Science to be a prayerless religion, his conclusion is based on erroneous premises. Christian Scientists know that God has already done all. In the book of Genesis we are told that God's work was finished, and that it was "very good." The revelator likens this perfect creation to a city that "lieth foursquare," into which nothing has entered and nothing can enter which "defileth . . . or maketh a lie." If all that God made is good, then sin, disease, and death were never made, for they certainly are not good. These errors must therefore be mere suppositions which fallible human belief—based on the supposition that there is intelligence in non-intelligent matter—regards as real and indestructible.

Hence, instead of being a mere petition, the prayer of Christian Science is the affirmation of the truth of being of which human belief is ignorant and by which it must be corrected. On page 2 of Science and Health Mrs. Eddy writes as follows: "God is Love. Can we ask Him to be more? God is intelligence. Can we inform the infinite Mind of anything He does not already comprehend? Do we expect to change perfection? Shall we plead for more at the open fount, which is pouring forth more than we accept? . . . Asking God to *be* God is a vain repetition. God is 'the same yesterday, and today, and forever;' and He who is immutably right will do right without being reminded of His province. The wisdom of man is not sufficient to warrant him in advising God."

✧

[S. T. Downs in *Our Sunday Visitor*, Valparaiso, Ind.]

In an article purporting to refute Christian Science the critic stated by means of comparison that we worship a "twofold power, one of good, the other of evil." The fact is, however, that Christian Science is based fundamentally and in every detail on the Old Testament admonition that the great Master reiterated with such force: "Hear, O Israel; The Lord our God is one Lord." It knows no other God, no other cause or creator, no other Life, no other Love, no other Truth, no other physician than the God Christ Jesus revealed.

The critic stated that our attitude toward the suffering caused by the European war is one of "imperturbable equanimity," and he charges directly and indirectly that Christian Science develops inhumanity and heartlessness. On the contrary, while giving poise and control to its adherents even under the most trying circumstances, this teaching develops the highest sense of humanity,—kindness, tenderness, benevolence, compassion. This is being manifested toward the present conflict in many practical charities, including contributions of money totaling many thousands of dollars that are given by Christian Scientists in all walks of life for no other purpose than the relief of human suffering.

The fear that Christian Science would prevent material modes of treating disease is unwarranted, since Christian Science insists that all mankind be allowed the greatest liberty in their belief in and worship of God. In other words, we ask nothing more than to be let alone in our endeavor to follow the Master's commands to "preach the gospel" and "heal the sick," and we accord this privilege to all others.

Christian Science does not claim other than that men and the children of men break the commandments, and that there is present with mankind a love of sin that God did not create. Only that which God created is real and eternal; hence sin is unreal because not of God. It is God's law which destroys sin, and sickness as well, by bringing to human consciousness a love of the good and pure. Christian Science teaches that sin brought all the sickness, misery, and death the world has ever known, and that as sin is destroyed its effects will disappear. As a movement Christian Science deserves the grateful approval of every follower of the Master, whether he accepts its teaching or not, since it has stimulated in thousands of people a desire to be obedient to the commandments and to put into daily practice the first: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself."

✧

[Thorwald Siegfried in *Yakima Republic*, North Yakima, Wash.]

The evangelist whom your paper reports as making the statement that Christian Science is of the devil, seems to be giving himself needless trouble, for if it is of the devil, whom Jesus pronounced a liar, the more that people understand of it the less it will draw them; whereas in fact those who understand Christian Science best, love it most, and its critics often understand it the least. Hence in the course of time the reverend brother may find that his disobedience to the wise counsel of Gamaliel, as given in the fifth chapter of Acts, will leave him fighting against God, for "if it be of God, ye cannot overthrow it."

Christian Science, being of God, concerns itself with bringing godlikeness into the lives of men, by better morals, better conditions of health, happier view-points, and more compassionate motives. Proofs of this are to be found in living witnesses in practically every village and city; in the literature of the cause; in its great daily newspaper, *The Christian Science Monitor*, a successful international daily paper that prints whatever is good because that alone is ultimately true; and in the reverent use which every Christian Scientist makes of the Scriptures, or Word of God, in which we have a record of the growth of the spiritual idea during many centuries.

✧

[Charles F. Kraft in *Tacoma* (Wash.) *Ledger*]

Your interesting report of a clergyman's lecture credits the speaker with including Christian Science with alchemy, palmistry, and theosophy as "occultism." It would be unfair to your readers to allow the erroneous impression created by this inclusion, made by so eminent a speaker, to remain uncorrected. In this restoration of primitive scientific Christianity there is nothing occult or hidden. Christian Science is based largely upon the declaration of the wise man that as a man "thinketh in his heart, so is he." It might therefore properly be termed the Science of right thinking.

Occultism is generally regarded as that which operates in some mysterious or secret way and deals with that which is hidden or unexplainable. On the other hand, Christian Science when understood is found to be supremely natural and extremely simple and practical. There is no mystery in Christian Science, unless it be the mystery of godliness or right thinking.

✧ ✧ ✧

We need a clearer discernment of the vital significance of gentleness in the character of men and women, in the relations individuals sustain toward one another, and in all the complex affairs of business and politics among social groups, and even among nations. We need to estimate at its true value the temper of mind and heart that begets a disposition in men to be mild, gracious, and kindly in their relations with one another. The crudeness, rawness of temper, self-assertion, and bluster that so often pass for strength should be rated as symptoms of undeveloped or defective organic constitution, nervous control, and intelligence. The mildness, the gentleness, the graciousness of Jesus of Nazareth, were the fruits of magnanimity, of a greatness of soul that was prophetic of the perfect man.—Prof. George E. Dawson.

Editorial

"Honor to whom honor is due"

On page 148 of "Miscellaneous Writings" there appears an extract from a letter by Mrs. Eddy which she has also used as a foreword to the Church Manual. It is clear, from a study of this paragraph, that Mrs. Eddy regarded the rules and by-laws embodied in the Manual of The Mother Church as of inspired origin; that they are necessary "to maintain the dignity and defense of our cause," and "requisite to demonstrate genuine Christian Science."

All of this being conceded to be the truth about these by-laws, also the further fact that they are permanent and unchanging in their provisions, it is of course impossible that they should be neglected by Christian Scientists, or that any of them should become "a custom more honored in the breach than the observance." As to the manner in which these by-laws may be made most useful to Christian Scientists, we may well profit by Mrs. Eddy's answer to the question so often asked by those eager to gain an understanding of Christian Science, in which she says: "Study thoroughly the letter and imbibe the spirit. Adhere to the divine Principle of Christian Science and follow the behests of God, abiding steadfastly in wisdom, Truth, and Love" (Science and Health, p. 495).

Those who have studied thoroughly the rules and by-laws of The Mother Church, and have imbibed the spirit, have seen that compliance with both the letter and the spirit of these rules is necessary to the steady and stately progress of Christian Science and the growth of the individual Christian Scientist. There is not one of them but was intended to promote Christianity and brotherly love, to safeguard the purity of the religion of Christian Science and insure the genuineness of all that officially bears its name, as well as to perpetuate the organization which Mrs. Eddy founded for the continued promulgation and practice of this Science.

Those who are most careful to observe them in both the letter and the spirit will not be led away from Christian Science through the belief that there is an easier and a better way,—a broad road which can be safely trodden by those who would find a short cut to heaven, harmony. They will know that they must have the insight and the patience which would prompt them to follow the narrower but straighter path which has been trodden by the Discoverer and Founder of Christian Science. To those who have listened to the tempter's plausible claim that there could have been Christian Science without Mrs. Eddy, it may be well to bring the reminder that there has not been and can never be genuine Christian Science without her; that Mrs. Eddy is the Discoverer and Founder of Christian Science and her name is inseparably connected with it.

We have been told by the wise man that it is "the little foxes, that spoil the vines;" and that these little foxes are always at work in the vineyard of Christian Science, is shown by the hesitancy of some to give honor where honor is due. As an example of this we may note that even in the Sunday services some readers forget to abide by Article XV of the Church Manual when announcing hymns which were written by Mrs. Eddy. They may say that it is a hymn written by our Leader, but to the stranger within the gates that term carries no special meaning. In The Mother Church the customary form of announcement is, "The words of this hymn (or solo) were written by our revered Leader, Mary Baker Eddy," and the entire hymn is read, thus giving it a further distinction from hymns by other authors, as only the first stanza of these is read.

It may also be of interest to the branch churches and societies to know that in The Mother Church it is the rule rather than the exception that one of Mrs. Eddy's hymns is sung at each service, in conformity with a letter from Mrs. Eddy to the Board of Directors of The Mother Church some twelve years ago, and published in the *Sentinel* of Aug. 29, 1914, in which she says:—

"It would be a good thing to have one of my hymns read and sung about every Sunday. It would spiritualize the thought of your audience, and this is more needed in the church than aught else can be."

It may seem only a slight departure to substitute some phrase or title for Mrs. Eddy's name in quoting or reading from her books, but nothing less than strict conformity to the rules and by-laws laid down in the Manual is right for a Christian Scientist.

ARCHIBALD MCLELLAN.

Law a Power

FEW people would be willing to deny the power of law, however understood, but there would doubtless be great diversity of opinion as to how this power could be proved. On the material plane the punishment of a criminal proves nothing more than a feeble attempt to assert the dignity of a law which has been broken by the wrong-doer. Some obey law because it is a necessary provision for human safety, even though they regard it as restrictive. This is, however, a long way behind the attitude of those who have come to realize that all just laws spring from the demands of divine Principle and that the recognition of law, rightly understood, is no less an integral part of human consciousness than is reason. All such can joyfully exclaim with the psalmist, "O how love I thy law! it is my meditation all the day."

The student of Christian Science gains new views of law as he studies its text-book, "Science and Health with Key to the Scriptures," and Mrs. Eddy's other writings, especially the article "Spirit and Law" in "Miscellaneous Writings" (pp. 256-259), where she says: "The assertion that matter is a law, or a lawgiver, is anomalous. Wherever law is, Mind is." It soon becomes apparent that in spite of popular opinion disease has no law to support it, nor has sin, since both are the product not of intelligence but of ignorance. To prove this it is necessary to relate law to divine Mind, Spirit, God; then we have a concept of law as intelligent, powerful, and good. The understanding of law gained in Christian Science explains the so-called miracles of Jesus, and heals the sick today even as in the Master's time, but this law must be declared in order to annul the operation of the asserted law of disease or sin.

Now the Christian Scientist not only believes that divine law is power, but he applies his understanding of this truth to the varied experiences of daily living. Christian Science is constantly proving that fevers and diseases of all kinds are lawless, hence their powerlessness is shown when spiritual law is declared, as in the case of Peter's "wife's mother," who was healed by Christ Jesus. It is not, however, so generally known that the moral law, when spiritually understood and declared, rights wrongs of every name and nature. The writer knows of a number of instances in which stolen property was restored to the owner when no suspicious or condemnatory thought was directed toward any one, but where the first and the eighth commandments were declared daily by the one whose articles had been taken, until these were restored to the rightful owner.

Digitized by Google

One such case was especially interesting. A young lad belonging to a respectable family stole something from people who did not know him, and told a plausible story to cover the theft. This was at first believed by his parents, but as the truth was declared by the one who had been robbed, this declaration of law as a power unerringly found its way to the right place, and after the boy's father had for some time vainly essayed to solve a seeming mystery, he was led in a wonderful way to the owner of the property. The lad then confessed to his temptation and fall, and was started on the way to true repentance. It was also found that when the work in Science had been neglected, the activity of truth temporarily ceased in the home where the stolen article was. In another case two adjoining homes were entered one night and a number of articles taken from each. In one of these homes there were two students of Christian Science, and they quietly declared the power of divine law daily, with the result that in a week every article taken from the home was restored as silently as it had disappeared. The people in the other home never recovered their goods, although they employed all the ordinary methods for reaching and punishing the offenders.

To realize to the full extent the protection of divine law, the only real law, we must know its power, love it, and obey it gladly. Then we shall dwell in safety, secure from sin and disease, realizing all the while that "love is the fulfilling of the law."

ANNIE M. KNOTT.

Healing of Dishonesty

SPEAKING of the more immediate effects of Christian Science, Mrs. Eddy has said that "both truth and error have come nearer than ever before to the apprehension of mortals" (Science and Health, p. 368), and Christian Scientists will all witness that one of the most significant features of their experience is the fact that their escape from evil has been preceded by the gain of a clearer sense of what evil is. Evil is not to be overcome by ignoring it, but rather by clearly perceiving the nature of its claim and performance, in the light of Truth. The correct analysis of erroneous sense and its manifestations in impulse and habit is therefore decidedly important.

All this is seen to be very true with respect to the sin of dishonesty, a sin which is summed up for general thought as the spirit of trickery, the disposition to take unfair advantage. As such it may seem contemptible, in the abstract, to those who pride themselves upon always having done business "on the square." Nevertheless when awakened they might discover that they have been consenting to not a few things which upon examination are seen to bear the hallmarks of injustice.

Dishonesty expresses itself most seductively in the willingness if not the purposeful desire to gain without giving. It manifests a false sense both of what good is and of the way to secure it. It is the controlling manager of all enterprises which are intent upon getting something for nothing, and the number and variety of such undertakings will surely impress even the most superficial thinker. The moment one accepts this interpretation of the word, and begins to test out his plans and purposes thereby, that moment he realizes as never before the world-wide extent of what might be named The Realm of Rogues.

It is apparent that in all human affairs the satisfaction of a desire to get something for nothing involves the gain of what is called freedom only as others are enslaved, of leisure only as others are burdened, of pleasures only as others are pained, and it is the perception of these unescapable results of every least dishonesty which has initiated the revolt against its domination, upon the part of many who were once ready and eager to respond to any business proposition, any speculative venture that promised to secure a monopoly of some universal necessity and so assure "big returns"! The story of Diogenes' fruitless search is no longer a joke the moment one begins to think in terms of *bona fide* brotherhood, of absolutely honest dealing; and the explanation of the fact that adherence to the demands of Christian Science does not prove a "pleasant recreation" for a good many people is found in the further fact that it at once precipitates this analysis of personal motives, impulses, and habits. No one enjoys being compelled to classify himself as capable of being engaged in what would rightly be named thievery, hence the stimulus and profit of that disclosure of the truth about things, that uncovering of long indulged error which Christian Science at once inaugurates.

Well-dressed dishonesty is a prominent figure at many a commercial conclave these days; it parades in attractive garb at many an inside-advisory council, and it seems to rule, without protest for the most part, in the entire domain of international diplomacy and worldly ambition. It is a clever casuist, and has fooled every one of us ten thousand times, at least. He, therefore, who has the grace advisedly to consecrate himself to the living of a truly honest life, in his dealings with God, with himself, and with his brother man, who has begun to refuse to seek and to profit by the many get-rich-quick opportunities and schemes which are pressed upon his attention, that man has certainly made a great stride toward honest manliness and the kingdom of heaven.

With respect to no other aspect of life is the need of reform today greater, more imperative than this, and no one can be fully awakened to the situation which probably exists beneath his own waistcoat without being impelled to pray, "God be merciful to me a sinner"! Here all have come short of the glory of God, and crucified the Christ afresh, and here the understanding of Christian Science immediately proves helpful, and will ultimately heal.

JOHN B. WILLIS.

Among the Churches

Current Notes

TRINIDAD, COL.—One of the most pleasing features in connection with the entire Las Animas County fair was the manner in which the ladies of the Christian Science church looked after the wants of the women and children at the fair grounds during the long waits between races and between trips to the exhibit rooms. The only reading-room on the grounds was provided by this church, and it was fitted up with chairs, lounges, tables, and plenty of literature, not to mention the big tank of ice-water. More than seven hundred and fifty people availed themselves of the opportunity to rest for a few minutes. The officials of the fair have been most profuse in their thanks to the thoughtful donors of the reading-room.—*Picketwire.*

KENTON, OHIO.—For the first time the local distribution committee had a tent for the reading and distribution of Christian Science literature at the Hardin County fair. There were 172 visitors. *Sentinels* given out numbered 64, *Journals*, 24; *Monitors*, 50; *Heralds*, 3.—*Correspondence.*

BETHLEHEM, PA.—Christian Scientists from the Bethlehems, Easton, Allentown, and Catasauqua have purchased the former building of the Bethlehem Trust Company at Bethlehem, and will convert it into a church edifice.

Allentown Call.

Digitized by Google

SPRINGFIELD, MO.—The corner-stone of the church building being erected by First Church of Christ, Scientist, at Center and Jefferson Streets, almost directly south of the Springfield Public Library Building, was laid with simple but impressive services in the presence of the board of directors, the readers, and other members of the church. The building when finished will have an auditorium which will have a seating capacity of four hundred. A lobby will furnish standing room for five hundred persons, and the Sunday school room will have provision for two hundred children. The structure completed will cost approximately twelve thousand dollars.—*The Springfield Leader.*

HARTFORD, CONN.—A booth was maintained and conducted at the Connecticut state fair at Charter Oak Park in Hartford the week of Sept. 6 by joint committees from First and Second Churches of Christ, Scientist, of this city. During that week there was distributed from this booth the following Christian Science literature: 1,825 *Monitors*, 274 *Sentinels*, 30 *Journals*, 12 *Heralds*, 292 pamphlets, 15 copies of Senator Works' speech, making a total of 2,448 pieces.

Literature Distribution Committee.

DERBY, ENGLAND.—The Christian Scientists of the town, who have hitherto been meeting at a room in Friargate, are erecting a new building in Friary Street. The main hall is about 78 feet long, and the frontage of the building 38 feet, with a bay 18 feet long forming a reading-room.

Derbyshire Advertiser.

CHICAGO, ILL.—Tenth Church of Christ, Scientist, has completed the purchase of its building site, 5642 Blackstone Boulevard. The lot is 100 by 150 feet, and cost seventeen thousand dollars. Negotiations were opened in April, 1914, and sixteen months later the final payment was made.

Correspondence.

TOLEDO, OHIO.—A new church building will soon be added to Toledo's group of public edifices, for it is expected that Second Church of Christ, Scientist, will begin plans for its new church home within two or three months.—*Toledo Blade.*

LEXINGTON, KY.—The members of First Church of Christ, Scientist, celebrated the opening of their church home at the corner of East Main Street and Woodland Avenue on Sunday, Aug. 15.—*Correspondence.*

The Lectures

Chicago, Ill.

Clarence C. Eaton delivered three lectures on Christian Science for Eighth Church of Christ, Scientist. Alice Nichols, second reader, in introducing Mr. Eaton at one of the lectures said:—

The occasion of a Christian Science lecture is significant. The fact of our being here is evidence that we are looking for that for which the whole world has searched,—a demonstrable religion, a religion whose law applied to the affairs of men should bring harmony and health, and destroy sorrow and sickness.

At one point or another in history some one's achievement stands out as of greater or less importance in this direction. In the early history of the Hebrew nation Abraham perceived the great verity that there is one God and that God is Mind, Spirit, able to lead and direct men and nations. He demonstrated this truth when he obeyed the call to come out from the midst of his idolatrous surroundings to follow God's leading in the establishment of the kingdom of Israel. Throughout the history of this people arose great leaders, who proved beyond question that divine energy may be injected into the affairs of men to govern them harmoniously. Moses, Elijah, and the prophets, all proved that man's relationship with God establishes him in peace.

Later Christ Jesus the Wayshower by his work showed with greater certainty than ever that signs may follow all who obey the commandments of God with pure motives, and for nearly three hundred years similar demonstrations were made by his followers. Then men cast aside the Christ-principle as the ruler of earthly things and the world was left in darkness; and it has waited through nearly two thousand years for the return of the light. In these latter days the light has returned and the rule of demonstration has been unfolded. Something over forty years ago the law of a demonstrable religion was discovered and demonstrated by Mrs. Eddy. Since then many others, following her teaching, have repeated the works of old and found freedom, health, and happiness.—*Correspondence.*

Aberdeen, Wash.

The introductory words of Senator E. E. Boner in presenting William R. Rathvon, who lectured on Christian Science, were as follows:—

Since the first record of human affairs, the great question that has ever agitated men has been the problem of life,—whence it came, whither it goes, its highest aims, its ultimate end, how to possess it in all its fulness. The savage, the semibarbarian, the civilized man, have ever sought, each in his own way, to fathom the deeper promptings, the truth about this existence we call life.

Nearly two thousand years ago there appeared on earth a man who announced that his mission was to show mankind the way. In him men might behold "the way, the truth, and the life." He spoke as never man did before, for he taught a religion of love. That this man of Galilee has wielded a mighty influence on the world since his day,—on men and nations,—has been the most potent influence in shaping the nations that constitute our present-day civilization, history affirms, and none deny it. Yet when we contemplate struggling, suffering humanity still under its burden of vice, wrong, injustice, and sin, we must reach the conclusion that the world and the nations thereof have never understood the Christ-philosophy of life or applied the Master's science of living; for he has said that the knowledge of his eternal truths would set mankind free from these burdens.

While it is true that mankind has ever sought to know the Science of being, I think it may be said that men are today seeking deeper after spiritual truth than ever before. We are now, I believe, undergoing a sort of spiritual renaissance from which mankind will emerge with a clearer understanding of God and man's relation to Him. And now, to the world that is eager to know the truth, Christian Science brings its message based upon the teachings of Jesus of Nazareth. It is well that we pause, consider, and seek to understand the teachings of the Christ, for they are fraught with promise of fulfilment of all that is desirable of attainment.

Correspondence.

Hartford, Conn.

The introduction of George Shaw Cook at his lecture on Christian Science for First Church of Christ, Scientist, by L. Harold Burt, was as follows:—

Christian Science is not mysterious; it is the same truth which Jesus taught throughout his wonderful human exist-

Digitized by Google

ence, the same truth which Moses discerned and whose power he utilized to lead the Israelites safely "out of the house of bondage." The law of life, health, and happiness taught in Christian Science is today being demonstrated with mathematical accuracy by thousands upon thousands throughout the world.—*Correspondence.*

Lectures to be Delivered

CALIFORNIA—Lompoc: George Shaw Cook, Lompoc Opera House, 8:15 p.m., Nov. 22.
Petaluma: Virgil O. Strickler, The Hill Opera House, 8:15 p.m., Nov. 23.
San Diego (Second Church): William D. McCrackan, First Church Edifice, Second and Laurel Streets, 8 p.m., Nov. 26.
San Francisco (Fourth Church): Virgil O. Strickler, Dreamland Rink, 8 p.m., Nov. 20, and 3 p.m., Nov. 21.
Santa Cruz: George Shaw Cook, High School, 8 p.m., Nov. 23.
Santa Barbara: George Shaw Cook, Potter Theater, 8 p.m., Nov. 21.
Tulare: Virgil O. Strickler, Tulare Theater, 7:45 p.m., Nov. 25.

Testimonies of Healing

It is fourteen years since I first heard of Christian Science from my sister. I did not want to have anything to do with it, and condemned it without even looking into it or inquiring what it was, laughing and scoffing at it at every opportunity. When my sister came to live with me shortly after this I secretly read her books to see what was wrong in them. I did not understand a word, but kept on searching night after night, hoping to find something to condemn; then gradually there came the realization that at last I had found the truth.

During this time I was healed of varicose veins, for which elastic stockings and special boots had been worn constantly. The physical healing did not especially interest me then, as I took it for granted. One night shortly afterward, being much dissatisfied with myself and everything, I opened Science and Health quite aimlessly, and these words: "Emerge gently from matter into Spirit" (p. 485), arrested my attention. I read on most of the night and knew that I was free, that God was All-in-all, and that as one of His children I was gently being led. After that I began the study of Science and Health in earnest, and soon loved and understood the Bible as never before.

It is impossible to tell of half the benefits I have received through the understanding of divine Love, which governs all. Headaches for which I had taken almost every known drug, belief in lack, and discordant conditions in my work, have been overcome. A quick and violent temper has been largely replaced by more loving and charitable thoughts to all mankind. Lately I have had treatment for a skin disease said to be caused by the extreme heat and cold of my work as a laundress, and it has been entirely healed.

For all the physical healing I am deeply grateful, and my constant prayer is that I may become a channel for good. I am truly thankful to God, and grateful to our Leader, Mrs. Eddy, who has restored to mankind this healing truth. Words cannot express my gratitude for the peace and joy that Christian Science has brought me.

MARGARET DALL, St. Boswells, Roxburghshire, Scotland.

✧

Having been most wonderfully healed in Christian Science, I feel it my duty to write this testimony, in the hope that it may help some one, although I can never fully express the wonderful peace that has come to me. For years I had been a physical wreck, but the most serious period of my life has been the past seven years. I had hemorrhages, and the doctors gave me little encouragement, though among them were specialists from nine cities in the East. I came to California a few years ago, thinking a change of climate might help me. Soon after arriving here I employed a physician who said he could possibly cure me in two years with good care. Then he began the treatments, but I grew worse all the time. I then employed another physician, who speedily assured me that nothing would relieve me except an operation, which by that time I was almost too weak to undergo. He told my mother that if he could operate by half past seven that morning there would be a chance for me, so I said I would try to put myself in God's care, though I did not know how to trust Him, and accordingly the operation was performed. I was not, however, encouraged by the result, for in two weeks it was found necessary to perform another. Then I seemed to be better, but about two months later the trouble came back with added force. To mortal sense there was nothing left for me to do except to wait for the end.

When it was thought I was nearing the last days, my sister-in-law went to a lady and asked her if she was not a Christian Scientist. She said that she was and gave my sister-in-law some *Sentinels*, which she brought to me at once. I had read a little when I wondered why God was not as able to heal the sick now as He ever was. Then, thinking I was too weak to read, I laid the *Sentinels* aside. That was in the early part of the week. In a few days I felt better, and so decided to go to the Christian Science church the following Sunday, if possible, though every one thought I was foolish to think of such a thing.

Sunday morning the Christian Scientist called for me on her way to church, as I had asked her to do. Meantime there was a great longing to know how I might trust in God. In the afternoon I had another severe hemorrhage, and I told my mother I would like to have Christian Science treatment, so my father went for a practitioner. She came and talked to us a little while, and the words of truth spoken by her have helped me all the way. I slept well all that night, something I had not done for years.

Next morning I awoke with such a sense of peace it seemed like "a new heaven and a new earth." I got up and dressed myself, feeling sure that I had found the only true and living God, and after reading Science and Health that day I knew how to trust Him and not be afraid. The Bible says, "Blessed are they which do hunger and thirst after righteousness: for they shall be filled." Since that day I have had the peace which assures me I have found the Comforter that leads into all truth. I thank God, and am grateful to our dear Leader.—MAMIE CHAMBERS, Lindsay, Cal.

I wish to verify my daughter's statement. She was sick seven years, and we had many good doctors who were earnest and interested in doing all they could for her, but our family lived in constant fear and dread that she could not survive another attack. The time came when we thought the end was at hand and nothing could save our dear one. Then she asked for Christian Science treatment. A practitioner came, and that night my daughter slept like a little child. I, however, did not then know what Christian Science was, so I watched her all night, felt her pulse, and listened for her breathing, which was so soft and even that I feared she had passed away, for she had always tossed and moaned pitifully in her sleep. She is well now, and I praise God, the giver of all good, and am deeply grateful to Mrs. Eddy for her untiring effort in giving us her book "Science and Health with Key to the Scriptures."

I will give my own testimony also. I felt like one shipwrecked, just dashed about till all hope was gone. It seemed as if my heart would break with the despair a mother feels when she is told that God is taking her child away for some good reason. I had tried to have some kind of faith to hold to, but had at last decided there was no God.

I battled along in this way for seven years; all hope was gone, and I did not want any friends to mock me with sympathetic words, though I felt I must die. To mortal sense I was passing through a very critical time in a woman's life and felt that I could not live through it; but when I picked up Science and Health and read the opening words of the Preface,—"To those leaning on the sustaining infinite, today is big with blessings,"—I thought it must be a good book, so I would read it. I therefore read on and on, and it was full of surprises to me; the greatest at first was to know that God is good and does not send sickness, sorrow, pain, and death. Truth began right then and there to take off the shackles and loosen my chains, and I said to myself that I would not fear again or bow down to matter, for God was my refuge, my strength, and my fortress. I am now a well

Digitized by Google

woman, enjoying a life of freedom because God gave it me, and all mankind can drink of the waters of Life freely and proclaim their freedom.

I pray that these few lines may impress all who read them to believe that it is possible to live God's kingdom here on earth. I wish I had more light to give, but I am young in Science; however, I study the Bible and Science and Health and try to learn more every day. I thank God, and am grateful to Mrs. Eddy for Christian Science.

CAMMIE CHAMBERS.

✧

It is with a heart full of gratitude that I write this testimony, in the hope that some one who is seeking the truth will be benefited. Seven years ago I was about to go to the hospital for the fifth operation upon my neck for diseased glands, which the doctors diagnosed as tuberculosis of the neck. The first time I was operated on the doctor assured me that the trouble would not return, but I went back to the hospital four times after that on account of its recurrence, and there was seemingly no cure.

At the time I was persuaded to take up Christian Science there was an enlarged gland on the back of my neck the size of a hen's egg, from which there had been a discharge for three months or more. When the physician examined me preparatory to operating, he said I had waited too long, that the tissues were broken down and might never heal, but if they did it would be only after months at the best. Though this greatly discouraged me, it took much persuasion on the part of a dear relative to get me even to consider having Christian Science treatment. After finally consenting to postpone the operation for a week to see if there was any improvement, I went to a Christian Science practitioner for my first treatment, and only those who have been uplifted by this truth can know the joy and peace that were mine. It was like being pulled up out of the mud and made clean, for I was shown the way to think rightly. In less than three weeks my neck had entirely healed, and a short time afterward all swelling disappeared.

I am very grateful for this healing, but more so for the spiritual uplift of this saving truth, which gives a religion that can be utilized every day, no matter where we are or what we are doing.—ETHEL K. BRILLHART, Chicago, Ill.

✧

On June 11, 1913, I was riding a bicycle on the way to work, when at the intersection of two streets a motor-cycle, ridden by two people and going at a high rate of speed, struck my wheel, throwing me about fifteen feet, where I landed on my head with the motor-cycle and the two people on top of me. When taken up by shopmates who witnessed the accident, I was unconscious. The ambulance was sent for, and by the time it arrived I had regained consciousness but did not seem to know what I was doing. I was so sore all over that I could not bear to have anything touch me, and had a deep cut over the left eye. When I reached home a Christian Science practitioner was sent for immediately. The pain became so severe that I could hardly stay on the bed, but after about fifteen minutes' treatment I was resting quietly. The next day the papers, giving an account of the accident, said I probably would not live, but by the understanding of the truth gained through the study of Christian Science, and the practitioner's faithful work, I was able to be up the second day, and the third day went downtown. The cut healed very quickly and left scarcely a trace to show where it had been.

This is only one of many opportunities that both my wife and I have had, since taking up Christian Science about three and a half years ago, to test the truth of the ever-presence and all-power of God. We have both had the privilege of class teaching, for which we are grateful, and our desire is that our lives may daily prove the sincerity of our thankfulness to God, and our gratitude to our revered Leader, Mrs. Eddy, for this wonderful truth.

ELMER E. HOWE, Denver, Col.

✧

It is with a grateful heart that I write of the blessings I have received through Christian Science, which has brought me out of darkness into light. It has helped me to love more than ever before, and to do unto others as I would have others do unto me.

There have been many proofs in my home of the healing power of Truth, for every member of the family has benefited by it in many ways. I have been healed of a bowel difficulty of long standing, of colds that came every winter and would keep me from speaking above a whisper for a week or ten days, and also of a discharge from the ear which the doctors said was caused from an abscess that I once had in my head.

I am thankful to God for all these healings, and my prayer is that I may help others to understand Christian Science. Words fail to express my deep gratitude to our revered Leader, who has shown us the way out of darkness into light.—MRS. E. O. BARNEY, Arlington, Mass.

✧

[Translated from the German]

It is with a sense of deepest gratitude that I wish to testify to the wonderful blessings which my twelve year old son has received through Christian Science. After a short bicycle tour in July, 1912, his knees suddenly became very much swollen. A physician whom I immediately consulted pronounced the trouble water on the knee, and resorted to puncturing in order to bring relief; but this proved of no avail and the trouble grew more serious with each day. When after three weeks the boy's legs became quite stiff and deformed, the physician informed me that he was unable to effect a cure, owing to the presence of a tubercular condition. I then took my son to a surgical clinique and had an X-ray examination made, but it seemed impossible to determine the nature of the trouble. Following the physician's instructions I took the boy home seven weeks later, and then tried every means which was recommended to me; but far from witnessing any improvement, inflammation of the hip-joint was added, and the right leg became visibly shorter.

In the latter part of March, 1913, my attention was called to Christian Science, and I applied for treatment from a practitioner, for my son was by this time a very sick boy. With one week's treatment there was a marked improvement, and in four weeks he was healed of the disease.

For this wonderful healing I am most profoundly thankful to God, and grateful that my family and I have found through Christian Science the way of truth.

J. BERGER, Hannover, Germany.

✧

About two years ago I came to Christian Science for the healing of stomach and bowel trouble of three years' standing and was cured in a week's treatment. With the exception of a slight attack a few months later this healing has been perfect and permanent. Since that time my health has been better than ever before; I had never been strong from childhood. Three doctors had been tried for the above trouble, the last one saying I would have to submit to an operation; but this I would not do, as I had a horror of such things. Having heard just a little of Christian Science through a cousin who had been healed of the same trouble,

Digitized by Google

I decided to take treatment, and was healed very quickly, as I have said. I read Science and Health faithfully, and it seemed very beautiful to me. It certainly is a "Key to the Scriptures."

I have also been healed of severe colds and influenza. While very grateful for all these healings, I am equally so for the knowledge that God does hear and answer prayer, and that there was none to oppose me when I turned to Christian Science. This did not seem so much to me at first, but when I hear how hard it has been for some who have had to stand alone, I feel that I have much for which to be thankful. I have tried Christian Science in many ways, and always find that when I do my part by right thinking and right knowing, God is ready to help me. Both my parents having passed on several years before I came into Christian Science, and the only member of the family besides myself in this city being a younger sister, it seems so comforting to know that I can always lean on God.

Christian Science has been a great blessing to me and all in my home, and I am thankful to God, and grateful to Mrs. Eddy for giving us this truth which we can use daily and hourly.—Christine Sickel, Chicago, Ill.

I gladly verify my sister's testimony, knowing it to be true, and I will say that Christian Science has been a great help to me also, as I have had several healings.—Elsie Sickel.

✧

Twelve years ago, at a time when there were many difficulties to contend with and I was hungering and thirsting for the truth, Christian Science was presented to me. The church in which I had been brought up failed to give me the needed comfort and relief, while the God I had been taught to believe in seemed far away and my prayers of little avail. I did not come into Christian Science for the physical healing, although frequently suffering from nervous breakdown for which *materia medica* could do nothing. When I began to study Christian Science the light at once dawned upon my thought, bringing with it a sense of peace and joy such as I had never experienced before. All my life I had been in bondage to fear of every kind, but this beautiful new yet old truth set me free, and my ailment has never returned. However, the physical relief is not to be compared to the spiritual uplift, for which I thank God and am unceasingly grateful to our dear Leader.

Agnes Shorting, Huntington Beach, Cal.

✧

For six months previous to becoming interested in Christian Science my thought had been much disturbed, and my constant prayer had been for more light. For several years I had suffered severely from rheumatism, and while lying in bed the thought came with a great deal of bitterness that I was an invalid for life and dependent. Immediately I knelt, asking God with all my heart what to do, and instantly the answer came, Go to Christian Science. Although I had heard of this teaching I knew nothing about it, but feeling satisfied that I was being led, a few days later I consulted a Christian Science practitioner. I commenced to attend the services at once, going to my own church to teach in the Sunday school and from there to the Christian Science church.

After a while error tried to turn me back, saying I had taken up with strange people of whom I knew nothing. On returning home from a Wednesday evening meeting I prayed to God for an understanding of Christian Science, and Paul's counsel came to me: "Let that mind be in you which was also in Christ Jesus." Then I felt perfectly satisfied. The following Sunday night, there being no service at the Christian Science church, I went to my own church. The minister preached on the second coming of Christ. He said that the time for the second appearing is now; all prophecy has been fulfilled, and we may expect any day to see him coming in the clouds. It was with difficulty that I could refrain from rising and saying, He has come! When the service closed and the last hymn was being sung, I found that my voice, which had been almost lost, had returned.

Fourteen years have elapsed since the glad day on which I found Christian Science, and my healing has been permanent. It may be that the truth has unfolded slowly, but so clear and convincing is the light that I can say I know Christian Science is the truth. If I could not secure another copy of Science and Health, there is not wealth enough in the world to buy mine. I feel that I can never be grateful enough to our dear Leader for all she suffered and endured to give the truth to the world as it was given to her.

Mollie C. Langhorne, Lynchburg, Va.

✧

I was instantaneously healed of the liquor habit the first time I ever attended a service in a Christian Science church. In February, 1912, a friend told me a little about Science and invited me to a Wednesday evening meeting. For fourteen years it had been my custom to have at least one and usually several drinks each day, with a few extra ones on Saturday night, therefore one of my first questions was how Christian Scientists stood on the temperance question. I was told that the use of intoxicating drinks was not in harmony with this teaching; and while this information was not particularly attractive to me, I was nevertheless keenly interested in many other things that my friend had told me. As I had no notion of what a Christian Science service was like, I went to the meeting on the following Wednesday evening with an open mind, desiring to learn all I could about this subject.

What particularly surprised me about the meeting was the large size of the congregation, for it was a very stormy night. I was also greatly impressed by the happy, contented faces which I saw on every side. The more I thought about the wholesome, prosperous appearance of these people, the more I felt they possessed something that I wanted. I could see that liquor had no place in their lives, therefore I concluded that if by any chance I was going to turn my steps in the direction they were traveling I would have to leave intoxicating beverages behind. Then I began to recognize the truth about this question. I saw that liquor was nothing I really wanted, and that I had found no real pleasure in gratifying the false appetite. The moment I came to that conclusion my point of view changed, and all desire to continue the habit left me, for I found myself suddenly healed. From that day to this I have never tasted any intoxicating liquor, or had any desire to do so.

On the following Sunday morning I went to this same church again to hear a Christian Science Sunday service for the first time, and received my second healing. While waiting for the service to begin I looked over a *Quarterly* that was in the pew, placed there for the use of visitors. I had a vague idea that it was something every student of Science needed, so I decided to take it home with me as a souvenir which would come in handy. For many years I had been in the habit of taking whatever I wanted, regardless of the owner. I believed that there was not enough honesty in the world to go round, and that I had to be dishonest in order to get along in my dealings with my fellow men. So after the responsive reading was over I quietly slipped the *Quarterly* into my pocket, saying to myself, Here is where I save fifteen cents!

During the service, however, something in the Lesson-

Digitized by Google

Sermon made me realize that I had never received lasting good or real enjoyment out of the many things I had wrongfully appropriated in the past. I recalled that several times all my earthly possessions had been swept away. Then I thought that if I had never furthered my interests by using questionable means, there was no use of starting out in the study of Christian Science with something that did not belong to me. Could I "gather grapes of thorns, or figs of thistles?" Thus healed of the belief that dishonesty has a place in the kingdom of good, I took the *Quarterly* from my pocket and returned it to its place. Since then I have not knowingly taken any object that belonged to another.

This idea of honesty has been slowly unfolding in my consciousness during the past two years, and has healed me of a great many wrong beliefs which I had had for a long time, and which had been manifested in loose methods in money matters, the continual running into debt, the chronic borrowing habit, the spending of more than I earned long before I had earned it, and so on. Thus the truth has been transforming, evangelizing, my human self in these and in many other directions, and I can most gratefully and truthfully say that all I have and all I am I owe to Christian Science.

JOHN WENZEL, New York, N. Y.

✧

[Translated from the German]

I joyfully embrace the opportunity to express my thankfulness to God and herewith to testify to my wonderful healing through Christian Science. I had been afflicted with liver complaint for quite a while, and had sought the advice of several physicians, but the trouble kept growing worse. Then I heard of Christian Science and applied to a practitioner for help, my suffering by that time having seemingly reached a climax. The nature of Truth was lovingly explained to me by this lady, whereupon she took up treatment, the result being that I immediately felt better, and was completely freed of the disease within a few days.

FRAU ELISE OPTERBECK, Herford (Westphalia), Germany.

The Great Surrender

S. CAMPBELL

How tenderly, when we were little children,
As evening came they took away our toys,
Knowing that night brings rest for tired people;
And as we weeping left our childish joys,
How gentle were the arms then folded round us,
How quiet was the voice that bade us rest,
Whispered our toys would all be there tomorrow
And sleep was best.

And later, when the swiftly lengthening shadows
Gathered to show another day was o'er,
Some one we knew would very softly enter,
Moving with care across the nursery floor.
Our toys and dolls had long since been forgotten;
We lay at rest, nor wished to understand,
Holding in ours, amid the deepening twilight,
A well-loved hand.

O patient Love, who all the way hast led us
Since first we met Thee in our mother's eyes,
Help us to leave the foolish toys and treasures,
The earthly hopes and dreams we vainly prize.
We are but tired children! Tender Shepherd,
Just as of old, until the night is past,
Take Thou our hands within Thy quiet keeping
And hold them fast.

From Our Exchanges

[Rev. Russell Henry Stafford in *The Advance*]

Despite the pettiness of many lives, there is nothing petty in life itself. It is a great thing and splendid, brilliant in opportunity, bewildering in its complexity. The most absorbing business and the finest art under the sun is just living—an art often grossly misused by people who have not cared to become skilful in it, but in which every human being can be a genius if he will. Life is an affair of strange variety and startling contrasts,—youth and age, joy and sorrow, peace and struggle, virtue and that abnormal, sinister thing we call sin; these and many more, all bound together in one personality, in every personality, for all the experience of the race enters into the life of each member of it. And so intricate are the combinations of these divers ingredients that the same proportion has never occurred twice; the component parts of humanity are as widely different as the sum total is uniform.

The gospel of Jesus Christ was given to men by their creator to meet their needs in all the changing conditions and at every side of their life. It is not a religion for the happy only, or the good, or the young; nor is it alone harmonious with the darker tones of life. It is for every moment of every hour, for rich and poor, for wretched and for blessed. And the church, which is its medium for reaching the world, has adapted itself as well as it could to all the calls thus made upon it. It has striven to be all things to all men; and the measure of its success is one of the strongest evidences of that divine Spirit which we know to be resident in it. But at times it has been forced by unusual developments in society into overemphasis of some departments of its activity, to the neglect of others equally important.

[Prof. Thomas N. Carver in *Harvard Theological Review*]

The individual who has not the anchorage which religion ought to give, who does not see things in their larger relations, as a religious person ought to see them, who does not have a sense of the larger values, which a religious person ought to have, is like the person in a crowded room full of distractions. He does not realize what things are really worth while; therefore he allows trivial things to occupy his attention. He does not see the larger aspects of life; therefore the petty things worry him. He does not feel his feet planted upon the larger truths; therefore he is blown about by conflicting winds of economic, social, and religious doctrine. A sound religion gives him a sense of quiet, of poise and balance; it enables him to enter the quiet room where problems become simple and lessons easy. "The peace of God, which passeth all understanding," is the first condition of the highest economy of human energy and the most productive life. To the individual who has thus freed himself from distraction, the yoke of service is easy and the burden of the productive life is light.

[Rev. Joseph Fort Newton, Litt.D., in *The Homiletic Review*]

We need as much to take stock of our ideals as to lay plans for our work. The conviction is general and persistent that the preachers have lost their bearings, and that from their message the note of authority and the thrill of momentousness have died out. No doubt there are deep-seated and widespread causes for this absence of the power of appeal and the abeyance of the instinct of evangelic persuasion. With these unfriendly influences we have not now to do, except to say that our first concern does not lie with those outside but with our own hearts.

Digitized by Google

Our Christian pulpit has fallen not upon evil days, but upon other days. The voices of the age call men away from the inner life, psychology seeks to dissolve it into mist and dream, and we are almost imperceptibly led to neglect it. Our life is obsessed by things external; our literature gives us little more than passing thoughts of things eternal. Science has unveiled the vastness of the universe, and what we need now is to rediscover the still greater heights and depths and richness of the kingdom of heaven which is within. Here lies the imperative necessity of the pulpit, if it is to recapture its lost power of insight and appeal. The prophet of today must learn to live where insight is pure and piercing, where moral earnestness rises into passion, and where the ancient oracle of God repeats its truth to the heart. He must look upon life with purified and exalted vision; his vision must become his utterance; and his utterance must be commended by the integrity of his life. Evermore the minister must live in the innermost life of the spirit, where God makes character and where souls renew their being in Him.

[*The Christian Intelligencer*]

The impending death of Jesus seemed to the disciples to mean the annihilation of all their hopes. It does not require much imagination to see that they must have been troubled beyond measure. Jesus pleads for faith, realizing that faith is their only source of peace under the circumstances. The absolute eclipse of faith would certainly have shut out all light.

Christ was warranted in making this plea for faith. He had certainly proven himself worthy of trust. His speech had ever been with winsome grace. His mighty works had been freighted with sacrificial love. His relations with the disciples had made consistently for their spiritual enrichment. He had brought God near and revealed Him as a merciful Father. One so loving, so unselfish, so strong as Jesus, would not now deceive their hopes, although he could not meet their expectations in a material sense. Neither must they fear that the eternal Father would surrender them and Christ as permanent victims of the forces of unrighteousness. In view of all they had seen and heard, they could afford and were under obligation to trust God and Christ in the hour of the power of darkness. . . . Faltering hopes became living and mighty. They saw the risen Lord. They received the Holy Spirit. The things of Christ were shown unto them.

[*The Congregationalist and Christian World*]

Love and not hate, sacrifice and not inconsiderate self-assertion, brotherhood and not the corroding suspicion of a neighbor, are the only forces which can make a world worth living in. War may interrupt their action, but it cannot suspend their force; and war itself will finally be done away with only as they are splendidly trusted in the interrelationship of the nations, invoked in times of tension, embodied in diplomatic procedure, and set on high as the supreme and appellate court of humanity.

Surely there is nothing which the churches can do this winter comparable with their high insistence upon the things which endure. . . . They must declare—and incarnate—the supremacy of love and goodness, witness the method of the cross, advise a brave confidence in justice and fair dealing and the honorable appeal to the honor of others, and so safeguard for the present and secure for the future those holy foundations upon which a war-weary world may begin to build anew its habitations of comradeship, its temples of vision and adoration.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition" size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

A new pamphlet, "What went ye out for to see?" is now on sale. This pamphlet contains the four following articles, republished from the Christian Science periodicals: "Principle Not Person"; "Jesus of Nazareth"; "Jesus the Christ"; and "Jesus and the Christ."

The pamphlet, "Causation," by Frederick Dixon, has been translated into Norwegian "Skapende Kraft," and is now published with the English and Norwegian versions on opposite pages.

The pamphlet, "Fulfilling the Law," has been translated into Danish, "Lovens Fylde," and is now published and on sale. This new pamphlet has the English version printed opposite each page of the translation.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

Having just observed its second anniversary, the Lincoln Highway—the 3,384 mile transcontinental road dedicated to Abraham Lincoln—begins its third year with much construction work completed. Figures show that already there has been expended upon the road about $2,250,000, of which more than half has been spent the past year, and that improvements have been made in every state through which the highway passes. These improvements have included the building of permanent hard-surfaced roads, bridges, repairs to old roads, and maintenance.

For all practical purposes the highway is completely marked from New York to San Francisco. Its entire length in New Jersey is hard surfaced, and all but nineteen miles in Pennsylvania. Ohio has spent over $350,000 on the highway in the past year and has sixty-three miles of brick construction. Indiana has sixty-eight miles of concreted surface either built or assured. The gravel roadways through Illinois have been well worked. In Iowa the road is graded, crowned, drained, and dragged entirely across the state, and more than $125,000 has been spent in keeping it up during 1915. Five sections of concrete work are under way in Nebraska. The North Platte River has been bridged at a cost of $50,000, and permanent concrete bridges and culverts are rapidly replacing the old-style wooden structures. Wyoming has no hard-surfaced portion of the highway, but has spent about $200,000 in maintenance on the route during the year. In Utah and Nevada over $75,000 has been spent and a vast amount of road work done voluntarily. In California the highway is in practically boulevard condition.

A measure providing for an amendment to the constitution of Peru, allowing religious freedom, has passed Congress by a large majority, and if not vetoed by the President will become a law automatically. Most of the opposition to the measure has come from the women. The Peruvian constitution forbids the practice of any other than the Roman Catholic religion, but as a matter of fact, within the last ten years religious bodies have been allowed to hold services within certain restrictions. The amendment proposes to legalize Protestant and other worship. Religious liberty has existed in Ecuador eighteen years and in Bolivia eight years. Colombia has had it longer than any of the west coast countries. Chile has full religious liberty as a result of a law "interpreting" the constitution.

"Big business" interests of the United States have for some time been making large investments in various Latin-American countries, particularly in mining enterprises in South America. Among these are the Armour packing plants in Argentina; the Dupont nitrate mines in Chile; the Bethlehem Steel Company's immense iron mines near Coquimbo, Chile; the Morgan interests in the Cerrode Pasco Company's mines in Peru; the Braden Copper Company's extensive copper plant at Rancagua, near Santiago, Chile; the Guggenheim corporation, known as the Chile Exploration Company, now completing the gigantic copper industry at Chuquicamata, near the town of Calama, on the Antofagasta Railway.

The new Lackawanna Railroad cut-off between Clark's Summit and Hallstead, Pa., with the Tunkhannock Viaduct, its most impressive engineering feature, was formally opened Nov. 6. The new cut-off has been under construction since 1912, and cost the Lackawanna $12,000,000. While the reduction in distance between New York and Buffalo is less than four miles, the reduction of curves and cutting down of grades means a saving of twenty minutes in the time of every passenger train and an hour in the time of every freight train between the two cities; and trains which formerly required five engines to pull them up the heavy grades between Scranton and Binghamton can now be dragged up by two engines.

The Woman's City Club of Cincinnati numbering 1,400 active workers on its roll of membership, is one of the new organizations of that city. The purpose of the club is threefold: To establish a broad acquaintance among the women through the common aim of service to their city, to provide a central meeting-place where members may meet informally, and to establish an open forum for the discussion of all ideas of civic import. One of the results of the work of the club so far is the passage of a bill through the legislature providing for a permanent city planning committee and an appropriation of $1,500 for the city of Cincinnati.

Plans for a giant passenger terminal at Randolph Street and the Lake Front, Chicago, to be used by twenty trunk line railroads and to have three decks of tracks with all trains operated by electricity within the terminal zone, are said to be well on toward completion by the Illinois Central Railroad. The passenger station will be the largest in the world, outranking the $65,000,000 project now under construction on the West Side by the Pennsylvania and its allied railroads, and more extensive than the Pennsylvania terminal in New York. The new structure is planned to take the place of four passenger stations now in use.

The Idaho legislature this year created one of the most comprehensive farm market bureaus in the United States. The director is empowered to promote economical distribution of farm products, to help improve country life, to warn home seekers against misstatements by promoters, to bring buyers and sellers of farms and farm labor together, to serve as a free clearing-house of information advantageous to farmers and consumers, and to recommend legislation for the more efficient production or marketing of farm commodities.

The whole system of Canada's internal development will be investigated by a commission recently named by the Government. Questions of agricultural production, transportation, and marketing, immigration, including that of soldiers returning from the war, the back-to-the-land movement, and other elements in the country's development, are to be reported on by the commission and the subcommittees it is authorized to appoint.

The General Education Board announces that it has made grants totaling $375,000 to four colleges and has provided the funds for a number of experiments in the field of education. The latter work, which inaugurates a new departure in the activity of the board, included a survey of the Gary (Ind.) scheme of public school education and of the Hampton (Va.) Institute system, the results of which the board intends to make available for general use throughout the country.

The vast amount of oil taken out of the fields about Tampico, Mexico, apparently has not impaired the ability of the fields to produce "gushers." In the week of Sept. 9 one of the biggest wells in the country was brought in. The well is in the Panuco district, less than one hundred feet from the big Dutch-Shell gusher, which has an estimated production of 100,000 barrels a day. The oil was struck at a depth of 2,120 feet, or 300 feet deeper than the Dutch-Shell well.

Yoshihito, Emperor of Japan and 122d head of the Japanese imperial house since the first Emperor, Jimmu, whose reign began 2,575 years ago, left Tokio Nov. 6 for Kioto to make his state entry into the capital and there formally accede to the throne of the Empire of the Rising Sun. The program of the coronation is long, and indicates that various rites or ceremonies will be held up to the last day of the month.

Announcement has been made of the manner in which the people of Massachusetts may avail themselves of correspondence courses offered by the extension service of the State Board of Education. These courses, which are practical and vocational, are offered as a result of an act passed by the last legislature. Pamphlets outlining each course are expected to be ready for distribution soon.

Extension of the Dixie Highway by a loop through Indiana to the Straits of Mackinac has been decided upon by the directors of the highway. The loop will run through Indianapolis, Logansport, and South Bend in Indiana, and Niles, Kalamazoo, and Grand Rapids in Michigan.

It will be only a short time before the wireless telephone and telegraph will be in operation on the fast trains of the country, according to a statement made by Dr. F. H. Millener, experimental engineer for the Union Pacific Railroad, at the annual meeting of the Association of Railway Electrical Engineers.

Experiments undertaken some time ago by the Argentine Bureau of Forestry with a view to producing a commercial pulp from the pines of Neuquen Territory, Argentina, were so successful that the bureau extended the work to other pine bearing parts of the country with equally successful results.

The corn crop of the United States this year, based on prices paid farmers Nov. 1, is estimated as worth $1,913,025,000. The production is over three billion bushels.

The net profit of the Panama-Pacific exposition is now $1,410,878. The total income of the exposition since the opening to Oct. 31 was $5,018,129.

Unity of Law

COL. WILLIAM E. FELL

THE requirement of today is a fuller recognition of the unity, the completeness or spherical nature of the Christian Science movement; the fact that each activity of the movement has an equal importance with every other activity in relation to the whole. This completeness is to be found wherever divine Principle operates. It appears in the first chapter of Genesis, in the record of the creation or unfoldment of Truth's ideas. It is seen in the ten commandments delivered to Moses on Sinai, and is just as complete and binding today as when revealed to the seer, for each commandment, from the first that declares God's allness and oneness, is found to be the complement of the one preceding it and of all the others.

We see that the keeping of one commandment involves the keeping of all; and conversely, to break one commandment is to violate all. The Bible says: "For whosoever shall keep the whole law, and yet offend in one point, he is guilty of all." If it is incumbent upon us to keep the commandment "Thou shalt not commit adultery," it is obligatory to keep the commandment "Thou shalt not steal;" and if we must not steal, neither may we violate the commandment "Thou shalt not kill," and so on right through the decalogue.

The ancients through ignorance failed to grasp the unity of law, and found it very difficult to keep even its letter, to say nothing of its spirit. Christ Jesus therefore placed a line of defense about it which we call the Sermon on the Mount, this line of defense being as a halo of light,—the light of Love. Not alone round the whole did Jesus place this halo of light, but round each individual commandment. For example, let us take the commandment just mentioned, "Thou shalt not kill." Jesus neither abrogated nor qualified this or any other commandment, but he supplemented and strengthened it with the golden rule,—to do to others as we would have others do to us; to love our neighbors as ourselves; never to return evil for evil,—and he clasps the golden circlet of Truth round the whole with the explicit order to leave all judgment in the hands of God.

The halo of Love shining from the Mount surrounds each and all of the commandments. The early Christians who had come directly, or almost directly, under Jesus' teaching understood these things, until ecclesiasticism with its formalism stepped in and this light was temporarily obscured. Even today, people full of natural goodness and affection, but who labor under the false assumption that life is in matter and that there are many lives, many minds, will tell you that it is quite impossible to keep thought and action in complete conformity with Jesus' sermon. Hence arose the necessity for another line of defense about the Sermon on the Mount, and this defense has been supplied by God in the Science of Christianity revealed through Mrs. Eddy. This defense too is a line of light. It is the prismatic bow of Truth,—Truth understood and thus rendered demonstrable. Darkness, error, does not pierce light, and it is the glorious effulgence of this light which shows mankind that not only is it possible to live the Sermon on the Mount, but that existence becomes a tragedy, as is being proved today, under any other rule.

It is disobedience to the ten commandments, and the false belief that the Sermon on the Mount is too altruistic for every-day life, which has ultimated in a condition aptly described as "hell let loose." When the world returns to a condition of sanity and awakens from the mesmeric belief that God, Love, does not rule His own universe, then peace on earth, "good will toward men," will prevail in the hearts of all men, and therefore throughout the universe. If the nations were to fight one another for a score of years, they would have accomplished nothing, for the government of the universe still remains where it always has been, in the hands of God, who, as the Bible assures us, is of too pure eyes to behold evil, and cannot look upon iniquity. St. Paul says, "The weapons of our warfare are not carnal, but mighty through God to the pulling down of strong holds."

Verity of Being

GRACE HOFFMAN WHITE

WHAT is man but an expression of Life,—man, whose origin and ultimate is Life? His great endeavor is to understand Life and demonstrate it, that he may thus become conscious of his immortality. We cannot conceive of the loss of anything that exists in God; its form and fashion may change, but it springs from the seed of eternity and hints at realities greater than those we yet know.

Does the simple laborer in some far-off quarry foresee what will become of the stone he is setting free from its prison of earth? Does he dream of vast marble palaces on sunlit slopes, of fountains playing in flowery gardens, of yew-clipped paths leading to some retreat graced by a fair statue? His ignorance does not prevent the existence of all this, nor does our lack of intelligence or imagination hinder the universal Life from finding its own expression. How insignificant is what we have learned when we compare it with what we do not know.

One versed in the things that pertain to our higher life says, "What keeps us and will long keep us from enjoying the treasures of the universe is the hereditary resignation with which we tarry in the gloomy prison of the senses." Here we find the key to the whole matter. It is the senses that, in spite of the divine intuitions of Life and its ever widening circles, infest and feed our imagination with that which is not of Life and which tends to death. Submission to the conception of death presupposes a lack of high mental and spiritual activity, a bowing down to superstition, a belief in that of which we have no proof. The autumn comes, the leaves fall about our feet, and the trees, denuded of their luxury of leaves, stand etched against a gray sky. Yet we do not despair, for the revelation of past springs has shown us that like produces like; that the banners of the year will again be unfurled on the bare branches with greater glory; that the roots have gone deeper into the warm earth and the waving tops will be nearer the sky. Even those primeval

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

trees that have fallen in the forest have gathered to themselves another form of service, and as coal renew their usefulness and bring us cheer and warmth, till they mount in flame to find other expressions of life in service.

Thus we come gradually by the things that are seen into the apprehension of things unseen, and learn slowly, as a child learns its picture-book, that the intelligence of the universe cannot produce non-intelligence, nor existence non-existence. To give up the belief in death cannot fail to advance us to a higher consciousness of Life. Mrs. Eddy says, "If the belief in death were obliterated, and the understanding obtained that there is no death, this would be a 'tree of life,' known by its fruits" (Science and Health, p. 426).

Thus we come at last to shape our thoughts toward the continuity of all that really exists, till the true consciousness of being is established in us. Then we do not fear if one we love passes us on the road and we lose sight of him. We no longer clothe ourselves with garments of night, nor hug to our bosom the torment of self-pity, nor bruise the flowers of affection by requiring repeated reiterations of sympathy. As travelers through a diversified country, we are not alarmed when from the sunny plain tall mountains loom before us, but with confidence we plunge into the tunnel that carries us through them, knowing that light awaits us at the other end, for the unity of the road is unbroken. So let us speed one another on the journey with thoughts of the continuity and beauty of life. Let not our senses be obsessed any longer with grief.

Then may we take account of ourselves. What is it we have lost? Is it not the flower in the garden that grew by our side, the touch of its petals, the daily association from which the habits of life seem to have sprung, the perfume of its existence? But does not the perfume remain with us? And what of the habits and associations? Are they not capable of deepening into a love that knows no separation, but ever seeks and finds its own? What then have we lost? That only which the senses call their own and which would hold us captive in gloomy prisons. Let us therefore obey our divine intuitions and see man as a spiritual individuality; then the fetters will fall from us and we shall rise free men. The treasures of the universe shall be ours in that life which expresses itself in service and is ever conscious of its own spiritual unity, because it knows, as our Leader says (Science and Health, p. 427), that "life is the law of Soul, even the law of the spirit of Truth, and Soul is never without its representative."

Ascending Life

DR. EDMUND F. BURTON

While material things can never adequately illustrate spiritual truths, yet we may catch glimpses of reality through our human experiences, even as those to whom the parables of the Master were spoken found in them truths whose statement he had adjusted to their comprehension. A balloon trip some time since gave me food for thought in this direction, since it supplied an illustration of the fact that the study of Christian Science keeps the mind so open to Truth that every experience may become a finger pointing to the allness of Spirit.

As the basket in which I stood was lifted from the ground by the golden sphere above it, the first sensation was that of a rapidly widening horizon, which seemed to rise swiftly all about me like a huge ring. The surface of the earth took on the appearance of a level plain. All inequalities were merged in a great tessellated carpet of green, brown, and gold. The highways became ribbons, and then threads of white crossing the parti-colored map below, but in them were no steep or rough places, from this point of view. The city which had seemed a great confusion, became orderly and peaceful, and as we passed over the surrounding country its long straight roads, its meadows, farms, and forests, presented a picture of beauty and order in entire contrast to that received by the near-by observer.

As I looked down on the landscape which had thus become so calm and quiet, I remembered the words of Isaiah, "Every valley shall be exalted, and every mountain and hill shall be made low: . . . and the rough places plain." Then as I looked upward and thought of the invisible force which was bearing me away from the familiar earth, I was reminded of Mrs. Eddy's words, "Rise in the strength of Spirit" (Science and Health, p. 393), and realized anew the truth of Jeremiah's statement that "the way of man is not in himself," and that, save by a strength entirely apart from ourselves and above everything partaking of the nature of personality, we cannot escape from material limitations. I also saw that while that which was lifting me so rapidly was, in comparison with the mass of the heavier atmosphere, but a mere bubble, yet by virtue of its nature it was freeing me from the law that said I could not rise above the ground on account of my nature; and the words of Jesus, "If ye have faith as a grain of mustard seed," came to me with new significance. Faith is substance, truth manifest to human consciousness; and although our apprehension of Truth may seem "little," yet by its inherent power the dawning Christ-idea is able to save; it does make the honestly aspiring superior to the law of sin and death.

In the sunshine we rose rapidly, until, borne by an air-current, we passed into the shadow of a heavy cloud. For a few moments the upward course still continued, but as soon as the chill of the shadow caused the gas to contract, we began to descend. Sand was then thrown overboard until the fall was checked, when we again began to rise, and passing through the cloud that had hung over us, emerged into the sunlight and ascended to a yet greater height. Then again there came to me the words of Scripture, "Your iniquities have separated between you and your God," but "I have blotted out, as a thick cloud, thy transgressions."

In the light of a new faith, the joy of the discovery of Truth, we speedily ascend above the sense of trouble and disharmony, and vision is cleared and widened so that the discords of an earth-bound experience are lost to view; we wonder how we ever could have been deceived into thinking of life as either hard or circumscribed. But suddenly, perchance, there falls across our experience the cloud of some unabandoned belief, the darkness of a mortal opinion as yet unrecognized, and the sun seems to have gone out, the things of matter seem near and threatening, and there may be heard the voice of fear declaring that we have been deceived, that we must again accept evil as the reality. Then we hear the voice that has interpreted for us the words of him who spake as never man spake, and heeding it we throw over some earthly sense and practice, and find ourselves correspondingly freed, uplifted in consciousness, and thus able to leave the late low plane behind.

The clouds do not vanish at once, perhaps; they may for a time seem heavy and impermeable, and even to move with us and to cover us with their shadow, so that we are tempted to believe that it is our fate to be shut off from the kindly light we see shining upon others. Persistently and fearlessly ridding ourselves of false beliefs, however, we at length pass through the midst of the darkness, find it neither substantial nor dark as it had seemed below, and emerge into the light never so bright as now. Yielding then with joy to the

Digitized by Google

expansive action of the light of Truth, we rise again to diviner heights. Speaking of the possible good to be reaped from the struggles of those who are loyal to Truth, Mrs. Eddy says, "The very circumstance, which your suffering sense deems wrathful and afflictive, Love can make an angel entertained unawares" (Science and Health, p. 574). Sin is ignorance and false belief, and while we allow ourselves to remain under its lowering influence it is to us a black and chilling presence. But when "in the strength of Spirit" we rise above this ignorance and falsity, the thick cloud has disappeared.

Another experience noted soon after leaving the ground was that we seemed to be resting quietly without movement, although by looking at the earth beneath, the car was seen to be traveling rapidly. We were moving with the medium in which we are supposed to "live, and move, and have our being,"—resting in it, borne by it, obedient to its every current,—a beautiful lesson of the rest of perfect action. So, too, the life in unresisting accord with the activity of its divine Principle knows no inertia, no resistance; hence there is no weariness, exhaustion, or sense of effort, even while being borne swiftly, irresistibly onward and upward by unopposed and unopposable omnipotence.

A few thousand feet higher we found a silence which gave one a great sense of aloofness. No distinguishable sound came to us from below, and our own voices were echoed back to us through the unruffled air. The currents were less baffling, and at a yet greater height we entered the steady stream that flows forever eastward, undisturbed by clouds or storms below. In the peace of this isolation the truth was brought home that harmony is the law in the realm of reality, and that only as mortals identify themselves with the things of dust do its discords and limitations assume to them an appearance of lawfulness. Realizing also that an uplifted consciousness escapes the conflicting influences of earth, there come to mind the words of our Leader, where she says of one who has "accepted the divine claims of Truth and Love in divine Science," that "all the wicked endeavors of suppositional demons can never change the current of that life from steadfastly flowing on to God, its divine source" (Miscellaneous Writings, p. 19).

Things material are never more than illustrative; it is only in the power of Spirit that we can rise above the turmoil and disharmony, the disease and death, which pertain to the plane of an earthly or carnal sense.

Omnipotent and Omnipresent

JOHN E. FELLERS

Among the things taught in Christian Science which have startled the thought of materialists, perhaps none has provoked more comment and opposition than that sin, disease, and death are unreal; yet it seems strange that this teaching is not readily accepted and acknowledged, when the meaning of the words "real" and "reality" is carefully considered. According to Christian Science a thing that is real is eternal, everlasting, unchangeable,—the same yesterday, today, and forever,—unyielding, unalterable, immovable. On page 275 of Science and Health we read: "To grasp the reality and order of being in its Science, you must begin by reckoning God as the divine Principle of all that really is."

If we accept the belief that sin, disease, and death are real, thus acknowledging them as eternal, everlasting, unyielding, unchangeable, what becomes of the ministry and the ministrations of all the hospitals, sanitariums, asylums, churches, and physicians whose honest efforts and sacrifices we so much respect and honor? How are they singly or collectively to heal, or change, or ameliorate a condition that is real? The facts are that there is no hospital, sanitarium, asylum, church, physician, or minister in Christendom whose work is not a direct challenge to the claims of materiality that sin, disease, and death are real or have reality. Wherefore then the opposition to the teachings of Christian Science on this vital question, when the materialist in theory is teaching the same thing? In this age when consistency is of such great value, it seems strange that our materialist friends will continue to work in one direction and talk in the other, and expect to achieve the results for which sick and suffering humanity is watching, waiting, and praying.

We are taught in Christian Science that Life is the only reality, because Life is God. We have been taught by creeds and doctrines that sin and disease are real and result in the reality called death, from which there is no escape. Let us measure these opposite teachings. It is easy to see and realize that there is no life in death, for death, so called, is the absence of life. If there is no life in death, the final result or fruit of all suffering, and Life is the only reality, then there is no reality in death; and there being no reality in death, there cannot possibly be any reality in the myriad minor sufferings which claim to result in death. It is axiomatic that if the sum of all the parts does not contain a certain element, none of the parts contain that element. In like manner we are taught in Christian Science that Life as God is omnipotent, all-power; and since there is no life in death, and Life is the only power, then there cannot possibly be any power in death, nor in the innumerable beliefs which claim to result in death.

Christian Science teaches us also that Life is omnipresent, the all and the only presence. If this is true, how can death, the opposite or the absence of Life, or any of the beliefs which claim to terminate in death, be present at any time or in any place? It is neither logical nor thinkable. Wherefore then the fear that pales the faces of men? Surely we need not fear that which has no reality, no power, no presence.

Constructive Correction

JANE GRAVES MONSARRAT

In Science and Health (p. 62) Mrs. Eddy says: "The entire education of children should be such as to form habits of obedience to the moral and spiritual law, with which the child can meet and master the belief in so-called physical laws, a belief which breeds disease. If parents create in their babes a desire for incessant amusement, to be always fed, rocked, tossed, or talked to, those parents should not, in after years, complain of their children's fretfulness or frivolity, which the parents themselves have occasioned."

When one of my children was only a few days old it was noticed that she did not seem to like to have her little bonnet fastened on. I mentioned this to the nurse, who replied, "It is not too early to begin to know the truth for this baby, and not make laws for her which will only hamper her in her mental and spiritual development." She then went on to explain that if we were constantly alert to destroy every inharmonious expression by declaring its falsity and dwelling emphatically on the reverse of error, the child could be freed from the first appearances of "self-will, self-justification, and self-love," against which Mrs. Eddy warns us on page 242 of Science and Health.

One sometimes hears a parent remark, "John is cross today," or say directly to him, "You obstinate child!" thereby establishing the very condition which one wants the child to

Digitized by Google

overcome. The first step in this method of constructive correction is to know and affirm the truth of being, thus lifting one's own thought up to the recognition of the divine fatherhood and motherhood. When this point is firmly established the child will readily see why it is not natural to be cross, untruthful, or stubborn, since God can express only His perfection in the complete harmony of truth, in purity, gentleness, patience. A happy smile will thus come to the little one, driving away tears, in recognition that God's child is always sunny and good, because those are God-given qualities and he has a right to them; that the opposite error is no part of him and cannot make him a channel to express anything unlike perfection. The true method helps us over many rough places, and the truth clung to and dwelt on cannot fail ultimately to bring the permanent and harmonious results which we desire.

"A little child"

ELIZABETH H. MURDOCK

When our consciousness has once been awakened to the spiritual facts of being, we find that many a little incident along the way becomes symbolic of an idea of Truth and teaches us valuable lessons. Not yet have we outgrown the need of just such teaching as Jesus gave to his disciples in his wayside parables, and also his object-lessons. One of the most important of these was given the disciples when the Master "called a little child unto him, and set him in the midst of them." An enlightened and uplifted thought follows now, as it did then, when the inner voice bids us pause to meditate upon some apparently trivial thing.

We have especial cause for rejoicing when the effect of such an experience tends toward the recognition of the simplicity of the teachings of Christian Science, for this is a much needed lesson. We often seem to feel that work in Christian Science is a very complicated matter, requiring an exhaustive knowledge of disease, its laws and manifestations, before we can even diagnose the trouble, and great skill in the application of the truth before we can meet it. This sense of things leaves us very much afraid that there may be some phase of error which we have omitted to consider in our work, or some aspect of truth, necessary to the healing, that we do not realize, with the result that we unconsciously arrive at a much greater reliance upon our own intellectual comprehension of both evil and good, and of the right methods of applying truth, than upon the omnipresence and omnipotence of God.

Nothing has ever spoken to me more clearly of the simplicity of truth and its application to human needs than a little incident that I witnessed while traveling last summer. Near us in the sleeping-car there sat a mother with her ten months' old baby, and I noticed that occasionally, as a little rest for them both, she would place the baby in the corner of the seat opposite her. Once she had just settled her there when I heard the roar of an approaching train which would pass close to the window where the child was sitting. The baby heard it too, drew back into the corner with a little shudder, and stared out of the window with wide, frightened eyes to see what the dreadful thing might be. It was only for a moment, however, that she did this, and then, just as one might have expected her to scream out in terror, with a visible effort she turned away from the window and looked up into her mother's face. While the train was passing, and it must have seemed a long time to her, for it did even to me, she never once wavered, but kept her eyes fixed steadily upon her mother's face. She not only did not allow herself to look for an instant at the thing that frightened her, but she was evidently filling her consciousness with the beloved mother-presence, and all the love and protection and good that it meant to her; and one could see from her face that she had found peace.

Idly looking on at this little scene, I did not realize for a few minutes what a beautiful illustration it was of trustful faith. Then as I pondered it the spiritual lesson appeared, and I saw that it symbolized in all its simplicity the complete teaching of Christian Science as to the application of the truth to every form of error. The baby did not investigate, and she did not need to know all about the frightful, monstrous thing that seemed to be rushing down upon her; neither did she have any theories as to the methods by which she could receive help. She merely refused to look, refused to listen, refused to receive any of the apparent evidences of danger, and steadfastly, unwaveringly, to the exclusion of all else, dwelt in the enfolding mother-love that had never failed her. She was perfectly safe all the time, but if she had reversed her thinking and listened to the suggestions of error, even if she had wavered a little, heeding first one and then the other, she would not have been conscious of her safety. And it is not merely the fact of protection and safety, but the consciousness of the fact, that makes for peace in the midst of seeming evil; and consciousness, we must remember, is determined by what we think.

It is indeed wholly a question of consciousness, and how to gain and preserve the right consciousness is what Christian Science teaches and requires us to do. With its beautiful teaching of a God who is Love, and whose tender relation to us is more perfect than even the word "mother" can express, in proportion as we do our thought-work as this little one did hers, we shall find how simple is the application of the truth, and how wonderful its results in securing this right consciousness.

Let us read again and ponder well those loved passages found on pages 495 and 261 of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy: "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea. Allow nothing but His likeness to abide in your thought." "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts."

"The secret place"

CHARLES F. KRAFT

One day, while struggling with a problem which had seemed to baffle every effort at solution, the writer opened the Bible and turned to the ninety-first psalm. On reading the first verse with its assurance of divine protection, the question came as it had never come before, Where is "the secret place"? Then followed a yearning desire to find it, and consequently an analysis of the situation regarding man, as taught in Christian Science. I saw that by the very nature of God, infinite good, man as God's likeness cannot get outside of this infinity, and that according to this I am now dwelling in the infinity of good. But how do I know this; can the boundaries of infinity be seen or felt? They cannot be cognized through the physical senses. Surely, then, the infinity of Truth, Life, and Love is "secret" to material sense; and yet in spite of the limitations of material sense, I know that Truth is infinite and that infinity is true.

With this thought there came a sense of peace, and I began to read this wonderful psalm as I had never read it before.

Digitized by Google

It became luminous with divine Love. I saw that as all truth is eternal, this truth of God's protection of man not only has always existed, but actually exists now. "Then," I exclaimed, "verily I am even now dwelling in 'the secret place,' and am therefore protected this moment, and I can declare that now divine Love is 'my refuge and my fortress: my God,' in whom I do trust." As I continued reading, I found myself making each promise my own.

The seventh verse of this beautiful psalm has often been quoted as though a thousand of one's fellow beings might be stricken at his side, yet without injury to him. This had always seemed to me as in a way unjust; but now like a flood of light came the realization that none of God's children are ever destroyed, that it is only false beliefs which are lost, and these never touch or become a part of God's image and likeness. Such a sense of divine Love's immanence flooded my consciousness that I knew my prayer had been answered.

The criticism is sometimes offered that Mrs. Eddy did not furnish an adequate interpretation of the Scriptures. As a matter of fact she has given to the world a "key" with which each may unlock for himself the hitherto hidden truths of the Scriptures. It is the privilege of each one to utilize the discovered truth to the solution of the problems peculiar to his experience. Because the shackles of sin, sorrow, and disease are being stricken off through this apprehension of the Christ, Truth, a constantly increasing multitude of grateful ones today rise up and call her blessed. As each of these reflects the truth that comes to him, others are benefited thereby. As each one repeats the "old, old story" in the new light of his understanding, added multitudes are being enabled to apprehend the practical import of the text of the Scriptures and its correlative truth contained in Science and Health, so that they too may more intelligently follow Paul's injunction, "Prove all things; hold fast that which is good [true]," and gain a more abiding consciousness of dwelling now in "the secret place of the most High."

[Written for the *Sentinel*]

"A still small voice"

ISABEL SHERRICK WARDELL

"Oh, where is God?" my heart cried out
In its dream of pain and fear;
"I must find Him now; the need is great,
And the way seems dark and drear."

"He is here!" the humble violet smiled,
Lifting her meek, sweet face;
"Here, where the heart lays down its pride,
Donning humility's grace."

"He is here!" a fragrant incense rose
Up from the lily white;
"The pure in heart see God," it said.
"Purity finds the light."

"He is here!" the skylark mounting sang
In his morning hymn of praise:
"Lift up thy heart—'tis the way to Him;
Thank Him in all thy ways!"

And lo! in the silence a voice within—
"Why seekest thou God afar?
Love is with thee and everywhere,
That Love's expressions are!"

Then I woke in the dawn of humble faith
To purity's hymn of praise.
The fear and the pain and the doubt were gone.
Vanished in Love's pure rays.

Selected Articles

[E. M. Ramsay in *The Shetland Times*, Lerwick, Scotland]

As one who has been from childhood a Bible reader and regular churchgoer, I quite sympathize with your correspondent's fear lest heretical teachings should be allowed to dim "the faith which was once delivered unto the saints." When Christian Science was first presented to my notice I too approached it with misgivings, as its teachings ran counter to many things which I had hitherto believed to be true; but further investigation convinced me that its teachings were those of primitive Christianity and were therefore in strict accord with our Lord's words and works.

In all philosophies it is necessary to understand the precise sense in which words are used. The expression "reality" as employed in Christian Science means absolute reality. Nothing is absolutely real which is unlike the nature of God, the only creator, First Cause, or Principle of the universe. As we begin to learn to dwell in thought on the spotless purity of God, and realize that the Bible tells us man was originally made in the likeness of this most pure God, we find that a great change is taking place in our consciousness. Our tastes are becoming refined and elevated; our intelligence and skill increase; our health is improved. This inner change is naturally manifested in improved surroundings,—the intemperate man being rendered steady, the delicate man strong, so that he can do better work and receive better pay. "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

Our Saviour stated plainly that the healing of the sick should "follow them that believe." Before becoming a student of Christian Science I believed these words, and that every word our Lord uttered was true; but I did not understand the saying and had never known any one who did. Now by way of illustration let us suppose that a manuscript has been discovered in Egypt which purports to contain the recipe for the long lost Tyrian dye. A number of learned men set to work to decipher it. They differ as to the meaning of many phrases, but one of them produces the dye. Does not the production of the dye offer the best proof that this scholar's rendering of the manuscript is the correct one? So long as I believed in the reality of evil and matter I was never able to heal myself or any one else; the countless answers to prayer which I have received since accepting the Christian Science explanation of the gospel teaching is to me the proof of its correctness. I now see that the way to get free from sin and illness is to turn more and more to God, to dwell on the purity of His nature, His fatherly kindness, His wisdom, His power, the beneficence of His loving law; and I also see that by imputing so much power and intelligence to evil we have riveted the fetters of illness and sin on ourselves and on others and taken from the omnipotence of God.

✧

[M. S. Bruen in *Dundalk* (Ireland) *Herald*]

Our critic returns with unwearied persistence to ventilate his views on the subject of what he conceives to be Christian Science. When he says that "a temporary recovery from some illness is no proof of its permanency," we cordially agree with him. As has been said, "Healing by material means is a never ending process of getting well. . . . It is a hopeless pursuit of a fleeting *ignis fatuus*." If Christian Science did no more than bring this sort of healing, does any reasonable person think that it would have attracted the thousands who in ever increasing numbers turn to it in their need? They have learned that illness has its origin in wrong thinking, and that Christian Science heals each separate

Digitized by Google

trouble by replacing the wrong with the right. It goes to the root of the disease and scientifically removes its cause. Then a recurrence of that same disease is impossible for that individual.

On page 292 of "Science and Health with Key to the Scriptures" Mrs. Eddy says: "When the last mortal fault is destroyed, then the final trump will sound which will end the battle of Truth with error and mortality; 'but of that day and hour, knoweth no man.'" Men, women, and children are learning that as God did not make or send sin, disease, or death, it is right to resist these claims, and Christian Science teaches the right way to do so. Mankind has believed somewhat in God's power and good will, but has obeyed and feared another so-called power which sense declares is stronger. To be Christian,—thinking the way Christ Jesus thought, logically and reasonably,—God being infinite and ever present, evil cannot have any real power or existence. We have the power to begin to put away, humbly and persistently, the wrong belief in a power opposed to God. The only way to find the truth of this statement is to put it into practice.

✧

[Ezra W. Palmer in *The News*, Grand Junction, Col.]

Our critic, continuing his cogitations on Christian Science, appears to have discovered for the first time that God is Mind. How God could be anything else but Mind, since He is the supreme, omniscient intelligence of the universe, is beyond explanation. Because Christian Science teaches that God is Mind, the critic concludes that He is not therefore a personal God. Christian Science teaches that God is not a person in the sense of finite personality—God is not a man greatly magnified. God is personal in the sense of infinite personality. He is individual in the sense of infinite individuality, but not in a finite sense. We cannot understand the nature of Deity if we clothe the infinite God with our human conceptions. "We do not conceive rightly of God," Mrs. Eddy says, "if we think of Him as less than infinite. The human person is finite; and therefore I prefer to retain the proper sense of Deity by using the phrase *an individual* God, rather than *a personal* God; for there is and can be but one infinite individual Spirit, whom mortals have named God" (Rudimental Divine Science, p. 2).

This critic assumes that Christianity teaches that Christ is a person, entirely overlooking the distinction between Jesus and Christ made by Jesus himself, and later clearly defined by Christian Science. Jesus manifested the Christ, God's spiritual idea. Through this manifestation of the Christ, Jesus healed the sick and raised the dead. Jesus was a person; Christ is incorporeal, the divine image of the infinite person called God. When speaking of himself in his human relation, Jesus called himself "the Son of man;" when speaking of his inseparable relation with God as the Christ, he called himself "the Son of God."

The denial of the existence of a personal devil by Christian Science disturbs this critic, although he can find no warrant that either Jesus or his apostles taught that God created a devil. Jesus declared that the devil was "a liar, and the father of it." Christian Science accepts this explanation of the devil as a liar, namely, the false belief of a personal existence of evil opposed to God. The belief of a personal devil is an inevitable corollary of the belief of an anthropomorphic God, a man-made God who creates evil as well as good.

This critic contends that God "formed the wills which in their perverted freedom gave evil birth." God being omnipotent, this of course makes God responsible for evil. But St. John declares that the spiritual man is "born, not of blood, nor of the will of the flesh, nor of the will of man, but of God," a direct refutation of the claims of this critic that God created depraved wills capable of giving birth to evil. Jesus specifically declared that he came to bring light to those in darkness. If God permitted evil, it would be immortal, eternal, a blessing to man. Jesus therefore would have been going contrary to the divine will in destroying sin, sickness, disease, death, or any other form of evil; yet Jesus healed disease, overcame lack, stilled the storm, raised the dead, showing that evil is a false human belief and contrary to the divine will, and that a knowledge of God destroys it.

To assume that God permits or creates evil, paralyzes all attempts to destroy evil. According to the contentions of this critic, sin, sickness, pestilence, war, poverty, famine, and earthquakes are sent by an inscrutable Providence, with the result that people who believe this monstrous doctrine regard God as a merciless tyrant, instead of a loving Father who protects and saves His children from false mortal conceptions. The critic quotes this passage from Isaiah: "I make peace, and create evil." The prophet here referred to the divine law which arouses the belief of evil when casting it out. Witness the stir of evil beliefs when Jesus did his mighty works in Judæa. St. Paul said, "The carnal mind is enmity against God," and this carnal mind while being destroyed rises in resistance.

Next, the critic asserts that evil is necessary to freedom. Jesus never so declared. He said, "Ye shall know the truth, and the truth shall make you free," thus freeing mankind for all time from the belief that evil is necessary to the attainment of good. Is darkness a concomitant of light? By no means. Darkness is merely the absence of light. Is imperfection a part of perfection? By no means. If this were true, perfection would be destroyed. Is mortality a part of immortality? No, because immortality would cease to be, should it take on death or mortality. False theology attempts the impossible by trying to make good evil and evil good. It attempts to dishonor God by making infinite Love responsible for hate, sin, and death. Christian Science clears the atmosphere and shows that an infinite God, good, is not the author of evil, but that evil is a lie, as Jesus declared, and that when God is rightly understood, evil is destroyed as light banishes darkness, and man proves his heritage as a son of God forever free, as "when the morning stars sang together."

✧

[Charles W. J. Tennant in *The Medical Press and Circular*, London, England]

Christian Science does not profess to cure disease by a miracle, as a writer avers. No science professes anything at any time. It is always the student of a given science who professes to attain results in proportion to his understanding of the science. Those who have studied Christian Science and have thereby gained sufficient understanding of divine Principle, have been able to destroy the manifestation of every disease known to medical science. The volume of evidence has grown for the last forty years till it has reached such vast proportions that for one to acknowledge ignorance of the fact is equivalent to acknowledging that one is not well informed.

I would like to ask your writer if he believes that Jesus could or could not have healed instantaneously any of the diseases enumerated in his last letter? If his answer is in the affirmative, then he must admit that the possibility, method, and power are present for all to avail themselves of today, as stated in the New Testament. If his answer is in the negative, then he must admit that Christianity is the biggest fraud ever presented to humanity. The demonstrators of Christian Science are proving that the word of

Digitized by Google

God in the Bible is true, and is applicable to every human need today as it has been throughout all time.

Our critic will find my definition of a miracle, which he terms "grotesquely absurd," in Webster's dictionary; it is not original. He admits that the latest discoveries in the realm of natural science would seem miraculous to our ancestors or to those who have not been "instructed in the fundamental facts of science." It is precisely for the same reason that he considers the works performed through an understanding of Christian Science to be miraculous. He does not in the least understand the fundamental facts of this Science. If he would only take the trouble to study the subject and gain a knowledge of these facts, he would be in a position to understand how the works are done, and his sense of mystery and doubt would vanish. He will have to deal with the theology of Christian Science if he wishes to understand its methods. Mrs. Eddy writes on page 138 of Science and Health, that it was the "theology of Jesus which healed the sick and the sinning," and she continues, "It is his theology in this book and the spiritual meaning of this theology, which heals the sick and causes the wicked to 'forsake his way, and the unrighteous man his thoughts.'"

✧

[J. Arnold Haughton in *Preston* (England) *Guardian*]

Christian Science does not depend for its efficacy as a healing agent upon the influence of the human mind on the body. On the contrary, it teaches that there is but one Mind, God, and the Christian Scientist can heal only as he has in him that Mind "which was also in Christ Jesus," that is, the divine Mind. In the gradual awakening of mankind to the fact of a close relation between mind and body the world is only taking its first step toward a practical recognition of the teaching of Christian Science, for on page 177 of "Science and Health with Key to the Scriptures" Mrs. Eddy says: "Matter, or body, is but a false concept of mortal mind;" and again, "From first to last, the body is a sensuous, human concept."

The advice so freely given, not to worry or fear because of the effect of these conditions of mind on the body, does not give the power to profit by it. You cannot eliminate fear and worry from the human mind unless you rightly understand the power of God and intelligently feel assured of the harmonious government of His creation. The understanding of God as the only Mind is therefore what heals both mind and body. This differentiates Christian Science from the systems of mental healing with which our critic associates it. Again, Christian Science healing is not confined to disorders of nervous origin, but includes sickness and disease of every description, whether functional, organic, or the so-called incurable.

✧

[W. D. Kilpatrick in *The Journal*, Detroit, Mich.]

A signed article in *The Journal* misinterprets the attitude of Christian Science on the subject of atonement. Without going into detail, I would say that the subject of atonement is a broad one, and one concerning which theologians have ever differed. It is also a subject which cannot receive just consideration in a brief newspaper article. Suffice it to say, however, that Mrs. Eddy's explanation of atonement is in strict accord at every point with the Scriptures, and chapters nine and ten of Hebrews probably explain her view as well as any part of the Bible to which I could refer.

The quotation of the critic from page 23 of Science and Health, if taken into consideration with the context, in no wise contradicts the quotation referred to from page 497 of that book. The passage from page 23 reads as follows: "Wisdom and Love may require many sacrifices of self to save us from sin. One sacrifice, however great, is insufficient to pay the debt of sin. The atonement requires constant self-immolation on the sinner's part." Would the critic imply that one sacrifice on our part is sufficient to relieve us of all sin? And would he also imply that the sacrifices or atonement of Jesus relieved the world of sin? If so, how does he account for this sin-laden universe?

The Scriptures make it very plain that the mission of Jesus was that of the Wayshower and Exemplar, and his triumphs over sin, sickness, and death were in exemplification of his unity with the Father, and were for the guidance of all mankind. The efficacy of Jesus' mission is not found so much in his bitter experiences as in his complete mastery of every adverse situation and the overcoming of all the conditions of death and the grave in showing mankind the way to salvation through Christ, Truth. He taught that the truth makes men free, and it was in explanation thereof that it became necessary for him to prove the truth of the statement, that mankind might follow his example.

The doctrine that the overcoming of sin, disease, and death by Jesus relieves us from the necessity of overcoming these conditions for ourselves has no foundation whatever, either in Scripture or in reason.

✧

[Campbell MacCulloch in *Brooklyn* (N. Y.) *Times*]

In a statement referring to Christian Science a speaker is reported as saying, "Christian Science, for all the good that it achieves, also does mischief by discounting intellectual work," and much more in the same erroneous strain. The statement is wide of the mark, for on page 128 of the textbook, "Science and Health with Key to the Scriptures," Mrs. Eddy says: "Business men and cultured scholars have found that Christian Science enhances their endurance and mental powers, enlarges their perception of character, gives them acuteness and comprehensiveness and an ability to exceed their ordinary capacity. . . . A knowledge of the Science of being develops the latent abilities and possibilities of man. It extends the atmosphere of thought, giving mortals access to broader and higher realms. It raises the thinker into his native air of insight and perspicacity."

In the Preface to the same volume, in the second paragraph, Mrs. Eddy observes, "The time for thinkers has come." Still again on page 195 is the statement: "Whatever furnishes the semblance of an idea governed by its Principle, furnishes food for thought. Through astronomy; natural history, chemistry, music, mathematics, thought passes naturally from effect back to cause. Academics of the right sort are requisite. Observation, invention, study, and original thought are expansive and should promote the growth of mortal mind out of itself."

Here are two or three excerpts taken at random from a great many other similar passages to be found in this textbook; and these discount with authoritative statement the loose generalizations of the critic, who quite evidently speaks with a "zeal . . . not according to knowledge." Further, despite the critic's added assertion that Christian Science denies the existence of evils, permit me to state that so far as a recognition that evils are a part of and enter into human experience is concerned, Christian Science does nothing of the kind, but proceeds to cope with such manifestations and destroy them in the most effective manner.

✧ ✧ ✧

A man is often called upon to renounce that upon which he has set his heart, and renunciation is then his highest duty; but there is also something beyond it; it opens the way to some kind of positive achievement.

HAMILTON WRIGHT MABIE.

Editorial

Thinking Rightly

It is gratifying to note, as a sign of the times, that many people are recognizing not only the futility but also the harmfulness and bad taste of indulging one of the stock subjects of general conversation, namely, descriptions of the ills "that flesh is heir to." *The Ladies' Home Journal* is doing its share toward forwarding this reform, and we gladly quote from its November editorial page as follows:—

I wish we were all Christian Scientists (one moment—this sentence isn't finished yet) in one respect: that we would cease from discussing our ills and ails either with one another or in public. Whatever else we may accept of the doctrines of Christian Science is an affair personal to each one of us. But the personal line is crossed when some one in a company from which we cannot extricate ourselves or in a public place where we cannot help listening begins, step by step, to describe the symptoms of a personal ill or to relate the gruesome details of an operation. It is not necessary that we shall be unsympathetic with persons who are in physical trouble, but neither is it incumbent upon us to be forced to listen to a detailed narration of those troubles, and they should not be inflicted upon us. It may not be an agreeable truth to realize, but it is a fact nevertheless that, excepting those who are very close to us, our friends are not interested in our ill health. When we are asked the perfunctory salutation, "How are you feeling?" it is not meant that, like pulling a bung out of a barrel, we shall pour out upon the inquirer a stream of our physical ills and ails. Besides the injustice to others, there is the harm to ourselves of allowing the mind to rest upon the ills of the body. If more of us could realize that the body will be healthy about in proportion as we keep the mind happy, there would be fewer aches and pains talked about. . . . A happy mind is the best doctor that exists for the body, and conversely a mind always centered on the pains that exist, tends not only to make those pains worse but to prolong them, and by their prolongation to bring about others. A chronic condition of ill health has been brought about in many an instance by thinking or talking about it too much.

Christian Scientists will of course notice that the reference to Christian Science is kindly and that it is not intended to do more than superficially to call attention to the fact that thoughtful Christian Scientists are not guilty of the practice against which protest is made. Unfortunately, however, it must be admitted that there are some who are not as thoughtful in this regard as they might be, and it is largely to these that the spirit of the by-law, Article VIII, Section 24, of the Manual can especially be commended. In this by-law it is directed that testimonies given at the Wednesday evening meetings and those which appear in the periodicals "shall not include a description of symptoms or of suffering," and the reason for this prohibition is apparent to those who are at all familiar with the unopposed action of fear.

It must not be forgotten, however, that many who afterward become Christian Scientists receive their first introduction to this subject, either directly or indirectly, through conversation, and it is essential that the fear which has so largely contributed to their sickness and distress should not be catered to or augmented by the rehearsal of what has been proved to be but the false belief of mortality. Mrs. Eddy has said that fear "creates the image of disease and its consequent manifestation in the body" (Science and Health, p. 154). She also says (p. 411), "Always begin your treatment by allaying the fear of patients. . . . If you succeed in wholly removing the fear, your patient is healed."

It is but a poor return for the blessings received by any of us that we should put stumbling-blocks in the way of those who have not yet had the experience which will enable them quickly to free themselves from fear. More often than not the error is voiced in complete ignorance of the effect, but the offense is none the less culpable. Even if the motive in recalling past ills is a desire to be helpful, no good purpose is served by the relation of harassing details. Many people are so susceptible to influences of this kind that merely reading or listening to a vivid description of a distressing ailment or condition is enough to etch the picture as with a graver's tool upon the consciousness, there to fester until sooner or later it is manifested in or on the body.

Why not reverse the process? Why not follow Paul's counsel to "think on these things,"—the things that are pure and good and true and "of good report"? Mrs. Eddy's counsel on page 261 of Science and Health is very much to the point: "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts." Christian Scientists have proved the truth of this statement for themselves again and again. Surely the world would be a vastly more comfortable place in which to live if such a habit of thought were more generally practised.

ARCHIBALD MCLELLAN.

Evil Has No Cycle

Good endureth from generation to generation, and its modus alone can have permanence, prove an unbroken chain, and establish that legitimate law of heredity under which like produces like. Cycle and sequence belong only to the activities of Truth, and the seeming orderliness of error is but a counterfeit part of its falsity. Good is eternal, but evil can be broken off at any point; its effects come to an end at any moment, and this because it has no authority behind it, no Principle. Good is a spring whose perennial flow witnesses to an inexhaustible source, while error can be dried up because it has no source, and this is made to appear in every case of spiritual healing. Jesus taught that when forgiven the sinner is not simply excused from suffering the penalty attached to the violation of a mortal law, but that the so-called law itself is annulled, so that he is freed, as St. Paul declares, "from the law of sin and death."

Human sense is always and naturally frightened by its belief in the inescapable effects of sin, but in Christian Science we come to know that the pardon of sin means the destruction of sin, including its asserted cause as well as its effects, its root as well as its branches. Thus its absolute nothingness to Truth is brought into demonstration. This is expressed by Mrs. Eddy in the tenet of Christian Science which reads: "We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal" (Science and Health, p. 497),—a teaching which takes issue with practically universal Christian thought respecting the nature of evil and the tenacity of its hold upon humanity.

So long as a belief in the reality of evil is maintained, so long logical thought must be overwhelmed with the realization of its inevitable continuity. If one would defeat it he must first recognize with the great Galilean that it is unreal, otherwise the effort to overcome it will be paralyzed by the conviction that there can no more be a break in its cycle than in that of good, and the expectation of its end amounts to nothing more than a hope of utterly discomforting indefiniteness. When, however, evil is seen to be truthless, in both nature and expression, without substance, reality, or mission, and when this is proven true by the destruction of so-called "incurable" disease, then the entertainment of either fear of it or respect for it is seen to be out of keeping. Thus it dawns that apart from mortal belief evil has no necessary permanence, because it has nothing to hold to. An utter negative, it calls for neither kick nor courtesy. It has no actuality, and its seemings to us must therefore cease the instant it is known for what it is. Truth knowing is therefore freedom bringing, even as the Master said.

Digitized by Google

This teaching of Christian Science is wholly opposed to the thought that the effects of evil are impressed upon reality; that its destruction means the erasure of being. Looking to the material senses for information, men are led to concede that the history of evil compasses an immeasurable past, and they therefore legitimately conclude that the elimination of evil will consume an immeasurable future. The doctrine that "whatsoever a man soweth, that shall he also reap," plus belief in the reality of evil, might seem to render the further belief in a relatively interminable corrective process altogether logical, were it not for the fact that Christ Jesus broke through this order, and to the joy of unnumbered prisoners of pain his daring trespass upon the fatalism of false human belief is being repeated today by the stoppage of the course of disease and death. This is the glory and this the promise of Christian Science.

To concede place, power, and continuity to evil is to contradict our Lord's word to the dying thief, "Today shalt thou be with me in paradise." He showed that to the faith which has ripened into scientific understanding, salvation is timeless; that error can at once be erased from our program of being. Divine forgiveness means evil's instant end, and that this may be brought about through man is assured in our Lord's otherwise inexplicable statement, "Whatsoever ye shall loose on earth shall be loosed in heaven."

JOHN B. WILLIS.

Trust and Foresight

MANY good people are apt to think of trust in God, which is urged upon us in the Scriptures, as a somewhat negative mental quality, a condition of thought which relieves one of all responsibility either at the present time or in the future. A closer study of the Bible shows on the contrary that trust in God illumines all human experience, enabling us to grasp the lessons of the past and present, and prepares us for dealing with those of the future with more than human wisdom. The psalmist tells us that he who makes God his trust is truly blessed. At the same time he tells of having "waited patiently" for God to deliver him from a dreadful pit and "miry clay." It is apparent that trust in divine Love and wisdom is especially needed when the senses testify to darkness, doubt, and danger, but mortal mind characterizes such trust as folly and would punish, if it could, the one who, like Moses, endures "as seeing him who is invisible."

People who know nothing of the divine Principle of Christian Science remark sometimes that it is all very well to depend upon prayer in the case of slight ailments, but criminal to do so where conditions are serious. They of course fail to see how utterly illogical this is, and the Scriptural requirement is that we trust in God "at all times." Here we may recall the mocking words of the priests who stood around Jesus' cross: "He trusted in God: let him deliver him now, if he will have him." Speaking of this experience of the Master, our revered Leader says (Science and Health, p. 50), "The distrust of mortal minds, disbelieving the purpose of his mission, was a million times sharper than the thorns which pierced his flesh." If Jesus had in any degree shared that distrust of divine power to save to the uttermost, the priceless heritage of Truth and Love which is ours today in divine Science would have been lost to the waiting centuries. The lesson of Science is that in every experience, great or small, we must trust God and cling to what we know of the spiritual fact until the light of Truth dispels all the seeming darkness. If we do this, the bright bow of promise will span the flood with its radiant hues, and through the arch we shall have at least a glimpse of the city which is lighted by the glory of God.

In the sixteenth chapter of John's gospel we are told about the quickening influence of the Spirit of truth, which enlightens and transforms human consciousness, and among other promises we find this: "He will show you things to come." This statement was doubtless intended to include universal and individual experience alike, and to reveal the spiritual fact which to mortal sense is ofttimes obscured if not quite hidden by the material counterfeit. With divine Science there comes trust in Truth, even before spiritual reality is fully perceived, and this mental attitude clears the vision and prepares one to grasp that which is invisible to mortal sense, and through spiritual illumination to take the right steps toward the realization of complete harmony. The first requirement is trust in God; then, as we read on page 84 of Science and Health, "when sufficiently advanced in Science to be in harmony with the truth of being, men become seers and prophets involuntarily. . . . It is the prerogative of the ever-present, divine Mind and of thought which is in rapport with this Mind, to know the past, the present, and the future."

Just here it may be well to see that the foresight which comes with spiritual illumination is best utilized in working out our own human problems, not in talking about them or predicting what we think will happen, much less in forecasting events in the human experience of others. We can of course encourage those who seek help through our understanding of Science to press on until fuller illumination is gained and divine guidance clearly recognized, even though the clouds of doubt and uncertainty may seem to obscure the path. Whether the command is, as in Moses' time, to "stand still" or to "go forward," trust is needed, and with its perfect exercise comes the unfolding of foresight with that joy which, as Jesus said, "no man taketh from you."

ANNIE M. KNOTT.

Among the Churches

Current Notes

LOUISVILLE, KY.—Arrangements were completed yesterday [Sept. 9] by a committee representing First Church of Christ, Scientist, for the use of De Molay Commandery Hall, 212 West Broadway, until the proposed new church building has been completed. The congregation is now housed in a small structure on Third Street, near Oak, but this building is said to be inadequate. The De Molay Hall, which seats about fifteen hundred persons, will be used for the usual twice a week services, beginning Oct. 1. The Christian Science organization is planning to erect a new edifice at the southeast corner of Third Street and Ormsby Avenue, where it has acquired land.

Louisville Courier Journal.

SOUTH DAKOTA.—A Christian Science reading-room has been built on the state fair grounds for the purpose of distributing Christian Science literature. It was completed and furnished for the state fair which has just closed. The building is 24 by 40 feet and cost a little under one thousand dollars. It was the object of considerable attention during the fair, and many came for literature, while some wanted to buy "Science and Health with Key to the Scriptures" by Mrs. Eddy and the Bible, but they were not for sale. Next year all of Mrs. Eddy's writings will be on hand for those who wish to buy them.—*Correspondence.*

WINNIPEG, MANITOBA, CANADA.—The Christian Scientists have contracted for the building of a church here at the preliminary cost of $35,285.—*Canada.*

Digitized by Google

LINCOLN, NEB.—A Christian Science booth at the Nebraska state fair was visited and appreciated by many Christian Scientists and others. It had an excellent location on the balcony of Agricultural Hall, the newest, finest building on the grounds, and was maintained by the literature committee of First Church of Christ, Scientist, Lincoln. All the Christian Science publications were displayed, and recent copies of all the periodicals were supplied for free distribution. One copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy and one of "Miscellaneous Writings" were sold, while about six hundred periodicals were given away. Several hundred people, coming from all parts of the state, stopped here for literature and information. The booth seems so much better than the reading-room tent which the Lincoln church has maintained during previous fairs, that it is probable the work will be kept up in this way each year, only on a larger scale.

Correspondence.

AUBURN AND LEWISTON, MAINE.—A new tent at the fair grounds this year greets people as they enter. It is the Christian Science reading-room and is located close by the handsome flower-bed between the main entrance and the exhibition hall. Here the Auburn and Lewiston church welcomes not only Christian Scientists but the general public, offering an attractive and comparatively quiet corner for people to rest in. The church has on display its literature, various periodicals and books, although none of these are offered for sale. Free copies of the *Christian Science Sentinel*, *The Christian Science Journal*, and *The Christian Science Monitor* are given to those interested enough to read them.

Lewiston Journal.

ALBERT LEA, MINN.—On the north side of the Manufacturers' Building at the county fair, First Church of Christ, Scientist, had a cozy reading-room, fitted up with easy chairs, which invited the public to stop for a few minutes, and many took advantage of the opportunity. On one table were displayed copies of Mrs. Eddy's works. Free literature, consisting of *The Christian Science Monitor*, *Sentinel*, and *Journal*, was given out.—*The Tribune.*

The Lectures

Boulder, Col.

Clarence C. Eaton, who lectured on Christian Science at the Curran Theater, was introduced by Attorney Guy D. Duncan, who said in part:—

Christian Scientists are constantly alert to demonstrate, not only in the restoration of health but also in the upbuilding of character, that the influence of divine Love is even more potent than is that invisible power by which from the same soil and atmosphere one rose-bud selects red, another white, another pink, and still another yellow. They assure us that if humanity were to become fully imbued with the teachings of Christ Jesus, and the actual practice thereof as inculcated through the aid of Christian Science, our prison walls would crumble to dust and surgical operations at our hospitals would go out of fashion; that no longer would war and pestilence devastate the earth; that we need then have no further anxiety lest our citizens be again called to perform warlike deeds of valor, that then, indeed, would the drawn sword of the struggling nations seek its sheath and the tempered bullet melt into a statue of "Christ the Redeemer" to mark the national boundary, as did the cannon of Chile and Argentina; and that thereby would the "Prince of Peace" become eternally enthroned as the final arbiter of international affairs and another ideal of our noble President and of every true American be realized.

Surely such a religion is worthy of our most serious thought; therefore those of us who are not members of the Christian Science church are grateful to you for bringing your able lecturers to us.—*Correspondence.*

Goshen, Ind.

Jacob S. Shield gave a lecture on Christian Science at the Jefferson Theater to a large and attentive audience. In introducing the speaker, George R. Harper, a local attorney, said:—

In the third epistle of John you will find these words of the apostle: "Beloved, I wish above all things that thou mayest prosper and be in health, even as thy soul prospereth." It is strange indeed that through all the Christian centuries people should have forgotten that Christ healed the sick, and made whole the cripple, and cleansed from sin. It has remained for our time to receive the message that health of body and of mind is a gift of God through the love and grace of the Lord our Christ. When we arrive at a perfect understanding of the truth we shall know what Isaiah means when he says, "Then shall thy light break forth as the morning, and thine health shall spring forth speedily: and thy righteousness shall go before thee; the glory of the Lord shall be thy rereward."—*Correspondence.*

Calgary, Alberta, Canada

Virgil O. Strickler, who lectured on Christian Science, was introduced by Clifford Jones, K.C., who said in part:—

Christian Scientists desire to present Christian truths as they see them, not with the idea of interfering with your belief or mine, but in order that we may think calmly about what we may hear. If as a result members of the local church see new faces at their meetings, they will doubtless be greatly pleased. Although not an adherent of Christian Science, I realize that the world is in upheaval,—the old is passing and the new is coming forward. Religious thoughts have been deepened as never before and people are eager for light. It may well be that Christian Science will satisfy this world craving.—*Correspondence.*

Lectures to be Delivered

ARIZONA—Phœnix: Clarence C. Eaton, Arizona School of Music, 8:15 p.m., Dec. 2.

CALIFORNIA—Bakersfield (First Church): William D. McCrackan, Scribner's Opera House, 8 p.m., Nov. 30.

Compton: Virgil O. Strickler, Masonic Hall, 8 p.m., Nov. 28.

Coronado: William D. McCrackan, Auditorium School Building, 8 p.m., Nov. 27.

Covina: William D. McCrackan, Covina Union High School, 8 p.m., Dec. 3.

Huntington Park: Virgil O. Strickler, Women's Club House, Pacific Boulevard, 8 p.m., Nov. 27.

Lodi: George Shaw Cook, Lodi Opera House, 8 p.m., Dec. 2.

Testimonies of Healing

I desire to express my gratitude for what Christian Science has done for my family and myself since 1888. For six years previous to that time I suffered from an ailment diagnosed by some of the best physicians in Denver as a malignant growth in the stomach. I was rarely able to retain any food and was virtually given up as incurable. My nearest friends and neighbors informed me later that they would not have been surprised at any time to learn of my passing on.

Our attention was attracted to Christian Science by the statement that it would heal incurable cases, and having no other hope my wife sent for a practitioner, who, not being able to come to our home, gave me an absent treatment, as I was at that time confined to the bed from hemorrhage of the bowels. As a result of the treatment I was able to get up and attend to business the next day. I then purchased a copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, to learn what brought about this favorable change, and while it seemed a strange language, we could see proofs of a Christlike and tangible religion that was efficacious to heal sickness as well as sin. Since that time countless blessings have been received. One of our daughters manifested all the symptoms of a virulent form of typhoid fever, but this attack was overcome within four or five days through the application of the truth as taught in Science and Health.

Through a fall I received an injury that I feel confident neither instruments nor material remedies could have reached, but was relieved in a few hours through Christian Science. This experience convinced me that the truth can and does reach the very "joints and marrow." A splintered bone was perfectly healed in a very short time. With the help of a Christian Science practitioner I had seven teeth extracted within five minutes without any fear or pain whatever, to the astonishment of the dentist.

At another time, while moving several hives of bees, three swarms escaped and attacked both myself and the horses. My bee hat and veil were lost during the excitement, but I succeeded in catching the horses, which had broken loose. In my effort to separate them so that they might take care of themselves to some extent, the thought occurred to me, notwithstanding the seemingly strenuous conditions, that surely the Science of Christianity ought to be made available at such a time. At once I began to realize as best I could the "scientific statement of being" (Science and Health, p. 468), and immediately all fear and pain left, and it seemed clear to me that God is the only power. Although the bees were thick about my head, the thought of the allness of divine Truth and Love sustained me, until some neighbors prepared to handle bees came to my assistance. I was told that over one hundred and fifty stingers were removed from my head, and nearly as many from my face.

Friends telephoned to my wife, who was some four miles distant, and in less than two hours the swelling had gone down and I was resting comfortably. This occurred at noon. I slept well during the night, and next morning assisted in hitching up my team to go home. On the way I met a gentleman who remarked that he considered it perfectly marvelous, and entirely beyond his comprehension, that I was able to withstand such an assault and live. I told him the Science of Christianity was indeed "a very present help" in every time of need. All this occurred despite the fact that I am considerably past "threescore years and ten," and also that the law of mortal mind agrees that even a few bee stings will generally incapacitate a person for work for some time.

For these and many other blessings my wife and I desire to express our gratitude to the Discoverer and Founder of Christian Science, Mrs. Eddy. We are also grateful for our Leader's invaluable instructions for the safe and harmonious guidance of faithful Christian Science students. The Bible has become an open and more clearly understood book to us, being spiritually discerned.

B. R. Hickok, Collbran, Col.

✧

To say I am thankful for Christian Science and what it has done for me would not do justice to my sense of gratitude for this new-old blessed truth which has set me free from pain and mental depression. I came into Christian Science because I needed help. I was sick and had tried everything I could find in *materia medica* without obtaining relief. The doctor told me a surgical operation was the only thing which would save my life; but I thank our heavenly Father, and am grateful to His beloved servant, Mrs. Eddy, for the truth which I have learned in the study of the Bible together with her book "Science and Health with Key to the Scriptures," since through it I have been healed of all those diseases.

Five years ago I was taking six kinds of medicine every day and was to human sense a physical wreck. Although a church-member and considering myself a Christian, I knew little about spirituality or spiritual life. After turning to Christian Science, however, with a fervent desire to do my Father's will I laid material remedies aside. I am grateful for the complete freedom from all physical ills which followed, but still more thankful for the knowledge that I am God's child and that He is our Father-Mother God. One year later, when I was attacked by acute catarrh of the stomach, a Christian Science practitioner was called, and the healing was complete in a week. I am also thankful for the healing of my little granddaughter of tuberculosis after three days' treatment. I thank God for the truth that makes us free.—Anna Bennett, Zelienople, Pa.

✧

After having been ill seven months with heart trouble, stomach disorder, and extreme nervousness, for which I had been treated by the best specialists, I decided to try Christian Science. I had spent the whole month of March, 1913, in the country, my friends thinking a change of air might help me; but after I came back I continued to lose flesh. My case seemed hopeless, and finally I turned to Christian Science for relief. A practitioner was asked to come to me, as I was not able to go to her. She was very patient with me, and by July I was able to take long walks in the country. Every one has looked at me in surprise, for I have gained in flesh and have been helped in other ways.

I am so thankful to God and grateful to Mrs. Eddy for the help I have received, that I think others should know of it, since, like many another, in my ignorance I used to think there was nothing in Christian Science. I am indeed thankful for the change in my disposition, for I look on everybody and everything in such a different light. My earnest prayer is that I may grow spiritually and help others to know the truth, that they may be free.

Emma L. Hooper, New York, N. Y.

✧

My heart overflows with thankfulness to God, and gratitude to our beloved Leader, Mrs. Eddy, for through the study and application of Christian Science I have learned that "where the Spirit of the Lord is, there is liberty."

While I was an infant the family physician told my mother that she could not expect to rear me, as I was too delicate;

Digitized by Google

indeed, I never knew what it was to be free from ailments of some kind until I was healed in Christian Science. I have been healed of bilious fever, and severe headaches which were supposed to be hereditary; of frequent colds, and a cough that came upon me regularly in the fall and lasted till spring, with an attendant fear of lung trouble; also of chronic bowel disorder, diagnosed by specialists as "stricture and adhesions of the bowels." For this last ailment I submitted to the most painful treatment for months, and was then told that it had failed and an immediate operation was necessary to save my life, although no hope of recovery was given me. I was operated on, but afterward continued in a very bad condition until on turning to Christian Science I was perfectly healed. I also gave birth to a child with absolutely no pain, after two former experiences which were very serious, so that the doctors said I would never be able to survive another experience of this kind.

I am most grateful of all, however, for the overcoming of the morphine habit, brought on by the administration of that drug for nervous prostration, through which it was feared I would lose my mind; but I have learned that nothing can separate me from the one Mind, that as a child of God it is my birthright to manifest intelligence. When I seemed to have lost everything that was dear to me,—husband, home, and money,—thinking I no longer had anything to live for and was useless, I attempted to take my life. In this I failed, and now I have gained that "true idea of God" which "gives the true understanding of Life and Love, robs the grave of victory, takes away all sin and the delusion that there are other minds, and destroys mortality" (Science and Health, p. 323).

The healing seemed slow, but with the continual study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, together with the Bible, and the striving to be more obedient to the one Mind each day, the victory was won, and I am deeply grateful for the spiritual regeneration which came with it. I can truthfully say I am likewise grateful for the hard experiences, since they have taught me to become as a little child, humble, meek, obedient; to give up my will for the divine will. Self-will, selfishness, sensitiveness, desire for worldly pleasure and gain,—all have disappeared, and I have seen "a new heaven and a new earth." I have been born again, not of flesh and blood, "nor of the will of man, but of God." The old man is being put off and the new immortal man put on, the supply which seemed to be lacking has become plenteous, and I am a healthy, useful, and contented woman.

I have had the great privilege of class instruction, and my daily prayer is that I may be able to show forth more praise to the giver of all good gifts and to let my light so shine that men may see it and glorify God.

LEFIE ROSS, Chicago, Ill.

✧

I wish to tell of a demonstration over the effects of an accident. My left hand was caught under the needle-bar of the sewing-machine, and when it was released I saw that the needle was broken off at the shank, the longer piece having been forced through the thumb-nail at the base, making two incisions. There was no pain, even when the needle was removed, but the finger began to bleed rather profusely. This soon ceased, however, for I was earnestly praying as we are taught in Christian Science. After a few minutes I went to my room and opening Science and Health read Mrs. Eddy's words on page 398 in regard to the healing by Jesus: "To the sufferer with the withered hand he said, 'Stretch forth thine hand,' and it 'was restored whole, like as the other.'" I knew that the same power which healed the withered hand nineteen hundred years ago could heal my wounded hand; and it did, for I continued using it as though nothing had happened. There was no discomfort or inconvenience, no swelling or inflammation; moreover, I did not lose the nail.

The spiritual blessing that came with this healing was far in advance of the physical help, and can any one wonder that I am most grateful for the understanding of Christian Science.—MATTIE A. WOODWARD, Kansas City, Mo.

✧

I feel it a privilege as well as a duty to tell what Christian Science has done for me. More than six years ago I was healed of the liquor habit of sixteen years' standing. Also quinsy, a throat trouble from which I had suffered since childhood, was healed in two treatments and has never returned. I no longer use profane language, am in perfect health, and in my home there is now happiness and harmony. For these blessings I am indeed thankful to God and grateful to Mrs. Eddy.—CONRAD BRANDT, Chicago, Ill.

I gladly testify to the truthfulness of my brother's statements, with loving gratitude for the many blessings we have received through Christian Science teachings.

HEDWIG BRANDT.

✧

When but a child of twelve I first heard of Christian Science through an aunt who had been wonderfully healed. I learned the "scientific statement of being" (Science and Health, p. 468) and applied it for several slight ailments that appeared, finding it all sufficient to meet my childish needs. Since growing to womanhood this healing truth has never failed me, and knowing that health, harmony, happiness, peace, all good, are ever of God, I know it never will.

I have proved through Christian Science that there is no truth in heredity. A severe throat trouble from which I suffered every winter was supposed to be inherited, but it has disappeared entirely. I no longer fear or have colds in winter as formerly. For this healing I am deeply grateful, also for the efficacy of Christian Science as a preventive. The knowledge that I can help others is a source of joy to me. In my work with the little ones each day I find many opportune moments when Science is indeed very effective. I am thankful that we always have this Christ-teaching at hand and can use it constantly.

LOTTA M. BALES, Springfield, Ill.

I can truthfully corroborate my daughter's testimony. Throat trouble was for years a dreaded enemy in our family, until we found the truth as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy. Since then, 1899, we have used no medicine, and are daily proving the words on page 494 of that book, "Divine Love always has met and always will meet every human need."

EMILY M. BALES.

✧

Although comparatively young in Christian Science, I feel it a duty as well as a privilege to announce publicly my experience in part since taking up this study. For about thirty years I had been an active church-member, and so it was with reluctance that I turned to Christian Science for relief when for practically the first time in my life I found myself in extreme physical need. I was advised by reputable physicians that I had Bright's disease in rather an alarming form, and when I failed to improve after having medical treatment for about six months, as a last resort I asked for help from a Christian Science practitioner. After eleven

Digitized by Google

treatments I had gained sufficiently to discontinue treatment, and while the improvement was gradual, it has proved to me conclusively that Christian Science heals absolutely. My life has practically been transformed from one of disease, unrest, and fear, to one of contentment and peaceful trust in a God who is Love and in whose image I have been created.

In November, 1914, I was instantly healed through Christian Science of the habit of smoking, in which I had indulged for twenty-five years. I have never had the slightest desire to smoke since, and am sure I never will. For the last few years my work has been accompanied with a degree of success and harmony never before experienced in my business life. My home surroundings have been materially changed, resulting in increased domestic happiness. I have realized, in some degree at least, that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). Like Paul, I have been "transformed" by the renewing of my mind, and I am more than grateful for what Christian Science has meant to me and mine.—Silas Miller, Denver, Col.

✧

I send this testimony with the hope that it may reach some receptive thought. Many times when error seemed to talk to me, I have picked up the *Sentinel* or *Journal*, and while reading about the healings that my fellow men have experienced, my heart has overflowed with gratitude to God for His "wonderful works to the children of men."

Three years ago, when Christian Science found me, I was in a very discordant condition, the result of an automobile accident, and was in constant pain. Several of the best physicians in our city were consulted, and they advised an operation, to which I submitted. I was no better, however; indeed, the nervous condition seemed worse. One physician said mine was one of the worst cases with which he had ever come in contact. I tried several physicians of other schools, but each gave a different cause for my condition, until I lost faith in all of them. At this point I was as near being frightened to death as any one ever was. I then began the study of Christian Science, and with the help of a practitioner one by one the physical ailments disappeared, so that now I am a new person,—"old things are passed away; behold, all things are become new."

To say that I am grateful for the physical healing would poorly express my feeling. I am, however, even more grateful for the spiritual uplift, for whereas I had no God or hope in the world, now "I know that my redeemer liveth." I thank God every day for the humble Nazarene who marked the way for all men. I also thank Him for Mrs. Eddy, that beautiful, pure woman who gave to the world this new-old truth, Christian Science.—Ruby Helms, Oakland, Cal.

✧

It is with pleasure, as well as with thankfulness to God for His wonderful goodness and mercy to me, that I write this testimony, in the hope that it may benefit some one in need of the light. I had been a sufferer since childhood with a throat affection, and a few years ago it culminated in such a serious form that there was no hope from a medical standpoint. As a last resort I turned to Christian Science. A practitioner was called, and I was healed of the throat trouble. Under the physician's care, however, I had become a sufferer from mercurial poisoning, having taken large quantities of that drug in accordance with the doctor's prescriptions. The effects were made manifest on different parts of the body, particularly the face, and my condition became very serious. Face and head were swollen and I was almost blind, while the suffering was beyond description. A Christian Science practitioner was called and in thirty-six hours the face and head were healed. In a few days all traces of the disease had disappeared, leaving no scars, and I was up doing the housework.

When quite a small child I had a severe fall, cutting the kneecap on a rusty can. The wound healed after a great deal of trouble, leaving a scarred skin seemingly grown fast to the whole kneecap. Physicians told my mother that unless the knee was operated on and the bone scraped, in time I would be a hopeless cripple. We never consented to have the operation performed, although the knee always gave me a great deal of trouble, even extreme suffering at times. A few years ago it began to grow worse, and in May, 1914, the scar burst into an offensive running sore. The whole shin-bone became dangerously affected, so that no covering of any kind could be endured.

Again the Christian Science practitioner was called. Through his persistent declarations of Truth, and his constant references to the thought expressed in Science and Health (p. 97) under the marginal heading "Dangerous resemblances," I was not only healed, but was impressed with the importance and imperative necessity of individual, methodical, and earnest study of the Bible and Science and Health through the Lesson-Sermons, also the periodicals issued by The Christian Science Publishing Society. The healing was so perfect that not a trace of a scar of any kind remains, although the old scar had been there for twenty-four years. Today this knee is in the same normal condition as the other one.

Christian Science has not only healed me physically, but it has given me a new hope in life. To mortal sense I was ever in discord, but since coming into Science the clouds have rolled away and divine Love has brightened all the seemingly dark places. I wish to express my gratitude to our beloved Leader, Mrs. Eddy, for her wonderful love to mankind and for the truth which has made me a healthy, happy woman.

Ella Billadeau, Seattle, Wash.

With heartfelt thankfulness to God and gratitude to our Leader I wish to confirm the testimony of my daughter's wonderful healing through Christian Science. She was about to pass on, according to mortal mind belief, and was a most pitiful sufferer from the effect of poison, when we called a Christian Science practitioner. In a few days no trace of the trouble was left, not even a scar, and she is now in better health than she ever was. After having been nearly all my life in an orthodox church, I was weak and fearful; but I praise God that the light has dawned. I know that to God I owe my daughter's recovery. I am also grateful for the help I have received, both physically and mentally. I want to know more of Christian Science, for the teaching gives me strength and comfort.

Mrs. J. Carter, Seattle, Wash.

✧

It is now fifteen years since I first heard of Christian Science. I was always an ardent worker in my former church, but at last there came a time when the satisfaction and joy of it all left me, and I began to ask myself, Is there really a God or is it only a man-made theory? As time went on I visited one church after another, but found none that satisfied me any better than my own. Mentally I saw myself standing before a deep, dark pit, and became frightened. Circumstances took me to another state, where for the first time I heard of Christian Science. I did not, however, accept it until six months later, when after attending a testimony

Digitized by Google

meeting a great light came into my consciousness and I knew I had found the living God.

I have never for one moment desired to go back or longed for the old days, but the light of Truth is shining brighter and brighter. Every problem that comes up is solved, each time with a stronger faith and a greater desire to go on. And why should we not be grateful? To be constantly grateful is the open secret of growth in Christian Science, for when we cease to be grateful we cease to see the light. We can never be thankful enough to God, who through Mrs. Eddy has given us this light. No one can ever take her place as the Discoverer and Founder of Christian Science.

BERTHA R. RUEDINGER, Fairhaven, Mass.

✧

It is impossible to express in words my deep gratitude for Christian Science. My whole life has been changed by the wonderful interpretation of the Bible and the inspiring teaching of Mrs. Eddy as found in the text-book, "Science and Health with Key to the Scriptures." Before I knew of Christian Science my life was full of worries and fears, either for myself or for others. I welcomed "luck" when it came, but always with a conviction that it was too good to last.

It is for the absolute peace and confidence gained through Christian Science that I am most grateful. I now know, and have proved over and over again, that no matter what the difficulty to mortal sense may be, God's law is ever active and all powerful. I know that as I learn more of His goodness and of the nature of His law of good, that good will be manifested in my life and in the lives of all those with whom I come in contact. I welcome every difficulty as a fresh opportunity to prove the all-power of Truth, and as another light to help me to the attainment of my rightful inheritance,—heaven on earth, peace, joy, health, and harmony.

I well remember, in times past, the fear and anxiety expressed in the words, "There is no more to be done but to wait, and hope for the best." Now there is always something to be done; no standing still and anxious waiting, but active work, backed with the reassuring confidence of the availability of good, which brings a peace that passeth understanding. I am thankful to God for giving us this truth through Jesus the Wayshower, and grateful to Mrs. Eddy, whose brave stand amidst all the conflicting thought with which she was surrounded has helped me to maintain my stand for Christian Science amidst difficulties which seemed too great to overcome. I am learning every day the truth of the Master's declaration that "with God all things are possible," and that the power of Truth cannot be resisted.

FLORENCE M. BARNES, Birchington-on-Sea, Thanet, England.

[Written for the *Sentinel*]

In the Forever Now

M. GORDON INGLIS

He liveth on in hearts whose deep perception
Lies in the truth uplifting and divine;
In deeds more noble than the world's conception
He liveth on.

He liveth on in joy's sublimer presage,
In prayers more real and e'en more truly blest;
In life more boundless—heaven's eternal message,
He liveth on.

Love cannot cease; there is oblivion never;
In the forever now he liveth on.

From Our Exchanges

[The Christian Intelligencer]

It is a hopeful sign that thousands of Christians are again taking up the neglected Word. The disposition to know the mind and will of God is the precursor of surrender and obedience; and these in turn precede every great religious awakening. It is a comfort that the darkening skies of human life are shot through with light at some points. The imagination loves to picture Christians all over the land bending over the sacred page of Scripture and on their knees in prayer. The scene, which harmonizes with the facts, warrants the faith that our deliverance draws nigh.

[The Christian Work]

If Christians of all complexions would mobilize their beliefs around a pure, growing love for their one Lord, they could control civilization. Not sentimental effusions, which are something worse than bad taste, but warm, vital convictions about Christ, and what he was and did, and how he has saved to the uttermost and can save to the end, from the baser self, the mental sloth, the moral stagnancy, the spiritual dearth, the spurious adoration of the bloody sword of tyranny and them that use it,—these are the articles of a transforming creed. They express a love for him which neither stains the conscience, nor stultifies the mind, nor hardens the heart. It is a love filled with lucidity, communion, triumph. By it the men who trod the hills of Galilee with Jesus reshaped their proud, unbending world. It will give to all our teaching and our ministry a double power.

[The Universalist Leader]

What occurred in the storm on the Sea of Galilee is typical of the constant service for which the disciples of Jesus were indebted to the greatness of their Master's faith. In sharing his undertaking to transform the world's religious life, they had embarked with him upon a wider sea than that which separated Galilee from the country of the Gadarenes. Tempests of persecution assailed them; and the trials which they encountered were like the countless billows of a wind-swept ocean. Not once, but many times, they must have turned to him with the despairing cry, "Lord, save us: we perish." And always it was the serenity of his spirit, manifested alike in word and deed, that breathed peace into their troubled souls, and caused them to feel as secure in the heart of the storm as if their voyage had been beneath a cloudless sky and over tranquil waters. When they saw that his confidence remained unshaken, they ceased to be afraid, and waited patiently with him until the winds ceased their raving and the billows sank to rest.

[The Christian Commonwealth]

In spite of nineteen centuries of church teaching, the average man has very little idea either of what "a Christian ought to know and believe to his soul's health," or of what he ought or ought not to do if he would inherit the kingdom of heaven. Our generation has to discover afresh the Christian idea of God. In attempting to do this it will instinctively follow the other great current of Christian thought which flared into it from the eastern world, and think of God as visiting His people, as becoming man among men, in order to save man from the fate of being merely himself. However we may construe the historical facts, Christianity remains essentially an incarnational religion.

But the fatherhood of God toward all men, which Jesus taught in the Lord's Prayer, was narrowed by the creeds to

Digitized by Google

the fatherhood of God toward Christ alone; and the doctrine of the incarnation has never yet come to its own. The church has been so busy safeguarding the divinity of Christ and explaining the efficacy of his death, that it has had no time to teach the truth for which those doctrines stand,—that every man may become a son of God, and that all love and all self-sacrifice redeem the world. Thus an unreal and unnecessary barrier has been set up between theology and religion, the official doctrine of Christians and their unofficial experience.

[*The Congregationalist and Christian World*]

"Thou shalt love thy neighbor as thyself." This is the absolute, irreversible, and irrepealable law of the Christian life. Whoever is disobedient to it is disloyal to Christ, and so far useless or hindering in the work of his kingdom. But practically, when we come to study the application of this irrepealable Christian law, we are confronted with the fact that in the complications of our human life our neighbor quite often is our enemy.

Christ himself both experienced and foresaw this difficulty, but he did not turn out of his way to avoid it, either for himself or for his followers. In the realm of personality the law of love is a law which admits of no exceptions. He did not make light of the difficulty; he insisted on the universal application of the law. It is one of his most striking advances upon the teaching of the church leaders of his own time: "Ye have heard that it was said, Thou shalt love thy neighbor, and hate thine enemy: but I say unto you, Love your enemies." That is the law of the obedient Christian life yesterday, today, and forever.

[*The Hibbert Journal*]

Now one effect of the war has been (this, I think, may be said with confidence) to challenge many of our preexisting notions of human nature and to confuse greatly our vision of the world. We do not quite know what to think, what to say, about either. Our anthropology is at sea in one direction; our cosmology in another. The war is the work of human nature; it originated in human nature, and is carried on by human nature. What comment, then, on human nature, what light on its "value," its position in the hierarchy of being, is offered by this, the latest of human nature's works? "By their fruits ye shall know them."

[*The Christian Register*]

No necessity rests on the promoter of liberal opinions in religion to disregard the feelings and points of view of those who maintain doctrines he rejects. No requirement of courage and candor obliges him to stalk rough-shod over the convictions of others, especially when they seem absurd; for in most cases there is something underneath them which is as precious to the progressive as to the conservative. A reputation for slashing brilliancy in exposing the errors of others, and for disregard of proprieties of consideration and courtesy in scorching them, is not attractive.

[Rev. Adam J. Loeppert, D.D., in *Western Christian Advocate*]

It is not just to blame the true church of God for having failed to prevent war. It is paganism that is to blame, pagan encroachments, pagan distortions of Christianity, but not Christianity itself. Perhaps to some minds these statements seem to be a mere attempt to cover up the faults of actual Christendom. The shortcomings of professed Christians are too evident for such efforts ever to be of any use, even if it were desired to make them so. It is important, however, to bear in mind that if the churches are bad, the world is worse; and that the blemishes of the church are caused by the encroachment of the world-spirit.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition" size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

A new pamphlet, "What went ye out for to see?" is now on sale. This pamphlet contains the four following articles, republished from the Christian Science periodicals: "Principle Not Person"; "Jesus of Nazareth"; "Jesus the Christ"; and "Jesus and the Christ."

The pamphlet, "Causation," by Frederick Dixon, has been translated into Norwegian "Skapende Kraft," and is now published with the English and Norwegian versions on opposite pages.

The pamphlet, "Fulfilling the Law," has been translated into Danish, "Lovens Fylde," and is now published and on sale. This new pamphlet has the English version printed opposite each page of the translation.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

Digitized by Google

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, $1.15; half morocco, $1.40; full morocco, $2.50; levant, $3.50; pocket edition, size 4⅝ x 6⅝, $3.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission, have been set to music as follows: "The Mother's Evening Prayer," 75 cents; "Christ, My Refuge," 75 cents; "Love," 40 cents; Communion Hymn—"Saw Ye My Saviour?" (Johnson), 50 cents; "Blest Christmas Morn," 27 cents; "O'er Waiting Harpstrings of the Mind," 27 cents; "Shepherd, Show Me How to Go," 27 cents; "Saw Ye My Saviour?" (Root), 27 cents. The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing. 8-inch (mount 12 x 16), $1; 12-inch (mount 15 x 20), $2; 16-inch (mount 21 x 29), $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18 x 24 inches, $5; on India paper without remarque, $3. Smaller reproduction, size 11 x 14 inches, on Japanese vellum, $1. Photogravure postcards, reproduction of the picture of the Church Edifice and Publishing House, 5 cents.

QUARTERLY COVERS in black morocco, $1.15; with purse, $1.40.

ALUMINUM LESSON MARKERS. Set of thirty, with paper shields, 50 cents. Extra paper shields, one hundred, 15 cents.

PRICE LIST OF BIBLE CONCORDANCES and DICTIONARIES OF THE ENGLISH LANGUAGE supplied on request.

REPRINTS (not printed in English). Two-page leaflets, 14 subjects in French and Swedish; 19 subjects in German. Ten copies to one address, 10 cents.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Send all orders for the works of Mrs. Eddy, with remittance by New York or Boston draft or money order, direct to Allison V. Stewart

For literature listed above address orders and make remittances payable to

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $4.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current [illegible] in the CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

Moonlight schools, so called because conducted during moonlight nights, are meeting with success in various communities in Kentucky, Georgia, and the Carolinas. Concerning results of the work done by the teachers under her charge, the superintendent of schools of Rowan County, Kentucky, says:—

"We expected to enroll a straggling few, but found how eagerly adults welcome an opportunity when twelve hundred people came the first evening. We taught persons from eighteen to eighty-six years of age that year, having a two weeks' session, then a recess and then another two weeks' session. The next year we had a six weeks' session, enrolled sixteen hundred, and our oldest student was eighty-seven. In these two years we taught more than six thousand people to read and write. During the autumn of 1913 we made an effort completely to wipe out illiteracy. We enrolled twenty-five hundred persons, and taught all illiterates in the county but twenty-three. Meanwhile eight other counties in Kentucky tried the method with success the second year, and twenty-five adopted it last year. It was tried in the tobacco districts among the tenant class with marked success; it was tried in the mining camps, and the miners and their families embraced the opportunity with eagerness; it was tried in isolated farming sections, and the farmers and their families came for miles and could hardly be driven home from school when the hour of dismissal arrived. In the mountains, where the movement originated, the people crowded to the school in throngs, as many as one hundred and twenty-five being enrolled in one isolated district."

The National Historical Society has acquired *The Journal of American History* as its official organ and will appeal to the country in behalf of the George Washington Memorial Building, to be erected in Washington, D. C., on a site given by Congress. The purpose of the society, as set forth in the articles of incorporation, are: "To discover, procure, preserve, and perpetuate whatever relates to history, the history of the western hemisphere, the history of the United States of America and their possessions, and the history of families: to inculcate and bulwark patriotism; to provide a national and international clearing-house and historical exchange, promoting by suitable means helpful forms of communication and cooperation between all historical organizations, patriotic orders, and kindred societies, local, state, national, and international, that the usefulness of all may be increased and their benefits extended toward education and patriotism; to promote the work of preserving historic landmarks and marking historic sites; to encourage the use of historical themes and the expression of patriotism in the arts."

The Nobel prize for physics for 1914 has been awarded to Prof. Max von Laur of Frankfort-on-Main for his discovery of the diffraction of rays in crystals; the chemistry prize, to Prof. Theodore William Richards of Harvard University for fixing the atomic weights of chemical elements. The prize for 1915 in chemistry will be awarded to Dr. Richard Willstaetter of the University of Berlin, and in physics will be divided between Prof. William Henry Bragg of the University of Leeds, and his son, W. L. Bragg of Cambridge University, England, for research in the structure of crystals by use of the Roentgen rays.

Though the municipal light and power plant of Winnipeg, Manitoba, Canada, has been in operation only four years, it is already paying its way, and in addition, besides making full provision for all charges, including interest, depreciation, and sinking fund, it has paid off a deficit of one eighth of $1,000,000 incurred during the first year and a half of operation. The 100,000 horse-power of electrical energy under the control of Winnipeg is far greater than the total water-power developed at Lowell, Lawrence, and Holyoke in Massachusetts, and Manchester in New Hampshire.

Cambridge, Mass., is to have one hundred shade-trees planted in its streets next spring, having won the prize awarded by the Massachusetts Forestry Association in its state-wide contest for planting the greatest number of shade-trees on its public streets this year. Cambridge planted 779 trees; Fitchburg, 675; Newton, 715. The association made special mention of Agawam, Petersham, Ludlow, Lexington, Orange, Danvers, Falmouth, Oxford, Wenham, Bourne, Rutland, Medway, Hadley, Longmeadow, and Swampscott.

The movement to protect the birds of the United States is stronger than it has ever been before, according to a statement of the secretary of the National Association of Audubon Societies. In the past twelve months progress has been made in the bird protecting laws in six states. Announcement is made of a gift of $20,000 from "a friend of the birds" who will not allow his name to be published. Mrs. Russell Sage gave $5,000.

Jamaica in the West Indies is the home of the Jippe Jappa hat, very often mistaken for the genuine Panama. When very finely plaited, only an expert can tell the difference. Peasants all over the island are engaged in the work, but some districts are famed for the fine quality of the hats. Men, women, and children are kept busy the year round preparing the straw and plaiting it.

Baker Mountain, Saranac Lake, N. Y., which was stripped of its trees by fire some years ago, is being reforested under the direction of the Saranac Lake Fish and Game Club. Within two years 35,000 Scotch and Norway pines have been planted around the summit. The first year that reforesting was undertaken, volunteers carried the trees up the mountain by hand and the event was made a community enterprise.

By the largest vote ever recorded in the history of Detroit, Mich., the electors at the recent election rejected the proposition to purchase from the Detroit United Railway the street-car lines and property within the one-fare zone. The plan, which to be successful required a three fifths vote of the people, received less than 50 per cent of the votes cast.

Considerable commercial interest attaches to the discovery of molybdenite in the Gatineau near Ottawa, Canada. Since the beginning of the European war this rare metal has increased in price from $400 a ton to $3,300. The metal is used in the manufacture of high-speed steels, armor-plates, rifle barrels, and big guns.

The United States Federal Trade Commission has begun an investigation of the oil business of the country. The commission is soon to issue a report dealing with the cost of pipe-line transportation of crude petroleum and with the conditions in the production, refining, and marketing of petroleum and its products.

A proposal to appropriate a strip of land along the historic Boston Common for purposes of street widening has come before the citizens of Boston for consideration. These proposals to invade the integrity of the Common for one purpose or another usually meet with strong public protest.

Wheat production in twenty countries which ordinarily produce 80 per cent of the world's crop, is placed at 3,793,000,000 bushels by the Department of Agriculture from preliminary official estimates. That is an increase of 550,000,000 bushels over the 1914 crops in those countries.

President Maclaurin of the Massachusetts Institute of Technology announces that the dedication of the new Technology buildings is to take place June 14 in the great court of the educational group on the Cambridge side of the Charles River Basin.

Pope Benedict has made an important departure from the custom of the pontiffs by visiting the church of Saint Anna, adjoining the Apostolic Palace, and thus going outside the Vatican precincts, according to the newspaper *Giornale D'Italia*.

The Federal reserve board has made public a statement of the earnings and current expenses of the twelve Federal reserve banks for October. Balances in the members of the group range from a deficit of $218.18 to gross earnings of $30,478.26.

American automobile manufacturers for the 1916 season will produce close to 750,000 motor-cars, an increase from slightly over 500,000 cars last year. There are at present approximately 2,250,000 cars now in the country.

The Columbia Highway now extends on the south side of the Columbia River, Oregon, for almost two hundred miles from Biggs to the sea. Scenically the Columbia Highway is considered without a peer in this country.

Plans are being made for the first textile exposition ever held in the South, and Greenville, S. C., has been decided upon as the city where the southern textile men will gather.

Dam No. 10 in the Ohio River, one mile above Steubenville, Ohio, was completed recently, and put in operation. The cost to the national Government was $1,500,000.

Approximately two hundred and thirty thousand automobiles will be registered in New York state this year.

Automobile registration in Massachusetts has passed the 100,000 mark.

"The longing to be better"

SAMUEL GREENWOOD

If asked how good he would like to be, the average Christian would probably indicate that nothing less than perfection would satisfy him; but just how hard the average person is willing to work, or how much he is prepared to sacrifice to attain that ideal, is a vastly different matter. No doubt every Christian at times aspires to walk in the footsteps of his Master, but the general and prolonged neglect of Christendom to obey some of his most insistent commands shows how self-satisfied is the thought of mortals. So long as life and harmony are believed to depend upon so-called material sense, mankind will continue apathetic toward spiritual things; hence the declaration of Truth to that false sense, "I came not to send peace, but a sword."

Students of Christian Science realize that divine Principle will not make mortals better merely for the asking, any more than the science of numbers will make one a mathematician for a like reason. All Christians have learned that petitioning for holiness does not make men holy, and this should arouse them to see that more than prayer is required of them, and that is active service. The problem of redemption from evil is as individual as the problem of redemption from errors in numbers, since the rule is as definitely established in one case as in the other. "We have only to avail ourselves of God's rule," Mrs. Eddy writes, "in order to receive His blessing" (Science and Health, p. 3); and a rule implies conditions to be met and an unvarying standard to which one must conform.

While the desire for a better life necessarily precedes reformation, that end is accomplished only as right desire becomes active. Expecting the Principle of goodness to make one better without the individual's cooperation is not more sensible or practical than to sit beside the bath and expect the water to make one clean. We know that one might sit there until the water dried up without experiencing the cleansing process, unless the desire to be clean was put into effect. In like manner the truth of man's spiritual being and eternal likeness to God, as taught and demonstrated by Christ Jesus and as declared today in Christian Science, is ready to make mankind whole to the degree that they avail themselves of it. Truth is always present to deliver mortals from error, but obviously they must come to know it and understand it and use it in order to realize that deliverance.

It is true that prayer when rightly understood is the means whereby men may commune with God; but generally speaking it cannot be said that it has been rightly understood. Mortals have been content with a mere offering of petitions, in the unreasoning belief that God would act in a way that would render anything else unnecessary. But one's own common sense should lead him to see that the only permanent benefit which prayer can bring to the individual depends upon his conformity with the spirit of his prayer. What prayer is capable of doing for a man must of necessity depend upon the man himself. It may be for him but a dead letter, or it may be the living spirit of progress and regeneration, according to his understanding or his ignorance of the truth about God and of the divine demands upon man.

Mrs. Eddy goes to the very heart of this question when she says, "The longing to be better and holier, expressed in daily watchfulness and in striving to assimilate more of the divine character, will mold and fashion us anew, until we awake in His likeness" (Science and Health, p. 4). Merely wishing to be better than we are, unless it is backed up by the earnestness that seizes every opportunity to improve, is little more than laziness. The demand for watchfulness means that we should not only be on guard against temptation, but that we should be vigilant to manifest the good of which we are capable. The prayer that strives for godlikeness is logically the only prayer of which God takes account.

Human salvation necessarily involves the change from evil to good, and since evil is first mentally conceived of, this salvation must be wrought out through mental transformation. This transformation or purification of human thought is not effected by prayer alone, as prayer is commonly understood. Neither idle longing nor fervent petitioning makes one pure in heart. The evil must be put out of consciousness, sinful thoughts must be corrected, and this calls for mighty wrestling and continued striving, until the perfect ideal is attained. To that end one's daily watchfulness should be to possess a mental state wherein good alone rules. Inasmuch as man is the image and likeness of God, Truth demands that we reach this divine consciousness, and this can be done only through individual goodness.

We should however avoid deceiving ourselves into thinking that we want to be better, when we may be willing to be made better only if some one else will do the work. This is the doctrine of vicarious atonement, and amounts to a covetous attitude, because it would possess what it is not willing to work for. In ordinary worldly matters mortals are called upon to render due service for the things they need or desire, and the case is essentially the same in respect to spiritual things. If we are in all earnestness hungering and thirsting after righteousness, we shall certainly put forth the effort to receive it, and the putting forth of this effort is the scientific sense of prayer.

Longing is but another term for hunger, and one who has experienced a keen sense of physical hunger knows how it affects him when food is available. A hungry person is usually willing to feed himself, and we should manifest the same willingness to partake of heavenly things. Our Master said, "Blessed are they which do hunger and thirst after righteousness: for they shall be filled." If mankind were as anxious to preserve the activity of spiritual desire as they are to preserve a normally active physical sense, and if they would strive as eagerly and industriously to satisfy that spiritual desire as they do to gratify physical appetite, they would progress more rapidly toward the consciousness of better things. The longing, for example, to be more loving and forgiving, when put into effect, will make one more spiritually minded, whereas idle affirmations of the truth about infinite Love only leave us in the grasp of the so-called carnal mind.

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

Opportunities to improve are strewn all along one's pathway. If we pass them unheedingly, it must be that our attention is occupied with those things that are not designed to improve consciousness. Sometimes what we think to be a longing to be better is merely the desire for the more harmonious conditions which pertain to genuine spiritual progress. It is well that we be candid with ourselves on this question, lest our profession of Christianity become a vain thing. The necessity of our salvation is that we go forward from the longing stage to an active watchfulness for and the utilization of opportunities to be better, think better, and talk better than we do. Thus doing, we shall begin, in the words of Mrs. Eddy already quoted, to "assimilate more of the divine character." Some time mankind must learn that no other path leads to the awakening in God's likeness.

A Wednesday Evening Healing

REV. ANDREW J. GRAHAM

In February, 1912, the writer gave in The Mother Church his first verbal testimony concerning his healing. In the preceding year he had been lifted out of a state of great physical and mental distress through the power of Christian Science. The sweetness and beauty and joy of his individual release still dominated his thought and made him feel that this, his own case of healing, was quite the most wonderful on record. He felt that all the incidents leading up to, accompanying, and following it, would loom just as large and important in the thought of others as soon as they heard the story. He began his testimony, and when but a few words, as it seemed, had been spoken, the first reader announced that only half a minute more could be allowed for its recital. This announcement was a stunning blow to mortal man's estimate of his own importance. At once an old lurking root of the "pride of priesthood" (Science and Health, p. 270), which the speaker supposed had been removed forever, rose up, flushed with a touch of resentment, and silently said: "I have been engaged in public speaking for many years and never before have been warned that it was time to stop. Now, in the presence of four or five thousand people am I brought to this pass of humiliation."

The testimony was lamely finished and the speaker sat down. He observed nothing unusual in the audience; the people seemed to pay no attention to the incident; calmness pervaded the vast congregation,—only the one who had testified was having a bitter struggle, but it soon passed. The "Peace, be still" of Christ prevailed, and almost immediately before the mental vision there rose up two stately aspects of Truth, with healing power.

The first said to the human sense of the troubled speaker: "Mrs. Eddy discovered and restored to humanity the divine Principle which healed you of your physical and mental distress. She also established the Christian Science church, and wrote the Manual by which it is governed. In arranging details for the Wednesday evening meetings, including the limiting of time for testimonies, the Christian Science Board of Directors are simply applying the wisdom of the Manual; and why should you feel wounded by the guiding voice of one who has blessed you so much? You should know that the first reader, in telling you that only half a minute remained, instead of reproving, was kindly aiding you to keep the rule." At this point the release of the speaker from his perturbed sense was begun: "And the evening and the morning were the first day."

Then said the second messenger of Truth: "The main object of the Wednesday evening meeting is to make demonstrable truth plain to others who are in need of it. Your testimony was massing such a verbiage of detail that it was obscuring the main fact of healing and largely destroying the value of the message. You could have given the essential facts of your healing in less than two minutes, in such simple outline that the seekers after Truth, the weary and heavy laden, would have heard with understanding and joy, and this is surely the essential thing."

The speaker knew that his healing was progressing, that divine ideas were unfolding to him, and to him "the evening and the morning were the sixth day." He rested from all the discord which he himself had made, and never again will he feel hurt when a Christian Scientist endeavors to help him keep a rule. Neither in The Mother Church nor in any branch church will he be so unmindful of those who are seeking bread as to offer them a grain of wheat in a bushel of chaff. One fact which he did not know on that Wednesday evening, nor for many months after, is now perfectly clear to him, to wit: that the loving and correct thought of that great congregation supplied the channel through which peace came to him in his hour of need.

Seeking a Sign

ANNA W. HOLLEBAUGH

While still a girl in high school the writer well remembers how the principal of the school deplored the fact that the pupils worked the problems in arithmetic simply to obtain the answer as it was to be found in the back of the book. He often said, "If I could only remove the pages with the answers from your books I would gladly do so, then you would have to work to prove the principle of mathematics and not for the answers alone."

Often in later years, having accepted the Principle of being as revealed in Christian Science and attempting the solution of the problems confronting us daily, we have found ourselves again working for the answer, or seeking after the sign, instead of striving to effect the demonstration of the Principle of our work. It is true Jesus said, "These signs shall follow them that believe," but he could not have meant that the sign was that for which we should work; rather it was simply that which would follow faith, that faith which is an understanding of God and man's relation to Him.

Again Jesus said, "My Father worketh hitherto, and I work." Had not our Father worked hitherto, were not His work finished, complete, perfect, and permanent in its perfection, it would be folly for us to attempt anything. But since His work is done, and He made all that was made, then ours is simply to know it, and that it is "from everlasting to everlasting;" "nothing can be put to it, nor anything taken from it," even as the Scriptures declare. No wonder Christian Scientists are known as happy people! How could it be otherwise when they know they are not warring "against flesh and blood," physical conditions, but against false beliefs about life, substance, and intelligence.

In his prayer as found in the gospel of John, Jesus said, "Father, . . . glorify thy Son, that thy Son also may glorify thee," while on page 51 of Science and Health we read, "His purpose in healing was not alone to restore health, but to demonstrate his divine Principle." These statements indicate that our application of Christian Science should not be to outline in thought some one thing or result we wish to have manifested, clinging tenaciously to it until it is brought out materially, and then call it a demonstration, but that the truly scientific way is to seek "first the kingdom of God, and his righteousness," leaving "things" to be "added" in due time.

Why strive so earnestly for "things which are seen"? Why

Digitized by Google

rest on the sense-testimony as true either for good or for evil? The very same sense which says "I suffer," says also "I am well," and the sense which says "I am grief stricken," says later "I am happy." Can one afford therefore to rest or cease from work just because the senses say that all is well?

The only safe course is to look away from the testimony of the senses, whether good or bad, and to locate harmony where it belongs,—outside the material sense of things. Thus we will not be seeking a sign, but seeking to prove a creator whose creation is as immutable and perfect today as when "the morning stars sang together," or as it will be hereafter when there shall be no more pain, and when all tears will be wiped away.

✧

True Baptism

ELMORE W. MURRAY

FREQUENTLY the complaint has been made by those of other churches that the teachings of Christian Science do not insist upon the necessity of the rite of baptism. In answer it may be said that in so far as baptism is regarded and celebrated as a creedal rite or ceremony the objection is valid, but in the light of the teachings and practice of Christ Jesus, Christian Scientists maintain that this sacred rite is most truly administered and received by them, "with signs following."

In the third chapter of Matthew we read, "In those days came John the Baptist, preaching in the wilderness of Judæa, and saying, Repent ye: for the kingdom of heaven is at hand." John also made this acknowledgment: "I indeed baptize you with water unto repentance: but he that cometh after me is mightier than I, whose shoes I am not worthy to bear: he shall baptize you with the Holy Ghost, and with fire." Furthermore, we are told that Jesus in his ministry asserted, "I am come to send fire on the earth . . . But I have a baptism to be baptized with." In the teaching and works of the Galilean Prophet it was clearly made manifest that his baptism for the remission of sins included also restoration of the infirm to health, since he said: "For whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk? But that ye may know that the Son of man hath power on earth to forgive sins, (then saith he to the sick of the palsy,) Arise, take up thy bed, and go unto thine house."

In early life the writer received the rite of baptism by the act of sprinkling. This ceremony is remembered by him today with veneration, for it was a sacred and solemn occasion; yet it entered not into the vital aspects of his life. It did not render him less susceptible to temptation nor free him from tendencies to sickness and disease, but remained in his consciousness only as a beautiful memorial. Years later, after having removed to another state and finding there no church of his own affiliation, he united with another church, and was required by its tenets to receive the rite of baptism by immersion. This, again, was a memorable incident, but it in no way entered into the vital aspect of his career and failed to effect any strikingly visible transformation in character.

About a decade ago, after having suffered many years from physical and mental afflictions believed to have been acquired through heredity and overwork, he was led to seek the help of a Christian Science practitioner, and that day he learned the interpretation of John the Baptist's reference to the baptism which Jesus should administer, and received its benediction. Chronic bowel trouble of more than twenty years' standing disappeared that day and has never since been in evidence. Habits that were neither helpful nor uplifting vanished permanently. Nervous and mental tendencies which had caused great unrest and suffering were speedily overcome. The baptism of fire had been experienced with beneficent results which could not be denied. Some of the chaff of human frailty had been destroyed and the wheat of better nature had been more safely housed in the garner. Moreover, he was awakened to pursue the study of Christian Science, which in turn so illumined his search of the Scriptures that the practical import of the Word became clearly and practically apparent.

This last baptism, which brought resurrection and regeneration, was not administered by an ordained priest, potentate, or other licensed ecclesiastic, but by a simple and humble Christian Science practitioner who claimed no other authority than that given by Jesus to all "them that believe," that they might do the works he did, works made possible only by the right understanding of God and unselfed love for mankind. On page 241 of "Science and Health with Key to the Scriptures" by Mrs. Eddy we read: "The baptism of Spirit, washing the body of all the impurities of flesh, signifies that the pure in heart see God and are approaching spiritual Life and its demonstration."

✧

Our Right Place

WINIFRED E. COWARD

To the human sense, the question sometimes presents itself, Who am I that there should be a right place for me? Do I really exist, or am I but a myth masquerading as something real, only to be cut down without any resistance at some unknown moment in the future? Christian Science, however, enables us to prove that each of us has true being, and we can take one simple means of proving this. We all know that at some time in our lives we have done some good act, accomplished something good, and that we have seen the results. Then if we have expressed good at any moment, at that instant we were reflecting God, for good is God's humanly expressed reflection. A single expression of God through us reveals the fact that we could have many such experiences, that we must have real being in good, God. A recognition of this truth opens to us a vision of the fulness of our true living, when we shall express God every moment. On page 301 of Science and Health, Mrs. Eddy tells us that spiritual man "reflects the divine, which constitutes the only real and eternal entity." She also says (p. 300) that "God is revealed only in that which reflects Life, Truth, Love."

How did we come to perform any act which expressed good? On examination we find that it was the direct outcome of a thought of good. No mortal sense could have conceived it. It is the divine Mind that flashes its light upon the awakened and responsive human sense.

True living is therefore the result or expression of God's thoughts. Divine Mind alone conceives those thoughts; no one knows them but Himself, before they are reflected through man. God is the source of all real supply in every imaginable sense; hence the folly of taking useless, anxious thought for the future. The divine Mind is perfect, the sole controller of its own thoughts, which fill the universe and accomplish the will of perfect Love in just the way it desires. Why then do we attempt to outline even for the next moment? We could not fashion it in such perfect form as God, the divine Mind, does. It is only mortal mind that outlines materially in its attempt to imitate or usurp the prerogative of divinity.

Many times we are tempted to question the rightfulness of the situation or surroundings in which we find ourselves. In reply to such temptation, as in all cases where mortal mind speaks and puts forward its baseless claim, we do well

Digitized by Google

to be still, and as simply as possible declare the facts which we know are true. Our lives, in so far as they express reality, reflect the thoughts of God, good; and it is inconceivable that God could make a mistake and express Himself in the wrong place, in the wrong work, or at the wrong time. We must be, we are, in our own special and rightful place in the universe, for God's ideas compose the universe, and He is the only power and presence. This truth declared and understood,—that God's thoughts, expressed through us, are our life and the only power, and that He is uninfluenced by circumstances,—will without doubt transform our view of the whole situation.

The activity of Truth revolutionizes our appreciation of the things about us, opening up fresh channels of interest, granting us clearer insight, revealing happiness and peace whose presence we had never even suspected. Mists have been dispersed by the sunshine which burst forth when we turned our faces to our Father in a simple acknowledgment of the greatest of all privileges,—that of expressing the thoughts of the one perfect and supreme power.

Light from the Lessons

INEZ TRETHEWEY

An illustration of how Truth works in our consciousness, if we are faithful in doing our part, came to the writer while studying one of the Lesson-Sermons. One of the references was the passage from page 516 of Science and Health which contains the lines, "Love, redolent with unselfishness, bathes all in beauty and light. The grass beneath our feet silently exclaims, 'The meek shall inherit the earth.'" This reference being a familiar one, there was an inclination to hurry through it, but the desire to be faithful predominated, and the reference was read each day slowly and thoughtfully and with an earnest desire to know the truth.

On Friday morning of the week, the writer awakened with a sense of Love clearly defined, and the revelation was so complete that she was uplifted into a pure, sweet sense of God's allness. Then came the thought as to whence this experience came, no special effort having been made to realize it, but later in the morning, as she sat in a sunlit corner and again studied the Lesson, she understood. The reference, which had been perused daily and considered conscientiously, was now read in the new light of a higher understanding of divine Love.

Words are inadequate to describe the wonderful brightness and glow which surrounded her, for, as our Leader has said, it is difficult to express spiritual ideas through human language, but it meant Love as intelligence, power, and peace. It was Love as Father-Mother, All; and the student felt that this Love sheltered, shielded, and comforted, not only herself but all humanity, and God's creation stood apart from all error, entire and complete. Remembering then that the subject of the Lesson-Sermon was Love, she saw how, during the days past, its spiritual import had been working in her consciousness unknown to her. She then remembered also how the second week before she had awakened on the last two mornings with a similar sense of the allness of God as divine Life. On turning back the pages of the *Quarterly* it was found that the subject for that week was Life.

To young students who feel at times that they are not growing spiritually, this may be an encouragement, an incentive to more faithful study of the Lesson-Sermon, as it was to the writer. If we are earnestly desiring Truth and are doing our part to the best of our understanding, we are rewarded, and oftentimes the reward is rich in its unfoldment of Mind's resources, for, as we read in the first epistle to the Corinthians, "eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him."

Gift of Producing

CASSIUS M. LOOMIS

When in a moment of spiritual awakening so-called genius attempts the impossible, as it often does, aspiration meets its most serious commitment. It has been said that the products of human thinking and ingenuity approximate only in part what the truly ardent student conceives during his moments of exaltation. In other words, the musician, sculptor, poet, dramatist, or inventor sees deeper than the hand, chisel, or pen can reach. It must be true, according to the teachings of Christian Science, that the real statue, melody, play, poem, or invention exists as an idea in Mind before a stroke of work has been done toward bringing it into material visibility. If so, it is of itself and as a spiritual concept, perfect. Is it not this faultless work of art that the genius frequently sees, just beyond his mental grasp?

The wonderful advances made in artistic production in recent years promise a much greater unfoldment in the realm of beauty and harmony. That the attainment of a higher level in all human endeavor is the goal toward which we are striving, is self-evident. Suppose every master of the high arts knew, beyond all doubt, that the work to which he aspires does exist, and always has existed, in the universe of Mind. It has been a fact, sometimes a mournful one, that the genius of his day weeps because he has failed to realize the limit of his inmost seeing and feeling; but even while he weeps the world may be applauding his work, though he sits alone in despondency.

Because the perfect work exists as a model, is it possible genius will ever be satisfied until it can more nearly approximate the truly real? A writer of songs once forbore to offer his lines to the world, because every day suggestions came to improve them a little here and a little there. After a time it seemed quite impossible to make further changes, and, although the composition even then did not meet with his fullest approval, its nearness to the ideal song made it instantly popular when it was given to the public. Had the work been put forth in its unfinished state, it might have had no reception whatever.

What does this teach? It teaches that in all work, be it mental or otherwise, the highest model must be chosen and followed with all possible diligence, else the day's work is indeed incomplete. Whence cometh the true light of all perfection? In James we read: "Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning." How blest a commission is this! A gift from God can have no imperfections. This truth, when obediently followed, lifts all human striving to a higher plane of accomplishment; and thus the faithful doer of the word will never be satisfied with an indifferent or incomplete mastery of his chosen art.

Let the author, for example, instead of attempting to give out his own imperfect concepts, reach out for spiritual ideas, that he may express them as nearly as possible. The one Mind can and will furnish the thinker with ever deeper and holier words of truth. Thus the writer need not set up his claims to independent authorship, since the scribe holding the pen is but a servant or channel through whom God speaks

Digitized by Google

to man. Under this gospel personal greatness has no place, and the humble servant who sends the article he has produced out into the atmosphere of thought, soon forgets it in his willingness to forge ahead toward the next inspired message that shall be given him.

To keep one's self in harmony with the perfect concept of creation, to be satisfied with none but the highest and best, must assuredly round out to fulness the career of him who lives the life of the idealist in a practical way. Self sinks to oblivion when inspiration leads. The high lights of history furnish us many proofs that the obedient, prayerful wooer of the muse, the builder of the mechanical model, or the successful chiseler of marble, dwells for the moment in an atmosphere of self-immolation when a ray of inspired and holy light comes from God's ample storehouse.

It must have been true that even our Master realized his inability to reach at once the ultimate of the healing art when he said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." A promise of greater works than he had yet accomplished meant much; but does it not show that perfection is to be aspired to, though not yet achieved because of our beclouded mortal vision. Still, what Jesus knew of the perfect model must have been clearly discerned to have evoked a promise from him so positive and forever operative. First a perfect model, then a spirit of consecration, patience, and trustful devotion, and we need not trouble ourselves about the ultimates.

On page 360 of Science and Health, our Leader tells us: "Either Spirit or matter is your model. If you try to have two models, then you practically have none." Should not this clear statement of fact give renewed hope to the gifted student? One model, one desire for the best at any sacrifice! Christian Science is certainly changing the belief of mere personal effort to achieve into an absolute faith in God and a knowledge of His countless ways of unfoldment. The specially gifted individual no longer needs to delve so strenuously in his work that the Father's beneficence, His unfailing loving-kindness, becomes obscured and uncertain. Knowing his real self to be perfect, and according the same perfection to all other true individualities, instead of aspiring to become a shining light far above his fellows, he becomes a cosharer in the limitless supply that belongs to all. All true work, absorbing and elevating, touches the hearts of men, and thus another drop of solace flows from that fountain of good which never fails.

✧

[Written for the *Sentinel*]

Trinity

VICTOR BUCHANAN

BEYOND the sun that floods the earth with light
And brings the day to dawn on mortal sight,
Beyond the moon that glorifies the night
And myriad stars that make the heavens bright,
Is Life eternal, known to us as God.

Above the plane of error's vain display
And changing mortal law's tumultuous sway,
Above perplexities from day to day,
With sin's false pleasures thick along the way,
Is Truth unchanging, and this Truth is God.

Above the stroke of malice and of hate,
Of treachery and greed insatiate,
Of dreaded failure and of ruthless fate,
Above the path where dangers lie in wait,
Is Love unfailing, and this Love is God.

Selected Articles

[Ezra W. Palmer in *Trinidad* (Col.) *Chronicle-News*]

A speaker from New York city advertised that he would lecture upon Christian Science, which he designated as an "anti-Christian cult." Fortunately for the modern world each individual at the present time has the blessed privilege of determining for himself whether any religion is or is not anti-Christian, but the attempt to decide for an individual what system of religion or worship he shall accept is a species of intolerance.

In advertising Christian Science by his statement that it is anti-Christian, the speaker is merely expressing a personal opinion, an opinion not determined by the standard set by the Founder of Christianity. Jesus gave this test of Christianity: "By their fruits ye shall know them." The statement that Christian Science does not agree with the theological conceptions of this critic by no means supports the conclusion that it is not in harmony with the teachings of the Master.

Christian Scientists ask that Christian Science be judged not by comparison with creeds and dogmas, but by the results obtained in healing the sick and awakening the sinner, and by the better and more spiritual lives of its adherents. Surely this is what the Master meant by declaring that "fruits"—results—were the test of Christianity. Can the critics of Christian Science point to similar happy results from the practical application of their religious views? If not, would it not be well for them to investigate and accept Christian Science, which proves its conclusions in the lives of its adherents, rather than subject it to misrepresentation and abuse?

✧

[W. D. Kilpatrick in *The Journal*, Detroit, Mich.]

It would hardly seem possible that a minister of the gospel of Jesus the Christ should cherish any desire to discredit the religious convictions of his neighbor, no matter what those convictions might be. If the critic imagines for one moment that he is accomplishing any ill to Christian Science or any good to himself or his church, he might well take a brief glance over the history of the Christian Science movement and consider what this faith has gone through in the way of persecution.

Christian Science, the reverend gentleman to the contrary notwithstanding, is in strict accord with the teachings of the Bible, as may be ascertained by a study of its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

The gentleman's objection that Christian Science does not teach the existence of a personal God will hardly find support in the creed of the church for which he stands sponsor. The definition of God contained in the Westminster Confession of Faith, which comprises part of our critic's creed, could hardly explain a more impersonal God. It is as follows: "There is but one only living and true God, who is infinite in being and perfection, a most pure spirit, invisible, without body, parts, or passions, immutable, immense, eternal, incomprehensible, almighty, most wise, most holy, most free, most absolute, . . . most loving, gracious, merciful, long-suffering, abundant in goodness and truth, forgiving iniquity, transgression, and sin. . . . God hath all life, glory, goodness, blessedness, in and of himself; and is alone in and unto himself all-sufficient . . . he is the alone fountain of all being, of whom, through whom, and to whom, are all things."

The definition of God on page 587 of the Christian Science text-book is as follows: "The great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle;

Digitized by Google

Mind; Soul; Spirit; Life; Truth; Love; all substance; intelligence."

When any person undertakes to emulate the Master in all his ways, to love his neighbor as himself, to do unto others as he would be done by, to return good for evil, and to heal the sick as well as the sinning, as Christian Science teaches we should do, he will have little time to spend in denunciation of the religious convictions of his fellow man.

✧

[Mrs. Mary Henderson Toms in *Knoxville* (Tenn.) *Journal-Tribune*]

A number of tracts attacking Christian Science have recently been circulated in our city. They have been distributed in large numbers by one of the Christian denominations, not only to members of its own sect, but to those who it thought were interested in Christian Science. It is to be regretted, in this day of enlightenment, that a Christian denomination should stoop to attack those who are quietly attempting to worship God aright, and to remain silent would not be just, especially when either through ignorance or intolerance the source of these attacks misrepresents the teachings of Christian Science. Practically every quotation given in the above-mentioned tracts consists of only a few words separated from their context in such a manner as to rob them of the meaning intended to be conveyed by Mrs. Eddy. By following such methods the writings of any author may have a meaning placed upon them to suit the preconceived notions of the critic.

Through earnest and thorough study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, in connection with the Bible, students of Christian Science have proved the truth of its teachings by healing themselves and others of sorrow, sin, and sickness, and many testimonies of the healing efficacy of Christian Science are given in the church in our city. On page 114 of "The First Church of Christ, Scientist, and Miscellany" Mrs. Eddy writes: "Christian Science teaches: Owe no man; be temperate; abstain from alcohol and tobacco; be honest, just, and pure; cast out evil and heal the sick; in short, Do unto others as ye would have others do to you." When all the world lives according to this rule, as all Christian Scientists are striving to do, what more can be asked or required?

✧

[J. Edgar Fielding in *The Observer*, Sarnia, Ontario, Canada]

There is nothing in Christian Science to warrant the statement that it teaches that sin does not exist to mortal sense, or that it is imaginary. Mrs. Eddy teaches that sin is responsible for the suffering and misery—the sickness, disease, and death—that is so prevalent in the world. She also insists that they who sin must suffer, and that this suffering will continue so long as the sin lasts. But sin is unreal in the sense that it is not eternal, for the Scriptures declare in Revelation that "death and hell were cast into the lake of fire,"—destroyed by the power of Love, which destroys everything unlike God, good.

The statement that Christian Science denies the value of real prayer is so far from the fact that no one who has the faintest understanding of its teaching would think of accepting it. If our friend would read the chapter on Prayer in Science and Health with anything approaching an unbiased thought, he would, I am sure, find that it coincides with the teachings of Jesus. Does our friend think that because Christian Scientists do not indulge in audible prayer they do not pray aright? Jesus said, "But thou, when thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father which is in secret; and thy Father which seeth in secret shall reward thee openly." The value of prayer is proven by its results, and it is through the prayer of Christian Science that the sick are being healed, the sorrowing comforted, and the sinners reclaimed. The results are too evident for any one successfully to gainsay.

The statement is also made that Christian Science is the shadow, forerunner, and herald of anti-Christ. Anti-Christ is that which denies and opposes the Christ. Jesus said that those who believed on him should do the works that he did—heal the sick, give sight to the blind. Now, could any body of people do those works while living in opposition to and denying him? The question then is, Does Christian Science deny or affirm the Christ-teaching? Christian Scientists point to the fruits of their work as an answer to this question.

✧

[Ora S. Drewry in *Cincinnati* (Ohio) *Times-Star*]

A point made by our clerical critic is that all cheer and healing in Christian Science could be found outside of it. Why is it not found? The burden of proof is on the critic. The Christian Science churches are filled to overflowing every Sunday morning and Wednesday evening with people who are seeking and finding the cheer and healing they have not found elsewhere.

Most of the criticisms made by the reverend gentleman are unsupported statements, and not founded on facts. When he refers to Christian Scientists as a sect, with emphasis on the healing, he fails to remember that Jesus commanded us to preach the gospel and heal the sick. To make a man better morally is to make him more healthy physically, and this spiritual healing is the true healing of sickness. No doubt the critic believes and teaches that the Christ can transform a man "dead in trespasses and sins," and yet he cannot see how this same Christ in consciousness could heal a toothache! It is a rather hopeless position to take.

Scarcely a criticism appears on the subject of Christian Science that does not include an allegation that Christian Science teaches that all creation is illusion, and that man has no body. Christian Science declares in the words of the Master, "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit." It recognizes the creation of God as the spiritual man and the spiritual universe, and teaches one to know man as the Bible says God made him, in His own image and likeness.

We are constrained to ask the reason for all this criticism against Christian Science. The Christian Scientist recognizes that various churches exist, and will continue to exist and carry out their noblest purposes so long as there is a need for them. For nearly half a century Christian Science has proven what it is and has demonstrated its right to exist. Its followers are peaceable, law-abiding citizens, and have a right under the stars and stripes to worship God according to the dictates of their own conscience. Their ranks embrace well-known business and professional men, eminent scholars and statesmen, physicians, and even those who have formerly been ministers in other churches. Why all this vituperation?

✧

["Investigate" in *The Telegram*, Portland, Ore.]

I am not a Christian Scientist, but I would like to ask the clerical critic if he ever attended a Christian Science meeting and if he knows anything whatever about the Christian Science creed. If he ever did attend a meeting, he will agree with me that he never saw a more intelligent body of people in any audience in any community. If Christian Science is wrong and condemned to perdition, why is it that the number of its adherents is increasing by leaps and bounds without solicitation, and that the most enlightened and best people of

Digitized by Google

the country are becoming interested? Christian Scientists never ask any one to join their church. How is it with other Christian churches, where the members are dissatisfied and are getting up where they can see the light?

Let us be reasonable. Let us have religious liberty and worship according to the dictates of our own conscience, and let the other fellow alone. If all our members leave us because they are not satisfied, why let them go, and after a while we may see the light and follow them. No church will save us. It is not necessary to belong to any church to be saved. We can do good anywhere and everywhere, and that is my real religion. "God helps them that help themselves."

✧

[F. Elmo Robinson in *The Journal*, Portland, Ore.]

The writers in two published letters disagree with a Christian Science lecturer who in the course of his address made the statement that "Jesus never claimed to be God." Had these friends read a full text of the lecture I am sure they would not have been led to believe that Christian Scientists deny the divinity of the Christ. There are no people on earth who believe more unqualifiedly in the divinity of the Christ than do Christian Scientists. They, however, apply the name Jesus to him who was born in Bethlehem and crucified on Calvary. In other words, the name Jesus is applied to the human nature of Christ Jesus, which was derived from his mother Mary. When referring to this nature the Master repeatedly spoke of himself as "the Son of man." Christian Scientists apply the name or title Christ to the divine nature which Christ Jesus derived from God and which is coexistent and coeternal with God. When alluding to his divine nature our Saviour spoke of himself as "the Son of God."

Christian Scientists believe, in accord with the teachings of the Scriptures, that the human nature, or the man Jesus, is not God, but they do not thereby deny the divinity of the Christ. To them the Son and the Father cannot be identical —the Son of God cannot be his own Father. This is indicated in the Master's statements, "My Father is greater than I," and "I can of mine own self do nothing." All of the Scriptural quotations, therefore, cited in the letters of these correspondents are accepted without question by Christian Scientists.

✧

[Gordon J. Murray in *Phoenix*, Muskogee, Okla.]

One might think from the recent remarks of an evangelist that Christian Scientists wilfully close their eyes to sinful conditions and without trying to overcome or destroy them pass on with the superficial remark, "There is no sin;" yet nothing could be farther from the truth.

We start in Christian Science from the standpoint that God created all, and "saw every thing that he had made, and, behold, it was very good." For a thing to be real, then, it must be God-created; all else is but the illusion of material sense. If evil is an absolute reality, it must be of God, and being created by God, it must, in accord with the passage of Scripture just quoted, be "good." Then why try to destroy a thing that is good and God-created? How absurd! God never created evil; therefore we find that in its last analysis evil, being outside of God's creation, is an unreality that only seems to be real to ignorant human consciousness. In its nature it can best be likened to darkness. We readily prove darkness to be unreal, for when a light is brought to the darkness the darkness is dispelled; but all the darkness in the world cannot lessen in the slightest degree the tiny rays of a candle. Jesus came "to give light to them that sit in darkness;" and Christian Science is holding aloft that light which illumines human consciousness and begets a spiritual understanding of the statement of Paul when he said, "There is no power but of God."

By disproving the claim of sin to be real we are better able to advance and destroy it. This also applies to all manner of sickness, for we find that sickness is based on the sin of recognizing a power not of God. On page 357 of our textbook, "Science and Health with Key to the Scriptures," Mrs. Eddy states, "If what opposes God is real, there must be two powers, and God is not supreme and infinite;" then she asks this very pertinent question: "Can Deity be almighty, if another mighty and self-creative cause exists and sways mankind?"

All authorized books and literature of the Christian Science movement are designed to bring out the spiritual meaning of the Scriptures, to point out to humanity the absolute unreality of sin, the penalty of believing and indulging in its seeming reality, and the way out of its bondage. Again quoting from Science and Health, we read: "Sin kills the sinner and will continue to kill him so long as he sins" (p. 203). It is only as we forsake sin and get closer to God that we are able to understand and spiritually discern the nothingness of sin. It will be impossible for humanity to comprehend this until men give up their belief in a power other than God, for Paul says, "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned."

✧

[A. E. Brandt in *Reading* (Pa.) *Eagle*]

Every page of Mrs. Eddy's many books shows a studied desire to give to the world an understanding of spiritual truth and nothing else. Mrs. Eddy attacks no one's religion nor does she misrepresent it. Christian Science has reached the point where the most intelligent and devout stand in awe of it, for they see in it that which lays the axe at the very root of the tree of evil, a power over sin and disease which does not exist "in every human body," as our critic is reported to have said, nor in any human body, but only in that Mind which was in Christ Jesus, the Mind which demonstrates matter to be a phenomenon, even as modern physical scientists now admit it to be.

Christian Science vindicates itself to every sincere, humble seeker for Truth, in the overcoming of sin, sickness, disease, want, and woe of every description. The proofs of this fact can no longer be denied, and the world is rapidly escaping from that blind prejudice which has so long obscured the saving truth. Mrs. Eddy unselfishly gave her discovery to a waiting and hungry world, which was too darkened at first to comprehend her spiritual light, but which is now, in practically every country of the globe and in an ever increasing ratio, acknowledging the truth of her teaching.

✧

[Willis D. McKinstry in *Parsons* (Kan.) *Sun*]

Christian Science does not teach the worship or following of any personality, but it sets forth the fundamental fact that God is the Principle and law of being, who creates, governs, guides, protects, and provides all sustenance for that which exists in fact. Christian Scientists turn to God in every time of trouble, realizing, as did the revelator, that "now is come salvation, and strength, and the kingdom of our God, and the power of his Christ." They love and esteem Mrs. Eddy because they have been set free from the bondage of disease and sin through her clear, spiritual interpretation of God's word as revealed in Holy Writ, but they do not follow or look to her personality for guidance. Mrs. Eddy's writings constantly and unswervingly point to Christ as the Messiah, or saving power.

Editorial

Educating the Public

EFFORTS of the doctors to bring about compulsory medical examination of school children and others are not on the wane, and it is quite evident from newspaper reports that where they have succeeded in having this work done, little if any regard has been paid to the wishes and protests of parents, or even to the simple dictates of modesty. We quote from an editorial in the *Cedar Rapids* (Iowa) *Republican* as follows:—

In New York city the health department is demanding that "each pupil at the time of his or her admission to a public school, or free school supported in whole or in part by funds obtained from direct taxation," shall be examined "in the absence of all clothing" by a "duly licensed physician authorized to practise medicine in the state of New York."

We must confess that we do not like this sort of business. It is not exactly compatible with our ideas of freedom. We are foolish enough to presume that most parents in America are still wise enough and good enough as parents to look after the welfare of their own children. Most parents have about as much sense as most doctors. Of course, we must admit that there are many parents who are not only ignorant, but who lack the instincts of parenthood. That there may be some neglected children should not subject all alike to the attentions of a public inspector of children's bodies.

In Newark, N. J., the mothers of high school girls have assumed a hostile attitude toward the compulsory doctors, and we do not blame them. They ought to start a riot. Every man who holds a certificate from the state is not either professionally or morally fit to strip another man's daughter, even to the waist, as the rule seems to be in that state. The Newark women allege that absolutely no regard was paid to the modesty of the girls. The state doctors took the girls in groups, after the fuss had been made about it. These officious doctors refused to pay attention to the protests of parents, even when they sent with them certificates from their own family physicians.

It is not all the public against the doctors, but it is the doctors against the doctors. Case after case is cited in which the family physicians have stated that the children sent home as suffering from this or that alleged defect or disease, had no such defect or disease. The diagnoses of the public doctors were not worth the paper on which the results were noted. We have here in Iowa already recorded the statement of an eminent oculist who found that five out of six children sent to him by a public inspector to be fitted for glasses had no appreciable eye defects and he refused to put glasses on them, for glasses might only produce the defects that the inspector found.

It seems to us that it is a system of putting the whole public at the mercy of doctors who happen to get into certain offices. We are not entitled to be thus delivered, and our children also, to doctors who are not of our own choosing. Some of us do not want any doctors at all, either for ourselves or for our children. And we have the knowledge that all medical knowledge up to date is more or less experimental and speculative. The science of medicine is not yet an absolute science. The findings of doctors are at variance. One finds this, and another that, and it is seldom that any two are agreed. The chances, therefore, are that neither one may be correct, and to have compulsory inspectors and then compulsory treatments—for unless the findings of the inspectors are heeded the children cannot be returned to the schools—is not only unscientific but it is outrageous.

This seems to be a very temperate statement of the situation, but one which should bring the matter home to every parent, and in fact to every person who is in the least interested in maintaining personal rights. There has been no demand on the part of the public for medical examination of this kind, nor in fact for the general medical legislation which the doctors themselves have been so urgent in trying to put through. The theory upon which they have acted in these matters has seemed to be that the wishes and the rights of the public are of no importance, and that they, being created a race of supermen by the diplomas of allopathic medical schools, are entitled to absolute dominion over their fellow beings. As a certain representative physician expressed this sentiment some time ago, "The public must be educated to take our advice in medico-political matters as they do our pills and powders, without knowing of their contents or effects, but with an abiding faith in their potency."

The actual facts are, however, that there is no race of supermen who should be given power to abrogate the rights of other men, and that those who have received a medical diploma are just the same as other mortals and subject to just the same frailties and lack of judgment as are these others. The system which they practise is empirical; it is in a constant state of change, and according to published statements of prominent men of their profession, only about fifty per cent of their diagnoses are correct.

The object of all this medical legislation and medical examination is to compel the public to submit to a particular kind of treatment, whether it is desired or not, also whether it is effective or not. Would it not be as logical and as just for the oatmeal trust, if there is such a trust, with prospective profits in view, to demand legislation which would compel every man, woman, and child to eat at least two pounds of oatmeal every day, and empower the agents of the trust to enforce the law *vi et armis?*

ARCHIBALD MCLELLAN.

Faith Not Credulity

THERE are perhaps not many who take the trouble to discriminate between faith and mere credulity, which is defined as "a disposition to believe on slight evidence." Many people who ought to know better speak of faith, especially when it is of the active kind, in a sort of apologetic if not a condemnatory way, and yet the Bible tells us that without faith it is impossible to please God. To the Christian Scientist this does not mean a theoretical belief about God and His Christ, but rather a firm conviction that "with God" all good is possible, and that to prove this, unwavering reliance upon divine Principle is required. The possibilities of good as the activity of divine Mind are being proved today through Christian Science as they have not been since the days of Christ Jesus, and it rests with all who profess to be his followers to give the proofs which he required in saying, "When the Son of man cometh, shall he find faith on the earth?"

When Mrs. Eddy says (Science and Health, p. 430), "Faith should enlarge its borders and strengthen its base by resting upon Spirit instead of matter," she shows us how to distinguish between faith and credulity. The latter places its dependence upon material evidence, and when it meets with constant disappointments, as it must, it becomes cynical and rejects without any sound reason whatever points away from the beaten path of mortal experience. As of old mortals cry out, "Who will show us any good?" and then turn away without investigation from that which at least promises to lighten the burdens of humanity. The writer well remembers the slighting manner in which a great English newspaper, a good many years ago, referred to the telephone as a possible public servant, saying that it would never be more than a toy. It is not only interesting but helpful to observe how we ourselves and others are disposed to be stupidly credulous or as stupidly incredulous when we ought to test by reason and revelation whatever is presented as a new idea.

To the student of Christian Science the sixteenth chapter of Mark's gospel is a wonderful record of the triumph of the faith which rests upon spiritual facts. The thrilling story of the resurrection is told in words that should touch every heart, for no one lives in the truest sense until he has made their promise his very own. We are told that when Mary Magdalene, who had been healed by Jesus, carried the glad tidings of his resurrection to the mourning disciples, they "believed not." The testimony of two others who had seen the risen Master was likewise rejected. Credulity was not

Digitized by Google

equal to this occasion, and the apostles' dawning faith had seemingly "fallen asleep." Mortal sense was loudly clamoring, "Believe no more," yet the destinies of the race were hanging upon that hour. Then, as with the quickening tones of the archangel's trump, came the words of the Master himself as he stood beside the eleven and reproached them for their hardness of heart, "because they believed not them which had seen him after he was risen." Had not all his healing work led thought up to the point of acceptance of Mary's story? Had he not told them that he would pass unharmed through the awful experience of the crucifixion and appear to them on the third day, and had they not seen him disprove the reality of death in the case of the widow's son, of Jairus' daughter, and more wonderful still in calling Lazarus from the tomb where he had lain four days?

All Christian people in varying ways accept the story of the resurrection, but what of the Christ-teaching as to the "signs" which should follow the acceptance of the truth? Mere credulity turns its back upon them and cries, Impossible! Could any one drink unharmed some "deadly thing"? No, answers mortal belief. Can the sick be healed in the name of Christ without the use of material means? Let mortal belief answer as it will, the Christian Scientist answers, Yes, and then turns to these inspired words of his text-book (p. 410): "The more difficult seems the material condition to be overcome by Spirit, the stronger should be our faith and the purer our love." None too often can we pray as did the disciples, "Increase our faith"!

ANNIE M. KNOTT.

Consenting unto Death

In his splendidly daring self-defense before Festus, Felix, and Agrippa, St. Paul relates the story of the supreme event of his life, and in evidence of the wondrous transformation which it effected he cites the bitterness of his past bigotry as manifest in the fact that when the saintly Stephen was stoned, he was "standing by, and consenting unto his death." This consent of the apostle to the rightfulness of death is explicable only when we remember the depth of his educated ignorance, and to one instructed in Christian Science the present practically universal affirmation of its naturalness and inescapability is seen to be due to the same fact. True, all men struggle to postpone the date of their demise, but today very few even of the followers of him who said, "Whosoever liveth and believeth in me shall never die," have any least thought that death can ever be escaped from.

Christian Scientists have come to understand the unreality of sin, and since this involves the unreality of every sequence of sin, it is quite as illogical for them to consent to the normality of death as it would be for them to consent to the normality of sickness. The thought that life has an end is now seen to be a child of the belief that it is the product of material organization, which belief is forever put away in the idealism of Christian Science, so that consent to death becomes equally unphilosophical and unchristian. Nevertheless, how often have we found ourselves succumbing to this down-hill drift of thought and expectation, yielding to the world's insistence that death must come; and how constantly we need to remember Christ Jesus' words, "I am come that they might have life, and that they might have it more abundantly."

In truth there is, there can be, no death, and no thought of it in Life, for these are contrary; and this right sense of life, our devotion to the concept of it revealed in Christian Science, determines our spiritual status and efficiency. No man is truly alive who consents in any way or degree to death. Respecting this, Mrs. Eddy inquires in Science and Health (p. 216): "Who shall say that man is alive today, but may be dead tomorrow? What has touched Life, God, to such strange issues?" He alone who links himself to Life in persistent thought of Life's immediate presence and eternality, has assumed the Christianly becoming and the healing attitude toward death.

Here we should awaken to the fact that we are consenting to death whenever we consent to the rule of any habit or purpose which is unjust, unethical, or unideal, and that it is through such, for the most part unintentional, consent that selfish political rule has always effected its stupendous ills. In the sanguinary strife going on today, few at its beginning had any ill will toward others or any desire to injure them. Indeed it is probable that despite all the enmity, hatred, and false patriotism which the struggle has incited and nourished, most of these armed millions are revolting in their hearts against the cruel, unbrotherly things which they are forced by the situation to do. Sanguinary world struggles would seldom occur if the great body of the people were consulted. Such struggles have usually been precipitated by a relatively trivial number who have had it in their power to dominate the many. If we would not become a party to the crimes of world strife, then we must not consent to its beginnings, in any place or at any moment. The only innocent life is that which is an energetic and continuous protest against all evil, a determined "Thou shalt not" to every suggestion of wrong in deed, purpose, or thought.

Here we fail. Consent to evil, hence to death, is expressed in all the listlessness, indifference, passivity of lazy human sense. We have allowed ourselves to become so accustomed to injustice and abnormality that ofttimes we do not even recognize it as such. Our attitude is the child of habit rather than of alertness to truth, the assertive right-knowing which meets "every adverse circumstance as its master" (Science and Health, p. 419). This attitude is the mother of every human sickness and suffering, and from its discreditable and degrading torpor the Christ-idea has come today with this appealing mandate found in Science and Health (p. 393): "Rise in the strength of Spirit to resist all that is unlike good."

JOHN B. WILLIS.

A New Concordance

The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1,103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health.

The publisher is now ready to receive orders, and shipments will be made as promptly as possible. Single copy, $6.00; in lots of six or more to one address, each $5.50.

Address Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Massachusetts.

Lecture in The Mother Church

The First Church of Christ, Scientist, Boston, Massachusetts, announces a free public lecture on Christian Science by Willis F. Gross, C.S.B., a member of the Christian Science board of lectureship, in the church edifice, Falmouth, Norway, and St. Paul Streets, Back Bay, Friday evening, Dec. 8, 1915, at eight o'clock. The public is cordially invited.

Among the Churches

Current Notes

LIVERPOOL, ENGLAND.—Is it not surprising that Wednesday [Sept. 15], being a half-holiday, with service performed in every Church of England Church, the churches are empty with the exception of a couple of dozen or so? . . . There is one church in Liverpool, the Christian Science Church, which has been full to the door of earnest Christians these long summer evenings,—not old and decrepit people, but all young and healthy people.—W. M. in *The Liverpool Echo.*

MANCHESTER, N. H.—While the Christian Science Church on Harrison Street cannot perhaps be properly classed as among the strictly new structures of the year, the elaborate and extended nature of the additions and changes that have been made in the original building is such that it is virtually a new edifice after all, and a most attractive and sightly one. The original building, constructed before the Christian Science faith had attained to its present vast proportions here or elsewhere, is made to serve simply as the front of the present building. In the rear of it, and as the main part of the auditorium of the church, has been built an addition 42 by 28 feet in size. This auditorium gives a seating capacity of approximately eight hundred. The construction cost of the added portion of the church, exclusive of any of the interior furnishings incidental to the equipment, was in the neighborhood of nine thousand dollars.—*Manchester Leader.*

LOWELL, MASS.—Although not generally known, the House of Prayer on Walker Street has entered upon a period of renewed usefulness, the place having been bought a few months ago by a portion of the Christian Scientists in Lowell, who have formed themselves into a new society and are carrying on the work with zeal.—*Lowell Telegram.*

FRESNO, CAL.—Working drawings are practically completed for a brick and stucco church to be erected for First Church of Christ, Scientist. The edifice will cost forty thousand dollars, exclusive of the furnishings, and will seat nine hundred persons.—*Architect and Engineer.*

LONDON, ONTARIO, CANADA.—At the Western Fair, London, 826 pieces of literature were distributed as follows: 471 *Sentinels*, 121 *Journals*, 7 *Heralds*, 223 *Monitors*, and 4 pamphlets.—*Distribution Committee.*

The Lectures

Marshall, Mo.

In introducing William R. Rathvon, who lectured on Christian Science, Manley O. Hudson, of the law school of the University of Missouri at Columbia, Mo., said in part:—

It is indeed a pleasure to me to be permitted to preside at this meeting and to introduce the speaker of the evening. Though I am not a Christian Scientist, I am interested in Christian Science as a part of one of the big movements of our time. If we should suddenly be transported to the planet Mars, I wonder what it would be that would most interest us there. Would it not be the difference between the thinking of the people there and our own? Surely, the really distinguishing thing about any society is its thinking. The Missouri of today is vastly different from the Missouri of yesterday, or the Turkey of today, only because of the difference in ideas.

Conservative people are prone to conclude that because an idea is firmly intrenched in society, it must necessarily be right. How frequently does one hear it argued in defense of an idea that it is generally accepted as true. It would be easy enough to point to conspicuous instances in history which refute such an argument. Why do people who believe that ideas are wrong so frequently believe they cannot be righted? Why do they so frequently refrain from doing anything to change them? You will hear a man say tomorrow that war is futile but that it will take a hundred years to convince the world that this is true; and his conclusion will be that because it will take a hundred years nothing should be done now. Then he makes it a job of more than a hundred years. His is really a gospel of the futility of effort, which no optimistic person can accept.

Now the Christian Science movement represents a gospel of the efficacy of effort. It recognizes what all of us will admit to be true, that progress is to be measured by the extent to which mankind succeeds in gaining control over matter and the forces of nature. The physical world has long held the spiritual world in bondage, and all of us should welcome any attempt of serious-minded men and women to help mankind to loosen the bonds. Right thinking cannot be too much emphasized. And for this reason, if no other, all of us can look with sympathy and with interest, if not with conviction, on Christian Science.—*Correspondence.*

Tacoma, Wash.

Clarence C. Eaton delivered two lectures on Christian Science. At one of them Dr. Francis Atwell introduced the speaker in the following words:—

It is beyond question of a doubt that Christian Science has increased the religious aspirations of more people than any other religious movement since the beginning of Christianity. Whatever the opinion of the average man may be as to its efficacy, the fact remains that right here in our midst there are found thousands of people who gladly and gratefully testify that it has opened up to them a new way of living; that it has brought light where at one time darkness prevailed; that it has freed them from sin, hatred, malice, and envy; that it has destroyed evil and promoted affection and virtue; that it has brought them peace and harmony, health and happiness; that it has made them better men and women, better husbands and wives, better fathers and mothers, sisters and brothers. It seems to me that the testimony of these thousands of earnest workers should have more weight than the opinions of those who have not laid aside their prejudice long enough to investigate the fundamentals of this great Christian truth.

I am not a member of this church, but some time ago I laid aside my prejudice, for a time at least, to investigate this subject, and I say to you tonight, not from observation but from personal experience, that Christian Science is efficacious, and when understood and properly applied will do what is claimed for it.—*Correspondence.*

Lectures to be Delivered

ARKANSAS—Jonesboro: William R. Rathvon, Empire Theater, 8 p.m., Dec. 7.

Little Rock: William R. Rathvon, Majestic Theater, 3 p.m., Dec. 5.

CALIFORNIA—Gardena (Los Angeles Eighth Church): George Shaw Cook, Women's Club House, 8 p.m., Dec. 7.

Testimonies of Healing

Gratitude for the complete change Christian Science has made in my life impels me to give this testimony. I was told of this healing truth by a dear friend, and was led to ask for its help through a desire to be rid of the drink habit. It was not until the usual methods of escape had all been tried that I realized drink had become my master, and during the last miserable three years of this bondage the time was about equally divided between the indulgence of the habit and the suffering occasioned by trying to conquer it. Indeed, I had come to the point where suicide seemed the only way out of the difficulty. Then Christian Science was offered as a means of relief.

I was intoxicated the night I went for the first Christian Science treatment, but in about half an hour I left the practitioner's house sober, and with a sense of freedom and peace never known before. I was able to ride my bicycle and not afraid to pass through the shadows cast across the path, whereas in making my way to the practitioner it was about all I could do to lead the wheel, and I was afraid to step on a shadow before trying to see what it might be. Within the next two days' treatment I realized that I was healed. Only those who have been or are slaves to the liquor habit can understand what this healing meant to me. There was no feeling of missing something, no awful void, as when trying to leave off through will-power, because the place that drink had taken was filled with the satisfying joy of knowing that God's man does have dominion and is not a slave.

I had also used tobacco in about all the ways it is used, learning to smoke while at school, and up to the time of finding Christian Science I often got up in the night to smoke. I cannot recollect when freedom from this enslavement came about, but as my understanding of Science increased, I simply forgot to use the weed. Moreover, Christian Science treatment was the beginning of a spiritual education, and I have been raised out of the darkness of ignorance and suffering into the glorious light of spiritual knowledge and harmony. Every good thing that has come to me, everything worth while, dates from my first healing in Christian Science. Freed from the old bondage, living gradually became a pleasure instead of a round of wearying tasks, while courage and confidence began to take the place of fear and doubt.

I am a business man, and after learning of Christian Science I began to experience peace of mind, and had strength to handle the daily problems calmly, because I was realizing that my strength is in God. In other words, I began to take God into partnership with me. When my associates learned that I was trying to live according to the teachings of Christian Science, they freely predicted a speedy end to my business career, as there is a general belief that methods of sharp practice and dishonest advantage are necessary for success in my line of work. My business has, however, increased greatly, financial conditions being better than ever before. I enjoy the confidence of all with whom I have dealings, and that greatest asset of all, the peace of mind which comes from trying to think rightly. Christian Science appeals to the business man because he can apply it practically to his everyday needs. Considering it just from the view-point of an element to success, I would rather start with a working knowledge of Christian Science and no capital, than a good-sized bank account without Christian Science.

I was healed by Christian Science of an ailment for which doctors said nothing could be done. The sickness was of some weeks' duration and was said to be a complication of troubles. In fact, I had to learn to walk again, as though I had never taken my first step. I have had a number of other experiences which fully proved that Christian Science does heal. A severe chill disappeared in about two hours, and several minor physical ills have been quickly overcome. One day, while crossing a street on which traffic is supposed to be restricted during market hours, I was struck by a motorcycle and thrown from the middle of the street to the curbing. On becoming conscious of my surroundings I found myself repeating aloud "the scientific statement of being" (Science and Health, p. 468). I persuaded the people who picked me up not to call the ambulance, and in a few moments I was able to walk away and attend to business. Except for some damage to my clothing I suffered little inconvenience. The machine was badly wrecked and the rider's clothing torn, but with the exception of a few slight cuts and bruises he was not hurt. I was grateful for the ability to attend to business so soon after the accident, but more especially thankful that while treating myself in Science I did not feel any resentment toward the offending person, although the bystanders were insisting on his arrest.

I am beginning to learn what Mrs. Eddy means when she declares that "divine Love always has met and always will meet every human need" (Science and Health, p. 494), and I know that Christian Science will teach those of "willing mind" how to prove this.—Samuel H. Deirks, Denver, Col.

✧

I first became interested in Christian Science through my mother's wonderful healing, and began to study it principally to learn how such a healing could possibly have taken place, and also to learn how to be able to help others, as I knew so many who needed help and did not seem to be getting it. I had no particular physical ills, except that for eight years I had suffered agonies from fallen arches, although I had doctored for this trouble the greater part of that time. During the first month's study of "Science and Health with Key to the Scriptures" I realized the disappearance of this suffering, and have never had the slightest return of it since.

At this time I had been married five years, and had continuously entertained excessive fear over a law that had been made for me in previous years,—that I would never be able to survive childbirth. This torturing fear was gradually overcome as I grew in the understanding of God's loving care, and after a perfectly harmonious spring, summer, and fall, our first child was born to us in November, 1904. Conditions had been so harmonious that our near neighbors and friends were not even anticipating the arrival. I had with me a Christian Science nurse, and the little fellow's coming was so peaceful that we even had him dressed for his night's rest before we called my husband. I passed as restful a night as I had ever had, and when morning came and breakfast was over, I wrote to my mother and then sat up a while. We have become the parents of two little ones since then, and the coming of each has been marked with the same harmony as attended the first.

I am deeply grateful for these and many other satisfying demonstrations of the power of divine protection from physical suffering, but more so for the spiritual uplift. I rejoice each day that Christian Science came into our home before the arrival of our children. There has never been a time when I have felt the slightest hesitancy to depend entirely upon it to heal every discordant condition that has overtaken them. More than that, I have rejoiced that we have found this remedy which is according to divine Principle, and which is reliable and far superior to any possible man-made system.

I am thankful to God that this beautiful truth exists, and grateful to its Discoverer, Mrs. Eddy, also to all who have

Digitized by Google

helped me and are helping me each day to grow in the truth which does make free, and which I am able to demonstrate daily, proving that God is our ever present help in every kind of seeming difficulty.

SARA ABBOTT BRUCE, Indianapolis, Ind.

✧

In the early part of September, 1910, my little daughter developed symptoms of incipient typhoid fever, and within ten days the disorder had assumed a grave aspect. I had lost all faith in *materia medica* and so knew that I could not look to it for help in this crisis. Having been led to investigate Christian Science some years before, I had been gradually leaning upon Truth in many trials, so I now turned to it with all my heart. A practitioner was asked to treat the child, and as a result she was fully restored to health and able to reenter school the second month of the term, thirty days covering the entire time of her illness; while some children in the neighborhood, ill with the same malady and under the care of a physician, were not able to go to school until after Christmas.

Christian Science came to me when my heart was torn by a mistaken sense of filial love and a struggle with bitter hatred and resentment, but through the study of the Bible and our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have learned somewhat the meaning of the words "love," "brother," and "neighbor." Christian Science has healed my thought of its wound, and it is today the greatest blessing of my life. I am thankful to God for our Leader, Mrs. Eddy, who taught us to know that God is an ever present help in every time of need.

SUE E. KOHLHASS, Winchester, Ky.

✧

It is with thankfulness to God, and gratitude to our beloved Leader, Mrs. Eddy, that I send this testimony for publication. From babyhood I was troubled with epileptic fits, and my parents tried everything which promised even relief, but none was received. Our family physician gave me up, saying that medicine could not reach this case, but the attacks might be outgrown. This did not prove to be so, however, for they kept getting more severe and more frequent, until I would have from five to six in one day, and they would leave me in a very weakened condition for about a week afterward, even unconscious for several hours. About eleven years ago we heard of Christian Science, and in one week's treatment I was healed. I have never experienced any symptom of this ailment since. Words cannot express my gratitude to Christian Science for this healing. I feel sure that I have been saved from a life of wretchedness, and possibly the grave, as my older sister passed away during a similar spell some years before. I also wish to speak of the healing of my mother of lung trouble. After two weeks' treatment the terrible cough lessened, and in four weeks she was entirely well.

In the eleven years which have elapsed since taking up the study of this Science we have had numerous demonstrations of physical healing, but that which exceeds the physical healing is the spiritual uplift, the putting off of the "old man" and the putting on of the "new." My parents, brothers, and sister join me in thankfulness for this great truth.

MARIE WALTERS, Rich Hill, Mo.

✧

I wish to express my gratitude for what Christian Science has done in curing an abnormal growth on my little daughter's head. While brushing her hair one morning I noticed a small swelling just over the forehead, extending slightly back into the hair. The nurse who inspects the children at school noticed this condition and was very much alarmed. She told the child to tell me to take her to a physician at once, but instead of doing this I took her to a Christian Science practitioner.

In about two weeks the nurse again inspected the children, and when she came to my daughter and saw that the swelling was larger and quite inflamed, she asked the child if I had taken her to a doctor for treatment. My daughter answered, "No, my mamma is a Christian Scientist, and Science will take care of me." The nurse brought her home and told me I must take her at once to a physician, as she had an abnormal growth which was liable to grow inward and prove serious if not attended to. She said: "Your little girl tells me you are a Christian Scientist and prefer that method of treatment. It is all right for nervous diseases, but Christian Science cannot cure any thing serious like this." I did not discuss the matter with her but said that the trouble would be taken care of.

I then took the child to a Christian Science practitioner, to whom I related what the nurse had said, and being assured that the child would be healed, we were content to trust her to the care of divine Love. With our daily reading of the Lesson-Sermon from the *Quarterly* and the aid of the practitioner, the child was healed in four weeks. After the swelling had disappeared there was a smooth bald spot which was quite noticeable and attracted considerable attention, many people insisting that the place would always be bald; but the practitioner assured us that this would also be overcome, and we are grateful to say that the hair is now growing as thickly as before on the spot that was bald.

This is only one of the many benefits with which my family has been favored, and I give the testimony in the hope that it may lead others to trust in the power of divine Love as revealed to us by Mrs. Eddy in our text-book, "Science and Health with Key to the Scriptures."

MRS. M. E. GRIFFIN, San Francisco, Cal.

✧

Since I came into Christian Science many evidences of the ever-presence of divine Love have been vouchsafed me. My father and older brother being ministers, I had early read all the books in a large theological library, and up to a year ago had read the Bible through twenty-three times. During college days, inspired perhaps by my father's favorite quotation, "Prove all things; hold fast that which is good," I became familiar with many of the works of our greatest freethinkers, and went into slum work and all sorts of work among the poor, hoping to find that larger life for which I was longing but which always seemed just around the corner. At last, weary and discouraged, I dropped into "going it blind," with the hope that in some future life the answer would be revealed. With this submission came a corresponding gradual loss of health, until I was practically a wreck. This state of things continued for several years, and though still young I was doomed by doctors of all schools to worry along in semiinvalidism under several incurable ailments.

Three years ago a good chance to study art came to me, and I went into it so eagerly that all the symptoms of ill health asserted themselves in force, and at last while trying to paint a ceiling I fell from the platform in agony. I was unable to rise from my bed for several days, and then, though believing Christian Science to be of the devil and the great error of this age, to please the people I was with I let them take me to a practitioner. She talked with me for two hours, and though I did not understand much that she said, when I left, to my great astonishment, the pain and weak-

Digitized by Google

ness were gone. In three treatments I was feeling young and buoyant again, while many so-called incurable ailments, supposedly inherited, had disappeared for good. Most important of all, a great happiness, a constant expectation that the best is yet to be, possessed me. That dear old book, the Bible, so much pondered and so well understood, as I supposed, now opened up with new meaning, and ever since then I have been realizing that "of the increase of his government and peace there shall be no end."

For the Lesson-Sermons, the Christian Science publications, class instruction, and church-membership, I cannot be too thankful; and before the example of patient self-abnegation, steadiness of purpose, and wonderful insight of that great woman, our beloved Leader, Mrs. Eddy, I bow in speechless admiration. It has been my privilege to realize the truth for myself and others many times, and always with me, even in the hours of desperate struggle, is that steady sense of increase. How glad I am that Christian Science reached me so soon!—Grace M. Bosworth, Bristol, Vt.

✧

I am very grateful for what Christian Science has done for me and for my family, as well as for all mankind. A time came when it was thought necessary for me to have an operation. A sister asked me to try Christian Science first, but I was not then ready for it. This sister had been healed of a severe stomach disorder of many years' standing, but it seemed to me that my trouble could not be overcome. The operation was therefore performed, and was soon followed by a second, with no good results from either one. At last I was told medicine would do me no good and another operation worse than useless. After two more months of suffering I was again urged to try Science, and did so. We called a practitioner, and in three treatments I was healed.

Two years from this time the practitioner was called again, as I was in a delicate condition and dropsy had set in. For seven months I did not lie down in bed, but had to be propped up with pillows. Then, to please those who thought nothing was being done for me, a physician was called. He advised my husband to leave me in the practitioner's care, saying that if anything could save me Christian Science could. When the critical time came, every condition was normal. In three days I was dressed and around the house.

For ten years we have depended on Christian Science and have always received the needed help. No words can express my thankfulness to God, and I am indeed grateful to Mrs. Eddy for her work in revealing this truth.

Mrs. L. D. Buchanan, Spokane, Wash.

✧

I desire to express my gratitude for the many blessings which have come to me through the ministration of Christian Science. I have been healed of coughs and colds, catarrh, a throat affection, and an eruption of the skin with accompanying symptoms much resembling small-pox, although the case was not diagnosed at the time. Typhoid fever in its most dangerous form was overcome in eighteen days, although the physician, called in compliance with the law, had said that recovery was doubtful. A periodical headache and stomach disorder, to which I had been subject for many years, disappeared without any special treatment therefor, simply as a result of a better thought gained from the daily study of the Bible in connection with our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have been lifted above hatred, resentment, self-pity, discouragement, a belief of great injustice, and sorrow occasioned by the loss of a dear one, and for this help I am more grateful than for all the physical healing I have had.

I did not come into Christian Science for physical healing, but for the clearing up of a number of mental problems with which I had been struggling for some time, all of which have been solved. For four years I have been interested in this truth which makes us free, and during this time it has never failed when there has been an honest application of its divine Principle. I am profoundly thankful to God, and grateful to our beloved Leader, Mrs. Eddy, for the understanding that "God is our refuge and strength, a very present help in trouble."—Agnes L. Cook, Milwaukee, Wis.

✧

As a last resort I applied to Christian Science for relief from a very painful and distressing eye trouble from which I had suffered for about a year. Material remedies afforded no relief, and after consulting an oculist and receiving little or no hope, I was so discouraged that I felt Christian Science was the only thing left to try. I had no faith in it whatever, but to my surprise I experienced such relief after the first treatment that I knew I had not asked in vain, and at the end of three weeks the trouble had entirely disappeared. During this time I was also healed of chronic bowel disorder and of severe headache of almost daily occurrence.

This healing took place four years ago, and Christian Science has been a daily study ever since. I am very thankful to God, also grateful to Mrs. Eddy for this truth which makes us free.—Carrie Buxton, Kansas City, Mo.

✧

From the time that I was two years old until I went to a Christian Science practitioner for help, I cannot remember a day when I was free from pain. I suffered from so-called rickets, and from diabetes, kidney trouble, rheumatism, neuralgia, lung trouble, and poor eyesight, from all of which I received only temporary relief under *materia medica*. One of Boston's best eye specialists told me after a long treatment that I would always have to wear glasses. Through divine Love as revealed in Christian Science the glasses have been laid aside and I now have perfect sight.

In March, 1908, I was taken with heart disease, and went from one good physician to another to find a cure, but to no avail. One physician said I must make up my mind that while I might live for years I would never be able to work at my trade again, that of a carpenter, as there was no known cure for my trouble,—organic heart disease. Christian Science was then brought to my notice, and I went to see a man who had been given up to die with the same disease but was healed in Christian Science. After a while I went to a practitioner's office, but turned away from the door through prejudice and returned home. On April 11, 1909, I was so ill that I did not expect to live through the night. The next morning I went to see the practitioner as a last resort, though still prejudiced, and within a short time I was healed.

While I am deeply grateful for this healing, it is nothing in comparison with the spiritual quickening received from the Bible and Science and Health. I am now learning to know God, "whom to know aright is Life eternal" (Science and Health, Pref., p. vii), and I will say to any one sick or in trouble that divine Love is able to meet the human need. I thank God and am grateful to our dear Leader for Christian Science. I am also grateful for the privilege of church-membership.—George L. Morrison, West Roxbury, Mass.

✧

To those whose healing comes slowly I wish to tell a portion of my experience. I was six years in getting to a point where I could declare I was in perfect health. When I began to see the sickness as an opportunity to learn more fully through its overcoming that God is the only power, my

Digitized by Google

fear left me, and the truth of God as a God of love was proven to me, as well as to others, as never before. I had to learn to be patient and to love more, and I count it all as part of my blessings. Christian Science held me above the depths, and finally brought me out of all the discordant conditions.

Nothing but God's power could have destroyed the error that bound me. For six months I could not walk or lie down. I had dropsy in a very bad form, and was told by medical science that the vital organs had absorbed considerable water. I was in a serious condition, but with thankfulness to God, and gratitude to our beloved Leader, Mrs. Eddy, as well as to those who tenderly led me into a higher understanding of God, I can truthfully say that I am absolutely healed.

HANNAH S. DAVIS, Los Angeles, Cal.

✧

It was in the fall of 1912 that I first heard of Christian Science. I was going to live with a lady five miles distant who wanted some one to help her and to be with her when her husband went away on his business trips. The day before leaving home my father told me that she was a Christian Scientist, and that I should not have anything to do with Mrs. Eddy's teachings, as he had no faith in them. I stayed in my new home three days without looking into Science and Health, then curiosity got the better of me.

Not being in the habit of reading the preface of any book I turned to the first chapter, on Prayer. This was in the evening. At first I had some difficulty in reading, because of the veil that seemed to obstruct my sight. I had not read, however, to the bottom of the first page when I suddenly exclaimed, "Why, I can see." My friend did not know that my eyes were affected in any way and was surprised. I had worn glasses until the previous June, when a small, hard bunch formed on my face near the right eye. Thinking this was a boil, I did nothing for it for several weeks, but it rapidly grew large and pained me severely. Then my father placed a poultice on it, thinking to draw out the core, but it only broke and swelled as before. I became frightened and went to a physician, who increased my fright by saying I would be blind shortly if I did not go to a hospital; but this I refused to do. Then he showed me in a book a description of the tuberculous malignant growth which he said was my trouble. He also said it could not be healed.

After being healed of weak eyes through Christian Science I thought that surely the growth could be destroyed. I questioned my friend, and on learning that this could be done by the power of God, I visited a Christian Science practitioner in October. After having a few present and absent treatments I was completely healed. I have since been helped many times by reading Science and Health. I attend the Christian Science Sunday school at every opportunity, which is quite often, although it is sometimes impossible to attend both church and Sunday school, and I always come home happy and refreshed.

From childhood I had been thin and pale, but now am well and have lots of color. Through divine Love a way has been provided for me to study music, and Christian Science has helped me to progress rapidly in this as it has in other things. I have indeed had proof of Mrs. Eddy's statement (Science and Health, p. 7), "It is the all-hearing and all-knowing Mind, to whom each need of man is always known and by whom it will be supplied."

I cannot express in words my thankfulness to God, and my gratitude to our revered Leader, Mrs. Eddy, the Discoverer and Founder of Christian Science, but I hope this testimony will aid another to know the truth that makes all free.—LILLIAN M. JOHNSON, Winsted, Conn.

From Our Exchanges

[Rev. Dr. M. A. Matthews in *Seattle* (Wash.) *Post Intelligencer*]

If we had faith enough we could heal the sick as instantaneously as the early apostles did it. The day of miracles is not past, and never will be; but the day of our faith does not seem to have arrived. Do not charge God with having ceased to perform the work, but be honest and take the blame upon yourself, where it belongs. Where is your faith? The reason for our lack of faith is because we are entangled with the world. We are too much interested in the material things of this world.

[H. C. Tolman, D.D., LL.D., in *The Living Church*]

If the sign manual of life is progress, if as the years pass the soul advances in truth, daily growing more manly, more courageous, more divine, filled more and more with the spirit of service, love, and beauty, the happy years of life are the limitless years which will unfold the divineness of our humanity.

God loves the beautiful and the good, but He wants them at their best. . . . Sometimes we may think there is retrogression in nature when we see growth impaired and beauty sullied, but one fact is certain,—that all retardation is compensated for by progress. In the grand result nature never works backward, but forward. This is the divine mode of activity, a movement which is revealed to man as his capacity becomes adequate to receive such revelation. That which has highest "survival value" is the moral and intellectual nature of man, and God's decree of perfection will be realized in the soul. Life is divine growth, and divine growth is happiness.

[*The Universalist Leader*]

It is unquestionably popular in certain companies, even of those who profess to be religious, to announce the abandonment of theology and the exaltation of religion; or, in different phrase, to plead for practice in place of piety, work in place of worship, service in place of creed. There is rebellion against dogma, and we turn easily to the visible things which are of immediate service, and are suspicious of the invisible forces behind. But the truly scientific mind is beginning to accept as fundamentally true the affirmation of the apostle, that that which is seen is temporal, and that which is unseen is eternal.

It is therefore true that the crude reversion of the blatant revivalist to the cruel and unreasonable theological dogmas of the past has significance, especially when he is followed by multitudes of well meaning people, in that a tendency is shown to reconnect the life of today with the sources of its spiritual and real power. That these efforts of revival are absurd in their crudity only serves to reveal the genuineness and universality of the recognized need.

[*American Lutheran Survey*]

No public man today dares openly to substitute the policy of expediency, palpably involving injustice to others, for the high principles of the gospel covering individual and national conduct. William Allen White, the well-known newspaper man and publicist, says: "The time is past when the Sunday school politician or business man may be sneered at. It was a fashion twenty years ago to sneer at Sunday school men, but more and more the bad man is getting out of politics and the good man is taking his place, and generally speaking the good man is anchored to some church or creed which he is not at all ashamed to proclaim and testify to."

Facts such as these—and who shall deny them?—are well worth remembering and contemplating, especially in moments

Digitized by Google

of discouragement, faint-heartedness, and depression. The forces of evil are powerfully organized and welded together, and their onslaughts on human society are terrific. There are times when even the church of Christ seems feeble and insufficient to meet the enemy; and yet the story of David and Goliath serves the purpose of illustrating the power of the gospel to overcome the bitterest enemies. Our faith shall yet overcome the world. For this reason it is well to remember that in spite of all enmity and opposition the gospel is still doing its saving work in society. The "still small voice" is heard in the hearts of men above the roar of artillery and the clash of arms. Christ still is the captain of our salvation, and his followers need only to place confidence in him and their hearts shall be lifted up, and they shall go forth "as an army with banners," from victory to victory.

[*The Christian Register*]

Churches are looked upon as, so to speak, factories of morality and piety. If they do not turn out religion and conduct in due amount and quality, the fault must be theirs, people think; but what they can turn out depends more on what the people are and do who seek them than upon any machinery of theirs. If the people who go to church carry the right spirit and purpose, the community will surely feel the difference. It is even doubtful, in these days of motor-cars and golf on Sunday, if we can lead a man to church; it is sure that we cannot make him pray. But we can be assured that life will bring experiences in which he will need what prayer brings, and the churches which keep their purpose pure will find themselves, like a college which aims to be really and only a college, the attractive novelty of the future.

[*Northwestern Christian Advocate*]

What is wanted in society everywhere is the generous temper which seeks the good in human nature and refuses to think the worst. It is as easy to think well of people as ill; it is as easy to put a fair construction upon their motives as to impute evil. Among the various revivals of which society just now has sore need, let us not forget to pray for a revival of that true and heaven-born charity which "rejoiceth not in iniquity, but rejoiceth in the truth."

[*The Christian Work*]

Faith in God is faith that the highest is the true, and the committal of ourselves to the implications of that assumption. And it is a faith which works, which is all we can say in justification of any kind of faith. The man of faith in this connection is the man who dares much for the kingdom of heaven's sake; he is not simply one who expects great things for himself, but who attempts great things in the confidence that at the back of his endeavors is the infinitude of God.

[*The Christian Intelligencer*]

It is true for all practical purposes to say that God has placed no limits to our spiritual possibilities. Of things material much may be denied us; we are bound to dig graves for many cherished hopes. Life is not likely to respond to all our expectations of earthly good; but we may direct our lives into channels of spiritual enterprise with every assurance of increasing enrichment. The harvest of sowing to the Spirit is as sure as the abiding promises of God.

[*Zion's Herald*]

The Scriptures have this in their favor among other things: that they can be tested by any one who wants to try them out, in the midst of the work and the warfare of life. Tried by this practical test the Bible works well. In its every phase and aspect the Bible is the book of God, and therefore it is the book for man.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition" size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Christian Science: The Religion of Divine Law," a lecture by Jacob S. Shield, C.S.B., has been published in pamphlet form, and is now on sale at prices for our regular pamphlets, as shown on the opposite page.

A new pamphlet, "What went ye out for to see?" is now on sale. This pamphlet contains the four following articles, republished from the Christian Science periodicals: "Principle Not Person"; "Jesus of Nazareth"; "Jesus the Christ"; and "Jesus and the Christ."

The pamphlet, "Causation," by Frederick Dixon, has been translated into Norwegian "Skapende Kraft," and is now published with the English and Norwegian versions on opposite pages.

The pamphlet, "Fulfilling the Law," has been translated into Danish, "Lovens Fylde," and is now published and on sale. This new pamphlet has the English version printed opposite each page of the translation.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 61 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

About the last of the cheap irrigated land in the West is to be found in the Uintah Indian reservation, in Duchesne and Uintah Counties, Utah. These valleys are broken into separate topographical divisions by the "bad lands" breaks, but the soils of the valleys are deep, and when touched with irrigation produce bountiful crops. Five large rivers flow from the Uintah Mountains on the north to the drainage basin in the south and east, and fully 300,000 acres of land have already been brought under irrigation canals. The Government allotted some 112,000 acres of irrigable farm lands to Indians living on the reservation, and 250,000 acres of grazing lands. The balance of the reservation, containing some 2,250,000 acres, was thrown open to settlement. It was discovered that a great many of the Indians to whom the allotments were made were no longer to be found, and many more had become incompetent, so the department has decided to dispose of these lands, the interest they bear in the canals, together with the water rights, at public land sales.

In a formal petition which has been addressed direct to the King by the Chamber of Commerce of Bilbao, Spain, it is begged that the Government shall give its assistance toward the construction in that port of new jetties and wharves with all the latest improvements; that Government approval and assistance shall be given to the project for the establishment of a new line of steamships to ply between Bilbao and Southampton; that new public warehouses for the deposit of cargoes and goods under customs examination shall be established at the ports; that the assistance of the Government shall be given in solving the various difficulties that exist in regard to the building of minor ships of the navy at Bilbao; that a school of commerce shall be established in the city, and that special attention shall be given in it to training for the consular service; that a direct telephone service between Paris and Bilbao shall be speedily established.

The Chicago, Milwaukee & St. Paul Railway will soon try out the first of its huge new electric locomotives that are to haul freight and passenger trains over the mountain divisions from Harlowton, Mont., to Avery, Idaho. In January a trolley system is to be inaugurated and steam traction entirely abandoned over a 440 mile stretch of mountain country. The improved system of handling mountain traffic has required three years for its installation, and its cost will be about $15,000,000. Figures show that there will be an immense saving annually. The locomotives, of which fifty will be required for the mountain divisions, are constructed to haul 2,500 ton loads over 1 per cent grades at an average speed of 16 miles an hour, exercising 3,440 horse-power. The same locomotive geared for varying speeds will haul 800 ton passenger trains at a speed of 60 miles an hour. The engines are 112 feet, 8 inches long.

Another great steel highway through the heart of northern Canada now links the Atlantic and the Pacific, the Canadian Northern Railway, which twenty years ago was the mere dream of a country school-teacher and his lumberman friend. It is said that from one end of the route to the other the railway runs through beautiful and productive country. It taps the great clay belt of northern Ontario, and runs through a fine timber and mineral region. On the prairies the wheat-producing areas are second to none. The grade of the road through the Rockies is so easy that only one engine is required to haul the average train, while the scenery through the mountains, from the great Mount Robson, at the entrance of the Yellowhead Pass, all down across British Columbia to the Fraser River Cañon, is declared to be equal to anything on the continent.

Attention is called to the possibilities of zacaton grass in the manufacture of paper in a new professional paper of the United States Department of Agriculture. Zacaton grass extends from California and Texas southward to the Argentine Andes. It grows most profusely, however, in the mountain regions east and west of the City of Mexico, where it is harvested for the sake of its roots. These are made into brushes of various sorts, and for this reason the zacaton plant is frequently known by the common English names of broom-root grass, wire-grass, and rice-root grass. At the present time the tops of the plant are allowed to go to waste. The paper manufactured from the stock has proved as satisfactory in physical tests as a first-grade, machine-finished printing paper. It has, moreover, a very satisfactory appearance and feeling.

The New York, New Haven & Hartford Railroad Company is completing final arrangements for the building of a new bridge over the Thames River at New London, Conn. This bridge will be constructed to carry the heaviest loading now known to eastern railroad managers or contemplated in the future. There will be a four-track substructure, with a two-track superstructure, leaving room for two more tracks later on. The bridge and approaches will cost approximately $2,500,000. When it is finished the old bridge, which crosses the river at a different point, will be given to the state of Connecticut for use as a highway bridge, thereby improving and shortening the wagon and motor road along the shore line. The present bridge, with its approaches, cost originally about $1,300,000, and is a five-span structure.

A request for an annual appropriation of $2,000,000 for a period of five years, and the recommendation that the work already begun be continued, will probably be embodied in the report which the National Forest Reservation Commission will make soon after Congress convenes. As matters now stand there remains only $500,000 at the disposal of the commission for the continuation of its work. To date, about 1,285,000 acres of forest lands have been acquired or approved. It is the hope of the forest service that 4,000,000 acres more will be purchased by the commission in the White Mountains, in the southern Appalachians, and in Arkansas. This land, the commission thinks, may be used for recreation purposes, as well as for the conservation of water and timber resources.

The first inspection tour of the commissioners of the Dixie Highway, over the route from Chicago to Miami, Fla., terminated recently in Miami. While it cannot be said that the commissioners found all the way a road easily used the year round, they did find progress in road building along the entire way, and in many considerable stretches the highway is ideal. Several members of the touring party stated that the Dixie Highway in its entirety is in as good condition as the Lincoln Highway was at the time of the first inspection tour over it, if not better. The two principal purposes back of the construction of the highway are the economic benefit of the localities through which the road runs and the benefit of tourists passing north and south.

A shipment of 6,000,000 Alaska humpbacked salmon eggs for the stations at Green Lake and Craig Brook, Maine, and 500 large Pacific Coast crabs destined for the United States Hatchery at Boothbay Harbor, to be placed in Maine waters at Boothbay Harbor and John's Bay, has been sent from Seattle, Wash. This will be the first attempt of the Government to transplant the Pacific Coast crab into eastern waters. The first humpbacked salmon was hatched from eggs which came from Alaska by way of Seattle two years ago, the experiment being made at the Green Lake station. The results have been very successful, so much so that from the Penobscot and Dennys rivers have come reports of the fish in excellent condition.

According to recent advices from Berlin, German scientists have invented new processes of producing nitrogen from the air, making good edible flour from straw, utilizing sugar in the manufacture of soap, producing various important foodstuffs, especially fat, from yeast, and finding a good substitute for rubber. These researches were stimulated by necessity born of present conditions, but they are of permanent value, and if these substitutes can be made more cheaply than the original products they will add vastly to the wealth of the world.

After being absent four months and two days, the schooner Kitty A. has returned to Newport, R. I., from her trip to the Canary Islands, the Azores, and the coast of Africa. The trip was undertaken for the purpose of securing rare types of birds for the museum at Harvard University. Three hundred specimens of birds were brought back in the schooner, and two hundred more are coming by steamer.

The first court in the history of California, and probably the first in the nation, in which judge, clerk, reporter, and bailiff are all women, and in which no man has any part, was held recently in Los Angeles, Cal. The scope of the court includes all cases in which girls in their minority are defendants and which concern boys up to nine years of age.

Professor Lowell sends word from Flagstaff, Ariz., that Doctor Slipher of the Lowell Observatory has detected spectrographically rotation in the great Andromeda Nebula. To accomplish this the exposure had to be continuous over several nights.

Atonement

REV. JAMES J. ROME

AMONG the teachings of the Christian church there is none considered of greater importance than that of the atonement, for it is generally understood to mean the plan by which sinners may be saved from sin and its consequences. The doctrine has not however been presented in a way that can be easily or clearly comprehended, one reason for this no doubt being that the word rendered "atonement" in the New Testament is confused with the one in the Old Testament which has received the same interpretation, though the words thus similarly translated do not in any way correspond with each other.

The word "atonement" in the original Hebrew of the Old Testament means "covering," or "to make a cover," which implied apparently the confession of unfitness and unworthiness of everything material and sinful, and the covering up or hiding, that is, the putting out of sight and laying aside, of everything of that nature, and the honoring of only the pure, holy, and spiritual. Gradually this developed into a sense of offering sacrifices to cover up sin and procure pardon by appeasing the wrath of an angry God.

The only instance in which the word "atonement" occurs in the authorized version of the New Testament is in the fifth chapter of Romans, where we read, "We also joy in God through our Lord Jesus Christ, by whom we have now received the atonement." In the original the word means reconciliation, and it is thus translated in a number of other passages. For instance, in the second epistle to the Corinthians, where Paul speaks of the "word of reconciliation" and the "ministry of reconciliation," and exhorts, "We pray you in Christ's stead, be ye reconciled to God," the same Greek word is used as that which is translated "atonement" in the epistle to the Romans.

The doctrine of vicarious atonement, as it is so generally accepted, wherein the sins of a depraved world are heaped on the head of an innocent victim, so that the wilful sinner may be free to wallow in sin and then be saved by a substitutionary righteousness, is not compatible either with human or divine justice. Such a concept is not to be found in the teachings of Christ Jesus. He taught that the only way of reconciliation with the demands of divine justice was the way of repentance and reformation, by conformity with the perfect, spiritual law. Even before the Master's time the prophet Isaiah called for a truer sense of atonement and reconciliation than that held by priest and people. Thus we read: "To what purpose is the multitude of your sacrifices unto me? saith the Lord: . . . Bring no more vain oblations." Then follows the divine demand, "Put away the evil of your doings from before mine eyes; cease to do evil; learn to do well; seek judgment, relieve the oppressed, judge the fatherless, plead for the widow."

To those still blind to their sins the Master said, "Except ye repent, ye shall all likewise perish," and to those ready to follow him he said, "If ye love me, keep my commandments." The only atonement taught by Christ Jesus is that effected through the understanding of God and conformity to His righteous law. "Blessed are the pure in heart," he said, "for they shall see God." It was Jesus' demand for practical evidence of professed sincerity and piety that turned the rich young man away sorrowful, and roused the ire of his hypocritical opponents, the scribes and Pharisees.

Christian Science teaches that the proper meaning of the word "atonement" may be gained by dividing the word into its three elementary syllables, at-one-ment, that is, at-one-ness with God. It lifts consciousness above the mere effort to gain a better mortal sense and enables one to recognize his relationship to infinite, immortal being. In Science and Health (p. 18) Mrs. Eddy writes: "Atonement is the exemplification of man's unity with God, whereby man reflects divine Truth, Life, and Love. Jesus of Nazareth taught and demonstrated man's oneness with the Father, and for this we owe him endless homage." It was this identity with the divine nature which Jesus brought to the minds of the disciples when he prayed not alone for his immediate followers, but for those in all ages who would come to accept the truth he taught. These are his words: "As thou, Father, art in me, and I in thee, that they also may be one in us."

As one makes the effort to bring such a concept into his life, it soon becomes apparent how constantly he will need to lift his thought to a higher sense of being and thus keep correcting the false, erroneous concepts of existence. How continually he must refuse to be identified with all that is unlike God and turn persistently to the divine ideal, like the needle to the pole. Thus guided by Truth, he will correct every form of evil and wrong,—he will push aside every sense of suffering, discord, trouble, temptation, he will remove every obstacle that would obscure his mental vision, and thus he will be enabled to rise to a higher, healthier, and holier sense of life and be more at-one with divine Mind, the true source of man's being.

"But," it may be asked, "do not other passages of Scripture teach the vicarious efficacy of Jesus' crucifixion, as, for instance, 'Without shedding of blood is no remission,' and, 'The blood of Jesus Christ His Son cleanseth us from all sin'?" The word "blood" is generally used to signify life. In Genesis we read, "But flesh with the life thereof, which is the blood thereof, shall ye not eat." Now substituting "life" for "blood" we would have, "Without shedding [giving up] of blood [life] is no remission [sending away or putting away]," that is, Without the giving up of a false sense of life there is no putting away of sin. Also we would have, "The blood [life] of Jesus Christ his Son cleanseth us from all sin." This makes the passage clear, although it is just the opposite of the interpretation generally given. It is evident that as we partake of the Christ-life we shall be free from sin, and as we attain more and more of that life we shall finally be cleansed from all sin.

Such references simply go to show the impossibility of clinging to a mortal, worldly sense of life with its false pleasures and sinful indulgences, and at the same time gaining a spiritual sense of being with its holy peace and heavenly joys. As Paul expresses it in his epistle to the

Romans, "Likewise reckon ye also yourselves to be dead indeed unto sin, but alive unto God through Jesus Christ our Lord," and as Mrs. Eddy writes in Science and Health (p. 16), "A great sacrifice of material things must precede this advanced spiritual understanding." Also on page 21 she says: "If the disciple is advancing spiritually, he is striving to enter in. He constantly turns away from material sense, and looks towards the imperishable things of Spirit."

Standing with David

LEWIS C. STRANG

In answer to their anxious queries regarding his second coming and the end of the world, Jesus once said to his disciples, "When ye shall hear of wars and rumors of wars, be ye not troubled: for such things must needs be." He apparently regarded these conditions as evidences of a great upheaval in mortal consciousness, and his disciples were not to be disturbed by them, because they were but the indications of the end of such things. He intimated that rightly viewed they were the forerunners of a better sense of things, the ushering in of a higher plane of human consciousness, a nearer approach to the ideal.

Jesus' statement finds its modern expression in Mrs. Eddy's remarkable prophecy and promise on page 96 of Science and Health, which is being fulfilled today: "This material world is even now becoming the arena for conflicting forces. On one side there will be discord and dismay; on the other side there will be Science and peace. . . . These disturbances will continue until the end of error, when all discord will be swallowed up in spiritual Truth."

It is markedly true today that the Christian Scientist, looking aghast at mortal sense-testimony, must say with Jesus, "The foxes have holes, and the birds of the air have nests; but the Son of man hath not where to lay his head." That is, neither in the gross materialism of human will nor in the captivating ideals of human good can the spiritualized thought find rest and peace. It is forced by the necessities of its own nature into that pure idealism of Spirit which declares that impersonal good, impersonal Love, impersonal Principle, alone has reality and truth. It is of little consequence what form the threat of materialism may take, whether of political, religious, or medical despotism; if one permits himself to look upon the threat with the same eyes as do those who believe in the reality of the threat, he too will believe as they believe, will be awed as they are awed, and will surrender his God-given dominion over the lie material as they have surrendered it.

It is the story of Goliath once again. Goliath, with his overwhelming belief in his own power, with his mighty sword and spear had overawed the whole army of Saul. He did this because Saul's army accepted as valid Goliath's claim regarding himself, and therefore stood mentally on the same plane with him. It took the shepherd boy, who knew nothing about fighting, nothing about armor, but who had lived in close communion with spiritual things and believed in the power of righteousness, to show how quickly and how easily the giant of material sense could be slain by his own sword.

The Christian Scientist must choose one of two positions: he must either join the army of Saul's followers, be mesmerized into powerlessness by the Goliath of the Philistines, or he must be a David in this age and time, eschewing the material weapons of Saul, holding as of no moment the vain boastings of Goliath, unmoved by fear and prophecies of evil, and serene in the understanding that a single rightly directed thought, like the pebble from the sling, renders null and void the giant of mesmeric suggestion.

Let us keep the picture of the shepherd boy well before us. It was not by agreeing with those who believed in the validity of the claims of evil that he won his victory, but it was by simple, unswerving trust in the God who was more real to him than were all the claims of evil. He had found this God among the hills, in the open, while he lived a spontaneous, natural, honest, genuine human life. He did not find Him in the intricacies of human knowledge, false education, and materialistic learning.

The God who found His way so fully into David's heart through its simplicity, sincerity, and spiritual responsiveness, will find His way into the human heart today through the same qualities, for He is a God "with whom is no variableness, neither shadow of turning." Is it not reasonable to suppose that, as we shake off some of the trammels of the purely formal and conventional in our thought-processes and reach with desire for the quickening spirit, we shall come into some of the simple directness of David's serene faith and express some of his spiritual power in our life-activities?

"Thou shalt not steal"

ALICE HALE COHEN

Frequent mention is made in the Old Testament of the "word of the Lord," and there are numerous instances related where it was recognized as vital, obeyed with quiet confidence, used with authority, and found dynamic with power. When faithfully adhered to, it swept as a mighty, purifying wind, irresistible, dominant, supreme. In I Samuel we read, "The word of the Lord was precious in those days."

Jesus in turn brought a still deeper, clearer comprehension of the power of the word. It was said of him, "What a word is this! for with authority and power he commandeth the unclean spirits, and they come out." Through its operation in consciousness he raised the dead, healed all manner of sin and sickness, and rose superior to every suppositional law of matter which would have blocked his path. He it was who warned us against the false sense which would rob both God and man when he said, "The thief cometh not, but for to steal, and to kill, and to destroy: I am come that they might have life, and that they might have it more abundantly."

In this age Mrs. Eddy, the Discoverer and Founder of Christian Science, has again awakened human consciousness to the power of God's word. In addition to the exalted vision of the prophets and the profound spiritual understanding of the Master, there has been revealed to us through the Christian Science text-book, "Science and Health with Key to the Scriptures," the divine Principle and rule which elucidates the separation between the chaff and the wheat, between the reality of Spirit and the unreality of matter, thereby opening the way by which every one who will may again listen for God's voice, admit it to consciousness, and prove its power. Through the clear instructions given in Science and Health and Mrs. Eddy's other writings, the alert watchman, or Christian Science student, is armed with the recognition that the word of Truth is pure and unadulterated, and he is thus equipped to arrest the thief of erroneous thinking in the attempt to steal ideas and the words which express them and appropriate them for the use of error.

For example, *materia medica* and hygiene claim a large measure of control over all that is conveyed by the word health, insisting that it is physical in origin and manifestation, to be attained and retained by recourse to material remedies and subject to suppositional material laws. When this argument presents itself, the Christian Science student has but to rise to the spiritual recognition of the word health as expressive of a spiritual fact, hence as belonging to the

Digitized by Google

source of all good and subject to His bestowal and maintenance. This arrests in consciousness the circulation of a false sense of health, replacing it with the true concept bearing "fruit after its kind."

The thief of material thinking would also endeavor to circulate the word man erroneously, claiming for it the personality through which the evils of hatred, inhumanity, envy, malice, covetousness, and sickness are expressed. The Christian Scientist, strong in the recognition of man as "that which has no separate mind from God; that which has not a single quality underived from Deity" (Science and Health, p. 475), is enabled to deal fearlessly and authoritatively with the would-be thief and to know that God alone has power over man and that there is no power apart from God. This watchfulness also deals with every attempt to think or speak of church from the standpoint of the thief, who would steal it for the circulation of ambition, jealousy, discourtesy, apathy, indifference, and hypocrisy, and awakens the ability to take refuge in the true sense of church as given on page 583 of Science and Health. This enables us to stand as faithful sentinels at the door of the temple, ever alert and ready to bar the way lest the thief find entrance.

This clear comprehension of the right use of words leads in turn to the recognition that power is left out of a word when God, good, is left out, and that whenever it becomes necessary to use words such as sickness, sin, pain, and death, it may be done with the certainty that there is no life, truth, power, action, cause, or effect to be conveyed by them. Stripped of all disguise as reality, they cease to terrorize as of yore, for it is seen that they are not living words going forth with authority and power, but inert, lifeless, destitute of vitality, even as a wire which has never been connected with the source of the electric current can convey no light.

Thus in Christian Science we are learning to speak the new tongue, and awakening to the fact that back of every word proceeding from God, good, is a mighty force, an irresistible power. This enables us to discard the dead letter for words animate with the spirit of unadulterated good. The light of dawn is seen in the sky, right is adjusting the balance, and the weight is shifting from a belief in physical force to the recognition of the substance of godlike thinking expressed in words bearing proof of their utility. In this age spiritual sense is beginning to transcend the limits of physicality, and we are learning to observe and listen in the manner of the prophets, of the Master and our Leader. In the measure of our faithfulness to the mandate of the "still small voice" through which angels whisper God's message to man, shall we be able to say with the psalmist, "Thy word is a lamp unto my feet, and a light unto my path."

❖

Divine Selection Utilized

MARY I. MESECHRE

When the Christian Science movement was inaugurated, one of its avowed purposes, as is well known, was to "reinstate primitive Christianity" (Church Manual, p. 17), with special reference to the restoration of its "lost element of healing." Even a casual perusal of the history of the primitive church indicates the methods of its government, and a more careful scrutiny reveals many details which we may rightfully appropriate to our own use in these more modern days, secure in the conviction that whatever leads to a fuller knowledge of the "good, and acceptable, and perfect, will of God," will enable the speedier fulfilment of our revered Leader's vision for our church organization.

A prominent characteristic of the early church was the reference of all its activities to the divine guidance, and nowhere is this more clearly seen than in the choice of those who were called to service in official capacity. Two such instances may be cited as illustrative of adherence to the divine government,—one the separation of Barnabas and Saul to work for which God had already chosen them, and the other the selection of "seven men of honest report, full of the Holy Ghost and wisdom," who were to be entrusted with the direct administration of the business affairs of the church. It will be noted that in both cases a special work was prepared to which the chosen were destined,—Barnabas and Saul were sent to preach the word of God, while the seven were to be appointed "over this business,"—and the selection was made with prayer and fasting, in full recognition that the gain of spiritual wisdom was essential to the expression of a safe judgment respecting so important a matter.

In "The First Church of Christ, Scientist, and Miscellany" (p. 13) Mrs. Eddy writes, "The church of Jerusalem seems to prefigure The Mother Church of Christ, Scientist, in Boston," quoting as basis for her inference from a book by Benjamin Wills Newton: "The church at Jerusalem, like a sun in the center of its system, had other churches, like so many planets, revolving around it. It was strictly a *mother* and a ruling church." By reason of the government prescribed for the Christian Science churches, the preceding instances recorded in the book of Acts relate themselves in a peculiar way to the periodic election of our readers and our boards of directors.

The Manual of The Mother Church provides definite rules applicable to every need of our organization, and certainly the choosing of those who are to serve our churches in an official way, and of those who are to represent our cause before the world, demands a prayerful looking to and reliance upon divine wisdom. Section 1 of Article VIII points out the necessity for a consciousness purified from animosity and personal sense, of which our Master affirmed that "this kind goeth not out but by prayer and fasting," thus emphasizing the preparation made by the early church, and as well that which is today requisite, to the end that the exercise of choice may be unhampered by erroneous judgment, counsel, or influence. This purification of consciousness so that it shall become a transparency for the divine intelligence is furthered by the recognition that no one can be commissioned of God save those who are qualified for service, who are equipped with such spiritual endowments as will insure their efficiency.

We must not lose sight of the fact that under the divine government only those who reflect and manifest the unassailable spiritual qualities of mind which attest true fitness, worth, and readiness are fitted to fill positions of trust. Our share in the work is so to subordinate our personal desires that we shall reflect the divine intelligence and thus so work in response to divine guidance that mistakes may be avoided. Here it may not be amiss to remind ourselves of the fate of Uzzah which followed his rash attempt to steady the ark of God when it was in course of being transferred from one guardianship to another. Is not the use of political methods, the advocacy of one or another as a candidate for office in the church, simply a modern effort to accomplish that for which Uzzah met such salutary punishment? Is not the ambition for place and power, whether for one's self or for one's personal choice, and the determined effort to thwart such ambition when recognized in others, the outcropping of an attempt to interfere with divine government?

Let us briefly consider some of the mental qualities emphasized in the two passages in Acts to which we have referred, as requisite in those who are to be considered as available for an office. Honesty, spiritual-mindedness, and wisdom are named, and a glance at the characters of Saul, better known

Digitized by Google

as Paul, and of Stephen, reveals moral courage, humility, uncompromising fearlessness, with broad, tolerant, and forgiving love to all mankind, as highly developed in these "chosen of God, and precious." Can we do less than recognize as paramount these and kindred mental qualities when we are called upon to exercise our most thoughtful judgment?

We should bear in mind the special qualifications of church-membership, education, devotion to duty, and unworldliness —or other-worldliness—so wisely enjoined for our guidance in the selection of readers. (See Manual, Art. III, Sects. 1 and 6.) It is also wise to exercise due care that we be not misled by certain negative conditions, and mistake self-depreciation for humility, wordy self-assertiveness for fearlessness, politic recognition of prevailing opinions for wisdom, and so on. One's fitness for any position of trust in our church organization cannot be rightly measured by one's personal following, but by individual adherence to and reflection of the divine character, the imaging forth of the godlikeness which alone measures true manhood and worth.

Entire subservience to divine direction means that the entire church-membership will be of "one accord in one place," with no subtle remnant of personal sense to hinder or delay the recognition of those whom God would approve, for, as our Leader says in "Miscellaneous Writings" (p. 361), "the divine modes and manifestations are not those of the material senses; . . . they are the forever-existing realities of divine Science; wherein God and man are perfect, and man's reason is at rest in God's wisdom."

"Forgetting those things which are behind"

CATHERINE YOUNG

ONE of the most tenacious of the mortal thoughts that cling to mankind and cause much suffering and heart-searching, is the belief in the past, either for good or for evil. This belief is strongly entrenched in human consciousness. From childhood we are trained to look to the past for wisdom and guidance, and if it has been a so-called good one, we are taught to sigh for its repetition, and thus the past plays a large part in determining the attitude of most people toward life, creating bias of thought and tending to confuse and obstruct one's outlook on the present. More than this, an undue regard for the past leads one to forget the present, which is his only real concern.

With many people faithfulness to the past is looked upon as a virtue of high order, and numberless lives are thus narrowed and embittered by this erroneous concept. Much of the world's history would have remained unwritten but for this strong belief in and reverence for the long ago. We have only to look into our own consciousness to become aware of how much we allow it to affect us in our daily experiences. The question therefore arises, How can I possibly get rid of this belief, how can I free myself from that which seems to have become part of myself? If we turn to the Scriptures as spiritually interpreted in Christian Science, we find our answer. On page 224 of Science and Health Mrs. Eddy says, "As the crude footprints of the past disappear from the dissolving paths of the present, we shall better understand the Science which governs these changes, and shall plant our feet on firmer ground."

In Acts we read of the wonderful conversion of Saul to Christianity and of his splendid missionary work. Nevertheless, in his zealous persecution of the Christians before his conversion, and especially in his participation in the martyrdom of Stephen, he had burdened himself with memories ineradicable from the human point of view. In addition to this he had to bear the not unreasonable suspicion and doubt with which the disciples seem at first to have regarded him. In spite of these seemingly overwhelming difficulties, however, the light which shone on him on the road to Damascus brought him courage and strength and the keenness of perception which enabled him to pierce this mass of sorrow and doubt, as is indicated in his words to the Philippians: "This one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark." In these words his method of getting away from the haunting belief of the past is disclosed. We know that his forgetting was no light-minded disregard of difficulties, but a scientific laying aside of that which he knew to be of no avail, in order that his whole attention might be devoted to the great work in which he was engaged.

In Christian Science great emphasis is laid upon the Scriptural statement that God is Spirit, hence man as His image and likeness must be purely spiritual. From this is argued man's immortality, and the fact that the real man is unfallen, therefore sinless. As this is perceived and understood in Christian Science thought is detached from a dead past and the opportunities of the present hour are utilized to the utmost. It means that we are to work with God, man's divine Principle, in all we undertake. To realize this even in the least degree is to begin the work of "forgetting" as St. Paul did, and divine Love will guide us as he was guided. To work, to think, to help in the present, was undoubtedly St. Paul's method of accomplishment. When we go daily about our real business we find no time for other thoughts, and the seemingly fateful past vanishes from our consciousness. The good that was ours in a seeming past is ours still, and has always been ours, for good is God, and the evil, the sorrow and sin, the sickness, and the heavy burden, never existed except as false beliefs. As our text-book says (p. 370), "We must forsake the mortal sense of things, turn from the lie of false belief to Truth, and gather the facts of being from the divine Mind."

"Instant in prayer"

JOHN M. DEAN

IN Christian Science, as in other things, it is a truism that "an ounce of prevention is worth a pound of cure." This statement implies no limitation to the healing power of Christian Science; rather does it emphasize the necessity for watchfulness, a quality which Jesus was constantly urging upon his followers. Truth can destroy error regardless of how strongly it may seem to be entrenched, but to destroy error in its incipiency is a duty which if neglected invites additional punishment as a penalty therefor. On page 234 of Science and Health Mrs. Eddy says, "You must control evil thoughts in the first instance, or they will control you in the second." The same lesson is given by Paul, who enjoined the Romans to be "instant in prayer," and who exhorted Timothy to be "instant in season, out of season."

It is undoubtedly true that a very large proportion of the work of Christian Science consists in prevention, a thing regarding which we hear much nowadays. As a part of their campaign our medical friends are constantly preaching bodily cleanliness, but Christian Scientists go much farther and uphold the desirability of "a body rendered pure by Mind as well as washed by water" (Science and Health, p. 383). No one can estimate the wonderful work that Christian Science has done and is doing in preventing disease. The very large immunity which its followers have enjoyed in times of contagion, as well as the number of authenticated individual instances of evil nipped in the bud, shows this teaching to be a

Digitized by Google

mighty factor in the realm of prevention. There are thousands of such known instances, and there must be countless others in which the practical understanding of God has thwarted threatened dangers that were never even dreamed of by those so protected. A host of people who were practically invalids before accepting Christian Science, now rarely have to meet a physical ailment for themselves; and it must be apparent that this condition has been made possible solely through the prophylactic influence of their faith.

Effective prayer is simple, and consists in mentally and scientifically rejecting the false and accepting the true. Jesus said, "Let your communication be, Yea, yea; Nay, nay: for whatsoever is more than these cometh of evil." This is the prayer of affirmation and denial, in which every good thought is accepted with a "Yea, yea," while every evil suggestion is rejected with a "Nay, nay." Until thought becomes perfectly attuned to "the things of the Spirit of God," the seeming suggestions of evil will knock at the door of every consciousness; but the unbidden guest can be effectually barred out. The consciousness that is open to truth spontaneously rejects every suggestion of error, and it must be plain that such opposites cannot occupy the same place at the same time.

Thought is action in embryo; cause must precede effect, and so long as the cause exists the effect remains. It is demonstrably true that sickly thoughts produce sickness, just as surely as sinful thoughts make a sinner. This fact is recognized, at least in part, by many physicians, and yet men are continually striving to destroy the result of wrong thinking by the use of drugs. Can drugs destroy fear, malice, hate, envy, jealousy, dishonesty, or revenge? Can they do more than exchange one material belief for another just as material? What then is the remedy? Christian Science offers a prescription which, when used according to directions, never fails. It is taken from the Bible and reads as follows: "Be not overcome of evil, but overcome evil with good." This statement is in no way qualified; hence there can be no limit to its application. If it means anything, it means that Love is stronger than hate, Spirit more potent than matter, Life mightier than death, and health stronger than sickness. How dare we, then, assign even the slightest place or power to evil? To the gross materialist who believes that mindless, inert drugs are more powerful than the omnipotent God, the idea of such overcoming may seem to be airy transcendentalism beyond the reach of mankind; but this conclusion is due solely to the bias of false education. Mortal man is a muck raker to whom all is muck, but once impelled to lift his eyes above the things of material sense, he begins to realize that "with God all things are possible."

In the matter of prevention, as in every other question handled in her writings, Mrs. Eddy has given a conclusive statement. Indeed, all that another can say on any phase of Christian Science teaching will prove to be little more than an elaboration of what she has already said far better. The words may be grouped somewhat differently and may serve to introduce the subject, but there is no improvement of their meaning. Explanations of Christian Science, like variations on the work of a master of music, may present old beauties in a multitude of combinations, yet the great central theme contains all and dominates the symphony. The teaching in this connection is epitomized in the article entitled "What Our Leader Says," on page 210 of "The First Church of Christ, Scientist, and Miscellany." When its declarations are fully demonstrated, as they must be before the salvation of mankind is attained, we shall all rest in its confident assurance that "good thoughts are an impervious armor."

Selected Articles

[John L. Rendall in *Clinton* (Iowa) *Herald*]

As reported in the *Herald* an evangelist has taken occasion to criticize what he terms "new doctrines," making special mention of Christian Science. Now as a matter of fact Christian Science is not a new doctrine. Its Principle is God, and its practices are those which were instituted and recommended by the Founder of Christianity. Therefore as a teaching of Truth, Christian Science is as old as Christianity itself. When Mrs. Eddy discovered the Principle of Christian healing and made it known to humanity in her book "Science and Health with Key to the Scriptures," she simply discovered something which had always existed, and which might at any time have been discovered and put into practice by any one sufficiently pure in thought to do so.

The critic makes the point that Nicodemus testified of Jesus, "Thou art a teacher come from God," and speaking of Christian Science the evangelist states: "Thou art a teacher come from—come from Boston, like Mrs. Eddy and her Christian Science." Nicodemus could testify that Jesus was a teacher come from God because of certain indisputable proofs of his Messiahship that were presented. Jesus himself, in answering the question propounded by the disciples of John the Baptist, stated: "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk, . . . the deaf hear, the dead are raised up, and the poor have the gospel preached to them."

The critics of Jesus' time asked, "Can there any good thing come out of Nazareth?" Jesus' teaching, however, did not originate in Nazareth; neither did Mrs. Eddy's teaching originate in Boston. The proofs which Jesus offered of his Messiahship are the proofs which Christian Science offers of its Christianity.

The evangelist states: "When you speak about Christian Science some one comes and says: 'Oh, my! You must not say a word!' No, but go to Chicago or any city where Christian Science is strong and you will hear this: 'Before I was a member of the Christian Science Church I was a Methodist [or a member of some other denomination], but now I have my eyes open.'" This statement is inadequate and insufficient. It should also include: "I was a member of some other denomination and I was sick," or "I was poverty-stricken," or "I was in mental distress," or "under the bondage of liquor," or other perhaps worse conditions. To be complete, the statement should include any or all of these, and it should also include: "But now I have my eyes open to the fact that God is good; I have learned that sickness and sin, poverty and distress, and all the *et ceteras* of discordant human sense are unnecessary, abnormal, and illegitimate, and these things have been destroyed for me through an awakening to Truth, the illumination which Christian Science has thrown upon the Scriptures."

Christian Scientists in their healing mission do not discriminate between those whom the world calls rich or poor. As a matter of fact, a great many of those who have come to Christian Science, to begin with were poor so far as this world's goods were concerned, their poverty being occasioned by continued sickness or by habits of life which were not conducive to prosperity. Christian Science has in large measure corrected these conditions; consequently its adherents are finding that God, the one infinite source of supply, has established for each and every one unlimited good, and in proportion to their understanding of God they are realizing this. The fact that Christian Science heals the sick and reforms the sinner is established beyond all question.

Digitized by Google

Its teachings as to sickness and sin are fully set forth in its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and it is therein plainly brought out that sin and sickness seem to exist in the human thought as realities, but that they can be destroyed through the spiritual understanding of that which is eternally real.

✧

[Ezra W. Palmer in *The Star-Journal*, Pueblo, Col.]

Our critic seems greatly disturbed over Christian Science, judging from the space he fills in the press to tell the public his personal opinion regarding it. The reverend gentleman, judging from his newspaper attacks, seems more intent on discrediting Christian Science than on promoting the kingdom of God. I wonder if he has taken stock of the results of his assaults. Has any sorrowing soul been comforted thereby? Has any sick one been healed by his unscriptural attacks on spiritual healing? Has any person's faith in and understanding of the protecting power of God been strengthened by his assumptions that God is responsible for evil, for mortal man, for human want and woe?

Jesus told his followers that they should be known by their fruits. He also told them that through knowledge of the Father they would have the "signs following." Beyond question, in the Master's opinion the crucial test of genuine knowledge of God was the power to heal. When John the Baptist, doubting, sent to Jesus asking if he was the long looked for Messiah, Jesus propounded no theological dogma as evidence of his orthodoxy, for his works were the evidence he relied upon to prove his sonship with God. He answered: "Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached." Can this professed follower of the great demonstrator of God's power to heal and save, point to the same healing works as evidence that he understands the Christianity of Christ Jesus?

Christian Science does not teach that mortals are incapable of sin, as this critic asserts. This charge has been repeatedly corrected in the press. The Scriptures, as well as Christian Science, make a clear distinction between mortal man and the spiritual, perfect man. The spiritual, perfect man, made in the image and likeness of God, does not sin. It was this perfect man to which Jesus alluded when he told his disciples to be "perfect, even as your Father which is in heaven is perfect." Mortal, material man was meant by the prophet when he said, "The heart is deceitful above all things, and desperately wicked." All Christian Scientists know that mortals are capable of sin and do sin. In like manner mortals, through blindness and false belief, manifest disease and death. But when the forever fact is seen that the real man is spiritual, the bonds of human belief are broken, and sin, disease, and death no longer have dominion over him. Mrs. Eddy says, "The belief in sin is punished so long as the belief lasts" (Science and Health, p. 497); but when sin is destroyed through repentance, reformation, and that knowledge of the truth which frees, nothing is left to punish or to suffer, and spiritual peace is an accomplished fact.

Christian Scientists make no claim that they have a monopoly of the healing art by spiritual means. God listens to the prayers of all who pray to Him aright. The reason some prayers are not answered is made clear by the apostle James: "Ye ask, and receive not, because ye ask amiss." Thus to declare that God made sin, sickness, and death, and then ask God to heal these evils, would be to "ask amiss," because such a prayer betrays a total misconception of the perfect Father. The inference of the critic that *materia medica* is more successful in healing than Christian Science, has no foundation. During the past forty years Christian Science has repeatedly healed patients given up as hopeless by the medical fraternity. Christian Science grows in popular esteem because it heals when all material remedies have failed; indeed, spiritual healing is often turned to as the last resort of despair.

Asylums and hospitals provide merely for the effects of evil, and do not destroy the cause of sickness and sin. Jesus came to give men a knowledge of the Father which would transform them and lift them above the need of institutional support. His teachings, when applied, destroy sickness, want, woe, and death. Christian Scientists found no hospitals because they have a better way. An understanding of Christian Science prevents sickness, destroys poverty, and makes a man self-supporting. Because Christianity has neglected and refused to follow the Christ-method, which saves the world from the results of its wrong beliefs, hospitals and asylums are needful at the present time. Jesus said, "Suffer it to be so now." Christian Scientists recognize the wisdom of such a course, and on this basis support worthy charities. But this does not prevent them from seeing clearly that a right knowledge of Christ Jesus and his works would render unnecessary the founding and maintenance of hospitals and asylums.

✧

[Thomas Jennings in *Blaydon* (England) *Courier*]

Under the heading of "Talks for a Quiet Hour," the statement is made "that one need not be a Christian Scientist to know that a man with a strong effort of will can stave off a cold or influenza." This implies that the human will is a factor in Christian Science. This is not so, and I shall be obliged if you will publish this correction. The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, says: "Human will-power is not Science. Human will belongs to the so-called material senses, and its use is to be condemned. . . . Truth, and not corporeal will, is the divine power which says to disease, 'Peace, be still'" (p. 144). Christian Science teaches the application of Jesus' words, "Thy will be done in earth," and proves that the prevention and healing of colds, influenza, and all kinds of sickness is the natural result of God's will, and His only, being done.

✧

[Thomas F. Watson in *The Bee*, Sacramento, Cal.]

That Christian Science is both Christian and scientific has been demonstrated over and over in the healing of thousands of cases of disease, both functional and organic, as well as in the reformation of character and in breaking the bondage of those addicted to morphine, liquor, and other sinful habits. Therefore the Rev. Mr. ——'s sermon, wherein he "exposes" Christian Science and charges it with being unchristian and unscientific, is somewhat misleading.

Whereas the minister quotes one physician who declares that Christian Science never healed organic disease or a cancer as big as a pin-head, the fact remains that there have been thousands of substantially authenticated cases of the healing of this and other so-called incurable diseases, and in the ranks of Christian Science practitioners are many who were formerly practising physicians, as well as many hospital nurses, who have been convinced of the efficacy of Christian Science by seeing many of these cases healed after having been given up by *materia medica*. In a speech before the United States Senate last January, Senator John D. Works gave the names and addresses of people who had been healed in Christian Science of tuberculosis, cancer, locomotor ataxia, and

Digitized by Google

many other diseases, with the names of reputable physicians and surgeons who had diagnosed these cases.

Mrs. Eddy does not "dismiss the matter by saying that man is never sick," but she explains how Truth heals the sick and casts out evil, as it did in the early Christian era. She states on page 495 of Science and Health, "Truth casts out error now as surely as it did nineteen centuries ago." Christian Science teaches that the healing truths taught by Jesus the Christ and practised by the early Christians for three hundred years after the resurrection, are as true and powerful now as they were then. After Jesus had taught his disciples to heal the sick and sinful, he again charged them to go and "teach all nations, . . . teaching them to observe all things whatsoever I have commanded you," and Christian Scientists are endeavoring to obey the Master's commands to "preach the gospel" and "heal the sick,"—to "observe all things." Is this denying the Christ of Galilee, as our critic avers?

The Bible tells us that "to obey is better than sacrifice," and in "Miscellaneous Writings" (p. 117) Mrs. Eddy has stated, "Obedience is the offspring of Love; and Love is the Principle of unity, the basis of all right thinking and acting; it fulfils the law."

✧

[Carl E. Herring in *Weeping Water* (Neb.) *Republican*]

There is nothing mysterious or obscure in regard to Christian Science, nor is there the slightest desire on the part of Scientists to do other than proclaim exactly what they believe, leaving the public to accept or reject as it sees fit. That the Bible has both a literal and a spiritual meaning is accepted as a basic proposition by the church fathers of every denomination. There is no controversy about this, and Christian Science can not and does not lay claim to any originality in promulgating this idea. A purely literal interpretation plunges the believer into all sorts of abominations and contradictions and gives rise to the stigma cast upon the churches,—that one can prove anything from the Bible.

The point of divergence comes in trying to determine what is the spiritual interpretation and not in agreeing that the spiritual interpretation should be found. Christian Science comes in conflict with orthodoxy because it throws down the gauntlet and refuses to temporize with any interpretation of the Bible which is not spiritual. Whether or not the spiritual meaning of the Bible is presented in the teachings of Christian Science, is for each one to determine after a careful study; but whether one agrees or not, it does not militate against the fact that Christian Science accepts the Bible as its only authority and guide to eternal life.

To illustrate: In the first chapter of Genesis we find it recorded that "God created man in his own image," and "God saw every thing that he had made, and, behold, it was very good." In the second chapter of Genesis we find that the "Lord God formed man of the dust of the ground," and took one of his ribs and made a woman. Then follows the record of man's sin. Evidently two accounts of creation and of man are contained in the first and second chapters of Genesis. Christian Science prefers to accept the first as the spiritually scientific account, and the second as the human, mortal mind account.

That the carnal or mortal mind is not the image and likeness of God ought not to require elucidation, and its appearance flitting across the pages of human history is no more to be accounted for than the false note struck upon the piano. The lesson of Christian Science is that the carnal, mortal, or false note is destroyed by striking the true chord, or as Paul puts it, "The carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be."

Again, Christian Science understands that Jesus came to fulfil the law, and that the spiritual interpretation is found in his teachings and in his works. Whenever there is an apparent conflict in the Scriptural teachings, we can gather the true meaning from what Jesus said and what he did. As in the study of Christian Science, so in studying about the atonement and the deity of Jesus, if we would read more of what he said and less of what is said about him, we would have a better understanding of Jesus and of his mission.

✧

[Charles F. Kraft in *The Spokesman-Review*, Spokane, Wash.]

A Seattle clergyman goes out of his way to assert of a very considerable portion of Spokane's best citizenship that they are "without the hope of salvation" and are "being led down to hell"—all because they have found in Christian Science the present salvation they failed to find elsewhere. While thinking persons generally know this denunciation to be untrue, there may still be those who will accept the statement without question because it was made by a professed teacher and preacher.

When the disciple John said to the Master, "We saw one casting out devils in thy name, . . . and we forbade him, because he followeth not us," Jesus replied: "Forbid him not: for there is no man which shall do a miracle in my name, that can lightly speak evil of me. For he that is not against us is on our part." What a marked difference in the spirit shown by the great Teacher! Christian Science does not deny the great work of Jesus the Christ, but declares the paramount necessity of following his teaching and practice. It accepts his declaration that he was the Son of God. He manifested God to the world, as recorded in that wonderful seventeenth chapter of John. Not only this, but he declared that his brethren, his followers, should manifest God, and gave them the further promise that they should do even greater works than he himself had done.

Christian Science emphasizes the point that practice rather than profession, knowledge rather than mere belief, is requisite to the true Christian life and salvation. Because the adherents of this faith are approximating in a degree full obedience to the command both to preach and to heal, they are not proclaiming themselves the only chosen vessels by loudly berating those who follow not with them. While speaking with authority to every form of evil, they become more humble, for they realize that of themselves they can do nothing. Mere belief counts for little; it is the knowledge of the truth that makes free. We say in the words of Paul, "I know whom I have believed."

Christmas Giving

FRANCIS C. GEORGE

SHOULD we but once in all the long full year
Bestow some token of the love we bear,—
Love with each day new born, more sweet, more fair;
Born with youth's eagerness to speak, to hear,
To give, to take its proper meed of cheer?
Should we forbear from each day's store to spare
Thoughts such as blossom into deeds more rare
Than costly gems brought when the year's grown sear?
He whom we claim to honor filled each day
With Love's unfading tokens. May not we
More often scatter gifts along the way?
Such gifts as he then gave I would for thee
Each day upon some transient altar lay,
That we the ever present Christ might see.

Editorial

"An opening wedge"

A GREAT deal has been alleged and a great deal denied as to what the attitude of the so-called allopathic physicians would be toward all other practitioners of healing whom they might consider competitors, in case they should succeed in obtaining the legislation which ostensibly as public benefactors they have so ardently and strenuously advocated. The reason for this question is the admitted fact that the American Medical Association, which is the sole advocate in demanding such legislation, is entirely allopathic or "regular" in its constituency, and at the present time it is alleged that none other than allopathic physicians are in the employ of the Government. Consequently there is no reason to believe that further additions to the Government force, or further powers granted to physicians, would change this condition.

"I have but one lamp by which my feet are guided," said one of America's greatest statesmen, "and that is the lamp of experience." So too we may say that, in assuming what the attitude of the allopathic school may be in the future, if backed by legislation of the kind sought by the American Medical Association, we can only be guided by what it has been in the past—the very recent past at that. As a rather illuminating case in point we quote an editorial in the *St. Louis Post-Dispatch* of Oct. 22 as follows:—

The last desperate hope of the parents of Bryan Scott, the student of Knox College who suffered a dislocated vertebra in a football game with St. Louis University, was osteopathic treatment. When, however, they presented themselves with two osteopathic practitioners in the unfortunate student's dying hours, they were refused admission by the hospital authorities.

This was not at a private hospital or at an endowed institution or at an institution conducted by benevolent or religious organizations, but at the municipal hospital of the city of St. Louis, whose maintenance is paid for by taxpayers who believe in the regular school, the homeopathic school, the osteopathic school, and other schools of treatment.

That Mr. and Mrs. Scott, in such an agonizing moment, were compelled to appeal to Mayor Kiel and Director of Public Welfare Tolkacz must have been due to an official of the hospital unacquainted with the scope and purpose of the institution as a municipal creation. It was not established at large cost to afford an arena for unseasonable and distressing disputes between advocates of different remedial theories.

In no *attaché* is vested the authority to deny near kinsmen the right to bring all available skill to the relief of any patient and especially to assume the sacred responsibility of exhausting all untried but promising methods of treatment in a case the hospital attendants have already given up.

The *St. Louis Times*, also editorially, said:—

The "doctors' trust" got a jolt from Mayor Kiel in the Scott case. Young Scott had been given up by the staff, and friends of the football victim asked that osteopathy be tried. There was a terrible hullabaloo. The trust physicians objected.

"The visiting staff is likely to resign if overridden," said one.

"Then we'll get a new staff," said Mayor Kiel.

The mayor isn't afraid—not even of the doctors' trust. One of these days the sensible men of the profession will rebel against the methods of an organization that seeks to rule or ruin.

"The sensible men of the profession" certainly should rebel against the influence and methods which place them in the light of endorsing actions such as those here referred to. That physicians of schools other than the "regular" hold different views from those expressed by the hospital staff, is shown in a letter addressed to Mayor Kiel by L. M. Ottofy, M.D., a homeopathic physician, as follows:—

As secretary and past president of the American Association of Progressive Medicine, I heartily commend the action taken by you and Mr. Tolkacz, director of public welfare, in the case of Bryan Scott by permitting osteopaths to treat the case in the city hospital, when it was pronounced hopeless by the allopaths in charge of this public institution.

I am a graduate in homeopathy, a taxpayer in this city for many years—but as a physician I am non-sectarian, and not only believe but advocate that "the only calling of the physician is to heal the sick," regardless of school, pathy, or ism.

The allopathic school of medicine has charge of our city and eleemosynary institutions, without rhyme or reason. Other schools of medicine, eclectic, homeopathic, and any other "pathic" should be permitted free access to our city and state charitable institutions, supported by our taxpayers and believers in these schools.

Allopathy is by no means infallible; give the others a chance. Your action is an opening wedge and should be expanded and enlarged. Any patient going to the city hospital has a right to ask for and receive homeopathic or eclectic treatment if he desires it, in preference to the old-time and out-of-date allopathic system.

The views of the public were unmistakably expressed by Mayor Kiel, and this experience may well be made "an opening wedge" to secure beyond question to the public the right to medical as well as religious freedom. It is the public that pays the bills.

ARCHIBALD MCLELLAN.

Habitual Meditation

HE who enters the hospitable courts of Richmond Hill, the center of Wesleyan mission work at Point de Galle, Ceylon, will come upon many interesting things in addition to one of the finest views in all "The Pearl of India." It is a beehive of educational and evangelical industry, in which the "cultivation of the spirit" is the constant aim. This fact was emphasized to one visitor as a result of his inquiry respecting the purpose of a row of little cell-like rooms which nestled under the cocoanut palms that bordered the school compound. "Here every student," came the answer, "is expected to spend half an hour each day alone, in silence and meditation."

This interesting discovery brought to remembrance the fact that the meditative life is a child of the East, and that though both preached and practised by the Master, it is made conspicuous today by its absence from the habit of the great majority of religious people. In our day so-called Christian civilization has little time or taste for quiet thought, and its marked materiality, its very noticeable lack of the fruits of the Spirit, is largely explained thereby.

For a Christian man to be unmeditative is incongruous, since Christianity means regard for the things that most stimulate thought. The infinite manifestations of Life, the inexhaustible riches of Truth, the deep mysteries of Love,—all the grandeurs and beauties of being challenge the Christian's attention, and that he can seem to be stupidly indifferent to their appeal is inexplicable indeed.

Yet how vagrant and superficial the thinking of the average believer, how intent he is upon the parade of material sense. Absorbed in temporal experiences, he fails utterly to distil from them their higher spiritual products. The drift of population toward the great centers, which is precipitating such serious communal and economic problems today, is very largely accounted for by the fact that men cannot bear to be alone. Having little imagination, little of the spirit of inquiry, and thus not knowing how to extract the elixirs which are to be found in the Word of God and the revelations of nature, they are irresistibly attracted to the glitter and glare of the city street, the racket and cheap adventure of the passing show. Responsibility for this ignorance of the nourishment and the joy, the health and the happiness to be gained through meditation upon the good, the beautiful, and the true, must lie in large part with the church. Christian believers have not been taught to follow the Master by relating the solution of life's problems to habitual communion with God, divine Truth, and here Christian Science is not only a great discovery and protest, but a great emancipator.

In the Preface of Science and Health (p. vii) Mrs. Eddy declares that "the time for thinkers has come," and the demonstration of the Science which she taught might be named the practice of the spiritually meditative mood. The realization of saving and healing truth is gained only through that

Digitized by Google

turning away from the claims and confusions of material sense, and that centering of thought upon the contemplation of spiritual realities, which was commended by the Master when he said to his disciples, "Come ye yourselves apart into a desert place, and rest a while." Here, however, both the quietists and the mystics have come short. They saw something of the advantage of retirement and meditation, but they did not attain to the metaphysics of Christian healing. The Christian Science practitioner is the true mystic, and the habit of entering into "the secret place of the most High," which is acquired by every worthy Scientist, is certainly proving next to "the greatest thing in the world." Here that weeding and watering of the garden of consciousness is done which is absolutely essential to the richer blossomings of faith.

The overcoming of world-likeness is not to be gained by pugnacious tilting with the windmills of its folly. This was the mistake of asceticism. The freedom of truth is gained only through the knowing of truth, through spiritual meditation. The habit of being alone with God is the study hour which Christian Science has again inaugurated, and over the door to its cloistered retreats there is written, "Let every meditation of my heart 'be acceptable in thy sight, O Lord, my strength, and my redeemer.'"

JOHN B. WILLIS.

Transformation

THAT a great change is needed in human character, individual and collective, few would deny, even if the demand were pressed home in each case; but there would doubtless be great diversity of opinion as to how this needed improvement can be effected, and few would be willing to meet unshrinkingly the divine requirement, which never stops short of perfection. When a very learned and religious man came to Christ Jesus, seeking new light on the important questions of life, the great Teacher swept aside all trivialities with the demand, "Ye must be born again." According to this decision it is not enough to make certain changes here and there in character; the mortal concept must be given up, and life must begin anew with the divine idea as its foundation. There is almost contempt in these words of the Master: "That which is born of the flesh is flesh," nothing more; it is that which sins, suffers, and dies; but thought is immediately lifted above it to "that which is born of the Spirit."

In direct line with this teaching of the Master we find St. Paul saying, "Be ye transformed by the renewing of your mind," and in this statement we have a hint of both process and result. Transformation implies a complete change in nature and character, and in the process, as Mrs. Eddy explains, "belief melts into spiritual understanding, and sin, disease, and death disappear" (Science and Health, p. 442). She adds that then "the material, transformed with the ideal, disappears;" and it is toward this result that all true Christian Scientists are bending their energies. If we ever make the mistake of standing still, forgetful that we are yet largely controlled by material sense, we shall surely be roused from our lethargy by that unceasing demand of Truth, "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light."

At every step of the way Christ Jesus, our great Exemplar, was teaching those who were willing to hear him, how they must put off mortal sense if they would gain spiritual freedom. On page 49 of Science and Health our revered Leader says that though he was "charged with the grandest trust of heaven," yet he was "ready to be transformed by the renewing of the infinite Spirit." Are we as ready to meet the problem of each hour, desiring only to throw off more and more the burden of mortal belief and to be changed into the perfect likeness of the perfect Father?

Paul is unsparing when he marks the contrast between the flesh, or matter, and Spirit; the former with its envyings, murders, and impurity, and the latter with its "love, joy, peace;" its "gentleness, goodness, faith,"—all indeed that makes life worth living. There are some who object to Christian Science because its teachings rule out matter, or the flesh, as a factor in the divine economy; but the reason for its insistence that materiality must be given up, may be stated in Paul's words respecting the belief of bondage to the flesh, namely, "Ye cannot do the things that ye would." He at the same time points the way to freedom when he bids us "walk in the Spirit," and this assuredly leads to the transformation of which he speaks in his epistle to the Romans.

The student of Christian Science knows that God's idea needs not to be transformed; being the reflection of God, it is forever perfect. The human sense, however, needs to be greatly changed in order to be "conformed to the image of his Son," and this is the purpose of divine Love for all mankind. If we are in any wise "conformed to this world," we should arouse ourselves and become truly coworkers with God in the task of being transformed and, like the Master, at length transfigured,—cleansed from every stain of earthliness by the mighty power of infinite Spirit. Even in the process of overcoming error the healing work goes steadily on; indeed it is the healing which has no element of uncertainty in it. It is true that "flesh and blood cannot inherit the kingdom of God," but there is this sure promise: "We shall be changed"! Self-righteousness is hushed before these words so full of majesty, and thought is lifted to the mental altitude where we can stand "with open face beholding . . . the glory of the Lord;" then are we "changed into the same image from glory to glory, even as by the Spirit of the Lord."

ANNIE M. KNOTT.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston Street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk Streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon Street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

NEW BEDFORD, MASS.—With simple but impressive services, the corner-stone of the new edifice for First Church of Christ, Scientist, was laid at sunrise this morning [Sept. 23], on the site at County and Mill Streets. The society has been organized for more than twenty years but never had a home of its own. During the last three years it has been meeting in the Middle Street Christian Church. It has owned the site at County and Mill Streets for several years. The new church building, which is expected to cost between twenty and twenty-five thousand dollars, will probably be ready for occupancy about Feb. 1, 1916.—*The Standard.*

SALEM, N. H.—First and Second Churches of Christ, Scientist, of Haverhill, and the Churches of Christ, Scientist, of Lawrence, Lowell, Nashua, and Manchester, united in placing a tent at Rockingham Fair, which was held in

Digitized by Google

Salem, N. H., Sept. 28 to Oct. 1. The managers of the fair manifested much courtesy and gave the ground rent free. The tent was well patronized, many callers gladly and eagerly taking copies of our periodicals. Two thousand *Monitors* and about fifteen hundred other pieces of Christian Science literature were distributed. The pamphlets were especially acceptable, because so convenient to carry away.

Correspondence.

PHILADELPHIA, PA.—Ground was broken yesterday [Oct. 21] for the erection of an edifice for Fourth Church of Christ, Scientist, at Fifty-ninth Street and Cobbs Creek Parkway. A temporary structure will be built, and the congregation, which now holds services in Red Men's Hall, Sixtieth and Spruce Streets, expects to occupy it before the end of the year. The site for the building cost twenty thousand dollars, and the temporary structure will cost six thousand five hundred dollars.

The edifice of First Church of Christ, Scientist, was built here six years ago, in Walnut Street, near Fortieth. Soon after, Second Church of Christ, Scientist, was organized in Germantown, and later Third Church of Christ, Scientist, at Broad and Oxford Streets.—*North American.*

CHERRYVALE, KAN.—The Christian Science Society of Cherryvale took advantage of an opportunity to have a reading-room and distribute Christian Science literature at the Old Soldiers' Reunion recently. It was decided to have a tent, which was very kindly loaned us, and the park commission gave free use of enough ground on which to set it up. The reading-room was well equipped with all the comforts necessary for the occasion, and was open from nine o'clock in the morning until nine in the evening. There was loving cooperation from the neighboring towns of Independence and Coffeyville in making the work a success. Copies of the *Monitor* and *Sentinel* were distributed and information was given regarding Christian Science.—*Correspondence.*

SAN FRANCISCO, CAL.—The architect has completed working drawings and will shortly call for figures for the construction of a new church building for Second Church of Christ, Scientist, at a cost of sixty thousand dollars. The building will be erected at the corner of Dolores and Cumberland Streets.—*San Francisco Examiner.*

✧ ✧ ✧

The Lectures

Brooklyn, N. Y.

The introductory remarks of Prof. Joseph F. Wingebach, second reader, at the lecture on Christian Science delivered for Second Church of Christ, Scientist, by Jacob S. Shield, were as follows:—

Christian Scientists have apparently found something which seems worth while, for this "something" is proving to be a very present help in time of trouble. Indeed, the world is inquiring, "What is Christian Science?"

Some are asking this question with fear and trembling, lest the answer made them will also name the conditions and the price to be paid for this "something,"—the overcoming of prejudices, the giving up of old beliefs, and perhaps the abandonment of those very systems of education under which training has been sought. Again, there are others humbly asking, "What is Christian Science?" and earnestly desiring to know what is this power which today is healing the sick and the sinning and bringing harmony into consciousness. Tens of thousands have had undeniable evidence of the power of the truth as revealed in Christian Science, and thousands are now proving that this religion is demonstrable. So could you and I surely prove Christian Science a demonstrable science, were we to act in accordance with the Master's teaching and "become as little children," and going straight to him who was "meek and lowly," learn of him.

We know that prejudices fetter the human mind, that the presence of erroneous concepts is confusing, and that preconceived notions and the passive acceptance of mere opinions clog the intellectual activity. Our progress begins only when we rid ourselves of prejudices, correct erroneous beliefs, clear the mind of mere notions, and test beliefs and opinions for the purpose of discovering whether these accord with fact and reason. It is therefore but fair to one's self to approach the study of Christian Science with at least the same open-mindedness that one would approach the study of any of the physical sciences. The mind open to receive the truth experiences the healing. God "giveth the increase."

In her Message to The Mother Church for 1900 (p. 7) Mrs. Eddy refers to Christian Science as "the Science of perfectibility through Christ, the Way, the Truth, and the Life." "The Science of perfectibility,"—does not that appeal to you as a remarkable definition, because of its descriptiveness, its conciseness, and its completeness? Proceeding as it does from the self-evident proposition that God is All-in-all, Christian Science leads straight to the conclusion that man, whom God created in His own image and likeness, must necessarily be perfect; and the new Science that Mrs. Eddy gave to the world is indeed the "Science of perfectibility."

Correspondence.

✧

Chicago, Ill.

Bliss Knapp lectured for Third Church of Christ, Scientist, on Christian Science. He was introduced by Albert E. Barnard, who said in part:—

You will recall Solomon's saying in Proverbs that as a man "thinketh in his heart, so is he;" but perhaps you never paid much attention to the fact that spiritual thinking has immediately to do with our mental and physical comfort. That such is the fact, however, is proved by the hundreds of thousands of men and women who in the past forty years have literally thought their way out of confining creeds and material laws into the spiritual realm of Truth, where they took the Word of God at its face value and found the instructions of Christ Jesus able to solve all their troubles and heal all their diseases.

To those of you who are not Christian Scientists, we would say that all we aim to do in a lecture such as you will hear this evening, is to show how we make the Word of God practical in our every-day lives, and leave you free to do your own thinking.—*Correspondence.*

✧

Richmond, Cal.

Under the auspices of Second Church of Christ, Scientist, a lecture on Christian Science was delivered by Dr. Francis J. Fluno, in East Shore Park Pavilion. The lecturer was introduced by Miss Neoma Check of San Luis Obispo, whose remarks were as follows:—

The history of the human race has been a record of the gradual unfoldment of eternal truth to the human consciousness; and the rate of humanity's progress and growth has been determined largely by its willingness or unwillingness to shake itself free from the inertia of ignorance and custom

Digitized by Google

and to let go of the limitations imposed by them. Every one of the discoveries that have so immeasurably benefited the world has been but the uncovering, to some awakened mind, of a truth or principle which has always existed, always been available, and which only needed to be understood and applied in order to yield to man increased dominion over the products of the earth and the forces of nature.

Mankind has an equally great need of an improved understanding of the fundamental truths of being, for the progressive unfoldment of man's true selfhood that results from living in accordance with these truths brings into realization man's freedom from the limitations which now beset him on every hand, gives him power in every direction, physical, mental, financial, and is thus manifested in a well-rounded and increasing efficiency that is both natural and satisfactory.

The Courier.

Lectures to be Delivered

CALIFORNIA—Berkeley (First Church): Clarence C. Eaton, High School Auditorium, 8 p.m., Dec. 9.
Escondido: Clarence C. Eaton, Roberts Auditorium, 8 p.m., Dec. 6.
Hermosa Beach: Clarence C. Eaton, Bank Building, Pier and Hermosa Avenues, 3 p.m., Dec. 12.
Los Gatos: Clarence C. Eaton, Ford Opera House, 8 p.m., Dec. 14.
San Francisco (Fifth Church): Clarence C. Eaton, Dreamland Rink, Steiner Street, near Sutter, 8 p.m., Dec. 13.
Yreka: Clarence C. Eaton, Peters' Theater, 8 p.m., Dec. 17.
ENGLAND—Leeds, Yorkshire: Col. William E. Fell, Empire Theater, 3 p.m., Dec. 5.
FLORIDA—Daytona: Clarence W. Chadwick, Palmetto Club House, 8 p.m., Dec. 13.
GEORGIA—Macon: Clarence W. Chadwick, Grand Opera House, 3 p.m., Dec. 12.
Savannah: Clarence W. Chadwick, Lawton Memorial, Bull Street, 8:30 p.m., Dec. 14.
IDAHO—Cœur d'Alene: Prof. Hermann S. Hering, Rex Theater, 8 p.m., Dec. 16.
Moscow: Prof. Hermann S. Hering, Egan's Hall, 8 p.m., Dec. 17.

Testimonies of Healing

I am one of the many who have been raised through Christian Science from an unhappy state of existence to one of health and great peace, and for these blessings I can never cease to give heartfelt thanks to God. For years I was never well. I had undergone two operations for internal troubles, and it seemed as if I could not live without taking medicine daily. The doctors all did their best to cure me, but I did not get well. I was afraid to eat or take any exercise, and was fast becoming a chronic invalid.

A few years ago Christian Science was brought to my attention for the third time, and this time I felt drawn to it, my former prejudices having disappeared. It was not for the healing that I came to it, though that was needed very much, but I had long been seeking for a religion which would satisfy. I had tried many churches, but there was always something lacking. This something was found in Christian Science, and I have never had any doubt since as to the truth of its teaching. It is so comforting to know that God, good, is always with us, and that heaven is not a far-away place, but that it is possible by right thinking and living to attain to heaven, harmony, in this present existence.

The physical healing was almost instantaneous, and in a day or two after beginning the study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I realized that I did not need any more medicine, so I threw it all away and ate anything that appealed to me. Since then I have had splendid health and can do whatever is necessary. Relatives and friends are amazed at the change in me in all ways. They say I am much easier to live with, and this I can well believe, since formerly I was in a very depressed state of mind and thought that life was not worth living. Although I did not require any treatment for physical ills, I am very grateful for the help received from Christian Scientists for other troubles, and I have found our literature and church services a constant help and delight.

I have had the great privilege of class teaching, and it has done more for me than I can tell. It is impossible to express in words the gratitude I feel for all that Christian Science has done and is doing for me, and for the joy that has come into my life. My desire is that I may learn more about God each day, and thus grow into a fuller understanding of Him who healeth all our diseases, so that I may be able to help others as I have been helped.

ISABEL LINDSAY, London, England.

✧

When less than three years old I met with an accident which left me rather delicate, and like many frail children, I acquired an unhappy, disagreeable disposition. I was supposed to have inherited delirious headaches from several generations of ancestors, and I had become subject to hayfever, bronchitis, and stomach disorder, suffering for many years from all these ailments. When I was about twenty-four years old, lung trouble developed, and the physician gave me up, but said I might possibly live a few weeks if I went inland. I was then living on the coast of Massachusetts. I accordingly went to an uncle who was preaching in the northern part of the state. When I arrived at his house the ladies' sewing society, which was meeting there, was discussing a neighbor who had taken up the study of Christian Science, and I absorbed all the adverse remarks that were made. This occurred more than twenty-six years ago.

A few days later this dear lady called and tried to talk to me about Christian Science, but I was so prejudiced that I would not listen. When she said she was willing to help me, I simply scoffed at her. However, I began at once to improve, and in six weeks a thorough medical examination showed the lungs to be sound. But that did not convince me that Christian Science was in any way entitled to credit, and for sixteen years I ridiculed, condemned, and repudiated what I thought Christian Science to be.

I had been instructed in three different denominations, and owing to inability to get any satisfying understanding or information from any of them, had early become an atheist. When I was finally constrained to look into Christian Science through the apparent improvement of my wife under its ministry, it appealed to me by its very simplicity, and I quickly grasped its teachings. For nearly eleven years now I have been a devoted student, and have overcome, through my own study and application of the truth, all the ills named above, also nervous exhaustion, weariness, resentment, hatred, and many other unpleasant habits and beliefs.

Gratitude is a word pregnant with meaning, and yet it is inadequate to express what I feel toward the one who presented to the world the aforetime hidden truth of the Bible, the truth that does indeed make free.

EDWIN F. HAMMOND, San Diego, Cal.

✧

Although I did not understand the teachings of Christian Science when I first heard of it, I never for a moment doubted that it was true. I had been a sufferer from chronic bowel trouble and other ills for twenty-five years, using material remedies continually. At times I would be relieved, but only to have the ailments return. A cousin came to our home for a few days' visit, and as I felt very miserable he asked me one day why I did not try Christian Science, saying that he had been healed by it of a similar difficulty. He talked to me a while about the subject, and on his return home sent me some literature, which I read and reread.

My thoughts were thus turned into new channels, for I saw that if Christian Science had healed others it could heal me, and as I had read that testimonies of healing were given at the Wednesday evening meetings, I went to my cousin's home and attended one with him. I was surprised to see so many intelligent looking people, who all seemed friendly and happy, and I thought there surely must be something in this teaching, for these people could not all be wrong. During the service I listened as only one would who was very much interested. The reading, singing, and all seemed very beautiful to me, but it happened that only a few people testified, and I was not so impressed as I had expected to be.

When we reached home we talked about the meeting for a while, and then retired, but I kept thinking about what I had seen and heard, and could not sleep. Soon every trouble and pain I had ever experienced seemed to come back to me with renewed force, and I suffered terribly until morning, when a Christian Science practitioner was sent for. She arrived in about an hour, and I shall never forget her sweet face. She talked a few minutes and then gave me treatment. I was healed instantaneously of the chronic bowel disorder and other ills, and all other troubles seemed to vanish like mist before the morning sunlight. That afternoon I returned home much happier than I had ever dreamed it possible to be. Treatment was, however, continued for two weeks, as fear had a strong hold on me. All material remedies were discarded, and now for six years I have relied on God under all circumstances. The Bible and Science and Health have been my daily companions.

I thank God for all the blessings I have received and for the spiritual uplift Christian Science has brought to me. I am grateful to our beloved Leader for the path she has pointed out for us to follow. I am also grateful to every one

Digitized by Google

who has been a help to me in this journey from sense to Soul. There is no Christian Science church in our town and not a Scientist that I know of around here, so I am working out my own salvation alone with God. My greatest hope is that I may continue to progress in understanding until I become a Scientist worthy of the name, for I know now that "all things work together for good to them that love God." I hope this testimony may be helpful, if only in a small way, to some who may read it.—Ada E. Burton, Eagle, Wis.

✧

About four years ago I became interested in Christian Science. For twenty years before that I was addicted to the liquor habit to such an extent that I believed I could not do without strong drink for any length of time. After reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, also the Bible, I decided to go to a practitioner for help. I can truthfully say that I am now completely healed of this habit, also of the smoking habit of thirty years' standing, and I no longer use profane language. I am indeed grateful for these healings, and more than thankful to God for the spiritual uplift I have received since coming into Christian Science. I am also grateful to Mrs. Eddy for the truth that made me free.—Alexander M. Morrison, Berkeley, Cal.

✧

I had always been dissatisfied with myself, and conditions over which I had no control worried me with their complications, so that finally my health was gone and I was practically a nervous wreck. Then I gave up what I supposed was God, thinking there was no use in trying to serve One who gave nothing in return, not even peace. After years of doubt I happened to live in a house with a Christian Scientist, and she reflected Love to such an extent that I began to wonder what she had that made life so sweet. I had been a church-member for years, but when an operation was declared necessary and we could by no means afford it, I turned to Christian Science in my perplexity and was entirely healed of chronic bowel trouble, stomach disorder, and neuralgia. The healing has been permanent, and I have steadily grown stronger and happier; indeed, I am almost a new creature.

I give this testimony with a most grateful heart, in the hope that it may help some one. That divine Love should have given us our dear Leader, Mrs. Eddy, proves beyond a doubt His watchful, tender care.

Mrs. L. P. Layton, Penns Grove, N. J.

✧

Six years ago I had what *materia medica* called a structural defect of the eyes, for which glasses had been worn for a number of years. This condition became aggravated and was accompanied by excruciating pain in the head. A friend who was investigating Christian Science advised me to give it a trial, and I accordingly called upon a practitioner, who took up treatment for me. As a result the glasses were laid aside, and in a few days I was free from pain. There has never been a return of the trouble.

Becoming interested in Christian Science, I began to read Science and Health, and as a result some understanding was gained, but I was unwilling to give up all for Truth. In a comparatively short time my physical condition became bad, and for three years I suffered from acute stomach trouble. Many material remedies were tried, but they gave no relief. Then there were periods of complete nervous exhaustion, and the future indeed looked dark; but in the midst of my despair came the admonition, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." At last I realized there was but one way,—that through Christian Science; so without delay I again consulted a practitioner. Treatment was given and I was lovingly led back to the study of the Bible and Mrs. Eddy's writings. The healing of the stomach disorder was instantaneous. The same evening I ate a hearty dinner and for the first time in many months felt no distress. I had also been troubled with a bowel difficulty from childhood, but this condition was overcome in a short time, and I am now enjoying the best of health, relying wholly upon divine Love.

Soon my husband also became interested and he has taken up the study of Christian Science with me. He too has experienced several healings, and words cannot express my thankfulness to God for all the blessings I am daily receiving. I am indeed grateful to our Leader for her wonderful illumination of the Scriptures.

Sue M. Monckton, Hannibal, Mo.

I can cheerfully testify to the great benefits received by my wife. With the aid of a Christian Science practitioner I have been healed of the tobacco and the liquor habit of forty years' standing, and I am sure that any one who so desires may receive the same blessing. The mental uplift experienced is truly wonderful, and I feel that as fuller understanding comes greater blessings will be realized. I thank God for the demonstration of the power of Truth.—C. J. Monckton.

✧

I wish to testify most gratefully to the benefits I have received through Christian Science, and particularly to the healing of grief. In regard to the last, Christian Science seems unique, since *materia medica* offers no healing for it, human sympathy is futile, and the solace of prevailing religious belief has proved ineffectual.

Fourteen years ago, at the time my sister passed on, I first became interested in Christian Science, and through its healing influence the dark clouds were swept away and I was able to carry burdens that had seemed unbearable. I was healed of physical ailments at that time, and although I was under sentence from *materia medica* to have brain fever, Christian Science proved to be an effectual preventive. I have also been healed of a disease pronounced incurable by two physicians. Within the past two years my mother and father have both passed on; but through Christian Science I have been wonderfully sustained. Truth has enabled me to escape from the assault of grief, and to think upon the things that are true and lovely and of good report.

Christian Science has been to me an effectual guide in business affairs, in my profession as a teacher, and in all the problems of daily life. I am grateful to Mrs. Eddy for her discovery of this wonderful truth, and also for the church services, for the publications, and for all that has made possible to me an increasing understanding of the truth. My entire outlook upon life is brighter because of Christian Science, and I am immeasurably more useful in the world.

Sadie Marion Becker, Sioux City, Iowa.

✧

I have been healed through Christian Science of a bowel difficulty which medicine did not relieve, also of a skin trouble and many minor ills. About six years ago my foot turned as I was going down-stairs, and I was thrown down several steps with my feet turned backward under my body, causing severe pain. I got up feeling very much jarred and shaken up, and went on down-stairs. The lady with whom I was living was a Scientist, and she declared the truth for me, so that in an hour the pain was destroyed and I could walk freely again. This seemed to me a wonderfully quick demon-

Digitized by Google

stration, as I had not been in Science very long. On another occasion, as I was getting off the street-car the skirt of my dress caught on a piece of iron, throwing me to the ground. The motor-man and conductor helped me up, and with some assistance I reached home, where Christian Science treatment was given me. In less than two hours the sense of shock and pain was entirely destroyed. There were two flesh wounds and several bruises, but these healed in less than a week.

I am very thankful to God for these experiences, and grateful to Mrs. Eddy. I am also thankful for our literature.

SARAH B. TRIMBLE, Baltimore, Md.

✧

Some thirteen years ago I began the study of Christian Science in a lukewarm way and drifted along for some five years, taking things as they came and giving out no more than I was forced to give; going to Wednesday evening meetings and absorbing everything that came my way, but giving nothing in return.

About this time red spots broke out on my body, and I immediately went to a doctor, who diagnosed the trouble as a skin disease. Thinking I wanted treatment he prescribed some medicine, and also a brush to use twice a day. I used the medicine and the brush for a few days, and I was certainly a sight to behold when I threw them out and applied for help in Christian Science. I received the help and was a well man some ten days later. This, however, did not bring me to the point where I could give a cup of cold water in a Wednesday evening meeting to some one in distress.

A short time after this healing I began to feel more or less hatred toward a man in our city, thinking he did not care to associate or do business with me. This shows me now what pride will do when one does not throttle it in its infancy. A little later on, sitting down to think where this feeling would lead me, I woke up to its seriousness and changed my thought of the man. I tried to recognize his true individuality, God's own child and my brother. In about two weeks this man asked me to take lunch with him that noon and I accepted his invitation. We entered into harmonious business relations.

About three years ago a mental trouble came on me very suddenly, and at times it seemed as if I would not be able to weather the storm; but I never faltered, and the turning-point was reached some two months afterward. With this trouble there went out of my life most of the things that are holding the world in bondage today, such as hate, malice, revenge, jealousy, and the like. Since then I have been able through my own efforts to find freedom from a very tenacious disease of fifteen years' standing that had given me many wakeful nights, and days and weeks when I was unable to attend to business. I now have a better understanding of what constitutes a good Christian Scientist, and it is my privilege and duty wisely to give to a hungry world this saving truth which has come to me. I know that I am on the way to my Father's house and that I can only stray by being absent from my post of duty.

As Christian Scientists we should remember that in divine Love there is no strife. A little judicious thinking on this line might save many a heartache in the world today and in days to come. I want to express my thankfulness to God, whom I have begun to know, and my love for the woman who was pure enough to bring this inspiring truth to a waiting world.—W. T. THOMPSON, Riverside, Cal.

✧

It is with love and thankfulness to God, and gratitude to our dear Leader, Mrs. Eddy, that I send this testimony. My mother and I became interested in Christian Science through the healing of my aunt. I attended the church with her occasionally, but on being asked why I did not try Christian Science treatment, replied that Science could not help me. I however finally decided to give it a trial, having suffered from bowel disorder since birth. The last few years before my healing I never retired without taking some kind of medicine for this difficulty. With just four Christian Science treatments I was entirely healed, and have remained so. After this healing I immediately began to study the Bible, and "Science and Health with Key to the Scriptures" by Mrs. Eddy. By reading these books I have been healed of female trouble, and enabled to lay aside glasses that had been worn most of the time since childhood. I have also been helped in many other ways.

I had been a member of another church all my life. My mother always took me to all of the services when I was a child, but as I grew older I began to wonder why, if God was all powerful and all loving, He would allow His children to suffer. I therefore lost interest in the church and seldom attended. When I did go it was because my mother insisted, saying that it was my duty. But since Christian Science has come into my life I know that God is Truth, Love, and Life, omnipotent, omnipresent, and omniscient, and that He does not permit His children to suffer. As our Master said, "Ye shall know the truth, and the truth shall make you free."—MRS. AWDREY L. HASKETT, Indianapolis, Ind.

✧

It is now over five years since Christian Science was brought to me by a dear friend, when I was a nervous wreck and suffering from severe pain in the back of the head. This friend treated me, and the headache was overcome in a short time, while I was healed of stomach disorder and backache by reading Science and Health. When I had been in Science about a year, my husband had what seemed a serious trouble with his foot, but I treated him the best I knew how and the next morning it was all right. He has also been healed of stomach trouble in one treatment; likewise of asthma, from which he had suffered for years.

I am thankful to God, and grateful to Mrs. Eddy, for all the blessings I have received.

RACHEL SMITH, North Falmouth, Mass.

✧

I can no longer refrain from giving at least one testimony of what Christian Science is, to prove that God is ever present, and that the help is given even before we ask it. Not long ago I accidentally knocked a bottle off a washstand. Without thinking what was in it, I picked it up, and as the cork had fallen out the contents were spilled all over my hands, and I put one hand up to my face. Not until then did I realize that what is called a caustic poison was in the bottle. Almost unconsciously the realization of the power of Truth flashed through my mind, and I was not only saved from the least bit of pain, but my face and hands did not even get red. This is only one of many demonstrations we have made in our family since taking up the study of Christian Science, for which we are more grateful than words can express.

MRS. R. F. POLHAMUS, Los Angeles, Cal.

✧

I am very grateful for having the ever operative spiritual law revealed to me through our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. It strengthens, supports, and sustains me, and supplies every need. It has recently been demonstrated to me again that God is the great Physician. I was suffering greatly from stomach trouble and other complications, when through the aid of a Christian Science practitioner these discordant conditions were destroyed. Daily I ask God to help me to reflect

Digitized by Google

more of this blessed truth, until all in my consciousness that is unlike God, in whom I live, move, and have my being, is overcome, and I may sing with the psalmist, "Many, O Lord my God, are thy wonderful works which thou hast done." I thank God, and am grateful to our dear Leader and to all who have so patiently assisted me in seeking my salvation through Christian Science.—MARIE J. FELDES, Chicago, Ill.

✧

The writer is one of those "that go down to the sea in ships, that do business in great waters." Six years ago I was healed through Christian Science treatment of general ill health, and eyesight troubles so serious that it seemed as if it would be necessary to give up going to sea and seek some work on shore, as *materia medica* could hold out no hope of a cure; but through Christian Science all that has been changed, and now health and happiness have taken the place of sickness and misery.

In comparing the days spent at sea now with those before knowing of Christian Science, I am full of gratitude and thankfulness for the change that has been brought about through Christian Science. I never was inclined to read much, and the trouble with my eyes prevented my doing so even if I had felt the desire for it, and as for study, I avoided it as much as possible; mental inertia and physical weakness were strongly in evidence and took away all inclination for study and self-improvement. The Bible was a closed book; in fact I had none on board, considering it only took up space for nothing. Now all my spare time is profitably and enjoyably spent in reading the Bible, also "Science and Health with Key to the Scriptures" by Mrs. Eddy, with all the other authorized Christian Science literature, and I have a daily feast of good mental food, so that the days at sea instead of seeming long and wearisome, as they used to do, now pass by quickly and happily.

Then there is the pleasure of going to the Christian Science services at a foreign port where there is a church or society, and I have always met with the greatest kindness and hospitality from the Scientists I have met abroad, so that the time in port has been spent as happily as when at sea. At the end of the voyage comes the meeting with my wife, son, and daughter, all of whom are Scientists, and this makes the list of temporal blessings complete.

But above these pleasures is the peace of mind which passes all human understanding; the increasing freedom from worry and anxiety; the joy of knowing that the government is "upon his shoulder," not mine, which sets me free from all the cares that attend a shipmaster in the navigation of his ship. When I think of all these things of "good report," is it any wonder that I am thankful for having been brought out of the darkness of the material beliefs to which I was once in bondage, and brought into the glorious light of Truth and true being as taught in Christian Science, given to us by our Leader, Mrs. Eddy.

CAPT. WILFRED S. ILIFF, S.S. Bampton.

✧ ✧ ✧

You will not compass your poor ends
Of barley-feeding and material ease,
Without the poet's individualism
To work your universal. It takes a soul,
To move a body: it takes a high-souled man,
To move the masses, even to a cleaner stye:
It takes the ideal, to blow a hair's-breadth off
The dust of the actual.—Ah, your Fouriers failed,
Because not poets enough to understand
That life develops from within.

ELIZABETH BARRETT BROWNING.

From Our Exchanges

[*American Lutheran Survey*]

"Having food and raiment let us be therewith content." The adjuration of the apostle needs to be repeated again and again. If we would be content, satisfied, and happy in this life, we must be satisfied with daily bread. The Lord has taught us to pray, "Give us this day our daily bread." He points us to the lilies of the field and the birds of the air, that we may learn from them contentment. Discontent is the destroyer of happiness, and results from our lack of satisfaction with the daily provision for life. Greed, avarice, covetousness, and a long train of sinful desires, grow like weeds in the heart which has not learned the lesson of contentment with food and raiment. God would have His children care free and happy.

The contentment of which the apostle speaks is more than a philosophy. It is not based on selfish considerations; it is the work of the Holy Spirit in the heart. As such it is of divine origin and nurture. It springs from a living faith in God's loving care and providence. This contentment should be the sign-manual of every Christian. It helps him to mental poise and equilibrium. It steadies his purpose and gives sanity to his judgments. It renders him helpful and comforting to his fellow men, who thus learn from him the secret of a happy life.

[Rev. James Mudge, D.D., in *The Christian Intelligencer*]

It is sufficiently clear that the root idea of religion is a yearning of the spirit of man for the spirit of God, a recognition of the relation of man to the invisible, an adoration and imitation of the highest object of which man can conceive. Reverence and worship are essential parts of it. It implies love and loyalty to God, surrender or submission to a higher power, to a personal, supernatural being on whom we are dependent and to whom we are responsible. The truest, best, most genuine religion, while including all moral duties, is something more, for it consists partly in doing all those duties from a higher motive, the desire to please God (not from expediency alone, or a sense of honor, and a feeling of benevolence or good nature), partly in the doing of certain other duties which have no connection with our fellow men. It involves the affections and emotions as morality does not. It is a larger, holier, more beautiful and enjoyable thing, reaching the inmost recesses of our being and lifting us into communion with the infinite personality. It is the perfume and the poetry, the melody and the mirth of conduct, while morality is the prose.

[*The Outlook*]

The sayings of Jesus are interpretations of the spirit of life, and he who fails to look through these luminous windows to the spirit within, falls into the same mistake as the disciples who, when their Master warned them against the leaven of the Pharisees, thought it was because they had forgotten to bring bread with them. He who blindly follows the sayings of the Master does not follow them at all. Blindness is no better for the soul than for the body. "The letter killeth," says Paul. The literalist by his reverence for the letter kills the spirit.

[George Rowland Dodson, Ph.D., in *The Christian Register*]

A religion that unquestioningly accepts authority and complies with traditional forms is natural to children, but a thoughtful religion is the only religion possible for thoughtful men. Theology, which is simply religion grown thoughtful, which is the result of man's effort to understand his life of
