When we first see the call of justice and mercy as absolute,—in our zeal to be just or merciful to others, we may fail to require justice toward ourselves. This also is an error, for universal justice must be manifested, or it is not absolutely just or merciful. We have no right to be unjust, even to ourselves, for we thus mar the beauty, the symmetry of the whole as much as if we were being unjust to another. The only difference is that in this case there is less selfishness manifested, but the mistake must be corrected. "A false balance is abomination to the Lord: but a just weight is his delight." It makes no difference who or what is being weighed, it must be a "just weight." We must learn to be meek and yet strong, gentle and still firm, charitable and at the same time decisive.

Thus we see that we need the great balance-wheel of Truth and Love to keep us true to ourselves, true to others, true to God, and to do the work that we are capable of doing when rightly directed. How blessed we are in having such a guide as our text-book, "Science and Health, with Key to the Scriptures," by Mary Baker G. Eddy, to which we may go at all times and find there the sure word of love and wisdom. How its "line upon line, precept upon precept," cheers, warns, counsels, reproves, and encourages us! Are we bringing out the symmetry,—the harmony in our lives, in our work and in our surroundings, that we should, with such able counsel, such loving rebukes, such faithful instructions? We all desire to do this, but how often are we reminded of Paul's words: "For to will is present with me; but how to perform that which is good I find not." (Romans, 7 : 18. See also vs. 20, 25.) However, with our added helps,—having been taught the absolute nothingness of these false claims,—the unreality of the "carnal" mind, and the allness of Good, we are better equipped to overcome this adversary, and bring out the perfectly rounded, symmetrical character; and as our light is greater, our responsibility is also greater.

Know, O child, thy *full* salvation;
*Rise o'er sin and fear and care;*
Heaven's eternal day before thee,
God's own hand shall guide thee there.

## Christian Science, the Christ-Truth.

BY WILLIAM BRADFORD DICKSON.

As in the days of old, the spirit of the deathless Christ stands again at the portals of the world, beside the by-paths of all the common daily walks of life, and cries, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

Through the harsh noises of our day
A low, sweet prelude finds its way;
Through clouds of doubt and creeds of fear,
A light is breaking, calm and clear.

That "Light" and that "low, sweet prelude" is Christian Science whose deathless theme is the old-time song of the angels, "on earth, peace, good-will, health, holiness, happiness to all the world." Its benedictions destroy the iniquities of the sinner and the diseases of the sick, rob the grave of its victory and restore again to the children of Israel immortal life and harmony.

The time has come for humanity to take the Sword of the Spirit and with heart athrob with immortal courage emancipate itself from the world-wide thraldom of sickness and sin.

When, with a mighty burst of spiritual power and love, the Apostle Paul sent forth to all times and all peoples, this majestic message of Truth, "The law of the Spirit of Life in Christ Jesus hath made me free from the law of sin and death," he sounded to the world the bugle call of victory, and sublimely summarized the words, work, and mission of our beloved Master, the Son of the living God, —the eternal exemplar of all true Christianity.

In like manner, Christian Science, which is but the teachings of the Nazarene and of the elder Scripture, spiritually interpreted, scientifically classified, and amplified by right reasoning and revelation, has come to bring mental, moral, and physical freedom to this age, and to leaven this latter-day world with the spiritual power and grace of primitive Christianity,—to prove its divinity and demonstrate God's omnipotence by the destruction of disease and sin.

In the Messianic days the sick were healed, the hungry fed, and the dead raised up by the power of the ever-present Christ,—the deathless Christ,—which has never left us but still abides in this day and age, and is again seen magnifying the Lord of Hosts by its countless victories at the bedsides of the sick and in the hearts of sinners.

We can no longer say with lonely dread
The power of miracle has fled.

Even a faint perception and realization of the ever-presence of this Christ-consciousness as revealed in Christian Science, enables the Christian to become a wonder-worker and to fulfil, at least in part, the commands of our Lord and Saviour, "Go ye into all the world and preach the gospel; heal the sick, cleanse the lepers, cast out devils."

One of our poets has written:—

I held it Truth with him who sings
To one clear harp in divers tones,
That men may rise on stepping-stones
Of their dead selves, to higher things

Christian Science fulfils this prophecy, and by its innate spiritual power impels humanity upward in the infinite scale of being by enabling mankind to put off the old man with his deeds of sin and plagues of sickness, and to put on the new man, made mentally, morally, spiritually in the image and likeness of God,—possessing dominion over all the earth.

Can you picture to yourself a world peopled with such God-governed and God like beings? Yet this is the mission and objective ultimate of Christian Science.

Who would be the first to offer the slightest antagonism to such a sublime cause with such a divine mission? For all such, Christian Scientists have but one prayer, "Father, forgive them; they know not what they do," for Christian Science is a religion of love, with malice toward none and charity for all peoples, nations, sects, and denominations.

Digitized by Google

But some will ask, "Why did this wonderful unfolding of Christ-Truth, this matchless revelation of divine Light, this demonstrably true, scientifically Christian system of divine therapeutics, which is stirring and purifying earth from centre to circumference, come through a woman?" Because the Founder of this system has drawn nigh unto God by a long life of irreproachable piety, purity, self-immolation, and love; because through all ages woman has demonstrated her ability as reformer and spiritual leader by being the first in the Garden of Eden to candidly and honestly acknowledge her fault to God; by being last at the cross and first at the sepulchre; by being the favored of God as the mother of Jesus; by living a purer and better life than man throughout the ages and bearing her cross of suffering with more unflinching fortitude and bravery than man; by centuries of majestic motherhood.

This is truly woman's triumphant day and hour, for she is again divinely favored by being chosen of God to give birth to a new Christ-idea which shall cause the dayspring from on high to flood the world with "knowledge of the Lord, as the waters cover the sea."

## What is it to Obey?

BY RHODA PARKER.

THE thought of obedience or how to obey is a subject frequently presented to every one coming into an understanding of Christian Science. In the November, 1899, number of the *Christian Science Journal*, in the Editor's Table, we read, "To honor is to obey." This led out into a train of thought after this manner: If we obey God we must honor the source through which the supply from God is furnished us. While criticising and finding fault with those in authority over us, error is blinding us to the benefit to be derived from our Sunday sermons, and from the reading of our text-book, "Science and Health with Key to the Scriptures." Then how necessary to honor and obey each channel for good; for are we not told that every good gift is from God. (James, 1 : 17.) Some tell us we must look beyond personality to God; true enough, and we must begin at the beginning and overcome personal sense in ourselves first. In the twelfth chapter of Numbers we find graphically portrayed the account of suffering endured by both Miriam and Aaron because they said, "Hath the Lord indeed spoken only by Moses? hath he not spoken also by us?" and we find that they both had to come to the place where they were willing to honor and obey even Moses, for he had indeed been honored by God. And what follows this humbling of Miriam's pride? She is healed; and it is the same to-day, for God's law changeth not.

## The Lord's Prayer.

BY ELLEN L. CLARK.

A WONDERFUL prayer! never was there petition like it. When we understand and act up to this prayer we shall have attained our heritage. God knoweth all our needs and supplieth them. We have only to accept His love. Why should not His kingdom come on earth as in Heaven? We should stand where it is our right to stand, above material laws, material aids, creeds, forms, and ceremonies —on the hilltop of serenity not in the slough of despond. This is Heaven. The spiritual interpretation of the Prayer as found in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, has opened the door of sense into Heaven's vestibule.

There is but one way—that is God's way—the strait and narrow path, up, up until we reach the land of Love. Our feet should be planted firmly, our eyes with steadfast gaze ever looking toward God who is the Father of all. In Him is all the wisdom, all the power, all the glory.

## Testimonies.

### Broken Arm Healed by Christian Science.

A few weeks ago, one Friday afternoon, a lady came hurriedly into my office, saying, "Mrs. —— wishes you to come to her as soon as possible; her daughter, little Ruth, about five years old, has broken her arm." I replied that it was impossible for me to go at once, but to tell the mother that I would commence treatment immediately and come over as soon as I could. To outward appearances I was very much engaged with other work, yet the thought of Truth was above it all, and I so clearly realized God's presence and all-powerfulness that a feeling of peace came to me and I knew that all was well with God's child.

In this sweet realization I remained, and about an hour later I went to the home of the little girl and found, as I expected, that she had gone to sleep. The mother told me that several little children had been playing on a fence and one of them pushed Ruth and she fell to the ground, striking her arm on a stone. The children ran to Ruth's mother and told her that Ruth was hurt. The mother hurried to her, and as she picked her up she pushed up the sleeve of her dress and noticed a protrusion on one side of her arm and a corresponding indentation on the other side, which looked as though the bone was broken and pushed out of place. She immediately pressed down the lump and took Ruth into the house and bound a strip of flannel around her arm and sent for me. Then she took "Science and Health with Key to the Scriptures," and declared the Truth with all her might and tried to quiet the child with the assurance that divine Love watches over all, and no harm could come to her. In a little while she fell asleep.

I read a little more from Science and Health with the mother, and then we silently realized the presence of infinite Mind and the nothingness of matter. Soon little Ruth awoke and came running to me full of joy, bringing to me her latest picture-books to show me, saying nothing about her arm and paying no attention to it whatever, merely allowing it to hang limp at her side. In a short while I took her upon my knee, and while talking with her I felt of her arm and found that there was no swelling and no claim of fever, and harmony seemed to reign.

Ruth's father had not returned from business yet, so I waited for him to see what he would wish to have done. He has not as yet declared himself to be a believer in Christian Science, although he makes no objection to it and attends our meetings frequently. Upon his return the case was explained to him and I suggested that he send for a physician and have the bone set, and then, if he wished Christian Science treatment to bring about speedy healing, I was willing to give the treatment. He said, "According to your belief, a doctor should not be necessary, and besides, how do I know that it is broken." I quoted to him the instruction from our text-book, Science and Health, with reference to having broken bones set by a surgeon, and told him that he might take the child to a surgeon and explain the case to him and have the bone set. He replied that he would leave it all with his wife, saying she could do as she thought best and he would not interfere. The child's mother is one of our loyal church members, and she at once declared that God is the Great Physician, and we need no other.

Little Ruth has been taught that divine Love heals all disease and overcomes all error, and has had many beautiful proofs of it before this, so she also chimed in that she didn't want a doctor. I said that this decision must be entirely on their own responsibility, and by no means by my advice; then if they wished me to take charge of the case I was ready to do so. They said they wanted no

Digitized by Google

other help than Christian Science, and for me to take charge of the case. I gave another treatment and went home. The next day (Saturday) I called and found that Ruth had slept all night as harmoniously as a babe, and was playing around during the day. Sunday morning, just before the beginning of the church services, Ruth's mother came to me and said that they had been battling with error all night, and Ruth had slept but little, and there was much discord manifested. I also learned that there had been many harsh things said in the neighborhood against Christian Science and what would happen. This only uncovered the error and showed me how to work. During the reading of the Lesson-Sermon the Truth was so clearly revealed that before the service was over I knew the error had been overcome. And thus it proved to be. Sunday night little Ruth slept peacefully all night, and in the morning, when her mother went to her crib, she found her sleeping sweetly with her arm (the one that had been broken) up over her head. From that time there was no further trouble. She was kept at home from school a few days, lest the jostling of the children might cause more to demonstrate over. In less than a week she commenced to use her arm a little, and in about two weeks she was all right again. Truly our God is a great God, and greatly to be praised. We give everlasting thanks for the glorious revelation of Truth to this age through our dear Mother and Leader, Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science.

CHARLES ROCKWELL, Mt. Vernon, N. Y.

### What Christian Science has Done for Me.

As much is said about the price of "Science and Health with Key to the Scriptures," I can say that I would have been willing to pay many times that amount for it several years ago, had I known its real value. A knowledge of its value came to me through bitter experience. After spending what money I had on hand, doctoring with a special oculist, I concluded to try an oculist in another city, as I had received no benefit from the one who was treating me. The first visit I had made him, he charged me ten dollars. Now I was ready to try the other oculist, and the first five visits he charged me twenty-five dollars,—five dollars for each few minutes' examination,—and besides I was having my glasses changed right along at additional expense.

When I stopped treatment with this oculist I was in a hospital and worse in every way. Now I was ready for Christian Science, and was healed by a week's treatment and the dear "little book,"—though a kind Scientist read the book to me until I was able to read it alone. With one week's treatment, I took off my glasses, and the completion of my healing was due to Science and Health. At first I purchased a cloth binding, but finding the book so valuable, was willing to pay two dollars more for one that I could carry in my pocket. Also I have learned through Science and Health that God is the source of supply, and have been able to pay every cent of what I owed for treatment with the oculist and in the hospital.

God has given this Truth through the right one. God has never made a mistake, and He surely has not now by giving this Truth through Mrs. Eddy, who daily labors for the world, and, judging by the fruits of her labors, she is surely governed by God. True religion is not at peace with the world, and had not my Methodist friends been so bitter against the Truth, I might have been a Methodist a while longer, but I could not remain in a church that could not offer health, when there was one that gave it. My old church is saying that three or five dollars is too much for Science and Health; but to me it is the cheapest thing I have ever purchased. It teaches me how to meet many other needs.—CHARLES F. MEEK, Baltimore, Md.

### Many Blessings Received.

To me the light of Truth and understanding came very slowly. I was a dissatisfied mortal for a great many years, and a feeling of unrest and uneasiness dwelt within me constantly. My good mother and a beloved sister, who were Christian Scientists (the latter having been healed after all material remedies had failed), used to say, "When all else has failed you, come to Christian Science, and you will find peace, comfort, health, and happiness," and I have found it so.

Two years ago I was in a state of nervous prostration bordering on insanity; I had not slept at night for months; I had no appetite; I was disagreeable, and it was almost impossible for any of my help to stand my abuse at times. In addition to my nervous disability, I had astigmatism, having worn glasses for five years. I used tobacco excessively; I had a fiery temper, and a sense of jealousy developed beyond all my control. One by one these errors yielded to Truth and were replaced by health and sunshine. The physical healing, however, is a trifle compared with the spiritual uplifting and peace of mind realized. I apply the thought to all the affairs of my life, both business and social.

I have from one hundred and ten to one hundred and thirty-five people under my management, and it now comes easy to help them and to be patient, kind, and gentle. One of my good friends in Christian Science, and one from whom I have had many benefits, has often said that a business man's testimony was always far-reaching, and I trust this may reach some one that needs it as badly as I did.

Christian Science to me is a religion for everybody, every day and every hour, and this is what I sought and found.—ED. G. GYGER, New York, N. Y.

### A Profitable Hour.

There is in Chicago a body of Christian Scientists which deserves mention in our publications. It is without rules, regulations, or organization, and its blessings are only fully appreciated when they are pointed out to us by visiting Scientists. I refer to the group of men, with occasionally a visitor of the opposite sex, who congregate daily at the luncheon hour around a table reserved for them in a restaurant, there to make fruitful the only "idle" hour of the day.

Error finds no voice there, and while there is much of good-fellowship manifested, and the group is noticeably a happy one, the whole conversation is maintained on a Scientific basis. When a member is good enough to bring his wife, there is never any necessity to lower the voice or change the subject. Business problems are naturally the most often presented, and they are handled in the spirit of Love, and advice is never sought as to how to get the better of "the other fellow," but rather the question discussed is, "In this instance, what is my duty to my fellow-man?"

The personnel of the Club might be described in rather imposing terms if intended to impress mortal mind, but for the majority of those who will read this I can confer no loftier title than to say that they are Christian Science business men.

We had no trouble in securing a table seating twelve persons, reserved for us from 1 to 2 P.M. in a well-patronized restaurant, and we find it a most profitable experiment for ourselves and an enjoyable one for our visiting friends.—J. U. HIGINBOTHAM, Chicago, Ill.

The *Sunday School Times* has the following: "A man is likely to be stronger in proportion to the conflicts in which he must engage. No man can ordinarily slip or fall up hill; it takes climbing for that."

### How to Keep Cheerful.

In the very nature of things an intelligent, genuine Christian must be the happiest person in the world. Discouragement to a Christian must always mean a falling away of faith in some way, for if we really believe that this is God's world and that all things work together for good to them that love Him, and we are sure we love Him, then we must carry round with us happy faces and hopeful hearts.

Above everybody else the Christian has a right to look on the bright side of things. The world should not only look beautiful to us because it is beautiful, but because it is an indication of the kindness and love of our Father. It is a failure of faith and a certain indication of practical infidelity when we give way to some temporary defeat and say with gloomy faces that there is no use trying, as everything is against us.

On a very slippery day last winter a young Negro was making his way home with a large market basket on his arm, full to the brim with all those hard and ball-like vegetables peculiar to winter. Treading unwarily on a bit of glare ice he came down suddenly, with a crash that emptied his basket out into the street. Surrounded by garden products he lay at full length, his head supported on his hand, looking calmly about him. Seeing him still prostrate a gentleman hurried to him anxiously. "Are you hurt?" "No." "Then why don't you get up?" "'Taint worth while." A good many of us, having spilled our little basket of plans and purposes in the street, are as absurd as was that colored man when we say that it is not worth while to continue the struggle because we have caught a fall and find ourselves momentarily confused. After all, this suggests one of the chief methods of keeping cheerful, and that is not to magnify trifling difficulties. It is a sure way to be always filled with misery to exaggerate in the lens of our own imagination, or in our conversation, the difficulties which we all have to meet, and the troubles and sorrows with which we have to contend. Let trifles take their place as trifles and we shall often find that we have nothing but trifles in the way, and that compared to the mammoth mercies of God they are as nothing.

Another way to increase our cheerfulness is to keep the disagreeable things which seem to be our particular cross as much as possible to ourselves. Dr. Scudder well says that there is no greater mistake, so far as the happiness of the world is concerned, than that which is made by those people who go about with their bitter cups and want everybody they meet to take a sip. Some people seem to take a morbid delight in making themselves and other people miserable. If they have no real troubles to worry about they manufacture artificial ones and their mills never shut down. They grind out just about so much misery whether the market is brisk or dull. They are like old rusty pianos that have not been tuned for years. They are so full of discordant elements that no harmony can be evoked from them. Play on any key and there sounds nothing but a jangle. They whine and sigh, but they never sing. And yet a Christian above all others should be forever singing at the heart.

A sure recipe for cheerfulness is to be always on the alert for some pleasant thing that may happen to us. A washerwoman in a miserable tenement-house was asked how she kept singing in her disheartening surroundings. "Oh, because there is always a breeze in the alley." She might have said it was because she had a singing heart within her. To every such soul God giveth songs in the night.

From "A Year's Prayer-Meeting Talks," by LOUIS ALBERT BANKS, D.D.

### The Interest in Education.

A marked characteristic of the religious life of our time is the transfer of the interest of religious men from distinctively spiritual to educational activities. Many of our strongest churches are perplexed about their financial support. There is hardly a missionary treasury that does not face an actual or prospective deficit. The raising of funds for city mission work is attended with much discouragement. But the amounts of money that are being contributed to schools and colleges is unexampled. Almost every kind of educational institution appears to be in high favor except one. It is about as difficult as ever to raise money for a theological seminary or for missions, and yet that is a special kind of educational work whose appeal to Christian men would seem to be of convincing force.

*The Watchman* (Baptist).

## Miscellany.

### The New York Sewing Bureau.

The sewing bureau of the New York Association for Improving the Condition of the Poor is a place of much interest to the woman visitor. Women applying for relief are given plain garments to make, and for their day's labor—which is very light—are paid eighty cents either in clothes or groceries. The garments, such as underwear, baby clothes, sheets, pillow-cases, aprons, etc., are cut by a professional cutter and given to needy women to make at the wages named. The women take these garments—all of which are made of muslin, outing and Canton flannels, and ginghams—home and are allowed three orders a week or more if need be, according to the amount they need to tide them over the week. They are allowed to sell them, if they can do so, among their neighbors in the tenement district at a small percentage above cost, which they may keep. In the sewing-rooms plain and substantial garments are sold to all kinds of people, and they cost only the price of the material to the purchaser, the money for the material being contributed by charitably disposed people to the association for this particular work. From the sale of garments in the bureau last year $1,753.39 was realized and 1,074 women—almost all mothers—were given work. Constant effort is made to improve the work of the less skilled.

In connection with this work the association also conducts the industrial rooms at Hartley House, the annual report of which is just out. The rooms were opened November 1, 1898, and closed May 23, 1899. During this time 2,573½ days' work were given to 289 women, and for this they were paid $1,027.10 in groceries and $259.65 in clothing, in addition to their dinner every day they worked. The women sent to the workrooms are less skilled than those receiving work from the sewing bureau. The work of making bed "comfortables" seemed most attractive to them, and they were always pleased to take them in payment.

*New York Evening Post.*

### Cost of Big Guns.

A single big gun of the many now being put in place for the protection of the seacoasts costs a large sum. Some interesting figures on this subject have just been submitted to General Wilson and will be by him transmitted to Congress. A 12-inch breechloading rifle, with its disappearing carriage, costs $141,000; a 10-inch, $99,250; and an 8-inch, $72,000. The figures show that modern high-powered guns cost immense sums of money, and the cost of firing them is proportionately as great. The report of experts who have inspected these guns and the devices for securing an accurate aim show that there is an immense saving effected by possessing modern-range and position-finding devices. "The demoralizing effect of a hit as compared to a miss," said one of these reports, "cannot be reduced to a money value, but it costs big money to shoot a big gun and then miss the mark. Take, for instance, the 12-inch gun. To miss the mark is simply to throw away $561.70. With the 10-inch gun the loss is $222.40, and with the 8-inch rifle it is $164.65."—*Boston Transcript.*

### Water which Chokes Infidels.

Toward Mecca the thoughts and aspirations of all pious Moslems are turned, and at least once in his lifetime the good Mohammedan is expected to make a pilgrimage to that city. One of the duties of the pilgrim, immediately after arrival, is to make a journey seven times round a holy portico outside the mosque.

"We went at a great pace," says an Englishman, who, disguised as a Mohammedan, paid a visit to Mecca at the risk of his life, "and the day was growing hot. When the procession was over we came back to the mosque, and were each given a bowl of limpid water. I was so thirsty that I drank mine down at a draught, and asked for more, which, I noticed, produced a very good impression, for, as I afterward learned, this was the sacred water of Temzen, which an infidel cannot drink without being choked.

"This was supposed to be the water which was supplied to Hagar when she was perishing in the desert."

*Christian Endeavor World.*

## Notices.

### Supplements to the Sentinel.

Two supplements to the *Christian Science Sentinel* have been issued. The first is the able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The workers in the field will readily see the wisdom of giving these supplements the widest possible circulation, and the extremely low price at which they are issued will enable them to do so. The price of the supplements is as follows: Single copies two cents each, postpaid; ten copies or more to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Notice to the Field.

The November number of the *New England Magazine*, now ready for delivery, contains a finely illustrated article regarding "The Discoverer and Founder of Christian Science." Many of the illustrations are here produced for the first time, and the text of the article will be of fresh interest to all Christian Scientists. This magazine will be valuable for distribution, and the Publishing Society will receive orders and send postpaid any number of copies at twenty-five cents each.

### Per Capita Taxes.

Per capita taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec. 1. The per capita tax for the year beginning June 1, 1899, and ending May 31, 1900, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Items of Interest.

Professor Jacob G. Schurman, chairman of the Philippine Commission, discusses "Our Duty in the Philippines," in a recent issue of the *Independent*. He says there is great need of Protestant missionaries in the islands, the priests have ruled in Luzon so long that the natives know of no other religion. The archipelago was really governed by the priests instead of the Spanish civil or military commanders. He regrets that the saloons have been allowed to get a foothold in the islands, as they have already done much harm.

On account of recent laws passed by Congress which debar the Indians from leasing their lands for any purposes, every lessee of land in the Indian Territory will be compelled to leave the territory. It is estimated that since the exodus began, a few weeks ago, more than three thousand families have gone to Oklahoma. Congress will be asked to repeal the law, as there are several towns in the Indian Territory with a population of nearly ten thousand, which will dwindle to almost nothing if this new law is carried out.

A statue of Daniel Webster will be unveiled at Washington, D. C., January 18, The pedestal is eighteen feet high and is of rose granite. The statue is twelve feet high and is cast of the most beautiful bronze. On the pedestal are two bronze panels—one in front representing Webster replying to Hayne, and the other at the rear, picturing him delivering his oration at the dedication of Bunker Hill monument. The statue and panels are the work of Trentalove.

The Panama Canal Company of America, with an authorized capital of thirty million dollars, which may be increased at any time, has been incorporated under the laws of the state of New Jersey. The object of the company is to acquire by purchase the Panama canal and the railway across the Isthmus of Panama, and to construct and operate the canal and railroad and the various enterprises connected therewith.

John G. Price, the man chosen at Skaguay to represent Alaska in Congress, has arrived in Washington. Mr. Price will apply for a seat as territorial delegate in the House in order that he may present, in an official way, the needs of Alaska for legislation. The fear is expressed that if a delegate is seated, application for a similar favor will come from Havana and perhaps Porto Rico.

Upon learning that other nations had military officers accompanying the Boer armies as observers, the War Department directed Mr. Hollis, the United States Consul at Pretoria, to ask President Kruger if he would allow an American officer to accompany the troops. The request was granted and a suitable man for the place will be selected at once and hurried to the scene of hostilities.

Sousa's band will be the official American band at the Paris Exposition. The band will close its regular season here April 1, and sail at once for France to take part in the opening exercises of the Exposition on May 1. They will also play at the unveiling of the Lafayette monument on July 4. While abroad they will visit cities in Germany, Holland, Belgium, and England.

It is said that not one dollar received from the hymn-books has ever been taken by Mr. Moody or Sankey for their own personal use, but on the contrary, every dollar received from the hymn-book fund has been used to defray expenses of Mr. Moody's schools, materially helping in the $80,000 necessary to be raised annually for their current expenses.

A general treaty of trade, navigation, and immigration between China and Mexico was signed at Washington, D. C., December 27. This is the first treaty ever entered into by these countries. Three copies of the treaty were made, one in Chinese, one in Spanish, and a third in English. This is a departure in diplomatic usage, as the third is usually in French.

The bodies of the heroes of the Maine were interred in the National cemetery at Arlington, December 28. President McKinley and several members of the Cabinet, Admiral Dewey, General Miles, and other prominent army and navy officers witnessed the short and simple ceremonies. Both the Episcopal and Catholic burial services were read.

It has been decided to construe that portion of the treaty with Spain regarding the return of Spanish soldiers and prisoners of war, in the most liberal manner. All Spanish soldiers and their families, and all Spanish civilians and their families, will be transported to Spain at the United States' expense.

It is said that the United States is producing more than one fourth of the coal output of the entire world, and at the lowest cost per ton reached in any country. The cost of coal production in the Old World is constantly increasing, on account of the great depths at which it is mined.

At Valparaiso, Chili, a huge fossil has been discovered which is believed to weigh about six tons. It is 28 feet 11 inches long. The head is 9 feet long and the tail 14 feet 11 inches. Across the back it measures 9 feet 9 inches. It is evidently prehistoric, and a cross between an alligator and a lizard.

Between seven and eight hundred scientists from all parts of the country and representing practically all the colleges and universities of note, gathered at New Haven, Conn., December 27, for the opening sessions of the ten different conventions, which were held at Yale.

An enormous megaphone has been erected at Faulkner's Island, Conn., on the government lighthouse reservation, for testing a new system of fog signals. The megaphone is seventeen feet long and seven feet in diameter at the mouth. Attached to it is an inch and a half steam siren.

Nearly twenty-five thousand applications for pensions have been filed because of deaths or wounds received since war was declared with Spain. As the entire enlistment of soldiers since war was declared is less than three hundred thousand, the applications for pensions are about one in twelve.

The London directors of the Manila Railway Company have been legally advised that the American Government is liable for the guaranteed interest since assuming sovereignty in the Philippines. Claims for more than fifty million dollars are supported by the British embassy in Washington.

It is estimated that over two hundred ships will be required to bring the cargoes of iron and copper ore consigned to Philadelphia, Pa., this year. Two hundred thousand tons of iron ore have been purchased in Spain and other Mediterranean countries.

A general order has been circulated by the Southern Railway that all employees of the company on the South Carolina division must stop using cigarettes or resign their position, and that in the future no one will be employed who smokes cigarettes.

December 26 the United States treasury had seventeen million dollars of internal revenue receipts on deposit with National bank depositaries. Thirty-one banks located in fifteen different states have been selected as the depositaries.

The Dewey residence was closed to callers on New Year's day. Admiral and Mrs. Dewey received with Mrs. Dewey's mother, Mrs. Washington McLean, at the residence of the latter. They were assisted by fifty young ladies.

A large coal company in Pennsylvania will operate a number of farms to provide food for its employees at cost. The object is to better the condition of the miners, and thus reduce the possibility of strikes to the minimum.

General Wood has been well received by the Cubans who are anxious to be given the opportunity of taking hold of all departments, and thus practically fitting themselves for the government that is to come.

Headquarters of the Commercial Travellers' and Hotel Men's Anti-Trust League have been opened in New York City. The league was started last August and has a membership of twelve thousand.

It is said that Lord Roberts refused to accept command of the British forces in South Africa until he was assured that he should "have absolute supreme command, and receive no instructions from home."

The commissioner of the General Land Office has decided that the tide lands in the District of Alaska are not public lands, and for this reason no mining rights can be granted to individuals.

The stockholders of the Boston and Albany Railroad have voted to lease the road to the New York Central and Hudson River Railroad Company for a term of ninety-nine years.

General Otis has issued a decree authorizing the celebration of civil marriages in the Philippines. Heretofore all marriages were performed by the Catholic church.

Andrew Carnegie has given away $5,155,000 during the past year. Two million, four hundred thousand dollars of this was given to seven public libraries.

In accord with the expressed desire of the late Dwight L. Moody, his biography is to be prepared by his elder son, William Revell Moody.

A permanent arbitration board to settle differences between labor unions and contractors in Chicago, is practically assured.

July 1, 1899, the national bank notes in circulation amounted to $241,268,606, this amount has been increased to $245,223,313.

During the year 1899 the output of iron ore in the Lake Superior region was 18,500,000 gross tons.

The Supreme Court of Brazil has accorded to women the right to enter the legal profession.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## Unique Gift from Germany.

**German Students Present a Bible to Rev. Mary Baker Eddy.**

CONCORD has recently had two visitors who came here upon an unusual and unique errand. These visitors were Frau Bertha Gunther-Peterson and Fraulein Ida Schoen of Hannover, Germany, who crossed the water to pay their respects to an eminent citizen of Concord, Mary Baker Eddy, and to present her with a beautiful and valuable copy of the German Bible, the gift of the Christian Scientists of Germany.

Frau Peterson, who is the leader of Christian Science work in Hannover, Germany, is the daughter of a celebrated physician, and is a woman of great intellectuality and marked ability. Through the healing of a friend who had come to America, she was led to send for a copy of the Christian Science text-book, "Science and Health with Key to the Scriptures," of which Mrs. Eddy is the author. From her study of this treatise on the Science of Life, she was herself healed of severe maladies and restored to perfect health. She then visited America and took a thorough course of study in one of the leading Christian Science institutes. On her return to Germany, she at once entered actively upon the work of applied Christianity with great success.

This movement has a large following in Germany, and, as elsewhere, is growing rapidly. Among the first to visit Frau Peterson for help was the son of the famous Count von Moltke, the great field-marshal of the German Empire. Herr von Moltke was completely healed of long-standing ailments, for which he had in vain sought far and wide for relief. His restoration to health was so remarkable that it attracted widespread interest in the court circles of the empire; and among others who became interested is the sister of Emperor William, who is now reading Science and Health with interest and profit.

Herr von Moltke, thoroughly convinced from careful study and from his own practical experience, of the trustworthiness of the Christly religion which had healed him, identified himself with the movement, and, being a talented musician of exceptional ability, gladly gave his services as soloist for the religious services of First Church of Christ, Scientist, in Hannover.

Among others to receive physical and spiritual help in Hannover from this healing religion is a distinguished doctor of medicine, who said to Frau Peterson: "Your religion is doing greater things than I have ever done." A clergyman was healed of many ailments after an unprejudiced and intelligent study of Science and Health, and is now performing his Christly ministrations in healing the sick and restoring the sinful in the light of Christian Science. After being convinced from a thorough investigation of the Christ Spirit made manifest in its followers, he declared that he must put in practice its divine Principle.

The studious habits, the profound scholarship, the kindly nature, and the simple faith of the German people make easy the acceptance of the Christ Science which Mrs. Eddy has named Christian Science.

In the past, only the State church of Germany has had a charter from the government. On application, however, from the Christian Scientists, an exception was made in their favor. Apart from the State church this is the only denomination which has ever been granted a charter by the empire.

Cases of healing have occurred so frequently at the meetings of this Hannover church that now people attend their services for that purpose, and their simple faith is thus manifested.

The gratitude of the German people for benefits received and their profound reverence and esteem for the Founder and Discoverer of Christian Science is especially marked and notable. This gratitude found expression in the presentation of the gift for which Frau Peterson visited Concord.

This copy of the Holy Scriptures, which is a rare specimen of the printer's and book-binder's art, is substantially bound in leather with rich silver trimmings and clasp, upon the latter of which is engraved the name of Mrs. Eddy.

From the title-page one learns that the sacred work is a translation of the Holy Scriptures according to Martin Luther, and contains thirty fine engravings upon Old Testament subjects by the great masters, and fifteen rare engravings on the life of Jesus by the world-famous artist, Heinrich Hofmann.

A handsome illuminated page has been inserted, which in beautiful German text reads as follows: "The members of First Church of Christ, Scientist, in Hannover, Germany, in profound esteem, present this volume to their beloved Teacher and Leader." Then follow the names of the donors.

In connection with this expression of love and gratitude for the physical and spiritual healing that has come to these reverent people through Mrs. Eddy is an interesting incident. One of the early students of Mrs. Eddy was a German, and to him Mrs. Eddy said, "Germany will be the first European nation to accept Christian Science. Their love of God, their profound religious character, their deep faith, and strong intellectual qualities make them particularly receptive to Christian Science." In the presence of this prized gift it is seen that this prophecy is being fulfilled.—*Concord Monitor.*

---

The *New York Observer* says that "the close of this last decade of this century has witnessed more study of the Bible than any of its predecessors since the book was written. More Bibles are printed and sold than ever before. The study of the Bible is careful, searching, and critical beyond anything known in the past. The fact is one over which to rejoice."

---

A man should not allow himself to hate even his enemies; because if you indulge this passion on some occasions, it will rise of itself in others; if you hate your enemies, you will contract such a vicious habit of mind as by degrees will break out upon those who are your friends, or those who are indifferent to you. PLUTARCH.

Copyrighted, 1900, by Mary Baker G. Eddy.

## The Lectures.

### At Philadelphia, Pa.

A lecture was given last evening (Tuesday, December 19) by Judge William G. Ewing of Chicago, at Horticultural Hall, under the auspices of the Philadelphia Church of Christ, Scientist, on the subject, "Christian Science, the Religion of Jesus Christ." The large hall was nearly filled and the audience listened to the speaker with marked attention for nearly two hours.

John White, First Reader of the church, presided, and Carol Norton, a member of the International Board of Lectureship of Christian Science, introduced the speaker.

*Public Ledger,* Philadelphia, Pa.

Mr. Norton, introducing Judge Ewing, spoke as follows:

In ancient Hebrew history God, the Jehovah of Israel, was first known as King of Kings and Lord of Lords. In Patriarchal history Abraham stood as the first great teacher of faith in one supreme Being. The religious teacher is always the spiritual interpreter. The prophet, the reformer, the law-giver, and the Psalmist invariably occupy the mediatorial office between God and the people. The Messianic hope shines forth throughout the spiritual literature of Israel. While God is in Heaven and man upon earth, while Paradise and harmony exist above the material sense of existence, and hell and suffering abide in materialistic existence, there will exist as of old the divine necessity for the mediator, the teacher, the spiritual leader and demonstrator of the law of Spirit, or Good. Each succeeding epoch of Jewish history added new hope to the mind of the race. This hope embodied itself in the definite expectation of a great spiritual Leader or Messiah, one whose life, works, and revelation should be virtually Emmanuel, or God with man. Thus did Israel look forward to the coming of that life which is destined to become the Light of the whole world. It came. It burst upon the worlds of Paganism and ancient Hebrew ecclesiasticism as the morning sun breaks upon the mist-covered valleys of earth. Its holy advent, manger-birth, sanctified development, and divinely ordered grandeur illuminated the world of Cæsar's day and dated the Christian era. Although it was the light shining in darkness which the darkness comprehended not, it healed the sick, reformed the sinner, bound up the broken-hearted, gave joy for heaviness, life for death, and for the tomb and death's cold sting, the victory and triumph of the Easter morn, and the immortality of the Life divine. This career was lived that the world might have life, and have it more abundantly. Those who came in spiritual touch with this life partook of its healing and saving essence, and in turn became healers of the sick and physicians of the soul. This light rose higher and higher to the zenith of spiritual demonstration, and while remaining in the world as the spirit of Truth and the Comforter, its individual manifestation rose far above material-sense evidence, and left for man's heritage the divine afterglow of Love's radiance and Mind's healing and saving power. Down through the centuries, over a period by men named nineteen centuries, this light has shone through the darkness of human belief, renewing the hopes of the race and guiding the destiny of nations. In the history of Christendom, accompanied with its progression, social advancement, and humane progress, the glorified afterglow of this life has painted the Heavens of thought and led Godward and idealward the aspirations of the mind of Christendom, inspiring art, sanctifying popular government, exalting music, purifying nature, building anew the structure of human character, and leading out from the tomb of sense and the valley of the shadow of death millions who were vainly nourishing hopeless grief and human despair.

In listening to the lecturer of the evening we are privileged to hear the truths of Christian Science, the religion of Jesus Christ. In loving recognition of that holy career, reconsecrating ourselves anew to the life and triumph of the Founder of our common religion, let us give impartial and thoughtful hearing to what shall be said this evening, remembering the promise of Christ, "Ye shall know the Truth, and the Truth shall make you free." I now have the pleasure and privilege of introducing to you a distinguished member of the International Board of Lectureship of the Mother Church of Christian Science in Boston, Mass., ex-Judge William G. Ewing, of the Superior Court of Chicago, who will speak to you on "Christian Science, the Religion of Jesus Christ."

### At Massillon, O.

Edward A. Kimball, C.S.D., of Chicago, lectured at the Grand Opera House in Massillon, O., Thursday, December 21.

Mr. Kimball was introduced by the Hon. Archibald McGregor of Canton, O., who spoke in part as follows:—

*Ladies and Gentlemen:*—Having been requested by the Christian Scientists of your town to preside on this occasion, I with pleasure assume the duty, which is mainly, of course, to introduce the distinguished gentleman who is to address us on the subject of Christian Science. The subject being new to most of us is little understood. I doubt not we shall profit by the address, for which I bespeak your kind attention. I may say it is only a few months since my attention was called to Christian Science by a letter from a daughter residing in Indiana stating she had been relieved from her years of suffering by Christian Science and was a new woman; all without material nostrums or so-called remedies, and without delay. I naturally followed her advice and have done some reading in that direction, I must say, to my edification. Certainly a grand work is "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

In order to do right we must think right, for thinking precedes the doing. Hence we read, "as he thinketh in his heart, so is he." So let us think health, for success in life and our happiness greatly depend thereon. As the mind controls our bodily movements, it surely may do something for our ailments. This is at least worth considering.

A popular author in the early part of the century wrote a story entitled, "Search after Happiness." It relates how the Sultan of the East had lost his health. How his learned doctors were completely baffled, and finally called a grand council of their learned brethren from various parts of the empire. The case of the Sultan was long discussed and considered, but without result. At last there was a lull, whereupon a venerable doctor who had hitherto remained silent arose and said he knew what would cure the Sultan. Take the shirt of a happy man, put it on the Sultan, and he would warrant a cure. After full deliberation this novel plan was adopted, and the thing then was to find the happy man. They all agreed it would be of no use to look for him in the Sultan's dominions in their then suffering condition, so a search must be made elsewhere for this happy man. Accordingly a stately ship was got ready and sailed with the Sultan and attendants. But they could not find him in the countries visited, for they had been devastated by the long Napoleonic wars. Finally sailing one beautiful day along the coast of Ireland they saw a group of men enjoying themselves, and one of them especially was a happy man. At once a party was landed, with the Sultan along, and the happy man was seized, but to their horror they found he had no shirt on. It must be stated, however, that the Sultan was greatly amused and laughed and continued to laugh heartily over

Digitized by Google

the incident and went home in better spirits and recovered his health. He thought if that poor fellow could be happy without a shirt, he would be happy too.

I have read that in the early days, before mankind had become corrupted and diseased, Truth was the divinity worshiped, while Error had no following. Error concluding something must be done proposed to Truth they travel together and present themselves that people might decide which to worship and follow. Truth readily agreed and they started. Error soon found she was gaining no followers and resorted to artifice. One warm day, when tired with a long journey, they came to a beautiful stream when Error proposed a bath. Truth assented, disrobed and plunged in, whereupon Error at once seized and arrayed herself in the garments of Truth and ran away. Ever since, Error has been parading and posing herself accordingly, and deceiving mankind by wearing the garments of Truth.

Let us consider and recognize the divinity of Mind, Immortal Mind, and fear not.

Herein is the way of salvation—the way of healing, and saving from sin and suffering, disease and death. The victims of error take many shapes defective and criminal, filling our numerous institutions of charity and correction. We need reform, the reform proposed and claimed by Christian Science.

I now take pleasure in introducing Mr. Kimball of Chicago.

W. E. R.

### At Chanute, Kan.

Judge Joseph R. Clarkson of Omaha, delivered a lecture on Christian Science to a large audience in Chanute, Kan., Friday, November 24. He was introduced by W. S. Brewster, a prominent lawyer of Chanute, who spoke in part as follows:—

*Ladies and Gentlemen:*—The lecture this evening is under the auspices of First Church of Christ, Scientist, of Chanute.

Within a comparatively short time this organization has assumed large proportions in our city. It is composed of earnest, intelligent, strong men and women.

The rapid growth of the church in general, and the favor shown it by hundreds of thousands of the most intellectual and the best of people in our land, give sufficient guarantee that the institution is founded upon a rock.

In this connection, ladies and gentlemen, permit me to say that I am not a Christian Scientist. I am not even schooled in the philosophy. But I want the portals of my mind always ready to swing open for the reception of truth.

The King of Siam once made himself the butt of ridicule by refusing to believe in the existence of ice. There are others.

From the earliest records of both sacred and profane history to the present, vaguely or definitely, the power of Mind over the functions and sensations of the human body has been recognized.

This wonderful power was given unto Moses, and by him transmitted to Joshua. It raised the dead at the hands of Elijah and Elisha. Under its benign influence the lame have leaped into usefulness, sight has been restored to the blind, and the deaf made to hear.

To our Christian Science brethren I concede one point high over all the various methods and schools in this field of study of which I have any knowledge, they construct a new man and put him at work on a much more elevated plane of moral responsibility.

Sincerely thanking you, ladies and gentlemen, for the honor you have conferred upon me this evening, I take great pleasure in introducing to you the lecturer, Judge Clarkson of Omaha.

C. I. WILLIAMS.

### At Syracuse, N. Y.

Judge William G. Ewing of Chicago addressed a large assemblage at the Wieting Opera House last night (Friday, December 8), on Christian Science under the auspices of the First Church of Christ, Scientist.

The audience was not only large but representative, many of the prominent families of the city being present. Scarcely a seat in the house was vacant. It was necessary to open the gallery in order to accommodate the large number who were unable to secure seats in any other part of the house.

Charles I. Ohrenstein, the First Reader of the Syracuse Church of Christ, Scientist, introduced the speaker of the evening as follows:—

During the career of Judge Ewing as a jurist he was known as a just and upright judge and has always been highly respected by the public. After years of critical study he has become convinced that Christian Science is true, and he has surrendered his practice of law to enlist in this cause.

Judge Ewing was cured by means of Christian Science from a disease that both his friends and physicians believed to be mortal. He is to-day doing the greatest work that lies within the power of man to do. I feel that it is a great honor and an unusual pleasure to present to you Judge Ewing.

As the speaker stepped forward he was received with applause by the large audience.

Frequently during the address the speaker was interrupted by applause. He spoke with a great deal of earnestness and was often very eloquent. He held the close attention of the audience for about an hour.

*Post-Standard,* Syracuse, N. Y.

### At Leavenworth, Kan.

Mr. Edward A. Kimball of Chicago, lectured last night (Friday, December 15), to a large audience of Leavenworth's representative people, on the subject of Christian Science.

In the audience were Scientists from Kansas City and St. Joe, Mo.; Atchison, Lawrence, and Seneca, Kan.

Mr. Kimball was introduced to the audience by Edward H. Keach, First Reader of the Christian Science Church of this city, with the following remarks:—

*Ladies and Gentlemen:*—This is an age of progress, an age in which there is research and advancement in art, science, invention, and all the great problems of the day, and mortals have been so busy along this line of acquiring material knowledge, that they, seemingly, have not had time to give any thought to spiritual things.

But finally there is a change and Spirit is claiming something of our attention.

We say finally, because we have been educated to feel that what was good enough for our fathers is good enough for us, and in our efforts to gain material things we have left Christianity to take care of itself. But to-day there is an unrest among all Christian people. They are not satisfied with their experience and there is a reaching out for a better understanding of God and His creation in all our churches. Christian Science comes to help us to acquire this understanding, and these lectures are arranged for that purpose.

A little more than a year ago we had a lecture here which was well attended, and the good attendance this evening shows there is still an interest to know more of this subject.

I take great pleasure in introducing to you Mr. Edward A. Kimball, C.S.D., of Chicago, who will now address you.—*Evening Standard,* Leavenworth, Kan.

### Lectures at Other Places.

Sheldon, Ia.—William G. Ewing. Monday, October 23.

## Expressions of Gratitude.

"THANKSGIVING and Prayer" was the subject chosen for the Wednesday evening meeting at First Church of Christ, Scientist, Dayton, O. Services were opened by singing.

The 107th Psalm was read as a Scripture lesson, followed with selections from the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. After a few moments of silent prayer the congregation united in repeating audibly the Lord's Prayer, and after another hymn, the First Reader announced, "The meeting is now open for experiences and remarks on subjects that are in line with Christian Science. We have much to be thankful for, benefits physically, financially, morally, and spiritually, and for these blessings we should express gratitude and thankfulness."

Said one lady, "As Christian Scientists we are grateful for the liberty which Truth has brought us; grateful for the release from the bondage of old superstitions, many of which were a fearsome nightmare to us from early childhood; thankful that in Christian Science we have a religion founded on Love instead of fear; one that creates within us a purer love for God, and a more unselfish regard for our neighbor; thankful for a whole salvation. Especially should we be grateful for the practical application we can make of these wonderful scientific truths to our every-day needs, and its far-reaching and incomparable results; thankful for the great good Science is doing for suffering humanity in so many directions all over the world. This Truth that is able to meet all forms of error, that is capable of solving the world's greatest problems and filling the world's greatest needs, should constantly call forth our heart's best gratitude."

A man testified, "I am grateful and thankful to-night. Seven years ago at this time I had no gratitude to express. My son was lying at the point of death, and I never expected him to be well again, thinking it impossible for him to be restored to health; but through Christian Science he has been healed, and is present at this service. I am thankful to know something of the Truth. It has done so much for my family."

Another gentleman spoke: "Gratitude is heaven-born. It is a star that shines brilliantly in the spiritual firmament; it is the reflection of the One Mind—the Mind that was manifest in Christ Jesus. Its rays pierce the darkness of sin and selfishness, re-kindling hope, beautifying earth, overcoming hatred by the realization of Truth and Love, and establishing the brotherhood of mankind. Not by words but by deeds in living the precepts of our Master is the greatest gratitude expressed, which is one perpetual Thanksgiving Day, a prayer without ceasing, a love unfeigned. That consciousness most spiritual more quickly discerns this great Truth, and like the 'one leper' of old acknowledges the source of blessings. The 'Key' that is to-day opening the seals of error, revealing God or Good as the only Life, unlocking the hidden treasures of the Scriptures, illuminating its pages, showing man his birthright, is "Science and Health with Key to the Scriptures," whose author is God's appointed messenger, Mary Baker G. Eddy.

"An indisputable and undeniable fact that Christian Science is of God is, that it teaches the allness of God, that there is but one Power. It does not take our God away from us, but brings us nearer to Him. We have more confidence and trust in God than ever before, because we better understand Him, consequently have more reliance in the Biblical promises. Then could we be otherwise than grateful for a teaching that enables us to love God more? And would we not be very ungrateful if we did not love our Mother through whom God has revealed the Science of Christianity, or Christian Science, she who through toil, sacrifice, self-denial, meekly and humbly has followed in the footsteps of our Master, laboring to confer the greatest blessing earth has ever known, that of which Jesus prophesied? We are grateful for all the inventions, discoveries, and reforms, that have bettered the world, ushering into existence our own blessed country, wherein this idea of Truth could have birth. We turn with grateful hearts to the faithful corps of workers in this and foreign lands who are promulgating this Science, loyal to the heart's core to her who discovered it.

"We are specially grateful that Christian Science has been established in our own city, that the sick are being healed in the way Jesus taught, that a church has been organized, and is steadily growing, and that its members are now working to erect an edifice here as soon as sufficient funds are gathered. We are very grateful to The Herald Publishing Company, of this city, who have shown such a kind attitude to Christian Science,—should our gratitude be less than to encourage subscriptions thereto?—whose manager is a broad, liberal-minded, and philanthropic man. A chief characteristic of the Christian Scientists is a gratitude that touches the heart and the pocketbook, else they would not be able to erect the many beautiful edifices that now dot our land. We are grateful that we are now able to put Christian Science literature in many of our public institutions in this city, sowing the seed beside all waters. This is done through our Literature Fund, and every one interested in the welfare of this church should express his gratitude by helping to support it."

"After twenty years' study of the Bible," a lady testified, "I am grateful to Christian Science above all else for satisfying the long unsatisfied longings of the heart, for a knowledge of God, and the understanding it gives of the hitherto mysterious problems of life. Every thoughtful human being is confronted by this mystery of life and death; and philosophies, ancient and modern, have sought a true solution. The words and works of Jesus Christ declared and proved the supremacy of Spirit—Truth and Love—as the rule of life; it proved the divine Principle thereof; but it remained for Christian Science to make clear to human understanding the practical application of this Principle to the affairs of every-day life.

"The Discoverer and Founder of this truly Scientific Christianity has lived it for more than a quarter of a century, and proved it to be the very same Principle of Life Truth, and Love, that Jesus Christ lived and demonstrated, confirming his teachings by doing the works he said would follow them that believe. However feebly we, who have accepted her Scientific interpretation of Scripture, have been able to follow her in living and proving it, we can but be unspeakably grateful for the demonstrations we have and do make and for the peace and hope and courage it has given us. To know that we are in the Way in full assurance of man's present unity with God—Good,—'now and forever, one and inseparable,' and with the presence and power and knowledge of God with us to meet the temptations and ills and weaknesses of the flesh, enables us to enter into rest, and to overcome all that seems against us. 'Beloved, now are we the sons of God.'"

A lady spoke thus: "I have so much to be thankful for. Christian Science has taught and proved to me that God is my life, my ever-present help under all circumstances. Science and Health is my constant companion."

A man remarked: "I thank God this evening for Truth, and that I have gained some understanding of Christian Science. I have found it practical in overcoming worry and fretfulness, in doing my daily work."

A traveling man stated: "I am very thankful for my little understanding of Christian Science. Some two years ago I was an abject slave to the use of tobacco. It was

Digitized by Google

my custom to smoke nine or ten cigars a day. I had been reading Science and Health, and I saw that the pure teachings of this book did not harmonize with the impure atmosphere of tobacco. After reading this book, and then leaving it for the cigar, a sense of shame crept over me, and still worse, the claim assumed such a serious form that I was obliged to call on a Scientist for help. The desire for tobacco was fully destroyed. My vocation takes me among all classes of business men, where oftentimes a great amount of smoking is indulged in, but I neither desire it, nor am I affected by it, although I have no desire to be in that atmosphere. When under this claim my employers thought I was a crank because I would not submit to medical treatment, but nevertheless this was all met, and they paid my bill for Christian Science treatment, the same as if I had been under the care of a physician. I am grateful to God and Mrs. Eddy for Christian Science."

A man testified: "I am thankful for Christian Science. It restrains from evil by teaching the allness of Good, or God, and the nothingness or unreality of evil. It helps me to be careful to think good thoughts."

Said a lady: "There are many reasons why I am a Christian Scientist. Perhaps the first, as is usually the case, is because of the physical benefits received. But comparing this with the great spiritual benefits which are possible for our attainment, the former dwindles into insignificance. If we carefully read the Old and New Testament Scriptures we shall find in every instance that God prevailed. Though error would sometimes seem to have power for a time, yet in the final outcome, right, Truth was victorious, thus proving the nothingness of error. If we but keep in our consciousness the thought that we are the creation and reflection of this divine Principle, which is omnipotent, we shall see that we have great reason for rejoicing in the fact that our origin is not of the earth, but that we live and have our being in divine Love. Another reason and cause for thanksgiving is that Omnipotence is also Omnipresent, and if we cling to this Truth tenaciously we cannot be overthrown, for error is given neither power nor place. It is made plain to us in our text-book, Science and Health, that there is no power but divine Mind. This is reason enough of itself, if understood, to make every one a Christian Scientist.

A case of healing of fifteen years of invalidism was spoken of, the lady being a sufferer from nervous prostration and stomach trouble, dieted almost to starvation—living on boiled wheat, dry bread, and hot water. Through Christian Science she was healed when physicians could give no encouragement. She is well to-day, able to do all kinds of housework.

Another testified: "So many glad remembrances of the power of Truth over error come thronging up in memory that it is difficult to know how to express our gratitude at this hour. Many years I have spent in suffering. There was no glad Thanksgiving Day, for I was taught that God sent afflictions on me, and what was there to be thankful for? But to-day the glorious teachings of Christian Science have illuminated our pathway by the healing power, and taught us that God is Love and that sickness is not of God, but the result of error. This lifts us above the cold thought of materialism into the liberty of the children of God, where we can with grateful hearts praise God for the revelation of Christian Science. Gratefulness flows from all hearts that have been touched by infinite Love. Through this Truth I have been healed of scrofula of twenty years' standing, dyspepsia so severe that I could scarcely eat anything, also weak eyes, having used glasses for seven years. We have greater cause for thanksgiving than ever before for this Truth that is making hundreds and thousands free and will continue its reformatory mission until all shall know the Truth, and gratitude resound from every heart."—*Dayton (O.) Evening Herald.*

## A Courageous Apology.

THE *Register* yesterday, through an inadvertence which is practically inevitable in the selection of news matter of a miscellaneous character, printed an article to the effect that Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science, some time ago treated a patient in Philadelphia, but without the slightest effect. The story appeared originally in the *New York World* but was afterward corrected by it and pronounced untrue. It is still on its travels and evidently ahead of the denial. Having fallen into error we gladly enter an apology and correction. Mrs. Eddy not only did not treat the patient, but receives no patients at any time or under any circumstances. Our chief reason for making this correction is not that we regard the story as of any consequence, but in order that Christian Scientists shall have the same protection against misrepresentation at our hands that any other faith is entitled to and receives.

*Register,* New Haven, Conn.

## Can Walk only when Asleep.

BERNARDUS BENNETT, No. 24 Flushing Avenue, Jamaica, is a helpless paralytic when awake.

Asleep, he has full control of his limbs, although he has no consciousness of it.

There is not the slightest doubt about it. Even the colored servant, who first saw the phenomenon and ran screaming from the house at the strange apparition of Mr. Bennett sitting by the kitchen stove fully dressed in clothes he had not worn in years, now believes.

Mrs. Bennett knows that it is true, and so does her daughter Helen, although they would not believe their eyes until they all saw Mr. Bennett at the same time.

Even then the uncanniness of it made them shiver. They cannot explain it any more than the doctors, and the doctors have devoted much attention to the problem.

The family calls it a miracle, and that is as good an explanation as has been offered. Thousands of people about Jamaica who have known Mr. Bennett for years are still in doubt. He was born in Queens, L. I., and went to live in Jamaica fifty years ago.

The stroke of paralysis which came upon him more than twenty years ago was severe. It sent him to his bed, absolutely helpless. During all this time he has been unable to stand on his feet. The physicians had told him there was no chance for his recovery.

When a man spends twenty years on a "mattress grave" he expects to end his life there. But Mr. Bennett has never given up hope. His clothing was always kept in a closet near his bed, although no one dreamed that he could ever wear it again.

A few mornings ago the colored servant saw Mr. Bennett, fully dressed, sitting beside the kitchen stove. She lifted her voice, thinking she had seen a ghost. Mrs. Bennett and her daughter were summoned.

Mrs. Bennett spoke to her husband. He did not answer. After a half hour he walked upstairs and undressed himself without assistance.

When he woke he was absolutely helpless again. He became angry when they told him what he had done, declaring that they were making fun of him. When they persuaded him to try to use his limbs he could not.

The paralytic had become a somnambulist. The doctors and family are wondering what will be the next manifestation.—*New York World.*

The *Advocate* says: "Do not keep company with any sin. It may surprise thee as an enemy sometimes, but let it not lodge with thee as a friend."

CHRISTIAN SCIENCE SENTINEL

# Editorial.

## MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## By-laws.

BY MARY BAKER G. EDDY.

PREPARED July, 1899, and adopted by the Mother Church, The First Church of Christ, Scientist, Boston, Mass., December 22, 1899, and will in due time appear in the Church Manual.

We enjoin upon every member of the Mother Church a careful and prayerful perusal of *each* of these By-laws, that we may become so thoroughly imbued with their letter and spirit as to be able to carry them out in our daily lives.

In accordance with our text-books—the Bible and "Science and Health with Key to the Scriptures,"—and all Mrs. Eddy's other teachings, members of this Church shall, neither orally nor by writing, signify their belief in more than one Christ, even that Christ whereof the Scripture beareth testimony.

They shall entertain no ill-will towards men, towards members of other Churches, M.D.'s, or doctors of any sort.

They shall not publish, nor cause to be published, an article that is uncharitable or impertinent towards religion, medicine, the Courts, or the laws of our land,—on penalty of being removed from the Editorial corps, and the Board of Lectureship.

The Churches of the Christian Science denomination shall have one reading room for each Church.

The following verse shall be sung in Doxology at the close of the Communion Service:—

Be Thou, O God, exalted high;
And as Thy glory fills the sky,
So let it be on earth displayed,
Till Thou art here and now obeyed.

Section 1, Article XXXV., is amended so as to read:—

If a Christian Scientist is to be married, the ceremony shall be performed by a clergyman who is legally authorized to perform this ceremony. According to our present laws, a Christian Scientist alone cannot unite individuals in wedlock.

The second paragraph of this By-law is expunged.

❦❦❦

## Our Baptism.

THE account of Jesus' appearance upon this earth as given in the Gospel of Saint Mark is unlike that of the other gospels in that it makes no mention of his material birth. This Gospel somewhat abruptly begins thus: "The beginning of the gospel of Jesus Christ, the Son of God." Then follow references to John the Baptist, wherein he foretells the coming of one mightier than he, the latchet of whose shoes he was not worthy to stoop down and unloose.

The Baptist declared that while he had baptized with water, he who should come would baptize with the Holy Ghost.

Then follows the simple announcement of Jesus' appearance: "And it came to pass in those days, that Jesus came from Nazareth of Galilee." Jesus then partook of John's baptism. No sooner had he been thus baptized, than the Spirit drove him into the wilderness, and there his forty days' temptation by Satan ensued, and he was with the wild beasts.

Did the narrative stop here, we might well suppose that Jesus was in the wilderness alone with Satan and wild beasts; but not so. The narrative proceeds: "*and the angels ministered unto him.*"

Jesus was not forsaken during his period of temptation. The Father was watching over him, His angels of protection were hovering around him. He was being baptized of the Holy Ghost that he might baptize others with the Holy Ghost. He was being fitted for his mission. He was tempted sore, but overcame the temptations.

"After that . . . Jesus came into Galilee preaching the Gospel of the kingdom of God, and saying, The time is fulfilled, and the kingdom of God is at hand." The lesson is plain. The purifying process must be within.

When we are ready to forsake the allurements of baptism (immersion) in material things for the baptism *into* (immersion) of Spirit,—the Holy Ghost,—the Christ will appear to our consciousness as quickly as Jesus appeared to John the Baptist and his followers.

As we enter the new year, shall we not also enter into a new and higher and holier baptism—the Christ-baptism, the baptism of Spirit so glowingly held before us and taught us in "Science and Health with Key to the Scriptures," written for us and all the world by our God-fearing Leader and Teacher, Mary Baker G. Eddy?

Let us stand constantly at this baptismal font, and through the purifying water of Spirit overcome the Satan of temptation, drive away the wild beasts of lust, fear, hatred, and every encumbering sin, and thus let God reign in us and His "angels minister unto us," so that we too may be able to perform our mission, preach the gospel of the Kingdom of God, and convince our fellow-men that the "time is fulfilled, and the KINGDOM OF GOD IS AT HAND."

❦❦❦

## Christian Science Prayer.

THE whole groundwork of Christian Science is prayer. Its achievements in healing sickness are the result of prayer. Without prayer there is, there can be, no real healing. The Christian Science prayer is not an emotional or ecstatic supplication, petition, or wrestling so much as it is a deep, profound, and abiding conviction of the all-presence and all-power of God. This prayer is instant and constant. It is the ever-present consciousness that man is in harmony with God. It is the realization that man, in his true relation to God, reflects health and harmony rather than disease and discord. This is the plain teaching of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy; and this altitude of prayer we must reach ere we shall be able to pray aright and in such a way as to receive answer thereto.

Our text-book, from beginning to end, is a lesson on prayer. To the extent that we understand and live its teaching we are in an unceasingly prayerful state of mind. Its repeated injunction is that we must have in us the Mind which Jesus had; we must be about the Father's business as was he; we must reflect the Divine character as did he; we must be in the world, and yet not of it, as he was in it and not of it; we must worship the Lord our God with all our might, mind, and soul, as he worshiped God with all his might, mind, and soul; we must have no other gods before God; we must yield our mortal selfhood to *all* the requirements of Divine selfhood, thus reaching that perfection which Jesus demanded in his great injunction to his disciples, and, through them, to all the world: "Be ye therefore perfect, even as your Father which is in Heaven is perfect."

Digitized by Google

The demands seem great. If we were to trust to material sense and rely upon human strength, we should stand aghast before them; but the great glory of our textbook is that it turns us away from the material senses and toward the realization of the omnipotent Good that reveals to us the possibility of compliance therewith.

We should carefully read and study our Church Manual on prayer, especially the last and recently added section of Article XXI., page 46. All the members of our beloved Mother Church should be conversant with this By-law.

### Corrections.

In the account of the recent lecture in Portland, Me., which was published in the *Sentinel* of December 21, it was stated that Hon. Edward Wiggin of Bangor, presided and introduced the speaker. We are informed that the lecturer was introduced by Francis Wiggin, who is associated with the *Industrial Journal* of Bangor, but resides in Portland.

The lecture of Judge Clarkson delivered November 1, 1899, was at Lincoln, Kan., instead of Lincoln, Neb., as stated in the *Sentinel* of December 14.

### Questions and Answers.

The department of Questions and Answers in the *Sentinel* has been discontinued.

## Selected Articles.

### From the Boston Herald.

THE following was published in the *Boston Herald* of December 26, relative to an editorial in that paper which, among other things, claimed that Christian Scientists seek to practise in an unnatural way merely for personal benefits.

*To the Editor of the Herald:*—I am sure you will be glad to have a statement from me as to what Christian Scientists really do believe and practise concerning some of the things so kindly commented upon in your editorial of yesterday. Faith in God and spirituality can be perpetuated only by the practice of spiritual teachings. The waning faith of this age is due more to a lack of practice than of understanding. Spirituality and real healing power are one and the same. They cannot be separated.

What is true nature? Is not God the natural lawgiver? A natural law is one that is in the condition in which it was created by God. Doubtless we may find ourselves doing many things in a very unnatural way, when we consider deeply what God's ways really are. Isaiah said, "My thoughts are not your thoughts, neither are your ways my ways, saith the Lord."

It may seem more natural to turn to material means and methods for healing the sick, but may not this be because we are more used to doing this, and because material remedies are more tangible to our present sense; even as it is natural to encourage or allow appetites, passions, and sin, because they are more in keeping with our human tendencies? We are taught in the better schools of the day to stifle this "natural" tendency to evil and cultivate love for the good. May it not be equally true that we should cultivate dependence upon Spirit, God, and seek to rise above the so-called material laws, so far as is possible?

It is scarcely expected that any of us can at this immature period in our growth do exactly right; for we may not yet have attained to a sufficient degree of moral strength to sin no more; and yet we have the command: "Be ye therefore perfect, even as your Father which is in heaven is perfect." While we do not seek to set aside this command, yet we recognize that we can reach perfection only through spiritual growth. In like manner we hear the declaration: "It is the Spirit that quickeneth; the flesh profiteth nothing;" and yet in our unspiritual condition, Spirit may seem exceedingly rarefied, if not altogether a myth, while the flesh seems a very profitable or real thing. Indeed, but for the effect of Spirit upon matter, we should have nothing but blind faith upon which to build our belief that there is such a Substance or Power as Spirit.

We suffer a great many things "to be so now," because we are not far enough advanced spiritually to set aside all material laws. Furthermore, it may be true that we have more suffer-it-to-be-so-nows than are justifiable in the sight of God, and doubtless people in general could abstain from sin and selfishness even beyond their present practice, if they would but try. And who knows but that even at this period we could safely trust God to heal our bodies and keep them well without the use of material aid? Have you tried it? Many have and are ready to testify to health and happiness as a result of this experiment.

We never shall know what Spirit can and will do for us until we throw our whole weight upon the side of Spirit. The use of medicine has filled its place as a necessity in human experience, and this great world could not yet be deprived of it, yet may it not be true that, in the course of events, we may find the spiritual method of healing better? The Christian Scientist believes so, and he desires quietly to live according to this belief without in any way interfering with the methods of others.

I love Christian Science because it has made my religion practical and because it fulfils what it promises. Christian Science has not taken away any of my Christianity, but has added to it. It has enlarged my sense of God—has made God more to me, and my faith in other supposed powers has become less. I believe the best man in the world without Christian Science would be still better with it; for he would understand better how to be good.

Christian Scientists care much less about physical benefits than they do about the spiritual benefits. Indeed, we hope to be well only as our lives, in God's sight, merit health. We do not hope to be safe physically, except as we are right spiritually. The real purpose of Christian Science is to lift us spiritually until we are too good to be sick. If our motive or practice is less exalted than that of Jesus, it is because we fall short of the demands of this Science, not because Christian Science justifies wrong motives or deeds.

I hope I am right in believing it a work of love to save my fellow-man from bodily suffering by saving him from the evil that causes his suffering. Many people with a high degree of goodness are in a suffering condition, while many bad people are in a reasonably healthy condition, but this does not change the fact that the good man is on the road to harmony, though he may not have reached it, while the bad man is on the road to destruction and will surely find it, if he does not change his course.

It is not our goodness—not our spirituality, but our materiality that gets sick. Sickness may overtake the "good man," but never the perfect man. "In the way of righteousness is life; and in the pathway thereof there is no death." The wicked man may seem to find harmony for a period, but his harmony has no foundation, and will eventually cease.

Jesus was doubtless too good to be sick. His goodness was his health. He probably had little need to heal himself. Bodily healing is only a secondary matter in Christian Science work. It is a part of the harmony that must follow a life consecrated to God according to the teachings of Science. If our lives are such before the world as

Digitized by Google

would make the impression that our only desire is in "having recourse to miracles for one's own personal advantage," there must be a deep want of Christian Science on our part, for such a desire could not be instilled by this Science.

The works of Jesus were not supernatural, but natural, if it be true that God's way is natural.

Jesus said, with reference to the law, "I am not come to destroy, but to fulfil." His healing was not unnatural but in strict accord with the law of God. He also said, "He that believeth in me, the works that I do shall he do also," *i.e.,* he who understands as I understand and who practises as I practise will accomplish the same results.

We may believe in a small way, and accomplish some results, while we have our Master's assurance that our results will be greater as we, through spiritual growth, become more firm in the power of God.

ALFRED FARLOW.

## Opportunities for Doing Good.

"LAY not up for yourselves treasures upon earth, . . . But lay up for yourselves treasures in heaven."

"But Jesus answereth again, and saith unto them, Children, how hard is it for them that trust in riches to enter into the kingdom of God!"

"Charge them that are rich in this world, that they be not highminded, nor trust in uncertain riches, but in the living God, who giveth us richly all things to enjoy; that they do good, that they be rich in good works, ready to distribute, willing to communicate."

An old friend of the writer, in the course of a business conversation remarked that he was past the zenith in his life, and as he looked back over the past and recalled the mighty struggle for wealth, gain, and position that was carried with it, he voiced the thought as expressed in First Timothy: "For we brought nothing into this world, and it is certain we can carry nothing out." If men were not so anxious to accumulate wealth, the division of wealth would be more equal and poor men would thereby be afforded an opportunity of doing good otherwise impossible.

As a matter of course we are not all situated alike so far as this world's goods go, but that should not hinder us; we can all do something for God and each other. Only the other day a poor woman asked a friend who was talking to her on a religious subject, what one in her humble sphere of life could do to serve Him.

Why, my dear friend, just turn to your Bible and read these blessed words of the Master: "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me." Now, doesn't this make it all plain? Whatever service we render to God's needy children His love accepts as done unto Him. Knowing this, is it not easy, in this world of want and suffering, to find something to do for the Master?

And in this we see how closely Christ identifies himself with his disciples. The "God manifest in the flesh" comes very near to us. The perfect, sinless man appeals to our hearts, although we can never, in this life, fully understand how "the Word was made flesh and dwelt among us."

We who would serve God let us bear in mind these words of the Master: "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me;" then how many ways of service we shall find. How many about us there are whose hearts are aching for a kindly word, and to whom it would mean more than silver or gold. Shall we forget such as these, or shall we give them our sympathy in the thoughtful word of kindness, or even in a pleasant smile, if we have not opportunity to give more? A little flower sent to some sufferer confined to a sick-chamber is often like a message of hope and comfort, for it brings with it the thought that there is some one in the busy outside world who has not forgotten him, and the fragrant rose will breathe something of the love of Christ to the one upon that sick-bed, and it will bring some of the beauty and brightness of the summer world into the darkened room.

And sometimes even in the simple pressure of the hand you may serve God. How much it means sometimes to the sorrowing. It says that heart pities me, and I feel that the one who gave me that warm, tender grasp is my friend, and life does not seem quite so hard, I am not wholly forsaken; God has not forgotten me, and I will strive to live and work for Him still.

Then sometimes we may feed the hungry and clothe the naked for love of the Master, and in everything that we do for him we too receive our share of the blessing. Our hearts are lightened through the sympathy we give to others, and we feel the blessedness and the joy which lies in that "Inasmuch."

The way of the Cross, that is the way that we should tread. In a recent sermon by Rev. J. B. Silcox, pastor of the Congregational Church at Sacramento, that way was set forth in the following words:—

If that cross means anything it means that the more a man has of wealth and talent and culture, the more is he under obligation to render service to humanity. He who would be chiefest and greatest must make himself the servant of all. Increase of strength means increase of obligation to help the weak. Increase of culture means increase of obligation to enlighten the illiterate. Increase of virtue means increase of obligations to reform the vicious. Christianity is not separation, it is impartation. The throne must bend to the hovel. The monarch must minister to the mendicant. Heaven must come to earth. That is the meaning of the cross. That was the governing law in the life of Jesus. It must be the governing law in our life. "We that are strong ought to bear the infirmities of the weak, and not to please ourselves. For even Christ pleased not himself." He died for all "that they which live should not henceforth live unto themselves but unto him which died for them, and rose again." Our life belongs to Christ, and therefore to humanity.

No man ever came to greatness along any other path than the way of the cross. The truly great have felt the truth that their life belonged to the race, and that what God had given them was given them for the service and salvation of man. The enthusiasm for humanity that made beautiful the life of Jesus has irradiated the lives of men and women and lifted them to thrones of distinction. Not to be ministered unto, but to minister has been the one motto and ideal of their life. It was the motto and ideal of Peabody when he used his millions to endow schools for the enlightenment of the ignorant and erect homes for the well-being of the poor. It was the motto and ideal of Florence Nightingale when she consecrated her womanhood to the service of the wounded and dying on the battlefields. It was the motto and ideal of John Howard when he devoted himself to the betterment of the criminal population of the world. It was the motto and ideal of Wendell Phillips, when he turned from the honors and emoluments of the law to champion the cause of the dumb, downtrodden slave. It was the motto and ideal of Livingston when he consecrated the valor and genius of his manhood to open a path and carry the light of the Gospel into the dark jungles of Africa. These are illustrations of the high serving the low, the strong ministering to the weak. They receive the homage of the earth and the hallelujahs of heaven. They declare with trumpet tones the truth that the great life is the life that serves.

To these may be added the name of Mary Baker Eddy, whose life of self-sacrificing love and ceaseless devotion

Digitized by Google

to the welfare of humanity, shines as a pilot star to guide the suffering and sinful to a harbor of rest and a haven of peace, who has in Christian Science given to the world the Christianity taught and practised by the Saviour.

Should we not make that life of service ours?

Every day we may find those who need our service, and we may realize the blessedness of that "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."

*Ottumwa (Ia.) Press.*

## An American Heroine.

A STORY even more striking and more pathetic than that of Father Damien is told in a thin volume of one hundred and seventeen pages—"Mary Reed, Missionary to the Lepers, by John Jackson, with an Introductory Note by the Rev. F. B. Meyer, B.A." (Marshall Brothers). Mary Reed is an American lady who went to India in 1884 in connection with zenana mission of the Methodist Episcopal Church. She worked first at Cawnpore and then at Gonda, but her health broke down, and she returned home in 1890 to rest and recruit. It flashed on her that her disease was leprosy. The doctors, one of them a specialist who had studied the disease in the Sandwich Islands, confirmed her suspicion, and, as Mr. Jackson says, "this educated, refined Christian woman found herself face to face with the appalling and paralyzing fact that she had fallen a victim to leprosy—the most dreaded, loathsome, and hopeless disease known to mankind." Telling only her sister, and without saying farewell to her family, she at once returned to India as a missionary to the lepers. She took it as a divine call to a life of service, and was speedily appointed to the superintendence of the Asylum for Lepers at Chandag in the Himalayas. In this work she has now been occupied for eight years. "Single-handed, or at most with a limited supply of native assistants, she has developed the institution under her charge from a mere collection of huts and stables in which some thirty-seven lepers were housed to an establishment with an average of eighty-five or ninety inmates, sheltered in substantial houses specially erected for them." The Rev. F. B. Meyer, who met her at Lucknow during his late visit to India, and had "more than one delightful talk" with her, says that "from the first day until now she has borne her heavy cross in a spirit of consecration which makes the story of her life one of the most inspiring in missionary biography." But the most wonderful part of the story is that though Miss Reed makes use for her patients of all the ameliorations and remedies that medical science suggests, she trusts her own case entirely to the healing efficacy of prayer, and is now, and has been for many months past, in better health than she frequently enjoyed in former years. So remarkably and unusually has the disease been kept in check that some medical missionaries pronounced that in her case it was not leprosy at all. But the opinion of the most eminent authorities is that it is undoubtedly leprosy, though Dr. Condon said some time ago that she was "practically healed." But there she remains, isolated from the world, among the Himalayan snows, with her band of sufferers round her, sustained by an enthusiastic devotion and faith which, as we read of it, seems itself to be a miracle.—*London Daily News.*

Every attempt to make others happy, every sin left behind, every temptation trampled under foot, every step forward in the cause of what is good, is a step nearer to heaven.

DEAN STANLEY.

## The Infinite.

BY CLARENCE A. BUSKIRK.

I.

WITHIN the blossoms of the bower,
However lovely wrought,
The concept of some fairer flower
Is possible to thought.

The brightest planet in the dance
Of worlds that shine afar,
May be surpassed in radiance
By some remoter star.

But when we seek the Infinite,
Such perfectness prevails,
The uttermost of mortal wit
Before the threshold fails.

II.

The red throat of the robin quaffs
The sunshine for its song,
The bithesome brooklet leaps and laughs
Its sparkling way along;

But man, the blinded Titan, gropes
Around his rugged cave,
And searches with his fears and hopes—
Only to find a grave.

Is bird so blest and man so curst?
Nay, all is Perfect Good,
And God's own spiritual likeness first,
Could all be understood.

Enough of God illumes our eyes
To know His ways are Good;
Therefore, our trust in Him is wise,
Though dimly understood.

## Christmas Letters.

Kansas City, Mo., Christmas, 1899.

*Dear Sentinel:*—It has been many months since I have undertaken to do my share of the pleasant work attending the "making up" of our publications. I say "our publications" advisedly, because they belong to the Field, and were given us by the same loving thought which supplies all human needs.

In a little book entitled "Daily Light On the Daily Path," in the "Evening Hour," under date of December 24 are these words:—

"Then said the princes of the Philistines, What do these Hebrews here?"

"If ye be reproached for the name of Christ happy are ye; for the Spirit of glory and God resteth upon you: on their part he is evil spoken of, but on your part he is glorified. But let none of you suffer as a murderer, or as a thief, . . . or as a busybody in other men's matters."

"Let not then your good be evil spoken of." "Having your conversation honest among the Gentiles."

"Be ye not unequally yoked together with unbelievers: for what fellowship hath righteousness with unrighteousness? and what communion hath light with darkness? . . . Ye are the temple of the living God."

"Wherefore come out from among them, and be ye separate, saith the Lord, and touch not the unclean thing."

Digitized by Google

"Ye are a chosen generation, a royal priesthood, an holy nation, a peculiar people; that ye should shew forth the praises of Him who hath called you out of darkness into his marvelous light."

These are quotations from Samuel, Peter, Romans, and Corinthians,—passages of Scripture which I have read and heard read a great many times, but out of which I had no particular benefit, simply because their deep spiritual import was hid from my eyes which saw not, and my ears that could not hear, and which refused to hear and understand, lest Christ, Truth, should come in and heal me of sin as well as of physical discords.

Through the teachings of Christian Science the eyes now see and the ears hear, and gradually I am gaining a little understanding of the Christ, and through an effort to continue in his word, realize something of the freedom of which he speaks in John, 8 : 31, 32.

For this Christmas gift of all others, I feel most grateful and hope for the day when there will come to me the clearer understanding which will effect the more perfect demonstration.

The work done by those who are conscientiously endeavoring in their walk and conversation to follow the teachings of Christian Science, is made manifest throughout the world, and so again the princes of the Philistines are asking, "What do these Hebrews here?" and in answer the Christian Scientists can truthfully say, following our Master's command to "Let (y)our light so shine before men, that they may see (y)our good works, and glorify (y)our Father which is in Heaven," and the Christian, not in name only but in fact, can greatly rejoice if approached because living for Christ, Truth, and needs only to be concerned if he be justly reproached because of holding wrong thoughts, and so "suffer as a murderer, [see John, 8 : 48] or as a thief, . . . or as a busybody in other men's matters."

"Ye are a chosen generation. . . . Ye should shew forth the praises of him who hath called you out of darkness into his marvelous light."

Those living what Christian Science teaches are fulfilling this Scripture. I know many active business men, some of them men of large affairs in the commercial world, students of Christian Science, who are constantly exciting comment from those with whom they come in contact in a business way, because in the face of seeming adverse conditions the Christian Scientist is calm, undisturbed, and self-possessed, through the consciousness that he has "not believed cunningly devised fables," but that the God whom he serves is able to save him from "the burning fiery furnace;" and his business associates, often Christian men, ask what is the secret of his self-possession, which is so free from any resemblance to stoicism, or simply resignation to the inevitable.

I am always glad when I see the business man take up Christian Science, because it is a business man's religion pure and simple, at hand and available seven days per week, twenty-four hours per day, through the forceful manner in which the student learns that he must work out his own salvation because no one on earth or in heaven can possibly do it for him. "Be not deceived," said Paul, "God is not mocked; for whatsoever a man soweth, that shall he also reap." It is this thoroughly "every-day-in-the-week-practical" side of Christian Science which commends itself to the business man who really wants to be a Christian indeed.

"Be ye not unequally yoked with unbelievers;" weed out our individual gardens, keeping our thoughts pure, not only from sin but from any other sense of discord, including disease.

This recalls a statement published by a St. Louis physician in the *Globe-Democrat* of December 17, "Yes; a person may imagine himself having a disease until he finally develops symptoms of it. Doubtless there were many such during the typhoid fever epidemic just passed." This physician is also quoted as having said, "The influence of mind over matter is very pronounced." Is it unfair to assume that thought properly controlled and directed can produce health, if it be possible for thought through fear to produce disease? (See "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 481, l. 23–26.) Paul said, "God hath not given us the spirit of fear; but of power," and a greater than Paul, one whom all the Christian world frankly admits was the greatest man who has ever passed through this experience, said, "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

So on this glad Christmas day is this same Truth revealed to hundreds of thousands of loving hearts who unite in renewed feelings of gratitude to our dear Leader. Through the light which she has given us, we are capable in a degree of "casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ," Truth; and so we demonstrate health, happiness, and holiness so far as we lay aside our false conceptions and accept and understand God.

IRA C. HUBBELL.

Philadelphia, Pa., December 25, 1899.

*Dear Sentinel:*—Through the columns of the *Sentinel* let me send greetings to all the dear co-workers in our blessed cause. To the Publishing House many thanks are due for the monthly and weekly messengers of Truth which have come into my home the past years, so freighted with hope and encouragement, giving "daily strength for daily needs." But above all does my heart overflow with gratitude and love to the dear Mother, whose watchfulness, faithfulness, and unselfishness has been a constant reminder of my own shortcomings, and a stimulus to greater activity in the line of right. I am reminded to-day how much we can add to her joy by bringing in our sheaves and rejoicing her heart with the fruit of our understanding. Is it not time we should bring "glad tidings of great joy"? Have we not burdened her too much with our weight of sin, our failure to demonstrate ever-present Love? To-day let us pour out our thanks, our gratitude to her who was worthy to receive this wonderful revelation of Truth and for a suffering world was willing to stem the tide of mortal thought.

Let praise to God be upon our lips and thanksgiving in our hearts for her labor of love, and the means she has furnished by which we know how to cast our burdens on the Lord. To her do I owe a debt of gratitude which nothing but a holy, consecrated life can repay. To her I owe this happy Christmas day which has brought my dear ones home that we may celebrate together this new birth and understanding of God's gift—the immortal Idea which has become our salvation from sin, disease, and death.

Not a cloud has darkened our home to-day, for we are dwelling in Truth; not a gift received that we do not recognize as coming directly from God, whom we have been taught to love, understand, and demonstrate.

My offering to you this Christmas day, dear Mother, is an overflowing heart of love for what you have brought to me, to my home, and to the whole world. May we all, as your Christian Science children, be an honor to the cause you so dearly love and become better and better transparencies for Truth, realizing more fully the import of your words to us at the Annual Church Meeting in Tremont Temple last June:—

"Where God is we can meet, and where God is we can never part."

D. ELOISE BROWNELL.

## From Judaism to Christian Science.

BY FANNIE AND HENRIETTE KAHN.

It is over ten years since the seed of Truth was sown in our midst. We were born of Jewish parents, and brought up in the strictest observances of the orthodox Jewish religion. Our mother passed on when we two were young girls, and from that time we felt convinced that there could be no God in the world. Sorrow and separations followed —a veritable wilderness. We two went to attend the University of Michigan, hoping, through intellectual attainment, to satisfy our longing for something better and higher. We little dreamed that it was the Truth that was leading us; for at that time we had never heard the name Christian Science.

While attending college, one of us sustained a serious internal injury, which prevented her from continuing her work. When the physicians, who were specialists on the university faculty, passed the verdict that nothing but a surgical operation could *relieve* her, and that nothing could entirely *cure* her, one of her professors, who was at that time taking a course in Christian Science, suggested her going for treatment to his teacher, a loyal student of Mrs. Eddy. Within two weeks she was perfectly healed and thereby we knew for the first time that there was a living God.

This was the first glimmer of light that came to illumine our gropings in the dark. Our inherited prejudice against the word Christ was soon destroyed by this new understanding as revealed through "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, in the positive, practical proof of its Principle as a present regenerating and healing Power. Here was a Christianity we could accept as true, and which we immediately set about trying to comprehend. We rejoiced especially in the knowledge that in reality there was no Jew nor Gentile, that we were all members of the one grand, universal brotherhood, all governed by the One Intelligence, the One Father and Mother-God.

This was in the fall of 1887. Although at that time, no other member of our family was ready to accept Christian Science, yet since then each one, through his own proof of its efficacy to heal sickness, or his desire to find the true Principle to live by, has become an adherent to this, the one true religion.

For eight years we saw almost nothing of our father, and we had carefully avoided mentioning Christian Science to him, as we naturally expected the greatest opposition because of his extreme orthodoxy. Three years ago our eldest brother was telegraphed for to the bedside of our father. The latter had reached the point where his physicians could do no more for him. Nervous dyspepsia, rheumatism, neuralgia of the heart, and rupture had caused him suffering for many years, but when these and other diseases had assumed the most serious forms, *materia medica* decreed that he had but few days to live. Here was the opportunity to tell him in what manner his children and grandchildren had been healed of divers diseases, such as astigmatism, lung difficulty, hay fever, paralysis, etc.

After a day or two he was quite willing to have treatment from his eldest daughter, who was immediately sent for. Not only was he completely healed in a few weeks, but he became at once interested in Science and Health, by which he has abided ever since, and he is now in his turn preaching the gospel and healing the sick. He too sees the fulfilment of prophecy, and knows Christ Jesus is the Messiah. Giving the lie to the mortal law of three score years and ten, he is demonstrating strength, health, and happiness.

We never fully realized all the blessings that we had received through Christian Science until November, 1897, on the day of the dedication of our church in Chicago. After years of tribulations, of separations, of estrangements, we were all meeting for the first time "with one accord in one place," bound by the one Spirit, the one hope of our calling.

Four of us have had the privilege of class instruction. One is Reader in his field of work. We are all striving to do our part in the destruction of the illusions of sin, sickness, and death for others as well as for ourselves. Words are inadequate to express in any degree our gratitude to our beloved Mother, but we know that we can attest our love and reverence for her only through greater obedience to the law of God, as she has revealed it to us through "Science and Health with Key to the Scriptures."

## Mind and Matter.

BY L. H. JONES.

It may be interesting and helpful to those who are beginning to read Christian Science literature, and who stumble at the statement in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, that Mind, Life, is not in the body, to have their attention called to the accepted teaching in this connection of the elementary schoolbooks of the day.

In "Elements of Psychology," by Edwin C. Hewett, LL.D., president of the Illinois State Normal University, it is stated:—

"Of the real nature of both mind and matter, we are profoundly ignorant. No one can tell what either is; we can study their phenomena only. We believe that the mind is a real thing, and that it will live after the body is dead. Although we know nothing of human minds disconnected from bodies, we see no reason to doubt that a soul may be thus disconnected without any essential change in its nature or function. Even Mr. Bain says, 'For anything we can see, the body might have its bodily functions without the soul, and the soul might have its psychical functions in some other connection than our present bodies.'

"There are philosophers who teach that mind is the product of molecular movements in the brain. But to suppose that matter in any way produces mind involves the absurdity of supposing that something totally inert and unconscious can produce that which is both conscious and self-active. Can anything be greater than its maker? Can any effect exceed its cause?"

And in a similar work by Noah K. Davis, Ph.D., LL.D., professor of moral philosophy in the University of Virginia, it is stated, "Mind and brain, then, are two distinct substances, having no quality and no law in common. The mind cannot be assigned to any bodily organ as its seat. Locality can no more be attributed to mind than extension; either reduces mind to matter. Mind in itself bears no relation whatever to space. To ask where the soul is, or to say that it is here, or there, or that it pervades the brain, or the nervous system, is sheer nonsense."

When one has come to seek the honor that comes from God only, he will take the withholding of the honor that comes from men very quietly indeed.

GEORGE MACDONALD.

Just as in earthly society, the pushing, intrusive, self-conceited man must be prepared for many a strong rebuff, and will find himself often compelled to give place to modest merit, so in the eternal world, "whosoever exalteth himself shall be abased, and he that humbleth himself shall be exalted."

CANON FARRAR.

# Testimonies.

### Demonstrations in Dentistry.

I had some teeth filled, one nerve extracted, and two teeth drawn without a touch of pain. The dentist prophesied a great deal of pain in extracting the nerve, but I knew God's law was more powerful than any law of dentistry and I felt no pain at all, although he probed several times before getting the nerve.

I have been many times with patients to the dentist, and with two exceptions, the patient has felt no painful sensation whatever. The first case I had was a woman whose teeth were so hard to draw the dentist said he could not get them out. She came for treatment, and then went again. He managed to draw them, but they came very hard. He asked her how she managed to stand it. She told him, much to his surprise, that it was painless, and explained the kind of treatment she had had.

Another, a girl, wanted all her remaining upper teeth out. They were principally roots, as the teeth had broken off. There were eleven in all. They came without pain although part of them had to be dug out.

A young lady came to me last summer. She wanted four teeth out and new ones in at once, as she did not want to have to stay at home, and as the teeth were front teeth, she did not want to be seen so disfigured. We went to the dentist by appointment, I arrived first. He was not busy at the time and came into the waiting room and asked me if I were the Christian Scientist who was going to treat Miss ——. I said I was, and upon some questions being asked and answered, he said that he would do as nearly as we wanted him to as he could, but that he did not believe that both bleeding and swelling could be stopped so that she could have her teeth immediately. However, the young lady came and the four teeth were taken out without pain and the bleeding stopped at once. The dentist took an impression with very warm wax, also without pain, the gums did not swell, and the next morning she had her teeth and was wearing them without any inconvenience whatever.

I have had many more demonstrations along the same line, equally good. I want to relate an experience given in one of our Wednesday evening meetings.

A young man whose only teacher has been our text-book, Science and Health, said when he first came into Christian Science he had a great deal of trouble with aching teeth, but that he treated them and they ceased paining him. After a while he found that the cavities were filled up with new bone, and he has never had any trouble with them since. His faith in the Truth is "as a little child."

I have had many demonstrations of the power of Truth, as revealed in Christian Science, as able to destroy all our erring beliefs, be they of pleasure or pain, and I am deeply grateful to Mrs. Eddy for revealing to us the way to the divine heights of Love and Life.

MARGARET M. ELLISON, Winnipeg, Man.

### Deafness Healed.

A case which came to me for treatment was a child, a boy nine years old, who had passed through a fever which his mother said had left him quite deaf, and with almost constant flow of blood from the ears.

I treated the little fellow one week, and he was completely restored. The blood ceased flowing and he can now hear as well as any one.

Another case was a lady whom the physicians said if she should pass safely through a hazardous operation she could live but five years at most. She had consented to the operation hoping that five years would be sufficient time for her only daughter to become able to take care of herself.

She had partly planned the trip to the city where the surgeons resided, when she came with her over-anxious husband and said, "I have a notion to try Christian Science. It cannot harm me if it does not cure me. I may never accept your religion, but I will do justice to your cause, and if I am healed, I will proclaim it from the housetops."

The same evening I commenced treatment, and in less than two weeks she said, "I am perfectly well and give God the praise, for it was Christian Science that wrought the cure."—MRS. EDNA HENSON, Canyon, Tex.

### Study of Science and Health Rewarded.

The following beautiful demonstration proves that a faithful, conscientious study of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, is richly rewarded, and that its practical teachings are ever at hand. The passage on page 492, line 16, came clearly and forcibly to me when I was awakened one night and asked to come to the room of a dear one who to mortal sense was suffering with a severe nervous chill. Realizing the beautiful Truth expressed in those lines, all sense of responsibility was dispelled from my thought, and after five minutes the patient grew quiet and slept peacefully.

Formerly three persons were required to hold the afflicted one. Much medicine had to be given and the patient was from three to four days getting over the effects, whereas the healing through Love, enabled God's own child to be bright and happy at the breakfast-table the next morning. How full of love and gratitude is my thought for our beloved Mother, for giving us the impersonal teacher, Science and Health, and may I ever be found willing to obey all its directions.

E. D. S., Mt. Vernon, N. Y.

### The Price of Books.

I have often thought of writing what the small investment of three dollars for "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, did for me.

A friend, knowing my need, brought me the book, which was then in two volumes. At first I did not gain much light, but I was told that others had been healed of all the ills that flesh is heir to, by reading the books.

I kept on reading until the Scriptures were explained in such a way, that the Truth which Jesus said should come, made me free.

That book like the Bible is priceless. I liken it unto the "Pearl of great price." I shall ever think that the author was divinely inspired; for all Truth comes through inspiration and revelation from Spirit, not from the flesh.

Those first volumes have been replaced by later editions. Their bindings are worn and their leaves yellow with age; but I would not part with them for many times the original cost.—NANCIE G. SAVAGE, Wilton, Me.

### A Case of Typhoid Fever.

About five weeks ago my son, twenty-five years of age, who lives at Sheridan, Ind., came home with the typhoid fever. His physician had diagnosed the case as typhoid fever and his Methodist pastor and Epworth League cabinet officers all wrote him hoping that he would *not* have the fever.

I began to declare the Truth as I understand it and symptom after symptom disappeared till at the end of a week he said he was able to go back to clerking; however, he stayed three days longer when he considered himself healed.

Suppose some of my professional brethren should say it was a case of typho-malarial fever, I would like to ask them if they can do better than that. He had been taking medicine about three weeks. I write this to show what Truth and Love can do.

E. N. TULL, M.D., C.S., Fairland, Ind.

## From the Religious Press.

### Believing in Yourself.

There are few better protections against unworthy conduct than the faculty of believing in yourself and taking a high estimate of what the future has in store for you. When men are discouraged and "down on their luck," and come to think that there is no future for them, they are peculiarly liable to temptation. "What is the use," they think, "of trying? I do not amount to anything. I might as well take pleasure as it flies and let the future take care of itself."

Perhaps there are comparatively few of us that do not occasionally have these low-toned moments. We lose sight of our ideals or become sceptical about them. You do not know what you are doing for a fellow-man when you teach him to believe in himself by believing in him. You are bestowing a choicer gift than money or position. A good deal of the power of the gospel lodges itself in its capacity to invigorate self-respect by showing men that God cares for them, and revealing to them the dignity of their own nature and immortal destiny.

It has been verified a thousand times that when a great responsibility or dignity is imposed upon a man his best energies are enlisted in becoming worthy of it. A man who believes in his worth and future has always the inspiration of that motive. More sins than we often think for can be traced to discouragement or the clouding of ideals.
*Watchman* (Baptist).

### "Thy Kingdom Come."

An expression or formula that is often repeated, sooner or later loses for most people much of its original import and inspiration. Through thoughtless and perfunctory repetition it becomes a mere form of words without significance or uplifting power. Even the prayer dictated by Jesus to his disciples has not escaped this law. Indeed there are indications that of the multitudes who habitually repeat the Lord's Prayer as an act of devotion, there are comparatively few who have any adequate conception of its real meaning. They recite it perfunctorily, though perhaps not with a deep sense of reverence, but with slight comprehension of its spirit and beauty. The Lord's Prayer ought not merely to be *said*, it ought to be studied and understood. When it is understood it will be found that it contains a revelation to man as well as a petition to God.

Take, for instance, the petition, "Thy will be done in earth as it is in heaven." That passage is a promise as well as a prayer. It opens a vista of hope to despairing lovers of humanity, heartsick from a contemplation of the world's sin and misery. It is an inspiration to the weary, despondent laborer in the field of humanitarian effort. Few can doubt that Jesus, when he directed his followers to pray for a better and purer earth, knew that he would not pray in vain.
*The Universalist Leader.*

### "He Knows About Leather."

Among those who attended the ministry in Glasgow of the gifted but erratic Edward Irving was a poor woman, the wife of a shoemaker who was a pronounced infidel. Irving visited him, talked with him, and sought to lead him to faith, but all in vain. The effort seemed only to confirm the man in obstinacy of unbelief. One day Irving, as he sat beside him, began to talk with him about his handicraft, and about the grade and quality of the materials used. The man became interested. He was surprised to find that Irving knew more about these things than he himself did. The sense of a common interest was awakened. Leather furnished the bond. On the following Sunday the shoemaker was one of Irving's hearers. He went again and again, and was finally converted. Some of his former associates taunted him for weakly yielding to superstition and folly. He replied: "Mr. Irving is no fool; he knows a great deal about leather." The incident has its lesson for the Christian worker. There is some way of approach to the heart of every man. It is necessary that some common standing ground be reached, from which further advance may be made. A man's daily pursuit is quite likely to furnish this. Find out what specially interests him. You may find in this the way of approach for highest ministry.—*The Baptist Union.*

## Miscellany.

### Cheated Out of Threepence.

An infidel lecturer once gave an opportunity for reply after his lecture. A poor old woman stepped up to the platform, put down her basket and umbrella, and said: "I paid threepence to hear of something better than Jesus Christ, and I have not heard it. I have been a widow forty years, and I had ten children, and I trusted the Lord in the depth of poverty, and He comforted me to bring up my children so that they have turned out respectable. I was often sore pressed, but my prayers were always heard, and I was delivered. Once, when I lay sick, I thought I was ready to break with the thought of leaving my fatherless little ones, and there was nothing kept me up but the thought of Jesus, and you tell me it is a mistake. Now, tell me something better, or else why do you cheat me of my threepence? Tell me something b .ter."

The infidel had not expected such an opponent. He said: "Really, the old lady is so happy in her deception I would not deceive her."

"No," she said, "that won't do. Facts are facts. Jesus Christ has been all this to me, and I could not sit down in this hall and hear you talk against him without coming and saying this and asking you whether you could tell me something better than what he has done for me. I have tried him and proved him." The lecturer said nothing. Experience is an argument that cannot be answered.—*Scotsman.*

### An Independent Preacher.

There are few cases on record wherein a minister owns his own church, refuses to accept a salary, performs the janitor work, and furnishes light and heat for the church. Under these novel conditions the Rev. A. W. Hobson of Lyons, Neb., ministers with success to a large number of zealous followers. In the common parlance of the street, "he is the whole thing." The Rev. Mr. Hobson is a regularly ordained preacher, at one time or another having been connected with the Methodist denomination and with the United Brethren in Christ. But at this time he professes allegiance to no particular sect. He prefers to be free to follow the dictates of a new dispensation which he declares may ere long be given to the world.

The Rev. Mr. Hobson is in many respects a remarkable man, but his apparent eccentricities do not carry him so far as to cause his neighbors to set him down as a crank. He enjoys the respect of the whole community, and has the reputation of being a sincere man, an original thinker, a fearless speaker, and a worker of great energy. His appearance in the pulpit, clad in a red robe, has caused a great deal of comment, both favorable and unfavorable. Mr. Hobson says he is not permitted to divulge the secret of his red robe at present, though it will gradually be done as the days go by.
*Chicago Chronicle.*

### Couldn't Fool Him.

A traveller, was riding on one of the coaches in the Trossachs of Scotland, when the driver said to him, "I've had a coin guv to me to-day two hundred years old. Did you ever see a coin two hundred years old?" "Oh, yes," was the reply. "I have one myself two thousand years old." "Ah!" said the driver, "have ye?" And he spoke no more during the rest of the journey. When the coach arrived at its destination the driver came up to the man with an intensely self-satisfied air and said: "I told you as we came along that I had a coin two hundred years old." "Yes." "And you said to me as you had one two thousand years old." "Yes, so I have." "Now you be a liar!" "What do you mean by that?" "What do I mean? Why—it's only 1899 now!"—*London Answers.*

### Chaplains for Firemen.

New York City has two chaplains for its fire department, one a Roman Catholic, the other a Protestant Episcopalian. They deal spiritually with the men when the latter are off duty in their engine houses, and when they are on duty the chaplains are on hand to administer the sacrament to dying heroes, or to give sympathy and aid to the injured. Their presence, too, often gives assurance to and produces calm in frightened inmates of houses that are either burning or in danger of being burned. They wear a uniform similar to the firemen, but with insignia that reveal their calling.—*The Congregationalist.*

## Notices.

### Supplements to the Sentinel.

Two supplements to the *Christian Science Sentinel* have been issued. The first is the able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The workers in the Field will readily see the wisdom of giving these supplements the widest possible circulation, and the extremely low price at which they are issued will enable them to do so. The price of the supplements is as follows: Single copies two cents each postpaid, ten copies or more to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Notice to the Field.

The November number of the *New England Magazine*, now ready for delivery, contains a finely illustrated article regarding "The Discoverer and Founder of Christian Science." Many of the illustrations are here produced for the first time, and the text of the article will be of fresh interest to all Christian Scientists. This magazine will be valuable for distribution, and the Publishing Society will receive orders and send postpaid any number of copies at twenty-five cents each.

### Per Capita Taxes.

Per capita taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec. 1. The per capita tax for the year beginning June 1, 1899, and ending May 31, 1900, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $13.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.

SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

THE BUSWELL TRIAL. 24 pp.

THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.

HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 10 cents; 12 copies, to one address, $1.00; Twenty-five copies to one address $1.75; 50 copies to one address, $3.00.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U. S. A.

SEPTIMUS J. HANNA, C. S. D., Editor. CAMILLA HANNA, C. S. D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

Last October Miss Edna McClellan began to raise funds by means of the endless chain letter system, to purchase a loving cup for Rear-Admiral Schley. Contributions to the amount of five thousand dollars have been received. Miss McClellan has decided to change her original purpose, and will endeavor to secure funds sufficient to purchase for the rear-admiral a home, either in Washington or New York City. Many subscriptions have been made on condition that the fund be used to purchase a home. It is thought that at least twenty-five thousand dollars will be available by July 1.

It is reported at Washington that the Transvaal government has asked the United States to offer its services as a mediating power. The request came through the American consul at Pretoria. No answer has been given by the State Department, and unless Great Britain makes a similar request the President will probably take no action in the matter. There is, however, a disposition on the part of some to urge that under the treaty of The Hague Conference, the United States could extend its mediation without offending Great Britain.

Andrew Carnegie has given three hundred thousand dollars to Cooper Union. This, with the two hundred thousand contributed by the members of the Cooper family, will serve to found a great polytechnic school. The intention of the founder, Peter Cooper, that the entire Cooper Union building in New York City, be dedicated to the work of education, will be carried out. There will be accommodations for one thousand pupils, and the school will have an income of nearly twenty-five thousand dollars.

All the twenty-six Powers that were represented at The Hague have signed the arbitration tribunal plan. The United States, China, and Switzerland have not signed that portion of the treaty in regard to the laws and usages of land warfare. The rules of the Geneva Convention, as applied to naval warfare, were signed by all the Powers except the United States. England did not sign that part of the protocol which prohibits the use of projectiles from balloons.

Recent dispatches from South Africa show that the situation in Natal is more critical for the British army than at any previous stage of the campaign. The Boers have at last attacked Ladysmith, and the last word received from General White was to the effect that he was very hard pressed. General White is believed to have a force of ten thousand men. General Buller has about thirty-three thousand men, but is apparently unable to render him any assistance.

United States Ambassador Choate has called England's attention to the matter of the Delagoa Bay flour seizures. Premier Salisbury informed him that the British government had not yet arrived at any decision as to whether or not food-stuffs were contraband of war, but assured him that the commercial rights of the United States would be equitably considered, and that a decision on this important matter would be reached as soon as possible.

It is said that Secretary Gage will recommend to Congress a measure for giving some benefit to the government from the deposit of funds in the national banks. The plan proposed is to charge a moderate rate of interest for use of the public funds, the rate of interest to be left to the discretion of the Secretary of the Treasury, since it must be governed by the condition of the money market.

The actual ore production of Colorado for 1899 was:—

| | |
|---|---|
| Gold | $33,000,000 |
| Silver | 15,500,000 |
| Lead | 5,902,154 |
| Copper | 1,750,000 |
| Zinc | 1,000,000 |
| Total | $57,152,154 |

The amount received for the Lawton fund is about ninety thousand dollars. It is believed the fund will reach one hundred thousand dollars. The money will be held in trust for Mrs. Lawton, and will be turned over to her on her return to this country, as a gift of the American people to her in token of their esteem for her late husband.

The Christian Political Union has been formed at Chicago, Ill. The object of the Union is to unify the forces of righteousness for political, social, and commercial reform. An effort will be made to get a large representation of Christian men and women at the initial national assembly, scheduled to be held at Rock Island, Ill., May 1, 1900.

Congress will be asked to appropriate five million dollars in aid of the St. Louis World's fair; conditional on ten million dollars being raised locally, one-half by subscriptions to a stock company, and one-half being voted by the city in the form of bonds. Less than one million is needed to complete the local subscriptions.

The New York fire department has a novel addition to its apparatus in the shape of a searchlight fire engine. It is the first searchlight fire engine ever constructed, and it is expected to be of great assistance to firemen when fighting interior fires. It is equipped with two electric lights of six thousand candle-power each.

The accumulation of money in the United States treasury the past three months has been remarkable. The ordinary receipts during the month of December were $46,759,104, and the expenditures $39,055,500, affording a surplus of 7,703,604. The surplus for November was $6,175,724, and for October $3,359,561.

The maintenance of the open door in China is assured, as all the Powers addressed have responded. Italy was the last to come into the agreement. President McKinley regards this work of Secretary Hay as the greatest achievement of the state department during the present administration.

It is stated that it will require one hundred million spindles a year to manufacture the cotton crop of the world into the average grade of cloth. New England has thirteen million spindles, seven million of which are in Massachusetts. There are now five million spindles in the South.

The oath of allegiance was administered to the members of the new Cuban cabinet January 2. The oath is the one ordinarily administered to all Cuban officials taking office under the present authority, swearing allegiance, for the time being, to the military authorities of the United States.

The Paris city council has selected a fine site in the midst of the American quarter for the equestrian statue of Washington. It is desired to unveil the statue July 3 next, the anniversary of Washington's acceptance of his commission as general, which act the statue represents.

Admiral Dewey says that the shore guns did much better work at Manila than those afloat. He has made a strong argument to show that in adjusting the claims of bounty the Spanish shore battery should be considered in determining the forces which opposed him.

On the Russian New Year's day (January 13) His Majesty, Czar Nicholas will issue a proclamation inviting the Powers to continue the work of peace which was initiated at The Hague Conference. The call will be addressed to all nations.

General Buller's difficulties have been greatly increased since his last engagement. He is now confronted by walled and fortified hills, running sixteen miles along the Tugela, and the Boers still continue to add to their works.

The year 1899 was the greatest business year ever known for the American Steel and Wire Company of Pittsburg, Pa. The company has announced a general advance of 7½ per cent in wages of its thirty thousand employees.

The funeral of General Lawton will occur early in February. It will be made memorable by a military and civic parade at Washington second only to those at the funerals of Grant and Sheridan.

Captain Leary, naval governor of the island of Guam, has issued a decree abolishing slavery or peonage in the island. He has also deported all Spanish priests for reasons which are sufficient for him.

The Senate committee on privileges and elections has decided by a vote of four to three that Mr. Quay is not entitled to a seat in the United States Senate under Governor Stone's appointment.

General Otis has notified the War Department that Lieutenant Gilmore and his party from the Yorktown and all other American prisoners in the northern part of Luzon have been rescued.

President Keenan of the L. A. W. will endeavor to secure an appropriation of five million dollars by Congress for the construction of improved highways throughout the United States.

Secretary Root has cabled General Otis to open the southern Philippine hemp ports as soon as possible. These instructions are sent for the purpose of breaking the corner in hemp.

The Chicago canal was opened January 2. The first work on the canal was done September 3, 1892. The total outlay was about thirty-three million dollars.

Captain Richmann, 17th infantry, now in the Philippines, has been ordered to South Africa to report upon military operations in the Transvaal.

Hawaii wishes to send a delegate to the Republican National Convention which meets in Philadelphia next June.

Yale University received a donation of one hundred thousand dollars from the Vanderbilt estate.

The total amount pledged for the Dewey arch fund is two hundred thousand dollars.

The University of Chicago received a New Year's gift of $3,370,000.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## The Telediagraph.

WHILE the newspapers of to-day are unquestionably marvelous as achievements, when compared to those that were considered the most finished productions of the press a few years ago, the limit to this improvement has by no means been reached. Every year witnesses new inventions in methods of printing, all of which enable the publisher to increase the attractiveness of his paper, but no invention can do more to revolutionize present newspaper methods than the art of picture telegraphy, which is now almost ready for practical use. Already there have been several successful tests of this invention, pictures have been sent thousands of miles over the ordinary telegraph wires, and there is every reason to believe that it will not be many months before the telediagraph will be as great a necessity in every newspaper office as the regular telegraphic receiver is at present.

What this will mean few newspaper readers can realize. By the use of this machine the correspondent of a newspaper will be able to furnish his office with pictures, diagrams, and photographs of events happening in all parts of the world. If there is a battle in the Philippines, or a great fatality in Europe, the artist who may be on the scene can immediately provide his paper with pictures of the event, making it possible to reproduce the sketches a few hours after the happening. As the natural result, it is safe to assume that the newspapers of the future will be more profusely illustrated than those of to-day, for it will then be possible for them to obtain pictures from every part of the globe, pictures that will accurately portray the great events that have happened.

The advantage of the new invention will not be restricted to the newspaper office, however. Business men will find it of the utmost use in the sending of messages in shorthand or cypher, and the police of every civilized country will be able to use it in securing the arrest and identification of criminals. If a man who is wanted in this country is suspected of having escaped to Europe, his picture can at once be cabled to the police of every European city. If a great crime should be committed, and the criminal should be known to the police, his counterfeit presentment could be telegraphed so thoroughly over the world that escape for him would be practically impossible.

While these are but a few of the uses to which such an invention could be put, they are sufficient to illustrate the great importance of such a discovery, and in view of these facts, it is not strange that inventors have been striving to solve this problem almost since the beginning of telegraphy. During these many years various methods have been proposed, and all have depended upon the synchronism of apparatus at the two ends of the line. The difficulty in obtaining this has been the principal cause for the lack of success of the many systems of picture telegraphy that have been projected. To enumerate all the inventors who have been unsuccessful in their efforts to send pictures by telegraph would be tedious. It is enough that one has at last been successful, and that it cannot be long before his machine will be operating in every city in the world.

Now that this wonderful invention has been perfected, and the details of its construction are no longer the inventors' secrets, one wonders that it should have been so simple. In order to explain it, however, it is necessary to go back to the first principles of telegraphy. When Morse first invented his system of ticking off messages by the means of dots and dashes, he found that a continuous current of electricity was necessary. To obtain this continuous circuit it was requisite that the electricity should return to its starting point. For a time two connected wires were used, but at last it was discovered that the earth made a perfect conductor, and that by connecting the wires with the ground at each end a perfect circuit could be obtained. It was by breaking this circuit that the light and loud "ticks" of the ordinary telegraph machine were obtained.

For a time this was the only means of telegraphing, but finally it was learned that if the dots and dashes were indented upon strips of paper these indentations could be reproduced by running the paper under a key. It was this principle that led to the invention of the phonograph, and it is this principle upon which the telegraphing of pictures is based.

The drawing that is to be sent over the wire is made on a sheet of tinfoil, which is wrapped around a cylinder in the machine. This cylinder is very similar to the wax cylinder of the phonograph. At either end of the line there is a machine, and these must be twin machines, so regulated that they will work in perfect harmony with each other. At the receiving end of the line a sheet of carbon paper is placed between two blank sheets of paper. When the operator who is sending the picture turns on the current the little needle or platinum point above the cylinder breaks the circuit whenever it touches the ink outline of the picture. Owing to the fact that the two machines are perfectly adjusted, the receiver reproduces every pulsation of the sending machine. When the circuit is broken by the sender, therefore, the needle of the receiver beats hard upon the paper, and the picture is faithfully copied.

Nothing in the world could be simpler, and yet it has required years of hard and persistent work to evolve a machine that would accomplish this purpose. At present, however, there is no question as to its success. There is nothing uncertain about it. The work has been accomplished. Pictures have been flashed in an instant from one end of this country to the other, and in each case, regardless of distance, whatever was drawn on the tinfoil was faithfully reproduced at the other end of the wire. To chronicle such an achievement is to show that a new milestone has been planted on the road of civilization.

Such is the invention, and such is its effect upon the existing conditions. The man who has finally succeeded in accomplishing this achievement, and whose name will undoubtedly occupy a place in history beside that of the inventor of the telegraph and the telephone, is Ernest A.

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

Hummell of St. Paul, Minn. Although he is still comparatively a young man, he has been at work upon his invention for several years, and he is still engaged in watching all its operations closely, in the hope of discovering some defects that may be remedied. Mr. Hummell does not claim to be a scientist or an electrician. He says that he is simply a watchmaker who has a taste for mechanics, but in spite of his modesty, it cannot be denied that he has succeeded where countless inventors have failed, and that he has perfected a piece of mechanism, the work of which has been the fondest dream of those versed in electricity for more than a quarter of a century.

## A Beautiful Christmas Gift.

MR. C. M. HOWE has just returned from Lead City, S. Dak., where he went at the request of Rev. Mary Baker G. Eddy of Concord, N. H., to officiate at the presentation ceremonies in connection with the lovely Christmas gift which Mrs. Eddy has just made to her son, who resides in Lead City. The gift referred to is a commodious eleven-room brick residence, the erection of which during the past summer has been under the direction of Mr. Howe; Mr. J. C. Ryan of Spearfish, S. Dak., having superintended its construction. The plans were furnished by Mr. E. J. Eckel of this city, and all the furniture and fixtures were supplied by St. Joseph firms. The following is from *The Lead City Call*:—

"One of the most elegant and beautiful gifts ever made in this city was from Rev. Mary B. G. Eddy of Concord, N. H., to George W. Glover of this city. Mr. Glover is the only son of Mrs. Eddy. The gift consists of a handsome brick mansion at the head of Maine Street thoroughly equipped and furnished from cellar to garret. The gift is worth at least twenty thousand dollars.

"The beautiful residence is located where it commands a most extensive view of the city. Mr. Glover's friends, and we may say all the good people of this city, are much pleased over his good fortune.

"Mrs. Eddy is one of the most progressive women in the United States. She is the Founder of the religion known as Christian Science, whose followers are numbered by the thousands.

"The Christian Science church in Boston, known as the Mother Church, has the largest membership of communicants in the United States, not excepting any other denomination. Mrs. Eddy is a very philanthropic lady, and her charitable work each year amounts to about one hundred thousand dollars. The *Call* congratulates Mr. Glover on his good fortune and hopes he may long enjoy his new home. There are few men in the Hills who have done more single-handed than Mr. Glover to build up the country by honest, intelligent, and upright methods. Such men deserve success."—*St. Joseph (Mo.) Daily Gazette.*

## Christmas Greetings from Egypt.

THE following, recently received by Mrs. Eddy, was written on a neat folio Christmas Card. Above it was a beautifully colored pastoral scene,—shepherds tending their flocks, and in the distance, the river Nile and the pyramids:

From this distant land, three loyal students send their love and Christmas greetings to their beloved Leader, and Mother.

Though so far from home, their thoughts and hearts are one with the Cause, in these momentous times,—Divine Love guards and guides.

HATTIE G. STOCKTON,
NELLIE G. ALLEY,
WILLIAM H. ALLEY.

Cairo, Egypt, December 5, 1899.

## The Lectures.

### At McPherson, Kan.

ON Sunday afternoon, December 17, Edward A. Kimball, C.S.D., lectured on Christian Science to a large audience, in the Opera House. The closest attention was given, and the lecture was well received.

The editors of the newspapers were very liberal in advertising, and a very nice comment upon the lecture was published in the daily paper.

The speaker was introduced by John D. Milliken, a prominent lawyer of our city and of our state, who made the following introductory remarks:—

*Friends*:—As you are aware, we have met this afternoon to listen to a lecture on Christian Science. Some have come because they are adherents of that faith; some, because they are friends of Christian Science; others, because they desire to learn for themselves something of the doctrine.

Whatever motive may have impelled this large and highly intelligent audience to assemble, and however little we may know of the principles of Christian Science, the large number of its adherents throughout the world, their respectability, intelligence, sincerity, and zeal, challenge our respect and command our attention. And this is the case even with those who, like myself, do not indorse or accept its principles. But because you or I do not indorse it, is no reason why we should not learn all that is to be known in reference to it. On the contrary, it is a cogent reason why we should seek all possible information upon the subject.

If Christian Science be true, we should accept it. If its doctrines are false we should know the fact that we may warn others. If truth and error are mixed, we should be able to discern and separate them, that we may garner the truth and reject the error. There is an old proverb that "Truth fears nothing but concealment."

The intolerant spirit of the Pharisees in the time of the apostles in a measure still exists in the world, adapted to the changes of our higher civilization. It is in a measure transferred from the physical to the metaphysical forum.

Personally, I am never afraid to treat my opponents in any of the affairs of life with respectful consideration. I believe in the greatest liberty of conscience and judgment. I freely concede to every other the rights which I claim for myself.

I may say to the distinguished guest that while your audience is discerning and discriminating, it is also the fairest and most magnanimous to be found anywhere.

And now, my friends, I have the honor and pleasure of presenting to you the speaker of the occasion. One who left the field of commerce in obedience to the imperative command of conscience to devote his life and energies to expounding the faith that is in him.

He stands high in the councils of his society, and is reckoned as one of its ablest exponents—Mr. Edward A. Kimball of Illinois, who will now address you.

HANNAH G. MILLER.

### At Omaha, Neb.

Ex-Judge Joseph R. Clarkson, who is an authorized lecturer of the Christian Science Board of Lectureship, last evening (Friday, December 22) delivered an address in Boyd's Opera House on Christian Science, before a large, intelligent, and appreciative audience, composed in the main of adherents of the new faith. Among the audience were numerous personal friends of Judge Clarkson, who formerly served on the district bench of Douglas County. For the last few years he has devoted himself entirely to the study and practice of Christian Science, in

Digitized by Google

which he has become well versed, and he is now an ardent advocate of the new religion. Judge Clarkson was introduced by Judge Ferguson.—*Daily Bee*, Omaha, Neb.

The remarks of the Hon. A. N. Ferguson in introducing Judge Clarkson were as follows:—

*Ladies and Gentlemen*:—By many the principles and doctrines of Christian Science are not fully understood. A fair, candid investigation of this subject is necessary to an understanding. Prejudice is one of the main obstacles and stumbling-blocks that prevent knowledge. If truth be at the basis of this Science, all the opposition in the world will not avail against it. This, the youngest of the Churches, is only about thirty years of age, and yet it numbers among its followers nearly half a million earnest adherents. In every state of our nation, across the ocean, in all the civilized countries of Europe, we find the doctrine not only planted, but increasing. The best minds, the strongest characters, are to be found adhering to the doctrine and teaching of this new, but old, Science. An International Board of Lectureship has been formed with a view of placing before all the people a correct understanding of this important school of thought, so that error and opposition, based upon imperfect knowledge and misunderstanding, may be swept away; so that men, before passing judgment, may have an opportunity to read and study its principles. We have with us to-night, as a member of this Board, an able, earnest thinker, a zealous, conscientious man, who will address you upon this interesting and important topic. I have the honor, as well as the pleasure, of presenting to you as the speaker of the evening the Hon. Joseph R. Clarkson.

C. W. C.

### At El Dorado, Kan.

A large crowd greeted the well-known lecturer, Edward A. Kimball, at Ellet's Opera House Monday night, December 18. Among them were seventy-five people brought by special train from Wichita, and visitors also from Howard. Mr. Kimball was introduced by Rev. E. Everett Cowperthwaite of the Christian church, in the following words:—

*Ladies and gentlemen*:—We have with us this evening a gentleman of extensive travel and wide experience, who comes with a message, the practical teachings of which purport to be a blessing to the human family. Of this new and avowed Truth, a large majority of us know very little, but we remember this is the age of discovery—expansion and absorption; truths are being brought to light and developed in the physical and mental worlds not heretofore dreamed of. We are expanding and absorbing as we advance, more and more of Truth. We should therefore place ourselves in a receptive and meditative attitude and absorb so much of this message as may be of Truth. I now have the pleasure and honor of introducing to you Edward A. Kimball of Chicago, Ill., a member of the Board of Christian Science lecturers, who will speak to us upon Christian Science, which means the Science of the Christ life.

*Daily Republican*, El Dorado, Kan.

## The Lash.

'Tis not the sunshine or the blessedness of life,
Nor love, the healer of despair,
Nor laurels torn from sullen fields of strife,
Nor nightfall's certitude of care—
I most thank God for; 'tis the lash!
That cuts my face
To one swift surging consciousness,
That I all but betrayed a royal place
And pawned my soul for fate's caress.

MARTHA GILBERT DICKINSON.

## Among the Churches.

### Christian Science in Mexico.

The following account of the progress of Christian Science in the City of Mexico, is taken from a letter written by Edward C. Butler to a friend in the United States:—

"That Christian Science has a foothold in Mexico I think I can establish by citing a few facts. A year ago when the first service was held in the Jardin Hotel, in the rooms of Mr. and Mrs. Adam H. Dickey, of Kansas City, there were but four of us present, and for months, when the services were continued in our own home, we only had at most half-a-dozen people present. Our attendance is now from fifteen to forty. We have our own Hall and Reading Room, with all our expenses to date paid in advance. Our expenses are small, of course, but even then we owe no man.

"A year ago there were in this old city but two or three copies of 'Science and Health with Key to the Scriptures,' to-day there are about forty, all purchased and read throughout the families of the English-speaking colonies. Christian Science has been proved repeatedly to possess the same redeeming, healing, transforming power that has so signalized its operations everywhere else. We have had impersonal healing in our meetings. Children among our number have been able to demonstrate the Truth.

"Even some Mexicans have been led into our midst, and one of them, a Mexican woman, has been able so strongly to reflect the light of this blessed Gospel that she has cured sicknesses among Americans. That poor woman had to pick out with her dictionary the sentences word by word in her copy of Science and Health. Surely God is no respecter of persons when He thus enables an unlettered woman, of a foreign race, to carry to American homes this sweet evangel of healing.

"It has done us much good to follow these cases. At least three of the hardest cases in the American colony have been redeemed, men who previously had had no use for religion and never read the Bible. They now have their Bibles and copies of the text-book of Christian Science, and are reading them devotedly. The press, too, is losing its hostile bearing.

"This is not written with any attempt to boast, but to show you that the Lord is blessing His precious work in Mexico."

### The Work at Pasadena, Cal.

At a recent welcome given to the Universalist pastor of this city, I was asked to sit on the platform, which was occupied by several ministers. The Rev. Robert Burdette, widely known as humorist and lecturer, was the principal speaker. I was not invited to speak, but afterwards several asked why the Christian Scientists were not invited to speak, and expressed regret that it was not so. The president of the meeting said very frankly that he did *not* believe in our doctrines, but that he felt I was honest in my beliefs and he respected them by giving me an invitation with the rest of the ministers. I was the only lady invited as the representative of a church.

The change of feeling here has been very marked since our church was started. I find a very liberal feeling towards us among the business men, and we meet our obligations in the way of rents and such matters so promptly that we find a desire to secure us as renters. While many sermons have been preached against us, we have met all with love, and in every instance, I have been told, some one out of the congregation has borne witness to our Christian character. This proves that God will defend His cause, if we are doing our work.

Five new members were added last Sunday. We have

Digitized by Google

several hundred dollars in the bank for our church building.

I will add that the editors of our principal papers are most polite and kind, and have accepted printed matter to look over and cull from as they see fit.

We have a box marked "Christian Science" in the office of the electric car company. This is kept up by two of our members, and they say an immense amount of literature is taken away. This is a very important point, as tourists from the east are constantly coming and going through this station, and the seed is thus scattered far and wide over the continent.

SARAH TOWNSEND GEE, Pasadena, Cal.

### Reading Room at Greensburg, Pa.

The Reading Room of First Church of Christ, Scientist, of Greensburg, Pa., was opened November 7, 1899. Formerly we occupied a hall on Sunday mornings and Wednesday evenings on the third floor of the Glunt Building. We saw the necessity of bringing our work within the reach of the people every day in the week, therefore we rented a store room in the central part of the city. Our landlord has fitted it up for our convenience for holding Sunday and Wednesday evening services, as well as for reading rooms through the week. The rooms are open every day from 10 A.M. to 3 P.M. While the work seems slow here, yet we can see that it is spreading out and permeating mortal thought more than we sometimes realize, and we are hoping to see larger advancement in the near future.—E. A. P., Greensburg, Pa.

### Pleasant Quarters at Rockland, Me.

Sunday was a joyous day for the Christian Scientists of Rockland and vicinity, the occasion being the opening of their new hall in Ulmer Block. There were present Christian Scientists from Camden and Vinalhaven, and the service, which is the same as that used in Christian Science churches all over the world, was simple and impressive. A solo, "The Holy City," was beautifully rendered by Miss Alice Gurney Lane of Vinalhaven. The Christian Scientists are to be congratulated on having such pleasant quarters, but the indications are that it is all too small for their growing congregation.

*Star*, Rockland, Me.

### Organization at Bridgeport, Conn.

The Christian Scientists, who have a room in the Court Exchange Building, where services are held on Sundays and Wednesdays, have formed themselves into an association, filing articles with the town clerk yesterday. The articles state: "The purposes for which this corporation is formed are the following, to wit: To preach the gospel according to the doctrine of Christ as found in the Bible, and in 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy."

The name of the organization is First Church of Christ, Scientist.—*Union*, Bridgeport, Conn.

### Charter at Enid, Okla.

A charter was filed to-day (December 5) with the Territorial Secretary, for the First Church of Christ, Scientist, of Enid, for the purpose of disseminating the doctrines of Christian Science.—*Republic*, St. Louis, Mo.

The widow's mite that went tinkling through the brazen throat of the treasury is sounding yet; the escaping fragrance of the alabaster box fills the world with sweetness.

BEECHER.

## Selected Articles.

### "If They Only Knew."

LOOKING at life from a mortal, material standpoint what a sad scene presents itself! The daily record of events presents the medley of life and death, day after day, in varied tales of crime, disaster, sorrow, suffering, as the panorama—the dream of the false sense of life—moves on. The seemingly helpless victims of every ill that flesh is heir to, bear the pangs of physical agony, whether it be pain, poverty, or mental woe, as a reality and burden from which there is no escape while living on earth. If they only knew, there is a way out of it all, and happy, indeed, are they who find it, the way of Life, the opposite of death.

If we think profoundly upon this subject we must see, from the standpoint of human reason, setting aside Revelation which teaches it most unequivocally, that the mental qualities, the character which is the reality of each individuality, is not dependent upon physical organization, and must survive it. Those who believe, or who profess to believe, that death ends all, are a very small minority. The hope of living on or of "living hereafter," is so universal as to be a very strong argument upon the side of the Scriptural teaching, that man is immortal.

The desire to live is born of God. Man clings to life tenaciously through all the degrees of suffering, and under the stress of adverse circumstances, shrinking instinctively from the thought of death. He feels his unity with Life, and especially in times of trouble turns for help to a Power beyond the visible. If it were not for this natural love of life, if it were really believed that death gives entrance to a heaven of health and happiness, this self-destroying error would have a much larger roll of human sacrifices as a legitimate result of the teaching that it is the will of God for man to suffer as long as he is in the body. Jesus overcame death as an enemy during his life-work, and in his own resurrection. He came to "destroy him that has the power of death, that is, the devil; and deliver them who through fear of death were all their lifetime subject to bondage." The destruction of death and hell is the final work of the Conqueror, before the new heaven and earth can be fully manifested here.

The Old Testament prophets caught glimpses of this consummation most devoutly to be wished, the manifest supremacy of Spirit, Life, over all error. Isaiah declared the coming Conqueror would destroy everything that hides the supreme power of Spirit, "swallow up death in victory . . . and wipe away tears from off all faces." The divine Light and Life illuminating Hosea, he cried out, "I will redeem them from death; O death, I will be thy plagues; O grave, I will be thy destruction." The same glorious Truth was reiterated eight hundred years later: Christ, "must reign, till he hath put all enemies under his feet. The last enemy that shall be destroyed is death." "O death, where is thy sting? O grave, where is thy victory?"

Divine Science, the Science of Life, comes now confirming and demonstrating all that was spoken "by the mouth of His holy prophets, which have been since the world began; that we should be saved from our enemies."

Jesus fulfilled this proclamation of Zechariah, boldly declaring, "He that liveth and believeth in me shall never die." Escape from death and all that leads to it is the result of believing and following Christ Jesus as the Way. How far, then, from Scriptural teaching is the thought that man's own belief of death gives him harmony or eternal life. "Because I live, ye shall live also," said Jesus. "At that day ye shall know that I am in my Father, and ye in me, and I in you." If the world is to know this unity

Digitized by Google

of God and man, it must be manifested here. Jesus said, "I pray not that thou shouldest take them out of the world, but that thou shouldest keep them from the evil"—sin, sickness, and death—through the understanding of eternal life. How glorious to know this, and to know that the false sense of life is but a dream, an illusion, and not life at all. Does not the very name—mortal life—expose its falsity. Is it not dead or dying life—life subject to death? mortal, the opposite of immortal? death, the opposite of life? The Science of Life makes all this very clear, drawing a perfectly rational, logical line between the true and the false, between Life as God, and the false sense of life as an illusion of mortal sense ending in death.

The problem of Life has been clearly and logically stated in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. Each individual on earth to-day will ultimately work out the problem sometime, somewhere. In working out the problem we must think of it rationally, with the same common sense used in reflecting upon any other subject. How many years does it take a child to advance with faithful study from the multiplication table on up through arithmetic until each process is mastered, to geometry? How many never get beyond the simplest processes? How many have never cared to get beyond them? Students of mathematical science have been willing to work hard enough, patiently and faithfully on and on, up through all the mental processes necessary to master the ever-advancing rules, that enable them to prove the principle in the higher and more difficult problems. In thus advancing, the problems in geometry and trigonometry, at an early stage of study incomprehensible, are as easily solved as the simplest sums in addition in the beginning.

As we look more deeply into Christian Science, we find it to be the very same Truth that the great Founder of Christianity lived and taught nineteen centuries ago. It is practical Christianity. Did not St. Paul say, "For me to live is Christ"? Christian Science is scientific because it can be demonstrated as purely spiritual. Our false views of material life must vanish into the nothingness of origin in mortal thought. Must not this true understanding of Good precede its perfect demonstration or proof in living it?

If the world but knew what it is, and what it can do for them in any and all the perplexities and sorrows of earth, how quickly the sinning, the suffering, and sorrowful would turn to it, and how eagerly would they accept this Science or true knowledge of Christ. There is not a pain or pang of mind or body that Christian Science, rightly understood, will not alleviate and ultimately destroy.

It can only be said of Christian Scientists that they have but started in this pathway, but great already have been their achievements with their little understanding of this Truth. What shall the harvest be when it is better understood and realized?—*Dayton (O.) Herald.*

## A Word in Favor of Christian Science.

*Editor News-Press:*—So much has been said of Christian Science of late that I take this method of saying a word in its favor. I had been a sufferer from constipation for twenty-five years, during which time I tried about every kind of medicine, prescribed for me by some of the foremost physicians in this city and New York, and also proprietary remedies. While I must say that some of these did not lose their efficacy as quickly as others, still the result was always the same, viz.: substituting a new remedy for the old. Some years ago I went abroad, feeling sure that the voyage, change of air, and mode of living would bring about the desired result; but in this I was mistaken. I again had to call on physicians, and after several months returned home, a disappointed woman.

Less than a year ago I attended a lecture delivered at Vassar Institute, in which much was said against Christian Science. My next step was to learn what the other side had to say; for, as we know, there are always two sides to a story. I attended some of the Wednesday evening meetings of the Christian Scientists, and found among the people I met there some of our best citizens. Their teachings were so different from what I had been led to believe, that I went again and again, and always found the leaders adhering strictly to the teachings of Jesus, and always admonishing their hearers to love one another, inasmuch as we are all children of one Father. Surely none other than a God-abiding people would teach this.

I am not nor have I ever been a member of any church, but to me there can be no higher concept of the Bible than that taught by Christian Science. These people look upon God as Love, Good, the bearer of all glad tidings, and they therefore go to Him with their sorrows, sickness, and sin, knowing full well that with God all things are, ever were, and always will be, possible. Christian Scientists claim all churches should understand and practise the healing power, and this power certainly should be manifested if the words of Jesus are true. I am not a member of the Christian Science Church, but to people of such indisputably high morals and Christly character I say God-speed.

In closing I will say that six treatments cured me of my ailment. I have furthermore in my family two other cases which were healed by Christian Science, one a case of diabetes of four years' standing and pronounced incurable, and one case of eczema in an aggravated form.

OLGA WIMPLEBERG.

*News-Press,* Poughkeepsie, N. Y.

## Truth Triumphant Over Error.

JUST outside of the city of Geneva, in Switzerland, there are two rivers which come together at an acute angle; the one to the left is muddy and turbid, while that to the right is as clear as crystal; you can look down through its liquid depths, clearly distinguishing that which lies at the bottom of the river. Standing there upon that narrow neck of land, as far as the eye can reach, these two rivers move along side by side, as though divided by an invisible partition of glass. But if you go down the river a mile or two you discover that the clear, limpid water is beginning to be defiled by the waters of the turbid stream. If you go down the river a short distance further you find that the clear, crystal water is lost in the mingled presence of the muddy stream. You go down the river a few miles further, and you find that the mud and the filth and the dirt are beginning to settle down to their native earth—the river is filtering as it flows. If you go down to where it pours its great flood into the ocean, as its waters roll at your feet, you will find the entire stream clear as crystal. So it is with the stream of Truth flowing from beneath the throne of God, to be mixed and mingled in the early centuries with doubt and unbelief and error and sin, until multitudes of men all along the ages inquire, "Where is truth?" and "What is truth?" But as you come down the centuries you discover that error and unbelief and scepticism are settling down to their native earth and the stream of Truth is growing clearer and purer, and when at last the generations of men shall stand where this great river pours its vast flood into the ocean of eternity it shall be clear as crystal—as when it flowed from beneath the throne of God.

From "Methods of Church Work," by Rev. SYLVANUS STALL, A.M.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## As to Questions.

WE think it well, thus early in the new year, to republish the remarks, under the above title, which appeared in the *Sentinel* of February 23, and the *Journal* for March, 1899.

We ask a careful perusal and heeding thereof, both for the sake of the Field and the workers at headquarters.

We are aware it is difficult for the Field always to know to whom to address inquiries. The work at headquarters is necessarily divided into separate departments.

The publication of the works of the Rev. Mary Baker G. Eddy is a separate department, and everything relating to this department, of whatever nature, should be addressed to Mr. Joseph Armstrong, C.S.D., Publisher.

All applications for membership in the Mother Church and matters pertaining thereto should be addressed to Mr. Wm. B. Johnson, C.S.B., the clerk of the Church.

Matters relating to the Lectureship should be addressed to the Board of Lectureship.

Matters relating to the Massachusetts Metaphysical College and Board of Education should be addressed to the Board of Education.

Matters relating to the Publishing Society, namely, the *Journal, Sentinel, Quarterly,* pamphlets, tracts, etc., come within the province of the Christian Science Board of Trustees and the Business Manager of the Publishing Society, Mr. Joseph Armstrong, C.S.D. All inquiries, remittances, and other matters pertaining to the literature should be addressed to the Christian Science Publishing Society.

All inquiries or matters pertaining to cards, church notices, places of the meetings of Christian Science societies, Christian Science Institutes, Dispensaries, and Reading Rooms, should be addressed to the Christian Science Publishing Society. All inquiries with reference to the publication of pamphlets, tracts, or the designation of newspapers in which Christian Science matter shall be published, belong to the Christian Science Board of Trustees and the Business Manager. Letters addressed to the Christian Science Publishing Society requiring the action of the Board of Trustees will be duly presented to the Board.

Only letters relating to reading matter published in the *Journal* and *Sentinel,* and articles or communications for publication, should be sent to the Editorial Department. It is not the province of the editors to answer promiscuous questions relating to all branches of the work. They have neither the authority nor the information necessary to do so.

Many questions are sent to the editors, business manager, and others, both by letter and telegram, that it is impossible for them to answer. It is best for the workers in the Field to rely more upon divine guidance and less upon human, in working out the various questions that arise. Having worked them out for themselves it will be their demonstration, and not that of some other person. We recognize the fact that there are certain current matters concerning which workers in the Field must sometimes make inquiry, but by far too many questions are sent in to headquarters that can only be answered through the work and demonstration of the inquirers themselves. We especially request that the numerous inquiries as to the meaning of Church Rules and By-laws cease. We have no information relative to these not possessed by the Field. These Rules must speak for themselves. They are their own interpreters.

## To Christian Scientists.

WE have recently spoken of the satisfaction afforded us by the generous manner in which our co-workers of the Field have supported our publications, in the way of writing articles and testimonials. We again wish to bear testimony to our deep appreciation of this support, and once more express our thanks therefor.

As a more explicit expression of our thanks we make the following suggestions, feeling sure that our beloved co-workers will respond in kind, for we are all laboring for the good of our sacred Cause, and whatever benefits the Cause benefits also each individual worker, and whatever tends to the injury of the Cause tends also to the injury of the individual worker.

Our suggestions are:—

1. That in preparing articles and testimonies you do not write them hastily, but with due care and consideration, so as to relieve the editors from so changing them, in order to make them available for publication, that there is danger of altering or destroying the sense intended by the author. Many articles, good in the main, are not published for this reason.

2. That you scrupulously avoid quoting from the Christian Science text-book, "Science and Health with Key to the Scriptures," without giving due credit to its authorship and making reference to the page. Also avoid the practice of substantially repeating the text-book as though it were original thought and expression, when in reality it is but a slight shading off from the language of its author, Mary Baker G. Eddy. Please carefully study and heed the recent By-laws upon this subject. We have grown so thoughtless in this respect as to make such By-laws necessary. Let us be more watchful.

3. That, in accordance with the By-laws, we carefully refrain from the habit of attacking or reflecting upon other systems of any kind. In preparing your articles realize that the Love we reflect is the potent factor, and only this will do good. We have a message of Love for the world, and let us give it forth only in love.

In thus doing you will aid the editors in their work, and not throw in their way the temptation, either by oversight or otherwise, to let such attacks stand because they seem to have point.

We plead guilty to thoughtlessness in this regard, and we are now asking you to aid us so that in the future we may avoid all offenses of this kind.

There is a tendency to make us hard and cold in the letter. Let us keep alive within us the glow and warmth of Love, so that in our expression of it we may not misrepresent our Cause or prove false to our teaching and profession.

God will work with us if we will work with Him—of that we may be sure.

Let the articles and testimonials come freely, for with both *Journal* and *Sentinel* to fill we require a great deal of matter.

Let us, on the threshold of the new year, turn over all the new leaves in the books of our lives that we can possibly think of as needed in our progress Heavenward.

### A Warning.

Word comes to us from Michigan that a man claiming to be a Christian Scientist is traveling about the country and, upon the strength of plausible stories, getting money from Christian Scientists. He is said to be about twenty-five years old, short of stature, has a foreign accent, and is apparently well educated. He refers to Dr. Fluno as his teacher, while the Doctor writes our informant that he never had any student of his name or description.

One of his stories is that he is a Jew, and was driven to the necessity of securing aid on account of persecution by his family and friends.

We at present withhold his name—real or assumed—with the hope that there will be no further occasion to refer to him.

### An Error.

In the article entitled "Unique Gift from Germany," appearing in a recent issue of the *Concord Monitor*, and republished in the *Sentinel* of January 4, the following statement occurred:—

"Among the first to visit Frau Peterson for help was the *son* of the famous Count von Moltke, the great field-marshal of the German Empire."

This should have read, "the *nephew* of Count von Moltke."

### Not Authorized.

Mrs. Verna B. Heflinger of 5545 Gates Avenue, St. Louis, Mo., writes us that Mrs. S. A. Jefferson of Chicago never had any authority whatever from her to use her name in connection with her (Mrs. Jefferson's) advertisements.

### Lecture at Canton, Ohio.

In the account of Mr. Kimball's lecture at Canton, Ohio, by oversight, Massillon was mentioned instead of Canton. We gladly make the correction.

## From Our Contributors.

### Out of Darkness into Light.

BY G. W. BARRETT, M.D.

I WAS a practising physician for about thirty years. During all this time, however, I was never free from some ailment and continually taking medicine. I thought I could not live without it. It seemed impossible to get rid of biliousness, which, from a mortal standpoint, I had inherited.

I struggled along from year to year, trying every new remedy that promised any relief; growing worse all the time, till finally I was compelled to give up my practice entirely and went to the mountains for a short time, thinking that a change of climate might possibly help me. But all was in vain. I returned to my former home in Kansas City, Mo., worse than when I went away—a physical wreck, suffering from enlargement and softening of the liver, indigestion, ulceration of the bowels in the most aggravated form, heart trouble, and that most dreaded of all diseases, called leprosy, which had been contracted when called to see a patient who was afflicted with it. I felt a sense of fear come over me while in the room, but never dreamed of its being leprosy, as I had never seen a case of that kind. I told the patient that I could do nothing and left.

Some time afterwards, during my stay in the mountains, I noticed some peculiar looking spots on my body, so I consulted a specialist on skin diseases and he pronounced it leprosy in its incipient stage. I kept my own counsel, and returned to Kansas City with the expectation of settling up my earthly affairs as soon as possible, for I felt that my days on earth were few. I can see now that it was my fear that fastened the disease upon me.

A few hours after I arrived home, a former patient of mine called to see me and said she had been healed by Christian Science and wanted me to try it. I told her that Christian Science might cure her, but it could not cure me. I had tried the most powerful medicines known without receiving any benefit, and Christian Science was not half so strong as some of the remedies I had used, so there was no use in wasting precious time with any such foolishness. But she insisted so strongly on my having an interview with the Scientist who had healed her, that I finally said that if it would please her any, I would submit. So finally arrangements were made for her to call the next morning at eleven o'clock. The next morning came and she was on time with the Scientist to whom she introduced me and then left.

Well do I remember that interview. The first question I asked, was, "Do you pretend to say that Christian Science can cure all kinds of diseases without any medicine whatever?" Her answer was, "I do, sir; and I am here to demonstrate and prove it to you." I told her that I had telegraphed to New York for some medicine, but if she wanted to experiment on me while waiting for it she could "sail in;" that I had but once to die, and she could not do any more than kill me, and I would just as soon die as not, for death would be preferable to the condition I was then in.

She gave me a treatment, and talked to me for an hour or more. As she was going to leave, I inquired about my diet—what she would recommend me to eat, etc., as I had not dared to eat any solid food for months. She laughed, and said, "Just eat anything you like, and all you want of it; it cannot hurt you." I said to myself, "If you only knew the condition my bowels are in, you would not talk such foolishness as that to me." Soon after she left, however, the pain began to disappear, and in the course of half an hour it was all gone and I began to feel hungry. By the time dinner was ready (just an hour and a half from the time she left), I was as hungry as a bear that had been "holed up" all winter. It seemed as though I could not wait for the dinner hour to come. But I did not dare to say anything, as my family were ignorant of what had been done, and knew that I was opposed to anything of the kind; as I had classed it in with Spiritualism, mesmerism, etc.

When I sat down to the table, I said to myself, "I am going to see if you (the Scientist) can keep this dinner from hurting me." Boiled beef, cabbage, turnips, potatoes, pickles, onions, bread and butter, etc., disappeared as if by magic, and I finished with a quarter of a good-sized pie and a cup of coffee. In fact, I ate till I could eat no more. I thought, if it gets to hurting too bad, I will take a lot of morphine; and if it requires enough to give the undertakers a job, I don't care, I will be one good square meal ahead any way. But the pain failed to appear, and never has appeared from that day to this. I have been able at all times, to eat anything I desired and all I wanted of it, without the least inconvenience whatever. Strange to say, my bowels did not move till the next morning about nine o'clock,—perfectly normal, just as though there had never been a thing the matter. Previously, however, at times they would move every few minutes, attended with the most excruciating pain; and when I saw that the signs of leprosy had nearly vanished, words could not express my feelings of joy and gladness. I saw that in healing sickness Christian Science is as far ahead of medicine as the heavens are higher than earth.

Digitized by Google

I resolved, then and there, that, if it were possible for me to learn how this wonderful work is done, I was going to know how to go and do likewise.

My healer was to call again that afternoon at two o'clock, but I could not wait, I was so anxious to tell her the good news. I put on my coat and hat and went at once to her house. She seemed almost as much surprised as I was at the sudden turn in my case, and rejoiced with me over the result. I told her that she had proved her faith by her works, and I wanted to know if it were possible for me to learn how it was done. She assured me I could, if I really wanted to. I told her that that was one of the main objects of my visit, and I wanted to know what I should do first. She said to study thoroughly the Bible and "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. It is all in those two books. She kindly loaned me her Science and Health for a few days till I could get one of my own. I shall never forget the first time I opened it and read the first sentence in the preface. It seemed to cover the whole ground. I read it over and over again, and as I went on analyzing every word and every sentence, I felt that at last I had found the "Key to the Scriptures."

I studied day and night, and at the end of three months, I had gone through it once. I gained steadily in health and strength, and increased in weight from one hundred and ten to one hundred and forty pounds. I could stand more cold in my shirt-sleeves and slippers than I could before with overcoat, muffler, arctic overshoes, and the heaviest kind of flannel underwear. The cold, stormy weather did not seem to affect me in the least.

In January, 1892, I went to Cleveland, O., and received class instructions from one of Mrs. Eddy's loyal students, and began at once to prove the superiority of this Science over material methods by the healing of rheumatism, paralysis, tumors of all kinds, stiff joints, cancers, smallpox, indigestion, constipation, chronic diarrhœa, hemorrhoids, heart trouble, hernia, deafness, blindness, etc. In fact, nearly every ill that flesh is heir to, has been met and mastered through my little understanding of Truth. I would like to speak of one case in particular. A lady, eighty-one years old, had been suffering from the effects of a railroad accident for sixteen years. The left ankle and foot were very badly crushed. The railroad surgeons said the foot must be amputated, or she would die. But she positively refused to submit to an operation, and prevailed on them to fix it up the best they could. In the course of a few months, she was able to go around the house on crutches, but the bones would not unite firmly, and the entire flesh around the ankle joint became semi-ossified, very much enlarged, and very painful. At the end of four months from the time treatment began, she wrote me that her ankle was perfectly well; she could put on her shoe and button it up for the first time since the accident, and could be on her feet from morning till night without any pain.

The Bible that had been laid away for years as a kind of keepsake (and never read), is now a new book to me, full of good things. My whole being has been changed. Everything looks bright and beautiful, which before was filled with doubt and despair. Through the light thrown upon its pages through Science and Health, its teachings have become practical instead of theoretical. I have been able to prove the statement found in Isaiah, 41 : 31. I have never known what fatigue is, since my first treatment, September 25, 1891, and yet I have studied as I never did before, and occasionally performed physical labor without any discord. Words can never express my deep feelings of heartfelt gratitude to our dear Mother in Israel for the many blessings that have come to me through the understanding of Science and Health. It is truly, "The Key to the Scriptures," for it unlocks the storehouse of God and bestows upon us riches that the world knows not of. It shows us the way to Life, not death. *Surely, God is Love, and God is All-in-all.*

## The True Center.

BY BERT POOLE.

CHRISTIAN SCIENCE reveals the fact that nearly all men are egotists; that is, the world, society, business, God (when He is thought of), and all matters and affairs, center in the little I's of the world; in the mortals who comprise its billions of population.

As this is true of individual men, so is it true of bodies of men, communities, states, and nations. From individuals up to nations it seems to mortal thought as if the only destiny to which man is fated is to be born of woman, to struggle through the growing period under the rule and heel of parents and educators, and then to be pushed out into the world to shift for himself, uncared for except by a few of his relatives and friends. Millions of such are daily carrying burdens of work, of trouble, of mortal fret and ferment, and the wonder is that the paternal institutions of the states and countries of the world are not many times their present size and filled to overflowing with the unfortunates who know not the Truth, hence bear life's troubles in sorrow and calm despair.

There are many to whom the Truth of being has never come. To a vast majority of mortals life hangs on a thread, and the constant expectation is that its slender fabric may be snapped at any time. The only thought of happiness possessed by most of earth's millions lies in the "reward" they are to have in heaven, after the resurrection, or in some way, beyond the grave. But in whatever channel the thoughts of mortals flow, the conclusions are turned inward upon themselves. I know a man in business who dreads business failure as the worst calamity that could befall him, his dread being occasioned by the thought of what his acquaintances would think of him. A long list of imaginary ills are conjured up by seemingly intelligent people who have proved those imaginings many times in their lives to be false beliefs, but who are so self-centered that new forms of conjecture, worry, and disaster appear in constant succession to torture them into the belief that "all is vanity and vexation of spirit."

Many noble works are being done in the name of the Master by the very ones who suffer the tortures of mortal illness and who go about doing good with sad hearts and the weary footsteps occasioned by unwholeness of the body, and they cry out, even while stretching out helping hands to others, "O wretched man that I am! who shall deliver me from the body of this death?"

But, weary ones, take courage. There has come to this age a wonderful revelation,—a Key that unlocks the Scripture and illumines the teachings of Jesus. The works that he did, the new light shows can be done now. The sick are healed, disease is stayed, sorrow is made to flee away and new hope dawns upon the weary ones whose thoughts have so long been turned inward and earthward.

"Science and Health with Key to the Scriptures" teaches that poor mortals have been worshiping many gods instead of the one true living God, the Maker of the universe; that one divine Principle rules the universe, and that the image of God is being inverted by mortal men who turn their thoughts inward, make themselves to be little gods, and worship the graven image they have set up. We are led to discover what Jesus' mission really was. That he came to save man from sin, and to show the real man as a reflection of God, Spirit, Love, and perfect harmony; that this poor self-centered, scared-of-his-shadow fellow, called man, is no man at all, but simply a counterfeit of man made in the image and likeness of God.

Digitized by Google

Jesus came to turn men's thoughts toward God, and to show them how to partake now of the divine harmony of being and not to wait till death to enter heaven. Mortals must ascertain what and where the true center of existence really is. In Christian Science they will find that it is not that God enters our body and there abides, but that man really dwells in and reflects God. All the seeming inharmony of sin and sickness is shown to be a mortal belief, and when man turns his thought from the troubles, sins, illness, and pleasures of self-centered existence to God or Good, he finds that all the old things were untrue, that the only true life is God, the only real substance is Spirit which God is and which man reflects.

Thus is the saying of Jesus actually being demonstrated by Christian Scientists to-day that "He that findeth his life shall lose it: and he that loseth his life for my sake shall find it" in Truth, Life, Love, the divine center of Being.

## Christian Science is Practical Christianity.

BY F. M.

WITH magical skill Christian Science takes up the chain of events and re-links the distant past with the present. It connects the birth of Jesus, when Bethlehem's star led the Wise Men, with choicest of treasures in token of homage, to the place where the "young child lay," and the present, when the re-appearing of the Christ-Truth illumines the pathway of mortals and is destined to accomplish the same mighty works as of old.

From this leading it may not be amiss to glance in brief at the workings of Christian Science for the past few years. "By their fruits ye shall know them." Christian Science would celebrate the birth of Jesus by an offering of works in token of its power and progress throughout the entire globe. Nearly two thousand years ago the Christian era was ushered in amid great acclaim of joy, and with its advent, there came a fresh inspiration to the human race. The religious world had hitherto lived and served the letter of the law. Human affection had been confined to the narrow bound of blood or personal preference, so that "peace on earth, good-will to men, all ye are brethren," was a new message to humanity.

Jesus knew that in such a message lay the germ of all the spiritual growth of the future, and that it called for all the high toil and sacrifice of which men were capable,—a sacrifice of the false for the actual. Jesus endeavored to waken mortals from the dream of sense to the supremacy of Spirit, omnipresent and omnipotent. To this end he walked the waves and calmed the storm. He comforted the broken-hearted, set free the captive, healed the blind, the deaf, and the lame, and then burst the bars of death, all in defiance of material law, by the power of divine Mind. Jesus came to establish a Principle that might be applied with mathematical certainty to the needs of universal humanity in the utter destruction of all evil and error.

Christian Science takes up the strain, and again proclaims peace and good-will to a suffering world, and it finds the presence and power of God just as potent here to-day as in the time of the Nazarene on the shores of Galilee.

Christian Science is Christianity made practical with Jesus Christ as its model and Way-shower. Again it proposes to bring health for sickness, good for evil, and life for death.

The mission of Christian Science is to establish a reign of universal harmony and universal brotherhood. It honors God as supreme in power and goodness; a God who never sends sickness or suffering, and who never permits sin or evil in any form or degree, and thus proves that the wondrous message of peace is an ever-present and everlasting fact.

Christian Science invites a fair investigation of its religious and therapeutical principles.

This Science has a right to be judged by what it actually teaches and accomplishes. If it be not of God, it will go down into a fathomless abyss; but if it be ordained of Omnipotence, it will live on, and gather in strength and might. It may suffer misapprehension and persecution, but it cannot be overthrown, for it is built upon the Rock of Ages.

## A Comparison.

BY MRS. HATTIE S. GALE.

IN the editorial column of the *Sentinel* of December 7, under the title, "Honest Objections," we read an able argument on the price of our text-book, "Science and Health with Key to the Scriptures," as compared with the price of other text-books, college books, law books, medical books, etc., and were shown how much more expensive they were, than the Christian Science literature; but to go still farther, let us compare the price of literature with the price of the books connected with theological schools, and their different translations of, or their commentaries on, the Bible.

I have recently procured catalogues of the different publications of the various theological schools, and can quote the prices of a few of their works directly from them.

The American Baptist Publication Society gives, "A People's Commentary" by George W. Clark, D.D., for $9.00, which includes the first eight books of the New Testament, also a commentary on any one of the books of the Bible for $1.25 each. The prices of all their books are at the same rate, which would mean an exorbitant price were we to buy them all. Now we will glance at the catalogue of prices of Methodist publications.

Their commentary on the New Testament by Daniel D. Whedon, D.D., costs $7.50, the commentary on the Old Testament costs $14.00, which makes a total of $21.50. Rev. John Wesley's sermons, journals, and miscellaneous writings cost $15.75. The price of "Miscellaneous Writings" by Mrs. Eddy is only $2.25.

Let us now go to a Congregational Publishing House, and we can procure a commentary on the first six books of the New Testament by Rev. Lyman Abbott, D.D., for $7.50, other works by same author, including letters, sermons, etc., for $11.25. Rev. Henry Ward Beecher gives Bible studies, sermons, lectures, etc., for the sum of $31.75. Beside these few men whom I have quoted, there are hundreds of other writers of the same faith who have published many books giving their opinions, which their followers are expected to buy, so there is no end of buying books in the old school. Thus we can see how inexpensive Christian Science literature is, compared with the price our good brothers pay for their reading matter. We who are trying to become Christian Scientists purchase a Science and Health for $3.00 and with the *Christian Science Quarterly*, which costs fifty cents a year, and the Bible, we are not obliged to take a six years' course in some theological school, or purchase a library of several hundred volumes; but by thoroughly studying these Bible lessons each day, and applying our knowledge of the same as we are taught in Science and Health, by our dear Leader, Mary Baker Eddy, we are able to obey the commands of Jesus in Matthew, 10 : 8, "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

## Every Blow Counts.

BY C. F. HACKETT.

A GENTLEMAN while passing a building in the process of construction, noticed a workman trying to break a large stone with a sledge-hammer. He struck a hard blow, then another and another, until finally, after many hard, well-

Digitized by Google

aimed blows, the stone broke. Looking up he said, "Which blow did that?" The gentleman replied, "The last one, of course." "No," said the man, "Not the last blow or the first blow, but the first and the last and every one in between."

So when we come to Christian Science to be healed of sickness and sin, after everything else has failed, we should not be discouraged if the first blow of Truth does not destroy the error. It has done its part, and more blows will surely do the work. Perhaps the stone has been hardened by years of hygiene and medical treatment; perhaps sin has toughened the rock. No matter, persistent effort will destroy it. God is all powerful, and did we fully understand this we should destroy the error at one blow, but many lighter ones will finally do the work, and meanwhile we are learning how to strike harder ones. Our blows (our thoughts of Truth) must be as clear as possible and well directed, we must not "scatter fire" or lose valuable time by striking lightly or at random. Every blow must count. We should expect every one to be the last. Before the stone is broken, we can see the chips fly, many signs that Truth is at work, and finally, when the work is done, when the error is destroyed, it cannot return, for error destroyed by Truth is gone, as surely as darkness before the light.

## Happy New Year.

BY ALTA GRETTON.

God's New Year! All God gives is good, then we have nothing to fear for the new year, for we know that "all things work together for good to them that love God."

O what a bright and happy new year in which to work for God—to prove His allness! Though shadows seem to come, we must know them as only shadows—hence having no reality—and that behind the dark the light is shining and has been shining all the time, although in our slumber we saw it not.

Let us *arise* out of our seeming slumber and walk in the Light—the Light of Love that is shining all around us. Each day shows us some new truth and new demonstration; each day brings us nearer God—our Life. Let us ever be ready to help others all we can in all the ways we can, for God is our strength and supply.

## Letters to the Sentinel.

Baltimore, Md., January 2, 1900.

*Dear Sentinel:*—The Sunday School of Second Church of Christ, Scientist, of Baltimore, Md., wants to thank you for telling us about the dedication of the Sunday School rooms by the children of First Church of Christ, Scientist, of Minneapolis, Minn., and to say how much we were helped and encouraged by this demonstration. We are much interested in all you tell us of the "big children's" work, but somehow we seem to understand the work of the little ones better. We suppose it is because we are working out the same examples, and know arithmetic better than we do geometry. Wont you please ask all the little workers to tell us something of their work from time to time?

When we read of the children's work we feel much as the little boy did when he saw his little baby brother for the first time. He said, "Oh, I'm so happy, I feel like smiling all the time!" Since we all have such a precious Mother whom we love so dearly and who loves us so truly, how can we help loving each other and being interested in all that our little brothers and sisters are doing to help on the blessed cause of Christian Science, that means so much to us? Christian Science makes us loving, truthful, obedient, and pure, and teaches us how to overcome everything that is not good. Would it not be strange for us not to love that which does so much for us?

In our Sunday School are several little children who have been healed of serious claims. Some of us helped build Mother's Room in the Mother Church, and although most of us have never visited this room, we know all about it, and some day expect to see it.

Recently we were allowed to use some of our collection money to start a Sunday School library. With the money we bought several of Mrs. Eddy's books and a copy of "The Mother Church." Two little boys were appointed librarians; they keep careful watch of this tender plant, and each week nearly all the books are in circulation.

Dear *Sentinel,* we thank God and our Mother for you, and because you are such a help to us all, the older children in the Sunday School have resolved to earn enough money each week to buy an extra copy from our news dealers, and to give this to some one who otherwise would not see it.

We have much more to tell you, but we know you have lots of letters to read, so we will wish you a happy New Year, and ask God to bless you and all our dear little brothers and sisters.—JESSIE E. ROLFE, *Supt.*

*Dear Sentinel:*—I desire to express my love, and gratitude, for the article entitled "Christmas Gifts." The gems of thought so understandingly worded coincide with my experience, and I felt while accepting such priceless jewels, that it was my duty to write, and thank the giver.

As we bring our gifts to the altar, the search-light of Truth reveals much to be parted with; our desire is for more light, more love, and more wisdom, that we may be obedient to all the demands of Truth. Those who have seen and followed the star of the nineteenth century, have, as of old, been led to where the young child lay; and as we bring the wealth of our earthly possessions, self-love, self-righteousness, and pride of power, along with all else that comprises the mortal, replacing them with Life, Truth, and Love, the Christ is born to us, man is regenerated, born again, resurrected to a growing understanding, "till we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

Nothing but the consecration of a life-work can ever repay the debt of love and gratitude we owe to our beloved Leader, the Rev. Mary Baker Eddy, Discoverer and Founder of Christian Science. My prayer is, to be found faithful, and worthy to bring the gold, frankincense, and myrrh, separated from the mortal, and lay it down before Christian Science. Let me also extend my thanks to you, dear *Sentinel,* for bearing to us weekly such rich gleanings of thought. The uplifting messages sent by our Mother to her children, through your pages, make you doubly dear to our hearts and remind us constantly to—*Watch.*

MRS. L. JENNIE PARKER, Brooklyn, N. Y.

A LESSON that we all need to learn is to grasp opportunities the instant they appear. A person was walking along the seashore, gathering the treasures which were left on the sands. He was searching in a dreamy way, listlessly looking here and there. Suddenly the waves left at his feet a shell more beautiful than any he had found. "That shell is safe enough," he said; "I can pick that up at my leisure." But, as he waited, a higher wave swept along the beach, recaptured the shell, and bore it back to the bosom of the ocean. Is not that like many of our opportunities? Seemingly they are providentially cast at our feet. The chance to do good or to get good seems so wholly within our reach that we think it safe to attend to other matters first. We delay for a moment, and when we turn again, the opportunity is gone.—*Selected.*

# Testimonies.

### Saved from the Operating Table.

Two years ago I was in the depths of misery and woe, both mental and physical. After six months in bed the physicians said the disease was organic and incurable, and only an immediate operation could help me. Delay would be dangerous. Just before this blow, trouble came in full force, and I felt that life was ended as far as happiness was concerned. I did not realize that just a few steps beyond were beautiful "green pastures," and "bright skies" where "darkest clouds" had been.

Fortunately I had a dear friend, a Christian Scientist, living in another city. I wrote asking her if there was any hope. She replied, "You can be perfectly healed without an operation." I asked for treatment, desiring only the physical healing. Shortly after, my friend came to the city where I was living, and at my request took me home with her. I was borne to a carriage, a bed was made up in the train, and I was taken to my room on arriving at the destination. The improvement was immediate, and wonderful to those at home knowing of the case. In two days I left the bed and was soon moving about.

My case, however, was what might be called slow healing, and for the benefit of the dear ones similarly situated I would say, there were months of waiting, and many days of discouragement. I am glad to say I soon realized that Christian Science is the Truth and the only way. I clung to this faithfully, and was obedient to the healer in every respect. During this time of waiting the *Journal* was doing a great work for me. "Miscellaneous Writings," which has since been such a wonderful help, was not published then. There were many old Journals in the house. I used to read them constantly, searching each one for words from Mrs. Eddy, and rejoicing when I found an article of length from her pen. I was brought to Buffalo in October, and the following February, I went for the first time to First Church of Christ, Scientist, and I have attended nearly every service since, missing, I think, only two.

It is almost impossible to tell all that Christian Science has done for me, and is doing every moment; how it has brought divine Love, harmony, peace, and joy into my life; how I worked and waited for the class instruction, and the happiness of receiving that blessing; how each day brings a stronger realization of this wonderful Truth, and a desire to grow in it, to be faithful in every way, so that my life may bear witness to the Truth which I have taken for my shield, and bring others into the understanding of this *sure* defence.

CHARLOTTE S. DENNIE, Buffalo, N. Y.

### Thankful for Many Blessings.

I first heard of Christian Science about eight years ago while living on a homestead in Nebraska, and to enumerate the blessings my family and I have received in those eight years would fill volumes. My wife, who was suffering with nearly all the ills that flesh is heir to, was healed by reading "Science and Health with Key to the Scriptures."

How little we realize what this mortal man is until Truth begins to strip off the disguise. I was an agnostic. I had no use for anything pertaining to religion. We went one day to visit my sister, who was suffering with Bright's disease. While there she spoke of Christian Science, and said she was taking Christian Science treatment from an aunt in Pennsylvania, and that she had just received a letter from her, and would like to have me read it. Never shall I forget the thrill I received on reading that letter. I read it over and over, and when I went home I took it with me; it seemed as though I could not bear to let it get out of my hands. From the time I read that letter I was filled with a desire to know something about Christian Science.

Upon the advice of my aunt, my sister decided to consult a Scientist nearer home. She sent us word when the Scientist would be at her house, and at the appointed time we were there. How I did love to hear that woman talk! It seemed to me I had been asleep all my life and had waked up in another world. As good fortune would have it, she came well supplied with all the smaller works of our Leader, and I bought one of each, and afterwards sent to her for Science and Health.

We have had some long and hard battles with error, but Truth has always been the victor. About a year after we were interested in Science we lost all our worldly possessions, and decided to come to Denver. About two years ago the way was opened for us to go through class under one of the Mother's faithful and loyal students. Words cannot express what it has done for us, nor can money pay for it. More than once when overwhelmed with a sense of fear and foreboding of evil, and the mental strain seemed greater than I could bear, I would think I must go for help, but by the time I would get started there would come such a flood of love and peace as only those who have had the experience can know anything about. The light is getting brighter and self is getting smaller.

W. D. MERRELL, Denver, Col.

### Crutch laid Aside.

It is my privilege and pleasure to relate a wonderful case of healing in Troy, N. Y., which recently came to my knowledge.

My daily avocation brings me in contact with persons of almost every disposition and temperament, and I find golden opportunities for dropping the precious seeds of Truth.

A short time ago I met a young woman who had just passed through a very trying ordeal. Owing to the use of surgical instruments she was injured and crippled so badly that she was unable to walk without a crutch. I passed an hour with her in conversation, discoursing upon the merits of the Christ cure as demonstrated in Christian Science, and upon leaving her home gave her an invitation to attend the testimonial meeting at the chapel that evening, which was gladly accepted.

Another friend placed a copy of "Science and Health with Key to the Scriptures" in her hands, and she began to read, to study, and to think. The following Wednesday evening she again visited the chapel, accompanied by her husband, more deeply interested than before. The third week found her at the meeting, and the fourth week she came, but not leaning upon her crutch, as she had no need of the artificial support to enable her to walk.

The law had been made for her that it would be a long time before she would walk without her crutch; but the power of the word, attending the meetings, and the study of the text-book of Christian Science had healed her in this short interval. She continues to gain in strength day by day.

She is willing to give to God all the glory of her healing, and rejoices in the knowledge of Truth, which she is daily demonstrating to be something more effectual to lean upon than a wooden crutch.

MRS. CECELIA M. DUESLER, Troy, N. Y.

### Curvature of the Spine.

For more than twenty-five years I was an invalid, not able to walk or sit up. I suffered so constantly with the many ills that seemed to hold me in bondage, that my life was at times a weary burden. Doctors, medicine, and operations all failed to relieve me. I was finally induced

Digitized by Google

by a very dear friend, to write to a Christian Scientist in a distant city. She took my case, and I began to improve at once. In the first treatment I was healed of one trouble on account of which I had passed through untold suffering, and it has never appeared since. I also began to rest quietly and peacefully at night and awake refreshed and strengthened every morning.

Among other seeming difficulties I had a serious curvature of the spine, so that I had been obliged to wear a plaster cast and numerous other appliances. But I threw them all aside, and Christian Science healed me so that the curvature has nearly disappeared and does not inconvenience me at all. I can sit up all day, walk about with comfort, and ride long distances in my carriage. Words cannot express my joy and happiness and thankfulness to God that I am able to be about and work for my friends and family after so many years of suffering. I have sometimes struggled through the dark, and error has tried to get me back in bondage. If I was not able to demonstrate for myself I did not resort to medicine in any form, but called for help from the dear sister who first took my case and who has always brought me out by her realization of Truth and Love.

MASIE K. BRACKELL, Rice Creek, Mich.

### Healed after Operations Failed.

Ten years ago I fell from a step-ladder causing such injury that I was never free from pain, although I immediately consulted one of our best physicians, and went every day for treatment. At the expiration of three years' treatment, taking medicine all the time, I found myself growing worse, and my nervous system fast being shattered. The constant fear lest my mind might be affected from continual pain, drove me almost to desperation. A consultation was held with a surgeon, and an operation was suggested. I reluctantly gave my consent, hoping thereby to be well; but alas! I was only more miserable. A year elapsed when I was worse than ever. Electricity was tried, a milk diet, the rest-cure, and medicine galore, but to no purpose. At that time a noted surgeon from New York City visited our city, and I submitted to a second operation, which proved utterly fruitless. I was really on the verge of insanity when I heard of Christian Science. When I first called upon a healer for treatment, I could scarcely walk a block, could not go up or down stairs without pain; even talking was an exertion, and not a friend thought I would ever regain my health. My healing has been slow, but sure. I can now outwalk most of my friends. I cannot be too thankful to Mrs. Eddy for what she has done for so many suffering ones.

LELIA F. BLAKE, San Francisco, Cal.

### A Case of Blindness.

About a year and a half ago my little son Eugene (now seven years old) fell and hurt his eye.

We did not know at the time the eye was injured. Later a white covering completely hid the sight, and on taking him to an oculist he pronounced him blind in the eye.

The fall had caused a hemorrhage, and the hemorrhage had formed an abscess back of the sight.

The doctor ordered the child put on a strict diet, and I was charged to watch him day and night. He must not run or jump or laugh or cry; or, as Eugene expressed it, he couldn't do anything; for any excitement would increase circulation, and that increased the hemorrhage, and lessened the chances of saving the eye. To add to all this, the doctor said the child had an inherited blood disease, which might prevent the eye from ever being cured.

I spent an hour and a half every day bathing and using the different remedies prescribed.

At this time we knew little of Christian Science, but Eugene became very much interested in the Sunday School, though still under the doctor's care. About three months ago his eye was completely healed by his teacher's explanation to him of what constituted real sight. He gave his testimony the next Sunday.

NAOMI HAMPHREVILLE, River Forest, Ill.

### Appendicitis Healed.

About nine years ago I had a very severe disease which my physician pronounced appendicitis. At that time it was not so common as it is now. I was confined to my bed for weeks, had to be kept under the influence of opiates almost all the time, and had my side blistered, poulticed, etc.

I finally recovered sufficiently to be out of my bed a part of the time. When I asked my physician when I would be well, he said I could not be cured without an operation and I would never be strong enough to stand it.

I wrote a sister and told her I wanted her to have the care of my little daughter, then six years of age, as I only had a short time to live. I had my will made and was trying to be ready for death. She in reply wrote me to try Christian Science. As I had tried everything else and failed, I did so, and was cured in a month's treatment. How thankful I am for this blessed Truth and what it has done for me.—MRS. DORA H. SIMMS, Denver, Col.

### Convinced by Healing.

I was led into this marvelous light, seeing the allness of Good and the nothingness of error, through the healing of our little son. The doctor said nutrition had stopped and he could do nothing for him; that I had better change cow's milk, and perhaps that would help him. I did so, but without any good result. He grew worse until we could scarcely see that he was alive. I knew very little about Christian Science, but thought I would try it. I did so, and I am thankful to say from that day he began to improve, and in a short time he was well. He is now a stout, healthy boy of ten years. This showed me who the great Physician is. From that time there has been no medicine given to any of my children, eight in number. "I will say of the Lord, He is my refuge and my fortress: my God; in him will I trust." This is the light that cannot be hid.—MRS. CHARLOTTE R. RAUCK, Grinnell, Ia.

### A Case of Croup.

On Christmas day we were invited out, not returning until late that night. At half past two my husband awoke me and asked me if I heard our little girl. I listened; then she began to cough and cry; the trouble was croup. I got up and took her into my bed. I began treating her. In a short time she stopped coughing, the wheezing also stopped, and she slept till ten o'clock. That was the end of the croup. My heart is full of love for this blessed Truth; it has done so much for us. It brings such peace and joy as one can only find by reading the Bible and "Science and Health with Key to the Scriptures." May the great work go on.

MRS. KITTIE JOHNSON, Jamaica Plain, Mass.

---

Those who, in confidence of superior capacities or attainments, disregard the common maxims of life, should remember that nothing can atone for the want of prudence; that negligence and irregularity long continued will make knowledge useless, wit ridiculous, and genius contemptible.

JOHNSON.

## Who Seeks, Finds.

Once upon a time there was a wise queen who reigned over a country so beautiful that she ought to have been perfectly happy. And she would have been happy but for one thing: the lords and ladies of her court were always quarreling. All through the long bright days they would come to the queen with ill-natured complaints of one another. In order to remedy this state of things she called a secret council of the wisest men of the kingdom.

When they assembled before her, she told them her trouble. Then, one after another, they spoke; some advised severe punishments, and others suggested that the discontented courtiers should be sent away, and new lords and ladies appointed in their places.

At last the eldest was called. He was bent nearly double with age. He walked with a staff, and his white beard almost swept the ground. He said, "Oh, queen, live forever! Thy lords and ladies are like naughty children. They quarrel through envy, and because they try to find one another's blemishes. If thou, oh queen, canst teach them, by some parable, how ignoble such feelings are, they will be ashamed, and repent and be freed of their fault."

After the queen dismissed her wise men, she pondered awhile, and then she called her seneschal, and bade him summon all the lords and ladies, and she also directed him to see that there should be two pages waiting in the ante-room.

When all were assembled, the queen arose and said:—

"I am about to send forth two pages on a quest so full of interest that I wish you all to witness their departure and their return." Then she said to the seneschal, "Summon the first page!"

The page entered and knelt before the queen, who said to him: "I wish you to mount a trusty steed, and, keeping always to the right, to go entirely around the kingdom, visiting its gardens and plucking here and there the sweetest flowers. Then hasten back with them to me."

The page bowed, and left the queen's presence. After a moment they heard the clattering of his horse's hoofs on the pavement without. When these sounds had died away, the queen commanded:—

"Summon the other page."

When he had knelt before her, the queen said, "I wish you to take a trusty steed, and, following the roads to the left, to go around the kingdom, visiting its gardens, plucking here and there the bitterest, most harmful of the weeds; and then hasten to return with them to me." The lords and ladies exchanged puzzled glances as this page also departed.

But the queen, without explanations, gave orders that a watch should be set in the palace tower, and directed that word should be brought to her whenever either of the two pages was to be seen returning from his quest. Then she dismissed the lords and ladies.

Several days passed and then the seneschal came one morning to tell the queen that both pages could be seen in the distance, approaching the palace from different directions. The queen bade him call all the lords and ladies and admit the pages separately. Just as the courtiers were assembled, the first page entered.

His arms were full of flowers that filled the whole palace with the sweetest perfumes. Some of them had withered, but all were yet fragrant. As he laid them at the queen's feet, she asked: "Well, what did you find on your journey round the kingdom?"

Smilingly he answered, "Oh, queen, I found a kingdom filled with flowers! Not only were the gardens all abloom, but even the hedge-rows, fields, and forests. And as I looked beyond the boundaries of the kingdom, I saw flowers beyond—I have ridden through a world of flowers!"

"Were there no weeds?" asked the queen.

"Your majesty, I do not remember any. There may have been, but I saw them not." Then the queen rewarded the page with a purse of gold, and dismissed him.

When he had gone she told the seneschal to put all the flowers out of sight, and then to admit the other page. He came in, his arms filled with rank and poisonous weeds – some so full of acrid juices that he wore thick leather gauntlets to protect his hands from them. As he laid them at the queen's feet, she asked: "Well, what did you find on your quest?"

"Your majesty, I found a kingdom overrun with weeds. Not only were the hedge-rows, fields, and forests full of them, but even the gardens also. And beyond the boundaries of the kingdom I saw weeds, weeds, weeds!—the world must be full of them! I noted them even inside the palace gate, as I returned."

"What!" said the queen; "did you find no flowers?"

"There may have been flowers, your majesty; indeed, there must have been, but as I looked only for weeds, I saw only weeds."

The queen rewarded and dismissed the second page.

Then she lifted her eyes and looked around her at the lords and ladies. All were abashed, and could not return the gaze of the good queen. Some of the gentler ladies were trying to conceal tears of penitence. The queen had thought to speak words of loving reproof to them; but she saw no words were needed. The courtiers had learned their lesson; and they gathered around her, and one of the ladies-in-waiting said:—

"Dear queen, forgive us, and we will no longer sadden your loving heart by seeking only weeds. We will bring you flowers, and trouble you no more with the weeds."

Then the queen was very glad, and they were all happy ever after. JUDITH RAY.

*St. Nicholas.*

## Who May Print the English Bible?

A copyright case was decided last summer in the London courts, which establishes the question of who it is that really holds the right to publish either the old "authorized" or the new revised version of the New Testament. The universities of Oxford and of Cambridge together paid to scholars and divines over £20,000 ($100,000) for their work in the preparation of the revised version, and they had taken all the necessary precautions to secure for themselves the fruit of their labors on this great enterprise, so that, when Messrs. Gill & Sons, an enterprising firm of educational publishers in England, put forth editions of the Gospels of St. Luke and the Acts of the Apostles, they were at once restrained, and had to pay costs and damages.

It may be interesting in this connection to recall the conditions under which the Bible—in the authorized version, for the old version is still the "authorized" version in the hearts of the people of England and the revised version is slow to take its place—is printed in that country. The authorized version of the Holy Scriptures can only be legally printed in England by the Queen's printer, Messrs. Eyre & Spottiswoode, the University Press of Oxford, and the University Press of Cambridge. Such a limitation was necessary in so important a work, if only as a means of giving the best possible guarantee for strict accuracy and for preventing any wilful tampering with the sacred text.

But there is no work of man into which defects and errors will not creep in course of time. More than a hundred and fifty years after the authorized version had been first issued, various printers' errors had crept in; and at the recommendation of Bishop Seeker a revision was undertaken by several learned persons of the University of Oxford in connection with the delegates or governors of the University Press of that city. The result was the publication in 1769 of two editions of the Bible, commonly known as Dr. Blayney's edition, one in folio, the other in quarto, the former of which was decided upon as the standard for the authorized version.

Again, in 1834, by the authority of the two universities, the Oxford and Cambridge Bibles were carefully collated, which resulted in an agreement that the Oxford Small Pica Octavo Bible, with references, printed in 1824, with the corrections then marked, should thenceforward be the standard for both universities.

No deviation whatever has since been permitted from this until the Revised New Testament was made; and to secure perfect exactness, each fresh edition of the Scriptures is read three times by different correctors of the press, while as an additional security a reward of one guinea (five dollars) is offered by the Oxford University Press for any error which may be discovered, not having been previously detected and corrected. CHARLES WELCH.

*The Christian Register* (Unitarian).

---

The Russians tell a story of the late Czar Alexander III, that upon the rare occasions when it was incumbent upon him to pay a call he would take a gold coin bearing his "image and superscription" and, twisting it between his thumb and finger, leave it in lieu of a card—the only man in Russia who had strength for the feat.

*Ladies' Home Journal.*

## Notices.

### Supplements to the Sentinel.

Two supplements to the *Christian Science Sentinel* have been issued. The first is the able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The workers in the Field will readily see the wisdom of giving these supplements the widest possible circulation, and the extremely low price at which they are issued will enable them to do so. The price of the supplements is as follows: Single copies, two cents each, postpaid; ten copies or more to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the First Sunday in June and on the First Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### An Interesting Article.

The November number of the *New England Magazine* contains a finely illustrated article regarding "The Discoverer and Founder of Christian Science." Many of the illustrations are here produced for the first time, and the text of the article will be of fresh interest to all Christian Scientists. This magazine will be valuable for distribution, and the Publishing Society will receive orders and send postpaid any number of copies at twenty-five cents each.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec. 1. The per capita tax for the year beginning June 1, 1899, and ending May 31, 1900, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 10 cents; 12 copies, to one address, $1.00; Twenty-five copies to one address $1.75; 50 copies to one address, $3.00.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

The negro population of the United States is about eight million. They have four hundred million dollars worth of property, acquired largely since the war. They have forty thousand students in the higher institutions of learning, thirty thousand Negro teachers, thirty thousand youths learning trades, twelve thousand pursuing scientific studies abroad, seventeen thousand graduates, two hundred and fifty-four thousand volumes in libraries, valued at a half million dollars; one hundred and fifty-six normal schools, colleges, and universities in the South; five hundred Negro doctors, two hundred lawyers, three hundred books by Negro authors, three banks, two hundred and fifty newspapers, four magazines, ten million dollars in school property, and the same amount in church property.

To an Associated Press correspondent King Oscar dictated the following message to the Scandinavians in the United States:—

"Tell those of my two peoples who have taken up their abode in the United States, and their descendants, that I follow their path with love and interest, and that I feel their joys and their sorrows as if they were my own.

"I am glad to hear that the Swedes and Norwegians are among the most respected citizens of your great country. May it always go well with them."

The claim of Admiral Dewey and the officers and men of his squadron for bounty arising out of the destruction of the Spanish fleet in Manila Bay was argued before the Court of Claims January 9. The question at issue was whether the Spanish force was inferior or whether it was superior. The statute provides for a bounty of one hundred dollars for each man on board the vessels destroyed if the force of the enemy was inferior, and two hundred dollars if it was superior. It is claimed there were 1,914 men on board the vessels destroyed.

During the year 1899 the donations and bequests made for religion, educational institutions, charity, libraries, museums, and galleries, and to cities for popular benefit and entertainment aggregated $79,749,956. In the preparation of the statistics no record has been kept of donations or bequests of less than one thousand dollars. Of this amount there was given to educational institutions $55,851,817; to charities, $13,206,676; to churches, $2,992,593; to museums and art galleries, $2,686,500, and to libraries, $5,012,400.

A society of Altruists has been incorporated at Moorestown, N. J. The object of the association is to conduct business on the co-operative plan. Members of the society will be paid for their labor and share in the profits. But little interest will be taken in politics, and it is hoped to build up a community where no officers of the law will be required, as only those of good moral character will be admitted. They must pay an initiation fee of $5 and dues of $1 per week.

According to Professor Mendenhall of the Worcester Polytechnic Institute, the present known supply of coal will be exhausted in about fifty years. Last year six hundred million tons were mined. The United States furnished two hundred and fifteen million. Professor Mendenhall says that when the supply of coal is exhausted there will be no difficulty in getting power from tidal coasts and rivers in various parts of the country and transmitting it by electric current to where it is needed.

The Czar's peace policy has been successfully carried out by Count Muravieff, the minister of foreign affairs, in the recent satisfactory solution of the disquieting political events arising from the Cretan insurrection, and the Turco-Greek war. The Czar has expressed his appreciation by addressing a highly eulogistic rescript to Count Muravieff, in which the count is thanked for his great skill in dealing with the Powers.

The National Building Trades' Council, which assembled at Milwaukee, Wis., recently, indorsed the World's Fair for St. Louis in 1903. It was proposed that only union labor be employed in the erection of the buildings. Efforts will be made to make the Council international in scope. Charters have been applied for in Canada and Great Britain. The convention in 1903 will be held in St. Louis.

The January *Sugar Trade Journal* estimates that during the year 1899 the United States consumed 2,094,610 tons of sugar. This is about 61 pounds per head of the population. The consumption of foreign sugar was 1,839,642 tons. Of the sugar produced in the United States 120,400 tons were cane sugar, 79,368 tons beet sugar, 52,600 tons were made from domestic molasses, and 5,000 tons were maple sugar.

Postal experts desire a forty-eight hours a week law for mail carriers in place of the present eight-hour a day law, but the Letter Carriers National Association in Washington is strongly opposed to it. The reason given for the desired change is that the work is necessarily heavier on some days, and to apportion it so that eight hours will cover the maximum, necessitates a great deal of waste time on other days.

January 10 was a day of eulogies in Congress. In the Senate several orations were delivered eulogizing the character and public services of Vice-President Hobart. On this occasion Chauncey M. Depew made his first speech in the Senate.

In the House an hour was devoted to eulogies upon the life and public services of the late Representative Green of Nebraska.

A meeting was held in New York City January 11, for the purpose of devising the best means of carrying on the work of the late Dwight L. Moody. It has been announced that the work will be continued under the form of the Moody Memorial Endowment. The public will be asked to subscribe three million dollars to meet the expenses of the institution.

Germany has decided that it would not be compatible with strict neutrality to allow war materials to be sent from that country either to Great Britain or the Transvaal. When it was reported that Herr Krupp was making steel shells for Great Britain, he was requested by the government not to send arms, guns, or ammunition to either belligerent.

The question as to who was elected governor of Kentucky is to be re-opened by the Goebel crowd. Five thousand witnesses have been summoned to testify in the case before the election contest committee. Governor Taylor has already taken the oath of office. It is reported that William J. Bryan has advised the Democrats to abandon the contest.

In anticipation of the adoption of a resolution in the Senate asking for information respecting the Philippines, President McKinley has given instructions that all despatches on the subject in the war and navy departments be collected. The President says he is quite willing to have the resolution broadened in scope to cover everything.

In reply to resolutions of inquiry from the Senate why public moneys were deposited in banks, Secretary Gage submitted a statement containing about nine thousand words supplemented by reports from department officials and including copies of over one thousand letters on the subject under consideration.

The British societies in the United States have determined to demonstrate their loyalty to the mother country by raising a fund for the widows and orphans of soldiers lost in the Transvaal. It is thought that at least two hundred and fifty thousand dollars will be raised.

A bill has been introduced in Congress providing for a change in the oath of a cadet of the military academy, so as to require him to subscribe to an oath that he will abstain from the practice of hazing while at the academy.

In reply to the note from the United States regarding seizure of American flour, Great Britain has ordered that the flour be released, and says that food-stuffs are not considered contraband of war unless intended for the enemy.

The Kaiser Wilhelm der Grosse of the North German Lloyd line, from New York to Southampton, has created a new record of five days and sixteen hours. This is two hours and six minutes better than the best previous record.

During the last five years the average annual value of agricultural exports has been $663,536,201. Sixty per cent of this went to the United Kingdom and its various dependencies.

A two-cent postage stamp of the first issue of British Guiana in 1850, was recently sold for $1,710. This is the largest sum any stamp has ever brought in this country at auction.

The Assistant Attorney-General has decided that models in the patent office at Washington cannot be removed for the purpose of displaying them at the Paris Exposition.

A loving cup of silver made from melted dimes contributed by over seventy thousand persons, the majority of whom were children, was presented to Admiral Dewey, January 9.

By the terms of the will of the late Dorman B. Eaton, the exponent of civil service reform, Columbia and Harvard Universities receive one hundred thousand dollars each.

Generals Roberts and Kitchener reached Cape Town January 10. Lord Roberts has a force of about one hundred and twenty thousand men under his command.

The Postoffice Department has issued an order warning postoffice employees against coming to Washington to influence legislation.

Lieutenant-Commander H. M. Hodges reports that he has discovered a feasible cable route from San Francisco to Luzon.

The Transvaal mint is coining three hundred thousand sovereigns per month.

January 1, 1900, the net bonded debt of New York City was $252,676,035.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## Annual Meeting.

### First Church of Christ, Scientist, of Concord, N. H., Records Progress.

THE annual meeting of First Church of Christ, Scientist, in Concord, N. H., was held last night (Thursday, January 11) in Christian Science Hall, and was largely attended. Organized last February with seventy-five charter members, there have since been added thirty-eight new members; and the reports from the trustees and directors showed a decided increase in attendance and interest during the past year.

The treasurer reported all bills paid, a balance in the treasury, and no church debt.

Of especial interest to the meeting was a message from the Discoverer and Founder of Christian Science, the Rev. Mary Baker Eddy, as follows:—

First Church of Christ, Scientist, Concord, N. H.

*My Beloved Brethren:*—At this, your first annual meeting, permit me to congratulate this little church in our metropolis, weaving the new-old vesture wherein to appear and clothe the human race. Carlyle wrote: "Wouldst thou plant for eternity, then plant into the deep infinite faculties of man. If the poor toil that we have food, must not the high and glorious toil for him in return that we have light, freedom, immortality?" I agree with him; and in our era of the world I welcome the means and methods, light and Truth emanating from the pulpit and press. Altogether it makes the church militant, embodied in a visible communion, the foreshadowing of the church triumphant. Communing heart with heart, mind with mind, soul with soul, wherein and whereby we are looking heavenward (take it in whatever sense you may) is not looking nor gravitating earthward. It uplifts man's being, it makes healing the sick and reforming the sinner a mutual aid society that begins to be possible here and now.

May this dear little Church, nestled so near my heart and native hills, be steadfast in Christ—always abounding in love and good works—having unfaltering faith in the prophecies, promises, and proofs of Holy Writ; having one God, one Christ, and that one, the God and Saviour whereof the Scriptures declare,—catch the early trumpet-call—take step with the twentieth century—leave behind those things that are behind, lay down the low laurels of vainglory, and, pressing forward in the onward march of Truth, run the race set before them in joy, health, holiness, till—home at last—they find the full fruition of their faith, hope, and prayer.

With love, Yours in Christ,

MARY BAKER EDDY.

Pleasant View, Concord, N. H., January 11, 1900.

To this the church made reply, by the following resolution unanimously adopted at the Annual Meeting of First Church of Christ, Scientist, in Concord, N. H., January 11, 1900.

Deeply appreciating the sacred privilege of membership in the home church of our beloved Leader, we send to her our greeting and our love. We again thank her for our dear Church home, for her personal interest in our welfare, and for all the many gifts of love which she is continually bestowing upon us.

Especially do we thank her from our heart of hearts for the Soul-inspired, significant, and far-reaching message with which she has gladdened us all this night, and with which she has renewedly inspired "this dear little church" to realize her prayer—to "be steadfast in Christ, always abounding in love and good works."

As loyal children we will earnestly strive to be worthy of a friend so dear and a Mother so tender and true.

IRVING C. TOMLINSON, C.S.B., *President.*
MABEL C. GAGE, *Clerk.*

The following were elected church officers:—Readers—First Reader, Irving C. Tomlinson; Second Reader, Mary E. Tomlinson. Officers—President, Irving C. Tomlinson; Clerk, Mabel C. Gage; Treasurer, George H. Moore. Trustees—Irving C. Tomlinson, Alfred E. Baker, Joseph G. Mann, Horace G. Boutwell, George H. Moore. Directors—Mrs. Anna B. White Baker, Miss Ida A. Brainerd, Mrs. E. E. Clark, Mrs. Fred A. Piper, Miss Mary E. Tomlinson. Musical Director—Mr. Fred A. Piper; organist, Mrs. Cora Straw; soloist, Miss Villa Whitney White.—*Concord Monitor.*

## Coming Day.

BY KATE JONES.

HEED not that error seems to hold
Unbounded sway,—
The darkest hour—'tis said of old—
Precedes the day.

Turn from the darkness of the night—
The senses' sway—
To see the coming of the light
Of perfect day.

The mists of darkness melt away
When comes the light;
So errors melt in Love's pure ray
And take their flight.

The songs of birds herald the birth
Of coming day;
So thoughts of love from heaven to earth
Show us the way.

The day is here, the night has fled!
We walk in Love.
The past of fear and doubt is dead;
We live above.

## Selected Articles.

### The Healer.

So stood of old the holy Christ
  Amidst the suffering throng;
With whom his lightest touch sufficed
  To make the weakest strong.

That healing gift he lends to them
  Who use it in his name;
The power that filled his garment's hem
  Is evermore the same.

For lo! in human hearts unseen
  The Healer dwelleth still,
And they who make his temples clean
  The best subserve his will.

The holiest task by Heaven decreed,
  An errand all divine,
The burden of our common need
  To render less is thine.

The paths of pain are thine. Go forth
  With patience, trust, and hope;
The sufferings of a sin-sick earth
  Shall give thee ample scope.

Beside the unveiled mysteries
  Of life and death go stand,
With guarded lips and reverent eyes
  And pure of heart and hand.

So shalt thou be with power endued
  From Him who went about
The Syrian hillsides doing good,
  And casting demons out.

That Good Physician liveth yet
  Thy friend and guide to be;
The Healer by Gennesaret
  Shall walk the rounds with thee.

JOHN G. WHITTIER.

### Character Building in the Home and School.

THE training of children is conceded to be one of the important problems of this human existence.

Solomon, who stood highest in wisdom, suggested his methods with great earnestness, having seen the evil effects of one self-willed, spoiled child in a household and the final destruction of his beautiful brother Absalom, through self-will, disobedience, and disregard of justice to one of the most devoted fathers ever known through history.

The object of training is evidently to bring a thing up to its highest capacity for good, and only the line of training is changed to suit the object trained. Various animals have been by rigid discipline brought up to a remarkable degree of intelligence and usefulness.

Flowers have been nursed and so environed by atmosphere, heat, and moisture as to grow into a beauty unknown to their families in the fields and woods. Physical culture has had its day, and has been carried along side by side with the intellectual and moral; but has the moral growth kept pace with the physical development?

Many schools and families are co-operating with religious training of children, and while the school is having her pupils taught daily in the Bible, the home is watching for good results, but when one sees even the parent weeping over his wayward sons and daughters, one is led to think that the character-building of children, both now and in the past, has had some misstatement in the premise, or the conclusion would be better. So we find anxious parents asking for a remedy.

This brings us to where the whole world must come, even to Jesus, who gave the world a most practical solution of the problem of life, which applies to every age and condition.

A right concept of Jesus is needed, however, in order to make his lessons valuable to us now. That he solves the problem of character-building is just as true as that he demonstrates eternal life. Just how he points the way in home and school training is shown in Christian Science. This grand revelation of Truth, through Rev. Mary Baker G. Eddy, so valuable in its application to every human need, is being carried into the daily life of children with wonderful results.

Christian Science "has broken down the middle wall of partition," and the students of Christian Science find themselves in the sanctuary of Mind, where they learn the true revelation of God and man, and begin at once to put on the "new man," or new concept of life, which is after the likeness of God. Christian Science has rent from top to bottom the vale of flesh which under material law hides the true character of God's child, and enables him to put on his robe of righteousness, even the understanding of his perfect sonship with the Father. Jesus' statement that he was the Son of God, made his entire career; this premise in his birth ended in the ascension, and was the keynote of every miracle. To prove man's sonship with God was Jesus' purpose. One of his students said: "Now are we the sons of God," and with this understanding did many wonderful works.

These divine lessons are not too hard for children. They learn them naturally, and have less to unlearn than older students of Truth. A "Home School for the Children of Scientists" is established near Washington, Ga. A student of Mrs. Sue Harper Mims was living on a large, beautiful farm with her husband and children. She was growing to realize more and more the great possibilities of Christian Science. Her applications of Truth to the small things of daily life with certain results led her to reach up to higher claims for herself and family. The human sense of limit and fear had hindered the success of the farm, adversity had faded the farmhouse and shut out the beautiful steps of progress. The little county school she taught was affording a poor income for so much work. When she saw that better conditions should be demonstrated, and declared ever-present Love always ready to supply, a short letter from her teacher asked to send into her home a young lady who was a devoted Scientist, and one who would prove a blessing to her household. Feeling that divine Principle was guiding, this young lady went into the farmhouse, where she found both love and work awaiting her.

With the careful study of Christian Science and application to business these two women have in two years made the farmhouse a large, beautiful, and attractive building, furnished it appropriately and filled it with children whose parents are in Science. They are using "Science and Health with Key to the Scriptures" as a daily study with their pupils, and are proving the value of its teachings in home and school training. That God is good and an ever-present reality, dispelling the illusion of evil, is proven hourly in this school; that they can apply the understanding of God to every circumstance of life and bring out a good result as naturally as the results of an applied rule in mathematics, is a demonstrated fact.

Many phases of sorrow have been overcome here. A boy, the only son of his mother, under a claim of limited memory, which had deprived him of educational growth, though much money had been spent, is now a fine, practical fellow, doing good work in the schoolroom and out of it.

Digitized by Google

A girl with a violent temper, out of which had grown many ills, is now a gentle, loving, and beautiful girl.

Selfishness, envy, hatred, and malice all fade into nothingness, and the true character begins to appear.

The teaching that "God is Love" and the one and only Mind in which we live, and move, and have our being has purified the atmosphere of this beautiful home school so much that visitors feel the influence and acknowledge the presence of something they do not find elsewhere.

Claims of sickness do not stand long, for the Truth of being, so familiar to every child, is the daily and hourly statement of life, before which the sense of suffering falls and is seen no more.

The rules of Christian Science are made very plain for even the youngest child. The baby Scientist says he lives in God. He also defines God as Good; therefore he knows he lives in Good, and of course is fearless and happy, and makes his own demonstrations over the little ills of childhood which consume so much of a mother's time. The one Intelligence is declared and the stupid child is awakened. The one divine energy is proclaimed and the lazy boy is aroused.

The order of ever-present heaven or harmony is urged and the home is beautifully kept by the children. Principle is made the controlling power, and the children are taught to obey Principle and not personality. This makes them reliable followers of the right.

The success of this school has been phenomenal. Ten states are represented by twenty-eight pupils. Four teachers are at work, and their standard, "Christian Science in every-day work," is proving to the world that character is built upon good work; that nothing need be poorly done, and that there is no limit to the perfectibility of man through the understanding of Jesus' teachings as explained by their text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. The teachers in this school are students of Mrs. Livingston Mims.

This school was established by Mrs. Armstrong, the wife of Hon. James Armstrong, a recent and valuable member of the legislature. Miss Annie Lou Winter is principal of the school, and Atlanta regrets the loss of so bright a member from her society circles. But all rejoice in the grand success she has achieved in character-building. Our state will some day call her blessed.—A. DAVIS.

## The Message of the Rose.

BY WALDO PONDRAY WARREN.

A ROSE once bloomed in a flower garden, and grew to be sweet and fair. By daily drinking in the loveliness of her surroundings she became wondrously wise, because she was living in harmony with all that is beautiful and true. She lived in the sunshine and breathed the odor of the fragrant flowers, till she seemed to catch the meaning of life in all its grandeur and goodness. A hope sprang up in her heart, a hope that she might go forth among the children of men and tell them the Glad Message from heaven which had been imparted to her.

By-and-by a tender hand, moved by unselfish love and sweet sympathy, carried her to the bedside of a Woman who lay wasting away in sadness and pain. Soon the Rose and the Woman were left alone, and, as their eyes met, they understood each other, and, in her own language, too pure and delicate for mortal words, the Rose told heaven's message to a saddened heart. It was the same message of "Peace on earth" which the angels sang on the first Christmas morn. But the Rose told her they had not ceased to sing, for their rejoicing was the forever victory song of good over evil. And the Woman looked toward heaven, not upward, but inward, and listened for the music of the angel chorus. Faint and far off it seemed, yet so grandly sweet and true. The Rose told her 'twas harmony that forever swelled in triumphant strains throughout the invisible realm of supersensible life; that love was the infinite impetus of being, creating and governing the universe of Mind in perpetual harmony.

The Woman sighed. "But whence this discord, pain, and darkness which fill my life with woe? Did Love create these that they should forever be?"

The Rose smiled triumphantly, as though she held the key to an eternity of joy. "Oh, peace, be still, to human fears and tears," she said. "Thou but dreamest of pain, and all discord is but a dream, and not a part of Life. Awake to see Being in all its beauty and harmony, and thy dreams shall melt away into nothingness, and the sunshine of Love shall give thee light forever. This, the message the angels sang, the Christ-Truth that healed the lepers in ancient days! I bid thee awake to-day and see that Life hid with Christ in God, for it is thine."

An echo faint from far-off days came, gently wafted across the plains of centuries, "Arise and walk, thy dream is over, awakened art thou to Life and Love."

The Woman arose, so free and strong, her heart aglow with a new-found Universe of Light and Love. The Truth had made her free. She kissed the Rose, and, kneeling there, laid upon the altar of the world's great need, her future years. "I will tell this message to all the world, awaken dreamers everywhere, till heaven resounds with their rejoicing, and will unfold to human sight the Universe thou hast shown me to-day."

Some day angels of the infinite will reckon up the joy that went forth and grew from this idea; and amid the mighty deeds of the ages will record the mission of the Rose, placed by loving hand, beside a bed of pain.

*Flower Mission Magazine.*

## The Birthplace of Mary Baker Eddy.

**Reproduced by the Aid of Mrs. Eddy's Information, Photographs of Site, and Authentic Data.**

THIS is the title of a well-executed etching from an original drawing by Rufus H. Baker. It restores on paper the Baker homestead as it appeared in Mrs. Eddy's girlhood. Now the site is but a tithe of the old farm, and only a few fruit-trees remain to suggest the once fine orchards.

This picture has been made possible mainly through Mrs. Eddy's kindly assistance.

The etching is printed in black and sepia to meet a preference in tints, and can be obtained at the following prices:—

Artist's Proofs . . . . . $7.50
These are the first prints, are on India paper, and limited in number.

India Proofs . . . . . $5.00
Later prints on India paper.

Plain Proofs . . . . . $3.00
Prints on plain rice paper.

Address, RUFUS H. BAKER, 88 North Main Street, Concord, N. H.

### Notice.

There have been sent to this office two contributions of money which bear no names. Will the senders kindly furnish us with their names and addresses?

EDITORIAL DEPARTMENT.

'Tis easier for one to begin to profess well, than to hold out as he should to the end. BUNYAN.

## Among the Churches.

### Christian Fellowship at Omaha, Neb.

THE thought of Christian fellowship has not slumbered in our midst during the past year, but has assumed more definite proportions, both spiritually and materially. We are glad to announce to the Field that the Christian Scientists in Omaha are now worshiping together under one roof, and have been for the last three months. It is occasion for rejoicing with us all that this demonstration has been made.

We can now look forward to the time when First Church of Christ, Scientist, in Omaha, shall have a church edifice of its own. We are at present occupying a rented church building which is fast becoming too small for our congregation. We know that every need will be supplied in God's own way and time. Our building fund has been added to during the year, and the time is not distant when far greater activity will be manifested in this direction. The imperative demand upon every one of us is that we shall individually manifest more and more of divine Love This demonstration is already taking place to a marked degree, as the thought of personality is giving way to a more impersonal sense of Truth and Love.

Two lectures were delivered here during 1899, the first by Mrs. Knott, early in May, and the last by Judge Clarkson, on the twenty-second of December. Both of these lectures have wrought a blessing to our church as well as to the community. Especially have the informal remarks made by these lecturers to the students contributed to our present harmonious relations. The remarks made by our last lecturer will long be remembered by those who heard them.

At our last Communion thirty-two new names were added to our membership roll, making a total of two hundred and ninety. All our meetings are well attended, and strangers are present on nearly every occasion. Cases of healing at these meetings have been acknowledged at different times.

An active work is being done in the distribution of our literature in various public institutions of our city. Three copies of "Science and Health with Key to the Scriptures" have been donated to the County Jail, and two to the County Poor Farm, also copies of the Bible. The *Journal, Sentinel,* and *Quarterly* are to be regular visitors at these places, and additional copies of our text-book are yet to be donated, so that every need may be supplied. Those having this work in charge report a pronounced eagerness on the part of the inmates of these institutions to learn more of our teaching.

Pockets, containing tracts and current issues of the *Journal* and *Sentinel,* are being placed in the leading hotels, where there is a perfect willingness to receive them, and they will doubtless be put in many other places accessible to the public.

Everything goes to show a marked weakening in public prejudice against Christian Science over a few years ago. We frequently hear outsiders commenting on the growth of our Cause at home and abroad. We realize, perhaps as never before, that the Church of Christ, Scientist, is a very important factor in the establishment of our Cause in any community, and it is and shall be our aim here in Omaha to have our church a living and loyal branch, one that shall at all times be a credit to the parent Vine, the Mother Church in Boston. Many of our number are members of the latter, and others soon will be. More and more we see the importance of taking this step, in loving acknowledgment of the wisdom and foresight expressed by our revered Leader, the Rev. Mary Baker G. Eddy, whom we are all learning to love because of her having taught us what Love is and how to make it manifest. Our church has already expressed its abiding loyalty both to her and to our Publishing Society, in its Resolutions, unanimously adopted at its last annual meeting, held October 31, 1899.

To all who acknowledge the Rev. Mary Baker G. Eddy as the God-ordained Leader of the Christian Science movement, and supremely capable of directing the earthly footsteps of Christ's followers in the present age, First Church of Christ, Scientist, of Omaha, extends cordial and loving greeting.

C. W. CHADWICK.

### Progress at Cleveland, Ohio.

THE architectural plans for a Christian Science church building, to be erected on the corner of Cedar Avenue and Kennard Street, have been decided upon. It is expected that the work of building will be commenced as soon as possible in the spring. The structure will be of stone, of Grecian design. The seating capacity will be between eight hundred and one thousand. The lot is already owned by the church and paid for, and a liberal subscription has been advanced, with a fair working capital in the treasury to start with.

"Comparatively few outside of the thousands who have been benefited by Christian Science, and so are interested in it, appreciate its worth and growth," said a prominent Scientist to the *World*. "The test that all Christian Scientists invite is 'By their fruits shall ye know them.' One thing to be observed is, namely, if a man wishes to know something of astronomy he applies to an astronomer. He does not consult an astrologer. If one is to start for a trip around the world he consults railroad maps, steamship time tables, and a geography. He does not consult one who says the earth is flat. This advantage is not always given to Scientists. Occasionally a person, instead of inquiring of a Scientist concerning Christian Science, consults some one ignorant of it or opposed to it. Thus it is often misunderstood by honest people. The subject is thoroughly set forth in the Christian Science text-book, 'Science and Health with Key to the Scriptures,' by Mary Baker G. Eddy."

Christian Science has grown steadily in Cleveland since the first organization here about ten years ago. The increase now in numbers and works is considerable each month. There is great need of a church building. The hall in the Pythian Temple building, where the meetings are now held, is far too small to accommodate comfortably even those who regularly attend.

The reading rooms in the Pythian Temple building are open every week day from 9 A.M. to 3 P.M. All Christian Science literature can be obtained there, and Christian Scientists are always in attendance to give any information or assistance that may be asked in reference to Christian Science.—*Cleveland (O.) World.*

### The Work at Salt Lake City, Utah.

The necessity of the new large church erected by the congregation of the Church of Christ, Scientist, was amplified during the past year. The interest in Christian Science has grown wonderfully among the people of Salt Lake. At the present time the church numbers over three hundred members, a gain of sixty during the year, while it is estimated that about six hundred persons assemble every Sunday. In addition a Sabbath School has been organized for children under fourteen years of age. There are now thirteen classes with a total membership of one hundred and thirty. The church is out of debt, and during the coming year will put in a handsome new pipe organ to cost not less than four thousand dollars.

Another body of Christian Scientists, some twenty in number, meet at South Lawn every Sunday.

*Herald,* Salt Lake City, Utah.

### More Commodious Quarters.

First Church of Christ, Scientist, of this city has leased the St. Cecilia building on Ransom Street for the year 1900 with the privilege of a three-years' term. The church has for the past three years occupied the Ladies' Literary Club building, but a continuous growth has made it necessary to seek more commodious quarters. The change of location takes effect the first week in January.

*Herald,* Grand Rapids, Mich.

### Church Charter at Joplin, Mo.

First Church of Christ, Scientist, of Joplin, Mo., has recently received a charter. For months error tried to defeat us in getting our organization chartered, and even after the judge had decided to grant the charter, he requested us to wait until the next term of court. Having let patience have her perfect work, we reaped our reward in due season.—MAY R. BOLTON, *Clerk.*

## The Lectures.

### At Joplin, Mo.

Edward A. Kimball of Chicago, delivered a lecture on Christian Science at the Club Theatre, Tuesday evening, December 12, to a large audience, under the auspices of Second Church of Christ, Scientist.

Mr. Kimball was introduced by Lawyer R. A. Pearson of this city, who spoke as follows:—

*Ladies and Gentlemen:*—If there is anything the history of human thought has served to impress, it is certainly a lesson of tolerance. To whatever phase of its unfolding the mind reverts, the most amazing and the most pathetic feature of its growth and greatness is the contempt and derision, the hate and persecution, through which it has come as through fire. We are debtors to the folly and futility of others; and the heroism that irradiates such names as Garrison and Phillips, Kepler and Columbus, Luther and Paul, are not more a heritage than an admonition. And we are not infallible, not even yet, and the very brilliance of modern achievement but serves to bring into bolder relief the shadows that bound and embarrass all assurance. There are signs and wonders, portents on every hand, that might give us pause. Socially, politically, morally, everywhere a deep unrest, and men as never before are revolving the enigma of life, and seeking to know the compass and equivalence of that greatest of questions, "What is truth?"

The progress of more recent thought towards this attitude is significant. At first it gathered momentum and swung to the extreme of a rank materialism, and then, beginning to take account of itself and taking counsel of its own sweeping methods, is now awaking to the realization that there may indeed be more things in heaven and earth than were ever dreamt of in its philosophy. Thus there begins to prevail a more intelligent liberality along with a more appreciable sense and a purer love of Truth for its own sake. We are coming more and more to distinguish substance from semblance, and daring to conceive that the traditional distinctions, and supposed elements in our creeds and constructions are but the relative and accommodated postulates of our faith and service. That back of all thoughts and things is the ultimate and great reality which to know aright is life. But the great question is, How shall this be translated into motive and method? how interpreted for the purposes of faith and service? It is a question answered in many and various ways. There is but this qualifying certainty, that no prince or potentate, college of cardinals, synod, council, or committee has any infallible or exclusive jurisdiction over the matter. Who would doubt but there are in every clime and in every age hearts that o'erleap their mortal state and claim a kindred with the Christ-power, though unidentified, which is unto them the very savor of life? There are diversities of gifts and differences in administration.

Now as to Christian Science in particular, I must remark that its peculiar doctrines and distinguishing tenets do not in all respects commend themselves to me. But far be it from me to deny or deride any motive, conceived in sincerity and faith. And if beneath its modes and conventions there be a ground of the great Truth, some nearer apprehension, some clearer appreciation of an abiding reliance, then it were at least wise to remember that the character of Philistine or Pharisee never has been, and perhaps never will be, historically popular. The admonition of Paul is in point. "Despise not prophesyings. Prove all things; hold fast that which is good."

The progress of this movement has been, and is to-day, something phenomenal. It is attracting some of the best thought and most earnest devotion of the day. Its professions and pretensions are of the very greatest, and either it is to be one of the most potent factors in the evolution of spiritual life, or one of the most interesting fiascos in the history of religious fancy and fanaticism. To all serious seekers after Truth it therefore justifies its claim to a hearing, and your presence here this evening is a recognition of that much. We have with us a gentleman eminent as an exponent of its doctrines, and devoted to its faith, who will speak to us concerning it. Without saying more, I take pleasure in presenting Mr. Edward A. Kimball of Chicago.—MATTIE C. BISHOP, Clerk.

### At La Porte, Ind.

A large and interested audience attended the lecture on Christian Science by the Hon. Judge William G. Ewing, at the Unitarian Church, Tuesday evening, January 2.

The lecturer was introduced by one of La Porte's oldest and most respected citizens, Judge William P. Andrew, who has passed his ninetieth birthday. Judge Andrew has been active for many years as a lawyer and judge, and he does not seem at all aged. His introductory address was as follows:—

*My Fellow-citizens:*—I come before you to perform the very pleasant service of introducing to you the honorable speaker of the evening, who comes not to speculate on finely imaged theories, but to preach the gospel of peace on earth and good-will to man; a gospel not the discovery of yesterday, but a gospel preached and practised nineteen hundred years ago, with exceeding precious promises to them who received and obeyed, namely, salvation from sin, sickness, and death. This gospel, taught by our divine Master, has been brought home to our speaker of the evening by blessed experiences in his own person and to his own grateful heart, and to him it is pre-eminently Christian and Scientific. I will now introduce the speaker of the evening, Judge William G. Ewing of Chicago.

MRS. A. E. HICKMAN.

### Christian Science.

Like the small waves made by the pebble thrown into the water, the discussion of Christian Science widens and grows broader every day. For the benefit of those who are tired of the suffering from disease, we copy a portion of an address delivered in Boston recently by Judge William G. Ewing of Chicago. The judge was cured by Christian Science over fifteen years ago of what the doctors called incurable asthma. He declined a renomination to the bench and left his profession to devote his life henceforth to the higher profession of spreading the healing and saving gospel of Christ to a waiting and needy world.

*Standard,* Macclenny, Fla.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Satisfied.

BY MARY BAKER G. EDDY.

[Written January, 1900.]

IT matters not,
What be thy lot,
So Love doth guide;
For storm or shine—
Pure peace is thine—
Whate'er betide.

And of these stones;
Or tyrant's thrones,
God able is,
To raise up seed—
In thought and deed—
To faithful His.

Aye, darkling sense
Arise, go hence,—
Our God is good:
False fears are foes,—
Truth tatters those,
When understood.

Love looseth thee,
And lifteth me,
Ayont hate's thrall:
There Life is light,
And wisdom might,
And God is all.

The centuries break!
The earth-bound wake!
God's glorified;
Who doth His will,
His likeness still,
*Is* satisfied.

### Church By-laws.

BY MARY BAKER EDDY.

The By-law on page 66, Article XXX., Section 7, in our Church Manual, shall be amended so as to read, Not less than four lessons, and *more* if *requisite* (and but one each day), shall be given to students in Obstetrics under the auspices of the Massachusetts Metaphysical College. A student in this class shall prepare a paper on *Accouchement,* giving in detail, the physical and mental treatment requisite for the Scientific and safe delivery of the mother. This paper shall be discussed by the class, and examined by the teacher, who shall decide as to the proper qualification of his pupils to practise Obstetrics. The tuition of students in Obstetrics is $100 each for one course, and they shall pay their tuition to the teacher in this department.

Not less than three *thorough* lessons, by a *well qualified* teacher, shall be given to each Primary and Normal class on the subject of *mental* practice and malpractice. The students in this class shall be required to prepare a paper on this subject, and after reading it, and having it thoroughly discussed by the class and understood, they shall retain no copy of it, but shall give the paper immediately to their teacher, who shall decide upon its thoroughness, and accuracy. This paper shall be sent to Mrs. Eddy, President of the Massachusetts Metaphysical College, for examination, if she so requires, before the Normal class students shall receive their certificates of degrees. The session shall continue not less than two weeks.

The large branch churches in the principal cities of the United States and Canada are hereby requested to appoint a Publishing Committee to serve in their localities, under their Church By-laws.

It shall be the duty of the member constituting said committee to correct, in a Christian manner, a lapse, injustice, or blunder, relating either to Christian Science or to a prominent member of this denomination, in the periodicals issued in the city wherein he resides. This committee shall also be responsible for replying, as above named, to abusive newspaper articles published in his city and state, that have not been answered by other Scientists, but have been forwarded to him for said purpose; also for reading the last proof sheet of the article he has prepared on this subject, having it published according to copy and the papers containing these articles circulated in large quantities.

A member of the Mother Church, who is not the clerk thereof, shall not appoint a meeting of the First Members of this Church. Only the clerk appoints said meetings and in accordance with the By-laws of this Church.

The Mother Church By-law as amended reads:—

The Churches of the Christian Science denomination shall have one reading room for each church, except those churches are in unity and so situated that it shall be wise to have their reading room, or rooms, in one building that is centrally located.

### Solomon's Question.

THE questioning of Solomon, as recorded in 2 Chronicles, 6, has been more or less reiterated by mortals in all ages:—

"Will God in very deed dwell with men in the earth?"

Mortals have queried: Can it be that a God invisible to the mortal eye really exists? and, if so, is it possible that He is present on the earth with men? If He is, why cannot we see Him in such a way that we may be sure of His existence, and *know* Him as we see and know each other upon the earth? If, in very deed, He does dwell with us upon the earth, why must we wait until we get to Heaven to see and know Him?

These are natural questionings of limited personal sense in its conception of a limited personal God. If limited personal sense alone is capable of giving answer, can it be conscientiously said that God does in very deed dwell with men on the earth? Where is the mortal who has seen a personal God? Where is the mortal who, after all these ages of teaching of the existence of a personal God, knows how or where to look for Him upon this earth?

If personal sense *must* answer Solomon's query, has it any other recourse than to say: God cannot be found upon the earth, therefore, He must be in Heaven, and I may not see or know Him until I too am in Heaven. I am taught that Heaven is reached only through death, hence I cannot see and know, or even hope to see and know, God until I have passed the portal of death and the grave and have reached my abiding place in Heaven. I can only, therefore, await patiently the time when God, in His own way and time, shall see fit to call me to His presence and let me see and know Him.

Thus have millions of honest hearts reasoned in the past, and thus are millions of honest hearts reasoning now.

Was this Solomon's view? Did he thus reason? Evidently not, for he answers his own query in the very same sentence in which he asks it; and this is his answer: "Behold, heaven and the heaven of heavens cannot contain thee."

This is strong and sweeping language. It can mean

Digitized by Google

nothing less than infinity. That Power or Presence which cannot be contained in the heaven of heavens, surely is not a person that personal or finite sense can see and know, or that can be materially discerned.

There must be a different and better apprehension of God than this, or Solomon's question will have to be answered in the negative.

What, then, is the true answer? The answer is conveyed throughout the Christian Science text-book, whose author, Mary Baker G. Eddy, manifestly grasped the spiritual meaning of such an answer as Solomon gave, and elaborately set it forth in "Science and Health with Key to the Scriptures."

If, as therein taught, we conceive of God as Supreme Intelligence and this Intelligence as Infinite or universal Spirit, we can then rise above mere physical or personal sense into a spiritual perception of God, and can thus understand how He doth "in very deed dwell with men on the earth," for He is everywhere present, an all-protecting and all-preserving Being.

Can Solomon's question be rationally answered otherwise?

We might verify Solomon's answer by almost numberless Scriptural references, but for the purposes of this article we are content to rest here.

## From Our Contributors.

### Expression of Gratitude.

BY EMILY B. F. SHANKLIN.

It is hard to express one's gratitude in words, for the great light of Christian Science, or to tell how marvelously its rays lead out of darkness into light, but I feel that I should long ago have attempted to give something of an experience, that might help some one still struggling in the bonds of invalidism.

From childhood I was a member of the Episcopal Church, my father having been a clergyman of that denomination. While I had every faith in my church, yet from earliest years there was an unfulfilled longing to know and understand more of a God who seemed afar off. When my father passed away, I found myself unprepared to face the world and earn a living through teaching, but this seemed the only course open. From time to time ill-health forced me to give up my work, but in spite of this, a desire to become a trained nurse caused me to send in an application to Bellevue Training School, N. Y. It was accepted, and for one year, I succeeded in going on with the course, though each day brought its battle with physical pain and weariness, finally a complete collapse forced me to return to friends in Toronto, worn out in body and mind.

The two years that followed were trying ones, I was under the care of the best physicians in the city, but received no benefit. During that time I tried to learn resignation, to what I then thought, was God's will, and as the months of pain passed by endeavored to become reconciled to a life of invalidism.

Words cannot tell what the first conversation with a Scientist meant to one whose way seemed so hedged about with suffering. During that conversation, clouds of fear and hopelessness rolled away, a door opened, and the light of freedom, hope, and expectancy poured in. While in the hospital I had often wondered why we did not know a better way to reach the sick and suffering; now the way was revealed.

In a few days after my first conversation about Christian Science, I began treatment, and in three weeks' time my physical ills disappeared. This sudden transition was indeed a surprise. I found myself able to walk miles whereas before taking treatment, every step seemed more or less fraught with pain. My friends prophesied there would soon be a relapse, but although I have had many battles to fight in the past nine years, a clearer understanding of Christian Science has brought added strength, mentally and physically.

For the release from physical suffering, I was indeed grateful, but I have since been far more grateful for the great searchlight which has been turned upon my consciousness, finding its way into the darkest recesses of mortal thought, uncovering sin and selfishness, yet lovingly revealing a way of escape from every ill to which flesh is heir.

At first we little realize how many obstacles will arise to obstruct our way up the hill of Science, but our beloved Leader, Rev. Mary Baker Eddy, goes before us with words of cheer and encouragement. In "Miscellaneous Writings," p. 276, she says, "In the dark hours, wise Christian Scientists stand firmer than ever in their allegiance to God. Wisdom is wedded to their love, and their hearts are not troubled." This brave Leader teaches us that we need no longer be slaves to circumstances but, on the contrary, can assert man's freedom and dominion by obeying the command of the Master literally, to preach the kingdom of God and heal the sick. Through the teaching given us in the inspired pages of "Science and Health with Key to the Scriptures," we have learned more of Jesus as the Way-shower; his promises become vital realities, and we find the same Father to whom Jesus prayed, "a very present help in trouble."

Those who have caught even a glimpse of this glorious Truth, can no longer shirk individual responsibility, the signs must again follow every true effort to be Christ-like, no circumstances can hinder our growth, no enemy from without can stay our footsteps, for our beloved Mother has clearly shown us, that our only enemy is whatever defaces the Christ-image in our own consciousness. Let us pray that we may express our gratitude in deeds rather than in words, and not be found sleeping when the hour demands constant vigilance. The mesmerism of self-love and ambition must not again darken our vision, and cause us to lose sight of our tireless Leader, whose loving prayer is, that her followers may become worthy exponents of the Truth as taught in Christian Science.

### Omnipotent Mind Destroys Prejudice.

BY M. ELIZABETH WRIGHT.

Ten years ago a friend wrote inviting my sister and myself to enter a Christian Science class. I considered myself too sensible to throw away *fifty dollars* on such nonsense.

The summer of 1894 was spent in Bay View with the hope of recuperating an invalid mother. While there I met a young man who seemed to enjoy good health. A chance remark led me to say, "You must be a Christian Scientist." He related his healing from typhoid fever, and said that if he were taken ill he would telegraph to his mother for treatment. The only impression I had was that he was very much deluded to believe in such foolishness.

A lady from Grand Rapids was introduced to me, who I was surprised to hear believed in this fanaticism. She was the picture of health. Mother returned more ill than before leaving home. As I saw her slowly fade away, I thought, "I hate a God who could rob us of our mother." A friend called and talked of Christian Science. I literally closed my ears. To me it was a mild insanity.

Finally, when convinced that medicine could not cure my mother, I persuaded her to try Christian Science for two

Digitized by Google

weeks. Never shall I forget the sense of harmony which came to our home with the first treatment.

After many signs had been given us, I told my fatner. He had no faith in Christian Science, and after some persuasion my mother tried another physician. "Science and Health with Key to the Scriptures" was taken from me, and all literature on the subject forbidden. In a few months, however, Science and Health was returned.

When my mother passed away, the healer sustained me. Many wondered at my calmness during the trying days which followed. All bitterness was obliterated from my mind, and I could say, "O death, where is thy sting? O grave, where is thy victory?"

All prejudice seemed gone; I was determined to investigate this new religion. The seeming obstacles to the realization of this purpose became nothing. Father, prostrated with trouble, seemed a physical wreck. He thought a trip West would help him, but did not think he could ever leave home again. I found him in this attitude of thought after my return from St. Louis. He continued to improve until the tenth day, when he started. I did not intend to treat him, but always denied the error voiced.

It was suggested that I spend a year in St. Louis, where I could pursue my studies, and enjoy the privileges of the church. At first this seemed simply impossible, but the demonstration that nothing is impossible with God, was wonderful. No objection was raised by my father.

Later on, having lost all faith in *materia medica* father consented to try Christian Science. One trouble which had caused much suffering was healed slowly. After an attack of gall stones, he returned to medicine. When the next chill came, it was hard to see him suffer and not treat him. Finally I asked him if he wanted Christian Science and would give up medicine. He consented, and in less than three minutes he was well.

## The Price of Science and Health.

BY MRS. ELLA KLEINECKE.

WHEN I began to awake from my dream-sense of life, so filled with sorrow, sickness, and sin, I had a great desire to know something of Christian Science. I can honestly and cheerfully say, that the three dollars invested in my first copy of "Science and Health with Key to the Scriptures" was the very best investment I ever made. The understanding of the teachings of that book has shown me the way out of malice, hatred, envy, and jealousy, into Love. It has lifted me out of sick headache. It has taken me entirely out of chronic rheumatism, the result of rheumatic fever. It has repeatedly enabled me to overcome neuralgia and toothache in a short time. It has overcome for my children, the croup, sore throat, mumps, eruptive fevers, and many other things. It has lifted me out of a great fear of God, that seemed to follow me all my life. What a glorious awakening it was to me, to *know* that God is Love, that He does not cause accidents of all sorts to come upon His children, that He does not strike them down with lightning.

Again, as to the price of books. My mother made me a present of a book some years ago that was called a "Family Physician." It was a medical work for which she paid fifteen dollars. It was a book about twice the size of the three-dollar edition of Science and Health, though inferior in quality of paper and style of binding. That book caused me the greatest sorrow and trouble that ever came to me. It contained one picture that was frightful to me. I looked at it repeatedly; I studied it over and over again and read the symptoms which were printed just under the picture, describing the disease that seemed so dreadful and powerful to me. I tried to fix it in my mind so firmly that I could readily detect this monster and call for a doctor at once. Finally this terrible mental picture was made manifest on my little daughter. I had ignorantly taught her to fear the disease as much as I did.

The doctor whom I called, a fine gentleman, kind and sympathetic, said he could do nothing for her. In a few hours my child faded away from me, like a beautiful flower. I could see when the doctor came in, he was just as much afraid of the disease as I was. I had only a *slight* understanding of Christian Science when I took that fifteen-dollar book which my mother gave me, and threw it into the furnace and burned it up.

The headaches above mentioned cost me at least twenty-five cents per month for medicine. The rheumatism cost me at least five dollars a year for medicine. I have been a Christian Scientist for six years or more, I have used no medicine whatever during this time, and have had no desire to.

Now I ask if my three-dollar investment, for Science and Health, six years ago, was not a good one. Compare that three-dollar investment with my mother's fifteen-dollar one. All gratitude and love to its author, Mary Baker G. Eddy.

## Wayside Thoughts.

BY M. E. S.

**O wretched man that I am! who shall deliver me from the body of this death? *Romans*, 7: 24.**

WHEN Truth has purified the human consciousness that has been filling up, with all kinds of error since first it wandered from the Father's house "into the far country," then, and not till then, shall we be "delivered from the body of this death," or in other words, this false consciousness of mortal self. Pure gold when melted in the furnace, comes out pure gold, but if silver, brass, and copper be fused with it, the stream poured from the crucible is impure; just so with human consciousness. But what are the impure elements that have been taken up by it as we have journeyed in the wrong direction? Everything that is not to be found "in the pattern on the mount"—all that is unlike God.

When man becomes weary of the "husks," and turns his steps towards home, Truth begins to unfold, and as error cannot stand before its white light, little by little it disappears, and God's creation, including man, as it really is, "good, very good," is made visible; but those who have advanced farthest toward the "Father's house," have only as yet caught faint gleams of the beauty and "glory that shall be revealed,"—the perfection that always was, and always will be. Man's temporary misuse of his reflected power has closed his eyes to the facts of his spiritual being and wrought sad havoc in his life; but as the veil of sense is lifted and Truth is revealed, the eyes of consciousness that have been tightly closed by error, slowly open and he begins for the first time to see a bit of the real that has existed from all eternity, and thinks if a taste of the Lord is good, what must it be to stand in the full effulgence of the "Light which lighteth every man that cometh into the world." He longs to fly at once from the bottom of the hill of Science to the top, but learns in a very short space of time, that every step of the ascent must be gone over. He also finds that divine Wisdom is directing his journey and that each step must prepare him for the next. Suppose it were possible for us in our present state of consciousness to fly to the heights of harmony, would "sweet accords" await us in the highest room in our Father's house ere we had become accustomed to the light of the lower ones? Would a semi-savage taken from his native wilds be contented if he were suddenly placed in the midst of a civilized community, and forced to conform to

Digitized by Google

the methods of a refined and cultured people? By no means.

Paul writes again, "I count all things but loss for the excellency of the knowledge of Christ Jesus my Lord: . . . and do count them but dung, that I may win Christ."

## A Lesson from the Birds.

BY ALTA GRETTON.

I WAS sitting in my doorway one day thinking. All at once a little bird flew down almost at my feet. I thought, "Dear little bird, I will watch you, and perhaps you will have a lesson for me;" and it did.

The second look showed me it was a young bird, and the mother-bird was just beginning to teach it to fly. The mother bird flew down with it, and after chirping to it for a little while, flew away, as much as to say, "Now I have cared for you long enough, it is time you worked for yourself." The little bird remained right in one place for quite a while, calling loudly for the mother bird, but she did not come near it, although I could see her sitting on a branch of a tree watching the little bird that no harm should come to it. At last the little bird started to hop along, always trying to get up *higher,* and at last it hopped up on an ash-heap, just to the very highest point it could reach, and then holding its little head up towards the sky, it quietly waited. I had noticed that all the time it always looked up, never down. Never did it look down upon the ugly ash-heap where it stood, but always up—up, into the beautiful sky where the sun shone so brightly.

After it had got just as high up as it could get it quietly waited. Waited ever and ever so long, for it knew that in time the dear mother bird would come to its rescue,—and it did not have to wait in vain; for after the mother bird saw that it had done its part, she came to it bringing its dinner. Then after a little more chirping the mother bird at last convinced it that it had nothing to fear, and that it could fly, and together they flew away,—only a little way, just to the first branch of the lowest tree—but that little proved the whole, and in a very short time it flew far away—far away from all ash-heaps into the beautiful reality that it was free.

What lessons the birds teach us. If we would keep our eyes and thoughts always up above the ash-heaps of this world, and always do all the work we possibly can do for Truth, knowing that our Father-Mother God watches over us, and just as soon as we have done all we can and then patiently wait, He will show us how we can do more, and as the little bird our thoughts will fly far away from all earthly environments into the beautiful reality that we are free—free from sin, disease, and death.

## The Hill of Christian Science.

BY A. P. BLACKLER.

THE path of Christian Science is similar to a mountain trail that was described as "ten miles long and all up-hill." When we start up this hill, which the Rev. Mary Baker Eddy describes in the allegory in "Miscellaneous Writings," we do not see the beautiful green pastures and still waters that are along the path. We do not realize that just beyond each especially steep or rough place is one of these beautiful green spots, like an oasis in the desert. The places are never so steep but we can get over them, and just beyond we find the rest and reward for our efforts. The higher up the hill we go the more work we encounter, and the more we realize that "peace which passeth all understanding."

To each of us, as we look into Christian Science, it seems to be a giving up. This seems to be the main feature; but is it so? What have we given up? *Nothing.* What have we in its place? *Everything,*—God—Good—who is All. We have left below strife, anger, malice, hatred, unrest, discontent, envy, etc. We have in place of them love, peace, contentment, happiness. In Truth we have all that is worth having, and we find we have really given up nothing, and gained everything.

The beauty of Christian Science is like the taste of a new fruit. You can tell of its flavor, but each one must taste for himself to realize what it is. Each one must climb the hill, if he would reach the green pastures, and there find peace and rest.

Truth and Love are the only help up this hill. God is an *ever-present help* in time of need, and if we *realize* this, we need no other.

Another beautiful thought in regard to this hill. The beauties of Christian Science are as the landscape, the higher we climb, the more we see of the beauties of nature. In this manner do we see the beauties of Science. Some one may tell us of the beauties, but we can never see them until we reach that point on the hill whence they are visible. When we have done the work that merits a reward, we find another green pasture, and take another drink at the fountain of living waters, and gain a higher realization of that peace which passeth all (mortal) understanding.

## With All Your Heart.

BY E. J. MASON.

I HAD been working hard to overcome a physical trouble for several days, with apparently no success. The suffering was great and I grew discouraged. After a while, I again took up my Bible, opened it at the Forty-third Psalm, and read, "O send out thy light and thy truth: let them lead me; let them bring me unto thy holy hill, and to thy tabernacles."

Surely there was my cry, the very echo of my desire for Light and Truth.

I turned the leaves over and in Second Chronicles read this verse, "And in every work that he began in the service of the house of God, and in the law, and in the commandments, to seek his God, he did it *with all his heart,* and prospered." Now had I been working and seeking with *all* my heart? I will search it and see.

The first thing I found was one corner filled with resentment. A very disagreeable thing had been said to me a few days before, and I thought I had destroyed its effects, but as soon as I began searching, the person and the remark came up before me, and I felt cross and disturbed, so I knew resentment was there instead of Love.

Then I was ungrateful. Some claims had been destroyed through Christian Science, but instead of being wholly grateful for that already received, there was a feeling of impatience that the healing was not complete. Impatience does not belong to God. So I kept searching, and the errors I found amazed me, for I was not conscious of them before.

Now I said I will cleanse that heart and *all* of it shall seek God, but just how shall I begin? I opened to page 175 of "Miscellaneous Writings" by Mary Baker G. Eddy, and read the answer. "But remember God in all thy ways, and thou shalt find the Truth that breaks the dream of sense, letting the harmony of Science that declares Him, come in with healing, and peace, and perfect Love."

Could anything be clearer? there was my cry of distress, the rebuke in which I saw self, and then the strong and comforting answer. Now all this started a train of scientific thought, and when I came back to a realization of mortal things my trouble had vanished.

# Testimonies.

### Heart Disease, Dropsy, and Liver Complaint.

In February of the year 1888, there came a climax in my life, where I found myself facing dissolution,—a dissolving of the elements, both physical and financial.

The former so overruled the latter that the only thought was to go on, leaving the "beggarly elements" behind.

This seemed the better way, for the thought was strong that my family was better provided for in case of my death, than in life. Of course this was manifested in many symptoms, heart disease being the name given it by the physicians who were consulted. Our old family physician and dear friend of many years, doing everything he could to keep me here, after two thorough examinations, diagnosed my case as heart disease, dropsy, and liver complaint; and knowing these to be hereditary, he urged me again and again to apply for a pension in order that my wife might the more promptly receive it after my demise. He being pension examiner at that time, his advice was significant. I became more and more reduced, and could no longer take even the medicine, and lost all hope when he acknowledged the medicines were doing no good. This was the situation in June, 1888, when my daughter wrote to a Christian Scientist of Cincinnati, a relative, and friend of many years, that if she wished to see father alive she must come immediately. She came to us direct from the Christian Science Convention, held in Chicago that year. It was her first call to "come over into Macedonia and help" after that great feast; and we know now that we were direct recipients of the blessings of that demonstration of Love.

Having known her as an invalid through many weary years of suffering, and having no knowledge of the manner of her healing, which occurred the year previous, we were amazed to see her looking the picture of health, and could not doubt its reality. Yet we did not know that she could heal others. One day during her week's stay with us, she spent the day with other friends in the place, and I did not feel so well as I had. Upon her return, feeling better, I remarked to my wife, "I feel better, I think, when Minnie is here." She grasped at it as a drowning man at a straw. "Do you think so? I wonder if she could do anything for you? I believe I will ask her;" which she thereupon did. She gave us assurance of the power of metaphysical treatment to heal all manner of disease, and patiently answered our inquiries and quieted our doubts and fears.

I had one present treatment, and the next day she returned to her home. All the rest was by absent treatment. In one week the dropsical affection was gone; I could lie down at night without the cough that had racked me so long. I could eat; in fact began a schedule of five meals per day, which I seemed to need, as my weight had gone to a few pounds over a hundred. *I was healed,* and the entire family, wife, daughter, son-in-law, and little grandson, were soon studying Christian Science.

From this nucleus, in the year 1890, a class of fourteen, seven men and seven women, was taught by our friend; and from that class has grown First Church of Christ, Scientist, in Lima.

Our growth was gradual, both individually and collectively. Old associations were tenacious and the church of our first choice was gradually outgrown, but not without something of a struggle with it and with ourselves. But every forward step took us so far beyond what we had seen ahead, that we have never looked back with longing eyes, but shall press onward.

Our faith in Christian Science has never wavered. We have proved its Science too often and have demonstrated that it is the Christianity of Christ, by healing sickness and destroying the claims of sin for others as well as ourselves. There has been no blessing like Christian Science ever given to men since Christ Jesus was manifested in the flesh.—D. E. FRITZ, Lima, O.

### Broken Ankle Quickly Healed.

In March, 1897, my son and I went to El Reno, a drive of forty-two miles. On our way home, one of our mules became sick and died, so we stopped at Fort Reno for three days. My son hired a horse and we were to start early on Thursday evening. As I was getting into the wagon I lost my balance and fell out, my foot being caught under something, causing my limb to break above the ankle, and also to sprain the ankle. I was taken to a house, and Dr. Smith, the army surgeon, was called. My toe was where my heel should have been. The doctor turned my foot around, and placed it on a pillow. I was in that condition under the influence of morphine, until Saturday.

That day my ankle was set, and put in a plaster of paris box, and I was put on a cot and sent to my brother's, ten miles in the country. Monday my sister-in-law and my son went to El Reno to find a nurse to take care of me, as I was suffering greatly. The nurse happened to be a Christian Scientist. We had never heard anything of Christian Science. The first night she was with me, my morphine was all gone, and I thought no one in the house would sleep; but the nurse talked to me about Christian Science, and said that there was a healer in El Reno if I should want help. I slept somewhat better that night, and the next day sent for the healer. She gave me a treatment, talked to me, and said that I should go to bed that night and sleep, as it was useless to sit up in a chair all the time. I did not have any faith, but told my nurse that it would not do her justice if I did not do as she said. That night they put me in bed, and I slept all night, never waking until eight o'clock the next morning. The healer came five days. I did not have a pain after the first treatment. The fifth day the healer said, "You can stand on your foot now." So I got up, then took the well foot up and swung it, standing entirely on the one that was in the plaster of paris box. I then wrote to my son that I was all right, and for him to come after me.

When we were on our way home we had to go through the Fort, and my son told me to see the doctor again. I told him I was all right. He did not believe it, as the doctor had told my brother that I would never walk on that foot again, as I was sixty-nine years old. But I stood up for the doctor to see that I could stand. Then he took off the box, and said, "Stand up now." I did so; then he said, "I never saw anything to equal that." I then told him what I had done. He put the box on again, and said, "You had better keep it on a while yet;" but when I got home I took the box off and put on my shoe, and have walked on that foot ever since.

I have had some very good demonstrations since. One was over my eyes. I do not use glasses any more. Another was a sprained wrist. I have "Science and Health with Key to the Scriptures," and get the *Journal* and *Sentinel,* and pass them on to others. I milk three or four cows every morning and drive the stage five miles and a half into Geary and back every day except Sunday. I also peddle milk. I feel younger than at forty. I was raised a strict Catholic.

MRS. ELIZABETH MANIGOLD, Stetson, Okla.

### Liquor and Tobacco Habits Destroyed.

Elkton, Col., December 19, 1899.

*Dear Friend in Truth:*—I have often thought of writing to tell you of the great help Christian Science has been to me, but have put it off from time to time, waiting for a more convenient season; but when I received the *Senti-*

Digitized by Google

*nel* this evening and saw, as I think, an article from you, I concluded to delay no longer.

When we were in L——, almost nine years ago, and you were treating Mrs. M——, I was in the best of health, but I was a hard drinker, used tobacco, both chewed and smoked. I had tried repeatedly to quit these habits, but did not give them up for any length of time and had come to think I could never give them up entirely.

When you took Mrs. M——'s case I felt perfectly easy and confident she would get well, and started for Colorado, where a good position was waiting for me. It had always been my habit when taking a long journey to have plenty of liquor and cigars to pass away the time, but this time I had no desire for such things. I bought the highest-priced cigars, but they had no taste, and I thought it very strange, for I had not yet learned anything about Science. I had no desire whatever to drink liquor, and when offered a drink by a fellow-passenger, refused, but as he insisted I took it, and had a severe headache. After getting almost to the end of my journey I bought a bottle of liquor. I did not even taste it, but threw it out of the car and the bottle was broken. I took one drink after my arrival while my breakfast was being prepared, and have not taken one since. Almost the first thing I did was to send for "Science and Health with Key to the Scriptures," and after reading it a few days threw my tobacco away and have not used it since.

Mrs. M—— was fully restored to health, and is and has been for several years the picture of good health. None of the family have used a drop of medicine since her return to Colorado almost nine years ago.

While working at the mines I met with an accident to my eyes, and was for more than a year almost blind, but Science came out victorious, and I am now and have been for more than two years working at my trade as an engineer. I am in the mines again, and my sight is restored through the Truth.

My wife and I are members of the Mother Church, and our little girl was one of the Busy Bees. We are doing well and I am thankful every day that we were led to the blessed Truth. I have thought often very kindly of you as being the one who first gave us the true thought. I attend the meetings in Victor, the gold mining town. They have not yet organized a church, but I think it will not be long before they will. My family live in Canon City, which is about thirty miles by rail from here. We are charter members of the Canon City Church, organized about six years ago, which now has quite a large membership, and a larger attendance of interested ones.

Yours in Truth and Love,

H. L. M.

### Wonderfully Restored to Health and Hope.

I feel it my duty to acknowledge through the *Sentinel* the great benefit I have received through Christian Science, and to express, though feebly, my gratitude to Mrs. Eddy, and my appreciation of her unselfish efforts to benefit the world and comfort humanity. Fearing lest my experience written in detail, would occupy too much space, I will briefly say that from a broken-down woman, mentally and physically, I have been wonderfully restored to health and hope, after all material means had failed me. In miserable bondage to sickness, sorrow, and grief, in my despair, I sought relief of the best physicians in this and other cities, many of them professors in the leading universities, but continued to grow worse. Finally I resolved upon travel and study, hoping, by diverting myself, to gain health.

I crossed the ocean and went from country to country. I traveled in Switzerland, Italy, Germany, Belgium, France, and England; but I did not find what I so much desired, and returned to America hopeless.

At last, I placed myself in a sanitarium near Boston, where at enormous expense I remained under strict *regime* for nearly a year. I graduated from this resort, only to become worse. After months of desperate struggle I was taken with typhoid fever, which raged fifty-and-six days.

At this point my condition can better be imagined than written. Suffice it to say, when Christian Science came to me I was a total wreck. I am unable to find words to express my gratitude for my steady restoration to health. Not only has Christian Science restored me physically, but morally and spiritually, and I rejoice not only for myself but that I am able in a small degree to benefit others.

I was born in the little town of Henniker, N. H., a few miles from Mrs. Eddy's birthplace, about the time of her discovery of this wonderful Science. I mention this in connection with the account of my travels over the world in search of wisdom and health, as a fact significant and suggestive.

In gratitude from my heart, I send this experience, hoping that it may be "as a cup of cold water" to some wanderer in the desert. "Because thou hast been my help, therefore in the shadow of thy wings will I rejoice."

ALICE SMITH, Boston, Mass.

### Anaemia Healed.

Because many would-be friends complain, and others remark that the instances of healing never show what is being done in England for the glory of God and the advancement of Christian Science, I offer three testimonials.

A little over two years ago I heard of Christian Science and attended the opening service of our new church. At the close of that first service I bought "Science and Health with Key to the Scriptures," and after reading it for nine days I became healed of a malady I had borne for thirty-five years; periodical attacks of biliousness and severe sick headaches, laying me aside for days together. I had tried every known remedy and had studied physiology, hygiene, chemistry, etc., to obtain relief and possible cure, but all failed. I have not had a single attack since, or taken a grain of medicine of any kind. I can now enjoy a sail on the stormy ocean without even a sense of sea-sickness, but instead receive the greatest pleasure and enjoyment from a sail on the ocean wave.

But more. With growth in the divine understanding I am becoming a healer of others. In November last I was informed of a man dying in our Croydon Hospital. He had been sent there after his doctor had given him up. His complaint, anæmia, was of the worst kind. There apparently was not a drop of blood left in his body. Every means was resorted to by the doctors, but of no avail. After he had been there a week the doctor gave him up, telling his wife nothing could save him, and it was expected he would die during the night; but see the result: I declared the Truth, and the demonstration of the Truth in relation to this dying man resulted in his awaking in the morning quite well, quite strong. I visited him, found him up and dressed, and he is now doing his daily work again. I distributed Christian Science literature to ten other patients.

In the month of December, 1899, a patient in the same hospital underwent an operation; he caught cold, erysipelas set in, had brain fever, temperature rose to 107. I called at the man's home, got permission to treat this case, and sent word to the man himself (I was known to him). Four days after treatment I visited the hospital. The man had recovered. A few days after he left the hospital and is now quite well, back at his employment. To our triune God—Life, Truth, and Love—be all the glory.

HENRY FOWLES, London, Eng.

### A Good Investment.

When Christian Science was first brought to my notice by one of my customers I did not feel as though I could afford to pay three dollars for "Science and Health with Key to the Scriptures." This gentleman, seeing I was looking for the Truth, kindly loaned me a copy (this was an extra copy he had, which later I learned he kept, like a great many other Scientists, expressly for lending). Before I had read it through I could afford to buy one for myself, and a five dollar one at that. Right here I might say it was the best investment that I ever made or ever hope to make; and if I could not duplicate it, money could not buy it. I have always been somewhat opposed to getting something for nothing, but I must admit that I have had so much for little or nothing through Christian Science that I absolutely know that if one is earnestly looking for the Truth it can be found as free as water.

It seems to me after most careful observation that the price of Science and Health is a most wise one. It is within the reach of every one who wants it—even the convict gets it, and any one who desires to investigate Christian Science honestly and earnestly may do so.

In a spirit of gratefulness I can truthfully say from personal experience that the poor, or those without money, have equal opportunities, if they are honest in their desire; and any price that may be set on Christian Science literature or class instruction will never stand in the way of earnest seekers, be they rich or poor.

This statement is a very mild one, as words cannot express my gratitude for what Christian Science has done for me, and is doing for thousands of others. I sincerely trust that I may give as freely as I have received.

H. P. HUGHES, Chicago, Ill.

### Healed by Reading Science and Health.

I investigated Christian Science with a view of seeing the Spiritual Light. I had been warned not to read any religious literature except such as was authorized by my church (Church of God). I heard much about Christian Science, both good and bad, and knowing nothing whatever about it, I very seriously questioned about reading anything at all, but concluded to read "Science and Health with Key to the Scriptures," trusting to God for guidance. If it proved to be an ungodly work, I knew I would not be led astray. To my great surprise, I found it to be truly spiritual; that it explained the Bible as I had never before been able to understand it. A peaceful satisfaction came over me, something I had never before experienced, and while reading Science and Health, I was healed of incurable diseases (so pronounced by the doctor). Since then the Bible and Science and Health have been my constant companions. The *Journal* and *Sentinel* are looked for with gladness. I have two little girls, and before I became a Scientist I prayed to God, that I might live (with all my suffering) until my children were old enough to remember a mother's love, care, and advice.

Only God knows what love I have for Mrs. Eddy. The world cannot repay the debt of gratitude it owes to her for proclaiming this Truth to us all. My husband and little ones rejoice with me for the blessings received, and truly we are a happy family.

I have interested my family and that of my husband, as well as many of my acquaintances, in the Truth, and they are beginning to see the beautiful Light of Christian Science.—MRS. ADA BRUEGGERHOFF, Austin, Tex.

### Healed in Three Weeks.

Four years ago my son, who is a physician, pronounced the disease from which I was suffering, diabetes. My intense thirst and rapid loss of strength caused us to consult other physicians, and they also told us that I was suffering from diabetes in its advanced stages. One told my daughter that medical science considered it an incurable disease. I took the medicine prescribed, also adhered to the diet recommended by the doctors, all to no avail, for I began to suffer from heart failure caused by extreme weakness. I felt I could not endure this much longer.

At this time my daughters attended a lecture at Vassar Institute against Christian Science, but it had the effect of making them wish to know more of this subject, and accordingly they attended the Wednesday evening testimonial meetings and became so interested in the healing that they proposed that I try it. A healer was called. I had not been able to taste or smell. After taking the first treatment my taste and smell were restored immediately.

I shall never forget that first meal, for the healer said I could eat what I wished to. In three weeks I was cured and was able to sleep as peacefully as a little child. My household duties and other affairs were resumed, for with health, I have renewed interest in everything. My family unite with me in thanking God for having heard of Christian Science.—ROSALIE WIMPLEBERG, Poughkeepsie, N. Y.

### From a Business Man.

Christian Science was called to my attention about two and one half years ago; since then I have earnestly studied its teachings and I now feel that I have found a religion that fulfils all my wants. Physically I had not been well for a number of years and had been under the care of many of our best physicians. To-day I am perfectly well and strong. Some of my troubles yielded and were destroyed in a short time, while with others the healing was slow. I have had the privilege of class instruction from one of Mrs. Eddy's earnest students, and shall ever be grateful both to my teacher and my healer for their patience and kindness. I find Christian Science very useful in my business, and through the understanding of its Principle I have been able to demonstrate over many seeming business difficulties. I find that all my affairs work much more harmoniously than in the old thought. I am most thankful to Mrs. Eddy for "Science and Health with Key to the Scriptures" and her other writings, and for her unceasing labor in behalf of mankind.

ROBERT P. WALKER, Chicago, Ill.

### From a Schoolteacher.

I subscribed for the *Christian Science Journal* in the fall, and in November a dear faithful servant of Truth sent me the *Sentinel*, having subscribed for me, and I cannot tell the benefit and comfort, yea, and inspiration its weekly messages of Love have been to me, enlightening my understanding.

I have just returned to Port Chester, N. Y., to resume my duties as a schoolteacher. I never spent such a sweet time in my home before, as the gentle Presence was evident and the growth in Science was very marked since last summer. My father and mother read Science, talk it, and enjoy it, and attend the Christian Science service which is held at Saratoga, fourteen miles distant.

My people are pioneers in Science in their vicinity, but I am full of gratitude to see them planting their feet so firmly on the Rock that I wish to express it.

M. J. BETTS, Birchton, Saratoga Co., N. Y.

---

Dr. Lyman Abbott says, "People do not go to church for theology; they go for religion. Religion is the life of God in the soul of man; theology is a philosophy respecting that life. Men and women go to church to get, not philosophy about the life, but the life itself."

## From the Religious Press.

### The Bible Studied.

Probably the Bible has been more studied during the past year than during any year for two decades. In all the special revival services it has been greatly honored; and in many of them it was preached in its older meanings and with a fervency and power not surpassed for many years. No one familiar with the facts will doubt the accuracy of this statement. Indeed, many of these services were marked by a laudation and coronation of the Bible by the preachers; and this exaltation of the Bible in the pulpit evoked an almost uncontrolled enthusiasm on the part of the people. They seemed as glad and grateful as were the people in the days of Nehemiah to hear the truths of the old Book. The study of the Bible is becoming more common in our week-day church meetings. The people are positively hungry for the Word of God. The old-fashioned "prayer and conference meeting" is giving place in part to a meeting for the more prolonged and profound study of the Bible. Many churches have already yielded so far to this trend that they give about half the time of the entire service to the direct study of the Bible; and a part of the remaining half is taken up with the comments of others than the leader on the portion which has been expounded.

Some of our interpretations will have to be modified, and some will have to be entirely abandoned. Some traditional interpretations have been unsightly scaffolds around the symmetrical and glorious temple of divine truth; and the falling of these scaffolds will the more reveal the temple in its divine origin, heavenly beauty, and celestial perfection. It is quite time that we distinguished rightly between divine revelation and human interpretation. Many so-called difficulties in the Bible are not in the Bible; they are in our human and often stupid misinterpretations of the Bible. All atheistic and agnostic criticism and also all well intentioned but incorrect interpretation will fall; "but the Word of God shall stand forever."

ROBERT STUART MACARTHUR, D.D.
*The Examiner.*

### What and Where is Heaven?

Heaven is the state of harmony. Man is in heaven when he becomes unconscious of the inharmonies, and conscious of the world of harmony. We do not need to go anywhere to get to heaven. Do you hear that glorious bird-melody? Your friend stands right here beside you, but he does not hear it, it does not exist for him, he is in another world at this moment, the world of discord. Look at his knitted brow and tightly clenched hands, and hear his labored breathing. You are in heaven, he is on earth, yet you both stand in the same place.

Now consider: if you were so absorbed in the harmonies, that you heard nothing else, and saw nothing else, and felt nothing else, then you would be wholly in heaven. You would simply become unconscious of the discords and conscious of the harmony.

As we find ourselves here, we have a mixed consciousness, of discords and harmonies. We long for the state of harmony, which we call happiness, and we imagine certain things will give it to us, not knowing that it is a growth of the real life, and that no external thing can create it for us.

There is no way to find heaven, then, but by growing into it little by little. Those of us who seek the Source of harmony for guidance and follow His instructions advance readily, those who follow their own ways or other men's ways grow slowly. The one way is a way of pleasantness, and all its paths are peace, the other is full of thorns and stones and desert places.

Speak to your friend, call his attention to the sweet bird-song; he will listen abstractedly, or like one suddenly awakened, drink in the harmony. So do we listen to the voice within, and become conscious of the harmony about us. So may we call our friends to the happy land by letting the harmony within ourselves speak to the harmony within them. Some will answer slowly, some readily, and *all* will hear, whether there is any outward response or not, and be helped to the kingdom.

MABEL GIFFORD.
*The New Church Independent.*

## Miscellany.

### Avoided Drugs; Reached 101.

George Blakeman, who died recently at Ansonia, Conn., was the oldest man in the state, being in his one hundred and first year. He ascribed his longevity to his total abstinence from medicine of any description. In spite of his years he was well and active until within three weeks of his death. Every pleasant day he walked half a mile to the postoffice, and on Sundays he was a regular attendant at the First Congregational Church. He read the papers with the aid of ordinary spectacles and frequently entertained friends by singing old-time songs, still retaining a good tenor voice.

When a boy Mr. Blakeman was of delicate constitution, and at the age of twenty-one years, after long periods of medical treatment, was weak and sickly. Disheartened by his failure to regain health, he took what at that time seemed a desperate resolve—to eschew all medicine thenceforth. He has never touched it since.

In a recent interview Mr. Blakeman said:—

"Since I was twenty-one years old not one drop of medicine of any sort has passed my lips. Year by year I have become stronger and heartier. I am convinced that the use of medicine is a great drawback to a long life and a strong one."

"But if you were seriously ill?"

"I have been. Thirty years ago I had pneumonia, and several years later a bad remittent fever. My wife had all the doctors in Ansonia assembled around me writing prescriptions. I would take none of them. When I felt myself becoming delirious I made my wife promise that no medicine should be given me. Well, it wasn't, and here I am. One doctor had a habit of saying: 'Just a little tonic, a little whiskey and quinine,' but I didn't drink when I was well, and I would not drink when I was sick."

"Then you don't approve of whiskey?"

"Decidedly no."

"Not as a medicine?"

"No, not for illness; not as a stimulant. I don't believe in stimulants. The reaction is twice as intense as the temporary tonic. Teas and coffees are stimulants. I never touch them. I haven't for more than seventy-five years. They affect the nerves, and so does smoking."

"You never smoke, either?"

"No. Like all the boys, I tried it, but common sense told me to give it up. It lessens one's usefulness; it even curtails life. Throw your tobacco out of the door or you'll never be a centenarian."

"In short, Mr. Blakeman, to become a centenarian, is it necessary to become an all-around model man?"

"Not a prude. I have just turned a hundred, but I've never let many chances for a good time pass. I believe in society. That's nature's tonic. Society is nourishment, mental and physical. It's the mingling with men that gives food to vitality. Another tonic is work. Work is the best recipe for remaining young and vigorous. More men rust out than wear out. I never went in for speculating; I learned early that you can't get something for nothing. I plodded for all I got, and I feel better for it."

Mr. Blakeman started life as a shoe cobbler. On retiring from business at ninety years of age he was a well-to-do tack manufacturer, a director in the Derby Savings Bank, and a stockholder in several other business enterprises.—*New York Times.*

### A Way to Settle It.

Those whose brains are a-weary with the discussion as to when the new century begins can well dispose of the matter for the time being as did the small boy who had just listened to an animated debate on the subject at the breakfast table. "Well, what's the use of talking about it any more?" said he. "There's the century plant over there. Let's wait and see when it blooms."—*Cincinnati Commercial Tribune.*

For 1899 the world's corn crop is 2,611,000,000 bushels of which the United States furnishes 2,200,000,000 bushels; Austria Hungary furnishes 98,000,000, a serious falling off from the 153,000,000 bushels of last year. Argentina comes next with 72,000,000 bushels; then comes Italy with 68,000,000 bushels. The crop is about 111,000,000 bushels more than the average crop of the last four years.

## Notices.

### Supplements to the Sentinel.

Two supplements to the *Christian Science Sentinel* have been issued. The first is the able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The workers in the Field will readily see the wisdom of giving these supplements the widest possible circulation, and the extremely low price at which they are issued will enable them to do so. The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### An Interesting Article.

The November number of the *New England Magazine* contains a finely illustrated article regarding "The Discoverer and Founder of Christian Science." Many of the illustrations are here produced for the first time, and the text of the article will be of fresh interest to all Christian Scientists. This magazine will be valuable for distribution, and the Publishing Society will receive orders and send postpaid any number of copies at twenty-five cents each.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., Sec. 1. The per capita tax for the year beginning June 1, 1899, and ending May 31, 1900, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum: One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 10 cents; 12 copies, to one address, $1.00; Twenty-five copies to one address $1.75; 50 copies to one address, $3.00.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U. S. A.

SEPTIMUS J. HANNA, C. S. D., Editor. CAMILLA HANNA, C. S. D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

The Philippine commission has completed its report and dispatched it to the public printer. The report is voluminous and will be divided into several volumes. One of the interesting features will be a splendid atlas of the Philippine archipelago, especially prepared for the commission by the Jesuits. The first volume will be brought out immediately. It is devoted to the political issues involved in the acquisition of the Philippines, followed by chapters on various subjects—government, currency, the Chinese question, naval requisites, etc. The second volume is devoted to the resources of the island. Other volumes contain the great mass of testimony taken by the commission in pursuance of the President's instructions.

The sixteenth annual report of the United States Civil Service Commission shows that in the classified service there are seventy-five thousand positions, and in the unclassified one hundred and seven thousand positions. The salaries of the entire service amount to about $104,000,000 per annum. During the year 47,956 persons were examined for all branches of the service, and 35,682 passed. The total number of appointments made during the year was 9,056. Of the 17,073 employees in Washington 1,416 are over sixty years of age, 288 over seventy, and 40 over eighty.

F. Cook of the Department of Agriculture says that the United States is paying two hundred million dollars for tropical products, a large part of which can be furnished by Porto Rico and the Philippines. Coffee has been the chief product of Porto Rico, over thirteen million dollars worth of coffee having been exported from the island in a single year, even though the methods of cultivation are of the most primitive character. Sugar lands are receiving attention from American capitalists, and large factories with the most modern facilities are being built.

The Attorney-General has filed an answer, in the Supreme Court of the District of Columbia in the proceedings brought by Admiral Dewey for prize money for captures at Manila. The Attorney-General asks that the case be referred to a commissioner. According to his opinion the vessels that were sunk were not prizes and should not be considered as such.

A similar answer was filed in the case of Admiral Sampson and Cervera's fleet.

According to the latest news received from the Transvaal General Buller has succeeded in crossing the Tugela River and is slowly pushing his way toward Ladysmith. The Boers offered stubborn resistance, but were slowly driven back. In the mean time the Boers had succeeded in placing in position [illegible] new guns and were vigorously bombarding Ladysmith. It is generally conceded that the critical point of the war has been reached.

Secretary Long and Rear Admiral Bradford submitted to the Senate Committee on Naval Affairs some interesting figures on the proposed Pacific cable. The report shows that the cable can be constructed for about ten million dollars. It also shows that the Navy Department has spent about twenty-six thousand dollars for messages, and the average expense of the War Department is about one thousand dollars a day.

John B McDonald's bid of thirty-five million dollars for constructing New York's great underground rapid-transit tunnel has been accepted. It is expected that work will begin about February 15, and will be completed inside of three years. The construction of the tunnel will furnish employment for about twelve thousand men. When completed there will be permanent employment for at least three thousand men.

The unveiling of the statue of Daniel Webster, which Mr. Stilson Hutchins gave to the nation, took place January 18. The exercises were held in Lafayette Square Opera House. President McKinley, members of the Cabinet, and Supreme Court were present. Secretary Long accepted the statue on behalf of the United States. The presentation address was made by Senator Lodge.

The men who took the census in Cuba arrived in New York January 14 with forty-four iron-bound cases containing the records of the census. No exact statement of the population of Cuba could be given, but it will approximate 1,600,000. The taking of the census was begun October 16, and finished November 30 at a cost of four hundred thousand dollars.

Secretary Root has ordered another stay of six months in the foreclosure of mortgages in Porto Rico. A bill has been introduced in the Senate giving Porto Rico free trade in the United States. This measure will give the relief that is needed, as it will provide a market for her products. It is expected the bill will become a law within two months.

It is reported that Pittsburg, Pa., has offered to contribute two hundred thousand dollars to the Republican campaign fund if President McKinley will visit that city on April 27, the anniversary of General Grant's birth, and make a speech which will be regarded as the formal opening of the Republican campaign for 1900.

During the year 1899 the United States mint at Philadelphia coined 241,314 silver pesos for San Domingo; twenty-five thousand twenty-colones pieces, fifty thousand ten-colones pieces, and one hundred thousand five-colones pieces for Costa Rica The coinage for Costa Rica was gold, and valued at $698,025.26.

Of the one hundred and twenty-five thousand inhabitants in Hawaii but three thousand are American. Forty thousand are Japanese; twenty-one thousand Chinese; and thirty-one thousand Hawaiian aborigines. Various other nationalities comprise the rest of the population.

A handsomely bound petition signed by thirty-two hundred colored persons asking for such legislation as will protect colored men of this country from the "barbarous practice of lynching and burning colored men," has been introduced in the United States Senate.

It is reported that New York City has agreed to furnish the site and build the foundation of the permanent Dewey Arch. This will be about half the expense, and it is thought there will be no difficulty in raising the amount necessary to complete the work.

Sir Thomas J. Lipton, who last year endeavored to lift the American cup, has applied for membership in the Chicago Board of Trade. For several years he has owned and operated a meat preserving and pork packing plant at the Chicago stock yards.

The *Pacific* publishes a memorial to Congress asking it "to amend the Chinese restriction law, so that Chinese Christian converts may be permitted to bring their families into the United States and here enjoy the blessings of a Christian home."

Written pledges that American interests in China will be protected have been received at the State Department from four of the six countries from whom pledges were requested. The answers of the other two are expected shortly.

Capitalists are planning to erect an immense hotel structure in New York City. It will be twenty stories high and the handsomest hotel in the world. The amount of capital involved will be about ten million dollars.

The last shipment from California to the Paris Exposition was made January 5. The display of native woods consists of over five hundred specimens. The exhibit of minerals will be the best made outside the state.

The committee appointed to investigate the case of Brigham H. Roberts of Utah, agreed as to his polygamous status, and seven out of nine favor his permanent exclusion from the House of Representatives.

Beginning April 1 the Philippine postal service will be placed on an independent footing. Money orders can then be drawn upon points in the islands, and registered letters sent between postoffices there.

It is reported that General Joseph Wheeler has resigned his position in the army, and immediately after his return from the Philippines he will resume his duties as Congressman from Alabama.

The orange crop of Southern California this year is estimated at more than fourteen thousand carloads or nearly 4,500,000 boxes. The crop is worth about $4,600,000 to the growers.

Fifty thousand dollars has been pledged by one person to the fund which is being raised to carry on the work of Dwight L. Moody. The name of the donor has not been made public.

Pasadena, Cal., has the most famous rose shows in the world. About a million were exhibited at that place January 1, and witnessed by more than fifty thousand people.

A unique experiment is to be tried in Chicago. Buffet cars will be placed on both the surface and elevated street car lines in the city.

It is estimated that nearly fourteen thousand persons from the United States have become residents of Canada the past year.

January 17 the gold fund of the treasury stood at $400,102,275, the highest point reached in the history of the Department.

The Congress of the Argentine Republic is considering a law which provides for the reading of the Bible in the public schools.

During the year 1899 the foreign trade of the United States was as follows: Imports, $799,834,620; exports, $1,275,486,641.

The State Supreme Court of Delaware has decided that no woman lawyer can practise her profession in the State.

Miss Helen Gould is said to have given fifty thousand dollars for a new building for the Brooklyn Y. M. C. A.

The first religious paper in Porto Rico has been issued in Ponce. It is called *El Ideal Catolico.*

Secretary Gage advocates the extension of the metric system to the Treasury Department.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## Raphael and Luther: A Contrast.

It is curious to contrast the lives of great men whom the same environment has moulded or the same year ushered into the world. One thinks, for instance, of Fra Angelico and Savonarola, both citizens of Florence, both monks of San Marco, both confessing the same faith, but separated as the poles in its expression. These men, however, lived nearly a century apart. Stranger still is the contrast between Raphael and Luther, whom the same year (1483) ushered into the world, and who were destined to accomplish greater results in art and religion than Fra Angelico could have imaged or Savonarola could have prophesied. But here the environments were as contrasted as the missions. Warm, sunny Urbino nestled the baby Raphael; a Saxon mining town, Eisleben, gave birth to Luther.

Raphael, under his first teacher, Perugino, learned all that was sweet and poetic in art, and, in his Apennine home, shut off from worldly excitement and near to the town hallowed by memories of the holy St. Francis, he seemed at once to imbibe the spirit of fine religious feeling, so characteristic of the Umbrian School.

At the same time Luther, in his peasant home in the little German mining town, by a struggle with poverty, and strict religious training, was equally preparing himself for his Christian warfare. His father's circumstances improved, however, so that later he was enabled to take a degree at Erfurt. Then followed terrible religious conflict, the momentous decision to become an Augustinian monk, and the austere discipline which it involved. But already he was preaching so forcibly that one of his hearers exclaimed: "This monk is leading all the doctors astray."

All this time Raphael's life, endowed by many admirable qualities, kept on the noiseless tenor of its way; he was ever honored by legate, cardinal, and Pope, the very forces that would a little later summon Luther to Worms and impel him to protest. Raphael went to Florence to study in "The School of the Beautiful," and was but twenty-five years old when he was summoned to Rome. In 1508 he stands in the Imperial City, the gorgeous Court of Julius II. The warrior Pope had spent years in fighting to gain lands for the Church, and now wished Raphael to immortalize him, by painting the *stanze* of the Vatican. Here, surrounded by poets and artists, with the world's masterpieces before him, and under the patronage first of Julius II., and later of Leo X., Raphael most fully developed that genius which, whether Peruginesque, Florentine, or Roman, was always phenomenal. Perhaps his varied and harmonious qualities are best expressed in his Madonnas, and they are legion. The Sistine Madonna will ever give to the world the best expression of the union of earthly beauty and spiritual aspiration.

While Raphael painted, Luther was confronting trial and obstacle, in a heroic effort to steer the Reformation clear of threatened dangers. He, too, went on a mission to Rome, but very different was the impression made upon him by the luxurious Papal Court. Raphael loved to gaze on St. Peter's, then in process of erection; Luther saw underlying all the spirit of Tetzel's sale of indulgences, which was even then helping to make possible the building. Luther could not display the moderation of a modern controversialist, and, fired with indignation, he defied the thunders of the Vatican and affixed his ninety-five theses to the gates of the church in Wittenberg, and even as he was doing this, Raphael was symbolizing most emphatically his attachment to Catholicism by painting his St. Michael.

When Luther was summoned to Worms he exclaimed, "To Worms I am called, and to Worms I will go; my conscience is bound by God's Word, and I cannot and will not recant." Among the acts of his later life was his protest against ecclesiastical tyranny, followed by the confession of the Protestants, proclaiming the doctrine of justification by faith—read in 1530 at the Diet of Augsburg.

Raphael painted his Bible on the ceiling of the Loggie of the Vatican, while Luther translated his in the retirement of Wartburg Castle. Luther was as active with his pen as Raphael with his brush; he threw his whole soul into his subject, whether it were letter, tract, lecture, or sermon. Italians love to recall the gentle Raphael, who always shared the affection of his friends, and who ever seemed surrounded by admiring throngs. We wish that we might know him more familiarly, even as we know Luther through his table-talk, for in this his personality is revealed in so many ways, among others his unfailing sense of humor, his merry laugh ringing through the whole solemn drama of his life.

Raphael and Luther—the two portraits are before us, the one with countenance youthful, earnest, with never a wrinkle to show the seriousness of life's warfare; the other manly and rugged, bearing traces of conflict and seriousness, yet full of courage and of an unswerving will.

Raphael died in the year 1520, just one year before Luther was summoned to the Diet of Worms. He was laid out in his studio, and mournfully suspended over his bier was the picture on which his last working hours had been spent, the Transfiguration, with its wondrous Christ. All Rome mourned her famous painter, and, followed by admiring throngs, his body was borne to its last resting-place in the Pantheon.

Luther died at Eisleben, in 1546. By command of the German Electors, he was interred in the castle church at Wittenberg, and as his body was carried through the villages on the way to the burial, there were tears and mourning and tolling bells, and the "De Profundis" at his funeral was rather wept than sung. Engraven on his tomb is the first line of what has been called "The Protestant Marseillaise," "Ein feste Burg ist unser Gott."

On August 2, 1897, there was unveiled at Urbino, in the presence of a great concourse of people, a monument to Raphael, made by the sculptor Belli of Turin. Raphael, in

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

his working dress, stands upon a granite pedestal, holding paint-brush and palette, contemplating from afar the effect of one of his works, and below are groups symbolizing sculpture and painting. We recognize the cherubs of the Madonna di Foligno, Baldacchino, and San Sisto; upon the dado of the pedestal are bas-reliefs representing Raphael decorating the Loggie of the Vatican and painting the portrait of Leo X. On one side is a characteristic figure, a woman of Greek outline, divesting herself of an enfolding mantle, symbolizing the Renaissance of Art. On the other stands a genius of Michaelangelesque pose, holding on high a crown of laurel. Festoons of laurel bind together the coats of arms of the cities of Urbino, Perugia, Florence, Siena, and Rome, and at the base are medallions containing portraits of Bramante, Perugino, Romano, Raimondi, and others.

As proudly as Urbino holds her noble monument, so Worms honors to-day, in its central square, Rietschel's monument to Luther. Luther, like Raphael, is heroic in size. He is surrounded by Wyclif, Savonarola, Huss, Frederic of Saxony, and others who helped to give impulse to the new religion. Coats of arms of cities faithful to the cause and bas-reliefs representing leading scenes in Luther's life, all give expression to the one central figure —Luther. As he stands there, in an attitude of stern defiance, we may almost hear his voice reaching down through the centuries: "Here I stand. I can do no otherwise; so help me God! Amen!"—IDA PRENTICE WHITCOMB.

*The Churchman.*

## A Plucky Newsboy.

ALL Dawson is interested in a one-legged newsboy, and when, after a year's stay there, he started on his return to the States, all the men of the town and the miners from the creeks formed a procession and marched to the landing to wish him godspeed and a quick return. Ring, the hero of this occasion, has accomplished what means as much to the miners as the yellow metal they are digging from the bowels of the earth. The boy has established an independent and, storm permitting, a regular newspaper service for Dawson and the creeks beyond. He has founded the nucleus of a circulating library, and with his own ten-dog teams will send to his customers every week a library book, a newspaper, a magazine, and mail. The papers are twenty-five cents each, magazines two dollars each, and books two dollars a month. Mail he carries merely as an accommodation, but never receives less than twenty-five cents a letter, and often in addition any loose dust the miner may have handy.

He has received as much as sixteen dollars in dust for a letter, and the man was "so glad to see a human being and have something to read" that he thought he had the best of the bargain. Uncle Sam and Canada carry the letters under a prescribed weight, but refuse all second-class matter, including newspapers, magazines, or books. The expressage is three dollars a pound.

In and about Dawson are men of education from every country, and every one of them wants something to read. When the lights must be lighted for the long night as early as three o'clock, it means a good many idle hours till the twilight begins at nine next morning.

In the cabins the great need is reading matter to shorten the long, silent hours when they cannot work. The winter is the miners' working season, and they must stay on their claims and get out the gold. Within a radius of about twelve miles the men walk into town about once a fortnight, but when they are farther away they seldom get in, for the journey must be made on foot.

Prior to a year ago Ring was selling papers and doing errands about the Seattle Athletic Club. Charley Anderson, a member of the club, went to the Klondike and came home with his pockets full of money. He said half in joke to Ring, who was watching the luck of the miner at billiards:—

"Ring, if you were at Dawson I'd give you the best job you ever dreamed of."

"Then I'll go," Ring answered.

"But no one-legged boy could get over the pass. It is all a strong man wants to do."

"I can go any place a two-legged boy can," Ring insisted.

The result was Ring did set out for Dawson and found himself in the snow at the beginning of the long pass last October. It is a two days' trip, one on the actual pass. He hurried nervously because he was afraid of being benighted before he reached the other side.

"You'd better go slow, kid." "You can't do it." "Better give it up, youngster," came like a Greek chorus from his fellow-travelers, with himself for the tragedy part. The first day he managed, but it was hard work. The second brought him to a place where he must jump from one stone to another. One leg and a crutch made it impossible.

"What are you going to do now, youngster?"

It was a big Irishman who spoke. He had been watching the boy during the trip.

Ring had no answer to give.

"Well, I'll tell you what's going to happen. I'm going to pack you."

The man was already carrying two hundred and fifty pounds, and with Ring's twenty-five pound sack and his eighty pounds of avoirdupois the man carried three hundred and fifty pounds and jumped the stones.

So Ring got to Dawson. It was on the eve of the big fire he arrived, and when he had fallen comfortably into his tired sleep the boy was awakened and told to run for his life. He did, and got out, but his job and his effects went up in the flames that night.

Ring could not afford to sit down to cry. His first meal he earned helping to save goods from the burning buildings. His breakfast cost $5.50. Naturally, he turned again to his old trade. He went back from Dawson about five miles and waited. Every traveler who comes in brings a newspaper that he usually throws or gives away. Ring stood five miles from Dawson and bought every paper he could. He stood on the corner in Dawson and sold them for one dollar each, and every relay of travelers put a good many dollars into the cripple's pocket.

When the boats came in, there were tons of papers. The man who had the agencies spent most of his time in a comfortable saloon corner, and he was in no hurry to get out the papers for the impatient miners, because there were no other papers to be had. Ring persuaded the man to let him do the distributing, receiving a small sum for his work. His work was so prompt and satisfactory he was told if he could get papers every one would patronize him. He wrote to the different papers, and had his own consignments, which he sold. He bought dog teams and sent papers to his customers out on the creeks.

When the boats could not get to Dawson it meant no more papers. In the mean time Ring had got in about five hundred volumes for his library, and had fully as many patrons as books, which paid him one thousand dollars a month, at the rate of two dollars each. Ring saw his opportunity, and decided to go to the States and make his arrangements with publishers of papers to become exclusive agent. He could come out by rail and boat, and had plenty of money.

He made arrangements to purchase several fine dog teams of fourteen dogs each, and will establish an independent service for himself from Skaguay, where the railroad ends, to Dawson. The trip can be made in thirty-five days at a cost of about three hundred and fifty dollars, and the sledge will carry five hundred to seven hundred pounds of

Digitized by Google

reading matter. There will be two trips a month, which will bring the news in and out of Dawson every two weeks.

So the little one-legged newsboy is to be an important personage in Dawson. One year more and Ring will be a rich man, for good chances are often offered him, and he has plenty of ready money to take advantage of opportunities.—*New York Sun.*

## "End of the Century."

ON the closing day of the last year, which the *Chicago Times-Herald* accepted as the closing day of the nineteenth century, that paper improved the occasion to issue a special "end of the century" number, which is notable in many ways, and contains information of the progress of the one hundred years between 1800 and 1900 that will cause it to be preserved by many for future use.

The number contained sixty-four pages, with a vast amount of space devoted to "The Progress of the World in the Nineteenth Century." In separate chapters the subjects treated include a review of the political, scientific, mechanical, inventive, agricultural, transportation, medical and surgical, chemistry, mining, Christian, and educational progress.

Two other chapters review the century in the progress made in war's accessories and in the startling list of assassinations of public men.

In other divisions the *Times-Herald* reviewed the history of the century as it related to its own local field, which covers five great states. "Michigan in the Century," "Progress in Indiana 1800–1900," "Iowa in the Century," "Illinois in the Nineteenth Century," and "Wisconsin in the Century" are the titles of the various chapters.

The early colonial days, the times of territorial rule, statehood, their position in times of war, and the general material progress are fully treated. All the governors of each of the states are reproduced in half-tone.

Another chapter is devoted to "The Story of Chicago in 1899," and includes the portraits of all the mayors of the city of Chicago. An epitome of the commercial activity of the western metropolis is concisely given, and leading business and professional men sum up the year in the various lines.—*Boston Globe.*

## Religion of Good-Will.

I WONDER if Santa Claus is a Christian Scientist. It has struck me suddenly he must be, though I never heard the old gentleman's religion discussed. I have a friend, who has recently been converted to Christian Science. For years he was sick, discouraged, and weary of life. All the doctors gave him up in despair, he persisted in living but life seemed scarcely worth while. Then somebody induced him to go to a Christian Science meeting. I can't give you the details of what occurred after that time, but anyway he took on a new lease of life, he went back to his work with fresh vigor, and to-day he looks as if he had gained forty pounds and lost twenty years. He talks with tremendous enthusiasm about the Science that gave him back his health and he wants everybody to share in the benefits he has had.

He tells me that Christian Science heals not only the body but the mind. It makes the most disgruntled being above earth happy and fit to live with. It clears one's path of worries, brings happiness to a household, makes your children a wellspring of joy instead of incorrigible young demons, and sweeps the world of sin. So I have imagined that Santa Claus, with his doctrine of happiness, peace, and good-will to men, must be a Christian Scientist. He has been coming to this old world with his benediction for many, many years; but alas for the turmoil, selfishness, bloodshed, and lack of good-will he finds at each visit!—*Chronicle,* Binghamton, N. Y.

## The Lectures.

### At Chillicothe, Ill.

Judge Ewing of Chicago, who is a member of the Christian Science Board of Lectureship, addressed a large audience in Matthews Hall, Sunday evening, January 7. He came up from Peoria on a special train which brought a large number of the leading citizens of that place to hear him speak on the religion he professes.

At a few minutes past eight Mr. I. T. Kahn stepped to the front of the platform and said:—

Before introducing the eminent gentleman who is to address you, I wish, in behalf of the First Church of Christ, Scientist, of this city, to express our heartfelt gratitude and pleasure in having you with us to-night; not only that you may participate in the opportunity of hearing one so well qualified to speak on this subject, but for the reason that it shows that the world is looking for a religion practical in its application.

You may never have thought of a fact, which was brought to my attention at a lecture which I heard a few days ago, and that fact is this: that no form of religion, philosophy, or system of teaching in the world to-day makes the promise of destroying the last enemy or bringing in the millennium according to the prophecies of the Scriptures with one exception, and that is the Christian Science religion as set forth in our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy; and for this reason, if for no other, your closest attention should be given the speaker to-night and investigation follow at your leisure. The speaker for the evening is a gentleman of high attainments, having served as Judge of the Superior Court of Cook County for several years, and is a man of undoubted integrity and of untarnished character. He comes to us authorized for the work not only of promulgating the Truth, but of refuting the many misconceptions concerning this, the most important subject in the world to-day. The subject for this evening's lecture is "Christian Science, the Religion of Jesus Christ."

I now have the pleasure of introducing to you, the Hon. W. G. Ewing of Chicago.—*Bulletin,* Chillicothe, Ill.

### At Springfield, Ill.

Judge William G. Ewing of Chicago lectured to a large audience at the Opera House last night (Tuesday, January 9) on Christian Science.

Judge Ewing was introduced by General Alfred Orendorff, who said:—

*Ladies and Gentlemen:*—When a committee in charge of this meeting requested me to introduce the speaker, I suggested the propriety of selecting a member of their society rather than an outsider, but when I learned that the speaker was not only a distinguished citizen of Illinois, but a cherished friend, that talisman touch of personal regard transformed what would have been a mere act of courtesy to a pleasant privilege.

To indulge in laudatory introductory remarks, however well deserved, is a custom more honored in the breach than the observance.

I have, however, concluded that it was as important that the audience should be introduced to the speaker as the speaker to the audience. With this view, Judge Ewing, I wish to say that the magnificent assemblage before you is fairly representative of the manhood and womanhood of this community.

Our people are broad-minded, tolerant, and just. Lincoln's words fitly describe them: "With malice toward none, with charity for all, with firmness in the right as God gives them to see the right."

They love the truth—the truth that makes men free—

Digitized by Google

and follow wherever this imperial virtue leads. They firmly believe that in all contests with error, truth will ultimately prevail, and welcome a fair and free discussion of all mooted questions. To be a member of this audience carries with it no presumption of belief in your theories, but it does show a willingness on the part of all to hear with impartiality whatever is addressed to their intelligence. I shall not detain you longer from the oratorical treat that awaits you, and now take great pleasure in presenting Hon. W. G. Ewing, who will deliver a lecture on Christian Science.—*Illinois State Register,* Springfield, Ill.

### At Burlington, Ia.

A very large and deeply interested audience gathered at the Grand Opera House last evening (Monday, January 8) to hear a lecture by Judge William G. Ewing of Chicago, upon the subject of "Christian Science, the Religion of Jesus Christ." The audience included a number of lawyers, doctors, ministers, and people of all classes and churches. The judge was introduced by Mr. A. M. Antrobus.

Mr. Antrobus said:—

We have come here to listen to a discussion of the subject of Christian Science, by a gentleman who is eminent for his scholarly attainments, eminent as a lawyer and a judge, and earnest in his convictions. I am one of those who believe that any man who believes in a theory or a principle should be given a hearing, and anything which lays a claim to being of benefit to mankind should have free public discussion.

He briefly reviewed the history of religious beliefs, diseases, and the medical profession from the time of the most ancient known nation down to the present, and then introduced the speaker of the evening.

*Democrat-Journal,* Burlington, Ia.

### At Toledo, O.

On the last day of 1899 the Christian Scientists of Toledo invited their friends to listen to their semi-annual lecture on a subject of constantly increasing interest to them, "Christian Science, the Religion of Jesus Christ," delivered by one of their number, one who had for many years been in the thraldom of disease, and to whom, it is claimed, Christian Science had brought freedom. Fully seven hundred persons were present, regardless of the unpleasant, cold day.

The First Reader of the Toledo Church, and the pioneer of Christian Science in this city, Miss Sarah J. Clark, introduced the Hon. William G. Ewing of Chicago, ex-judge of the Superior Court of Chicago, and member of the International Board of Lectureship of the Mother Church of Christian Science in Boston, who spoke for nearly two hours.—*Bee,* Toledo, O.

---

I call that mind free which . . . resists the bondage of habit, which does not content itself with a passive, or hereditary faith, which opens itself to light whencesoever it may come, which receives new truth as an angel from heaven, which, whilst consulting others, inquires still more of the oracle within itself, . . . listens for new and higher monitions of conscience, and rejoices to pour itself forth to fresh and higher exertions.

I call that mind free which protects itself against the usurpations of society, which does not cower to human opinion, which feels itself accountable to a higher tribunal than man's, which respects a higher law than fashion, which respects itself too much to be the slave or tool of the many or the few, . . . which guards its empire over itself as nobler than the empire of the world.

W. E. CHANNING.

## A Wednesday Evening Meeting.

A FEATURE of the midweek meetings of the Christian Scientists is the impromptu speaking of members of the congregation in the time allotted for that purpose, during which they relate their experiences in Christian Science and give testimonies of healing. At the meeting of Second Church of Christ, Scientist, held at the Lyceum Parlors, on North Charles Street, last night, about fifteen persons, men, women, and children, told of what Christian Science had done for them and for others they knew about.

Miss Ellen E. Cross, C.S.D., a graduate of the Massachusetts Metaphysical College and First Reader of the church, conducted the meeting, the first part of which consisted of singing, prayer, and the reading of selections from the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, Founder of the organization.

A lady told of a case where a young man had had a bicycle accident, falling on his face, bruising it badly and injuring his nose. He refused medical aid and insisted on being taken to his home, where, after receiving Christian Science treatment, he was able to go about the same day, and no sign of the accident remained after the fourth day. The following day a similar accident occurred to a friend, who had medical attendance and was not healed in six weeks, although the injuries were no more severe.

A gentleman said that his horse had had a very severe attack of colic in the street and was expected to die. He ordered the horse taken to the stable and administered Christian Science treatment, and the next morning the horse was well and put into harness again. He said that subsequently a neighbor's horse was attacked in the same way and died under medical treatment.

Another gentleman told of a widow who ma[illegible] large farm out West, having great herds of cattl[illegible] and other animals. This lady was a Christian S[illegible] and while disease was attacking the animals of the [illegible] all about her and decimating their herds, she did [illegible] any, because whenever any of her animals were ta[illegible] as they sometimes were, and many nearly died, sh[illegible] them by Christian Science and they were soon w[illegible] spoke of the great benefits from the use of Chris[illegible] ence, he had seen in other farms he visited.

An illustration of ~~healing~~ at a distance was giv[illegible] ~~lady~~ who told of a case of pneumonia she had h[illegible] absent treatment, without seeing the patient. The sym[illegible] toms showed a well-developed case with high fe[illegible] two doctors had been in attendance. Improveme[illegible] with the Christian Science treatment, and in les[illegible] week the patient was healed.

Another lady spoke of the case of a friend who had broken her finger by a fall. A doctor was called to set the finger in plaster of paris; but after a while she suffered great pain, and upon examination it was found that gangrene had set in, and the doctor pronounced amputation necessary. Being a music teacher she did not want to lose her finger and tried Christian Science. The pain left her at once and she was healed in a short time.

A lady told of a child, three years old, living in her house in this city, who was ill with pneumonia and was pronounced dying by the attending physician, the body of the child being already quite cold. A Christian Scientist was sent for and in two hours symptoms of recovery were manifest, the body became warm and consciousness returned. The next morning the doctor pronounced the disease gone, although no medical treatment had been given that day. The same lady told of a case of croup that was healed in one night.

A little boy, who is a member of the Sunday School, said, "For several years I had very bad catarrh, but since I began learning about Christian Science I have been healed.

Digitized by Google

I also had astigmatism and wore glasses for three years, but I don't need them now, as my eyes are all right."

Another boy, also of the Sunday School, said, "My father came home one day with a badly sprained foot. I asked him to let me read to him from Science and Health and it would cure him; and it did, for he was at work again the third day. He had no other kind of treatment."

A case of healing through reading Science and Health was given by a lady, who said that a friend of hers had been bedridden for very many years, and upon becoming interested in Christian Science she desired to read the text-book, and in one hour she said she was completely healed, went down-stairs to dinner, and has been well ever since.

A lady told of the healing of a case of heart disease where the man had been pronounced incurable by the doctor, was very feeble and weak, and only able to hobble about. The healing was done in three weeks.

The case of an old lady of eighty-four years, who broke her leg in falling, was given, and it was said that the doctor who set the limb expected the worst on account of the age. Christian Science treatment was given and the patient had no pain, slept well, and was soon healed.

A gentleman said, "I was an invalid for many years and was in a hopeless state, as the doctors had told me nothing could be done and death was inevitable. Since coming to these meetings I have steadily improved, and my investigation of Christian Science and the study of Science and Health has proved a great blessing to me, as I am now practically a well man, can do more work than for twenty years, and realize the possibility of a successful life. I have always been addicted to smoking, and no matter how hard I strove to overcome the habit it was always in vain. I decided to have treatment for it, and on the second night the desire was all gone and has never returned. The greatest spiritual blessing that has come to me is the destruction of the desire to sin."

It was announced that a reading room has been opened at 1201 North Charles Street.—*Baltimore (Md.) News.*

## Regarding Christian Science.

### Both Sides of the Question.

The announcement of Dr. McLeod's sermon for last evening against Christian Science prompted the believers in Christian Science to request our publication of their views as presented by Judge Joseph R. Clarkson of Omaha, in a recent lecture on the subject.

The *Republican*, in its province as a general newspaper, gives herewith both sides of the question, as locally presented. In this connection we call attention to the fact, alleged to be substantiated by statistics, that only seventeen per cent of the population of Scranton are regular church-goers. The thought is naturally suggested, whether Christian effort would not be better directed toward the reclamation of the eighty-three per cent of our population rarely or never seen in our churches, than in the endeavor to thwart and oppose any of the seventeen per cent professed followers of Christ?—*Scranton (Pa.) Republican.*

### Entitled to a Fair Hearing.

Some days ago *The Mail and Express* printed an address on Christian Science by Judge Ewing. As a consequence, the Rev. Lewis Ray Foote of Brooklyn accuses us of being "used to advance such nonsense"—meaning by "such nonsense," Christian Science. Mr. Foote is entirely mistaken. In publishing Judge Ewing's address we simply gave Christian Science something to which it is entitled—a fair hearing. Christian Science may or may not be nonsense, but the fact remains that it appeals to a good many people, and because it does, fair play demands that it should be allowed to state its case. If Christian Science is nonsense, "the white light of publicity" will expose it as being just that. Why, then, should Mr. Foote object to the publication?

EDITORIAL, *Mail and Express.*

### Dr. McLeod and Christian Science.

In view of the general interest in the lecture of Judge Ewing of Chicago, which has been aroused by Dr. McLeod's sermon on Christian Science, copies of the lecture referred to may be obtained free of charge at the Christian Science Church, 519 Adams Avenue, or mailed free to any address. Also copies of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, will be loaned to any one desiring to read it. Call on or address First Church of Christ, Scientist, 519 Adams Avenue, Scranton, Pa.—Every one will read with interest Judge Clarkson's (of Omaha) reference to Dr. McLeod's subject, printed in yesterday's Scranton *Republican.*

*Scranton Tribune.*

## The Birthplace of Mary Baker Eddy.

### Reproduced by the Aid of Mrs. Eddy's Information, Photographs of Site, and Authentic Data.

THIS is the title of a well-executed etching from an original drawing by Rufus H. Baker. It restores on paper the Baker homestead as it appeared in Mrs. Eddy's girlhood. Now the site is but a tithe of the old farm, and only a few fruit-trees remain to suggest the once fine orchards.

This picture has been made possible mainly through Mrs. Eddy's kindly assistance.

The etching is printed in black and sepia to meet a preference in tints, and can be obtained at the following prices:—

Artist's Proofs . . . . . $7.50
These are the first prints, are on India paper, and limited in number.

India Proofs . . . . . $5.00
Later prints on India paper.

Plain Proofs . . . . . $3.00
Prints on plain rice paper.

Address, RUFUS H. BAKER, 88 North Main Street, Concord, N. H.

## Sentinels Wanted.

THE Christian Science Publishing Society are desirous of obtaining copies of the following issues of the *Christian Science Sentinel*:—

Vol. I. No. 19, Jan. 5, 1899; No. 20, Jan. 12, 1899; No. 23, Feb. 2, 1899; No. 24, Feb. 9, 1899; No. 27, March 2, 1899.

Vol. II.—No. 1, Sep. 7, 1899; No. 3, Sep. 21, 1899; No. 18, Jan. 4, 1900.

For the above numbers the Society will pay the same price for which they are sold, or will give in exchange the latest issues of the *Sentinel.*

## Request.

WHEN the Publication Committees have been chosen for the Branch Churches the name and address of each person appointed should be sent to the Christian Science Publishing Society. Request is made that this be done in each case without delay.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

**MRS. EDDY DOES NOT RECEIVE PATIENTS.**

**THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

## The Pamphlets.

WE call attention to the fact that there are yet on hand a large number of the pamphlet "Christian Science History" for free distribution. There should be no lack of interest in getting this booklet into the hands of the appreciative public. We know that all earnest inquirers are glad to be informed of the facts therein contained.

The pamphlet "Legal Aspects" should also be in general circulation at this time. It contains much that is helpful to all, but especially to those who may have questions pertaining to legislation to look after.

There should be no failure to meet the needs in this respect by every proper means. Often adverse conditions arise solely because those who are parties to them are either not informed at all, or else are misinformed. This lack should be supplied in the Christian spirit, as in all other lines of action.

We again mention the recent pamphlet of Mr. John Gillespie. It can be made most useful, and should be. There has been much added to the article which appeared in the *Journal*, both in Scripture quotation and the author's comments.

## The By-laws.

We can only answer the inquiries coming to us as to the meaning of the By-law relating to reading rooms by referring the inquirer to the article "As to Questions" in the *Sentinel* of January 11.

Please accept this as the answer to all.

## Order of Church Services.

IN response to requests we herewith publish the present order of service in the Mother Church:—

1. Organ voluntary.
2. Hymn.
3. Reading a Scriptural selection.
4. Silent prayer followed by the audible repetition of the Lord's Prayer with its spiritual interpretation.
5. Hymn.
6. Announcing any necessary notices.
7. Reading the explanatory note.
8. Announcing the subject of the Lesson-Sermon, and reading the Golden Text.
9. Reading the Scriptural selection, entitled "Responsive Reading," alternately by the First Reader and the congregation.
10. Reading the Lesson-Sermon. (After the Second Reader reads the Bible references of the first Section of the Lesson, the First Reader makes the following announcement: "As announced in the explanatory note, I will read correlative passages from the Christian Science text-book, 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy.")
11. Collection and solo.
12. Hymn.
13. Reading Scientific Statement of Being and pronouncing benediction.

The following is the order for Communion Day:—

1. Organ voluntary.
2. Hymn.
3. Reading a Scriptural selection.
4. Silent prayer followed by the audible repetition of the Lord's Prayer with its spiritual interpretation.
5. Hymn.
6. Announcing any necessary notices.
7. Collection and solo.
8. Reading the explanatory note.
9. Announcing the subject of the Lesson-Sermon, and reading the Golden Text.
10. Reading the Scriptural selection entitled "Responsive Reading" alternately by the First Reader and the congregation.
11. Reading the Lesson-Sermon. (After the Second Reader reads the Bible references of the first Section of the Lesson, the First Reader makes the following announcement: "As announced in the explanatory note, I will read correlative passages from the Christian Science text-book, 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy.")
12. Kneeling in silent Communion; concluding with audible repetition of the Lord's Prayer (spiritual interpretation omitted).
13. Hymn.
14. Reading Scientific Statement of Being and pronouncing benediction.

On Wednesday evenings the following is the order:—

1. Organ prelude.
2. Hymn.
3. Reading from the Bible and correla[illegible] from "Science and Health with Ke[illegible] tures."
4. Silent prayer with audible repetition [illegible] Prayer (spiritual interpretation or[illegible]
5. Hymn.
6. Announcing any necessary notices.
7. Experiences, testimonies, and remar[illegible] Science.
8. Closing Hymn.

The order of Sunday service is sometim[illegible] singing of a duet immediately after the [illegible]

For the purpose of having a uniform ser[illegible] for the Branch churches to follow the [illegible] local conditions will warrant.

## Scientific Research and Biblical Study.

WE give below some interesting excerpts from a paper on the above subject by the Rev. Canon R. B. Girdlestone, M.A., read before a meeting of the Victoria Institute or Philosophical Society of Great Britain. This society was organized in London, England, upwards of thirty years ago by scholars and scientists interested in a liberal and unprejudiced investigation of religious and scientific subjects, and a fair and candid discussion of the same.

Its primary objects are officially announced to be:—

"First.—To investigate fully and impartially the most important questions of philosophy and science, but more especially those that bear upon the great truths revealed in Holy Scripture.

"Second.—To associate men of science and authors who have already been engaged in such investigations, and all others who may be interested in them, in order to strengthen their efforts by association; and by bringing together the results of such labors, after full discussion, in the printed transactions of an institution, to give greater force and in-

Digitized by Google

fluence to proofs and arguments which might be little known, or even disregarded, if put forward merely by individuals.

"Third.—To consider the mutual bearings of the various scientific conclusions arrived at in the several distinct branches into which science is now divided, in order to get rid of contradictions and conflicting hypotheses, and thus promote the real advancement of true science; and to examine and discuss all supposed scientific results with reference to final causes, and the more comprehensive and fundamental principles of philosophy proper, based upon faith in the existence of one eternal God, who in His wisdom created all things very good."

The Rev. Mary Baker Eddy has for a number of years been an associate life-member of this society, having been specially invited to unite with this distinguished body. It numbers among its membership many other eminent Americans, has exerted a wide influence for good throughout the civilized world, and is destined to extend its radius with the extension of civilization.

It will, of course, be understood that the "science" referred to in connection with this Institute is physical or material science.

Following are some of the more salient points made by the learned Canon. We follow his capitalization strictly:

"There is a rumor current among certain classes that scientific men have dropped their belief in Christ, in the Bible, and even in God. This, as stated broadly, is not true; though doubtless there may be some slight ground for the assertion. The Bible contains at first sight some things which run counter to the principles on which modern natural science acts, and persons who do not profess to be scientific, but who have watched with interest the researches of the last fifty years, have had their faith sorely

[illegible] seen the need of reconsidering their attitude to the Bible from time to time.

[illegible]ple, however, the tendency of things seems [illegible] than otherwise, and I propose to enumerate [illegible] which there has been an approximation between scientific research and Biblical study, and to indicate [illegible] which must be supplied before complete [illegible]ished.

[illegible] science in a large sense. I include all [illegible] of the natural world, and I do not exclude [illegible] human nature, the higher as well as the [illegible] past as well as the present.

[illegible] scientific man by no means ignores the Bible. [illegible] that it is a factor not to be overlooked, and [illegible] considered with a certain respect.

[illegible] would deny that the facts recorded in its pages [illegible] strenuous to research during the past few cen-

"Whereas a large proportion of the Bible was a *terra incognita* to the historian of the past, it is so no longer. Not only have the books of the New Testament been pushed back on strictly historic and literary grounds to the century whence they professedly spring, so that their contents may no longer be regarded as mythical; but also the facts recorded in the Old Testament are taking their places among the materials which the historian of antiquity must digest and reckon with. The historic framework of the Old Testament, so far as it is not purely internal, is established in the main as historical, though not yet confirmed in all its details. Egypt and the East are rapidly yielding up their secrets, archæology and linguistic lore are contributing their testimony, and with rare exceptions, if any, it is confirmatory of the genuineness and antiquity of the Biblical narrative.

"2. The scientific man is increasingly conscious of the limitation of his powers and functions.

"Every addition to the known opens a new vista into the unknown. Specialization is the order of the day. Physical science is itself only a specialized branch of universal science.

"Many things are given up which were the delight of old times. Men no longer hunt for the philosopher's stone, for the secret of renewal of youth, for a method of attaining perpetual motion. The investigator of nature has ceased to look for *Power,* and is content with *Process;* he does not peer into a gland with his microscope in the hope of finding the *ego* there. Intent on the secret of the origin of life, he has given up—or seems to be on the point of giving up—the idea that the living proceeds from the non-living without the intervention of preceding life.

"3. The scientific man no longer stumbles at some of the old difficulties which have called out the ingenuity of so many 'reconcilers.'

"He no longer measures human history by untold myriads of years, for the physicist steps in and forbids it. The longevity of primeval man is not now scouted as an utter impossibility, thanks to the investigations of the anthropologist. The story of the Flood is to him a matter of serious study, as the debate on Prof. Prestwich's interesting paper read before the Institute has shown. The student of comparative philology is prepared to detect in the simple story of Babel some strange intervention which may account for what is otherwise unaccountable—the remarkable divergence of human languages viewed in connection with the unity of the race. The crossing of the Red Sea has been recently discussed by this Society, and was regarded as a fact, not as a fiction. I would also call attention to the correspondence now going on in the pages of the Palestine Exploration Quarterly on the stoppage of Jordan when Israel crossed.

. . . . . .

"There are other phenomena in the Bible, such as its way of putting things, its selection of topics, and its systematic tracing of everything back to the First Cause, which are replete not only with interest, but with philosophy. Its statements concerning natural phenomena need to be interpreted with extreme accuracy, both on their positive and on their negative side; whilst the series of marvels it records are to be read alongside of its theology and its central teaching, and not as a collection of isolated curiosities or fables. They are signs; and the thing signified by them takes us to the very heart of the Creator. Inductive principles which are the keys to nature are applicable *mutatis mutandis* to the Bible on all the topics now enumerated; and if these are applied, there will not be any need of far-fetched and ingenious 'reconciliations' between the Bible and science.

"If nature must be studied as a whole, so must the Bible. It is a collection of books by writers who unwittingly contribute to a scheme the key to which is to be found in one historical Personage. To discuss the books without reference to the Personage is like anatomizing a body without reference to its head. We can hardly expect the scientific man in the ordinary sense of the term to study the Bible scientifically unless the theologian does so. Ordinary versions do not always bring out the technical sense of Hebrew words and idioms, and even such a man as Professor Huxley sometimes failed in his criticism of the Bible through an ignorance of Biblical science which was very pardonable in his case.

"The greatest desideratum of all is that Theism should be approached with steady steps from two sides, the Biblical and the scientific.

"It is manifest to every one who thinks at all, that God must be reached in some other way than by the telescope or the microscope. The forces and processes of the material universe do not affect His nature or touch His Being. Space and time, which are the very warp and woof of our existence, are not to Him what they are to us. We can no more see Him or comprehend Him than we can see or com-

Digitized by Google

prehend a molecule or an atom. How then can we study His ways?

"It is to human nature—its most spiritual part—that we must turn if we want to catch even a whisper of His real nature.

. . . . . .

"At times we stand abashed and silenced as we realize that there are vast regions of existence of which we know next to nothing. I do not speak of the stellar but of the spiritual heavens. The Bible possesses a uniform system of psychology, of morals, and (I think) of metaphysics. Its writers are convinced that we live on the borders of two worlds whose laws are analogous—I will not say identical—and that the material world is a nursery for the spiritual. May not scientific men look into this spiritual world? Do they not recognize psychology as science? May they not investigate on scientific principles its immaterial side, where three empires meet, the psychological, the ethical, and the spiritual? . . . We cannot even be conscious of the material without exercising the immaterial.

"I am not pleading for metaphysics, though I for one do not think they are yet played out, and I see no reason why the words 'subjective and objective' should not be baptized afresh in the twentieth century. I plead rather for a more careful inductive survey of the special phenomena of the universe as detected in human nature and revealed in certain phases of human consciousness, and especially in the (divine) Will.

. . . . . .

"Yet the Will after all is the chief known factor in the universe; and with the Will we must associate the *ego*, and with the *ego* the law of Right; and whence are these? are they the fortuitous products of matter, or are they the outflow of the original personal Mind? Scientific men need not be deterred from giving the true answer through fear of playing into the hands of religion. Let them speak out their deepest and most abiding convictions on this supreme question. Surely they are prepared to affirm that the Theistic hypothesis will account for certain observed facts in the universe, and that a consideration of the spiritual side of human nature turns this hypothesis into a conviction. They are then within measurable distance of the Christian Faith, which invites the Theistic conviction to become a personal experience."

It is a custom of the Society briefly to discuss papers after they have been read. We extract the following from the remarks upon Canon Girdlestone's paper:—

"The Chairman (T. Chaplin, Esq., M.D.),—I am sure we owe our best thanks to Canon Girdlestone for his valuable and timely paper. I speak of it as timely, because I believe the Victoria Institute is now just thirty years in existence, and this paper may, in a certain measure, be regarded as a report of scientific progress during these thirty years. When this Institute was first founded such a paper could not have been written, and we surely have cause for thankfulness that so much progress has been made in this direction. For myself, I cannot help thinking that one reason why so much progress has been made, is that those who desire to reconcile science and religion have been bold in grappling with difficulties. Now there is a very great difference between boldness and rashness, and I think we all feel, as members of this Institute, that while we should be very bold in grappling with difficulties and very bold in carrying our investigations into various departments of science, we should ever be strictly on our guard against drawing rash conclusions, whether those conclusions be in favor of the Word of God or whether they seem to be opposed to it.

"Mr. D. Howard, D.L., F.C.S., etc.,—I think we must all agree with our Chairman in what he has said as to the great value of this paper. The chief difficulty which one feels in discussing it is that one agrees with it so entirely, and it is always easier to attack than it is to agree.

"It is a wonderful thing to look back thirty years and to see that certainly the course of thought has not made against but for a sound religious faith. I do not say that nothing has been changed. One cannot view any branch of science without remembering a good deal of change. There is hardly a matter of physical science upon which we have not more or less altered our opinions; but progress from immature to maturer knowledge has tended not to increase, but to diminish the gulf between religious and scientific modes of thought. There has been always that ancient though certainly not commendable habit of mind that has regarded any new discovery as a weapon with which to attack religion. It is a very old habit of mind, in fact almost as old as scientific thought, and the very fact that it still exists is nothing to make one anxious. We have passed through a great change in modes of thought, scientific and otherwise.

"Looking back upon the 'confused noise' that is necessarily associated with battle, we find that in a large measure the confusion has been in the rival armies and has not belonged to the real progress of thought. Scientific and religious thinkers have learnt to understand one another as far as they have been willing to do so."

## Among the Churches.

### The Good Work Done by One Small Church.

It is often very encouraging to a struggling church to know the experience of others, so we, First Church of Christ, Scientist, Burlington, Vt., send our mite for publication.

We started with two students of one of the Mother's students in 1895. After these two had met once a week for a short time to study the lesson, they were joined by a family of three, and in 1896 were joined by two other families, one of them from Essex Junction, Vt., eight miles from here. In September, 1897, we moved into public rooms, and in June, 1898, into still better quarters.

In November of 1898 we organized as a church, with twelve members, some of whom have since moved away. Our average attendance is about fifteen, though we have had as many as thirty-six present. We have placed two copies of "Science and Health with Key to the Scriptures," one of "Miscellaneous Writings," and the *Journal* in the Fletcher Free Library; one copy each of Science and Health, "Miscellaneous Writings," and *Journal* in the Billings Library and Essex Junction, Vt., Library; one copy of Science and Health in the County Jail, and one in the library at Newbury, Vt. A few years ago the Mother presented a copy of Science and Health, third edition, to the Fletcher Free Library, making three copies now in constant circulation.

Just before the 43rd Infantry, Volunteers (mustered in at Fort Ethan Allen, Vt., four miles from here), was sent to Manila there was a call for contributions of literature from the citizens. One of our number visited the adjutant and asked if our Science literature would be accepted. He replied: "Certainly; but I can't promise that all will read it; but if the minority read it I suppose you will feel satisfied." The Scientist said that if one man read it we should feel repaid.

We sent them one copy each of Science and Health and "Miscellaneous Writings," the *New England Magazine* containing the article about the Mother, and all the Sentinels that were left after our lecture. Shortly after this another request came for literature to be sent to the 3rd Cavalry, Regular, formerly stationed at Fort Ethan Allen,

Digitized by Google

now in the Philippines; so another copy of Science and Health and one of "Miscellaneous Writings" was sent to them.

We have had two lectures: one by Mr. Tomlinson in November, 1898, and one by Mr. McKenzie in October, 1899. After the last lecture we had twenty dollars left from the lecture fund, which, with five dollars given by the Sunday School, we have placed in the Savings Bank for a Church Building Fund. When we consider that there have been only eight families, all in ordinary circumstances, to bear the expenses, we feel that we need not be discouraged, even if our growth in numbers has been very slow. It has been said that what we need is not *more* Scientists, but *better* Scientists, and we all are striving to live up to our highest understanding.

MRS. ALMA PORTER CLARK, *Clerk.*

### Third Church at Philadelphia, Pa.

The opening service of Third Church of Christ, Scientist, in Philadelphia, Pa., was held in Odd Fellows Temple, January 7, 1900, with a congregation that filled the room to overflowing. The pulpit was occupied by Mrs. Henrietta E. Chanfrau, C.S.D., as First Reader, and Dr. Elias R. Carey, C.S., as Second Reader.

The church room, one of the finest in the Temple, was handsomely decorated with palms and cut flowers.

The solos, especially selected for the occasion, were beautifully rendered by Mrs. Stanley Addicks.

A delegation from the Philadelphia Church of Christ, Scientist, was present; also representatives from First Church of Christ, Scientist, of New York City, and First Church in Philadelphia.

The presence of divine Love and harmony was felt by all, [illegible]nt faces and kind and loving words of con[illegible]d good wishes expressed at the end of the [illegible]stimony to the power of that Love that knows

[illegible]frau delivered the following address:—

[illegible]*thren and Friends:*—We greet you in love, [illegible] to rejoice with us at the birth of another [illegible]oved Mother Church of Boston. Out [illegible] and vigor of the parent vine, sturdy [illegible] forth. Our work shall be so to [illegible]ng branch with love, that its in[illegible]d wide, and its blossoms will shed [illegible]r and comfort to all those who [illegible]—the bread of Life.

[illegible]s step by step, and with overflowing [illegible] His tender care.

[illegible]ler and Teacher, Rev. Mary Baker Eddy, whose gracious consent and loving Godspeed has enabled us to perfect and complete our demonstration, we owe our grateful, heartfelt thanks of love.

Mrs. Chanfrau then read a telegram of love from First Church of Christ, Scientist, Providence, R. I., and stated that she had also received many letters of congratulation from the brethren in Philadelphia as well as from others through the Field.

EDWARD D. CUTHBERT, *Clerk.*

### The Work in Central California.

I came to Fresno the last week in April, 1895, a stranger to all but one person, who, though knowing nothing of Science, had asked me to come and treat him, the doctors having exhausted their skill and utterly failed to benefit him.

At that time Christian Science was not known here, and there was no Christian Science meeting nearer than about two hundred miles. I went to work with these thoughts for my foundation stones, viz.: not to talk Science but to demonstrate it, and let the work show for itself whether it be of God; "God is able of these stones to raise up children unto Abraham;" "If God be for us, who can be against us?" and "One with God is a majority."

The first Sunday, I read my lesson alone; the next Sunday, one person joined me; the next, four; and so on, until the last week in April, 1896, there were thirty. We then rented a hall; previous to this the meetings had been held in my room. The last week in April, 1897, twelve of us met and organized a church of over twenty members, and our number has been increasing ever since. The last week in April, 1898, we obtained our charter. The last week in April, 1899, we had a lecture on Christian Science delivered by Dr. Sulcer of Riverside, Cal.

The seeming opposition we have had has made us grow, for it has kept us at work, increased our watchfulness and prayer, which are the conditions of growth.

When I came to this city I only intended to remain until my son was healed, and then return to my home in Grand Rapids, Mich., but the work grew so rapidly that I was not able to go home even for a visit, until about a year ago.

A. J. HODGE, Fresno, Cal.

### From Weeping Water, Neb.

We are not only glad to express, but feel encouraged to show, our gratitude to God; and to the one who has made it possible to reach a hungering and thirsting world through her enlightened understanding of the Holy Scriptures.

Perhaps our dear Mother would be glad to know that the unadulterated food is in as eager demand as ever. Some time ago the church placed "Science and Health with Key to the Scriptures" and other works in the primary library of the public school, and the depot. Upon visiting these places the committee was very pleasantly entertained by the librarian of the public school. She told them she decided the books were of more value to the advanced teachers and pupils. For those reasons she had taken it to the adult's library. The books were being freely circulated and eagerly read by both teachers and scholars. The librarian felt sure it would be beneficial to all.

Doctors are taking our books and reading them, when returning them have re-borrowed them. We know Truth is permeating mortal consicousness. We feel although "the heathen rage and the people imagine a vain thing," still Isaiah's words are come to pass: "And the work of righteousness shall be peace; the effect of righteousness quietness and assurance forever."

MRS. EMMA C. BUSCH, Weeping Water, Neb.

### To Open Reading Room.

A reading room will be opened in the Ferguson Building, Sixth Avenue and First Street, by the Christian Scientists of this city. The room will be opened for the first time on Wednesday, January 3, and every Monday, Wednesday, and Friday thereafter, from 2.30 to 4.30 P.M. Members of this denomination will be in attendance, and information and literature bearing on the subject may be obtained. The reading room is free and for the benefit of the public.

*Mt. Vernon (N. Y.) Argus.*

---

The *Watchman* says, "Let a church in its own circle give the world a practical example of how people should live together and help each other and unite for the good of others, and that will be far more effective towards ushering in social reforms than the declaration from pulpits as to what a city or a state should do."

---

What a shame and scandal it is that we should consent to be saved by the sacrifice of Christ, and yet utterly refuse to practise the sacrifice of self.—A. J. GORDON.

### Satisfied Longings.

BY CLIFTON N. HILDUM.

My Father, God, to be
Nearer and nearer Thee,
My only aim.
Thou art my Sun and Shield,
Thou dost all power wield,
To Thee my all I yield—
Thy promise claim.

Oh, Love, Thou art my All,
E'er on Thy name I call,—
Lead me, I pray.
Thy foll'wer I would be,
All would I leave for Thee,
Thy glorious beauty see,
Lighting my way.

Eternal Life is mine,
He giveth me a sign
That shall not fail.
My spirit with His own
Witnesseth, thus 'tis known,
Henceforth I'm not alone—
Oh, wondrous tale.

If Thou, Truth, art my Guide,
Whate'er of ill betide,
I cannot fall.
Within the veil I cast
Hope's anchor, and 'tis fast—
Love, Life, and Truth, at last,
I know are all.

### Why Christian Science Appeals to Thinkers.

BY ANNIE LOUISE ROBERTSON.

THERE is no subject which to-day is attracting more attention from thinking people than Christian Science, and it may be helpful to consider some of the reasons why this new yet old system of healing is appealing to multitudes of suffering humanity. In the first place, as we are taught in our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, Christian Science is based upon the great fact that God—Good—is the only real power, the one Mind and true Life of all that really exists, and from this unassailable premise it teaches us that God sendeth neither sorrow nor sickness, for He is the great Physician who healeth all our troubles. Armed with this Truth we set out as courageously as David when he went forth in the name of the Lord of hosts to slay the giant of the Philistines; and, God being with us, we shall have the same victory, for who or what could successfully oppose the power of God?

The one fact alone that Christian Science is based upon the omnipotence, omniscience, and omnipresence of God, lifts it above all criticism and turns the thought of intelligent people toward it. Could any foundation be larger, broader, higher, or grander than this? Surely it is the Rock of Truth, and from this premise follow innumerable advantages. The world is greatly under bondage to fear, and on this point Christian Science is a wonderful help, for it not only destroys the claim of disease, but with it a large amount of fear in general, for as patients find that this system really does heal one disease, they gain faith that all discordant beliefs can be destroyed. Soon this faith blossoms through experience into understanding, and fear disappears, for the reality of health and happiness has been revealed. Under this system of divine healing, one is made every whit whole, since what clears the head, strengthens also the feet. Then, too, we have our remedy—the power of Truth and Love—always at hand. We are not obliged to stop to prepare it and can never forget to take it with us. On land or at sea, in the desert or on the mountain-top, God is ever-present and all-powerful. The same Truth applies to all diseases, whether acute or chronic. One never needs to hesitate, for Truth is always the right medicine and always, when correctly applied and received, does its work. While healing from disease it also heals from sin.

Experience has proved that its moral effect is as great as its physical relief. It opens one's eyes to the beauty of purity and holiness, and lifts one higher in the scale of being, physically, morally, and intellectually, until the glory of spirituality begins to dawn on the human consciousness, and Truth, the impersonal Christ and Saviour, the spiritual idea, is revealed. Thus it is not only healing the present claims of disease and sin, but it is destroying their very roots, so that in time, if we are faithful, we shall rise to the altitude of Mind which is above all evil.

To crown all, comes the conviction which nothing can shake, that the teachings of Christian Science are right because they are one with the teachings of Jesus the Christ who came to save humanity from sin, disease, and death. While we have always known that we ought to follow in his footsteps and that there is no other way of salvation, yet we did not know how to follow, for we did not clearly see the path he had trod. Now, however, we are without excuse if we do not obey his commands, for the way has been revealed to us through the understanding of God which has been given to the world by our text-book, Science and Health.

Before the Truth was made known to us through the teachings of Christian Science, many of us were stumbling and falling in the darkness of doubt and fear, not knowing what we were, why we were here, nor whither we were going. Mere words can never express our gratitude for the Light that has been shed upon Life's great problem, but we can do our utmost in loyal fidelity, in faithfully laboring for this Cause, being careful in small matters as well as great. There is plenty to do if we only seek for it and are willing to be faithful in little things until God leads us higher. Is it a small thing that Christian Science shows us how to live so that we need not make mistakes? When guided by our highest sense of divine Love we cannot wander far from the true path, but our experiences will help us to understand God and lift us out of the discords and sorrows of material existence.

How many true hearts have longed to be perfect, yet did not know how to overcome temptation; but to-day in Christian Science our hearts send forth one continual hymn of praise that the way has been shown to us whereby we can find God and heaven while yet on earth. In the Science of Christianity we have found the pearl of great price—the Love which casteth out all fear; and is it a wonder that this song of thanksgiving going up from grateful hearts to the Giver of all good, is reaching every clime and race, and that earnest men and women come to ask and to partake of the joy of the Spirit which is Truth and Love?

### Christian Science Literature.

BY MRS. LOUISE A. ROGERS.

I FEEL urged to raise my voice against the false claim that Christian Science literature costs too much. My experience convinces me that supreme Wisdom is guiding our Mother and Leader, Mary Baker Eddy, and also our Publishing Society under her care. If any one asks why I am so sure, I reply that every fair-minded person will

Digitized by Google

admit that when one has tested a system according to its rules and found it not wanting, he knows whereof he speaks.

To relate in detail the innumerable proofs which have come to me, would require too much space, Words are inadequate to convey our highest realizations of Truth as applicable to our every need. But let me assure every earnest seeker for Truth, be he rich or the poorest in this world's goods, that Jesus' words, "But seek ye first the kingdom of God, and His righteousness; and all these things shall be added unto you," enunciate a Principle which, when applied, is just as certain in its results as the Principle governing mathematics or music. I did not know this until I studied and applied the rules given in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. Neither did I learn this great fact through what is called being rich, but rather do I feel the greater is the blessing to the poor and needy, if they will but invite this meek and lowly stranger (Truth) into their consciousness. I had heard these words of Jesus preached for years, but it was like preaching about the rules of mathematics, without teaching how to apply them scientifically.

It was after years of hopeless misery, suffering many things of many physicians, each one undoubtedly doing his best, that I was persuaded to give Christian Science a trial. My religion would hardly permit me to try what I considered, at that time, faith-cure. However, I was healed, although I told my healer, after questioning her, that she would have to excuse me, if I laughed at the idea of Science healing me, who had gone through so much and tried so many supposed remedies; and if faith would be necessary, I wished to distinctly inform her that I had none. She smilingly replied that I could have the laugh and need have no faith, if I would be strictly honest and live the rule as fast as I learned what it was. This brought my right senses into action, and I said I was willing to do so while giving the Science a trial.

I had about two months regular treatment and was healed. Now I ask, Is Christian Science, in its various helps of treating, teaching, and literature, too expensive? I think not, when compared with being at a health resort more than a year at from sixty-five to seventy-five dollars per month, as I have been several times, and have been told there that I could only be made a little more comfortable invalid.

Jesus said, "Ye shall know the truth, and the truth shall make you free." But I seemed to be a captive behind thick iron bars that friends and specialists were unable to break. But what power can there be like unto our God who made all and made it good, of whom Daniel said, "My God hath sent His angel, and hath shut the lions' mouths." Therefore my assurance that every one, who honestly and earnestly seeks, will find a sure cure for every dis-ease—physical, moral, and financial—in Christian Science.

My gratitude should be, and is, boundless, that in this age all are privileged to touch at least the hem of the seamless robe of righteousness, and feel and know the "Peace, be still" which our common Father—Divine Principle—is teaching us through His trusted and tried servant, whose loving and unselfish care for her sacred trust is well symbolized by the tender love which only a mother can know.

## Christmas Musings.

BY M. V. B.

As I looked over the table whereon were placed my Christmas gifts, examining each article, I seemed to feel the delight of a child. There was nothing of great value, nothing which, if I had purchased, would have given me such joy in possessing, but each one of these little gifts was an expression of love from some dear one, and, viewed from that standpoint, they were all as rare gems to me. As I pondered these things, I thought, How sweet this interchange of love at Christmas time! What pleasure I had experienced in preparing the little gifts which my small means had allowed me to make, and what happiness in these dear remembrances which lay before me. Then my thought wandered on to the many, many lives I would gladly have brightened this Christmas day had not limited means debarred me. Then I saw how necessarily partial our expressions of love must be when confined to gifts material, limited as matter always is, and at most but expressing the human love, only "the pattern of heavenly things." My heart went out to God in prayer to reflect more of divine Love, that priceless and impartial gift of "peace on earth, good-will to men" which Christmas day commemorates, for the source of this Love is boundless, and all who reflect it bestow a gift that lightens every heart which comes within their range of thought, even their enemies. It is unlimited and unlike the material. Our capital always increases in proportion as we give. How important, then, that our minds and hearts be ever open to this ceaseless fountain of Love that it may flow on through us to all mankind, removing the mountains of belief and making the valleys of depression to sing with immortal joy.

## Rest.

BY HENRY BRADFORD SIMMONS.

HAVE you found rest—not as the world giveth it but as Jesus gave it when on earth and as now revealed in Christian Science?

We shall never find rest without the presence of Love—Love enough to love our enemies and dissolve all malice within and without.

When Jesus stood before the band of men and officers in Gethsemane and declared "I am he," his pursuers fell to the ground,—fell before Love's representative,—for the prince of this world found no response in Love—Love is his annihilation.

Let us pray for more Love that each thought in us or for us which is contrary to Truth—we are not dealing with personality,—may fall before Love; then will come rest, —rest in harmonious action.

### Uses of the Bible.

The Bible has been a quarry for sculptors, a gallery for painters, a text-book for orators, a standard for poets, and a dictionary of quotations for everybody. It was a fountain of melody to Handal, to Mendelssohn, to Haydn; a field of phantasmagoria to Dante; a spectrum of human life to Goethe; a consecrating oil to Shakespeare; a window in heaven and a light upon earth to Bunyan; a mystery of mysteries to Byron, and a pocket companion to Scott.—*Selected.*

The *Advance* of Chicago says, "Mr. Moody knew his Bible so well that his eyes and fingers could find any passage that he wanted from Genesis to Revelation in the hurry of rapid speech, as easily as the fingers of a master musician can find the notes of a familiar sonata on the keyboard of a piano."

Alfred Tennyson said, "The Bible ought to be read, were it only for the grand English in which it is written. It is an education in itself."

# Testimonies.

### Sciatic Rheumatism and Other Ills.

In September, 1893, I began to suffer from sciatic rheumatism. Shortly after the first attack I was carried home one night from my engine-room after having a hypodermic injection of morphine administered. I remained in bed for two or three weeks and then returned to work, using a cane, as I was very lame. I remained in this condition until December of the same year, when I suffered an aggravated attack of spinal trouble and severe nervousness. My stomach and bowels became so diseased that I could not eat anything without the greatest suffering, and sleep was almost unknown to me. Medicine had no effect on me except to make me worse. I could only lie and think over the past, and became almost a fit subject for the asylum. The last disease confined me to my home for three years.

During this time I was constantly under the care of a physician. I had exhausted the skill of five of the best of our city, and my case was pronounced incurable.

Many kind friends visited me but none of them brought me any light. One or two suggested Christian Science, not being interested themselves at that time. But being surrounded by seeming opposition the subject was dropped for a short time. Again hearing of the many cures wrought by Christian Science in our city and vicinity, and especially that of our county clerk, who was almost raised from the dead, I became more and more eager to meet the Scientist who was having such success.

Shortly after I received my first visit from her. This was in July, 1896. The first treatment had its effect. Her encouraging words never left me, but the surrounding opposition was so great that her visits to the house were discontinued. I received absent treatment for five weeks when I became able to walk to her house, a distance of eight blocks. My healing was somewhat slow, yet it was wonderful, for I was, in a word, saved from the very grave. I soon became a regular attendant of the Christian Science Church and joined the Mother Church and local church January, 1898.—ARTHUR A. WEBBER, Atchison, Kan.

### A Severe Case of Heart Trouble.

I wish to add my testimony to those appearing in the *Sentinel*, and tell of my gratitude to my heavenly Father for the restoration to health, through Christian Science, of a son who was considered a hopeless case. The best physicians in two cities pronounced him incurable, and said that he could not live more than two months.

Not being a Scientist, and not knowing how to trust God in such a matter, I was frantic. My sister-in-law, who is a strong Scientist, asked me if I would not like to try Christian Science. I said, I do not understand it and have but little faith, but I must give him the one chance, as everything has failed.

That day she called on one of the Science healers here and told her about the case. On account of a previous engagement, the Scientist could not come that day, but promised him absent treatment. He was afflicted with a most severe form of heart trouble, the result of a long siege of rheumatism. He had to be almost carried to the table, as he desired to sit with the family for his meals. That night he was leaning on the table, bolstered by pillows as usual, and we had gone to the kitchen to do our evening work. Not long after, the door opened, and in walked my son. He exclaimed, "Oh, it is all out of my knees, and my heart does not hurt one particle." You can imagine how he felt, after weeks of extreme suffering and helplessness. You can imagine a mother's joy and happiness as well. He never returned to his old condition, but improved daily. He was under treatment but three weeks. To-day he is a strong and healthy boy.

MRS. O. M. WILEY, Los Angeles, Cal.

### What Christian Science has Done for Me.

Seeing so many good testimonies given in the *Sentinel*, I think it my duty to give to Christian Science due credit for what it has done for me in overcoming the liquor habit that kept me in bondage for twenty years. I had been told of Christian Science years before, but I would have nothing to do with it. I was constantly in bar-rooms and at gambling-tables; did not think about home or my family. In fact, I was down in the gutter and could not get employment anywhere, but now I have been working for three years in one place.

The thought of turning over a new leaf often came to me, but mortal mind would say, no. Three years ago a Christian Scientist talked to me and I said I would take treatment. I shall never forget that night when Christian Science came to me, and what happiness it has brought to my home. Since that demonstration was made, I saw that we were sitting in darkness. I can now overcome other troubles that come up. People often remark about the change there is in me. My wife has been raised from a bed of sickness after all medical skill had failed to heal her. We are both members of the Christian Science Church here, and our two little boys attend the Sunday School.—THOS. COUCH, Grand Forks, N. Dak.

### Well and Happy.

Having been sick and unhappy, with no hope of being any better, physically or spiritually, I was induced to consult a Christian Scientist. This I did, telling my woes, and concluded by saying in mournful tones, "I am *so* weak and *so* weary." The Scientist replied, "You are a child of God. The Psalmist says God healeth all our diseases. Now turn from these mortal beliefs of sickness and sin, and drink in the Truth. 'Tis Truth that makes us free. Go to the fountain of Life and live forever. Trust in the promises and health and happiness will be won." "How shall I begin?" said I. "Read 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy, and the way will be plain to you," was the reply. I did so; this advice was as a grain of mustard seed. Paul said, one may plant and another water, but God alone can give the *increase*. The seed was sown, God made it grow, and the increase came. Very soon birds of promise began to alight in the branches. The messages came thick and fast. They were, Jesus said, "Follow me." "The God of Jacob is *your* refuge." "Seek the Lord and His strength, seek His face evermore." Were I to tell all the good messages that are in the branches of my tree, the entire edition of the *Sentinel* could not contain them. Suffice to say, I am well and I am happy. "O Lord my God, I cried unto thee, and thou hast healed me."—T. B. BEACH, New Haven, Conn.

### Partial Blindness Healed.

It has been about two years since I first heard of Christian Science, and the first knowledge I had was the healing of my husband of several troubles; among others was partial blindness. All were successful demonstrations. Then several troubles of mine were healed. The most wonderful was this fall. I was taken with a very severe attack of pneumonia. I sent for our healer, who treated me so successfully that I soon recovered and am well and can work as well as ever I did, although I am in my seventy-third year.—MRS. K. MELLEN, Emporia, Kan.

## From the Religious Press.

### Patient Continuance.

"If you read the lives of the men who have best served the world and brought it forward out of darkness into truth and righteousness, and perhaps left behind them imperishable names," says Rev. J. M. Greenough, "you will find invariably that they have been men richly endowed with this grace of patient continuance—full of the strong self-mastery which can work steadily for a far-off result; which does not demand its day's wages always in the evening time; which is not discouraged because the wages are long withheld; men who were not intoxicated with swift success, or disheartened by momentary defeats; who did nothing by easy brilliant leaps, but everything by painful, unresting toil, and who had infinite reliance on the Divine Justice, which is ever on the side of honest labor and patient hope. There are no lives worth reading which have not been based and built up on these qualities. The great teachers from whom the world has learned everything that is worth knowing were men who had laid to heart the eternal principle, that nothing worthy can be done without persistent work and waiting. They believed that the human heart moves slowly towards the truth; that it must be 'precept upon precept, line upon line, line upon line; here a little, and there a little.' The world moves, but always with stolid resistance and sluggish feet, and those who push it forward must do it in the spirit of the Greatest Teacher. 'In your patience possess ye your souls.' By those words all great thinkers and workers have been swayed and inspired."—*The Watchman* (Baptist).

### Mr. Moody's English.

I think that after he has gone from us it may be seen and admitted that we have had with us, not alone a man of great simplicity, faith, and earnestness, but a man whose command of the English tongue is singular and almost unapproachable. When I hear him I think of Bunyan and De Foe, and wonder at the crisp, clear, transparent Saxon which he uses. . . . Barring certain infelicities of syntax and pronunciation, and taking his style by itself, I feel when I hear him that if Macaulay could put Bunyan almost at the head of all masters of style, for the same reason men of culture ought to admire the clear, terse, forcible, and clean English of Mr. Moody. Indeed the charm of his style is so great that again and again I find myself wondering at it, and asking myself whether, if he had had a scholastic education, he would have kept that singularly pure Saxon id'om of which he is a master.

REV. WILLIAM L. GAGE, D.D.
*The Congregationalist*, Jan. 30, 1878.

### Bible Statistics.

A reliable statistician asserts that since the beginning of the present century the Bible societies of this country and Europe have put in circulation 280,000,000 copies of the Bible and parts thereof. There are seventy-three of these societies. The British and Foreign Bible Society is first in the amount of business done, and is credited with an output of 160,000,000 copies of the Bible. The American Bible Society stands second, with a credit of 66,000,000 volumes. It is estimated that the entire distribution of the sacred volume, within this century, reaches 500,000,000 copies. It is certainly cause for thankfulness and rejoicing that so much interest has been taken in this great and benificent work, for the prosecution of which millions of dollars have been expended. That the progressive increase in the amount of business done by the Bible Societies is a leading factor in the steady progress of civilized countries, seems to be demonstrably true.—*The Universalist Leader.*

### Foreign Missionary Figures.

A study of the reports of the foreign missionary societies in the United States for the past year shows that altogether $4,710,430 were spent and 29,690 converts made. There are 3,478 missionaries working in foreign fields who employ 17,300 native helpers. The native Christians themselves contribute over $600,000 to the work. It will perhaps surprise some of us to learn that of American missionaries in the foreign field 2,095 are women, or more than three-fifths of the whole.

*The Churchman* (Episcopalian).

The *Independent*, in giving religious statistics, sums up the whole number of denominations in the United States as forty-nine. Some of them have several bodies each. For example, the Presbyterians have twelve, Lutherans twenty, Baptists, thirteen. Whole number of ministers, 153,901; churches, 187,803; church members, 27,710,000.

## Miscellany.

### Egyptian Inscriptions.

When the hieroglyphic inscriptions of ancient Egypt first came to be deciphered and read, one of the earliest questions put to their interpreters was, Have you discovered any allusions in them to the Israelites and their exodus out of Egypt? For many years the answer was no; and as the study of the monuments advanced the conviction deepened that no other answer could be expected. The Israelites were but a small body of despised Asiatics, living on the outskirts of the Pharaoh's kingdom and reduced, during the latter part of their settlement in Egypt, to the condition of public serfs. It was no more probable that the lordly scribes and rulers of Egypt would take any notice of them in their records, than that notice should be taken to-day by English writers of the Bedouin tribes who still hover on the borders of Egypt. The Hebrews were hated by the native Egyptians, and after their departure from the country, which was accompanied by so many disasters to the Egyptian people, the natives were likely to endeavor to banish them from their memory. As for the plagues which forced the reluctant Pharaoh to set free his workmen, a veil of silence would naturally be drawn over them.

But it is always the unexpected that happens in Egyptian exploration. Not only has the name of the *Israelu* or Israelites been found on an Egyptian monument, but there is also a reference to the oppression under which they suffered. Sidelights, moreover, have been thrown on the history and geography of the Exodus, and the event has been fitted into what we now know to have been the current of Egyptian history. PROF. A. H. SAYCE.
*The Homiletic Review.*

### New Year's is Pay Day in China.

New Year is the national pay day in China. All accounts must be squared up at that time, and the man who can't raise money enough to pay his debts has to go into bankruptcy. The laws are such that the creditor can enter the debtor's house and take what he pleases if there is not settlement. To prevent such action families club together and make all sorts of compromises to keep up the business reputation of the clan. New Year's is a great day for the pawn-brokers. Their shops are crowded with people who want to redeem their best clothes before the New Year. There are crowds also who want to pawn their things in order to get money to pay their debts. Pawn-brokers receive high rates of interest in which they are protected by the government.

The Chinese paint the whole country red on New Year's day in more senses than one. Red is the color which with them denotes good luck and prosperity, and all the New Year's cards and invitations are on paper of that color. Every child gets its New Year present wrapped in red paper, and red inscriptions are pasted over the doors of the houses.—*London Mail.*

### "Unspotted from the World."

While traveling in a coal mine district, I noticed how very dingy the town appeared. The coal dust seemed to blacken buildings, trees, shrubs, everything. But as a foreman and I were walking near the mines, I noticed a beautiful white flower. Its petals were as pure as if it were blooming in a daisy field.

"What care the owner of the plant must take of it," said I, "to keep it so free from dust and dirt!"

"See here," said the foreman, and taking up a handful of coal dust, he threw it over the flower. It immediately fell off and left the flower as stainless as before.

"It has an enamel," the foreman explained, "which prevents any dust from clinging to it. I think it must have been created for just such a place."

DR. T. L. CUYLER.

## Notices.

### Supplements to the Sentinel.

Two supplements to the *Christian Science Sentinel* have been issued. The first is the able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The workers in the Field will readily see the wisdom of giving these supplements the widest possible circulation, and the extremely low price at which they are issued will enable them to do so. The price of the supplements is as follows: Single copies, two cents each, postpaid; ten copies or more to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### An Interesting Article.

The November number of the *New England Magazine* contains a finely illustrated article regarding "The Discoverer and Founder of Christian Science." Many of the illustrations are here produced for the first time, and the text of the article will be of fresh interest to all Christian Scientists. This magazine will be valuable for distribution, and the Publishing Society will receive orders and send postpaid any number of copies at twenty-five cents each.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII, sec. 1. The per capita tax for the year beginning June 1, 1899, and ending May 31, 1900, is now due.

| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

## Items of Interest.

Senor Mabini, the strongest counsellor of Aguinaldo and his Congress in the Philippines, has addressed a letter to the correspondents in the Philippines in which he requests that Congress either nominate a civil commission which may put itself in contact with the influential Filipinos, or permit a commission of Filipinos to come to Washington to express the desires of the people. Washington officials say that the Filipinos must first surrender, and then they will be given a full and free conference, with a view of granting them the largest measure of self-government.

The reading room for newspapers and periodicals in the library of Congress is said to be the largest newspaper reading room in the world. Five hundred American daily newspapers and one hundred foreign papers, mostly daily, are subscribed for. Every State in the Union is represented, with all the colonial possessions. The weekly and monthly periodicals number about two thousand. The files are arranged alphabetically by States and counties for the convenience of visitors from different parts of the United States and from foreign countries.

Tuesday night, January 23, General Warren succeeded in driving the Boer garrison from Spion Kop, a high hill commanding a long line of Boer intrenchments. The British, however, were unable to maintain the position, and in twenty-four hours retreated under cover of darkness. Two days later General Buller withdrew the entire British force south of the Tugela River. The British loss was heavy. Having failed in his flank movement to reach Ladysmith, the besieged town is now as far removed from help as when General Buller first started.

The call for the National Prohibition Convention to be held in Chicago, Wednesday June 27, has been issued. The basis of representation has been fixed as follows: Each State is entitled to four delegates at large, and twice as many delegates as the number of representatives in the lower house of Congress; each State may also send one additional delegate for every thousand votes cast for the Prohibition candidate for President in 1896. Each territory is entitled to two delegates.

The Ecumenical Missionary Conference, to be held in New York in March next, will have many distinguished members. About twelve hundred delegates have already arranged to attend. One fourth of these come from abroad as representatives of missionary societies in Germany, Denmark, England, Norway, Sweden, Holland, and Switzerland. President McKinley has promised to attend if his public duties will permit, and preside at one of the day's sessions.

For one week, beginning March 13, Rev. Charles M. Sheldon, the author of "In His Steps," will have editorial and business control of the *Topeka* (Kan.) *Daily Capital*. He will dictate its policy, edit its news columns, and control its advertising. This unique arrangement in the history of journalism is for the purpose of affording Mr. Sheldon an opportunity to demonstrate, as fully as possible, the policy he would pursue in the publication of a Christian daily newspaper.

The District of Columbia originally contained one hundred square miles of territory. Sixty-four square miles of the territory was on the Maryland side of the Potomac River, and the rest on the Virginia side. In 1846 that on the Virginia side was ceded back to the State. As a prerequisite to building the great memorial bridge across the Potomac, it is understood that the authorities will insist on the restitution of a part, at least, of the territory.

A naval parade on the new canal will be one of the attractions on the occasion of Admiral Dewey's visit to Chicago, May 1. It is proposed to have a fleet of small vessels, the number to be the same as that which Dewey commanded at Manila. In this way a better opportunity will be given to see the Admiral, and special attention will be called to the proposition to make the canal a part of the waterway from the lakes to the Gulf of Mexico.

The largest single span bridge in the world is to be built across the Hudson River at New York City. The distance between piers will be 2,730 feet. The height above the river will be 150 feet. The bridge will be double-decked and provided with a carriage road, a foot path, a bicycle path, and four trolley car tracks on the upper deck. On the main deck will be six tracks for freight and passenger trains.

It is authoritatively stated that the United States will not join other nations in announcing what shall be contraband of war. In The Hague Conference the American representatives submitted proposals that all private property at sea should in time of war be respected. The proposition was not accepted, and it is stated the Government will not restrict itself to principles which are less comprehensive.

A bill has been introduced in the Maryland Legislature for the re-establishment of the boundary line between Maryland and Pennsylvania, commonly called Mason and Dixon's line. Five thousand dollars is appropriated for the purpose. When the line was originally run in 1767 by two English astronomers, Charles Mason and Jeremiah Dixon, it cost over one hundred and seventy thousand dollars.

At the second annual banquet of the American Asiatic Association, given in New York City recently, the Chinese minister at Washington made a remarkable speech in which he advised Americans to be civil in their transactions with China. He said Americans could not expect China to keep her doors open if her merchants and her people are excluded from the United States and the Philippines.

Colorado has taken the first steps toward acquiring land under the Carey act, which permits each state to acquire one million acres of arid government land, merely by putting it under irrigation. The laws of Colorado provide that land acquired in this manner shall be sold at fifty cents an acre, and the amount sold to one person is limited to one hundred and sixty acres.

A national pension committee of the Grand Army of the Republic recently presented to the President a plan for the establishment of a court of appeals on pension cases to sit in Washington to hear cases of appeal from the decisions of the pension bureau. The President received the suggestion with favor, and promised to give the matter careful consideration.

A magnificent sword and a fine silver service were presented to Commander Richard Wainwright, January 24, by his Washington friends. President McKinley and prominent naval and army officials were present. Commander Wainwright commanded the Gloucester and succeeded in sinking two Spanish torpedo boats off Santiago de Cuba on July 3, 1898.

Two priests have arrived from Manila with data on the Philippines and their people, sufficient to make twelve large volumes. This matter will be translated and printed at the expense of the government. General Otis, Commissioner Schurman, and Senator Beveridge suggested to President McKinley the advisability of having this work done.

The House Committee on Interstate and Foreign Commerce have changed the appropriation section of the Nicaragua Canal bill. Ten million dollars is all that will be available at present, but authority will be given to contract for the entire work at a total cost not exceeding one hundred and forty million dollars.

On account of complications arising out of the Boer war, Lord Pauncefote, England's ambassador to this country, will probably be retained here, although for two years he has been past the age limit, seventy years. Conditions are such that his experience may be needed.

In response to the Senate resolution of inquiry, Secretary Gage states that during the year just ended $2,880,000 has been coined from silver bullion purchased under the Sherman act, to meet the demand for fractional currency.

Seventy-four Spanish officers, one thousand enlisted men, twenty-two civilian officers, twenty-one wives, and thirty-five children were recently furnished transportation from Manila to Spain.

W. F. Draper, the American ambassador to Italy, has established a scholarship of international law and diplomacy in the law school of Washington and Lee University, at Lexington, W. Va.

Busts of Benjamin Franklin, Horace Greeley, George W. Childs, Charles A. Dana, and Joseph Medill are to be placed in the Publishers' Building of the United States at the Paris Exposition.

The report of the committee on elections and privileges in the Quay case have been presented to the Senate. The majority report opposes the seating of Mr. Quay.

The St. Louis car works has been furnishing cars to foreign countries and has decided to erect a hundred thousand dollar plant in England, probably in London.

Marshall O. Waggoner, the noted infidel of Toledo, O., who was recently converted to Christianity, has burned his magnificent library of infidel writings.

By a vote of 268 to 50 B. H. Roberts of Utah was permanently excluded from the House of Representatives at Washington.

It is said that nearly all the desirable rooms on the trans-Atlantic liners from New York are engaged for next summer.

Miss Susan B. Anthony is attempting to raise a million-dollar sinking fund for the Woman Suffrage cause.

The population of London equals the combined populations of Paris, Berlin, St. Petersburg and Rome.

If all the money in the world were divided equally among the people, each person would get about $30.

It is computed that there are four million men capable of bearing arms in Great Britain.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## Turning Chicago River Backward.

AFTER the expenditure of nearly thirty-five million dollars Chicago has turned the water of Lake Michigan into an outlet which nature provided before the glacial period. The big drainage canal is now completed. The prehistoric course of Michigan's waters toward the Mississippi will again be taken, flowing through the Des Plaines and the Illinois River valleys into the Father of Waters at a point twenty miles north of St. Louis.

For more than fifty years Chicago has been troubled with the question of pure water supply, and the disposal of its sewage. Nearly the whole of the city is drained into the Chicago River, which flows into Lake Michigan, polluting the water out to and even beyond the crib or intake.

Tunnels built under the lake at a cost of millions of dollars hold the great mains through which Chicago draws its water supply.

As the city grew, the seasons during which the water was unfit for use became more frequent, until to-day the citizen reads from his morning paper the usable or unusable condition of the water which he must consume in his household.

As far back as 1856 the people, looking ahead, talked of just such a drainage canal as has been completed.

Intercepting sewers and flushing canals were mentioned, but the drainage canal, cut through the natural divide separating two basins, was considered the only relief, and this idea was hung onto with a tenacity of purpose which finally brought about the consummation of one of the greatest engineering feats chronicled in history.

The city had sent able engineers to every important city in the world on a mission of investigation as to sewage methods, but no parallel case could be found.

Chicago, with the largest supply of water, practically pure, nearer, and more accessible than that of any other city, was daily rendering it more and more unfit for use. It was foreseen that in a few years the condition would become insufferable, and that a canal which would reverse the eastward flow of the Chicago River and restore the ancient western discharge of the lake into the Des Plaines valley was the only solution of the vexed question.

In order to enhance the value of such a costly piece of work, it was proposed that the undertaking should have a dual object, that the canal should be large enough and deep enough to float vessels back and forward between Lake Michigan and the Mississippi River.

Nothing short of a commercial feature of this magnitude would compensate the people living in the Illinois River valley for the floating of the sewage of a great city into their country. Indeed, it was known that such a consideration would not suffice to down opposition unless it could be demonstrated that the canal would take from Lake Michigan a supply of water in volume capable of diluting the sewage.

To thoroughly demonstrate the feasibility of the idea The Citizens' Association of Chicago was formed.

This organization gathered from the four corners of the globe the best engineering talent money could employ, and set about to launch the project and quiet objections.

September 3, 1892, was a momentous day. On that day ground was broken on a project, the carrying out of which in so far as it related to a ship canal, Joliet had predicted more than two hundred years before. To-day the main drainage canal or the sanitary district of Chicago is completed from its confluence with the south branch of the Chicago River to Lockport, its southern terminus, a distance of 28.50 miles.

The Des Plaines is a stream of wide fluctuations with no constant reliable supply. During some seasons its whole discharge would pass through a six-inch pipe. Again, its volume reaches eight hundred thousand cubic feet per minute, rolling along and flooding the whole valley. This stream had to be controlled, which has been done at a cost of one million dollars.

Thirteen miles of new river channel had to be excavated and nineteen miles of levee built to divorce the waters of the Des Plaines watershed from the channel which now receives the waters of Lake Michigan and passes them to the Mississippi via the Lower Des Plaines and diversion channel, which is two hundred feet on the bottom.

At the head of the river diversion it was necessary to provide a spillway to allow surplus water to flow toward Chicago, because arrangements have not as yet been made for carrying the entire flood waters of the Des Plaines through the city of Joliet.

The spillway is a concrete dam capped with cut stone, its wings faced with stone masonry. It is 307 feet long, its crest 16.25 feet above Chicago datum (this datum is referred to low water of Lake Michigan and is 579.61 feet above sea level at Sandy Hook). No water flows over this spillway until the volume passing the water gauge above reaches three hundred thousand cubic feet per minute.

The rock channel of the canal provides for six hundred thousand cubic feet per minute, which means a provision for three million people. The narrower earth channel provides for a flow of three hundred thousand cubic feet per minute. The law requires a flow of two hundred thousand cubic feet for each one hundred thousand of population, and as the population increases the flow must be increased. With this feature of the law in view the excavation in hard substance was made to serve for many years to come, while the narrower channel in earth may be widened at comparatively small cost. The width in the rock channel is two hundred feet, in the earth one hundred and sixty feet.

The river below Lockport follows the trough of the valley down a steep declivity to the canal basin in Joliet. The fluctuations in Lake Michigan by a varying slope of water surface will be felt at the controlling works and provision has been made to meet these fluctuations within a range of five feet above datum and eight feet below, or an extreme oscillation of thirteen feet. The fall from

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

datum to the controlling works to the level of the upper basin is about forty-two feet in a distance of four and one-third miles.

The controlling works comprise seven sluice gates of metal. The sluice gates are a modification of the Stony gate type, the gates having a vertical play of thirty feet. The bear trap dam has an opening of one hundred and sixty feet and an oscillation of seventeen feet vertically.

The dam is two great metal leaves hinged together and working between masonry bulkheads. The down-stream leaf is securely hinged to a very heavy foundation, and the up-stream leaf so placed as to present the barrier to the water.

The structure is operated by admitting water through properly constructed conduits, controlled by valves beneath the leaves just described.

To raise the crest of the dam water is admitted from the up-stream sile and the discharge is shut off until the desired height is obtained, and then the valves are adjusted so that the volume of water beneath the leaves shall be constant.

To lower the crest the water beneath the leaves is drawn off until the desired height is reached, when the valves are again adjusted so as to maintain a constant flow of water.

All the bridges on the main channel are movable structures. These are provided to meet the requirement of the law enabling ships to pass back and forward. The Atchison, Topeka & Santa Fe railroad crosses the channel twice between Chicago and Joliet, its right of way paralleling the channel.

The total amount of excavation on the main channel was 28,500,000 cubic yards of glacial dirt and 12,910,000 of solid rock. From the river diversion 1,810,000 cubic yards of glacial dirt and 258,659 cubic yards of solid rock. The grand total aggregates 43,478,659 cubic yards. The different contractors on the work invented and utilized machinery capable of removing an enormous amount of material. During the month of April, 1895, 86,400 cubic yards of solid rock was taken out, which has never been equaled since man began to quarry stone.

The cost of the different parts of the work, in part, is as follows:—

| | |
|---|---|
| Diversion of the Des Plaines River . . | $1,000,156.38 |
| Main channel to Lockport . . . . . | 18,318,609.43 |
| Controlling works . . . . . | 261,750.67 |
| Chicago River dredging . . . . . | 537,975.92 |
| Des Plaines River improvement . . . | 790,126.12 |
| Railroad and highway bridges . . . | 2,611,348.00 |
| Capitalization railroad bridges . . . | 410,000.00 |
| Right of way . . . . . | 3,175,000.00 |
| Administration to Jan. 1, 1900 . . . . | 2,109,000.00 |
| Total estimated cost to Jan. 1, 1900 . | 33,525,691.20 |

The drainage channel having been completed according to law, Congress is now expected to take up the matter of improving the Illinois River so as to make it navigable for vessels drawing less than twenty-two feet of water. The work done by the sanitary district of Chicago constitutes two-thirds of the entire cost of creating a channel from Chicago to the Mississippi River which would be navigable for the largest boats which ply between New Orleans and St. Louis.

That the government will carry on this feature no one in this section of the country has the remotest doubt.

*Denver Republican.*

## Playthings that Educate.

CHILDREN are imitative, and their minds are built up by the impressions which they receive, says Dr. Paul Carus, editor of the *Monist* and the *Open Court*.

The first impressions made on a child's mind are especially important, as they form the basis of all later impressions and remain for a long time, and sometimes forever, the standard by which they are measured. Should we not, therefore, exercise the greatest care, and instead of leaving the mental impressions of children to accident, see to it that they are throughout correct?

The first education of babies is, on the whole, left to uneducated nurses, who sometimes have not the slightest idea of the sacredness of their trust, and know very little of the right treatment of infants.

Use every opportunity in life to teach children the elementary facts and truths of the sciences which in later life will be of use to them. Familiarize them as much as possible with instructive observations. Teach them through the eye a knowledge of facts that will serve as examples of important scientific truths. Convey your first instruction by merely showing something, by making experiments, etc., but beware of superadding too quickly the theories invented to explain the facts, and if you mention them, characterize them at once as hypothetical. Let the experiment speak for itself and remind the child of similar or analogous experiments and experiences.

Whenever you buy presents for children bear always in mind the instructive feature of games and toys. Children are by nature anxious to learn, and they will themselves prefer playthings which serve to educate them and teach a lesson. A toy through which a child becomes familiar with a physical law of some kind is the best investment you can make, and will, if properly used, amply repay the cost.

There is a habit now in vogue in the kindergarten which superadds to the facts of nature the imagination of fairy tales. If you wish your children to acquire a sound conception of reality and a sense for genuine poetry, you had better avoid this pseudo-fiction of the nursery, which only distorts nature and detracts from her intrinsic beauty. Facts as they are, are in themselves sufficiently poetical, and need not the false glitter of a fairy-tale imitation.

*Boston Herald.*

## New York's Underground Railway.

THE New York rapid transit tunnel will be twenty-one miles long (approximately) and cost $35,000,000. It will take three years to build.

The Boston subway is two and one-tenth miles long and cost $5,000,000.

The Paris (France) underground railway system is one and one-sixteenth miles long and will cost $1,600,000.

There are three underground railway systems in London. The metropolitan and district railways are almost one hundred and one miles long and cost from $1,000,000 to $5,000,000 a mile to build. The city and South London system is three and one-half miles long and cost $4,199,850.

The Brooklyn bridge cost $13,000,000.

The New York rapid transit contract is the largest single contract ever let.

Two million dump cart loads of earth will be taken from the excavations.

More than 65,000 tons of steel beams will be used.

Almost 20,000 cubic yards of enamelled facing and common brick will be set in arches, tunnels, and stations.

Five hundred thousand lineal feet of underground track and 60,000 feet of elevated track will be laid.

Nearly fifteen miles of sewer will have to be taken up and relaid.

Eight thousand tons of cast iron will go into tubular tunnels and station construction.

Five hundred thousand square yards of granite blocks and asphalt will be necessary to restore streets.

*Boston Herald.*

# Among the Churches.

### Go to a Larger Hall.

Beginning Sunday next (January 7) the services of the Christian Scientist society will be held in the Knights of Pythias Hall, 112 West State Street, a much larger hall than that which has been their meeting place for the last few months; also one of the pleasantest halls in the city. A well-informed member of the society says, "The growth of Christian Science throughout the country is a matter of common knowledge, and Rockford does not lag. While many have supposed that Christian Science was introduced here years ago, and that it has been followed more or less continuously ever since, the fact is that Christian Science, which by the informed is understood to refer to teachings based wholly upon the Bible and the teachings of Rev. Mary Baker Eddy, had its first systematic start here, so far as known, in the summer of 1897. Five or six persons interested met at that time, but it was not until some months later that a society was formed. In a year from the beginning the number attending had so far increased that removal from the small quarters occupied was necessary. The attendance at Sunday service at times reaches one hundred now, and averages probably seventy-five; while from fifty to seventy are usually in attendance at the Wednesday evening meeting, which in Christian Science takes the form of a testimonial service. Here, as in other places, the number interested and attending the meetings is steadily growing. The majority are attracted by the physical healing promised, and it would seem must be held by the fulfilment of the promise. More than this, there is much and increasing testimony, not alone in the publications of the sect but in the secular press, going to show that there is, inseparable from the physical benefits derived, greatest spiritual help. That this as well as the claims of physical healing are by the majority of people doubted is perhaps not strange, since the average person's conception of what Christian Science teaches, both as to sickness and as to sin, is very far from the truth of what is taught. This misconception is no more ridiculous to those outside than to those who have knowledge of what Christian Science really is."

The Christian Science sermon is composed wholly of citations from the Bible and the text-book of the sect, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. Mrs. L. V. Weatherwax, a member of the Mother Church, started the meetings here, and is the First Reader. For twenty-four years the meeting night of the Arthur-Guinevere Lodge, Knights of Pythias, was Wednesday, but in order to let the hall to the Christian Science society the lodge decided to meet Friday night.

*Rockford (Ill.) Daily Gazette.*

### Articles of Incorporation.

Articles of association of the First Church of Christ, Scientist, were filed to-day (Thursday, December 28) in the town clerk's office. The preamble states that the subscribers associate themselves as a body corporate, according to statute law regulating the formation and organization of Christian churches, there being no ecclesiastical society connected with this church.

The first article says that the name of the corporation shall be known as the First Church of Christ, Scientist. Its purpose is to "preach the Gospel according to the doctrines of Christ as found in the Bible, and in 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy."

The statute laws relating to incorporation of Christian churches are made a part of the articles, the corporation to be located in this city.

The president of the association is Luther S. Ayer and Louise B. Warner is clerk. The following is the full list of the subscribers: Luther S. Ayer, Louise B. Warner, Orissa J. Betts, Emma C. Van Dyke, Mary E. Foote, and George E. Betts.

The date of the association formation is December 23, 1899.

The society meets every Sunday at eleven, and Wednesday evening at eight in room 313 Court Exchange Building.—*Bridgeport (Conn.) Evening Farmer.*

### Christian Science in Paris.

24 Place Malesherbes, Paris, January 7, 1900.

Since the opening of the First Christian Science reading room in Paris two years ago to-day, the general progress of Christian Science has been a steady growth. The interest taken in the work by all classes is sincere and earnest.

The following June a church was formed, and later a Sunday School. The advantages derived from these organizations prove the wisdom of the step taken. The numbers attending the services Sunday, and also Wednesday evening, are constantly increasing.

We enter on the third year of our work with hearts full of thankfulness to our Heavenly Father for all the blessings we have received, for the manifestation of His love in revealing the hidden mysteries of the Scriptures to our dear Mother, who has so beautifully expressed that Love in the "little book" we all prize so much.

We are a small band, united in love, trying to walk faithfully and humbly in the way of him who said, "Abide in me, and I in you. As the branch cannot bear fruit of itself, except it abide in the vine; no more can ye, except ye abide in me. . . . He that abideth in me, and I in him, the same bringeth forth much fruit; for without me ye can do nothing." B.

### Second Church at Los Angeles, Cal.

The Second Church of Christ, Scientist, of Los Angeles, Cal., was organized about two years ago, with twenty-five charter members, all of whom were members of the Mother Church. The church was duly incorporated, and charter issued by the State of California.

We now have one hundred and twenty-eight members. We have so increased in numbers that at our morning service and Wednesday evening meetings many have been compelled to stand. This condition has prevailed for some time, and we have secured more commodious quarters in the newly completed Women's Club House, situated on Figueroa Street between 9th and 10th Streets.

The Sunday School, which is held at the same hour as the morning service, is under the management of an efficient superintendent. The attendance is large and much interest is manifested by the little ones.

HATTIE L. WHITAKER, *Clerk.*

### Reading Room at Janesville, Wis.

Previous to the time the By-law regarding reading rooms appeared in the *Sentinel* we had never thought it possible to have one, though the wish to do so had often been expressed. When the *Sentinel* arrived we seemed to see at once that since our dear Mother had asked that this be done, it was possible, and we had only to be obedient to make the demonstration.

A church meeting was called and a committee appointed to secure a desirable room. One was secured in the finest office building in the city and suitably furnished. The room was opened to the public January 20.

## The Lectures.

### At Utica, N. Y.

Hon. William G. Ewing of Chicago, formerly judge of the Superior Court in that city, addressed an audience numbering upwards of fifteen hundred people in the Opera House yesterday afternoon (Sunday, January 21) upon Christian Science, its principles and teachings. Judge Ewing came to Utica under the auspices of First Church of Christ, Scientist. Although successful in the legal profession, for which he was educated and trained, he has of late devoted his time exclusively to lecturing upon the topic upon which he was heard here. His ability as a speaker, together with his recognized familiarity with the subject, bring crowded houses to listen to him in other places as in Utica. He appears under the direction of the International Board of Lectureship of the Mother Church in Boston. Upon the platform with him yesterday were Hon. Thomas S. Jones, Prof. Timothy L. Roberts, and Pratt G. Smith.

Judge Ewing was introduced by Mr. Jones, who said:—

*Ladies and Gentlemen:*—For the partiality that has led to my selection as chairman of this large and intelligent audience, composed of representative citizens, I am sincerely grateful. Particularly so because we are to be addressed this afternoon by a gentleman whose learning and ability have placed him in the foremost ranks of the jurists of this country. Religious freedom is one of the cornerstones on which rests our beloved republic. The time has passed when the citizen incurs social ostracism because he does not worship his Creator in the manner his neighbor would suggest. While many of us have not sufficient knowledge or information to form a belief as to the merits or demerits of the claims put forth in behalf of Christian Science, yet if it be true that its disciples and professors are engaged in relieving human suffering and in an honest endeavor to elevate the moral tone and religious standard in the community, is it not entitled to our respectful consideration and moral support? Who has the right to say that this or that Christian society is not God-given and rightfully entitled to a place in the Master's vineyard? Honest, earnest, intelligent investigation is to be welcomed and encouraged. The jeweled gates of reason are always open to the free, the clear, and the forceful presentation of truth, while error and its vagaries are likely to be discovered and exposed by intelligent discussion and candid consideration. It affords me very great pleasure to introduce to you Hon. William G. Ewing of Illinois, who will now speak upon the subject of Christian Science.

*Daily Press*, Utica, N. Y.

### At St. Paul, Minn.

Judge J. R. Clarkson, who lectured last night (Thursday, January 18) at the People's Church upon the subject of Christian Science, succeeded at least in initiating discussions upon his remarks from those who attended. A large audience listened to his address last night, the body of the church and the galleries being well filled. Many of those who were present were believers in what Mr. Clarkson terms the "purest and truest faith," but the majority were people attracted by the subject and anxious to learn concerning its merits. Mr. Clarkson believed in the literal interpretation of the Scripture, "the kingdom of God is within you," and sought to prove that sin, disease, suffering, evil, and death may be overcome. He said that the full unfolding of Christian Science means freedom from these evils.—*Globe*, St. Paul, Minn.

The lecturer was introduced by Howard C. Van Meter, who spoke as follows:—

We are told in the Bible that God "sent his Word, and healed them, and delivered them from their destructions."

Christian Scientists believe and prove by demonstration that God is sending his Word now as in the olden time, and as a result the sick are healed, the sinful redeemed from a sense of pleasure in sin, and the kingdom of heaven is come upon earth.

God, who is Infinite, must be, and only can be, expressed by laws that are eternal and not by laws that are in force at a certain time and then become null and void.

During the time which elapsed between the metaphysical healing practised by the early Christians and the advent of Christian Science in 1866, little was known of the healing power of Christianity. Much, if not all, of the prejudice against Christian Science is not in reality against Christian Science, but against a misconception of Christian Science. To correct these misconceptions was one of the reasons for the establishment in 1898 of the International Board of Lectureship of the Mother Church of Christian Science, The First Church of Christ, Scientist, in Boston, Mass. There are at present on this Board twelve lecturers giving to the world the Gospel of an ever-present God. We have with us to-night one of the members of this Board. He is qualified and authorized to speak on Christian Science. He was healed through Christian Science, and is now devoting his whole time to the work. I take great pleasure in introducing to you Judge Joseph R. Clarkson, C.S.B., of Omaha, Neb., and bespeak for him your most kind and considerate attention.

### At Quincy, Ill.

Hon. W. G. Ewing of Chicago, former resident of Quincy, son-in-law of the late Judge Marsh, one of the brightest lights of the legal fraternity in the country, faced an audience that filled every seat of dress-circle, parquet, and balcony of the Empire Theatre Sunday afternoon (January 14).

The speaker was introduced by Captain William Somerville. In making the introduction the chairman said:—

*Friends:*—I do not know whether the audience or the speaker is most to be congratulated on this occasion. In fact, it is not often that an occasion of this kind occurs in Quincy. We have a speaker who was formerly an honored resident of our city and who since leaving us has attained a national reputation in his profession and as a lecturer. You know him so well that nothing I could say would add to the sum of your knowledge. So I will take the pleasure of introducing to you Hon. W. G. Ewing.

Judge Ewing was received with a round of applause. While he disclaimed possession of the "ofttimes elusive and delusive gift of oratory" he was still the charming, interesting, forceful speaker he was from his young manhood. His opening sentences were as follows:—

I can hardly express my satisfaction over coming to Quincy. Coming back to Quincy, my friends, is always to me like coming back home. I began my manhood life in this city and the sweetest, tenderest memories of my existence had their beginning here. In this city I have made all kinds of speeches on all manner of subjects, and most of them, as I come to look back, were of no permanent value either to the auditor or the speaker. In changing from politics to religion I certainly cannot have offended my Republican friends, and in sacrificing my Democratic principles for religious principles I hope I have not offended my Democratic friends. I am here to-day to discuss a question more important than any political question—a question the most important that could engage the thought of man in this advanced and advancing age: a question of vital importance to every man and every woman: a question than which none of more far-reaching

Digitized by Google

importance has ever been presented for consideration. That question is, What is the relation of man to God, of the creature to the Creator? and what the responsibilities devolving upon us by the mere act and fact of living?

*Daily Herald*, Quincy, Ill.

### At St. Louis, Mo.

"The cosmopolitan character of this vast audience is ample evidence that all of us are willing and anxious to hear a fair statement of the views held by the other side on the questions of the day." The speaker, the Rev. Dr. Sale, rabbi of Temple Shaare Emeth, followed this statement by introducing ex-Judge William G. Ewing of Chicago, Ill., one of the prominent lecturers on Christian Science, to an audience that filled every seat and occupied every inch of standing room at the Odeon last night (Tuesday, January 16).

In introducing the speaker of the evening, Rabbi Sale took occasion to make a graceful speech touching the peculiar aptness of this age to hear all sides of all questions. He said that it was only by such fair-mindedness that advance could be made. Concluding, he told a story of a man who had listened to an address upon colonization and expansion, the speaker upon that occasion being at sword's point with the listener. Upon being asked how he liked the address the man replied, "I think it was an excellent one, though I do not agree with it." "How does that happen?" was asked. "Why, easily enough; I would not give a fig to hear a man talk with whom I agreed on every point. The persons who disagree with me are the only ones who can teach me better things."

As Mr. Ewing advanced to the centre of the platform he was greeted with liberal applause from all parts of the house. He is a tall man, perhaps sixty years old, with short gray hair and smooth shaven. When speaking, he is deliberate, the full tones of his voice carrying to every part of the auditorium. This is remarkable, when it is said that at one time his life was despaired of on account of asthma. It is claimed for him that his present devotion to the cult which he now represents upon the lecture platform is a direct result of the healing power he has experienced.—*Globe-Democrat*, St. Louis, Mo.

### At Ashtabula, O.

Judge William G. Ewing of Chicago addressed a fair sized audience Thursday evening, January 18, from the City Hall rostrum, on the subject of Christian Science, of which cause he is an ardent advocate. The lecture was free and given under the auspices of the local society of that faith.

Judge Ewing is a logical and winning talker, and his discourse, which continued for ninety minutes, contained many points of interest and much information to his audience, who sat through it without tiring. The attendance was representative of the thinking people of the city, and the speaker faced a highly intelligent audience, in which were several persons from neighboring towns and cities.

The speaker was introduced by Judge T. E. Hoyt.

*Ashtabula Daily Beacon.*

---

And 'tis a poor thing that is not worth asking for.

It is not always necessary to grant things not asked for, lest by so doing they become of little esteem.

He that forgets his friend is ungrateful unto him; but he that forgets his Saviour is unmerciful to himself.

BUNYAN.

## Concert at Concord, N. H.

THE opening concert of the series of three to be given by the New Hampshire Philharmonic Orchestra, under the direction of Mr. Henri G. Blaisdell, occurred in the Opera House last evening (January 25) and was thoroughly enjoyed by a large audience, who gave ample evidence of their complete appreciation of the treat prepared for them.

The soloist, Miss Craft, was most warmly received. Her numbers ranged from grave to gay, from Oberon and Tannhauser to songs of Hastings and Cowen and Mrs. Beach. Perhaps the fact that Mrs. Beach is a native of New Hampshire and was born within twenty-five miles of Concord, had some effect in making "Wouldn't that be Queer?" extremely pleasing to the audience. It certainly was very warmly applauded. Miss Craft's other numbers were equally deserving of praise, and the fact that five selections appeared opposite her name upon the printed programme did not deter the audience from demanding and receiving two encores.

Miss Craft is the possessor of a pure soprano voice of great range and flexibility, and she sings with a warmth and expression that win her instant favor. She is a young singer, who came from California, and is not yet thirty years old. A pupil of Charles R. Adams, she sang for some time in the choir of the Congress Square Church, Portland, Me., and she is now the solo singer at the Christian Science Church, Falmouth Street, Boston.

*Concord Monitor.*

---

## The Birthplace of Mary Baker Eddy.

**Reproduced by the Aid of Mrs. Eddy's Information, Photographs of Site, and Authentic Data.**

THIS is the title of a well-executed etching from an original drawing by Rufus H. Baker. It restores on paper the Baker homestead as it appeared in Mrs. Eddy's girlhood. Now the site is but a tithe of the old farm, and only a few fruit-trees remain to suggest the once fine orchards.

This picture has been made possible mainly through Mrs. Eddy's kindly assistance.

The etching is printed in black and sepia to meet a preference in tints, and can be obtained at the following prices:—

Artist's Proofs . . . . . $7.50
These are the first prints, are on India paper, and limited in number.

India Proofs . . . . . $5.00
Later prints on India paper.

Plain Proofs . . . . . $3.00
Prints on plain rice paper.

Address, RUFUS H. BAKER, 88 North Main Street, Concord, N. H.

---

### Sentinels Wanted.

THE Christian Science Publishing Society are desirous of obtaining copies of the following issues of the *Christian Science Sentinel*:—

Vol. I.—No. 19, Jan. 5, 1899; No. 20, Jan. 12, 1899; No. 23, Feb. 2, 1899; No. 24, Feb. 9, 1899; No. 27, March 2, 1899.

Vol. II.—No. 1, Sep. 7, 1899; No. 3, Sep. 21, 1899; No. 18, Jan. 4, 1900.

For the above numbers the Society will pay the same price for which they are sold, or will give in exchange the latest issues of the *Sentinel*.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

**MRS. EDDY DOES NOT RECEIVE PATIENTS.**

**THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

## Christian Science History.

THE First Readers of the Branch churches are each requested to distribute at least five hundred copies of the booklet "Christian Science History" in such manner as will do the most good. Also, will the members of the Board of Lectureship see that large numbers of this booklet are properly distributed in their sections of labor?

MARY BAKER EDDY.

Pleasant View, Concord, N. H., January, 1900.

## The Real and the Unreal.

IT is sometimes charged that Christian Science rejects the Bible doctrine of sin, sickness, and death. This charge will bear serious and candid consideration. If this charge were so formulated that it would read: "Christian Science rejects the *conception* or *interpretation* of the Bible held by many on the subject of sin, sickness, and death," it would hit the mark, and we should assent to it. The difference between the two formulas is as wide as can well be imagined. It raises the question as to the correctness of Biblical interpretation.

The gravamen of the charge that the Christian Science teaching as to sin, sickness, and death is anti-biblical, is that these three things, from the standpoint of the objectors, are real and potent, while Christian Science maintains that they are unreal and impotent. Here is the apparent difference, the solution of which rests upon the sense in which the words *real* and *unreal, potent* and *impotent* are used.

As a matter of ordinary reasoning it may be said that the Christian Science text-book, "Science and Health with Key to the Scriptures," divides sharply between the real and the unreal. The more one studies and the better one understands the distinction made by its author, Mrs. Mary Baker G. Eddy, the clearer becomes the distinction. Indeed, one cannot intelligently read the text-book until one has grasped a measurably clear idea of what the author means by the words real or unreal as applied to sin, sickness, and death.

What is reality? Is it that of which the physical senses alone take cognizance? Is it that which finite reasoning only can determine? Is it that which the limited mortal mind, of itself, can comprehend? Must we judge of the unseen by the seen? Can we analyze the spiritual from the standpoint of the physical or material? If so, what of divine revelation? what of the inspiration, spiritually considered, of the Scriptures? and what of the supernatural or metaphysical?

Christian Science answers the above inquiries from the standpoint of the metaphysical—that which is above and beyond the physical. It declares that only the spiritual is real. Why? Because only the spiritual is permanent and unchangeable. It uses the word real in the same sense that the apostle Paul used the word eternal, and the word unreal in the same sense that he used the word temporal. Paul divided sharply between the eternal (real) and the temporal (unreal). Not more so does the Christian Science text-book. Not more so could any one—if Paul's meaning is understood.

Let us, then, place sin over on the side of the temporal according to the Pauline definition, which, according to the Christian Science definition, is simply placing it on the side of the unreal. What is its place? If it is real, in this sense, it is eternal, and if eternal it can never be overcome or destroyed. In this view God's eternal Kingdom would be a Kingdom wherein sin would have eternal place and power. If sin had such place and power all its direful consequences, its sorrows, its blighting and appalling effects, would likewise have place and power. God's universe would thus be a place in which there would be endless sin with an endless train of sin's results. Where, then, would be mankind's redemption from sin and its effects? Where the hope of salvation? Where the Scriptural promises of the saving of all?

Christian Scientists plainly read in Scripture the annihilation of all sin, and with its annihilation the annihilation, of course, of all its consequences. In Genesis, wherein God pronounced all He made to be *good,* nay, *very good,* Christian Scientists read of the unreality of sin. If sin, or evil, then, is a part of the eternal universe it either must be good, or it got into the universe through some creative power outside of or apart from God. Can we conceive this to be true? Christian Science maintains that it is not conceivable; wherefore it concludes that God did not create sin, that it was not, could not have been, created by any other power than God, for Genesis plainly declares Him to have been the only Creator, and the only creative power. Whence, then, the *real* origin of sin? Is it, can it be, other than a human *belief,* and not a divine *fact?*

Christian Scientists read in Isaiah the annihilation of the Satan or Lucifer of the Bible:—

"How art thou fallen from heaven, O Lucifer, son of the morning! how art thou cut down to the ground, which didst weaken the nations! For thou hast said in thine heart, I will ascend into heaven, I will exalt my throne above the stars of God: I will sit also upon the mount of the congregation, in the sides of the north: I will ascend above the heights of the clouds; I will be like the most High. Yet thou shalt be brought down to hell, to the sides of the pit. . . . But thou art cast out of thy grave like an abominable branch, and as the raiment of those that are slain, thrust through with a sword, that go down to the stones of the pit; as a carcase trodden under feet."

Christian Science teaches that such statements refer to the destruction of the sin of which Lucifer is here pictured as a personalized type; but whether typically or literally construed, the fact of annihilation distinctly appears.

If the annihilation of the Satan or the Lucifer of the Scripture is here clearly shown, the annihilation of hell as clearly appears in Revelation, 20 : 14: "And death and *hell* were cast into the lake of fire;" the fire here typifying a burning or destruction.

It would seem that when Satan (as the personal representative of sin) and hell (as the place, or locus, of sin) are annihilated, there is nothing left of sin.

Now if sin were real in the sense that it is an essential part of God's creation, could it be thus annihilated? If we admit that a part of God's creation can be destroyed, we must logically concede that the whole could be, and thus we would have a temporal instead of an eternal creation.

The Christian Science text-book couples sin, sickness, and death together as a "triad of errors." (Science and Health, page 302.) Its teaching is that sickness is a consequence of sin, and all admit that death is a result of sickness. If sickness and death are a result of sin, and sin is unreal, it follows that sickness and death are likewise unreal. An unreal cause cannot produce a real effect. Such logic would be absurd.

As to sickness, it may be asked, is it not real to the suffering invalid? Humanly speaking, yes, distressingly real

Digitized by Google

—while it lasts; but when it is entirely gone—destroyed—by whatever means, where is its reality, in the Christian Science use of the term? It was—if we may be allowed the paradox—*a temporary reality*. The most ardent advocate of the reality of pain surely will not maintain that pain is eternal. If it were there would be little use in either physician or Christian Scientist endeavoring to prevent it.

In thousands of instances the Christian Science practitioner has been called to the bedside of persons writhing in pain which seemed to them unendurable, but in a few moments it was gone, and the patient resting at perfect ease, or in a peaceful slumber. After the pain was thus destroyed, will it be said that it is yet real? It was real to the senses of the patient while it lasted; but this is not the kind of reality meant by the Christian Science use of the word. Nor is it an unwarranted juggling with words. It is but the logical distinction between the temporary and permanent—the temporal and eternal.

Then what of death? If, as all who believe in a future life at all admit, it is but a change from one state or condition to another, it is not more real, in the logical sense of reality, than its predecessors, sin and sickness. However awfully and painfully real it may seem to the purblind sense of mortals this side the veil, if life is continuous, who shall say that death is real to the sense of him who has passed beyond the veil? To his sense he is yet alive. He may be fully aware that he has passed the portal of what mortals call death, but if he is alive he is *aware* of it, and, therefore, he is not *really* dead. He has but passed through the *belief* of death—the temporal conditions which bring about the change called death, but which conditions are not and cannot be eternal, else death would be eternal; this would be, not death, but extinction.

It will be observed that the passage above quoted from Revelation couples death and hell together; both are cast into the lake of fire—that is, destroyed. Thus death as a human *belief* becomes extinct, but mankind who are born of Eternal Life never become extinct. They forever retain their true relation to the God who created all good.

This will be known when the veil of sin shall be removed—when death and hell shall have been consumed in the fire of destruction.

We wish it distinctly understood that our text-book does not treat sin, sickness, and death lightly, as some seem to think. On the contrary, it teaches that, humanly speaking, they are to be overcome and destroyed as Jesus and his disciples overcame and destroyed them. It teaches that it was the solemn mission of Jesus and his disciples to prove the *unreality* of sin, sickness, and death by destroying them, and that it is the duty of Jesus' followers in all ages to strive to learn the divine law by virtue of which he did this, and having learned it, to practise it in the interests of suffering and dying humanity.

No, the Christian Science text-book dwells deeply and profoundly, not flippantly, on this subject, and no one can read the text-book in a serious and unbiased manner without becoming convinced of this. Moreover, the sincere, unprejudiced, and careful student of this book cannot long read it in connection with the Bible without seeing that its teachings are unassailably based upon Holy Writ in its deepest and truest import.

### Order of Church Services.

In the order of church services for Communion Sunday as published last week we should have mentioned the reading of the Church Tenets. This is done immediately before reading the explanatory note. It will be understood that the order as published is that of the *Mother Church*.

We call attention to Article XXXII., Section 1, of the Church Manual which is to be read in the Branch Churches.

## Selected Articles.

### Cripple no Longer.

NASHUA, N. H., Jan. 20.—After suffering untold agonies from muscular rheumatism Charles H. Sager of this city declares that he has been cured by Christian Science. For five years or more he has been a familiar sight on the streets of the city riding an old-fashioned tricycle to and from his home on Crown Hill every pleasant day during the warmer months. He disappeared with the first snow each season and was seen no more until spring.

All the business and professional men of the city knew him and pitied him. As he said himself hundreds of people knew him and spoke to him whose names he did not know. His tricycle was an old one with hard rubber tires, and weighed about eighty-five pounds.

In consequence his progress through the streets was slow. Last summer a well-known Concord woman presented him with a late model pneumatic-tired tricycle, and after that he was frequently seen by cyclists on the roads leading to the nearby country towns.

A few months ago he began to appear on Main Street on foot. Many people who had always had a word of cheery greeting for him in the past failed to recognize him without his tricycle. Those who knew him personally congratulated him on his improved health, and when he told them Christian Science had cured him they marveled, but were sceptical as to the permanence of the improvement.

Even his wife warned him that when winter came it would be a different story and he would find that he must stay in the house. He was confident that she was wrong, and time has proved that his confidence was not misplaced.

He has been on Main Street on foot this winter as often as he was on his tricycle during the summer months. Wednesday he walked from his home, 8 Harvard Street, to a Main Street photographer's, a distance of more than a mile, to have his picture taken. A year ago he says he would not have ventured as far as the sidewalk in front of his home, either on foot or any other way.

The *Globe* correspondent found him at his home Wednesday morning. He was very willing to talk about his cure, but complained that the first accounts published in the newspapers were misleading.

"If you print anything," said he, "I wish you would print the exact truth. I would much rather have my cure underrated than overrated as it has been. From the newspaper accounts published early this week one would think I had been instantaneously cured by Christian Science, and some papers gave me credit for being able to walk and run like a man of twenty.

"That, of course, is ridiculous. I am a well man to-day mentally and a much improved man physically. What we call the 'manifestations' of disease still exist to some extent, as you can see," he continued, holding out his hand for the newspaper man's inspection. "This right hand is still somewhat swollen," and that was true, "but yesterday I was able to use my hammer at my trade, cobbling, for eight hours, and do work that amounted to $2.70.

"Before I began with Christian Science I could not lift my arms above my head. To-day that is easy," and Mr. Sager demonstrated the truth of his assertion by raising his hands high above his head several times. "Six months ago," he continued, "it was impossible for me to walk any distance, and to go down-stairs was one of the most painful and tiresome things I could possibly do. This morning I went down to let you in, and when you go out I'll show you how easy it was for me.

"I became interested in Christian Science through my sister, who resides in Lowell. Through it she was changed from a gaunt, emaciated woman, a mere frame of skin and bones, to the very picture of health. Nine years ago,

Digitized by Google

while residing in Boston, I had a severe attack of the grip. It left me with muscular rheumatism, and I have doctored ever since. Physician after physician has told me that my case was incurable, and I finally concluded that they were right.

"Last August I began treating with a Christian Scientist, and from that day to this my improvement has been steady.

"I am still under the treatment, and am positive that I shall be as well physically as I ever was within a short time. Never until this winter have I been able to go out of the house during the cold weather. My place has been beside the stove. I have tried repeatedly to go out and every attempt has resulted in a siege of pain and sickness. I came in every time with every muscle in my body strained and aching.

"This winter I have been up town, and on foot, too, several times each week. My head, which used to feel heavy and dull, is now as clear as a bell, and pain is almost an unknown quantity with me. My ankles are still a little weak, to be sure, but they are getting stronger every day, and the more I walk about the less they trouble me."

Mr. Sager accompanied the newspaper man to the door, and true to his promise showed that he could descend a flight of stairs as well as most men of his age, which, by the way, is fifty-one.—*Boston Globe.*

## A Church Built by Children.

SCHOFIELD, WIS., January 11.—The only church organization in this town which possesses a building of its own is that of the Christian Scientists, and yet the town is soon to celebrate its semi-centennial anniversary. But more extraordinary still is the fact that the church edifice was built by children, the only case of the kind in the history of this country. It was erected during the current year, and every dollar represented in its construction and furnishing was contributed by the children of the town or obtained through their solicitation.

In 1896 Miss Mary E. Graves, a resident of Schofield, organized a Sunday School in her own home composed of eighteen boys and girls of the village, ranging in age from eight to fourteen years. The school was organized in accordance with the regulations of the Christian Science Church, and its exercises were the ones customary in Sunday Schools of that denomination. For about two years and a half the school was conducted under the fostering care of Miss Graves, and in the latter part of 1898 its finances were in such a healthy condition that its members decided to build a church edifice.

The surplus in the treasury amounted to exactly nine dollars, all of which had been accumulated through weekly collections averaging from one cent to ten cents from each of the children. With this sum in hand the youthful members of the Sunday School appointed a building committee from their own number and proceeded to carry out their resolution to build a house of worship, and "to turn it over when completed to a body to be known as First Church of Christ, Scientist, of Schofield, Wis."

In a few days some well-wisher of the children donated a site for the church building. A little later an unknown admirer sent a check for ten dollars, and on the heels of this contribution came twenty-five dollars in cash from another source. The head of a large lumber concern in Schofield offered all the building material required at nominal cost. Other contributions were received from townspeople and strangers, and the children themselves kept up their weekly payments and added to them the proceeds of various entertainments.

In due time the church was completed and dedicated. It is a cosy structure, twenty by forty feet, finished inside in hard wood and having a floor and pews of the same material. Its furnishings include a handsome reading desk and apparatus for heating and lighting. The seating capacity of the little church is one hundred.

On the day of the dedication Treasurer Alfred Glarson, fourteen years of age, announced with an air of dignified satisfaction that every obligation of the building committee had been paid, and that there was a surplus of $2.27 in the treasury.

The church organization is thoroughly democratic, the children electing their own officers and managing the business affairs of the organization in all its details. With the exception of Miss Graves, the First Reader, the church offices are filled by children. Miss Florence Harvey, a bright little girl of fourteen years, is the Second Reader, and Miss Edith Harvey, aged sixteen years, is the clerk. Master Glarson, already mentioned, makes an excellent treasurer. No bookkeeper in the land keeps a neater set of books than he. He is methodical and exact, and every contribution, including many of one cent, is accounted for and entered to the credit of the contributor. When any amount is paid out Master Glarson has the vouchers of the two readers and the clerk to show for it, and at the end of each month he presents a balance-sheet, which shows all the money received up to that time, all the disbursements, and the amount of cash on hand.

If all this is not a striking reminder of the Scriptural prophecy, "And a little child shall lead them," what is? Even people who have no sympathy with the Christian Science movement will cheerfully admit that the children of Schofield have made a sweet bit of history and given one of the most beautiful demonstrations ever heard of in connection with church building.

*St. Louis Globe-Democrat.*

Accompanying the above account was an excellent half-tone picture of the little church, giving one a definite idea of the work the children have accomplished.

## Christian Science.

*To the Editor.*

I have somewhat to say in respect to the criticism on Christian Science published in your issue of Monday. The writer asks, "Is it Christian? Is it Scientific?"

I am glad he has given the lexicographical definition of science, and I shall be pleased to discuss the question from this standpoint. Webster defines science as "knowledge; knowledge of principles and causes; ascertained truth or facts."

True science must begin with God, the only Principle or Cause of the universe, which includes man; hence the first lesson in science, according to Webster, is the understanding of Cause (God).

Webster further defines science as "accumulated and established knowledge which has been systematized and formulated with reference to the discovery of general truths." After we have discovered or uncovered certain facts concerning the Cause or Foundation of true ideas, that is, have learned definitely what God is—all His characteristics, His very nature—we are then ready to systematize and formulate facts concerning His creation.

When we understand the Cause, we also understand the effect, for the effect is exactly like the Cause. "Like begets like."

The effect is the reflection or expression of its cause. The word reflection destroys the belief that man partakes of the substance of God, and yet maintains the idea that he is God's likeness.

Now, God, the cause of all creation, is defined by Jesus the Christ as Spirit. Spirit then is the Christian name for God. This too is the Christian Science name for God. The Bible also teaches that God is Love, that Spirit

Digitized by Google

is Truth. In this manner we would call attention to the fact that Christian Science obtains its definition of God and creation from the Bible.

Will any one who believes the Bible declare that these Bible definitions of God are not science or true knowledge? Is not such science Christian? Could we then find a better or more appropriate name for what we understand about God and His creation than Christian Science?

God is Truth and His creation is true and real. That which is opposed to God—Truth—and His creation cannot be true or real, though it may seem true.

We do not regard darkness as something, but as the absence of something—the absence of light. So evil should be regarded not as an entity, but as the absence of good; sickness should be regarded as the want of health; discord, the lack of harmony.

What is reality? What makes a thing real? In science we determine the constituency of a thing by considering its origin; for the question is not what seems? but what is? "All things were made by Him; and without Him was not anything made that was made," and "Behold, it was very good."

I readily agree to the claim of the universality of sin in the world of matter. I agree that all mortals are sinners, but the mortal sinner is not the real, true man that God created. He is only a false sense of man believed and lived. Sin is not a part of man nor an element in man. When sin is no longer indulged the sinner will cease. It will then be seen that the man himself is good and always has been good. We might say, "Man has fallen into sin," just as we would say that a diamond has fallen into the mud. As the diamond is not affected by the mud and does not affiliate nor become one with it, even so man remains forever God's likeness and does not become one with sin or the sinner. The mortal needs to put off the old man with his deeds and put on the new, which is the likeness of God, and is not mortal. As sin is destroyed, the man himself is found to be good.

Our critic asks, "Is not God matter?" We ask, Is not God Spirit? Is Spirit matter? Are not matter and Spirit opposites? Paul said, "The flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary." Jesus said, "It is the Spirit that quickeneth; the flesh profiteth nothing." Is not matter only another name for flesh? Matter profits nothing. How much is nothing? From whence did nothing come?

No one ever heard a true Scientist say, "I do not care for the Bible." No class of Christians love the Bible more than Christian Scientists, none have greater respect for it. We believe every word of it, and also believe that it is a scientific book, that should be understood and practised.

Previous to my acceptance of this Science I had grown sceptical regarding the Bible, and was fast becoming an infidel. Christian Science, as taught in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, has restored the Bible to me and has given me an understanding of it that has made it more practical.

### Departure and Call.

BY KEYES BECKER.

UPON the wings of mystic gloom
The old year drifteth far from sight;
The final hours of latest night
Old Century's dying breath consume.

Then let them go! A fond farewell
To them for good they entertained.
They go, but ah! the good remained,
More good to do, more joy to tell.

The New Year with his stately bow
Awaits the zeal of your desire.
If goodness doth your heart inspire,
He says, "My time is yours from now."

Would you be happy?—hear that voice!
Help make your fellow-man more glad.
All selfish happiness is bad;
Unbounded pleasure waits your choice.

---

### Healing in Christian Science.

BY STELLA F. SABIN.

"How is it that ye do not understand?" said Jesus.

Among the many misconceptions concerning Christian Science healing, that of thinking it heals only imaginary complaints is perhaps the most common. Some people say that the Science does good among certain imaginary diseases, while the real cases, of course, need medicines. Again, there are those calling themselves Christian Scientists, who will declare that all kinds of sickness are imaginary, a saying most unwise, unless the meaning is made clear by explanation, as by these sayings the Cause of Truth and its mighty works are made to be lightly esteemed in the thoughts of the people.

Now, what is the fact concerning this question? Why, this: that the various ailments to which mortals are subject have been healed in numberless instances by this Science, after the patients had been given up; and that, whatever the cause or whatever the source of the sickness, Christian Science is proving itself able to destroy the error, and restore the patient to a higher mental, moral, and physical condition.

Sickness and suffering seem certainly more than imaginary to the patient, and the Scientific practitioner knows this, yet through his higher understanding he also knows that all such claims of evil are utterly without foundation in Truth, and that God, the Creator of all, never made them. He knows that God's law governs all His creation in unbroken harmony and peace, and that when His children's thoughts are guided entirely by this law they can neither manifest evil nor delineate it upon the body. Our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, page 219, tells us, "The body will reflect what governs it, whether it be Truth or error, Understanding or belief, Spirit or matter." The word imagination, as used in this connection falls far short of representing the condition of body and mind commonly called sickness, which is rather a state out of harmony with God's law. When mortals awaken from this dream of a power beside omnipotent Love, they are seen to manifest an improved condition of body, and this is not imaginary, but is a showing forth of Truth, which is always harmonious. This manifestation is health, which means wholeness or holiness. The light and flippant way in

Digitized by Google

which the subject is spoken of by those ignorant of its real character should cease.

The withered hand which Jesus healed (Mark, 3 : 5) doubtless seemed very real to the sufferer, and the Master, moved with true compassion, restored him. Jesus did not declare to him, as he might have done if he had been prepared to understand it, that this claim of a withered hand was unreal, that it existed as a mistaken state of thought through unbelief in God's power and ever-presence. Yet the Master knew this, and therefore he could heal the man.

This state of ignorance concerning the divine Principle which creates and governs all, is manifested in disease. Disease can be healed by destroying the ignorance and sin that separates man from his true consciousness as a child of infinite Love. We must all work out our own salvation, and this work consists in having no other mind but the divine Mind, dropping out of consciousness everything "that deceiveth or maketh a lie," even every thought of a power apart from God. Then we shall no longer image forth upon the body the terrible diseases and untold sufferings which are not imaginary, in the common acceptance of the term, but are the inevitable result of not being in obedience to divine Principle, and that law which made man in God's own image and likeness. These evil conditions are unreal, because they are not to be found in God's kingdom of harmony.

Paul, the apostle, calls us to the true consciousness when he says, 2 Corinthians, 10 : 5, "Casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ."

## Reason and Revelation.

BY CLARA B. MACMILLAN.

THE thought which suggests this article is not new, I take it, but recent circumstances have brought it to me afresh, and I have wondered if it is not the greatest stumbling-block in the way of Truth-seekers. It is this: That a vast number of people seem to be seeking that which *they think* is Truth, or rather that which coincides with human reason, and some even go so far as to quote from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, where the author says that "reason and revelation must coincide."

Surely this can never be construed to mean that that which appears to human reason as revelation is true, but rather that revelation which corrects human reason—this is Truth.

One says, I do what my conscience (which he believes to be the voice of God) tells me to do, and then I am sure I will always do right. Let us see where this conscience (human reason) has led many people. Has it not led them to take the most savage revenge on their fellow-men, thinking that they were meting out justice, and forgetting the counsel, "Vengeance is mine, I will repay, saith the Lord"? Did not Jesus refer to this when he said, "They shall put you out of the synagogue: yea, the time cometh, that whosoever killeth you will think that he doeth God service"? Has it not led man to burn at the stake those who would lead them higher, and to persecute in cruel ways the emissaries of God?

Another will say, I look into everything, but I only accept that which appeals to my reason. Has not the searching of the Scriptures through this channel resulted in infidelity, agnosticism, and all sorts of doctrines and theories? Can human reason ever understand the immaculate conception? Can human reason comprehend in the least degree the power by which the loaves and fishes were multiplied on the shores of Galilee? Can human reason know aught of the creation which saw every plant growing before it was in the ground? Can it partake of that bread which cometh down from Heaven, for which we toil not, neither do we spin?

Surely, none of these can human reason comprehend. Did this Truth as revealed by our Leader in "Science and Health with Key to the Scriptures," come to her through human reason, think you, when human reason has so often proven to be a treacherous guide, and so often leads in directions contrary to the law of Love which Jesus taught was the whole law?

If we say we are seeking Truth, and yet will accept only that which appears as such to this human reason, is not that equivalent to saying that we already have the Truth? for we say we know what Truth is and what comes to us must coincide with our views or be put aside. Then are we honest in our search, or only looking for confirmation of what this human reason declares to be true? If we already have the Truth, we need seek no further. If not, we must humbly and prayerfully accept that which is revelation, and let it correct the conscience or human reason, until it indeed becomes one, or coincides with it. In no other way can they be reconciled, but revelation, not human reason, must be teacher and guide.

## A Letter to Mothers.

*Dear Sentinel:*—Through your columns may I have a talk with mothers, particularly those mothers who are just beginning to feel an interest in Christian Science? The devout students know already what an all-round, constant help this study is, in the home, and with the children. To you, dear mothers, who are longing to take a step upwards, to grasp a practical helper, I may surely say a few words of encouragement, for I so recently stood where you are, on the threshold, so to speak, hungry for spiritual food. Having tasted this bread "which cometh down from heaven," and found it good, I naturally turn to you, who are looking in the direction you wish to follow, and say, "Come also and partake, and see how satisfying and wholesome is this Truth that makes free."

A little over a year ago I caught the first bright gleam of Truth, through a demonstration. The trouble was an accident, resulting in a severe sprain and great fright. Alone, I turned to the only help there was, the ever-present God, and, knocking at the door of divine Love, it was opened to me, for in half an hour I was free from pain and fear. Since then I have had other proofs of God's care and love, and I know Him to be a never-failing support. The little understanding I have, has come to me through the daily study of "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, and the wise guidance of a true disciple of Christian Science. Study this text-book, with your Bible, and prove for yourselves the truth of the first line in the "little book:" "Leaning on the sustaining Infinite, to-day is big with blessings." Do this for your children's sake. If mothers only appreciated what a character-builder Christian Science is, our Sunday Schools would be full to overflowing.

Mrs. Eddy says: "Truth is demonstrable, when understood, and that it is not understood until demonstrated" (Science and Health, p. 219). As you study, as your thought is uplifted and you become conscious of drawing nigh unto God, you will wish to take your little ones to Him for healing, not only their physical ills, but all moral and mental ills as well. When these deformities, selfishness, temper, obstinacy, disobedience, etc., need to be overcome, to whom can the mother turn with such sweet assurance as to the Infinite Mind, God, who knows all, is always close at hand, and all-powerful?

God gives, it is our part to know that we receive. Seek Truth and you will find Truth ready. In Isaiah, 65 : 24,

Digitized by Google

we have this generous promise: "And it shall come to pass, that before they call, I will answer; and while they are yet speaking, I will hear." If, dear friends, you are starting along the straight and narrow way of Christian Science, keep your children by your side, let them walk its rugged but healthful path with you. Place them in the happy, healing atmosphere of a Christian Science Sunday School, and you will soon note the change in thought and action. You will realize that, in the earnest search for Truth, your prayer for them is answered, almost before you are conscious that it has gone forth, so kind, and loving and responsive is Truth. Jesus said, "Suffer little children to come unto me." I speak to you as a mother and also as a member of one of these schools, so speak from both experiences. Most lovingly I say to you, bring your little ones into the Sunday School, and see how they will grow, mentally, morally, and spiritually.

**Truth is indeed the tonic divine,**
**The sweet bread from heaven, the water made wine.**

Before closing let me call your attention to page 147 in Science and Health, particularly to the lines: "Divine Mind makes perfect, acts upon the human mind through Truth, leads it to relinquish error, and find the divine Mind to be the only mind, and the healer of sin, disease, and death." God the perfect physician! Truth the perfect remedy! Think of these lines when there seems to be an inclination on the part of a child to err, and see what an alterative and tonic it is. I have found it a constant help during past months, and quick and potent as a remedy.

Out here by the Golden Gate, we eagerly await our regular visitors, the *Journal* and the *Sentinel*, and we are grateful to the Publishing Society for these faithful guides.

M. A. S., San Francisco, Cal.

## Benefits of Church Membership.

*Dear Sentinel*:—We wish at this time to send to the Field through the *Sentinel*, that so zealously and lovingly guards our cause, a copy of part of a letter which was read at our last testimony meeting, and which certainly testifies to the benefits arising from church organization, and also the blessing accruing to such as unite with a church, although distant from it. Often has a blessing come to those who have for true love and fidelity to our cause, united with the Mother Church in Boston. Here we have a beautiful testimonial of one who united with our little church, the first organized Christian Science Church in Idaho.

She thus writes: "I will express to you a testimony of the light and truth of Christian Science, as revealed to me on Sunday the 10th [the day she was received into the church]. I arose early with an earnest desire to read and understand. I opened the Bible and commenced reading at the 145th Psalm. Such an uplifting, hallowed influence of divine Love rested upon me, a flood of new light burst forth into my consciousness, and I felt that in that hallowed light and divine understanding, all the world will see and understand that Jesus is the "Root and offspring of David, the bright and morning star." I continued to read; I could not close the Bible; I turned to chapters which hitherto had been obscure, and read with understanding. That effulgent light abode with me all day and I still rejoice in that new revelation of divine Love. When I received your letter, I knew, and received it again, and do acknowledge it a solemn and sacred testimony to the eternal truth, light, and power of Christian Science, and do bear testimony through demonstration that it does perform all it proclaims. I fully realize in the light of my testimony the beautiful interpretation given of Revelation, 21:9, beginning on page 565, of "Science and Health with Key to the Scriptures."

MRS. ELLA S. HARVEY, Pocatello, Ida.

# Testimonies.

### Healed by Reading Science and Health.

The beloved apostle, John, said, "And there are also many other things which Jesus did, the which, if they should be written every one, I suppose that even the world itself could not contain the books that should be written." Just so about Christian Science. If all Christian Science has done and could do, were written, the books and papers would fill the world. I did not investigate Christian Science on account of physical healing, but when I saw one very dear to me in my family, given up by three of the best physicians, saved from the grave, I thought I would investigate it. However, I have been healed of several ills since coming into Science, such as sick headache, which I had from my childhood, suffering dreadfully at times. I am perfectly healed of that. My eyesight was very bad; now I see perfectly. Reading "Science and Health with Key to the Scriptures" accomplished the healings.

A few days ago my little boy, four years of age, running around the room after taking off his shoes for the night, stuck a tack in his foot. I did not pay any attention to it at the time. A day or so after we took him out with us, and he walked a great deal. When he started home he commenced complaining of his foot. When we arrived home, I removed his shoe and stocking and found his foot very much inflamed, and red streaks running up his leg. I gave him a treatment, but by bedtime he seemed to be suffering very much, and had a high fever. His father said, "I think I had better go for a healer;" but I said, "No; I will treat him to-night, and if you think best in the morning you can go for one." I talked to him of the power of God, and he said, "Mamma, read to me from Science and Health." I did so and he went to sleep. I gave him another treatment and sat up until eleven o'clock reading the Bible and Science and Health, trying to realize the allness of God and the nothingness of material sense. I then treated him again and retired, he slept until nine o'clock in the morning. When he woke up I put on his shoe and he went to play; all soreness and inflammation was gone, and he was perfectly well. I have heard nothing of it since. It gives me courage to press on and gain a higher understanding of this wonderful Truth, when with my little understanding I am able to meet such a claim, but the most beautiful part of Science is the spiritual understanding of the Bible gained through our text-book.

MRS. R. M. STURGIS, Chicago, Ill.

### Testimonies at a Wednesday Evening Meeting.

A little band of loyal students are making a good stand in Salem, Mass., and Truth prevails.

Last Wednesday evening the meeting was very interesting. After the usual reading from the Bible and Science and Health, the following testimonies were given.

The Leader told how some years ago she was able to overcome an attack of pneumonia in three days. On the third day she went to Boston to attend her association, and when she returned home the trouble was entirely gone.

A gentleman told of a dear old lady he met while at the White Mountains, who had always believed in God as a kind, loving Father, and after attending services for the first time, told a Scientist she had always believed in just such a God. She told the Scientist of a severe trouble of several years' standing. She was asked if she would like a little help that day, and she said she would. The gentleman who related the story told how he found the old lady, a week ago, rejoicing in the Truth, and desired him to inform the lady who had treated her, that the one treatment had healed her.

Digitized by Google

The next was from a gentleman, who received a letter telling him of a near one being taken to a hospital to have a tumor removed from the bowels, and how the doctors refused to operate and sent the patient home hopeless, to die; he said, "I thought, why, 'God is her Life,' she cannot die, and there is no tumor there. About three times that day, when she came into my thought, I made the same declarations, after this she passed from my mind." About two months after, he received a letter asking him if he had been treating the patient, also saying she was feeling so well she had discharged her girl and was doing her own work. Later on he received another letter stating that she had been reduced to her normal size and was able to take a two-mile walk. This was six years ago, and she is well to-day. The gentleman said this convinced him that faith was not necessary for the healing.

Several ladies testified to the immediate healing of severe colds.

All seemed to have received the Truth with gladness, no stiff formality or "vain repetitions," but joy, peace, and brotherly kindness predominated, and all expressed their gratitude and thanks to our dear Mother.

MARY L. RUTH, Salem, Mass.

### Grateful for Christian Science.

It was two years ago that I first had an opportunity to learn of Christian Science. I lived next door to Scientists and was acquainted with them. Many times I wanted to ask about it, but could not, because of the thought it was not my privilege to inquire into their belief and affairs. And so I drifted on, blind to the Good and not satisfied with what I had.

I finally asked for something of Science to read. I was told I could have it if I wanted it. I replied that I would like to read and see what it was. I expected the party would bring it to me, but it came not. Several days after I met the Scientist and told him that I thought he was going to let me have some reading. He answered, "Yes, if you want it." I said, "I do; can I get it now?" He said, "Why, yes." I received a *Journal* and a copy of "Science and Health with Key to the Scriptures." I did little else for a week but read that book. I cannot show my gratitude for Christian Science by simply saying that it has done something for me. I must know and demonstrate it in all the walks of life.

GUSTAV E. MELIN, Armstrong, Ia.

### Happy, Contented, and Well.

For fifteen years I suffered more or less every day from some trouble which made my life a burden. I wished over and over again that I could die, for I did not feel that I had anything to live for. Medicine did not do me any good. Sometimes I obtained relief for a time, but nothing cured me. As long as I could remember I had suffered from biliousness. I would have an attack every fortnight, but after two treatments I was cured. I have also been healed of chronic neuralgia, abscess in the face, and indigestion, by Christian Science treatment. I feel very grateful for what Christian Science has done for me in two years, but it is not only the healing that I am grateful for, but for the beautiful peace that it has brought into my life, such as I never knew before. I feel that words will never express the gratitude I feel towards the lady who first brought Christian Science to my notice and taught me that life was worth living. Two years ago I was a sick, discontented, miserable creature; now, I am happy, contented, and well.—E. E. E., London, N. W., Eng.

### Letter from One Healed.

*Dear Friend:*—If you could only see what Christian Science has done for me! Why, the world seems entirely changed in every way. I have drifted so far away from medicines it seems strange that I should ever have believed in them. I stand aghast when I view the past, and think of the power I gave to material things of life. No wonder I was so frail when I was leaning upon a reed for support which was ready to bend and break at any moment. Now I look to a higher Power which never fails when we put all trust in Him. You would not know E., she has grown and improved so much. Yes, I ordered "Science and Health with Key to the Scriptures" some time ago, and read it every day. The light it reveals is simply marvelous, and it makes the Bible so much more interesting. You know I told you that I read it because I had been raised to do so, and because it was right; but now I read it because I love it. What unspeakable joy it is to know there is One who will guide and direct us in all things.—M.

### Satisfaction Found in Christian Science.

As I failed to find the satisfaction for which I longed, I came to Christian Science for a religion, and I have surely found it. I have much opposition, but by pressing on in the Truth I am overcoming it to some extent. I have had many demonstrations, one of which I would like to relate, perhaps it will be of help to some one else.

One day when I was washing I set some boiling starch down to cool, and had just gone into the next room when I heard my little boy calling, "Mamma, come quick." As I went I declared the Truth. My little girl, who was barefooted, had put one foot into the starch and tipped it over on the other foot. I took her up and sat down a few minutes, and then put her down. That was the last of it, she did not even cry any more, and the burn did not leave a scar.—MRS. O. FINLEY, Chenoa, Ill.

### Bright's Disease Healed.

I was healed of Bright's disease through Christian Science. I had been under the doctor's care for nearly two years. I had the best in Chicago, some of them specialists, but received no benefit. I grew worse all the time, and was told I could not live. While in this condition a friend told me I could be healed in Christian Science. Knowing that all material remedies had failed, I called on a loyal student in Chicago, and received benefit from my first treatment. The way seemed hard at times. Darkness, doubt, and fear sometimes seemed about to overwhelm me, but divine Love tenderly lifted me above the wave. I have learned to love the Bible and "Science and Health with Key to the Scriptures," and can testify to its healing power.

ISABELLA GROVE, Seattle, Wash.

### Pronounced Incurable.

I was confined to my bed fifteen months after my baby was born. I was under the care of two skilful physicians and they pronounced my disease incurable. I was growing worse all the time and had given up all hopes of ever getting well. One of my neighbors had been healed by Christian Science and she insisted upon my being treated. I had a ray of hope when she told me she had been healed. The Scientist came and treated me and I sat up all day without suffering, after the first treatment. I have had many troubles to overcome, but each time it became easier, and now I am all right and doing my housework. God is ever present, and I trust in Him. My faith is planted on a rock that is immovable.

MRS. M. I. PITT, Elmont, Tex.

## From the Religious Press.

### The Coming of the Kingdom.

Jesus taught his disciples, and hence all believers in him, to pray "Thy kingdom come. Thy will be done in earth, as it is in heaven." The kingdom referred to is God's kingdom, and all who take this prayer upon their lips are asking that this world may become pure, righteous, heavenly. Will it ever become so? There are those who think it will not, while others, and their number is steadily increasing, believe it will.

The kingdom for whose coming we are taught to pray is not that of a particular form of governmental rule. It is the invisible yet effective reign of truth and righteousness, purity and love; conformity of man's will to God's will; the establishment in the mind and heart of the principles of the Gospel of Jesus. Therefore, whenever and wherever a person becomes Christ-like or God-like he is within the kingdom of God or the kingdom of heaven, whether on earth or elsewhere. To the extent that he is within that kingdom he experiences the eternal or divine life, he is spiritually saved.

As the world moves upward its ideals are raised, precisely as in the life of the individual. And it goes forward in the upward way only because individual lives are becoming better in quality, and the number of the better lives is proportionately increasing. Were every person on the earth truly Christian, or within the divine kingdom, or even up to the standard of the best people now living, what would follow? The cessation of the sins and crimes, the outrages upon public, social, family, and personal rights and interests, which now often shock the community. Purity, sympathy, love, and mutual helpfulness would universally prevail. No one would suffer in person or possessions because of another's wrong-doing or wickedness. The business world would have no troubles because of the injustice of one class toward another. The strong would aid the weak until they became strong. Ignorance would give place to knowledge, selfishness to brotherliness, envy to generous commendation, every harmful evil now existing to universal peace, joy, and prosperity. Such is the heavenly kingdom, God's kingdom, and the results it is intended to effect on earth. It is coming more and more in every century. Some day it will be here in full force. This century, this generation, this year sees more of God and truth and duty among men than any in the past saw. To-day a greater number of men and women than ever before are trying to give practical expression to the Gospel teaching, the eternal kingdom.—*The Universalist Leader.*

### Mathematics in Transcendent Form.

Of any cycle of time the symbol is a circle. The longer the cycle, the larger the circle, and the more slight the curvature of the circumference. Should the cycle, passing all bounds, become interminable, the curve of the symbolic circle's circumference would merge into a straight line. The infinite circle, then, is one whose circumference is a straight line. What of the centre? At each one of all successive points of time, eternity past and eternity to come exactly equal one another, reaching backward, reaching forward, each an infinite distance; and so these points are, each and all alike, the centre of entire eternity. This centre is then also a straight line. Further, since from centre to circumference of any circle the direct distance is always the same, centre and circumference are parallel, at an infinite distance apart. And all diameters—all of which pass through the centre—merge into the extended centre.

This is a mathematical parable, illustrating complete emancipation from self in becoming wholly "alive unto God." In the selfish life we revolve, self-centred, in a pitifully narrow orbit, held, indeed, under God's control, but not responsive in heart to Him. As, awakening in heart, we begin to know and acknowledge God, we attain enlargement of life; and as we become better and better acquainted with Him, this enlargement increases continually. We revolve in a wider and wider orbit; for the bond of selfishness becomes weaker and weaker. When at length completely loosed from it, we revolve no longer, but progress right onward, straight forward, perfectly harmonious (parallel?) with God, though He is always infinitely greater than we are. Deeper and deeper into eternal love and light we advance, "partakers of the divine nature." All the old selfish aims—diameters of the petty old orbit of self-seeking—are transmuted into workings of love. Then we shall well know what our Lord Jesus Christ meant in saying, "He that loseth his life for my sake shall find it."—*Christian Register.*

### A Sioux Indian Presbytery.

The Presbytery representing the Sioux Indian churches in the Dakotas is composed of 35 churches and 2,110 communicants. The officers of the churches, with only a few exceptions, are full-blooded Sioux Indians, and the pastors are Indians or half or quarter bloods, and are all graduates of some good school, generally of a Presbyterian Home Mission school. The efficiency and churchly qualities of the pastors and officers are spoken of in very high terms by General W. V. Lucas in *The Herald of Gospel Liberty*, who says they are doing their best to respond to the exhortations of the Presbyterian Home Missionary Society urging self-reliance. At the meeting of the Presbytery in Oahe, S. Dak., in October, when more than two thousand Indians were present, questions were discussed concerning a good home, good citizenship, and the tendency of returned students to go back to their old ways, and the remedy for it. More than one thousand full-blooded Sioux Indians took part in the celebration of the Lord's Supper.—*The Christian Advocate.*

## Miscellany.

### Since Washington's Day.

The population of the United States, which was about 5,000,000 in Washington's time, is now 75,000,000. The largest city in the country then, Philadelphia, had 69,000 inhabitants, while it now has 1,200,000 or 1,400,000. New York, then with 55,000 population, has 3,500,000 to-day. Chicago, then a hunting ground for Indians, with no place on the map until over a fourth of a century after Washington's demise, has more population now than was between the Potomac and the country's southern line at that time. The states of New York and Pennsylvania have each at present many more inhabitants than the entire United States had one hundred years ago, says *Leslie's Weekly.*

In 1799 the area of the country was 827,000 square miles, while it is now 3,700,000. Its western boundary, which was at the Mississippi then, was long ago advanced to the Pacific, and has now been extended to the Philippines in Asiatic waters. Its southern boundary, which was latitude 31 degrees at that time, the northerly line of the present state of Louisiana, has, in the passing years, taken in Florida, with that territory's former extension to the Mississippi, and reached down to the lower part of the Gulf of Mexico. Its northerly line, then the great lakes, has, in the case of Alaska, been stretched far north of the Arctic circle.

In the year of Washington's death the receipts of the government were $7,000,000 and its expenditures $9,000,000. In the fiscal year 1899 the expenditures were $700,000,000 and the receipts were slightly below that mark. The wealth of the country, which was less than $1,000,000,000 then, or much below that of the single city of New York now, is $90,000,000,000 at the present time.

Even the most daring imagination in the country, that of Jefferson, could not form any conception of the expansion that has come in the last one hundred years. In his first inaugural Jefferson congratulated the American people on "possessing a chosen country with room enough for our descendants to the thousandth generation." A country several times larger than the third president had in mind has filled most of its waste places in three generations. But neither Washington, Jefferson, nor any of their contemporaries could have foreseen the steamboat (then beginning in the most rudimentary way), the railroad, or the telegraph, and the changes they would bring. The sixty days required to make a journey from New York or Boston to the Mississippi a century ago would carry a person round the globe to-day. Several weeks passed before the news of Washington's death reached Kentucky or Tennessee, while intelligence of any occurrence can be diffused all over the earth in a few seconds at present.

*Concord Monitor.*

### The Currency Question.

"Speaking of the currency question reminds me of a campaign incident," says Charlie Curtis of Kansas. "A friend of mine had discussed 'gold dollar, silver dollar, and paper dollar' till the smaller members of his family even were filled with enthusiasm for the gold standard. 'Papa,' said one of his twin daughters, aged six, on election morning, 'if Jeanie and I vote the gold ticket, will McKinley be elected to-day?' Jestingly he assured his little daughters that such would be the case. That evening the pair of six-year-olds informed their startled parents that they had paid their dollar and voted for McKinley. 'What did you do with your votes?' asked the father. 'Put them in the mail box, of course,' was the quick reply. On investigation it was found that the two little girls had taken the two gold dollars that had been birth gifts to them, folded them in slips of paper on which they had written 'We vote for McKinley, and here's our gold dollars to back it up,' had put them in envelopes addressed 'Mr. McKinley,' and dropped them into the mail box."

*Boston Transcript.*

## Notices.

### Supplements to the Sentinel.

Two supplements to the *Christian Science Sentinel* have been issued. The first is the able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The workers in the Field will readily see the wisdom of giving these supplements the widest possible circulation, and the extremely low price at which they are issued will enable them to do so. The price of the supplements is as follows: Single copies, two cents each, postpaid; ten copies or more to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec. 1. The per capita tax for the year beginning June 1, 1899, and ending May 31, 1900, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each . . . . . $3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . . 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00
Twelve or more to one address, each, prepaid . . . . . 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen: $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each: per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 10 cents; 12 copies, to one address, $1.00; Twenty-five copies to one address $1.75; 50 copies to one address, $3.00.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U. S. A.

SEPTIMUS J. HANNA, C. S. D., Editor. CAMILLA HANNA, C. S. D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

**Political Events.**

State Senator William Goebel, contestant for the office of Governor of Kentucky, was shot down on the State House grounds at Frankfort, January 30, by a hidden foe. The following day, when Goebel was thought to be dying, the Democratic members of the Legislature, who comprise a quorum, decided the contest for Governor in favor of Goebel, and he was sworn in as Governor by the chief justice of the Supreme Court. He died February 3, and J. C. W. Beckham, Lieutenant-Governor under Goebel, was sworn in as Governor. Taylor, the de facto Governor, holds the State House by force, having the entire National Guard under arms and on duty. On the face of the returns Taylor, the Republican candidate, was declared elected and assumed office. Goebel contested the right of Taylor to the office, and the Democratic majority of the Legislature favored Goebel and declared him elected.

William J. Bryan opened the preliminary presidential canvass for the Democratic party in New England at a great mass meeting held in Boston, January 30. He then started on a speech-making tour of the New England states.

President McKinley has decided to leave to the new Philippine commission the question of the disposition of the property of the Roman Catholic Church in the Philippines and Porto Rico.

It is said that President McKinley intends to issue a proclamation to the Philippine insurgents within thirty days, offering amnesty to all who will lay down their arms.

At a recent meeting of the Cabinet it was decided to increase the army in Alaska.

**Foreign News.**

Since the retirement of the British forces under General Buller to the south of the Tugela River after the fight on Spion Kop, no authentic information regarding the situation of the opposing armies in South Africa has filtered through, owing to the strict censorship; but it has been persistently rumored that General Buller has begun a new movement in the direction of Ladysmith for the relief of the beleagured forces under General White.

Including the casualties in the battle of Spion Kop and engagements at Venter's Spruit, the total loss of the British since the beginning of the war, up to January 31, is placed at 9,658. On the arrival of 18,000 troops now afloat, Lord Roberts will have at his command 213,000, the largest army Great Britain has ever put in the field.

The British Parliament re-assembled January 30. The Queen in her speech announced that the provisions for military expenditure must be very largely increased. Sir Henry Campbell-Bannerman, leading the opposition, attacked the government on its conduct of the war, but it seems to be clearly the disposition of the members to sustain the government in spite of the popular dissatisfaction with the results of the campaign.

It is reported that business is stagnant in Porto Rico, and in consequence a great many laboring people of the island are in distress. The cause is said to be the uncertainty in regard to the tariff. It seems likely now that Congress will soon adopt a tariff for Porto Rico that shall be 25 per cent of the existing tariff levied on foreign goods.

The authorities of Honolulu set fire to a block of dwellings in the district condemned by the health officers, January 20, and the flames spread to other blocks sweeping everything before them until the Chinese and Japanese quarters of the town were burned out, leaving about 4,500 people shelterless.

The national library in Paris has just acquired the forty thousand volumes that formed the famous collection of books of M. Ristelhuber, the Austrian author. The testator was a rich man, and spent nearly all his fortune on his library.

Hamburg, Germany's first seaport, has adopted the overhead American trolley on its street lines. Eighty German cities are supplied with electric railways, and American appliances are admitted to be beyond comparison the best.

There are large furniture stores in Johannesburg and Pretoria, and the better class of Boers have their houses furnished in the most modern style. In 1898 the imports of wooden furniture alone were valued at $1,112,000.

The meteorological department of the government of India has four first class observatories, 174 general stations, and 2,280 rainfall stations, from which regular monthly statements are received.

St. Paul's cathedral is the most heavily insured building in Great Britain. It is insured in ten companies and the policies aggregate nearly five million dollars.

There are in the English army seven hundred Jews, one hundred and forty-four of them being officers. France has three hundred Jewish officers.

Recent cable reports have spread a rumor that Emperor Kwang Sur of China has been deposed, but the rumor has not been confirmed.

The sugar crop of the Hawaiian Islands for this season amounts to 282,807 tons.

**Industry and Commerce.**

Solicitor Dodd of the Standard Oil Company is reported to have made the following statement in regard to the dividends paid by that company. The quarterly dividends of the company aggregated 5¼ per cent in 1882; 6 per cent in 1883 and 1887, 11½ per cent in 1888, 12 per cent in 1889, 1890, and 1891, 12.21 per cent in 1892, 31 per cent in 1896, 31 per cent in 1897 and 33 per cent in 1898, and that a stock dividend was made in May, 1887.

A movement to amalgamate all automobile and bicycle interests has progressed so far in this country that Eleazer Kempshall of Boston has sailed to Europe to perfect matters in Great Britain and continental Europe. The outcome, it is said, will be a $200,000,000 trust, which is intended to embrace the manufacture of every article entering into the construction of a bicycle or an automobile.

Chicago's down-town streets are cleaned and repaired under the supervision of a woman. About seventy-five laborers are employed and the work is done between seven o'clock in the evening and six o'clock in the morning. About one hundred and twenty thousand dollars is expended annually under her direction.

The Agricultural Department reports that our trade with Japan and China, including the port of Hong Kong, amounted to $87,305,688 for the fiscal year 1899. The trade in 1889 amounted to $46,294,167. The gain in exports during ten years was 256 per cent, while the gain in imports was 36 per cent.

There are 37,000,000 sheep in the United States. Each annually averages 6½ pounds of wool. The total wool clip is, therefore, two hundred and forty million pounds. When pulled, scoured, and fleeced these figures are reduced to one hundred and fourteen million pounds.

Official figures on the pig iron production in Alabama and Tennessee during 1899, show that the output was an increase of twenty per cent over the highest previous year. The two states produced 1,571,570 tons during the year. Of this amount 1,257,256 tons were from Alabama.

The mints of the United States made an exceptional record in 1899. The gold coinage was $111,344,220, the silver coinage $25,061519, and the minor coinage $1,837,451. The total coinage was 152,939,465 pieces, representing a value of $139,243,190.

Sioux City, Ia., will soon have the largest creamery in the world. It will have two hundred and fifty stations, while the largest creamery now in existence, that at St. Albans, Vt., has one hundred stations.

The total number of vessels built and numbered by the Bureau of Navigation during the year 1899 was 954, of 267,642 gross tons, compared with 955 of 237,600 gross tons for the year 1898.

It is reported that the profits of the Carnegie Steel Company for 1899 will be forty million dollars. The aggregate properties of the concern are valued at three hundred million dollars.

The first aluminum telephone system is in operation between Pittsburg, Pa., and New Kensington, a distance of eighteen miles. It is a success in every respect.

In the year 1899 the exports of iron and steel products from the United States amounted in value to $105,089,645 against $27,000,000 in 1889.

The Illinois anti-trust law has been declared unconstitutional by Judge Kohlsaat of the United States District Court.

**General News.**

Until the widow of the late General Lawton arrived at San Francisco from Manila recently, she knew nothing of the fortune which had been raised for her by popular subscription. She was deeply touched by the unusual mark of esteem for her husband and care for his survivors.

The colored waiters employed in the hotels in Hyde Park, a suburb of Chicago, are to have a school of their own. A room in the Hyde Park High School will be set aside for their use. The hours will be from three to five daily, and an attendance of one hundred is assured.

The regalia worn by Washington as a Mason is owned in Goodland, Kan. It consists of an apron and baldric, and is the property of J. T. Smith. He inherited it from an ancestor, to whom it was given by John Robin MacDonald.

The will of the late Henry B. Plant, recently filed for probate at New Haven, Conn., shows that the great railroad and steamship owner left $16,952,546 besides a large amount of real estate in Florida.

## The Heliograph Described.

### How General White Flashes Despatches to General Buller Twenty Miles Away.

THE heliograph, which is being put to such effective use in South Africa by both Briton and Boer, is a modern adaptation of one of the oldest forms of signaling apparatus known to military science. Heliographing, as the name implies, is sun-telegraphing, and General White's signal men in despatching news from sorely pressed Ladysmith are using the same device, only in more perfected form, that the wicked small boy with a bit of looking-glass in his grimy fist employs to attract the attention of his fellows across the schoolroom by flashing the sun in their eyes.

Mirror-signaling was early used by the North American Indians, and is no doubt partially responsible for the marvelously rapid dissemination of news on the plains noted by many American army officers. The modern war heliograph is almost equally simple in theory and practice. The sending apparatus consists of a mirror mounted on a tripod and hung on both horizontal and vertical axes with adjusting screws admitting of minute changes of plane. With this mirror the sun's rays are flashed for miles, directed by painstaking adjustments into the field of vision of a receiving telescope, also tripod-mounted. The code is similar to that used in electric telegraphy. Flashes, long or short, represent dots and dashes, and the Morse or any other code, including ciphers, can be readily used.

The heliograph has been called the trump card of visual signaling, for it possesses the four cardinal military virtues —portability, rapidity, range, and secrecy. The heliograph is extremely portable, weighing, with its stand, no more than a soldier's rifle. It possesses a curious virtue of secrecy, because to people standing even at a very short distance from the point on which its rays are directed, its signals are invisible. But this fact will show how needful it is to have the sun reflected full on the distant station; and to insure this the heliograph has to follow the sun as it travels through the sky. The two screws mentioned, one giving a vertical movement and the other a horizontal movement to the mirror, about its centre, effect this, and the screws can be manipulated by the signaler while in the act of sending, without interruption to the message. The range of the heliograph is enormous with a strong sun and clear horizon, and it is therefore admirably useful in South Africa. In the 1883–85 campaigns a heliographic signal service extended north—Orange River to Molopole—a distance of 429 miles. One of the great virtues of the heliograph is its ability to pierce haze. Colonel Keyser, who was with the besieged garrison of Kandahar in 1880, reported that he opened communication with the advanced guard of the relieving force, under Sir F. Roberts, at Robat, a distance of forty-eight miles, and communications were kept up for several hours on a hazy day.

Heliographing 429 miles, as stated above, implies a system of repeating stations, however, as the curvature of the earth in such a distance makes it improbable that stations sufficiently high could be secured. In this country the longest distance covered of which we have record was a message sent in 1897 from Mount Wilson in California to Black Jack Mountain in the island of Santa Catalina, seventy-five miles away. This message was sent with ease, and there was nothing in the account of it to suggest that the limit of the heliograph's range had been reached in this experiment. Searchlight signals by night are, of course, only a modification of the same principle, with the disadvantages of less portability of instruments, less range, and less secrecy.—*Boston Transcript.*

## Jewish Rabbi Becomes a Christian Scientist.

REV. DR. MAX WERTHEIMER, who has been the Rabbi of the Jewish Synagogue K. K. B'nai Yeshurun of this city for ten years past, severed his connection with that charge several months since. Last night, at the First Church of Christ, Scientist, it was announced that the Rev. Doctor had embraced Christian Science.

After the usual exercises the First Reader arose and addressed the large congregation as follows:—

*Friends:*—It is with pleasure that I announce to you this evening something outside of the usual order of events. On last Monday evening Dr. Max Wertheimer came to my house, unexpectedly, and made his application for membership in this church. I want to say that this was not done under impulse, but after two years' consideration and careful study of our denominational text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. I wish specially to speak of this that you may know that you are not listening to a man on the outside of Christian Science, with only a kind feeling for us, but one who has officially severed his connection with his own church, and as far as it is possible at this time for him to do so, he has identified himself with this great cause of God and humanity. He needs no special introduction to you, for he is with us as one of us, an earnest seeker after Truth, one whom I believe God has called to this work.

Dr. Wertheimer, being thus introduced, arose, and delivered the following address, which is self-explanatory. Profound silence prevailed, and with deep, earnest voice, the Rev. Doctor addressed the meeting. He said:—

The Rubicon of doubt and discord is crossed, the die is cast, I have identified myself with your platform, I have affiliated myself with your cause and purport, and I am here to say so. Ever conscious of the divine Presence of Truth and Love and the cultured yearnings of you all, I will tell you what prompted and led me to this startling metamorphosis.

First of all, I want to assert that no human being either urged or persuaded, induced or lured me into Christian Science. I joined it not for the sake of money considerations, nor for a bribe, nor for the sake of rising into a higher social realm, but simply because I was, and still am, utterly convinced of the spiritual principles it advocates. Because of convictions, from which no power on earth can make me swerve! Convictions arrived at after long,

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

mature, and cautious reflection in the secrecy of my solitary study-room! Such convictions are sacred! They are my property. Hands off! For this step I am accountable to none but God. Yea, I chose this spiritual home, because it is congenial to my aspirations and unfettered thoughts. The main cause which shattered my old views and prejudices and made a new man out of me, was the study of Science and Health, written by Mary Baker G. Eddy. A small book—but oh, how mighty!

It was ever a soothing comforter, a kind admonisher, a gentle guide to me! Christian Science has made over a million men and women better mentally and morally—and that means, of course, physically—within the last twenty years. People do not see it; people do not and cannot believe it; but then some people are blind to the beauties of landscape and art, and others are deaf to the softest strains of sonata, symphony, and oratorio. To some, Christian Science is simply so much theory and crazy definition, just as mathematical figures and signs are to the uninitiated, but then out of mathematical theory and principle, foolish as they may look to some, are constructed Eiffel towers, Ferris wheels, Brooklyn bridges, air ships, and ocean greyhounds! The fact of the matter is, spiritual things must be spiritually discerned, and until they are spiritually understood, we cannot grasp them nor be benefited by them.

I have conscientiously studied almost every civilized religious system for a number of years, and by contrast and comparison, I have found Christian Science the divinest of them all, though it was but recently I found this out. The watchwords of Christian Science are: "Hear, oh Israel: the Lord our God is one Lord!" "Thou shalt have no other gods before Me." "Thou shalt love the Lord thy God with *all* thy heart, with *all* thy soul, and with *all* thy might." Imagine Asia, Africa, Europe, America and Australia, the Atlantic and Pacific, North Pole and South Pole! Think of the complex computations of astronomy stretching hundreds of millions of miles into numberless orbs and orbits, extending into infinite space beyond our ken,—and over them all One God,—One Master Mind,—and where is that God? Where is He not? As the one hundred and thirty-ninth Psalm says: Everywhere He is present! Science and Health teaches that One Mind is Love, Life, and Truth, and that Mind is the Principle of the universe and man. When we speak of man, we do not mean a sinful, wretched mortal who aches and quakes and sobs and sighs and moans and groans, but we mean the spiritual image of the Most High, the reflection of the divine Father.

There is but one God, and He is and fills All; God is Love, therefore Love is All, and therefore we are to give to that all-present, all-knowing, all-powerful God of goodness our all-heart, all-soul, all-might love! Worldly wisdom will ridicule and condemn this spiritual Truth as it did ages ago. There never was a religious prophet but was despised and rejected when he first thundered forth to sinful mortality his daring message. From Abraham to Moses; from Samuel to Elijah; from Isaiah, Jeremiah, and Ezekiel to Hillel, Jesus, and Paul, the carnal mind opposed the spiritual Mind, and the spiritual Mind the carnal mind; just as the apostle asserted: "The wisdom of this world is foolishness with God." "For my thoughts are not your thoughts, neither are your ways my ways, saith the Lord. For as the heavens are higher than the earth, so are my ways higher than your ways, and my thoughts than your thoughts." "Trust in the Lord with all thine heart; and lean not unto thine own understanding."

To whom was this message of one spiritual God, invisible to physical sense, originally entrusted? To Israel. What does Israel mean? Prince of God. A Prince of God means the spiritual Son of the spiritual God. "Israel is my First Born," says the Bible. What was Israel, as Prince of God, to do with this Truth? To hide it in a napkin? No. To put it in a bottle? No. To preserve it in a jar? No. To bury it in a dingy corner? No. But to proclaim it so emphatically by living example that through it all the nations and families of the earth should be blessed and not cursed. In fact, Israel was, from the very outset of its career, given to understand that it was to be a kingdom of priests. A kingdom of priests? Who then is to be their congregation? The world. The nations. Israel was destined to be a light to the Gentiles. That Israel as a people should prove its boundless love of God by its daily love for man. As a holy people, it was directed to go out into the world to teach and live this spiritual understanding; and while it was to go into the world, Israel was not to be of the world and copy heathenish vices and passions, but, ever denying ungodliness and worldly lusts, to love God, to cling to His Allness, and to cleave to Him alone.

God Almighty designed Israel to be the spiritual schoolmaster of Gentiles, but Israel grew worldly; fascinated by material gains, it deviated and erred. The gentle Nazarene, by his God-like and winning ways and superhuman works, was sent to rescue and to save the suffering, blundering mass. They heeded not. Even later pretended Christian followers became, despite Jesus' noble example, victims of worldly lusts. Centuries of persecution, intolerance, and tyranny followed. Spirituality was either stifled or almost extinct. But the hour of emancipation struck! Religious liberty, sent by divine Love at the ripe moment, flooded the world with new light and thought.

Need I say that Mrs. Eddy has been, and still is, one of the noblest Mothers in Israel? She has rediscovered what was lost, forgotten, or stifled for centuries. By perusing the wonderful book, Science and Health, my love and compassion for sinful and groaning mankind increased, my spiritual conceptions became clearer and holier. I have searched the Scriptures again and again, and have discovered undreamt-of gems and treasures hidden amidst the monotonous and oftentimes obscure verbiage of uninspired scribes and copyists of early Biblical documents. I have battled and wrestled with errors, prejudices, and mental bias, only to appreciate all the better my mission. I have come to co-operate with you and worship with you. I believe God is in this work, and He will not let it fail! The harvest is plenty, the laborers are few. Man's extremity is ever God's opportunity. Do you not see that Christian Science is now, at the dawn of a spiritual century, calling, "Come unto me, all ye that labor and are heavy laden, and I will give you rest"? Ah, rest from blunders, illusions, pains, conjectures, and beliefs.

Henceforth there shall be for me and for you, neither Gentile, Greek, nor Jew, but God's sons and daughters. All are Spiritual kith and kin! To all this work I pledge my heart and soul and might, which, please God, may never fail me. Upon this Rock I stand, and shall remain standing. Contrariwise I cannot act; God is my Help, as He is yours. Amen.

During yesterday afternoon Dr. Wertheimer addressed a letter to Dr. Wise, at Cincinnati, severing his connection with his own church and faith. He also wrote to a number of his friends, giving his reasons for embracing Christian Science.—*Dayton (O.) Evening Herald.*

---

The Christian Scientists deserve credit for emphasizing one thing that is too often overlooked, the power of mind over matter. Things we believe in help us.

*Citizen,* Somerville, Mass.

## The Lectures.

### At Washington, D. C.

An audience which filled every seat in the Columbia Theatre listened for almost two hours yesterday afternoon (Sunday, January 28) to a lecture on Christian Science, delivered by Hon. William G. Ewing, one of Chicago's most distinguished jurists. The vast audience, which was made up for the most part of Washington's representative citizens, included many Senators and Representatives. They applauded the speaker at the close, and not a few advanced to the stage and greeted him. The lecture was given under the auspices of First Church of Christ, Scientist, of Washington, and was under the personal supervision of John Freeman Linscott, who, in a brief address, introduced the lecturer of the afternoon. Judge Ewing is a forceful speaker. His long career at the bar in the state of Illinois, as a judge of the Superior Court, and as United States district attorney has thoroughly equipped him as a public speaker.

Judge Ewing was greeted with hearty applause, led by a number of people from his native state.

*Post,* Washington, D. C.

Mr. Linscott's introductory remarks were as follows:—

*Kind Friends:*—In behalf of our two churches in Washington, and by way of parenthesis, I will only say, that our position and contention is that the Rev. Mary Baker Eddy has actually discovered the Science of eternal existence. It is the divine Science of ontology, and she has invented an absolutely Scientific method of reducing it to human apprehension. She has termed this process Christian Science. It is narrow to human sense because there can be no controversy in it. Like mathematics it contains no human opinions. In her book, "Rudimental Divine Science," she has defined Christian Science, "As the law of God, the law of Good, interpreting and demonstrating the Principle and rule of universal harmony."

I feel called upon at this point to make a distinction between a discovery and an invention.

Ptolemy invented a theory of astronomy, and invented a method to present his theory to others. His theory of astronomy was based on the evidence of the human senses, which are always changing.

Centuries later Copernicus discovered the science of astronomy, through the reversal of the human senses, and invented an absolutely Scientific method of presenting his discovery to those who desired to know it. If Copernicus had never discovered the science of astronomy he could never have invented the scientific text-books to teach it. To-day and forever, the science of astronomy and the science of mathematics are placed beyond the possibility of controversy. The relation of the planets to the divine Mind that created and governs them is not more scientific than the relations of human beings to the same divine Mind.

We press the distinction, then, between the divine Science which Mrs. Eddy discovered, through the demonstrations of Jesus our Lord, and her invention of an absolutely scientific text-book, which reduces it to human apprehension. We do not claim that Mrs. Eddy invented Divine Science, but she discovered it through the revelation of the law of Spirit in the Scripture.

We believe the great Nazarene prophet was the Christ, the only Christ, or true manifestation of God in the flesh, and our working model in Christian Science.

We believe that Jesus the Christ has given to men the purest code of morals and the highest physical manifestation of God, that the world has ever known. His life and works were the very embodiment of the doctrine he taught, and his great demonstrations on the cross, in the tomb, and over his physical body at Olivet, was God's crimson seal of love to men. "Greater love hath no man than this, that a man lay down his life for his friends." When they were driving the spikes through his hands, he turned his eyes heavenward and said, "Father, forgive them; for they know not what they do." Those words, with those deeds are the eternal definition of love.

Because the law of Spirit by which he wrought the victory over death is the same by which we must work out ours, it is a blessing to this and all future ages that its science is reduced to absolute reason, which leads to the eternal revelation of what God and man is.

Unlike Copernicus, who feared to give his discovery to the world until he was on his death-bed, for fear of opposition and persecution, Mrs. Eddy gave her book to the world in 1875. Millions are interested in the subject; thousands have been healed by the study of the book, which is now in its 182d edition of one thousand copies each. A hundred thousand have been healed by others. Five hundred churches have been established in twelve years. We own our publishing house and have two national organs which are official, and the interest is rapidly increasing because the healing is so marked. The mass of thinkers can see that if Christianity is true, it must be a Science. They can see that if Christianity is true it can have but one theology, and we believe that all will soon see that the theology of Christian Science is just what Webster defines as theology: "Theology is the science of God, or religion; the science which treats of the existence, character, and attributes of God, His laws, and government, the doctrines we are to believe, and the duties we are to perform."

We knew, dear friends, you would be pleased to hear an eminent man discourse on the matter. For fifteen years he has been a true friend to our Cause for reasons he may think proper to mention. All these years he has been a companion of scholars, of eminent lawyers, of judges, of governors, of presidents, and constantly emerging from the practice of civil law to the essence of it, which is the law of the Spirit of Life in Christ; with its ceaseless, changeless attributes of justice, mercy, wisdom, and goodness, and the salvation of the world of men. A jurist, self-retired from the bench, he has become an humble advocate at the bar, before the Judge of all the judges, with the human race for a clientage.

I have the extreme pleasure of introducing the distinguished lecturer to you, the Hon. William G. Ewing of Chicago, ex-judge of the Superior Court of Chicago, and member of the International Board of Lectureship of the Mother Church of Christian Science in Boston, Mass.

### At Fortuna, Cal.

Hunt's Hall was filled to overflowing by people of Fortuna and surrounding country, Tuesday evening (January 16) to hear Dr. F. J. Fluno, M.D., C.S.D., lecture on "Christian Science and Christian Scientists." Dr. Fluno is a good speaker and held the closest attention of the large audience to the end.

*Eel River Valley Advance,* Fortuna, Cal.

Dr. Fluno was introduced by George W. Snively, president of the church, who said in part:—

*Friends:*—If you have any prejudice whatever against this Science, we ask, in a spirit of brotherly love, that you lay it aside, if but for the period of one brief hour, and listen to an exposition of this great problem from a Christian Science standpoint.

It is useless for opponents of this Science longer to claim that it does not heal the sick. You have only to look around you, and you need not go outside your own little hamlet, to find positive evidence that it does heal the sick.

Digitized by Google

Likewise it is useless to say that this Science is not Christian, for it saves from sin, and an honest investigation will reveal the fact that under its practice, men and women have been rescued from even the lowest depths of vice and degradation, and restored to a life of virtue and respectability. Especially is this true in regard to that great curse to the human race, intoxicating liquor. You, who are laboring so earnestly in the cause of temperance, did you but know the spiritual animus and uplifting power embodied in the teachings of Christian Science, you would not longer hesitate to give it an honest and thorough investigation; and with such investigation we know that you would find the Truth that overcomes all obstacles and will insure the final success of your cause.

We ask you to investigate this subject, not for our sakes, not for the sake of Christian Science, nor yet for the sake of God, who needs no help from mortal man, but for your own sakes; that you may be lifted out of the Egyptian bondage of material sense, into your God-given spiritual dominion over the whole world.

We feel that our remarks would be incomplete, without reference to one of the most notable—pardon me if I say the *most* notable—woman in the history of eighteen hundred years, the Rev. Mary Baker Eddy, Discoverer and Founder of Christian Science. She, with God's help, has done more for suffering humanity than any other human being since the first century of the Christian era, by giving to the world the first and *only complete* exposition of the Christ-healing methods.

It is she who gave to the world "Science and Health with Key to the Scriptures," which book contains the whole of Christian Science.

It is she who has made it possible for us to sit to-night under the voice of one who, by his loyalty to Truth and his faithfulness to the teachings of Science and Health, has been found worthy of an appointment to the responsible position of member of the official Board of Lectureship of the Mother Church in Boston.

Dr. Fluno is one who was a prosperous practitioner of *materia medica* for a number of years; and having found the Truth in Christian Science, is now devoting all his time to the practice of metaphysical healing and teaching.

I now have the pleasure of introducing to you Dr. F. J. Fluno, C.S.D., who will address you on the subject of "Christian Science and Christian Scientists."

MRS. FLORENCE E. JARVIS, *Clerk*.

---

### At Toronto, Can.

The citizens of Toronto, Canada, were favored with an excellent lecture on Christian Science, Friday evening, January 19, by Hon. W. G. Ewing of Chicago, Ill. Upon going on the platform of the beautiful hall, in which three thousand people were assembled, Mr. Stewart, Second Reader of First Church of Church, Scientist, Toronto, under whose auspices the lecture was given, gave the large audience a hearty welcome on behalf of the church, and announced that Mrs. A. M. Knott of Detroit, Mich., also a member of the International Board of Lectureship, being present, would introduce the distinguished lecturer of the evening.

Mrs. Knott said in part:—

It has been thought proper that I should formally introduce to you the distinguished gentleman who is to speak to you on the subject of Christian Science, the Hon. William G. Ewing of Chicago.

He is so well and favorably known with us that his name is a sufficient introduction everywhere. Here, however, it may be well to say that the most vital problems in American history were being worked out and prepared for the final issue in Judge Ewing's boyhood and youth, and what is more, he was intimately acquainted with a number of the most prominent actors in the great struggle for human liberty and rights, which culminated in the abolition of slavery in the United States. Abraham Lincoln's massive character was constantly before the boy and the youth, and must have retained a large place in his unfolding manhood. The all-important consideration in life is to recognize and make one's own the loftiest ideals one can find, and thus become fitted to understand what is meant by the image and likeness of God.

Mr. Ewing became a lawyer, and has for many years been an honor to his profession. He declined a re-election to the bench of the Superior Court of Illinois and afterwards became a member of the International Board of Lectureship of Christian Science.

These remarks are intended to show you that the speaker of the evening is not one who looks upon the surface of things, but has been for long years accustomed to weigh carefully all evidence, and subject it to the severest tests. In this judicial spirit he came to Christian Science, weighed it in the balance, and did not find it wanting. He is in every way qualified to speak upon this subject, and is intimately acquainted with the Discoverer and Founder of Christian Science and the Leader of the Cause, the Rev. Mary Baker G. Eddy, author of "Science and Health with Key to the Scriptures."

Jesus once said, "My doctrine is not mine, but his that sent me," and so we say and feel concerning Christian Science. It is as old as eternity, though discovered anew at this period. It is the Science of the Universe, the Science of Man, the Science of Health, and the Science of the Bible.

I esteem it a great privilege to be here—to be allowed to say these words, and to add that those who know this man learn to love and reverence all men.

I will now present to you the Hon. William G. Ewing, a member of the International Board of Lectureship of Christian Science.

Judge Ewing spoke for an hour and a half and retained the closest attention of his hearers. All were impressed with the earnestness of the speaker.

ISABELLA M. STEWART.

---

### At Troy, N. Y.

Music Hall was filled last night (Tuesday, January 23) by followers of Christian Science and those who, while not followers in the faith, wished to hear something about it. An interesting lecture of about two hours' duration was delivered by Hon. William G. Ewing of Chicago, the speaker receiving the closest attention throughout. Judge Ewing was happily introduced by Seymour Van Santvoord, who, with Fred W. Sim and E. K. Betts, occupied the centre of the stage. Mr. Van Santvoord said in part:—

In this large and representative audience, doubtless, there are many who, like myself, by birth, breeding, and temperament, belong to that class which, fortunately or unfortunately, obtains in every state and government—the so-called conservatives. From some subtle impulse, outside of our own volition, as it seems to us, we invariably incline to cling to the old things. This attitude, I believe, is well and right, if only because it is so entirely natural to us. It is like the fundamental political division into Whig and Tory, which Jefferson declared will always exist, because it is founded in human nature itself. And yet, however strong this conservative sentiment, thinking men ought never to be afraid to consider on its merits any new dogma, doctrine, principle, or prophecy. If it is new doctrine, whether it is to live or die depends not upon him who declares it, nor upon us who receive it; but alone upon whether it is essentially true or false. For in the unerring evolution of God's will and law, truth at the last

Digitized by Google

must conquer, falsehood fail. "A lie," says Carlyle, "can never live." Before it is even born it has sentence of death written against it in Heaven's high Chancery itself. And, if I may be permitted to paraphrase one of the noblest thoughts of our New England seer, the world has a sure chemistry, by which it extracts what is excellent in every idea, and lets fall the limitations and infirmities of every honest search for the truth.

Those who attend public exhibitions or gatherings of whatsoever character may, perhaps, be divided into three classes: First, there are those whose promptings, from the cradle to the grave, seem to be from the senses alone. In the second class are those to whom the intellectual life is something more than a sounding phrase; and finally, there are those who consider the pursuit of truth and the unfolding of the mystery of the soul among the highest of human privileges. Those who make up the first class, unrefined as it were, are contented if they but see something going on; the next, more refined, wish to be made to feel; the last, entirely refined, desire to reflect. As a fellow member of the profession which has honored and been adorned by the distinguished gentleman who is about to address us, I offer to him a fraternal greeting. As a citizen of this community, which delights to extend its hand to high-minded persons, I tender him an unaffected welcome. And in behalf of this large audience, made up, I presume, almost entirely of that third class which has been mentioned, I promise him a fair and generous consideration of his reasons for the faith that he cherishes. And it is our own great pleasure to become acquainted with the Hon. William G. Ewing of Chicago, whom I now present to you.—*Record,* Troy, N. Y.

### At Madison, Wis.

Fuller Opera House was packed to overflowing Friday evening (January 12) with people gathered to hear Judge William G. Ewing of Chicago lecture on Christian Science. It was an unusually intelligent audience, too, that faced the lecturer, including a large representation from the university and many professional men and their wives from the city. Close attention was accorded him throughout. He was introduced by C. C. Montgomery of the University Law School who also welcomed the audience in behalf of First Church of Christ, Scientist, of Madison.

*Madison Democrat,* Madison, Wis.

## The Christian Era.

*Q.*—The Christian era dates from the birth of Christ; why is it that New Year's does not come on Christmas, or the year begin on Christmas instead of eight days later, as it does?

*A.*—The Christian era was first proposed in 527 A.D., though its use was not uniform in Europe till a short time before the discovery of America by Columbus. Long before that, January had been established as the first month in the year, and as the beginning of this system of chronology was practically an accident and it was long unenforced by the authority in command, kings or counsels, no change was made. After various agitations the Gregorian rule was established, "in which the years are denominated as *years current* from the midnight between the 31st of December and the 1st of January immediately subsequent to the birth of Christ, according to the chronological determination of that event by Dionysius Exiguus." This character lived in the beginning of the sixth century. There was no exact determination. The answer to the question, then, in its simplest form is this: the inventor of the scheme could not upset the pre-eminence, that had existed for many years, of January as the first month. The most plausible tradition concerning the birth of our Lord fixed it at December 25, hence the scheme as we now have it. It was long before this was agreed to. The Julian system contended successfully for a great while with the Gregorian. Even as late as 1648 the 25th of March was New Year's Day in England, though in Scotland the year began with the 1st of January from the year 1600. On account of this difference a Scottish writer puts the execution of Charles I. in 1649, and an English writer in 1648, notwithstanding the fact that both agreed in the month and day. England did use the 25th of December as New Year's Day from the sixth century to 1066, the 1st of January till 1155, the 25th of March until the day after the 31st of December, 1751. Dionysius Exiguus, the author of the present era, himself originally chose the 25th of March, exactly nine months before Christmas, and that would practically have gotten another year into the era. A curious method of dating grew out of this, and persists. In some English documents will be found a date like this: 12th of February, 1706–7. That means 1706 if the year begins on the 25th of March, or 1707 if it begins on the 1st of January.—*Christian Advocate.*

## Dewey's "Perfect" Fountain Pen.

THE Dewey's "Perfect" Fountain Pen has recently entered my employ, and after one month's trial I find it well named,—perfect. I had tried various styles of fountain pens, but not until I got "Dewey's Perfect Fountain Pen" did I find one that meets the demand in every respect. To write with this pen is indeed a pleasure, it never fails to make its mark; and the construction is such there is no joint through which the ink can leak and stain the fingers. Manufactured by A. A. Waterman & Co., Boston, Mass.

MARY BAKER EDDY.

## The Birthplace of Mary Baker Eddy.

**Reproduced by the Aid of Mrs. Eddy's Information, Photographs of Site, and Authentic Data.**

THIS is the title of a well-executed etching from an original drawing by Rufus H. Baker. It restores on paper the Baker homestead as it appeared in Mrs. Eddy's girlhood. Now the site is but a tithe of the old farm, and only a few fruit-trees remain to suggest the once fine orchards.

This picture has been made possible mainly through Mrs. Eddy's kindly assistance.

The etching is printed in black and sepia to meet a preference in tints, and can be obtained at the following prices:—

Artist's Proofs . . . . . $7.50
These are the first prints, are on India paper, and limited in number.

India Proofs . . . . . $5.00
Later prints on India paper.

Plain Proofs . . . . . $3.00
Prints on plain rice paper.

Address, RUFUS H. BAKER, 88 North Main Street, Concord, N. H.

## Sentinels Wanted.

THE Christian Science Publishing Society are desirous of obtaining copies of the following issues of the *Christian Science Sentinel:*—

Vol. I.—No. 19, Jan. 5, 1899; No. 20, Jan. 12, 1899; No. 23, Feb. 2, 1899; No. 24, Feb. 9, 1899; No. 27, March 2, 1899.

Vol. II.—No. 1, Sep. 7, 1899; No. 3, Sep. 21, 1899; No. 18, Jan. 4, 1900.

For the above numbers the Society will pay the same price for which they are sold, or will give in exchange the latest issues of the *Sentinel.*

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## From Our Leader.

THE following letter from our Leader, to the First Reader of one of our churches, we have gained permission to give to our readers that all may share its blessing.

EDITOR.

Pleasant View, Concord, N. H., February 2, 1900.

*Beloved Student:*—Christ is meekness and Truth enthroned. Put on the robes of Christ and you will be "lifted up and will draw all men unto you."

The little fishes in my fountain must have felt me when I stood silently beside it, for they came out in orderly line to the rim where I stood. Then I fed these sweet little thoughts that, unfearing me, sought their food of me.

God has called you to be a fisher of men. It is not a stern but a loving look that calls forth mankind to receive your bestowal; not so much eloquence as *tender persuasion* that takes away their fear, and it is Love alone that feeds them.

Do you come to your little flock so filled with divine food that you cast your bread upon the waters? Then be sure that after many, or a few days, it will return to you.

The little that I have done, has all been done through love, self-forgetful, patient, unfaltering tenderness.

With love, Mother.

M. B. EDDY.

## The Press.

To those unfamiliar with the healing system known as Christian Science, there may seem to be a lack of wisdom in discarding the well-known and long-established systems of healing by drugs and other material means, and trusting to a system which, to them, is unknown and uncertain. This is true of our newspaper friends who have not investigated Christian Science as well as of others.

We are nevertheless aware that fair-minded newspaper men, even though they may not endorse Christian Science, do not wish to do it and its adherents injustice. Their natural desire is to treat it fairly, and give it the credit to which it is entitled.

This suggests the question whether, if they desire to publish anything relating to Christian Science, they can occupy this fair attitude toward it unless they take reasonable pains to inform themselves as to what Christian Science is, what it purports to be able to accomplish in the way of healing disease, and what it has actually accomplished and is accomplishing.

If, as the result of such investigation, the newspaper authorities should become convinced of the healing efficacy of Christian Science, and that in fact it is achieving healing results in many cases where all other systems have failed, then surely their inherent desire to encourage the sick and suffering in obtaining the greatest possible measure of aid and relief, would lead them to a candid recognition of the Christian Science claims and methods. So far from charging to Christian Science deaths supposed to have resulted from neglect or failure to employ the ordinary means of relief, they would take pains to inquire into the facts of each case and report accordingly.

Christian Scientists are well aware, as are others, that all who assume to be Christian Science practitioners are not such; that some of them, indeed, are as far removed from genuine Christian Science as is possible.

Christian Scientists only ask that the same fair treatment and just discrimination be accorded them, in this regard, that is vouchsafed to other systems.

We are glad to say that the present tendency of the newspapers is to so treat us, and we know that this tendency will increase as time goes on, and the benefits of Christian Science become better known.

To the newspaper fraternity who desire legitimate and candid information only for legitimate and candid uses, Christian Scientists will afford every facility in their power in the way of furnishing such information. There is plenty of evidence to be had, although there are some cases where, for obvious reasons, publicity is not desired by those interested; and their wishes should be respected. There are, on the other hand, numerous instances where the beneficiary is only too glad to make known the fact of having been healed. The Christian Science publications, extending back for many years, contain testimonies from thousands of this class.

In view of the whole situation, therefore, we feel warranted in asking, and do hereby respectfully and earnestly ask, our newspaper friends to look into our methods, satisfy themselves as to the work accomplished and being accomplished, and then give us such a hearing before the bar of public opinion as is justly ours.

We especially ask that particular cases, where rumor would often place Christian Science in a false position, be fairly looked into and treated in accordance with the facts.

We feel that we are but asking simple justice when we suggest that the good Christian Science is accomplishing should be fairly placed before the world, while careless misrepresentation should be avoided.

## Former Requests Renewed.

CIRCUMSTANCES make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and Church notices, should be sent direct to the Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent direct to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from the Christian Science Publishing Society should be made payable to the Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to the Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial department, and should be addressed to that department. The Christian Science Publishing Society does not receive money for Church

Digitized by Google

dues or per capita tax; this should, in all cases, be sent direct to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write him only upon matters pertaining to his duties as clerk of the church.

We feel assured that all will gladly comply with this request and thereby greatly assist those having the work to do at headquarters.

We trust our friends will bear in mind that the business of the Publishing Society is large and is constantly increasing, and there must be care and method or disorder and confusion soon follow.

The individual making a remittance, or sending an article, or writing a letter, is apt to think he is but *one* and it does not matter to whom his letter is addressed, it will get to headquarters, and there reach the proper person or department. While this may be true, it often causes delay, it is likely to make confusion, and it *always* makes unnecessary work for those at headquarters, for instead of being *one,* there are often hundreds of these wrongly written or addressed, letters, checks, etc., and a moment's thought will show what this means in the way of work.

Recently a rule was adopted of returning to the senders, checks, money orders, etc., made payable to the wrong person, with the hope that it would awaken them to the necessity of greater care. This has, in some instances, been objected to as unnecessary red tape. We hope the above explanation will show how mistaken that view is, and lead to more care and thoughtfulness.

*We again ask that no money remittances whatever be sent to the Editor or Editorial Department.*

## Christian Science Advertising.

WE have heretofore said upon the above subject that Christian Scientists have done all they properly can do in the way of advertising when they unobtrusively make known the fact that they hold themselves in readiness to respond to calls for healing sickness or otherwise aiding those who need and desire such services as come within their province and line of duty, and that the pushing methods which too much obtain in the business world have no legitimate place in Christian Science.

We herewith re-emphasize that statement. When the line above indicated is passed there is danger of falling into methods which bring reproach upon our Cause. If notices are inserted in the local press, they should be free from any undue attempt to draw attention to any particular person or practitioner, or to magnify the healing achievements of one above another. The moment this rule is departed from, the impartial and impersonal methods of Christian Science are violated, the spirit of competition or rivalry asserts itself, and mere personal benefit or commercialism usurps the place that should, and must be, held sacred to the high purposes of Christian Science practice.

It is only necessary to glance at the cards published in the *Christian Science Journal*—the official organ—to see how strictly this point is guarded and how impartially the cards are published. In fact, the cards as published are more in the nature of a directory than an advertisement.

Nothing said herein is intended in the least to change the prevailing methods of bringing Christian Science and its healing benefits and works to public attention through the press. On the contrary, we wish again to mention the wisdom of placing our Cause, its purposes and achievements, in a fair and proper light before the world. This should be done by our co-workers in the true Christian spirit, free from any selfish or merely personal considerations.

We trust the position of Christian Science as herein outlined will be brought by our fellow laborers to the attention of the press, so that its representatives may be able to discriminate between those who are Christian Scientists and those who are not.

It is, perhaps, needless to say that there are those claiming to be Christian Scientists who are not such, and these, of course, pay no attention to the rules governing our ranks.

Christian Science is not, and cannot be held, responsible for the conduct of the latter class, or the results of their work.

### To the Branch Churches.

Will the proper authorities of the branch churches please send to Alfred Farlow, C.S.D., The Westminster, Copley Square, Boston, as speedily as possible, the name or names of the persons appointed on the Publication Committee under the provisions of the By-law recently passed upon that subject.

## The Mystery of Godliness.

"BUT we speak the wisdom of God in a mystery, even the hidden wisdom, which God ordained before the world unto our glory" (1 Corinthians, 2 : 7).

"Religion is a mystery; I cannot understand it," is an objection sometimes heard when individuals are asked to accept its claims. As a matter of course, there are mysteries in religion, the Bible is undoubtedly a most mysterious book or collection of writings. The Great Teacher admitted the existence of mysteries, and that the people were perplexed by them, when, as is recorded in Luke, 10 : 21, "In that hour Jesus rejoiced in spirit, and said, I thank thee, O Father, Lord of heaven and earth, that thou hast hid these things from the wise and prudent, and hast revealed them unto babes."

The Bible tells us that "Great is the mystery of godliness," and confesses that it contains some things that are "hard to be understood." Christian Scientists have in their text-book, "Science and Health with Key to the Scriptures," a veritable Key to the Scriptures, and feel more than grateful to Mary Baker G. Eddy, the author.

Jesus said unto his disciples: "Unto you it is given to know the mystery of the kingdom of God." And if any further evidence is needed these words of the Master must suffice: "Why do ye not understand my speech? even because ye cannot hear my word. . . . He that is of God heareth God's words: ye therefore hear them not, because ye are not of God."

There are and must be mysteries about all systems of truth; they are not peculiar to revealed religion. Suppose we leave the Bible out of account, are there any less difficulties in Natural Theology? Let us see. One of the most familiar arguments for the existence of God is that from contrivance. The obvious adaptation of means to ends, we say, proves an adapting cause—that the eye is so clearly a contrivance for seeing that it is evident that He who made the light and gave to it its laws, made also the eye, with its cornea, its retina, its lenses, and its nerves. It was made for vision.

Let us for a moment glance at Natural Philosophy. We find puzzles in heat, in light, in sound; mysteries in chemistry, geology, and astronomy, which no man can solve.

Digitized by Google

For instance, we want to know something about heat. Heat is a very commonplace and simple thing, which ought to be understood by the scientist. If we chance upon an ancient text-book, we are told that heat is a material something that comes out from the heated body and enters other bodies. We test the truth of this theory. We come in very cold and sit by the stove until warm and weigh ourselves, and find that we have not increased in specific gravity, and we give up the theory as untrue.

Then we take a modern treatise to ascertain the latest utterance of science. The author tells us there is strong reason to believe that heat is a mode of motion. When a body is heated, the particles begin to move about among themselves, the atoms are thrown into violent agitation. I question my book as to what is sound, and I find that sound is caused by the vibration of the particles of a body. Then why doesn't a heated body emit sound? We thank the scientist for informing us that heat is a mode of motion, but we do not understand it any better than before.

The sceptic who writes about the unknowableness of religion cannot explain the heat that warms his writing hand, nor the cheerful sound of the blazing fire on his hearth.

Carlyle says, "The world, after all our science and sciences, is still a miracle, wonderful, inscrutable, magical, and more, to whomever will think of it."

What do we know about ourselves? Not much. Impenetrable mysteries cluster about the very beginnings of our being. Life itself is a Sphinx, and science cannot extort an answer from its closed lips. No one can explain it, or even adequately define it. We believe ourselves to be soul and body, mind and matter. But what is mind, and what is matter? The laconic answer of the professor to his pupil tells us about all we know. Asked "What is mind?" he answered, "No matter." "What is matter?" he replied, "Never mind."

We are ourselves inscrutable problems to ourselves. Now, we have not been searching the immensities of space for mysteries, nor exploring the remote regions of illimitable time for puzzles. We have been quizzing the common phenomena about us. In the same field you may see a goose, a cow, and a sheep, all eating grass. In one case the grass makes feathers, in another hair, and in the third wool; or we may say that it is making gooseflesh, beef, and mutton. By a wonderful transformation, it is true that "all flesh is grass!"

Yet the very grass of the field, acted on by a marvelous animal chemistry, supports our lives, helps us gain an intellectual grasp of truth, and gives us a vision of God. It is as great a mystery as anything we find in our Bibles. There stretches out before us a sea of knowledge. How can we cross it? Here is a ferryboat called Science. We gladly go on board, but we find that all it can do is to take us across the shallow to leave us in the profound depths beyond.

Yet we believe in science, though it is a bundle of mysteries. And we believe in religion, though it has some things hard to understand.

Again, these considerations become more significant when we remember that mysteries are to be expected above all in a revelation of God.

Hiero, King of Syracuse several centuries before Christ, was a learned man and a patron of literature. The great poets, Æschylus, Pindar, and Simonides, belonged to his court. The King asked Simonides: "What is God?" Simonides asked a day to consider his reply. When the day had passed, he asked for two days more, and when these had been spent, he asked for four days. Hiero expressed his surprise, and Simonides said, "The more I think of God, the more mysterious and unknown He is to me."

God acts upon a plane entirely above us. If we could comprehend Him fully; if all He is and does were within the grasp of our weak, finite minds, we could not revere and adore Him as we do. It is transcendent power and spirituality that make Him to exceed the limits of our thoughts. He would be a poor God whom we could perfectly understand. Here we can expect to explore only the shadows of His being and action. It will take eternity to sound the abysses of His mysterious love.

A very practical thought for us all is—and we can thank God that it is true—we do not have to solve puzzles to discover what we must do to inherit eternal life. There are many things connected with religion that perplex us, but this we can know—that God loves us with a surpassing affection, would shape us in forms that would fit us for heaven. How foolish, then, to busy ourselves with insoluble mysteries, to the exclusion of the plain duties of righteous living and Christian service. He who uses the light of the sun for the practical purposes of life will find it sufficient, while his speculative brother, seeking to gaze into its mysteries, will be blinded by its glare.

Take Paul in his epistle to the Ephesians where he says, "If ye have heard of the dispensation of the grace of God . . . How that by revelation he made known unto me the mystery; (as I wrote afore in few words, whereby, when ye read, ye may understand my knowledge in the mystery of Christ) which in other ages was not made known unto the sons of men, as it is now revealed unto his holy apostles and prophets by the Spirit; . . . Whereof I was made a minister, . . . that I should preach among the Gentiles the unsearchable riches of Christ; and to make all men see what is the fellowship of the mystery, which from the beginning of the world hath been hid in God, who created all things by Jesus Christ."

The inquiry, then, that we should make is: Am I living so as best to develop my immortal manhood? God has told us, my brethren, that which is of more practical importance than the solution of a thousand speculative mysteries.—*Ottumwa (Ia.) Press.*

## The Blessings of Christian Science.

THE following story was told in a Christian Science meeting in a northern city. The woman was a stranger in the congregation, and she appeared to be from the best middle class. She said,—

"Two months ago I was desperately in need of everything—reverses had followed each other thick and fast. My best dress was faded and worn, the children were bare-footed, and we could not hope to get shoes for them. My husband was a drinking man, and nobody would trust him with work. I stayed at home until it looked as if starvation was threatening my little ones; despair had its icy fingers on me when I put on my hat and started out in the street, with a determination to ask for help. I went aimlessly about the streets until I saw this church; then it occurred to me to go in, and I thought some good Christian would help me. A sweet woman spoke to me; I told her my story of distress, and she did not offer me money or material aid in any way; she talked to me and gave me some literature, and told me if I would read and understand it would lift me above all distress and worry. She said, 'God is Love; you are His child, and you cannot want when you understand that you are a child of a King.' I went out empty handed from the church, but all the depression and anxious fear that was heaped upon my soul was gone. I read and re-read the literature she gave me, and then a Christian Scientist visited my home and told me of God as a very present help in the time of trouble, and I believed every word of it, and this lifted me above the confusion that was around me. All fear was gone, and little

Digitized by Google

by little things began to harmonize. Now, two months after the first literature in Christian Science was given me, I have the brightest and sweetest home. My husband has quit drinking, he is sober and industrious, and he has all the work that he can do, and we both rejoice in our home which is made bright and attractive by God—Good.

"Not one cent was ever given us, but it was simply God's word believed and made manifest which has supplied us.

"Look at me now. I have everything in the world that I want, every human need has been supplied, and all the longings of the heart have been realized. At first I thought it was material things that I wanted, and which I had need of; but now I see that it was not the material things that I wanted, but it was an emptiness of soul or mind that was crying for food. This longing for something higher and better, which could not be filled by the material things of this life,—it was the longing to know more of God, and to follow in the footsteps of Jesus, and when my thought was filled with God I then found that all material things were supplied, and that I did not need anything. I thank God for Christian Science, which has brought such peace and harmony into my home. I thank God for the understanding I have of the spiritual life.

"I have not only found a God of peace and plenty, but I have also found the God that 'heals thy wounds.'

"A few weeks ago when I was preparing a meal on a very hot stove, this little fellow [she turned to the boy by her side] was playing near the stove, and the contents of a kettle of boiling water was turned over and a great amount of it splashed into his face. For a while his screams were terrible, the neighbors rushed in and wanted to send for a doctor, and said there was danger of losing his sight. I knew the doctor could not heal that burn, and I saw clearly if it was healed that it must be done by God.

"I took him in my arms and prayed out loud, fighting error for some time before the screaming was silenced; and in a few hours he was sleeping soundly. For a few days his face was red, but it never blistered. I used no medicine or applications of any sort; the only remedy applied was Christian Science as taught by Rev. Mary Baker G. Eddy in 'Science and Health with Key to the Scriptures.'

"I want you all to see my boy [she turned him around so all the congregation could see him]. His face is white and fresh as a baby's, and there is no appearance of the recent burn. I thank God for this understanding of Christian Science, which heals all diseases and enabled me to overcome fear, and planted my feet on the rock."

*The Saturday Review,* Atlanta, Ga.

---

There is an old legend that runs in this wise: At creation's dawn an angel came down to earth and before returning looked about for something to carry back to heaven. There were three things that attracted the attention of the white-winged messenger—a bouquet of sweet flowers that had been gathered from one of the earth's fair and blooming gardens, the smile of a little baby that had been playing with a sunbeam, and a mother's love. These three the angel carried away, but when he reached the pearly gates of paradise the flowers had withered—the baby's smile had vanished. Only the mother's love remained the same, and being found as pure and eternal as the waters that flowed by God's throne, all the angels that ranged about exclaimed in unison: "There is nothing on earth pure enough for heaven but a mother's love!" This was a tribute containing a sublime thought. And through all the ages it has been human experience that the angels referred to in that far away legend were not over-extravagant in the message which they passed out through the open windows of the "many mansions" along the banks of the "River of Gold."—*Harvard (Ill.) Herald.*

## From Our Contributors.

### "Humility's Seat."

BY P.

Oh, give me that seat in the corner,
The lowliest, humblest chair:
For the blind, the lame, deaf, and weary,
Are sure to be lingering there;
The hungry, the thirsty, and dying,
Will be seeking a kind, helping hand:
I will choose that low place in the corner,
Where none but the Christian would stand.

I will choose that low seat in the corner
Which arrogant pride hath disdained;
There I kneel at the feet of my Saviour,
Free from illusion's false claim;
In that low, humble seat of contrition,
Lies hidden this treasure for me,
A message to bear to the captives
In the Prison of sense—to set free.

I will choose that low seat in the corner
Despised and rejected of men,
I will guard, I will shield, and protect it,
Till they honor and love it again,
There the humblest and low are exalted,
The exalted and high are brought low,
There thought is held in subjection,
Till its true worth and value are known.

Bless that low, humble seat in the corner,
Which Science has taught me to love;
I found it the seat of my Saviour,
The Father hath sent from above,
Sacrifice, low, meek, and humble,
Divine thought to which "Mother" gave birth
A witness of Christ, our Redeemer,
Who comes, to redeem the whole earth.

---

### How I was Led into Christian Science.

BY HANSON W. WHEELER.

A year ago, I was invited to attend the Christian Science Church. At first I declined, assuming that it was very much the same as I had heard before. However, I finally accepted the invitation and went Sunday afternoon to the First Church, on Drexel Boulevard in Chicago. The service did not particularly appeal to me; in fact, it was anything but satisfactory. It seemed like a repetition of "mind over matter—mind over matter." My conclusion was that the whole thing was ridiculous and I could not understand how such intelligent-looking people could listen to what seemed to me nonsense. In short, I was thoroughly disgusted and assured myself I would never be caught there again.

Experience meetings were then being held Friday evenings. After dinner on Friday of that week I seemed impelled, I knew not why, to attend the Christian Science meeting, and suggested to my wife that we do so. She was surprised, but readily acquiesced. We remained throughout the meeting without being particularly impressed. We, however, noted the exceptionally large attendance for a prayer-meeting, the large percentage of men comprising the congregation, and the heartiness with which all those present joined in singing the hymns. And yet I discredited the testimonies; thought the witnesses were exaggerating, or rather were carried into the realm of imagination by their enthusiasm.

There were in attendance probably six hundred to eight hundred or more. There was little, if any, change in my

Digitized by Google

attitude toward Christian Science. But the awakening that was to be mine!

As we were leaving at the close of the service my attention was arrested by the harmony manifested in the exchange of greetings. It was not as if my ear had heard, but rather a continuous ripple of melody wafted to my inner consciousness. Not a discordant sound, but mirthful, sweet, and withal quiet. I began to look closely into the faces of those people. And what did I see? Such happiness, contentment, joy, peace, satisfaction. So intent was my observation that it could easily have been misconstrued as impertinent.

Now I was deeply impressed and wanted to know if they were all of one accord, or had I perchance come in contact with a few rare natures. I could discover no exceptions. They were all bright, happy looking, happy talking, happy acting people. There were no woe-begone looks, no dilating upon disappointments and troubles, no self-consciousness manifested in rivalry for the honor of having experienced a larger measure of sickness than others, and no appearance of self-exaltation or self-righteousness in assumed or delegated responsibilities.

When we reached the sidewalk nothing was said until we had walked a block or more. I was making mental deductions. In summing up my conclusions I was convinced that such a large concourse of people gathered together for no special occasion other than a regular weekly prayer-meeting, could not be so thoroughly harmonious and happy, and apparently of one mind, unless their inspiration came from a source beyond the conception of mortal mind. I considered the many kinds of people from the various walks of life and different nationalities, and all so intelligent appearing and intermingling without affectation. Even then I could not understand that Christian Science was the cause; I was not ready to give full acknowledgment. I finally said to my wife, "Well, those people have something I do not possess. If I could only get that happy look I know I should be satisfied, and I am determined to know what it is."

My search has not been along pathways strewn with roses. As Paul says, "I know both how to be abased, and I know how to abound," and the struggle continues; but it is uplifting and not depressing. At last I can say, as the result of demonstrations, "I know in whom I have believed."

During the past ten years I have worn spectacles, laying them aside only at night upon retiring. The trouble was compound astigmatism. To walk even a short distance without the spectacles would result in terrible pains in my eyes and severe headache. To read without them was out of the question. It was necessary, according to the oculists, to have new lenses ground about every other year. Three years ago my eyes were so swollen and painful that I was not permitted to leave a dark room for two weeks. The attending physician pronounced the trouble purulent conjunctivitis, and deemed it necessary to lance the right eyelid.

Soon after beginning the study of Christian Science I undertook to demonstrate over the need of spectacles. I read "Science and Health with Key to the Scriptures," and laid aside the spectacles, but was compelled to put them on again. It dawned upon me that I was looking only for the physical healing, besides using will-power, instead of having sufficient understanding to make the demonstration, leaving results to God.

My wife and I received class instruction last July from a loyal student of the Mother. These lessons were truly a crown of jewels, and I clearly realized the new birth. Within a month thereafter I was enabled to lay aside the spectacles easily and naturally. They were destroyed, and my eyes have been in perfect condition since. I do a great deal more reading and writing now than I did before.

The Bible and Science and Health are our daily guide, and we have met and destroyed many physical ills through our understanding of Truth. During thirteen of the fourteen years of our married life our little family was almost continually in the hands of physicians, and our condition otherwise was more or less miserable. Throughout the past year we have enjoyed perfect health, happiness, and prosperity.

While we rejoice in exemption from physical ills, we are grateful beyond measure to our Leader who has given us Science and Health, the study of which has brought to our consciousness that "peace that passeth all [human] understanding."

## "From One, Learn All."

BY ELLA S. SARGENT.

THE first and great commandment includes all the others: "Thou shalt have no other gods before me." The second is like unto it, to love the brother as the self. "*From one, learn all.*"

"Who is so great a God as our God?"

The God of the Christian world is the only God whose worship and whose only service is love. All other gods have been worshiped and served through fear. The Christian God is the God of Spirit; the pagan gods are gods of the senses.

The question before the Christian to-day, is "Have I but the one God?"

Do I trust my God with all my heart, or does there linger in that heart a fear that God may not be all-powerful? Am I erecting therein a temple to my "god of fear"?

Do I serve Him with all my mind, or lurks there a latent belief that some complication of ills may arise for which the wisdom of God is not sufficient? Am I raising in the dark, an altar to my "god of the knowledge of good and evil"?

Does my soul rest upon its God in quietness and assurance; or is it quivering with the dread of pain, or rioting like a Bacchanal in the feast of pleasure, prostrating itself at the shrine of sense?

Does my strength rejoice in the Lord, or has it feverishly fallen in some chiselled niche that its timid, faltering faith may hide till the hour of trial may have passed?

The test of Christianity is, that "perfect love casteth out fear." One element of fear, of doubt, of self-pity, or weakness, shows the absence of that Love which is the fulfilling of the law. When we love and serve the one God in the spirit of the first commandment, then do we keep the letter of all the commandments.

In pure and practical religion we shall realize our freedom from the tyranny of the "gods of the senses," who smite, who wreak vengeance, who cast into bottomless pits.

The one who has kept this commandment is the man who laid down his life, even as a pattern before his friends, that they may shape their lives by his, and worship and serve the God whom he worshiped and served, even to the fulfilling of the law in their own lives. A very simple, unostentatious life-pattern—followed only by serving the designer in entireness of heart, and mind, and soul, and strength. But when so followed, the life reflects happiness, health, and an abiding Love that dispels fear with its train of consequences which manifest discomfort and disease.

"Love is the fulfilling of the Law."

## Reasons Why.

BY A. OSWALD.

I WANT to give a few reasons why I am a Christian Scientist. "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, is indeed rightly named. It is Scientific and it is a Key to the Scriptures. It has enabled

Digitized by Google

me to overcome every form of sickness that has come to me since I have been studying it in connection with the Bible.

But that is nothing compared with the spiritual uplifting it gives one who honestly and earnestly strives to know the Truth. Through this understanding hate, envy, malice, anger, and covetousness disappear, and love takes their place. We are all God's children, one grand brotherhood, who, with the understanding gained from Science and Health will work for each other, not against each other. True happiness consists only in doing unto others as you would be done by. I have demonstrated the truths of Christian Science, as many of my friends could testify who have known me in the last year, and the years before I took up this study.

No one is capable of judging Christian Science unless he has so studied it that he is able to demonstrate it. Simply reading the book to criticise or to form an opinion is not demonstrating its rules. If people will take the trouble to investigate they will find that true Christian Scientists the world over are showing their faith by their works. "And the prayer of faith [understanding] shall save the sick, and the Lord shall raise him up; and if he have committed sins they shall be forgiven him."

Numerous cases of healing in Denison, Ia., as well as elsewhere, can be given. All these things have lessened my dependence on man and man-made theories, and increased my dependence on God, who, the Bible tells us, is the Giver of all good, and is ever present to help us.

## Obedience to Spirit.

BY E. DE W. W.

THERE have been a number of articles in the *Sentinel* on obedience, all of them very helpful, and still the meanings unfold until "obedience" seems the most important word in our vocabulary.

Studying the Bible in Sunday School and home from childhood, we learn the letter of the Mosaic law and strive to abide by the "Thou shalt nots." In the New Testament we read of the "law of the Spirit in Christ Jesus," and in the light of Christian Science we realize what obedience to this law of Spirit brings us,—nothing less than freedom "from the law of sin and death."

Obedient to the law of Spirit we shall find health and happiness. Governed by Spirit we are no longer under bondage to the flesh to fulfil the lusts thereof. With omnipotent Love as the Law-giver we, as obedient children, must show forth the *effect* of obedience to that law in the physical realm, as well as in the destruction of sin.

As we climb the hill of Science, how the horizon widens with each step. Looking back upon the narrow path we can see, here and there, a rough rock worn smooth by our struggles to gain a foothold, and we recall how we looked out from this vantage-ground and felt that we had attained to a great height. We are inclined to linger in these pleasant places. But, as we open our Guide-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, we find, on page 315, that "Seeking is not sufficient. It is striving which enables us to enter. Spiritual attainments open the door to a higher understanding of the divine Life."

The *Christian Register*, in an editorial headed "Why we ought to talk about our religion," says, "Men talk about all other subjects—about business, about politics. Why do they not talk familiarly about religion? Very few people realize how profound is the need in our modern world of vital religion. The world's tremendous needs will never be met till men learn evermore as fast as they get religion to tell it to others."

## Testimonies.

### Healed of Many Ills.

Five years ago this beautiful Christmas day, I received the first treatment from a Christian Scientist who was a student of our dear Mother, Rev. Mary Baker Eddy. My healing was instantaneous. In one treatment I was made free from that terrible bondage of *materia medica*, to which I had been a slave nearly all my life. Christian Science was truly a grand Christmas gift to me, as I was almost at death's door.

At the time of my healing I was about forty years old. From the age of ten until that time I was a great sufferer from rheumatism, and as I grew older the disease continued to get worse. I was treated by a number of physicians with but little if any benefit. I also tried numerous patent medicines until my entire system was saturated with strong and poisonous drugs. This brought on dyspepsia and stomach trouble. These diseases seemed to distress me more than the rheumatism, and the doctors admitted that it was the effect of the strong medicines I had taken for rheumatism, which had injured my stomach. Nearly everything I ate in the way of solid or rich food caused me much suffering.

In the spring of 1893 I went from Cincinnati to Chicago and secured a position as manager of a World's Fair Hotel. In a few days I was attacked with a fever which a Chicago physician who attended me pronounced typhoid. He suggested that I should keep quiet, but I told him that it would be impossible for me to do so and keep my position, so I kept on with my work the best I could, waiting for development. The fever proved to be a bad case of malaria instead of typhoid, but the doctor did not succeed in breaking it up. I would get better at times, but the fever still continued with me. At the close of the World's Fair I secured another position as manager of a large family hotel, and the malaria and my other diseases began to grow worse. I changed my doctor but this physician's treatment also failed, and I was confined to my room and bed most of the time. With two more troubles added—nervous prostration and night sweats—I was a total physical wreck.

It was now near Christmas, 1894, and my delivery from the bondage of *materia medica* was also near at hand, but I was not conscious of the fact. My doctor had planned a holiday visit and in his absence I was to be cared for by a lady doctor, who was not in active practice, and who lived in our hotel. A day or two before Christmas the lady physician sprained her ankle and was unable to walk, so I was compelled to go to her rooms for advice or treatment, which in my weak condition I did not feel able to do, as I was almost past going.

On my way to the doctor's rooms, I met a lady friend who had been treated by a Scientist a day or two before for a serious trouble and had been relieved of great suffering. She insisted that I go to Mrs. C., a Christian Scientist, who also lived in the hotel. My reply was that I did not have faith in that kind of healing, and soon found myself in the apartment of the doctor, and to my surprise met the Scientist, Mrs. C., whom I had known personally for several months. A thermometer was placed under my tongue and the Scientist started to go, but meeting her there impressed me somewhat and I took the instrument from my mouth and requested her to wait a moment or two. I then placed the thermometer in my mouth again and at the proper time it was removed and indicated that I had considerable fever. I kindly thanked the physician and told her that I had almost made up my mind to try Christian Science. The reply came at once, "Don't hesitate a moment on my account. Mrs. C. has been treating

Digitized by Google

me for my injured ankle and relieved me of terrible suffering." These words from the doctor settled all doubts in my mind, and I was soon ushered into the Scientist's suite of rooms, where I was instantly healed of that terrible malarial fever and all the other serious troubles mentioned. For five years I have been a free man—free from that terrible bondage to *materia medica*. In these five years not a particle of medicine or drugs of any kind have I used, and during that time I have been in excellent health, never sick enough to be in bed or confined to my room.—WESLEY H. ROWE, Cincinnati, O.

---

### Healed by Reading Science and Health.

I was in poor health for eight years, and grew worse all the time, until at last I went to a hospital in Montreal and submitted to an operation. This left me in a worse condition in some ways than I was before. That was in November, 1894. We lived in Canada at that time, but the next summer we came to Vermont to take care of an old gentleman whose daughter is a Christian Scientist and is away from home all the year, except during the month of August.

I did not know anything about Christian Science. I remember telling my husband that I supposed Miss C. would preach her Spiritualism all the time.

By this time I had ceased to use medicine of any kind, having lost all faith in it, and was convinced that nothing but God could heal me. I could not believe that God was the author of sickness, but I thought I ought to be reconciled to my lot as long as I did not have faith enough to be healed. I prayed all the time for health, and believed I could find it if I only knew how. I felt discouraged and worried all the time.

This was my condition when Miss C. came home in August, 1896. I saw right away that she was happy and in good health; but to my surprise she did not mention her "Spiritualism" to me until I became very anxious to know what her belief was. One morning I introduced the subject, and found her very willing to talk.

I shall always remember the talk we had that morning. I accepted some ideas very readily, but when she told me about "Science and Health with Key to the Scriptures" I thought I would be on my guard, and not be led astray. However, I decided to read the book and see if I would be healed. I could not understand it, but I continued to read, for I was determined to give it a fair trial. In two days I was very much stirred up. I would lay the book aside, thinking I would let it alone, but in a few minutes would pick it up and read again. The third day I began to get better, but did not say anything about it, for fear I would get worse again. In about a week I became aware that a cloud was lifted from my mind. I felt happier than I had for years, and was free from worry. Then I said I was getting better. I continued to study, for I knew I was being healed. I knew very little of the value of Science and Health. Although I was much better, I was not "every whit whole," and had many battles with error, but Truth was always victor. Last March I began to help others, and have found God a very present help.

How often my heart goes out to our dear Mother! We can never appreciate her as we ought, until we take up the cross ourselves. Then we can realize a little of what she has done for us.

I am now a well, happy woman, and am learning how to love my brother better, for God is the Father of all.

Science and Health is becoming dearer to me every day. I study the Lesson-Sermons, and find them a great help. I take the *Journal* and *Sentinel*.

MRS. CHRISTINA A. MACJUER, Waterford, Vt.

### Help Received through Christian Science.

One day about four years ago a friend said, "If you want to be perfectly well, try Christian Science, for I have just been healed by it." Perfectly well! Why that seemed impossible, for I had tried doctors all over the country. Each would give me a new remedy, all telling me that I could never be cured, but would always have to take medicine to keep up and around.

I had a great many ailments, some of which I had had since my birth. I had lost all faith in doctors, but did not know what else to do. Mentally I was very much depressed, as I was constantly grieving over the loss of a mother and brother, and welcomed each day as I thought I had that much less time to stay on this earth, which seemed to have nothing but disappointment and suffering for me. I was a church member, but felt I did not know how to live up to Jesus' commands, and nobody else seemed to be doing so. My prayer was that I might know the Truth, for nothing in the world seemed worth doing or striving for.

After taking a week or two to get up courage, I went to the healer of whom my friend had told me. She talked to me a little and gave me a treatment. I took the book, "Science and Health with Key to the Scriptures," home with me to read. From that day I have never doubted that Christian Science as taught by Mrs. Eddy in Science and Health is the Truth.

Through the help of my healer and the study of Science and Health and the New Testament I was able to rise above my seeming grief, and also financial difficulties. I was also able to take off a support from an ankle which had always caused me a great deal of trouble. Several troubles have presented themselves since, but when the error was found and destroyed, so was the trouble.

Through my being healed other members of our family have found the Truth. We have all had the privilege of going through a class with one of Mrs. Eddy's loyal students. There is nothing to which we cannot apply the little understanding we have, no matter how large or how small it may seem, for God is the only power and all power. Christian Science uncovers our sins and helps us to destroy them. It teaches us how to love God supremely and our neighbors as ourselves.—C. D., Chicago, Ill.

---

### Insanity Healed.

I would like to add my mite in praise to our faithful ones at the front. We can all see that there is hard, thoughtful work being done, and I presume there are thousands like myself who send up a silent "God bless you" as we are fed from our different periodicals from time to time. How many, many times do we also thank God for "Science and Health with Key to the Scriptures" given to us through our beloved Leader and Mother.

I did not come into the Science because of healing on my part. Ten years ago my husband was taken out of the insane asylum, a wreck in mind and body, and completely cured through Christian Science. No medicine has been in the house since. I was ready for Christian Science when it came. I had for some time been looking and longing for something better, higher, and more spiritual than I was receiving.

There are but two here besides myself who are interested in Christian Science. We meet every Sunday afternoon at half past two and study the Lesson-Sermon. Sometimes we have as many as ten at our meeting. I am a student of one of Mrs. Eddy's loyal students, and a member of the Mother Church.—A. E. D., Jackson, N. J.

---

All that is good must come to us if we do good. Anything that would not do us good, we should not desire.

## Religious Items.

The *Watchman* of December 14, 1899, has this to say of M. Tissot's paintings of Jesus:—

There is now on exhibition in Boston a series of over four hundred paintings, representing the main features of the life of Christ, which serve as a fresh interpretation of the Gospel narrative. If it is legitimate for Farrar, or Andrews, or Edersheim, or Geike to retell the life of Christ, it is as legitimate for a painter to set forth his conception of the story of the evangelists. Form and color may convey the divine message as truly as words.

The main facts of the life of the artist, M. James Tissot, are easily accessible, and we shall not recount them, but it is easy to believe that his work upon these pictures made him, not merely nominally but in spirit and in truth, a disciple of Christ. You feel as you study them in detail, and then, grouping your impressions, survey the whole series, that you have been following a devout guide. Munkacsy may have wrought in that spirit, but you always felt that the artistic purpose was primary with him; that with him the scene before Pilate and the Crucifixion were subjects. You hardly feel that about Tissot's work. His motive seems to be to set forth the historic facts of religion rather than to paint a striking picture.

---

The *Church Standard* of January 20, editorially speaking of the causes and cure of religious unbelief, says:—

The man who says to himself, "I am going to be rich at all hazards; if the widow suffer thereby, and the orphan die, if thousands eat the bread of penury and drink the water of tears, I still am going to be rich"—or who practically makes that a working principle—this man is opposed to Christianity, because Christianity is opposed to him. So with the man with whom personal ambition is supreme. So with the woman who says to herself, "Admiration is the sunshine in which I will bask. I will make conquests though human hearts be torn and broken thereby. My charms shall be recognized, and my fascinating power shall be felt"—that woman is opposed to Christianity, because Christianity is opposed to her.

For infidelity of such a kind there is but one remedy—*a new heart and a new spirit.* "How can ye believe, which receive honor one of another and seek not the honor that cometh from God only?" "Wherefore, he saith, Awake thou that sleepest, and arise from the dead, and Christ shall give thee light."

---

The *Christian Register* of January 18, thus refers to the late Dr. Martineau:—

The death of James Martineau removes from the sight of men one of the most dignified figures of the Church in England. We say advisedly "the Church," because, while Dr. Martineau was the foremost exponent and advocate of Unitarian doctrine, and never flinched from the use of the name when it was used to describe his theological position, he was still too large to be limited to any denomination. His thought was so majestic that, like the sacred mountain of Japan, it was always in sight from all the plains around. His philosophy was recognized by all advanced thinkers of the Anglican Church as one of the steadfast defences of theology, religion, and ethics. Many a preacher and theologian of the Established Church took service under his banner in the theological discussions which have stimulated the thought and life of the last generation.

---

Rev. Dr. Henry Van Dyke in the first number of the *Outlook* for the new year publishes the following words of counsel and admonition:—

To be glad of life, because it gives you the chance to love and to work and to play and to look up to the stars; to be satisfied with your possessions, but not contented with yourself until you have made the best of them; to despise nothing in the world except falsehood and meanness, and to fear nothing except cowardice; to be governed by your admirations rather than by your disgusts; to covet nothing that is your neighbor's except his kindness of heart and gentleness of manners; to think seldom of your enemies, often of your friends, and every day of Christ; and to spend as much time as you can, with body and with spirit, in God's out-of-doors—these are little guide-posts on the foot-path to peace.

---

The *Congregationalist* of January 18, 1900, under the head of "Progressive Revelation," says:—

"The Bible ends; revelation can only begin," is a pregnant sentence of Dr. Joseph Parker. "Jesus Christ, the same yesterday, and to-day, and forever," is the assertion of the Holy Scripture. But he promised to his disciples greater knowledge of him than they had and the guidance of the Holy Spirit into that greater knowledge.

Christ's promise holds true. It has been continuously fulfilled through nineteen centuries. Jesus Christ is better known among men now than ever before. He has revealed himself anew and more clearly to each succeeding generation.

---

## Miscellany.

### Deed Carved on Stone.

Out at The Hermitage, the home of the late A. Swan Brown, hidden in a thicket within a stone's throw of the house, is a title carved with great care and not a little skill upon the face of a rock. At one time the rock had been a bowlder, sticking up some distance above the ground, but the genius whose work the title is, blasted the top of the rock off and planed the surface down to a smooth tablet. The work was done many years ago by an eccentric genius, a vegetarian and a recluse. So averse was he to flesh and killing that he would not have a leather harness for his horse, but drove about, his crazy old equine draped in a harness made of old bits of rope and chains.

It is through this odd specimen of humanity that the beautiful home, The Hermitage, gets its name. His name was William C. Hall, and his history is well known in Worcester. Why he should have undertaken so arduous and unprofitable a task is hard to explain, but he probably thought that such a title would last. He was evidently an illiterate old fellow, for his handiwork on the rock at The Hermitage still shows distinctly an indelible evidence of his poor spelling. This is the title on the rock:—

"Know all by these presents, that I, William C. Hall, of Worcester, and the commonwealth of Massachusetts, in consideration of 125 dols—paid by the hand of Solomon Parsons of the same Worcester, the receipt whereof I do hereby acknowledge, do hearby give, grant, sell, and convay unto God, through the laws of Jesus Christ, which are made known to man, to be the reckord of the New Testament, recorded by Mathew, Mark, Luke, John the Evangelist, this land to be governd by the above-mentioned laws, and together with the spirit of God, the sad tract of land is situated in Worcester above-mentioned, the southwesterly part containing 10 acres, more or less, and bounded as follows, viz., beginning at the southwest corner of the lot at a stake and stones, by land of E. Daniels, thence easterly by land of S. Perry about 37½ rods to a corner of the fence, thence by land of L. Gates about 54 rods to a corner of the fence, thence westerly land of the hears of J. Fowler about 24 rods to a chestnut tree in the wall at the corner of the land of said Daniels and a heap of stones by the side of it, thence southerly to the bounds first mentioned."—*Worcester Gazette.*

### The Black Walnut.

The great size often reached by this tree, the richness of the dark brown wood, the unique beauty of the grain sometimes found in burls, knots, feathers, and in the curl of the roots, all conspire to make this the most choice and high-priced of all our native woods.

Twenty-five years ago walnut was extensively used in the manufacture of fine furniture and furnishings in this country, but manufacturers adroitly drew attention to the beauty of darkly stained quartered oak, and the use of the rarer wood has greatly declined. But all this time the search for fine black walnut logs has gone on systematically, though quietly, the trade attracting little attention though the volume of lumber handled has been large. Though found to some extent in the Atlantic States from Massachusetts southward, the great source of supply has been the central portions of the Mississippi Valley. The walnut is at home in the rich alluvial bottom lands of the Western streams, and in the stony limestone soils of the hills and mountains, and in such localities the buyers have left few trees unsurveyed. Throughout Eastern Kansas, Missouri, and Arkansas, as well as the States along the Ohio and its tributaries, may be seen a few logs at this little station, a car or two at that, with carefully hewn sides and painted ends, ready for the market.

If you ask where this market is, you will find that the great bulk of this rare lumber goes to Europe. While we have been led into an enthusiastic admiration for fine oak, stained according to the degree of antiquity it is supposed to represent, our European cousins have been paying fancy prices for the rich black walnut that we have allowed to go "out of fashion."—*Berea Quarterly.*

---

## Notices.

### Supplements to the Sentinel.

Two supplements to the *Christian Science Sentinel* have been issued. The first is the able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The workers in the Field will readily see the wisdom of giving these supplements the widest possible circulation, and the extremely low price at which they are issued will enable them to do so. The price of the supplements is as follows: Single ocpies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

---

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

---

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

**The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII, sec. 1. The per capita tax for the year beginning June 1, 1899, and ending May 31, 1900, is now due.**

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 10cents; 12 copies, to one address, $1.00; Twenty-five copies to one address $1.75; 50 copies to one address, $3.00.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

**Political Events.**

A peaceful settlement of the political feud in Kentucky is now fully expected. The body of William Goebel, the Democratic claimant of the office of Governor, who was assassinated, was buried at Frankfort, and thousands participated in the obsequies, but there was no turbulence. Acting Governor Taylor still holds the State House by force and refuses to accept as legal the act of the Democratic majority of the Legislature in deposing him, but leaders of his party, both in Kentucky and at the National capital, have urged him to abdicate in the interests of peace and submit his claims to the courts. The general opinion is that he will do so, for already he has sent part of the troops home and has rescinded his proclamation that an insurrection exists.

President McKinley has transmitted to the Senate, with a view to receive the advice and consent of that body to its ratification, a convention signed on February 5, by the ambassadors of both the United States and Great Britain, which takes the place of the Clayton-Bulwer treaty and leaves the United States free to construct the Nicaragua canal and thereafter maintain and control it as a gateway between the Atlantic and Pacific oceans, open to the merchant and naval vessels of all nations on equal terms. The proposed treaty denies the United States the right to fortify the entrances to the canal, and much opposition to the arrangement has been voiced by the press on that account.

The House Committee on Interstate and Foreign Commerce will vote soon whether the Sherman Pacific cable bill granting a subsidy, or the Corliss measure providing for government construction shall be reported. The Sherman bill as amended provides for paying a subsidy of $400,000 annually for twenty years to a private company to build the cable, in return for which government messages shall be sent free, and also provides that after twenty years half rates shall be paid for government messages. The Corliss bill simply provides that a cable shall be built by the government under the joint supervision of the secretary of war, secretary of the navy, and postmaster-general.

To fill the vacancy in the National House of Representatives caused by the rejection of Brigham H. Roberts, a special election will be held in Utah, April 2. The Democrats and Republicans have each determined not to nominate a polygamist, and the canvas, it is said, will be made strictly on the national issues of 1896.

Judge Henry W. Taft, of Cincinnati, O., has been appointed chairman of the Philippines Commission by the President. It is reported that General Otis will soon be relieved from duty as governor-general of the Philippines.

At the National convention of the Socialist Labor Party, held at Rochester, N. Y., January 28 to February 3, Job Harriman of Los Angeles, Cal., was nominated for President, and Max Hayes of Cleveland, O., for Vice-President.

Secretary Long has sent to Congress a deficiency estimate of $838,300 to meet increased expenditures incident to the establishment of naval stations outside of the United States.

The total expenditures of the United States government on account of the war with Spain and with the Filipinos have amounted to about $355,000,000 up to the present time.

**Industry and Commerce.**

On the very day that the order suspending foreclosure of mortgages in Porto Rico expired, the cable message from the War Department extending the order for six months was received. It was a great relief to the planters, for it is reported that the mortgages were largely concentrated in the hands of a few corporations and syndicates that were ready to grab the land and turn the planters off.

Considerably over five million dollars in United States gold coin has been received from Cuba by one trust company in New York during the past two or three months. Cuba is importing French and Spanish gold for use in the general exchange of business, because the majority of existing contracts stipulate that payment shall be made in Spanish or French gold.

A monopoly in the moving picture projecting business has been established by the decision of the commissioner of patents affirming the action of the board of appeal of the patent office in awarding priority of invention in projecting machines for moving pictures to Thomas Armat of Washington. This case has been in the patent office for four years.

On the proposal of M. de Witte, minister of finance, the Czar has consented to the importations of coal exclusively for the use of the Russian railways, free of duty until September 1 next.

The American crop of peas and beans is said to be 800,000 bushels short this year, and the European crop is also short.

**Foreign News.**

The British forces under General Buller have made a third unsuccessful effort to break through the Boer lines on the Tugela River in order to relieve the beseiged garrison at Ladysmith. On February 5, General Buller threw a strong force across the Tugela and seized a ridge on the most direct road to Ladysmith. After holding the position until February 7 the British were forced to abandon it and retire to the South side of the Tugela once more. Recent dispatches indicate that a combined advance movement by the British is about to begin, Lord Roberts and General Kitchener actively supervising it. About the time that General Buller started the third time for Ladysmith, General MacDonald with four thousand men suddenly appeared on the extreme left of Lord Methuen and began to harass the Boer right wing. At the same time General Gatacre's forces were engaged near Sterkstrom, and rumors of other movements in contemplation have aroused expectation of receiving early news of a decisive engagement.

A press dispatch from the City of Mexico says that the committee appointed to count the votes cast in the recent national plebiscite has reported to the National Liberal Convention that 1,548,654 votes were polled, and that 1,456,482 were for General Diaz as the candidate for the presidency in the coming summer.

After an animated debate the British House of Commons, on February 6, rejected the opposition amendment to the address in reply to the Queen's speech, by a vote of 352 against 139, and February 8 the address proper was adopted by a vote of 229 against 39, which means that the present ministry is upheld.

Adelbert S. Hay, the new United States consul to Pretoria, was received by the Transvaal government February 5. Charles E. Macrum, former consul at Pretoria, has arrived in this country, but has not made any public statement in regard to the cause of his leaving his post.

English and Japanese capitalists have secured a franchise from the Chinese government for an electric trolley line three miles long to connect the foreign quarter of Tien-Tsin with the native walled city. This is said to be the first project of the kind started in China.

A Manila dispatch of February 5 says that Brigadier-General Kobbe's expedition in the islands of Luzon, Leyte, and Samar has occupied permanently and garrisoned nine towns with the 43d and 47th regiments, and has placed on the market 180,000 bales of hemp.

In M. de Bloch's pamphlet on the South African war, the conclusion is reached by the author that improvement in the mechanism of modern warfare has multiplied the advantages of defence under cover over attack in the proportion of eight to one.

The Emperor of China was not deposed, as generally reported, but the Empress Dowager is in full charge of affairs, and is said to be only waiting for a favorable moment to dispense with the Emperor's services.

Distress among the diamond cutters of Antwerp, whose occupation the Boer war and the consequent suspension of the Kimberly diamond mines have destroyed, grows daily more acute.

An estimate of the numerical strength of the armies of the two Dutch republics made by a man who is quoted as an authority, makes out the total to be sixty-four thousand men.

Famine in India is reported to be spreading. Already four million people are receiving relief.

**General News.**

Prof. E. L. Hewett of the Normal University of Las Vegas, N. M., has announced his belief that the Cliff Dwellers of New Mexico and Colorado lived during the tertiary period. He is said to have discovered in recent explorations of the Cliff Dwellers' ruins, fossil remains of the mastodon and other animals of the tertiary period. He is also said to have found in their ancient homes utensils manifestly made from live, not fossil ivory, which tend to prove that the people who made them were contemporaneous with tertiary animals.

On the three small reservations of the La Pointe Agency, east of Duluth, Minn., the Indians are now logging some fifty-two million feet of pine, for which they get prices of from $5.50 to $2 a thousand, according to quality. It is estimated that not less than $250,000 will be distributed to them for the winter's cutting, in wages and purchase of the timber.

The city council of Topeka, Kan., has passed an ordinance making it unlawful for any one to practise hypnotism or to allow himself to be hypnotized in any public place. The punishment for violation of the ordinance is fine and imprisonment.

Prof. R. L. Garner, who is accorded recognition by scholars, has made exhaustive study of the language of monkeys, and affirms that they can be taught to speak in the language of mankind, having special aptitude for the French tongue.

## Voice of the Press.

### Regulating the Art Curative.

IT is to be hoped the General Assembly will not attempt any further restrictions upon the curing of sick people by any system or process the patients may desire. There ought to be the utmost freedom in this respect consistent with the public welfare. There is a general aquiescence in the belief that it is essential to have regulations by the state governing "the practice of medicine" and the qualifications of doctors who prescribe medicine and practise surgery, and pharmacists who compound drugs. But there the necessity for state regulation ends.

It is debatable whether the state has any right to restrain the practice of faith cures and Christian Science. Neither of these is the "practice of medicine." They have to do with mental processes. The influence of mind over the body is often remarkable. Many people also believe Providence intervenes in response to prayer to heal diseases and work seeming miracles. Whether this belief is well founded or not does not concern the question of individual rights under a republican form of government guaranteeing each citizen the utmost personal liberty consistent with the general welfare.

The place to draw the line between what is and what is not permissible in the conservation of communal interests is—results. It is an anomaly, an anachronism, to punish people for healing the sick. The penalty ought to be imposed for failure to cure, and not for curing; for malpractice, and not for successful practice. To illustrate; the following appears in the despatches:—

"Nashua, N. H., Jan. 19.—Charles H. Sagar, for many years a cripple, walks erect to-day, a well man, cured by Christian Science, he asserts. Sagar was widely known as 'the tricycle man' from his habit of wheeling himself about the streets on a tricycle.

"He was unable to walk without the aid of crutches owing to a severe attack of muscular rheumatism.

"To-day he walked down Main Street, crutches and tricycle being thrown aside. He asserts that he has been treated by a Christian Scientist from Lowell, and that as a result of this treatment he has been cured. He attends the Christian Science meetings, and will join a Christian Science church if one is organized in Nashua, which is expected."

Here was a cripple who was cured. He thinks he was healed by Christian Science. Let him think so. Who is harmed by it? It is not denied he was crippled; it is not denied he now is recovered from his disability. How has the state, how have the people, been injured by the incident? On the contrary, a cripple has given place to an able-bodied man—a distinct economic advantage to the man and to the community where he lives.

On the other hand, serious results flow from neglect by sincere but ignorant, or misguided people. The *Hawk-Eye* recognizes the difficulty of ascertaining and defining the correct attitude of the state toward such emergencies. There may be a remedy, but it ought not to be so sweeping and restrictive as to jeopardize the prerogatives of the many other cases where no harm results. It is possible a law might be enacted against malpractice and neglect under all systems of treatment. Such a law, of course, must be general in its scope and not directed at any one, or two, schools of medicine, or healing, exclusively. The policy of such an act would be to reward successful treatment and punish unsuccessful treatment. The proposition is ethically logical and correct, but practically it looks visionary and impractical. But it serves the useful purpose of illustrating and emphasizing the imperative necessity for great prudence and conservatism in legislation regarding the healing art. The status must not be narrow or proscriptive, and they must protect individual liberty.

*The Hawk-Eye, Burlington, Ia.*

## A Day for Gratitude.

WE so often resolve we will be thankful. But the swift demands of each day's wants enslave the mind. The average man is not so large as his place in the world. This is true in this age, for both industrial and social development were never so exacting. We drop yesterday when it is passed. We forget to reflect. In fact, we have no time, unless we take it—and the time is so filled.

There is only one way for the man of affairs who would live conscientiously. He must take time to reflect, to remark the fulfilment of his desires by a kind Providence, and note the goodness of his Creator. It is the peculiar office of the Sabbath to afford this time. It is a day for self-knowledge in relation to the Lord of all things. The purpose is man's good, not some jealous exaction on the part of Heaven. The Sabbath was made for man. It is the servant of his higher nature.

Happy is he who is far away from his business on Sunday. Thrice happy he who can sit by some far-seeing window and, with folded hands, trace along the sunlit hills the path over the earth which he has trod; the memory of an upright sire, a gentle mother, and the home group of long ago.

The knowledge acquired by blessings, than which there is no surer knowledge, is not treasured except by effort. It differs from what we learn by suffering, which is somehow more obtrusive. Whether a man can learn more by his happiness than by his sorrow depends on what his type is. We would all prefer, so we assert beforehand, to be taught by gentleness. Yet it may be doubted if a majority are so taught. The worship of God has no sweeter element than the reverent tracing of the blessings He has sent us. It is absurd to suppose that this quiet study is as well pursued in the noisy working-day as in the calm Sabbath divinely ordained for this very purpose.

Theology is unkind when, by acrid debate, it interferes with the gentler feelings which belong to giving God thanks. The debates of theology should be on week-days, out of church, anywhere or any time except when weary minds need the rest of gratitude. "Great is the Lord, and greatly to be praised." Beginning with that, one can

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

hardly go wrong. Perhaps the lack of gratitude is the one peculiar offense to which a busy and wealthy nation is most exposed. Perhaps the great revival in religion which we so much need would begin if, in this era of prosperity, we began to give way to appropriate praise.

What land should be so vocal with thanksgiving? What people should so throng their sanctuaries on the day of praise? In what age of the pious Hebrew, whose history is our Scripture, was there like condition of the welfare of the race? Every psalm of David would have spoken even loftier sentiments had he lived in America now. And those great leaders of the English race, such as Wyclif, Knox, Wesley—with what eloquence would they have enlarged upon our state, calling on us, in view of things realized which in their day were almost hopeless dreams, to deport ourselves as a most religious people.

The characters that are to be our example are not easily studied amid the confusion of the week. Around these portraits, like a frame, is placed "the day that saw him rise." Though his precepts fit all days, yet it is of things that belong to the eternities that he most strenuously preached. It behooves this nation to defend the day with conscience unimpaired. Amid the nations we are conspicuous for our blessings.—*Mail and Express.*

## Is Christianity Declining?

THE peculiarity of the age is that everything we know and everything we think we know is being put to the severest test. Our theories of physics, of metaphysics, of economics, and even of religion are in the crucible, and the ultimate purpose is honestly to discover the truth. The end sought is not destruction, but reconstruction on a more solid basis.

These matters are being discussed in the pulpit, on the lecture platform, and in the magazines and the daily papers —proof positive that all classes are interested in them.

It is evident that the world is becoming thoughtful, but also evident that profound thinking will not endanger the cause of truth. Faith in its larger sense seems to be on the increase, while faith in certain dogmas heretofore accepted is decreasing. The Christianity of Christ, in all its simplicity and beauty, and with all its ideals, is not only undisturbed by criticism, but brought out into stronger relief by it. The desire to believe both in the duties of this world and the hopes of the next was never more eager than now. It is not an agnostic age, but an intellectually and spiritually hungry age. The appetite for real facts, fundamental facts, facts about which there can be no reasonable doubt, was never keener, and it grows by what it feeds on. Men must have religion of some kind, and if what is offered is not acceptable it does not show the absence of faith, but rather its presence, when they reject it and search for something which they have not received.

A kind of chaos prevails, but out of this chaos will ultimately issue a new and higher order of thought. Investigation is not made by agnostics for agnostic ends, but by some of the noblest Christians of the day and for the purpose of establishing Christianity on a firmer basis. The enemies of dogma are the friends of truth. Copernicus did not destroy the science of astronomy when he declared that the stellar theory of that day was wrong, but, on the contrary, did it a service, and reverent scholarship will do a larger service to religion when it tells us that if the building is to stand certain stones must be removed in order to give place to others fresh from the quarry.

Real Christianity is a life rather than a belief. Faith in the ethical ideal which the Master created never had such a hold on the world as now. Progress means clearer ideas of right living.

The world will never try to get on without the Sermon on the Mount. The people are reaching a higher level with every century, and religion—the religion of Christ as you find it in the New Testament—furnishes the upward impulse. Agnosticism is depression, faith is ennobling, and the proof of the prevalence of an ennobling faith is found in our larger charities, our increasing philanthropies, and in the innumerable endeavors to dignify human nature and produce a society in which Christ shall be a living factor.

There is no decadence of faith either in the possibilities of this life or in the reasonable hope of another life. The world will still march on, believing more, thinking more, and living better lives than ever before.

*New York Herald.*

## Kingdom of God on Earth.

THE Rev. Dr. Lyman Abbott recently described to a crowded gathering the purpose Jesus had in view when he endeavored to promote the kingdom of God.

This kingdom, the preacher said, was a kingdom on this earth, and not, as many supposed, a state of things which was to come in after this life was over. By this kingdom we were to have, not hereafter, but now upon this earth, a richer, a freer, and a happier life. The kingdom of God was not only in this world and in human existence, but it was also in the hearts of men, and whoever, in business, in politics, or in the general life of the world, was acting honestly and justly, and was seeking for justice and righteousness in the world, was thereby seeking to realize the kingdom of God.

Christ pre-eminently sought to bring about the kingdom of God, and his effort to promote it, in spite of opposition and persecution, in spite of the opposition of the Jews, in spite of the apathy of his own followers, and in spite of his knowledge that the attempt would end in his crucifixion, was the most splendid example of optimism to be found in the world's history. Christ believed, also, that the kingdom of God was a growth, and that it must come through the development of spiritual principles in the hearts of men.

How could men live together without these principles—men who were selfish and grasping—how could they live together? It could not be done, neither under individualism, nor socialism, nor feudalism. The kingdom of God was a kingdom of personal character, and character was a growth.

But it had opposition to encounter, even within the church itself, and perhaps one great evidence of the divine character of Christianity was that it had survived the Christian church—that it had survived coldness, worldliness, division, and contention, forgetfulness of justice and mercy and love, as well as the concentration of the church's attention on rituals and creeds.

What a poor tool Christ had had in the Christian church! He advised that the tares should be allowed to grow up with the wheat; yet he did this in order that the wheat might become so strong that the tares might have little opportunity. The kingdom of God was a struggle against inertia within and enemies without, and we were to promote it by returning good for evil.

It was not to be wrought for us, but it was to be wrought by us. We were put upon our responsibility in this matter, just as by the optional system students were put upon their responsibility, and just as by our political system each man was put upon his responsibility as to what and whom he would vote for. The kingdom of God was the result of personal, individual responsibility. Every one of us was either helping or hindering the coming of the kingdom of God; most of us were doing both.—*Boston Herald.*

## Among the Churches.

### Work of the Denver Sunday School.

I have just read the letter from the Sunday School of the Second Church of Christ, Scientist, of Baltimore, Md., in which the writer says, "Wont you please ask all the little workers to tell us something of their work from time to time." I gladly respond to the invitation to speak a word for our Denver Sunday School.

This school has enrolled about two hundred and fifty children, with an average attendance of over two hundred, and is divided into twenty-two classes.

Our church, which seats about eight hundred, is becoming too small to hold our congregations, and funds are being raised to build a much larger one. The last Sabbath of each month is the children's contribution day to the building fund, and the money which they have earned and saved for this purpose through the month, is brought in. In December, when the thought of holiday gifts was making heavy demands on the nickels and dimes, their gift to the church was sixty-six dollars. The happy, beaming faces with which these offerings were brought testified that the scientific truth of Jesus' words, "It is more blessed to give than to receive," was being demonstrated. Aside from this, they pay fifteen dollars per month toward the church support. Their generous contributions brighten the church with palms and beautiful flowers for the Sabbath, and also pay for two hundred copies of the *Sentinel*, which are distributed through the classes. Words are inadequate to express our gratitude for these papers, and the missionary work they are doing. The children are imbued with the thought that they are not to be destroyed, but after they are read, are to be loaned to friends or patients, or sent wherever they will do good.

I could not ask for space in your columns to report half the demonstrations of the power of Truth over error which the little ones relate to their teachers, but will give only two. A little girl had been sent to the blackboard to work a test example in fractions. She could not think of the rule, and the harder she tried, the more difficult it seemed to recall it, until, as she said, "All at once I thought, I am a Christian Science girl, and God is Mind, so I cannot forget." In a moment the fear was gone, the rule was remembered, and the example was easily solved.

The other was a little girl who was troubled with nearsightedness. The teacher had written some stanzas of poetry on the board for the children to copy and commit to memory at home. She had been accustomed to go up close to the board to copy her school work, but this time, as she said, "I sat still in my seat with my hand over my eyes, and kept saying, 'God is my sight, God is my sight; I am His child, and my sight is perfect, for He is perfect.' When I looked at the board again, I could read every word."

The power of Love to overcome evil of every sort is strongly inculcated by our beloved superintendent; and many demonstrations over selfishness, anger, etc., are given from the realization of that grand statement in Captain Joseph Eastaman's "Friendly Words," February *Journal*, 1898: "Everybody loves me and I love everybody, because 'God is Love' and 'God is All.'"

We feel that the Sunday School is a factor in our Christian Science work, whose importance cannot be overestimated. As we see the quick and sure results following the simplest statement in Science when reflected by the pure child thought, we recall the words of Jesus: "Take heed that ye despise not one of these little ones; for I say unto you, That in heaven their angels do always behold the face of my Father which is in heaven."

MARTHA E. KILLIE, *Asst. Supt.*

### Church Organized in Edinburgh, Scotland.

In January, 1898, a small band of Christian Scientists met together at a private house to hold the Sunday service. Week-day meetings were started at the same time for the study of the Quarterly Bible Lessons, and were held on Thursday afternoons. To find the origin of these services, we must really go back as far as the early part of the year 1895, when a husband and wife began to read the Sunday lesson together, and soon afterwards started a collection for the benefit of Christian Science work in Scotland. It was not till three years later that the work assumed a more public character; then others who had become interested in Christian Science were glad to join, and the services were advertised in the *Christian Science Journal*. In July, 1898, these regular services were temporarily suspended during the absence of the First Reader, who went to America for some months. While there, she enjoyed the privilege of being called to a class in Christian Science taught by its Discoverer and Founder, the Rev. Mary Baker Eddy.

The Sunday services were resumed in February, 1899, and the Thursday meetings for the study of the Bible Lessons were changed to the regular Wednesday evening meetings. Later on it was felt that the time had come to take another step forward, and the advisability of hiring a public hall for the services was discussed, and also of opening a reading room for the benefit of enquirers. After much work, suitable quarters were found at 18 Duke Street, and on November 26, 1899, the opening service was held. Over forty people were present at this service, and many messages of love and congratulation were received from friends at a distance.

Amongst those who had contributed towards the funds required to start the work on this wide basis, were three boys, two of whom had earned fifteen shillings during the summer by running errands, etc., while the third, a very little fellow, gave one tenth of his whole patrimony to the church.

It may also be of interest to note that the sale of Christian Science literature had gone on hand in hand with the rest of the work. In December, 1896, the first consignment of books and periodicals was received from the Christian Science Publishing Society in Boston, Mass.; and up till the opening of the Duke Street rooms about £160 ($800) worth of literature had been sold.

The rooms themselves are very attractive ones. There is a fine large reading room at the front with a hall in the rear for services where sixty people can easily be accommodated. Much thought and loving care was bestowed on the furnishing of these rooms, which were tastefully decorated with palms and flowers for the opening service.

Later in the day, eight of those present, being members of the Mother Church, met together and organized themselves as First Church of Christ, Scientist, Edinburgh. Seven others were admitted on Communion Sunday, December 10, making a total membership of fifteen to start with. C. L. R.

The first act of the newly organized church was to request the First Reader to despatch a letter expressing love and loyalty to our beloved Teacher and Leader, Mary Baker Eddy.

### Christian Scientists Move.

Christian Scientists of this city, who, under the name of First Church of Christ, Scientist, have been holding services on Sunday mornings for the past year in Gould Hall, had their first service in their new quarters on Bassett Square, Shurtleff Street, near Broadway, on Wednesday evening (January 31). There was an attendance of more than one hundred and sixty, and a number of Scientists from the Boston and Roxbury churches were present.

Digitized by Google

Many were in the audience who were not members of any Christian Science church but were interested to attend this first service in the new hall.

There was considerable satisfaction expressed that the church in Chelsea could at last meet in what may be spoken of as its own quarters.

Since this branch church was organized a year ago, it has been impossible to have all the meetings of the week in the same place, and the Wednesday evening meetings, which are customarily taken up with voluntary statements as to what Christian Science is and what help its followers have obtained from it, were first held in the Unitarian Church vestry, and later in one or the other of the halls at 220 Broadway.

This arrangement is now given over for a hall on the street level in the block of brick residences between Grove and Marlborough Streets, obtained by converting the double stores recently built there, into a fine hall. Everything is new, and the interior is plainly but tastefully decorated. New furnishings for the platform and new furniture and a piano have been put in. The services will now continue there every Wednesday evening at 7.30, and Sunday forenoons at 10.45.

It is the intention of the church to use the front part of the hall before long as a reading room, where the literature of Christian Science will be accessible at times when services are not in progress.—*Chelsea Gazette.*

### Plans for a New Church.

The First Church of Christ, Scientist, has acquired the old Butts place at the corner of McKinley Avenue and Travis Street, and will erect a handsome church building there shortly.

Architect W. A. McMillan is now drawing the plans and it is announced that he will be ready in a day or two to consider proposals from contractors for the construction of the Sunday School wing of the building.

The board of trustees, composed of Mr. O. B. Kone and Mesdames Stella C. Heard, Beulah G. Hines, Emma L. Webb, Charles Guenard, chairman, announce that this wing of the church will be completed and ready for occupancy by Easter.

This organization, of which Mrs. Jennie M. Myrs and Mrs. Lelia S. Kirby are the Readers, has heretofore held services at 1007 Rusk Avenue, in the Mason Building, but owing to the growth of the congregation find it necessary to build a church.

The new building will be a credit to the congregation erecting it, and a material addition to Houston's many fine churches. While this congregation's membership is not as large as that of several other churches in the city, their successful efforts toward the building of a house of worship are indeed commendable.—*Houston (Tex.) Post.*

### Site for a Church Building.

After the morning service at Second Church of Christ, Scientist, yesterday, it was announced that the trustees have secured a site for a church building, thus bringing nearer fulfilment a cherished wish of the congregation.

The lot selected has a frontage of ninety feet on Mount Royal Avenue, adjoining Music Hall, with a varying depth up to ninety feet, and is considered a very eligible location.

The Second Church of Christ, Scientist, is a chartered institution, having been organized in March, 1897, since which services have been held in the Lyceum parlors pending the erection of a church building. The new structure will include accommodations for the Sunday School, and also for the free reading rooms of the church, which are now maintained at 1201 North Charles Street.

*American,* Baltimore, Md., Feb. 5.

## The Lectures.

### At Hartford, Conn.

The Hon. William G. Ewing lectured in Hartford, Conn., on the evening of January 25 at Parsons Theatre, under the auspices of First Church of Christ, Scientist, to an audience that nearly filled the auditorium. It had rained nearly all day, and was very stormy in the evening, but notwithstanding this, almost every seat was taken in the lower part of the house before the lecture commenced. Many of Hartford's leading citizens were present and expressed themselves as much interested in the subject so ably presented by Judge Ewing.

The speaker for the evening was introduced by the Hon. William E. Simonds, ex-member of Congress. Mr. Simonds spoke as follows:—

*Ladies and Gentlemen:*—I am about to introduce to you a well-known gentleman who will speak to you upon the subject of Christian Science. I am not myself a Christian Scientist, at least I do not know that I am, I shall be better able to say as to that after I have listened to the gentleman who is to address us, but I do know that I am glad to express in this way my love of fair play and free speech. If there be truth in Christian Science it will live; if it has not enough to sustain it, it will die, and the best way to administer its deserts is to let the people know all about it.

I am persuaded that the honored gentleman who is to speak to us can and will do much to enlighten those who, like myself, now sit in darkness in regard to the teachings and truths of Christian Science; for there must be some truth in a system that has been able to make such a wonderful growth in numbers and strength as has this new doctrine in the last few years. The gentleman who is to address us is a man of affairs. At the bar, on the bench, and in the field of national politics he has long been a force recognized and respected. It is a part of his distinguished good fortune that he has been a personal friend of our great President Abraham Lincoln.

It is most certainly not for profit or worldly gain that he gave up his seat on the bench, where he had served long and honorably, for the cause that brings him to our city to-night. He merits from us that appreciation which all men deserve who bravely prefer that which they believe to be right rather than that which would be purely worldly gain.

This world of ours has great need just now for brave men who have a message to deliver in truth and sincerity. Many of the dogmas and doctrines of other days have lost their hold on the minds of men. This does not mean necessarily less of belief in God or less love for Christ. To me it rather means a greater love and reverence for God and a greater and more tender love for His Christ. But for minds that have been ruled by fear and guided by misunderstanding it does mean a certain measure of wild license, and it is a fact that in a measure explains the unnatural developments in the centralization of business enterprises, the unhealthy tone in some fields of journalism, and a tendency in politics to be over-grasping that saddens and puzzles our social philosophers.

I am told that Christian Science discloses God as very near to us in our daily lives, and that to realize this we must be very near to God in our thoughts and acts. Surely we cannot have too much of such teaching as this. It is to be feared that in our practical, every-day ideas of God we are too apt to be not unlike the good old lady who was at sea in a fearful storm. She went to the captain of the ship and made some distressful inquiries. He said to her, "My dear madam, we must put our whole trust in God." "Goodness gracious," she said, "is it as bad as that?" I may be mistaken about the matter, but I seem to feel from what I have heard of Christian Science that it teaches its

Digitized by Google

followers to trust God in all things, no less in physical than in spiritual matters. If the speaker of the evening can tell us how to gain a fuller realization of our nearness to God and how to increase our faith in the healing power of His love I shall indeed be pleased that I have been called upon to introduce to you, as I now do, the Honorable William G. Ewing of Chicago, Ill.

MYRON G. MARSH, *Clerk.*

### At Longton, Kan.

The lecture on Christian Science given in the Congregational Church Saturday evening, November 25, was largely attended. There were visiting Scientists from Howard, Elk Falls, Independence, and Chanute. The speaker was introduced by Rev. T. Edgar Watt, pastor of the Congregational Church, whose remarks were in part as follows:—

The presence of so many indicates a desire to know something of Christian Science. No intelligent or reasonable person will refuse to listen to facts on a subject of interest, whether they are in harmony with his views or not. I came here this evening to learn something. I trust you are here for the same purpose. I have heard of the speaker from other appointments he has had, and he is spoken of in favorable terms. I now take pleasure in introducing to you Judge Joseph R. Clarkson of Omaha, Neb., who will entertain you this evening.

MRS. MARY A. WOOLDRIDGE, *Clerk.*

### At Salt Lake City, Utah.

A large audience, filling the three lower floors of the theatre, with a number in the gallery, greeted Judge Clarkson of Omaha at the Salt Lake Theatre last evening (Saturday, January 27) when he rose to speak on the subject of Christian Science.

The stage was tastefully arranged, a table near the centre being adorned with beautiful cut flowers. D. C. Dunbar presented Judge Clarkson to the audience.

No better testimonial to the power of the speaker could have been given than the fact that although he spoke for almost two hours, scarcely one in the great audience departed until the final words of the address were pronounced. Nor were Scientists the only ones there, for all denominations were represented, and the interest in what was said was manifest throughout the evening.

*Tribune,* Salt Lake City, Utah.

### At Akron, O.

The lecture on Christian Science by Hon. William G. Ewing at the Universalist Church Thursday evening (February 1) was well attended.

The audience was made up of all classes, some believers, others doubters. Many of Akron's best-known business and professional men were present. Mr. Ewing was at his best and delivered an excellent address. He was introduced by Judge J. A. Kohler, who said,—

A few days ago I was invited to be present to-night, to listen to thi lecture, and was requested to introduce the speaker. I am a believer in liberty of speech and freedom of thought, whether I concur wholly in the opinions of the speaker or not. I therefore take great pleasure in introducing to you Hon. William G. Ewing.

*Beacon Journal,* Akron, O.

### At Wilmington, Del.

Judge W. G. Ewing delivered a lecture on Christian Science before an audience of about three hundred and fifty persons in the New-Century Club building last evening (Monday, January 29). He is a lucid and interesting speaker and the lecture was much enjoyed.

In the audience there were a number of prominent residents of the city, and visitors from New York, Philadelphia, Baltimore, and West Chester. Mr. Carol Norton, C.S.D., of New York introduced Judge Ewing.

*News,* Wilmington, Del.

### Lectures at Other Places.

Eureka, Cal.—F. J. Fluno, M.D., C.S.D., Thursday, January 18.

## Aid for the Shakers.

*Editor of The Monitor:*—I have learned with regret of the great misfortune which has befallen the North Family of Shakers at Canterbury in the destruction of many thousand dollar's worth of property by fire, with no insurance to offset their loss, even in part. I have frequently enjoyed their hospitality, and I am sufficiently acquainted with their pecuniary situation to realize how heavily the wiping out of their herd of cows, much of their provisions, and their costly buildings, must burden them. Concord people have known the members of the community for many years, and I am sure many share with me my sense of their worthiness and my sympathy for them in their present embarrassment. I therefore propose that contributions be made to aid them, and I gladly offer my subscription of twenty dollars as a beginning for a Concord fund in aid of the North Family of Shakers at Canterbury. General Harry H. Dudley at the Mechanicks National Bank has kindly consented to receive and forward such contributions as may be made to him.

Very respectfully,

FRANK W. ROLLINS.

Concord, February 5, 1900.

The first response to Governor Rollins' appeal in behalf of the Canterbury Shakers was received from the Rev. Mary Baker Eddy, who this morning sent one hundred dollars to General H. H. Dudley at the Mechanicks Bank with the request that he forward the sum to the Shakers with her sympathy.—*Concord Monitor.*

### No more Sentinels Wanted.

The Christian Science Publishing Society is now plentifully supplied with back numbers of the *Sentinel* recently asked for. We desire to thank the Field for the generous response to our request, and ask that no more copies of the *Sentinel* be sent us.

It is while you are patiently toiling at the little tasks of life that the meaning and shape of the great whole of life dawns upon you. It is while you are resisting little temptations that you are growing stronger.

PHILLIPS BROOKS.

Liberty may be endangered by the abuses of liberty, as well as by the abuses of power.—MADISON.

Sin may be clasped so close we cannot see its face.

TRENCH.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Church By-law.

BY MARY BAKER EDDY.

A MEMBER of the Mother Church shall not, under pardonable circumstances, sue his patient for recovery of payment for said member's practice, on penalty of discipline and liability to have his name removed from this church membership. Also, he shall reasonably reduce his price in chronic cases of recovery,—and in cases wherein he has not effected a cure. A Christian Scientist is a humanitarian—he is benevolent, forgiving, long-suffering, and seeks to overcome evil with good.

## Order of Communion Service.

THE following is the order of service for Communion Day, as revised:—

1. Organ voluntary.
2. Hymn.
3. Reading a Scriptural selection.
4. Silent prayer, followed by the audible repetition of the Lord's Prayer with its spiritual interpretation.
5. Hymn.
6. Announcing notices.
7. Reading Tenets of the Mother Church.
8. Reading Sec. 1, Art. XXXII., of Church Manual.
9. Collection and solo.
10. Reading the explanatory note on first leaf of *Quarterly.*
11. Announcing the subject of the Lesson-Sermon, and reading the Golden Text.
12. Reading the Scriptural selection entitled "Responsive Reading" alternately by the First Reader and the congregation.
13. Reading the Lesson-Sermon. (After the Second Reader reads the Bible references of the first Section of the Lesson, the First Reader makes the following announcement: "As announced in the explanatory note, I shall read correlative passages from the Christian Science text-book, 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy.")
14. The First Reader briefly invites the congregation to kneel in silent Communion. This is concluded by the audible repetition of the Lord's Prayer (spiritual interpretation omitted).
15. Singing the Doxology given in the Church Rule.
16. Reading Scientific Statement of Being and pronouncing benediction.

This is the order of service of the Mother Church, and the branch churches shall adopt this form of service.

The Church Tenets shall be read at the Communion service in the branch churches.

Of course, it is well known that there is usually an address from our Leader to be read at the Communion service in the Mother Church. The order is changed accordingly.

## "Cause of the War."

UNDER the above heading Count Tolstoi discourses upon the war in South Africa. The newspapers report him as saying, among other things, that he cannot agree with those who attribute the cause of this war to the behavior of this or that political leader. "The real causes," he says, "are perfectly evident in regard to the Transvaal war, as well as to all the wars which have lately taken place." He then divides these causes into three:—

1. Unequal distribution of property; 2. The existence of the military class, or a class educated to the profession of war; and 3. Erroneous religious teaching.

He concludes that it is not only useless, but harmful to attribute the causes of the war to the Chamberlains and Wilhelms, and such like, thus hiding from one's self the true causes, which lie nearer and in which we are ourselves participating. He asserts that all history is a series of actions on the part of politicians exactly similar to those which preceded the Transvaal war.

Although Tolstoi's strictures upon these preceding causes may seem somewhat untempered with a due regard to the apparent difficulties with which nations, as well as individuals, in this mundane sphere, have to deal, yet that he has sounded a keynote to the situation, all thinking, right-minded persons must admit.

Lying back of all wars are untoward human conditions; conditions apart from the true principles of Christianity, if we admit that the teachings of Christ Jesus constitute the basis of Christianity. If his teachings are not to be regarded as the groundwork of Christianity, then this name, as applied to any system of religion, is a misnomer. In all his acts he demonstrated a higher method of settling earthly grievances than through war and bloodshed. In all his teachings he pointed to love, forbearance, and forgiveness, as the qualities which should control in human relations.

His Sermon on the Mount *lived,* would obviate the necessity of wars anywhere or under any circumstances; and not until the precepts of this Sermon shall become the watchword of the nations, will wars cease. Men can never redeem each other by slaughtering each other. One nation cannot permanently establish itself by unjustly dealing with another nation. Lasting prosperity cannot be built upon greed, tyranny, and oppression. This moral law is of universal application, applying as well to the smaller and weaker as to the greater and more powerful nations. All history has repeatedly proven the unvarying force of this moral law. We have but to think of the ancient nations, in their rise and seeming power and splendor—for a season—and their subsequent downfall and humiliation.

These historical results are the fulfilment of biblical prophecy in its plainest import. No one can read the biblical prophecies without easily seeing that nations cannot permanently endure on the basis of human greed and selfishness. As individuals have permanent success, so must nations; for to be worthy the name, the power of nations must be resident in the will and wisdom of the people. Never, therefore, until the people are under the sway of the one universal Will and Wisdom, will national government be rightly based. And what does this kind of government imply? What the Bible teaches from its Genesis to its Apocalypse: Love of God and love of neighbor. This love must become a living, practical thing. It must be made the main plank in political platforms. It must be made the issue of political campaigns. It must be made the theme of political orations—the heart and soul of stump-speeches; and it is the duty of Christian people to bring this about.

Government officials, in all republican forms of government, from the Chief Magistrate down, are but the servants of the people; they carry out the will of the people; there-

Digitized by Google

fore, until the people themselves have a right apprehension of government it were folly to expect its servants, the officials, to administer governmental affairs according to the highest right. The servants will not, cannot, reach a higher plane than their masters.

If the believers in the verity of the Bible, and the advocates of the teachings of Christ Jesus everywhere, regardless of creed or sect, will awaken to the true sense of government, and through prayer and exhortation, precept and example, assert their kingship and dominion in and through Christ, if faithfully done, the time will certainly come when the promises of Scripture will be fulfilled, and war will be no more.

## An Evidence of True Fellowship.

WE take great pleasure in publishing the following letter from a Jewish Society at Orange, N. J., which breathes a spirit of Christian fellowship well worthy of emulation by all religionists. We are glad to say that we have the cordial permission of the society to publish the letter.

Orange, New Jersey, January 22, 1900.

To the Society of Christian Science.

It is with feelings of deepest and most sincere regret, that we are obliged to announce to you, that at the present time it is utterly impossible for us to comply with your wish to extend to you the privilege to meet in our house of worship.

The same is not as yet in perfect condition, and needs particularly, proper heating facilities.

We have held a special meeting to thoroughly consider the matter, but upon very extended deliberation find that we are not in position to undergo further responsibilities, than those already assumed. At the same time we beg to assure you, that should we be able to give you proper accommodations you would be welcome to them, not for any monetary considerations, but simply as an act of duty, and as a proof of the love and esteem we feel for our Christian fellow-workers in the vineyard of the Lord.

With fraternal greetings we are

Very sincerely yours

ISAAC LEHMAN, *Vice-Pres.*

S. SELIGMAN, *Sec.*

For the congregation Sharey Tefilo.

### Lecture at Tufts College.

On Wednesday, February 21, at three o'clock P.M., by invitation of the college authorities, the Rev. Irving C. Tomlinson will deliver a lecture at Tufts College on Christian Science. Doubtless many Christian Scientists will wish to attend. The college authorities have kindly authorized us to extend a cordial invitation to Christian Scientists to be present, which we hereby do.

A train leaving the Union Station on the Boston & Maine road at 2.29 P.M. will reach the college in time for the lecture.

### The Publication Committee.

Matters relating to the Publication Committees should be addressed to Alfred Farlow, C.S.D., The Westminster, Boston, Mass., who, it should be understood, has the general supervision of this work throughout the entire field of Christian Science.

Rev. Thomas K. Beecher said, "He alone is trustworthy who stands by his work, ready to acknowledge his failures or wear the laurels of success with the beautiful composure of an honest man who has done his best."

## Compensation.

*To the Editor of the Herald:—*

The following is an answer to the query in the mind of your correspondent from North Easton published in your issue of December 30 last.

I readily agree with your correspondent that "the idea of developing one's spiritual nature as a means of physical health is not new." Indeed, the idea itself may not be so new to this age as the practice of it. The work of developing one's spiritual nature is greatly aided by the comprehensive and clear definition of the nature of God as taught in Christian Science: for to be spiritual is to be godlike. Through Christian Science we have a definite idea of what God is, even an understanding of His very nature; and this constitutes a definite idea of what we must do to be like Him.

I have no doubt of the honesty of our friend's position in respect to taking pay for healing the sick, for I once thought just as he expresses himself. Experience with this proposition has brought to my knowledge many things which I had not learned without experience. Truly divine favor cannot be bought with money, though the time and labor of those who are able to show us how to merit such favor may be justly paid for. Under proper conditions, Peter could not have been harmed by receiving Simon's money. On the other hand, the sorcerer could not have been harmed by an humble sacrifice of his money. Therefore, no evil could have come out of the mere act of giving or receiving money.

Simon was not only wrong in his sense of the method whereby to become a healer, but he was also wrong in the motive which prompted his offer of money; hence Peter said, in substance, "Both thou and thy money perish."

Is the man who sets himself apart for the work of divine healing the only one who is doing God's service, and for this reason the only one who should labor without pay? Is not the preacher, the doctor, the teacher, the merchant, the mechanic, the agriculturist, and the day laborer, each doing God's service? Is not each filling his niche in this great universe, if he is honest and industrious; even though some vocations may afford greater opportunity to serve God than others?

The preacher receives pay for his labor, and this is right. The doctor receives pay for his service, and this, too, is right. The Christian Scientist is both preacher and doctor; why should not he receive remuneration for his work? Should he labor without pay because he heals the sick by his preaching? If his calling is an exalted one, his compensation should be abundant. Who made the law that we should be rewarded for the more material efforts of life, and not for the spiritual? Paul said, "If we have sown unto you spiritual things, is it a great thing if we shall reap your carnal things?"

If a Scientist, or a laborer in any sense, misappropriates his fee, the evil does not consist in the receiving of pay, but in the wrong appropriation of it.

Doubtless many of us have at some period of our experience tried to plan some way whereby we could get something for nothing, but we have failed. It is not only right that we should have recompense from those for whom we strive, but it is also right that they should sacrifice for benefits received.

One might be unselfish enough to be willing to work for another without remuneration, and yet encourage the other to be selfish by doing this. To be unselfish one's self, and at the same time encourage selfishness in another, is not keeping the golden rule. The patient who pays will "hurry up" to get well, while the one who does not pay is

Digitized by Google

apt to assume this attitude of thought: "Drag me out, and take all the time you please, as it costs me nothing."

Some one has truthfully said, "The best charity is to teach men how to dispense with charity." I believe it is wrong to allow labor without pay in any line, except for charity's sake. This rule of compensation is not only necessary, but is also just.

I believe I may safely say that all Christian Scientists devote a large portion of time to gratuitous work, and many have been healed who could not pay. Many of this class have been healed of their poverty as well as of disease by being helped into a condition wherein they could find employment and pursue it.

I do not know of a worthy applicant for help who has been turned away because he had nothing to give in return.

If Jesus were here to-day he would find a very much changed world, and, for aught I know, would deem it wise to use methods differing from those employed nineteen centuries ago. But why should we believe that he received no money? He had a man appointed to carry the money bag. Whatever he practised individually, one thing is certain, he taught his disciples to receive remuneration for their services. His words indicate that he expected them to have plenty, even a surplus.

Jesus said to his disciples previous to starting out upon their mission, "Provide neither gold, nor silver, nor brass in your purses." He taught them that they were safe to go out empty handed, trusting to God alone for support: "For the workman is worthy of his meat." This statement shows that he believed thoroughly in the law of equitable compensation for service rendered.

After the disciples returned he inquired: "When I sent you without purse, and scrip, and shoes, lacked ye anything?" And they said, "Nothing." Then he said unto them, "But now, he that hath a purse, let him take it, and likewise his scrip." The lesson learned from this is that only that sustenance which is gained in God's way can be retained.

Financial prosperity which is based upon Principle will stand better than that which has no principle. God must be recognized in all human affairs to insure their permanency; hence our Master's words:—

"There is no man that hath left house, or brethren, or sisters, or father, or mother, or wife, or children, or lands, for my sake, and the gospel's, but he shall receive an hundredfold, now in this time, houses, and brethren and sisters," etc.

ALFRED FARLOW.

## Reports of Healing.

IT was the writer's privilege, this week, to attend the regular Wednesday evening meeting at the Church of Christ, Scientist, 109 Fourth Street. There was a good-sized gathering of bright and happy people. In fact, this is one of the most noticeable features of Christian Science, the believers are always happy and contented. The order of service was the same used in all Christian Science churches. The meeting opened with a hymn, followed by reading from the Bible and from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. After silent prayer, followed by the Lord's Prayer and a hymn, the First Reader of the church, James E. Brierly, C.S.D., gave all present an invitation to tell what the Christ-Truth had done for them, physically and spiritually.

A young lady at once arose and briefly said: "I am very happy to be here and to give my testimony to what Christian Science has shown me. I became interested on account of the spiritual help. The logic and truth of its teachings impressed me from the first, and I thank my Heavenly Father that through Mrs. Eddy's books I have found the understanding of the Bible—that is now an illumined book—whose promises are all true.

The next speaker was a noted ex-newspaper artist from Boston, who said, "I am happy to bring to this church greetings from the church in Roxbury. I can report a rapid growth there, and before a great while they will be obliged to seek larger quarters in a church building of their own." He spoke of the science of Christian Science and how an earnest student could find to his satisfaction that it is logical and correct.

As he finished speaking a visiting Scientist from Rhode Island spoke as follows: "I am always glad to meet with this dear little church, where I know we are all dwelling in the one Mind." She spoke very sweetly of the loving faith of children and the necessity of all becoming as the little child—pure and trusting.

The next speaker advised all seekers for truth faithfully to study the Bible and Science and Health thus to work out their own salvation, not depending upon the explanations and opinions of others.

A lady then told of seeing many claims of sickness and discord healed, especially the cures of ailments in her little ones.

A young lady, whose native land is Germany, spoke very sweetly of her experiences during the week, how she found Science to be the one help in every disturbance that came up in matters of business, health, and morals. She said she desired so to live the truth of its teachings, that she might show by her deeds, rather than by words, that Christian Science is fulfilling the law.

A lady who had been healed of paralysis and typhoid fever, as well as many nervous disorders, spoke of how her home was saved from serious damage by fire through her realization of the Ninety-first Psalm.

The gentleman from Boston again arose and said, "I should like to speak of a few cases of healing. Take my own case. I was fairly driven to try Christian Science as a last resort. On account of ill health I was without employment, having tried, without help or relief, everything the doctors could offer, and I will say, as for the doctors, they are doing the best they know, God bless them, and they have helped us through many a hard place. Finally, when I was in the depths of despair, a friend loaned me a copy of Science and Health. I read it all the way home in the car and read on, until after nine o'clock, something new for me, for I had even been having the newspapers read aloud to me, on account of my eyes being in a very bad condition. The moment I began to read I knew it was the truth, and I was healed in a few weeks, simply by studying Science and Health.

"My first test came one evening after church, when my little daughter was seized with a severe attack of tonsilitis. She had suffered from this ever since she was a very small child, and the doctors said she could never be helped until her tonsils were removed. I sat down by her side on the bed and treated her. Soon she was asleep, and has never had a return of the once dreaded disease.

"Another case was also with a member of my family, who was a great sufferer with rheumatism. This time I saw it was best to wait until help was asked for. When the call came it was completely met, and never to this day has it returned.

The last speaker was a lady who was an invalid for years before she was healed by Christian Science. She said the testimony just given reminded her of a demonstration of God's power that she saw Christmas time. She was spending the holidays near Boston, and while there she called on a lady whose little baby was very sick. At one time the child seemed to be dying, but through the understanding of God's power as taught in Christian Science the babe was restored, alive and well, to its mother's arms.

The meeting closed with the singing of one of Mrs. Eddy's hymns.—*Mercury*, New Bedford, Mass.

### Exultation!

BY E. F. V.

He "maketh the *clouds* His chariot!"
And why should we
From sorrow flee
In fear and trepidation?

He "maketh the clouds His *chariot!*"
In Him abide
And safely ride
Above the desolation.

He "*maketh* the clouds His chariot!"
So let us make
Each sorrow take
Its place of degradation,
Below our feet,
A chariot meet,
And ride to exultation.

### Sowing Beside All Waters.

BY M. A. T.

With a heart overflowing with love and gratitude for all that Christian Science has done and is doing for me and for the whole world, I wish to tell of a very beautiful experience which came to me over two years ago. I had been visiting in another state, and on the homeward journey, it was my very good fortune to make the acquaintance of a lovely young woman from Michigan. During the hours we spent together, she told me of her school life, of travels in this and foreign lands, and was seemingly as happy and well satisfied with the pleasures of the world as one could be.

All this time I had an unutterable longing to tell her of the joy and peace which filled my life because of Christian Science. Error said, "She will not care to listen," but Good governed, and I asked if she had heard anything of Christian Science. Instantly she was all attention, and said, "Yes, I have heard of it, but know nothing of it. Are you a Christian Scientist? Tell me about it." I told her of some of the beautiful instances of healing, both spiritual and physical, of which I personally knew. Then she most sorrowfully told me of her dear mother, who had been many years a hopeless sufferer; not hopeless I assured her, in a land of Christian Science; but she asked, "Do you believe that Christian Science can cure where the most skilful physicians fail?" I answered, "I do not believe, I know it." We soon separated, each taking the other's address.

About five weeks after I received the following letter:—

*My Dear Mrs. T.*:—Do you recall a young woman who was fortunate to be your traveling companion from E. to G. in October,—a Michigan girl with whom you kindly spoke of Christian Science? I was called home from my visit east by my dear mother's rapidly failing health, and found her in a most pitiful condition. I think I did not tell you her trouble is a paralysis of the vocal organs and softening of the brain; besides this, the most distressing convulsions. The doctors can do her no good. They also think it will be a marvel if she lives through the winter. I told you I had a longing to know something of Christian Science. I have had mamma begin to take treatment from a healer in town. I want to study it, and I take the liberty of asking, if you will kindly select for me the books needful to inform myself. Asking that you will pardon this seeming liberty, and thanking you for all your kindness to me while with you,

I am yours cordially,

December 3, 1897. M. E. W.

It is needless to tell a Scientist, that no time was lost in going to the Publishing House and selecting "Science and Health with Key to the Scriptures" and "Miscellaneous Writings" by Mary Baker G. Eddy; also subscribing for the *Journal* and *Quarterly*. About ten days later the following letter was received:—

*My Dear Mrs. T.*:—One week ago I was the most forlorn, grief-stricken, and desolate of mortals, and now I am as happy as any king because I have accepted Christian Science. I wish I could tell you all it means to me, this stepping forth into the light. My dear mother has now been treated a week, and already there is a vast improvement in her. I had known nothing of the teachings of Christian Science, but for many years religion has meant nothing to me, has seemed mere form, no spirit in it at all. I have taken no interest in church work, and the Bible has meant nothing; I have not read it. The Truth came like a flash. At last I have found a religion, not a creed, and all seems so beautiful and clear to me, and the Bible such a wonderful book. As yet I have had but the merest glimpse of it all, but I am happy. I have all faith for my mother's recovery. I thank you, dear Mrs. T., for your kind interest in me, and all your trouble in sending the books. My meeting you was a very beautiful thing, for you seemed to bring the idea of a "something in Science" more to my mind, you seemed so happy yourself. I was tired of living on the old plane, and beginning to wonder if it paid, that being all. Now I know differently. Every one notices a vast change in my mother and you must know my happiness. Trusting we may meet again some day, I am, as ever, affectionately yours,

December 12, 1897. M. E. W.

An extract from a letter a month later, says, "My dear mother's health is improving daily, so that I have dismissed her regular nurse and have only a little maid to serve her. For myself I am striving daily to live in Truth and find great happiness in it. The most forlorn thing is, that none of my dear friends have the least faith in it, and it is so hard not to have them know too. I keep up my reading, and when possible go to the Christian Science Church here. . . . Every one is rejoicing over my mother's returning health and marvels at it. To be sure it is a gradual thing but a *positive* fact. I am a happy and contented woman, thanking God without ceasing for the wondrous Truth which has come."

Another letter some four months later, says, "Your letter has long been unanswered, but I am very sure you will rejoice in this note which tells you I am here in Chicago for a course in Christian Science with a loyal student of Mrs. Eddy. The last two months I have felt the need of knowing more of the Truth, and am now reveling in the lessons, which are bringing a more glorious unfolding than I had dreamed possible. My mother is so well that on the 16th of April we went to Detroit for ten days, and she went everywhere, shopping, driving, to dinners and luncheons, and the horse show, and was not over-wearied. I trust we may meet again before many months, the first meeting has brought me great peace. I thank God."

I am indeed grateful that Love prompted me to tell of my experience, and may it encourage some hesitating one to speak for Truth. How little we realize that very many of those with whom we come in daily contact are hungering for the bread which satisfieth, thirsting for the living waters. My heart's desire and prayer to God is to be worthy to break this bread, to give of the living water, of which Jesus said, "Whosoever drinketh of the water that I shall give him shall never thirst."

Are we doing all for Christ, Truth, that we can, faithfully and obediently following her to whom it was revealed how to unlock the never-failing treasures of the blessed Bible, with her God-inspired "little book," "Science and Health with Key to the Scriptures"?

## The Everpresent Christ.

BY JAMES A. LOGWOOD.

ALL Bible history, all history of reason and revelation, has established glorious proofs of the eternality and omnipresence of the Christ in every age.

Isaiah (the meaning of which is, salvation of Jehovah), early in his career as a prophet, saw the deplorable, rebellious spirit manifested in the ranks of Israel and Judah against God. He saw the inevitable destruction that would follow, and thus his heart went out to God. After this he had the prophetic vision of the Christ child; he caught a glorious glimpse of the divine idea that must finally come to rule all people and nations, with Peace on earth and good-will to men, for he says, "Unto us a child is born, unto us a son is given: and the government shall be upon his shoulder." He further says, "The zeal of the Lord of Hosts will perform this."

The definition of the Christ in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy is: "The divine manifestation of God, which comes in the flesh, to destroy incarnate error."

St. John refers to this new spiritual idea, or Christ, as the Word. "And the Word was made flesh, and dwelt among us, (and we beheld his glory, the glory as of the only begotten of the Father,) full of grace and truth." He further says, "For the law was given by Moses, but grace and truth came by Jesus Christ."

There was a period of nearly seven hundred years, from the time of Isaiah's vision of the Christ child, before the Christian era, or the manifestation of the Christ in the fleshly form, or in the child Jesus. Here we see how the divine manifestation of God came to the flesh to destroy incarnate error; for while the blessed Jesus was tempted like as we are in all points, yet was without sin, it was because the ever-present, indwelling Christ consciousness enabled him to meet and overcome every temptation and suggestion that the world had to present to him.

Thus it was that the human Jesus manifested the Christ, for in him was centred the present, practical possibility of the power of God with men, for he said, "I can of mine own self do nothing;" "but the Father that dwelleth in me, He doeth the works." And of his followers he said, "The works that I do shall he do also." And finally, he said, "Lo, I am with you alway, even unto the end of the world."

Note that the "I" referred to was not the fleshly Jesus, for he knew that the material Jesus would soon vanish forever from their sight, but the eternal "I," the Christ, would be always present, even unto the end of all human strife.

In speaking to his followers who did not clearly perceive the impersonality of the Christ, but who were more or less blinded by the veil of the flesh, or the fleshly Jesus, he said, "It is expedient for you that I go away: for if I go not away, the Comforter will not come unto you," "but when the Comforter is come, . . . even the Spirit of truth, which proceedeth from the Father, he shall testify of me."

After the ascension of the great Leader and Way-shower, a few faithful followers braved the tide of sectarian bitterness and malicious persecution, and practised the teachings of Jesus, in healing all manner of diseases and in raising the dead.

History shows that the healing continued for more than three hundred years after the ascension. After this the power of healing was gradually lost until it became generally accepted by most religionists that the healing of the sick belonged entirely to Jesus and his immediate disciples, or to what is termed the age of miracles.

Christian Science is now thoroughly established, and its purity, Christliness, and healing efficacy is acknowledged and demonstrated in the whole civilized world. All church bodies representing this denomination, are authorized to meet every Wednesday evening to extend an opportunity for expressions of love and gratitude, and the giving of helpful testimony and experiences to the efficacy of this great Truth, Christian Science.

## Love's Messenger.

BY SARAH A. HUGHES.

As I read the various items under "Among the Churches" in a recent number of the *Sentinel,* I was especially interested in the contribution from Pasadena; and though I have not had the pleasure of visiting the church or of meeting any of its members, I hear much of its good works, and must tell of the pleasant impressions made by a reader of their literature, and how one of their little messengers of Truth came through our home on its mission of Love.

My son, who attends Throop University at Pasadena, finds it necessary to remain at that place Friday evenings, to attend the Debating Club of the Institute. One evening while strolling about trying to pass away the time until the hour for meeting, he wandered into the Public Library. When telling me about it, he said, "I had been there but a few moments when a gentleman came in whom I knew had seen many years; his hair was white, but his face gave the impression of youthfulness in its happiness, his form bore no trace of care's burden, his step was quick and almost noiseless. He selected a book, seated himself at one of the tables, and quietly read for about an hour, then arose and departed, leaving the book on the table. Desirous of knowing what could interest such a happy looking being, I stepped over to the table at which he had been seated, picked up the book, the November issue of the *Christian Science Journal,* and read until time for business. At the depot, while awaiting my car, I picked up a small paper which some one had left upon the seat, and found it to be a Christian Science tract; it had been taken from the neat holder on the wall marked 'Christian Science.'"

The following morning my son took the little paper from his pocket, and handed it to me, while relating his pleasant experience. The tract was written by Dr. Sulcer of Riverside, and though I had read it many times, and had given away a number, I read it again with interest, then put it in a case with other literature for distribution, knowing it had a mission to perform, as Love had started it on its journey. That evening when my husband came home, he said he had met a lady who was in great distress mentally and physically, and he had recommended Christian Science. She said she had heard of it, would like to know more about it, and would like something to read. He asked me to hunt up something for her, and said, "I would like to give her something she can understand, something that will give her hope." I gave him the tract. She read it, and the next time my husband saw her, which was a few weeks afterwards, she met him at the door with this greeting, "Oh! how can I thank you people enough for what you have done for me." I sent her some Sentinels and she said she had asked a friend to get the Christian Science text-book, "Science and Health with Key to the Scriptures," for her.

She is investigating in the right direction, and fast regaining her inheritance, the spiritual understanding of holiness (wholeness), health, and happiness.

## Abiding.

BY EMMA J. COE.

"ABIDE in me, and I in you." Christian Scientists attach a new meaning to the word "abide." It is indeed significant in the Truth. Abide, sojourn, stay with. Stay with God—Good. To be conscious only of ever-present good, "With whom is no variableness, neither shadow of turning."

If we in thankfulness acknowledge His supremacy, His ever-presence, we need not fear. For the blessed promise is, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you;" and in Christian Science that sweet assurance is being continually verified.

The Bible command is "Bring into captivity every thought." Mrs. Eddy says, "Stand porter at the door of thought" (Science and Health with Key to the Scriptures, p. 391), which means being obedient, faithful, and vigilant; "Instant, in season, out of season" with the denial of error and the affirmation of Good. We cannot one moment declare the allness of God, and the next dishonor Him by acknowledging a power apart from God, and be honest in thought. This blessed practical Truth is indeed the seamless garment, for it means wholeness, holiness, in thought, word, and deed.

## Distribution of Literature.

WHAT the Students' Christian Science Association, No. 39, of Minneapolis has been doing in the way of distributing literature this past year, may be of interest to the Field. Many of the students are not residents of Minneapolis, so we decided to send to the places represented by these non-residents two dollar packages of literature for free distribution, that the attention of many who were strangers to it might be called to the blessed truth of Christian Science.

Twenty-six packages were thus sent out containing tracts, pamphlets, Sentinels, Journals, "Christian Science Healing," "People's Idea of God," "Rudimental Divine Science," "No and Yes," etc. Besides this nine copies of Science and Health were donated variously to state penitentiaries, public libraries, military post libraries, the Associated Charities, etc. The *Journal* and the *Sentinel* have been sent to the county jail, the state penitentiary, an engine house of the fire department, and the post library at Fort Snelling. A State University library which had considerable call for something on the history of Christian Science, was furnished with "Retrospection and Introspection" and the pamphlets which contain historical material.

Other gifts of literature have also been made, and it is encouraging to know that the seed thus sown has already begun to bear fruit. This coming year we hope still further to "enlarge our borders" in doing similar work. Surely at the present time there are large opportunities in this direction, and in so doing we are helping to spread the knowledge of the "living God" throughout the land.

A. L. G.

During the last three months the Commonwealth Institute Association of Christian Scientists has placed copies of "Science and Health with Key to the Scriptures" and other literature in fourteen various libraries and institutions in this city and state.

We, as an Association, consider this as an important work in preparing the thought for the reception of Truth.

Our efforts, almost without exception, have met with kind consideration and acceptance of the literature. Many interesting letters have been received, especially some from physicians.—HENRY C. LAWRENCE, Roxbury, Mass.

## Testimonies.

### Acknowledgment of Benefits Received.

When only one of the ten lepers healed by Jesus, returned to give God thanks, the Master said, "Were there not ten cleansed? but where are the nine?" I am constrained to give expression to the facts concerning my healing so I may be accounted as one who can and is willing to glorify God for the manifold benefits received.

Business complications and a disturbed mental condition resulted in bodily ailments until I was considered a sick man. *Materia medica,* in extraordinary doses and in attenuations, was applied, and to my mind my condition was incurable. It was stated by physicians that I had every indication of diabetes, yet I was told that through dieting this trouble might be greatly relieved. All that winter the starchy and saccharine elements of food were denied me,—no potatoes, no bread, and little meat. After some months, no apparent improvement could be seen or felt, and in sheer desperation, a change was made to homœopathy, not, however, until I was compelled to take to my bed.

In the care of a conscientious homœopathic practitioner, improvement was soon plainly evident, as he immediately dispelled the fear of Bright's disease, at the same time putting me on a broader plane of privilege in diet and exercise.

After some months of treatment, I started on a business trip. On this trip I was absent from home about five weeks, and all the time I was in close touch with my physician. One of my most formidable troubles did not yield to treatment, even with the most careful living, and upon my return I consulted my physician, putting the question, how long must I wait before this disease would be reached through medical science. The reply was, probably as long as it had taken up to that time, possibly longer, but no assurance could be given as to a cure being effected. Discouraged and depressed, I left the office of my physician ostensibly to find out what Christian Science was, that I had heard was doing wonderful works in healing. My sister had written me while on the trip mentioned above, as to the wonderful cures of which she had heard. When this information was received I scouted the idea of Christian Science healing, though I had never investigated it, and should not have condemned that of which I knew absolutely nothing.

As a drowning man reaching for any straw of help or support, I concluded here was my opportunity to learn what Christian Science was, and called at the home of a practitioner.

In my introduction I did not fail to portray my condition to be desperately alarming. At this first interview, so much was said by the Christian Scientist that was hopeful and encouraging, that I could not be sceptical, and I was compelled to think that Christian Science was something which could help me.

One thing that particularly impressed me at that time was the statement, "God and matter do not mix," and that all my remedies used internally and locally must be given up. I replied I could not, as I had already spent too many sleepless nights and lost too much rest. My healer encouraged me, but I looked forward to the night with dread. As I did not want to go contrary to instructions I did not take any medicine on retiring. When bedtime came I simply went to bed, and before I could think of anything disagreeable, I fell asleep. I awoke after a most beautiful and peaceful night's rest, with the sunshine of God's love streaming in my windows. I was so much encouraged, I continued to investigate, and read "Science and Health with Key to the Scriptures" until I realized I could be every whit whole. Many of these deep-seated, long-

Digitized by Google

standing diseases were not immediately destroyed, but I have the consciousness now that they are destroyed, and at this present time I am in the full enjoyment of health, thirty pounds heavier in avoirdupois. I had worn glasses constantly for ten years. My sight is completely restored. The desire for tobacco is destroyed. I had used it for fifteen years.

During the past month, my wife and I have been privileged to sit under the instruction of one of our dear Mother's students for class teaching in Christian Science. We cannot express enough gratitude for the happiness and sunshine that Christian Science has brought into our home.

JNO. C. FIELD, Brooklyn, N. Y.

### Love Supplies all our Needs.

After reading "Science and Health with Key to the Scriptures" for some few months I saw that I must stop hating. At that time my sense of hate was centred on one who had been with me in a mining enterprise and who caused me to lose a large sum of money. By meeting the thought of hate with love every time it presented itself it was finally utterly destroyed in my own consciousness. About that time in my efforts to be established as a Christian Science practitioner, our finances became very low, and with nothing in sight from which to replenish our stock of needful things. With the cupboard about empty and the rent almost due error screamed louder and louder, and the greater the lack seemed to be the harder my wife and I worked to meet it with Truth, but seemingly without success. When our cash on hand got down to thirty cents, with rent due and no sign of an income, there seemed to be but one thing to do and we did it.. We sold our household goods and went to boarding.

I then looked for material work, but still held in thought that I had God's plenty and would demonstrate it. I could find nothing to do but to solicit orders for a coal firm, and that did not bring much income. Going about in this work I went to the gentleman above mentioned to get an order from him. At this meeting (though we had stormy ones before) there was not a sign of that old evil —hate—present. Meeting him again the following day he requested that I join him and his partner in their business. The thought of becoming his partner had never occurred to me. The proposition was that I was to put in no money and get one third of the profits of the concern, to which I agreed, and with the result that the past eighteen months I have had our living expenses out of the business, and on December 8 last received thirty-five hundred dollars cash as my share of profits.

"Divine Love always has met, and always will meet every human need" (Science and Health, by Mary Baker G. Eddy, p. 490). Love never fails those that trust and look to Love for help, wisdom, and guidance.

LOUIS HELM, St. Louis, Mo.

### Quinsy and other Diseases Healed.

Ever since I can remember I had the quinsy. Sometimes I could not eat for a week, only drink a little milk, and sometimes I would hardly be able to do that. Last fall it seemed to come on severely. Although I could eat, I could not speak aloud. My mother thought I must have a doctor, but I said to her, "You know when I had a doctor, I was in constant pain, and could not eat; but now I am taking Christian Science treatment, I can eat and I have no pain, and surely my voice will be all right too." And so it is; I have not had the trouble since.

My husband was treated for his eyes. He was almost blind. He had treatment between two and three months, but he was patient and the Scientist that treated him was as faithful as she could be. Now his eyes are clear and he can see better than he ever could. He also had a very severe attack of diphtheria, which was overcome in one night.

Our little boy seemed to be ill one Sunday morning. He was very cross and in the evening we noticed red spots on his face, but did not pay much attention to it. The next morning the spots had become very bad. I wrote to our healer at once to treat him. She received the letter Tuesday. The case seemed stubborn for a day or two, but then the spots started to heal, and by the next Sunday they were all gone, only red spots left; but now there is not a trace of it on his face. A number of children were afflicted in the same way. They were under the doctors' care, and it was from three to four weeks before they were well. The people here who have opposed Science, thought it was wonderful that the child was healed so quickly.

MRS. W. LOESEWICK, Tonawanda, N. Y.

### Healed of a Disease Pronounced Incurable.

Through the columns of the *Sentinel* I wish to express my thanks and gratitude, for the messages of love which have come to me of late through its pages. Through the issue of January 4, I seemed to have received such a blessing that words are inadequate to express my thanks. Through the reading of the "By-laws" the scales have fallen from my eyes, and I know I am a better woman. It was such a glorious message of impersonal *Love*. I have felt ever since that I was standing on holy ground. I also feel very, very grateful to the editor, the committee on Lesson-Sermons, and last but not least, to all contributors. Above all I want to say to the dear Mother, "The only desire I have is to consecrate my life to the work of Christian Science, and to try, as nearly as I can, to be obedient, and follow in the footsteps of one who is laboring so unselfishly for all mankind." I was healed in Christian Science some six years ago of what *materia medica* called an incurable disease. From the very first glimpse I had of this Truth it was settled in my mind, This is the way of Life, and I have never doubted for one instant the efficacy of the Word as taught in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

MRS. MINNIE A. WHITE, Chicago, Ill.

### Restored to Health and Strength.

My attention was first called to Christian Science in June, 1894. I was at that time almost constantly under the care of a physician. I at once gave up all medicine, and with three treatments was changed from a bundle of nerves to a woman with perfect health and strength. I have never had the slightest desire for material remedies since. I have always found divine Love the best remedy.

About two years ago we commenced reading the lessons with three interested. One year ago we organized as First Church of Christ, Scientist, Camanche, Iowa, with eight charter members. January 14, 1900, we held our annual meeting and passed a resolution of loyalty to Mrs. Eddy, the *Journal, Sentinel,* and *Quarterly*. I feel that we cannot be too thankful for the messages of Truth, nor too grateful to the sources from which they come.

MRS. ALLIE TONG, Camanche, Iowa.

God has given each of us His orders for the day;
His words do not need translating; the text is full and clear;
"Whatsoever thy hand findeth to do, do it with thy might.

CLARA CONWAY.

Look for goodness, look for gladness,
You will meet them all the while;
If you bring a smiling visage
To the glass, you meet a smile.

ALICE CARY.

## Religious Items.

### He "Forgot Mother."

A man who sent presents to many of his friends and relatives at Christmas, said some time afterward, "Why, I forgot mother."

Forgot mother! His mother never forgot him. The Bible suggests that monsters in the shape of mothers may. She may be old and blind or deaf, wrinkled and feeble, a care, and may seem a burden where love is not; but no son who can be truly said to have manhood will either forget his mother or be ungrateful to her. More likely will he be to indulge a hope against nature, that his mother may live as long as he. Such will know the inwardness and outwardness of these lines which recently appeared in the *Christian Register*:—

MY MOTHER.

BY MILTON L. MURDOCK.

She gave the best years of her life
With joy for me,
And robbed herself, with loving heart,
Unstintingly.

For me with willing hands she toiled
From day to day.
For me she prayed when headstrong youth
Would have its way.

Her gentle arms, my cradle once,
Are weary now;
And Time has set the seal of care
Upon her brow.

And, though no other eyes than mine
Their meaning trace.
I read my history in the lines
Of her dear face.

And, 'mid His gems, who showers gifts
As shining sands,
I count her days as pearls that fall
From His kind hands.

*The Christian Advocate.*

---

In an editorial on prayer, the *New York Christian Advocate* says:—

Is it not to be feared that if most of our prayers could be properly interpreted they would mean, "My will be done"? The prayer "Thy will be done" is the broadest, deepest, and highest supplication that saints on earth or saints and angels in heaven, yea, that the only begotten of the Father, can offer. And it meets the need of an awakened sinner. One who offers this petition intelligently and sincerely surrenders his will to the will of God. The trouble with man is that he has been doing his own will instead of the will of God. This way leads to innumerable and inextricable entanglements.

The picture in the parable of the prodigal son correctly represents the outcome of a life in the pursuit of one's own will. It does not always lead to the same depths of shame, but it always leads downward. There is one Supreme Will in the universe, and by this perfect standard all other wills must be regulated, or there can be no peace, no harmony.

---

Concerning the outlook for Christianity the *New York Christian Advocate* says:—

The signs of the times are not so dark as some men seem to think. Freedom is marching on, and wherever freedom spreads her banner humanity awakes from the slumber of ages and catches a glimpse of a better day. The borders of the kingdom of God are being extended in every direction. The nations are in commotion. War has not ceased, but men look on war now in a new light. The king cannot make war to gratify his ambition for conquest as he once could. The people who fight the battles now have something to say. Carnal weapons are far more deadly now than they once were, but carnal weapons are being superseded by the sword of the Spirit. The great revival which shall fill the whole earth with the knowledge of the Lord is hastening on. The thing will be done suddenly. The time is not yet ripe, but the shadow of the dial shall not move backward. The time is nearer than we think when the shout shall ascend from earth to heaven, "Alleluia: for the Lord God omnipotent reigneth."

---

The *Congregationalist* gives the following suggestive hints which it calls "Christian Secrets:"—

Translate duty always into terms of privilege if you would think in the language of God's kingdom. Faith is a duty the outsider may confess with grudging, but the child of the kingdom calls it a delight. Obedience is hard, the disobedient heart complains, but the children of God are glad to obey because they are His children. Cross-bearing is a bitter trial the slavish spirit thinks, but the companions of the Crucified count it all joy that they are counted worthy to be sharers of his sufferings. All experiences thus translated into the language of the kingdom are transfigured also by the glory of the presence of the King.

---

## Miscellany.

### A Story of the Obelisk.

A lieutenant in our navy, whose name for obvious reasons I shall refrain from mentioning, related to me recently a good story, which I believe has never been told, which is authentic, and gives one of the numerous examples illustrating Russia's friendship for the United States, writes H. I. Dodge in *Voice*. I give it in his words:—

"When Lieutenant Commander Gorringe was sent to get the Obelisk, now in Central Park, New York, he met with obstacles of a wholly unusual and unlooked-for character. It seems that certain interested foreigners had incited the Egyptians to rebel against the removal of the great stone from their shores, and a pretty formidable opposition had been secretly organized. Gorringe's crew was by no means adequate to combat this unexpected opposition, and there was no American man-of-war in the harbor to render assistance.

"A Russian flagship was there, however, and the admiral, learning of the plot to defeat the American captain's purpose, sent Gorringe a very respectfully worded note in which he spoke in very high terms of the unique engineering feat which the Americans were about to undertake in moving the obelisk, and begged that Mr. Gorringe would do him the very great favor of permitting his officers and men to witness the great work. The request was of course granted, and early the next morning the wily Muscovite landed four hundred men, armed to the teeth with fixed bayonets and pistols loaded with ball cartridges, who formed a hollow square about the obelisk. These men really saw very little of the engineering feat of moving the great stone, as they faced about when the mob came, and no one was allowed to go through the square without a pass from Mr. Gorringe. As the obelisk was landed on trucks and moved down to the sea, the square moved along with it, and not until after it was safely on board did the Russians return to their vessel. The next day the Russian admiral sent another very polite note to Mr. Gorringe thanking him for the opportunity given to his officers and men to see the wonderful work, and stating that not only the admiral himself, but the Russian Government, would always remember, with feelings of keenest pleasure, Mr. Gorringe's great courtesy."—*Boston Transcript.*

---

### A Story About Lincoln.

The following incident occurred at one of the joint meetings between Stephen A. Douglas and Mr. Lincoln, during the memorable senatorial campaign of 1859.

Douglas opened the debate with a speech of an hour and a half. He seemed to be inspired by the occasion. His argument and oratory were convincing and overpowering.

As point after point was made, amid the applause of his friends and admirers, they grew more and more confident and elated; while Lincoln's friends were correspondingly discouraged and depressed. So eloquent and convincing was his address that Prof. Smith leaned over and whispered to his friend and colleague, Prof. Bateman: "Bateman, we are licked this time. Lincoln can never answer this address. The crowd is so carried away with Douglas that it will be impossible for Lincoln to get a hearing." "Wait and see," was the reply of Bateman.

During the delivery of his opponent's address Mr. Lincoln sat with legs crossed, head bowed, eyes partially closed, and countenance as expressionless as parchment. When Douglas had concluded his address and taken his seat Mr. Lincoln remained seated, allowing the friends of Douglas to cheer and shout to their hearts' content.

He then arose, and walked slowly and deliberately to the front of the platform, raised himself to his full height, and looked over his audience for a little without uttering a syllable. He then began to unbutton and slowly remove a long linen duster, which covered a conventional suit of black. After folding it with great care and deliberation, he handed it to some one just back of him, and said, in his clear, penetrating voice, that reached every ear in his now quiet and expectant audience, "Young man, hold that while I stone Stephen."

The effect was electrical, and all that Mr. Lincoln's friends could have desired. Douglas's eloquence was forgotten. The audience was quick to catch the force and point of this play on words. They laughed and cheered and were at once placed in that receptive attitude that was necessary for Mr. Lincoln's successful rejoinder.—*Selected.*

## Notices.

### Supplements to the Sentinel.

Two supplements to the *Christian Science Sentinel* have been issued. The first is the able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The workers in the Field will readily see the wisdom of giving these supplements the widest possible circulation, and the extremely low price at which they are issued will enable them to do so. The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

---

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the First Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

---

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII, sec. 1. The per capita tax for the year beginning June 1, 1899, and ending May 31, 1900, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D. Editor. CAMILLA HANNA, C.S.D. Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

**Political Events.**

Charles E. Macrum, former United States consul at Pretoria, who gave up his post recently and returned to this country, has issued a brief statement to the public to the effect that he sought leave of absence to come home in order to lay before the Secretary of State certain matters which could only be satisfactorily explained in person, and that he was superseded before reaching Washington. He complains that the British censors opened his official mail and held up his cable messages, and insinuates that a secret alliance exists between the United States and Great Britain. A resolution has been introduced in Congress calling for an investigation of the charges.

Public opinion seems to be turning in favor of the new treaty between the United States and Great Britain relative to the construction of a ship canal through Central America, connecting the Atlantic and Pacific oceans. Some of the opponents of the treaty in its present form have abandoned their opposition, and it seems possible that it may be ratified without amendment. The European and South American nations are well pleased with the provisions of the treaty. The House committee on interstate and foreign commerce have submitted a favorable report on the Hepburn bill for the construction of the canal and urged early ratification of the treaty.

Acting Governor Taylor of Kentucky has sent away all the state troops from Frankfort except two companies, and has invited the Legislature to resume its sittings in the Capitol. The Democratic majority has refused to sit in Frankfort until all the troops be dismissed. Application was made by the leading officials under Acting Governor Taylor, to Judge Taft of the United States District Court at Cincinnati, for an injunction against the Democratic contestants for their offices and against the state board of elections, but the application was denied on the ground that the court had no jurisdiction in the matter.

The joint committee of the Pennsylvania Legislature, appointed at the last session to consider the subject of election of United States Senators by a direct vote of the people, with a view to submitting an amendment to the national constitution, has completed its work, and forwarded copies of its resolutions to the secretaries of the States of New York, New Jersey, Ohio, Massachusetts, Tennessee, Maryland, Iowa, Kentucky, and Mississippi, where Legislatures are now in session.

An anti-trust conference, called by the National Anti-Trust League, was held in Chicago February 12-14. A set of resolutions was adopted covering the following points: Government ownership of all railways and telegraph lines; the abolition of all special privileges by legislative enactment; placing on the free list of all trust goods; and direct legislation by petition from the people.

George Y. Wisner of Detroit, a member of the Deep Waterways Commission, recently appeared before the Committee on Rivers and Harbors of the National House of Representatives and urged that a dam be built across the Niagara River for the purpose of raising the level of Lake Erie three feet.

The House Committee on Interstate and Foreign Commerce decided by a vote of eight to five to report a Pacific cable bill along the lines of the Sherman bill appropriating $400,000 for a subsidy, defeating the Corliss proposition for a government ownership.

The National American Woman's Suffrage Association, which has been holding its convention in Washington, on February 13 elected Mrs. Carrie C. Catt of New York president of the association to succeed Susan B. Anthony, who declined re-election.

By a vote of 46 to 29, the United States Senate passed the finance bill which provides for the formal adoption of the gold standard. By action of both houses the bill was placed in the hands of a conference committee.

Governor Roosevelt of New York has definitely announced that he will not be a candidate in the National Republican convention for the nomination for Vice-President. He is expected to be renominated for Governor.

The Committee on Election Laws of the Massachusetts Legislature has voted ten to one against municipal or presidential suffrage for women, and unanimously against taxable or married woman suffrage for women.

The President has approved an act of Congress for the preservation of the old frigate Constitution.

**Industry and Commerce.**

H. C. Frick, the former manager of the steel interests of Carnegie, but now a powerful rival, has begun equity proceedings against the Carnegie company to recover $16,238,000 for his stock in the concern, instead of $6,000,000 which Mr. Carnegie has offered. It is stated that Mr. Frick is supported in his litigation by Henry Phipps, Jr., and other partners of Mr. Carnegie, who are said to have combined to divide up the property of the great Carnegie company. It is reported that H. C. Frick and his associates, in execution of their plans, have already acquired control of the Bethlehem Iron Works, one of the largest producers of armor plate in the country.

The National Biscuit Company, known as the cracker trust, has declared its regular quarterly dividend of 1.75 per cent. Twelve months' earnings were equal to 5.6 per cent on the outstanding common stock, against 5.7 earned in thirteen months the previous year. The gross earnings for the past twelve months were $35,651,898, with profits of $3,302,155.

A Tacoma dispatch says: Dawson advices say little will be left of the Klondike metropolis after the home rush in May and June. Merchants are closing out their places of business, and instead of every building being crowded, "To let" signs are frequently seen. Business is dying, and most of these dealers are going to Cape Nome.

Taking the entire year for the five islands or groups of islands, Cuba, Porto Rico, the Hawaiian, Philippine, and Samoan islands, the total for 1899 shows an increase of more than one hundred per cent in exports to those islands over 1898, while the imports from them show an increase of nearly fifty per cent.

A combination of the steel sheet mills of the country has been formed, twenty-five concerns out of twenty-nine being represented. The capital stock is fixed at $52,000,000, of which $26,000,000 will be preferred, carrying a seven per cent dividend, and $26,000,000 common.

The year 1899 brought our foreign commerce for the first time past the $2,000,000,000 line, and February, 1900, shows our money in circulation for the first time more than $2,000,000,000.

**Foreign News.**

Lord Roberts, the British military hero and field marshal, who was sent to South Africa after the campaign of the British had come to a standstill, has justified the popular confidence in him by his first important move. He has forced a way through to Kimberley in a remarkably short time, without any severe fighting so far as reported, General French, acting in accordance with Lord Roberts' general plan of campaign, reached Kimberley with a large force of cavalry, mounted infantry, and artillery Thursday evening, February 16, and the town is safe for the present at least. Kimberley, which is a city of twenty thousand inhabitants, is the diamond centre of the world. It has been under siege by the Boers for 123 days. This is the first important success gained by the British in the present war, and it was almost a bloodless success. It was due to superior organization of transport facilities, which enabled the British to throw forward an overwhelmingly strong force by rapid marches. In addition to reaching Kimberley, the British have gained advantages in position at various points in the Orange Free State, which it is said will seriously embarrass the movements of General Cronje, who is in command of from fifteen to twenty thousand Free State soldiers. The dispatches state that General Cronje was in full retreat on February 17. Ladysmith, the besieged town in Natal, is still holding out. General Buller, on February 14, started for Ladysmith for the fourth time, but has made small headway. Some of the Boer forces around Ladysmith are being withdrawn.

Premier Waldeck-Rousseau has introduced a bill in the French Chamber of Deputies providing for varying terms of imprisonment as a punishment for ministers of religion who disobey the laws. The present law provides for banishment in all cases, and the severity of the penalty causes the law to be inoperative.

In the British House of Commons the government military scheme for largely increasing the army, was passed by a vote of 239 to 34.

**General News.**

The cable sounding ship Nero made what is said to be the deepest ocean soundings that have been yet recorded, between Manila and Guam, when the depth was found to be 5,260 fathoms or 31,560 feet, almost six land miles. The spot was named Nero's Hole.

The ninety-first anniversary of the birthday of Abraham Lincoln was celebrated throughout the country by banquets and public meetings, and the good deeds of the emancipator were reviewed in the pulpit and in the public schools.

One hundred and seventy-seven men have handed in their names as aspirants for places on the 'Varsity baseball team which is to represent Harvard next season.

Edward Moran, the celebrated marine painter, has given Admiral Dewey a fine painting of the flagship Olympia.

The national assembly of the League of American Wheelmen has voted to surrender control of cycle racing.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## The Pan-Helio-Motor.

### Concentration of Heat Effected by Means of Mirrors.

WITHIN the past two weeks Dr. William Calver, a man of science who has been working for twenty odd years on the vastest material problem which has ever presented itself to mankind for solution, has been granted letters patent simultaneously in the United States, England, Germany, and France on an invention which contains within itself possibilities of a revolution as radical and of a reorganization of society as great as those which followed the first practical introduction of steam power. As a matter of fact the powers of imagination fail when one commences to contemplate the invention and its bearings on society with all the far-reaching consequences of its universal introduction. And yet men have been working for thousands of years at the problem which Dr. Calver claims to have completely solved. Scientists of every generation since the time when it was first propounded by Archimedes have studied and striven for its accomplishment.

The correspondent of the *Herald* called on Dr. Calver at his home in Washington. The doctor is a man of something past middle age. Like many inventors, he seems thoroughly wrapped up in the work that he has accomplished and the work that he has in view.

"I believe, in fact, I know," said he in answer to a question, "that I have solved the problem of the direct conversion of the sun's rays into a heat which can be utilized on a far cheaper commercial basis than coal. I have also devised a method for the storage of this heat so that it can be used at any desired time and place. I feel that beyond a doubt I have settled forever the question of the actual commercial harnessing of the direct rays of the sun and of their conversion to the use of man.

"The process which I have invented is a distinct departure from anything which has ever before been attempted by men working in my line. My methods are the acme of simplicity. No complicated and costly machinery is used in a single portion of my invention. Once my machine is built, it will last practically indefinitely, and as long as the sun continues to give heat and light to man it will labor in his behalf.

"There is no limit to the intensity of the heat which I can generate. I can produce in one spot a heat vaster and more fierce than that on the face of the sun itself, and a greater heat than any now attainable through the combustion of known substances or through the agency of the electric arc, which now furnishes the fiercest heat known to man.

"As to the cost of this heat for commercial purposes, I shall only say that I can furnish it at the mouth of the coal pit or on the edge of the forest for a tithe of the cost that it takes to dig and raise the coal and to cut down the timber. And the heat which I generate by this process is available for a thousand and one things for which fuel is absolutely unfit. With it I shall be able to smelt easily the hardest and most rebellious of the ores. With it I shall make a quality of glass which cannot exist at present. With it an innocuous gas can be made at a cost far less than it is now made from coal.

"I conceived the principles on which my invention is based in three days. I was a young man then. It is going on now thirty years that I have been laboring on it. You must come to my laboratory where I shall be glad to show you my apparatus and explain my methods."

The sight which met the reporter's gaze as he entered was both novel and interesting. In the centre of the inclosure stood a small round house, about twelve feet in diameter, roughly constructed and resembling an upright water tank.

This tank seemed to form the centre of a system of circular wooden tracks. And it was on these tracks that the unique features of the exhibit were located. These were nothing more nor less than a number of mirror frames. In the big frame, for example, to which Dr. Calver led the way, instead of a single solid mirror or reflector, which might naturally have been expected, there were a great number of small mirrors set in a series of rows one above another. These mirrors, which were only four by six inches in size, exposed to the sun a perfectly flat surface. The method of arrangement of the rows in the frame was slightly convex. It was found by a simple count that there were twenty-seven rows of thirty mirrors each in the entire frame, or eight hundred and ten mirrors in all.

"It will be understood," said Dr. Calver by way of explanation, "that the great question which confronted any one working in my field was that of arranging the reflectors of the sun's rays so that any number of them could be concentrated on the same point at the same time and kept there throughout the entire day. Working on this idea I have constructed the form of reflector which you see before you. To this I have given the name of 'pan-helio-motor,' Greek, which translated means 'universal sun-power.'

"This motor consists of the simplest arrangement possible. Each of the small, flat mirrors is attached to a simple gearing device by which it can be moved at pleasure. Each and all of these surfaces, four by six inches in size, can be concentrated on a very small surface at any desired distance. In practice they are concentrated on the reservoir in the centre of the yard. Each glass reflects from twelve to fifteen degrees of heat from the sun."

"How about the point of concentration when the sun moves around?" was asked.

"That is simple enough," said Dr. Calver. "The frame moves, too. It is geared and adjusted in such a simple manner as to be moved along the circular track by even the most ignorant of attendants."

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

"But how about the cloudy and rainy days?" questioned the writer.

"Simple enough; we can keep ice in hot weather; after exactly the same principle we can store and keep heat in cold weather for use by day and by night, in sunshine and in storm. Two well-known examples will suffice to explain the principle of our heat reservoir. For instance, the heat of the sun's rays goes through the closed glass of a hot-bed and raises the temperature within. Heat goes through glass, but it does not come back. It is a universally known fact that a brick or a bag of hot water retains imparted heat for a considerable length of time.

"What more simple, then, than to throw the concentrated rays from our mirrors through two thicknesses of glass and collect their heat in a reservoir of clay and stone on the inside. This is what has been done in the present instance, and in practical work on an extended scale this same principle will be applied, only to a much greater extent and on a much larger scale than in the small experimental reservoir here.

"At the same time it may be stated as a matter of interest that I have kept three hundred or four hundred degrees of heat—a much higher temperature than is needed to make steam—in this small reservoir for a week at a time.

"From the sixteen hundred mirrors in the laboratory here, which can all be concentrated on a single point, I have generated on the coldest days sufficient heat to solder copper and Russian iron. I have burned a brick half way through in half an hour. I have concentrated the combined heat from the mirrors on an ordinary unburned brick and have burned it so hard that it scratched steel."

⚜

Dr. Calver described a number of experiments which demonstrated the efficiency of his methods and the terrific amount of heat, nearly ten thousand degrees, which he can concentrate in a single spot. He then showed the party some of the brick which he had burned as well as the metals which he had melted and welded. Some of the simpler of these experiments he performed.

The rays from a couple of the smaller helio-motors were concentrated on a corner of the reservoir. Some one walked near and held a handkerchief for a moment at the point of concentration. A dazzlingly brilliant white light was reflected, causing every one around to close his eyes.

Dr. Calver reached down and picked a stick from the frozen soil. He mounted the reservoir, and holding the stick in one hand he focused by means of a small hand reflector the heat of the combined mirrors on a portion of the frozen wood. In a moment it cracked, smoked, and burst into a fierce flame.

Sixteen feet in front of a small helio-motor whose reflecting surface was but ten feet square he placed a tin boiler full of water. A few minutes after he had concentrated the mirrors on its surface the water was boiling merrily. "Why, that little trick could cook a dinner for a whole family in summer time," remarked a member of the party. "And the cost of cooking for the whole year would average about a cent a day," said the doctor.

When asked what he believed the effect of his invention would be on humanity, Dr. Calver said:—

"I had few better friends than the late Senator Leland Stanford, who knew my invention well and sympathized with my purposes and ends. Conversing with me he one day said of my helio-motor: 'If perfected, it will do more for humanity than all we have at present. The steam engine made a great revolution, and this will make another and a greater.' I have nothing to add to what my friend has said except that my invention is completed now," said Dr. Calver.

JAMES M. THOMSON.

*Boston Herald.*

## Speech of Monkeys.

PROF. R. L. GARNER, student of, and instructor in, the speech of monkeys, lectured in Steinert Hall to a large and very intellectual audience, who listened intently for nearly two hours to a discussion of the possibilities of simian eloquence. The professor told of his experiences while living in an iron cage in the midst of a central African jungle for one hundred and twelve days without seeing a human being, and especially the attainments and accomplishments of one "Moses," the young chimpanzee which was Professor Garner's companion during his residence in the cage.

The Rev. Dr. Edward E. Hale introduced the speaker. Professor Garner appeared in the costume of brown duck, with trousers oddly cut to fit the contour of the legs, in which he conducted his jungle experiments. Behind him on the platform was the famous cage, deftly constructed of iron bars and made in sections for convenient folding and shipment.

Beginning with the assertion that not only monkeys, but all mammals, possess the power of speech, Mr. Garner related how he stood for seven hours before a cage of monkeys in Cincinnati, observing how the little ones would assist each other in avoiding the attacks of a large one. Their cries of danger were intelligible to him, and he determined to study the subject till he had mastered it. Going from one menagerie to another, he then collected the remarks of various monkeys in all parts of the country, and, taking the phonographic records of these conversations to another city, he would reproduce them to another monkey of the same species and take a record of his answer. In this way a vocabulary of nine words was collected, including the words meaning food, drink, vexation, and satisfaction.

In order to study the monkeys in their pristine innocence and free from the influences of civilization, Mr. Garner then went to a place one hundred and twenty miles south of the equator and one hundred miles inland, on the west coast of Africa, where he set up his cage in the primeval jungle and watched the gambols of the denizens of the wilderness. He lived on canned goods, with the meat of an occasional alligator, jungle-pig, or parrot. Twenty-two gorillas came under his observation here, more than any one man ever before saw in the forest. The time was happily passed in the education of "Moses" and in watching the wild beasts stalking about his cage.

In closing, the speaker said that he was shortly going back to Africa again, and after a few years would return with a school of talking monkeys which should convince the most sceptical that these little creatures, endowed with the same physical and mental outfit as man, are perfectly capable of learning spoken language, especially the French language.—*Boston Herald.*

### "Sow beside All Waters."

Broadcast thy seed!
Although some portion may be found
To fall on uncongenial ground,
Where sand, or shard, or stone may stay
Its coming into light of day—
Or when it comes, some pestilent air
May make it droop and wither there—
Be not discouraged; some will find
Congenial soil, and gentle wind,
Refreshing dew, and ripening shower,
To bring it into beauteous flower,
From flower to fruit, to glad thine eyes,
And fill thy soul with sweet surprise.
Do good, and God will bless thy deed;
Broadcast thy seed.

*Unknown.*

## The Lectures.

### At Auburn, N. Y.

Music Hall contained a large and thoughtful audience, last evening (Tuesday, February 6), the magnet of attraction being a lecture upon Christian Science by Carol Norton, C.S.D., of New York. Believers in the power of Mind over matter were there in force, to be sure, but, naturally, the larger part of the audience was made up of those who came merely through curiosity, or with an honest desire to derive information on the subject. How well they succeeded may be learned from the copious synopsis of the lecture which is herewith published.

The speaker was introduced by his host, the Hon. John D. Teller, in his usual eloquent manner and Mr. Norton entered at once upon the discussion of his subject.

*Daily Advertiser,* Auburn, N. Y.

The introductory address by Judge Teller was as follows:

*Ladies and Gentlemen:*—The honor of being asked to preside at this meeting I accept as a compliment to the legal profession of which I am a member. The speaker of the evening, being a Doctor of Christian Science, represents two of the learned professions,—divinity and medicine,—and I suppose it is proper that courtesy should recognize the law.

From my earliest association with the Presbyterian Church, when my resources were even more limited than at present, I have been given the opportunity to contribute to the sending of missionaries abroad. I have often wondered how it would seem to have missionaries sent from foreign parts to educate us. To-night we are to have some experience of that kind. We are to listen to an apostle of Christian Science, who speaks with authority.

In 1874, when Dr. John W. Draper gave to the world his "History of the Conflict between Religion and Science," the good people of our churches experienced a shock. They felt that an attack had been made upon holiness, and they resented it. Twenty-one years later President Andrew D. White gave to the press his work upon "The History of the Warfare of Science with Theology." The impression made upon the public mind was not so serious. Theologians had in the intervening years become more liberal and the conflict treated of was recognized as being not between exact knowledge and piety, but of science on one side and doctrine or dogma on the other. Disagreements which arise from imperfect understanding or futile attempts to supply in our theological systems truths that have not been revealed, can have no damaging effect upon essential truths. There can be no conflict between different truths. They all have their *raison d'etre,* but while different doctrines may disagree they should have fair consideration. This belief has placed in our fundamental law a safeguard for religious freedom, and it is consistent with the principles of our government that in judging of any form of religion we should take our data from authorized sources.

Christian Scientists, as well as other denominations, have reason to feel that they have not been at all times fairly reported by the public press. The claims of extremists and cranks, being somewhat sensational, have most readily received reportorial notice and been accepted as representing the tenets of the Society. To correct such errors and properly set forth the doctrine of Christian Science is the desire of the true exponent, such as we have the privilege of hearing to-night, and I am sure his statements will much more nearly agree with what is considered orthodox than may be generally supposed.

Whatever may be our object in attending this lecture, whether we come out of curiosity or as devotees, it must be a source of satisfaction to every hearer who respects Christianity, that the lecturer speaks in the name of the great Physician, whose life and example is the inspiration of all Christianity, and that he conscientiously reasons in support of harmony rather than of conflict between religion and science. To him Christianity is an exact science of itself.

There is one thing we must certainly all concede, that one of the most potential evidences of Christianity is found to a remarkable degree with the Scientists. Experimental knowledge has conduced to sincere faith in its truth. The believer seems to have the witness in himself. Such a believer and recognized representative is the distinguished speaker, whom I have the pleasure to introduce to you, Carol Norton, C.S.D., of New York City, member of the Board of Lectureship of the Mother Church of Christian Science, The First Church of Christ, Scientist, in Boston, Mass.

### At Louisville, Ky.

Library Hall was well filled yesterday afternoon (Sunday, February 4) by people of all creeds and conditions who had gathered to hear the lecture of W. G. Ewing of Chicago, former judge of the Illinois Superior Court. The subject of Judge Ewing's lecture was Christian Science. Judge Ewing is now a member of the official Board of Christian Science lecturers. He became interested by reason of his restoration to health through the prayers of Scientists and has recently associated himself actively with the movement.—*Courier-Journal,* Louisville, Ky.

The lecture was given under the auspices of First Church of Christ, Scientist, of Louisville, Ky. J. M. Chatterson, a well-known lawyer of that city, introduced Judge Ewing as follows:—

All the world is engaged in the pursuit of a more perfect knowledge of the truth, and there is great divergence of opinion. Tolerance for the opinions of others is, however, a characteristic of this modern civilization. There was a time when if the followers of a particular belief became numerically strong, they considered it to be a duty to persecute those of opposite opinions in order to show their zeal and their faith. This is all changed, except perhaps in the minds of a few whom we call fanatics, who probably would to-day burn at the stake those who dared to differ from them, if they had the power.

However, it is now recognized that the truth belongs to no person, or set of persons, and it is well that this is so, because the human mind is so constituted that what appeals to one may wholly fail to attract another, according to the receptive condition of the mind of each. We have assembled to listen to one of the most eminent expounders of the truth *as he sees it,* and I have been requested to present to this audience the speaker, a distinguished citizen of a sister state, one who, to a long and honorable career at the bar, has added the cares and responsibilities of both official and judicial position, and who to-day is giving his talents and learning to the dissemination of the truth as he believes it to be. Ladies and gentlemen, I present to you the Honorable Judge Ewing of Chicago.

### At Jacksonville, Fla.

Judge Ewing, the noted Christian Science lecturer who enlightened a large and appreciative audience last evening (Friday, February 9) at the Park Opera House, was introduced by Mayor J. E. T. Bowden, in the following short and telling address:—

*Ladies and Gentlemen:*—I know nothing of Christian Science, but I have had some intercourse with families who are Scientists, and I want to say to-night that those people are as honest and true in their convictions as any people I have ever met, and I hold them in the highest regard and respect.

Digitized by Google

I wish I could make an eloquent speech in my introduction of the far-famed lecturer who will shortly address you, but I cannot. I see a great many people in this splendid audience to-night who have known me from boyhood, and I can see honest sympathy in their faces for me in my present dilemma, but I want to say that a subject which will draw together such a large and intelligent audience in so small a city as Jacksonville must have a great deal of truth in it.

I am told that it has been about thirty-four years since Christian Science was discovered by its Founder, the Rev. Mary Baker Eddy, and that it was brought about by an accident in which she was badly hurt, and after having been given up by the most prominent doctors of that time, she decided to go to her God, with the result that is shown to-day by her wonderful following. I take great pleasure in introducing the speaker of the evening, Judge William G. Ewing of Chicago.

Judge Ewing was greeted with hearty applause.

*The Evening News*, Jacksonville, Fla.

### At Provo City, Utah.

Judge J. R. Clarkson delivered an able lecture on Christian Science at the Opera House Monday evening (January 29) before a fairly large and appreciative audience. Ex-Mayor S. S. Jones introduced the lecturer in a fitting speech expressive of the idea that we should give audience to all creeds or religious denominations.

*Utah County Democrat*, Provo City, Utah.

### Lectures at Other Places.

Savannah, Ga.—William G. Ewing, Tuesday, February 6.

## Among the Churches.

### Forward not Backward.

In a communication to the *Tribune*, Miss Clara Shepard, C.S.B., First Reader of the First Church of Christ, Scientist, in Sioux City, says:—

A remark which was reported to me, hinting that Christian Science was dying out, because we were moving from our former office rooms, made me wish to tell a little of what we are doing as a religious body in this city. We were simply moving out of the old into the new, for the demand of the work increases, and larger and better rooms must be had to accommodate the needs of the people and the better accomplish the good the cause represents. We now have three rooms instead of two, the larger one to be arranged in a comfortable manner for a reading room, where any one wishing to know something of Christian Science may come and read the authorized books on the subject, and also the monthly and weekly, published by this denomination. The rooms will be open every day in the week, from 10 A.M. to 3 P.M., except Sunday.

Our church in the month of December collected and paid out over twelve hundred dollars from those only who have been helped by the Truth which Christian Science teaches. And every one gave, glad of the opportunity to express in some way the gratitude they felt for the great good this religion has brought them. There are many hundreds in this city whom Christian Science is blessing. All manner of evils have been destroyed for those unfortunately under their influence, and not knowing how to overcome temptation. Sickness of every kind has been healed. Death in some degree has been overcome.

*Sioux City (Ia.) Daily Tribune.*

### Another Small Church.

The small churches are sharing nobly in the great work which is required at the present time. I was pleased to see an account in the *Sentinel* of January 25 of the work of a small church in Vermont. I wish to speak of some of the work of another. Some interest was awakened in Barre, Vt., over ten years ago by the healing through Christian Science of a few persons. About five years ago a church was organized by one of the Mother's students. Most of the original members have since moved away, and are helping to swell the attendance in larger places. Only a few persons carry on the work. The present Readers are students of one of the Mother's students. During the past year a large amount of literature from the Publishing House has been distributed. Pledges were given for the money to have a lecture several months ago; but as the engagements were full for the New England lecturers, they were obliged to wait until another year. A small building fund has been started. The work is growing in a deepening sense of harmony and personal responsibility. And here where there is so much activity and growth in everything else, there is surely destined to be a wonderful growth in Christian Science.

REV. S. C. HAYFORD, Barre, Vt.

### A Word from North Dakota.

I have always corrected every untruthful or mistaken article pertaining to Christian Science or Scientists appearing in our local papers, during my ten years residence in Grand Forks. Long since, Christian Science has had fair representation in these papers, and antagonistic articles are rarely copied from other periodicals.

Our church has gone through some troubled waters, but it stands loyal, undivided, and enters upon the new year with a new lesson learned. The work in this field marks the healing of many hopeless cases of sin and disease.

By the abnegation of self and exaltation of the spiritual idea we endeavor to work out our salvation by walking in the narrow path our dear Leader is treading before us. This is the only way we can hope to pay our great debt to her.—MARTHA SUTTON THOMPSON, Grand Forks, S. Dak.

### Church at Savannah, Ga.

First Church of Christ, Scientist, was organized March, 1899, with twenty-one charter members. The existence of a church called forth renewed comment on, and interest in, the Christian Scientists and their belief, all of which was followed by visits from the ranks of the thinking public. Many came inquiring, and spent a while daily in the rooms, simply to inform themselves of what Christian Science *really* is. It is needless to report the result—increased membership—for where one really informs himself of Christian Science, there is that longing for a broader view and desire for a higher life that awakens us to the transforming Christ Love, and lifts us into a world of which we had never dreamed.—C. T. BYRD, Savannah, Ga.

The *Observer* says: "The Bible is not a neglected book. The Christian converts of Tahiti, on the approach of the French army, hurried as fugitives to the mountains, leaving their Bibles behind them. But they came back at great personal risk, declaring that they must have their Bibles for they could not live without them."

The *Watchman* has the following: "The more we see of life the firmer is apt to be our persuasion that we get the best of any power or advantage we may happen to have by using it for the welfare of others. The riches that we can amass in that way are truly laid up in heaven."

## Letters to the Sentinel.

Baltimore, Md., January 26, 1900.

*Dear Sentinel:*—I feel the need of expressing in a few words my appreciation of all that comes to us so regularly, and always just at the right moment, in our helpful publications. What the monthly visits of the *Jour al* are goes without saying; and I have always felt gl d of our *Sentinel,* as it stands on the watch-tower, ever sending out the next word of warning, encouragement, or command from our revered Leader and Mother. But lately it seems I have only just begun to appreciate its importance to the Cause and to each individual worker, as week by week the new By-laws and the messages have so closely followed, one after the other in these stirring days,—beacon lights set upon a hill. My heart is very thankful for *all,* and also for the Manual, which I find needs to be placed very near my books for daily use. Then the poems from our beloved Mother,—"Signs of the Heart" in July, and the latest, "Satisfied," whose deeper meaning will be revealed day by day. The by-law Article 21, Section 4, "Church Prayer," is a tremendous step upward and onward in the "unity of prayer" so necessary in order to bring into a demonstration the outpouring of Spirit which is Love *of* God reflected in love *to* Man. I also want to express my thanks for the two editorial articles,—"Our Baptism" and "Christian Science Prayer," in No. 18. They are truly beautiful; and so clear upon what and where the purifying process (Baptism) is; and the true prayer, bringing out those wonderful lines in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, as manifested in Jesus, "whose humble prayers were deep and conscientious protests of man's unity with Truth and Love."

LOUISE SCHMIDT.

Geneva, Ill., February 9, 1900.

*To the Sentinel:*—Shortly before the late departure of the *Washington News Letter,* Colonel Sabin wrote an editorial in which he spoke in the highest terms of Mrs. Eddy, and apparently took a stand for true Christian Science.

I was about to renew my subscription and wrote him a friendly letter commending his attitude. This letter of mine was published in that issue of the *Washington News Letter* which came out boldly, showing that it was *not* on the side of Truth, and many persons seeing it thought I was upholding that error, which of course was untrue.

I wrote to Mr. Sabin asking him to correct the false impression, but he has never done so.

Since then it has occurred to me that if he *did* publish it, probably not many Scientists would see it, so if you care to set this right before the world, I shall appreciate the kindness. I shall be glad if you feel that it is right to do so, as several people have been misled by the circumstance.

MARY EMMA BENNETT.

## Acknowledgment of Gift.

There was placed in my hands this week, an enveloped book on which is written "Presented to the San Mateo Public Library by the students of Christian Science in San Mateo, December 25, 1899. The book is "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy; cost $4. Published by Joseph Armstrong, 95 Falmouth Street, Boston. The library receives from the same publishers the *Christian Science Sentinel,* a weekly, and the *Christian Science Journal,* a monthly, without cost. These publications are clean and well-edited religious journals, and the enterprise which confers them upon us might well be emulated by others.—C. H. KIRKBRIDE, *Librarian.*

*San Mateo (Cal.) Leader.*

## Christian Science Notes.

THE reading rooms of the First Church of Christ, Scientist, on the third floor of Pythian Temple building, are now open in the evening from half past seven to nine o'clock, as well as during the day from 9 A.M. to 4 P.M. All Christian Science literature can be obtained there, and Christian Scientists will always be found in attendance. Gentlemen are attending the rooms in the evening. The public is cordially welcomed to these rooms.

The Christian Scientists had the pleasure of having Judge William G. Ewing of Chicago with them on Wednesday evening at their meeting, and he spoke to them at length, after listening to demonstrations which were given during the meeting, the point of his talk being that there were no small demonstrations in Christian Science, for each one proved a dividing line between man's weakness and God's strength or allness. He illustrated this point by telling a story of a good man who had been brought up in one of the Orthodox beliefs, who was kind, lovable, but solemn in his religion, and who thought there should be more earnestness in the face of his growing boy, rather than the lovable smile that always greeted him. One day while driving with this boy he began a long discourse on his belief in the power of God, when the boy interrupted him with the remark: "Well, father, don't you think you're going a long way around to tell me something which you can get at in a very short way? You know as well as I know that you could not make even a corner of a star, nor could any man, and if you could make a corner of a star you could make the whole star,—you could make the whole universe; and I say that it is the one power which makes not only the little corners of the stars, but the whole universe."

Judge Ewing further impressed his hearers with the fact that the only proof which Jesus ever left from which the Christian religion was established, was the proof of healing power, and this was the same proof given to-day to Christian Scientists in what they might term very large or small demonstrations, for "these signs shall follow them that believe."

It will be remembered that Judge Ewing gave a very interesting lecture in the Chamber of Commerce building on the 28th of September last, and on Thursday night of this week he lectured at Akron, O.

*Cleveland (O.) Daily World.*

It is not the most active people to whom we owe the most. It is the lives, like the stars, which simply pour down on us the calm light of their bright and faithful being, up to which we look and out of which we gather the deepest calm and courage. It seems to me that there is reassurance here for many of us who seem to have no chance for active usefulness. We can do nothing for our fellowmen. But still it is good to know we can be something for them; to know (and this we may know surely) that no man or woman of the humblest sort can really be strong, gentle, pure, and good, without the world being the better for it, without somebody being helped and comforted by the very existence of that goodness.

PHILLIPS BROOKS.

### No more Sentinels Wanted.

The Christian Science Publishing Society is now plentifully supplied with back numbers of the *Sentinel* recently asked for. We desire to thank the Field for the generous response to our request, and ask that no more copies of the *Sentinel* be sent us.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Church By-law.

ONLY one of the largest Branch Churches in each state of the United States, and in Canada and Great Britain, is requested to appoint a Publishing Committee to serve in its locality and under its Church By-laws. This Church can appoint a Publishing Committee conveniently adapted therefor, who is in good fellowship with another Church of Christ, Scientist, to serve in this capacity.

NOTE.—It is understood that the committee referred to consists of one person as indicated in previous By-laws.

## Abraham Lincoln.

THE anniversary of the birthday of Abraham Lincoln, the great emancipator, was generally celebrated on February 12, 1900. Many eloquent eulogies of the great man were pronounced in various parts of the country by eminent speakers. We cull from a few of them.

The Hon. Chauncey M. Depew said:—

The distinguishing characteristic of the nineteenth century is emancipation—emancipation of the soul from bigotry and dogma; emancipation of the mind from the formalities and dead forms of the past; emancipation of the individual from class, from privilege, and from slavery; emancipation of education from studies which consumed valuable time without imparting instruction; emancipation from restrictions upon the suffrage; emancipation of commerce, of travel, of the fertile lands and navigable waters of the globe, of the restrictions of nature by discovering the secrets and utilizing the forces and powers of nature.

While Washington stands as representing the construc tive forces which created modern representative government and the power of the people, Lincoln will stand as the representative of the marvelous advance in emancipation and reconstruction. In these days, when it is common to try to build parties and create issues upon class hatreds, Lincoln stands as the representative of all classes, if there be such in our country.

. . . . . .

The emancipation for which Lincoln stands in the nineteenth century will bear its fruits in the twentieth. The mighty spirit of emancipation for which he stood, and of which he was the noblest and most conspicuous representative, has worked a salvation for the North and the South, the East and the West, which has demonstrated both the elasticity of our constitution and the resurrection and revivifying powers of American liberty and American institutions.

Speaking at Portland, Maine, the Hon. James E. O'Grady, M.C., of New York, said:—

In the history of every great nation or people there are men standing forth separate and distinct. Many of the great heroes of the world have been men of the people, who remember with difficulty, if at all, the names of their ancestors; who enjoy none of the advantages of lofty estate and ancient lineage. Poverty and misery seem to be their birthright, hardship and pinching want their earliest memory. Yet time's eternal flight will not halt, and whether the future brings evil or good, it must be risked, and tested to the last drop in Fortune's cup.

Such a man was Abraham Lincoln. His birth could hardly have been more lowly, his childhood more obscure or disheartening. His youth and early manhood were marked by every hardship. Bound out in accordance with the custom of the time during his minority, he respected his obligation with scrupulous fidelity and honor. Indeed, the one great characteristic of this man was his high sense of honor, which he maintained even with himself. Throughout his very busy career no man could point to any act or word of his that was other than entirely honorable.

His nomination for the presidency was inevitable. By his own individual force he had made himself the one predominating representative of the great party opposed to the extension of slavery. His voice was heard throughout the land to be listened to and followed by eager men, believing with him that the time for compromise was passed, the time for vigorous action had come. No more quibbling, no more procrastination. Action, determined action, was to be the watchword. The present generation often wonders why there should have been any doubt of his election. Looking back from this date success seems the only outcome of the contest. Yet doubt was there, and party feeling never ran higher. Through it all Lincoln's personality strode firmly, his eyes upon the goal, his voice raised for human freedom and against national disgrace.

Of course he was successful. We say now he was heaven-sent, intended by Providence to secure his fellowmen from longer committing the hideous sin of slavery. No President ever had so hard a chance. How much he merited our confidence the result shows. After four years of bloody struggle, consuming vast resources and exhausting the Confederate commonwealth, the United States of America as a nation was saved to the civilized world. Slavery was forever abolished under the stars and stripes.

No resource was too great for him, no step too far in advance, if it tended to the grand result. Yet, how few mistakes were made, and then how quickly recognized and corrected—no stubborn insistence upon a wrong line of action; the honesty of Lincoln's character forbade that. There was prompt recognition of error and immediate steps to set the wrong aright.

As we review our national history and seek for the typical American, we think of Lincoln; do we look for the matchless orator, the wisest statesman, no other man recurs to us. His personality seems to measure up to all our standards, to realize our highest ideals. Such men are few in the world's history.

That disinterested and indefatigable laborer for the education and elevation of his own race, Booker T. Washington, in the course of an able oration delivered at Anderson, Ind., said:—

If we would continue to spread the spirit of Lincoln, and finish the work which he began, it should be our highest ambition to make the negro, first of all, a property-holding, industrious, intelligent, virtuous citizen, and a Republican or Democrat afterward.

The time has come when all of us should take high ground with reference to the negro's position in the South. In this we must lift ourselves above mere temporary party advantage or the influence of tradition. The negro must be taught that in every manly, straightforward, honorable way, he should cultivate the confidence and friendship of the white man, by whose side he lives in the South.

In turn, the southern white man should be encouraged not to distrust the negro, but to give his hearty consent and active personal co-operation to every measure that has

Digitized by Google

for its object the lifting up of the negro to the highest plane of citizenship.

The Rev. H. E. Barnes, D.D., of North Andover, Mass., said:—

Fortunate we, who have lived long enough to recall the man while he was living and working out the rugged problems that met him for solution; fortunate we, who in the sixties took his hand, looked into his honest, homely, serious face, and heard his cheery, friendly words; fortunate we, who, in 1860, stood among tens of thousands of his prairie neighbors in Illinois and heard his grand, inspiring public utterances, when great, threatening clouds were gathering in the nation's sky; fortunate we, who remember voting for him once, and, perhaps, twice, for President of the nation for which he was ready to die, for which, through years and years, grand years, but bloody, he lived and thought and worked and struggled and suffered and prayed; fortunate we, who hailed him commander-in-chief, when we fell into line, and, with inexpressible enthusiasm and invincible determination, sang,—

We are coming, Father Abraham, six hundred thousand more,
Shouting the battle cry of freedom.

A rare theme for oratory will the life, character, virtues, and achievements of Abraham Lincoln continue to be for ages to come.

Yet, after all, it is not so much his personality, grand and commanding as that was, that calls forth the rich tributes to his memory, as it is that for which he stood. He stood, in a pre-eminent sense, for honesty: honesty in personal relations and in national affairs. He stood for government "of the people, by the people, and for the people." This kind of government necessarily meant a free people; a people free to enjoy life and property, and free to worship God and exercise the privileges of their religious belief, untrammelled by unjust, restrictive, or prohibitive laws. He stood for the beneficent provisions of the Bill of Rights constituting the ground-work of our American citizenship in their highest, broadest, deepest, and most generous interpretation. He stood for American citizenship in all—and the highest—that the term implies. He stood for right, justice, equity, in all their essentials, hence he was, of course, in favor of the equal rights of all, from the lowest to the highest, regardless of race, color, lineage, or antecedent conditions. His humanity was as broad as the human race. His sense of justice and right almost divine. Of course, such a man could not believe in human bondage, and, of course, by the very force of such a nature as his, when circumstances made it possible, he became an emancipator of his fellow-men from the bondage of chattel slavery.

And Abraham Lincoln stood for *Christianity*. Although a member of no particular church and allied to no sect, he was a Christian, for he believed in and practised the precepts of Christ Jesus to the best of his perception thereof, and that perception was lofty.

That he would have united with a church which represented his views of Christianity, if he had known of one such, he himself declared. He is authentically reported as having said:—

"I have never united myself to any church, because I have found difficulty in giving my assent, without mental reservation, to the long, complicated statements of Christian doctrine which characterize the articles of belief and the usual confessions of faith. When any church will subscribe on its altars as its sole qualification for membership the Saviour's condensed statement of the substance of both law and gospel, 'Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself,' that church will I join with all my heart and with all my soul."

Had such a mind as was Mr. Lincoln's grasped a conception of the larger freedom embraced in emancipation from the slavery of the false material senses—the slavery of human error in all its forms—there is no doubt that he would have lent the force of his great nature to the abolition of this awful bondage with the same directness and honesty that characterized his proclamation of freedom of the American slaves.

The world is awakening to that larger outlook of freedom, and great minds are lending themselves to its proclamation throughout the nations.

## Selected Articles.

### Christian Science Methods and Results.

VERY few persons realize the scope of Christian Science work, and few deny that it is accomplishing good results in the development of character as well as in the healing of disease, when they have a fair opportunity to observe its operations.

One or two cases carefully stated from the writer's own observation may serve to illustrate the "diversities of operations" and the "same spirit" referred to by St. Paul in the twelfth chapter of First Corinthians.

A little girl about six years of age was brought to Detroit for treatment several years ago. Her relatives said that the physicians had pronounced her case a severe hip difficulty and had declared it to be incurable. She wore an iron brace and had besides the ailment above referred to a painful bladder trouble and seemed a very delicate child and practically helpless.

Her aunt, who had been healed by Christian Science, undertook to care for her and found it no small task, as she cried most of the time. She was treated by a student of Mrs. Eddy, who urged her, young as she was, to rely upon divine power, and to help herself whenever possible.

The brace was removed and in a few days all sense of pain had vanished and functional regularity was established. She was taught to repeat every morning this statement from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy (page 392):—

"Rise, in the strength of Spirit, to resist all that is unlike God. He has made man capable of this, and nothing can vitiate the ability and power divinely bestowed."

The little one gave the proof that she understood this statement by demonstrating it with the courage of a Spartan and the faith of a Christian. Very soon she was able to care for herself entirely, and to walk about readily with a slight limp which grew less and less.

She was invited to spend the day at a friend's home, and a lady who noticed her happy face and who knew nothing of her past experience, said, "You're a happy little girl, aren't you?" The child looked up and responded quickly, "I should think I am. Don't you know that God is my Life?"

Upon her return to her home she was noticed one day by some people who asked whose child she was. Some one said (from force of habit): "She is Mr. ——'s little cripple girl." The little one met this by saying, "Oh, no, I'm God's child, and He hasn't any cripple children." One of the listeners, a gentleman of education, was deeply impressed by the little one's remark, and on questioning her further was greatly surprised to learn from the lips of such a young child that Christ the Truth healed the sick now as surely as in the bygone centuries. He packed his trunk the next day and started out for the same help. He had suffered from nervous prostration for several years and had failed to receive any relief from material means.

During his first treatment in Christian Science he inter-

Digitized by Google

rupted the healer five times to ask that a window be opened, then closed; then the hot air register the same, etc. He was quite surprised when reminded of Jesus' words, "Take no thought for the body," and saw readily that he had been sinning against a spiritual law in so doing until he had become a veritable slave to his own body, or rather to the mortal thought which claimed power to govern it. As he learned further the meaning of Jesus' words, "Is not the life more than meat?" the healing came by degrees, but not so quickly as to the child, thus contradicting the general opinion that nervous diseases yield more readily than functional or organic difficulties.

Really this has nothing to do with it at all; it is the state of the patient's thought and also the bias of education which influences the results. If thought has been held down to fear and a false or mistaken sense of God and man's relation to Him, this will have to be corrected in order to establish health upon a sure foundation, even the recognition of the divine Principle which saves alike from sin and sickness.

In Genesis, first chapter, twelfth verse, we are told that the earth brought forth grass, herb, and fruit-trees all yielding seed after their kind. In the wonderful realm of Mind this is no less true; thought is reproduced and multiplied after its kind.

Understanding this great law of Being, the Christian Science healer needs to be the closest observer of cause and effect in the world. He sees everywhere the thorns and thistles springing up in the form of disease-beliefs, and he knows that they have no place in the kingdom of God, for all therein is good according to Scripture. Then Jesus' words again appear in very clear light when he says, "Every plant, which my Heavenly Father hath not planted, shall be rooted up." Everything which does not represent a spiritual and moral fact will in process of time disappear, be it sin or sickness, for this is the law of God.

If we are to be co-workers with him as Paul teaches, we need to understand better the spiritual law of progress in order that we may advance more rapidly and also help others. A few idle words spoken may add to the burdens of the sick and oppressed, while a calm, scientific declaration of the supremacy of God, or Good, may, must, bless alike the giver and believer of Truth.

A single statement taken from our text-book, Science and Health, is often like the bread broken by Jesus when the multitudes were fed, it may feed many and never be lessened, because it passes from one to another. That great storehouse, the Bible, is thus opened and its treasures liberally poured forth, and they are indeed found unlimited. Why should not all rejoice to speed the Truth on its glorious mission, since to be a sharer in the work is to know and experience all the good which has ever been, and to echo St. Paul's statement, "All things are yours; . . . and ye are Christ's; and Christ is God's."

ANNIE M. KNOTT.

*Grand Rapids (Mich.) Herald.*

## From the Boston Globe.

Boston, February 1, 1900.

*To the Editor of the Globe:—*

In your issue of the 26th I note a report of a criticism on Christian Science by Rev. George H. Wallace. This report states in substance that Christian Science perverts the Scriptures and denies the sacrificial atonement of Christ.

I know of no better way of answering this charge than to give a brief definition of the atonement as I understand it under the light of Christian Science. For a more comprehensive and satisfactory definition of the atonement I would refer to our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

The death, resurrection, and ascension of Jesus mean much to Christian Scientists. We believe that his whole earthly life was a demonstration in the presence of mortals, showing the true relationship between God and man, and illustrating what could be accomplished by an understanding of thi relationship. Jesus' experiences in the flesh, including his death and resurrection, not only manifested his boundless love for mankind, but were object lessons, teaching the oneness between himself and God; and thus he also proved the relationship between God and mankind in general. Jesus labored and prayed that all mankind might become one with the Father.

We believe that the atonement, which is generally interpreted to mean reconciliation, consists in bringing about that spiritual state wherein God, and man awake in His image and likeness, constitute perfection and entirety of being.

Jesus' death was a pure sacrifice, for it was not necessary on his own behalf except to carry out his divine mission. He said, "Thinkest thou that I cannot now pray to my father, and he shall presently give me more than twelve legions of angels?" He allowed his enemies to do their utmost, even to spill his blood, which the physical senses claim is the life of man, while he made no resistance. Afterward he lifted out of the grave the same body which had been crucified, proving that his life was not in matter, that it was not in blood, but that the infinite Spirit, God, outside the body, was his real life and sustained him always.

Jesus' death and resurrection, together with the ascension, demonstrated the truth of his theory, "It is the spirit that quickeneth; the flesh profiteth nothing." Taking up this theory and practising it, as far as we are able, in our own lives, we gradually become reconciled to God. Without this sacrificial atonement of Jesus Christ we could not have known the way to accomplish this, but would still be in darkness. By his sacrifice he demonstrated his theory of life, illustrating the truth of certain ideas, which, understood, enable us to work out our salvation.

The charge is also made that Mrs. Eddy and her specially endowed pupils turn about and sell this power to less favored ones at several hundred dollars a head. Our critic may not believe it right to accept pay for preaching, but most preachers do; and so do I. Is it more un-Christian to accept remuneration from a class of students in a parlor, or from a person whom your prayers have healed, than it is to accept pay for services rendered to a congregation in a church edifice? Is the good minister selling the Gospel? No, he is serving his flock, and it is but just that they should pay for his earnest labors in their behalf. So the Christian Scientist is not selling the Gospel. He is simply receiving a recompense for his preaching. There is no just reason why an audience of one should not pay its preacher as well as an audience of many.

Now, as to the amount that shall be paid, who shall be the judge? Men pay more for an ordinary horse than Mrs. Eddy has ever charged for a course of lessons in Christian Science. The horse is useful and good, yet his value, in the estimation of a Scientist, is incomparable with that which the pupil receives from Mrs. Eddy. Of course our readers will understand that I speak for those who have been willing and glad to pay the fee, considering it but a trifle compared with the spiritual help received.

In this matter of paying out money, the Christian Scientist does just what he cheerfully allows others to do—uses his money according to his own judgment.

A man's right to recompense is usually based upon the virtue and value of his service, and is determined by mutual agreement between the benefactor and the one benefited. Both parties are satisfied with the contract; and a third party in the matter could be nothing more or less than a meddler.

ALFRED FARLOW.

## In the Vineyard.

BY WILLARD G. FLEMING.

WHY art thou downcast, O my soul, and why disquieted?
Trust thou in God to show thee what is best;
Through many dark and desert paths His hand hath safely led,
Commit thy way to Him and be at rest.

Do pitfalls threaten? Is thy view by mists of earth obscured?
Think not that human sense can guide aright.
Be not deceived by prophets false, by error's voice allured,
Trust Him alone thy path of life to light.

What though at times within thy heart the tempest fierce may rage?
His outstretched arm is ever near to save.
Be not dismayed; let Truth and Right thy sympathies engage,
His "Peace, be still" will calm both wind and wave.

Think not, with ever-present Love, thy efforts go for naught;
Each word and deed is taken to account.
'Tis thine to struggle 'gainst the foe; 'tis thine to hold in thought,
The pattern that was shown thee in the Mount.

Have faith to battle falsehood's claims; at length will fade the night,
And erring sense no longer bring defeat;
And through the disappearing clouds, in beauty, glory, light,
The New Jerusalem thy view shall greet.

## The Joy of Work in Christian Science.

BY ALBERT HORTSMEIER.

THE keynote of Christian Science is joy. Jesus said to the sick of the palsy, "Son, be of good cheer." The first effect of Christian Science on us is to cheer us up; we feel an irresistible inclination to look on the bright side of things; things do not look so hard as they did, and at last we find that our faith, our understanding, does make us whole.

Thinking of how hard things are never helps, but on the contrary is the very circumstance that makes it impossible to accomplish what we would and should; whereas every one knows by experience that looking on the bright side has helped us to overcome seemingly insurmountable difficulties. And here is where Christian Science is of such great assistance, because it shows us that there is in reality only *one* side to every question, and that is the bright side, because God is Light and He is everywhere, and how then can there be a dark side? How can there be shadow when Light is all about us? So in healing disease, ailments which seemed so difficult, so impossible to cure, which impressed us so forcibly with their seeming reality, vanish into nothingness before the joyful realization that there is only the *one* side, that man is perfect because he is the child of God. Every achievement that seems difficult to human sense at once becomes easier when we learn that Jesus' words, "My yoke is easy, and my burden is light," are proven true in Christian Science, which has come to take away the hard yoke of men and put in place an easy one, and to remove the heavy burden from men's shoulders and substitute a light one.

But, says some one, "If the yoke in Christian Science is easy and the burden light, why do Christian Scientists usually work so hard?" The fact that Christian Scientists see so clearly how far from the reality this seeming condition of the world is, and know how these errors can be eliminated through Christian Science, impels them to the most earnest, serious, persistent, joyful work,—*joyful* because they know that spiritual activity means work with God and *not* the *toilsome labor* of man-made methods. They are taught in their text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, that "God rests in action" (page 513), and that all that is really done is perfect, and that the chief work to be done is to get the material, the unreal, self out of the way and so *let God do the healing;* but all the work they have to do to arrive at this point is light compared with the wearisome labor men are accustomed and compelled to do while still groping blindly in the darkness of mortal belief, before Christian Science came to call them into "His marvelous light," emphasizing the Biblical statement that "with God all things are possible;" and as they have the light of Christian Science to work by, they consider the work necessary to heal as a sacred privilege rather than a laborious duty. Christian Scientists *are* workers, but they are *not* a laborious people; really the great fact is that the object of Christian Science is to do away with the laborious methods of men, and show man how to work intelligently with God. It should be a joy to work when we have been shown how. Cheerful, unselfish work cannot hurt anybody; it is the toilsome labor without knowing where the end will be, "without hope and without God in the world," that wears out men. As Christ came to his disciples on the shores of Galilee after their night of unavailing toil in the dark, so Christian Science comes to us and tells us to cast our net "on the right side" and we shall find how *easily* God does what all the most strenuous human labor cannot accomplish.

## Christian Science Healing.

BY GEORGE TOLMIE.

SINCE taking up the study of Christian Science, some fifteen months ago, I have enjoyed reading the Christian Science *Sentinel* and other literature. The many demonstrations mentioned in the *Sentinel* during this period, have been of much interest to me. At first they suggested what I might some time accomplish for myself. Now they prove doubly interesting as they voice my own experience, only perhaps along different lines.

I have been as deeply interested in cases of healing that have taken months as those that were accomplished in hours or minutes. To my mind there is good and sufficient reason for some demonstrations being slower than others. It is quite natural for us to wish for, and rejoice over, quick healing, still there is no occasion for regret or disappointment over what we are accustomed to speak of as slow demonstrations. With our limited understanding of divine Love, it may be we are unable to recognize the great benefit it will prove to us to have some demonstrations extend over a period of weeks or months, or even a longer time. To all who are in haste I wish to say, be patient and persevere and Truth will prevail.

As my personal experience during the past year may be of interest to some who are in haste to recover I will briefly relate it. On one occasion after endeavoring to overcome a severe strain of the right arm and limb, which almost paralyzed them, I called in a Christian Science healer, and it required about a week to give me ease, and another one to effect a complete cure. Since then I have felt no effects of the strain, and walk as easily and rapidly as before.

On another occasion I ran a rusty shingle nail fully an inch into the inside of my right hand. On pulling it out it was followed by a copious flow of blood. I took up the case at once. The trouble was met almost instantaneously, and I did not suffer more than a moment's pain.

Digitized by Google

There was very little swelling and only a slight discoloration on the back of my hand over the wound. The puncture made by the nail healed at once, and no trouble whatever followed.

About two months previous a friend of mine suffered severely for over three weeks from a similar accident. Some two years ago a sister-in-law was laid up several days as the result of running a pair of new scissors into the palm of her hand about half an inch. In these two last mentioned cases everything possible in a material way was done for the sufferers.

I mention my own case to show that even with the same person one trouble may require time, while a second, which seems equally severe, may be healed at once.

## Our Highway.

BY LILLIAN MORGAN GUSTIN.

If we are earnestly seeking the understanding of the Bible and "Science and Health with Key to the Scriptures," conviction gradually dawns upon us, that many of our disappointments are the result of a misconception of God and our fellow-man; that many of our troubles are caused by entertaining an exaggerated sense of our brother's faults, or of his virtues.

What are we, to demand perfection in others? The best that we can say for ourselves is, that we are endeavoring to conform our lives to the teachings of our text-book, Science and Health. This brings error out from under cover, and too often we gaze with horror upon the uncovered sin of our brother, placidly unconscious of our own shortcomings. We gradually learn to appreciate the labors of the pioneers of this work; to marvel at their courage in blazing the path for themselves and for us. As we realize that the gnarled trees have been hewn down and the boulders removed, we forget to censure them for the clump of weeds, or the unsightly mound, but we stoop and help remove the objectionable feature. Thus the way becomes easier for us all, and Isaiah's word promises fulfilment, "And an highway shall be there, and a way, and it shall be called The way of holiness; the unclean shall not pass over it; . . . the wayfaring men, though fools, shall not err therein."

As a ray of light passing through a prism is divided into the various colors, yet all are combined in the pure white light, may it not be that this ray from the Infinite shining through the prism of human consciousness is, to human sense, divided? One seems to reflect more truth, another, more love; one possesses a clearer perception of life, yet the perfect idea embraces all these. How much we need each other. The one who seems to be lacking in truthfulness, may be assisted by the man with a clear perception of honesty and justice. The one so truthful and upright, yet inclined to be uncharitable towards him who occasionally fails to reflect these attributes, may he not be benefited by him who is filled with gentleness and love?

As we recognize our dependence upon each other, our hearts are filled with gratitude to every one who has lent a helping hand as we endeavor to surmount the hill of Science. We learn to discover our friends. We become more discriminating as to what constitutes a friend, and we begin to comprehend the article, "Love Your Enemies," in "Miscellaneous Writings" by Mary Baker G. Eddy.

## Stand Still.

BY SUSAN P. POOLE.

John tells us that "the leaves of the tree were for the healing of the nations." We know that the Truth contained in the Bible, and revealed to us through the study of the Bible and "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, is the Truth which heals all sickness and sin.

The Bible was indeed a sealed book to me, but through the light of Christian Science I have learned not only to read it, but to understand it, to love it, and to find in it an unfailing help for every day and every hour.

Some days ago when I had been working to overcome a claim of error, I took my Bible and seated myself to read. It opened to Second Chronicles, twentieth chapter, and I read the seventeenth verse; it was this: "Ye shall not need to fight in this battle: set yourselves, stand ye still, and see the salvation of the Lord with you, O Judah, and Jerusalem: fear not, nor be dismayed; to-morrow go out against them: for the Lord will be with you."

I read it over and over, and as I read I realized that I had been fighting, and with that which had seemed to be very real to me, but which was really nothing. I had not obeyed this command, "Set yourselves, stand ye still," but had allowed myself to be led this way and that, forgetting that man is made in the image and likeness of God, and that "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

As I thought about it, I realized that if we were only to obey this command, we should never allow ourselves to be influenced by anything but Love; we should never admit a thought of pain or discord; never admit an unkind or unloving thought toward any one.

With this realization, harmony was restored, and I have found these words ever since an unfailing source of health and strength, "He sent His Word, and healed them."

## A Word of Thanks.

BY EDNA L. CONARD.

I have received much benefit through Christian Science, and feel that nothing could induce me to give it up. My feelings are best expressed in the words of the Psalmist, "Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men!"

My thanks arise first to God for His great goodness in giving to this age such a Leader as we have in our beloved Mother, the Rev. Mary Baker Eddy, who is true to God and the mission which has been given her. Does she not deserve the love and gratitude of every one who has caught even one faint gleam of this great Truth? Should not each give to her the encouragement, love, and gratitude she deserves? And is not this best manifested in a life of loyalty and obedience to God in all the demands made upon us?

In my giving of thanks I must not forget our efficient Publishing Society, its able editors, and all connected with it. Much praise is due them for their noble work and labor of love. Many times when reading the *Journal* or the *Sentinel* have I been thankful indeed for the pure, loving, Christlike attitude manifested therein, giving to the world a higher, holier, truer sense of man's duty to his fellow-man. It has been an incentive to me to strive more earnestly to "let this mind be in me [you], which was also in Christ Jesus."

I have received many words of cheer, comfort, and encouragement from articles in the *Journal* and *Sentinel;* and for every means through which I have been enabled to gain a higher understanding of God and His creation, I humbly and sincerely return thanks.

Associate Justice Brewer of the United States Supreme Court says, "Religion that spends itself in creeds, and does not ripen into character and the richness of a pure and lovely life, is like a barren fig-tree—covered with leaves, but fruitless."

# Testimonies.

## Testimony of a Dentist.

I became interested in Christian Science because the Christian Scientists with whom I came in contact in my profession and otherwise seemed to possess something better than any one else I had ever met. I have never seen a Christian Scientist unhappy or disturbed by any pain I was obliged to inflict, and I have seen many who seemed to dispel every evidence of pain under trying circumstances from a mortal mind standpoint.

About the time I began the search for this Truth I closed my safe door one afternoon, with the thumb of my right hand inside. I will not attempt to describe my feelings, but simply say that I went home at once. My thumb gave me all I could attend to and I had no thoughts of business and cared little for anything except to get rid of the pain. I retired with my right hand propped high with pillows, the only way I could get any relief, and very little even then. I went to my office the next morning with my arm in a sling to give my bookkeeper directions regarding putting off my patients. My first patient whom I could not notify arrived about the time I did. I told her not to take off her hat and wraps, and explained my condition. She being a Christian Scientist laughed at me, and told me I could work just the same as ever, and finally induced me to try, which I did, and succeeded.

I never had a moment's pain or soreness with that thumb from that day to this, and although I lost the nail and experienced the tenderness which usually follows, I never realized one particle of pain or inconvenience, and there is no scar or evidence of an accident in the thumb or new nail, and the thumb has done its good work in earning a living for myself and family every day since the accident occurred in April, 1898.

I have witnessed many wonderful demonstrations in my practice. A patient for whom I had tried to prepare hypersensitive cavities for filling, and was obliged to give up, came to me at a later date with a Christian Science healer, and I excavated seven cavities in thirty minutes without pain.

Another case with whom a Christian Science healer came, had two teeth with chronic abscesses without fistulous opening. (I mention these terms hoping some dentist may read and understand, they mean more to a dentist than to any one else.) These teeth were badly broken down and were capped without any treatment, outside of cleansing, at one sitting. They started in with the usually expected pain, but were met by the Truth and controlled immediately. I have seen the patient many times since and the gums and mouth are in a perfectly healthy condition now. I also extracted three teeth for the same patient without causing a flush in the cheek. He laughed at my expression of sympathy at being obliged to cause him pain.

Another case, a cavity with exposed nerve which had caused much pain was filled at one sitting and the pain following controlled, and the nerve preserved healthy. This was done under treatment by a healer.

I have not been able to do much for myself and others, but I am gaining a little and begin to see a ray of light and am certainly better natured, and love my neighbors better, and they and my patients and associates note the change. My work is easier, although I am doing much more, and more difficult work every day with less weariness, in fact very little of the old tired feelings.

I desire to express my sincere thankfulness for Christian Science. If it is an illusion let us have more of it. I believe, however, that it is the Truth. I am convinced of its usefulness and I am longing for a clearer knowledge that I may demonstrate in its fulness for myself and for all I am called upon to assist.

EDWARD L. JORDAN, Boston, Mass.

## Heart Trouble and Influenza.

Last March, while attending the last of several Good Friday services which had been held during the day at his school chapel, my eldest boy was suddenly taken with a very severe attack of heart trouble attended with fainting, terrible sounds in his head, darkness, and breathlessness. He does not know how he got up and left his place in chapel, but his one thought was to get his Science and Health which was kept in a locker that had the lock out of order. He kept saying as he went, "God is All, God is Good. He didn't make *this,* it is not *true.*" At first he could not see or feel well enough to get the locker open; but he finally got his book, and read until he was able to go to bed and sleep naturally. The symptoms went down one by one, and next day he wrote home, "Mother, I can only say that Christian Science and Science and Health saved my life last night, and I am thankful."

He had been troubled somewhat for several months, and he was now on the eve of competing for the first time in the annual athletic sports at this school. His schoolfellows had often urged him to consult a doctor. How thankful I am that he was firm in his refusal to follow their advice. A doctor would have ordered him to abstain from hard exercise for two or three years. He had help for a few days from a Scientist, and when the day of the sports came he won two cups; competing with boys of fourteen (his own age) up to sixteen years of age.

Any Scientist will know what are our feelings of gratitude to Truth when we look at those two silver cups.

My second boy went away to another school last September. Towards the end of November there was an epidemic of influenza in the school. One Sunday my boy wrote to ask my help to overcome an obstinate headache. I received the letter at half past ten on Monday morning, and immediately gave him a treatment. Meanwhile, earlier in the day, the authorities had sent him to the doctor, when he paid his daily visit to the school, and he had sent him to bed, reporting high temperature, and influenza threatening. Later in the day the doctor was surprised to find the boy's temperature normal, and so it continued, until the doctor had to give up expecting influenza, and let him get up. The boy wrote very indignantly at having been put to bed, but he took good care to take his books with him (Bible, Science and Health, and Miscellaneous Writings), and he wrote next day, "They tried to make out I had influenza, but of course I had nothing of the kind."

The joy of seeing the Omnipotence of Truth destroying the seeming power of material laws, is a great strength to me, and I must remember to bow gratefully to this proof of divine Love when I am next tempted to feel afraid for the children. "God is our refuge and strength, a very present help in trouble: therefore we will not fear."

ANNIE SMITH, Sidney Sussex College, Cambridge, Eng.

## "There is Health for You."

That was the welcome message brought me, after years of suffering and despair, by one of our dear Mother's loyal students. How sweet those few simple words sounded—those words of Life, health, and Love!

I had been a constant sufferer for almost nine years from diseases the most complicated and mysterious; I had tried nearly everything known to medical skill, and had employed twenty of the best physicians in this and other cities. I had undergone two severe surgical operations, tried electricity, etc., all to no purpose. It was deemed best to take me South hoping the climate would do for me what medicine could not.

A consultation at Chattanooga, Tenn., with its leading physician, revealed the fact that climate had proved a failure and hope had now nothing, not even a reed, to lean upon. My husband was kindly advised to take me back

Digitized by Google

to my northern home as soon as possible. The medical verdict was that my lungs were about gone. The diseased condition of the spinal cord had caused paralysis of the lower limbs. For three years and four months I was unable to walk. For many months I lay completely helpless. As my decease was daily expected, on reaching home I arranged with as much reconciliation as I could command, to place my little daughter with kind friends.

At this time Christian Science came to my rescue, and I at once became as obedient to my healer as I had tried to be to the doctors. My husband most lovingly cooperated with me, never talking of disease or the dark past, and reading "Science and Health with Key to the Scriptures" aloud when I could not even hold a *Journal* in my hand, or turn myself in bed. Every improvement, even the least, I watched for and eagerly reported to the healer—never questioning time or expense, even when friends visited me, finding me happy that I could sit up, and coldly said, "But you do not walk yet." Treatment had continued ten weeks when my healer advised me to take care of myself, and the following Sunday I attended Christian Science services, standing bravely and joyfully with the congregation.

That proved to me the power of Truth. It has been two and a half years since I was healed, and I have had many beautiful demonstrations. Words cannot express my deep sense of gratitude to our dear Mother, whose pure spiritual thought has made us free and our lives so bright. Nor will I cease to be thankful to my healer and teacher for her patient, loving care.

MRS. SOPHIA A. STARK, Columbus, O.

### Catarrh and Neuralgia Healed.

About three years ago, after having tried medicines and climate for four years, and submitting to a number of surgical operations with very little benefit, I heard of Christian Science. I thought I would try it and see if I could be helped by it. I had a very bad attack of catarrh of the head and the grip. My head felt as if it would burst and every bone in my body seemed to ache. I sent for a practitioner and received a treatment in the forenoon. The healer told me I could come to her office for a treatment the next day. I doubted if I would be able to do so, as the weather was very cold and snow on the ground. I had spent three winters previous to this in the South and feared that I would have to go again. I was at her office the next morning by nine o'clock, having walked about nine blocks. In three days the pain had all left me and afterwards catarrh of the throat and stomach and a severe nervous trouble disappeared. I had an eruption on my chest which specialists of skin diseases pronounced eczema. This has also been overcome.

Before coming to Christian Science I was a slave to tobacco, having used it from early boyhood, both smoking and chewing. I had tried to stop it a number of times, but the desire for it was so strong that I always failed. But through Christian Science I have overcome it altogether. I have no desire whatever for it.

About a year ago I had a very severe attack of lame back (something I had been subject to for years), which I was able to overcome. Other troubles have also been mastered.

My wife was healed of neuralgia of the stomach and a number of other diseases. We have used no remedy except Christian Science in our family for three years. I had been a member of the Lutheran Church when a boy; afterwards I united with the Presbyterian Church, but the Bible was a book I could not understand, and for five or six years did not attend any church. I became almost an infidel.

Since I became interested in Christian Science I have scarcely missed a meeting. The book Science and Health has been a Key to the Scriptures to me, and I am daily growing in my understanding of Life through reading it. I also read the *Journal* and *Sentinel* and find them a great help to me. I find Christian Science of great benefit in my work; a "very present help" at all times.

CLAAS DE WEERTH, Peoria, Ill.

### Asthma of Long Standing.

Although not a Christian Scientist, I will gladly give an account of what a kind Christian Scientist of this city, through his treatment, has done for me.

For over thirty years I had suffered with asthma, and four weeks ago I called on him at his office, not knowing that he was a Christian Scientist. I had never before seen the gentleman. This was on Thursday. I told him my troubles and he took me out to his residence and asked me if I would like to try Christian Science. I told him that I would try anything. He read a few paragraphs from Science and Health, quoted a few verses from the Bible and told me something about Christian Science. He then gave me a treatment. About three or four o'clock in the afternoon of the next day I had a very curious feeling all through my lungs and bronchial tubes, which had been closed for over thirty years, so when he came home I told him what had happened and he said, "Why, man, your asthma is all gone."

Yes, it had gone, and the tobacco habit with it, although I had used tobacco ever since I knew what it was. I have given up all my bad habits.

There are only two sides, the good and the evil. I had been working for the evil all my life, in fact I did not know any better. Christian Science has healed me of all these evils and I cannot find words to express my gratitude for this wonderful Truth and Love that have made me free.

I am still studying Science and Health, also the Holy Bible, and intend to continue until I become a Christian Scientist.

May the only God (Good, Spirit) bestow untold blessings upon this good man and his lovely family forever, is my prayer.—JOSEPH P. HIGDON, St. Louis, Mo.

### A Remarkable Case of Healing.

One morning a short time since our little daughter, a child five years of age, was seated in the buggy and her sister who had hold of the reins was about to get in, when the horse started. Not being in a good position to guide the animal, he ran into a post, and becoming frightened started to run. He had not gone far when the buggy was overturned and the child thrown violently to the ground. When picked up she was to all appearances dead; blood was oozing from mouth and ears and the senses said, "She has gone." This occurred about nine o'clock in the morning, and it was afternoon before she again seemed to notice anything. The appearances were that she would never be able to speak again. It seemed as serious a case as possible; but it was fully overcome. She is now a bright, happy child with no knowledge whatever that such a thing ever seemed to happen. There was no suffering at all.

We feel that we are only beginning to know how to be grateful for the blessings we have in Christian Science.

WALTER L. COCROFT, ROSELLA COCROFT, Beaumont, Wis.

---

You may meet with much to offend and distress you, but only look a little further, and you will see the heavens beyond, as the last object in sight, governing, comprehending, and terminating all the rest. It matters little what course things take if it only tends to heaven.

GOTTHOLD'S Emblems.

## Religious Items.

"With Cheerfulness," is the subject of an article in the Home department of the *Watchman*. The writer says in part:—

"The apostle Paul enjoins his disciples to exercise mercy with cheerfulness. That phrase, 'with cheerfulness,' is too often slurred over in reading the passage, but it is the significant thing about the precept. It was not necessary to tell Christians that they should show mercy. They had learned that long before, but he put the virtue in a new light when he says that it is to be exercised with cheerfulness. That is just the trouble with much of our forgiveness and mercy and charity: it lacks the supreme quality of delight and joy. It is sour, constrained, and grudging. We do it because we think we ought to. There is no gladness about it. But you see at once to what a new level the virtue is lifted when its manifestation is the outcome of a glad and cheerful heart. Then it becomes winsome and charming. We may be grateful for the charitable judgment, the merciful construction, the forgiving temper, but we love the one who manifests these qualities if he is cheerful in displaying them."

---

Writing of the influence of New England Pilgrims and Puritans on the citizenship of America, Frank Forbes says in the *Universalist Leader*, that at the close of the eighteenth century, "The world did not *then* realize that the religion of America was a greater power than the philosophy of France, the education of Germany, and the wealth of England all combined. But the vital force of the Christian religion was in all the movements of the people and *now* it is perfectly understood that the great strength of this Nation has been built on the foundation of religious faith laid by that band of men and women who landed on Plymouth Rock and made religious knowledge, faith, and conviction the rule of their lives. Our literature, our policies, and our laws, have been moulded by their influence, and nothing else has ever given us any degree of pre-eminence. Whenever there has been a decline in that religious element in the people, or a weakening of the puritanic influence, it has brought about trouble and shame."

---

There was one thing about Jesus no one could fail to notice: his great popularity with children. A certain fulness of humanity always seems to attract children. In Jesus this constituted an irresistible attraction. They ran after him, they clung to him, they shouted for him. His must have been a joyous presence. I think this power of attracting and interesting the little ones is one of the hall-marks of good men. The children's unspoiled natures seem to cling to unspoiled souls, as like cleaves to like. "And they brought young children to him." The best way of bringing our children to Christ is by being Christlike ourselves. Let them see in us nothing but his kindness, wisdom, strength, tenderness, and sympathy, and they will learn to love their religion, and grow close to Jesus, as in the days when he took them up in his arms, put his hands upon them, and blessed them. REV. H. R. HAWEIS.

---

A correspondent of the *Baptist Courier* says: "It may be interesting to your readers to learn that the business men of the country are beginning to declare war against the cigarette habit. I frequently receive letters from bond and guarantee companies asking for the records of young men who formerly attended this college. This is done when a young man is required to give bond in a position that involves the handling of money. Naturally the guarantee company writes to the college authorities to find what record the applicant made when a student.

"One of the largest guarantee companies in the world has added this question to the ones usually submitted, 'Does the applicant smoke cigarettes?'"

---

The *Standard* (Baptist) editorially endorses the following recent utterance of Mayor Jones of Toledo, Ohio:—

"It isn't a good spirit that prompts men to rob others in order to get so well fixed that they can afford to give charity—later on."

"I don't take much stock in plans. We have too many plans and too little purpose."

"The man whose life's success depends upon the impoverishment of others will find, when it is too late, that the same operation which made his fellow-man poor has beggared his own soul."

---

Julia A. Morgan, in the *New Church Messenger* of January 17, thus speaks of the Bible:—

I feel that the greatest need of the age is a right understanding of the Bible. I meet people every day who have no idea what the Bible is; they seem to think that it was useful at a certain time, but has now passed its usefulness, and that this age "has no need of it."

---

Rev. Theodore L. Cuyler compares Dwight L. Moody with Abraham Lincoln. Both, he says, came from the common people, and both developed into greatness. The one emancipated slaves, the other sinners.

## Miscellany.

### Light Fluid in which Cork Sinks.

Now that hydrogen has been liquefied there seems to be no more worlds to conquer in that special direction. It was a remarkable coincidence that the first public exhibition of this latest wonder was made in connection with the centenary of the Royal Institution of Great Britain. Professor Dewar, in opening the exhibition, spoke of liquid hydrogen as a new instrument of research, which it eminently is by virtue of the extremely low temperature at which alone it can exist, and which low temperature, it, by its presence of contact, enables other substances approximately to reach. The liquid was exhibited in a state of gentle ebullition in a vacuum tube immersed in liquid air, the latter serving to impede the access of the heat. The hydrogen is a transparent liquid and, besides being the coldest, is also the lightest liquid known.

A cork drops immediately to the bottom of it. At the bottom of the vessel containing the liquid there appeared a whitish substance, which is, in fact, solid air, or air ice. It is impossible to avoid the air ice in the bottom of the vessel, as the air at the surface of the liquid is, by the intense cold, condensed, liquefied, and subsequently solidified; and, being so much heavier than the hydrogen, it sinks and accumulates at the bottom. To show that the liquid was really hydrogen a light was applied to a small quantity, which at once burst into brilliant flame. Solids immersed in the liquid long enough to attain the same temperature were, upon being taken out, covered with liquid air, which would run down and drop off.—*American Machinist.*

### Hiram Powers.

I had at Florence one memorable conversation with the distinguished American sculptor, Hiram Powers, in which he expressed his firm conviction that the great need of our country was more education of the heart.

"Educate the hearts of the people," said he. "Give in your schools rewards to the good boys, not to the smart ones. The great danger of our country is from its smart men. Educate the heart. Educate the heart. Let us have good men."

These were the words of that old man eloquent, with an eye like an eagle's and a face full of sunshine.

*Autobiographical Recollections.*

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and Church notices, should be sent direct to the Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent direct to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from the Christian Science Publishing Society should be made payable to the Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to the Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department. The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent direct to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as clerk of the church.

---

### Supplements to the Sentinel.

Two supplements to the *Christian Science Sentinel* have been issued. The first is the able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The workers in the Field will readily see the wisdom of giving these supplements the widest possible circulation, and the extremely low price at which they are issued will enable them to do so. The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

---

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

---

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist in Boston, Mass., should be set to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The per capita tax for the year beginning June 1, 1899, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen: $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents: per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science: 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
95 Falmouth Street, Boston, Mass.

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each: per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

### Political Events.

The answer of the State Department to the House resolution calling for information regarding certain charges made by ex-Consul Macrum was transmitted to the House February 21 by the President. It is signed by Secretary Hay. The charge that official messages were opened by the British censor is met by the statement that Mr. Macrum never has made any complaint to the State Department, and the insinuation that a secret treaty exists between the United States and Great Britain is flatly denied.

Lawyers for Governor Taylor and Governor Beckham have agreed upon a judicial solution of the Kentucky crisis. The various suits for injunction brought by both sides are to be combined and taken before Judge Emmett Field of the Jefferson County Circuit Court. He voted for Goebel, but is regarded as the severest and most scrupulous judge in the state.

Admiral Dewey has expressed the opinion that the fortification of the proposed Nicaragua canal would be a military mistake. Opponents of the new treaty with Great Britain respecting the canal, base their opposition on the fact that the United States will not have the right under the treaty to fortify the canal.

The conference committee of the Senate and House of Representatives have reconstructed the gold standard bill, and it is to be passed this week. The gold dollar is made the standard for the future, and it is declared that all other money of the United States shall be maintained at a parity with this standard.

At a meeting held in Washington February 22, the Democratic National Committee decided to hold the party's national convention at Kansas City, Mo. July 4. The Populist party will hold its national convention May 9. It is conceded that both conventions will nominate William J. Bryan for President.

On February 19, the net gold reserve was $222,969,642, the highest point ever attained in the financial history of the United States.

### Foreign News.

Governor General Wood has decided to issue an order that persons, Cubans by birth, who renounced their nationality during the Spanish régime in order to become American citizens, but who are now ready to fulfil the required conditions, may vote at the coming elections. This order will affect more than thirty thousand men, and it may result in a complete change in the constitution of political parties, although it is believed that the Cuban-Americans will be fairly scattered among those existing.

The invasion of the Orange Free State with a powerful army by the British under command of Lord Roberts has changed the whole war situation. After the relief of Kimberley, nearly the entire army of invasion started in pursuit of General Cronje and surrounded his army of eight thousand men. The contending armies fought day after day with heavy losses to the Free Staters, and up to February 26 Cronje was still holding out, though his surrender is said to be unavoidable.

The dangers threatening the Free State forces compelled General Joubert to weaken his forces about Ladysmith to send reinforcements to General Cronje, and, taking advantage of the opportunity, General Buller, commanding the British in Natal, captured Colenso and forced his way toward the besieged town, the relief of which is now regarded as certain.

In the British House of Commons the report of the committee of supply for the addition of one hundred and twenty thousand men to the army, was passed February 19, and on the same day an army order was issued on advice of the Queen inviting the reservists (retired soldiers) to rejoin the army for home defence.

The British naval estimates for 1900-1901 aggregate £27,522,600, an increase of £928,100, providing for an increase of 220 officers, and 4,020 men for new ships. It is proposed to build two new battleships, six first-class armored cruisers, a second class cruiser, two twin-screw sloops, two gunboats, and two torpedo boats.

A cable message to the *New York Journal* from London says:—

"William T. Stead's *Review of Reviews* intimates that President Kruger's plan to make England pay a price that will 'stagger humanity' for victory over the Transvaal is to fill the trenches with women."

All business at Mafeking, one of the British towns in South Africa besieged by the Boers, is conducted in underground apartments to avoid Boer shells. The Mafeking Hotel underground dining-room seats forty people.

### Industry and Commerce.

Because of dissatisfaction with bills recently passed by the Illinois Legislature, the headquarters of three companies, known as the triple steel trust, were shifted from Chicago to New York, the transfer being made by means of a special train carrying office fixtures, papers, officers, clerks, and stenographers. The three companies are: The American Tin Plate Company, the National Steel Company, and the American Steel Hoop Company, the combined capitalization of which is one hundred and forty-two million dollars.

Arthur E. Stilwell of Kansas City, who successfully financed and built the Kansas City, Pittsburg, and Gulf railroad, has announced another great project, an international railway system, eighteen hundred miles in length from Kansas City to the Gulf of California. A company has been incorporated to carry out the plan. The proposed route is from Kansas City, through Indian Territory and Texas, to Chihuahua, where connection would be made with a line now being built to Topolobampo, on the Gulf of Mexico.

On February 21, a committee from the Merchants and Manufacturers' Board of Trade of New York proposed to the postmaster general to adopt the same rate of letter postage between the United States and foreign countries as now prevails within the borders of the United States. It is said that the postmaster general approves the suggestion.

The capitalization of the proposed new Armour & Co. corporation will probably be about $20,000,000. The grain business of the firm of Armour & Co. will not be taken into the corporation. The interests to be included are the packing house and closely allied plants,—the glue factory, the soap factory, the hair factory, and the car factories.

Men of experience in the ocean shipping business predict that steamships will soon be forced out of the trade between the United States and the far East on account of the great advance in the price of steam coal, and that the trade will revert to the sailing ships, which will revive the building of large sailing vessels.

The American Sash and Door Company, a new corporation with a capital stock of $6,000,000 has been incorporated. The company was formed for the purpose of acquiring sash, door, and interior-finish mills in Chicago. Of the forty-five plants sought, thirty-two are to be included in the new corporation.

George E. Roberts, director of the mints, says that the Philadelphia and San Francisco mints are running almost exclusively on gold twenty dollar pieces. To supply the Christmas demand for change the mints, during last fall, were kept busy stamping out pennies, nickels, and dimes.

Under the name of the American Clay Manufacturing Company, the sewer pipe interests have consolidated, having a capitalization of ten million dollars. It is estimated that the new company will control sixty per cent of the output of sewer pipe in the United States.

The Chicago City Council has passed an ordinance authorizing the controller to issue four per cent city bonds to the amount of not more than $2,500,000 for the purpose of procuring money with which to develop the water power expected to be generated by the drainage canal at Lockport.

A London cable to the *Chicago Tribune* says: The English wallpaper trust, which has been forming since September, is now complete. The capital stock is $30,000,000, and practically every manufacturer in the United Kingdom is in the combination.

It is estimated by lumbermen that 53,250,000 logs have been cut around the headwaters and on the tributaries of the Kennebec River in Maine, the largest cut ever known on this river.

A company has been incorporated to build an underground street railway in New York City to back John B. McDonald, who has been awarded the contract.

A representative of the Marconi Wireless Telegraph Company states that five islands of the Hawaiian group are soon to be connected by the Marconi system.

### General News.

A party of American archæologists and tourists recently left Guadalajara, Mex., to visit the recently discovered pyramids and other prehistoric monuments located in the district of Istlan, near Tepic, on the western limits of the State of Jalisco. One of the pyramids measures fifty-three feet in diameter at the base. These monuments are supposed to be the work of the Nahautl race. Fragments of structures found around them are made from volcanic rock, and are covered with hieroglyphics. Many human bones and clay idols are also found.

The ninth continental congress of the National Society of the Daughters of the American Revolution was held in Washington, D. C., the third week in February. On February 20 nine hundred delegates were received by the President. The secretary's report showed the membership to be 31,192, an increase of nearly four thousand during the year.

President Eliot of Harvard College, through Alexis E. Frye, superintendent of schools at Havana, has invited the Cuban teachers to the number of one thousand to attend the Harvard summer school free of charge for six weeks next vacation. Governor-General Wood has promised to furnish free transportation for the Cuban teachers.

## A Remarkable Event.

### Recovery of Mrs. Mary Baker G. Eddy after an Accident in Lynn Recalled.

In 1866 Mrs. Eddy met with an accident in Lynn, Mass., as stated below, and was healed through Divine Power.

It has recently been stated in the public press that she was healed by Dr. Cushing, and we publish the following as a correction of this report.

*To the Editor of the Herald:*—After the Discoverer and Founder of Christian Science, Mary Baker G. Eddy, met with the accident in Lynn, Mass., 1866, which history records, the following report of it was published the next day in a Lynn newspaper, which article was alleged to have come from a conversation with Dr. A. M. Cushing.

At that date Mrs. Mary M. Patterson was the name of the present Mrs. Mary Baker G. Eddy. In her book, "Retrospection and Introspection," she names her second marriage, and it was to Dr. Patterson (deceased).

The newspaper article reads as follows: "Mrs. Mary M. Patterson of Swampscott fell upon the ice near the corner of Market and Oxford Streets, on Thursday evening, and was severely injured. She was taken up in an insensible condition and carried to the residence of S. M. Bubier, Esq., near by, where she was kindly cared for during the night. Dr. Cushing, who was called, found her injuries to be internal, and of a very serious nature, inducing spasms and intense suffering. She was removed to her home in Swampscott yesterday afternoon, though in a very critical condition."

The above-named Dr. Cushing, a homœopathic physician, was called on Thursday night to attend her. He left some powders to be taken, but she declined to take them, and three days thereafter, on Sunday, through the divine Power, she rose from her bed in health. When the doctor called again on Monday he found her well, and congratulated himself on having healed her. She then stepped to her table, opened the drawer, and said, "Look, doctor; all your medicine is here; I never swallowed it." He arose, stood by her side, and looked, as if dazed, at the powders; took up one of them and opened it, then laid it back in the drawer, and made many inquiries as to how she was healed. Afterward he called on her once; at that interview his sole conversation and apparent purpose was to learn what he could about this event, which had stirred the good people in Swampscott and Lynn.

The third day after the accident Mrs. Eddy enjoyed better health than she had ever before known, hence the self-evident fact that she did not need a doctor. Some of the loving friends who were with her at that momentous hour have passed away, but they knew and had told others that she took no medicine, and for three reasons—1. Dr. Cushing gave her no encouragement that she could recover; 2. At that date she had lost all faith in drugs; 3. She did not even ask for a doctor; it was her friends who sent for him.

Mr. Calvin A. Frye of Concord, N. H., states: "Mrs. Eddy holds the original article that she clipped from a Lynn newspaper, and that I have copied for you."

Mrs. Eddy says: "Rather than quarrel over being vaccinated, I recommend that, if the law demand an individual to submit to this process, he obey the law, and then appeal to the Gospel to save him from any bad results. Whatever change belongs to this century, or any epoch, we may safely submit to the providence of God, to common justice, individual rights, and governmental usages." She also recommends in our text-book, Science and Health, to leave surgery at present to surgeons. Her very nature would incline her not to dictate terms to them, but strictly to comply with their methods, if one were employed.

ALFRED FARLOW.

## Washington's Birthday.

ALL honor to that day which long ago
  Gave birth to him who Freedom's cause espoused;
Who, by his ardor in the sacred fight,
  The fire and strength of patriots aroused;
Who knew no master, save that One divine
  Whose strength was his, who knew no fear, save one—
The fear of doing wrong! All hail the day
  That gave to Freedom's cause George Washington!

Years come and go, and generations fall
  Into the dust. The world its heroes gives.
They step upon the stage, then pass away
  And are no more, but Freedom ever lives.
And while it lives, and while its banner bright
  Is upward flung into the golden sun,
Within the heart of every freeman's child
  Will live that honored name, George Washington.

Then honor to the day that gave him birth,
  For it is also Freedom's natal day.
Let all who worship Freedom's cause stand forth
  And to his memory their homage pay.
And let each loyal son the work take up—
  For, know ye, Freedom's work is never done—
And greater, grander, build the edifice
  Begun so long ago by Washington.

ARTHUR J. BURDICK.
*Denver Republican.*

### A Soldier's Tribute.

Maj-Gen. Nelson A. Miles paid a soldier's tribute to General George Washington at the banquet of the Massachusetts Society of the Cincinnati, held at the University Club Thursday evening, February 22. He said in part:—

One hundred and sixty-eight years ago to-day there was born in a primitive farmhouse in the county of Westmoreland, Virginia, the child who was destined to become the most illustrious and beloved personage the world has known. Every American loves to dwell upon the simplest detail of his noble life. Panegyrics have been written and eulogies have been pronounced by the most prominent pens and tongues of this and other countries, and it would be futile for me to try to tell you anything new concerning that tall, sun-crowned patriot who lived above the fog in public and private doings. On this occasion I cannot refrain from

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

reiterating some of his imperishable words of wisdom—words that will serve as beacon lights through all ages and increase in effulgency as time rolls on. John Milton's utterance to the effect that "war has made many great whom peace makes small" cannot be applied to George Washington; for though he was a general whose movements, particularly along the Delaware, that renowned soldier, Frederick the Great, designated as "the most brilliant achievements of any recorded in the annals of military action;" yet it is as a statesman that we can at this time best comprehend and appreciate him.

I would call your reverent attention to the priceless legacy of his jewelled utterances rather than to the memory of his immortal acts. Consider the matchless bequest to posterity of his farewell address to the people of the United States, the inspired words of which I would emblazon, were I able, in letters of fire on the skies of this republic, to serve as a perpetual guide and confession of faith to every American. Webster well said that "America has furnished to the world the character of Washington," and that character has impressed itself on our constitution, and has been, and will continue to be, the perfect and immortal model for all the liberty-loving people of the earth.

The historian Bancroft, describing Washington's first inauguration as President, said that "but for him the country could not have achieved its independence; but for him it could not have formed this Union, and now, but for him, it could not set the federal government in successful motion."

In the same farewell address he tells us of his idea of happiness for the individual by saying: "Happy, thrice happy, shall they be pronounced who have contributed anything in erecting this stupendous fabric of freedom and empire; who have assisted in protecting the rights of human nature, and establishing an asylum for the poor and oppressed of all nations and religions."

In explaining those things which are essential to "the pillars on which the glorious fabric on which our independency and national character must be supported," Washington did not forget that below this fabric there must be two qualities necessary to the glory for which he prayed, for he said that: "Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. In vain would the man claim the tribute of patriotism who should labor to subvert these great pillars of human happiness, these firmest props of the duties of men and citizens."

And finally, after invoking heaven's choicest tokens of beneficence to his beloved country, he gave expression to the hope, in words vibrating with strong feeling and tenderness, "that, in fine, the happiness of the people of these states, under the auspices of liberty, may be made complete, by so careful a preservation and so prudent a use of this blessing as will acquire to them the glory of recommending it to the applause, the affection, and adoption of every nation which is yet a stranger to it."

How completely this prophetic wish has been granted is seen in our own republic of eighty million of free people, and in that great chain of sixteen sister republics of this hemisphere, embracing over forty-six million of inhabitants, who, in forming their constitutions, have either faithfully copied ours, or have drunk deep from that fountain of liberty, whose perpetuity was guaranteed under the pure, lofty, and dominant spirit of Washington. This was Washington's idea of expansion.

I should be rendering this hasty sketch incomplete did I not refer to another state paper of our first President, namely, his letter to the governors of the states, every sentence of which breathes of wisdom and prophecy. In this letter, written in 1783, he says: "For, according to the system of policy the states shall adopt at this moment, they will stand or fall; and by their confirmation or lapse, it is yet to be decided, whether the revolution must ultimately be considered as a blessing or a curse, not to the present age alone, for with our fate will the destiny of unborn millions be involved. . . . There is a natural and necessary progression from the extreme of anarchy to the extreme of tyranny, and that arbitrary power is most easily established on the ruins of liberty, abused to licentiousness. . . . The path of our duty is plain before us; honesty will be found, on every experiment, to be the best and only policy. Let us, then, as a nation, be just."

Since the inauguration of Washington political convulsion after convulsion has shaken Europe, overturning thrones, sending their occupants out as wanderers on the face of the earth, and wiping their kingdoms from off the map. Governments have passed through the change from monarchical to republican, and even anarchical, and back again. It has been given to some of these people to taste of liberty, then to find that the boon has eluded their grasp. Others have wrested from their hereditary sovereigns constitutions limiting despotic power. Yet through all these revolutionary changes the American people continued to live, and do now live, happily under the government of Washington.—*Boston Herald.*

### Veritas Answered.

*Editor Courier, Dear Sir:*—In your edition of December 21, 1899, was a letter signed Veritas, in which the writer ostensibly attacks Christian Science as a religion, but in reality attacks Christianity.

Science needs no logical defence and no logic can overthrow it, for all Science is divine, else God is not the great Author and Creator of all. All God's works were pronounced good and God is conceded to be Omniscience (All Science), hence, all God's works are scientific, therefore to deny Christianity scientific basis and operation is infidelity. To denominate the works which Jesus set for a sign to "every one that believeth," as "belonging to the realm of fancy, imagination, and supernatural,"—to denominate as such, the healing of sickness and sin, and that, too, in the face of all the Bible promises in this direction, is a denial of the Bible itself, and certainly challenges the truth of Christ's doctrine and the sincerity of his promises.

To conclude that God will not hear the prayers of poor, suffering, and sin-laden humanity, and send His word to heal them, is to mock the divine mercy and make "Him a liar; because he believeth not the record that God gave of his Son." What is the record which God gave of His Son? What record did the Son leave behind him? He healed sickness and sin from first to last. What does God require of us? That we believe in the Lord Jesus Christ. What did the Lord himself say of those who believe? "And these signs shall follow them that believe." Jesus said he came to do the will of his Father, and he did just these things. He said that all believers should do the works that he did if they would keep his word; that is, understand his doctrine, and we take him at his word.

I was reared in the Orthodox church and love it; and I believe every word that Jesus uttered, whether I understand it or not. He knew what he was saying and meant what he said.

The Christian Scientist loves good wherever found and honors every channel that works for higher morals and a better humanity. Every lover of Jesus Christ and his gospel has the prayers of the Scientist and his benediction on every good work. If some, or all denominations, differ on unessential points of the Christian religion, or even on seeming vital ones, God will surely redeem this human weakness, for He is Love. He sent His son into the world to save it; to establish His Kingdom on earth;

Digitized by Google

and God's purpose cannot fail. Christ taught us to pray, "Thy kingdom come" on earth, and we expect our prayers to be answered. If Christian Science has some ideas which are unique and original, it only stands in the same relation to popular thought as did the doctrines of Luther, Calvin, Wesley, and other reformers in their respective days.

Acquaintance with the lives and teachings of the great reformers and founders of Christian denominations, and of eminent divines and evangelists all through the centuries, teaches us that belief in the interposition of divine Love in behalf of every human need, circumstance, and condition, is a universal doctrine, and has been and is now, the star of hope that points to Emmanuel, or God with us. The Orthodox church has nothing to fear from Christian Science but much to gain.

Jesus was crucified, not because the world did not need and did not want what he came to offer, but because he was not understood. Christian Science is not attacked because of what it is, but because of what the world thinks it is.

Our critic claims that divine power never fails, and he is right. Did Peter heal with divine power? We must concede that he did, and yet he failed to walk upon the water. Did the disciples heal with divine power? We must concede that they did, and yet they failed at times to demonstrate the healing power.

Principle never fails, for it is absolute, and divine power is omnipotent; but we have the treasure in earthen vessels, as it were, and we are doing just as the early disciples did, viz.: the best we can, and this is less than we would have it at times, but God will also redeem this weakness and the fulness of His power will yet be manifest in the earth, for hath He not promised it? "There hath not failed one word of all his good promise, which he promised."

Judge Clarkson of Omaha, says in the *Christian Science Journal* for January, 1900, "At this day no valid excuse can be given for not knowing what Christian Science is, hence no valid excuse can be given for abusing it for what it is not." Now some of our best citizens stand ready to verify the claims made for Christian Science to any sincere inquirer who comes in the proper way and in the right spirit. Intolerance and unjust criticism cannot hide the Truth nor shake the Scientists' faith in all the promises of Christ, nor in the sincerity of Christians generally, nor in the final triumph of Christianity over sin, sickness, and death.

J. EDWARD SMITH.

## Christian Science.

*Editor People and Patriot:*—In a recent issue of your paper, in an article on Christian Science, occurs a statement which might lead the reader to suppose that the Massachusetts Metaphysical College, of which our eminent citizen, Mrs. Eddy, is president, is a money-making institution. The facts in the case are these: It is true that the college accomplished so much good and its course of studies was so highly appreciated that large numbers of Christian people eagerly sought admission.

It is true also that the college was closed at the height of its prosperity. This fact furnishes good evidence that money-making was not the object of its founder. When Mrs. Eddy felt that her time should be given to other important labor for the welfare of humanity, she closed the doors of her prosperous college.

There is further evidence to the unselfish character of our illustrious fellow-citizen. In November of 1898 Mrs. Eddy taught a class of seventy students in Concord. This class included clergymen, doctors, lawyers, editors, judges, and scholars from this and foreign lands, and all would gladly have paid a liberal fee for the tuition which they so highly prized. For teaching this class of seventy Mrs. Eddy did not receive a single dollar and the checks which were sent to her were returned with thanks to the donors.

This same article contains sentences taken from their proper settings in Mrs. Eddy's published works that are made to appear to have a meaning which they were not intended to convey. These abstracts if read in their proper connection, would be appreciated at their true worth.

In America literature is so plentiful that people buy and pay for what they like. Mrs. Eddy's writings have a very large sale because large numbers of thinking people like them and are glad to pay for them. In a free land this is conceded to be the people's right. But to take single sentences at random from an author's works to attempt to show the poor taste of the large constituency of earnest readers is hardly just to the author or to the readers.

This practice recalls the old story of the over-zealous exhorter who felt called upon to warn one portion of his congregation against the excessive size of their headgear (then called waterfalls). For the text of his fervent philippic he announced "Topnot come down." The argument lost its force when the hearers found that the original read, "Let him that is on the housetop not come down."

With intelligent people it pays, in the long run, to be just; yes, and generous, too.—REV. IRVING C. TOMLINSON.

*People and Patriot.*

## Healed by Christian Science.

CURIOSITY, not expectation of benefit, led me to study Christian Science. I looked suspiciously upon it, and upon its adherents as fanatics. As for healing, I supposed the incantations of a savage about as likely to be profitable. A careful study of its text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, led me to revise my opinion. If only the tithe of the teaching of this book be true, I thought, it is no wonder I am a sick man, for it is the opposite of all I have thought, believed, said, and done all my life. But is it true? was the important query. To have lifelong convictions about matter, spirit, body, soul, health, disease, medicine, mortality, causation, etc., ruthlessly bowled down like skittles, staggered me.

Had my health been robust I should likely have left about then. But as it was very bad, I turned to Science and Health again and studied earnestly and continuously, as my feebleness permitted. Reserving for later study abstract propositions and perplexing passages, I turned my mind upon its plainer, and to me, then, more practical teaching. Presently a fascination for the book grew upon me. Illumination began to come. Its truths now reached rapidly the depths of my being and changed the basis of my thinking. Thought reconstruction commenced and its new ideals led me to look to the within rather than to the without. A new consciousness dawned upon me. With increasing diligence and interest I pursued the study, assimilated and digested its truths until its teaching became a part of my daily life and thoughts. With my acceptance of the truths of Christian Science, as expounded in Science and Health, and their incorporation into my intellectual and moral nature, my pains and aches vanished one after another. Insomnia disappeared. My step, so long infirm, is now firm and elastic. Heart spasms are gone; no morphine injections wanted; appetite returned; happiness returned; life is now worth living. As I grow older I feel younger.

But more amazing still, the old cough, with its ceaseless expectoration, which defied medical skill and held its own against out-door life in the sunshine of a California flower garden and orange grove, disappeared under Christian Science.

## The Lectures.

### At Atlanta, Ga.

Despite the inclement weather, a large audience filled the Grand yesterday afternoon (Sunday, February 11) to hear Judge W. G. Ewing of Chicago in his lecture on Christian Science.

Not only was the floor of the house filled almost to its capacity, but all the boxes were occupied, and the balcony contained quite a number of persons.

Frank Weldon, Esq., one of Atlanta's leading attorneys, in introducing Judge Ewing said:—

A distinguishing feature of the closing years of the nineteenth century, is the remarkable activity in the domain of religious thought. The world is neither so irreligious as some claim, nor tending so rapidly to materialism and agnosticism as others assert, but the people are investigating, studying, thinking for themselves.

In the crucible of storm, passion, and criticism, creeds are undergoing changes, modifications, and re-actions. Religious as well as secular convictions are influenced by the revelations made through searchlights of science and theology. The conflict between science and Christian religion is more imaginary than real. There is more conflict between different denominations as to creeds and between different schools over theories, than there is between religion and science. A learned astronomer, speaking from this very stage a few nights ago, in telling his large audience some of the secrets and mysteries of the firmament, declared that the more profound are the researches of science, the more indisputable is the conclusion that there is a superior wisdom, a higher power, directing and controlling the universe—"a power that never wearies, which controls all forces." Science knows no simpler name for it than God.

Another feature of the nineteenth century is the growth of religious toleration. While a great advance has been made on this line in the past hundred years, there still remains a vast amount of narrowness and prejudice, but this will pass away as we become more enlightened and better acquainted with the religious views, and especially with the lives, of our neighbors. In passing, I would call attention for a moment to the fact that Georgia has ever been broad and liberal as to the religious convictions of people. When she was an infant colony, she welcomed the Jews who were driven from South Carolina, and afforded them a home and an asylum on the banks of the Savannah. Christian and Jew, Catholic and Protestant, have ever dwelt in this commonwealth in peace and harmony.

We have assembled here to-day to listen to a man who is devoting his life to missionary work in behalf of a creed which is attracting and receiving more criticism than any other in this country. I take it for granted that many of us have only a vague idea of the underlying principles of Christian Science. If they are true, they will survive; if false, they will perish and be forgotten. But whatever the final outcome, we cannot but admire the devotion which inspires a man to forsake worldly honors and emoluments, and go out into the world preaching the faith which is in him.

The learned gentleman who will address us this afternoon, was for years a distinguished member of the Chicago bar, leader in the law, in politics, and in the social life of the magnificent metropolis of the great and growing West. I take pleasure in presenting to you an authorized representative of the Christian Science church, Judge Ewing of Chicago.

Judge Ewing was given the closest attention by his hearers. He told in a plain and practical way what Christian Science was and what it does.

Judge Ewing is a relative and a law partner of ex-Vice-President Stevenson, and was for many years judge of the Superior Court at Chicago. He has a large and intimate acquaintance with the public men of the day.

Judge Ewing, it is said, was healed by Christian Science of asthma, from which he suffered greatly. When he had convinced himself of the absolute truth of the beliefs and teachings of the Christian Scientists, he sacrificed his position on the bench and his political ambitions and began devoting his entire attention to the spreading of the belief of Christian Science.

He was congratulated warmly by a number of persons in the audience at the conclusion of his address yesterday.

*The Constitution,* Atlanta, Ga.

### At Macon, Ga.

The profound and widespread interest in Christian Science found most remarkable and emphatic illustration in the assembling Friday evening, February 9, in a heavy downpour of rain, of the large audience which practically filled the spacious auditorium of the Academy of Music to hear the lecture of Judge Ewing on "Christian Science, the Religion of Jesus Christ."

Remarkable as was the audience in numbers under prevailing conditions, it was even more remarkable in its personnel, embracing, as it did, both sexes, all ages, and prominent representatives of every class, trade, and profession. That they had assembled, not to scoff, but to hear, to investigate, to think, to learn, as honest, inquiring men and women, whose minds were free from the fetters of fear and the shackles of prejudice, was conclusively established by the rapt attention with which each auditor followed the lecturer's every sentence.

Neither by word, tone, nor inuendo was offence given to the disciples of any creed or profession, but high tribute was beautifully paid to the pure purposes and good deeds of each.

The beaming eye, the pleasing face, the kindly, sympathetic voice of the speaker effectively re-enforced the cogency of his logic in carrying conviction to the minds and hearts of his hearers, as he so beautifully and eloquently presented the truths of Christian Science, declaring its purpose to be to re-enthrone the same God, and teach again the same helpful, practical religion the Saviour taught nearly nineteen hundred years ago—a religion ever luminous with divine light and freighted with abiding love for all humanity.

Mayor Smith gracefully presented the lecturer to the audience in the following words:—

*Ladies and Gentlemen:*—Within the memory of many of you, certainly within the tether of my own, there was a time when the name of Abraham Lincoln was uttered in this city and country only in derision. To-day, with all wounds healed, each passing year unfolding to us some new and noble trait of his rugged character, not only is that name spoken in gentle tones, but honored as well. And to-night we welcome and have with us a gentleman who has felt the warm clasp of Lincoln's honest hand, and was Lincoln's personal friend. But this gentleman comes to us to-night, not to speak of the dead and perhaps bitter past, but to tell us of a modern doctrine—the doctrine of Christian Science. And knowing the good people of Macon as I do, I vouchsafe him an audience of broad-minded, intelligent men and women, who will respect him and his views, whether those views run counter to or agree with their own.

I now have the honor and pleasure of introducing Judge William G. Ewing of Chicago.—*Press,* Macon, Ga.

### At New Orleans, La.

Tulane Hall was well filled last night (Tuesday, February 13) to hear Judge William G. Ewing of Chicago, on "Christian Science, the Religion of Jesus Christ." Judge Ewing was at one time on the Superior Court bench of Cook County, Illinois. He is at present one of the Board of Lectureship in the interest of Christian Science.

Prof. John W. Pearce introduced the speaker. He said:

I am told that it is for a curious reason that I have been singled out for the honor of introducing the speaker to-night—the reason that I am myself well known to be not in sympathy with Christian Science. I am told, too, that I am to feel perfectly at liberty to make as harsh comments as I choose upon the doctrines of the cult. I confess that, did I feel ever so competent to take up the cudgels and attack the ideas of those under whose auspices this occasion is held, I should be quite disarmed by this frankness. But for me to enter at all into a discussion of a subject like this, whichever side I might take in the controversy, would be little less than gross presumption. Suffice it to say that if Christian Science be divine, time, which tries all things, will justify its claims; if it be divine, it cannot die; if it be not divine, it will but live its little life, and then be remembered only among things forgotten.

In this day of the Associated Press, of newspapers and magazines almost countless—nay, in this day when thought reigns, the name and the fame of a thinker like the one who is to address you to-night, cannot long remain unknown even to the uttermost borders of our great country; nay, even beyond those borders. I feel sure that the assembled intelligence of New Orleans knows enough of him to welcome the opportunity for listening to him upon any subject. He chooses to speak to us upon Christian Science. The reputation he has achieved bids me assure you that he will not deal in mere dead, lifeless words, but rather in vigorous, living thought. I now have the honor of presenting Judge William G. Ewing of Chicago.

Judge Ewing was cordially received by the audience and was accorded the closest attention during the entire hour and a half during which he spoke.

*Daily Item,* New Orleans, La.

---

## A Wednesday Evening Meeting.

At First Church of Christ, Scientist, I. O. H. Hall, Preston Street, Baltimore, Md., some most interesting testimonies were given Wednesday evening, January 24. The hall was filled with those who know what Christian Science has done for them, as well as many who came to hear and see what this leaven is that seems to be finding its way into every condition of mortal thought, like the "holy waters" pictured in Ezekiel, 47, which, issuing "out from under the threshold of the house eastward" gradually rise and spread until they become a river that "could not be passed over;" and behold, "every thing that liveth, which moveth, whithersoever the rivers shall come, shall live . . . for they shall be healed."

After singing hymn 141, the meeting was opened by Edward H. Hammond, C.S.D., First Reader, reading from John 12, then from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, page 212. After a few introductory remarks, in which he brought out the thought that only through the spiritual interpretation as given in our text-book, Science and Health, can we understand that the Bible is not contradictory, Mr. Hammond announced that the meeting was open for testimonials.

A lady arose and told how she was living where Christian Science was not well known, when a friend loaned her Science and Health. She began reading and was healed of an eye trouble which had manifested itself years before, through vaccination. While reading, a stomach trouble of old standing became very apparent but was soon overcome. She then took the book and read to a friend of hers who was in such suffering on account of trouble with her knee that she felt like taking an overdose of morphine. The reading and talk quieted her, but the physician prevailed upon her to put the leg in a plaster cast. For four weeks this cast was kept on and when removed her leg was useless. Then she asked what she should do. Her friend advised Christian Science treatment; the physician said, "Surgical operation and return to the cast." She refused to undergo any more voluntary suffering and sent for a Christian Scientist to treat her. In six treatments she was healed perfectly. Then her daughter was attacked with typhoid fever. The doctor predicted a long siege. She told her friend (the speaker) who, though fear seemed to take possession of her, mentally declared the Truth for her own protection; and, to the surprise of the physician, the fever was broken the following day. She began to eat and rapidly got well.

A gentleman said, "The question is often asked will Christian Science help me? God is no respecter of persons. Christ Jesus came to teach us how to live and do our work. Many of you know I have been healed of many troubles: rheumatism, etc. I took up the study of Science and Health just as I would take up mathematics or any other science, with the thought that if it could heal me I wanted to know; and I went at it in earnest. I thought the Truth was there, but I had to work for it to find it. My wife was healed of consumption; my daughter was also healed of various troubles. That showed me that Christian Science was the Truth that maketh free."

A lady said, "This passage from 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy, page 563, 'Know thyself, and God will supply the wisdom and the occasion for a victory over evil' has been one of the most helpful to me,—to know myself as taught in Christian Science, know myself spiritually as God's image and likeness. In the old thought I had often heard this expression 'know thyself,' and I thought the more self-knowledge I gained, the more discouraging all appeared, for I saw myself as sinning and sick. But Christian Science has shown me the unreality of these things and our work is to walk in the footsteps of Jesus who, as Science and Health says, 'Beheld the perfect man, who appeared to him, where sinning mortal man appears to us.'"

The next speaker testified as follows: "One year ago I got Science and Health and I never knew how much it has been and is to me until ten days ago. For nine years I suffered each spring from insomnia and nervous prostration. A Christian Scientist healed me. Ten days ago a man stopped at my house who was affected just as I had been. Then I realized from what I had been delivered. Only once since taking up Science and Health have I had a return of the old trouble, and now I am free from it all."

A lady said: "One of the most beautiful things is the light Christian Science throws on the Bible. It shows so plainly how we must follow our Way-shower. One passage: 'The Prince of this world cometh, and hath nothing in me,' comes to me very often, and always with renewed power. We know that God having *all* Power, the prince of this world can have *no power.*"

Mr. Hammond spoke of having been in Science seventeen years, and how often he had heard the prophecy that Christian Science would soon die out. It is the Way made known by Jesus Christ. In Science and Health this Way is made plain, and as one reads one finds, as some one has said, "Christian Science is Christianity reduced to a working basis."

Meeting closed with singing hymn 39.

LOUISE SCHMIDT.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## "The Press."

THE *Chronicle* of Wappinger Falls, N. Y., of February 16, 1900, publishes in full our recent article in the *Sentinel* under the above title, and then editorially comments upon the article somewhat at length. After going over the ground in a fair and friendly spirit, the editor, speaking of Christian Scientists, says, "They profess to heal, to cure all manner of disease, injuries, bone fractures, nature's afflictions, etc. Now let the Scientists exhibit in the presence of judges, practical and competent in their several professions, and show its curative power in their presence. If the 'Science' accomplishes what it professes to be able to do, under such a test, we hesitate not to declare that it will revolutionize theoretical doctrine, it will win to its fold followers innumerable. If it cannot stand the test named it will, like its predecessors who have claimed similar spiritual powers, sink into oblivion. If Christian Science denies a just, proper, and impartial test like unto the one named, then it must not be surprised to learn that its claims are disbelieved, its assertions disregarded, and its teachings believed to be hypocritical. This is a plain, simple, and honest proposition, made not in enmity, or malice, but only candidly and impartially. Will the editor of the *Sentinel* advocate a submission of the test proposed in this article, or will he take to cover with the affirmation, 'you must take our word for it'?"

In our former article we made this statement: "To the newspaper fraternity who desire legitimate and candid information only for legitimate and candid uses, Christian Scientists will afford every facility in their power in the way of furnishing such information. There is plenty of evidence to be had, although there are some cases, where, for obvious reasons, publicity is not desired by those interested; and their wishes should be respected. There are, on the other hand, numerous instances where the beneficiary is only too glad to make known the fact of having been healed. The Christian Science publications, extending back for many years, contain testimonies from thousands of this class."

We submit to our friend, the editor of the *Chronicle*, that there is nothing in the above statement to warrant the conclusion that we, the editor of the *Sentinel*, proposed to supply evidence ourselves, or to make exhibitions of patients in the way that he suggests. All intended by our article was, that in the places where articles are published concerning particular cases, the Scientists on the ground, in the spirit indicated in our article, would do everything within their power to aid the newspapers in ascertaining the exact facts of the case, that the newspapers might make a fair and truthful publication thereof.

We also, out of abundance of caution, mentioned the fact that there were cases where, for sufficient reason, the patients and friends of the patients might not wish any publicity given to their cases. This is so entirely reasonable that we apprehend no one will question it.

So far as the matter of taking into consideration the *Chronicle's* suggestion to exhibit the Science "in the presence of judges practical and competent in their special professions, and show its curative power in their presence," we beg respectfully to say that we do not consider it a reasonable or fair suggestion. We feel very sure that neither physicians nor any other healers of disease of any kind would wish to have the privacy of the sick-room invaded for the purpose of making such tests as are implied in our friend's proposition. We fancy that the patients and friends as well as the Scientists, might very reasonably object. We certainly have no power, if we had the disposition, to compel them to submit to any such proceeding, nor should we, under any circumstances, favor exhibitions so nearly akin to the public exhibitions of hypnotists and like performances. We think, with a moment's reflection, our editorial friend will see that he enlarges upon our statement in a way that is not warranted, although his good intention we do not question. We will simply re-affirm our former statement that Christian Scientists "to the newspaper fraternity who desire legitimate and candid information only for legitimate and candid uses, will afford every facility in their power in the way of furnishing such information." In doing this we submit to our editorial friend that we are not "taking to cover with the affirmation 'you must take our word for it.'"

The cases of healing are numerous, and it is only necessary to call upon local healers to get such information as we indicated in our editorial, for the uses therein mentioned. The Scientists of each locality possess such information, and, as we have said, unless there are special reasons to the contrary, they have, so far as we know, always been willing, under proper circumstances, to impart the same. We are not here dictating to them their course of procedure in this matter, but feel warranted now, as we did when we wrote our editorial, in speaking for them to the extent that we therein spoke.

## Changes in Place of Meeting.

WE publish below a letter upon an important subject. We trust it will be carefully perused, and that the shortcoming therein referred to will be remedied so far as may be. In the larger cities it is especially important that changes in the places of holding services, meetings, and the reading rooms should be promptly reported to the Publishing Society.

Denver, Col., February 14, 1900.

*To Christian Science Publishing Society*:—I would like to call the attention of the Christian Science Publishing Society to the inaccuracy of information in regard to Church Services in the *Journal*. It seems a small matter, no doubt, to delay making a change of address or hours for services in the *Journal*, but it means a good deal to a traveler like myself to go time after time to the wrong place for service or to an evening service advertised in the *Journal* but discontinued in practice.

As recently as this very evening I attended the Wednesday meeting here, putting off two quite important material duties in order to get to the church at seven-thirty, only to find that the hour is eight, and that I must wait thirty minutes before service began.

In New Orleans, also Wichita, Kan., I had to hunt up the churches after going to the addresses given in the *Journal*, while in Fort Smith, Ark., I could not reach the place of service on time, when I finally obtained the right address.

Those services are now rightly given, but I attended them in succession and naturally felt that I could not depend upon the *Journal* information. I am in the theatrical profession and cannot control my traveling, hence when I am in a city or town on Sunday in time for service (which is seldom, for we travel, as a rule, Sunday mornings) it is an esteemed privilege, and I have to depend largely upon the *Journal* for information.

Digitized by Google

I am sure the good Scientists who put their cards in the *Journal* would gladly make all changes known immediately, if they knew what a boon it is to us wanderers to have accurate knowledge of services and reading rooms.

Occasionally I call on a Scientist at her home, when I am deprived of attending service and am hungry to meet some one who will speak the Truth to me, and I will say that only once did I have trouble to find the Scientist of whom I was in search.

It is wonderful to find, in all the states and cities and towns I have visited this season, some Scientists, and nearly everywhere the Sunday services, but, alas! they were not for me! Since December 31, when I was in San Francisco, I have been able to attend only two Sunday services—one in Portland, Ore., and three weeks after, one in Tacoma, Wash.

I do not wish to complain of the *Journal,* for I love it too well and value it too highly, but the little matter I speak of is easily remedied, and I am sure would benefit others besides myself.

I am, with sincere appreciation and regard for all workers in Christian Science,

Yours most faithfully,
L. M.,
Frederick Warde Company.

Of course, our good friend who thus writes will bear in mind that the *Journal* is issued only once a month; that it takes time to send notice of changes from long distances, and that such notice must reach the Publishing Society in time for publication in a given issue of the *Journal.* Often the notice arrives too late, and has to go over another month.

## From Abroad.

A LETTER recently written to a Scientist friend in Boston by a young lady Scientist who is traveling abroad for the winter, contains many items of interest. By the kind permission of the recipient we cull some of them for the information of our readers.

Referring to a mid-week meeting the writer attended in London, she says:—

"Mrs. Ward arose and said that last Sunday she was at Cambridge attending the first service in a hall there. She said that the work had been begun by the wives of two of the Masters in the Colleges. At the service there were forty present, and she felt the work was well established.

"Then a lady arose and spoke of the beginning that had been made in Dublin, and another of services in a home in Tookshire, and how the farmhands seemed to be interested.

"After the meeting Mr. Miller spoke of the work in Christiana, Norway; how he had lectured there, and though there were five hundred at the hall to hear him, many who did not understand English were not satisfied. That a young woman who understood both English and Norwegian and was a stenographer took down the lecture and the whole audience waited till she gave it to them all over again in their own tongue. Mr. Miller says they, the Norwegians, seem very open-minded and have no prejudice against Science. There are twenty there who read the lessons in the *Quarterly* on Sunday."

She also says:—

"Last Wednesday a lady from Belfast spoke of the work beginning there; and another, after meeting, of the reading of the lessons in Essex County."

The letter concludes:—

"We left London last Saturday and came here for a week, then we spend Sunday next in Plymouth; then to Exeter, Salisbury, and the Isle of Wight, and sail from Southampton, January 6, for Madeira and the Canaries for the winter. We are all well and happy and have seen a good deal since leaving home."

The evidences of the spread of the work on foreign soil are encouraging and significant. This soil is rich, and the seed thus being planted there is taking deep root, to the bringing forth of a future great harvest.

The letter also refers interestingly to the work in Scotland.

### Lecture at Tufts College.

The Rev. Irving C. Tomlinson, C.S.B., was greeted with a large and appreciative audience upon the occasion of his lecture, February 21, in Goddard Chapel at Tufts College. The chapel was filled by professors and students of the college, by former co-workers of Mr. Tomlinson in the Universalist denomination, and by Christian Scientists.

The lecture was delivered under the auspices of the philosophical department of the college, which is under the direction of Prof. Herbert E. Cushman, Ph.D. Mr. Tomlinson's appearance was before the second conference of the Society for the present year.

Mr. Tomlinson is a graduate of the Tufts divinity school, class of '88. His subject was: "Christian Science as the Science of Mind," and was ably presented and well elucidated.

## Among the Churches.

### Services at Cambridge, England.

It may interest your readers to know that Christian Science services are held in a public room every Sunday morning and evening, in the old university town of Cambridge, England.

For more than a year previously two friends had met in a private house to read the Quarterly Lesson. The reading had gradually developed into a full service. The readers were first joined by their own seven boys, and then by a slowly but steadily widening circle of interested friends. Two of them had already become interested in Christian Science in America.

When the little congregation had for one or two Sundays numbered over twenty, it was felt that a move must ere long be made. And yet we seemed in no hurry to move on, for our meetings in the pretty, cosy drawing-room, always beautiful with fresh flowers, so generously and joyously lent to Science, Sunday after Sunday, had been very happy ones, and perhaps there was even, with some of us, a little shrinking from publicity. How it came about, or who proposed it, we could none of us say, but it was suggested that inquiries should be made about public rooms with the result that we almost immediately found a large, bright, upper room, in a very central part of the town, well lighted, and provided with a piano, ready to be hired for a moderate sum. It seemed to have been just prepared to meet our need, and was engaged without delay.

We had made no special plan for our first meeting in this new building, but the fact of our move was mentioned casually to a Scientist friend in London. To our delight we were told that a party of Scientists would come over to join in our opening service; and when the happy day arrived, and we gathered together for the first time in our new home, on November 26, 1899, we felt permeated by new strength and vigor. The sun shone out brightly upon the few who met for morning worship, and seemed a fitting symbol of the sunshine in our hearts.

In the afternoon,—a more convenient time for most of our little band,—we held our real inaugural service. We were quite surprised to find ourselves a congregation of forty. The room seemed to be full of Love. So much

Digitized by Google

had been prepared and given to us, without any effort on our own part, that all feelings of personal weakness and personal sense of every kind were swept away in a great wave of thankfulness. During the course of the service a telegram was read bringing loving greetings from First Church of Christ, Scientist, of Edinburgh, Scotland, holding their first public service on that same day.

At the close, friends were invited to remain a little longer, in order to hear or offer testimonies, the presence of our visitors from the London Church being an opportunity for encouragement not to be neglected. Then in prompt succession came words of dear and joyful witness to the power of Truth and Love, and these not from our visitors exclusively.

Since that day our services have been held regularly, morning and afternoon or evening, in the Victoria Assembly Rooms, Market Place. The hours are 11.15 A.M. and 6.30 P.M. The numbers have not again reached those of the first Sunday, but there is a small and increasing nucleus, who find in Christian Science their daily food, and we know that the numbers will come, when we are ready for them.

One of our members has lovingly worked the cross and crown emblem in gold on white for our reading desk, and also a large banner for the end of our room, with the text from the Bible, "God is Love," also from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, page 490, "Divine Love always has met, and always will meet, every human need." Our work is to bring home the reality of these two glorious messages to every man, woman, and child who shall enter our room.

We have not yet inaugurated a Wednesday evening testimony meeting, but we are all eagerly looking forward to it, and know that we shall soon be rejoicing in it.

A. F. B., Cambridge, Eng.

### Site Purchased at Kansas City, Mo.

Negotiations have just been concluded by Second Church of Christ, Scientist, of this city, for the purchase of a choice building site at the northeast corner of Thirty-first Street and Troost Avenue. The lot is located in a fine residence district; has a frontage of one hundred and thirty-five feet on Troost Avenue and one hundred and sixty-five feet on Thirty-first Street, and is probably the highest point in Jackson County.

Upon this ground the members of Second Church of Christ, Scientist, purpose, within a year, to erect a fine church edifice, suitable to meet the requirements of its rapidly growing congregation. Services are at present held in the auditorium of the Pepper building, opposite the public library.

The architecture of the new church will be Roman classic, and in appearance will be unlike any other religious edifice in Kansas City. The exterior will be of white Carthage stone, surmounted by a beautiful dome which will admit light into the auditorium. The church, when completed, will have a seating capacity of one thousand. It is said to be the consistent practice of Christian Scientists in the erection of church edifices to discharge all obligations as they accrue, and no church is dedicated while encumbered with debt, and that the Second Church of Christ, Scientist, will prove no exception to this rule.

*Kansas City (Mo.) Times.*

### A Fourth Church in Chicago.

Christian Scientists are to establish a new church in Englewood. This will be the fourth of its kind in the city. A business meeting of the members of the First Church, Drexel Boulevard and Fortieth Street, will be held to-night, when a formal decision will be made. The matter has been under discussion for some time and there is every prospect that the meeting will declare for the establishment of the fourth church.

For some time past there has been a growing need for another church on the South Side. A year ago a second church was established on the North Side and a third church on the West Side. Recently the congregations of the First Church have been so large that the building has been crowded beyond its seating capacity. Last Sunday upward of two hundred persons stood in the aisles. It is expected that fully this many members will be found for the new church in Englewood.

The establishment of this fourth church will greatly relieve the First Church from its overcrowded condition.

*Chicago Times Herald.*

### From Chadron, Neb.

First Church of Christ, Scientist, was organized in Chadron, Neb., January 31, 1899, with fifteen members.

The Sunday School was started in May, and in July a reading room was opened and is kept open every day, except Sunday, from 10 A.M. to 4 P.M.

Thirteen copies of "Science and Health with Key to the Scriptures" (nearly all five dollar bindings) have been sold and a great deal of literature has been loaned and given away. We had a lecture by Mr. Kimball last July and expect another from Judge Ewing in the near future.

Just before Christmas the members agreed to put the money they had intended to spend in material presents for each other in a church building fund. We also have sufficient funds for our next lecture. Our present membership is twenty-one.—MRS. M. M. LUTZ, *Clerk.*

### A Word from Ireland.

There are four of us in this house, earnest students of Mrs. Eddy's works, and the seed is being sown steadily in Dublin. We meet together on Sundays and have our little service, which is a great help. There have been several good cases of healing, which show that divine Love is guarding and guiding us. Truly "The Lord reigneth, let the earth rejoice."

CONSTANCE GIBSON, Dublin, Ireland.

### The Immutable Promises.

Some Christians, as in time of trial they look at one of God's promises, are like an old man, a friend of mine, when he first looked upon the narrow suspension bridge just overhanging the falls of Niagara, with the raging, foaming water far beneath. That bridge is strong enough to support one thousand tons; but it is so light, and airy, and slender in appearance, that my inexperienced friend was really afraid at first to trust his one hundred and fifty pounds upon it.

My Christian friend you must remember that one of God's cables never breaks—light and spirituelle though it seems, it never sways beneath the greatest weight. Trust your life upon it then. Trust without fear or the slightest reserve. Trust your whole life upon it. What is your weight upon one of the eternal promises of the eternal and Almighty God? It is like a grain of sand set against the vast world in the balances; it is like a humming-bird perched on the peak of Mt. Washington; it is like a feather resting upon the broad bosom of the Atlantic ocean. The ocean shall evaporate in mist, the mountain shall melt away, and the great earth shall be destroyed at last, but "the word of our God shall stand forever."

Ross C. HOUGHTON, D.D., LITT. D.

### "Little Children, Love One Another."

BY BEATRICE ISABEL BEST.

"Little children, love one another," said three times, in a voice of unutterable tenderness and meaning, is, by some, supposed to have been the last public speech of John as Bishop of Ephesus.

INTO the hearts of the list'ning throng
Passeth the peace from above,
For John, the Beloved, is talking,
Telling his children of Love.

"Little children, love one another,"
This is the message he brings;
For John is ambassador loyal
Of his Lord, the King of Kings.

"Little children, love one another,"
Again he says, low and sweet.
Would you know where he caught that accent?
John sat at the Master's feet.

"Little children, love one another;"
He has said these words three times
And their echo round earth is ringing,
One of the sweetest of chimes.

So often this message I'm hearing
I seem to be of that throng;
And oh! may I learn to repeat it
*In practice,*—John's tender song.

### Why I am a Christian Scientist.

BY J. W. RUSSELL.

To me religion was nothing but an undefinable superstition. There were two places I never cared to visit; one was a church, the other a saloon. I was a faithful follower of Ingersoll, and believed in doing right because it was right, without fear of punishment or hope of reward.

I became interested in Christian Science, through the healing of a friend. My prejudice against religion was so strong that when "Unity of Good," the first book on Christian Science I read, was given me, I threw it down several times, and said, "This is too much religion for me, I cannot stand it." But my friend was healed by Christian Science, and I wanted to ascertain how it was accomplished. There must be something in it that I did not understand. My curiosity was greater than my prejudice, so I resumed reading the work. When I began to read "Science and Health with Key to the Scriptures," my prejudice did not last long. It appeared to have so much common sense, and so many practical ideas, besides being free from superstition, that it just suited me. I was not looking for healing but for an understanding of the Principle of healing. Before becoming interested in Christian Science, I had been reading medical works on the digestion of food, and my stomach became so affected that I could not digest anything but the plainest kind of food. If I dared eat any luxuries, I could not sleep. I became a slave to my stomach. Before I was half through reading Science and Health I was free. My stomach was once my master, now it is my servant. I was cured of the belief that life is in matter, and depending on the heart, stomach, and lungs for existence, by the understanding that Life is God, and that God is Mind.

Science and Health is the greatest book that has been published in modern times, for it is the key to the Bible, and all the hidden treasures of Life. I would not, if it were possible, relinquish my understanding of Christian Science for all the gold in the universe.

We often hear people who are in bondage to self and trying to get something for nothing ask, "Why could not God have revealed Christian Science to them as well as to Mrs. Eddy?" Why could He not have revealed the telephone, the phonograph, or wireless telegraphy, to them, as well as to Bell, to Edison, or to Marconi? It was because they were not looking in the right direction. God only helps those who help themselves. We must use the talents we already possess if we wish to receive more.

When a person discovers or invents anything, he must first see the necessity for it. Then let him get away from self, out of the ruts and grooves that others have been working in; away from the seen to the unseen; from matter into Mind, and then thoughts of Truth will be manifest through him. It is useless for us to waste our time trying to discover something that has already been discovered, or finding fault with it because it was discovered by a woman, or by some other person.

No one can advance in any line, who is unwilling to take advantage of the progress made by others. Everything is governed by law, and the only thing that keeps us back is our ignorance of it, or our unwillingness to conform to it. If we wish to succeed we must take the world as we find it and adjust ourselves to our circumstances, whatever they may be. We can soon learn to control circumstances instead of letting circumstances control us.

It is just as much of a wrong to cheat ourselves as to cheat others. The law of right wrongs no one. The value of the book Science and Health is not in what it costs to print it, but in the amount of Truth and information it contains and the benefit it is to those who make use of it. When we take into consideration the amount of time and thought Mrs. Eddy devoted to writing it, the difficulties she encountered in having it published, the amount of persecution she has endured since writing it, no one with any appreciation of the Truth can think that the price is too high. This world can never repay the debt it owes her for discovering the Truth contained in Science and Health.

### A Little Child's Faith.

BY MRS. MELVIN GRIMES.

WHEN the Thirteenth Minnesota Volunteers marched away, there went with them, as one of their number, a young brother of mine, a boy of scarcely eighteen. It is needless to say that many anxious thoughts and fears went with him from the home people in Minneapolis.

Hearing some of these expressed, my little boy, who was then about eight years old, said to me that he was going to realize the Truth for his uncle "all the time he was gone." I asked him how he would do this, and he said, "I shall give him a treatment every night after I have said my little prayer."

Nobly has he kept his word, for in all the long, dreary weeks and months that the Thirteenth has been away, there has never been a night that this little Scientist hasn't sent his message of love and protection far over land and sea to the absent boy in Manila.

To prove how well the work was done, one has only to follow the life of this boy, as I have done, from the time of his departure until he was returned to us a few weeks ago, the picture of health and manliness.

He has been exposed to all the dangers that attend a soldier's life and has never been sick a day. Once, when the news reached us that the Thirteenth was in battle, there were white faces in the old home; and I found my little Scientist off by himself, in a corner, with eyes closed and hands folded. I asked him what it was he was saying,

Digitized by Google

and he answered simply, "A thousand shall fall at thy side, and ten thousand at thy right hand; but it shall not come nigh thee."

In a few days we received word that there were fourteen wounded and two killed in the regiment, and it was several days before we could get the names. Hearing some anxiety expressed in regard to this, Willard said to me, "I know he isn't among them, for all those treatments I have given him have built a little fortress around him and he is safe." And so it proved.

This was at the battle of Mariquena Roads, fought on March 25, in which his company received the hardest of their fighting. They were thrown to the extreme right, so that they received the fire from the side as well as from the front; and he has told me since his return that he stood for an hour and a half with the shot falling like hail all around him, coming so near as to brush his clothing several times. He came out of it without a scratch, and was called one of the "lucky" ones of the regiment.

The most beautiful part of it all was, that when I told him of it, although he knows little or nothing about the Science and had no idea he was under any protection at the time, he showed no surprise. He said, "I know there was some power with me on that day, and I have wondered many times since what it was that saved me."

Of all the many proofs which I have received of God's "tender love and watchful care," this is perhaps the most convincing. The Ninety-first Psalm has always been my refuge in times of trouble, but the true beauty and strength of its many promises have been revealed to me through the faith and understanding of a little child.

"For He shall give His angels [pure thoughts] charge over thee, to keep thee in all thy ways. They shall bear thee up in their hands, lest thou dash thy foot against a stone."

## Is Death a Saviour?

BY E. F. V.

MANY people are taught that some glad day our Heavenly Father, in the holy purpose of His will, will send His messenger, Death, to claim our suffering friends; and if they are Christians they will be ushered into Heaven and be made free from all physical ailments.

What does this theory make of Death? Nothing less than a Saviour! Although many people entertain this view, yet there is nothing in the Bible that logically leads to such a conclusion.

If Death is a Saviour, then Jesus the Christ must have hindered the work of that Saviour when he destroyed Death and gave the sick and dying back to their friends. If it is good now for people to pass out of this life; if Death saves them and gives them happiness and rest and peace and a permanent home in Heaven, then it must have been the same good fortune in Jesus' time.

Hence, Jesus had no right to destroy Death, for his mission was to do good and not to destroy it.

*No! Death is an enemy and not a Saviour!*

There is only one Saviour, even the Christ-Truth which destroys this enemy, Death, and brings "life and immortality to light." "For he must reign, till he hath put all enemies under his feet. The last enemy that shall be destroyed is death." Would it not be wise, then, instead of trusting Death as a Saviour, to understand that the One God is Life which by His omnipresence destroys Death and reveals man as immortal? As the Scriptures say, "I will put my trust in him." And again, "Behold I and the children which God hath given me. Forasmuch then as the children are partakers of flesh and blood, he also himself likewise took part of the same; that through death *he might destroy him that had the power of death, that is, the devil;* and deliver them, who through fear of death were all their lifetime subject to bondage."

The only death which can in any possible sense be called a Saviour is the *death of sin,* which death we can invite and daily entertain. Paul says, "I die daily." Also, "Knowing this, that our old man *is* crucified with him, that the body of sin might be destroyed, that henceforth we should not serve sin." "Likewise reckon ye also yourselves to be dead indeed unto sin, but alive unto God through Jesus Christ our Lord."

"The death of a false material sense and of sin, not the death of organic matter, is what reveals man, and Life, harmonious, real, and eternal" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 192).

## An Interesting Incident.

An incident of much interest occurred at our State Prison on Sunday, Dec. 17, when, after the close of the Christian Science services, one of the prisoners stepped out before the others and said,—

"I desire to say a few words to our Christian Science friends from Lincoln. On behalf of the class here assembled it is my privilege to extend to you our sincerest thanks for your untiring efforts in breaking the bread of Life—the Truth—to us; and in doing so you are making us free indeed; for our Master said, 'Ye shall know the Truth, and the Truth shall make you free.'

"Friends, as a small token of our esteem, allow me to present each of you with a broom—a symbol of cleanliness. May your efforts at cleansing our consciousness from erring thoughts be crowned with success; and may you sweep from our minds all clouds and anxious doubts, so that we may be able to hear the whisper of the 'still, small voice' saying to each and every one of us 'God is Love.' I beg you to accept this, our love-offering, in the sense our Master accepted the widow's mite; for, as she gave all she had, so we are giving all we have. Through the magnanimity of brother D. whose loving hands made these brooms each day after his daily task due to the state was performed, we are enabled to offer this small token of our esteem; and let me assure you that the gratitude we owe you for the benefit received, we shall never be able to repay. May God bless and reward you."

The brooms are fine specimens of workmanship. The hard-wood handles are covered, for two-thirds of their length, with embossed velvet, the remaining third with interwoven wire and straw, in beautiful designs.

Encircling the largest part of the handle of one broom, woven in with fine strips of chenille and wire, are the words "Our First Reader," another "Our Second Reader," and the other two have the names of those who have attended all the services and also on "visiting day" have talked with those who have expressed a wish to hear more of this Truth that makes them free men in Christ Jesus. The brooms are treasured by each of us as expressions of love and gratitude, and occupy places in our parlors where they are likely to remain as "symbols of cleanliness."

N. B. E., Lincoln, Neb.

### Weapons not Carnal.

When in the year 254 an epidemic broke out in Carthage, the Christians, answering an appeal made to them by the venerable Cyprian, though they had just suffered a violent persecution, by their zeal and self-denying courage saved the city from pestilence. Their heathen neighbors, afraid of infection, refused to minister to the sick or bury the dead as they lay in heaps in the streets—corpses tainted the air. "Let us now overcome evil with good," exclaimed the good bishop. The effect of these words worked like a charm, and the uttermost parts of the Roman Empire heard him.—*Selected.*

# Testimonies.

### Astigmatism Healed.

It will soon be five years since I first experienced the wonderful healing power of Spirit, manifested through Christian Science. At that time I was wearing glasses on account of a pronounced condition of astigmatism. I had worn glasses constantly for a dozen years, and was not able to use my eyes without the glasses for even five minutes without experiencing headache, sometimes followed by sickness at the stomach.

Prominent oculists had prescribed the glasses, agreeing that my eyes were astigmatic and far-sighted, and that one eye differed from the other in the degree of defects. With the aid of the glasses I got along quite satisfactorily and I fully expected to require them during the period of my natural life. This expectation was confirmed by the oculists.

I sought Christian Science treatment to obtain relief from an annoying trouble of a different nature from which I had suffered for two or three years. Skilled medical attention had failed to bring permanent relief. The first treatment by the Scientist produced complete relief, and since that time I have used no medicines.

An unsatisfied desire for spiritual truth had possessed my mind for years previous to this experience. This healing convinced me there was some unseen Power at work that I had not known before.

Earnest inquiry followed, and at the end of four days I laid aside my glasses, without any suggestion that I do so; I had not asked for treatment for my eyes. I have not used glasses since.

Christian Science had been brought to my attention two years before this healing, but, after trying to comprehend it I had given up the subject, believing it to be something akin to spiritualism.

My experience convinces me that Truth cannot be given to an individual until a desire for it is felt, and when a real desire for it exists, no sacrifice of earthly things is too great for its attainment.

Though I had no money to spare, upon coming into Science, no edition of Science and Health but the small, leather-bound one was good enough for me.

Is three dollars too much for the text-book that tells us how to get well and keep well, how to become happy and remain so, and how to uproot and destroy the conscious and unconscious mental and physical needs and poisonous and impure growths of mortal sense, and discover the perfection and beauty of the one perfect Mind which man reflects?

No! three dollars is not a high price for the book that imparts this understanding. Only those who do not understand the Truth will say it is.

Many of my relatives and friends have been drawn to the Truth by reason of the faithful effort that opened my eyes at my healing.

Our four children have taken no medicine during the past four years, and they have been healthier than formerly.

To those kind friends whose loyalty to Truth enabled them to present it to me in the convincing form of healing demonstration, I owe a debt that can be repaid only by doing likewise for my fellow-man who is still in the darkness of mortal belief. We yet but faintly realize our debt of gratitude to the loving, toiling, patient Mother, by whose life of self-sacrifice this age is attaining to a sense of peace that passes our present understanding.

W. R. McKiernan, Chicago, Ill.

---

### Physical and Moral Benefits.

In August, 1896, I was afflicted with a cough accompanied by the raising of large quantities of mucus. My lungs were congested to such an extent that I seemed to breathe in the top of them only. Added to this was a violent headache, diarrhœa, and copious night-sweating. I became greatly weakened, losing about twenty pounds in weight in two weeks time. I went home and placed myself under Christian Science treatment. The headache and bowel trouble were conquered the first day. The other troubles were overcome one by one, the shortness of breath being the last one to disappear. It was about three weeks before I took up my regular work again. I was in charge of construction work for the New York and Pennsylvania Telephone Co. The first week out I gained seven pounds in weight, and improved steadily until I was heavier by about six pounds than I had been for several years.

I had been a user of tobacco for more than twenty-five years. I was a temperate drinker of liquor; taking a drink when I felt like it, but cannot say there was any habit formed. I had left off the use of tobacco at different times, but always returned to it. In fact was not wholly free from the desire for it at any time. Since being healed by Christian Science I have not had the least desire for tobacco or liquor in any form.

While all these things were great helps to me, and to Christian Science is due the credit for the knowledge of God that made them possible, the greatest blessing received by me at that time was the moral uplift. Before that time I had seen the work in my own family. I knew there was healing power there that I could not understand, still I quibbled and argued about the words and terms that Scientists used, not understanding them. My thought was cleared up. "Science and Health with Key to the Scriptures" read differently. It was all new to me. Since my healing I have not taken medicine nor applied material remedies in any form. I thank God every day of my life that a knowledge of Christian Science has come to me. I am doing my best to follow the teachings of the Great Master and to bring my life into harmony with God (Good).

George L. Lawrence, Bradford, Pa.

---

### From a Business Man.

Christian Science found me, some four years ago, a slave to false beliefs and appetites. Error seemed to have persuaded me that indulgence in liquor and tobacco was a necessity in the transaction of business. Truth has taught me that business is successfully transacted only when one is free from the influence of anything apart from the divine Mind.

My wife was spared to me through Christian Science treatment, which healed her of Bright's disease in a few short weeks. *Materia medica* also said that childbirth would probably result in her death. We now have a dear little boy, two years old, whose birth was cared for by Christian Science treatment. He knows no remedy but Truth for his little troubles, and when disturbed by any false claim, he promptly says, "Go 'way, error; Truth's here!" Needless to say his path is free from many of the rough places other children find. He dearly loves to hear us tell of our dear Mother.

As a business man, I can say without hesitation that Christian Science simplifies all problems, and shows us clearly our way out when in doubt. It eliminates the petty cares and troubles that are apt to divert us and take up the time needed for greater and better things.

One thing I am most grateful for is the friendship with the Bible which Christian Science has given me. It is my daily companion, and read under the light which "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy reflects upon its pages, it satisfies my desires and points out the true way in all things.

Albert E. Miller, Philadelphia, Pa.

### Help in Time of Need.

When the Light came to me through Christian Science, I was in the darkness of despair. I thought, "O, where can rest be found?"

One can easily understand the suffering both physical and mental, that such a state of thought would bring. The physicians said it was nervous prostration and weakness brought on by too steady application to business. I see now it was just utterly giving up, because I saw nothing worth striving for. "Science and Health with Key to the Scriptures," came as a beam of light from a world of light in which there is no darkness at all,—the Light that can penetrate the remotest recesses of mortal thought, dispel the darkness of error, and break the bonds of sense, that the children of the One Eternal, omnipresent Good (God) may be free, governed and controlled only by the One Mind.

After trying many physicians, patent medicines, electricity, massage, and everything that mortal thought could suggest, and finding them a broken reed, I knew not which way to look. It was then the still, small voice of Truth said, "Look up;" and the assurance was given me that my desires were heard and answered, and I had a bright, happy future before me. From that moment I never doubted. I knew it was so, although I did not know how it was to be realized. Truth was leading me. I was advised to go to a Christian Science healer. I did so, and received the help so much needed. My healing was slow, but error cannot stand in the presence of Truth, and as the consuming fire of divine Love burns up the chaff of error, true Being is made manifest and health is found to be man's birthright.

MRS. N. WILSON, The Dalles, Ore.

### A Child's Testimony.

I would like to tell a demonstration over error, for it may help some other little child to demonstrate over error.

One night as I was undressing I dislocated my thumb. When I did it I realized God's presence. Then I pushed it back into place with a crash. I pushed it back into place without pain. After I had finished undressing and had got into bed it was paining me awfully. I said over the "Mother's New Year's Gift to the Little Ones," and declared that there were no broken or dislocated limbs in God. Then I said over and over that God was here and that God was All-in-all. Then I dropped off to sleep. In the morning it was not swollen, discolored, or sore. When I showed it to mother she couldn't tell which thumb it was. I have had many beautiful demonstrations.

Mother and I have been in Science four years. Every Sunday we and others go through the lesson at a neighbor's house. Mother reads in "Science and Health with Key to the Scriptures." There are fifteen that go through the lesson with us. This winter we got half a dozen Christian Science Hymnals. We will have to move pretty soon, as the house where we are holding the service is getting too small.

I always look forward to the *Journal* and *Sentinel*. I read the demonstrations over and over because I find so much help in them.

I feel so grateful to our beloved Leader and Mother who has opened the way for us. I could write all day but will close for this time. I am twelve years old.

MABEL LOY, Fairfield, Wash.

### The Words of Jesus Demonstrated.

I enclose an experience told me a few days ago by a lady who, though not a Scientist, is, with her husband, studying Science and Health and attending our services.

This lady is French, the wife of an American artist here. Her knowledge of our language is so limited that it is only by closest attention that she gets some of the thoughts in the lesson. With broken English and the sweet sincerity of a child she told how some of the good, of which others are telling, had come to her. I asked if she would put it on paper for me to send to the *Sentinel*. She said she could write it in French and her husband would copy in English for her. I send his copy.

MRS. KATE A. M. HILL, Saginaw, Mich.

The letter enclosed is as follows:—

The Sunday of the sermon on "Truth," I felt myself very indisposed to go to church, suffering from a severe attack of bronchitis. I had a bad cough that fatigued me. All at once the thought came to me that I should go. I went then to the church coughing continually.

Towards the end the Reader read, "Man, thy sins are forgiven thee." And in answer to the scribes and Pharisees Jesus says, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Rise up and walk?" The idea that sickness was sin came to me like a lightning flash; my cough left me, and I felt that an obscure point had been illumined.—MRS. JOHN P. WICKER, Saginaw, Mich.

### Help Received from the Manual.

I want to acknowledge the benefit I have received from the Church Manual. I expected to purchase one, but a friend said, "You can use mine;" but I felt I needed one of my own, so sent for a copy of the thirteenth edition. I was healed of a severe pain and great confusion in the head that had troubled me for several weeks, by the first reading of Section 5, Article XXI.

I feel that we as members of the Mother Church do not fully appreciate the Manual and what it means to us to be loyal and obedient to its rules and by-laws. My heart goes out in love and gratitude to our dear Leader for her watchfulness and tender care. Also to the officers and First Members of the Mother Church, who are so faithful to their trust. I fully appreciate the *Journal* and *Sentinel*. It is now about eight years since I first gained any understanding of Christian Science, although I had known of it, and that it healed, for three years before I sought it for my own needs.

It indeed has been the comforter when I have been surrounded by want, darkness, distress, and despair. Every ailment that has come to a family of six has been met and mastered through the understanding of Truth.

N. C. H., Albion, Mich.

### Testimony of a Soldier.

I could not get along without the *Journal* and *Sentinel*. The text-book, "Science and Health with Key to the Scriptures," is beyond value. Christian Science is the pearl of great price. The leaven of Truth is working

One company sergeant has read my Science and Health and was healed of a complication of ills. He is now a firm Christian Scientist.

A lady living two miles in the country was healed of heart disease by reading Science and Health. The doctors said they could do nothing for her. She is now rejoicing in the Truth.

I cannot be too grateful for what Science and Health has done for me, physically, morally, and spiritually.

CHAS. A. MORGAN, Soldiers' Home, Bath, N. Y.

"All one's life is music," says John Ruskin, "if one touches the notes rightly and in time."

I am being taught never to be disappointed, but to praise.—JAMES HANNINGTON.

## Religious Items.

Speaking of the Ecumenical Conference to be held in New York next April the *Church Standard* says one of the special features will be a missionary exhibit. Material is being gathered from every mission land in order vividly to present, through the eye, the social and moral conditions of the peoples among whom the missionaries are laboring. It will be the endeavor also to make it, as far as possible, a Progressive Exhibit, showing the results of a hundred years of missionary effort. It will combine a library and a museum, and will comprise publications of all kinds—books, Bibles, and magazines from the field, in English and many other languages; maps and charts, pictures, models, curios in dress and workmanship, and objects of religious worship, such as idols and fetiches—all intended to illustrate the actual surroundings of the missionary in his work.

Germany and England already have very complete Missionary Museums, but America is as yet deficient in this respect. In England these exhibits have proved not only helpful in arousing intelligent interest in missionary fields and work, but popular as well. Thus the Church Missionary Society has fine collections which are sent about from city to city, where they are publicly displayed for a number of days attracting in some cases as many as fifty thousand visitors.

In an appreciative review of the work of John Ruskin, the *Congregationalist* says:—

"Ruskin believed in a God, knowable, lovable, and loving, who is more than law, blind and implacable. Pessimist though he seemed to be at times, strangely and whimsically Toryish in a liberal age, he 'had a solemn faith in the advancing power of human nature, or in the promise, however dimly apprehended, that the mortal part of it would one day be swallowed up in immortality.'

"One year ago, when his eightieth birthday was celebrated, Frederick Harrison said of him and his work: 'There is not one line (of his writings) that is base, or coarse, or frivolous; not a sentence that was framed in envy, malice, wantonness or cruelty; not one piece that was written to win money, or popularity, or promotion, not a line composed for any selfish end or in any trivial mood. . . . It was always the heart's blood of a rare genius and a noble soul. . . . His words, flung to the winds, have borne fruit a hundredfold in land that he never thought of or designed to reach.'

"Of the prophets of the century England has produced no greater than John Ruskin."

The *New York Christian Advocate*, which is the leading Methodist journal, in a recent editorial says:—

"That the Methodist Episcopal Church, with nearly three millions of communicants and a vast army of Sunday school scholars, should add less than seven thousand to its membership in 1899, is startling. That in the same period it should show a decline of twenty-eight thousand five hundred and ninety-five in those avowed and accepted candidates known as probationers, is ominous.

"Such a situation has not been frequent in our history, and when it has occurred the usual result has been to awaken the Church to its need of divine assistance and concentrated work. In some such instances the year of drought has been succeeded by several years of extensive harvests.

"Should a further decline be reported the result will be most depressing. Let not the last year of a century of blessing be marked and marred in the history of the Church as pre-eminently the year of spiritual dearth."

The twenty-sixth annual meeting of the Board of Trustees of Chautauqua Assembly was recently held at Cleveland, O. The financial reports showed a gain in assets of nearly $150,000 over those reported last year. The endowment fund has reached $50,000, and will be increased to $100,000 by May 1.

## Miscellany.

### How Patti Identified Herself.

On her recent marriage to Baron de Cederstrom, Patti left orders at her home that her mail should all be forwarded to the Cannes postoffice. On her arrival there she went to the postoffice and asked if there were any letters for the Baroness Adelina de Cederstrom Patti.

"Lots of them."

"Then give them to me."

"Have you any old letters by which I can identify you?"

"No, I have nothing but my visiting card. Here it is."

"O, that's not enough, madame; any one can get visiting cards of other people. If you want your mail you will have to give me a better proof of your identity than that."

A brilliant idea then struck Madame Patti. She began to sing. A touching song she chose, the one beginning, "A voice loving and tender," and never did she put more heart into the melody. And marvelous was the change as the brilliant music broke through the intense silence. In a few minutes the quiet postoffice was filled with people, and hardly had the singer concluded the first few lines of the ballad when an old clerk came forward and said, trembling with excitement: "It's Patti, Patti! There's no one but Adelina Patti could sing like that."

"Well, are you satisfied now?" asked the singer of the official who had doubted her identity. The only reply which he made was to go to the drawer and hand her a pile of letters.—*The Standard.*

### A Good Story.

The late Dr. M. D. Hoge, of Richmond, Va., tells of two Christian men who "fell out." One heard that the other was talking against him and he went to him and said: "Will you be kind enough to tell me my faults to my face, that I may profit by your Christian candor and try to get rid of them?" "Yes, sir," replied the other, "I will do it." They went aside and the former said: Before you commence telling what you think wrong in me, will you please bow down with me and let us pray over it, that my eyes may be opened to see my faults as you will tell them? You lead in the prayer." It was done, and, when the prayer was over the man who had sought the interview said: "Now proceed with what you have to complain of in me." But the other replied: "After praying over it it looks so little that it is not worth talking about. The truth is, I feel now that in going around talking against you I have been serving the devil myself, and have need that you pray for me and forgive me the wrong I have done you." Dr. Hoge tells the story very well, and here and there in almost every community is a man or woman who might profit by it.—*Religious Herald*, Richmond.

### Fear and Death.

(An Arab Legend.)

BY R. R. BOWKER.

The Spirit of the Plague entered the gate.
One watching, asked, "How many will thou slay?"
"A thousand," spake the spirit, "is my quest."

The Plague made end. The Spirit left the gate.
The watcher cried, "Ten thousand didst thou slay."
"Nay, one," the Spirit said: "Fear killed the rest."

The *Advance* says the oldest book in existence is in the National Library in Paris, a papyrus discovered in a tomb of one of the kings of the first Theban dynasty. It is entitled: "Precepts of the Perfect Ptahhotep, under the King of the South and North, Assa;" and it is supposed that it was compiled about 3350 B C.

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and Church notices, should be sent direct to the Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent direct to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from the Christian Science Publishing Society should be made payable to the Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to the Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department. The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases be sent direct to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as clerk of the church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Supplements to the Sentinel.

Three supplements to the *Christian Science Sentinel* have been issued. The first is the lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The third is the lecture of Judge Joseph R. Clarkson of Omaha, Neb., delivered at Kenosha, Wis., September 18, 1899.

The price of the supplements is as follows: Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The per capita tax for the year beginning June, 1899, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston: 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A: for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each: per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00: Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 10 cents; 12 copies, to one address, $1.00; Twenty-five copies to one address $1.75; 50 copies to one address, $3.00.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

**Political Events.**

The bill providing a tariff on imports from Porto Rico of fifteen per cent of the Dingley schedule passed in the lower house of Congress, February 28. The Senate took up the matter, referring the bill to a committee of which Senator Foraker is chairman. The committee struck out the preamble and substituted the Senate Porto Rican bill after amending it to read fifteen per cent instead of twenty-five per cent of the Dingley tariff, and in this shape reported it to the Senate March 1. President McKinley, on March 2, sent a message to Congress recommending the appropriation for the benefit of Porto Rico, of all the money collected by the United States on Porto Rico products since the Spanish possession ended, which would mean a return of over two million dollars to the funds of the island for public improvements, etc. The recommendation was immediately carried out by the House in a bill, which passed with a large majority.

On February 26 the Kentucky state election board finished its deliberations and issued certificates of election to the Democratic contestants for the state offices below that of Governor. This filled out the Democratic roster of state officers, and now there are two complete sets of officials. The issue has been submitted to the courts.

Miss Susan B. Anthony has undertaken to raise an endowment fund for the National Suffrage Association, her aim being to secure not less than $500,000, to be placed in the hands of twenty-one trustees, who shall use it as they see fit in behalf of the propaganda for equal political rights for women.

Three more Spanish vessels have been added to the United States Navy. They are the armed transport, General Alava, and the gunboats Quiros and Villalobos, all modern ships. General Otis purchased them from the Spanish Government under his authority as governor of the Philippines.

The United States Court of Claims has rendered a decision on the claim of Admiral Dewey for prize money on account of the destruction of the Spanish fleet in Manila harbor. The court decided against the admiral's contention that the enemy's force was superior to his, and awarded him $9,570.

For the relief of the great distress in Porto Rico caused by the hurricane, Secretary Root, by direction of the President, has authorized the use of $1,225,000 remaining over from the emergency war fund.

Recent dispatches from General Otis, governor-general of the Philippines, indicate that the insurgents are becoming inactive, and that commerce is beginning to manifest a revival.

The bill giving Hawaii a permanent form of government like that of the territories, and with a delegate in Congress, was passed by the Senate March 1.

The United States Supreme Court has decided that a jury of eight men in some cases is allowable under the Federal constitution.

**Foreign News.**

General Cronje, about forty other officers of high rank, and four thousand men, surrendered unconditionally to Field Marshal Lord Roberts February 27, and the prisoners were sent on to Cape Town. The surrender was the outcome of Lord Roberts' plans and it seriously weakens the military strength of the South African republics. The surrender fell upon the nineteenth anniversary of the battle of Majuba Hill, which has always been a disagreeable memory to the British public. On the day of General Cronje's surrender General Buller captured three hills, which made the position of the Boers in front of Ladysmith untenable, and on the following evening, February 28, General Dundonald with a strong force entered Ladysmith, and General Buller followed the next day. The dispatches indicate that the Boers are collecting their scattered forces at the borders of the Transvaal and are preparing to resist stubbornly the British approach to Pretoria.

Portugal is preparing to pay the McMurdo claim arising from the confiscation of the Delagoa Bay railway, running from Lorenzo Marquez to Pretoria. The claim was submitted to arbitration and it is expected that about $4,000,000 will be awarded the claimants. There was some expectation that Portugal would enter into some arrangement for disposing of her South African possessions rather than pay the claim out of her revenues.

Grogan, an African traveler, who has been exploring the volcanic region in the neighborhood of Lake Tanganyika, found several active volcanoes which are discharging enormous streams of lava. One valley forty miles by sixty, was filled in two years with lava to a depth in some places of a hundred feet.

Lord Rosebery, formerly premier of Great Britain, has renounced connection with the Liberal party and declared his intention of holding himself independent of all party ties. He is in high favor with the English people at this time, and it is predicted that he will succeed Lord Salisbury as soon as the war is over.

The Uganda Railway telegraph line reached the Nile at Ripon Falls February 18, and was carried across the river next day, thus establishing telegraphic communication between London and the sources of the Nile.

The Italian prime minister has asked the Chamber of Deputies to appropriate eighty million dollars for the renewal of war material and fortifications.

**Industry and Commerce.**

What amounts to a revolution in mechanical economics is reported by Consul-General Mason of Berlin. Professor Josse of the royal technical high school at Charlottenburg has succeeded in advancing the efficiency of the best type of modern compound steam engine fifty per cent. This is effected by the absorption of heat from the exhaust steam through sulphurous acid, which, being evaporated, drives an auxiliary engine. In this way a two thousand horse-power central station engine should furnish power to drive an additional one thousand horse-power engine.

The *New York Herald* reports that the Russian government has obtained a loan of twenty-five million dollars from New York bankers on Russian railway bonds guaranteed by the imperial government. None of the money for the bonds will be transferred to Russia, but will be disbursed under direction of the Russian fiscal agent in payment for ships, armor plate, etc., which that government has contracted for in America.

The Western Union Company has closed negotiations with the Mormon Church for the purchase of seven hundred miles of the telegraph system in Utah, erected and operated by that organization for many years. The Mormon system was built for the purpose of facilitating communications between the head of the Church and the various colonies in Utah, Nevada, and Idaho.

Officials of the Chicago, Rock Island and Pacific railroad have decided to provide technical instruction for their employees on the road. The "School on Wheels" for engineers, firemen, conductors, and brakemen is to be a part of the Rock Island system. The men will pay for their own instruction.

The president of the Halifax Chamber of Commerce is authority for the statement that the coal production in the United States in 1899 was 244,000,000 tons, and that of Great Britain 234,000,000 tons. Last year was the first in which the American exceeded the British product.

A combination of bathtub manufacturers has been organized with a capitalization of $5,600,000. Only four of the nine plants merged in the combination are to be operated.

Five hundred Porto Rican laborers, who were employed in building the military road from Ponce to Adjuntos, have struck for an increase in wages from three cents an hour to five cents an hour.

Iron and steel manufacturers in the Pittsburg district have formed a combination to be known as the American Steel Company. It will have a capital stock of $52,000,000 and will control 156 mills.

Imports at the port of Havana during 1899, including merchandise, gold, and silver, amounted to $57,296,088 of which $28,133,895 came from the United States.

**General News.**

At Harvard University arrangements have been made for all the officers and a limited number of students to keep diaries, each man writing of the daily history of the university from the point of view of his own duties and social circle. These records are to be sealed and placed in locked chests in the keeping of the librarian. The chests containing the records for this year will remain closed until 1925, and general use of them will not be permitted until 1960.

The division of forestry, United States Department of Agriculture, has selected Southern California as the field for an exhaustive series of measurements and investigations for the purpose of securing accurate knowledge of the relation of forest to the run-off of streams. The question has become an exceedingly important one in many parts of the United States, where lumbering is extensive, and has caused much diversity of opinion among scientific men.

Chicago stockyards companies will send an unique exhibit to Paris in the shape of a model of a stockyards packing house. The exhibit will afford an opportunity to see just how cattle are received and handled from the time the stock cars arrive until the dressed meat is received for shipment. The model will be eight feet square and will cost over $5,000.

The will of the late Philip D. Armour, Jr., disposes of property valued at $8,000,000. One-third of the estate is left to the widow, and the rest is left in trust for the two surviving sons of the testator.

The net expenditures for carrying on the Boston public schools for 1899, exclusive of furniture, repairs, and new schoolhouses, was $2,383,787.97; rate per pupil, $28.72.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## Selected Articles.

### The Phoenix.

BY EDWARD EVERETT NORWOOD.

From the land of ancient Egypt,
On the banks of storied Nile,
Comes a lesson, old and musty,
To keep our hearts from guile.
A lesson fraught with wisdom
And love for you and me;
For all who, having ears do hear,
And having eyes, do see.

It was fabled in that country
(In the town of Pe Ra On),
That a bird of brilliant plumage,
Most fair to look upon,
Came flying to the city
Once each five hundred years,
Was welcomed by the people
With prayers and joyful tears.

And when the service ended
And all the rites were said,
It gathered up sweet spices
And leaves about his head.
Then suddenly above his form
Would start a blazing fire,
Which burned, till it at last became
His chosen funeral pyre.

Then even while the people looked
Upon the wondrous thing,
From out the slumbering ashes
Another bird would spring!
A bird of rarer beauty
And color than the old,
Which, rising, slowly flew away
On wings of red and gold.

So from this ancient fable
A lesson comes to-day,
To warn us that the Phoenix' part
We each and all must play;
That every wrong and sinful thought
Of pride and worldly pelf
Must be consumed, and then will rise
From the ashes of vain self,

The purer form, the Christ-like man
Of meekness and of might,
Of wisdom, love, and justice,
And honesty, and right.
So let us all be ready,
And make no more delay,
But gather up the sinful thoughts
And light the fire to-day!

## "Faith with Works."

Many spiritually minded men and women in this age, like Simeon and Anna of olden time at the birth of Jesus, waiting and watching for the Mind of Christ to more fully possess them, are bidding "All Hail" to the spiritual idea now dawning upon us, the promised Comforter of our Master—Christian Science, so named by its Discoverer and Founder, Mary Baker G. Eddy, in her text-book, "Science and Health with Key to the Scriptures." In almost every city and hamlet in our own country, and many in foreign lands, may be found living witnesses of the power of the gospel of Jesus Christ to heal the sick and reform the sinner.

The Apostle James says, "Yea, a man may say, Thou hast faith, and I have works: show me thy faith without thy works, and I will show thee my faith by my works." In every Christian Science church the Wednesday evening meeting is devoted to testimonies of healing. All Christendom should rejoice for a teaching that shows us how we may touch the hem of Christ's garment and be made whole.

We herewith append testimonies recently given at First Church of Christ, Scientist, this city:—

A sales agent of the National Cash Register Co., whose home is in Chicago, gave his experience. Prior to hearing of Christian Science he had been afflicted with asthma, and though under the best medical care, he grew worse. Through a relative he was persuaded to try Christian Science, but after a few days' trial again resorted to *materia medica.* Getting so much worse he decided to try Christian Science a second time, which resulted in fully restoring him to health. He referred to the practicability of Christian Science in the home, stating that two children had been born in his family since he was interested in this Truth, and never had taken any medicine.

He spoke of attending a meeting in his own state, where a Methodist minister told of the healing of his niece of severe troubles, through Christian Science, but that he was more impressed with a demonstration of a child, the eleven-year-old son of this niece, who had met with an accident, breaking his leg. This minister asked his niece if she had a doctor, and she replied, no. Then he said, "You had a surgeon?" No, was again the reply. "But what did you do?" She said, "We did not do anything, but let God do the work." In two weeks' time the boy was healed, and at this time was out in the yard playing.

This same minister visited the large Christian Science churches in Chicago, and found them well attended, even when the weather was very disagreeable, and told of listening to the testimonies of healing, remarking that he was a humble seeker after Truth, and was directed to search Science and Health.

This sales agent spoke of the wonderful growth of Christian Science in Chicago, and that at present they are building simultaneously two large churches, one on the north, and one on the west side. When completed this will make three churches in that city, each costing over one hundred thousand dollars, with a seating capacity of nearly two thousand each.

Digitized by Google

Another traveling man, after speaking of the beauty of the lesson, referred to his own healing. The physician consulted said he had the grip. After being in his care for some time without restoration to health, he decided to try Christian Science, but not experiencing any benefit again resorted to medicine. He rapidly grew worse, and was advised by his physician to seek another climate and went to Indian Territory. His condition was such that when his wife bade him good-bye, she never expected to see him return alive, though she did not so inform him, at that time. He continued to grow worse until he was much alarmed. Other physicians were consulted. All the symptoms of consumption were manifest.

Though under the care of *materia medica* he had taken Science and Health with him. With his first experience in Christian Science there was an impression made, though he thought he had not received any benefits. Christian Science had taught him that God is all power. He knew something of its teaching, but had not lived it. He realized there was a work for him to do. God must be proven "All-in-all." Whiskey and medicines were put aside, and the Bible and Science and Health were brought out and read. In a few days it was apparent to friends that he was much better. He continued to improve, and to-day enjoys better health than ever before and weighs more, and has learned to cling closely to the Truth.

A third salesman, the very picture of a robust and healthy man, with a marked degree of intelligence, spoke of the practicability of Christian Science in business. Like a child he told how he trusted in God to guide, direct, and care for him each day, and how he had been abundantly blessed.

The First Reader, in charge of the services, stated that near our city was a Shaker village, where Christian Science had been introduced a few years ago, and some of the inhabitants healed. Since then our church had supplied them with literature. He then announced that the clerk would read a letter received from them under the date of January 9, 1900. By way of explanation the clerk stated that the eldress of the village fell a few weeks prior to this, breaking her arm, and that they had employed a physician to set the bone, but that Christian Science had been applied to overcome inflammation and soreness, and no medicine was used. The letter read,—

*Our Dear Friends in Truth*:—Eldress Hester is improving finely. We realize the allness of Truth, and God as our ever-present help. We feel that your influence for our happiness is realized by us, and that we can never say half enough for the blessing received through reading "Science and Health with Key to the Scriptures." The author of this wonderful book is our dear Mother, whom we love and bless. It is a feast of good things that no one can hinder us from enjoying. We can retire to our closet, and there give thanks for numberless and nameless blessings that no other source could ever bring. We receive the *Christian Science Journal* and the *Sentinel,* and we venture to say that every word is read, and some of the articles many times over. We, of all people on this earth, should be able and willing to shout aloud for the wonderful blessings bestowed upon us as a little band of pilgrims. God bless the day we first heard the truth of Love and Life through our Science friends. We have a treasure that nothing can ever take from us, no difference what the condition. It helps in every case, both spiritually and financially. It makes our heart feel glad and give to our Mother, in the light of Truth, praise and thanks. It all comes through Science and Health, and in trusting God, and in looking for blessings in the right direction.

Signed, MARY.

From the Friends interested in Christian Science at Watervleit, O.

Speaking of the benefit of the public services, a gentleman stated that he had always found the Sunday services and Wednesday evening meetings very helpful. If suffering from any physical trouble he went away relieved.

A member spoke of an instance of healing that occurred at our meeting one Wednesday evening. A lady had been suffering with a stiff neck, and it was such that her husband did not think it advisable for her to go to church, but she decided to do so. By the thought of Truth manifested at this service she was healed.

A man testified that by the reading of Science and Health and attending the services, he had been healed of stomach trouble.

Locomotor-ataxia was spoken of as being healed. A lady stated that her brother-in-law had been healed of this disease through Christian Science, after trying a number of physicians. He can now walk as erectly as any one, and is perfectly well. This led her to investigate and become interested in the Truth that healed him.

Word was sent to a Scientist that a man living in the country was suffering with heart trouble and pain in his back, and wanted help. This was given, and soon thereafter another message was received, stating that the trouble had been met and that he was able to haul gravel. Early one morning this same Scientist was called to see a little girl suffering with pain in the head and sickness at her stomach. The pain and sickness were soon destroyed through her understanding of Christian Science.

A mother testified to the healing of her little girl of tonsilitis through Christian Science.

A man testified to being able to discard glasses since becoming interested in Christian Science. Being by profession a bookkeeper, he has used them since 1883, thinking that he could not possibly do without them, but now can read without any inconvenience.

The desire for intoxicating drinks, said one man, has been overcome through Christian Science.

By the side of one lady sat a young man who, we learned, was her brother. He had accompanied her to church as proof of what Christian Science could do for one who had been confined to bed with inflammatory rheumatism, unable to move his limbs, with high fever and joints swollen. In thirty-five minutes after the Scientist entered the room the boy was able to be on the floor and walk. On the fourth day thereafter he was out of doors. Previous attacks of this kind always lasted from four to six weeks under medical care.

Christian Science was spoken of as being very effectual in overcoming colds, cuts, bruises, and many similar complaints.

An elderly gentleman was spoken of as being healed of diseases of forty years' standing.

Is it any wonder that Christian Scientists should be a happy and contented class of people after being freed from so much suffering, so much worry, so much trouble and anxiety. Though the benefits received physically have been great, yet when consulting those who have been healed, they inform us that while they are very grateful for the relief from suffering, they always value this the least, and say they are most grateful for the better understanding Christian Science gives them of God, the more confidence and trust it enables them to have in the Bible promises, and for the moral and spiritual reform it brings in their own lives. This is the one natural and universal effect of Christian Science.—*Dayton (O.) Weekly Herald.*

## Disease—its Cause and Cure.

SOME means and methods for the healing of the sick have been practised among men in all the ages. The healing art has engaged the attention of the profoundest thinkers and scholars of every generation in all the rounds of time. Thousands of books have been written and schools in plentiful number have been established throughout the realms of civilization, and every means known to the skill and genius of man have been employed to elucidate the art, and to educate and qualify the healing practitioner for the successful treatment and destruction of disease. The mineral, vegetable, and animal kingdoms have been vainly explored for means to overcome disease and to stay its destroying work among the children of men.

Whatever may be said as to the success that may have been attained in treating some forms of disease it will scarcely be denied that the phases which this evil assumes are continually on the increase. Who can say that death is not now more sudden and inexplicable than at any former period? Scanning the history of the past and present who can discover from the standpoint of material modes any promise or sign of the extinction of the dread disturber? What hope along the old material lines is offered to mankind? The sick and suffering multitudes in this city to-day and in every quarter of the globe deny with unanswerable accent the claim that disease is under the control of medical skill. A search among those who have passed the noon-hour of human life will disclose the fact that disease in some phase or form is still the rule and not the exception. Many among the sin-sick and weary await with some measure of hope the glad coming of the Christly method of Jesus and his disciples which healed both sin and disease.

The schools of every country regard disease as of material origin, and treat it with material agencies. It is supposed to be almost entirely separate from sin and from error of thought. Ignorance of God and man's spiritual nature are not generally supposed to enter into the cause of disease. The statements of Jesus that a knowledge of the Truth would make us free and that to know God and Jesus Christ aright is eternal life, are not regarded as having any practical importance in the solution of the ever-perplexing problem. How plain seems the teaching of Jesus that the destruction of sin and disease are inseparable; for the effect could not remain when its cause was gone. "Whether is easier, to say, Thy sins be forgiven thee; or to say, Rise up and walk? But that ye may know that the Son of man hath power upon earth to forgive sins, (he said unto the sick of the palsy,) I say unto thee, Arise, and take up thy couch, and go into thine house." Again he said to the impotent man whom he had healed, "Behold, thou art made whole: sin no more lest a worse thing come unto thee." In Luke, 13 : 16, referring to the healing of the crooked woman, he said: "And ought not this woman, being a daughter of Abraham, whom Satan hath bound, lo, these eighteen years, be loosed from this bond on the Sabbath day?"

How can the religious thought of this awakening hour longer ignore the cogency of these statements that were accompanied with such indisputable proof of their absolute verity? Jesus did not assert or imply that this woman had been herself guilty of any special sin, but simply that her condition expressed one of the many forms of sin or satanic beliefs in universal human thought which spring from the errors therein. These errors include what is commonly known as positive sin as well as the sin of ignorance, or a belief in, or fear of, some power opposed to God and His righteous laws and government. Is not the great sin of the world to-day a belief that there is something besides God, divine Intelligence, that can do more for us in times of trouble than He can?

If it were admitted that the teachings of Jesus are true, that sin and error are the cause of disease, no one would any more think of healing disease by means of drugs than he would of healing sin by that method. If the sin or error must be first cast out, then the spiritual methods of Jesus as taught and affirmed by Christian Science must be the only effectual means that can be employed. The healing in Christian Science is based upon this statement of Jesus, and demonstrates that his proposition was then and still is true. If, however, it should be denied that sin or error of human thought is the primary cause of disease, yet it must be admitted that any quality of good possesses the character and essence of every other quality of good. So one form of evil has the nature and tendency of every other form and they cannot be separated in origin or destiny; hence every manifestation of sin, disease, or discord must proceed from error of thought. Therefore, every form or manifestation of evil should be treated in the same general way. For this reason it may be logically affirmed that errors of thought can only be corrected through mind or intelligence, and this mind must be good, must be right, must be true. It must be the one infinite Intelligence or Mind, which we call God, and which Jesus so thoroughly understood and reflected as to heal the errors in human thought that came to him.

Christian Science is the science of this one divine Mind, and the harmonious action of its laws in human consciousness, whereby the errors therein are cast out. As Jesus commanded, Christian Science applies the axe to the root of the tree of evil and error, whence every branch thereof withers away forever. Morphine is given to allay pain, but not removing the cause, its action is temporary. Is it not evident that healing by drugs leaves the belief and fear of disease still in the thought of the patient, and just as liable, if not more so, to some form of disease as before the supposed healing? In Christian Science, the healing of any form of sin or disease strikes at the very root of every form and type, because the healing is done through the understanding of the one Mind that is eternal, universal Good. And the action of this Mind on human thoughts and bodies is universal in its effect. Just to the extent that the student of Christian Science gains an understanding of God, or divine Mind, does he reflect to his patient the healing power of Truth.

What a blessing to mankind it will be when all shall accept this teaching of Jesus as made clear in Christian Science. Of all the evils that afflict the race to-day, the one that man calls disease is the one he most desires to be rid of. To lay it off he will travel over every land and sea and submit to the most excruciating torture. When he learns that to be rid of disease he must rid himself of sin and error of thought, and that this can only be done through an understanding of God, then will man turn to Him as his only Saviour with a zeal, earnestness, and confidence known only to those who in the past understood and who now understand that God is man's only Redeemer from the ills of flesh. From this beneficent motive for human action, sin must totter to its final fall with a rapidity not now within the range of man's finite conception. This understanding of God that heals disease to-day through the universal and eternal action of His spiritual laws is gained only by a patient, faithful, and honest study of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, in connection with the Bible, and living and practising what is learned. That this is no idle statement is being attested by thousands in this country at this time, and the good news has crossed the waters and the proof is found there as here. J. C.

## The Lectures.

### At San Diego, Cal.

The lecture of Hon. William G. Ewing of Illinois on "Christian Science, the Religion of Jesus Christ," called to the Fisher Opera House last night (Sunday, February 18) one of the largest audiences which has ever gathered to hear a religious talk either on Christian Science or any other subject. It was well for the First Church of Christ, Scientist, that the Opera House had been secured, for the usual meeting place would not have held one half the large audience. It filled the large auditorium and balcony, and some were crowded into the gallery in order to find room within hearing of the speaker's voice.

The lecturer was introduced by Judge George Puterbaugh, who said in part:—

*Ladies and Gentlemen:*—I feel that it is a great honor to have the privilege of introducing the distinguished lecturer of the evening to this magnificent audience. I am not a professed Christian Scientist, and hence I possess no special fitness for the pleasant duty now before me, further than as a former citizen of the great state of Illinois, I had, and have, the pleasure of knowing; either personally or by general reputation, all the many illustrious citizens of that great commonwealth. It has produced many men who stood high as warriors and statesmen. With all these, the speaker of the evening was a friend and associate.

For a third of a century he has stood in the front ranks in all things which constitute good and highly respected citizenship. He is possessed of vast learning, and he is one of the profound thinkers and investigators of the age. He is a man whose integrity and honesty of purpose are above and beyond all reproach, or question. Knowing the unimpeachable reputation of the gentleman for veracity and fairness, I can pledge this audience in advance that he will not resort to subterfuge or exaggeration in the presentation of any argument he may make. He is possessed of a logical mind, and he is one of the foremost lawyers of the nation. Such a man would not undertake to urge a point which he could not substantiate with authority of the highest standing. From the subject upon which he is to speak to-night, I imagine that he will present as his authority for many important points nothing less than the Holy Bible itself. Christians, no matter to what denominations they may belong, cannot reasonably demand any higher authority than this.

Personally, and without any mental reservation whatever, I believe in the one omnipotent God, and that all the inspired writings and teachings contained in the Holy Bible are absolutely true. While I thus unreservedly believe, candor compels me to confess that I do not understand.

It is now my pleasure to present to you as the lecturer of the evening, the Hon. William G. Ewing.

Judge Ewing was greeted with hearty applause.

*San Diego Union.*

### At Minneapolis, Minn.

One of the largest audiences that the Metropolitan Theatre has ever held gathered to hear the lecture given by Judge Joseph R. Clarkson of Omaha on Christian Science yesterday afternoon (Sunday, February 18). Every seat in the house was taken, and many who came after the hour announced for the beginning of the lecture were obliged to return to their homes.

Judge Clarkson was introduced to the audience by Rev. M. D. Hardin, pastor of Andrew Presbyterian Church, in the following remarks:—

*Ladies and Gentlemen:*—I have been requested to introduce the speaker for the afternoon.

While I am not a Christian Scientist, I am a Christian. And as a Christian, I do not claim for one moment that any or all the older interpretations have exhausted the truth which came to the world from the man of Galilee. Christian Science has enabled many men to find Christ, who never found him in any of the older interpretations of the teachings of his life. There are in this country of ours to-day many men—sincere men—and women who claim to have been greatly benefited through the teachings of Mrs. Eddy. The days of narrow, blank bigotry, I hope, are over. I hope that men in this age are ready and glad to welcome a truth that makes life better, no matter from what source that truth may come.

I believe that it is the duty of every man and woman to study sympathetically, earnestly, the teachings of Christian Science, and if there is truth in it, then it is their duty to accept that truth and to proclaim it to the world.

I have the pleasure of introducing to you the speaker of the afternoon, who I know will give us a clear statement of the teachings of Christian Science, and if Judge Clarkson is as delightful as a lecturer as I know him to be delightful in the social circle, there is a pleasant hour before you. I have the pleasure of introducing Judge Joseph R. Clarkson, who will now explain to you the teachings of Christian Science.

As Judge Clarkson stepped forward to begin his address, he was given a hearty reception by those who had assembled.

*Minneapolis Journal.*

### At Wallace, N. Y.

Thursday evening, February 8, Carol Norton, C.S.D., of New York City, gave a lecture in the Union Church on the subject, Christian Science. The night was dark and stormy and the country roads in all directions muddy and hard to travel over, but in spite of all this a large audience gathered to hear Mr. Norton elucidate Christian Science. This he did in such a clear and understanding manner as to hold the closest attention of his audience for nearly two hours. The speaker was introduced by Rev. J. W. Richardson, the Universalist pastor from Cohocton. A goodly number of Scientists and friends drove from Hornellsville, Pa., and Cohocton. Two of our Mother's faithful students from Rochester were present. The people in this section are much interested in Christian Science, and this lecture has brought it vividly to their thoughtful attention.

JAMES B. MERRITT.

### At Oneonta, N. Y.

At the Oneonta Theatre, last evening (Friday, February 23) a large and attentive audience listened to a lecture upon "Christian Science—Universal Christianity," by Carol Norton, C.S.D., of New York City, one of the most eloquent exponents of the teachings of Mrs. Eddy. The assemblage embraced representatives of all creeds, and the close attention the speaker received demonstrated that all were either sympathizers or students, with willingness to learn the teachings of the Science.—*Oneonta Star.*

Work gives balance and regularity to the movements of the soul. It drives all discarded fancies out of the mind. The condition, however, is that it shall be really work, not the show of it; that we shall put ourselves wholly into it for the time; that we shall not work mechanically, nor reluctantly, but with our thoughts present, our heart in it, as well as our hands. JAMES FREEMAN CLARK.

## Memorial Church.

A SCORE or more leading Protestant divines of New York City and vicinity have issued the following appeal to the Protestants of the United States:—

In the year 1529 A.D., the Diet of the German Empire assembled in the old city of Speyer-on-the-Rhine at the call of the Emperor Charles V. It was convened for the express and avowed purpose of suppressing the religious reform movement which had been begun by Luther and other prominent reformers, and by their determined propagation had spread rapidly and threatened the predominance of the Catholic Church. The Diet yielded to the promptings of the Emperor, and by a large majority pronounced the condemnation of the new faith, and placed all its followers under the ban of the Empire. The good cause seemed lost; but the intended effect of this proscription was neutralized by immediate and resolute resistance in the Diet itself. A minority of six princes and fourteen representatives of free cities, in defiance of the imperial ire, made a solemn protest in most vigorous language, and proclaimed it to all the world. It is from this fearless act that the designation of non-Catholic denominations as "Protestants" is derived.

It was resolved by prominent Protestants to commemorate this momentous historical event in the birthplace of Protestantism, at Speyer, within a few miles of Heidelberg, by an enduring monument. After much deliberation the conclusion was reached that a memorial church would be the worthiest and most appropriate form, and that all Protestant Christendom should be invited to contribute toward the cost of it. A commission of experts selected the best design out of forty-five submitted to them. The erection of the edifice has been progressing for five years out of a building fund collected in Germany. It represents the pure Gothic style of architecture, which is adhered to in the smallest details. It will be surmounted by a hexagonal tower, which will reach a height of three hundred feet. The material used is a hard sandstone from Alsace, whose yellow-gray color imparts a noble simplicity to the structure. The body of the building is completed, and the roof is now going up. The church will easily seat fourteen hundred people. Its acoustic properties will be excellent.

The ground floor of the tower will be used as a memorial hall, thirty-five feet in diameter and sixty feet high. In entering this imposing space through the beautiful carved portals, the visitor will find in the centre a bronze statue of Martin Luther, nine feet high above the base. With his left hand he clasps the Holy Bible to his breast, while with the outstretched right he seems to sweep away religious prejudice. This statue will be surrounded by the figures of the six princes who signed the protestation, donated by their descendants. The corners over the portals will be decorated with the coats of arms of the fourteen protesting cities. On the wall over the entrance to the main part of the church there will appear a colossal *al fresco* painting by the master hand of Professor Gussman of Dresden. The painting will represent the delivery of the document of protestation by Prince John, Elector of Saxony, to Ferdinand, King of Bohemia, who presided over the Diet at Speyer, as the substitute of the Emperor.

Most of the painted windows will be presented by the Protestant princes of Europe—the German Emperor and Empress having given five of them. In the central window there will appear a large painting of Christ, after a design by Wilhelm von Kaulbach. The organ will be presented by church choirs, who are giving concerts for that purpose.

The entire cost of the church will be $375,000, two-thirds of which have been raised in Europe, and it is earnestly desired that the Protestants of the United States contribute the other third.—*Boston Herald.*

## Uses of Electricity.

AN address on "Every-day Uses of Electricity" was delivered at the Montauk Club, Brooklyn, by Charles W. Price, editor of the *Electrical Review*. In speaking of the telephone, Mr. Price said:—

"To show what remarkable doings take place every day under our very ears, as it were, I would state that at the present time between all important telephone centres of the United States, while the trunk wires are being used for transmitting speech, there is being sent over them simultaneously telegraphic messages without producing any interference with the spoken words. Were it not for immutable laws of nature, which cannot be varied by man or corporation, you might, by listening, take off the telegraphic message thus traversing these very conductors. Although the telegraphic impulses actually traverse the coil in the telephone at your ear, and actually speed along the identical copper conductor at that time conveying the voice currents, you hear neither dot nor dash of the telegraphic message. The ear, keenly tuned to those rapid vibrations constituting sound, is deaf to the vibrations of the slow rate of the telegraph."

Mr. Price said that over six hundred million dollars had been invested in electric lighting in the United States, and that the total horse-power required in the electric lighting, arc and incandescent, of Greater New York required not less than two hundred thousand horse power. This would be sufficient to pump the East River dry in a day, and yet this power would be nearly doubled by the electric traction plants now in existence and building. In speaking of the progress of the electric railway, Mr. Price stated that it was less than thirteen years old, and yet within that period an expenditure had been made of more than $1,700,000,000, and he believed that the year 1900 would see the gross earnings of the electric traction interests of the United States amount to considerably more than $200,000,000.

"One can travel," he said, "by electric cars from Paterson, N. J., via New York City, to Portland, Me., with only three insignificant interruptions of less than fifteen miles all together."

He stated that the storage battery for electromobiles had been reduced in weight from twelve hundred pounds to six hundred and it would run sixty miles now as against thirty miles one year ago.

In speaking of wireless telegraphy, the speaker stated that it was not yet "selective," and therefore only one set of apparatus could be operated in the same locality at the same time, the electric waves interfering.

In reference to ocean telephony, he said that while the cost of copper alone at present price and present calculations would amount to over $432,000,000, and while the insulation and armor would make the cable of the size of a flour barrel, and that while there was not enough guttapercha known to exist on the globe to insulate it, yet there did exist a strong belief, in which he shared, that in the lifetime of his listeners the ocean telephone would become a reality.—*New York Sun.*

### Right makes Might.

Neither let us be slandered from our duty by false accusations against us, nor frightened from it by menaces of destruction to the government, nor of dungeons to ourselves. Let us have faith that right makes might, and in that faith let us to the end dare to do our duty as we understand it. ABRAHAM LINCOLN, 1860.

Gladstone said, "The promises and purposes of the Creator are not for an age but for the ages, and not for a tribe but for mankind."

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## False Rumor.

THE *Independent* says: "There is a split in the Christian Science body." A new body has been formed and already over twenty churches have been organized. It is alleged that there are ten thousand Eddy followers who have left the first church and the number is increasing every day.

The above, copied from the *Independent* of New York by the *Boston Transcript*, will certainly be news to Christian Scientists. The members of the Christian Science Church in Boston, the Mother Church, officially known as The First Church of Christ, Scientist, in Boston, Mass., as well as the members of its branches will read this item with surprise. There has been no split in this church, nor any new body formed of any kind or character whatsoever from the membership of this church or its branches.

We wish to say to our newspaper friends, that so far from there being any split among Christian Scientists, there never was greater unity or activity within the ranks than at the present time. New church edifices are being constructed in many places; new societies and churches are being almost daily organized; the church membership of the branches is rapidly increasing, and in ratio of the increase of membership in the branches is the increase in the Mother Church, whose members are now admitted semi-annually. At the last semi-annual admission of members in November, 1899, there were nearly thirteen hundred new members received.

The healing work of Christian Science is going actively on in every city and town, and almost every village and hamlet in this country and in many places in Europe and on the continent. New Reading Rooms are being rapidly opened; the demand for genuine Christian Science literature is becoming greater and greater each day. There is a general reaching out for this new healing Truth as discovered and founded by the Rev. Mary Baker G. Eddy, and the difference between the teaching and healing as established by her, and some others who claim to be Christian Scientists, but who have never demonstrated the fact to the world that they are such, is becoming daily better and better known. The public are no longer groping in doubt and uncertainty as to the genuine and the false. Christian Scientists are as well aware, as are others, that there are not a few persons claiming to be Christian Scientists who never were members of the Mother Church or of any of its branches, and who are therefore not entitled to recognition as adherents to the Christian Science movement. We say this in no spirit of hostility to others, but simply by way of statement of fact; this fact being due as well to the outside world, by way of authentic information, as to Christian Scientists themselves.

## What is News?

THE REV. CHARLES M. SHELDON, a prominent clergyman of Topeka, Kan., will have entire control of the *Topeka Daily Capital* for one week, beginning March 13. This unique feature of journalism in which Mr. Sheldon will dictate the policy of the paper, edit its news columns, and control its advertising, is for the purpose of affording him an opportunity to demonstrate the policy he would pursue in the publication of a Christian daily newspaper.

In 1895 Mr. Sheldon edited one issue of the *Topeka Mail*. In that issue he published the following editorial under the caption "What is news?" His work on the *Capital* will doubtless be in accordance with the views expressed at that time.

What is news? In other words, what ought a daily newspaper to furnish its readers?

1. Items of genuine national and international importance, political, religious, artistic, scientific, and educational.

2. Information that properly belongs to the home of the paper. This does not mean a publishing of private affairs. The newspaper has no more right to give to the general reading public the private affairs of individuals and families than Christian people have the right to gossip over the private matters of their neighbors.

3. A definition of what is news requires a definition of what is not. It is not news, for example, to publish in a Topeka paper the account of a murder trial in California. It may be news to the California people, but does not properly belong to Kansas people. Such a murder, with all its horrible details and court proceedings, is not news anywhere in the sense that the papers make it such by column accounts of it.

4. It is not news to print hearsay. The news of the day is facts. Everything in the nature of supposition should have a column by itself headed "Rumor." And the reading public ought to understand that whatever went into that column might be true, or it might not, according to what happened during the next twenty-four hours. But when a man reads a newspaper he ought to be able to feel that he is reading the facts in the case. A reporter on a newspaper has no right to an imagination while writing news.

5. The home has the right to object to the introduction into the family circle of anything it would not allow in book form. And yet one might cull from the papers in the course of a month a variety of detailed description of vice, crime, depravity, and brutality which, if bound up into a book and placed in a girl's or boy's hands to read, would shock every father and mother with indignation. Is it any better because it appears half a column at a time?

6. One definition of a newspaper would be a journal of information concerning what people ought to know and not what they want to know. A paper is not obliged to publish what the public demands if that demand is vicious. Journalism has an educating and moral function to perform as well as being a purveyor of news. And that is not legitimate news which creates a demand for reading which lowers instead of raising the moral standing of the reader.

## A Word of Justice.

We feel it to be our duty to say in refutation of all rumors to the contrary that Rev. George Tomkins, D.D., C.S., has not retired from the Christian Science work, nor allied himself with any movement adverse to true Christian Science. He remains true to his colors, and is actively in the work at Camden, N. J., as will be seen by his card in the *Christian Science Journal*.

Whatever is honest; whatever is moral; whatever is righteous; whatever is just; whatever is true; whatever is pure; whatever is free from hatred, malice, or revenge, pertains to Christian Science, or to a Scientific Christianity.

## The Lecture at Tufts College.

WE herewith publish in full the able lecture delivered by Rev. Irving C. Tomlinson, C.S.B., before the Philosophical Conference at Tufts College, Wednesday, February 21, at 3 o'clock P.M.; also the very appropriate introductory remarks of Prof. Herbert E. Cushman of the college.

We gladly yield to this purpose such part of our space as might otherwise be occupied with editorial remarks.

Professor Cushman said in part:—

*Ladies and Gentlemen, Members of the Conference:*—To-day we are to listen to Rev. Irving C. Tomlinson, one of the honored graduates of this college, who has come to speak to us on Christian Science. Mr. Tomlinson tells me that this occasion is notable in the fact that it is the first lecture on Christian Science given before an organization of a college by one of the authorized Christian Science lecturers. This leads me to remind you that Tufts College is a very liberal institution; and this fact is remarkable when you think that in no one of the other smaller, and only among a few of the larger, colleges of the country is there perfect freedom of thought. You would be surprised to see in how few institutions in our land is there liberty. The liberal attitude of Tufts College is in the main due to the fostering care of the honored head of the institution, —who, I regret to say, is unable to be present to-day, but he is supported by the Trustees and the heads of the departments of learning. This Philosophical Conference is a platform for the Philosophical Department of Tufts, on which it can give an hospitable hearing to representatives of different phases of human thought. We are always glad to have our graduates come back to us, to explain life theoretically for us out of the richness of their experiences. I believe that a serious opinion seriously held by a single serious person or a body of people, is always worthy my serious consideration. I am glad to present, therefore, Mr. Tomlinson, who will speak to us on Christian Science.

Mr. Tomlinson's subject was "Christian Science, the Science of Mind," and he said:—

Because it is quite impossible in a single short address to treat exhaustively so profound a subject as Christian Science, it is the purpose of this lecture to present Christian Science as the Science of Mind. To understand all that this Science includes, it is needful to read and to study the text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

It is in keeping with the honorable history of Tufts College that the Philosophical Conference in seeking to know more of this subject should appeal to an authorized lecturer to tell what Christian Science is, instead of going to an unauthorized controversialist to hear what Christian Science is not. As was the case with the Copernican system of astronomy and the theory of evolution, so with Christian Science, its most bitter opponents have been those who have known the least about it. Christian Science has in itself only blessings for every worthy institution and for every honest man. Those who know even a little of Christian Science have respect for it, even though they may not fully understand it.

### "AS A MAN THINKETH."

This invitation from the Philosophical Conference for a lecture upon Christian Science is not only evidence of a growing interest in the subject in our colleges, but it also suggests bonds of mutual interest. We all believe in the power of Mind and in the influence of the human mind upon the body. We are agreed with that ancient philosopher who said, "As a man thinketh in his heart so is he." Thoughts alter the face and the form. Fair thoughts beget fair features. Noble thoughts create a noble bearing. Greed and hypocrisy announce their presence. Lust and avarice tell their own story. The glutton may preach temperance, but his face proclaims his practice. The immortal Shakespeare well understood the power of the human mind, as when he made Lady Macbeth say to her husband,—

> Your face, my Thane, is as a book, where men
> May read strange matters;

or again when Hamlet declared,—

> The play's the thing
> Wherein I'll catch the conscience of the King.

You know that faith and hope, qualities of mind, are auguries of success. Distrust and despair presage disaster. The warrior who inspires his forces with the conviction of certain triumph will surely lead his army to victory. The strength and courage which of old inspired a Joshua found ready response in the hosts of Israel. They drove all before them, and won their gallant victories, convinced that from Heaven came their battle-cry, "Be strong and of a good courage; be not afraid, neither be thou dismayed: for the Lord thy God is with thee whithersoever thou goest."

### THE POWER OF MIND.

I assume we are on common ground also in believing that the Founder of Christianity had a profound understanding of the power of Mind. His knowledge of the Science of Mind is shown, first, in his words. One has but to study his parables, the Sermon on the Mount, and the Lord's Prayer to see that their author was a master of thought. How much more truly than the astronomer Kepler might Jesus have said, "I think thy thoughts after thee, O God." His understanding of Mind is shown also in his unerring insight into the human character. He read the human mind as one would read a book. At his first meeting with his disciple Nathanael he said, "Behold an Israelite indeed, in whom is no guile!" Well was it said of Jesus, "He knew what was in man."

Not only were his words and his judgment obedient to the One Mind, but so also were his deeds. His works pre-eminently show him to have had a firm grasp upon higher metaphysics. All his deeds of helpfulness are wrought, not through superior physique, not through wonderful mechanical or material appliance, but the Man of Nazareth was mighty in his philosophy of Mind.

A striking instance of the healing power of Mind is found in the restoration of the demoniac child, who had been taken by his father to Jesus' students, who were practising his methods with marked success. In this particular case, however, they had been unable to effect an immediate cure, and the father then appealed to the master-metaphysician. Jesus was successful where the disciples failed. When they asked for an explanation, he declared that the method was not at fault, but that their faith was at fault. To use his exact language, he said, "This kind goeth not out but by prayer and fasting;" meaning, evidently, that in the Science of Mind such cases are healed through a deeper insight into and a clearer consciousness of the allness of divine Mind. This case is characteristic of all that Jesus accomplished through the power of Mind, and his works show that, with the great Physician, Mind, and Mind alone, was sufficient to restore the sick and sinful to health and happiness.

The Science of Mind was not new with Jesus. It was as old as Israel. The Father of the Hebrew race practised it, for we read, "Abraham prayed unto God: and God healed Abimelech." It was known of Moses, and through his understanding of the power of Mind he lifted a race of slaves out of bondage and made them an independent nation. It was understood by David, and he sang of his God, "I cried unto thee, and thou hast healed me." It was beheld by the prophets, and they told of its power for their nation, saying, "Heal me, O Lord, and I shall be healed; save me, and I shall be saved: for thou art my praise."

### SCIENTIFIC CHRISTIANITY.

So far we have journeyed amicably together. We recognize the power of Mind upon the body, and we agree that Christ Jesus and the Bible characters accomplished much of their work by means of this power of Mind. The proposition which Christian Science makes to all is, that there should be no halting-place until the full Science of Mind is attained. The advance move which the Scientific Christian thinks that he has made is his conviction that Christianity is a Science. Just as you feel and know that mathematics is an exact science, so we feel and know that Christian Science, as the Science of Mind, is also an exact Science.

It may be said that the probabilities are against the existence of such a Science, for if there were a Science of Mind, it is sometimes said, it would have been discovered long ago. Upon this point the following facts are to be carefully considered.

The existing sciences are not to-day known by all men. There are large bodies of people who do not know of the science of music. We say that to such the science of harmony awaits discovery. Their ignorance cannot be accepted as evidence against a science which we understand.

History makes it probable that there was a time when no one on this globe understood the science of numbers. But the darkness then existing did not disturb the fact. With advancing light this science became revealed. This principle of mathematics was discovered by man when he was prepared for the discovery.

That the Science of Mind should be late in being discovered is not strange. It is what was to be expected. The natural order would be that man should discern the lesser sciences first and the greater last. As Mind is the source of all the true sciences and includes them all, its discernment would not precede but follow their discovery. As it is written, "First the blade, then the ear, after that the full corn in the ear."

### AN EXACT SCIENCE.

The Christian Scientist feels, therefore, that the Creator has provided such a Science, which only awaits discovery by the individual to become as practical in solving his life problems as the science of mathematics is practical to the mathematician in solving his problems.

The science of mathematics has its principle from which all is derived, upon which all depends, and which includes the all of mathematics. The Science of Mind has its Principle, the one originating Mind, our God, from whom man is derived, upon whom man depends, and who includes all that really exists.

The science of mathematics has its separate ideas—the numbers—and these numbers partake of the nature of their principle. Likewise the Science of Mind has its idea, and this idea, or man, partakes of the nature of his Principle, the infinite Mind, our God. Numbers have their signs, the figures which represent them. Man has his sign, the human figure which represents him. Numbers exist in mind as ideas, and are governed by their principle. Man exists in Mind as an idea, and is governed by his Principle. That which is real and substantial in mathematics is not the signs and symbols which are seen, but the principle of mathematics and its ideas.

That which is real and substantial in Mind is not the human figure which is seen, but God and His idea, the perfect man,—these are the real and eternal. Wherefore it is written, "The things which are seen are temporal; but the things which are not seen are eternal."

And this corresponds with what we know to be in harmony with experience. We all agree that the true man is of the mental realm. What he thinks and what he feels constitute the veritable man. Your friend is more than the eye beholds. He is more than the gross weight to which the scales testify. Your friend is as much of Mind as he expresses. And that which the eye sees, what of that? Is it not the visible sign and symbol of the real man? Is it not the witness of the invisible spiritual idea which the eye does not see? As in the science of mathematics the figures stand for ideas, so in the Science of Mind is not this human figure the visible witness of the invisible spiritual idea that we call man?

Man, the true man, then, is the true idea of infinite Mind, of which the body is the figure. In this view we are certainly in accord with an early statement of the Bible, that "God created man in his own image." As God is Mind, then man's real being is like Mind. And the Master said, "I and my Father are one," *i.e.*, Infinite Mind and its idea, man, are one. Again, Jesus said, "My Father is greater than I," *i.e.*, the Infinite Mind which includes all is greater than any one of its ideas.

### MIND THE TRUE REMEDY.

Because the Christian Scientist regards man as an idea of Mind, just as the mathematician regards numbers as ideas of mind, he holds that what is true philosophy in dealing with the problems of mathematics, is true philosophy in dealing with the problems of man. In mathematics certain problems present themselves and certain fixed and invariable rules prevail for their solution. The mathematician in working out his problem, when he fails of the correct answer, has an exact method of procedure. He finds the mistake and corrects the error through the right understanding of the truth. Likewise the musician has a scientific method for restoring harmony when he finds discord. He knows the truth, and the truth makes him free from the discord. The mistakes in the mathematical problem are made apparent by misplaced figures. For these mistakes the figures are not held responsible. To correct the mistakes, the mind which made them must be corrected. Free the mind from mistakes and the problem will be free from mistakes.

What is true science in arithmetic, Christian Science holds to be true science in the human problem. The error in man's problem is made apparent by an imperfect human figure. For this mistake the body should not be held responsible, for the body is but the instrument of the mind. Free the human mind from its error and the human body will be free from its disease. To remedy the error of disease, then, the Christian Scientist, like the mathematician, does not treat the figure, but rather he treats the mental condition which produced the disease. He regards disease as due to the absence of Mind,—divine Mind. He treats the disease through the presence of Mind. To him sickness and sin are signs of mindlessness. Life and health are the signs of mindfulness. Christ Jesus then announced the fundamental fact in the Science of Mind when he declared, "Ye shall know the truth, and the truth shall make you free."

As Christian Science has a Scientific treatment for disease, it has also a Scientific treatment for sin. In this Science of Mind, as darkness is the absence of light, so sin is the absence of Good or God. As light is the reality and darkness its absence, so Good is the reality and sin its absence. As darkness is not the child of light but vanishes before the light, so sin is not the product of Mind but is destroyed by the advent of Mind.

To heal sin, then, it cannot be Scientific to regard it as something real and genuine. If God made it, it would be eternal, and man could not destroy it. God is Good and all that He made is like Himself, hence evil is but the absence of what is real. To destroy it we know the Truth concerning that which is real, and this perception of the Truth is the sunlight from the divine Mind which destroys the supposed power and presence of evil. In harmony with which it is written, "To this end was the Son of God manifested, that he might destroy the works of the devil."

### THE PRAYER OF FAITH.

This Mind method for solving life's problems the Christian Scientist understands to be in complete harmony with the true and Scientific doctrine of prayer as taught in the Bible and as practised by the great Physician and by all his students. For in this Science of Mind prayer has a comprehensible and Scientific office to perform. The Christian Scientist recognizes that a constant desire for goodness and a deep-felt longing for Divine help and strength, is a constant prayer. He knows that "The effectual fervent prayer of a righteous man availeth much." Not only in the Christian religion, but in well-nigh all religions and among all peoples, prayer has a prominent place. Too often it has been so much abused that not a few philosophers have found no place for it in their philosophy. We apprehend that it has no place in much of modern philosophy. Such, however, was not true of Hebrew philosophy. Throughout their sacred Scriptures prayers are enjoined and definite assurance is given that prayer is a practical and an efficient method in the accomplishment of good.

It was so used by Jesus of Nazareth, and he announced, "All things whatsoever ye shall ask in prayer, believing, ye shall receive." Those words as understood in Christian Science are plain and Scientific. In this Science of Mind prayer is seen to be the same Scientific process for solving problems as that employed in all the exact sciences. In the exact science there is but one way to solve a problem, and that way is through demonstration. In mathematics, the problem is solved when the right relations between the numbers are discovered and understood. The student does not demand that the multiplication table shall do his work for him. He knows that he must work out his own problem. He opens his eyes to the truth involved, and this clear-eyed discernment solves his problem.

The Christian Scientist regards right living as a problem presented to him for solution. And just as he regards a problem in numbers as a mental problem, so to him right living is a mental problem. The right solution to his life problem is to be gained through demonstration. His problem is rightly solved when the right relations between himself and his Principle are discovered and understood. The Christian Scientist does not pray God to do his work for him. He knows that he must work out his own life problem. His prayer consists in opening his eyes to the truth involved, and the right understanding heals sickness and sin and gives health and harmony. In complete accord with which the great Christian philosopher accurately stated the Scientific process for solving our problems in the words, "Work out your own salvation, . . . for it is God that worketh in you."

### TRANSFORMATION THROUGH REFORMATION.

I am confident that your studies in philosophy and your observations among men suggest reasons favoring this Scientific method for solving life's problems. You know how the human mind re-acts upon the body. It is not new to you that the physical condition is largely dependent upon the mental condition. You have seen how anger flushes the face and distorts the features; how fear brings pallor and weakens the body. It is of general comment that unhealthy thoughts induce disease and are known to result in death. Three of New York's eminent physicians, as reported in a recent issue of a Boston daily, agreed to the statement that through business troubles, through great excitement or mental disturbance, there may be developed diabetes. According to their statement, "There is never a ministerial crisis in England but two or three members of the Cabinet come down with an attack of gout." Physicians agree that death has often been occasioned through fright. And if this mental condition so affects the entire body, must it not be conceded that mind not only controls the body partially but wholly?

The believer in the Science of Mind therefore asks with good reason, If disease comes from a mental cause, why will not health come also from a mental cause? He affirms that as it is a false condition of mind which produces disease, that the right condition of mind will heal disease.

There can be no question that disease is always an effect. In itself it is not a cause. It is an unhealthy conclusion from unhealthy premises. According to the accepted rules of logic, the method in such a case would be to doctor the premises. If the premises are right the conclusion will be right. An unhealthy body is the bad conclusion resulting from an unhealthy mind. According to Christian Science it is logical as well as theological to give health to the mind. With this premise right there follows as a logical conclusion a healthy body. According to philosophy you change an effect by changing the cause which produces the effect. Certainly that system would violate every rule of philosophy which undertook to alter an effect by entirely neglecting the cause and treating only the effect.

There can be little question that disease is always an effect. Christian Science, then, is certainly philosophical when it heals sickness by healing the mental cause which produced the sickness. You clarify the stream when you clarify the fountain which is the source of the stream. Upon this point the medical experts above quoted bear strong testimony. They were discussing insanity, and the question was asked, "What is the biggest thing that can come for the treatment of the brain?" The startling answer given was, "A complete reformation of the life of every man." This is the avowed purpose of Christian Science, "A complete reformation of the life of every man," a purpose in full harmony with the injunction of the great Physician, "Be ye therefore perfect, even as your father which is in heaven is perfect."

The value of a philosophy ought to be in what it accomplishes. Christian Science as a philosophy is ready to be judged by that standard. Every true Scientist furnishes the proofs of his Science in the problems he has rightly solved, by healing all manner of diseases and all forms of sin. The entire membership of the great Christian Science denomination is made up of visible proofs of problems rightly solved. Its hundreds of churches, its thousands of teachers, lecturers, readers, and healers, its tens of thousands of active workers and members are evidence to the believer that Christian Science is unquestionably the Science of Mind.

### THE SCIENTIFIC PRACTICE OF JESUS.

If we have been able rightly to present this Science of Mind, we have separated it from other systems which solicit your attention. It has been made evident that Christian Science is not faith cure—where high hope and fervent trust are alone relied upon to solve the problems of life.

It is evident, also, that Christian Science is very unlike hypnotism and mental science, in which systems it is the human mind which is made the instrument of cure. In Christian Science it is the Divine Mind, God, which heals. In hypnotism it is the stronger magnetic personality dominating and controlling the weaker one. The Christian Scientist knows that the less of the personal element there is in his work the more the Divine Mind will reach and help another. By mental action he means the operations of the human will only as it is governed by the divine will, according to the Scriptural injunction, "Not my will, but thine, be done."

Those who are believers in that God who is Mind and the Creator of all, cannot rest content in the mental science that has to do only with the human mind. In our efforts to escape the despotism of matter, we may for a time depend upon our own mental power, but this finite, human mental science cannot long suffice. It must soon

Digitized by Google

suggest itself to us that if we are to have a Science of Mind, why stop short of that which includes all Mind? The human is finite, its science, then, is finite. Christian Science reaches out to All Mind, the infinite God, and includes all Science. The individual is but a fraction of the whole. The system which deals only with the human can be but a fractional science. At best it is but a stepping-stone to that Science of Mind which teaches us to "know thee the only true God, and Jesus Christ, whom thou hast sent."

That the true system of scientific Mind healing includes more than faith, and more than a strong personality, is shown in all the works of the Master. Take for example the healing of the demoniac child which has already been cited. The father came to the disciples with his insane son, full of faith in their ability to heal, but his faith did not then accomplish the cure. When Christ's students asked for the explanation of their failure, he did not ascribe it to their weak personalities, but to their lack of understanding. The Bible record itself gives the power which wrought the healing, for the onlookers were amazed, not at the mighty faith of the father nor the mighty personality of Jesus, but "they were all amazed at the mighty power of God." That it was not his will-power nor his personality which did the wonderful deeds seems plain from his assertion, "The Son can do nothing of himself, but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise."

The Science of Mind, then, as Jesus wrought and taught, is something more than faith cure, and something quite the reverse of human will-power. In his philosophy that which heals and works all good is the one original and originating Mind, our God. That through which this Mind works is man. That which enables man to do the work of the Divine Mind is faith or Spiritual understanding, and a life which is in harmony with Good.

As Jesus ministered to men, he saw the sick and sinful in darkness waiting for the coming of the Light of Truth. Jesus was the window through which the light streamed in. Their faith was the raised curtain which let the light pass through the window; but that which healed was the light of Divine Mind.

### PERSONAL TESTIMONY.

May I now say that all that has been set forth in exposition of Christian Science as the Science of Mind I have found true and practical in my own experience. I shall venture, in this familiar spot, surrounded by old friends and welcomed by new ones, to give to you a leaf from personal experience.

The careful training of wise instructors in these halls of learning, together with the prized association with these scholarly teachers now living, and with that patriarchal philosopher and theologian who is with us no longer, these privileges were of inestimable help to me, for which, every day, I am more and more grateful. This valued discipline strengthened an indwelling confidence in the integrity of the Christian religion. I was taught to regard the words and works of Jesus as credible and veritable facts expressed by the founder of Christianity that they might be made manifest by all men.

Associated with this confidence in historic Christianity there was begotten within me a love for the Scientific method in all departments of labor. I was led to ask, if man has discerned a science for all that is without himself, why should he not discern the Science which shall include himself. If there be the science of all that Mind creates, why, I asked, should there not be a Science of Mind itself, which is the Creator?

Moreover, I was shown here that real religion is a life of helpfulness, that true philosophy ripens into fruits. There are those here who perhaps remember that in those college days I tried to put in practice this philosophy by healing some few of pain and suffering. I found, however, that this healing lacked intelligent direction and was devoid of any scientific method. It was my will-power, my magnetism, which brought temporary relief. This I saw was not in accordance with the method of Jesus, who said, "I can of mine own self do nothing." "The Father that dwelleth in me, he doeth the works."

When Christian Science was called to my attention, a question came, born of my training here and my own personal experience. I asked, What of its fruits? I did not doubt that it healed the sick, I must know if it reformed character. To me, trained as I had been, that was not a true religion, nor was it a true Science of Mind, which did not concern itself with the entire man. I found that this Scientific Christian's chief interest was not the healing of the body but the healing of the mind. I learned that in obedience to his philosophy he sought to have not the physique of an athlete, but to have the Mind of the Lord. And four years' experience has only confirmed this observation. Christian Science appeals to me more and more as the long-sought Science of Mind, because it strengthens hope and faith, intensifies high resolve and noble aim, exalts honesty and virtue, cultivates charity and selflessness, and enthrones the love of God within the heart of man.

### THE DISCOVERER AND FOUNDER.

Members of the Philosophical Conference, students and friends, I thank you all for your close attention and your hearty co-operation in the presentation of this brief address upon the Science of Mind. I could not forgive myself, and you would hold me ungrateful should I fail to voice my gratitude to a teacher whose instruction I have enjoyed after leaving these halls. Though not of this college faculty, this teacher is one with them in consecrated effort and in holy purpose for the welfare of the race. From this teacher I learned the rudiments and the philosophy of Mind Science. Through these teachings all that was dear has grown dearer, all that was clear has become clearer.

Through this teacher I feel that my life has been placed upon a Christianly Scientific basis and that my problems are solvable from a Scientific standpoint. My God is divine Mind, approachable and comprehensible. My Master is the perfect expression of this Mind, a living presence whose voice of Love bids me arise from the grave of matter into his resurrection and his Life. Called to the home city and to the home church of this teacher, I have had opportunity to observe the esteem and confidence in which she is held by her neighbors. And I bear willing witness to the sincerity of purpose and the exalted life of our teacher and Leader, the Rev. Mary Baker Eddy.

## Rejoicing wards off Temptation.

The Christian may be tempted; but little impression is made upon him by the pleasurable bait if he is happy in the Lord. There is a passage in Paul—I forget just now where it is—where he speaks of putting on the armor of light. It is fine poetry as well as solid fact that we wear the armor of light; and part of the meaning is, that we are so surrounded with seraphic joy that nothing can tempt us. The joy which we wear is far surperior to any which the evil one can offer us; and so his temptation has lost its power. What can the devil offer a joyous Christian? Why, if he were to say to him, "I will give thee all the kingdoms of the world and the glory thereof, if thou wilt fall down and worship me," the believer would reply to him, "Fiend, I have more than that. I have perfect contentment; I have absolute delight in God. My soul swims in a deep sea of bliss as I think of God." The devil will speedily quit such a man as that; for the joy of the Lord is an armor through which he cannot send the dagger of his temptation.

SPURGEON.

### A Gleam.

BY SARAH M. KELLY.

"THE same day there came certain of the Pharisees, saying unto him, Get thee out, and depart hence; for Herod will kill thee. And he said unto them, Go ye, and tell that fox, Behold, I cast out devils, and I do cures to-day and to-morrow, and the third day I shall be perfected" (Luke, 13 : 31, 32).

Remembering what Jesus said of the spirituality and the permanence of his own words, we may well assume that in the passage quoted, as in so many others containing his sayings, the true spiritual meaning lies beneath the surface. In fact, it seems as though he gave the warning not to accept the literal interpretation here, for he says in the next verse, "Nevertheless, I must walk to-day, and to-morrow, and the day following." In the revised version, for the word *perfected* the words *end my course* are substituted from the margin and so, literally construed, verses 32 and 33 might seem to contradict each other.

If the three days referred to are taken to mean stages of spiritual growth, then Jesus' reply to the Pharisees contains a rule for attaining perfection. The stages of casting out devils (evils) and doing cures must precede the final state of being perfected. Also this, the fox—the sly, false claim that tries to intercept, confuse, and disannul Truth—is *met* by the absolute statement: I (Principle, Truth) do cast out evil and cure all the ills of the flesh, and therefore the perfection of God and of His reflection, man, *shall* appear.

Superficial reading may not reveal it, but careful study of this text finds it to be correlative to that other answer of Jesus to Thomas which we love so well and so often quote (John, 14 : 6): "I am the way, the truth, and the life: no man cometh unto the Father, but by me."

This illustrates the profundity of the Scriptures and also how the inspiration that is necessary to read them understandingly comes through Christian Science as set forth in "Science and Health with Key to the Scriptures," our beloved text-book.

### A Christian Science Library.

BY MARGARET WOOD OGDEN.

ANOTHER number of the *Sentinel* has arrived and is so filled with helpful articles that the desire comes to express appreciation to those who had part in giving it to the Field. What would we do without our precious publications?

Recent articles on the price of our literature, have brought to mind a little investigation, which was made a year or so ago, as I sat thinking of our Christian Science books and of what they had done, in restoring to us our rightful heritage—health, happiness, and peace. I made a list of all our Leader's works, in the best bindings, together with the publications of the Christian Science Publishing Society, to ascertain the cost of a Christian Science library—since that time other works have been added but even now the total cost is but thirty dollars. This amount includes one copy each of all books, pamphlets, and music sold at 95 Falmouth Street, Boston. It also includes the *Journal, Sentinel,* and *Quarterly* for one year and one hundred tracts.

Now is there any one, who has tasted of the healing through Christian Science but has been saved double, yea, triple, that amount in drugs alone? Has every Christian Science family a copy of each of these publications? Priceless literature indeed and but thirty dollars for the entire collection, in bindings such as would ornament any library. A small sum from a worldly standpoint, for in many cases, a book-lover will pay much more for a single set of his favorite author. When we think of the blessings we receive from the perusal of the volumes, our hearts turn in gratitude to our dear Mother, Mary Baker Eddy, in that she has given to the world this literature upon which no money value can be placed, and yet, if earnestly desired, it is within the reach of every one.

Let us make greater effort to possess all the publications ourselves, and put them where they will do good in the world.

### Testimonial Meetings.

BY ELIZABETH A. BACON.

WHY do Christian Scientists hold testimonial meetings? The above question was asked me a few days ago, and overwhelmed me with surprise, as it did not seem possible that even an "outsider" could fail to know why testimonies are given.

"Out of the abundance of the heart the mouth speaketh." Again the Bible tells us, "But whosoever shall deny me before men, him will I also deny before my Father which is in Heaven."

If we remain silent when the Christ-Truth has healed us of suffering and woe, and given us "the peace of God, which passeth all understanding," are we not literally denying Christ? Gratitude for blessings received, first causes us to acknowledge what Christian Science has done for us.

Then a desire that the world may share our joy makes us long to tell the glad tidings to all. We have found the pearl of great price and would reveal it to the world, for the world hath need of it.

Mrs. Eddy tells us in "Science and Health with Key to the Scriptures," page 267, "Happiness is spiritual, born of Truth and Love. It is unselfish; therefore it cannot exist alone, but requires all mankind to share it." The Source of our joy is inexhaustible, and we know the more we give, the more we shall have.

Oh, the bliss of bringing comfort to even *one* of Christ's little ones. So let us join in the glad song which is reaching to Heaven (harmony) and tells of the wondrous blessing which Christian Science contains for all.

### True Selfhood.

BY JESSAMINE GLESSNER CHILDS.

WE grow in God as self is left behind;
And rise to know true selfhood is in Mind.
True self unfolds as more in Love we live,
Becomes our own the more of Love we give.

## Testimonies.

### Has Wrought a Complete Change.

In 1895 I was an avowed infidel, having read Paine, Huxley, Voltaire, Ingersoll, Draper's "Conflict Between Science and Religion," and literature of this class until I was in a seeming defiant and bitter opposition to the Bible and religion. It was about this time that Christian Science was first brought to my notice, and by one not a Scientist. The little information received so interested me, that I purchased literature mentioned, and commenced the study of what I supposed was Christian Science; it proved, however to be false literature.

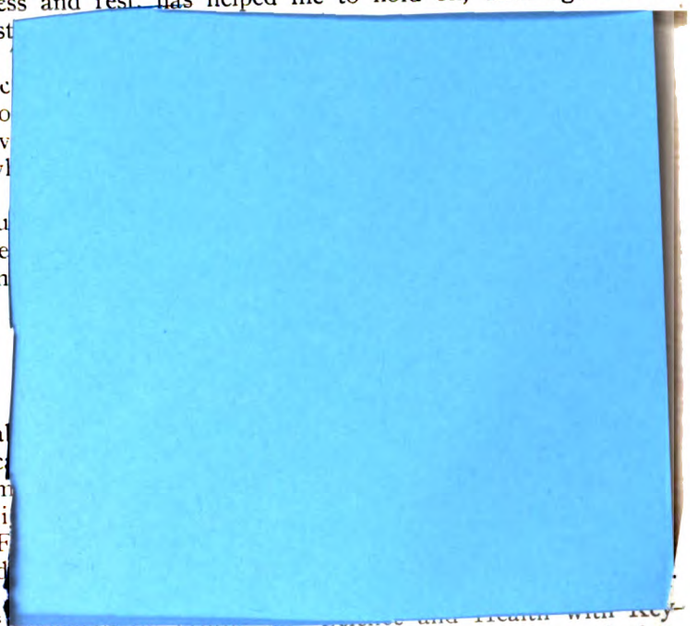
I make mention of my experience with false literature in order that others in commencing this study may purchase only the writings of the Rev. Mary Baker Eddy, Discoverer and Founder of Christian Science, and publications of the Christian Science Publishing Society, Boston, Mass. After this error was uncovered to me, I soon had "Science and Health with Key to the Scriptures." I continued its study for a period of eighteen months, followed by class instructions in the spring of 1897.

From the first I was deeply interested in its study, as I am to-day. It has wrought a complete change in thought, and taught me what God is, and my relation to Him. Its reasonableness and truth have healed me of infidelity, destroyed a tobacco habit of twenty-five years' indulgence after other efforts and means had proven ineffectual.

Christian Science has taught me that as the sense limitations are removed the expression or reflection of Truth expands. That I must not stand on declaration rather than demonstration. That I know no more than I have demonstrated. That as a recipient of light, I should reflect light. That the application of this Principle strengthens, purifies, and opens the treasure-house of Truth and higher consciousness. That Science and Health illumines the Scriptures and unlocks their spiritual meaning and harmony. Neophyte that I am in Christian Science, the condition of thought in which Science and Health found me four years ago and that of to-day, is distant many leagues.

For these changes in thought, for the understanding that has come to my consciousness, and for the demonstrations that have followed an adherence to, and an application of this Principle I am very thankful. He who patiently studies Science and Health in an unbiased manner, free from prejudice, with an honest purpose to acquire and assimilate its teachings, to him will be revealed, as it has been revealed to me, the Christ-Truth.

It comes to me that there is no better, no higher, way to express my love and gratitude to Mrs. Eddy and my teacher than that Truth bear witness of a life corrected.



F. M. Hubbard, Detroit, Mich.

### Found Peace in Christian Science.

Christian Science was brought to my attention some eight years ago, when I was deep in a shoreless sea of fear—and with a great and growing doubt of the reality of God.

Educated for a public career, I soon saw the nothingness of mad ambition, in the strife, jealousy, hatred, and utter selfishness of it all. Life itself was to me only a condition of struggle and disappointment, in which the garment of hypocrisy seemed the most popular and essential covering. I am sure mine was not an unusual case, although I thought so at the time.

Just then came my first treatment in Christian Science, and the peace which followed was most miraculous to me. It was a mystery then, but often since, in times of trial, that first experience of an unseen and unknown power stilling the turbulent waves of my consciousness into calmness and rest, has helped me to hold on, until again the "st

to the Scriptures," which led me to buy a copy of that marvelous book, because I thought I had read something new about religion and the Scriptures. I became interested and went to the Sunday meetings of that little band of students, who in this city struggled on all alone without leader or reader in the search for more light.

After about six months of reading Science and Health I lost all desire for smoking or the use of tobacco in any form whatever; I had been a slave to this habit for more than thirty years. Besides this it has made me, morally and physically, a new man; it has also brought harmony into my little home and an understanding of divine Love which frees us from the many discords of material sense.

I cannot conclude these lines without acknowledging deep-felt gratefulness, love, and loyalty to the dear Mother, who has revealed to us the power of Truth over error and of Mind over matter.

G. A. O. Gantzer, Berlin, W. Germany.

### Help Received in Time of Need.

I feel that I should be indeed ungrateful did I not add my testimony to the many helpful experiences appearing each week in our *Sentinel*, and acknowledge the spiritual quickening and uplifting thought that came to me through the beautiful lines in a recent number, entitled "Satisfied," written by her whom we love to call Mother. It came in an hour of need, when the shadows of false material sense seemed to have closed in about me. But as I read those inspiring words,—

> Love looseth thee,
> And lifteth me,
> Ayont hate's thrall,

it brought such an uplifted sense of the ever-presence of divine Love, that the false sense I had entertained, immediately vanished, and I was enabled to take up my work again with renewed joy and thanksgiving to our Father, that the promised "Comforter," that shall abide with us forever, "even the spirit of Truth," has *come*,—in Christian Science,—revealed through the one whom God called. A week has elapsed, and the clearer light received in that hour of need remains with me, an abiding presence.

E. J. H., Pierrepont Manor, N. Y.

---

When the enemy has failed in all other artifices, he will propose friendship, that under its appearance, he may effect what he could not compass as an open adversary.

## Religious Items.

In an interesting article on "Problems of the Psalms," published in the *Homiletic Review*, Prof. George H. Schodde, Ph.D., says:—

In the very forefront of the Biblical discussions of the day stands the Psalm-problem. Christians are so thoroughly imbued with the traditional conviction that the bulk of the Psalms are from the pen of David, and the others, as a whole, from the age of the sweet singer of Israel, that it makes almost a painful impression to hear that the general trend and tendency is now to deny to David the authorship of almost every psalm, and to claim the exile and the period immediately following the exile as the age in which these songs were composed. In fact, the favorite term for this collection, among the more critically inclined investigators, is, The Hymn-Book of the Second Congregation.

"Most of the sunshine we get in life comes to us by reflection," says the *Sunday School Times*. "It is given us in the brightness of the air, the sheen upon the sea, the color in the flower. What comes to us as directly as the atmosphere will allow of is not always the messenger of joy and health. It makes us yearn at times for the shadow of a great rock in a weary land. So it is in God's disclosures of Himself. This sunshine also comes to us mostly by reflection from others —in the warmth, and brightness, and color of lives He has made to shine in the beauty of nature, in the wisdom of inspired men, in the grand humanity of His Son.

The following notes are from the "London Letter" to the *Church Standard* (Episcopalian):—

"The Queen, as is well known, possesses and treasures the Bible which accompanied General Gordon during his campaign in China. She has now received the Mahdi's copy of the Koran. A private soldier picked up in the streets of Omdurman, just after the entry of British troops, the autograph letter of Gordon in reply to the Mahdi's demand for retreat or surrender. This also is said to be now added to the Queen's collection of relics."

"We need from Christian teachers not perpetual notes of warning, but words of comfort—above all we need constant, quiet prayer and encouragement to hope and to endure."

Reviewing the statistics of the Baptist churches of New Jersey, the *New York Examiner* (Baptist) publishes, among other things, the following interesting historical facts: Three churches in the State were organized in the seventeenth century; Middletown, 1688; Piscataway, 1689, and Cohansey, 1690; fourteen others were constituted in the eighteenth century anterior to the Revolution, and five others in the same century after 1776. The other 290 churches were established since 1800.

Concerning the Salvation Army plan of relief for the "submerged classes," as devised and executed by General Booth, the *Congregationalist* says that one million three hundred thousand dollars have been received from the public to maintain it, and that the results have been so good that several European governments have subsidized the Salvation Army, delegating to it the work of remedying conditions among the outcast poor.

"To Look Up and See God," is the subject of an editorial in the *Christian Register* (Unitarian). The writer remarks the changed attitude of the secular press toward religious and ethical problems, and asks a newspaper editor what has produced the change, and he declares that all people are beginning "to look up and see God."

## Miscellany.

### A Familiar Quotation.

A short time ago a correspondent of the *Daily Advertiser* called for information in regard to the origin of the proverb, "Cleanliness is next to godliness." By consulting Bartlett's "Familiar Quotations," says the *Advertiser*, we found it attributed to John Wesley, but as he used it as a quotation, we suggested that the question of its origin might still be deemed an open one. And now we find a note in the Richmond *Dispatch* from the learned rabbi, the Rev. Dr. Bettelheim of that city, which shows just where it originated, and how in a regular gradation of virtues it is placed next to godliness. Dr. Bettelheim's note is as follows:—

Richmond, Aug. 7, 1871.

In your issue of Saturday last was a paragraph from the Boston *Daily Advertiser* inquiring as to the origin of the proverb, "Cleanliness is next to godliness." Let me state that this maxim appears first in a *Beraitha* as the last *Mishna* of *Sota*, Chapter IX.; *Talmud jerus., Shakalim*, Chapter III., page 6; *Talmud babl., Ab: sarah*, page 20, b.; *Jalkut, Sh. Isaiah*, No. 263; and *Alfassi Ab: sarah, ibid, loc.* Here it reads as follows: "*Phinehas ben Yair* says: The doctriues of religion are resolved into (or are next to) carefulness. Carefulness into vigorousness. Vigorousness into guiltlessness. Guiltlessness into abstemiousness. Abstemiousness into cleanliness. Cleanliness into godliness (equal to holiness), etc., etc. Literally, next to godliness. Yours, etc.,

DR. A. S. BETTELHEIM, RABBI.

In his "Advancement of Learning," first published in 1605, Book 2d, Article X., "Of Arts Concerning the Body," Lord Bacon says: "Cleanliness of body was ever esteemed to proceed from a due reverence to God, to society, and to ourselves." T.

*Boston Transcript.*

### Phrases of Affectionate Greeting.

There is a tender sweetness about some of our common phrases of affectionate greeting, simple and unobtrusive as they are, which falls like dew upon the heart. "Good night!" the little one lisps it as she toddles off to bed. Sisters and brothers exchange the wish; parents and children; friend and friend. Familiar use has robbed it of its significance to some of us; we repeat it automatically without much thought. But consider. We are as voyagers put off from time to time upon an unexplored sea. Our barques of life set sail and go onward into the darkness; and we asleep on our pillows, take no such care as we do when awake and journeying by daylight. Of the perils of the night, whatever they may be we take no heed. An unsleeping vigilance watches over us, but it is the vigilance of one stronger and wiser than we, who is the eternal Good. Good and God spring from the same root and are the same in meaning. "Good-bye" is only "God be with you." "Good night" is really "God night," or "God guard the night." It would be a churlish household in which these gentle forms of speech were ignored or did not exist. Alike the happy and the sorrowful day by day say "Good night!"—*American Hebrew.*

### Rare Old Bible Found.

A wonderful old Bible has just been discovered in Venice, the finder being Leo S. Olschki, a well-known antiquarian of France. It is in five large volumes, and was printed in Rome, in the printing house of Don Pietro Massimo, in 1471 and 1472. Soon after it came from the press it was purchased by a patrician family of Venice, and it was in the archives of this family that Olschki discovered it. The edition of which it forms a part is exceedingly rare, and very large sums have been paid for imperfect copies of this Bible. Olschki paid $1,080 ten years ago for a copy of which two volumes were missing, and a library in Berlin recently asked $2,600 for a mutilated copy. The copy just discovered is probably the finest in the world, and $6,000 was readily paid for it by a buyer, who is supposed to represent a wealthy American.

*New York Herald.*

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and Church notices, should be sent direct to the Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent direct to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for Goods ordered from the Christian Science Publishing Society should be made payable to the Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to the Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department. The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent direct to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as clerk of the church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Supplements to the Sentinel.

Three supplements to the *Christian Science Sentinel* have been issued. The first is the lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The third is the lecture of Judge Joseph R. Clarkson of Omaha, Neb., delivered at Kenosha, Wis., September 18, 1899.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address one cent each; one hundred copies seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The per capita tax for the year beginning June 1, 1899, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each . . . . . $3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . . 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00
Twelve or more to one address, each, prepaid . . . . . 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen: $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, C.S.D., Publisher,
95 Falmouth Street, Boston, Mass.

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 10cents; 12 copies to one address, $1.00; Twenty-five copies to one address $1.75; 50 copies to one address, $3.00.

### Political Events.

Eugene V. Debs, who managed the great railway strike which threatened to tie up the entire railway traffic of the country a few years ago, has been nominated for president of the United States by the Social Democratic party. By a proposed amalgamation he is expected to replace Job Harriman and become the head of the Socialist Labor party ticket also.

Nearly one hundred and fifty applications for national bank charters under the provisions of the pending gold standard bill have been received by the Comptroller of the Currency. The bill permits the incorporation of banks with a capital of twenty-five thousand dollars, whereas the minimum capital hitherto required has been fifty thousand dollars.

The ratifications of the Samoan arbitration treaty were exchanged at Washington March 7 by the diplomatic representatives of the United States, Great Britain, and Germany. King Oscar of Sweden is the arbitrator agreed upon.

President McKinley has completed the new Philippine commission, which is constituted as follows: Judge Taft, Ohio, president; Dean C. Worcester, Michigan; Luke Wright, Tennessee; Bernard Moses, California; Henry C. Ide, Vermont.

Julius G. Lay, United States consul general at Barcelona, reports that the new Spanish revenue tariff greatly increases the duty on American products, the duty in some cases being practically prohibitive.

Rear Admiral John C. Watson is to be relieved of his command as commander-in-chief of the Asiatic squadron, and Rear Admiral George C. Remey is to take his place.

The War Department has transmitted to Congress a statement of the expenses of the Philippine war from May 1, 1898, to November 1, 1899, giving the amount as $48,928,060.

General Joseph H. Wheeler has returned from the Philippines, having resigned his commission, and he expects to regain his seat in Congress.

The Senate has passed the annual pension appropriation bill, providing for the payment of one hundred and forty-five million dollars.

Elihu Root, Secretary of War, is in Cuba on an official tour of inspection.

### Foreign News.

Since the relief of Ladysmith the Boers have continued to lose ground. They concentrated a force of about fourteen thousand men at Poplar Grove in the Orange Free State to dispute the advance of the British to Bloomfontein, the Free State capital. Lord Roberts outmanœuvred the Boer generals and their army retreated in confusion. It is reported that both Presidents Kruger and Steyn were present during the action, but could not prevent their men from giving way. Without any serious engagements the British are securing immense advantages of position, which make their strength overwhelming, and it is reported that Presidents Kruger and Steyn have made overtures for peace.

Through the influence of the farmers in Germany a bill has been forced to the front in the Reichstag providing for such restrictions on the importations of American meats as almost entirely to shut out these products from German markets. The commercial bodies of the empire oppose the measure and it is reported that the Kaiser is doing all he can to prevent the passage of the bill.

Lord Pauncefote, British Ambassador to the United States, who, having reached the age limit, was to have been retired next April, has received notice from Lord Salisbury to remain at his post indefinitely. He is in high favor with the United States officials and his experience is necessary to Great Britain in the pending treaty negotiations.

On March 5 the British House of Commons adopted the government budget providing for the expenditure of one hundred and fifty-four million eighty-two thousand pounds for the next fiscal year. It is estimated that the revenue will fall short of this sum by thirty-seven million pounds.

A war loan of thirty-five million pounds has been authorized by the British Parliament, and Americans have been invited to invest in the bonds, the first time in history that this has been done. An American Insurance Company has subscribed for ten million dollars worth.

Queen Victoria visited London March 8 and rode through the streets in an open carriage. The appearance of the aged Queen in public aroused the people to enthusiasm, and the occasion was turned into a popular celebration of recent successes in the war.

St. Helena, on which is to be the prison camp of Cronje and his four thousand men, has an area of only forty-seven square miles. Its population is about four thousand two hundred, including a garrison of a battery of artillery and a company of infantry.

The Theatre Francais in Paris, one of the world-famed playhouses, was destroyed by fire March 8. It was announced by the government authorities that the theatre would be rebuilt in time to be opened before the close of the Exposition.

Herr Fridtjof Nansen has announced that he will leave Christiania next May to make hydrological studies around Iceland for the Norwegian government. He admits that he is planning for another trip to the Arctic regions.

Great Britain is planning to establish an extensive naval training school at St. Johns, Newfoundland, where the orphan sons of fishermen will, with the consent of their guardians, be drafted into the Imperial navy.

To commemorate the gallantry of the Irish soldiers in the recent battles in South Africa, the Queen has ordered all ranks of the Irish regiments to wear a sprig of shamrock on St. Patrick's day in future.

There will be a fully equipped United States postoffice at the Paris Exposition, where all mails of Americans from the United States will be handled by United States postal clerks.

Queen Victoria will visit Dublin next month instead of going to Southern France, as is her custom. Her last visit to Ireland was in 1861.

### Industry and Commerce.

It is reported that a school, to be known as the University of the Federation of Labor, is to be established in Baltimore, the purpose of which will be to educate the members of labor unions on the following subjects: Moral philosophy, parliamentary law, universal history, English and American history, constitutional law, the organization and structure of state, county, and city governments, political science, American politics, the organization of political parties in nation, states, and cities; political economy, embracing the various schools, which will include trusts and labor organizations.

The New York *Journal of Commerce* prints several columns of tables showing in detail the industrial consolidations of the last forty years, and showing that since 1860 there has been over $4,000,000,000 in aggregate capitalizations of such organizations. No attempt has been made to include consolidations of railroad and steam companies, but a separate table is given showing the leading gas companies formed during the period as follows: Preferred stock, $27,625,000; common stock, $379,533,000; bonds, $214,018,000.

The present number of pensioners on the government rolls on account of the Revolutionary war is four widows and seven daughters; war of 1812, one survivor and 1,998 widows; Indian wars, 1832 to 1842, 1,656 survivors and 3,889 widows; Mexican war, 9,204 survivors and 8,175 widows; granted since 1861, under general law, 321,555 invalids and 92,901 widows and other dependents; under law of 1890, invalids, 420,912 widows and dependents, 130,226.

The American Sugar Company, commonly known as the sugar trust, reduced the quarterly dividend on its common shares to half the rate maintained since 1893, by declaring a dividend of one and one-half per cent on March 5 for the quarter, or at the rate of six per cent per annum, against twelve per cent paid since 1893. In that year the payment, including an extra dividend of nine and one-half per cent, was twenty-one and one-half per cent.

Workmen employed in the building trades are out on a strike in Chicago, and with the employees of brickyards, stone quarries, etc., forced out of employment by the cessation of building, the number of men out is fifty thousand.

The Metropolitan Street Railway Company of New York City has announced that it will replace all its cable lines with the underground electric trolley next summer.

Four thousand employees of the National Tube Works at McKeesport, Pa., have received a ten per cent advance in wages.

In his will the late John Ruskin, the great English author, named Prof. Charles Eliot Norton as one of his literary executors.

### General News.

In the last sixty years the speed of ocean steamers has been increased from eight and one-half knots to twenty-two and one-half knots an hour. Ships have been more than trebled in length, about doubled in breadth, and increased tenfold in displacement. The number of passengers carried by a steamship has been increased from about one hundred to nearly two thousand.

Adjutant General Corbin, as treasurer of the fund raised by voluntary public subscription, has handed over a check for $98,407.07 to Mrs. Mary C. Lawton, widow of the late Major General Lawton, this being the amount raised. The call was only for something over $8,000 to pay off a mortgage on Mrs. Lawton's home.

Guilford, a town in Connecticut, will not levy any taxes upon its citizens next year, because the surplus revenue from former years is large enough to meet all needs. This is said to be the first instance of the kind in the state.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## The Power of the West.

WE herewith publish extracts from a very interesting letter written from Omaha, Nebraska, to the *Boston Herald* by a special correspondent.

Omaha, Neb., February 14, 1900.

In an article which appeared in the *Herald* Monday, January 22, a summary of the political conditions was given, as they exist in the central western states, comprising Iowa, Nebraska, North and South Dakota, Colorado, Kansas, Wyoming, and Missouri. That article embodied conclusions based on a careful survey of the situation. It commented only in a general way on the causes for which the western people are at variance on some points with the people of the East. It will be the province of the present letter to particularize on commercial and industrial affairs, with a view of showing, in as brief form as possible, the wonderful development which has occurred in the central West, and the effect of this enlargement of people and business interests upon the political beliefs of these western people.

The first important point which seems to have failed to impress the people of the East is the rapid growth of population in the central western states. A city built in a day, hundreds of square miles of desert sands metamorphosed into productive, well-populated farms and ranches in the course of a year, is, apparently, to the people of the East, merely a dream—a phantasy conjured by real estate speculators to beguile the innocent purchaser. In the West these "dreams" are of frequent realization. The discovery of gas wells in Kansas, the opening of strips of territory in Oklahoma and Indian Territory to settlement, the unearthing of inexhaustible mines in the Dakotas, Colorado, and Wyoming, all these form the centring points of a vast army of ever-migrating people, flocking hither and thither with the tide of fortune.

While a large share of these people are transitory in the new settlements, they are the creators of changes and improvements which attract and retain a solid, progressive, and stationary civilization. This latter element, sturdy in character and willing to acquire fortunes by the slower processes of labor, remains and profits, first, by the cheap prices at which they can purchase great stretches of country from the "movers," and, second, by the certain wealth which follows their energetic labors.

In 1854 the great breadth of country between the Missouri River and the Rocky Mountains was practically a wilderness, traversed only by poorly constructed wagon roads, and inhabited by countless thousands of hostile and treacherous Indians. Civilization was represented only by a few government posts, widely scattered towns established by pioneers as trading points, or by the Mormons, and a very few fair-sized towns which were the centres of trade and population. Council Bluffs on the western line of Iowa was then the border of civilization, and it was not until the following year that the first building, an unpretentious log cabin, was constructed on the opposite side of the river, in Nebraska, forming the nucleus for the present magnificent city of Omaha. The next nearest town was Fontanelle, thirty-eight miles to the northwest, with Lincoln, the present state capital, fifty-five miles slightly to the southwest, not established until 1866–67.

Forty-five years later, in 1900, Omaha has a population of one hundred and sixty thousand, with a suburb, named South Omaha, having a population of twenty-five thousand. The latter city is already famed as the third largest meat packing centre in the United States, a close rival to Kansas City, holding second place. Nebraska, then tenantless, treeless, and savage, now contains a population of approximately two million. The first year Nebraska appears in the United States census reports is 1860, it being then accorded a population of 28,841, while the relative age of Iowa is shown in that the census report of that year places the state's population at 674,913, the first census in the state having been taken in 1840. The population of Nebraska in 1890, according to the census, was 1,058,910. It will therefore be seen that the population has practically doubled in the past ten years, the estimate here given being based on school reports and election returns.

The country west of the Mississippi River comprises twenty-eight states and territories, of which ten, like Nebraska, were not known to the United States census bureau until the year 1860. It is of these ten states, born within the age of the present matured generation, that this article will mainly deal, referring to the other trans-Mississippi states only when necessary to complete the context. These states comprise the following: Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, North Dakota, South Dakota, Washington, and Wyoming. The population of these ten states, according to the census of 1890, was 4,089,126, and in each state the ratio of increase during the past ten years has been equal to that of Nebraska, in some cases being greater. It will readily be seen that the population of these ten states, therefore, now approximates nine million, as against twenty-two million population in the entire twenty-eight trans-Mississippi states, or nearly one-half. That this enormous mass of people should be congregated in a certain section of the country in the brief space of forty years must be ascribed to some cogent reason. The only reason possible to be assigned is the wealth of resources of the country, their value and variety of character.

Of the character of the people of this country, it may be stated that their desires and demands for the best that is obtainable have grown with the wonderful expansion of their number. That their predilections extend toward education is shown by the fact that Nebraska in 1894 had 260,336 pupils, taught by 9,354 instructors; Kansas had 389,597 scholars, receiving their learning from 12,070 teachers. These are not the latest statistics at hand, but they serve as well as the latest to show the inclination of the people toward the mental advancement of their children. These two states are representative of the attention paid to education in the other states of this group.

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

The thrift of the people is shown from the fact that so early as 1890 farms or homes were owned in Nebraska by 124,529 families, of which properties 66,071 pieces were free from incumbrance. In Kansas, the same year, homes and farms were owned by 181,328 families, of which parcels of lands 91,057 were clear of debt. The proportion of ownership has increased with the population, and the conditions in these two states is typical of those existing in the other states mentioned.

This population of practically nine million is being increased steadily from day to day by the influx of thousands of emigrant home-seekers from the East and from European countries, with the usual proportions of mechanics, accountants, business and professional men, all willing to grasp the opportunities afforded by a new country, and easily acquiring the same wishes and beliefs as their predecessors. As laggards are abhorred, the energy and ability necessary to be possessed by the ever-new people is self-evident.

The important relation which this immense increase in population bears to the political affairs of the nation lies in the corresponding increase these western states will have in the number of their representatives in the electoral college and in the halls of Congress. The East, which has long held sway in these bodies, must awake at the close of the census now about to be taken, to the knowledge that its control of Congress will be greatly abridged in coming sessions by the increased representation from the West, while, with the exception of a very few districts, that in the East will either remain stationary or will be reduced by the emigration of its people during the decade. The census of 1900 cannot, of course, create any change in the electoral college of this year, because the census will hardly have been completed in time for the reapportionment of representation, but the effect will first become evident in the congressional elections of 1901 and thereafter, and the presidential election of 1904. The West is feeling its new strength, and is placing itself in fine fettle for future political struggles.

### RAILROAD BUILDING.

Next in importance to the increasing population, is the increase in the amount and varieties of the resources of the country. The filling up of a vacant territory, covering hundreds of thousands of square miles, cannot be accomplished without means of transportation. The people were in this section before the railroads, and freighting was carried on by means of ox teams or mule wagons, and the odd-looking, but useful prairie schooner. The necessity of aid in furnishing railroad transportation for the increasing commercial business here was not recognized by the government until the outbreak of the Civil War, when the knowledge was forced upon the federal power by its own requirements for the transportation of troops and war supplies. Then western enterprise was backed substantially by eastern capital and governmental assistance. The Union Pacific road was started from Council Bluffs, Ia., the Central Pacific from San Francisco, and they were constructed toward each other until they met—the first transcontinental line in the United States.

The effect of the building of these two roads, one the extension of the other, upon the development of the country was marvelous as is evidenced by the rapid growth of population noted above. The rail transportation opened a country illimitable in its resources and offering every character of wealth-producing substances, with as much room as can accommodate the entire population of the United States, without crowding.

The great expanse of territory to the north and south of this steel divisor was still unaccommodated in means of marketing the minerals and agricultural produce of this new country, hence branches were sent out at short intervals to tap the wealth-producing centres, and but a few years sufficed to interlace the several states with railway tracks. The people required the railroads, as well as the railroads required the business of the people. This mutual necessity has prevented to the present time the opposition existing among the general masses of the East against railroad corporations.

Statistics are uninteresting, and it is not necessary to give them in detail in the present article. The amount of railroad building each year is shown in the annual business reviews published by every paper, and their reproduction would be mere surplusage. That railroad construction is more extensive in the West than in the East, is natural, owing to the new country to be covered. Iowa alone built eight hundred miles last year; Nebraska approximately five hundred miles. The amount constructed through these states since the Union Pacific was built has involved the expenditure of hundreds of millions of dollars. It can best be shown by the mere statement: Where in 1866 only one road extended to the eastern Nebraska line, fifteen lines now centre into the twin cities of Omaha and Council Bluffs. The total mileage in Nebraska is 5,585.76, according to the latest statistics compiled. Iowa, Colorado, southern Wyoming, South Dakota, Kansas, Arkansas, and Missouri show this same state of railroad development.

Thousands of miles of railroad have been and are being constructed, concentrating at three points, Denver, Omaha, and Kansas City, from which points great trunk lines already extend southward to the Gulf of Mexico, with several more as absolute certainties in the near future. They come from the gold-bearing heights of the Rocky Mountains; from the sheep ranges and mines of Colorado and Wyoming; from the mines and wheat fields of South and North Dakota, the lumber camps of Minnesota, the corn acreages of Iowa and Nebraska, passing through the equally great corn belts and sugar-cane reaches of Kansas and Arkansas, the coal fields of Arkansas and Missouri, and concentrating, when the proper time arrives, the entire aggregation of products of this territory at the ports of the Gulf of Mexico,—Galveston, New Orleans, and Mobile.

## A Bird's Wonderful Flight.

Carrier pigeons have been in use for ages for the purpose of taking messages from distant places to their homes. Long before the invention of the railway and the telegraph, pigeons were the swift message-bearers of mankind, and to-day even they prove of great service in carrying news from besieged cities, or from parts of the world where the telegraph and the railways are not.

Among the remarkable exhibitions of the speed and endurance of homing or carrier pigeons was a journey made not long ago by a bird named Wilkins, owned by Mr. Lautz of Buffalo. The pigeon was taken to Lawrenceburg, Tenn., a distance of seven hundred miles, and liberated. The bird first flew straight up, then circled a few times, and finally started flying rapidly in the direction of Buffalo. A southwest wind was blowing at the rate of about thirty miles an hour, and a thunder storm was approaching. Likely enough the approaching storm frightened the pigeon, and caused it to try to reach home ahead of the deluge, and likely enough the wind helped it greatly. But the bird flew faster than the wind, and reached its home loft in thirteen hours, twelve minutes, and forty-one seconds from the time of its liberation. Consequently, the homing bird flew but a little less than a mile a minute, or at the rate of 1,567 yards a minute—a record hardly equalled by the fastest express trains. After this wonderful flight of seven hundred miles the bird seemed only a little tired, and the next day it was as lively as ever.—*Boston Herald.*

# The Lectures.

### At Riverside, Cal.

If anything were needed to show that the great mass of the people are seeking for light and truth, the immense gathering of earnest, interested seekers after truth on Sunday evening, February 25, to listen to Judge Ewing's lecture on Christian Science, would be ample proof. That the Christian Scientists of Riverside are in earnest, needs but little proof, for they were liberal enough to hire the Opera House and invite the people of Riverside to listen to one of their regularly authorized lecturers, without even passing the hat. It appears, too, that they have a regular staff of lecturers whose mission it is to go everywhere, enlightening the people as to the real mission of Christian Science, admission to these lectures being invariably free.

Dr. A. A. Sulcer, C.S.D., of Riverside, who is also an accredited lecturer, presided over the meeting, and in introducing Judge Ewing said,—

In the name of the Christian Scientists of Riverside, and in the name of the Board of Lectureship of the Mother Church of Boston, I am glad to greet you and to give you welcome this evening.

Your presence is gratifying, because I know that the speaker I have the honor to introduce will not only give you pleasure, but will tell you that of which you can take possession, and always retain, and ever use to your own physical and spiritual profit.

It is further gratifying because when one has a message to deliver publicly, it is easier to impart it to many than to few; empty benches do not inspire as does the intercommunion of many minds. . . .

From time immemorial the innovator has been misunderstood, and the most heavenly of new teachings, because misunderstood, have often been reviled. Christian Science has been no exception to the rule, but it has serenely encountered misrepresentation and, under its inspired Founder, has waxed strong in numbers and in good works. Hundreds of thousands of thoughtful people—men and women of the broadest culture and refinement—are numbered in its ranks to-day.

While Mrs. Eddy's text-book, "Science and Health with Key to the Scriptures" has reached nearly its two hundredth edition of one thousand copies each, yet there are many, very many, who still in "well-meaning ignorance" are ready to attack on all possible occasions their own misconceptions of Christian Science. It is to help remove such misconceptions, to bring the true teaching directly to all who wish to learn that the Board of Lectureship was established.

Among the colleagues of that Board none are better qualified to meet the public than the learned gentleman who is about to address us. We consider ourselves fortunate to have secured his services. He is an able advocate, a distinguished jurist, and, according to the world's standard of judgment, has been a recipient of life's high honors.

He has, in his own person, experienced the power of Christian Science, and investigation showed to him such riches of Spirit within reach of all who are ready to accept, that he has devoted himself, in the full maturity of his powers, to the spread of the Living Truth. . . .

I will not infringe upon what he may have to say by further reference either to our doctrine or to our beloved Leader, but will at once introduce the speaker of the evening, the Hon. William G. Ewing, ex-judge of the Superior Court of the city of Chicago.

The lecturer talked for nearly two hours and he held the closest attention of the audience during the whole time.

*Riverside Morning Enterprise.*

### At Pasadena, Cal.

The Tabernacle was crowded to the gallery last night (Friday, February 23) to hear the great exemplar of Christian Science, Judge Ewing of Chicago.

The speaker was happily introduced by his old friend, Rev. Robert J. Burdette, as follows:—

One stormy night in March, 1883, when more rain was falling in a minute in Quincy, Illinois, than falls in Pasadena in six weeks, when there was more mud in the streets of that city than there is in a tule marsh, Judge Ewing called on me, without my solicitation, to present me to an audience that had gathered to hear a raw lecturer practise on themselves. In extending this courtesy to a stranger, Judge Ewing did not ask my religious views, nor my politics. If I had told him what they were it would have made no difference to him. He would have introduced me just as cordially. I either have long since passed, or else I have not yet reached, the time in life when political or religious differences of opinion will make any change in my friendships—personal friendships.

The members of the Church of Christ, Scientist, are a feeble folk in Pasadena, numerically. In faith and confidence and zeal they appear to be young giants. If this audience knows as little about their belief and practice, as little about the principles upon which they are striving to build their church, as little about what they hold to be the truth, as I do, they have great need of enlightenment. I know too little about them and their teachings to criticise them. All that I half think I partly know, I have learned from people who tell me what they have heard, and that isn't good evidence. There is nothing that the truth so earnestly desires as publicity; nothing that it so eagerly craves as light.

Two thousand years ago a new doctrine was being preached in Jerusalem. And the enemies of the infant church took counsel to slay them. "Then stood there up one in the council, a Pharisee, named Gamaliel, a doctor of the law, had in reputation among all the people, and commanded to put the apostles forth a little space; and said unto them, Ye men of Israel, take heed to yourselves what ye intend to do as touching these men, . . . for if this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it."

Judge Ewing very happily acknowledged the compliment by saying it was worth crossing the continent to hear.

*Pasadena Daily Evening Star.*

### At Santa Monica, Cal.

Last Saturday evening (February 24), under the auspices of First Church of Christ, Scientist, Judge W. G. Ewing of Chicago, delivered an interesting lecture at Odd Fellows Hall. The speaker took for his subject, "Christian Science, the Religion of Jesus Christ."

The hall was crowded with representative people of this place, many being turned away for lack of room.

Mr. T. H. Taft, who introduced the lecturer, spoke in part as follows:—

Intellectually as well as politically, we are beginning to realize the limitlessness of our freedom and to rejoice in the strength of our manhood and womanhood; so that we of the enlightened races to-day, and we of their average communities, give respectful hearing to matters new and even disquieting, strong in our courage to "prove all things," and to "hold fast that which is good."

And so you, my fellow citizens of Santa Monica and vicinity, are gathered here this evening to give respectful attention to reasonings with which you may not all be in full accord; to listen to an exposition of doctrines which to some are new, to others may even seem repugnant, and yet which to all, I trust, may prove, at least in a measure,

Digitized by Google

instructive and helpful, and it is a source of sincere satisfaction to know that the presentation is to be made by a man not only representative within the lines of his own school of thought, but a man of proved and recognized ability as well; a man who has enjoyed a long and successful business career; a man who has been an acknowledged leader at the bar of a great eastern city; a man who has adorned the bench and reflected credit upon its professional life. You are to listen to a man who, in the full maturity of his powers, has deliberately turned his back upon the business associations of a generation, to devote his energies and his eloquence to the dissemination of a thought which appears to him to promise more of good to humanity than the lines along which his life work has heretofore been prosecuted.

Fellow citizens, such a man I have the pleasure of introducing to you in the person of Judge William G. Ewing of Chicago, who will speak to you upon Christian Science.

*Santa Monica Daily Outlook.*

### At Olean, N. Y.

Carol Norton of New York made his second appearance upon the lecture platform in this city at the Opera House last night (Friday, February 2), and spoke upon the subject, "Christian Science; Universal Religion." The lecture was free, and quite a large and intelligent audience greeted the speaker, who has an easy and entertaining delivery. Judge S. M. Norton of Allegany County, presided and introduced the speaker. Christian Science has been and is condemned by many who probably have little understanding of the principle advanced and adhered to by its disciples and exponents. It is a subject which occupies considerable public attention. Many intelligent people, as, for instance, Judge Norton of Allegany, believe in it, and the reasons why they believe were well presented by the lecturer last night.—*Olean Times.*

### At Chicago, Ill.

William G. Ewing lectured on Christian Science last night (Thursday, January 4) to one of the largest audiences ever assembled in the North Side Jewish Temple, LaSalle Avenue and Goethe Street. Long before the hour for the lecture every seat in the large edifice was filled, as well as chairs which had been placed in the aisles. Several hundred persons, unable to find seats, were turned away. Judge Ewing was introduced by Arthur J. Eddy.

At the close of his introductory remarks, Mr. Eddy said, "Fortunate indeed are you in possessing an advocate so earnest, able, and fully persuaded of the truth of his teachings as my friend of many years—Judge Ewing, whom I have the honor to present to you."

*Chicago Times-Herald.*

### The Root and the Flower.

A Wild Rose grew by the pasture wall,
A beautiful shrub with branches tall,
With wonderful color and rich perfume.
A Daisy looked up at her rosy bloom,
"Of which are you proudest, Rose so fair,
Of your stems or leaves or your flowers rare?"
"Of neither," said Rose with a graceful bend,
"I am proudest of my roots, sweet friend."
"Of your roots? Those ugly things down in the earth?"
Here all the daises bent with mirth,
And a bobolink swinging on a twig
Sang and danced his loveliest jig—
"Of my roots," said the Rose, "for they work away,
Down there in the darkness, day after day,
Contented if only the flowers blow
Up here in the sun, while they toil below."

***Unknown.***

## Among the Churches.

### The Work at Grand Rapids, Mich.

The report of the clerk of First Church of Christ, Scientist, Grand Rapids, Mich., at the annual meeting held January 25, 1900, was in part as follows:—

The kindly and generous attitude of the press of this city, without a single exception, during the closing months of the past year, specially manifested in the advertising, and in the notices of our last lecture, together with the cheerful publication of the lecture in full or a liberal report of the same, marks an important epoch in the history of Christian Science in Grand Rapids. This kindly and unanimous sentiment of friendship for the Truth on the part of the public press of the city is an oasis in the pathway of Christian Scientists in their journey through the wilderness of human beliefs, which gives hope and cheer to the seekers and demonstrators of Truth in every land.

It is with deep pleasure that I am able to report that during the past year we have had two lectures—one in May and the other in November. The blessings these have brought us as a church cannot well be measured. If the soil in which the seed of Love and Truth has been planted by these able and beautiful lectures was as well prepared as we believe it was, then will the harvest be most truly abundant.

The growth in numbers and interest of the Sunday School is especially gratifying to every member of our denomination. The tender thought of youth blossoming into the manhood and womanhood of Truth and Love brings from the generous heart wellsprings of Christly joy.

Not least in the work of the church since its last annual meeting is the large amount of literature which has been distributed free—not only at our public lectures but through the mails by the committees appointed for this purpose. Hundreds of Sentinels, printed lectures, Christian Science Histories and other writings have been distributed from time to time among the people of the city, and in some cases the work has been extended to other parts of the state.

The object has been to feed the hungering heart with the "Spirit that quickeneth." This bread of life gathered from the treasure-house of Mind through demonstration has been sent out under the protecting armor of Truth which feeds with the sweetness and joy of Love divine. Let us all know that in due season God will garner a fruitful harvest from this daytime sowing.

Mention of the good work that has been done by the committee appointed for missionary work at the jail and other places should not, it seems to me, be omitted in this report of the general work of the church. The very kind and even cordial reception that Christian Science has received from all the officials of the jail, together with the general, and in some cases marked, interest manifested by the inmates, give sweet assurance that the hour and manner of Truth's final appearing are becoming daily more recognized. This work faithfully done we all should know that God will surely give the increase in His own good time and way.

To the Christian Scientist, growth in the numbers of those who espouse the cause of Truth and work in its ever-expanding lines, is next in importance to the spiritual advancement of the membership, individually and collectively. I am glad to state that our membership and congregation have more than doubled during the past three years.

As we enter upon a new year, the goodly fruits which come to us as a church in the twilight of the last, cluster in joyous memory to give cheer to all faithful students of Christian Science and are stars of light and promise for

Digitized by Google

more glorious triumphs to be wrought out in the glad work of Christ during the coming year.

LIZZIE W. CEPERLEY, *Clerk.*

### The Growth of Interest in Christian Science.

Perhaps the greatest proof of the religious awakening that is to come with the new century is afforded by the phenomenal growth of Christian Science at the close of the present one. Discovered and founded in 1866, by Rev. Mary Baker G. Eddy, this denomination numbers about four hundred organized churches in this and other countries, besides about one hundred regular Sunday services in places where churches have not yet been organized. The Mother Church, The First Church of Christ, Scientist, of Boston, itself has a membership of nearly sixteen thousand, nearly four thousand of whom united with it during the past year. The total following of the sect is estimated to be from half to three quarters of a million people. The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, is now in its one hundred and eighty-second edition of one thousand each, and the circulation of the denominational periodicals is very large.

The people of Syracuse, like those of other cities, are taking a marked interest in Christian Science, which is shown in many ways. Repeated inquiry for "Science and Health with Key to the Scriptures" at the Syracuse Central Library, where four copies are kept for circulation, has brought out the fact that these books are constantly in use; a copy of this work has recently been placed in the reference room of the library and the *Christian Science Journal* has also been placed there on file, and the *Christian Science Sentinel* subscribed for. This desire for information on this most interesting subject is also shown by the constantly increasing sale of all literature pertaining thereto at the reading room of First Church of Christ, Scientist, located at No. 704 East Fayette Street, where all the Christian Science publications are to be had. The reading room is open every afternoon from two to five o'clock, and reports of the members of the church in attendance, who make all visitors most welcome, show a growing number of inquirers.

The attendance at the services held in the church on Sunday mornings at 11.45 and Wednesday evenings at eight o'clock has caused many consultations as to the possibility of increasing its seating capacity. All this is very pleasing to the members of the church, all of whom have been benefited through Christian Science, and is an indication of the live interest felt in this doctrine, which is proving every day and everywhere among upward of half a million of its followers, "God also bearing them witness, both with signs and wonders," signs which the Master said should follow them that believe—of healing sickness and reforming sinners, as well as preaching the Gospel to the poor—that this new-old religion is Christian Science, or Christ Knowledge.—*The Post Standard,* Syracuse, N. Y.

### From Memphis, Tenn.

What has heretofore been known as Church of Christ, Scientist, in this city, held its regular Wednesday evening meeting February 14, and after a prolonged and most interesting meeting, a business meeting of the members of this church took place. The president having briefly announced the purpose of the meeting, motion was made and duly seconded "That the name of this church shall be, and is hereby, changed from Church of Christ, Scientist, to Second Church of Christ, Scientist."

This motion, which to many of us was of such import, and which one short year ago could not have secured the support of a majority of our members, was carried without a single dissenting voice.

Pursuant to the call of our president, the committee on by-laws rendered their report, and the amendments thereto, as recommended, were taken into consideration, section by section, and the large attendance and full and free discussion attested the universal interest of the membership in the welfare of our beloved church.

Since the organization of this church in 1894, with but few people, our growth has been constant and steady until the present, when our membership consists of an hundred and sixty earnest, truth-seeking, and truth-loving men and women.—B.

### Larger Quarters at Cedar Rapids, Ia.

The Church of Christ, Scientist, at their meeting on Sunday, unanimously accepted the proposition to take about one third of the second floor space of the Dows auditorium building of the library board of trustees. The part they will occupy will be that lying on Third Street. Both the library and church will use the Second Avenue entrance and stairs. After entering the auditorium proper the church will have a short hall to the right. The church is much pleased to have obtained such fine quarters. They will use the room for their two Sunday services, Sunday School, and Wednesday evening meeting. They will also fit up a reading room to be conducted in the same place, according to the methods of Christian Science.

*The Republican.*

## Friendly Words.

EVERY once in a while I make a little excursion into the domains of Christian Science, not with a view of becoming a convert, but simply on the "good in everything" principle. In the course of my last excursion I came across the following by-laws, prepared by Mrs. Eddy last July, but not adopted by the Mother Church in Boston until the twenty-second of December: "They shall entertain no ill-will towards men, towards members of other churches, M.D.'s, or doctors of any sort." "They shall not publish, nor cause to be published, an article that is uncharitable or impertinent towards religion, medicine, the Courts, or the laws of our land—on penalty of being removed from the Editorial corps and the Board of Lectureship." These by-laws struck me with singular force because they stand out in such sharp contrast to some of the utterances during the recent religious disturbances in Brooklyn. Whatever criticisms may be passed upon the scientific side of Christian Science, the guiding spirit of the new creed has a strong sense of charity and justice.—*Brooklyn Life.*

The *Christian Science Journal,* published by the Christian Science Publishing Society, Boston, Mass., very appropriately gives place of honor in its February number to a poem by Rev. Mary Baker Eddy, followed by an article by the same writer, a "Message to the Concord Church." This publication is valuable to all wishing to keep in touch with the workings of a sect that is taking a prominent place in our country, and in order to avoid doing injustice it would be well for the general public to inform itself concerning its methods and doctrines.

*Minneapolis Tribune.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### The Christian Science Board of Lectureship.

*Beloved Students:*—I am more than satisfied with your work: its grandeur almost surprises me. Let your watch-word always be,—Great, not like Cæsar, but only great as good. You are not setting up to be great; you are here for the purpose of grasping and defining the demonstrable, the eternal. Spiritual heroes and prophets are they whose new-old birthright is to put an end to falsities in a wise way, and to proclaim Truth so winningly that an honest, fervid affection for the race is found adequate for its emancipation.

You are the needful and the inevitable sponsors for the twentieth century, reaching deep down into the universal, and rising above theorems into the transcendental, the infinite—yea, the reality of God, man, nature—the universe. No fatal circumstance of idolatry can fold or falter your wings, no Fetishism with a symbol can fetter your flight. You soar only as uplifted by God's power, or you fall for lack of it. You know that to conceive God aright, you must be good. The Christ mode of understanding Life, —exterminating sin and suffering, and their penalty, death, —I have largely committed to you, my twelve faithful witnesses. You go forth to face the foe with loving look, and, with the religion and philosophy of labor, duty, liberty, and Love, to challenge universal indifference, chance, and creeds. Your highest inspiration is that nearest the Divine Principle, and nearest the scientific expression of Truth. You may condemn evil in the abstract without harming any one, or your own moral sense; but persons seldom, if ever. Improve every opportunity to correct sin through your own perfectness. When error strives to be heard above truth, let the "still small voice" produce God's phenomena. Meet the raging element of individual hate dispassionately, and counteract its most gigantic falsities.

The moral abandon of hating even one's enemies excludes goodness: hate is a moral idiocy let loose for one's own destruction. Unless withstood, the heat of hate burns the wheat, spares the tares, and sends forth a mental miasma fatal to health, happiness, and the morals of mankind: and all this only to satiate its loathing of love, and its revenge on the patience, silence, and lives of saints. The marvel is, that at this enlightened period a respectable newspaper should countenance such evil tendencies.

Millions may know that I am the Founder of Christian Science: I only know what that means.

MARY BAKER G. EDDY.

### Singing of Solos.

FOR the information of inquirers we will say that in the Mother Church the solo is not sung until the taking of the collection is fully concluded. It was not intended to indicate to the contrary in the published order of service.

Also the selection of hymns to be sung as solos in the Mother Church is not confined to our Leader's hymns or to the Hymnal. One of our Leader's hymns is sung, however, as a solo, once or twice a month.

### "Former Requests Renewed."

WE trust there will be a careful and continued perusal of the article bearing the above caption, and now standing on the last page of the *Sentinel* under the head of Notices. It is put there to be read, remembered, and heeded. Please do not overlook it because it is kept standing and may therefore seem stale.

We shall keep it standing for some time.

### A Good Suggestion.

A CORRESPONDENT thus writes in reference to notice of Church services in hotel registers in the larger cities:—

"As you are aware, nearly all the churches in the cities have notices in what are called Church Registers, and these Registers can be found in all *first class hotels*. The church notices of our denomination are now placed in these hotel registers, but the traveling public, and Christian Scientists as well, never seem to remember to consult these registers for information as to the places and hours for services. In many instances hotel clerks have been asked for the desired information, and the inquirers, who were for the most part Christian Scientists, have been told they knew of no such church, etc., when in the hotel office hung the Church Register containing the card announcing the place, hours for services, etc. Would it not be well to call attention to this in the *Sentinel?* Students of Christian Science do not always have a *Journal* with them, and it would be a great convenience to know that by stepping into any first-class hotel and consulting the Church Register, they would be spared often a fruitless search for a Church of Christ, Scientist."

We suggest in addition that where our church services are not yet placed in the hotel registers, this be done, and if changes occur in the place of holding them, the change be promptly put in the register. Then if traveling Christian Scientists will profit by the suggestion of our correspondent, the difficulty will be met, and the delays which sometimes occur in getting notice of the change in the *Journal* referred to in a letter from a member of the Frederick Warde Company, published in the *Sentinel* of March 1, will not occur, and the trouble mentioned in that letter will cease.

### Satisfied.

A LADY from a far away foreign land thus writes us:—

"I am a physician's widow; since childhood I have hungered for 'something' to satisfy, and for the past eight years the hunger was great; nothing really satisfied.

My husband passed on four years ago. To occupy my mind (as I had no children) I continued my nursing education and took out a midwifery diploma at B.'s Hospital where I was in charge of the Surgical Hospital. February, last year, I bought a copy of Science and Health by the Mother to whom we owe so much, and I knew, even in the midst of my material work, that at last I had found Truth. I was literally starving for it and every crevice was filled. I broke all mortal laws with this new but old light, and divine Love brought me safely through all those terrible struggles which the Mother so accurately describes as the first stages, in 'Pond and Purpose.'"

Then follow other interesting experiences.

This is but one of the many testimonies we get of the quick conversion of those who had been truly hungering and thirsting for spiritual Truth, and who at last found it in our blessed text-book, and were at once satisfied.

Those who grasp its teachings thus readily are able very speedily to apply it in aiding, and healing, themselves and

Digitized by Google

others. It is certainly true that there are minds prepared, either through suffering or spiritual apprehension, for the ready reception of Truth as they find it in the glowing and teeming pages of the text-book. To such minds it seems strange that all cannot accept, and utterly unaccountable that any should reject, such teaching, for they clearly see that it radiates only Light, Life, Truth, and Love.

Happy they who have eyes to see and ears to hear.

This letter was a private one, not intended for publication, but we feel sure we shall be pardoned for thus impersonally quoting from it, for the good it will do to others.

### An Apt Saying.

A LETTER recently received from a young lady who is interested in Christian Science contains the following reference to the experience of herself and a friend:—

"We both want to read Mrs. Eddy's books. I wish I had nothing else to do for a while; they are like water when we are thirsty. We also seem to be convinced that to be a Christian Scientist is to be like those books and John's Gospel and Isaiah."

This is truly a beautiful and wise conception for any one to have reached, but for a young student of Science, it is worthy of more than a passing thought.

When Christian Scientists shall become *like* John's Gospel and Isaiah and our Leader's writings, they can truly be said to be Christian Scientists.

John and Isaiah, like many others of the Biblical books, and our Leader's writings, are *reflectors* of divine Love; and this is what Christian Scientists must be. When they shall reflect God—Good—in the same impersonal way that these books do, the healing and saving work of Christian Science will have reached so substantial a footing that the outside world will no longer gainsay it.

Yes, by all means, let us be *like* these precious, life-giving, and health-restoring books.

## Selected Articles.

### Christian Science.

To the Editor of the *Post*.

*Sir*:—In your issue of the 8th inst., I find a criticism on Christian Science, in which occurs the statement: "We could tolerate Christian Science practice, if it were harmless, but not only are the helpless members of their families endangered, but their practice is a menace to public health."

No doubt our critic is sincere in this belief, and he has my full sympathy in his position. The ardent desire of the Christian Scientist to rely upon God, rather than matter, is equally sincere.

Even the Christian Scientist in his earlier experience may be more or less fearful about the safety of his friends and children who are relying upon this treatment as are others who have never tested it; but this fear passes away as we learn, through actual results, the efficacy of this Science. The testimony of Christian Scientists upon this question must of necessity be the best possible evidence, for they alone can speak from experience. Will any one who stops to reason out this proposition believe that hundreds of thousands of intelligent people would continue to follow after that which does not keep its promise? Old things must pass away and all things must become new. Material means and methods are fleeting. "Here, we have no continuing city." Progress is made possible through the "survival of the fittest." In an age when the opinions of men are rapidly dissolving, it is scarcely safe for any one class to demand general adherence to any one thing. Even Christian Scientists should be allowed their choice of religion and medicine. On the other hand, I readily concede that Christian Scientists must not attempt to set aside the laws which stand for the general good of any community, and, so far as I know, they have no desire to do this. On the contrary, they desire to be law-abiding people.

There may be unwise and careless Christian Scientists, who do and say unwise things, but such people would be unwise and careless anywhere until they learn better, and the acts of this class should not be taken as the practice of Christian Scientists in general.

I have seen a great deal of Christian Scientists, having been a laborer among them for a number of years, and have seldom found contagious diseases among them. I firmly believe that if all mankind understood and practised Christian Science, sickness and sorrow would grow less and less, and finally disappear altogether, and I cannot see wherein any one could be harmed by it. Christian Science not only heals disease, but destroys the contagion, also. I have never known an instance where Christian Scientists have spread disease outside of their own homes, but I have known of hundreds of cases where children, under Christian Science influence, had been exposed to contagious diseases, and yet were not ill therefrom.

I have observed that contagious diseases, fevers, and all acute troubles, yield even more readily to Christian Science treatment than chronic troubles. Indeed I have seen so much good work in this line that I have lost much of the terror I once had for these things.

The assumption that dependence upon Christian Science is simply neglect and not a preventive, is unfair in view of all the good that has been accomplished through this Science.

That an occasional calamity should befall Christian Scientists is not strange, and perhaps not avoidable in our present degree of spirituality. Even a perfect method will not bring perfect results, until its adherents learn to use it perfectly.

ALFRED FARLOW.

*Boston Post.*

### White Divorce Suit.

**The Marital Relations of Christian Scientists Clearly Defined.**

*To the Editor of The World*:—In your edition of yesterday appeared a special from Chicago relating to a divorce granted to George E. White, ex-Congressman of that city. The article in question seemed to imply that Christian Science was responsible for the cause of the divorce, alleged as desertion.

In this connection it will doubtless interest many of your readers to know what the teachings of Christian Science really are upon the subject of the marriage relation. I therefore inclose you for publication the following quotations and church tenets from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, and also extracts from some of her other writings.

(From the *Christian Science Journal*, June, 1893.)

Owing to isolated instances where students of certain idiosyncrasies misuse and misinterpret my teaching, and because of a religious mania or of wantonly refusing to comply with the obligations of wedlock, I hereby publish in unmistakable language the following statute in the code of Christian Science:—

"A man or a woman, having voluntarily entered into wedlock, and accepted the claims of the marriage covenant, is held in Christian Science as morally bound to fulfil all the claims growing out of this contract, provided such claims are not relinquished by mutual consent of both parties, or this contract is legally dissolved."

Digitized by Google

In "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, page 268, we read: "'She that is married careth for her husband, how she may please him,' says the Bible; and this is the pleasantest thing to do. Matrimony should never be entered into without a full recognition of its enduring obligations on both sides. There should be the most tender solicitude for each other's happiness, and mutual approbation should wait on all the years of married life."

Also the following extract from "Miscellaneous Writings:" "Be faithful over home relations; they lead to higher joys: obey the Golden Rule for human life, and it will spare you much bitterness. It is pleasanter to do right than wrong; it makes one ruler over one's self and hallows home,—which is woman's world. Please your husband, and he will be apt to please you; preserve affection on both sides."

The following tenets are subscribed to by every member of the Christian Science Church:—

1. As adherents of Truth, we take the Scriptures for our guide to eternal Life.

2. We acknowledge and adore *one* Supreme Infinite God. We acknowledge *one* Christ, the Holy Ghost, and man as the Divine image and likeness.

3. God's forgiveness of sin, in the destruction of sin, and the understanding that sin and suffering are not eternal.

4. The atonement as the efficacy, and evidence of divine Love, of man's unity with God, and the great merits of Jesus, the Way-shower.

5. Universal Salvation as demonstrated by Jesus, the Galilean prophet, in the power of Truth over all error, sin, sickness, and death; and the resurrection of human faith and understanding to seize the great possibilities and living energies of the divine Life.

6. We solemnly promise to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus, to love one another, and to be meek, merciful, just, and *pure*.

AUGUSTA E. STETSON, C.S.D.
First Reader First Church of Christ, Scientist, New York, N. Y.

## Christian Science in Germany.

BY D. B. MACGOWAN.

BERLIN, February 6.—Christian Science has gained a substantial foothold in three cities of Germany and has incipient churches in two or three other places. Mrs. Frances Thurber Seal, formerly of New York, after starting the work in Dresden, largely among the American and English residents, came to Berlin and rented apartments near Winterfeldt Platz in the western part of the city and fitted up the salon as a meeting hall, with a capacity of eighty people. She now has two German assistants, and holds two services in German and two in English every week. The attendance is often as high as sixty persons at a meeting.

At Dresden also four meetings a week are held. The Dresden community is still composed largely of English-speaking people. Mrs. Frey, at Heidelberg, and Pastor Dieterle, formerly a German Methodist minister, are pioneers in South Germany, operating at Heidelberg and Stuttgart respectively.

The main Christian Science centre is, however, Hannover. Frau Bertha Gunther—often called Gunther-Peterson, according to the Swiss custom of appending the maiden name to the marriage name in hyphenating—and Fraulines Marie and Ida Schoen have an average attendance at their meetings of two hundred persons. They no longer attempt to find room for these gatherings at 18 Geibelstrasse, where they have two entire floors as living apartments and offices, but have secured a hall in a large hotel near the centre of the city.

German legislation is so systematic and German administration is so painstaking, one might be surprised that there would be room here for any but doctors with diplomas and licensed physicians, and that if Christian Science had managed to gain a footing it was simply because the teachers and healers of Mrs. Eddy's school had hitherto escaped the attention of the police. This is by no means the case. It is odd, but it is true, that in a country which requires physicians to be university graduates and to have passed a severe examination after leaving the university, the police have been unable to interfere materially with the unorthodox healers.

Frau Gunther and Fraulines Marie and Ida Schoen and Mrs. Seal can heal the ills of mankind by the metaphysical method, without the police being able to interfere. That they are unable is not a mere assumption. They have tried and failed. The physicians and clergymen, the police and the courts of Hannover have given Frau Gunther and her assistants a generous share of their attention for nearly two years, and their waiting-rooms are still crowded daily with patients.

The physicians signed a secret petition for legal interference and some of the clergymen told their parishoners Frau Gunther was an emissary of Satan himself. The police stationed themselves in the cellar of Geibelstrasse 18 and spent ten hours observing the entrance and noting the names of callers as far as they could be identified. The patients were then summoned to the office of the Criminal Inspector and rigidly examined. This was in June, 1898. The examination apparently disclosed nothing to base a complaint on, for the only information the healers received of the proceedings was from their patients. This was repeated twice afterwards, and the last time Frau Gunther and Fraulines Marie and Ida were summoned personally before the Criminal Inspector. This was in November, only a short time before Frau Gunther and Frauline Ida went to the United States to present Mrs. Eddy at Christmas a handsome German Bible and make a report on the work in this country.

"The Criminal Inspector sent his own wife to be treated two days after the first examination of witnesses," Frau Gunther said. At all events, the visit of the "Frau Criminal Inspectorin," as she is no doubt known in society, did not cause the police to lodge a complaint with the State's Attorney.

Both Mrs. Seal and the Hannover representatives of the metaphysical healing system, assert that among their patients are the wives of many high military officers. The conquest which has made the greatest furore was naturally that of the young Count Hellmuth von Moltke, the nephew of Feldmarschall and the son of the present commanding General at Breslau, Major-General von Moltke. The young Count von Moltke lives on the Moltke estates at Kreisau, near Breslau. He is not now in the public service. He manages the estates.

His health became somewhat impaired and he was persuaded by General and Frau von Garnier, who had, it is said, become convinced of the merits of Christian Science, to place himself in the hands of Frau Gunther. He went to Hannover last fall with his mother and spent eight or ten weeks there. After a few conversations, it is said, he became thoroughly converted to the theology and physical and metaphysical views of Mrs. Eddy, and within a short time his splendid tenor was to be heard in every Christian Science service at Hannover. He left for home cured of his nervous prostration.

"I received a letter from him a few days ago," Frau Gunther said last Sunday. "He told me his sister was reading Science and Health diligently and was begging her father to allow her to become a Christian Science healer."

Not satisfied with this triumph, the Christian Scientists have been whispering it about that Science and Health

Digitized by Google

numbers among its readers a member of the royal family. It is related that when about to leave for the Holy Land with the Emperor a high naval officer telegraphed Frau Gunther to meet him at the railway station in Hannover with a copy of Mrs. Eddy's book. She complied and this officer has carried the volume in his breast pocket ever since. From Jerusalem he sent Frau Gunther a picture postal card with the words, "Truth is victorious." Whether he succeeded in convincing any of the other members of the Emperor's party of the truth of Mrs. Eddy's book it is not said.

The story is that the hereditary Princess of Sachsen-Meiningen, the oldest sister of the Emperor, whose husband is stationed at Breslau, heard of the case of the young Count von Moltke—the families are naturally thrown much together—and through this enthusiastic propagandist secured the famous book.—*Chicago Tribune.*

## Christian Science Healed Them.

At the last regular Wednesday night testimonial meeting of Second Church of Christ, Scientist, in the auditorium of the Pepper Building, a number of interesting personal testimonials as to the efficacy of Christian Science in healing mental and physical ailments was given. The attendance was smaller than usual, owing to the inclement weather, but the meeting was, for all that, of exceptional interest.

The leader asked for the giving of personal testimony.

The first speaker said he had great reason to be thankful for the discovery of Christian Science. For years his wife had been under the care of physicians for hay fever, headaches, and other similar troubles, and had received no benefit. Finally she had been told that there was no cure known to the medical profession for hay fever, and then she turned her attention to Christian Science, with the result that she had been permanently cured in a few days. He said that he himself had suffered from astigmatism, and had worn glasses, but that after becoming a Christian Scientist he had never felt the need of them. Since the time when he first took up Christian Science he has had recourse to no other method of healing. He also knew of a woman who had suffered from insanity, and had been confined in a sanitarium. She was given absent treatment at the request of her husband, and was cured in a few days. "To my mind," he said, "the most beautiful part of Christian Science is the spiritual uplifting, which teaches and helps us to work for our fellow-men, who are suffering from disease and sin."

The testimony of another man was that for twenty-seven years he had had catarrh in its most aggravated form, one of the worst foes of mortal man. He had found no relief until he had found the Truth in Christian Science and was entirely cured. He, too, testified that its greatest fruits were in its spiritual teachings. As an instance of the revolution it had worked in him, he said that from reading the lightest literature formerly he now only enjoyed reading the Bible and Science and Health and other Christian Science literature.

The third speaker said that many people had expressed a wonder that so much is made of healing when there is no such thing as disease. The reason is that mortal man has to be lifted up by degrees until he attains the full spiritual life. The spiritual healing is as effective as the physical.

A woman gave her testimony next. She said that she had been a nervous, delicate child. She was the daughter of a physician and yet had suffered fearfully as she grew older, from a number of diseases, neuralgia, inflammation of the stomach, and catarrh. At one time, after she was married, she had reached such a state that her physicians and others said her death was only a matter of hours. While in this condition her father came on from the East to see her, and while here took the grip and passed away. Hearing of her condition, a friend who had already accepted the Truth came to her, and, as the physicians had given her up, was allowed to take charge of her. The result was that in a few days her physical ailments had almost entirely gone, and though her mind for some time was clouded she was soon healed mentally also, and since, knowing the Truth, has known there is no reality in disease. One of her ailments, she said, had been called a tumor, and that, with the other errors disappeared under the influence of Truth.

"I was sick from the grip," said another young woman, "and, finding no relief from the treatment of physicians, sought spiritual help from the Bible. I read that I must be perfect. I, of course, wanted to be perfect, and I rebelled at my Maker to think that He should tell me to be perfect and yet not tell me how. I did not think it right for God to make a person of my disposition and tastes, with longings and desires, and then insist on my being perfect." At last "Science and Health with Key to the Scriptures," was put into her hands, and she now reads the Bible with a new light and finds the spiritual uplifting in it she had sought in vain before.

Another woman had been ill; had gone to the seashore; had tried magnetic healing, electricity, and most remedies known to *materia medica,* and was at last told that she must go to a hospital to undergo a surgical operation. At this juncture she went to a Christian Science healer and was benefited at once. Among other things, she said, "Working out our own salvation means 'casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ.'"

"Science and Health should be read, and without prejudice," said another man. "Mortal mind is an aggressive nothing, but seemingly is a terribly persistent foe. I told a friend that I would be a member of the Church of Christ, Scientist, if for no other reason than that its members were people who practised what they preached; they are sincere."

There were other testimonies of a like nature.

*Kansas City (Mo.) Times.*

## "Put on the Whole Armor."

In Holman Hunt's great picture, "The Shadow of Death," which represents Jesus as a young man in the carpenter's shop stretching himself at the close of a weary day, and with his outspread arms making the shadow of a cross on the wall, there is a minor feature that is full of suggestion. On a shelf is a collection of books in the form of rolls, such as were in use in those days. They represent the library Jesus used—the books of the Holy Scriptures. They are there in the shop where he worked, suggesting that in his leisure moments he turned to them to ponder their great truths and store away their principles in his memory and in his heart. No doubt the picture truly represents the daily habit of his life in those quiet years when he was preparing for his great public work. Thus it was that when the tempter came, there was no need for feverish haste in preparing for defence. The weapons were ready, and the victory was easy.

From this example of Jesus we should learn to prepare in advance for temptation by filling our hearts in the days of youth and early life with the truths of God's word. The soldier cannot learn the art of war when the battle is upon him; if he is not already trained he can only suffer defeat. When the tempter has come, there will be no time to search texts with which to ward off his blows; but if we have sacred words treasured in our hearts, it will be easy to draw them forth, as arrows from a quiver, for use at any moment of danger.—*Selected.*

## From Our Contributors.

### Sweet Rebuke.

BY ELLA S. SARGENT.

His faithful ones, the Master said,
The sick would surely heal;
Would "cleanse the leper," "raise the dead,"
And God, in flesh, reveal.

Less barren, Father, seems the tree,
More fertile, desert sands
Than I, who yield no fruit to Thee
Save prayer-enfolded hands!

To Thee some first-fruits I could bring
If self gave o'er its fight;
My lame would leap, my dumb would sing,
My blind, receive their sight.

. . . . . .

One heard my restless, fevered fret,
And, soft rebuking, said,—
"For others work! Thyself *forget;*
Be thus, by Spirit led!"

. . . . . .

The fruit of Spirit, now I see,
Is meekness under wrong,
And joy, and faith from fear set free,
A love that suffers long;

A love that *seeketh not her own,*
A peace without alarm,
A gentleness and goodness shown
In temperance and calm.

### Gives Rules to Work by.

BY HERBERT S. FULLER.

As growth in Christian Science implants in the consciousness of each student the beautiful images of thought which Truth places there in the room vacated by the thoughts which we had cherished as real until their worthlessness became apparent to us from the opening of our eyes which had been blinded, we see through thought's vistas views above any that we had imagined.

The leaven is found to be doing its work, as through the constant assimilation of Truth and Love our own thoughts become spiritualized to the extent that words which were meaningless to us in the old condition of mind become illumined, and we wonder why we never saw them in this light before. It is simply because the light of Truth is now shining upon them in place of the tallow dip of error, whose feeble beams only lighted up just what our personal senses wanted to see.

I have in mind one text whose meaning was first made clear to me in Christian Science; in fact before Truth shed its spiritual brilliancy upon it, it seemed to me only like so many words, words that evidently in their time meant something to those who understood how to apply them, but which to me, without the key seemed dead.

I read, "Let the wicked forsake his way, and the unrighteous man his thoughts." Here was a peremptory and mandatory order, and it was uttered time after time from the pulpits, but *how* to obey it was the thing. Listen as often as I might to sermons on the text, it did not seem as though there was any light thrown upon *how* to obey this call to a higher life. The earnest, honest clergyman explained it as best he could, but when he had done, the fact still remained that no rule had been given me by which the order could be obeyed. In fact, it seemed impossible that it could be obeyed.

When I turned to Christian Science I found for the first time that the *way* to obey was made plain. That one was not simply told to do a certain thing that seemed impossible to him, and then turned out on an open sea of doubt, without chart or compass with which to direct his course. With the order to do the thing came the *way* to do it, and this gave one courage to go to work.

Applying the rule as given in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, I found that it worked, and that with this spiritual key the entrance could be had "to the secret place of the Most High," where Wisdom for guidance was to be found in full measure.

What the world wants to-day, and especially the men of the world, is a rule by which they can work out the orders which they find given to them in the Bible. Orders to *do*, without the direction *how* to do, amount to nothing. Christian Science, it seems to me, gives man just what he has always been seeking, an understanding of *how* to obey the Father, and makes plain the remainder of the words of the great prophet Isaiah: "Return unto the Lord, and he will have mercy upon him; and unto our God, for he will abundantly pardon."

This is only one of many texts that Christian Science has made plain to me.

We know that the wicked can forsake his ways and the unrighteous man his thoughts, but only when he has a clear understanding of what man is, and what is his relation to God. Christian Science gives him this, and with the rule the result can be worked out for a surety.

### Our Periodicals.

BY HELEN HOOD.

As our periodicals appear at their appointed times, monthly, weekly, and quarterly, keeping us supplied with messages from Christian Science and Christian Scientists, the fact that we can have so much done for us in return for so small an effort on our part becomes more and more apparent and also more wonderful. To have the *Journal* every month, this magazine which is invaluable to Scientists, seems quite out of proportion to our share in the matter —the payment of only two dollars a year. And this is merely the beginning. For one dollar we have a paper every week, not only with testimonies and most helpful and encouraging articles regarding Christian Science, including often a word from our Leader which we all know is beyond ordinary computation, but picked out for us, gathered from many sources, giving us the advantage of reading items and news from publications we would otherwise never see, representing a vast amount of search, and discretion in the matter of selection—is the important and useful information and news of the day in concise form; obviously the work on the *Sentinel* is at least twice that on the *Journal;* and for half the price!

I was told a short time ago of a conversation in regard to current events which took place between a Scientist and a man who is connected with some periodicals, but who is not a Scientist. The Scientist discovered that she was better informed upon those subjects than he was, and the *Sentinel* is the source from which she had obtained all her information.

In the *Quarterly* there is a continuous and systematic course of study taken from the Bible and "Science and Health with Key to the Scriptures," from which we are learning all logic, all law, all science, all medicine, all religion, and if these subjects did not already include it, I should add, all wisdom, with the remedy for our greatest need or our least, and showing us how the most important event in our lives can be managed, also the smallest incident of the day; these things, in nearly every lesson, illustrated by some beautiful story from the Bible. Thus we are provided with

Digitized by Google

a sermon for each Sunday, and every day with a lesson which, spiritually discerned and assimilated, is the actual bread of Life. Who does not, in reading these Lesson-Sermons, feel himself refreshed and nourished daily, beside realizing that he has begun to understand the great problem of existence, to comprehend which, has been the desire of mankind in all ages.

We pay fifty cents a year for the *Quarterly*, and have by the means, fifty-two of these Lesson-Sermons. This makes the cost of each not quite one cent. Think of being taught and fed for a cent a week! Can anything be nearer "without money and without price" than this?

## A Helpful Lesson.

BY ELIZABETH L. MADDEN.

A VERY simple, natural phenomenon taught me a helpful lesson recently, and perhaps the experience will help some one else. We were driving home one night after the electric lights were turned on, and with interest watched the shadows on the smooth asphalt. As we approached each light, there was no shadow to be seen, but as we passed under the light and it was behind us, the shadow appeared, growing in size and ugliness as the light was left farther behind; then, as we came up to the next light the shadow disappeared, only to re-appear as the light was left behind.

Suddenly the lesson dawned upon me. The light of Christian Science is before us, our path is illumined, we forget self and see only the glorious light of Truth. But temptation comes, and we turn our back to the light. What is the result? The black, ugly shadow of self appears, with its fatal trio of sin, sickness, and death.

Our harmony, our happiness, rests greatly on this one fact of where we place our light. If we keep the Truth of Being before us, if God is the lamp unto our feet, if our eyes and hearts earnestly read, and dearly love the Bible and our text-book, if we are guided by our dear Mother, and obey her, there will be no shadows. But if our light is behind us, if we cast it away from us, then there will be self,—black, distorted,—shadow and darkness, and the question I now ask myself each day is, Where is my light?

## False vs. True Witness.

BY H. L. DUNBAR.

Thou shalt not bear false witness.—*Matthew*, 19:18.

SURELY every one wishes to ascertain what is true. Only that which bears testimony to the right, to the good, is a true witness. However much one may think he is testifying to Truth, if he gives not evidence that his word and deed is based on Principle that is immovable, because it is an eternal or fixed fact, he is surely a false witness.

We have found in Christian Science that mortal mind is ever changing from one belief to another, therefore always bearing witness to the false, while ofttimes seeming to bear testimony to the true, but when tested by the "line and plummet" of righteousness—rightness—it is found wanting. The true witness has an eternal Principle to support him and thus gives a right reason for the hope that is in him. In Revelation, 1 : 5, we find that Christ is the faithful or true witness, so that Christ or Truth is its own interpreter; and as we understand this Truth do we become true witnesses, therefore we "shall not bear false witness," but testify only to the divine Mind as ruling and governing all. Thus we reflect only that Mind which was in Christ Jesus. So we bear testimony to the Christ-Truth whenever we demonstrate the allness of Mind and the nothingness of matter. When error is overcome, either in ourselves or others, we prove to be true witnesses.

## Testimonies.

### The Healing of Sin.

So great is the benefit received from reading the *Christian Science Journal* and *Sentinel* that it is not easy to express it in words.

A comfort in sorrow, strength in weakness, cheer and encouragement amid the darkness, and an inspiration at all times, surely no periodicals in the world to-day are so helpful and so powerful, as the *Journal* and *Sentinel*.

We cannot realize at what a cost they are published and distributed; but we can express our gratitude, which "blesses him that gives and him that takes;" and so cheer on those who are working so nobly and faithfully that we may have these publications.

I wish to send a tribute of gratitude, in a testimony to the power of Truth, the Word of God, to destroy sin.

"If we confess our sins, He is faithful and just to forgive us our sins, and to cleanse us from all unrighteousness." This passage of Scripture has been so familiar as to lose some of its force to my sense; but only because I had not applied it scientifically. Not long ago, I had a temptation to feel resentment and bitterness toward a friend whose act and words had roused and wounded self. I realized that such feelings were wrong, and should not be indulged by a member of the Christian Science Church. I struggled to overcome them, and as they seemed very tenacious, and not inclined to yield, I began to see that they were not only sinful, but dangerous. They were the very beliefs that would crowd out of consciousness the true sense of love, that spiritual love which is impartial and universal, which "thinketh no evil" and loves enemies, and this love is our life and our salvation.

As I saw this and still struggled to cast out the sinful thoughts, there came to me like a comforting angel, so quickly, yet so quietly, the above quotation: "If we confess our sins, He is faithful and just to forgive us our sins, and to cleanse us from all unrighteousness." I was relieved at once. "Why," I thought, "I do confess, I know it is a sin; God never made it, and it is not true. *God* will forgive it; *divine Principle* will destroy it; the Spirit makes pure. I can never destroy it myself." The bitterness was gone and there prevails a sense of love toward my friend, and toward the whole world.

Now, possibly the act of my friend need not have touched my pride; perhaps I had no reason for resentment. But even if I had, it should have made no difference, for, as we read in "Miscellaneous Writings" by Mary Baker G. Eddy, page 32, "Love alone is admissible towards friend or foe." In the same book, page 224, we read, "Above all, do not fancy that you have been wronged when you have not been."

After my victory, I was able to make other demonstrations very easily, and to reflect sufficient Truth and Love to destroy a belief of illness in another, which had previously baffled me.

So I realized more than ever before how "Love leaveth us not in temptation, but delivereth us from evil,—sin, disease, and death." (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 322.)

MARY A. DAGGETT, Cambridge, Mass.

### Healed after Years of Helpless Invalidism.

The beauty, grandeur, and power of Christian Science burst upon my darkened sense nine years ago, when, sad and discouraged in mind and sick in body, after years of hopeless invalidism, I turned to it for relief.

I had sought in all directions to find health, but received only partial, temporary relief. Many eminent, kind-hearted physicians bestowed upon me their best efforts, five of them at one time assisting in performing an operation. For an

Digitized by Google

hour and a half I was kept under the influence of ether and chloroform. The operation was not successful.

Previous to this I had my spine punctured in over thirty places with Spanish needles, and then croton oil and Spanish blister rubbed in to produce a counter-irritant to extreme pain at the base of the brain. That experiment also proved of no avail. I tried Turkish and sulphur baths. I was sent to the seashore eight consecutive years for the salt water baths and bracing sea air, and when that was found useless then the mountains were sought. Each year I gradually grew worse. As months went on I was confined to my room, much of the time suffering intensely, and finally could not take medicine at all, even the odor of it producing violent nausea.

Then hypodermic injections of morphine were administered, but I vehemently protested against this, as I did not wish to become a victim to this habit. Apparently there was nothing left for me to do but suffer until I could be released by death, as no material remedy seemed to be of the slightest use.

At this juncture Christian Science was presented to me, and for several weeks my pride and prejudice forbade my trying it, but, frantic with pain, I finally sought help from a loyal student of Mrs. Eddy, and in a very few weeks was a well woman.

I was rejoiced to gain a sense of physical harmony, but much more so to gain a spiritual sense of union with God that I had never known before, though I had been a church member for years. I was surprised to find that the Christ-healing was as efficacious now as in the days of Jesus and his disciples.

My healing was so wonderful that my husband, son, and sister accepted the Truth as revealed in Christian Science, seeing plainly what it had accomplished where other means had failed. I eagerly desired to know all the modes and methods of this wonderful system that had brought to me and my family a new sense of life and harmony.

In a few weeks I received class instruction with my healer, and immediately took up the work of trying to help my fellow-beings, and for nine years have found my greatest pleasure in that work. During that time "Science and Health with Key to the Scriptures," with the other writings of our dear Mother, Mary Baker G. Eddy, has been studied daily and has proved a very wellspring of joy and counsel.

ELLA HOLBROOK DOTY, Detroit, Mich.

### Hip Disease Healed.

In 1888 I had an attack of typhoid fever. Just before I took to my bed I fell, bruising my hip, which soon developed an abscess. After three months, the fever left me with the abscess still unhealed, and finally it developed into hip disease, which kept growing worse. For five years I suffered from it, and at times the limb was so drawn up that I could only touch the floor with my toe.

I had four operations performed, but kept growing worse, notwithstanding the encouragement of each surgeon before he performed the operation. The last operation was the most severe, the incision being eighteen inches in length penetrating to the bone. When I recovered from the effects of the anæsthetic, I was told my hip was found in a very bad condition, that there was a piece of dead bone at the head of the hip bone, and when an attempt was made to force it off it adhered so firmly that it was thought best not to remove it, as it might cause hemorrhage.

My surgeon told me he could give me no encouragement as to a permanent cure; but to go home and keep quiet, and after that piece of bone became loosened I would need to have another operation and have the bone scraped.

When Christian Science was proposed to me, four months later, I had no faith in it because the prayers of my pastor, earnestly offered, had wrought no change, nor had the skill of surgeons done anything to alleviate my sufferings.

Christian Science treatment enabled me to take a journey by rail of twenty-seven hours to the healer, where I remained ten days, taking treatment each day. I then left but had absent treatment. I want to say for the benefit of any who may meet with the same experience, that after being treated about three weeks I chemicalized, and it seemed as though I might pass on. When friends urged me to see a physician, because my healer was so far away, I said with Job, "Though he slay me, yet will I trust in him." *Materia medica* had been thoroughly tried and I resolved Christian Science should have a fair chance. I soon began to improve, and in about two months from my first treatment I was perfectly healed.

Since then I have given it a thorough test, having been quarterback on a foot-ball team about two years after being healed. It is now nearly six years, and I am perfectly well, having never seen or felt any effects from that "dead bone." I am indeed grateful for the physical healing, but it cannot compare with the understanding of what life really is as shown in "Science and Health with Key to the Scriptures" by our beloved Mother and Leader, Mary Baker G. Eddy, who through her purity and self-sacrifice has given to the world the understanding of "the only true God." I feel that I cannot do less than devote my whole time to the spreading of the gospel of Truth.

J. LLOYD PHILLIPS, Kingston, N. Y.

### Several Cases of Healing.

In the year 1893, after several years of suffering and invalidism, which had baffled the skill of many physicians, my brother, now a Reader in one of the Brooklyn churches, induced me to try Christian Science, and took me to a Christian Scientist in Toronto. As I grew stronger, the desire to know more of the Truth came to me, and I remained about three years, in order to gain more of the understanding. While there, my sister came for a while and was healed. We both came home and began to read the Lesson-Sermon every Sunday morning in our home, and I began to treat my mother, who had been bedfast for fifteen years—the result of a sunstroke. She was healed, and later my father was healed of serious stomach and bowel trouble. They are both interested in our services. Two years ago last October we began to hold regular public Sunday services in Union Hall, and now five of us meet regularly every Sunday and Wednesday evening. Often we have others, and we feel that the influence of the meeting is felt by many.

Three brothers from Dakota and Iowa have visited us, become interested in our work, and have begun the study of "Science and Health with Key to the Scriptures" and have acknowledged great benefit.

Several of our friends from a distance have visited us, and seeing the work done, and attending our service, have gone away, and begun the reading of the Christian Science Lesson-Sermons in their own homes. We have had a number of cases of healing, some pronounced incurable by a number of the best physicians in the country.

We have distributed quite a little literature, and sold several copies of Science and Health. My sister and I are members of the Mother Church, and we, together with an uncle, who felt the healing power of Truth, have had the privilege of class instruction with one of Mrs. Eddy's loyal students.

We are deeply grateful to Mrs. Eddy for the blessings which have come to us through Christian Science. We also appreciate the labors of the workers at headquarters.

EVA JOHN, Millville, Pa.

## Religious Items.

"If it were attempted to run a line through society which should separate the wise from the foolish," says the *Christian Register*, "probably no two persons could be found who would agree as to just where that line should lie. It may be assumed, however, that in any number of cases there would be this similarity: all would concur regarding their own side of the line as that on which would be found the wise. How can it be otherwise, our own faculties being our necessary starting-point for any apprehension of what constitutes wisdom or foolishness? Yet, if one accepts this natural position, it is at least interesting to look across the line and regard with wonder the mighty host of those who differ from us in so many ways, and to whom we could give such excellent advice, that it is no wonder we look upon them as the foolish.

"A newspaper paragraph recently stated that a certain otherwise insignificant individual had devoted fifteen hours out of every twenty-four, for twenty years, to training and strengthening his muscles for performance on a trapeze! What wisdom in one so foolish! What unimaginable patience and endurance for how small an end! There are men, however, familiar to all, who spend endless hours taking infinite pains, and devote concentration and persistence and real self-denial merely to playing billiards or acquiring the noble art of golf. One cannot help saying to one's self: If I were as patient, as energetic, as concentrated, as determined, in the practice and promotion of pure Christianity, in adherence to the principles of the higher life, in discipleship to Jesus; if I were as enthusiastic, as persevering, as those who seem to me so foolish in wasting their time and powers over the trivialities of worldliness,—what a noble impulse I might add to the cause I hold so dear. Can it be that men who hunt after the trifles that perish, yet give to that end a devotion and energy more than I am ready to offer in the pursuit of eternal realities?"

---

Under the title "Our Negro Fellow Baptists," the *Standard*, the Baptist organ of Chicago, publishes an editorial summary of the improvement of the religious conditions in the South since the Civil War. Among other things the writer says:—

"Before the war had closed Baptists of the North, working through the American Baptist Home Mission Society, began a blessed work among them of organizing schools, especially for the training of preachers and teachers, and of counseling and directing the Negroes in their missionary and evangelistic work. These schools have grown in number, efficiency, and importance, and have wrought what no other human agency could possibly have accomplished for our Negro brethren. The Home Mission Society has put into the work more than $3,000,000, but what is of much more consequence than the money, the society has sent into the South and maintained for a generation, a body of able, consecrated men and women as teachers, guides, and examples, and through them has done a mighty work in developing a new life and civilization among these people. Their influence has gone out to all the South."

---

Concerning the coming Ecumenical Conference on Foreign Missions, the *Watchman*, organ of the Baptist denomination, gives the following information: "The Conference on Foreign Missions which is to be held at Carnegie Hall, New York City, during the week beginning April 21st, is the successor of similar conferences held in England—one at Mildmay in 1878, and one in London in 1888—but this is the first general conference that has ever been held in America. The delegates will number close to two thousand, and will represent every land that has been reached by evangelical missions. It will be a world-wide conference, world-wide in its scope, its sympathies, and its outlook. It will be notable for the presence of men who have gained fame, not only as missionaries, but as statesmen, educators, and financiers—and that not only in America, but in England, Scotland, Germany, Canada, and Australia as well. Benjamin Harrison, ex-President of the United States, has consented to act as honorary president. Great Britain will send to this conference some of her most eminent men, and missionaries will be present from all over the world."

---

In an article on "Weak Things," a writer in the New York *Christian Advocate* minimizing the power of rifle and sword, says:—

"Besides, these things are not so mighty as men think. There is more power for good in one solid truth than in all the battleships on all the seas. There is more help for the world in a little love and sympathy and kindness than in all the artillery in America. Diplomacy is not so powerful as men think. A little straightforward righteousness and sincerity will do more for a nation than all the wiles of the most skilful diplomat in the world. Deceit and fraud have played a large part in human history; anger and hate have been regarded as manly and mighty; but we know that they are puerile and weak."

---

The *Yale Alumni Weekly* furnishes the following interesting religious item:—

"Records of the General Secretary of the Yale Y. M C. A. show that sixty-five per cent of the students of the Academic and Sheffield Departments are church members. This is rather a remarkable proportion, although some recent class figures show a still higher percentage. These figures, as have often before been remarked, are not sufficient themselves to show what kind of life the Yale life is, but there are such abundant evidences that this large number of positive religious men are sincere and active, that it is very satisfactory to point to it."

---

"If God should speak to us to-day in such a way that we could recognize His voice," says the *New York Christian Advocate*, "would we not listen attentively to the message? If we should hear Him speaking from the sky, as Saul of Tarsus heard Him, would we not go at once and do what He should command? No doubt we think so, but it is not at all certain that we would. The truth is, God is as near to each one of us as He was to Saul of Tarsus, and He speaks to us as distinctly as He did to Abraham and the prophets. If we do not hear the voice which is lifted up to-day, we would not hear if He should speak with an audible voice."

---

R. Gunton, in an article published in the *New Church Independent*, says: "All the truths of the Word are heavenly treasures to be sought for, and stored up in a spirit of humility and gratitude, day after day, Sabbath after Sabbath, and year after year—all the days of our life. As the world is an inexhaustible storehouse for the exploration of the external man, so the Word is an inexhaustible storehouse for the exploration of the internal man."

---

Rev. R. T. Polk, in the *Universalist Leader*, says that Dr. Hanson's new book, "Universalism in the First Five Hundred Years of the Christian Church," establishes it as a fact that the doctrine of universal salvation was taught by Clement of Alexandria, A.D. 180, by Origen, A.D. 220, and by most of the greatest and best of the Christian Fathers for five hundred years of the Christian Era.

---

A Tokio dispatch says that the religious bill, guaranteeing a larger measure of religious tolerance than hitherto has obtained in Japan, was defeated in the House of Peers, owing to the Buddhist opposition.

---

The *Watchman* says that the railroad corporations paid more than $200,000 last year to support Christian associations along their lines.

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and church notices, should be sent direct to the Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent direct to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from the Christian Science Publishing Society should be made payable to the Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to the Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department. The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent direct to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as clerk of the church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

---

### Supplements to the Sentinel.

Three supplements to the *Christian Science Sentinel* have been issued. The first is the lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The third is the lecture of Judge Joseph R. Clarkson of Omaha, Neb., delivered at Kenosha, Wis., September 18, 1899.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

---

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

---

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The per capita tax for the year beginning June 1, 1899, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen: $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in BOSTON, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

### Political Events.

Gold became the sole monetary standard of the United States on March 14, when the President signed the new finance bill, which was finally passed in the House the previous day. The new law fixes the dollar containing 25.8 grains of gold, nine tenths fine, as the standard of value, and provides that all other forms of money shall be maintained at a parity with this standard, by setting apart a gold fund of $150,000,000 for the redemption of United States and treasury notes. Authority is given the Secretary of the Treasury to convert into subsidiary coin any of the 1890 silver bullion up to the limit of $100,000,000. The bill provides for the issuance of new two per cent bonds in exchange for outstanding Spanish war loan bonds and others amounting in all to $839,000,000, and National banks which issue circulation notes on the security of their bonds, will have to pay only one half of one per cent on such circulation instead of one per cent, the tax on notes secured by other bonds. The new law also allows banks having a capital of $25,000 in places of three thousand population or under, to organize as National banks and issue circulation, whereas the minimum has hitherto been $50,000 capital stock.

Representative Ray of New York, chairman of the House Judiciary Committee, has introduced in Congress a joint resolution proposing an amendment to the constitution for the purpose of regulating trusts. The following is the suggested amendment:—

"Article XVI.—The Congress shall have power to regulate and repress monopolies and combinations; to create and dissolve corporations and dispose of their property, to make all laws necessary and proper for the execution of the foregoing powers. Such powers may be exercised by the several States in any manner not in conflict with the laws of the United States."

Judge Fields of the Circuit Court in Frankfort, Ky., to whom the election dispute was referred, has decided that the Legislature is the only tribunal authorized by the constitution to determine such questions. Threatened armed strife in Kentucky has been avoided by an agreement between the rival state officers to refrain from making any effort to change the *status quo* until the Court of Appeals shall have decided the dispute. The Legislature has adjourned.

E. H. R. Green, chairman of the Texas Republican executive committee and son of Mrs. Hetty Green of New York City, is said to be the choice of the Republican leaders of Texas for vice-president on the National Republican ticket.

Chicago has sent a delegation to Washington with a memorial to Congress urging that a deep-water way be constructed from the drainage canal to the Mississippi River, thus connecting Chicago with the Gulf of Mexico.

The Porto Rican relief bill appropriating $2,095,000 of collected customs revenues to the people of Porto Rico was passed by the United States Senate March 16.

### Foreign News.

The character of the peace proposals made by Presidents Kruger of the South African Republic and Steyn of the Orange Free State, was made public March 13, when, in the British House of Lords, the premier, Lord Salisbury, read the message of the Boer presidents asking for peace on the basis of full independence for both republics, and his reply, refusing "to assent to the independence either of the South African Republic or the Orange Free State." Similar proposals were transmitted through the consuls of foreign nations at Pretoria, and the United States Ambassador delivered the Boer message, with an offer of his government's good offices to assist in restoring peace, if desired. The offer was courteously declined.

The Lord Mayor of London, A. J. Newton, has received the title of baronet, and the two sheriffs, William P. Trelar and Alfred H. Bevan, have been knighted by Queen Victoria in accordance with the custom of conferring such honors on the chief officers of London when she visits the capital.

Lord Roberts, with his army, entered Bloemfontein, capital of the Orange Free State, March 14, and raised the British flag over the house of President Steyn, where he established his headquarters. The Boer army made no resistance, but fell back on the stronger positions.

The coal famine in the government of Kharkow and neighboring districts of Russia has compelled many iron and steel mines to close down.

Mexico has been at war with the Yaquis Indians for some months past. The Indians collected in large numbers and seem to be well armed.

The British report that their losses in the South African war footed up 15,677 men on February 12, including wounded and missing.

The Reichstag has adopted a coinage bill providing for the issue of about two hundred million dollars worth of silver coins.

### Industry and Commerce.

The *Railway Age* says: "Although more miles of new railroad were built in the United States last year than in any year since 1890, there is every indication that the present year will witness even greater activity. In the aggregate there are nearly fifty-nine thousand miles of projected road, grouped in sections as follows: New England States, 447 miles; Middle States, 2,240 miles; South Atlantic States, 9,752 miles; Gulf and Mississippi Valley States, 6,798 miles; Central Northern States, 15,623 miles; Northwestern States, 6,197 miles; Southwestern States, 21,207 miles; Pacific States, 6,377 miles; total, 58,841 miles.

In a review of the agricultural situation from a financial standpoint, the *American Agriculturist* states that the produce of the United States farms last year was worth one billion six hundred million dollars more than the value of the farm produce during the years of trade depression from 1894 to 1896. The total investment in American agriculture is now placed at seventeen billion five hundred and fifty million dollars.

Andrew Carnegie has filed his answer to the bill in equity of H. C. Frick, claiming that $16,238,000 is due him for his stock in the Carnegie steel enterprises. Mr. Carnegie gives a history of his dealings with Mr. Frick, showing that the latter has only paid $300,000, all told, for his stock, which Mr. Carnegie is willing to buy, however, at its book valuation of $4,900,000.

Stockholders of the Standard Oil Company were paid twenty million dollars on March 15, representing a quarterly dividend of three per cent on the company's capital of one hundred million dollars, and an extra dividend of seventeen per cent. This is supposed to be the largest dividend ever paid by an American corporation for a single quarter.

Maine ship yards are overwhelmed with orders for all sorts of vessels. They launched about ten thousand tons of new shipping during the first two months of the present year. Scarcity of steam coal and the great increase of general business have raised freight rates and made investments in ships attractive.

The increase in the price of cotton to nearly ten cents a pound has added nearly $200,000,000 to the available wealth of the Southern people in a single season, and they are putting a good deal of money into new factories.

### General News.

The novel experiment of conducting a daily newspaper on the basis of what the editor supposes Jesus would do if in his position, was made by the Topeka, Kan., *Daily Capital* last week. Rev. Charles M. Sheldon, author of "In His Steps," accepted a proposition of the owners of the paper to take absolute control of it for six days. Public interest in the experiment was very great, owing to the widespread popularity of Mr. Sheldon's novel, in which he described the reformation of a daily paper by the editor, who became convinced that he should apply the test of what would Jesus do? to his enterprise. Duplicates of the Sheldon issues were printed in Chicago and New York, and will be in London, and it is stated that the issues for each day were enormous. Mr. Sheldon announces that he will go abroad next May and will organize a movement in England and the United States to secure the practical application of Jesus' teachings to every-day life. F. O. Popenoe, who is said to own a majority of the stock of the *Capital*, is reported to have decided to continue the conduct of the paper according to the Sheldon method, but the editor and business manager, who are also stockholders, object to having this done.

A dispatch published in the *Boston Transcript* states that a New York house has placed an order with prominent sportsmen of Delaware for twenty thousand birds at eight cents apiece, to be delivered within sixty days. The birds are wanted for millinery purposes. The dispatch says that the slaughter has begun, and the woods and fields are swarming with gunners. Owls, blackbirds, sea-gulls, red-winged blackbirds, and crows are on the list ordered. The American Ornithological Association has taken up the matter and will prosecute those engaged in the work of destruction, wherever evidence can be found.

As the result of an agitation in Quebec to have the universally supposed site of the battle between Wolfe and Montcalm perpetually maintained by the government as public ground, an investigation of ancient maps and records was begun with the result of revealing beyond question that the supposed site of the battle was not the actual battle-ground.

The first total eclipse of the sun visible in any part of the United States since 1878 will occur May 26 of this year. The best opportunity for observing it will be in the south, and astronomers of the great colleges are making up a party to go south at that time.

As an indication of the tenacity with which New York clings to old customs and traditions, it can be stated that there are still eight thousand street-car horses with their shoulders against the collar every day in New York City.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## Panama and Nicaragua Canals.

THE project of separating the continents of North and South America, and establishing free navigation between the Atlantic and Pacific Oceans by a ship canal through the Central American isthmus, is by no means of recent origin. A survey of the valleys of the Chagres River and the Rio Grande was made by Flemish engineers early in the sixteenth century, and explorations with the same object in view were soon after made along the courses of the San Juan and Coatzacoalcos Rivers. From 1528 until the present, intermittent isthmian canal fever has preyed upon the minds of engineers, capitalists, and diplomatic schemers in both hemispheres. Numerous surveys have been made; a score or more of routes have been selected, each being pronounced by its advocates incomparably preferable to all the rest; and a vast amount of romance and speculation on the subject has been indulged in, without, until very recently, any definite result. But the rapid growth of the states of the Pacific coast, closer commercial relations and increased trade with the Philippines, China, and Japan, and other less important causes, have at last made the long-dreamed-of canal a necessity in the view of many people; and the scheme has been denuded of all romance and speculation, save such as dwells among the mathematical calculations of contractors and engineers. The number of proposed routes has been reduced to two, which, oddly enough, were the first chosen more than three centuries ago—Panama and Nicaragua. For each of these special advantages are claimed over the other, and upon each it is proposed to construct a maritime highway of entirely different character. Minutely detailed descriptions of the two routes have from time to time been made public.

The Panama route is in the immediate vicinity of the railroad now in operation between Panama and Aspinwall, and lies wholly within the United States of Colombia. Its general direction is from northwest to southwest, along the valleys of the Chagres River and the Rio Grande, at which point the isthmus is only forty-three miles wide. It is proposed to pursue the heroic course in constructing this canal, and run it from ocean to ocean at tidewater level. Passage through the mountain range that forms the backbone of the isthmus would be effected by a tunnel, in which two full-rigged ships may pass each other. Of course, no lift locks will be used, but as the tides of the Pacific rise twenty feet higher than those of the Caribbean Sea, a compensator tide lock will be placed at each entrance to the great trans-isthmian ditch.

Numerous objections have been offered to this route. It is said that the climate is so deadly that the laying of each sleeper on the Panama railroad cost the life of a workman; that the violent rains, aggregating nine or ten feet annually, and the torrent-like stream of the Chagres will fill the canal with silt and debris; that the southern terminus is in a region of perpetual calms, where excessive towage will be required, while the northern port is the very home of tornadoes; that the cost of tunnelling the mountains will be too great; and many similar charges are made. Despite all this, the company expresses enthusiastic confidence of success. The estimated cost of the canal is only $110,000,000, for which subscriptions are received from all parts of the world.

The second route is that by way of Lake Nicaragua and the San Juan River, along the boundary of Costa Rica, and through the territory of the republic of Nicaragua, a region made famous by the daring and death of Walker the filibuster. The general direction of the route is from east to west. Beginning at or near Greytown, on the Caribbean coast, the canal is to be dug for a distance of sixty-three miles to the San Juan River, above the junction of the Rio Grande Carlos, the latter stream bearing too much silt to allow the use of the San Juan River below that point. Thence the line of navigation will be up the San Juan, which is a thousand feet wide and twenty feet deep, and of constant and gentle flow, to Lake Nicaragua. In all this distance from ocean to lake there will be from six to ten lift locks of about ten feet each. Lake Nicaragua is a fine inland sea, one hundred and ten miles long by thirty miles wide, and from thirty feet to one hundred and fifty feet deep. It lies one hundred and seven feet above the sea level. The canal route will cross the lake to its western shore, only sixteen and two-thirds miles from the Pacific Ocean. Here the hills rise one hundred and thirty-four feet above the lake, rendering a deep but short cut necessary; after which the canal will reach the tidewater by an easy descent through a system of ten locks, of ten feet each, and not less than two thousand feet apart. The western terminus will be at Brito. At each end of the canal an artificial harbor will have to be formed, there being no natural harbor at Brito, while that at Greytown, formerly one of the finest on the coast, has become so badly silted as to be useless except for small craft. The estimated cost for the entire work is seventy-five million dollars.

Objections have been made to this route, on account of its length, and more particularly against the system of lockage, which will, it is claimed, prove a serious obstruction to commerce. On the other hand, it is urged that by utilizing the lake and river the actual amount of canal excavation will be no more than by the Chagres route; that the ample size of the locks will preclude accidents or serious delays; that the climate of the regions is eminently healthful, and that while Greytown and Aspinwall are equidistant from the Atlantic ports of the United States, the Pacific terminus of this route is six hundred miles nearer the western coast of the United States than is the outlet of the Panama route. The Nicaragua route was selected by Admiral Ammen and Captain Phelps, U. S. N., and is entirely an American enterprise. Complete arrangements have been made with the Nicaraguan government.

A map of the world shows that as a means of communication between the Atlantic and the United States and its Pacific coast, the western coast of South America, China, Japan, Australia, and the islands of the Pacific, either of the two routes across the isthmus would possess great ad-

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

vantages in point of distance over the tedious and often perilous journey around Cape Horn, which is now the only means of communication which does not necessitate the unloading and reloading of cargoes. This fact will be the more evident when it is stated that the distance from New York to San Francisco via Cape Horn is 15,672 miles, and via Panama 6,057 miles, a saving of 9,615 miles. A proportionately great distance is also saved between New York and Yokohama or Hong Kong. The advantage in point of distance of the isthmian over the Cape Horn route to European commerce is immense, effecting a saving of more than seven thousand miles each way in the journey between Europe and the Pacific coast of South America.

It is evident that the further north a route may be placed the shorter will be the distance by it between the Atlantic and Pacific coasts of the United States. This circumstance is, of course, intensified by the spherical form of the earth, causing the distance between any two meridians to increase as they approach the equator.

The Caribbean terminal of the Panama and Nicaragua routes are about equidistant from any of the Atlantic ports of the United States. On the Pacific coast there is a difference of over six hundred miles in favor of the latter.

*Denver Republican.*

## Christ rather than Culture.

REV. JAMES MCFARLAND preached in the Hyde Park Presbyterian Church last evening (Sunday, February 25) from the text, John, 6 : 68: "Then Simon Peter answered him, Lord, to whom shall we go? thou hast the words of eternal life." He said in part:—

The Bible nowhere claims to be the foundation of Christianity. "Other foundation can no man lay than that is laid, which is Christ Jesus." Ye "are built on the foundation of the prophets, Jesus Christ himself being the chief corner-stone." He said, "I am the way, the truth, and the life."

It is on the authority of Christ that I believe the Bible. The world may ask how I know about Christ? The same as I know about Julius Cæsar, George Washington, or Queen Victoria. This is a matter of history, if you please. These things were not done in a corner. No matter what you may take away from me, Christ is still left. The Bible is an open country; Christ is the citadel of our faith. On Christ, the solid rock, we stand. "Blessed are the pure in heart: for they shall see God." Many had followed Christ for the loaves and fishes. So they went back to their old lives. Those that would follow him must do it through love. Everything in this world may be taken from us, but there is one thing that will remain. That is love.

The world says, "Give us culture;" the preacher gets into the same rut and says, "We will save the race and bring in the golden age." Culture—that is what Athens had, and she perished; that is what Paris had, and she has gone crazy; that is what Germany has, and she is full of trouble; that is what England has, and she is not happy; that is what the United States has, and still she is crying for something better. My friends, the water of this world will not satisfy. Let us stand to our guns until every grain of powder is gone, and then we will go up to the mansion in a blaze of glory.—*Denver Republican.*

### Communion Doxology.

Slips containing the words and music of the Communion Doxology, suitable for insertion in the Hymnal, will be furnished at 50 cents per hundred, prepaid. This can be placed in the Hymnals now in use. The Doxology will be printed in future editions. Address orders to the Christian Science Publishing Society, 95 Falmouth St., Boston, Mass.

## The Lectures.

### At San Jose, Cal.

The widespread interest that is taken in the doctrines of Christian Science was clearly manifested at the Victory Theatre last evening (Thursday, March 1), the occasion being the address of Hon. William G. Ewing of Chicago, who had announced as his topic "Christian Science, the Religion of Jesus Christ." A half hour before the time set for the meeting to open every seat in the building was occupied, many persons were standing in the aisles and lobbies, and many more turned away on seeing the crowded condition of the building.—*San Jose Daily Mercury.*

Judge J. R. Lewis introduced the speaker as follows:—

Since the masterly argument of Paul before Agrippa, humanity has been continually in the pursuit of the truth as to Jesus Christ, his mission and laws. For many centuries immediately succeeding Paul, men were so hedged about with laws regulating their beliefs and controlling their conscience, and limiting their speech, that even the right of free thought was scarcely accorded, for free thought without free speech is little worth.

For ages ignorance, superstition, oppression, and persecution ruled the world, and yet the search for truth still went on, for the Divine Master had said, "Ye shall know the truth, and the truth shall make you free." Emerging from the gloom of the dark ages the search for the truth of Divine promise gained greater force. The scholarly Wycliffe believed that he had found it. The world of bigotry and superstition were amazed, and even the bones of Wycliffe were exhumed and burned, but this did not stop the search. Luther and Calvin proclaimed that they had found the way, the light, the truth, and in defence of their faith the Thirty Years' War was fought and won. France was for a hundred years drenched with the blood of the followers of Calvin, yet the great truth was and is still searched for, and the world has grown better.

The Church of England, too, says, "We have found the truth and upon its faith have built a splendid civilization." Then came Wesley, who claimed to have discovered the way and the truth, and millions have believed and are traveling his way. Rome claims that she alone teaches the divine way, and so it is with all the multitudes of creeds, the world is still searching for the truth. Since the settlement of the United States an increased impetus has been given to inquiry; we have here free education, intelligent individual thought and speech protected by law, and in our free republic the inquiry has proceeded with increased vigor, our whole people are earnestly in search of the actual truth.

And so it is the world of religion believes that God rules in the affairs of nations and men, and the trust of our race is in the coming of better times. The religion of the intelligent, educated thought is intensely optimistic. It builds upon the eternal foundations of love for our Creator and fellow-men, seeks earnestly for the truth, and preaches the gospel of better times to come.

Our friends of Christian Science claim to have found the truth. We are here to-night to hear expounded the tenets of Christian Science. What the doctrines of this new and rapidly growing society are, I am not qualified to say. It is said that its chief corner-stone is Christ and his laws. Whether this be so or no I am not competent to determine; this, however, I do know, its ideas are optimistic, its beliefs and hopes are for better days, better things, and better men, as well in this world as in the world to come. If by the teaching and practice of Christian Science the world shall be brought nearer to God and be made truly to know Christ and his love, then indeed we may with one accord bid the society God-speed in its mission.

We have with us to-night a distinguished gentleman of

Digitized by Google

high repute as a citizen, an able lawyer, an eminent judge, who has left the bar and bench to expound the doctrines of Christian Science, a man who knows whereof he speaks, he comes with authority from his society. No doubt you will give him a hearty welcome and an attentive hearing. I am now pleased to introduce Judge William G. Ewing of Chicago, who will address you.—HERBERT W. EUSTACE.

### At San Francisco, Cal.

Last Tuesday evening (February 27) the Hon. William G. Ewing of Chicago, delivered a lecture at Metropolitan Temple under the auspices of First Church of Christ, Scientist. The hall was filled with earnest men and women to whom the lecturer was introduced by Livingstone Jenks. Mr. Jenks said:—

*Ladies and Gentlemen:*—Civilization is the development of the individual, and through the individual the development of society; and the onward march of civilization keeps step with man's successive discoveries of the truth in the moral, physical, and spiritual world.

Never before in the world's history has the desire to search out truth been greater than at the present time. How to lessen the cares of life, its sorrows and its pain, how to lighten its burdens, to smooth its path—in short, how to increase the sum of human happiness—this is the question the earnest discussion of which distinguishes the closing years of the nineteenth century.

The world has not always readily accepted new truth. Toleration is a virtue of modern growth. We no longer chain our Columbuses, imprison our Newtons and our Galileos, or burn our Savonarolas. Rather do we welcome and acclaim as a benefactor of his kind any one who does aught to add to our intellectual life, strengthen our moral powers, or increase our spiritual growth.

It is in this spirit that we are assembled here to-night. Differing in opinion, one from another, yet broad-minded, candid, and just—representing various creeds, yet suspecting that there may be truth and error intermingled in every creed, knowing that error will perish because it contains the seed of its own dissolution, that truth will live because it is God's thought—we have met to listen with open minds to a discussion of the great question, "Man's Relation to His Creator."

The most recent theory advanced in answer to this question, to the solution of which all denominations are striving, is put forth by a church of recent growth—Christian Science. Whether we believe in it or not, whether we understand it or not, whether it has our sympathy or our condemnation, Christian Science is one of the great and important facts of our generation.

Its growth has been phenomenal, and some of the best thought, the keenest intellect, the ripest culture, and most earnest devotion of our day may be found within its ranks.

I wish to express my own gratitude, and I will take the liberty of voicing the gratitude of this entire audience, to the local Christian Scientists for their efforts in bringing to our far Western shores the distinguished gentleman who is to address us. I might introduce Judge Ewing as a man of high social standing, a scholar and an orator, an able lawyer who has added to a long and brilliant career at the bar the honors of distinguished official and judicial service—for these merits are his, but he comes to us as the representative and advocate of a new faith, which claims kinship with the Christ power of old, and which he believes throws a clearer light upon the meaning of the Scriptures, breathes fresh hope into the hearts of humanity, and lifts men into closer communion with God.

It is in this capacity, therefore, that I present to you as the speaker of the evening the Hon. William G. Ewing of Chicago.

Judge Ewing was greeted with hearty applause.

*San Francisco Bulletin.*

### At Santa Barbara, Cal.

On Thursday night (February 22) the Hon. William G. Ewing of Chicago, addressed the people of this city upon the principles of Christian Science. The speaker's welcome was a warm one.

The lecturer was introduced by Judge W. S. Day of the Superior Bench of this county. He said:—

*Ladies and Gentlemen:*—We have assembled this evening for the purpose of listening to a lecture on a subject of paramount importance by one eminently qualified by reason of learning and experience to interest and profit us. I shall not presume that we are all in entire harmony with the anticipated views and expressions of the speaker, for our environments often prejudice us in advance against what we suppose will be said, but I beg leave to inform you that our distinguished lecturer represents a line of thought now entertained and being developed by a great many of the most intelligent people of our time. The proper relations of humanity to God and nature, and of human beings to each other is an earnest study of all Christian people.

In our search for truth we have many obstacles to overcome, among which is our sectarian prejudice, the idea that no good can come out of Nazareth—that in order to hear proper Christian teaching we must receive it through the church of our fathers. The fetters of ignorance may lead us to believe that when God builded our church, the devil built yours in order to win souls from heaven. The love of self and of church often leads to hatred of our fellow-man; to the hatred of even the good Samaritan who is not of our people. The love of God in the Christian brings him into harmony with all creation.

Being extremely liberal in my religious views and reasonably tolerant of all others' opinions, I have never taken occasion to inform myself, and am therefore quite ignorant of the difference between the teachings of the Christian Scientist and other Christian people, but from what I have heard, read, and observed in my neighbors who entertain that faith, and from the peculiar and significant combination of the words Christian and Science, I am constrained to believe that the still small voice of conscience, of faith, of hope, and of love speaks to them along the lines of scientific truth.

But I must not encroach upon the domain of the lecturer by attempting to give definitions, differences, or purposes, but leave that to him with the assurance that he will, at least, furnish you with material for profitable thought and consideration.

I now take great pleasure in introducing to you Hon. William G. Ewing of Chicago, a man of national reputation, who having earned and enjoyed the honor of high judicial position in that city, has declined further preferment that he may speak and teach the Truth as it is revealed to him.—*Santa Barbara Daily News.*

### At Flint, Mich.

Yesterday afternoon (Sunday, March 4) at the Maccabee Hall, Mrs. Annie M. Knott of Detroit delivered an address before the local Christian Science society and their friends. Mrs. Knott was introduced to the audience by Prof. Francis D. Clarke, superintendent of the School for the Deaf, in a few well-chosen remarks in which he said in part:—

Communities, towns, cities, states, nations, have characters as strongly marked and as peculiar as individuals. The most marked characteristic of Flint, if I may be allowed to say so, is a critical intelligence, and an unusually large share of that rare quality—common sense. We desire most earnestly to know all that is being done, or said, or thought; but exercise our own judgment on facts presented to us.

Like other cities, we have many different churches, but

Digitized by Google

from their different altars we all look up to the same God, —a God whom we believe to be infinite, eternal, and unchangeable, a God who answers prayer, and to whom nothing is impossible.

Most of us believe the Bible, and believe that what it says is true. We accept its miracles as true, and do not try to explain them away.

How, then, are we to explain the fact that we have none now. It has been said that the age of miracles has past, that they are no longer needed to awaken faith. Has God changed? Is it not possible that it is we who have changed, that, like the great Assyrian general, we turn petulantly away from One who is willing and anxious to save? We cry out: "Are not Abana and Pharpar, rivers of Damascus, better than all the waters of Israel?"

Now, my friends, there are those who claim that the same system of healing, the same means that was used by Christ and the prophets, can be used now, if men would have the same faith. They are not few and far between, but are numerous, especially in the eastern part of our country, and have sent to us here to-day one who will tell us what they really do believe, and what things they are accused of believing which they do not believe.

She comes to us with the endorsement of those who have the right to say she speaks for them. I bespeak for her a respectful and attentive hearing.

I have the very great honor and pleasure of presenting to you, Mrs. Annie M. Knott of Detroit, who will speak to you on Christian Science.—*Flint Evening Journal.*

### At Los Angeles, Cal.

The Hon. William G. Ewing lectured Tuesday evening, February 20, in Simpson Auditorium, under the joint auspices of First and Second Churches of Christ, Scientist, of Los Angeles.

A magnificent audience greeted the lecturer. Every seat on the floor and in the two balconies was taken long before eight o'clock, and at that hour, when the lecture began, numbers were seated on the steps of the aisles, or stood about wherever there was room to see and hear. Fully three thousand people were present, and hardly a person left the hall during the hour and a half that the lecturer was speaking.

Judge Ewing was introduced by Mr. F. W. Burnett, an attorney and personal friend of Judge Ewing. Mr. Burnett spoke as follows:—

*Ladies and Gentlemen:*—I, myself, have but a very general and indefinite idea of what is meant by the term Christian Science. Like many others, I have not taken the time to investigate a doctrine that has seemed comparatively new, but which I am assured is as old as Christianity itself. I am, however, acquainted with the gentleman who will address you to-night, and whom I shall introduce to you. I know of the distinction he has achieved in his career as a lawyer and as a judge, and when a man so talented and so successful in his chosen profession deliberately dedicates his life to the enlightenment of his fellow-men upon this subject, I am convinced that the doctrine he teaches is worthy of the profoundest consideration of all thinking people. I know, also, that whenever Judge Ewing has the floor upon any occasion or upon any subject, his audience is certain to be instructed and entertained. We are all therefore to be congratulated upon being present to-night, and it is with great pleasure that I now present to you the Hon. William G. Ewing."—CORRESPONDENCE.

### Lectures at Other Places.

Dubuque, Ia.—Edward A. Kimball, Tuesday, February 27.

## Church Dedicated at Marinette, Wis.

SUNDAY (March 4) was a day of rejoicing for the members of the First Church of Christ, Scientist, Marinette. They viewed with heartfelt joy the completion of their crowning effort in Marinette. The new home of Christian Science was dedicated and thrown open to the public. Several thousand residents of this city and many from abroad helped the Christian Science Church to celebrate the important event.

Three services were held. At each the seating capacity of the new edifice was tested. There was nothing pretentious about the dedication. A pleasing choral programme, the address of welcome and the usual reading of the Scriptures with correlative passages from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, constituted the services. But there was an all-pervading atmosphere of harmony in everything that occurred. The beautiful church, the kindly reception accorded every one, and the simple service made it an occasion that impressed all with the tenderness and the unselfish love of the religion to which the church is consecrated.

And what a marvel of quiet beauty is the new edifice. Built in the Greek-Roman style of architecture it is an edifice that attracts extraordinary notice. But the interior is where the impression is most delightful. There is something exquisite about the decorations and trimmings; the coloring is charming, the massive oak pillars and strips, their Corinthian top pieces, the ornate panel work in the walls, and the handsome pipe organ all seem to harmonize. It is without a doubt one of the prettiest edifices, as far as interior is concerned, on the river. The aisles are broad and the pews spacious and comfortable. In every detail it is a church of which the Scientists may well be proud. The only decorations Sunday were smilax and potted plants, roses and tulips. The church furniture is of oak with green plush backs and seats.

The three services Sunday, with the exception of a slight change in the musical programme, were the same. The address of welcome was delivered by Mrs. J. Pierce and gives a complete history of the congregation and church from the time it started until the completion of the church. Letters of greeting from various friends of the church living in other cities were read.

The church cost ten thousand dollars. Work on it was started last May and it was not completed until the entire cost was paid. This was done entirely without solicitation. The handsome pipe organ was the gift of Mrs. A. C. Merryman. The plans were drawn by S. I. Beaman of Chicago. The congregation here is a large and growing one, and has among its members some of the most prominent and wealthy people in the city.

Services will hereafter be held every Sunday morning and evening, and also every Wednesday evening. The reading room in the rear of the church, which is a cosy little parlor, will be open every day from two to four o'clock, for those who desire to read Christian Science literature.

The following is the address of welcome delivered by Mrs. Pierce:—

With hearts full of love and joy, we greet all who meet with us to-day. To our guests, the visiting Scientists, we extend a glad welcome, and thank you for your presence, and bless our heavenly Father for the loving tie that binds us together as one, through the understanding of the brotherhood of man, as revealed in Christian Science.

We welcome, too, all our dear friends from other denominations; and as your presence with us to-day testifies of love and kindly feeling, may we not unitedly anticipate the fulfilment of our Master's promise, that "there shall be one fold and one shepherd"?

We also most heartily welcome the "stranger that is within our gates",—any who are strangers to the tender

Digitized by Google

Christ-love which Christian Scientists are striving to learn and live. Christ hath prepared for us "a table in the wilderness."

He is our honored guest at this feast of love. Come and partake with us of this living Bread, which never fails to satisfy the hungering heart, and of which the Master said, "It is the Spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life."

In this gracious interpretation of his own words, Jesus foreshadowed the joy of the spiritual understanding of God, which Christian Science gives to man, anticipating that blissful time when, God's kingdom having come on earth, all men would recognize and acknowledge it, in thought, word, and deed. It is by reason of "this hope that is within us," that to-day and for all time, we most cordially welcome all to our church home, and to its public services.

In briefly outlining the history of the work of Christian Science in Marinette, let me say that all that has been accomplished, has been done through strict adherence to the teaching of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. This blessed book illumines the Scriptures, making the word of God practical in every hour of need. It gives us a love for God and man that finds expression in deeds rather than words, and through demonstration, shows us how applicable to-day is every word that Jesus uttered and lived.

In the winter of 1889 two or three persons met together to study the Bible and Science and Health, to learn something of what was then called a new religion. The number gradually increased, until, the first of April of that year, a class in Christian Science Mind Healing was taught by a loyal student of Rev. Mary Baker Eddy. This began the work and other classes followed which added to the growth of the cause. On the 21st of April of the same year, we organized our church with twenty-one charter members; and on December 30, 1897, we were legally incorporated as a church body. The church has had a steady growth, the healing work has given good results, and to-day we have a prosperous church society, built upon the Rock,—even Christ, Truth,—which is demonstrable in healing sin and sickness.

In referring to the history of Christian Science in this city, we wish to speak a kind, appreciative word, of the courteous treatment that it has received from both the clergy, the M.D.'s, and the press. And may the glad future tell of our united efforts and success in uplifting, healing, and saving humanity, morally, physically, and spiritually.

On the morning of July 5, 1899, the corner-stone of our new edifice was laid with simple but impressive ceremonies, and to-day, March 4, 1900, we present it complete with the exception of some exterior finishing, free and unincumbered by debt, a fitting offering to the one God in whom we trust and to whom we lovingly dedicate our church to-day. It has been built wholly from free-will offerings, with no solicitation for any funds outside of our own immediate church membership and congregation, and to all who have so generously given from willing, loving hearts, be it little or much, we desire to express our sincere thanks; and trust that the measure you have given will be returned with the increase of God.

To the dear children of our Sunday School, its officers and teachers, we want to say thank you, for our beautiful pulpit furniture, which is their loving gift.

Our faithful Building Committee deserve great credit for their untiring work, and we trust they are fully repaid to-day, in witnessing the consummation of their labor in our new church home. The laborers, too, who have helped us on the building, have been faithful in season and out of season; and a number have aided us with generous gifts, according to their ability, of both money and gratuitous work, and they will always be most kindly remembered.

There are no words to express the deep, loving gratitude we feel toward our beloved Leader, Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, whose self-sacrifice, faithful toil, and tireless labor of love, has made this joy possible to us to-day.

Who can measure the love of a life so unselfishly laid on the altar for humanity? What tongue or pen can do justice to one tithe of what our beloved Mother in Israel must have endured in voicing Christian Science to a doubting world? And still she patiently works and prays for the salvation of men, meekly following the Christ, up the thorn path in the "narrow way" that leads to eternal glory, where "There remaineth therefore a rest to the people of God." All honor to the loving noble woman, who dared to stand alone with God, and proclaim His message of Life to all mankind, thereby freeing from the bondage of sin and disease, those who accept the Word.

To-day thousands rise up to call her blessed, for the moral and physical healing that has come to them, by simply reading her book "Science and Health with Key to the Scriptures." The immortal Truth revealed therein is the Rock upon which we build our church; and we have our heavenly Father's assurance that "The gates of hell shall not prevail against it." As the Scripture hath said, "To whom coming as unto a living stone, disallowed indeed of men, but chosen of God, and precious, ye also, as lively stones, are built up a spiritual house, an holy priesthood, to offer up spiritual sacrifices, acceptable to God by Jesus Christ. . . . That ye should show forth the praises of him who hath called you out of darkness into his marvelous light."—*Daily Eagle*, Marinette, Wis.

## Had No Interview.

*Editor American:*—I would like to inform the public of an error of statement made by Mr. Riddell in his attack upon Christian Science.

He said he had within the last six months visited at Mrs. Eddy's home for a day and a half with Mrs. Eddy's private secretary. He said he could not think of his name. He never met Mrs. Eddy's secretary, and was never at her home as stated, as can be proven by a message received from that gentleman to-day. EVA THOMPSON.

In order to test the truth of Mr. Riddell's statement, the following telegram was sent to Mrs. Eddy's private secretary:—

Mr. C. A. Frye, Pleasant View, Concord, N. H.

*Dear Brother in Christ:*—Have you within the last year, or ever, had one day and a half's personal interview with Prof. N. N. Riddell on Christian Science, at Mrs. Eddy's home? He made this statement lecturing against Christian Science here last night. Answer at our expense.

LANSING W. HURLBURT.

To which the following reply was received:—

Concord, N. H., March 9.

Lansing W. Hurlburt, Creston, Ia.:—I do not know N. N. Riddell. I have had no interview with any stranger during the last two years. CALVIN A. FRYE.

*Morning American*, Creston, Ia.

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Church By-laws.

LOYAL Christian Scientists whose teachers are deceased, absent, or disloyal—or who, for insufficient cause would refuse to endorse their applications for membership with the Mother Church—can apply to the Clerk of this Church and present to him a recommendation signed by three members thereof in good standing therewith. After which, the unanimous vote of the First Members that are present at the meeting, shall admit said applicant to membership.

The Publication Committee shall consist of males only, and shall be appointed by the First and Second Readers of the Church employing said committee. If prior to its meeting for electing church officers, the Pastor Emeritus shall send to the First Reader of a church the name of a candidate for its Publication Committee, this Reader shall appoint said candidate. The female incumbents shall immediately resign this office and males shall be elected to fill the vacancy. It is by no means an office befitting a woman.

### The Massachusetts Metaphysical College.

As announced in the *Sentinel* of December 21, 1899 the annual term of the Massachusetts Metaphysical College which would regularly have convened on the first Monday of January last, was postponed until the Wednesday following the second Tuesday of June, 1900 (June 13). It was also announced that the applications for the examination then on file would be retained, but others would not be received until further notice.

Since that time a By-law has been passed, but not heretofore published, limiting the number of applicants that can be received for examination by the Board of Education, acting under the auspices of the College, to thirty-three. Not more than twenty-one of this number can be authorized to teach; and, as heretofore mentioned, only those who intend to teach are eligible to examination by the Board of Education.

It is now announced that the applications heretofore received for the examination of January, 1900, will be retained and considered, and applications from any who did not formerly apply will be received up to May 1; then those whose names are selected and placed on the list for examination, not exceeding thirty-three, will be duly notified thereof. Those not receiving such notice, of course, will not appear for the examination.

Obstetrics is taught to those only who have received the College degrees.

### About Contagious Diseases.

FOR some time past rumors have been afloat in Buffalo, to the effect that Mr. M. H. Miller of that city, had contributed to the spread of contagious disease by ignoring the city ordinance of that city upon that subject. Some of the newspapers of Buffalo published the substance of these rumors. It was claimed that Mr. Miller was a Christian Scientist. Mr. Miller was conferred with upon this subject, and in reply wrote the following letter which fully refutes the charge that he was a Christian Scientist.

Buffalo, N. Y., March 6, 1900.

Mr. R. Moderwell, C.S., 156 Cottage St., City.

*Dear Sir:*—Your communication at hand. Am very sorry that I am the innocent cause of trouble to any one, so will hereby make a statement that you may print or use in any way you may see fit.

I am not a Christian Scientist, never was, and never will be. My youngest child, a baby of one year, had the measles in a light form on or about the tenth or eleventh of December. I do not remember exactly. We kept the other child, a girl of thirteen, at home from the time the baby showed the first symptoms until the eighth of January, when we sent her to school and the principal sent her home to get a certificate. I went up to the Board of Health to get one and they refused it on the ground that I had no doctor's certificate. I told them I had no use for any doctor, that when I did I would employ one; that they had the privilege of coming to my house and examining my family if they wished to, but they refused to come. I have not tried to spread or be the means of spreading any contagious disease, but tried to comply with the city ordinance in so far as I could. I had no Christian Science treatment, or any other, but simple home remedies. All I ever knew about Christian Science was what I read in the Buffalo papers, and was quite surprised when I saw in the *Evening News* that I was a Christian Scientist. . . .

Respectfully Yours,

(Signed) M. H. MILLER.

In connection with the above we publish the following extract from a letter written to us by Mr. George H. Kinter, a Christian Scientist of Buffalo.

"Incidentally I may remark for your information and for publication if you see fit to make it, that, notwithstanding the most diligent watchfulness has been maintained by the Board of Health through its agents and otherwise, no single case of the spread of contagion at the hands of Christian Scientists has been found, and furthermore, that the Health Commissioner stated at one of the public hearings last fall upon his return from Chicago, where an epidemic of measles was said to be prevalent, 'I have not found that the spread of this contagion in our city is due in any case to the Christian Scientists.'"

Of course the newspapers of Buffalo, as well as the unprejudiced community, will see the injustice of the charge that Mr. Miller was a Christian Scientist.

### "Wrong Methods of Advertising."

WE have read a circular sent out by Mrs. S. A. Jefferson of Chicago, in reference to which we desire to say that its author is not now affiliated with the Christian Science movement. By her own voluntary acts she has departed from the legitimate and well-established Christian Science methods and practices, thereby cutting herself off from genuine Christian Science.

Christian Scientists have no jurisdiction over her or her practices, and hence all they can do or say is to inform the public that she is not recognized by them, and her methods not endorsed but disapproved.

We wish to say further that Christian Scientists deprecate her severe and altogether unjust attacks upon the medical profession, which, within its sphere, is laboring for the welfare of humanity, and which contains within its ranks scores and scores of noble, self-sacrificing men and women.

In this connection we will also say, that we have received a letter from Mrs. Dora L. Bond of Wichita, Kan., in which she says she never authorized Mrs. Jefferson to use her name in her circulars.

## As to Chartered Churches.

WE are asked the question as to what is meant by the term "Chartered Branch Churches." In reply we will say that a chartered branch church is a church which has been regularly incorporated under the laws of the state in which it is located. The branches thus incorporated are called Branch Churches. Those that have simply organized in an informal way without having taken the legal steps to incorporate, are usually designated as Societies, although sometimes called Branch Churches. The distinction between the chartered and the unchartered branch is simply that the one has legally incorporated and the other stands as a voluntary society.

It may be that the filing of a certificate with the proper authority would, under some statutes, constitute an incorporated church. This, however, would depend upon the provisions of the statute itself, and is a question which cannot be generally answered.

## Photographs of Churches.

We hereby extend our sincere thanks for the prompt response to our request for photographs of the branch church edifices.

The pictures received are all well executed and convey to us an accurate idea of the structures, which, without an exception, combine good taste and beauty with substantiality. Some of them are architectural gems.

They constitute a valuable and significant chapter in the external history of the Christian Science Church movement.

# Selected Articles.

## Christian Scientists.

### Plea for Toleration of Their Honest Beliefs.

*To the Editor of the Globe:*—In view of the recent sensational reports of the death of a Somerville child, we desire to enter into a candid discussion of the matter in question.

There are many thousands of Christian Scientists in Boston and its suburbs, and the number is rapidly increasing. These people are honest, charitable, law-abiding citizens, endowed with at least ordinary common sense, and an ardent desire for the general welfare of mankind. They have no desire to disrupt any laws that stand for the protection of the community in which they live. Yet it is true that they have their own peculiar ideas as to what constitutes a preventive of disease, and these ideas are to them conclusive, having been tested by many years of successful results.

Their theory, however, is not universal, and is perhaps only accepted by Christian Scientists themselves. For this reason Christian Scientists stand as a "peculiar people" and almost alone in their sense of the proper remedy and preventive of disease. They are obliged to mingle with those who have not yet adopted their methods; indeed, they have no desire to become isolated from their friends who do not believe as they do. Besides, their Christian influence is needed among men, and the world cannot afford to be without them.

To keep peace, therefore, the Scientist must suffer some things to be so now, which he might otherwise consider unnecessary, while, on the other hand, his neighbors of other beliefs may deem it allowable to compromise.

In case of a death I see no objection to an examination by a city physician, provided he is a Christian man, and is kind and considerate toward the bereaved ones, who already have enough to bear; and provided that the calamity is not given to the press and heralded abroad to the public. It is the dread of unfair treatment which causes the Scientist to shrink from announcing the death of one of his family. Generally, his fears are ungrounded, for the physician is likely to be kind-hearted and ready to do his duty without making any unnecessary trouble; yet it is sometimes true that the officer insists upon needless examinations, and resorts to threats and unkind remarks to the remaining members of the family. Then, too, the verdict rendered by the officer is sometimes unjust and unwarranted. However, in justice to the officers of this city, I desire to say that I have never known any of the above-named unpleasantness in Boston, except in the imagination of newspaper reporters.

We frequently notice the statement in the press, "If medical aid had been called, the patient could have been healed." We do not speak of this as the general practice of physicians; indeed, these statements seldom come from physicians. Nevertheless, such statements are often published from some source. If other systems are absolutely sure cures, there would be some justice in the claim, so often made, that the patient would have lived if he had called a regular physician; but the fact is, millions of people have died, who from their first illness have had the best available medical assistance.

While it may be the honest opinion of some that a child should be under the care of a regular physician, it should be remembered that another class of people are equally honest in believing that their children are more safe under the influence of Christian Science, and this belief has been established by actual experience. If the death of a child under Christian Science treatment proves this system to be cruel, what does the death of a child under the care of other systems prove?

It is not fair to assume that to depend upon Christian Science is simply neglect, and not a remedy. There are plenty of cases recorded where scarlet fever, pneumonia, smallpox, measles, diphtheria, yellow fever, cholera, have been healed through this Science. I knew of one case of leprosy that was healed by this method. A lady in the South healed several cases of yellow fever in one season. I have also known cases of scarlet fever, diphtheria, and other contagious diseases which were healed through Christian Science, after the regular methods of treatment had been tried.

We indorse the present sanitary systems; they are a necessity, in view of the whole situation, and I know of no law pertaining to this matter that Christian Scientists cannot obey. When people in general are governed by divine Principle there will be less need of human laws.

If Christian Scientists are unfortunate enough to be overtaken with disease, they are mindful of the safety of others, and observe always the spirit of the law, the purpose of which is to guard against the spreading of disease. The very nature of this Science inculcates a love of the good, the pure, and clean; hence, Christian Scientists are also strict observers of the laws of cleanliness.

We see no reason why a Scientist is not safe in the observance of the letter of the law. I give this as simply my individual opinion, but I believe the true sense of Christian Science will sustain me in this view. However, I would add, if Christian Scientists are ever reluctant to obey the letter of the law or to run the gauntlet of medical examination, this is due to a fear of harsh treatment and newspaper reports. There is no reason why Christian Scientists should not have the same kindly treatment that is extended to others. No class of people are more sincere in their beliefs than Christian Scientists, and their honest convictions should be respectfully considered.

It can no longer be said that Christian Science is new and untried, and for this reason must expect to be severely handled. The good effects of this Science are seen and felt

Digitized by Google

everywhere, and the Church of Christ, Scientist, is a well-established religious denomination.

Sensational newspaper reports of the death of a Christian Scientist, in view of the fact that such reports are not made concerning those who die under the treatment of other systems, savor of persecution, a thing not becoming to this age of enlightenment and toleration.

The competition of varying schools of religion and medicine should be fair and honest, like unto a race wherein each runner is free and untrammeled.

ALFRED FARLOW.
*Boston Daily Globe.*

## The "Science Religion."

*Editor Times-Republican:*—While listening to Dr. Munhall, in his discussion of Christian Science on Saturday evening last, many reflections were occasioned by statements made by that gentleman. Having no affiliation with the doctrines of Christian Science, we were in a frame of mind to weigh, as well as our judgment would permit, the arguments presented both for and against this "new religion," as orthodox Christians generally term it. Upon the assertion of Dr. Munhall that Science and Health teaches that "God does not forgive sin; that there is neither heaven nor hell; that they deny Jesus; don't believe in prayer," etc., we then and there resolved to investigate "Science and Health with Key to the Scriptures" on these points, and learn for ourself what Mrs. Eddy taught on the subject.

For our own satisfaction, we have diligently sought among the tenets of this faith, and find that, unless we have different books, we have drawn very different conclusions from the same statements—a thing, however, not much to be wondered at, since from the Bible, which Dr. Munhall holds is the source of all Christian faith and practice, have grown faiths and creeds many. Among what Mrs. Eddy designates as a brief exposition of important points or religious tenets of Christian Science—six in number—we find the following, marked No. 3: "We acknowledge God's forgiveness of sin, in the destruction of sin," etc. Glossary, page 578, 147th edition of Science and Health, we find the definition of heaven to be "Harmony; the reign of Spirit; . . . the atmosphere of Soul." Second in consecutive order, we find the definition of hell to be "Mortal belief; error; lust; . . . that which 'maketh and worketh a lie.'" Thus we see that Science and Health recognizes both heaven and hell. "Kingdom of heaven" is also given in this especial elucidation (glossary) as "The reign of harmony in Divine Science; . . . the atmosphere of Spirit, where Soul is supreme."

As to the fundamental belief of the so-called divine and human organization of Jesus, believed by Christian churches, Science and Health, page 228, edition 147, says, "Jesus was the Virgin's son. In the flesh he was appointed to speak God's word to human flesh, and appear to mortals in such a form of humanity as they could understand as well as perceive. . . . He expressed the highest type in that age which a fleshly form could express of manhood. . . . Thus it was that Christ born of the Father illustrated the coincidence, or spiritual agreement, between God and man."

The digest upon prayer being too long to quote, we merely cite the reader to Science and Health, page 307 of the same edition heretofore mentioned. After printing in full the language of Jesus as found in Matthew, 6 : 5–8, it goes on to say, "Thoughts unspoken are not unknown to the divine Mind. Desire is prayer; and no loss can occur from trusting God with our desires, that they may be moulded and exalted before they take form in word and deed," etc. The subject of public prayer is one that is now commanding the best thought of the best minds of our time.

Many points cited by Dr. Munhall have not been looked up, but according to the rule of establishment as proof cited in his sermon of two weeks ago upon the inspiration of the Bible, we have found enough testimony to persuade ourselves at least that the people known as Christian Scientists have a cause not antagonistic to the great commission, "Go, teach all nations," but on the other hand it is full of comfort, hope, peace, joy, and long-suffering, which in this new century of philanthropy and brotherly love form an important factor in the bringing together of God's children in the federation of the world.

During a rather eventful life of fifty years we have found the application of the Golden Rule a most satisfactory precept, and are of the opinion that if churches—each of which has come up under persecution and great tribulation as it brought its contribution of new truths to the altar of common good—before censuring and condemning might better not only practise the Golden Rule, but read the rebuke of the Saviour to John recorded in Luke, 9 : 49, 50, viz.: "And John answered and said, Master, we saw one casting out devils in thy name; and we forbad him, because he followeth not with us. And Jesus said unto him, Forbid him not: for he that is not against us is for us."

Dr. Munhall made the impression that from the Christian Science point of view we actually do not exist—have no pain, "no toothache," no bruises, "no identity." Pain is unreal and sickness imaginary. In page 457, of the book already referred to, Mrs. Eddy says, "Sickness is neither imaginary nor unreal,—that is, to the false sense of the patient. It is more than fancy, for it is solid conviction." And then proceeds to give what seems to her a remedy for acknowledged disease.

In the continuity of Christian thought many institutions have aided its advance which, if subjected to the criticism of Christians who are satisfied they have found the all of God's will, and the ultimatum of His judgments, for final approval, would have died in the process of birth. It seems to a disinterested listener at least that the mantle of Christian charity might be thrown around the people known as Christian Scientists, for from all over our land and foreign lands as well comes the testimony of men and women—whose integrity would not be doubted upon any other subject—that they have experienced and demonstrated the truths they promulgate.

In private conversation with a teacher of fine education and Christian culture, whose orthodoxy cannot be doubted, we were stimulated to the foregoing thoughts by the following expression given unsolicited: "Of all the sects and isms professing the gospel of Christ none have seemed to me to follow more closely the doctrine of the lowly Nazarene than the Christian Scientists. Their belief is carried out in their cheerful, happy Christ life; being good and doing good. One regret I feel is that I have not yet been able to understand their ground of belief sufficiently to go and do likewise." I am yours impartially, H.

*Evening Times-Republican*, Marshalltown, Ia.

## Christian Science and the Cure of Disease.

THE following appeared in the editorial columns of the *New York Evening Telegram*, February 27, 1900:—

A good deal of fuss is made whenever somebody dies under the ministrations of what is called mind-cure or that other peculiarity known as Christian Science.

It is said that in a large number of cases the patient is brought back to health by the same means, but these are never recorded.

We like to be entirely fair in such matters, and if there is a new thought anywhere we are inclined to stand at the

Digitized by Google

doorway and give it welcome. It is rather a humdrum world at best, and if the general monotony can be invaded by something fresh and startling we enjoy the novel sensation which it produces. It is not our habit to condemn any theory until we know what it wants to do and how it is prepared to do it, and, therefore, we have no wholesale criticism to offer on either Christian Science or the mind-cure people.

The Christian Scientists are certainly very numerous in this country. How many they are we have no means of knowing, but they claim to be counted by the million. This is probably an exaggeration; but the fact remains that they are a very large body, and that they are planting their churches and propagating their doctrines in every important centre and in many villages.

They can't cure everybody, and they over-estimate their ability to do so. They have some queer notions to which we find it impossible to subscribe, but plenty of people who have brains do subscribe, and that is significant. If we knew everything that is to be known we could at once decide whether the theory is true or false, but since our knowledge is limited we rather hesitate to declare that the whole thing is a humbug or an honest delusion.

Perhaps the medical fraternity lose a patient every now and again. At any rate, people die, and we judge that some physician did his best to keep them alive. It would be unjust to judge of the value of medical treatment and skilled surgery by the list of deaths in the morning newspaper. Some must die anyway, and nothing will save them. But what proportion of a doctor's patients die, and how many of them, even though desperately ill, are saved? That is a side of the question we seldom look at, but it is really the only standard of value which can be used in an argument.

In like manner, how many afflicted folk who refuse to take medicine and who demand the attendance of the Christian Scientist are brought back to health? Until we discover these facts it is impossible to form a proper judgment. If you say that a certain number who are sick would get well if simply left to themselves, well and good. We don't care to dispute the assertion, because it is probably true.

For ourselves, we confess a degree of ignorance, but, being ignorant, we do not, for that reason, condemn. Perhaps yes, perhaps no. We have heard many statements, but have not had time to verify them. Therefore we say to the Christian Scientists and the physicians of the old school, and the homœopaths, go ahead with your medicine, with your big pills and your little pills and your no pills, and the more people you cure the better we shall like you.

### Washington's Greatest Political Service.

But Washington was "first in peace" as well as in war, and was twice President of the infant Republic. His position as such was one of the most difficult that ever fell to the lot of man, and he held it with remarkable wisdom. He was one of the first to see that the old Confederation, which had carried on the war, was impossible to direct the Republic's affairs, and he summed up the essence of the situation in one pregnant sentence: "Influence is no government." To make a real and effective government which should bind the young and errant states together was his first aim, and he presided over the Convention which made that constitution which, with all its faults, has lasted over a century and has seen the dissolving wrecks of many a European structure. That, we take it, was the fundamental political service rendered by Washington to his people, and only those who have sufficient political imagination to realize the immense problem of meeting the needs of a new nation can estimate the value of that service.

## From Our Contributors.

### "The Lord is my Shepherd."

(Psalm XXIII.)

BY EDWARD C. BUTLER.

Music: "Portuguese Hymn," page 198 of Christian Science Hymnal.

THE Lord is my Shepherd; I suffer no need,
His loving provision is boundless indeed.
He leadeth me gently by waters serene
To pastures of promise refreshingly green.

My soul He restoreth with instant relief,
And draweth me ever in trustful belief.
By ways He has trodden and paths He has pressed
He leadeth my soul to His heavenly rest.

Yea, e'en though I enter the valley called death,
With footsteps enfeebled and faltering breath,
No evil I fear, for I walk not alone;
Thy rod and Thy staff all my weakness atone.

My table Thou spreadest in wilderness waste,
With infinite beauty and bounty 'tis graced.
With royal anointing Thou crownest my head.
My joy from a fountain o'erflowing is fed.

Thy goodness and mercy shall merit my praise,
Thy wings of deliverance protect all my ways;
And in that fair temple not fashioned by hands
I shall rest with the pure and the blest of all lands.

### The Journal and Sentinel.

BY S. E. BRADLEY.

I DESIRE to express my deep and sincere appreciation of the work and efforts of our editors and publishers, and of the good things they send us by our *Journal* and *Sentinel*. How welcome they are! They are words spoken in due season.

Living for some weeks in the country, at a distance from church services and week-day meeting, one can realize what the regular coming of these periodicals means to Scientists whose homes are always there. How eagerly we look forward to their appearance, especially of the weekly *Sentinel*.

As I recall the many wholesome lessons I have learned through them, I apprehend, as never before, what these publications are to us individually as well as for our cause.

Overlooking the whole Field, as the editors and managers are continually doing, they see the dominant errors, report the dangers and pitfalls, and give kind and timely warning.

I sometimes wonder if we are all aware of how much we owe to the wisdom and skill demonstrated by those in charge of this department, if we are careful enough, and thoughtful always to *see* the lesson intended. Do we acknowledge its need, take it as such into our own consciousness? Do we heed the reproof and warning? Do we ask ourselves if the errors pointed out are lingering in our own conscious or unconscious thought?

I remember the editorials, "The Present Need," which appeared some months ago, and later, "What is that to Thee?" seemed especially helpful and instructive in that respect, suggesting that we examine and know ourselves; *analyze* our *thoughts,* thus becoming better and more discriminating Scientists.

When the *Journal* or *Sentinel* comes it is very easy to lay aside other work or reading, to glance at least through them to see what is in store for a more careful and leisurely perusal. Perhaps the first thing Scientists do is to scan the

Digitized by Google

Table of Contents, to see if there is a message from the Mother's pen.

Then the words of cheer and encouragement from the thoughts and experiences of the brethren. I often turn to back numbers and re-read, always receiving some helpful or suggestive thought overlooked, perhaps, in a former reading. Many times some one sentence from an article will linger long in mind, either bringing to me new light or as an expression of my own hitherto unvoiced thought. I recall one from "The Error of Worrying." "The true Christian should have a triumphant feeling of security." That is just what Christian Science gives to me, a *triumphant feeling of security*. I am protected—secure—and nothing can by any means hurt me except my own mortal selfhood, which I strive daily to put out of sight. I feel like thanking the writer for those words.

Another great satisfaction I obtain is from the page Items of Interest. It is indeed a great comfort to read there all that is worth knowing of the doings of mortal mind, and be saved the time and annoyance of looking through a voluminous daily newspaper in search of what one would care to read.

I also enjoy the Religious Items. They show the trend of thought, and express much that is beautiful, true, and helpful. Next to the Mother's own books, I value the *Journal* and *Sentinel* as aids to study of the Scriptures and to daily progress in striving to prove my discipleship as a Christian Scientist.

## Thoughts for the Day.

BY ANDREW S. MERRITT.

LESS than two years ago, Christian Science was first brought to my notice. It was not because of physical healing that I accepted it, but because I saw it contained the Truth which I had so earnestly desired. When "Science and Health with Key to the Scriptures' was put into my hands, the Bible became a new book. The promises were real, as I have been many times able to prove. Both physical and mental troubles have vanished before the understanding that God is All-in-all. My wife and I had the privilege of studying with one of the Mother's loyal students. I have received through the columns of the *Journal* and *Sentinel* many helpful lessons, and because of this fact I desire to give a few thoughts that were very helpful to me.

As I awoke one morning these words came to me, "Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee." Truly the Light had come into my life and it came through Christian Science as taught us by our dear Leader in Science and Health.

The next thought that came to me was, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven." Let the Light of Christian Science so shine in your daily life that others will see reflected there the divine Principle, Love, and so glorify the Principle through its idea.

Then followed these thoughts, "But the path of the just is as the shining light, that shineth more and more unto the perfect day." As the children of Israel were led out of Egyptian bondage into the Promised Land, so we are led out of the belief in sin, sickness, and death, into the glorious liberty of the children of Light, Truth, and Love.

"I will greatly rejoice in the Lord, my soul shall be joyful in my God; for he hath clothed me with the garments of salvation, he hath covered me with the robe of righteousness as a bridegroom decketh himself with ornaments, and as a bride adorneth herself with her jewels." In Christian Science we are clothed with the spiritual idea and are clad in the garments of divine Love and Truth.

As I stood watching the fire burn I remembered that, "Our God is a consuming fire." The fire of divine Love consumes all false beliefs of Life in matter and brings to light the clear realization of Spirit as All-in-all. "Christ is all, and in all."

As I was eating my breakfast I recalled the words of our Master, "Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God." We live not by the natural food alone which is taken into the body, but by the spiritual Life, which is God. "To be spiritually minded is life."

As I went to my work this text came, "Work out your own salvation with fear and trembling. For it is God which worketh in you both to will and to do of his good pleasure." While each of us has his work to do, yet it is indeed God who doeth the work through us, for we are His workmanship, created in His image and likeness, and He giveth us all strength and wisdom for every duty.

The above thoughts furnished me with an impregnable armor for that day, and brought to mind the words, "God and man, Principle and idea, are inseparable, harmonious, and eternal" from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, page 232. "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty."

## Unity.

BY HENRY C. LAWRENCE.

THIS word "unity" is no doubt uppermost in the heart of every Christian Scientist to-day. As Christian Science encircles the earth, so this thought extends to its every corner, and appeals to each and every one working in Truth for the establishment of the Kingdom of Heaven, the reign of unity, in human consciousness.

John clearly expresses this (15 : 4): "Abide in me, and I in you. As the branch cannot bear fruit of itself, except it abide in the vine; no more can ye, except ye abide in me." It is reiterated in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 98: "The Scientific unity which exists between God and man must be wrought out in life-practice, and God's will must be universally done." This brings it home to us in our individual daily experience. Take a body of men banded together for the accomplishment of some end to the mutual benefit of all. They have a result to gain, and in the work each has his own part. As one cannot do the work of another, and as one alone cannot bring about the desired end, all work together, and yet individually, until the purpose is attained.

So each one of us, by bringing out his unity with God in manifesting love for the neighbor, is doing his part toward presenting to the world a Christianity in perfect accord with law and gospel as expressed in 1 Peter, 3 : 8: "Finally, be ye all of one mind, having compassion one of another; love as brethren," having one beloved Cause, one Leader, one Life, Truth, and Love, one *God*.

## The Bread of Life.

BY M. M. E.

JESUS came preaching to the multitudes and offering them the bread of Life, the bread of God, that would satisfy the hungry. This living bread was from above, not from beneath, and all who partook of it were promised eternal life. We have read of this bread and longed for it, for the bread of mortal mind is unsatisfying. It is called in the Scriptures the bread of tears, of sorrows, of mourning, of affliction; the bread of idleness, of adversity, of wickedness, of deceit, defiled. It is dry and mouldy, and mortal man, in his journey through the wilderness, has starved on this diet of affliction.

Christian Science offers to the multitudes this Word of God that satisfieth. It teaches that man is sustained by

Digitized by Google

Mind, God; that he can be absent from the body and present with God, Life; that holy, uplifting thoughts give strength, vigor, and courage, and are heavenly manna; that material things are but types and shadows of the spiritual, and that we must reverse the sense testimony to gain the facts of Being. Christian Science shows us that craving for the sincerity and truth, for purity, self-forgetfulness, and goodness,—lifts us out of our erroneous conceptions of Life, out of our false sense of existence, into the brighter, holier sense of Life as Love. "This is the bread which cometh down from heaven, that a man may eat thereof, and ~~die~~."

## Truth's Lesson.

BY LEWIS PRESCOTT.

IN the Scriptural narrative of the restoration to life of the widow's son, it is noticeable that Jesus first said, to the mother, "Weep not." To that mother's sense there was, no doubt, much reason for sorrow, yet, there came the loving admonition: "Weep not."

Can we not readily believe those tears were dried by the Christ's presence and the unseen influence of divine Love, and that a solemn, hopeful expectancy filled the woman's heart? Then followed those words of the Master, grander than the most beautiful symphony, reaching far above human faith: "Young man, I say unto thee, arise," and the son was restored to his mother.

Now is there not this helpful lesson in that experience? Must not we first see the unreality of sorrow and sickness? Then will follow the demonstration of Truth, if Christ be consciously present. "Lo, I am with you alway."

Mortal mind says: "Heal me of my sickness; remove the cause of my sorrow, and I may believe." In "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 24, we read, "When once reversed by Divine Science, the evidence before the corporeal senses disappears." Life, in divine Science, is man's identification with God. Christian Science healing does not restore one merely to a former human sense of life in matter, wherein self is to be satisfied, but gradually elevates thought unto the understanding of Life "hid with Christ in God."

## An Illustration.

BY J. E. FELLERS.

SINCE I began the study of Christian Science, I have often thought of the old field thistle that grows on the farm to the great annoyance of the farmer, who can never tell whence it came. One peculiarity of this weed is its rapid propagation. If it is allowed to grow, one stalk will seed a large field in two seasons. Another peculiarity of it is, that if you handle it gently the bristling thorns will sting you intolerably, but grasp it firmly and the pricking is not felt at all.

This weed is a type of sin and disease, in that they multiply rapidly if encouraged or even acknowledged as having power. Deny their existence in a faint, half-hearted manner and they will sting you into a belief that they are real and powerful; but when you declare earnestly and confidently that they are powerless and mindless and that an omnipotent, omnipresent, and omniscient God is the only power, they lose their sting and are easily exterminated.

After the thistle has been uprooted and destroyed, one stray seed will occasionally be found sending forth another stalk, but it in turn can be destroyed until finally no sign of re-appearance is seen. In like manner, intimations of disease and sin will come back to our consciousness from time to time with whisperings of unrest and discord, but the watchful Scientist knows how to reduce them to nothingness.

## Testimonies.

### Astigmatism and Muscular Trouble.

For fifteen years I suffered from nervous prostration, the attacks becoming more and more severe, and accompanied by a complication of ailments until at last I could neither read, write, nor sew, without excruciating pain in my head, neither could I see friends or any member of my family for more than a few minutes at a time nor talk to them. I did not dare to venture out of the house without a thick veil covering my face and head, for fear of neuralgia. I was afraid to be left alone in the room, or to be alone on the street; and I felt that my reason was going. The physicians who had charge of my case said that an operation for an internal ailment would be the only means of cure or relief. This was resorted to, but I received no benefit, and for a year I was in constant pain.

An oculist in New York City gave my eyes a thorough examination. He said I had severe astigmatism and muscular trouble, and from him I took a long course of treatment. He warned me not to go without my glasses, and that in all probability the difficulty would continue throughout my lifetime.

Finally the physicians gave up all hope of benefiting me, saying that my condition was beyond the remedial agency of medicine, and that I must have change of scene, climate, etc.

About this time I heard of mental science. As it did not matter to me what I did, or what helped me, and not knowing the difference between Christian Science and mental science, I placed myself under mental science treatment for two months, but on my return home I relapsed into my former condition, and my mental and physical states were more hopeless than ever.

Just then Christian Science came to my notice, and I decided to turn to that. After a few treatments I took off my glasses and have never worn them since. I also removed the thick veil. I began to read "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, at first only for a few minutes, but gradually increasing the time until I could read for several consecutive hours.

My fear of being alone or of going out alone vanished, and I could walk or ride a bicycle almost any distance without discomfort. Prior to this I could scarcely walk the distance of two or three blocks without great suffering, and a ride in car, train, or carriage caused great anguish. I also wrote a letter to my mother, a thing I had not done for two years, and the terrible mental depression was gradually overcome.

To-day I am able to fulfil my duties to my family, walk, ride, drive, come and go freely, and the home life wears a new and different aspect. My healing has been slow and there have been sharp battles to fight and many obstacles to overcome, but I have learned to be thankful for these, for they have led me to seek the spiritual as well as the physical blessings of Christian Science, and I have come to know that divine Love meets every need. Faithful study of Science and Health unfolds the meaning of the Bible to my understanding and enables me to read the Word with deep satisfaction, joy, and love.

FANNIE L. DANA, Orange, N. J.

### Christian Science and Materia Medica.

To show the difference between Christian Science and *materia medica* I shall tell of an experience that came to me about ten years since, before I was interested in Christian Science, although I had heard of it. It was at a time when the grip seemed very prevalent and I was a victim, having a very severe case. The doctor called it return grip, as I had had an attack in February, staying in bed most of two weeks. I am a teacher and forced myself back to school at the expiration of that time.

Digitized by Google

My strength did not seem to return, and I was obliged to go to bed again, I think early in April. I employed one of the best physicians in Chicago. For about six weeks I was confined to my bed, suffering untold agony with an abscess in my ear. My mother and sister went up and down stairs with hot applications, and most faithfully did all they knew in their kindness and love to relieve me.

Sometimes the doctor called twice a day; I begged him to use an instrument to relieve me, but he wished me to be patient a little while longer, as he said if he punctured the drum I would always be deaf. I was seemingly deaf then in my right ear. Relief came at last. I remember when convalescing I said, "I would rather die than go through such a siege again." My strength seemed to be a long time coming back.

This past month the same symptoms made their appearance. One night on retiring there was a sense of pain in my ear. I treated myself for about two hours without apparently any relief; then I lighted the gas, took my Science and Health, and commenced to read. It was then after midnight. Soon the pain vanished and I slept. The next morning being Friday, I attended to my school duties all day, but there was in my head or ear that sense of buzzing which I had experienced years before. Had it not been for my understanding of Christian Science I should have had to give up.

That afternoon I called on a practitioner, my teacher, a loyal student of Mrs. Eddy, and received much help from her, although I did not ask her to treat me, as I felt I ought to overcome the fear myself. Sunday following I went to church twice. After the evening service I asked my teacher to treat me. For a week she gave me absent treatment. The trouble did not seem to yield readily. The following Sunday I saw her, and told her I thought I was healed. Christian Science enabled me to attend to my school duties every day. Before I came into an understanding of the Truth hardly a month passed but I missed one or more days of school.

The difference in cost of the two experiences related above was at least two hundred dollars. I know this estimate is a very low one. I know without Christian Science I should have been as miserable as I was before. For all that Christian Science has done for me, not only physically but in all ways, I cannot express enough gratitude. It is my privilege to be a member of the Mother Church as also a member of one of the Chicago churches. My desire is to have more of the spirit of Christian Science.

*M. B. B., Chicago, Ill.*

### The Hungry Fed.

It was spiritual hunger that impelled me to turn to Christian Science. For many years I had clung to these two promises: "Blessed are they which do hunger and thirst after righteousness: for they shall be filled;" "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you: for every one that asketh receiveth; and he that seeketh findeth; and to him that knocketh it shall be opened."

How I held to these promises, never realizing them, almost doubting them, yet holding to them! And all the while they were *being* fulfilled, as all God's promises are, —for I was drawing nearer and nearer to Christian Science, that wonderful Truth, with its rich fulfilment.

It was the unselfish daily life of a friend that directly attracted me to Christian Science, making me feel that perhaps here was the help for which I longed so much. She loaned me "Science and Health with Key to the Scriptures." It seemed to me the most contradictory, and provoking book I had ever read. I kept putting it down in scorn, but such was the power of that "little book" that I could not let it alone. I was in the habit of lying down to rest every afternoon, and then it was that I would read Science and Health. One day, as I read, the thought came to me like the flood of light when a heavy cloud has lifted, "Why, if God is omnipresent, He is here! What am I tired and resting for when *God is here?*" and I sprang up, refreshed and joyous. That was the end of my habitual afternoon nap. The bondage to weariness was over.

Still I did not accept the book. I laughed at it, and yet the sense of an ever-present, a *real* God was growing upon me. One day I secretly went to a Christian Science practitioner. I was suffering from three physical troubles, two of which were, to human sense, distinctly hereditary. After three days' treatment, there came to me such a spiritual uplifting that I ceased to think much about the material conditions, which had remained unchanged. I was completely satisfied. I received that "bread from heaven" for which I had longed,—received it in the awakened sense of God's love and nearness. In six weeks I was well, and have remained so practically ever since.

In the five years that have passed since that sweet awakening, I am daily reminded of the truth of Jesus' words, when he said, "Whosoever drinketh of the water that I shall give him shall never thirst; but the water that I shall give him shall be in him a well of water springing up into everlasting life." If any one is hungering and thirsting as I was for the truth that shall satisfy his spiritual life as well as heal his body, I simply ask that he take his Bible and study it in the light thrown upon it by the reading of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

BERTHA WOODS, West Newton, Mass.

### Healed by Reading Science and Health.

Although Christian Science had been known in our home for five years, I did not feel inclined to study into it until I thought it was my duty to do so, on account of the statement frequently made to my daughter by a member of the Baptist Church, that the devil was in Mrs. Eddy's book, and that the devil was doing the healing. I told my daughter that I should study the text-book, and if I found anything wrong in it she would have to give it up.

It was a little over one year ago that I began the diligent study of "Science and Health with Key to the Scriptures," but instead of finding something of the devil in it, I found Jesus and religion again,—that which I had neglected for many years. That alone was a great gain for me; but soon I found my old ailments were leaving me. First, asthma of twenty-five years' standing, then a rupture of ten years' standing. What seemed most wonderful of all was, that my left arm, which was dislocated forty-two years ago and never set in place, commenced to pain me in the shoulder-joint one night, and next morning I could move my arm any way I wanted to. Previous to this I could hardly raise my hand higher than my ear.

Afterward my eyesight improved, constipation and indigestion left me entirely. Although I had been a moderate drinker and smoker, I lost all desire for both drinking and smoking; and minor ailments left me.

I am nearly seventy-four years old, and I feel as strong as I did fifteen years ago, and am in perfect health, more peaceful and contented than ever before. Therefore I cannot feel thankful enough to God, and also to Mrs. Eddy, the Founder of Christian Science and author of Science and Health.—J. F. STOCKDORF, Leadville, Col.

Have you had a kindness shown?
Pass it on.
'Twas not given for you alone—
Pass it on.
Let it travel down the years,
Let it wipe another's tears,
Till in heaven the deed appears.
Pass it on.

ANON.

## Religious Items.

An editorial in the *Christian Register*, organ of the Unitarian denomination, dealing with the question as to whether the God of Unitarians is the God of all true Christians, says: "When we say God, we mean an Infinite Power, Intelligence, Wisdom, Truth, Beauty, Justice, and Goodness. We mean a reality of Good Will or Love, making 'all things work together for good.' We mean a real presence,

'Whose greatness flows around our incompleteness,
Round our restlessness his rest.'

We mean a Father of infinite mercy; but when we say Father, like Parker, we like to say Mother, also. To get at the thought of the Absolute Life, we do not think away all attributes and qualities. We think in everything adorable and lovable."

The introductory paragraph of a sermon on "Seeking the Salvation of Children" by Rev. T. W. Young, in the (Baptist) *Standard*, is as follows:—

"The gospel writers have recorded twenty-three miracles of healing performed by Jesus, and five of these were done at the solicitation of a mother, or father, or friend, for others. The parents were deeply interested in the welfare of their children, and took it upon themselves to go to the Saviour and entreat his favor and help. They obtained the desires of their hearts. These scriptural narratives suggest the personal responsibility of Christian parents in seeking the salvation of their own children."

In an editorial intended as a tonic for discouraged clergymen who may be looking for posts free from difficulty, the *Congregationalist* gives us these tart bits of philosophy of general application:—

"The men who find easy situations are those who have mastered difficult ones. Men who have left hard places with the work undone in order to find easier ones do not succeed. The workman who acknowledges himself beaten in a task he has chosen is not sought for to repeat the experiment. Those who have shown wisdom in selecting their work and then have accomplished it against all obstacles are always in demand."

In an article concerning the work of the Y. M. C. A. in the United States army, the *New York Examiner* says:—

"In a response to an invitation from the War Department, the International Committee of the Young Men's Christian Associations has recently sent eight secretaries to work with the army in the Philippines. They have carried with them on the transports books, papers, magazines, games, stationery, and other things intended for the physical comfort of the army, as well as organs, song books, Testaments, and other matter for use in religious and social work."

In an item concerning the inhabitants of Tutuila, the island of the Samoan group which has recently come into the possession of the United States, the New York (Methodist) *Christian Advocate* says: "The people are different from the inhabitants of the other Samoan islands, being particularly peaceful in disposition, and they have been involved in the revolutions only through coercion of some of the elements on the larger islands. The population is unique in the fact that every soul is reputed to be a devout Christian.

The following is from a recent Lowell lecture by George C. Lorimer, LL.D., entitled "Inspiration and Trustworthiness," which was published in the (Baptist) *Watchman*:—

"The trustworthiness of the Scriptures and not their inspiration constitute the true basis of their appeal to reason. Heretofore it has been argued that we should receive the teachings of the Bible because they are inspired, but now it is claimed that we should acknowledge their inspiration because of their teachings. It is truth that proves the inspiration, not inspiration the truth."

In the department "Note and Comment" of the *Examiner*, organ of the New York Baptists, appears the following: "Co-education has taken a long step forward in this city. Barnard College, which for ten years has been affiliated with Columbia University, was last week united with the University under the presidency of Seth Low. The undergraduate classes will still be separated, but post-graduate courses will be open to both sexes, upon the co-education plan. This is a distinct gain, and in keeping with the spirit of the times."

In June, 1901, the fiftieth anniversary of the introduction of the Y. M. C. A. on the American continent, will be celebrated by a great jubilee in Boston, where the first of these institutions in the United States was started. There are now fourteen thousand associations on this continent, with a membership of three hundred thousand.

## Miscellany.

### Texas Has Been Under Six Flags.

Scarcely another State in the Union has so remarkable and interesting a history as Texas. In one respect, at least, it occupies a unique position in the history of American States. Since its discovery six different governments have at different times claimed its allegiance and as many different flags have waved over it, those of France, Spain, Mexico, Independent Texas, the United States, and the Confederate States. The foundation of Texas statehood was not laid as a British colony, nor under the grant or control of the British crown, as were those of the original thirteen States. Its first settlement dates back more than two hundred years, and its first American colonists went there under terms and conditions imposed by a foreign State, to whose language, laws, and institutions they were total strangers.

There never was, there never could be, any sympathy between these first American colonists and the Mexican Government under the old régime. Separated by a vast wilderness from the people of the United States, and unaided save by the individual efforts of sympathizing brethren therein, these colonists declared their independence, established it with the sword, and for nine years maintained a stable republic. Texas was neither purchased nor conquered for the Union. Annexation to the United States was accomplished through a treaty made by Texas representatives and ratified by the free suffrage of the citizens. No other State in the Union has had such varied experiences or sailed through such stormy seas into the haven of peace and prosperity.—*St. Louis Globe-Democrat.*

### That Lafayette Dollar.

Readers who may wonder why it is that their favorite newspapers do not illustrate the new Lafayette dollar among their matters of interest are informed that it is because of the peculiar wording of an act of Congress and the peculiar interpretation placed upon it by the Secret Service Department of the Treasury, which, taken together, makes it a penal offence to print a representation of any coin. According to this absurd ruling, a newspaper picture of a silver coin is a counterfeit of that coin, and must be dealt with as severely as if there were danger that it might be circulated as such.

*Philadelphia Ledger.*

The students in the great centre of India, which is Calcutta, represent a population of perhaps over one hundred million, and are for the most part Brahmins. Calcutta has seventy-four high schools and twenty-four colleges, besides the university.

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and church notices, should be sent directly to the Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from the Christian Science Publishing Society should be made payable to the Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to the Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department. The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as clerk of the church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Supplements to the Sentinel.

Three supplements to the *Christian Science Sentinel* have been issued. The first is the lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The third is the lecture of Judge Joseph R. Clarkson of Omaha, Neb., delivered at Kenosha, Wis., September 18, 1899.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass, are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The per capita tax for the year beginning June 1, 1899, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each . . . . . $3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . . 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00
Twelve or more to one address, each, prepaid . . . . . 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

### Political Events.

The Democratic and Populist state conventions in Nebraska last week adopted platforms which are almost identical. They re-affirm the Chicago platform, declare for free coinage of gold and silver, "16 to 1," oppose a large standing army, denounce the action of the Republican party on the Porto Rico tariff bill, declare against trusts and imperialism, and favor the income tax and the choice of United States Senators by popular vote. It is said that the platforms, though not written by Mr. Bryan, were submitted to him for approval, and that they are to be taken as his announcement to the nation of the platform upon which he desires to stand as candidate for president. Mr. Bryan addressed the conventions and was received with great enthusiasm.

Immediately upon the signing of the new finance bill by the President, the process of substituting the new refunding bonds for the various outstanding bonds began, and over one hundred and twenty-five million dollars worth have been changed. The great majority of bond-holders who are turning in the old bonds for the new ones are national banks, which expect to take out circulation up to the full amount of their holdings, and a considerable addition to the currency is assured.

Representative Lane of Iowa has introduced a bill providing for an exposition at St. Louis, Mo., in 1903, to celebrate the one hundredth anniversary of the purchase of the Louisiana territory. The bill provides for a Government building to cost $400,000, and also for an expenditure of $5,000,000 by the Government when the exposition authorities have raised $10,000,000.

Since 1888, when the present plan of seacoast defences was adopted, $46,971,013 has been appropriated for the work. March 19 a bill was reported by the House committee on appropriations providing $7,093,488 for continuing the work this year. The entire work will require $112,197,267.

Captain Leary, the naval governor of the island of Guam, whose energetic suppression of slavery and other evils has made him popular, has asked to be relieved, and Lieutenant Commander Seaton Schroeder has been appointed to succeed him.

The United States government at the present time employs 18,267 colored people, who receive in salaries $5,538,612 per year.

### Foreign News.

Lord Roberts has established British rule over one half the Orange Free State, and the inhabitants seem to welcome the necessity of accepting the peace of submission. British advices state that hundreds of Free State Soldiers are surrendering their arms every day and returning to their farms. The Boers are seemingly as determined as ever to defend their territory and their independence. No engagements of importance were fought last week, although there have been some clashes between the Boers and the British forces that are attempting to reach and relieve Mafeking.

Two thousand Chinese working men at Vancouver were aroused to such a pitch of patriotism by the oratory of one of their agitators that they collected $16,000 during a meeting on March 20, to be sent to China for revolutionary purposes in the interests of the emperor's reform party.

A Grecian cruiser having on board a number of picked naval men bent on investigating American naval affairs, is expected to arrive at New York early in April. This will have been the first war ship of Greece that ever crossed the Atlantic.

The Dowager Empress of China, who now has unlimited sway, has recently rewarded with decorations and appointments to offices of high honor the officials who have shown greatest hostility to foreigners and foreign institutions.

Press dispatches state that Emperor William of Germany will offer a prize of $20,000 for the best automobile adapted for service in the field in time of war, without regard to the nationality of the competitors.

Don Carlos, the pretender to the throne of Spain, is reported to have renounced his Spanish citizenship and become a citizen of Austria.

An "authors' home" under the protection of the Grand Duke of Saxe-Weimar is to be established in the little university town of Jena.

### Industry and Commerce.

Andrew Carnegie and H. C. Frick have settled all their differences out of court, and the lawsuits involving many millions of dollars have been stopped. As a result of the settlement, the plan, long under consideration, of combining all the Carnegie industries in one gigantic corporation has been accomplished. The new concern, named "The Carnegie Company," was incorporated under the laws of New Jersey on March 24, with a capitalization of one hundred and sixty million dollars, which yielded thirty-two thousand dollars to the state as an incorporation fee. The concerns embraced in the combination will include numerous blast furnaces, rolling mills, armor plate mills, coal mines and lands, coke ovens, thirty-five hundred dwellings, railroads, docks, and steamships.

In the British House of Commons A. J. Balfour, Government leader, in reply to an inquiry as to how long the Welsh anthracite coal mines would be able to supply the demand, said that the Geological Survey Commission was now investigating the matter. He added: "My own opinion is that long before the coal fields approach exhaustion we should have learned enough about combustion to prevent the fleets from being absolutely dependent upon that source of supply."

Stephen Jeans, an English authority on the iron and steel industry, says: "In the United States the rate of pig iron output has been nearly 1,500,000 tons a year in excess of 1899. In Great Britain the increase of output has been at the rate of fully 250,000 tons over 1899, and in Germany and Belgium the advance has been quite equal to that of the first two months of 1899."

In the Waters-Pierce Oil Company case, a Standard Oil Trust concern, the United States Supreme Court, on March 19, decided that the company violated the Texas anti-trust laws and therefore forfeited its permit to do business in that state. The oil company sought to bind its customers not to sell oil produced by any other concern.

In the farming communities of Minnesota the socialistic idea in business has had wide tests and is being extended to every branch of business. It began with farmers' grain elevators and co-operative creameries, and has extended to general stores, produce and live-stock sales, lumber and fuel yards, railroad construction, and insurance.

An English syndicate of coal dealers is said to have made a contract by which two million tons of Alabama coal are to be delivered at New Orleans for exportation within two years. The purchase price agreed upon in the contract is said to be seventy-five cents a ton at the mouth of the coal pits.

Gold deposits have been found five miles south of Leadville, Col., in a locality which was thoroughly prospected for silver years ago, when the existence of gold there was unsuspected. It is stated that ore of great value has been found, and miners are swarming into the new field.

A receiver has been appointed for the great publishing house of D. Appleton & Co., New York, owing to the inability of the concern to realize on outstanding accounts. The liabilities are $1,110,000. The house was founded three quarters of a century ago by Daniel Appleton.

The Hartford Life Insurance Company has paid a dividend of 100 per cent on its capital stock of $250,000, out of its surplus, all of which is expected to be returned to the company for a new issue of stock equal to the amount paid out in dividends.

New York has one street railway system now, the Third Avenue Railway Company having been absorbed by the Metropolitan Street Railway Company.

### General News.

The Erie canal boat originally had a capacity about equal to that of a modern freight car. After twenty years' experience one of the canal men ventured to build boats that could carry seventy-five tons, and in twenty years more they had ventured up to one hundred tons, still confined to a draught of three and one-half feet. By expending many millions the state of New York enlarged and deepened the canal to a draught of six feet, and for the past thirty-seven years it has been possible to run boats with a capacity of two hundred and forty tons. The State has been for some years at work on an enlargement, which, if completed, at a cost now estimated at about $25,000,000, would make it possible to run boats holding four hundred and fifty tons.

The Pennsylvania Railroad Company has awarded contracts for the construction of what is expected to be the largest solid masonry bridge in the world at a cost of at least $1,000,000. The new bridge will span the Susquehanna River at Havre de Grace on the main line between Baltimore and Philadelphia, and will replace the present structure. It will have forty-eight solid masonry arches of cut stone, each of which will be seventy-two feet in the clear, giving a total length, when completed, of between thirty-six and thirty-seven hundred feet.

English history has been dropped from the lists of supplementary reading for the public schools of Chicago, as the result of the persistent efforts of John T. Keating, national president of the Ancient Order of Hibernians, who objected to all the English histories on the lists because they were prejudiced in favor of England.

It is reported from San Jacinto, Cal., that a part of the San Jacinto mountain, a territory covering sixty acres at an elevation of four thousand feet, was recently dislodged by an earthquake and dropped one hundred and fifty feet lower, filling up a subterranean cavern.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## The Scholar.

### Address of Professor J. R. Mosley at Athens, Ga.

PROFESSOR J. R. MOSLEY, of Mercer University, delivered an address to the students of the University of Georgia, yesterday (March 3), by invitation of the chancellor. The occasion was significant of the unity of feeling existing between the two institutions represented by the speaker and the audience. The Athenians gave a cordial welcome to the Macon scholar, and their hearty and long-continued applause at the close of the address was an eloquent testimony to their appreciation of the masterly address.

Professor Mosley's subject was "The Scholar," and he treated it under the three topics: First, the characteristics of the scholar; Second, the activities of the scholar, and Third, the inheritance of the scholar.

A synopsis of the address would not do justice to its keen insight and rare literary merit. But a few paragraphs may be quoted to show the spirit and tone pervading the whole utterance.

He began the address as follows:—

"The scholar should be a scholar and much more than a scholar. His life is one of searching for, holding to, and teaching the truth. With Plato, he aspires to be the spectator of all time and all existence; with Cicero, to know all things and the causes of all things; with Bacon, to stand on the vantage-ground of truth; with Goethe, to come to clearness of vision; with Emerson, to have his upper set of eyes opened; with Solomon, to have an understanding heart; with Jesus, to know the truth and become free; with Paul, to apprehend that by which he himself has been apprehended; and with St. John, to see that light in whom there is no darkness and to have a glimpse of that eternal city where there is no night. The scholar is thus a citizen of the republic of enlightenment, and belongs to the illustrious society of the lovers of truth and light."

The ethical characteristics of the scholar were thus portrayed:—

"The scholar opens his life to all the gracious emotions of the soul, and labors to keep alive in glowing radiance the celestial fire called conscience. He thus perceives and adores the eternal nature of righteousness, and acknowledges the sovereignty of the moral life. While with Goethe the scholar investigates all that can be investigated and knows all that can be known, he stands with feet unshod and head uncovered as he contemplates Him whose ways are higher than our ways and whose love is higher than our love."

The true scholar inclines to optimism and away from pessimism. This thought was brought out as follows:—

"The optimism of the scholar is not that sickly and superficial moral blindness which says 'good God and good devil,' but that healthy and profound type which calls man into the service of love and truth with the large faith that every enemy of good can be overcome, and that all men are endowed with the potency of perfection—a perfection which is to be won through that truth which gives freedom, that love which fulfils all law and casts out all fear, and that understanding of God and His manifestation in the world which brings to light life and immortality. The worst of times only reveals to the scholar the splendor of his privilege of being a professor of the joyous science to a gloomy and pessimistic age.

"Is his optimism a dream?

> **Nay, but the lack of it the dream,**
> **And failing it life's lore and wealth a dream**
> **And all the world a dream."**

The topic relating to the activities of the scholar was introduced in the following paragraph:—

"Plato taught that it was to be the saviour of his country as well as of himself; Goethe that it was the service of God through the service of humanity, ultimating in a free man in lordly possession of a fair earth. Emerson taught that it was to be a reformer—the man thinking becoming the man acting, making the right known and the right prevalent. Thus the greatest stars in the intellectual firmaments of Greece, Germany, and America bow before the practical life, and teach that the scholar rises and is raised by altruistic effort."

The greater part of the concluding division of the subject is given entire:—

"As Professor Butler has observed, the scholar is entitled to a five-fold inheritance, scientific, literary, æsthetic, institutional, and religious.

"He is entitled to the resources, the spirit, and the facts of modern science. He is entitled to know that the laws of nature are the laws of mind, and that nature is only a thin screen through which 'the glory of the One breaks in everywhere.' Looking toward the earth, he is entitled to find, 'Books in the running brooks, sermons in stones, and good in everything.' Looking toward the heaven he is entitled to say with Kepler: 'Great God, I think thy thoughts after thee;' and with the psalmist that 'the heavens declare the glory of God, and the firmament showeth his handiwork.' This is his scientific inheritance.

"He is entitled to know the finest thoughts, clothed in the best dress, of the literary masters of all ages and of all peoples. Through the book he also becomes acquainted with the best men in their best moods and possesses the most precious fruits of the mind in its highest and divinest reaches. This is his literary inheritance.

"He is entitled to understand and appreciate the 'beautiful, the picturesque, and the sublime,' in nature and in art, thus knowing and possessing the abounding beauty and loveliness of all the works of God, as well as the æsthetic sweeps and embodiments of man at his best. This is his æsthetic inheritance.

"He is entitled to know the history of the institutional changes in the life of man, what types of society and government best promote the ends of existence, and what reforms and changes in the life of society are practicable

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

and desirable for his own age and for his own efforts. This is his institutional inheritance.

"He is entitled to sit at the feet of ancient prophets and teachers, to walk and talk with Jesus on the hillsides of Palestine, to know the truth and become free, to eat of the bread of life and never hunger, to drink of the water of life and never thirst, to have that mind which is the way, the truth, and the life, and to have an understanding of him whom to know aright is life everlasting. This is his religious inheritance.

"Having loved righteousness and hated iniquity, he is anointed with the oil of gladness above his fellows; having been wise, he 'shall shine as the brightness of the firmament;' and, having turned many to righteousness, as the stars forever and ever." *Atlanta Constitution.*

## Ojibways Visit Longfellow's Home.

ALMOST half a century has passed since the poet Longfellow visited the "Land of the Pictured Rocks" and "Hiawatha's Playground" to gather the material which later appeared in his immortal "Song of Hiawatha." He remained in that country for some months as the guest of Bukwujjinene, the chief of the Ojibway tribe, and throughout the poet's life there were none of his friends and admirers who revered and loved him more than did the old chief and his subjects.

It is hardly possible that, during the time which Longfellow spent in the wigwams of the Ojibways, the thought ever entered his mind that some day the descendants of the old chief who entertained him so royally on the shores of Lake Superior would accept the hospitality of his daughters at the beautiful old mansion in Cambridge which has been so long celebrated as the "Home of Longfellow." Yet, strange as it would have seemed to him then, it came to pass recently that Kabaoosa, the nephew, and Wabunosa, the grandson of the old chief, were entertained at the old Craigie house by Mrs. Dana, Mrs. Thorp, and Miss Longfellow, the daughters of the poet, and also had presented to them eight of his granddaughters.

They sat at the same desk, in the same chair, and wrote with the same pen which Longfellow used when he wrote "Hiawatha," and, before they left, they invited the ladies and their friends to visit them at their home on the shores of Lake Superior.

Kabaoosa and Wabunosa were at the Sportman's Show in New York, being the only representatives of the Ojibway tribe there, and came to Boston under the guidance of Mr. Francis West for the express purpose of visiting the home of the poet who had immortalized their tribe. They received a most cordial reception from the poet's daughters, and were escorted around the house and grounds and entertained at lunch. Kabaoosa sang two Indian songs for his hostesses, one a love song and the other a war song which his grandfather had composed after the victory which his tribe, as allies of the British, gained over another tribe allied with the Americans, at the battle of Queenstown Heights in the war of 1812.

The invitation extended to the ladies to visit the playground of Hiawatha was written on a large square of birch bark with a hot iron.

Translated into English, the invitation reads as follows:

*Ladies:*—We loved your father. The memory of our people will never die as long as your father's song lives, and that will live forever.

Will you and your husbands and Miss Longfellow come and see us and stay in our royal wigwams on an island in Hiawatha's playground, in the land of the Ojibways? The friend who came with us, whose address you have, will make all the arrangements. We want you to see us live over again the life of Hiawatha in his own country.

KABAOOSA,
WABUNOSA.

Boston (Onahbaunegises), the Month of Crusts on the Snow.

The plans for the visit and the invitation were made by the old chief Bukwujjinene, and he had intended to come himself, but only a few weeks ago he was taken sick. When he realized that his illness was fatal, he called his nephew and grandson to his bedside and told them to go in his place to see the home of Longfellow and the city from which had come the chief's old friend, Henry Schoolcraft. It was one of the old chief's last commands, for he died a few days later.

The visit of the Indians will be returned by the ladies probably some time in August. Mr. L. O. Armstrong, one of the officials of the Canadian Pacific railroad and a great friend of the Indians, has offered Kabaoosa a special car for the use of his guests from Boston to the station nearest the home of the tribe. From that point the journey will be made by canoes. Large wigwams of skins will be erected on an island in the lake for the use of the guests, and the tribe will suspend all other duties for the purpose of entertaining their visitors during their stay.

Since the death of Bukwujjinene there has been no chief of the tribe, but upon his return Kabaoosa will be chosen chief, as he is the best fitted for the position. He is about forty years old, and Wabunosa is twenty-three. Both are very intelligent men, and fairly educated, speaking French and English, in addition to their own tongue.

*Boston Herald.*

## Among the Churches.

### New Church for San Jose, Cal.

A handsome new church building is soon to be erected in San Jose, on the north side of St. James Street, facing St. James Park. For months the congregation of First Church of Christ, Scientist, has been constantly growing, till now it has reached proportions beyond the capacity of the Assembly Hall in the Louise Building on South Second Street, where the Sunday services and Wednesday evening meetings have been held.

Negotiations for the purchase of a lot have been in progress for some weeks, and last Thursday evening (February 22) a meeting of the congregation was held to pass upon the question definitely as to whether or not a lot should be purchased, and to decide as to what the location should be. Mr. F. C. Ensign presided at the meeting, which was a very enthusiastic one. It was unanimously decided to purchase the lot in the Charles White estate, owned by Mrs. Staples. Almost every dollar of the amount needed for the purchase of the lot, seven thousand dollars, was raised, so that the transaction will be on a cash basis. Yesterday the contract for the purchase of the lot was closed.

The movement to erect a church will now be pushed forward as rapidly as is expedient to insure that the structure will be a substantial one, that in architectural effect will be fully in keeping with its beautiful surroundings. The lot purchased is 137.5 feet from First Street, and has a frontage of 68.5 feet.

The present inclination is to have the structure of the quaint California mission style of architecture that has been so effectiv in the buildings at Stanford University. Pians for building will now be considered and passed upon as soon as possible.

A rule from which Christian Scientist congregations never deviate is that all real estate or buildings erected by them must be paid for in cash. No mortgage was ever

Digitized by Google

placed upon a Christian Science Church, and the rule will not be deviated from in San Jose. The new house of worship will be erected and entirely paid for before it is regularly dedicated to the work.

The officers of the San Jose Church who have charge of the building enterprise are: F. C. Ensign, J. L. Stull, George Blaine, Mrs. S. E. Ginty, Mrs. E. M. Curtis, Mrs. E. L. Dawson, Herbert W. Eustace; and Mrs. M. F. McCulloch.

*San Jose (Cal.) Daily Mercury.*

### A Prosperous Church.

*Editor Sherburne News:*—I was stopping in Utica over Wednesday evening and not being a Christian Scientist, I had quite a curiosity to attend one of their meetings, so I found my way to the auditorium where the meetings were held and was very much surprised to meet between three and four hundred as intelligent and cultured people as you would find in any city church. The meeting was opened by congregational singing with piano and violin accompaniment, followed by impressive Bible reading by Miss M. Adams and extracts from "Science and Health with Key to the Scriptures," the text-book of Christian Science. Then followed silent prayer with the audible repetition of the Lord's Prayer. After a few remarks by Miss Adams the meeting was thrown open for testimony. Many testified to the efficacy of Christian Science in the healing of sickness and sin. After an hour of testimony the meeting was closed with singing. I could not help noticing the difference between their church and ours. They all seemed so social and happy. You could hear nothing on all sides but thanksgiving to God for benefit received from Christian Science. I was so favorably impressed with their earnestness and fidelity to God that I could not help wishing that all our Sherburne churches were in as flourishing condition as the Christian Science Church of Utica.—*The Sherburne (N. Y.) News.*

### From Rutland, Vt.

The voices from Vermont, recently heard speaking through the columns of our *Sentinel,* have made us feel that Rutland should not longer keep silent. Although we have no startling record of rapid growth to offer, yet, one may find in this little city among the hills a small band of earnest, faithful students of Truth. The location of this little sheepfold is, to mortal sense, in a not over-fertile country, and sometimes the arrogant weeds seem in a fair way to choke out the little patches of sweet herbage which have sprung from the seed of Truth, but the members of the little flock are not dismayed, never discouraged; we are far too busy, plucking out the noisome weeds and protecting the tender plant of Truth's growth, always sowing, knowing well that

God will cause the seed to grow
Faster than our knowing.

We hope very soon to organize as a church, and then, of course, to have a lecture.

HELEN S. B. ROSS, Rutland, Vt.

### From Thorold, Ont.

In a few words, I wish to relate an incident, that may be of interest to workers in other fields.

In this town there is established a branch of the Mother Church called First Church of Christ, Scientist, of Thorold, Ontario. This church has had many seeming trials, but I am going to tell only about the one which deals somewhat with a present triumph.

Four years ago the offer to place "Science and Health with Key to the Scriptures" in the Public Library was declined. Last week the offer was again made, and was *accepted with thanks.*

It is quite unnecessary to enlarge upon the subject. It is enough to say that Truth has crowned our efforts with victory.—JOSEPHINE MCARTHUR, Thorold, Ont.

## The Lectures.

### At Salem, Ore.

At Reed's Opera House last evening (Thursday, March 8) a magnificent audience of Salem's best people greeted Hon. W. G. Ewing of Chicago, who, as one of the lecturers of the Christian Scientists, spoke on Christian Science. In the audience were Oregon's governor, the judges of the Supreme and Circuit Courts, state officials, and the leading public and professional men of the city. To say that they were all pleased with the address, whether they agreed with the speaker's views or not, is but a mild statement of their approval.

The lecturer was introduced by Hon. Frank A. Moore, Associate Justice of the Oregon Supreme Court, who presented his brother of the bar and bench in the following simple words:—

We live in a progressive age in which man's material development is largely measured by the degree in which he transcends his forefathers in knowledge, surpasses them in cheapening products by the selection and use of tools and machinery, and excels them in applying his time and energies to the accumulation of wealth. Such advancement is an evolution which, gradually unfolding as the years pass, leads on towards perfection, and shows that the material progress of a race depends upon the character and extent of the contributions made by it which conduce to the happiness and welfare of people, not enjoyed by their ancestors.

It would seem, however, that man's Christian development, which is ethical only, is not the outgrowth of, nor founded upon, the teachings of his immediate predecessors, but results from his abiding faith in, and close fellowship with, that Divine Teacher whose birth was the harbinger of peace on earth and good-will to men. The doctrine of love inculcated by him, embracing the fatherhood of God and the brotherhood of man, was a perfect system at its inception; so simple as to be comprehended by children, so sublime as to excite the admiration of sages. The plan being complete when inaugurated, any improvement thereof was impossible, notwithstanding which men by a subtlety of reasoning have attempted to engraft upon it conditions never imposed, and sought to establish by a progressive series of ideas, an expansion where none could be achieved. Not being a member of any association of Christian Science, I know nothing of its object or aims, but I am informed that it seeks to revive the primitive simplicity of Christianity as taught by the Master, and to obey his injunction to heal the sick and to preach the gospel to the poor.

The subject of the lecture this evening is "Christian Science, the Religion of Jesus Christ," and no doubt any mistake I may have made in stating the objects of that Science will be corrected, and its purposes amplified.

He who will address you on this occasion is one who, as a lawyer, has been trained to think carefully, and as a judge, to express his ideas logically, and I trust you will give him that careful attention which his distinguished ability merits.

Ladies and gentlemen, I take great pleasure in introducing Hon. W. G. Ewing of Chicago.

*Salem Daily Journal.*

### At Spokane, Wash.

Hon. William G. Ewing of Chicago delivered his lecture, "Christian Science, the Religion of Jesus Christ," at the Auditorium Thursday evening, March 15.

Long before the doors opened the crowd gathered around the theatre entrance, and by eight o'clock, the hour announced for the lecture, the house was filled.

Hon. Cyrus Happy, one of Spokane's most prominent

Digitized by Google

lawyers and an old friend of Judge Ewing, introduced the speaker in the following well-chosen words:—

By reason, I suppose, of my former acquaintance, back in Illinois, with the distinguished gentleman who is to address you this evening, I have been selected to introduce him formally to this audience. It is understood between me and the committee that made this selection that I was at liberty, and perhaps it was my duty, to confess my entire ignorance of the subject to be discussed this evening. I do not know enough about Christian Science to have any prejudice against it, so that I come here this evening, as I trust we all do, with an unprejudiced mind. I am not a Christian Scientist so far as I know. I heard about a man who found out he was an Episcopalian by going into a church where he heard the congregation acknowledge that they had done those things which they ought not to have done, and left undone those things which they ought to have done, and therefore he decided that he was an Episcopalian. Now it may be that without knowing it, I am a Christian Scientist.

I have long since learned, my fellow-citizens, not to oppose any science or anything else worth speaking of, by my ignorance. I have learned, before deciding against anything, to examine it, weigh the evidence, and draw my conclusions upon the evidence. I consider myself, ladies and gentlemen, fortunate that I shall hear the subject discussed this evening for the first time by a gentleman whom I have known for many years back in Illinois, a jurist and an ornament to the legal profession, a gentleman who, I know, is ripe in scholarship, and who has doubtless brought to the investigation of this subject, as he has to all subjects to which he has given his attention, a mind trained in his profession to sift and weigh evidence, and to draw conclusions based upon evidence. I believe that he has brought into it a conscientious regard for the responsibilities dependent upon what he may say or do. Ladies and gentlemen, without any further introductory remarks, allow me to introduce to you Judge Ewing of Illinois.

As Judge Ewing stepped forward he was accorded hearty applause. An audience of fully fifteen hundred people listened with marked attention to the lecture.

The audience included many prominent lawyers, doctors, and clergymen, and altogether was one of the largest and most representative audiences ever assembled in the Auditorium. F. E. GOODALL.

### At Sacramento, Cal.

Judge William G. Ewing lectured here Monday evening, March 5, on "Christian Science, the Religion of Jesus Christ." He was introduced by Mr. Weinstock, a prominent merchant. He spoke as follows:—

Time was, my friends, when men and women were incrusted so deeply with the beliefs of their forefathers that even to listen to those teaching another belief was heresy. Time was when to doubt the doctrines taught by the prevailing religion meant to become the victim of the Inquisition, the dungeon, and the stake. Thank God that we live in a freer, nobler age. Thank God that each is permitted to search out for himself the truth and to worship his Maker without let or hindrance in accordance with the dictates of his own conscience. Thank God that the generality of men have become truth-seekers and are searching after the truth, wherever they may find it. If in the religion of their birth, so much the better, but find it they will, however much the religion which to them holds the truth may differ from the religion of their fathers.

Most of us have come here to-night as truth-seekers. We come, let us hope, with our minds free from prejudice and our hearts open to receive whatever truth may be uttered here, however foreign such truth may now be to our hearts and minds.

That there must be more or less truth and merit in the teachings of Christian Science, is made evident by the many thoughtful, intelligent, high-minded men and women who have become converts to its doctrines.

If a tithe of the many excellent things we have heard and read of the speaker of the evening are true, we have before us a profitable and instructive evening. If we shall not go forth as converts to Christian Science, I am sure we shall leave this house with at least a broader knowledge and a more intelligent understanding of its spirit.

JOSEPHINE HUNT GOODWIN.

### At Portland, Ore.

A very large audience assembled in the Marquam Grand Theatre yesterday afternoon (Sunday, March 11) to hear Judge William G. Ewing's lecture on Christian Science. Half an hour before the doors opened, the lobby, vestibule, and a portion of the sidewalk in front of the theatre were crowded, and when entrance began, so fast did the eager crowd pour in to secure available seats that it required the utmost efforts of ushers to regulate the current.

Besides Judge M. C. George, who introduced the speaker, no other person than Judge Ewing occupied the stage. There was no programme, or even music, the purpose of the management being not to detract from the speaker and his subject. Judge George spoke quite briefly, observing the same idea of devoting the time to what all had evidently assembled to hear. He said in part:—

*Ladies and Gentlemen:*—I am not a member of the church organization having charge of the lecture service to-day. I esteem it as a great compliment that I have been invited to present the distinguished gentleman from Illinois to this large and intelligent audience of the City of Portland. I now have the pleasure of introducing to you the lecturer of the day, Judge William G. Ewing, who lectures upon the subject of Christian Science.

*Portland Morning Oregonian.*

### At Stockton, Cal.

The Yosemite Theatre, one of the largest auditoriums in California, was none too large for the audience that assembled to hear Hon. William G. Ewing lecture on Christian Science on Sunday afternoon, March 4. Every seat on the first floor was occupied and at least three rows of seats in the first balcony were filled.

Hon. Joseph H. Budd, judge of the Superior Court and father of ex-Governor Budd, introduced Judge Ewing. In doing so he said substantially:—

During the last few years much thought has been devoted to Christian Science. For myself, I have not had the time to investigate the subject. Fortunately, however, we have present to-day, one who, by education and command of language, is well equipped to explain the Science.

He then formally introduced Judge Ewing who, for two hours, kept his audience deeply interested in the subject which his simple language made clear.

All three of the daily papers here gave us liberal advance notices and made good reports of the lecture, including synopses that were eminently fair.

JESSIE M. STRINGHAM, Clerk.

### Lectures at Other Places.

Oakland, Cal.—Judge William G. Ewing, Friday, March 2.

Jamestown, N. Y.—Carol Norton, Sunday, March 4.

Key West, Fla.—Mrs. Sue Harper Mims, Tuesday, March 13.

## Miss White's Song Recital.

WITH much pleasure we republish from the *Concord Daily Monitor* the following critique of Miss Villa Whitney White's song recital recently given before the Concord Woman's Club. This review of Miss White's work and capabilities is from the pen of one eminently qualified to write intelligently and critically thereof.

Miss White, it is perhaps unnecessary to say, is the soloist of the Christian Science Church of Concord, N. H.

The exquisite cycle of folk-songs sung by Miss White before the Concord Woman's Club recently, was greatly enjoyed by an audience which filled the Baker Memorial Chapel to overflowing and afforded our music lovers an opportunity for learning a good deal about this primitive music, which more than any other has come straight from the heart of the people originating it. And Miss White's singing, even if she were not engrossing her hearers in one of the most fascinating subjects of musical history, would captivate her audience, for she has besides a genuine musical temperament and artistic cultivation of the highest sort, a voice full and rich, of an appealing warmth and possessing dramatic force. She has also that unerring taste which allows that the poetic interpretation of a song, be it great or little, is of more import than the display of those vocal feats, tricks of style, which, while they dazzle the audience contribute nothing to the musical or poetic idea. It was on the interpretative side of her performance that we felt Miss White showed her superiority and her rare accomplishments. She certainly gave us the cream from a large body of musical literature covering a period of four or five centuries, and we regret we could not have heard some of the numbers over again. The simplicity, not to say the sincerity, with which one must approach these quaint, bizarre, often dainty, sometimes religious, and sometimes grotesque bits of writing, are the qualifications only the trained artist can bring to them in full measure. As Madame Essipoff, the distinguished pianiste now wife of the famous teacher Leschetitzky, once said of the works of Mozart: "They are harder than all other compositions to play, because they require so much care and simplicity in their treatment." The success with which Miss White acquitted herself in the presentation of these simple, unaffected little songs, representing as they do so much highly wrought art, really meant more to us than the successful performance of any number of operatic feats, which are essentially muscular rather than poetic or imaginative.

The folk-songs themselves grew naturally out of certain primitive conditions of life. But to-day we see that the encroachment of metropolitan life, the growing commercial spirit, business enterprise, the spread of literature, and the growth of the theatre, are directly inimical to them. We shall have no more folk-songs. The indispensable conditions are wanting. Whether the native instinct to perpetuate local or national history or legend in musical form is as much alive now as it was in those heroic days of older times is a question probably no census taker ever thought to inquire about on his rounds among the people, but there seems to be little doubt that civilization with all its social activity, its rapid and thriving literature, and its popular art, has disturbed the spell out of which came the expressive and ingenious melodies that are so distinctly themselves as to be beyond imitation. M. B.

The Woman's Club owes a debt of gratitude to Miss White for her generosity in giving the members an opportunity to hear her beautiful voice and lecture.

---

The *Universalist Leader* says: "What the world needs to-day is more Christ-men: those who, like the Master, are here to minister, not to be ministered unto. The church should stand as the centre of a broad and generous service to the world."

## Fast Day Proclamation.

THE following proclamation has been issued by Frank W. Rollins, Governor of New Hampshire.

I hereby appoint Thursday, April 19, as Fast Day, and call upon the people of our state to observe it in its true and best sense.

When the country was in its infancy and dangers surrounded it on every hand, our ancestors felt the need of a protecting and guiding power, and sought it prayerfully, leaving us this annual rite as a sacred inheritance. Now that we have attained a strong and lusty manhood, now that we are a vigorous, wealthy people, having safely passed the perils of our youth, we are apt to forget the strong arm upon which our forefathers leaned. Instead of abolishing Fast Day as a worn-out and useless custom, I would call our people to a renewed observance and a better appreciation of the real significance of the day.

I would ask that large body of men who seldom, if ever, cross the threshold of a church, to kneel once more where they knelt as children, and see if the church has not some message for them. I believe that a single honest attempt to cast off the blinding and depressing influences of doubt and materialism and to look at life once more through the clear, earnest eyes of youth and in the light of the faith of our fathers, would bring a solace and satisfaction "like the benediction that follows after prayer."

---

## A Kindly Change.

WE have one newspaper that has abused and misrepresented Christian Science in every way and on every occasion. When Judge Ewing lectured here a few weeks ago, I took an advertisement to this paper and also took occasion to explain in a brief manner what Christian Science is and what it is doing for mankind. When I went for their bill after the lecture, they said, "We will make no charge for this. We feel that we owe you people something for the way we have treated you in the past, and we shall not publish anything on Christian Science without first submitting it to you."—F. W. S., Troy, N. Y.

---

## The Birthplace of Mary Baker Eddy.

**Reprodueed by the Aid of Mrs. Eddy's Information, Photographs of Site, and Authentic Data.**

THIS is the title of a well-executed etching from an original drawing by Rufus H. Baker. It restores on paper the Baker homestead as it appeared in Mrs. Eddy's girlhood. Now the site is but a tithe of the old farm, and only a few fruit-trees remain to suggest the once fine orchards.

This picture has been made possible mainly through Mrs. Eddy's kindly assistance.

The etching is printed in black and sepia to meet a preference in tints, and can be obtained at the following prices:—

Artist's Proofs . . . . . $7.50
These are the first prints, are on India paper, and limited in number.

India Proofs . . . . . $5.00
Later prints on India paper.

Plain Proofs . . . . . $3.00
Prints on plain rice paper.

Address, RUFUS H. BAKER, 88 North Main Street, Concord, N. H.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### The Christian Daily.

WE have read some of the numbers of *The Topeka Daily Capital,* which was edited as a Christian daily newspaper for one week by Rev. Charles M. Sheldon, commencing March 13. Certainly as an advertisement it has been a success, for it has received wide notice and generous comment at the hands of the press of the country, and has also been the subject of many sermons, as well as interviews by both clergymen and laymen. Yet we do not for a moment think that it was promoted merely as an advertising scheme; there is nothing on its face to indicate this. On the contrary, there is much to warrant the conclusion of a well-meant purpose to do good. How much good its brief existence has done or may do is a question.

It contained a fair quantity of healthful reading matter, and enough of current news to have kept its readers well informed. It was clean and unobjectionable in its moral aspects throughout; a newspaper fit to go into any family at any time. Its editorials were given over largely to religious subjects.

Surely no religionist could object to this item from an editorial in the first issue:—

"The main purpose of the paper will be to influence its readers to seek first the Kingdom of God. A nation seeking the Kingdom of God first of all, will in time find right answers to all disputed questions and become a powerful and useful nation."

Nor this from the second number:—

"There is also here and in every other city a great opportunity for all the forces of righteousness to come together and act together for the common good of all. Our different church denominations are on very friendly terms. The sixty-five separate church organizations in Topeka are ready, in a large, and, I believe, a very Christian, spirit, to co-operate in making conditions more righteous. But there is a great deal more we might do by getting into one federated organization every sect and denomination in order to make a better municipality. Where the churches could not agree in the matter of creed, or dogma, or ritual, they could easily agree, even more than they do, on the great common needs of humanity. Righteousness is not sectarian. The temperance cause does not have a denominational watchword. Purity and honesty and fair dealing between man and man, and love of one's neighbor, are elemental things, that all men can unite upon for the common good of the human family."

The greatest editorial, to our mind, is in the third number—that one entitled "The World's Greatest Need." We give it in full:—

"If Jesus were here again facing the very civilization that we face, and seeing in detail all that we see, living the life that we live now, what would be his answer to the question of the world's greatest need? What would he preach about oftenest? What texts would he use? What central truth would he emphasize?

"It is easy to imagine Jesus facing a multitude of all sorts and conditions of men in this generation and saying to them practically the same things he said to the age into which he was born. It would not surprise us if the first sermon he preached to a congregation here in Topeka or anywhere else would have for its text, 'Repent.' Or possibly the old words, 'Ye must be born again.' Or, 'Seek ye first the kingdom of God.'

"If this be true, if Jesus would preach, more than anything else, the need of a regenerated humanity, then that is the greatest need of the world. I do not mean to say that he would not use any other texts or words. The very fact of this great need would compel preaching about the detailed selfishness which makes the need itself. It is not easy to conceive of Christ keeping silent on the liquor question as it faces us, or saying nothing about the greed of much of the modern business life, or the horrors of war, or the injustice of man to man in his commercial relations. He would undoubtedly speak in detail against these sins. But he would do so because the one great need of all humanity is regeneration of life. The new heavens and the new earth wherein 'dwelleth righteousness' will be possible when men are born again.

"Selfishness is at the bottom of all the world's trouble. There is not a social wrong, there is not a ruined home, there is not a tangled condition of life anywhere, that does not have for its real cause a selfish life. The greatest need of the world is to get rid of this horrible selfishness. It is the sin of all the generations. And as fast as it is taken away by the power of Christ, as he is allowed to come into the daily life, so fast will the life of men on the earth become the happy, strong, beautiful life that God longs to have it. The greatest need of Topeka, of Kansas, of the United States, of the whole world, is a regenerated humanity."

This, from the ordinary standpoint, is a fair reflex, no doubt, of Jesus' teachings as they should be applied to-day, and if they were truly applied, the world would be vastly better than it is. But there are some very essential parts of Jesus' teachings which our editorial friend has failed to summarize. As a Christian Scientist we shall, we are sure, be pardoned for suggesting that no setting forth of Jesus' teachings which fails to include his repeated commands to heal the sick, etc., does justice to him or his work.

For instance, why should not the following be included in the list, for they were admittedly among his most prominent teachings:—

"Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give" (Matthew, 10 : 8).

And this at the close of the same Gospel:—

"Go ye therefore, and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost: teaching them to observe all things whatsoever I have commanded you: and, lo, I am with you alway, even unto the end of the world. Amen" (Matthew, 28 : 19, 20).

It will be observed that *all* his commands were to be taught; not one was to be omitted. We might cite many other texts of like import; but these will suffice.

Mr. Sheldon's venture has met a storm of opposition and severe criticism from many newspapers and many pulpits. This was to be expected. Any such radical innovation would meet this fate, however high its purposes. To the mind filled with materialistic views of religion, Mr. Sheldon's venture seems extravagantly Utopian.

Christian Scientists will fully endorse all Mr. Sheldon said as to human selfishness and its cure. Only as selfishness goes out can the Christ spirit come in.

## Prosecuting Attorney Frazer's Opinion.

PROS. ATTY. FRAZER of Detroit, Mich., has recently given an opinion upon the question of the legal status of Christian Scientists in cases of death under Christian Science treatment. It seems that in this case a five-year-old child died while being treated by a Christian Scientist. A long investigation was held, and after a careful inquiry into the facts and a thorough examination of the law, Mr. Frazer arrived at the following conclusions, as published in the Detroit *Evening News*.

"In a case where husband and wife were indicted for manslaughter, for neglecting to provide medical aid for a fourteen-months-old child, who was suffering from inflammation of the lungs, the judge held that when from religious convictions that God would heal the sick, and not from any intention to avoid the performance of their duty, the parents of a sick child refuse to call in medical assistance, and the child dies, it is not culpable homicide.

"In another case a father was indicted for neglecting to furnish medical aid to his child, he belonging to a sect who had objections to calling medical advice or giving medicine in case of sickness. The jury found the prisoner guilty, and the judge, in delivering the opinion, said, 'Had it not been for the statute'—providing a punishment for parents who wilfully neglected to give their children medical attendance—'I should have entertained great doubt upon this case.' And another judge added, 'I agree with Lord Coleridge as to the difficulty which would have existed had it not been for the statute.'

"In still another case the defendant was convicted of the manslaughter of his eight-year-old son, who died from small-pox. The prisoner belonged to a religious sect which did not believe in procuring medical aid. The Court of the Queen's Bench set aside the conviction upon the ground that the medical testimony was not sufficiently strong to authorize the jury to find a verdict of guilty."

The facts, the law, and the conclusions in the case Prosecuting-Attorney Frazer elaborates into about two thousand words, finally summing up as follows:—

"I am unable to find sufficient law or facts upon which to prosecute the father and mother of the child; there seems to be no law in the state of Michigan providing in terms that it is the duty of the parent to furnish 'medical aid to a child.' The judges in England, both by inference and direct reference, doubt whether at common law a parent was under legal obligations to furnish medical aid to a child.

"As to Christian Science healers, I am unable to find that they 'practise medicine or surgery' within the meaning of act 237, public acts of 1889. I also think that Mrs. Knott relieved herself of any liability when she told Mrs. Zoeger that she had better get a physician if her husband so desired it, as the conditions were not favorable for Christian Science treatment."

## A Correction.

The importance of the insertion or omission of a single word was well illustrated in the last *Sentinel*. At the close of the article, "The Bread of Life," the familiar text from John 6 was quoted: "This is the bread which cometh down from heaven, that a man may eat thereof, and not die." As the quotation got into type the word "not" was left out, thus entirely inverting the sense of this mighty saying of Jesus.

Let us be careful that we do not invert his teaching in our thought as it was inverted in the type.

There is no morrow. Though before our face
The shadow named so stretches, we always
Fail to o'ertake it, hasten as we may.
God only gives one island inch of space
Betwixt the Eternities as standing-place,
Where each may work—the inerrable To-day.

## Paper on Christian Science.

AT the Public Service Section of the Woodlawn Woman's Club, on Friday, February 16, Dr. Mary E. Frain read a paper on "Attitude of Christian Science toward Impure Water, Defective Sewerage, and Disinfectants." Vaccination was also added. In attempting to define the attitude Dr. Frain said she had consulted Mrs. Eddy's different publications and some of the leading Scientists of this city. Their position is an earnest desire to discourage and avert the spreading of fear. They argue that it is developed to such immense proportions that the average citizen is almost afraid to breathe the ordinary air of commerce until analyzed by a specialist, or take a drink from a hydrant through fear of the lively microbe.

And to look through the glasses furnished by the "up-to-date" specialist, it is amazing that our grandfathers and great-grandfathers managed to enjoy health and longevity in their stupid ignorance, greatly in excess of that which we enjoy to-day with our wonderful enlightenment and so-called knowledge of "how to live," "what to eat" and what to drink. These facts would justify the statement that "ignorance is bliss" and that "it is folly to be wise," if the fads, hobbies, and isms of to-day are wisdom; and we wonder how our poor progenitors ever struggled to maturity without pure food and disinfectants.

The power of thought as a governing influence is being acknowledged by the best thinkers of to-day, even in the medical profession, where conservatism is most natural in a line that encroaches upon its territory. From a Belgian hospital a case is reported of a patient who had been helpless for eight years from convulsions of the muscles of the arm and shoulder, and no cure had been effected. Mental therapeutics were tried and in a few days the patient left the hospital, cured. From a French medical journal I find that strong mental emotions may cause ulcerations and even abscesses so serious that amputation was necessary, and that similar lesions are often cured under favorable psychic conditions; that these emotions may lead to dilatation of the arteries and may even give rise to internal hemorrhages. Even infection may be produced by mental emotion. Professor Feren closes his article by saying one should guard against unfavorable psychic influence as strenuously as against physical injury from any other source.

Christian Scientists know that if thought is directed towards wind, water, and the microbe it will develop fear along these avenues, and thus cause disease. They try to uproot this fear and turn the drift of thought into channels of health and holiness. "Fear bringeth to man a snare," and "Perfect love casteth out fear." They believe cleanliness to be next to godliness, and advocate pure water and proper sewerage, but do not believe, however, that disease is lurking in the wind or microbe. They rest secure in the understanding that nothing impure could come from God, who creates all things. They declare that Mind is the master and not the slave of the unreal or material things manifested in the body. In the ability of the Christian Scientist to realize this rests his ability to destroy the thought force of disease lurking in the universal human mind.

Children are more sensitive to surrounding influences and more susceptible to fear, and Christian Scientists protest against children being taught in school that disease is lurking about to attack them in an unguarded moment. Christian Scientists believe that physiology lays the foundation of fear in the young, to be eradicated later. They are taught that disease is of mental origin and faith in rules of health fastens the disease by calling attention to this condition.

Many medical writers hold that cholera is a nervous

Digitized by Google

disease and can be propagated by mental conditions. An Eastern fable says, "A pilgrim met the Plague one day and asked his destination. 'I'm going to Bagdad to kill five thousand people,' said he. In a short time they met again and the pilgrim said: 'You told me you were going to Bagdad to kill five thousand, and you have killed fifty thousand.' 'No,' replied the Plague, 'I killed only five thousand, as I said I would, while forty-five thousand died from fright.'"

If an epidemic could originate in a mental condition could it not be prevented by the same force?

On questioning some Christian Scientists who have been engaged in mental therapeutics for years, they agree that their choice would be never to permit vaccination, but they reluctantly submit to the legal requirements.

If people would believe that good is more contagious than evil, since God is omnipresence, how much more certain would be the doctor's success and the clergyman's conversion of sinners.

If all pulpits would encourage faith in this direction, that Mind is the governing influence, theology would teach as David taught, "Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling."—*Woodlawn Times,* Woodlawn Park, Ill.

## From the St. Louis Republic.

MUCH has been said recently concerning the seeming failure of Christian Science to heal some of its cases. Many of these cases were not treated by Christian Science at all, but by what is termed Divine Healing, Faith Cure, and so forth.

It is obviously unfair that Christian Science should be made the synonymous term for all that is included in the phrase, "without medical attendance."

It has been most carefully estimated that ninety per cent of all who have turned to Christian Science for help from their many distresses have been those who have failed to obtain relief from the various medical systems. It is also estimated that seventy per cent of this class have been restored to health and happiness through Christian Science.

Every new and advanced idea or system has to pass through the crucible of intellectual and jealous criticism, and Christian Science will stand the test because it is Christian, and because it is Science and has its basis in a divine Principle and relies absolutely on God. When a practitioner in any science, whether mathematics, music, or Christian healing, fails to make his demonstration in one instance, and succeeds in a hundred others, does it seem fair that the practitioner and the whole system should be condemned for this one failure? Science can never fail.

Galileo was accounted a heretic and the promulgator of a dangerous doctrine because he dared to thrust Science in the faces of the unscientific and the unprepared thought, yet to-day, every man, woman, and child in the land knows that Galileo was right.

The same may also be said of homœopathy. It has passed through the same denunciation, but has finally taken its place as an acknowledged system of medicine.

We know, in Christian Science, that the children of God are no longer to be accounted as children of chance and circumstance, but that they take, what they are daily proving to be, the demonstrable position of working in harmony with all that is loving, noble, and true, knowing that these have the preponderance of power over their opposites, disease, evil, and falsity.

The Psalmist says of the upright: "He shall not be afraid of evil tidings: his heart is fixed, trusting in the Lord." And he further says: "The wicked shall see it, and be grieved; he shall gnash with his teeth, and melt away: the desire of the wicked shall perish."

The invitation of Christ to all is, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." "Ask, and it shall be given you." Jesus further stated: "Ye shall know the truth, and the truth shall make you free." Who shall say that all shall not rely on God, who made all that was made, and made all good, and who is the giver of every perfect and good gift?

Christian Science, according to the teachings of its textbook, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, is based on a demonstrable Principle, and thousands upon thousands, including the most conservative, thinking people in our land, have proven this beyond cavil.

There have been strenuous efforts made by some to brand Christian Science as religious frenzy and fanaticism, but this is because they do not understand it. The attitude of Christian Scientists is, true charity toward all and malice toward none, and, above all, to follow in the footsteps of the Master. JAMES A. LOGWOOD.

## The New Religion.

THE *Daily Journal* of Salem, Ore., had the following to say editorially regarding Judge Ewing's lecture delivered in that city.

Those who went to the Salem Opera House expecting to hear in Judge Ewing's lecture on Christian Science an airing of any new or irreligious fad, or any sensational departures from orthodox views held by believers in the theistic conception of the universe, as promulgated by such men as Dr. B. F. Cocker, formerly of Michigan University, and other tolerant, progressive thinkers all over the world, were doomed to disappointment. They heard instead a restatement of the old landmarks of spiritual Truth that any man or woman, familiar with the evolution of religious thought, could not differ from, and the extent to which they might accept what was presented and apply it to themselves was exactly in proportion to their readiness for the truth itself.

The simplicity of the discourse, its freedom from controversy, its toleration for the views of those holding other forms of belief, was also a surprise to the audience. In the garb of a plain American gentleman, with no affectation of being a reverend or evangelist, the evening's service being free from any stage effects, even illustrating his points with homely humor, Judge Ewing went through his talk as he would have appealed to an average jury of his fellowmen in a court of justice, except that he employed no pettifogging methods. He did not beg the case, not even "for Jesus' sake," as the revivalists phrase it.

The "sweet reasonableness" of the presentation struck the minds of many thinking persons. It was so flatly devoid of any intention to wound the feelings of others, to slap any one in the face, to claim a monopoly of truth for his viewpoint, so unclaptrappy, that it set a higher standard for religious discussion, and it is a pity all the ministers in the city could not have heard it. It put an end in the hearts of many to the cross-eyed attitude that makes the religion you don't happen to have adopted as yours wear the look of everlasting hostility and wrongness.

There is room in the world for any amount of the sweet disposition that Judge Ewing displays, the winning, helpful, human-Christianlike way of looking at those who have accepted or been born into other ways of thinking and believing. In a country where the state forces or propagates no particular religious cult, where there is no state church and where the public schools teach no religion, the broadest basis of love and toleration must be kept alive in the hearts of the masses, and if we caught the drift of his whole argument rightly that is what Christian Science stands for. A pretty complete report of the address, which is the second public lecture ever delivered at Salem on this subject, will be found in this edition of the *Journal*.

## Christian Science.

THERE is perhaps no religious teaching extant to-day in regard to which there is so great a lack of correct information, as there is with reference to true Christian Science teachings and methods. The popular mind seems to have become imbued with the idea that it is some monster of evil going about "seeking whom he may devour," and when we consider the methods adopted by some so-called Christian Scientists and many foolish utterances by well-meaning but over-zealous followers of this teaching, it is not at all surprising that the public should form erroneous ideas on this subject, and thus arrive at a false estimate of what Christian Science really is. After having reached such conclusions, many people believe themselves to be prejudiced against Christian Science, when the truth is they really have no prejudice against genuine Christian Science teaching in its practice and in its purity, but against their own false conception of its purpose, teachings, and practice.

Christian Science teaches what its name implies, knowledge of Christ; and the healing power of this understanding should only be used now as in the time of Jesus and the Apostles, as a means to an end, namely: that the power of God may be demonstrated, sinners brought to repentance and shown how to work out their own salvation. Healing the sick is the smallest part of Christian Science work. It is but a stepping-stone to the higher spiritual attainments set forth and commanded in all the teachings of our blessed Saviour, Jesus Christ, in the spiritual understanding of their real meaning.

No true Christian Science healer, therefore, ever uses any questionable methods of securing patronage. Beyond a simple announcement of name and address, they never advertise in any manner whatever, but like their honorable brethren, the "regulars" in the medical profession, they let the results of their work speak for them, their patients being their only advertisement. Feeling assured that the foregoing statements will at least have a tendency to remove some of the misconceptions in regard to genuine Christian Science teaching and practice, I have the great pleasure and satisfaction of subscribing myself, one who is trying to be

A CHRISTIAN SCIENTIST.

*The Commercial Appeal,* Memphis, Tenn.

## No Division.

To the Editor of *The Post.*

*Sir:*—May I ask space in your valuable paper for the following: An item in your issue of February 24, which was taken from *The Independent,* states: "There is a split in the Christian Science body," and further says: "It is alleged that there are ten thousand who have left the Christian Science Church and joined the new organization, and the number is increasing every day." I am authorized to state, and know of my own personal knowledge, that there is not, nor never has been any split of any kind or nature in The First Church of Christ, Scientist, Boston, Mass. In several of the larger cities, where the Christian Science Church organizations have grown so that the place of meeting could not hold the congregations, they have formed new church societies.

At the last annual meeting of The First Church, the Mother Church, over fourteen hundred new members joined that body.

The Christian Science denomination, as a church organization, is growing throughout the world at the rate of six new church societies a month, and reports indicate that at the annual meeting in June next more than two thousand new names will be added to the membership of the church.

C. A. Q. NORTON.

Hartford, Conn., February 28, 1900.

## Constant Growth.

BY MRS. C. E. TUCKER.

LIKE many others, when I first began the study of "Science and Health with Key to the Scriptures," it seemed thoroughly foreign to me. Many times I became discouraged and put the book aside, believing I could not understand it, only to take it up again in my anxiety to know how I had received such relief from physical suffering. My healer had told me Science and Health explained it all. The first few meetings I attended with a friend, I hurried out of the hall as quickly as possible after the meeting was over, as I was afraid I might meet some one I knew, and I did not want any one to know I was attending the meetings or was interested. I did not even tell my husband for several weeks after my first treatment.

Many times I determined not to let Science come between me and my church—the First Baptist—and once or twice I remember resolving to go to my old church instead of the Christian Science meeting, but I always attended the Christian Science meeting after all, yet with a desire to have no one know it.

How differently I feel about it now! I want all to know I believe in Christian Science and know the reason why. It truly gives us "the peace that passeth all understanding," and I realize more clearly every day that our growth in the work depends solely on our own efforts. It came to me so clearly recently how easy it is for us to depend on some one to help us. One evening while struggling with error I opened to page 327 of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and read, "'Work out your own salvation,' is the demand of Life and Love; for to this end God worketh with you. 'Occupy till I come!' Wait for your reward, 'and be not weary in well-doing.' If your endeavors are beset by fearful odds, and you receive no present reward, go not back to error, nor become a sluggard in the race. When the smoke of battle clears away, you will discern the good you have done, and receive according to your deserving." What a beautiful promise! I soon made one of my best demonstrations and realized the reward was present, thus proving the necessity of working for ourselves. When we are able to put into practice our understanding of Truth to meet error in every way in which it is manifest, there comes the growth that cannot be hindered.

I have had many good demonstrations and will give a recent one. As the holiday week approached, the thought came to me of how each one would enjoy the week in his or her own way and how I could enjoy it in the study of the books most precious to me. The entire week was spent in quiet, thoughtful study.

In the evening of New Year's day, came a telephone message from a friend that her father was very ill, seemingly almost lifeless. He was unconscious and the body was getting cold. The family were having a New Year's dinner and a number of friends were present, when the father was taken violently ill; so suddenly that the entire household was in a state of great excitement. My first thought was to destroy the fear for the family, which was quickly done, and then I began the treatment for the father. In twenty minutes he was better, and in an hour the message came that he was all right. The father recognized the treatment and says he knows Christian Science alone can do such work. I know the demonstration was so quickly and completely made because I was prepared to meet the error. With such demonstrations one realizes a peace that truly the world cannot give.

## The Way out of Bondage.

BY JAMES F. GILMAN.

THE communication of gratitude in the *Sentinel* of January 11, concerning a contribution of December 21, awakened my thought anew to a demonstration of sin-healing that this article of December 21, "Christmas Gifts," achieved in the consciousness of one who was burdened with the sense of malice; and who had sought repeatedly, and apparently in vain, for deliverance, striving to realize that God was Love, and was able, and surely would deliver from this monster in belief. The apparent failure to demonstrate this supremacy of Love caused a sense of despair that appeared unbearable. At this juncture the article "Christmas Gifts" was presented to the thought, and the glory of divine Love appeared and the sin-healing was found to be accomplished.

Thus Love's answer to the soul's desire came, and the love of God and man—even every one—was felt in all its natural simplicity. This relief was found to be abiding so far as it related to the particular problem presented for solution; proving that sin was actually destroyed by the consciousness of divine Love. In view of this, how much, indeed, have we occasion for gratitude for the Light that is so potent that going forth through the columns of Christian Science publications, from the honest enlightened heart, untrammeled by selfishness, alias sin, it is sure, as in the above example, to accomplish the good whereto it is sent, even the destruction of sin, the greatest of all achievements.

When we come to get a clear view of the claims of sin-bondage, and our seeming subjection to it, it is appalling. There is no hope for the sinner from the human plane of deliverance. Do what we will in the merely human way, it only amounts to a more subtle phase of self mastering a less subtle phase; and the last state becomes worse than the first.

Christian Science, shows plainly the only way out of bondage. It teaches that the way of Life relieves us from anxiety, and fear, for God does the work when we learn that we have but to plant and water with diligence and fearlessness, and the Lord will give the increase. We are to have no worry about *results*. We are responsible only for the obedience that improves all opportunities, proving that it comes from heaven; and then how gladly we find that our time, no matter how humble our outward circumstance, is precious indeed for doing good by reflecting His Presence in thought—too precious to allow of our giving any time whatever to looking out for self in any selfish way. This looking out for self is the awful burden from which mortals are vainly striving to find deliverance.

We have but to do our work and God will do His, and we may be sure He will not fail to provide for all needs. Surely a wonderful Light is this that the faithful servant of God, the Founder of Christian Science, has bestowed upon humanity, even the steadfast Light of divine Love that her obedience has reflected upon us. How glorious it proves to be! Not the least glorious part of this light is that we may surely go and do likewise in the degree of our spiritual growth and obedience.

Thus we find that not only are the physically sick healed but the sinful are reformed—redeemed—and Christ's kingdom does come on earth, even now, as it does in Heaven.

## From Darkness to Light.

BY MYRA RALSTON.

WHEN a child, two years old, I was afflicted with scrofula, for which my parents tried both physicians and home remedies, but all to no avail.

When I was fifteen years old I began to cough and spit blood, and develop all the symptoms of inherited consumption, as my mother, and most of her brothers and sisters had pass d away with this dread disease.

I was supposed to inherit weak lungs, and when these alarming symptoms first manifested themselves, my father went to a specialist, the best physician he could get, who told my father not to give me medicine, or I would go that much faster.

So I came from Ohio to Colorado Springs for my health, with the hope that the climate might benefit me, but after coming to Colorado I was prostrated by an attack of bilious fever, followed by intermittent fever, and was threatened with brain fever. So my physician said, I must go to a lower altitude, as it was too high here for me.

I returned to Ohio to live with a sister whose husband is a physician of high standing in the profession. All was done for me that love or medicine could do, but I found only temporary relief.

After this, stomach, liver, and bowel trouble set in, until I could not eat solid food with any comfort.

The twelve years I spent with them I was better and worse, and I was told that I need never expect to be well again, as I had no constitution to build upon. As I had always been weakly and sickly no hope was given me.

After this I again came to Colorado, but after spending a year here the doctors said I could not stand this altitude and must go to a lower one.

After so many weary years in search of health I was led to Christian Science by the healing of my brother. I was healed of the stomach trouble in the first treatment, and gradually of all the other troubles, some of which did not disappear until the light of Christian Science dawned on me.

Soon after I was treated, I went through a class taught by one of Mother's students. From this class, taught twelve years ago, our church in Colorado Springs was founded, and many are rejoicing in the Truth which makes us free. After all the weary years of invalidism, I was lifted out of the very depths of mortal darkness into God's glorious sunlight of Love, wherein I was made free and whole. Such a transformation that many have marveled. But we know when Truth makes us free, we are free indeed, and we rejoice in our freedom, for it is our own God-given birthright.

I have had many beautiful demonstrations of the power of Truth over error, and find God a very present help in every time of need.

My mother passed away when I was but twelve years old, and I have often longed for a mother's love. I have never felt that void was filled until I learned in gratitude to give to Mother the best and purest love that I can give, and to know that I can never repay the debt of gratitude I owe to her except by doing faithfully the work she has shown me to do, and in love to God and to man following the path she has pointed out. The "little book" is indeed a pearl of great price, and is daily feeding its thousands of famished ones with the Bread of Life.

## An Expression of Gratitude.

BY EMILE ROUNSEVEL.

IN a recent number of our *Sentinel* I noticed a tribute of gratitude to the *pioneer* Scientists. I desire to give expression to my sense of the debt of gratitude we owe to the pioneer Scientist, our beloved Leader, Mary Baker G. Eddy, Discoverer and Founder of Christian Science, and the pioneer Scientists.

It is like the debt of gratitude we owe our forefathers, among whom was my grandfather. When they entered the New England States they found a vast and dense

Digitized by Google

wilderness. With scarcely anything but their two hands with which to build homes from standing trees, to clothe their families, and to feed them with the produce to be raised from the ground not yet prepared. These families were often composed of a wife and twelve or fourteen children. I have been told of their going thirty and fifty miles for a bag of salt (a firmly fixed belief is that mankind cannot exist without salt), returning with it upon their backs, making a trip of sixty or one hundred miles on foot.

This vast wilderness has nearly disappeared. Comfortable homes, from the most luxurious to the humblest, are spread all over New England, even to the base of Mount Washington, that towers above the whole presidential range of the White Mountains, named for the pioneer general who led the army that fought for the freedom of our beloved country. In the valley just below is a little Christian Science Church. Right at our door within easy reach is clothing, food, and salt for all. How easy for a young man entering into the labors of our forefathers, to build for himself and family a home, feed and clothe them in this day of civilization. Thanks to our forefathers.

This wilderness to me is like the dense darkness of the human mind into which our beloved Leader, the *pioneer Scientist* and the *pioneer Scientists* entered with the Light of Christian Science, cutting down fixed beliefs, material knowledge, false doctrine (trees) with the axe of Science, and in their place planted the spiritual ideas of Truth, Life, and Love—God, as found in the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. Out of these have been built over four hundred churches (homes) scattered all over our land, in which the whole world is being fed with the bread of Life, and clothed with the seamless garment of righteousness—spiritual understanding. The work of our beloved Mother and Leader, the Bible Lesson Committee, the Publishing Society, and the pioneer Scientists, together with our Bible Lessons in the *Christian Science Quarterly*, the *Journal*, *Sentinel*, and all Mrs. Eddy's works, has so leavened the human mind with the Spirit of Truth and Love in Christian Science, that any honest seeker for Truth can easily find and lay hold of the universal physician, teacher, preacher, and Saviour from every ill to which flesh is heir. I ask can we ever pay the debt of gratitude to them?

## Our Lighthouses.

Habsburger Strasse 12, Berlin W., November 25, 1899.

*Editors of the Sentinel:*—After a long journey on the great, storm-tossed ocean the welcome sight of the lighthouses, shining forth their messages of ever-watchful care, warning of the hidden rocks that we may escape them, and giving sweet prophecy of the safe harbor to which they guide us, brings a joy unspeakable to the homeward bound traveler. Well do I remember when nearing the end of my first long voyage those beautiful lights that shone forth in a dark night. And as, standing apart from the others, I gazed at them, there went up from my heart a prayer of thanksgiving, and my eyes were filled with tears of joy.

Our *Sentinel* and *Journal* are our lighthouses, ever brighter and brighter; pointing out each unseen danger, and lighting our pathway with constant messages of love and guidance. For these glorious gifts my heart is filled with thanksgiving to God, to our precious Mother high in her signal tower, and to those tireless watchers and workers who keep these lamps trimmed and burning—our faithful editors.

Let us constantly pray that none may be so blinded as to mistake some wandering comet or pirate ship for these pure white stationary lights, and thus be led upon the rocks and be lost. FRANCES THURBER SEAL.

## Testimonies.

### Glasses Laid Aside.

In February, 1899, I made the ride from San Francisco to Portland, Ore., with our Pacific Coast Agent. As it takes thirty-six hours to make this journey, we discussed many subjects, and finally he talked of himself, his home and family, telling of his prospects, hopes, etc., and of the only thing which seemed to worry him—the illness of his daughter, and at my request he told me of her case.

At that time she was about sixteen years old—had never been able to read or study, and what she knew of books had been taught her by a tutor reading and explaining to her, which had not proved very satisfactory, and that there was no hope of her ever being any better. She suffered almost constantly with severe headaches, and one of the most prominent oculists in San Francisco had said that sixteen per cent of her eyesight was gone. I told him what Christian Science had done for me and others that I knew personally, how I had been healed instantly, and was enabled to lay aside my glasses after wearing them for fifteen years. I gave him copies of the *Journal* and *Sentinel* that I had in my traveling bag.

I soon after returned to Chicago only to find a few days later that I must again go to San Francisco, and within thirty minutes after my arrival there, I met the mother and daughter, and told them all I could of Christian Science in thirty or forty minutes. There was great fear in this family that a Christian Scientist would insist on the young lady taking off her glasses, and that she would lose what sight she had. In June my friend came to Chicago, his daughter accompanying him. He said it was his desire to do everything possible for her. He had been directed to a noted oculist in New York, and no reference was made to Christian Science, except that I said, "When you get all through with these people Christian Science will heal your daughter."

On their return to Chicago from New York he said the oculist had agreed in nearly every particular with what the one at San Francisco had said, that sixteen per cent of her eyesight had been lost and could never be regained, and the only hope was to have her continue to see at all. He also told me last November when I saw him in San Francisco that his daughter was becoming interested in Christian Science, but I did not know to what extent until to-day, when I received a letter under date of February 16, 1900, of which the enclosed is a copy.

*My Dear J.:*—I suppose you will be glad to know that our daughter took up Christian Science about a month ago. She called on Mrs. E., a healer here in San Francisco, and has been receiving treatment ever since and we are delighted with the result.

She has not been bothered at all with the headaches she has had for many years, and best of all, she took off her glasses and is now able to read, write, sew, etc., without glasses, and she informs me she will never have occasion to put them on again. She is now able to use her eyes the same as anybody else.

We all feel very grateful to you for the kind interest you have taken in bringing this matter to our attention. It has certainly made a new girl of her. She can use her eyes now the same as any person. My wife is also very much interested in Christian Science since she has seen what it has done for our daughter. Our friends here in San Francisco who have known of her case so many years are very much surprised at the result, and it is considered a miracle by all. It is safe to say that had you not taken the interest you have in our daughter's case, we would not have thought of trying Christian Science.

With kindest regards from my family and self,

Very truly yours, C. C. C.

### Chronic Catarrh Healed.

A little less than one year ago, after suffering for many years from chronic catarrh of the nose, throat, stomach, and bowels, with the ghastly horrors of indigestion and rheumatism, and having exhausted material means of relief, I was urged by a brother railroad official to investigate Christian Science, something I had never before thought of doing and which was at that time far from my inclination. I felt much regret for my friend's weakness but sought to word my reply so as not to offend. He returned literature and a letter that I would have considered beautiful had it been upon another subject. In answering this letter (I was at a southern health resort at the time), it occurred to me that a sensible man would investigate his subject before making a serious argument.

I sent to a bookstore for some work on Christian Science. They had none, but I obtained some St. Louis papers which contained a series of sermons delivered by each of two prominent orthodox clergymen against Christian Science. These, thought I, will enable me to put a quietus on my friend, but instead of the anticipated result, their statements and their quotations from "Science and Health with Key to the Scriptures," led me straight into the Truth.

I began treatment at once and within a week returned home and to work. My changed appearance has caused much surprise among my friends, several of whom are members of the medical profession. I have performed more physical and mental work than for the previous two years. It has been accomplished easily and without fatigue or worry, and I am sure in a manner more satisfactory to the railroad company.

In addition to this, I have found a peace that is priceless. I have stood upon the hilltop and viewed the land of promise, but I have not always kept above the clouds, for it seemed at first that while the "little book" was a wonderful production, and sound in the main, there were occasional statements to which mortal sense demurred, but these demurrers have been one by one overruled by understanding, and mortal sense has paid the costs in every instance. Then, too, while believing, and after having proved by ample Bible evidence that "God is All," I have not always found it easy to realize the nothingness of self, but I am learning and have already demonstrated enough to feel assured that to the extent that we manifest humility, obedience, and love for all,—to that extent shall we have health and peace.

G. C. KINSMAN, Decatur, Ill.

### Healed Physically and Mentally.

A lady who had long been a sufferer from stomach troubles, and had given up all hope of ever being well again, came to Quincy, as she said and her friends thought, to die. A short time after her arrival, she went to spend a few days with friends who were Christian Scientists, taking her material remedies, which she hoped would relieve her of intense suffering. Nothing was said to her about giving them up. In a few days she gave them up of her own accord, and asked for help in Science. When she came she was so weak she had to be almost carried from the carriage to the house; she could only eat certain things, and those very sparingly. After the first treatment she ate heartily of whatever she liked, and without the least disturbance of any kind. In two days she walked a mile without feeling the least fatigue. In a few weeks she returned to her home in a neighboring state, a well woman, to the great surprise and joy of friends who supposed they had taken their last leave of her. What a God is ours, when a little understanding of Him will accomplish such wonders!

Another lady was sorely afflicted by the loss of a son who was just coming into manhood. As he had neither made profession of religion nor united with the church she was so distressed over it, believing in the doctrine of eternal punishment, that reason was almost dethroned. She attended our Wednesday evening meeting and took Science treatment. She returned to her home and in a few weeks she wrote she was healed physically, mentally, and spiritually. To use her own language, she saw how, listening to temptation, she had been cheated out of the greatest boon given to mortals—"the joy of the Lord." Now she rests in perfect peace.—S., Quincy, Ill.

### Rheumatism Healed.

For ten years I suffered from an ulcerated knee, which made me very lame and caused great pain. The doctor told me there was no cure. I could not walk without a stick. Besides this, my hands and feet were so swollen and painful on account of rheumatism that I could not use them, and had to have my food cut up. For eleven months I could not go down-stairs. Then I became weak and had such bad heart attacks that the doctor said I must not be left alone. He thought a change of air might do me good, so I went to stay with a cousin. I was there four months but got no better. Then I heard for the first time about Christian Science, so I tried it. After the first treatment I felt a great change, and in less than three weeks I was cured. I am thankful to say I have no bad knee and no bad hands, can cut my own food and require no stick. I have not had one heart attack since the first treatment, and before that they were very frequent and severe. I am in good health and able to do my own work. My friends think it is a wonderful cure.

HANNAH LEONARD, Hull, Eng.

### Severe Burn Healed.

About a month ago I tried to start a fire with coal oil, and when I lit it the fire flashed into my face. My face and hands were severely burned, and when I got home my mother hardly knew me, my face was so badly swollen. She sent for a Scientist and in about fifteen minutes the pain was all gone and I was able to attend to my work the next day.

It was said that I would have scars on my face all my life, but there is not a scar on my face or hands. At first the fear was expressed that my sight was injured, but the next morning it was as clear as ever. I am very thankful to God that He was such a present help to me.

WM. VOIGTLANDER, Wardner, Idaho.

### Saved from Despair.

One year ago Christian Science came to me with its sweet healing influence. I was one whom innumerable sorrows, trials, and sickness had driven to the very edge of the black abyss, despair. After three weeks' treatment by a loyal student of Mrs. Eddy, I was convinced beyond a doubt that Christian Science is indeed the pearl of great price, to buy which we would sell all we have. My little son, three years old, was also raised from an invalid to a healthy Christian Scientist, and when his little ills appear, he promptly denies them.

We enjoy the *Sentinel* and *Journal*, with their useful thoughts, very much, and we are thankful for them.

CORA M. WISE, Memphis, Tenn.

---

The *New Church Messenger* has the following: "What the church needs is so to learn the manner of divine revealings, that her ministry and her people may know the Word as a stairway to the heavens, up and down which the angels of God are forever progressing."

---

The New York *Witness* says, "The earthly life of Christ, though complete in itself, was only a beginning as concerned his great work for the salvation of men."

## Religious Items.

A correspondent's letter in the New York (Methodist) *Christian Advocate* says: "Third Avenue is peculiar in not having one church along its whole length. Between Forty-second Street and Fifty-ninth Street, a short section intersected by only seventeen cross streets, on Third Avenue, Manhattan, there are no less than sixty-five saloons and liquor-selling groceries; and this is one of the respectable sections of the avenue. There is not one church along the whole distance, and there is only one little Gospel mission—that at No. 805—formerly a restaurant, converted into a room with a seating capacity of about one hundred and fifty, the founder and superintendent being a lady who seemingly bears all the expense herself."

M. B Thrasher contributes to the (Baptist) *Watchman* a short article on the Tuskegee Conference of colored people, which is a feature of Booker Washington's splendid work in behalf of his brothers of the negro race. As the result of the discussions at the conference, a set of resolutions were adopted, of which the following is the first section:—

"More and more, as a race, we feel that we are to work out our destiny through the slow and awful trying processes of natural growth rather than by any easy, sudden, or superficial method; and while we are trying to make ourselves worthy citizens we ask the patience and good-will, and appeal to the sense of justice of our white friends."

"Faith springs up among the workers and the lovers, among the helpful and the pitiful, among those who bear burdens and strive with sympathy to read the meaning of pain and sorrow, and to put in their place joy and gladness," says the (Unitarian) *Christian Register*. "It is the hero who discovers and not the philosopher. The man of action advances into new worlds of achievement and of revelation: the philosopher comes after to explain, to put in order, and to record that which came by flashes of inspiration into the willing hearts and active minds of those who have learned that the life is the light of men."

In the London correspondence of the (Episcopalian) *Church Standard* this note appears: Sunday morning the Rev. James Johnson—a negro—was consecrated by the Primate in the private chapel of Lambeth Palace, to the assistant bishopric of Equatorial Africa. The Rev. J. Whiting, who preached the sermon, mentioned the fact that Mr. Johnson was born of rescued slaves, and educated by the Church Missionary Society. He became successively a catechist, deacon, and priest, and in 1873 was sent to England as representative of the native Church.

Rev. Everett D. Burr, pastor of the Ruggles Street Baptist Church, Boston, has resigned in order to give the Baptist Social Union unhampered freedom to carry out the purposes indicated in the will of the late Daniel S. Ford, who made a large bequest to the church. The Ruggles Street Church is the centre of a complex and far-reaching philanthropic work. Its present status is due largely to the labors of Mr. Burr.

John Ruskin esteemed his Bible study under his mother's guidance, the most precious and most essential part of his education. He has left on record the following list of chapters made out by his mother:—

Exodus, 5 and 20; 2 Samuel, 1: 5, and 17 to the end; 1 Kings, 8; Psalms 23, 32, 90, 91, 103, 112, 119, 139; Proverbs, 2, 3, 8, 12; Isaiah, 58; Matthew, 5, 6, 7; Acts, 26; 1 Corinthians, 13, 15; James, 4; Revelation, 5, 6.

In an editorial the *Universalist Leader* says: "Religion is on the increase in spite of the alleged 'decline of the Church,' and the next decade is to be marked by a most magnificent advance of Christianity. People reading the catalogue of evils in the daily press and the meagre record of the good, fear for the welfare of righteousness, but the fact is the evil is reported because it is exceptional and therefore news."

*The Congregationalist*, which is the organ of the Congregational Church, a short time ago opened a famine relief fund for the millions of India who are depending on the British government and the Christian missionaries for food. The fund grew rapidly, and nearly twenty-three thousand dollars has been placed at the disposal of the missionaries.

It is a fact well worth pondering, says the New York (Baptist) *Examiner*, that the name of the lowly Nazarene is held in greater reverence to-day than at any time since his death upon the cross. Workingmen in their meetings applaud every reference to Christ, and social reformers pretend to base their systems upon his teachings.

## Miscellany.

### Mistakes of a Life.

The boys and girls most in need of knowledge are those who think they already know so much that no one can teach them anything. That noble American woman, Mrs. Julia Ward Howe, not long ago celebrated her eightieth birthday, and when some one congratulated her on the wide extent and variety of her knowledge and the good use she made of it, she said laughingly:—

"But oh, if I only knew as much now as I thought I knew when I was sixteen!"

The time will come to many boys and girls when they will wish in the maturity of their manhood and womanhood that they really knew as much as they thought they did when sixteen years of age.

The mistakes of youth are so many that it may be wise for the young—and for older people also—to profit by some "Mistakes of a Life" that I found not long ago in an old scrap book. Here they are:—

It is a great mistake to set up our own standard of right and wrong and judge people accordingly.

It is a mistake to measure the enjoyment of others by our own.

It is a mistake to expect uniformity of opinion in this world.

It is a mistake to look for judgment and experience in youth.

It is a mistake to yield to trifles of no consequence.

It is a mistake to worry ourselves and others with that which cannot be remedied.

It is a mistake not to alleviate all that needs alleviation as far as lies in our power.

It is a mistake not to make allowances for the infirmities of others, to consider impossible everything that we cannot perform, to believe only that which our finite minds can grasp, or to expect to be able to understand everything.

Now who do you think found out that these things were serious mistakes? Of course it was those who made just these very mistakes in their own youth and conceited inexperience. He is a wise boy who profits by the mistakes of others and is careful not to make the same mistakes in his own life. Conceit is a most unlovely trait in any one, and it is particularly repugnant in the young. You remember how severely it is rebuked in the Proverbs: "Seest thou a man wise in his own conceit? There is more hope of a fool than of him."

To the "Mistakes of Life" given, one might add this bit of advice:—

"Be very slow to believe that you are wiser than all others; it is a fatal but common error. Where one has been saved by a true estimation of another's weakness, thousands have been destroyed by a false appreciation of their own strength." J. L. HARBOUR.

*Young People's Weekly.*

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and church notices, should be sent directly to the Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from the Christian Science Publishing Society should be made payable to the Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to the Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department. The Christian Science Publishing Society does not receive money for Church dues or per capita tax: this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Supplements to the Sentinel.

Three supplements to the *Christian Science Sentinel* have been issued. The first is the lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The third is the lecture of Judge Joseph R. Clarkson of Omaha, Neb., delivered at Kenosha, Wis., September 18, 1899.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The per capita tax for the year beginning June 1, 1899, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

### Political Events.

The bill to appropriate $2,095,455, being the amount of customs collected on Porto Rican imports, to be subject to the will of the President for the prosecution of public improvements in Porto Rico, has become a law.

Both branches of the New York General Assembly have passed a bill repealing the Horton prize-fight law, and if the Governor signs it, as is generally believed he will, prize-fights will be prohibited in the state of New York after September 1, next.

Secretary Root has announced that he has decided to consolidate Havana city and the provinces of Havana and Pinar del Rio, and to appoint General Lee to command the military forces therein. There are now about nine thousand soldiers in Cuba.

### Foreign News.

The arbitration commission sitting at Berne, Switzerland, has decided the Delagoa Bay railroad case, condemning the Portuguese government to pay to the United States and to Great Britain fifteen million three hundred and fourteen thousand francs. Colonel McMurdo, an American, obtained a concession from Portugal to build the road in South Africa and formed a company in London to carry out the project. Portugal confiscated the property in an arbitrary manner in 1889, and it became an international question. The English papers declare the award was not half large enough, and say that this, together with the long delay of the commission in deciding the case, will go far to prevent arbitration in future international disputes.

It is reported that Russia has made demands upon the government of Korea for the privilege of leasing a harbor and landing troops in Korea. The interests of Russia and Japan in Korea are about equally important, and Japan has been jealous of the growing influence of Russia in the East for some time. Predictions are freely made that Japan will resent encroachment in Korea.

No aggressive move of importance was made by the British army during last week, the Boers have been satisfied to strengthen their defences and wait. A considerable Boer force which was supposed to be cornered by the British in the southern part of the Orange Free State succeeded in eluding interference and joined the main forces.

Prime Minister Hoering of Denmark and his ministerial associates have resigned, because,—so it is reported,—of the popular disapproval of the negotiations for the sale of the islands of St. John and St. Thomas of the Danish West Indies to the United States for four million dollars.

General Piet Joubert, commander-in-chief of the Boer armies, died in Pretoria March 27. He was the most capable general the Boers had, and his loss is much regretted by his countrymen. General Louis Botha has been appointed to succeed General Joubert as commander-in-chief.

The Shah of Persia has appointed Mofakham Ed Dowleh minister plenipotentiary of Persia to the United States. The Persian mission here has been vacant for some years past.

Chin Pom Ye, the Korean minister to the United States, has been transferred to Europe, and will represent his government at the capitals of France, Russia, and Austria.

### Industry and Commerce.

Governor-General Wood has recently had interviews with persons of influence, who have strenuously urged the taxation of valuable properties, rather than each bag of sugar as it is manufactured. Those who hold this view contend that, under the present system, impediments are thrown in the way of production. Many valuable estates have been lying idle and unproductive for years, some even having complete sugar plants. The owners of others are rich men, but are living in Paris, Madrid, and other European cities, quite untaxed for their property in Cuba. General Wood feels that if these properties are taxed their owners will be forced either to sell them or make them productive.

Views have been taken of the orchards of Messrs. Miller and Pancake, in the vicinity of Rodney, W. Va., to be shown at the Paris Exposition. These orchards are said to be the largest in the world, and contain 250,000 peach and plum trees. The owners planted 181,000 trees last year, and cleared for planting 1,735 acres of timber land. The first season their orchards began to bear they shipped one hundred carloads of peaches and plums.

A Boston *Transcript* correspondent writes: "Chicago has destroyed the balance of nature in cutting the divide between the lakes and the Mississippi, and the upsetting of the balance is a pretty serious thing." This writer declares that in order to turn the legally required volume of water into the Chicago drainage canal, the current will become so swift as to make navigation difficult in the harbor at the mouth of the Chicago River.

The *Manufacturers Record* states that Southern cotton mills are making phenomenal earnings, and that about one hundred new mills are under construction, while the coal, iron, and steel industries are also very prosperous. It is estimated that about twenty-five million dollars is going into Southern mills alone this year. The *Record* predicts that Southern industries have a splendid future assured.

United States Consul Ridgely at Geneva, Switzerland, reports that an American promoter having secured an option on existing street-car lines in Geneva, and a concession from the government to replace all the old lines with a complete trolley system, has organized a company to finance the project, and now has nine miles of the new track laid.

The Metropolitan Street Railway Company of New York has decided to place 125 new air-motor cars upon its tracks. Already the Metropolitan Company in New York is operating a considerable number of cars equipped with air motors, and for several months cars of this sort have been operated in Chicago.

Twenty-two new steamships are soon to be added to the fleet of the Hamburg-American line. Part of these ships are now being built and part are soon to be commenced. At the close of last year the Hamburg-American company had seventy-six ocean-going steamers.

It is expected that eight hundred million feet of white pine logs will be sawed up at the mills in Duluth this year. Sixteen thousand men and five thousand horses have been employed in the woods all winter cutting timber for the Duluth market.

It is announced that the Berwind-White Coal Mining Company of Pennsylvania has advanced the wages of its ten thousand miners twenty per cent, which will make their wages the highest paid during the past thirty years.

Actual work on the New York underground tunnel for street cars was begun on March 26. Some of the paving stones removed during the first few minutes' work sold as souvenirs at $2 each.

Turkey is reported to have notified the United States that the importation of American pork will in the future be prohibited.

### General News.

It is stated that in three months under the American plan the school attendance in Cuba has been raised from four thousand to eighty thousand pupils, with two thousand teachers. Although English is taught, the teachers employed are Cubans. No local school taxes are raised. The school expenses, which it is expected will this year reach four million dollars, are to be paid from the island treasury.

Forty-four years ago, March 26, 1856, the first street car in New England was run from the corner of Main Street (now Massachusetts Avenue) and Pearl Street, Cambridgeport, through Main Street across the West Boston Bridge and on Cambridge Street in Boston as far as West Cedar Street. The entire equipment of the road consisted of six cars.

Boston and its environs within a radius of 12½ miles of the State House may be studied by visitors at the Paris Exposition by means of a model ten feet in diameter, which gives the topography of Boston almost perfectly in miniature, showing streets, parks, streams, railroads, and one hundred and fifty-seven thousand accurately located houses.

United States treasury officials are reported to be considering the advisability of coining half-cents to meet the "bargain counter" demands of the large department stores. Half-cent pieces were once coined in the United States, but the last issue was in 1857.

A Paris press dispatch says that an anonymous donation to the Aero Club offers $20,000 to the aeronaut who will start from Longchamp, go around the Eiffel Tower, and return to the starting point, a total distance of about seven miles, in thirty minutes. This competition is international.

It is stated that the present theatrical season is the most successful in history, and it is estimated that the box-office receipts of all the theatres in the United States for the season will amount to twenty-five million dollars.

The committee on protection of the American Ornithologists' Union has sent out a general appeal to bird lovers urging them to subscribe and to use their influence in every way possible to protect the seagulls and the terns.

Augustin Daly's collection of books sold in New York at auction recently, brought $166,035. Book dealers had predicted that the collection would bring at least two hundred thousand dollars.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## The Bible's History.

### From Earliest Manuscripts to Latest Revision.

THE OLD TESTAMENT.

I. Manuscripts.—The larger part of the Old Testament originally, of course, was written in Hebrew. It was perpetuated by being copied by scribes. Errors crept in, sometimes by the carelessness of the scribes, sometimes by misunderstanding words when they were writing from dictation, sometimes by the incorporation into the text of remarks made upon the margin, etc. The Massoretic text was the result of an effort to purify the text of corruptions. The work of the Massoretes has stood the test of time. It was their text which was made use of by the revisers in the revision of 1884. The Massoretic manuscripts are divided into those regarded as:

1. Holy.—These are the synagogue rolls, in the transcription of which the greatest pains have been taken to guard against errors. They contain only the Pentateuch, with the addition sometimes of the five Megilloth (Canticles, Ruth, Lamentations, Ecclesiastes, and Esther), and sometimes of sections from the prophets.

2. Private or Common.—These are written upon rolls, paper, and also appear in book form with the Massoretic punctuation marks. When complete they are called Greater Massora; when abridged, Less Massora. The oldest of these manuscripts, the Prophet Codex, is assigned to A.D. 916; the most ancient covering the whole Hebrew Bible, to A.D. 1009. The oldest manuscripts are the most accurate.

II. Versions.—The Hebrew ceased to be a spoken language. Jews emigrated to different parts of the world. Hence there came to be a necessity for translations or versions, the most prominent of which are as follows:—

1. The Septuagint.—This is often designated by the Roman numerals LXX. It was a translation into the Greek for the benefit of the large number of Jews who inhabited Alexandria. Tradition related at considerable length by Josephus (Antiquities, 12 : 2), ascribes the work to seventy (more exactly seventy-two), who began the task at the request of Ptolemy Philadelphus, and finished it in exactly seventy-two days; whence the name Septuagint. It was the version in general use in Christ's day.

2. The Samaritan.—A translation of only the Pentateuch, into the Samaritan dialect. It is not earlier than the second century B.C. Its author is unknown, but by tradition it is ascribed to the Samaritan high priest, Nathanael. An ancient copy of this is the pride of the few Samaritans who remain at Nablus (Shechem).

3. The Syriac.—Called also the Peshito, meaning correct or simple, because it contains no mystical or allegorical paraphrases, but confines itself to the text. It is a translation made into the vernacular of the people of Syria and Palestine, so that the Christians of those countries could have the Scriptures in their tongue. It probably was made in the second century A.D.

4. The Targums (translations or interpretations).—The residence of the Jews in Babylonia made them familiar with a new language and caused them to lose their own, largely by want of use. (Nehemiah, 8 : 8.) The Targums are a free rendering into Chaldaic Hebrew of the Hebrew text with expositions of its meaning.

5. The Vulgate (common).—This received its name from its being the common or current text of the Scriptures. It is the work of Jerome, the most learned Christian scholar of his day (A.D. 331–420). This is still the "authorized version of the church of Rome."

6. Other Versions.—Besides the foregoing there are other versions of less interest and importance, made respectively for the African Church, the Goths, the Armenians, etc.

THE NEW TESTAMENT.

I. Manuscripts.—The New Testament was originally written in Greek. The autographs of the different books very early disappeared. They were written upon papyrus, which is quite perishable, and with ink made from gum and water, mixed sometimes with a little copperas. Papyrus was succeeded by parchment or vellum in the fourth century, and this again gave place to paper in the eleventh. Owing to the scarcity of writing material, often the old skins were re-used by washing off or erasing the writing, and in that way many a biblical manuscript was destroyed. By the use of chemicals, however, in many cases the original writing has been recovered. Such manuscripts are called palimpsests. Of these the most famous is the Codex Ephraemi, written in the fifth century, and erased and rewritten in the twelfth. There are about one thousand known manuscripts of the New Testament, only about thirty of which include all the books. They are divided into two classes.

1. The Uncials.—These are written throughout in capitals, without any division into words or sentences, and with very few marks of punctuation.

The most important of the uncial manuscripts are: (*a*) The Sinaitic of the fourth century, discovered by Tischendorf in 1859 in the convent of St. Catharine at Mt. Sinai; (*b*) The Alexandrian, probably of the fifth century, presented by Cyril Lucar, Patriarch of Constantinople, to Charles I., and now in possession of the British Museum; (*c*) The Vatican, in the Vatican library at Rome, assigned to the fourth century, and supposed to have been written in Egypt.

2. The Cursives.—So called from being written in a running hand. These appear to have come into existence in the tenth century. The letters are run all together, as in the case of the uncials, often with no capitals except in the case of initial letters. Of these manuscripts there are a great number, and some of them are of considerable value.

It is possible to tell with considerable accuracy the age to which any manuscript belongs by the material upon which it is written, the character of its writings, and by the use or absence of punctuation marks.

3. Their Order.—In the most ancient manuscripts the order of the books of the New Testament is usually put as follows, though there is some variation as to the epistles: The four Gospels, the Pauline Epistles, the Book of Acts, the Catholic Epistles, Revelation.

**Copyrighted, 1900, by Mary Baker G. Eddy.**

Digitized by Google

II. Divisions.—As we have seen, to aid in reading the Scriptures, punctuation marks were first adopted. Then came division into:—

1. Chapters.—First the Gospels were divided in this way in A.D. 220 by Ammonius of Alexandria, so that a comparison of similar sections might be facilitated. This was followed by a like partition of the remainder of the books of the New Testament, the work not being fully completed until about A.D. 500. The whole Bible was not thus divided until the thirteenth century, the work being accomplished by Cardinal Hugo de St. Caro (St. Cher), who died in A.D. 1263.

2. Verses.—Our present system of verse division was introduced by Robert Stephens in his Greek Testament published in A.D. 1551, and in the complete Bible issued by him in A.D. 1555. The faulty character of this division is very clearly shown in the Revision.

III. Versions.—As in the case of the Old Testament, there have been various translations of the New Testament, those of value being the Syriac, the Egyptian or Coptic, and those in Arabic.

THE ENGLISH BIBLE.

I. Anglo-Saxon Versions.—In these we see the beginnings of our English Bible. The steps are as follows:—

Caedmon, a monk of Whitby, composed some poetical paraphrases of portions of the Bible. He died A.D. 680.

Adhelm (died A.D. 709), the first bishop of Sherborne, with Guthlac, produced an interlinear translation of the Psalms on the basis of the Roman text.

Egbert, or Eadfrith, Bishop of Lindisfarne, about A.D. 730, translated portions of the Gospels.

Bede, one of the greatest scholars of the Middle Ages, died (A.D. 735) while engaged in the translation of the Gospel of John, just as he had reached the beginning of chapter six.

King Alfred the Great (died A.D. 901) translated parts of Exodus and the Psalms, designing to make the Mosaic law the basis of laws for his own kingdom. Those laws were called "Alfred's Dooms."

Toward the close of the tenth century, Aelfric put into Saxon paraphrases of the Pentateuch, Joshua, Judges, parts of the books of Samuel, Kings, and Chronicles, Job (?), Judith, and Maccabees.

It was through the labors of John Wycliffe (1324–84), the "Morning Star of the Reformation," as he has been called, that the Bible was first translated into English. Nicholas de Hereford, an English ecclesiastic, did the work from Genesis to Baruch 3 : 20, but all the rest is ascribed to Wycliffe. The translation was made from the Vulgate, and was completed about 1380. A revision by Richard Purvey was made about 1388. Manuscript copies of this version were multiplied, and many "Poor Priests" went about the country preaching from it.

II. Printed Editions.—The invention of printing, by Gutenberg (A.D. 1450–55), was of great advantage to the Scriptures. The first book issued from the press was a Latin Bible. Now the Word of God is to be found in many tongues all over the globe. The whole Hebrew Bible was first printed in 1488, a second edition, which was the one used by Luther, appearing in 1494. The first copies printed in a modern language were "the first and second German Bibles by Mentelin and Eggesteyn, of Strasburg, of rather uncertain date, but certainly not later than A.D. 1466." The first quarto Bible was printed by Peter de Ferratis at Placentia in 1475. The first Bible with a distinct title-page was printed by George de Ravabenis at Venice in 1487. The "poor man's Bible," a small octavo, was issued from the press of Johann Froben of Basle in 1491. The important English editions are as follows:—

1. William Tyndale (1484–1536).—To this eminent scholar belongs the credit of having been the first to furnish a printed translation of the entire Scriptures from the original languages. He was burned at the stake October 6, 1536, but not before he had completed his great task.

2. Miles Coverdale (1488–1569) translated the Bible from the Vulgate and from the Zurich (Swiss-German) Bible, following Tyndale in the New Testament, though not implicitly. It was printed in Antwerp at the expense of Jacob van Meteren in 1535. It contained a fulsome dedication to Henry VIII., and was illustrated with several wood cuts.

3. John Rogers (1505–55) was a personal friend of Tyndale. Under the name of Thomas Matthew he published an edition of the Scriptures in 1537. It was a clever compilation from Tyndale's and Coverdale's translations, carefully edited and revised, and interspersed with notes.

4. The "Great Bible," so called from its large size, was issued in London in 1539. Its pages were fully fifteen inches in length by over nine in breadth. It was a revision of the Matthew's Bible, the work being done by Miles Coverdale, who thus revised his own work. It was the first Bible in which the words not in the original were put in a different type. The Scriptures in the book of Common Prayer and the entire Psalter are taken from this edition. A new and revised edition appeared in the following year, which was called the Cranmer Bible, because the archbishop wrote a prologue for it. This Bible was chained to the reading-desk in parish churches.

5. The Genevan Bible, a quarto issued in 1560, was translated by William Whittingham, Thomas Sampson, and Anthony Gilby; though the larger part of the work fell upon the first-named. The three were exiles at Geneva from the Marian persecution. It is known also as "The Breeches Bible," because of this rendering of Genesis, 3 : 7: "They sewed fig-leaves together, and made themselves breeches."

6. The Bishop's Bible of 1568 was a revision of the "Great Bible," and was so called because, of the fifteen scholars employed upon it, eight were bishops. Its principal interest consists in the fact that the edition of 1572 is the basis of our present Authorized Version.

7. The Douay Bible. The popularity of the Genevan Bible stirred up the Romish church to put out a translation of the Scriptures based upon the Vulgate. The New Testament appeared at Rheims, France, in 1582, and the Old Testament at Douay in 1609–10. It was scholarly, but disfigured by Latinisms. The modern editions have been improved.

8. The Authorized Version, known also as the King James' Version, although he had nothing to do with it more than appointing the commission which executed the work, not aiding it to the amount of a penny. The suggestion of a revision was made by Dr. Reynolds, a learned Puritan divine, at the Hampton Court Conference in 1604. The commission appointed to carry out the work was composed of fifty-four scholars (only forty-seven were actually engaged upon it) divided into six companies, two meeting at Westminster, Cambridge, and Oxford respectively. The revision was begun in 1607, finished in 1610, and issued in 1611.

9. The Revised Version.—The revision was undertaken through the action taken by the Convocation of Canterbury in February, 1870. The commission consisted of two companies, one for the Old and the other for the New Testament. American scholars were invited to join in the work. In the Old Testament company there were in England, twenty-seven; in America, fourteen. In the New Testament company there were in England, twenty-five; in America, thirteen. The New Testament was issued in 1881 and the Old Testament in 1885. This is, as the title indicates, a revision of the Authorized Version, and is the product of the best scholarship of the day. M. C. HAZARD.

## Some Facts Regarding Christian Science.

*Editor Cambridge Tribune*:—A recent editorial requesting a reply to some of its questions, affords an opportunity for presenting some facts which will enable candid people to separate things which differ, but may be confused through misinformation.

1. The Christian Science movement represents a widespread awakening to the practical import of Christ's teachings. It has been gaining momentum for over thirty years, and earnest Christian people of all creeds have found in it what their hearts hoped for, namely, Christianity which has "demonstration and power."

2. The laborers in the movement remain, as a rule, in one place, and becoming known to their fellow-citizens, win respect and confidence. Their advertisement is the work they do; no other advertising is considered legitimate. The lecturers, teachers, practitioners, readers in churches, and other workers in this movement are working for the emancipation of men from both sin and sickness; a more widespread and advantageous reform than was the abolition of the slavery movement in its day.

3. The organizations, or Churches of Christ, Scientist (generally protected by state charter), are branches of the Mother Church of Christian Science, and all hold public Sunday services and Wednesday evening meetings, at which the Principle, the methods, and the practical results of Christian Science may be learned. These branch churches, in all the larger cities and towns, have public reading rooms supplied with the literature of the movement, where visitors are welcomed and given every opportunity to find out what Christian Science is doing for the world.

4. The Gospel of Christ proclaims healing for the sick as well as cleansing for the sinful. The congregations assembling as Churches of Christ, Scientist, are composed of those who rejoice in this gospel because in most cases they have been healed of disease, and in many cases redeemed from the tyranny of evil habits and sins.

5. Since 1883 the *Christian Science Journal* has been issued monthly, and the honest investigator may learn from its pages of the beneficent influence of Christian Science in redeeming its tens of thousands from enslaving sickness and fettering sin.

6. There are few people in the land who do not know of some friend, relative, or acquaintance healed through Christian Science. The many thousands of cases of restoration to health from diseases pronounced fatal by medical authorities, or from invalidism considered incurable, attest the power of a true Christianity to renew life, and revive the hopeless. The health and happiness of those who are now alive through this Truth, make one query whether it is fair that so large a proportion of the race should be allowed to go to premature death as now die in spite of the prevailing methods of material medicine, without being allowed a trial of Christian Science.

7. Christian Scientists are working for God and the welfare of man. Though at work now on all the continents, and the "isles of the sea," the true Scientists everywhere are one in motive, in method, and in understanding; exactly as were the astronomers who became satisfied of the correctness of the Copernican system, and could prove it, —though the world was against them. Charlatans and impostors may use the sacred name of Christian Science as a cloak for a time; but they are at variance, working every man for himself, and the imposture of selfishness in due time is revealed.

8. Christian Scientists have gained their unity in faith and understanding from study of the Bible and practice of its teachings according to the scientific method taught in their text-book, "Science and Health with Key to the Scriptures." This book was written by Mary Baker G. Eddy in 1875, and 185,000 copies of it are in circulation. The author of the text-book is the Discoverer and Founder of Christian Science, and naturally the leader in the movement.

9. Those who know Mrs. Eddy know her to be a woman noble and pure, whose Christianly scientific labor is bringing to the world its highest good to-day; for what higher blessing is there for man than to be brought out of agnosticism, infidelity, or partial Christianity, into Universal Christianity? To become universal, Christianity must cease to be sectarian and theoretical, and become practical and scientific. Men must have exact proofs, comparable to those which mathematicians have, before they can see eye to eye. Christian Science works out exact demonstrations of its Principle, divine Love; and those who have seen these results honor and love the first worker, by whose fidelity to God and bravery before men the Science has been revealed which gives the foundation for Universal Christianity. Those who have not seen the provable truth speak loudly its opposite regarding Mrs. Eddy; and the blind garrulously offer testimony where eye-witnesses are required. If any man be blind through ignorance, let him not be led by the blind.

10. The growing unrest of the human mind as the century ends, has prophesied that which satisfies the craving, —the coming again of Truth with such healing and saving power as through Christ was first manifested. When that Truth is understood and *practised,* the hearts of good men will be glad in the re-union of Christendom.

11. Christianity should satisfy all the needs of man. The chase of the multitude after deceits is a pathetic symptom of the unhealed sorrow of the world. Impostors promise to heal, but cannot. People spend their all upon them, but are "nothing bettered." The Christian Scientist knows that Christ is the living bread for which all men hunger, and with that spiritual food he supplies the need of those who come to him, so that the sick are healed, the lepers are cleansed, the hopeless made alive again, and the poor enriched by the gospel preached to them, which ends thriftlessness and incapacity. For this highest of all instruction, Scientists receive in return for a week's work what a music master exacts for one hour's tuition.

12. In conclusion it may be said that here in Cambridge, for more than a year, Sunday after Sunday, Brattle Hall has been filled with a congregation of Christian people who thank God for Christian Science. At the Wednesday evening meetings there have been given testimonies as to man's dominion over sin and sickness through this Science, such as would gladden any good man's heart. A kindly welcome awaits every such investigator. We believe that in Christian Science that element which gave to early Christianity its power, is found again, and in this blessing would have all men share. The undersigned is First Reader of First Church of Christ, Scientist, in Cambridge, and so as a representative expresses the kindly thought of the congregation.

WILLIAM P. MCKENZIE.

*Cambridge (Mass.) Tribune.*

## Testimony of Local Scientists.

THE regular mid-week meeting at the First Church of Christ, Scientist, was well attended, about two hundred being present. The assembly was composed of intelligent-looking people, mainly from the middle class, and every face seemed beaming with happiness.

The First Reader announced that the meeting was in the hands of the congregation, and she hoped the time would be well filled.

She had hardly seated herself when a lady, a member of the church, arose and said that in reading over the *Chris-*

Digitized by Google

*tian Science Sentinel* of March 1 she was impressed by an article entitled, "A Little Child's Faith," and knowing there were some present who do not take the periodical, she would read it. In a clear, calm voice she read, much to the surprise of some of her friends, for a few years ago she was unable to read the English language, being German, and now the foreign accent was hardly noticeable.

A little girl of about nine years then told of a schoolmate who was suffering from an attack of toothache. She had gone to the teacher for comfort. The little girl said, "I felt so sorry for her that I realized the Truth for her. In about ten minutes I looked and she was laughing, so I knew the pain was all gone."

A gentleman then told of his experience with an old trouble which appeared occasionally. He did not seem able to become master of the situation. One evening he picked up "Miscellaneous Writings" by Mary Baker G. Eddy. On page 93 of this book the following statement appealed to him strongly: "Nothing is more fatal than to indulge a sinning sense or consciousness for even one moment." Although he had read these words before, they had not attracted his attention particularly. This time they set him thinking, and it enabled him to overcome his trouble by clearing his consciousness of error.

Another gentleman then arose and said, "I was a habitual user of tobacco for twelve years, but through the little understanding of the Truth I possess I have been able to overcome this habit. Not the slightest desire to use the article remains."

A machinist then related an experience which proved the Truth to be the best physician. A man who is working in the same establishment had his foot injured. After having some little trouble with it he came to the narrator and asked for advice. The man went to work and has not had any pain since. Another co-worker who employed a physician for a like injury is still unable to assume his duties, although the doctor has had five weeks more in which to remedy it.

Another member of the church then said he had been asked by an acquaintance for a remedy for corns. When told what remedy the speaker had used a disgusted look was the only reply. Nevertheless, the speaker assured all present that he was thankful for the Truth which had enabled him to get rid of them.

Hardly had the last words been spoken before another member was on his feet. He said, "One of the experiences given this evening reminds me of something I have to say. I should have told it long ago. Speaking of the tobacco habit, ten cents worth was a limited supply for one day. I was a perfect slave to the habit. After coming into Science I continued using it for a while. One day in thinking the matter over I became utterly disgusted with it. Out of my pocket came the tobacco I had and it landed on the other side of the street. That was the last chewing tobacco for me. I still continued smoking cigars for several years, but I finally dropped that as abruptly as I did the other. Since then I have had no desire for either. This is but one of the many things I have been able to overcome through the understanding of the Science of Being.

The next experience showed the power of Love. The gentleman said, "For some time past one of the men working near me in the factory would deliberately lay some material in my way. In walking back and forth it caused a great deal of inconvenience. I spoke to him several times, but it did not change matters any. Finally discord began to assert itself in my thoughts. I was almost angry when it occurred to me that I was not acting as a Christian should. Thought was reversed and on the way to work the next Monday morning I realized that Love was the only real power. When I arrived not an obstruction was to be seen, nor has there been any since then. Love had removed it."—*Sheboygan (Wis.) Telegram.*

## "Observer" on Christian Science.

*Editor of The Mirror:*—In response to an invitation I attended the weekly meeting of First Church of Christ, Scientist, my object being to see and hear for myself something about the new movement which is attracting so much attention and meeting with so much criticism.

Taking the elevator at The Kennard at 7.30, I soon found myself in their meeting room, a comfortable and appropriately furnished room on the fifth floor, capable of seating some one hundred and fifty people.

The service commenced with the singing of a hymn selected from a collection of hymns and tunes from different sources and printed especially for the use of the Christian Scientists, and I noted that in every part of the room there were copies of this hymn book with words and music legibly printed, and that the casual visitor was courteously supplied with the same. The singing was hearty and apparently enjoyed by all present, being led by several ladies with remarkably fine voices, which gave unmistakable evidence that said vocalists at least were sound and well. Right here I may say that I never attended a religious meeting where the audience seemed more thoroughly happy, and as a whole showed evidence of better health and contentment than was the case here.

After the singing, a lesson from the New Testament was read in an impressive manner by the First Reader of this church, soon after which the meeting was declared open for testimonies, the first being given by the pioneer worker in this church, who in mentioning a case which had been under her treatment during the past week explained to her hearers a new and striking application of Christ's command to the sick man, "Take up thy bed and walk."

This was followed by an account given by a prominent healer, who described a cure she had been able to effect by the Christian Science treatment of a bad case of a diseased thumb with ulcerated nail. The next testimony was given by a lady in the congregation, who told in a simple and straightforward way how she had been cured of badly chapped and bleeding hands by the same treatment self-applied. The fourth testimony was given by a young girl, who, in a perfectly modest and natural manner, related how an article which was missing in her home was found by her through a remarkable application of Christian Science, which reminded me that there are more things in heaven and earth than are dreamt of in our philosophy. The fifth testimony was given by a well-known business man of this city and was an enthusiastic endorsement of Christian Science as a help in business.

The last and most striking testimony of all was an intensely interesting account given by a lady of the complete cure of the drink habit in the case of a confirmed drunkard who had lost health, wealth, happiness, and home, and had tried every ordinary means of cure, and made the most desperate attempts to reform, but without the slightest success, but who lost even the desire for drink after a few days' treatment by a Christian Science healer. The particulars of this extraordinary case were given in a direct and forcible manner which would have done credit to a professional orator and had a ring of truth in their delivery which impressed me with the conviction that a religion that will prompt two of its followers to take personal charge of a helpless drunkard—as this lady and her husband did—and never rest until he consented, as a last resource, to be placed in the hands of a Christian Science healer, must have a strong leaven of Christian charity in its composition, and that the readers of the *Mirror* who wished to know something of the new movement in the religious world might be interested in this light sketch. I may say further that I write as an outsider, having no connection with the Christian Science Church in any way, but attended this meeting simply as

## "Blessed are the Pure in Heart."

SOME clergymen having published statements peculiarly untrue regarding Christian Science, the following letter appeared in proclamation of the Truth and was published in the *Berlin (Ont.) News-Record.*

*Editor Record:*—When the great Teacher of Christianity lived and taught upon earth, his sinless purity did not prevent the hypocritical Pharisee and letter-perfect doctors of the law from saying that he was no better than the publicans and sinners with whom he associated.

It was a lofty standard of purity which was held up by Jesus, dazzlingly so to those whose hidden life was full of corruption—"dead men's bones;" for Jesus plainly taught that purity is to be measured not only by outward deeds, but that the thought, or source of all action, must be pure as well, and that even to look with desire on that which is unlawful is to break the commandment. The emphasis of his teaching was upon pureness in the *thought,* "for from *within,* and out of the heart of men, proceed evil thoughts." Let him whose every thought is pure cast a stone at her, he said, in substance, to the witnesses against the sinful woman, and when that piercing glance looked through the mask of hypocrisy to the corrupt and sinful thoughts within, the accusers, one by one, turned silently away.

Jesus Christ's standard of purity has not changed; neither have the false accusations against those who are honestly trying to follow the Christ at the present time. Christianity is re-affirmed to-day in Christian Science. It is the religion of Jesus. That religion was founded on pureness of thought and deed. So is Christian Science. Neither license of thought or action, or anything bordering on it or approaching it, is tolerated in Christian Science, and the sanctity of the marriage relation is plainly set forth in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, as well as in all the other writings by the same author.

It should be a well-known fact that all habits of dissipation which lead to unfaithfulness in marriage and lawlessness out of it, find no support in Christian Science.

It is the endeavor of the Christian Scientist to be pure "even as he is pure," to take for his life-model the example of Jesus Christ, his Way-Shower, and to bring every thought into captivity to Christ—that is, to try each day to make his thoughts more Christ-like. And this he does, like all true Christians, because he loves the Christ and knows that his is the only way to blessedness and peace. Knowing, as he does, through the teaching of our Master, that this work of purification must begin within, because thought is the source of all action, he is daily and hourly watchful at the door of his thought, and so is purifying the stream at the fountain-head.

His work must be thorough if he follows honestly each step of the way shown him by Jesus the Christ, for it includes not only the overcoming of all sinful desires, but the casting out of all selfish thoughts, thoughts of malice, envy, fear, doubt, hatred, pride, ambition, uncharitableness, dishonesty, and deceit.

The standard of Christian Science, like that of our Master, is perfection, for he said, "Be ye also perfect," and this means purity in thought, word, and action, and in *every* relation in life. Upon the stainless banner of Christian Science are inscribed these words from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, page 137: "The corner-stone of all spiritual building is purity."

ELINOR F. EDWARDS.

First Reader, First Church of Christ, Scientist, Berlin.

**Rev. Dr. Clark says in the *Endeavor World,* "We must take something into our lives before the old can be expelled. There must be a new life to drive out the old life."**

## Saved from Pain by Christian Science.

JOHN EVERSON, a young man who is employed in the Green Bay Theatre and who boards at the American House, believes he had, through the medium of Christian Science, a remarkable escape from serious injury or even pain following an accident.

Everson was walking across the stage Wednesday afternoon, carrying in his arms a large timber, when a hammer weighing three pounds, accidentally dropped by a workman in the rigging loft fifty feet above, struck him full on top of the head with tremendous force. A well-known Green Bay woman, who is a Christian Science healer, happened to be in the house and on the stage as a visitor. She saw the occurrence and instantly went to work to help the victim of the accident.

Everson was staggered by the blow, but retained his senses. He dropped the timber he was carrying and clapped both hands on his head. The hammer had inflicted a long gash and blood was streaming over his face, obstructing his vision. Mr. Johnston and others led him to a wash-basin, where the wound was washed with cold water. The Scientist remained at Everson's side. She said to him, "Never mind, young man. It won't hurt you. Don't put anything on it and the wound will heal up all right." Everson understood in a moment and took the Scientist's word that he was not hurt.

Everson says he experienced absolutely no pain. The skull was not fractured, and without the application of drugs the gash has healed promptly and without any apparent ill effect.

Everson earnestly believes his escape from pain or disability is due to the influence of the healer, and he declares he will take up the study of Christian Science.

He resumed his work in the theatre as usual after his wound had been bathed with clear water.

## The Birthplace of Mary Baker Eddy.

**Reproduced by the Aid of Mrs. Eddy's Information, Photographs of Site, and Authentic Data.**

THIS is the title of a well-executed etching from an original drawing by Rufus H. Baker. It restores on paper the Baker homestead as it appeared in Mrs. Eddy's girlhood. Now the site is but a tithe of the old farm, and only a few fruit-trees remain to suggest the once fine orchards.

This picture has been made possible mainly through Mrs. Eddy's kindly assistance.

The etching is printed in black and sepia to meet a preference in tints, and can be obtained at the following prices:—

| | |
|---|---|
| Artist's Proofs . . . . . | $7.50 |
| These are the first prints, are on India paper, and limited in number. | |
| India Proofs . . . . . | $5.00 |
| Later prints on India paper. | |
| Plain Proofs . . . . . | $3.00 |
| Prints on plain rice paper. | |

Address, RUFUS H. BAKER, 88 North Main Street, Concord, N. H.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Prayer and Fasting.

THE question is often asked, How do Christian Scientists regard the Lenten season? Do they deem it an essential observance, a necessary religious rite, or is it among the ceremonial practices which Christians may, at their option, dispense with?

In connection with this question, it may not be amiss for us to refer briefly to the significance of Lent among those who practise its observance.

In a general way it may be said to be the springtide fast of forty days before Easter, as a preparation for the anniversaries of Christ's crucifixion and resurrection, and in remembrance of his fast of forty days in the wilderness. It may, therefore, he said to be a season of purification, in imitation of Jesus' season of meditation and overcoming of temptation in the wilderness, to fit its devotees for the better observance of the Easter solemnities.

Abstention from eating meats, and from the usual social obligations and festivities, are among the acts of fasting or self-denial of this season.

Christian Scientists would be the last to question the right of any to follow these observances. If this practice tends even to a temporary purification of thought and purpose, or, in any measure, aids in preparation for a higher understanding or appreciation of the resurrection, with all that is implied thereby, the devotee has received so much benefit, and none should seek to take from him one iota thereof. If any sinful tendency has thereby been ameliorated or destroyed, or any temptation to do wrong overcome, so much has been accomplished in the right direction. If, in addition, after the days of fasting are over there is no return to the practices or indulgences thus overcome, and the benefit has thereby become permanent, to such a result all good people will ever say, Amen.

Now as to Christian Scientists. They might be inclined, from their point of view, to inquire:—

If fasting, prayer, and refraining from social festivities or dissipations for forty days aid one to a better appreciation and understanding of the signification of a forthcoming Easter, why would not a continuance thereof during the remainder of the year, increase the same? and why would not each succeeding year, thus observed, bring ever-increasing appreciation and understanding, until the full signification of Easter has been reached?

The Christian Science conception of the resurrection of Jesus is that it is a type of the ultimate resurrection of all; a resurrection from the mortal sepulchre of all discord, sorrow, sickness, sin, and death. Jesus' explanation of his own resurrection, as well as Paul's preaching thereof, and the teaching of the other apostles, make clear this Christian Science conception.

If Jesus' resurrection is such a type, so also was his forty days' fasting a type of that constant and unceasing prayer and fasting or abstinence, which he taught and practised. These types should not be substituted for the reality. *Shadow* should not take the place of *Substance*. Even admitting, as we have, that the observance of the type may be productive of some good, or relative good, is not, after all, the real goal the accomplishment of the all-good, or the absolute good? and can this be reached through temporary fasting and prayer, or must the true resurrection be arrived at through the perpetual watching, fasting, and prayer, of which Jesus is our exemplar, and which his temporary fasting foreshadowed? Christian Scientists answer in the affirmative.

A thoughtful and intelligent reading of the definition of the Resurrection, as defined by Mrs. Eddy on page 584 of the Christian Science text-book, "Science and Health with Key to the Scriptures," will throw a flood of light upon the question. It is this:—

"Resurrection. Spiritualization of thought; a new and higher idea of Immortality, or spiritual existence; material belief yielding to spiritual understanding."

A deep and earnest study of the chapters on "Prayer" and the "Atonement and Eucharist" will enable the enquirer to comprehend the true office and significance of prayer and fasting.

There is a good Lenten lesson in the following from the *Detroit Free Press*:—

"Among the most fair-minded of us it is yet a matter for remark how often we speak ill of our neighbor, don't you think?" said a woman I know. "And this, too, quite without being conscious of it, for let me cite you.

"Last year my sister and I were talking over the approach of the lenten fasts and denials, and we were wondering, like good Episcopalians, what we should forego that was worth while. Coffee and candy, the theatre and cards, savored rather too much of the flesh for true denial, we told ourselves.

" 'I'll tell you,' I said, 'let us crucify our spirit by making a vow not to speak one idle word of our neighbor for the six weeks of Lent.' So it was agreed, while we both silently rather congratulated ourselves that we had set up an easy task. For, in a self-righteous way, we fancied we were not given to that sort of thing, since we came of a line not wont to indulge in the subtle delights of gossip. But never flatter yourself, my dear, that you are known of yourself. You cannot think how incapable you are of recognizing your own shortcomings. I think I do not exaggerate when I say that scarcely a day of the forty but we found our tongues ready, tipped with some bit of an unpleasant word for this or that neighbor. This was a matter of great astonishment to us, I assure you, for you see we were so complacently sure that we were not given to the ways of 'evil speaking.' "

Now if so much was accomplished by the forty days' resolve, how infinitely more would result from a permanent resolve of this kind.

The Christian Science conception is that the mere abstaining from food is not true fasting. They believe in eating a temperate quantity of healthful food every day of the year. Get the mind in the right condition of abstemiousness and there will be no difficulty with the body. Pray without ceasing, live in the atmosphere of true prayer, and the fasting will take care of itself. This was the teaching of him who truly fasted and prayed.

### All Men.

At a recent Wednesday evening meeting in the Mother Church all the speakers were men, and there were several of them. While this is not of frequent occurrence, it should nevertheless go far toward refuting the charge sometimes made that Christian Science is a religion only for women and children.

Some of those who spoke were active, practical business men, who told in a practical business way of the great help Christian Science had been to them in many ways.

Did not Jesus sound the depths of Christian ethics when he said, "Render therefore unto Cæsar the things which are Cæsar's; and unto God the things that are God's"?

### Supplement to the Sentinel.

The lecture by Rev. Arthur R. Vosburgh, "Christian Science: Its Worth and Work," which was published in the March number of the *Journal,* will be issued as a supplement to the *Sentinel* next week.

For price of supplements See page 507 of this number of the *Sentinel.* Send all orders to The Christian Science Publishing Society.

### Literature for Distribution.

The April *Journal* devotes two pages to a list of publications all of which are suitable for distribution among those whom it is desirable to inform regarding Christian Science. The following notice also is given, "that pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature to do a wider work."

The prices now are, for pamphlets: One copy, or more, 6 cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets can be assorted as desired.

Notice is also given that some back numbers of the *Christian Science Journal* may be procured at five cents a copy. Address, The Christian Science Publishing Society.

## Among the Churches.

### Great Growth of a Faith.

SUNDAY, March 18, 1900, another mile-post marked the growth of the Christian Science denomination in Chicago. The event was the first service of the Christian Science Society of West Pullman, which was held in the morning at 11921 Halsted Street. The new church is the fifth which has been established in this city since 1890, and the followers of this faith are elated over the remarkable progress that has been made.

The new church began its career with a membership of between sixty and seventy, but the attendance, following the general rule, was much greater. There were no dedicatory services, but the members gathered and worshiped in their accepted form. The place of worship was a hall which has been rented for the time being, but if the congregation does not prove an exception it will not be long before it will have sufficient strength to build a temple of its own, and possibly in turn send from its doors an offshoot to establish another congregation in some other part of the city.

The society is a child of the First Church of Christ, Scientist, as are also the Second, Third, and Fourth churches. Early in February the congregation of the First Church again became so large that the meetings held there were crowded, and from one hundred to two hundred people were compelled to stand during the services. It was recognized that the time had come for further development, and the people of West Pullman decided to start their own organization. This was done at a meeting held February 22, and now the new church is fully organized and is in a position to accomplish good work.

Outside of the church little is known concerning the doctrines and tenets of the denomination and many erroneous ideas have been formed concerning the matter.

The growth of the faith in Chicago presents some remarkable features. In the first place, it must be understood that Christian Science has drawn its following from the best elements of citizenship. Bankers, substantial business men, society people, and men and women of means have been attracted to it, and have cheerfully accepted its teachings and are testifying to-day of the good it has done them.

The character of the people who are accepting the faith is proof that it is not to be classed as a fad, but as a doctrine which thousands of deep-thinking people want.

The members of the First Church worship in a stone edifice at Drexel Boulevard and Fortieth Street, and have nourished to full bloom four new churches. From a small beginning the congregations have grown to about the following proportions:—

| | |
|---|---|
| First Church | 1,500 |
| Second Church | 800 |
| Third Church | 800 |
| Fourth Church | 500 |
| West Pullman | 70 |
| Total | 3,670 |

The church membership and congregations do not comprise all the people who subscribe to the tenets of faith, for there are probably between eight and ten thousand Christian Scientists in Chicago. The church edifices in which the Christian Scientists worship are free from debt. That of the First Church is a stone structure costing $112,000 and having a seating capacity of fifteen hundred. The Second Church is erecting a stone edifice at Wrightwood and Pine Grove Avenues which will cost $115,000 and seat fifteen hundred. The building which the Third Church is constructing is of enameled brick, located at Washington Boulevard and Leavitt Street, and will cost $115,000 and seat fifteen hundred.

The Fourth Church was organized about the same time as the Christian Science Society of West Pullman and will hold its first service about April 1. The Marlowe Theatre at Sixty-third Street and Stewart Avenue, Englewood, has been rented by the church and will make an attractive meeting place.

The services of the church are simple and consist of readings from the Bible and Mrs. Eddy's book, "Science and Health with Key to the Scriptures." Each church has its regularly employed Readers, who occupy the place which ministers occupy in other churches. The rapid growth of the denomination is illustrated by the fact that one year after the first church was dedicated the second was started, and one month after the second opened its doors the third came into existence.

Thirty-three years ago there was but one Christian Scientist in the world—the Rev. Mary Baker G. Eddy. To-day the faith numbers half a million ardent followers. Its lecturers are touring the country sowing the seed which is everywhere bearing abundant fruit. Former Judge W. G. Ewing and Edward A. Kimball are the lecturers of the denomination in Chicago. When Mr. Ewing spoke in Tremont Temple, Boston, hundreds were turned away, and his reception has been no less flattering from the eastern coast to California.—*Times-Herald,* Chicago, Ill.

Wendell Phillips was once asked if he had ever made a personal consecration of himself to God. "Yes," he replied, "when I was a young man I heard Lyman Beecher preach on this theme: 'You belong to God.' I went to my room, threw myself on my face on the floor, and said, 'O God, I belong to thee, and if ever in the future I am tempted to do wrong, give me power to overcome.' From that day to this I have never feared to stand by the truth, however unpopular it might be."

It has been well said that many disappointments and misunderstandings arise from the fact that man is in a hurry, and the Creator is not. "The kingdom of God cometh not by observation:" the arrival of peace draws near slowly and imperceptibly, but none the less surely.

*Josiah Quincy.*

## The Lectures.

### At Tacoma, Wash.

There was a large attendance at the Tacoma Theatre Monday evening (March 12), to hear the lecture on Christian Science. Judge William G. Ewing was introduced by John A. Parker, who said:—

*Ladies and Gentlemen:*—To many in this audience to-night the speaker requires no introduction, he having visited Tacoma some years ago in company with Vice-President Stevenson and party, and at that time many of the Tacoma people had the pleasure of meeting and hearing him speak, but to those who may not have met him, I desire to say that he has made a reputation throughout the East wherever he has gone as a public speaker second to none.

As a judge upon the bench, the position held by him for several years in Chicago, it is said of him by those who know him best, by those who have practised in his court and live within his jurisdiction, that no man occupying a judicial position has had a stronger hold upon the hearts of the people than your speaker here to-night.

All who came before him, rich and poor, high and low, received the same conscientious and righteous judgment. Thus it would seem that a man of this kind and character —possessing these qualities in full, rounded measure —has every qualification to lecture upon the important subject, Christian Science,—a subject that is demanding and receiving the attention of many of the most brilliant intellects of our land, and thousands are marching under its divine influence to a higher and a better life.

To those who may believe in this doctrine, after you have heard this lecture you will have a higher and better conception of your religion than ever before, and to those who do not believe in this doctrine, I congratulate you upon the privilege of hearing a jurist so eminent, for his name, wherever it is known, is emblematical of fraternal friendship, moral integrity and genuine manliness.

It gives me great pleasure indeed to present to you the Hon. William G. Ewing, who will talk to you of Christian Science.

Judge Ewing was greeted with hearty applause.

*Tacoma Daily Ledger.*

### At Elkhart, Ind.

A large audience greeted Edward A. Kimball of Chicago at the Bucklen Opera House yesterday afternoon (Sunday, March 11). During the hour and a half that he spoke he was given the closest attention.

The attention he received was in itself a compliment which must have been appreciated. To those who have faith in Christian Science many points were made clearer, and to those who went merely out of curiosity the lecture certainly proved an interesting if not a convincing one.

There were sixty visitors present from South Bend and ten from Goshen who came and returned on the interurban cars.—*Elkhart Daily Truth.*

### At Neligh, Neb.

A crowded house greeted Mr. Edward A. Kimball at the Opera House Thursday evening (March 8), and listened attentively to his lecture on Christian Science. He spoke at length, giving some of the fundamentals of their faith; and while the majority of his auditors may have differed from his theory, none will dispute that he is sincere, and that the existence he pictures would be blissful beyond compare.—*Neligh Advocate.*

## From Our Contributors.

### The Law of Divine Love.

BY GILBERT P. ROBERTSON.

Not long ago a Congress of the principal nations of the world was held, which was widely heralded as a Peace Congress, and the result of which was to be a lessening of the burdens borne by the people of those nations in keeping up immense standing armies with which to defend themselves from the aggressions of their "neighbors," or which would, if circumstances seemed to demand such action, enable them in their turn to become the aggressors.

About the time this Congress was in session two of the so-called Christian nations were at war, and the results of its deliberations had hardly become matters of history, when lo! two more countries are engaged in a war, which relatively speaking has been the most costly in human lives of any war of modern times. This is certainly a most striking commentary on the inconsistency of human laws and rules of action, and offers an opportunity to consider whence arise these inconsistencies, for it will be admitted on all sides that even human laws are intended to be founded on the divine.

Among men if one is insulted by another, or thinks he is, the first impulse is almost invariably to meet the insult with a blow. Taking a broader view of the case, if a nation feels itself insulted or aggrieved by another, the cry is for retaliation.

As recorded in the Old Testament, the Jews were continually going to war for purposes of conquest or revenge, or, in other words, trying to destroy evil with the sword. But was evil ever really overcome in that manner? Had the error actually been destroyed in each instance as it appeared, would there have been such a long list of battles? The Jews would wipe out one enemy, and seemingly in a very effectual manner, for it will not be denied that they were very thorough in their work, but it was not long before another foe came up to be met.

God promised to give His people a home,—a "promised land" was what they were constantly seeking,—but did they ever reach it to enjoy it? That they did not do so was certainly not because God was not ready or willing to do His part. God's promises are absolute and unchangeable, so that their failure to see these promises fulfilled must have arisen from their own lack of understanding of God's meaning. Had they sought to understand God spiritually, instead of materially, the Jews might have found the promised land and been at rest, but in seeking it in matter, which has no definite basis or principle, they were really going further and further away from their goal all the time. Matter, from its very nature, is illusive and fleeting, and substance will never be found in shadow.

Even in their conception of the Ten Commandments, which are the acknowledged foundation of all human law, the material and somewhat revengeful nature of the Jews is again seen, for while the commandments themselves simply state what should or should not be done, we find a long list of the severest penalties following, and an amplitude of detail which certainly could not have been necessary had the meaning of those commandments been spiritually discerned. To be sure, as given in the Biblical record, this list of penalties would seem to have come from God in the same manner as the commandments themselves, but may this not have arisen from errors of translation or transmission? for later on in the Biblical accounts of the Jewish people, when it came time to build "the house of God," we find that even David, great as he had become, and unquestionably through God's favor, was not permitted to build that house, and why? Simply and solely because

Digitized by Google

he had "shed blood abundantly, and hast made great wars," and "shed much blood upon the earth" in God's sight. But God said to him that a son should be born unto him who should be "a man of rest," that he should be called Solomon, which means "peaceable," and that "he shall build an house for my name; and he shall be my son, and I will be his father" (1 Chronicles, 22 : 8–10).

David was allowed to prepare and gather materials for the house of God, but higher, because more peaceable, thought was necessary to bring it to completion.

We have further authority for this view of the question in Jesus' own sayings, for in the seventh chapter of Mark he pointedly rebukes the Pharisees for rejecting the commandments of God in clinging to their traditions, and in another place, Mark, 10 : 4, 5, he tells them plainly that, "for the hardness of their heart," Moses wrote them a certain precept.

The Israelites typify all mankind, and not until Jesus' time was any tangible doctrine of Love taught. Up to that time there was believed to be no remedy for physical force but a resort to physical force. No one had ever taught that a material force could be vanquished by Love, a spiritual force. The qualities in mortal mind which are responsible for wars and retaliation, viz., hatred, malice, greed, lust, etc., had remained untouched, because, being mental qualities, they had not been considered at their true value, if indeed they had been considered at all, nor could they be materially discerned. Weeds can never be eradicated from the soil simply by cutting off their tops. The roots must be pulled up, otherwise they will continue to send up their shoots indefinitely.

Man has made laws to suppress or hold crime in check, but these laws have fallen far short of accomplishing the desires of their framers, if one can judge by reading the daily newspapers, which are largely made up of records of crimes committed in spite of these laws. The mortal desire to kill has not been overcome by hanging, nor the desire to steal by imprisoning a man. Something more, then, is needed than the framing of laws, or even their conscientious enforcement by merely human methods.

It is indeed remarkable that the world has gone on all these thousands of years dealing with effects and absolutely ignoring the causes back of these effects. If the man who has a desire to kill, or the one desiring to steal, could have been shown clearly that he could gain nothing by his crime; that, on the contrary, what he deemed a gain or a profit was in reality a loss, the desire to repeat the evil acts would gradually disappear, and just so much evil in human consciousness would have been destroyed. Could that man have been taught earlier in life that there was neither pleasure nor profit in evil, those crimes had never been committed, and much suffering would have been avoided.

The Old Testament is full of wonderful accounts of God's goodness and power, but the people of that age were so material that they could estimate those occurrences only from a material standpoint. Through their prophets and leaders they were taught to depend upon God, and they did depend upon Him to a remarkable degree, and this absolute conviction that God was on their side gave them the courage and ability to endure great hardships and overcome great odds in battle; but their God was a God of war, and their desire was for material conquest. He that taketh the sword shall perish by the sword, and so they found, for one war simply begot another. Yet what a wonderful lesson is here for us, for if a blind dependence on a God who was not understood could bring out such stupendous results, what may we not look for when we have perfect trust and confidence in a God whose nature and character we *do* understand? Even that promised land for which all have been longing and searching ever since the belief of mortal existence began.

An advanced step into the light and life of Spirit was made when Jesus taught a God of Love, but for the most part the thoughts of those around him were still too material to appreciate his teaching, and the very people who for centuries had been longing for him, and whose prophets had been prophesying his coming, refused to receive him when he did come, because he did not lead them to material conquests; so that it has taken centuries to appreciate his glorious mission.

Though Jesus' earthly life was short, his teachings lived on, and it is being more and more recognized that the way to overcome the discordant conditions of mankind is, not to meet hate with hate and malice with malice, but to meet all such manifestations of mortal error with Love. In Christian Science it is constantly being proven that a "soft answer turneth away wrath," while all will admit that a hasty or malicious retort only adds fuel to the flames.

Mortal existence has been literally a warfare of man against man until it seems hard to believe that a practical application of the Golden Rule to human affairs is possible, or that kindness and forbearance will not leave one at the mercy of his more aggressive neighbor, yet human aggressiveness unquestionably proceeds from human will, as does also impatience in dealing with the failings, or even the seeming injustice, of those about us, and history is full of instances proving that the human will can only carry one a certain distance and is sure sooner or later to fail and leave one without a prop or support of any kind. Jesus teaches us to pray, "Thy will be done," and as we go on in the understanding of the Truth as revealed to us in our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, we are continually finding that this is the only safe rule of action. Beginners in Christian Science often meet with many difficulties through attempting to work out their life-problems on preconceived lines, but when they can bring themselves to rely absolutely on the divine Will, realizing that they reflect only the one divine Intelligence, the question will be worked out harmoniously for them, though perhaps not in the way they would have expected.

Jesus said he did not come to destroy existing laws but to fulfil them in their highest sense, which Christian Scientists know from experience brings out the best and most practical results even from the material standpoint; therefore Christian Scientists are the most law-abiding people in the world, for they are constantly trying to overcome the more fleshly or carnal desires, from which proceed all "emulations, wrath, strife," etc., and to bring out the fruits of the Spirit which are "love, joy, temperance," etc., and "against which," Paul tells us, "there is no law."

That community is certainly the most orderly and best governed whose members are law-abiding because law-loving, and such a community would be "neighbors" one to another, and of it could be truly said, "Love worketh no ill to his neighbor: therefore Love is the fulfilling of the law."

## Lenten Thoughts.

BY MOLLIE COGSWELL DAVIS.

THE Lenten season just passing commemorates the temptation of our Lord, and in pondering it and studying his method of meeting temptation we may gain most helpful lessons.

We read in Luke's Gospel that he was forty days tempted of the devil, and that "In those days he did eat nothing: and when they were ended, he afterward hungered." By what particular forms of evil he was assailed in the wilderness is unknown to us, but we do know that he fasted and fought until he conquered, and when, the long struggle ended, he returned to mingle with mankind, he was impregnable, unfaltering, victorious. As we recall those long

Digitized by Google

days and nights passed alone by Jesus before the final conquest shall we be disheartened or dismayed that our intermittent efforts to overcome self are not at once crowned by success? If the Son of man struggled for forty days shall not we, his humble followers, work on with no thought of discouragement, battling with sin in every form, whether anger, impatience, selfishness, or pride, till we can say with our great way-shower, "The prince of this world cometh, and hath nothing in me;" till error, coming, meets with no response? This is the Master's command to his followers, and our text-book, "Science and Health with Key to the Scriptures" teaches how we may obey it.

But no desultory, half-hearted warfare will ever bring a victory. We cannot wilfully serve evil to-day and hope to vanquish it to-morrow. We must meet the enemy face to face, mount guard over every thought, meeting every suggestion of error with the word of Truth, as did our Lord.

When the tempter said, "fall down and worship me," Jesus promptly answered, "*It is written*, Thou shalt worship the Lord thy God, and Him only shalt thou serve." When error suggested, "If thou be the Son of God, command this stone that it be made bread." Jesus again answered, "*It is written*, That man shall not live by bread alone." Every advance of evil was met by the word of the Law or of the Prophets, and before this impregnable defense Satan fell back powerless.

How do we meet the suggestions of evil? Do we not frequently entertain them, thus adding to their strength before we deny and destroy them? In our efforts to conquer the sins of disposition are we always on the alert, watchful as well as meek, or when anger or impatience comes like a bolt from a clear sky, do we not yield our thoughts, and too often our voices, to its service before we realize, with shame and repentance, that we are giving place to the enemy? When tempted by weariness do we at once remember that "They that wait upon the Lord shall renew their strength"? When wounded by ingratitude are we reminded that Love "seeketh not her own"? When worried by the ceaseless prattle and small demands of the little folks about us, do we check them sharply, or do we softly repeat within our heart of hearts, "Take heed that ye despise not one of these little ones," "for of such is the Kingdom of God"? When surrounded by vexations on every hand do we remind ourselves that it is in our *patience* that we possess our spiritual sense? Before such ammunition as the Bible and Science and Health afford us all the armies of evil would soon fall to the ground. It is only when we try to use error's weapons—to meet injustice with resentment, or weariness with impatience—that we fail.

We who have named the name of Christ in a newer and deeper sense ought always to have on the whole armor of God, then would be recognized the sweetness and might of Christian Science in the purification of character as well as in the healing and beautifying of the flesh.

## Christian Science Work in the Jail.

BY G. B. S.

It is hoped that it will be a point of interest in the progress of Christian Science to tell something of the work being done in the city jail at Rock Island, Ill. It was begun by the request of a prisoner about three years ago and has continued uninterruptedly up to the present time. Two members of our church take the work for a few months at a time and go to the jail every Sunday afternoon.

The men congregate in a corridor around a long table, at the end of which the two Scientists stand to read the regular Quarterly Lesson. The most earnest attention is given to the reading, and recently some of the prisoners have joined in the responsive reading.

There have been marked demonstrations from the power of the silent Word in overcoming opposition, flippancy, and pride. After the service in the men's department the Lesson is repeated for the women, with whom the work is also encouraging and interesting. The same phases of error here have been destroyed and in place there is close attention paid to all that is read.

In one instance, where the opposition seemed very decided, so much so that the person read when she pleased during the service, often bearing a face of scorn, she now is interested to the extent of wishing to buy the book, "Science and Health with Key to the Scriptures." She also related a demonstration over ill health in her husband (who also is confined in the jail) by just reading the book.

The Scientists were told by the sheriff that the men began early Sunday morning to clean the cells and corridor that it may look clean for the service. The long table is spotless in its cleanliness, and a paper is laid across the end on which the reader's books are laid, all of which shows the condition of thought toward the Truth. Every week the *Sentinel* is put in each department; monthly the *Journal* is placed there, and each quarter two Quarterlies are given them, besides other Christian Science literature occasionally. Each department also has a copy of Science and Health. Thus it is felt that the "good seed is sown" and not upon "stony ground."

The workers strive earnestly to know that it is the Word of God given to these people and "it shall not return unto me void."

## Is it Worth While?

BY CAROLINE N. POOLE.

"Yes, it must be beautiful to believe in Christian Science, but you must have to work so hard, and it seems so much to do!"

This was said in a hall filled with art-students,—young men and women whose highest privilege and greatest joy would be to devote their lives to painting, and this hall might be filled many times with young men who are willing to spend months, and even years, in the severe physical training which will enable them to gain a great foot-ball victory; by those who would endure privations and toil to become singers and musicians; by men and women who would devote themselves to literature, or natural science; and, alas! many, many times by those who, within the last week, have given up their lives for their country.

And what is the purpose of Christian Scientists? For what are they working? They would lighten the burden of sin and sorrow pressing down so heavily upon humanity. They would overcome sin, sickness, intemperance, poverty.

Christian Science proves every one of these evils to be powerless. It does not temporarily relieve those who are suffering with these ills, but it goes to the very root of the evil and destroys the belief that there is life or intelligence in matter; destroys the desire to sin, and the false belief that man, whom God made in His own image and likeness, can become a sinner, an invalid, an inebriate, or a pauper.

Christian Science proves that God governs and controls men at all times, and under all circumstances, and if we trust in Him, and love Him with all our mind and all our strength, not in word only, but in deed, we can overcome sin, sorrow, and every form of evil. Surely this is a cause for which to work with all the energy of painter, scholar, and soldier combined. The ceaseless endeavor and constant prayer which enables us to "Put on the whole armor of God," and go out against such an enemy is not work, but a God-given privilege, that brings us endless joy, and enables us to "sit together in heavenly places in Christ Jesus."

### Healed of a Disease Pronounced Incurable.

I was healed about three years ago of a disease that was pronounced incurable by a number of the best physicians. I had become despondent, believing God had sent this affliction upon me. I had been reared in a deeply pious home; taught from earliest childhood that God sent all trials for our good, and when my three little ones were taken I tried to bow in sweet submission to His will, but it was hard to believe that our heavenly Father, who is Love, could so afflict His children.

Under this terrible strain I lost my health, and even then I tried to be resigned to His will; but I grew worse and worse. Then I became rebellious, feeling that it was too much. I said I was willing to die, but would not be an invalid. It was at this time I was led to look into Christian Science. I was urged by my husband to consult a healer. He said, "You have tried everything else, why not try Christian Science." He knew nothing about it, but one of his friends had been healed by Christian Science. He did not know what it was, but said there must be something in it. I put him off from day to day, feeling that it was only time thrown away, but he insisted, and to please my husband, I finally went to see a healer.

I had been brought up on calomel and blue mass, my father being a physician of the old school; so I felt that I was going on a fool's errand.

I called on the healer. I shall never forget her calm, sweet face as she came into the room, free from any expression of care or anxiety. I told her I had come to her for help; I wanted to get well. She said, "My child, you can be well and you can heal yourself." No one had ever told me this before. Upon her recommendation I sent for "Science and Health with Key to the Scriptures." I asked the healer to call at my home the following evening. When I left I felt uplifted. I thought, what is this? it surely is of God. Later it was proven to be so.

I received my book, and decided to read every word in it, so began at the preface, and there the first words I read were, "Leaning on the sustaining Infinite, to-day is big with blessings." I had been leaning on everything else but God, I would now give up everything else and lean wholly upon Him.

I am now well; rejoicing in the blessed Truth which has done for me more than it promised. It has never failed me. My sister has been healed of consumption, and others have come under the influence of Christian Science.

MRS. W. H. SIMS, Goshen, Ind.

### Healed at the Church Services.

We have been favored in our church with many verifications of the truth of the Mother's words in "Science and Health with Key to the Scriptures," page 291, lines 5–7. I shall relate one of our proofs which was manifest last Sunday at the morning service.

A young man who plays a wind instrument in a band, had the belief that playing produced such a severe sick headache that he hardly knew what to do with himself. After being out with the band last Saturday night, Sunday morning found him in agony. A neighbor who is a member of our church seeing him in such misery said to him that going to church and listening to the Lesson-Sermon would heal him. He determined to go and see what the effect would be.

After the service this man went around among the people apparently perfectly happy, telling how the service had healed him of his terrible pain—that it was entirely gone, that he felt just fine—free as a bird.

Another instance verifying the same passage occurred some time ago. A middle-aged man who was in the city having some school desks manufactured, had lifted a heavy bar of iron from the floor and injured his back quite badly. He said he felt something break or snap near his spinal column, whereupon he dropped the bar, reeled, and nearly fainted.

After that he was in terrible pain until the next evening. On Wednesday he happened to think that he had promised some of the men at the foundry that he would attend the Christian Science Wednesday evening meeting, but he doubted whether he would be able to get to the church in his condition. He managed to go to the church but sat in his seat in pain, until the service opened, when he completely forgot all about himself until the closing of the meeting; then he found himself perfectly healed.

The First Reader was rather surprised to have this stranger walk up to her and say that he had a doctor bill to pay (holding out a silver dollar to her), as he had been healed during the meeting but did not know who to pay for it. "Well," said the Reader, smiling, "this money does not belong to me, but to the church, as the general harmony produced by the Truth has healed you." The man replied, "Very well, put it in the church treasury then, for I am so thankful I must pay something somewhere to express my gratitude to the Healer of all our diseases."

MRS. K. B., Sheboygan, Wis.

### Found Peace and Happiness.

I did not come into Christian Science for healing of sickness but to find God. For years I had been in a state of unrest and searched from one thing to another for satisfaction. I felt the need of something outside myself, and after many devious paths had been followed, I at last found Christian Science and knew it to be what I had been searching for. I found far more than I ever dreamed of. Through the study of "Science and Health with Key to the Scriptures" and class teaching by a faithful student, peace and calm have taken the place of unrest, discontent, worry, and anxiety; harmony instead of discord, happiness in place of unhappiness, and good thoughts have destroyed evil thoughts in consciousness. Now in place of an inharmonious body, I have a harmonious one, which seldom troubles me. All this is due to the destruction of evil thoughts. It is so wonderful and so blessed to understand there is but One Mind.

Of the physical healing which has come through the understanding of Christian Science I will speak of sick headaches, to which I had been a victim ever since I can remember. They were of violent form and frequent occurrence, sometimes as often as two in one week. I could never plan to go to any place or do anything but one of these headaches put in an appearance. They disappeared long ago, and I am now free to go and do as I desire without any fear in that direction.

The fear of storms, which had been a terror to me since childhood, has been destroyed. Now there is no fear, for the Ninety-first Psalm sustains me.

Just through growth in understanding a great demonstration over fatigue and lack of endurance was made. Where formerly I could stand nothing without the most excessive fatigue, to-day I seldom have a sense of weariness, and can endure any amount of work of any nature. For all these blessings and innumerable others I give thanks, but most of all am I grateful to the dear Mother in Israel for all the toil and hardships she has endured that mankind might be relieved of its burdens of sin and suffering. The more I understand Christian Science the greater is my realization of our Leader's work, and my gratitude can only be expressed by a life of faithful work trying to follow her example as far as possible.

CAROLINE I. GUERNSEY, Chicago, Ill.

### Tobacco Habit Healed.

New as I am to the atmosphere of Christian Science, I offer my first experience in it for the benefit of those who may be helped thereby. During the forenoon of the last Monday in August, 1899, I was unexpectedly brought into contact with the first Christian Scientist I had ever spoken to; read the first line of Christian Science literature I had ever seen; and made my first attempt to see for myself wherein the Christian Scientist based his claim to separate religious existence as a follower of the Master, a true servant of the most High God.

I had gone to the healer to arrange for treatment for my wife, who was supposed to be incurably rheumatic, after fifteen years of more or less constant treatment by skilful and honest physicians. I supposed I was looking into the honesty of the healer for my wife's sake. I discovered, to my astonishment, that the healer, in the mean time, had been investigating *my* honesty of purpose. When I left her and attempted to resume an old tobacco habit, I found myself so permeated with new thoughts, so elevated by my newly discovered sonship with divine Principle, that tobacco was distasteful, disgusting, and unmanly, and since that hour it has never passed my lips.

A sign had been granted me. A thing I had been wanting to do for years, in my former thought, by prayer and by will-power, had come to pass unconsciously in an hour, and only later did I learn that it was the natural result of a Scientific law. Surely, God is in this movement. My home and my heart bear witness to the Truth. My wife and children join me in a united and unbroken testimony of health and love and well-being, and as I said to my former rector, "Certainly I will talk this matter over with you, but not to argue it. My dear sir, there are convictions too deep for argument."

I am full of wondering awe at the demonstrations that come to the honest searcher after Truth. I can only feebly write of such impressive proofs of the verity of the Scriptures as made one marvel at the blindness of the world at large.—E. H. GILKEY, Columbus, O.

### A Demonstration in Dentistry.

Christian Science has done so much for me, that I feel constrained to give one demonstration of the many I have been able to make through the understanding of Truth. I feel that but for Christian Science I should not be here to write this. How thankful we should be for this blessed Truth that teaches us we *can* at all times abide "under the shadow of the Almighty," if we will only conform our lives to Good.

The demonstration I desire to relate is one in dentistry. Two teeeh that were broken off had given me trouble for more than two years, and I had a great fear about having them taken out. It became necessary to do something, so one afternoon, without trying to overcome my fear, I asked a healer to go with me to the dentist's office. She did so and I made an appointment with the dentist. I asked the healer to go with me again. She consented and I went to meet her at the appointed time, but she was not there. While waiting for her I picked up a *Journal* and read an article that reminded me of my duty to do all I could for myself before asking for help. I went to work for myself and realized the perfect Love that knows no fear. The Scientist came and we went to the dentist, and I sat down in the chair without fear. The dentist wanted to use remedies for deadening the pain in extracting the teeth, but I assured him that I would be all right without the remedies. He broke the teeth in pieces, but I did not move or speak, for there was no pain. When he was through I told him I was not hurt, and he said I was a brave soldier. My gums did not bleed and were not sore.

MRS. GEORGIA BATT, El Reno, Okla.

### Can See and Walk.

Seven years ago I was healed through Christian Science by one of Mrs. Eddy's loyal students. I was bedfast for eight years, and could not open my eyes for five and a half years. I tried many physicians but all pronounced it a hopeless case, and said I would never walk again. Just as it seemed to me I would pass on we heard of Christian Science and sent for a healer. After three days' treatment I could open my eyes, and in a week's time I could sit in a chair; in four weeks I could walk everywhere; and in three months I was healed entirely.

I am studying Science and Health. I read the *Journal* and *Sentinel* which are a great benefit to me. I had the opportunity to go through a class one year ago last fall. This has made the way more clear, and not only helped me physically but has given me more light and understanding of the Bible, and has enabled me to demonstrate over many ills for myself and others.

I want to tell of a demonstration I had eight weeks ago. I had a fall and hurt my knee severely. Mortal mind wanted to make me believe it was broken. The second day it was swollen to twice its natural size and so discolored that my family became alarmed and wanted to call a doctor. I would not consent and said, "God can heal a broken knee as well as any other trouble." In a week I was able to walk and do light housework, and in four weeks I attended the Christian Science Student's Association twenty-six miles from home. I am the only Scientist here, but I know God is with me. I read the lesson with my family every Sunday. My daily prayer to God is that the good seed sown will bring fruit in due season.

MRS. JOHN A. GARTLEIN, Connersville, Ind.

### A Severe Case Healed.

I always receive some benefit from the demonstrations given in the *Journal* and *Sentinel*, and I appreciate them so much that the testimonies constitute my first reading when the *Journal* or *Sentinel* arrives.

In order to give of my store I wish to relate how I was healed of sciatic rheumatism, which made its appearance soon after I came into Science. The entire right side was affected from the foot to the shoulder. The swelling was so severe that I was unable to turn over in bed without help, and the pain was so intense that for several nights I was unable to sleep. It did not seem as if I could find relief, but Christian Science was used from the start and I had decided to give it a fair trial. The healing was slow but thorough, and within two weeks I was as well as ever.

This was in the spring, and when I told some of my friends that Christian Science was the only remedy I used, they were inclined to make light of it and said, "Wait until cold weather comes, and you will find you are not so free from it as you think." This was four years ago, and no sign of its return in any form has been manifested. I am indeed grateful to Christian Science and to our dear Mother for her efforts in our behalf.

W. G. M., Minneapolis, Minn.

### Healed of Many Troubles.

A lady who was suffering from inflammation of the bladder and indigestion, asked for treatment, and the first named disease disappeared instantly. She said to the Scientist, "While you were treating me the thought uppermost in my mind was, 'God is here, God is here.'" The other trouble was a little more stubborn, but yielded in a few days.

A case of grip was healed in one treatment; also nervous and sick headache. A lady who resorted to morphine to quiet severe pain, was benefited so much by treatment and the reading of "Science and Health with Key to the Scriptures" that she willingly gave up her morphine, and now can demonstrate for herself and family, rejoicing in her spiritual and physical healing.—C. B. H., Elyria, O.

## Religious Items.

The *Church Standard*, organ of the Episcopal church in Philadelphia, devotes nearly two pages to an editorial examination of the arguments of "opponents of prayer," dealing largely with the doubts of church members themselves as to the propriety of petitioning God for any aid which would involve a violation of the so-called natural order of things to answer. The following few sentences seem to convey the substance of the editor's convictions: "God is unchangeable. True. . . . But we mean that He is unchangeable in the *principle* of His actions. . . . He acts towards a man who repents otherwise than had the man remained impenitent, not because He has changed, but because He has not changed."

In a sermon published in the (Baptist) *Watchman*, Boston, that was preached by John Caird, D.D., LL.D., dealing with the subject of freedom through knowledge of the Truth, this sentence is found: "For as all things are a bondage to us till our hearts be in them, as our work in life, our profession, our calling, our social duties and relations, the very ties of home and kindred are a drag upon us, if our heart be not in them; so our religion can then only cease to be a yoke upon our necks, a heavy, servile task-work, when our whole nature—mind, heart, soul, the convictions of our reason, the witness of our conscience, the constraining force of our affections—go with it."

From an editorial in the *Universalist Leader* we take the following: "Bondage of various kinds and degrees there is yet in the world. Not a few yokes have been broken. Many that were oppressed are now at liberty. Still, intellectual fetters, moral serfdom and spiritual captivity are not unknown; in fact, are frequently brought into notice. These instances show us that Christianity has much to do before the prophecy of its triumphant victory becomes solid history."

The (Unitarian) *Christian Register* says:—"The common impression is that the great-hearted men and women, who are making this a better world to live in, work so earnestly and so cheerfully because they have been able to solve the problems of existence to their own satisfaction; whereas the truth is that their faith is strong and their hopes abound because they are doing something worth the doing. Whoever attempts any worthy work will at once feel the glow of fresh hopes."

The Paris correspondent of the *London Standard* gives a description of a remarkable bronze medal bought in a curiosity shop in Rome by a Frenchman named Bayer d'Agen. The medal bears an effigy of Jesus on one side, different from popular portraits, and on the reverse side a Hebrew inscription, which is translated as follows: "The Messiah, the King will come in peace, He is the light of men, incarnate and living." Numismatists are said to have agreed that the medal is of great antiquity.

*Zion's Herald* says: "To every Methodist preacher the annual conference is a time of surpassing interest. Once each year the name of each minister is called in the open conference and his character passes in review. It is a moment of great significance when the presiding elder answers 'Nothing against him.'"

Prof. Arthur McGiffert of Union Theological Seminary, on March 19, announced that he had written to the moderator of the New York Presbytery, withdrawing from the Presbyterian fellowship. Professor McGiffert's views were not in harmony with the general interpretation of the Presbyterian theology.

Rev. J. W. A. Stewart, D.D., in the New York (Baptist) *Examiner*, says:—"You find that your life, as it unfolds, is divided into different chapters, like a book. No chapter is like any that went before it. Each chapter leads you deeper and deeper."

The *New Church Messenger* says that the Librarian of Congress has recently ordered the purchase of a fine copy of the "Opera Philosophica," etc., of Swedenborg in Latin, three volumes with a portrait, offered by a foreign bookseller.

Do not give up, do not get discouraged, do not let the forces of evil dream they are winning even a temporary victory. They are bound to be defeated some time, enjoy the victory over them now; don't wait.

*Universalist Leader.*

The *Congregationalist* says that Edwin Markham, who believes in immortality, once silenced a questioner who asked where the other world is by asking him to tell where this world is.

## Miscellany.

### Origin of the Penknife.

Do you know why the little pocketknives are often called penknives? Perhaps some of you have often wondered, and did not like to ask. You use a steel pen at school, but when Washington lived there were no steel pens. At that time, and until the year 1820, pens were made out of the quills or large feathers of the goose and other birds. Now these quill pens being soft, got out of order and split, so they had to be remade. Most writers kept a sharp knife to remake these pens, so the knives got to be called "penknives." The word "pen" is from the Latin word "penna," which means a feather; so when we say steel pen we talk of a steel feather, which is absurd, but then the language is made up of very funny words and phrases, and the little word "pen" is now used only for the piece of steel with which we write. What becomes of all the pens made? One firm in England makes two hundred million pens every year, and there are several other makers who send out nearly as many more; then in the United States we make at least two hundred millions every year. Where do they all go? It is not often that you can pick up old pens, and yet a vast number must be lost every day.—*John de Morgan.*

### Moody on Theology.

During the discussion of the Briggs heresy case some years ago I sought an interview with Mr. Moody on "higher criticism."

"I'm not up to that sort of thing," he said with a twinkle in his eye. "You see I never studied theology, and I'm precious glad I didn't. There are so many things in the Bible that everybody can understand that I'm going to preach about them until they are exhausted, and then, if I have any time left I'll take up the texts I don't understand."

"Aren't you ever asked to discuss difficult passages of Scripture?" I inquired.

"Mercy, yes," answered Mr. Moody, "almost every day, but I always answer people just as I have answered you, and tell them that there is satisfaction and consolation enough in the promises of the Saviour, all that anybody can want. The single verse, 'Come unto me, all ye that labor and are heavy laden, and I will give you rest,' contains all the theology and religion that I need, or any other man or woman."

*Chicago Record.* W. E CURTIS.

A German statistician estimates that about 125,000,000 persons on the globe use the English language, while 90,000,000 use Russian, 75,000,000 German, 55,000,000 French, 45,000,000 Spanish, 35,000,000 Italian, and 12,000,000 Portuguese.

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department. The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Supplements to the Sentinel.

Three supplements to the *Christian Science Sentinel* have been issued. The first is the lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The third is the lecture of Judge Joseph R. Clarkson of Omaha, Neb., delivered at Kenosha, Wis., September 18, 1899.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The per capita tax for the year beginning June 1, 1899, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

**One copy or more, each, 6 cents; 12 copies, to one address, 60 cts. Twenty-five copies to one address $1.15; 50 copies to one address, $2.25.**

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass. U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

**Political Events.**

The Louisville *Courier-Journal*, which was a gold Democratic paper four years ago, has announced that it will support the regular Democratic ticket this year. In Chicago, where Bryan had no newspaper support in 1896 the *Chronicle* and the *Evening Journal* seem to be with him now, and the Baltimore *Sun*, anti-Bryanite four years ago, has given indications of a disposition to support the regular party candidates.

The Boston *Transcript* says: The Senate accepted the report of the Committee on Public Health, "no legislation necessary," on the annual report of the State Board of Registration in medicine. This action will set at rest any fear that the State will, this year at least, impose greater restrictions upon the practice of medicine or healing than now exist.

The submarine torpedo boat Holland has been purchased by the Navy Department. The price paid was $160,000. It is the intention of the department officials to recommend an appropriation by Congress for the construction of from eight to ten vessels of the same type.

The Chicago *Tribune* says that the Democratic National committee has issued a circular urging that all delegates to the Kansas City convention be "instructed for the reaffirmation of the Chicago platform and the selection of candidates loyal to it in 1896 and loyal now."

General Otis, in a recent report of military operations in the Philippines, says that there have been one hundred and twenty-four skirmishes, mostly very slight affairs, since January 1, in which the insurgent losses amounted to 1,426, besides 1,453 captured.

Admiral Dewey has declared his willingness to stand for election as president of the United States. He refuses to say which party he looks to for the nomination, and declines to announce his views on the public questions which at present demand a solution.

Webster Davis has resigned the office of assistant secretary of the interior. Mr. Davis recently returned from a visit to South Africa where he was treated with extreme cordiality by President Kruger. It is his intention to lecture in behalf of the Boers.

The Kentucky Court of Appeals decided the governorship contest April 6 in favor of the Democrats. The opinion holds that the action of the Legislature in seating Governor Beckham was final, and that the courts have no power to review it.

Acting Chairman Foss of the naval committee, on April 5, reported to the House the naval appropriation bill, which carries $61,219,916, the largest amount ever reported to the House by a naval committee.

**Foreign News.**

A convoy of 350 British and seven pieces of artillery was ambushed by the Boers twenty miles from Bloemfontein on March 31 and captured. Another British force consisting of five companies was surrounded by the Boers on April 3 and captured after a day's fighting. This also occurred in the neighborhood of Bloemfontein. Methuen, the British general, reports on April 5 that he surrounded and captured a Boer force of about seventy men near Kimberly. Among the losses of the Boers was General Villebois Mareuil, chief of staff, a French soldier of fortune, who is supposed to have been largely responsible for the excellence of the Boer strategy thus far shown in the war.

Recently Russia made demands on the Sultan of Turkey for a monopoly of the future railway rights in that part of Asia Minor north of the line of the German railway right of way conceded by the Sultan. A disposition was shown to resist the demand, and Russia mobilized a large army near the border, which implied that a refusal would mean war. Dispatches from Constantinople of April 3 say that a compromise was reached whereby Russian capitalists obtain leave to build railways in the territory described, wherever Turkey does not wish to build.

The Mitsui Ginko, the oldest banking house in Japan, was founded two hundred years ago. The capital is five million yen and its reserve fund amounts to three million seven hundred and eighty-nine thousand yen. An immense edifice, the only steel building in the East, is being built for its use. The site covers one and one-half acres, and the structure will be finished in 1903.

The postal savings depositors of Great Britain are now said to number 7,000,000 and to have accumulated $55,000,000. In 1895 a dividend of 2½ per cent on this amount was paid, leaving a surplus of $3,500,000. The cost of the management is said to be but .44 per cent of the mean amount of deposit.

A youth of 16 years fired two shots at the Prince of Wales in Brussels on April 4, but missed his aim. The Prince and Princess went to Copenhagen to attend the celebration of King Christian's birthday, and while their train stopped for a few minutes at the railway station at Brussels, the shots were fired into their car.

Queen Victoria and her party on board the royal yacht arrived off Kingston April 3, and the venerable empress entered Dublin, seven miles distant, the following day. Great throngs of people greeted her both at Kingston and Dublin, and gave her a cordial welcome. This is her first visit to Ireland in 39 years.

A Berlin dispatch reports that Dr. Leyds, the Transvaal agent, has informed the press that one hundred thousand dollars has been collected for the Boers in Germany.

The British are transporting Boer prisoners of war to the island of St. Helena.

The Paris Exposition will open Saturday, April 14.

**Industry and Commerce.**

Convention hall, the mammoth auditorium in Kansas City, Mo., in which the Democratic convention was to have been held on July 4, was burned to the ground in less than half an hour on April 4. Plans are on foot to rebuild the hall immediately and have it ready for the Democratic convention in July. Convention Hall had been classed as one of the largest and most perfectly constructed auditoriums in the world. It was erected two years ago at a cost of $235,000, raised by public subscription. The seating capacity of the hall was twenty thousand, and with standing room it was capable of holding twenty-two thousand.

Work was resumed April 3 in the machine shops at Chicago, Cleveland, Philadelphia, and Paterson, N. J., where the machinists had been striking for the last four or five weeks. This was brought about by an agreement to arbitrate the differences between the men and their employers, and this action prevented a general strike of machinists all over the country, which would otherwise have been put into effect April 3.

Admiral Dewey has decided to deposit his entire collection of trophies in the National Museum, including the sword presented to him by Congress, and the great loving cup procured by popular subscription. His object in so doing is to give the public opportunity to view the collection, which is one of great value and interest.

The General Electric Company has absorbed the Siemens-Halske Electric Company of America, and this is said to have brought about what is virtually an electric trust of the world, as the Siemens-Halske Company is closely affiliated with the company of similar name in Germany, the leading electric company of Europe.

Arbuckle, the coffee king, who has become an important factor in the sugar industry also, recently lowered the price of sugar. Havemeyer, the sugar trust magnate, refused to meet the cut in sugar, but he controls a rival coffee roasting concern, and retaliated on Arbuckle by cutting on package coffee, and Arbuckle met the cut.

A consolidation of the leading brick plants of Illinois has been formed under the name of the Illinois Brick Company. The capital is $9,000,000, and thirty-six plants are included in the organization.

The Western Union Telegraph Company has filed a mortgage for twenty million dollars in New York to secure a like amount of bonds.

Nine inches of land fronting on Horatio Street, New York, was sold recently to the Edison Electric Illuminating Company for $250.

**General News.**

All arrangements have been made by the university authorities for taking care of the two thousand Cuban school teachers who are to attend the Harvard summer school on the invitation of President Elliot and the corporation. Some wealthy men who are interested in Harvard, have started to raise a fund of $50,000 for the maintenance of the visitors, so that very likely they will have their trip to the United States and return, their tuition, and most of their expenses of a summer vacation free.

Some time ago John D. Rockefeller agreed to give two million dollars more to the Chicago University if President Harper would raise three million dollars among the friends of the university to go with it. The time limit was January 1, 1900, and was extended to April 1. President Harper succeeded in meeting the conditions, and now the great western institution of learning has a total endowment of eleven million dollars.

The *Springfield Republican* makes the announcement that the position of superintendent of education in the Philippines has been informally offered to Principal Fred W. Atkinson of the Springfield (Mass.) High School by the new commission for the establishment of civil government in the islands.

Thirty thousand school children will greet Admiral Dewey with songs when he goes to Chicago in May.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## Strange Tribe of Eskimo.

### Just Discovered on Island in Hudson's Bay.

ON a big island in Hudson's Bay a hitherto unknown tribe of Eskimo has been found. Whalers discovered them, and the authorities at the American Museum of Natural History, hearing the news, sent Captain C. Cromer to investigate them. How well his work has been done is evidenced by the glass cases now at the Museum in New York City, filled with the strangest exhibit that ever came even from the strange north land.

Until the last few months these people had never seen a white man. They inhabit Southampton Island, which is almost as large as the state of Maine. It is at the northwestern end of Hudson's Bay. For centuries this tribe has not had the slightest communication with other Eskimo. When discovered they were still living in the stone age, and knew no metals until they were introduced within a year by visiting whalers, and to-day they live just as they did when they first emigrated—from no one knows where. Their residence probably antedates the discovery of America by Columbus.

They speak a dialect different from that of any other known tribe. Their huts are built of the skulls and jaws of whales, covered with skins of animals. Snow huts are the fashion among other Eskimo.

In the middle of their primitive dwelling stands the stone lamp (raised a little from the ground) which lights the home, heats it, cooks the food, serves for melting snow, drying clothes, and the perfecting of some of their weapons and implements. Among the Greenland Eskimo this lamp is hollowed out of soapstone, but on Southampton Island the lamp is made of a flat piece of limestone, around the edge of which narrow pieces of limestone are glued. Their pots are made of the same material, one slab serving as the bottom and four others for the ends and sides of the queerest square pot ever made. The glue is made of deer's blood, grease, and fish roe. One glance at the inside of one of these pots, lined with this pitchy mass, is enough to take away a white man's appetite for a week.

Into the limestone lamp, which is an oval a foot or so wide and about two inches deep, is put oil from whale blubber. The wick is a piece of moss. The pot is placed over the lamp on a support on which hangs a piece of blubber, which melts from the heat and feeds the lamp continually.

The dress of these people also differs in design from that of other Eskimo. The women's clothing is made of the skin of the reindeer, sewed skilfully and neatly with needles of bone and sinews instead of thread. The chief peculiarity lies in four bags, two on the shoulders and two on the legs. No one can see any use in these bags, for they are sewn shut, but it is a tradition that formerly they were much larger, and the children were carried in them. The style still persists, however, though children are no longer carried in this fashion.

Another peculiarity of feminine fashion on Southampton Island is the headdress. Nothing like it has been discovered the world over. The women plait their hair in two plaits, parting the hair in the middle. The ends of these plaits are then brought over the shoulders and introduced into two tubes of deerskin, about an inch in diameter and two feet long. From the lower end of these tubes hang wisps of hair, suggesting that the plaits—which are actually only long enough to reach the upper ends of the tubes—are so long that they run through the tubes and hang out a little. Even among Eskimo women there is "glory in the hair," and the fashion holds, though every one understands the polite fiction.

The members of this tribe live altogether by fishing and hunting, the whale being the chief article of diet. The bone harpoons they use are tipped with chipped flints, as well as their arrows and spears. The ingenuity with which they utilize the whalebone is most surprising. Cups and buckets are made of it by bending it round and sewing on the bottoms. Whalebone serves them for weapons and implements of utility. They even press it into service for making tobogganlike sleds. Some of their sledges are made of walrus tusks as runners, and with deer's antlers as crosspieces. On so large an island as theirs there is an abundance of game, such as the seal, walrus, and caribou. There are only fifty-eight persons in the whole tribe, so it is probable that it has decreased largely during the centuries.

The island is thirty miles away from the nearest point on the shore of Hudson's Bay, where there is a colony of Eskimos, and it is only once in a very long time that this strait freezes over. The tribe cherishes a tradition that about seventy-five years ago this happened, and two hunters from the mainland visited them, though the visitors were as much astonished as their hosts to know that there were other men on earth. Each tribe believed that they were the only people in existence. Strangers never visited them again, nor did they make any attempt to return the call.

In the large amount of valuable material which Captain Cromer has brought back with him are many curious implements and weapons. The huge bone ear-rings with long pendants are primitive jewelry indeed. There are bows and arrows with flint points or heads, and harpoons of bone similarly pointed with stone. Combs carved out of ivory, walrus tusks, and many curious ivory ornaments and carvings are there; pipes made of stone, bone needles, sinew thread, rawhide dog whips, arrow heads wrapped in intestine and carried in this fashion to replace those that might be lost in the chase. They also carve in slate and stone, and some of the quaint little figures of polar bears, musk-ox, reindeer, and walrus, as well as of human beings, are interesting.—*Boston Herald.*

## Selected Articles.

### Protecting the Children.

To the Editor of *The Boston Herald:*—

In reply to a letter in your issue of March 24, charging Christian Scientists with hazarding the lives of children, I desire to say this is the most unkindly thrust of all. The thousands of Christian Science mothers who are bringing up their children under the influence of this faith have already had the experience of depending upon other remedies before taking up this Science, and it is reasonable to suppose that they have chosen the method which has proved to them most efficacious.

The courage of these mothers which enables them to trust their children to spiritual means and to refrain from dividing the power with material remedies is builded upon actual experience. They would be foolish, indeed, to rely upon a mere theory, and for no other purpose than to be true to a fanatical religious belief. If the dependence upon such a belief had not already brought satisfactory results, what inducement would there be to hold to it?

As a reason for his remonstrance, our critic refers to the recent publications of a list of children said to have died under Christian Science treatment. It has been already proved to the people of Boston that the large majority of cases attributed to the failures of Christian Scientists were unjustly so charged.

During a period when epidemics are prevalent in our city, and in view of the fact that hundreds have passed away in one week—two hundred of these being from so-called contagious diseases—what is there of real testimony in favor of a proposition that Christian Scientists be forced to resort to the remedies under which these have fallen?

Neither the cry of danger, nor even the prospective possibility of death on the battlefield of Christian Science, could claim the right to a hearing from us, in view of the fact that millions of our neighbors are already dead, notwithstanding that they have been regular in their curative habits. If our friend desires to compel our submission to a method of therapeutics differing from ours, we ask him to present a reasonable certainty, not a recognized uncertainty, as a basis of our confidence.

It should be remembered that there are thousands of Christian Scientists in and around Boston, and yet out of about three hundred cases of death from pneumonia during the past three weeks, only two were under Christian Science. In view of the whole situation, what is there to disprove the supposition that there might have been many more added to this long list of fatalities but for the good work of the Christian Scientists?

If it were in my power to force every individual in this world to leave his chosen religion and medicine, I would not do it. I would accord to him the same liberty which I claim for myself. I appreciate the earnest effort of our honest physicians, and all they have accomplished for the human race; and I shall be glad when there is no longer need for me to name the words physician and medicine in writing on this subject of Christian Science.

We claim the right to use that which we know to be genuine, even though our neighbors have not yet discovered its merits. Our earnest desire is to be allowed to live peaceably in harmony with the pure teachings of this Science, and faithfully to serve those who voluntarily call for our help. Christian Science may seem ethereal and unsubstantial to those who are used to material remedies, and we have great charity for those who honestly think that the Christian Scientist is not doing, but simply neglecting to do, for his patient; yet even this does not affect the fact, that the power to heal is present in the operation of this Science, though hidden from the physical senses, and "Who is so great a God as our God?"—ALFRED FARLOW.

### What Christian Science Teaches.

To the Editor of the *Evening Express:*—

In your issue of Monday, March 12, you publish extracts from a paper read by Rev. Thomas Stalker, before the Methodist Ministers' Association, in which he attacks Christian Science. I beg leave and space to reply.

Did we not have a genuine sense of gratitude to Mr. Stalker for bringing Christian Science to the attention of the people, and thus giving us an opportunity to correct some of the popular misconceptions which he sets forth, we might be as severe as he, in the denunciation of "baseless assumptions, dogmatic assertions, and groundless opinions."

Mr. Stalker brings in question certain doctrinal points: How does Christian Science deny the personality of God? On page 232 of "Science and Health with Key to the Scriptures," Mrs. Eddy states: "God is personal, in its Scientific sense, but not in any anthropomorphic sense." The point at issue is largely one of definition. If personality means identity or individuality, Christian Science approves the usage. But if it means similitude, Christian Science objects on the ground that it violates the Ten Commandments. The error of the ages, illustrated in the Tower of Babel, is that man has vainly tried to reach God from the basis that sick, sinning, finite mortal man is the image and likeness of God.

Christian Science teaches that God, who is Spirit, who is Love, who is Infinite Being, "in whom we live, and move, and have our being," can never be circumscribed within the finite limitations usually implied by the word personality. The correct understanding of the nature of God is the very essence of scientific Christianity, for Jesus said: "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

The existence of matter: Spiritual thinkers in all ages have reached the conclusion that "only mind and its ideas exist," that "this world is a world of ideas." This doctrine is not strange. Strange, indeed, if it were! Mrs. Eddy states in her work entitled "Retrospection and Introspection," page 28, "In the latter part of 1866 I gained the Scientific certainty that all causation was Mind and every effect a mental phenomenon." The Bible was her only guide to this conclusion, and all she teaches must rest on Scripture. The Truth of Being is set forth in the statement in her work "Science and Health with Key to the Scriptures," page 3, "The only realities are the divine Mind and idea." Matter, sin, sickness, and death are the false concepts and phenomena of the fleshly material sense, the "carnal mind," as Paul has it.

That the Christian's warfare is mental, and that the battleground is his own consciousness, is amply verified by Paul's epistles, which fairly bristle with statements to that effect. "Be not conformed to this world: but be ye transformed by the renewing of your mind." "Put off . . . the old man . . . and be renewed in the spirit of your mind; that ye put on the new man, which after God is created in righteousness and true holiness."

Christian Science denies the real existence of matter because it is not the product of Spirit. Jesus taught us to deny the world, the flesh, and evil; that error was the prince or God of this world. It is only on the basis of the unreality of matter that it is possible to demonstrate scientific Christianity, in the healing of sickness and sin, as Jesus and his apostles did and taught.

Science no more denies the individuality of man, than does Mr. Stalker in his own doctrine of the immortality of man. I ask him: "What lives on?" and I anticipate his answer by saying, "Man's true individuality."

As to sin: On page 234 of "Science and Health with Key to the Scriptures" it is stated: "The evil doer can receive no encouragement from the fact that Science teaches that evil is the unreality of existence: for the sinner

Digitized by Google

is making a reality of sin,—making that real which is unreal." And later it states: "Only those who repent of sin, and forsake all evil, can fully understand the unreality of evil."

"Whatsoever a man soweth, that shall he also reap," is a law that Paul enunciated; he did not make it. On this basis retribution is inevitable. Christian Science denies a special place of retribution, as do scores of our fellow Christians of the liberal churches.

Christian Science believes in the atonement of Jesus, in the sense that it proved that man is spiritual, and that life is eternal. We do not deny the facts as they happened or the sacrifice it involved. We may differ only in the lessons they teach.

We believe more than all else in the efficacy of prayer. It is absurd for any one in this advanced day, when Christian Science is so well known, to assert otherwise. Such ignorance is hardly excusable.

Finally we believe most certainly in the necessity of the new birth on the basis of Jesus' words, "Except a man be born of water and of the Spirit, he cannot enter into the kingdom of God." The new birth is the awakening to the fact that man is spiritual, endowed with all the power and dominion that belong to the sons of God.

*Los Angeles Evening Express.*

## A Minister's View of Faith Healing.

*Editor Evening News, Buffalo, N. Y.*

I have read with some interest an item in the *Evening News* concerning the action of the Southern Kansas Conference of the Methodist Church in expelling a minister for practising faith healing. Years ago when I became a Methodist minister, I was taught to believe that souls were saved and bodies healed by faith, and I have good reason to believe that I have personally known many who were saved by faith and many who were healed in the same way. The general disbelief of the church in healing by faith has led me to examine the Scriptures on the subject. I there learn that Jesus said, "Thy faith hath saved thee," when sight had been restored to the blind man. There are many other instances which at least imply the same thing. I learn, too, that Jesus sent the twelve and the seventy to preach, the Kingdom of Heaven is at hand, and to heal the sick. He said (ye) "Heal the sick," and they did so with but one failure.

Among Jesus' last words to his disciples he said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." He also commissioned the disciples to preach the gospel and to heal the sick. He plainly declared that those who should believe through their word should also heal.

A mere casual study of the Acts of the Apostles will show that they did heal the sick, and the people gave glory to God who had given such power unto men. It does not appear that this was a miraculous power, but one that they had as men, and that was under their volition. Paul says, in enumerating the gifts of the spirit, to one "the gifts of healing, . . . to another the working of miracles." Why does he make this double classification, if healing was miraculous?

Whether rightly or wrongly, the church and ministry of to-day is carrying out only one part of the Saviour's final commission. His double commission—his two-handed gospel for soul and body—is embodied in one unbroken expression. Where do we find authority to continue one part and not the other? And if one part has been dropped, why not the other?

Are not the purposes of religion the same to-day as in the time of the apostles? Are there not the same human needs? Do not human minds and souls operate by the same laws now as then? If faith could heal eighteen hundred years ago, it can and ought to do so now.

Christ's first purpose in healing the sick was their personal physical relief. There was a secondary purpose—that was to touch men where they had the greatest conscious need, and so through relieving bodily ills, win their hearts to seek for greater good.

In plain words, the healing of the sick by faith has been set aside, not because Jesus meant it to be, but because the failure to heal was proof of weak faith and low spiritual life. Men might make high professions of spiritual attainments or blessing without fear of contradiction, but they dared not undertake to heal, as the disciples did, and as their successors should, because they knew they had not effective faith, and failure would expose them to ridicule.

There are frequent wails going forth about the church's decline in soul-saving power. How can it be otherwise when the church not only refuses to carry out one-half of the commission of our Lord, but actually opposes it, and dares to expel a man of God who claims the privilege and right of doing his duty in this regard?

Man has an intuitive idea that if God cared to heal men in Jesus' day, He does so now, and that if men's souls can be saved from sin by faith, their bodies can be saved from sickness by faith.

This is why Christian Science, even with all its vagaries, has had such a large following. The world wants faith healing, or mind cure and whatever it may be called.

God made man with this faith healing power, as one of his complement of forces, to be exercised by man's own volition. While the church has been denying this, science has proved it true. That church which does not allow and encourage faith healing and careful study and preparation for it on the part of the ministry is untrue to Christ and doomed to failure. A VOICE.

Pittsburg, Pa., March 22, 1900.

We take pleasure in republishing the above from the *Buffalo Evening News* because of the pungency and logic of the argument used.

Inasmuch as the chief "vagary" of Christian Science is healing the sick in accordance with the Scripture quoted by the writer, as well as much more that might be quoted, we cheerfully overlook the little fling at Christian Science, as we can well afford to do.

## A Mid-week Meeting.

The following is an account of a recent Wednesday evening meeting of the Second Church of Christ, Scientist, Milwaukee, Wis.

After the usual opening exercises the leader of the meeting made a few remarks in which he spoke in part as follows:—

Circumstances under which we are placed can obtain no mastery over us unless we put our neck under the yoke. It is our own desires that confine us, and blind our spiritual perception. To illustrate: Monkey traps are used in India. A quantity of grain is put in an earthen vessel with a small opening. It lets the open palm of the monkey pass into the grain. When he has closed his fist, having a handful of grain, he cannot take it out. If he only lets go of the grain he can, with the greatest ease, run away and be free. But no! attraction for the grain so bewilders his sense that the monkey begins to think himself a captive, and so is caught. Exactly so with man—nothing to bind him to slavery but unchecked desire. This condition leads to Paul's exclamation, "Oh, wretched man that I am! who shall deliver me from the body of this death?" Our own weakness forms the obstacle that holds us. There is noth-

Digitized by Google

ing outside of ourselves that can hinder our progress. In this thought of Christian Science, our liberty proclaims itself, and so an ardent desire to learn what the Truth is takes possession of those who come to these Sunday and Wednesday services, for "Ye shall know the truth, and the truth shall make you free," and this Truth is what we are gathered together to hear about this evening. The time is now yours.

After the leader of the meeting had taken his seat, a gentleman in the audience immediately arose and related his experience. He said substantially:—

When I am away from home and visiting Christian Science meetings, if I have anything to say, I like to say it as soon as possible, because error is not then given a chance to talk to me and say that I shall not get on my feet. I have lived to prove to my own satisfaction that a knowledge of Christian Science enlarges a business man's capacity. Nearly ten years ago my wife, who had been suffering for seven years with a complaint of which the doctors had failed to relieve her, asked me what I thought about trying Christian Science. I told her if it was anything that would bring relief, by all means to try it. She went to see some one who had been healed, and had a talk with her, with the result that she went herself and received, I think, five treatments and was entirely healed. She then wanted me to go and be treated for chronic sick headache. I did so, and have only had one since, and that seemed to come to give me the opportunity, or force me, to use this Truth for myself. I did so and it was speedily overcome. I consented to take a course of lessons, largely to please my wife, and attended class the first day almost wholly to please her, and not because I wanted to. I took the remainder of the lessons to please myself, as I at once became very much interested, and tried to put it into practice.

I make it a practice to read a little from "Science and Health with Key to the Scriptures" or some other work of Mrs. Eddy each day before breakfast. Take a little spiritual food, as it were, before eating my material meal. I do not attempt to read in any particular place, but get each day exactly what I want. During several years previous to becoming interested in Christian Science, I was engaged in a business that gave me much fatigue, and after we had our annual meeting I was a complete wreck for several weeks. After knowing something about Christian Science this disappeared and business began to enlarge and it is now quadruple what it was then, and during the last few years it has been carried on along Christian Science lines so far as I am concerned. For the past ninety days I have been engaged in work that used to reduce me in a very short time to a physical wreck. I am now doing three times as much work as I did during the time I became so fatigued, and do not suffer from it.

I think you will all be interested in the experience of a friend of mine who suffered from the use of morphine, first administered to him by a physician. He traveled all over this country, trying all material means to get rid of the habit, until finally he felt he had gotten to the end. He was then taking enough morphine every day to make forty fatal doses for one not accustomed to using it. He laid three days in a hotel before he could be aroused from the influence of the morphine and went, without knowing why, to see his sister. This sister had been healed through Christian Science and prevailed upon him to take treatment. That day he took his last dose of morphine. He was treated six days, during which time his suffering was so great that he would have committed suicide if he could have laid his hand upon a pistol. At the end of thirty days he was completely healed. He then asked for treatment for thirty days more, until he could get rid of the remorse from the disgrace the habit had led him into.

After he was healed he went out West and secured employment. Soon afterwards I received a letter which indicated that he was in a very happy state of mind. Among other things he said: "One of the most remarkable things has happened to me. The gentleman with whom I have been boarding had been laid up for three months with inflammatory rheumatism, and could not get out of his chair. I talked to him about Christian Science. He listened very attentively and insisted upon me giving him treatment. I remonstrated, saying that I was not a practitioner, and did not know enough about the subject to take his case. He insisted, however, saying "If this is the Truth which you have been telling me about, you can use it as well as another." I finally went to my room, where I would be alone, and for half an hour tried to realize the Truth. When I came down the next morning my patient was down before me, having walked down, and has been well ever since."

The next testimony was from a gentleman, who said:—

This week I had a demonstration which helped me very much. Monday morning my wife asked me to turn the valve in the steam radiator, and as I did so, some scalding water spurted out and struck me in the eye. My first experience was of severe pain, but I immediately realized that God was All, and that His child could not suffer. The pain disappeared at once, and I did not think of it again until my wife remarked half an hour afterwards that my eye was swollen. I mentally denied the testimony of the senses, and before night there was no sense of pain or discomfort or swelling whatever.

*Evening Wisconsin*, Milwaukee, Wis.

## "Is Christian Science Christian?"

THIS is the same old conundrum that has bothered many people in this country for the past thirty years, and has not yet been solved to their satisfaction, else they would not be under the necessity of discussing it so frequently.

What do we mean when we speak of anything as being Christian? That it conforms to the teachings, or is patterned after the life, of Jesus Christ, the founder of Christianity. That teaching is summed up in the saying, "If ye love me, keep my commandments." Those commandments it is not necessary to quote.

Does Christian Science meet those requirements? I believe, after an intimate acquaintance with it extending over a number of years, that it does. If I did not so believe, I would none of it; and it is safe to say that all Scientists feel the same. Christian Science is before the country, the youngest and most radical religious system extant, courting the investigation of every honest seeker after Truth. It is willing to be measured by the rule given by Jesus, "By their fruits ye shall know them." If it is not Christian, founded upon the great truths taught by Jesus, it will not stand. If it is so founded, if it can produce the proofs which Jesus required of his followers ("greater works than these shall he do"), then nothing can stay its progress, and all the denunciation hurled against it will avail nothing.

There is nothing secret about it. Its meetings are open to the public, and inquirers after Truth are always courteously treated. Its publications, from the text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, down to the simplest tract, can be obtained by any person desiring them. Its lecturers are abroad in the land advocating and explaining its teachings to the hungering people. Its adherents are found scattered throughout the length and breadth of the land, and there is scarcely a hamlet in this country where are not to be found living witnesses of its healing and elevating influence. These are facts patent to those who will open their eyes to what is going on about them.

Digitized by Google

Oftentimes the half-doubting, questioning ones who are about ready to investigate Christian Science are deterred by the perversions and misrepresentations uttered concerning it by those who do not even know what it is. Of course no honest, determined seeker after Truth will accept unquestioningly the statements of any person, either for or against, but will thoroughly investigate, follow where Truth leads, and reach their own conclusions. Such investigation Christian Science invites.—HENRY RIPLEY.

## Reply to the Objections of a Clergyman.

To the Editor of the *Express:*

Without caring to dispute with Rev. Thomas Stalker in his attack on Christian Science, I would like to cite, for his benefit and that of the *Express* readers who read your report of his paper, a fragment of history. It is found in the *London Quarterly Review,* vol. iv., 1820. "A Barrister" had a series of papers in that magazine in which he complained of the bigotry and fanaticism of the Methodists of that day. Instances of this fanaticism were cited and he expressed the opinion that the law should be invoked to put a stop to their practices. These practices were not only the healing of the sick, but the raising of the dead, according to the *Methodist,* a magazine of the sect to which Mr. Stalker belongs.

I would like it if Mr. Stalker would signify whether he regards John Wesley as having been a nuisance. If he does, he is consistent; if not, he is inconsistent in so stigmatizing Christian Scientists. According to Rev. Abel Stevens, Wesley's biographer, the founder of Methodism said, in answer to the question, "Do you believe in miracles?"

"Certainly I do if I believe the Bible. . . . Every answer to prayer is properly a miracle."

If Mr. Stalker is correct in his characterization of Christian Scientists, then Francis Asbury, Jacob Knapp, Peter Cartwright, and Jacob Gruber, pioneer Methodists, were also nuisances, as scoffers in their day called them. They all believed in the power of prayer to heal the sick, as does Bishop Charles Fowler, one of the brightest minds in all the Methodist Church to-day.

I could cite dozens of men who became eminent in Mr. Stalker's church who taught prayer saved them from sickness and from death by flood, by freezing, by hunger, and by violence. I will not undertake to advocate or explain Christian Science, because I am not sufficiently versed in it, but I know enough of it to perceive that Mr. Stalker did not truthfully represent it, any more than did the barrister who wanted the Methodists of England prosecuted, as he wants Christian Scientists served to-day.

ONE OF THE HEALED.

*Los Angeles Evening Express.*

## Editorial Comment.

THIS morning we publish in full the address delivered by Judge Ewing of Chicago, on Christian Science, and it is well worth perusal for several reasons. This religion is making converts every day, and its adherents are drawn from the middle class and the class generally given a place above that, men and women who are not given to vivid emotions and who believe in the orthodox. The lecturer is one of the ablest lawyers in Illinois and he has dealt with the subject in a lucid and judicial manner. The fact that this religion is the evolution of a woman's brain, guided, her adherents claim, by inspiration from on high, makes it still more interesting. It is, we believe, the only modern case in which a woman has been successful in maintaining a distinct religious sect.

*Herald-Democrat,* Leadville, Col.

## To Health.

LIFE'S most essential friend, I drink to thee
And thy advancement in this o'er-frail world,
Thy laws thou dost not veil in mystery;
'Tis we, ourselves. Thy banner thou unfurled
Dost fling from every hilltop. Thou dost plead
With us to thrust aside the vanities
That do so warp body and mind. We heed
Thee not, and he who should a Hercules
Have been in stature grand, and grand in all
Intelligence, shrunken and dwarfed remains.
Heaven speed the time when the enshrouding pall
Of worldliness shall be thrown off; when veins
With ruddy health shall run, and every man
Reflect God's image, perfect as His plan.

SARAH LOUISE MORRIS.

## The Birthplace of Mary Baker Eddy.

**Reproduced by the Aid of Mrs. Eddy's Information, Photographs of Site, and Authentic Data.**

THIS is the title of a well-executed etching from an original drawing by Rufus H. Baker. It restores on paper the Baker homestead as it appeared in Mrs. Eddy's girlhood. Now the site is but a tithe of the old farm, and only a few fruit-trees remain to suggest the once fine orchards.

This picture has been made possible mainly through Mrs. Eddy's kindly assistance.

The etching is printed in black and sepia to meet a preference in tints, and can be obtained at the following prices:—

Artist's Proofs . . . . . $7.50
These are the first prints, are on India paper, and limited in number.
India Proofs . . . . . $5.00
Later prints on India paper.
Plain Proofs . . . . . $3.00
Prints on plain rice paper.

Address, RUFUS H. BAKER, 88 North Main Street, Concord, N. H.

### Supplement to the Sentinel.

The lecture by Rev. Arthur R. Vosburgh, "Christian Science: Its Worth and Work," which was published in the March number of the *Journal,* is issued as a supplement to this *Sentinel.*

For price of supplements see page 523. Send all orders to The Christian Science Publishing Society.

### Christian Science History.

First Readers desiring additional copies of Christian Science History for free distribution can obtain them by addressing The Christian Science Publishing Society.

### New England Magazine.

Copies of *The New England Magazine* have been mailed to the Reading Rooms for distribution. These were sent by the Publishing Society free of charge.

### New Edition of the Manual.

The 15th edition of the Church Manual is now ready for distribution. Address all orders to The Christian Science Publishing Society, 95 Falmouth Street.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Easter.

THIS year, according to the accepted computation, Easter Sunday occurs on the fifteenth of this month, and it will be so observed.

So far as the mere material observance of Easter is concerned, Christian Scientists attach no importance to it.

As a commemoration, however, of the great fact of Jesus' resurrection, in its historical aspect, they hold the occasion in high esteem.

Whatever tends to draw mankind's attention to the Resurrection in its spiritual intent has the deep and profound reverence of Christian Scientists. As we have lately said, Christian Scientists regard the resurrection of Jesus as a foreshadowing of the resurrection of all mankind from the tomb of human discord, woe, sorrow, sin, sickness, and death. Mortals who, to their own sense, live apart from God are thus entombed, even though they know it not. To live apart from God, in the Scientific sense, means much more than in the ordinary sense. To be apart from God because of a conscious desire to commit the grosser forms of sin, is one thing. To be apart from God because we erroneously believe that there is or can be life, intelligence, good, or reality separate from Him, is another thing, though each shuts us away from spiritual perception, and, in its respective degree, prevents our receiving and enjoying the privileges, joys, and benefits accruing from a right apprehension of Him.

It is this view of Spirit and matter that differentiates the teaching of the Rev. Mary Baker Eddy from popular religious teaching and preaching. The text-book "Science and Health with Key to the Scriptures" declares that God is Spirit, that Spirit is all-powerful, all-present, and all-wise. This declaration is based on the biblical teaching of God's allness as a Being of Spirit, not of matter; and surely such a doctrine is soundly premised.

If God is Spirit, as such He is, and must be, spiritually manifested. He cannot show forth that which He is not. Science and Health repeatedly says that Spirit cannot create its opposite, matter; and if matter were life, substance, and intelligence in and of itself, or separate from God—Spirit—it certainly would be God's—Spirit's—opposite.

The true resurrection, then, is the rising above the false conception of matter, with all its laws and trammels, into a correct conception of Spirit and Spirit's law; for the former leads to sin, sickness, and death, while the latter leads to health, peace, and Life.

Did not Jesus' resurrection prove this? He overcame matter, and thereby proved its powerlessness and unreality, when he burst asunder the apparently solid and substantial encasements of his sepulchre, freed his body therefrom, and went whithersoever he pleased. He overcame matter in refusing to permit his would-be murderers to destroy his life. In his many re-appearances to his disciples he overcame the laws of matter and demonstrated beyond question their inability to control him. He finally overcame the sum-total of matter's claims in his ascension.

If it be true, then, that his resurrection prefigures the resurrection of those who follow him, what a mighty lesson is there before us all.

Well may we deeply ponder this lesson, not only during Eastertide, but at all times.

If we more earnestly than ever study the deep meaning of the teaching of our text-book on the subject of the resurrection, and the Bible teachings from this higher standpoint, our Eastertide will not have come to us in vain.

"In the sacred sanctuary of Truth are voices of solemn import, but we heed them not. It is only when the supposed pleasures and pains of sense pass away in our lives, that we find unquestionable signs of the burial of error and the resurrection to spiritual Life" (Science and Health, p. 128).

May we listen to and heed these voices of solemn import, and so break the trammels of our sepulchre, roll away the stone, and come forth from the trammels of sin and death unto the understanding of Life eternal.

Thus may we celebrate our Easter.

### No Spread of Contagious Disease.

WE have received from Mr. George H. Kinter, C.S., of Buffalo, N. Y., the following letter from the Superintendent of the Department of Public Instruction of that city, which we take pleasure in publishing.

We are pleased to note these constantly accruing evidences of a fair and kindly attitude toward Christian Science.

DEPARTMENT OF PUBLIC INSTRUCTION.
SUPERINTENDENT'S OFFICE.

Buffalo, N. Y., March 31, 1900.

George H. Kinter, Esq., 32 Arlington Place, Buffalo, N. Y.

*Dear Sir:*—In answer to your letter of the 30th inquiring as to whether the schools of this city have had to be closed on account of the spread of contagious diseases through carelessness or neglect on the part of Christian Scientists, I am pleased to state that this is the first intimation I have ever had that such a charge has been made. So far as my observation goes, the charge is entirely without foundation.

Yours very truly,

HENRY P. EMERSON, *Superintendent.*

## The Lectures.

### At Boise, Idaho.

At the Columbia yesterday afternoon (Sunday, March 18) Judge William G. Ewing of Chicago delivered a lecture on Christian Science. He had an audience that completely filled the lower part of the house and part of the gallery. He was listened to with close attention and all were much interested in his exposition of the subject. The lecturer was introduced by Justice Quarles of the Supreme Court, who said:—

*Ladies and Gentlemen:*—We have met here this beautiful afternoon to hear something of the principles of Christian Science, as it will be expounded by a distinguished gentleman who will tell us some of the reasons for the faith of the Christian Scientist. The eminent gentleman who will address us, was, for many years, a distinguished member of the bench and bar of the great state of Illinois, and also prominent in political and social circles. In early life he was a friend, associate, and ardent admirer of the immortal Abraham Lincoln. But, notwithstanding the pleasure and gratification that naturally comes to one who achieves success in social and professional life—a realization of the distinguished gentleman with us to-day—he has forsaken a successful professional career, quit traveling a road that would undoubtedly have led him to political

Digitized by Google

eminence, and has taken up the work of a missionary for Christ and humanity, as he sees it.

In ancient history we read of the seven wonders of the world. But, in this day of progress and invention, we are continually being surprised with new wonders. Indeed, when I think of the wonderful achievements of art and science during the century now closing, some of them so marvelous as to approach the miraculous, I am induced to think that many things which we now regard as commonplace would have been regarded by the ancient patriarchs as miracles.

I cannot understand how any human being can look upon the wonders which everywhere exist, the great planets in their relations one to another and those laws of nature through which life, both animate and inanimate, is perpetuated, and conclude that all this is the work of chance. Yet those who scoff at the idea of God and Christianity must so believe. When I think of the developments that are daily occurring; of the consummation and perfection of many things in scientific mechanics that were once thought to be visionary and impracticable, if not utterly impossible, we are admonished to investigate, and never to condemn any idea or theory because it is new to us. Truth is enduring and will prevail to the end. Error may succeed for a short time, but will finally succumb.

In introducing the speaker I do not indorse the views that he may express; yet, like many others who differ from him, doubtless like many of you, I am not thoroughly conversant with the doctrines that he teaches. Hence it is a pleasure, as well as a duty, to listen to him, and to learn of the principles that he advocates. My friends, I have the honor and pleasure of introducing to you the Hon. William G. Ewing of the city of Chicago.

*Idaho Daily Statesman.*

### At St. Joseph, Mo.

A large audience assembled last night (Tuesday, March 27) at the Tootle Theatre to listen to Judge W. G. Ewing of Chicago, who spoke on Christian Science. Judge Ewing was for many years a well-known attorney of Illinois, but has given up the practice of law to take the field in the interest of Christian Science.

Parties of Christian Scientists from Kansas City, Atchison, and other neighboring cities were in attendance.

In introducing the speaker, Judge Henry M. Ramey said that he had not been chosen for the important duty because he had any acquaintance with the principles which the speaker would present, but rather because he was a lawyer and acquainted with the profession which the speaker of the evening formerly practised. He said that there is a principle which is of interest to every one in every walk of life as well as in the temple of worship. "That principle, for want of a better name, had been designated as the religious principle," said he, "and should be studied by all. Plato said that it was our likeness to God according to our ability." In continuing, Judge Ramey said that he did not understand the doctrines of the Christian Scientists, but that he was present to become better informed regarding the belief. He said the lecturer had started to learn the intricacies of the law when a boy and had risen to the position of a judge, but having come in contact with the teachings of the new Science, and having considered them right, he gave up law and is now promulgating the doctrines of his cause.

Upon being introduced, Judge Ewing said that he had given up the law for the cause of the Christ, and that he believed his Republican friends would not object because he had left the Democratic party for the Christian Science lecture field. After a few preliminary remarks he entered upon the subject of the evening.

*St. Joseph Daily Herald.*

### At Pueblo, Col.

Christian Scientists have an able advocate of their teachings, a forceful expounder of their doctrines, and an eminently qualified lecturer in Judge William G. Ewing of Chicago who lectured on Christian Science at the Grand Opera House yesterday afternoon (Sunday, March 25). Sufficient interest had been aroused to attract a large audience in which could be noticed many citizens of Pueblo prominent in the various churches and professions. Some ministers, a number of physicians, and many lawyers were in the house.

For more than an hour Judge Ewing held the closest attention of his hearers in one of the ablest addresses ever heard in the city. With no effort at rhetorical flourishes or bombastic style, in a well modulated voice, he spoke earnestly in finely chosen phrases of the teachings of his creed. B. D. V. Reeve introduced the speaker in a short address in which he said that the claims of Christian Science appealed to all thinking people, as it gave that which we had been taught to look for only beyond the grave.

*Pueblo Daily Chieftain.*

### At Denver, Col.

The enthusiasm with which Judge Ewing of Chicago was greeted upon the occasion of his lecture on Christian Science at the Central Presbyterian Church Thursday evening (March 22), has not been excelled since the days when Mr. Bryan visited Denver in 1896. No lecturer who ever visited Denver was greeted by so large an audience. The great auditorium of the church was wholly inadequate to accommodate those who sought admission. The sidewalk in front of the church was black with people an hour and a half before time for the lecture, and hundreds of people were turned away, unable to get within hearing distance of the lecturer.—*Denver Evening Times.*

### At Dubuque, Ia.

Edward A. Kimball, C.S.D., of Chicago, addressed a large audience at Stout Auditorium last evening (Tuesday, February 27). Mr. Kimball is one of the most noted Christian Scientists in this country and he has an exalted reputation as a lecturer. He is very interesting on Christian Science because he devotes himself to his subject. Not one word of criticism is heard against any person or creed, not even reference to those who revile the Science. The whole time is devoted to Christian Science, and the theory of that Science and the beliefs of its advocates are clearly expounded.—*Dubuque Herald.*

### At Leadville, Col.

Judge William G. Ewing of Chicago, Ill., delivered a lecture at the Weston Opera House last evening (Saturday, March 24), on "Christian Science, the Religion of Jesus Christ." There was a large attendance of thoughtful, intelligent, and refined people. Frank G. White presided and briefly introduced the lecturer.

*Leadville Herald-Democrat.*

---

The *Sunday School Times* has the following: "Heaven and hell are within us rather than outside of us. He who is filled with the love of God is already in heaven, as having heaven within himself. He who is filled with the love of self is already in hell, as being set against God, which, in itself, is hell."

---

"Even though the Scriptures are infallible," says the *Watchman,* "our interpretations of them are not. When men identify the philosophy or creed they have drawn from the word of God, with the word itself, they are in danger of bringing reproach upon the revelation."

Digitized by Google

## Among the Churches.

### Site Purchased at Milwaukee, Wis.

The Second Church of Christ, Scientist, of this city, has bought the site for a church building on the southwest corner of Prospect Avenue and Keene Street, and the deed was placed on record to-day. The property has a frontage of one hundred feet on the avenue and runs back on Keene Street a depth of one hundred and twenty feet. The previous owner of the lot was William Swain, who sold it to the Christian Science corporation for twenty thousand dollars. While the new owners of the property do not intend to build a church immediately and are in a measure uncertain as to just when they will put up a building, they are determined upon one thing, and that is, that they will put up a fine structure when they do build. Keene is the first street which cuts into Prospect Avenue, and the neighborhood is a select one, with fine buildings in the vicinity. The Christian Scientists say that they feel a moral obligation to erect a church edifice which shall be consistent with the surroundings.

Unlike many religious congregations, the Christian Scientists do not run into debt. When they are ready to build they will have the cash on hand. They say that no Christian Science Church is dedicated unless it is free from debt. To put up such a building as they desire on Prospect Avenue might involve an outlay of perhaps one hundred thousand dollars. For the past five years this congregation, which was formerly known as the Milwaukee Church of Christ, Scientist, has held its services in the Athenæum. The attendance now is about three hundred, both on Wednesday evening and on Sunday morning.

*Evening Wisconsin.*

### From Berlin, Germany.

Knowing that all tidings of the good work which is spreading so rapidly in all lands will be welcome to loyal Scientists anywhere, I wish to assure you that the Truth as taught by the Rev. Mary Baker G. Eddy is being faithfully presented and eagerly received by Germans and English-speaking people alike; so while Berlin has a young congregation, it has the sure foundation of zeal and loyalty.

From the small beginning of which I wrote you last spring, the growth, under the guidance of our efficient leader, is most encouraging, and more seats have already been added to the original number.

Two full services are held every Sunday morning,—the first in the German language, and the second in English. Both are well attended.

Many cases of wonderful healing might be mentioned, but I shall speak of but one,—a severe case of spinal trouble, which had confined a German woman to her chair, absolutely helpless, for a number of years. The miracle of old has been again repeated, and she now walks.

The Germans take up this new thought very quickly, and people who cannot speak a word of English, study the "little book," and grow constantly in the understanding.

All honor to our dear Mother, and to her faithful students, both at home and abroad.

MRS. MAGGIE DRAKE, Berlin, Germany.

### A Good Religion.

An exchange puts it down strongly this way: "The religion that makes people pay their debts, the religion that makes no distinction between wealth and poverty, the religion that keeps people from speaking ill of their neighbors, the religion that makes men manly and women womanly, the religion that is a part of people's every-day life, exemplified in kind deeds, loving acts, cheering words, is the religion that is felt in the world to-day."

## From Our Contributors.

### Glad Easter Day!

BY E. F. V.

O EASTER day! Glad Easter day!
I come to thee my vows to pay.

I bring thee songs of gratitude,
I bring thee blossoms many hued,

I bring thee spices pure and sweet,
I lay all treasure at thy feet;

For on this day my Saviour came;
I learned there was "no other name."

For many years I sought relief,
And prayed to God to still my grief,

When lo! one glorious Easter day
I saw the Christ and heard Him say,

"You are the child of Love and Life
Come unto Me and still your strife!

"I am the way to heaven and peace,
Come unto Me and find release!"

O wondrous words to me that day,
O power divine that rolled away

The cold, hard stone from off my heart
And taught me all the better part.

That Love was Infinite and All,
And I obedient to His call

Could never cease to praise and pray
Could never end that Easter day.

Ah, do you wonder that I say,
Glad Easter day! Glad Easter day!

### Cultivation.

BY M. BETTIE BELL.

SPIRITUAL culture is the outflow ot the industrious practice and demonstration of the Principle and rules of Christian Science. From the revelation of such prayer and practice comes the real self-improvement, grace, and knowledge. Said Jesus, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." The words of Jesus are spiritual words; words of culture and refinement; words of light and life; words of health and harmony,—*Heavenly Words.* If heavenly words abide in us, we shall have whatever we ask for. To seek to possess such words, and have them abide in us, should be our every-day employment. The promise that goes with them is sufficient to attract the most careless and indifferent wanderer in the wilderness of sense.

The words of Spirit revive, repair, refresh, renew, and resurrect. Spiritual words clothe us with the language of life. In the Word is our riches, honor, and strength. To get a knowledge of the Word, we must be willing to be taken out of the wild waste of mortal words, and be planted in a garden where only spiritual words are sown. If a gardener sees a wild flower in the wilderness, his desire is to dig it up and transplant it to a good garden, where it may have the opportunity of cultivation.

In such a garden diligent work, delicate care, watchful protection are active until obstructions to growth are

Digitized by Google

removed and the soil made light and free. Then the plant is set in the soil, watered, weeded, strengthened, given a chance to grow,—when finally it spreads its branches, puts on the glow of refinement and culture, and buds and blooms in full-orbed beauty.

When a mortal is willing to give up his mortality, or put off the old man with his deeds, and put on the new, he is ready for cultivation. When he begins to cultivate, he must know the *Way* and not try to climb up some other way. He must learn the Principle and rule; obey the precepts and the law; have patience with himself and others, and steadily step up and *on,* "little by little," until the goal is reached, or a perfect concept is revealed.

What steady perseverance and earnest prayer was Elijah's when he stretched himself three times over the son of the widow! God heard his prayer and the soul, or spiritual sense, came unto the child again, and he *revived.* Again, what activity and industry Elijah manifested when he *repaired* the altar of the Lord that was broken down. (1 Kings, 18.) How earnestly David prayed for spiritual cultivation when he said, "*Renew* a right spirit within me."

Last, but not least, What a sublime victory was Jesus' when he broke the bonds of the tomb, laid off mortality, and demonstrated the *resurrection* and the life! What persistent, unceasing, and vigorous prayer it required to part with all obstructions, and gain the freedom of spiritual culture.

It took the wisdom of the poet Pope to say,—

> if vain our toil,
> We ought to blame the culture, not the soil.

Many a weary one has had the soil prepared and the seed sown, and for lack of industry and watchfulness, failed to cultivate.

To grow in grace, knowledge, beauty, purity, peace, joy, riches, wisdom, and understanding, we must cultivate a congenial, Christian, loving condition of mind. We must realize we are all flowers in the garden of God. Our daily prayer must be "Cleanse me from secret and presumptuous sins."

We must learn to know our garden is the religion of Christ; our gardener is true Christianity; our cultivator is Christian Science, and our cultivation is the education out of sin, sickness, and death into the realities of Life, Truth, and Love.

We must sow the seed of knowledge in the soil of an honest heart. Let honor be the plowman to prepare the soil; let industry clean and weed it, then perseverance will plant your seed; honesty will give it root; fidelity will strengthen it; justice will watch over it and keep the weeds out. Love will bring forth bud and blossom; humility will give the flower its fragrance; meekness will give its coloring, and thus it requires a busy cultivation to develop a *sturdy,* healthy, blooming plant, in the garden of pure religion and Christianity.

Sickly plants come of laziness, lack of prayer, self-ease, and worldly indulgence. A sturdy plant has obeyed the voice, "Occupy until I come;" "Be hewers of wood and drawers of water;" "Be instant in season, out of season;" "Watch ;" "Pray without ceasing."

This is the requirement for Christian growth and cultivation. Blessed is the one who is willing to leave all for Christ; suffer the pangs of sense, that he may reign with him; look neither to the right nor left, but keep straight forward with no lesser ambition than to reach the Horeb heights. Such an one will grow meek and sturdy,—will blossom with the flowers of his word; will wear the robe and crown of salvation, and ask for what he will and receive it.

"Blessed are the meek: for they shall inherit the earth." "Blessed are the pure in heart: for they shall see God." (Matthew, 5.)

## Christian Science, the Light of the World.

BY HENRY A. MANNING.

THE door of Christian Science opened to me from the waiting room of Unitarianism, and from the broad platform of Universalism I entered the train of thought which has borne me in safety and delight, while at times seeming to pass over rugged wastes and barren fields, yet with increasing strength and health, through green pastures and beside the still waters, into the realm of Life and peace.

In the faith of Universalism it had appeared to me, as Tennyson so beautifully says that, that

> one far-off, divine event,
> To which the whole creation moves

the final triumph of Good over evil, was a happy deliverance from the bondage of the old dogmas which affirmed the eternity of sin and suffering. Universal salvation was a glorious advance in the struggling evolution of Christian thought, but still it was conceived to be the remote and final event for the great human family, a far-away panacea for present and pressing ills and sorrows.

In the scientific Christianity taught and practised by the Master, and revealed to this age anew by the beloved Founder of Christian Science, is a salvation full and free and universal; here and now and always; a deliverance not only spiritual, but intellectual and physical; a concept which would have gladdened the hearts of Murray and Ballou, the fathers who proclaimed again the old gospel of impartial grace.

We have learned that we do not have to pass through the change called death in order to come into our rightful inheritance. It is waiting our acceptance all the time until we receive it. "Behold, I stand at the door, and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me." Could invitation be more gracious? Note the only conditions, *to hear, and to open the door!* "The kingdom of heaven is within you," and if the still, small voice be heard, and the response be made, this kingdom shines forth in spiritual health and physical healing, as the reflected "Light of the World."

The year 1893 was to me the morning hour of Christian Science. I was eager for Truth, but I could not then receive it as a little child. The door of intellectual suspicion and criticism was only just a little ajar, and I stood on guard, lest some deceiving doctrine enter in the guise of Truth, and steal away the foundations of the faith I already had. Instead of that the light broke upon me in this mental attitude, and gradually crept in upon this opposition which my instructor was wise enough to know came in all sincerity, and so her patience did its perfect work.

I came to Chicago to attend the World's Fair, and brought a letter of introduction to this lady. She received me with such gracious welcome that I felt free to spend several evenings with her, and profit by her helpful words. It was a time of great interest in the beautiful White City on the lake. And in spiritual things there came a season of mutual toleration and charity between widely divergent nations and peoples and tongues. Many beautiful and helpful truths were uttered in the World's Parliament of Religions, but the consummate flower of all religions was given forth in the statements of Scientific Christianity, the Science of Being.

And so, coming to my notice during that interesting period of a world's great fair, Christian Science has ever since been to me, by association with the event (and without a thought of playing upon the word for a phrase) the World's Fair Science, the fairest flower in all the sacred anthology of the ages.

## Consistent Application of Christian Science.

BY A. F. BLUNDELL.

AFTER once understanding a principle of any kind we generally realize that to get the best results we must apply it consistently, whether it agrees with our preconceived ideas or our present inclinations and desires or not. For instance: after once applying the rules of calculation as laid down in mathematics, to find out how much of a certain kind of material was required to construct a previously planned building, we should not expect to carry out the plan unless the information obtained by the application of the principle involved had been complied with. If we only furnished a part of the material our building would be incomplete and the plans for it could not be carried out.

The divine Principle upon which Christian Science is based governs by never-changing laws, which always were, and always will be, the same, whether with our present experience and development we are able fully to recognize them or not. Consequently, in order to get results we must consistently recognize these, not only in connection with the particular case we are trying to demonstrate, but in their relation to every experience of our daily life, denying without question any seeming evidence to the contrary. We cannot expect to realize practically the allness of God, Life, Truth, and Love in overcoming a physical ill, if at the same time we hold in consciousness some discordant mental conception of another person. We must know it is as much a delusion for him to be in bondage to error as for ourselves.

As we realize this we learn to work metaphysically, and faithful work on this line does not fail to make all our relations with others manifest harmony in proportion to the amount of work done by us. We learn really to recognize the power of thought, and constantly strive so to apply this power in its relation to our neighbor, as at least to relieve him from the unnecessarily added weight of our own anxiety or condemnation.

To the ordinary human conception it would be cruel in the extreme if, when we saw a poor mortal struggling along the street with a load under which he was already staggering, we should deliberately pick up a heavy stone and add it to the already too heavy burden.

While without consent we have no right to interfere with the load of error which our neighbor is already carrying, we are as Christian Scientists bound not to add to it, for in doing so we are preventing the development of our own spiritual understanding and adding, instead of decreasing, the illusions of mortal mind.

## Higher.

BY C. R. FRICKY.

THE article, entitled "A Lesson from the Birds" by Alta Gretton, in the *Sentinel* of January 18, brought to my mind an incident which occurred a short time prior to reading this excellent article. One day while pursuing my way through the Genesee Valley my attention was attracted to a pure white dove flying in a leisurely manner up the river. On the east side of the river there were gathered a large flock of crows, and as the dove came opposite this field one of the crows started in pursuit. It soon overtook the dove, which seemed not aware of the crow's approach, until the crow made a dash toward it, and seemed on the point of striking it, when the dove made a quick start upward, and so escaped the attack. The flight continued, and as the crow approached again and again, making desperate efforts to clutch its prey, the dove rose higher and higher. It was impossible to witness this strife in mid-air without realizing that God ever careth for His own. Soon I had the satisfaction of seeing the crow return to its companions seemingly exhausted, while the peaceful symbol of Truth passed swiftly and safely out of view.

This triumph taught me a lesson. No matter how strong, or swift, or black may be the error that is interfering with or pursuing us; if we but go higher and higher, we shall be able to rise above it, and see the error destroyed. God will give us the strength and understanding to perceive the attack and will show us how to overcome it with Love.

## A Thought.

BY EVA S. LOMBARD.

LAST spring on the north side of our house the ice-bound earth was like a rock. Almost before the ice was gone, the earth cracked open with the tiny pressure of a little lily of the valley.

If you say the sun made that crevice in the hard earth, we ask, if the sun alone did the work, why should the long fissure come always over the little flower that is almost too tender to stand the pressure of our loving fingers? Nor does the lily of the valley bruise itself in pressing out of its hard tomb.

When we see that it is God with the lily and God with Jesus, why not recognize this force as omnipresent? To-day is our resurrection day. All of mortal man is a Lenten season, and all of immortal man is a glorious Easter.

Let the pressure of good, of beauty, of liberty, with God break the bonds of barrenness, of blindness, of indecision, and of coldness.

## A Flower Legend.

BY M. A. G.

WHEN he whose sinless spirit has
For centuries been our guide and way,
Compassed by stern and cruel foes,
Was being forced up the dread hill
Of suffering and shameful death,
Weary and fainting 'neath the burden
Of the heavy cross on which he was to yield
In agony, his stainless life,—
'Tis said, that in his steps
There bloomed a sudden wonder:—
A snowy flower, that mortal eye
Till then, had never seen.
To instant life it sprang beneath his feet,
In perfect beauty, standing there,
Its snowy head half bent
As though in tender reverence.
Step by step, where'er his blessed feet
Did press in pain and weariness the pitying earth,
There bloomed a perfect flower;
And thus they made a path of shining light,
Which shamed and hushed the jeering, mocking crowd;
But those who loved him, bent in awe
Above the snowy miracle, and murmured low:—
"Behold, the flower of Christ!"
In days long past, when life was set
To glad and gracious melody,
I read this legend, fanciful and sweet,
And since that day, a tenderer grace has clothed for me
The lovely flower, which in these later years,
We call Chrysanthemum,—
The Christ-flower of that wondrous day,
From out whose bitter shamefulness,
Has sprung a *Light*
Which yet shall fill the world!

# Testimonies.

### Healed by Christian Science.

I desire to tell of some of the blessings that have come to me through Christian Science. My husband had consumption for twelve years, the doctor had told me he could not live longer than three weeks, the last hope was gone, when one day I met a friend who asked me why I did not try Christian Science. He spoke of the healing as part of the religion. In my extremity I grasped at the word healing. He directed me to a Scientist. We called and purchased a copy of "Science and Health with Key to the Scriptures." My husband took treatment at once. He improved daily and is to-day, some of his friends say, the marvel of the age.

I had diseases of ten years' standing. Seven doctors had said I would lose my mind, unless I had two very serious operations performed. I was treated by the same healer, and after the first treatment I never had a return of old troubles.

When one of my little boys was about six months old, the nurse let him fall down a flight of stairs. In a short time one leg seemed to be very much inflamed and swollen. For six months he was attended by our regular physician, who confessed that he did not know what the trouble was. He said I had better take him to a specialist on bone diseases. I went to the one thought to be the best in the city. He said the child had tuberculosis of ankle joint, and it would require a course of years' treatments even to relieve him. He also said the child would never walk, and it would be best to take the leg off at the knee joint to prevent disease from spreading over the body. I would not allow this to be done. The physician put the leg in a plaster cast and operated on it three times, once removing an inch of decayed bone, which made the leg shorter than the other. He would allow no one to dress the leg, but attended to it himself three or four times a week. The child walked on crutches, and was a great sufferer. He cried day and night.

One day not long after I was healed, as I was reading Science and Health, my boy came to me and said, "Mamma, take me, my leg hurts." Quick as a flash came the thought, "Treat him," then another thought, "But you can't do it." Truth whispered, "God does the work." I took him and removed the cast which he had worn for three years, bathed the leg, and put only a small piece of cloth on the sore. After the first treatment he never complained of pain, and that night was the first in three and one half years that he rested without waking with pain. In three months he was able to walk with a limp. When he found out he could walk he chopped his crutches to pieces. To-day he walks without a limp, the sore has been healed for months, and the scars are disappearing. No one would know he had ever been lame, unless they were told.

At times it seemed as if the demonstration would never be made, but in less than six months the trouble had been met. There was much opposition from relatives and outsiders. I was called cruel, with no mother love; but I pressed on, with my face to the front, and was slapped on both cheeks more than once, but the result was glorious. My boy is strong and well, and I owe it all to the blessed Truth as taught in Christian Science. I never heard of this wonderful Truth until the spring of 1898. These are simple facts, and will be corroborated by my teacher, who saw the child before treatment and after.

L. M. HANCE, Washington, D. C.

### A Letter from One Interested in Christian Science.

Los Angeles, Cal., January 20, 1900.

*My Dear Sister:*—It is such a long time since I have had a line from you, that the receipt of a package of Christian Science Sentinels, was welcomed yesterday with great surprise and wonder, and the thought was presented to my mind as to whether you were also an advocate of what is so frequently termed a fad; though many, while so calling it, acknowledge that there is much truth in it, but that it is very difficult of apprehension,—views which were entertained by me, until the truth of all, as given in "Science and Health with Key to the Scriptures," has been gradually unfolded to my understanding.

When the truth of the Christ-idea is fully revealed, what a great power and responsibility is reflected upon the new conception—it is, indeed, wonderful!

I sincerely hope you have come into the understanding. I have been wondering what induced you to send the papers which are much appreciated. Do give me full particulars. You may, in turn, wonder how such an unbeliever in a supposed unmerciful God could be brought into so seemingly sudden development of the understanding that "Mind is All." It was not from conversation, for I had never heard that there was such a religion until I read a lecture, published in our daily *Times*, about fifteen months since, which so attracted me that I read it a second time; and afterwards looked up the text-book, reading it continuously to the end, yet with much criticism. Nevertheless, I was drawn to perusal after perusal, until it now appears a necessity to refer to it frequently, and every time a new meaning, more advanced, is presented.

Afterwards I found that there are two churches here. I became acquainted with some of the best-informed members,—among them the Readers, who were pupils of Mrs. Eddy and who give class instruction. With these I have had many conversations, and when I asked if they considered it essential for me to take a course, they frankly told me that it was not; that they knew no one who had grasped the thought so rapidly, or words to this effect.

I have devoted considerable time to the study, but no time was ever spent by me to greater advantage; and, of course, much happiness is realized from the knowledge that we can cast our burden upon the Lord, which, interpreted, means that Harmony is our support; and a knowledge of Harmony, or God and His idea, is all there is,—these thoughts being capable of innumerable translations, all of which are synonymous.

If you have studied the Science perhaps you are better informed than myself, so I will not dwell upon it.

Ever affectionately, your brother,

W. B. C.

### All Ailments have Disappeared.

I had been sick for some time and doctors had told my husband they could do nothing more for me. Some friends then spoke to him of Christian Science and asked him why he did not have me treated, that they knew of some wonderful cures. My trouble was lung disease, or consumption, with many other complications. I had been subjected at times, all my life, to severe spells of neuralgia in my eyes and head. When my health grew so bad the attacks became more severe until the neuralgia went to my heart, and when Christian Science found me, I was a complete physical wreck. I had grown indifferent to all things except the misery I endured. So when my husband came home and told me he wanted me to try Christian Science, I told him it was useless, but all insisted and we went to a healer. I asked her if she would guarantee a cure. She said she could not, but was sure I could be healed. After she had read to me from "Science and Health with Key to the Scriptures," and told me that God could heal me, it was as if a veil had been lifted from my eyes. I always believed that God was all-powerful, but I had never thought to turn to Him instead of to medicine for bodily ailments, although the Scripture is full of Mind-healing.

After the first treatment my husband went home and

Digitized by Google

threw away all my medicine, which was a good many dollars worth. He afterwards said that he expected to have to replace it all in a few days, but to give me hope he threw it away. That was almost two years ago, and he has never had any call to replace the medicine. One trouble that yielded to the first treatment was weak eyes. When I was given some tracts to read, I told the Scientist that I could not read,—my eyes were too bad. She told me that I could read the tracts, so I took them home and sat down to read and never stopped until I had read them all. I have had no trouble with my eyes since.

One by one all ailments disappeared, until I can now say that I am a strong woman, and can perform all my household duties without trouble. I have also been able to overcome many diseases, and most of them were overcome at once.

MRS. BETTIE E. BOYLE, Houston Heights, Texas.

### Healed by Reading Science and Health.

Seven years ago I was suffering with a complication of diseased beliefs, three of which eminent physicians pronounced incurable. The fall before I had lost a baby girl, and believing that God had taken her from me as a punishment, I resolved to lead a better life. I joined the Friends Church and was continually studying the Bible, earnestly searching for the Truth, when one day I was led to take up "Science and Health with Key to the Scriptures" which, by the way, had been in the house for a year or more, and I had time and again pronounced foolishness.

The book opened at the chapter on "Prayer." What a revelation! I remarked to my wife, "This book is all right." It was from that time my constant companion. It made the Scriptures plain, which before were meaningless. It made me love them, and in a short time I awoke to find my diseases gone. I found myself a *free* man, and although I am but a babe, I find I am happiest when I am living the nearest to the Truth as taught by our beloved Leader. Neither tongue nor pen can express the gratitude I feel towards the one who has given us this revelation. I can truthfully say that no money consideration whatever, could cause me to part with Science and Health if I could not obtain another copy. I have not used a drop of medicine during these seven years for myself or family, while before that time I was spending all my living for drugs and physicians. But the physical healing is not all. The spiritual healing is the greatest of all blessings. This Truth that makes free, makes us free every way. It gives us the "peace which passeth all [human] understanding."

C. H. BARNES, Fruita, Col.

### Thankful for Christian Science.

I am thankful every day of my life for the Truth and help found in Christian Science. It first came to my notice through my mother-in-law, who was healed by Christian Science some ten years ago, after about fifteen years of invalidism.

After witnessing how she was able to overcome illness of different types in herself and others, I was persuaded to investigate for myself. She kindly loaned me Christian Science reading matter until I was convinced that I needed the book, "Science and Health with Key to the Scriptures," more than anything else.

I had consulted five different doctors in five years and could get no permanent relief for what four of them called neuralgia of the stomach and the last called gall-stones. I have been healed through Science of that disease, and other chronic troubles are gradually disappearing. I am now studying Science and Health and trying to "run with patience the race set before me."

I find the little understanding I have of the Mind that was in Christ is a great help in my family. We had an epidemic of scarlet fever here this fall and winter, and one of my children, a boy of nine years, was threatened with it. He had all the symptoms and was quite sick for two days and nights, but, thanks to Christian Science and our understanding of Truth, he recovered without doctor or medicine.—MRS. LIZZIE MARSH, Columbus, Ind.

### Grateful for Spiritual Uplifting.

My husband and I became interested at the same time, for which I am very grateful.

We have four children and have had many good demonstrations for them, as well as for ourselves.

We were told of Christian Science by a friend. We did not begin the study of it for any physical aid, although I was suffering from a trouble that the physicians had said would require a surgeon's knife, before I would become well, but after becoming interested in Christian Science I had read but six weeks in Science and Health when there was no trace left of the dreaded disease. I am very grateful to Mrs. Eddy for having discovered the true way to health and happiness.

I am grateful for the benefits received from physical ailments, but I am more grateful for the spiritual uplifting. It has caused me to see many faults in myself, and enabled me to overcome them.

MRS. HELEN HIRT, Tallahassee, Fla.

### How the Bird was Saved.

My little son Arthur and daughter Dorothy have always enjoyed reading in the *Sentinel* of the demonstrations which have been made by the little ones.

We want to tell how our bird was saved. Dorothy came in and found the cat had knocked the cage to the floor and was trying to kill the canary.

She rescued the bird, drove out the cat, and ran to me. Arthur and I came at once. Arthur ran for Science and Health and handed it to me unasked. I said, "Are you denying?" and we all went to work. The bird lay stretched out in the bottom of the cage, its eyes open, but otherwise it seemed to be nearly gone. I read aloud from Science and Health for a while, then treated the bird 1or an hour, when it suddenly sprang up on its perch and I knew the demonstration was made.

The children helped all they could and never voiced the error. The bird now hops about as gay as ever and sings its sweet song.—MARGARET D. COBURN, Chadron, Neb.

### A Child's Rendering.

There was a most beautiful rendering or reading of the text on the first page of the *Sentinel*, by a boy about eight years of age living with a family of Christian Scientists near here: "What I say unto you, I say unto all, Watch."—Jesus.

He came to the lady, and asked, what does this mean? reading the text in this manner, "What I say unto you, I say unto all, *watch* Jesus." The lady immediately catching the thought, said, "It means just *that, 'Watch* Jesus.'"

Truly "a little child shall lead them." O that we could *all* watch Jesus more closely; and make our lives conform more to his standard, the standard of Love and perfection!

A. P. BLACKLER, Pasadena, Cal.

### To Fulfil Promises.

The same voice that spoke the universe into being spake also the promises. The power that was more than sufficient to fulfil the creative commands will be more than sufficient to fulfil the promises of blessing.

*Lutheran Observer.*

## Religious Items.

A press dispatch from Cincinnati says that an address to the people of the United States advocating a national religious jubilee, preceded by a year of prayer, is being sent out, and that it is signed by Rev. John Henry Barrows, president of Oberlin College; Bishop William C. Doane, of Albany; Rev. George C. Lorimer, of Boston; Rev. Washington Gladden, of Columbus; Rev. Charles F. Thwing, of Cleveland; Rev. Theodore Cuyler, of New York; Bishop Boyd Vincent, of Cincinnati; Bishop C. C. McCabe, of Fort Worth; Rev. William R. Nicholson, of Philadelphia; Bishop Edward G. Andrews, of New York, and many other distinguished clergymen.

In the department "Hints and Clews," the *Universalist Leader* says: "Why not preach a sermon on 'the next thing to be done,' and why not show that men know what next they are to do by doing now what they have to do? Does not that seem to be the law of finding out? . . . Why be so full of worry about what is to be done? Why not heed the Master's word who sees that we always lack one thing, and, in quick obedience, go to the *one* thing that is near at hand, that which is a part of our entrusted care, whether it be to sweep a room, tend a loom, work at an anvil, or set down the words that tell the thought that burns within us?"

The *Congregationalist* publishes an editorial article on "The Demand for Christlikeness," in which the Sheldon edition of the *Topeka Capital* is treated as a remarkable indication of such demand. This is one of the comments of the editor: "Indeed there was something amusing as well as pathetic in the popular yearning to see this Christian daily. Who would have thought that after eighteen centuries of Christianity correspondents must cross half a continent to find one, and the presses of several cities must be brought into use in order to satisfy the demand of Christendom?"

In a sermon which the Philadelphia (Episcopalian) *Church Standard* quotes, Rev. Floyd W. Tomkins says: "One cannot do good work for God until one knows one's own life; until you have given yourself to God you cannot give Him acceptable work. Consecrated lives make consecrated zeal. Without a consecrated zeal our vision becomes distorted, and, ignorant of the aim for which God has called us, we become aggressive, and while we make a great deal of noise, accomplish nothing."

Pride is weakness. Humility is strength. Surely when we stop to consider what we are in comparison with what we might have been had we always lived at our best, we must be humbled. When we recall how bountiful have been God's blessings, and how meagre our returns, we will be humbled. Cultivate this grace, for there is scarcely another one that can do more for us in strengthening and adorning our characters.—*Christian Commonwealth.*

"The only Samaritans in the world to-day," says Arthur C. Kempton in the (Baptist) *Standard*, "are to be found in Shechem, and they are but a handful. Refusing to marry outside their own number, they have gradually died out until only about a hundred of them are left. . . . 'The oldest and smallest sect in the world,' they still worship in their humble sanctuary at the foot of the mount upon which the temple of their fathers stood."

Dr. Dwight Hillis, pastor of Plymouth Church, Brooklyn, says in a sermon published in the *Homiletic Review*: "No fetter hath ever been riveted that may not be broken. There is no barrier that will not yield before the intrepid spirit. Liberty and peace may still be yours. Know that a divine Being is abroad in the earth. His mission it is to open the prison doors and set all captives free."

In an article on the "Three Temptations" of Jesus, the (Swedenborgian) *New Church Messenger* says: "It is the religion which can not only help man to think spiritually and feel rapturously, and talk serenely, but which can also inspire him to do justly, and love mercy, and walk modestly but firmly in the path of duty—it is that kind of religion which helps the world and helps the man and makes him sane, and true, and serviceable."

The New York (Baptist) *Examiner*, in an editorial entitled "Overcome Evil with Good," says: "It is to be feared that many who are earnestly and honestly seeking to 'overcome evil' read the Apostle's injunction as an instruction to make an attack upon evil, and to put themselves, too, into the battle with it, instead of wheeling the good into line and letting it do the fighting."

In the sermon department of the (Swedenborgian) *New Church Messenger*, Rev. Lewis G. Horek says: "We seek to keep others right, to take the mote out of their eyes, forgetful of the beam in our own. What kind of darkness within does this reveal? It is pride, or self-exaltation. We consider ourselves perfect, and see faults or shortcomings in every one."

"We must come into harmony with God before we can enter upon God's work." says the New York (Baptist) *Examiner*. "To try to serve God acceptably while still 'in the gall of bitterness and the bond of iniquity' is like undertaking the higher mathematics before learning to cipher."

The (Baptist) *Watchman* says: "Christians do not gain power over the world by being like the world, but by being separate from the world. Sometimes this separateness will manifest itself in externals, but it must exist in dispositions, purposes, and ideals."

"Withdraw every believer from the earth and leave the Bible, and, in every land beneath the sun, readers from mere curiosity would find it answering to their inmost questionings," says the New York (Methodist) *Christian Advocate*.

*Zion's Herald* urges the reorganization of the old-fashioned Methodist Circuit system. There are now several of these circuits in the New England Conferences, circuits including from two to four preaching places served by one pastor.

The *Christian Register* (Unitarian) says: "The sinner is one who acts from a low motive when a higher one has been accepted by his reason and conscience."

## Notices.

### Literature for Distribution.

The April *Journal* devotes two pages to a list of publications all of which are suitable for distribution among those whom it is desirable to inform regarding Christian Science. The following notice also is given, "that pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature to do a wider work."

The prices now are, for pamphlets: One copy, or more, 6 cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets can be assorted as desired.

Notice is also given that some back numbers of the *Christian Science Journal* may be procured at five cents a copy. Address, The Christian Science Publishing Society.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Supplements to the Sentinel.

Three supplements to the *Christian Science Sentinel* have been issued. The first is the lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The third is the lecture of Judge Joseph R. Clarkson of Omaha, Neb., delivered at Kenosha, Wis., September 18, 1899.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The per capita tax for the year beginning June 1, 1899, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.
In one volume, 675 pp.
Price (cloth) each . . . . . $3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . . 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6¼ inches, narrow margins, each prepaid 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00
Twelve or more to one address, each, prepaid . . . . . 5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth) each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6¼ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . 4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.
Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

**One copy or more, each, 6 cents; 12 copies, to one address, 60 cts. Twenty-five copies to one address $1.15; 50 copies to one address, $2.25.**

SUPPLEMENT

To the CHRISTIAN SCIENCE SENTINEL

[Reprint from the Christian Science Journal.]

# CHRISTIAN SCIENCE:

## Its Worth and Work

By Rev. Arthur R. Vosburgh, C.S.B.

Some one has said, "There is nothing so painful as a new idea." The receiving of a new idea is as when a newer, more elegant article of furniture is brought into the home. The new stands for a different world, a different society, a different culture. Its presence brings out in sharp contrast the faults and failings of the old. And before harmony is restored the old must be retitted to be worthy to stand in the presence of the stranger, or else it must be ejected, to give place to that which is new. So the new idea, the truth when it appears, jostles our old mental equipment, disturbs our lines of thinking, and the fitness of things compels us to reconstruct many an old belief, to eject many another, or else to expel the stranger.

The most radical idea that has presented itself for judgment and acceptance in recent times, or in any time since the Christian era, is Christian Science. It is a stranger within our gates. And while, holding the ground of a safe conservatism, we prove all things and hold fast that which is good, we do well to beware lest, through an unwary prejudice in coldly rejecting the stranger, we fail in entertaining what may be an angel unawares.

The purpose and the promise of Christian Science are entirely good. Its works prove that it brings not only physical healing, but moral cleansing and spiritual illumination. If its radical claims can be sustained, it is "the desire of all nations," the hope of humanity; and every lover of good and friend of humanity will hope it may be true, until by thorough investigation he shall know whether or not it is true.

What, then, is Christian Science? First of all, Christian Science is a revival of primitive Christianity. It is a restatement of the Truth Jesus taught and demonstrated. It claims in no wise to be new, but the old, old story. It is a revelation to this age through its Discoverer, but it is a revelation of "the faith once delivered to the saints."

### SCIENCE AND CHRISTIANITY MUST HAVE A COMMON PRINCIPLE.

The term Christian Science comes at first with a kind of shock. That these two terms should be united seems to disturb our sense of the fitness of things; for the two words have stood for two systems of thought largely separated, often opposed. As the two words have been commonly used, Science has to do primarily with the things that are seen; Christianity with the things that are not seen. According to this usage, science has to do with the things of sense; Christianity with the things of soul. Science seeks exact knowledge, and receives nothing except that which approves itself to the reason, and can be verified in practical experience; Christianity deals with things that transcend reason, and must be received by faith; and science is founded absolutely on law, while Christianity is founded on miracle. With two such radically diverse conceptions, it is no marvel that it seems incongruous, irreverent, to think of blending them as one.

Scientific investigation has done this much positively: it has discovered an orderly universe, a universe of perfect system and law. The ideal of science is to explain this—to reveal this universe, including man, who is a part of it. Christianity has founded its faith on the man Christ Jesus, and is fully persuaded that no explanation of things is true that does not find a constituent place for this man and his teachings, yea, that does not see in his career, his words and works, the central event of all history. Science appeals to reason and represents its highest conception; Christianity appeals to faith and sentiment and represents their highest vision. And now any separation and estrangement between these two is becoming more and more unbearable. Each is an established fact,—neither can be discarded; the reason and the religious sentiment must each be satisfied. And to this end we must have a Science and a Christianity that shall be essentially one; that shall proceed from the same Principle, be founded on the same premises, reach the same conclusions, and achieve the same results. For all Truth is one. And if Science is true, and Christianity is true, they must be identical.

### CHRISTIAN SCIENCE A REVELATION OF THE DIVINE PRINCIPLE.

Now, truth is that which will answer human questions and meet human needs; and by this test neither Science nor Christianity, as they are now conceived, can speak with the authority of demonstration. Science—material science—cannot, does not claim to explain the real nature of even a single molecule of what it calls matter, nor of the smallest or greatest manifestation of what it calls force. With all the myriad forms of life revealed about us, with all its rising tides welling up within us, science cannot in any wise tell us what life is. No surgeon's scalpel has uncovered it, no microscope has perceived it, no chemical analysis has revealed it. And if we approach science with the mightier questions: What am I? Whence have I come? Whither do I go? her oracles are dumb. These are mysteries far beyond her ken. And still less can she even promise to meet the needs that press up against humanity on every hand. Something, yea, much, has our modern progress achieved in ameliorating external conditions and supplying comfort to the outer man; but it does not hold before us even a glimmering hope of meeting the needs of the human heart, or of giving us triumph over sickness, sin, and death.

When, then, we remember how far what is called science is from any absolute basis; when we recall how much that was called science twenty years ago is called nonsense to-day; when we survey again the systems of thought that were in more ancient times held as scientific, but have long since been given to the rubbish pile of the ages and are counted as only curiosities of history, and when we know not how much of our modern science may go in the same way; when we consider these things, and see how far short our materialistic theories have come from solving the human problem and meeting humanity's needs, is it not evident that we need a Science that shall give us firmer ground on which to stand and a Principle on which we can depend?

And if Truth be that which shall answer our questions and meet our needs, Christianity, as we have understood it, has likewise failed. We would not here be with those who decry what Christianity and the Christian Church has been and is to the world. We would not fail of being with the first of those who honor its name and its work. But does the church to-day come up to its primitive ideal? Where is the spiritual light and power that marked the early history of Christianity? The Christianity of the New Testament healed the sick and raised the dead, and Jesus gave that ideal as the standard for all times, for he says: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." Again he says: "These signs shall follow them that believe: in my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing it shall not hurt them; they shall lay hands on the sick, and they shall recover." Where is the doing these works and the fulfilling these signs to-day? Is it not evident that the Christian Church to-day stands in need of something it does not possess?

Now, many of you will answer, "That was an age of miracles, and we cannot have those wonderful works repeated to-day, for the age of miracles is past." But what Scriptural warrant have we for this? Nowhere are we warranted in taking for ourselves to-day any different standard than that given to the early church. And if we ask, what had the early church which the church to-day has not? what can it have been but an understanding that has since been lost?

And this becomes more evident as we read our New Testament and see how much of it is not understood. We are told, perhaps, that these are mysteries not for us to know. But why are the words written if they are not to be understood? How is it that God has tried to tell us some things which we are not to understand? Those who wrote understood, and they seem to take it for granted that those to whom they are writing will understand. And we find, too, that not only faith, but understanding is required of the Christian. Thirty-four times is the word "know" used in John's first epistle. And the thought of the epistle draws to a close and reaches a climax in this statement: "And we know that the Son of God is come, and hath given us an understanding, that we may know him that is true, and we are in him that is true, even in his Son Jesus Christ. This is the true God, and eternal life." Or, take again Peter's second epistle. After the salutation of the first verse, the thought of the epistle opens with the benediction: "Grace and peace be multiplied unto you through the knowledge of God, and of Jesus our Lord." And the Greek word used here is not the simple word gnosis, the general term for knowledge, but it is epignosis, which means precise, exact knowledge—scientific knowledge, if you will. And this same word is used at least a score of times in the New Testament. Again, Jesus' definition of eternal life is not to believe, but to know: "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Evidence from the gospels and epistles might be thus multiplied to show that the early teaching of Christianity led beyond faith into understanding, and that it was through this enlightened spiritual understanding that the early Christians demonstrated the power of God in what we have called miracles.

Now, there must be some primary Truth that will restore this lost element of Christianity, that will reconcile reason and reve-

Digitized by Google

lation, and will make Science Christian. And this Truth must be revealed. If what is to-day called Christian Science be not the revealing of this Truth that should come, then we must look for another. But it is a fully demonstrated fact to-day that Christian Science is the revealing of this final Truth; and this Truth is the understanding of the divine Principle of Being, the infinite Power and Intelligence that underlies, overlies, upholds, and enfolds all things—the infinite Good that we call God.

### WHAT IS DIVINE PRINCIPLE?

Just what, then, do we mean by speaking of God by this new term? What is meant by saying God is divine Principle? The word principle in its highest use is defined as cause, source, or origin. In applying it to Deity we mean that from which all things proceed, and of which in their working all things are an expression. When we say God is divine Principle, we are simply explaining and expanding the thought we have had before in speaking of the first great Cause. We mean that God is the ever-present creating, sustaining, controlling, and directing Cause of all that is.

Now, it is objected to this, that it denies the personality of God and is pantheistic. It is intended to deny the usual concept of a personal God. There is strongly entrenched in popular thought a conception after what Carlyle calls "an absentee God, who ever since the first Sabbath has been sitting in idleness outside of his creation seeing it go." To the average individual the thought of God as a person means a limited God, a being who has some particular place of abode and some definite form and appearance. But this cannot be true of infinite Spirit, and this old limiting thought of a personal God must be entirely discarded before we can know Him as the Bible reveals Him, as ever-present Life, Truth, Love. That God is divine Principle means this, that God is creative Mind. Creation is His idea or His thought expressed. And so it is that "in Him we live, and move, and have our being."

Now, is this pantheism? By no means. Pantheism is any system that confounds the Creator with His creation, while Christian Science emphasizes the truth that God is not in His creation; that the creation does not include or embody God, but expresses Him. And so, if of such a God, a Being who is infinite Life, infinite Intelligence, limitless Love, it is said that He is in this sense personal, Christian Science brings no objection. The Discoverer and Founder of Christian Science, the Rev. Mary Baker G. Eddy, has said this in this connection: "As the words *person* and *personal* are commonly and ignorantly employed, they often lead, when applied to Deity, to confused and erroneous conceptions of divinity, and its distinction from humanity. If the term *personality*, as applied to God, means *infinite* personality, then God *is* personal Being,—in this sense, but not in the lower sense. An infinite Mind and a finite form do not, cannot, coalesce" (Science and Health with Key to the Scriptures, p, 10). If we conceive of such a divine Being as personality, then this infinite, ever-present Personality is the living Principle of the universe. To a Christian Scientist, the word Principle as applied to God does not mean a cold generalization, an abstraction of our own thinking. We gladly and unreservedly adopt John's statement, "God is love." And what is love but the loftiest, mightiest Principle that can enter human experience or touch a human life to control it.

Christian Science has fashioned for us no strange god, but has given us a higher, more practical, more helpful understanding of Him whom we have known from the beginning. All the thoughts of God that have ever been helpful, comforting, and inspiring we still own. All that we have discarded are the beliefs concerning Him that have hidden from us His real nature as changeless Good. According to the way that our critics may call heresy, that we reverently call Christian Science, while we call our Deity divine Principle, we yet worship the God of our fathers.

### MATTER AND EVIL UNREAL.

And now arises a two-fold dilemma, as old as the record of philosophic thought. If the infinite Original of all things is Spirit, whence comes matter? and if Good, how is this reconciled with evil? The logic of Truth shows that they cannot be reconciled, that matter and evil are non-existent, unreal. This denial the world challenges, and Science sustains it by demonstrating the allness of God, Good.

Let us look at these statements a little more closely. The denial of the existence of matter does not mean quite what it at first seems to mean. It is not intended to assert that there are no houses, no hills, no trees, no heavens nor earth; that there is no external objective existence. What is claimed is that we perceive all these things through the medium of a false sense of things; that our human belief has put a wrong interpretation on nature; that back of the things that are seen lie spiritual realities of which what we call material forms are poor counterfeits, shadows of the real. It is not affirmed that the physical senses tell us nothing, but that they do not tell us the truth. Their evidence needs to be re-interpreted from Principle, and when so interpreted we shall find that this explains while it denies the testimony of the senses.

For we do not trust the senses as absolutely as we think we do. On a lower plane we are constantly explaining and denying their first obvious testimony. For instance: you see a straight rod plunged into the water, so that part is beneath and part above the surface. Now, the appearance is that where the stick emerges from the water it forms an angle. If you take the first testimony of what the eyes behold, you will say the stick is broken. The phenomenon is explained by the principle that governs the reflection and refraction of light, that explains while it denies the testimony of the senses. You stand on a railroad track, and your eyes tell you that the two lines of rails approach each other until they meet in the distance. But the principle that governs the law of perspective interprets this phenomenon, and so explains while it denies the testimony of the senses. No fact is more obvious at first impression than that the earth stands still and that the sun moves around it. For centuries no fact or belief was more unchallenged. It was intrenched in the world's philosophy and fortified by religious conviction. But deeper investigation revealed this as a mistake, and an understanding of the principle that governs the relation and motion of the heavenly bodies explained while it denied the testimony of the senses. And so out of the difficulties and discords that have arisen from believing in mind and matter has come a deeper investigation. And interpreting the universe according to its divine Principle, the infinite Mind, we find that this explains while it denies the entire testimony of the senses; and in perceiving the allness of God is seen the non-existence of matter. In other words, Christian Science explains all the phenomena of our conscious experience and interprets their meaning by divine Principle, according to Mind instead of matter. When from the new point of view our vision becomes spiritually clear, we shall see what the revelator saw: "A new heaven and a new earth: for the first heaven and the first earth were passed away."

So if God is Good and God is All, where is a place for evil? If God, Good, is All-power, where can there be an evil power? If God originally created all things "very good," what real place can evil have in this creation? Christian Science denies that evil is a reality, or has, in the nature of things, any abiding-place. And this does not mean just what it may at first glance seem to mean. It is not a denial that we have this sense of evil to meet in actual experience; but it has no more ultimate reality than the ghosts that appear to the child who is taught to believe in them, or the superstitions that are very real to the heathen, whose ancestors, from ages back, have credited them. Personified evil has been well defined by Jesus, when he says of Satan, "he is a liar, and the father of it." In an orderly Universe, governed by its Principle, there is no place for evil, any more than there is a place for errors in mathematics, or discords in music. When the principle of mathematics is sufficiently understood and demonstrated, the errors disappear; they have no real place in mathematics. When the principle of music is understood and demonstrated, the discords disappear; they have no inherent place in music. When the Principle of Being, which is infinite Love, is understood and demonstrated, evil will disappear, for it has no principle, no ground of existence, no ultimate reality.

### REAL MAN IS SPIRITUAL.

Then interpreting life from this perfect Principle, what shall we answer to the age-long, world-wide question, "What is man?" Just what the original statement of the Scriptures reveals him,—God's likeness. And as God's likeness, man can really be only like God; he must be originally perfect, as the Father is perfect. But how then do we account for what we find round about us in practical experience to-day? Simply through man's failing to understand and demonstrate his divine Principle, and interpreting himself (as all things else) materially, instead of spiritually.

The Scripture says that "God hath made man upright; but they have sought out many inventions." We see these inventions in the multiplicity of human opinions and beliefs. We see, too, these human beliefs working out their legitimate conclusions in human experience. Man was originally upright. According to the Scriptures he was originally perfect, subject to neither sickness, sin, nor death,—to-day, according to human belief, these are inevitable elements of human experience.

But now reason raises this query: If man was originally upright, has he lost his original nature? If he was originally God's child, is he not still God's child? The mere fact that he is not manifesting the divine nature, and that we do not see him as God's child, cannot alter the original fact, nor change the eternal truth. In seeking an answer to this question, What is man? we remember that it was foretold of the Messiah, that "He shall not judge after the sight of his eyes, neither reprove after the hearing of his ears." Jesus' injunction was: "Judge not according to the appearance, but judge righteous judgment." Man is to be judged from the standpoint of Mind, not matter. On the superficial judgment of the senses we cannot rest. Truth and Love must lead us within the barriers of the outer appearance, to where God's likeness is enshrined, ere we can answer the question, What is man?

For man, as God's likeness, must be to-day, in his essential nature, a spiritual and perfect being, and sin, sickness, and death, only mortal beliefs about man; but since as man "thinketh in his heart, so is he," these beliefs must seem to be substantial realities until they are proven to be but beliefs, and they disappear before the "revealing of the sons of God" (R. V. Romans, 8 : 19). And a wrong belief about anything, or a false interpretation about anything, does not change the real thing, although it may per-

Digitized by Google

vert its application and interrupt its working. Let me illustrate this:—

God gave to the Jews a message through the Old Testament Scriptures,—they contained His Word. But how was this message misunderstood and misapplied by the Jews of Jesus' time! The Jew professed and proposed to conform his life accurately to the Word. What he did was to obscure the tenor of the Word with his belief, and to conform his conduct to his belief. But the fact that the Jew held a certain belief about the Scripture, and the fact that his belief worked itself out in visible, tangible, definite results, did not alter the character of the Scriptures.

Now man is God's Word; that is, man's true consciousness contains what the Bible contains, the spiritual idea. As it is written, "For this commandment which I command thee this day, it is not hidden from thee, neither is it far off. . . . But the word is very nigh unto thee, in thy mouth and in thy heart, that thou mayest do it." This then means that man is the highest expression of divine Mind,—in his true selfhood he individualizes the spiritual idea, and this is all that is really in man's consciousness. Whatever else there may be present as an element of our consciousness, cannot be something which is a part of the original, perfect man, but is something which has crept in as a belief about man. The fact that there is a belief that man is material and mortal, does not change the original truth; and that this belief works itself out in visible, tangible results in human experience, by no means establishes the belief, nor alters the original fact, that man is in God's likeness.

And what, then, is the man of the senses? He is a creation of belief only. His life is that which James describes as a "vapour, that appeareth for a little time, and then vanisheth away." His origin is that of one "conceived in sin, and brought forth in iniquity." His mentality is the mind of the flesh, which is "enmity against God: for it is not subject to the law of God, neither indeed can be." Now this belief about man is what the Apostle refers to when he exhorts to "put off concerning the former conversation the old man, which is corrupt according to the deceitful lusts; and be renewed in the spirit of your mind; and that ye put on the new man, which after God is created in righteousness and true holiness." And again, "Be ye not conformed to this world: but be ye transformed by the renewing of your mind." When we shall have cast off all this mortal belief of life in matter, we shall be satisfied, for we shall have awaked in His likeness.

### THE SPIRITUAL IDEA.

Now generic man constitutes God's son, for man is originally and eternally God's child. Have you ever noted the significance of the genealogy of Jesus, as given in Luke, tracing back from son to father, beginning by saying that Jesus was, "as was supposed, the son of Joseph"? And so it follows back from generation to generation, until we come to "which was the son of Enos, which was the son of Seth, which was the son of Adam, which was the son of God." What can this signify, except that man is originally and by lineal descent, God's son? Jesus, the Christ, knew of his sonship; hence he is "the first-born among many brethren."

It was Jesus' mission to reveal God to man, and to reveal man to himself. He revealed God by reflecting him; and he revealed man by revealing himself as the ideal man. He says emphatically: "He that hath seen me,"—hath discerned me spiritually,—"hath seen the Father:" and likewise he almost invariably calls himself "the son of man." That the son of man is identical with the Son of God, is the key to his teaching. He asks his disciples, "Whom do men say that I, the Son of Man, am?" and in the same connection, "Whom say ye that I am?" Peter replies, "Thou art the Christ, the Son of the living God;" and Jesus approves the answer. In the words of our text-book, Science and Health, "Christ, born of the Father, illustrated the coincidence, or spiritual agreement, between God and man." Christ Jesus brought to human consciousness the spiritual idea, which reveals God as infinite Good, as changeless Love, and reveals man as perfect, as the Father is perfect. He embodied in himself this idea; he was an individual expression of this idea. Now this spiritual idea is the Christ. Jesus, the Christ, means Jesus the anointed one. It was the spiritual idea that anointed the man Jesus. This idea imbued his whole consciousness, and was revealed in him as the Christ. It is this spiritual idea which the Apostle says is "Christ in you the hope of glory." It was this spiritual idea that we are told followed the Israelites in their journeys of old. "For they drank of that spiritual Rock that followed them: and that Rock was Christ." This same spiritual idea was that which revealed itself to all the prophets, that which they spiritually perceived, and whose perfect coming they foresaw and foretold. And it is the re-appearing of this spiritual idea, in Christian Science, which is the second coming of Christ.

It is the working of this idea in human consciousness, that is to regenerate humanity and redeem the world. As it unfolds itself in the individual consciousness, all the elements of sickness, sorrow, and sin, must disappear. Do you ask, "How can these things be?" By a certain law of cause and effect. For we grow into our ideals, and our ideals form and control us.

### HOW TRUTH HEALS.

The truth of Christian Science finds practical application in this: that Mind accounts for all, and Mind controls all.

Human experience has been full of intimations of the deeper workings of mind, as the perfectly commonplace fact that a person will turn when looked at intently; or the game often played, where one comes into a room, and without previous knowledge or instruction, does just what all in the room are holding the thought that he will do. Experiences of transferrence of thought occur to all. Instances may be multiplied, to show how we are swayed, and influenced, and directed by unrecognized conditions of thought. These intimations are straws which show which way the wind is blowing. They usually show simply the influence of one human mind over another; but they are intimations of human possibilities, which, when they are understood and unfolded in their Principle and law, are boundless in their promise.

The work of Christian Science is to heal sickness and cast out sin, and it does this through understanding that man, as the idea of divine Principle, is spiritual and perfect, and is sustained and controlled by divine Mind. The healing of Christian Science is not brought about through mental suggestion, but through bringing to the consciousness of the patient the presence and power of Truth and Love, which destroy the wrong suggestion that has manifested itself as sickness,—for all sickness does in reality come about as a mental suggestion; that is, it is a mind picture, or a condition of consciousness imaged on the body,—for the body has no intelligence to say I am sick, but only reflects the condition of the thought that governs it. That disease does get about through such a transfer of mind pictures, or mental suggestions, is demonstrated beyond cavil. Medical students are frequently violently attacked with the symptoms of the disease of which they are studying. After the death of General Grant, and the prominence that was given to the difficulty and symptoms in his case, which was said to be a cancer of the throat caused by excessive smoking, every old smoker began to say, "I shall have to be careful, or I shall have the same thing." And it is claimed that after this case of General Grant, many more cases of the same difficulty arose than had ever been known before. I know an instance where, when the mother was sick, the son, a man grown, was sick, even though miles away, and knowing nothing of the illness of the mother, and vice versa, when the son was sick, the mother was sick also. It is notorious that people who read and study the doctors' books are apt to become ill, and often do.

The spread of epidemics, what we call contagion, is really mental inoculation. Nurses and physicians who rise above the fear of the disease with which they are brought in contact, and who are actuated by love for humanity and the desire to relieve, are largely immune from these diseases. Now here is the difference and difficulty. We have learned to mistake the occasion of sickness for the cause of the sickness. Some exposure is followed by a cold: we say the exposure caused the cold. We eat some particular article of food, and have dyspepsia; this occurs again and again; we conclude that the food caused the trouble; now in every instance the belief and the fear of the power of so-called material conditions is the procuring cause of sickness. The material condition is the occasion, not the cause. Banish the belief and fear from mortal mind, and no circumstance can cause us suffering. And here is the practical application: if we can banish from our thought all belief of the necessity of disease, all belief in the power of supposed laws of matter to bring disease, if we can replace sick thoughts by healthful thoughts, selfish thoughts by loving thoughts, and sinful thoughts by holy thoughts,—in short, if we can banish the beliefs of the mortal mind, and let this Mind be in us which was also in Christ Jesus, sickness and suffering will depart.

Paul says, "Whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; . . . think on these things."

### HOW TRUTH MAY BE KNOWN.

The spiritual idea, God's idea, or God's word, is contained in the Bible. In the works and words of Jesus we find the spiritual idea first clearly and completely presented. The Old Testament Scriptures are an unfolding record and expression of the spiritual idea, as it is being progressively revealed, until it comes to its fulfilment in the Christ. Now, in this generation, the spiritual idea is again set forth in its order and in its Principle, in the book "Science and Health with Key to the Scriptures." To grasp this spiritual idea, in all its applications to all the needs of human experience, to practically know God and His Christ, we need these two, and only these two books.

Some of you are investigators of Christian Science; you are honestly seeking Truth; now, in your seeking, note three proofs or criterions that we find in the New Testament, which we can apply to whatever claims to be Truth. Whatever does not present these proofs is not the truth of the Bible,—is not true Christianity: First, what are spoken of as the signs. "These signs shall follow them that believe." These are open demonstrations of physical control through Mind. The most usual sign was, and is, healing the sick. The second is what Jesus calls the fruits: "By their fruits ye shall know them." These fruits are the works of the Christ shown in a godly char-

Digitized by Google

acter. "The fruit of the Spirit is love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance." The highest witness of all is that in our own consciousness. "The Spirit itself beareth witness with our spirit, that we are the children of God." Where you shall find this threefold witness, there will be the Truth.

THE DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE.

Alongside of the wonder and admiration that is aroused by the remarkable growth and work of Christian Science, is that inspired by the esteem in which all its believers hold its Discoverer and Founder, the Rev. Mary Baker G. Eddy. This esteem holds in it nothing of fulsome adulation, nor anything approaching personal worship. It is simply a reverent, loving appreciation of her work, and her position as the one whom God has chosen and called to be the Revelator of this new-old truth. We know that through sacrifice unspeakable and love unutterable she has wrought the work that has restored to us a priceless gift, and for this we give her gratitude. Christian Scientists have seen in the life of their Leader an unselfishness and a wisdom that could only come from a life divinely directed. Instead of seeking power, she has taken just the steps that make it impossible to build up an ecclesiastical despotism. The steps that she has taken, the movements that she has directed, have proved their wisdom. And for these things we give her confidence. She has unveiled to us the transcendent beauty of Christliness. For this we give her love. As those who are working in the spirit of Christ, could we offer less?

FULFILMENT.

Christian Science comes as an expected one. The seers and sages of all the centuries have foretold it. In the land of its birth, out of many who have been "voices in the wilderness," prophets of its appearing, I will quote from two, as weighty as any America has known. The first is Dr. Horace Bushnell, for whom scholars have claimed that he, more than any other man, except Jonathan Edwards, has influenced the course of religious thought in this country. In the closing paragraphs of "Nature and the Supernatural," we read:—

"How different the fortunes of religious experience, when it is regarded—which, in some future time, it will be—as a coming unto God by the laws that regulate His bestowments; when the world of His supernatural kingdom is conceived to be as truly under laws as the world of nature, and these laws, accurately distinguished, enable the disciple to address himself accurately to the powers of grace, as now to the forces of nature. So the whole life of faith is an experience and spiritual discovery of God. And no discovery of natural science is more valid.

"The power of Christian piety will be as much greater than now, as it knows how to connect more certainly, and more in the manner of science, with the resources of God. And great will be the day when faith, laying hold of science, and rising into intellectual majesty with it, is acknowledged in the glorious sisterhood of a common purpose, and both lead in the realms they occupy, reconciled to God, cleared of the disorders and woes of sin, to set them in that final unity which represents the eternal Headship of Christ."

These words were written nearly two decades before Science and Health was published. Nearly a score of years earlier, Emerson wrote:—

"I look for the hour when that supreme Beauty which ravished the souls of those Eastern men, and chiefly of those Hebrews, and through their lips spoke oracles to all time, shall speak in the West also. The Hebrew and Greek scriptures contain immortal sentences that have been the bread of life to millions. But they have no epical integrity: are fragmentary: are not shown in their order to the intellect. I look for the new Teacher, that shall follow so far those shining laws, that he shall see them come full circle; shall see their rounding complete grace; shall see the world to be the mirror of the soul; shall see the identity of the law of gravitation with purity of heart; and shall show that the Ought, that Duty, is one thing with Science, with Beauty, with Joy."

And what many hold as the greatest poem of the century, closes with the vision of—

One God, one law, one element,
And one far-off divine event,
To which the whole creation moves.

The *worth* of Christian Science is that it reveals divine Principle; its *work* is to demonstrate Principle. Herein faith becomes understanding, reason and revelation are reconciled, and the prayer of Christendom, "Thy kingdom come, Thy will be done in earth as it is done in heaven," is finally fulfilled.

The world sits at the feet of Christ
Unknowing, blind and unconsoled,
It yet shall touch his garment's fold,
And feel the heavenly alchemist
Transform its very dust to gold.

# PERIODICALS

PUBLISHED BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY,
95 Falmouth Street, Boston, Mass., U. S. A.

## A WEEKLY NEWSPAPER

*Christian Science Sentinel*

PUBLISHED EVERY THURSDAY

Contains brief summary of the most important news; articles selected from various sources, gives the Voice of the Press and timely editorials in connection with the movement; and presents interesting contributed articles and testimonies.

Subscription Price: One Dollar a Year. Foreign subscriptions, $1.50. On sale at three cents a copy, postpaid.

## A MONTHLY MAGAZINE

*The Christian Science Journal*

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Is the Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

It contains interesting reports of cases of Spiritual and Physical Healing, as well as instructive discussions of the Principle and the Practice of Christian Science, dissertations and lectures.

Subscription Price: Two Dollars per annum; One Dollar for six months; Foreign Subscriptions, $2.40 per annum; $1.20 for six months; Single Copies, Twenty Cents, postpaid.

## BIBLE LESSONS

*The Christian Science Quarterly*

PUBLISHED JANUARY, APRIL, JULY, AND OCTOBER.

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year, in all the Christian Science Churches.

Subscription Price: One copy one year, postpaid, fifty cents.

Foreign subscriptions, one copy, one year, 60 cents

On Sale at 15 cents a copy.

Catalogue of prices for Oxford Bibles, Hymnals, Books, Pamphlets, etc., sent on application.

Direct orders, and make remittances payable to

BOSTON, MASS, U. S. A.

# Works on Christian Science, By Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Price (cloth) each . . . . . $3.18

Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . 4.00

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid . . . . . 5.00

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions. Price (cloth) each, prepaid . . . . . $2.25

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . . . 4.00

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRIST AND CHRISTMAS.** An illustrated poem. Single book, prepaid, $3.00; $30.00 per dozen.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, prepaid.

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.00; $5.00 half dozen; $9.00 per dozen, prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 50 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; $2.50 per dozen, prepaid.

Direct all orders for above works, and make remittances payable, to

## Items of Interest.

**Political Events.**

The following message of sympathy, signed by twenty-two thousand pupils of the Philadelphia public schools, was sent to President Kruger by a special messenger, who started April 9:—

"We, the undersigned students of the public schools of Philadelphia, the city where our own forefathers enlisted in their splendid and successful struggle against English oppression, desire to express to you and to the fighting men of the South African Republic their great admiration for their genius and courage that have checked English invasion of the Transvaal, and the undersigned extend their most earnest wishes that in the end the South African Republic will triumph over England in a war in which the Boer cause is noble, the English cause unjust."

By a vote of 161 against 153, the Senate Porto Rican bill was passed by the House on April 11, and was signed by the President April 12. The bill provides for collecting a duty on goods coming from Porto Rico into the United States of fifteen per cent of the Dingley tariff, and a similar duty at Porto Rican ports on goods from the United States, dutiable goods being the same as in the Dingley tariff, with some exceptions. The bill also carries with it a plan of civil government somewhat like that of the territories. Charles H. Allen of Massachusetts, Assistant Secretary of the Navy, has been tendered the office of governor of Porto Rico, and has virtually accepted.

The President has ratified The Hague conventions providing for universal arbitration of international disputes and for the regulation of the use of warlike instruments, and notification of the same will be immediately given to The Hague through United States minister Newell.

General Otis, governor-general of the Philippines, has been ordered home. His civil duties will be assumed by the Philippine Commission, and General MacArthur will succeed him as commander of the military forces.

For the first time in the history of the country the per capita circulation has crossed the $26 line, and the year 1900 carried the total currency in circulation for the first time past the $2,000,000,000 line.

Of the vessels captured by American warships during the Spanish war, twenty-four have been restored to their owners, and the others have been sold, excepting a few.

The Senate on April 11 passed the Pacific cable bill, which appropriates three million dollars for laying a cable between San Francisco and Honolulu.

Up to April 10, 28,440 veterans of the Spanish war have applied for pensions.

**Foreign News.**

For want of fresh horses and winter uniforms the British army have been prevented from advancing in force, and, taking advantage of their conditions, the Boers sent several large forces into that part of the Orange Free State assumed to be under British control, and seriously endangered the garrison at Wepener and other isolated forces, besides threatening Lord Roberts' line of communication with his supply base. On April 13 Lord Roberts reported that the Boer advance had been checked, and that they were retreating northward. British military writers say that it is scarcely possible for the Boers seriously to interfere with the movements of Lord Roberts when he is ready to act.

The Paris Exposition opened with splendid ceremonies, Saturday, April 14. According to the official catalogue just published, there are no less than 6,564 American exhibitors represented there, which is more than three times the number from any outside country, and second only to that of France herself.

A Berlin dispatch says that the German central committee for stopping the Boer war has handed to the chancellor of the empire a petition signed by seventy thousand Germans, including some of the foremost people in the empire urging international intervention.

The director-general of the Paris Exposition has given the American commissioner special permission to close the American pavilion Sundays.

Over fifty thousand school children gathered in Phœnix Park, Dublin, on April 7 to see Queen Victoria.

King Leopold of Belgium has presented all his real estate to the nation.

**Industry and Commerce.**

One of the curious consequences of the South African war is the increase in the price of barbed wire in America. The demand for barbed wire at the seat of war is enormous. The market there has been almost entirely stripped of the stuff. It is constantly in use both among the British and the Boers, for the strengthening of copjes and field positions.

The largest contract for coal ever awarded a single company has just been closed at Pittsburg. The operations are to supply coal for a year to the mills of the Moore iron and steel consolidations, the National Steel Company, American Tin Plate Company, and the American Steel Hoop Company. The contract price is said to be $10,000,000.

President Hill of the Great Northern Railway is said to have announced that within eighteen months his company will have in operation a trans-Pacific line of steamships of twenty thousand tons each. Each ship would, in other words, be equal in carrying capacity to the Campania and Lucania combined.

At the present time there are between five and six thousand miles of railroad in Mexico, with about five hundred miles in course of construction. Surveyors are laying out routes for many new lines that are not included among those in course of construction.

Jones & Laughlin, and Laughlin & Co., two great steel manufacturing firms of Pittsburg, have consolidated and formed a limited partnership with twenty million dollars capital.

The growth of labor unions in New York State is rapid. The State statistician reports 49,360 more members this year than last. The total membership in the State is 334,383.

A New York paper says that the British government has made a contract to buy from thirty to thirty-five thousand horses in the United States.

Governor Richards of Wyoming says that the wool crop for this season in his state will reach twenty million pounds.

The American Plate Mirror Company has been chartered at Harrisburg, Pa., with a capital of $50,000,000.

**General News.**

The nucleus of the Carlisle Indian school was a band of Indian prisoners of whom Major Richard H. Pratt had charge in Florida in 1875. At the end of three years most of those Indians were sent home, but Major Pratt was allowed to keep fifteen to continue a plan of education which he had begun. In 1879 the Carlisle barracks were turned over for the purpose of a school, which was opened then with 147 pupils in attendance. Now the school has a thousand students, representing seventy-five tribes, each speaking a different language. The full course is ten years.

Corn oil promises to become a strong rival of cotton-seed oil as a substitute for olive oil. On every kernel of corn there is a little fleck of yellow known as the "germ." Before corn may be shipped for export this germ must be removed to prevent the grain from becoming rancid. This "germ" yields oil, which experts claim to have been able to refine so thoroughly as to make it entirely palatable. There are now five million gallons of crude corn oil turned out annually from American mills which has been used as a substitute for linseed oil.

The growth of electric street railway systems in the principal countries of Europe during the last four years is shown in a table in a recent issue of *L'Electricien*. Germany leads with 250 miles in 1896, which had increased in 1899 to 2,160. Austria-Hungary is next with 45 miles in 1896 and 600 in 1899. The United Kingdom is third with 67 miles in 1896 and 600 in 1899, and the other countries follow in this order: Italy, France, Switzerland, Russia, Belgium, etc.

In the recent revision of the American naval regulations, the clause was omitted which directed commanding officers to display false colors on their ships in time of war when it was desirable to deceive the enemy. Leading European powers have lately taken the same action. There is no clause prohibiting the display of false flags, however.

Swollen by heavy rains, the Colorado River on April 7, swept away the great dam at Austin, Tex., which was finished a few years ago at a cost of $1,750,000, and flooded the country below. Towns and cities on the river were warned of the approaching waters by telegraph, but over thirty people failed to escape and were carried off by the flood.

Governor Roosevelt has signed the bill to protect the birds of New York against plumage hunters. The bill provides that no part of the plumage, skin, or body of any bird protected by the law shall be sold or had in possession for sale.

Mrs. Steyn, the wife of the President of the Orange Free State, has been in Scotland since last summer. It is said that her husband put his private fortune into the keeping of a London bank before the war broke out.

The cash gifts to libraries in this country during the year 1899 in amounts of over five thousand dollars amounted to over four millions of dollars, of which over three millions were given by Andrew Carnegie.

Lindsay Swift, one of the staff of the Boston Public Library, in a recent lecture advocated charging a small fee on books of fiction for the first three years after publication.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## Messages Without Wires.

GODDARD CHAPEL at Tufts College was thronged last evening (Wednesday, February 21) on the occasion of a public lecture given by Professor Amos E. Dolbear on wireless telegraphy. The lecture was illustrated by experiments showing the apparatus and method of sending messages without wires. In the course of his lecture Professor Dolbear said:—

It is necessary to make some distinction between the several known methods of electrically transmitting signals, which differ radically from each other. As long ago as 1835 or 1836 Professor Henry discovered what is now known as electrical induction between two parallel circuits which are separated from each other by a considerable distance, and he was able by sending a current through a coil of wire in his cellar to generate a current in another circuit in his attic, a distance of about thirty feet, there being no connecting wire between the two circuits. This same method has since been greatly extended by Sir William Preece, who has succeeded in this way in transmitting telegraphic signals between two circuits three or four miles apart.

Another method, differing greatly from this, was discovered by Professor Morse. In 1842 he placed a length of wire on one bank of a canal and let the ends dip into the water. A battery and key for this wire enabled him to send a current through the wire and water of the canal. On the opposite bank another wire was placed, with its ends dipped in the water, and with a galvanometer. Whenever a current was sent through the first circuit there was a current in the second, and thus signals sent from one side were received on the other, because a part of the current from the first circuit passed through the wire of the second circuit. This principle has been greatly extended through the efforts of Professor Trowbridge and Sir William Preece.

In 1881 I made the discovery that it was not essential that a receiving telephone should be connected directly with the transmitter in order to hear distinctly what was spoken at the transmitter, and I was able at the outset to hear with distinctness at a distance of fifty feet from any wire or any connection when using an ordinary telephone transmitter.

When an induction coil and Morse key were substituted for the transmitter, the distance between the transmitting wire and the receiver was greatly increased, and where one terminal of the induction coil was connected with the earth, while the other was extended upward into the air, the distance between the transmitter and the receiver could be extended to hundreds of feet, and still farther when the receiver was connected one terminal to the ground and the other extended into free air.

About three years ago Marconi introduced into my system what is generally called a coherer, a little glass tube, with a few metal filings loosely packed between the ends of wires inclosed in a tube. These filings have the properties of a non-conductor under ordinary circumstances, but become conductors when a discharge is sent through them. The conductivity so established is made to work a Morse relay and sounder, and thus the impulses which come through the wire produce the ordinary Morse alphabet.

The method of telegraphy without wires is, briefly, as follows: In the primary circuit of the induction coil and at the transmitting station is a Morse key and battery. When this is worked in the usual way, there are electrical discharges through the secondary coil, one end of which is carried to the ground, and the other end extended into the air. When such a discharge occurs the earth receives a charge and the aerial wire receives an equal charge, the result of which is a current into the earth and a series of so-called ether waves into the air, very much as sound waves are produced by the crack of a whip.

These waves are scattered in every direction from the air wire, and when they reach another wire, or any conductor, they follow it to the earth, so that it becomes possible for an unlimited number of receivers connected with the earth and air to receive signals sent through the transmitting station. These have been detected at a distance of ninety miles, and there is no reason for supposing that to be a limit.

The desideratum now is to direct these waves, and so prevent their scattering. This has not yet been accomplished, but there is no reason, in the nature of things, why it should not be done, for we can already direct shorter waves.

What seems to most persons to be extraordinary is that such long waves meet with no impediment, and go as freely through wood and stone and brick as light waves go through glass. It may be remembered that the so-called X-ray waves go through wood and stone, so that what we call transparency is not so much a matter of material as it is of ether wave length.—*Boston Herald.*

## A Petrified Forest.

THE Territory of Arizona is a vast museum of natural curiosities, including many of the most wonderful in all the world, says a writer in the *Chicago Record.* The atmosphere, the climate, the mountains, the soil, the rivers, the forests are filled with phenomena, many of which exist nowhere else. In the desert, three hundred miles square, with Flagstaff as a centre, are spread out a variety of wonders of which the people of this country have little or no conception, but if they were in Europe or Asia thousands of our citizens would cross the ocean to see them. Being within only two or three days' journey of Chicago, and easy of access by frequent trains of sleeping and dining cars and other modern luxuries of travel, they are overlooked by the multitude and are practically unknown.

To my mind, next to the Grand Canyon of the Colorado, the most interesting and impressive of the natural wonders of this great Arizona museum is the petrified forest, which covers nearly one hundred square miles, within easy distance, either on foot or horseback, from Billings station, on the Santa Fe Railroad; but it can be more easily reached

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

by carriages from Holbrook, where better accommodations can be found. The government explorers have christened it Chalcedony Park.

The surface of the ground for miles and miles around is covered with gigantic logs three or four feet in diameter, petrified to the core. Many of them are translucent. Some are almost transparent. All present the most beautiful shades of blue, yellow, pink, purple, red, and gray. Some are like gigantic amethysts, some resemble the smoky topaz, and some are as pure and white as alabaster. At places the chips of agate from the trunks that have crumbled lie a foot deep upon the ground, and it is easy to obtain cross sections of trees showing every vein and even the bark. Comparatively little of this agate has been used in manufacturing, although it is easy to obtain. Manufacturing jewelers of New York have made table tops and boxes and other articles from strips that have been sent them, and if the material were not so abundant its beauty would command enormous prices. Where you can get a carload of jewelry for nothing you are not likely to pay high prices for it.

A bird's-eye view of the petrified forests on a sunny day suggests a gigantic kaleidoscope. The surface of the earth resembles an infinite variety of rainbows. The geologists say this great plain, now five thousand feet above the level of the sea, was once covered by a forest, which was submerged for ages in water strongly charged with minerals, until the fibres of the trees were thoroughly soaked and transformed into eternal stone. Many of the trunks are still packed in a deposit of fine clay, which was left by the receding waters, but the erosion of the wind has pulverized much of the clay and carried it off in the air, exposing the secrets that nature buried under its surface.

One great tree spans a deep gulch, forty feet wide. It lies where it fell centuries, perhaps ages, ago, and is a most beautiful specimen of petrified wood. The rings and the bark can be easily traced through the translucent agate, and it is firm enough and strong enough to last as many centuries as it has already spent in its peculiar position. It is undoubtedly the only bridge of agate in the world, and alone is worth a long journey to see.

The Indians of the Southwest used to visit the petrified forests frequently to obtain agate for their arrow and spear heads, and the material was scattered over the entire continent by exchange between the different tribes, from the Isthmus of Panama to Behring Strait. The great deposit here explains where all the arrow heads of moss agate came from, and other weapons and implements of similar material that are found in the Indian mounds and graves of the Central and Western states. In the stone age the agate of the petrified forest was the very best material that could be obtained for both the implements of war and peace of the aborigines. A scalping knife could be made very easily from one of the chips of agate and could be ground to a very fine edge. Many crystals were used for jewelry and ornament also.

*Zion's Herald* says: "One of the impressive things about the greatest engines is the silence with which they do their work. The same thing may be observed in regard to the work of religious leaders or societies. Those which are most powerful are very quiet."

**The Bible is not a trifling book, but a magnificently brave, hopeful, and cheerful one. It is like a tonic, or a breeze from the mountains, or the shadow of a rock in the desert, or a song in the night, or cold water to a thirsty soul.**

**W. F. McDowell.**

## Selected Articles.

### Not a Business, but a Ministry.

THE assertion of Francis Truth, that the business he has been carrying on in Boston is substantially the same as the work in which Christian Scientists are engaged, was brought to the attention of Mr. Alfred Farlow, a recognized authority on matters pertaining to Christian Science, last evening, and he made the following statement:—

"The practice of magnetism must of necessity be further removed from Christian Science than it is from any other system of curing the ills of the flesh.

"The method of the magnetizer operates either through personal contact or the action of human will, commonly called hypnotism.

"The use of a handkerchief and manipulation by personal contact with the patient would hinder the practice of Christian Science, which recognizes no power but God.

"The magnetizer sometimes claims that his power is from God, and he may indeed believe so, yet his practice is considered by himself and by others to be simply a method of curing disease.

"I have never heard it claimed that this practice would make one better spiritually. I have never heard the practice of magnetizing people advocated as a form of religion or Christianity.

"Christian Science has for its purpose the reformation of mankind, and advocates the practice of pure and holy living as a means of harmony to both mind and body. While the Christian Scientist recognizes the healing of the body as a part of the result of his Christianity, yet this is secondary, and considered of far less consequence than the moral or spiritual regeneration of men.

"The prime object of Christian Science is to establish Truth. If the patient of a Scientist is made better morally by the influence of the healer, health follows as a natural consequence. Through the mental impartation of the thought of Truth to the patient he gains moral strength, which he could not otherwise have. Thus the prayer of the Scientist, giving the sinner increased faith in God, lifts him out of his sin. Through the understanding of this Science the power of God is brought to the patient and the power of evil is broken.

"Christian Scientists do not advertise for business nor solicit patronage. They quietly wait for those who call for their service.

"Some sensational advertising has been done by people calling themselves Christian Scientists, but such practice is not indorsed by true Scientists. To the loyal Scientist the work of healing and teaching is not a business but a ministry."—*Boston Globe.*

### Christian Science Testimony.

*Editor Press:*—One commendable characteristic of the Founder of Christianity, Jesus Christ, was the authoritative manner in which he spoke. We as Christian Scientists believe that he understood what he was talking about, and that his prophecies will be fulfilled. We give to every one the right to interpret his sayings according to their own light, and would say of no one that he is "a hopeless dupe or a rascally impostor" because he interprets the Scriptures differently from us and believes the Bible is true and that he has a right to expect the promises to be fulfilled. A mathematician may make a statement that a novice does not understand, but who would condemn the science of mathematics because a child has failed to demonstrate all the rules? The child rejoices that he is able to prove a part of the principle and he knows that a better understanding of the principle will solve all problems. So in Christian Science, when every individual gains a better

Digitized by Google

understanding of God, there will be a fulfilment of the promises of our Master, but at present we are very grateful for what we have been able to accomplish with our little understanding. The Christian Scientist does not want to argue for argument's sake, but prefers to present facts, as requested in your editorial of March 13.

We agree with our editor that "the educated world demands concrete results," and we are pleased to furnish a few of the many instances of healing in Christian Science. These are not instances that occurred in some far-away country or in some dark corner, but here in Dayton and vicinity. These individuals are willing to make affidavit as to their healing. On application their names and addresses will be given if you desire to call on them personally.

One of our business men testified: "My daughter was taken very sick. I summoned a prominent physician in this city who pronounced the case typhoid fever. A second physician was called and he agreed with the first that she had the fever. All was done that they knew how to do, but the child continued to grow worse and got so bad that we had no hope of her getting well. We had heard of Christian Science and as a last resort decided to try it, with the result that in a short time the fever was overcome and she was restored to health."

A brother of this man, and a member of the same firm, stated that he had been healed of severe stomach trouble in Christian Science.

A third brother states that he had been in poor health for about ten years. During this time he was under the care of some of the best physicians in this city and one in New York City. He had met with an accident in a foundry. These physicians stated that he had liver trouble, lung trouble, and Bright's disease. He is now the very picture of health, and states that it was Christian Science and that alone that healed him.

Another man, engaged in the grocery business in this city, says: "My wife had been in poor health for some time, afflicted with neuralgia of the heart and nervous chills. We tried different physicians and many patent remedies, but it was not until we sought Christian Science that she found relief and was perfectly healed. This was ten years ago and within this time we have taken no medicine.

The application of Christian Science in surgery was spoken of by an elderly man who met with a serious accident last fall, breaking the hip-bone. (At the present time the setting of bones is left to the hands of a surgeon if so desired.) Aside from the setting of the bone this man stated that the case was conducted by a Christian Scientist. There was scarcely any manifestation of fever and the pain was soon overcome. In five weeks the surgeon stated that the union was complete. They pronounced him the banner patient of the hospital. He was fully three weeks ahead of the usual time for a young man in good health, though he had been in poor health for several years previous. He came out a better man physically than he had been for several years before.

A young lady states: "Soon after I graduated at the High School I became afflicted and was an invalid for seven years with spinal trouble. My suffering became so intense and nervousness of such high attenuation, that my parents bored holes in the floor and put the bedstead posts on the ground, thus avoiding the jar of the floor in walking across the room. My chin was drawn down against my breast. It required several hours each day for my mother to pad me in bed, using a number of small pillows. The best medical aid that we could obtain was summoned. All hope of ever being well again had fled. In this dark hour of earthly experience, when all material means had failed, I heard of Christian Science, and through its beneficent influence was healed. I was a living marvel when again seen walking on the street. To-day I am happy, and enjoying good health, all due to this Truth."

A young man gave his experience: "From May, 1890, to January, 1893, I was confined to my bed with hip-disease and bone scrofula, constantly taking medicine and under the care of the physician. My suffering was so intense that morphine was administered every hour and a half, and even this failed to relieve me. No one thought I could live very long. In this critical condition our attention was directed to Christian Science as a last resort. I gradually commenced to improve; the morphine habit was soon overcome; the disease gradually disappeared; two ossified joints were healed. To-day as you see me I am enjoying good health, and can walk several miles without the aid of crutch or cane."

A lady spoke of her healing: "For twenty years I was afflicted with bone scrofula, and had two operations performed at the surgical institute at Indianapolis, Ind., and one at Hot Springs, Ark. I was under the care of the very best physicians, and tried almost every remedy recommended for this disease, but not until I found Christian Science was I healed. I have now been free from this terrible disease for seven years."

A gentleman in the middle walk of life stated: "In our family consumption seemed hereditary. All the symptoms of this dread disease were manifesting in my body. I thought to study *materia medica,* hoping to find something that would help me, but only grew worse. Very reluctantly on my part, through the earnest solicitation of a brother, did I commence to investigate Christian Science, but to-day I am a well man, due to this Truth." He further stated that the healing of his wife in Christian Science was something remarkable. For ten or eleven years she was afflicted with sciatica, and had become quite an invalid. After all material remedies were exhausted she tried Christian Science and was healed.

My attention was called to a case of inflammatory rheumatism. A lady stated that she was taken very sick and the doctor was summoned. "He said that I had inflammatory rheumatism, and could not expect to be much better under six weeks, and it would probably be three months, and then I was likely to be left a cripple. My suffering was so intense that morphine was administered every fifteen minutes at first, and then every hour for one week, but the suffering did not abate, and I continued to grow worse. In this terrible condition, when *materia medica* did not ease me, I sought Christian Science and at once experienced relief, and soon was healed and not left a cripple."

"I was an invalid for eight years," said another lady, "with a complication of diseases. Different physicians were consulted, and some of the diseases they stated I had were cancer of the stomach, heart disease, lung trouble, and female trouble. After a long period of drugging, magnetic treatment, and electricity, I continued to grow worse. Finally I asked my physician if he thought I would ever get well. I requested him to tell me frankly. He replied there was nothing in *materia medica* that would ever heal me. It was in this dark hour of my life that I decided to try Christian Science, and through this means I have been healed."

"For sixteen years I was an invalid," said a lady, "suffering from what the doctors pronounced nervous prostration, spinal trouble, stomach trouble, and female trouble. I tried many remedies, but was not healed until I sought Christian Science."

A man testified: "For thirty years I was afflicted with asthma, and for five months I could not lie down. All the sleep I got was while sitting in a chair. Finding no

Digitized by Google

relief in medicine I decided to try Christian Science and was healed."

A lady stated: "I had dyspepsia for twenty-six years; rheumatism for eight years, and wore glasses for nine years. During this time I tried many different physicians in this city, but was unable to get relief until I found Christian Science." She further stated that through Christian Science her son-in-law was healed of drinking and freed from the curse of intoxicating drinks.

A man testified: "Through Christian Science I was healed of a severe case of hemorrhage of the bowels."

A lady whose husband is a practising physician in this city, states that Christian Science healed her of nervous prostration that medicine could not reach. She says, "My husband will verify this, though it be against his own practice."

The writer's own experience: "I had been a constant sufferer for some time. Both allopathic and homœopathic physicians consulted stated that I had nervous prostration brought on by hard study. Their remedies were taken and advice closely followed, yet in spite of all this I grew worse. I reached a point that my parents did not think I could live more than a few days. At this dark hour I heard of Christian Science, and through it was restored to health."

We would have you distinctly bear in mind that those healed in Christian Science have no unkind words for the doctors that once attended them, for they believe they did all they knew how to help them. In almost all instances of physical healing in Christian Science the individuals are bettered morally and spiritually; they have more confidence in God and the Bible promises, and acknowledge the Way pointed out by Christ to be the only Way. Who would throw the first stone at this class of people and condemn their Christ-like teaching? Would it not be better to first see that your own teachings bear such fruit? Jesus said: "Many good works have I shewed you from my Father; for which of those works do ye stone me?"

Jesus could help those who wanted and needed help, but not the Scribes and Pharisees. To those individuals who honestly, truthfully, earnestly, and unselfishly desire to know the Truth, free from the spirit of argumentation, we would say, take the Bible and "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and read and study them together, with an honest desire governing you, and you will be led to a better understanding of the Truth, not away from God but brought nearer to Him.

LLOYD B. COATE.

## Personal Experience in Christian Science.

WHEN I hear people speak of their gratitude for the benefit they have received through Christian Science, a sense of sympathy fills my thought because of the abiding consciousness of my own debt of gratitude for the measureless comfort and help that have come to me through this wonderful Science. Not alone for the physical healing, although that has been great—greater than I have ever spoken, because I have always turned from contemplating one picture of bodily suffering that stood before me until it was wiped out through the action of Truth, as revealed through "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, our brave, heroic, gentle, loving teacher, guide, and friend.

Religion in my childhood's home was never rigid, austere, or compulsory. It was a Christian home, characterized by the simple faith that we find so strongly reflected in the life and writings of our own beloved Whittier. I always believed in prayer. It came naturally to me, not verbal prayer,—I do not remember that I ever prayed aloud but once in my life,—but secret, silent prayer, which seemed to be a natural supplement to the atmosphere of that early home. It was a prayer of earnest faith with no doubt in it. I fully believed that God heard and answered. This belief received a severe shock from a later experience, when day by day, week after week, and month after month, for two long years, earnest prayer was constantly made for the preservation of a beautiful, useful human life, when the Church united in the same petition, and our minister, loving with deep reverence the one whose frailty was so apparent, daily asked God to spare this life, that its usefulness might be continued, and yet the end came, with no evidence that a single prayer had ever been heard.

I had never been strong, and now both health and strength failed—in fact, nothing was left but courage and hope. I believed in God as earnestly as ever, but the heart of prayer was crushed. To occupy time and interest thought, I now took up and faithfully followed different lines of study. Oh, the diligent labor of those years, trying to win something that would impart a sense of security and satisfaction! This inward restlessness was characterized outwardly by a desire for change,—change of scenery, of association,—and *materia medica* would suggest travel and change of climate. During a period of less than eight years I had crossed this continent, or a large part of it, eight times, beside many shorter journeys, urged on by the hope that somewhere I might obtain that which I seemed to have lost—a settled peace.

I had heard of Christian Science, but thought it was just a fine theory, a beautiful study, and I was tired of fine theories and beautiful studies—tired of the rudderless ship of human expectations and disappointments. During these years I was often in Grand Rapids, and upon one of these visits heard that the Christian Scientists were holding Sunday services in Good Templar Hall. With a little wave of hope, I determined to go, and the following Sunday found me an interested listener there. Later in the day, when the question was asked: "How did you like it?" I readily replied, "I like it. I found real comfort there, and did not want to come away." I do not think I comprehended a single statement that was made, but I had caught the ring of "Peace, be still."

I continued to attend these services, purchased a copy of the text-book, Science and Health, and began to seek for myself. Now, I had really found something to occupy my time, to divert thought, yes, to correct and guide and govern it. So many old beliefs to be unraveled, and cast out, but loving, unerring Wisdom waits patiently upon human effort, and the encouraging Light that illumines the way, never fades from consciousness. Thought began to escape from personal environments and to find greater freedom. The physical healing of which I stood so much in need did not come at once. The change was slow from disease to health, but one after another the old troubles, which were called organic, and which had not yielded to *materia medica*, electricity, hygienic treatment, and careful nursing, disappeared, and the rest from unrest, from pain and suffering, and the joy and peace that have come through this divine rule of healing, are things to be truly grateful for.

The deep thankfulness that came to me at this time is beyond human estimate, as a lingering doubt that had so long shadowed my consciousness was removed by this unmistakable proof that God's saving help can be brought into daily life to heal the sick. At this time the physical healing had not been demonstrated in my own experience, and this was the first proof I had witnessed of the Omnipotence and Omnipresence of God in destroying disease and restoring the sick to health. It was no longer an uncertain Saviour and a doubting disciple, but the risen Lord—the loving Christ whose tabernacle is with the children of men.

## Mushrooms.

THE *Herald* of February 5, gave a report of a banquet given at the Westminster by the Mycological Club of Boston. The club numbers about five hundred members and there were about two hundred guests present. It stated that mushrooms were served in eight different courses, and that mushroom toasts, poems, and prose articles followed. Two water-color pictures of mushrooms were given as prizes for the best paper on the subject.

That there is great interest in the study of these curious fungi, is proven by the enthusiasm of the students who are in communication with foreign clubs. The researches of all have discovered and recorded about a thousand varieties, many of which are edible, some of which are curious, and others very rare.

There is one species which has been found nowhere else in the world but on the Lynn shore. One variety is quite large and luminous enough to light faces in a dark place. Another luminous kind grows on olive trees and gives light enough to read by. One which is handsomely shaped and edible grows in tanbark, others grow on trees, and one is found only near or under railroad tracks. Many varieties are found in pastures, fields, and vacant lots. One is said to taste like lobster, another like beefsteak, another like chicken. They seem to imitate different kinds of flesh food.

A lady near Boston thought she would like a bed of mushrooms in her greenhouse. She procured some spawn and it was planted. There was no sign of life that season or the next, but two years later, the whole greenhouse was alive with them in every crack and corner. They had even displaced planks which came in their way. The lady's surprise was great. She found such an abundance of tithes in her storehouse that there was hardly room for them.

She consulted an experienced mycologist who said the mushrooms were edible, and she had no trouble in disposing of her crop, which lasted several weeks.

In a book called "A Diplomatist's Wife in Japan," a statement is made, that the Empress Dowager of Japan amuses herself and others by hunting mushrooms. The dress of both ladies and gentlemen who participate in these "toadstool picnics," is quite minutely described.

The symmetry of form and beauty of color of many of these fungi are a delight to the eye. About three hundred varieties have been printed in water-colors and have been on exhibition and will be again this spring on Saturday afternoons at Horticultural Hall.—J. M. R.

## Twenty Blind Girls "See" Miss Terry Act.

WHILE Miss Ellen Terry was at Washington recently, she visited the Congressional Library and took great interest in the pavilion of the blind, and listened with much astonishment when the superintendent said:—

"I am in hopes that in time we may secure free sittings for them in the theatres, as is done for them now on the Continent, where they can hear and enjoy the standard plays."

"But would they enjoy it?" asked Miss Terry, "when they could not see the acting?"

"Oh, yes, indeed," answered Miss Giffin. "Perhaps you do not know it, but the loss of sight of the eyes is largely made up to those who are thus afflicted in the marvelous sight of the mind. Their imaginative powers are wonderful, and their keen minds picture all that they hear so vividly that I sometimes think they realize more fully what is going on about them than they would if they saw it with natural eyes."

"Well, then," said Miss Terry, "let us, you and I, inaugurate in this country the custom of sending the blind to the theatres. I will send you the tickets for as many as you think would care to go to hear me in 'The Amber Heart,' Saturday afternoon, and then you can bring them."

On the next Friday the tickets were sent, according to the promise, and a happier party was never seen than were the twenty blind persons Miss Giffin took with her to the theatre the following day. Excellent seats had been reserved for them, and all during the play they listened with rapt attention. So acute were their ears that several times during the afternoon when Miss Terry turned her face toward them in speaking they would whisper excitedly to one another, "See! She is looking at us; she is saying that just to us!" When the play was over, at her invitation they gathered in one of the boxes and she came down to meet them. She sat down among them while each one lightly passed her skilful fingers over her face and called her their "Beautiful, beautiful Ellaline," and poured out their gratitude to her for what they declared was the happiest afternoon of their lives.

## The Birthplace of Mary Baker Eddy.

**Reproduced by the Aid of Mrs. Eddy's Information, Photographs of Site, and Authentic Data.**

THIS is the title of a well-executed etching from an original drawing by Rufus H. Baker. It restores on paper the Baker homestead as it appeared in Mrs. Eddy's girlhood. Now the site is but a tithe of the old farm, and only a few fruit-trees remain to suggest the once fine orchards.

This picture has been made possible mainly through Mrs. Eddy's kindly assistance.

The etching is printed in black and sepia to meet a preference in tints, and can be obtained at the following prices:—

Artist's Proofs . . . . . $7.50
These are the first prints, are on India paper, and limited in number.

India Proofs . . . . . $5.00
Later prints on India paper.

Plain Proofs . . . . . $3.00
Prints on plain rice paper.

Address, RUFUS H. BAKER, 88 North Main Street, Concord, N. H.

### Supplements to the Sentinel.

The following supplements to the *Christian Science Sentinel* have been issued.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: a Lecture. By Judge Joseph R. Clarkson of Omaha, Neb.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

The extremely low price at which the supplements are issued enables the workers in the Field to give them the widest possible circulation. Orders for supplements may be assorted as desired.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Church By-law.

BOTH the husband and wife shall pay tuition for class instruction; only one of them shall teach classes in Christian Science—and that one shall be elected by the *two in one*, viz., both husband and wife; any jargon as to which of those shall be teacher, may exclude the jarring one from his or her office in church.

## From the Prisons.

FROM many parts of the Field we hear of a good work being done in the jails and penitentiaries. We have from time to time published reports of this line of work. We have also published a number of letters from persons confined in the jails and prisons, some of which have been most interesting and touching. Therein we have read of natures transformed by the light of divine Love which has penetrated the thick walls of the prison, and shed its regenerating rays into the darkness of the prison cells.

Men and women who, according to the world's estimate, are criminals, and who, indeed, were self-condemned as such, have been suddenly awakened to the fact that in the reality of their being they are not abandoned and hopeless children of Satan, but children of God, whom they found to be a loving Father, rather than a Monarch, whom they must approach with fear and distrust, lest in His anger He spurn their petitions for mercy, and cast them forever from His presence.

They have learned from reading Christian Science literature placed in their hands by our earnest co-workers, that they are not shut out from the radius of Infinite Love because they were placed behind prison bars.

When they grasped the teaching of "Science and Health with Key to the Scriptures" that God is Love, always has been and always will be; that as such He is eternally their Father—nay, even their Mother also; and that this true and tender relationship could never be really severed, hope sprang anew in their hearts and began its regenerative work of chasing away the dark shadow of doubt, distrust, and despair, and cast a new and brighter halo athwart their dismal pathway. They suddenly, unexpectedly, and joyously found their faces turned Zionward, and read, for the first time, with an understanding of their meaning, those tender words of Jesus: "I was in prison and ye came unto me. . . . Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."

As an apt illustration of what we have above said, and as showing how deeply they feel who have been thus touched by the hand of Love, we gladly publish the following letter written by a prisoner in the penitentiary of Nebraska, to a Christian Scientist through whose ministrations he was brought into the Light of Truth:—

*Dear Lady and Sister*:—I received the *Sentinel;* also your epistle and perused the contents with much pleasure. I wish to express my gratitude for the interest manifested in my welfare. You are correct in your conclusion as to the influence Christian Science has upon me, for I am convinced of its Truth; not merely because you have said so nor because Mrs. Eddy has written thereof in the book; but through a deep study of the same myself, by thinking, reasoning, and comparing its teachings with those of our Master and the apostles. But it is only within the last few weeks that I have grasped or understood the Principle that runs through the two books,—the Bible and "Science and Health with Key to the Scriptures." The thought of Life has at various times come to me, but before I came here to live I had reached the conclusion that the seat of life was as great a mystery as it ever was, notwithstanding all the light and knowledge the world was boasting of. That the solution would be reached at some time I had not the least doubt, but of course I thought it would come through matter, and that life was in matter. I did not know that the Key had already been discovered. Even after my conversion to the teachings of Christ, when I knew that those teachings and the life he lived was the only way for me to be saved, I was not satisfied that the interpretation of what he taught or of his life was correct, for it seemed to me it was contrary to them. That he had the Key to the problem of Being or Life I knew, but what was it? where was it to be found? were questions unanswered. That he taught it to his disciples I knew from reading the book of Acts and the life of St. Paul. My private thought of the whole was—up to the time Christian Science found me—Jesus Christ was the Son of God, and he was sent to save; that is, he came to show men how to worship God and how to live as God intended that man should live. Now as to the seen and the unseen; the real and the unreal; the spiritual and the material; and the temporal and eternal, I will leave until we can have a "face to face" conversation. Fear not, dear sister, for me. I stand ready at any time to give a reason for the hope that is in me. Trusting that all may learn the fact that Life is God, the Father of us all, I am looking forward to the clearer realization of the Truth mentioned in your epistle.

C.

The intelligent grasp the writer of this letter has made of some of the deeper meanings of God and Life, and man's relation thereto, as the result of his reading of the text-book, is both interesting and instructive. It shows how receptive to spiritual Truth is the mind which has discovered, through sad experience and disappointment, the hollowness of mortal existence, as such. Like the Prodigal Son, such an one is ready to return to the Father's house after learning that the supposed pleasures of sensual living fit one only for association with swine (type of sensualism) and leave one only husks as food. Then it is that when one grasps the thought of God as all-present Love, he is ready to turn from the swine and husks, for he has become aware that the outstretched arms of the Father were always ready to receive him, and it remains only for him to throw himself into their loving embrace.

He has caught the conception that God, the Father, is the Principle of his life, his being; that this relationship is eternal and therefore inseparable by prison walls, or any other barrier, and that even though physically confined he is spiritually free, as a son of God. Thus is he lifted from the gloom of his former life, encouraged to reform his ways, and reach out after the true life. He is immeasurably aided in this effort by the fact that he has seen the practical effects of the Christianity of Science in healing sickness and removing sin; nay, he has experienced it in his own person, and thus has he been brought into a realizing sense of the Father's nearness and pity and loving-kindness. He knows that through this awakening he has dropped off many conscious sins. He is aware that to sin is profitless and foolish. If he has had criminal tendencies, to further indulge them he knows would be suicidal. If he had been brought into the condition in which Science

Digitized by Google

found him through the influence of intoxicating liquors (and how many myriads have been finally sent to prison by this means) he knows that he is no longer in danger therefrom, for Science has utterly destroyed the habit; the desire is gone.

This rough outline speaks a true history of many cases, as all may learn who so desire.

Through the power of divine Love the prison doors are being opened and the captives set free.

## Semi-annual Lecture.

THE semi-annual lecture of the Mother Church—The First Church of Christ, Scientist, in Boston, Mass.,—will be given by Edward A. Kimball, C.S.D., of Chicago, on Tuesday, April 24, at 8 o'clock P.M., in Tremont Temple.

All are invited to attend.

# The Lectures.

### At Detroit, Mich.

Detroit Opera House held an interested audience yesterday afternoon (Monday, April 9) to listen to the free lecture by Edward A. Kimball, C.S.D., of Chicago, an expounder of the doctrines, promises, and accomplishments of the Christian Science faith. Every seat in the parquet and first balcony, as well as in the boxes was taken and many people had to remain standing during the two hours of the lecture. Mr. Kimball is a member of the Christian Science Board of Lectureship.

The lecturer appeared upon the flower-bedecked stage accompanied by Judge Alfred J. Murphy, who made a graceful speech of introduction. Judge Murphy acknowledged the honor he felt upon being selected for such a purpose by people with whom he had little acquaintance, but admitted that in these days of broad thought and wide tolerance no man can afford to set himself above his fellows, no matter how far he might differ in opinion and belief.

"I would not be honest to those who have honored me by assigning me to this post," said he, "if I did not here publicly assert that at present I dissent from the principles and practices that will be expounded to you to-day. It is written that 'ye shall know the truth, and the truth shall make you free.' The absence of intellectual freedom is the worst form of human slavery. We are fortunate in this blessed land of ours that free speech is a privilege granted to every one, and this permits no restrictions to be placed upon every honest movement of man. To-day we will give hearing to the explanation of a subject of grave importance. He who comes before you with this message of great promise is a man whose personal worth is such as to command our reverent attention and respectful consideration."

Mr. Kimball is not an orator. He indulges in no flights of passion, neither does he attempt brilliant sayings. He talks slowly and earnestly, and impresses one as being deeply filled with the responsibility upon him and as being wholly sincere. Only on one or two occasions did he bring smiles to the faces of his hearers by humorous references. For the most part all he said was very serious. He did not attempt to discredit those who held to the belief that Christian Science was no science at all, nor did he retaliate on the critics who have reviled the new creed. All his references to the practice of medicine and surgery was in the way of repeating criticisms made by prominent physicians themselves. He asserted, by this authority from the ranks of the medical profession, that medicine was not a science because it is not founded upon a single unwavering, indisputable fact. It is constantly changing, is always altered by experiments and theories, has a long list of so-called "incurable" diseases, and the doctors themselves seldom agree upon any question of serious import.

*Detroit Free Press.*

### At Montrose, Col.

The lecture last Sunday afternoon (April 1) by Judge Joseph R. Clarkson, of Omaha, was, as had been promised, an intellectual treat. The Opera House was well filled by an appreciative audience, many people coming in from the surrounding country to hear, and to say that all were well pleased is drawing it mild.

The Judge is an able and entertaining speaker, and held the closest attention of the audience from the opening to the close, the lecture lasting an hour and a half. The talk was scholarly and logical throughout, and showed the gentleman to be deeply in earnest and perfectly master of his theme. His subject was "Christian Science, the Kingdom of Heaven at Hand." The address was a straightforward statement of the fundamental principles of Christian Science, and must have set at rest in the minds of his hearers the vague impressions that it was something un-Christian at least, and might possibly have horns. Many of the stock objections so often urged against it were shown to be absolutely without foundation, and the what, where, when, and how of the immediate question under consideration were clearly presented.

Such a lecture cannot fail to have an elevating, uplifting influence upon all who hear, and its effect will be felt in this community.—*Montrose Enterprise.*

### At Colorado Springs, Col.

The Opera House last night (Thursday, March 29) was crowded to the doors by those who went to hear the lecture on Christian Science by Judge Joseph R. Clarkson, of Omaha, Neb. All present may not have believed as the speaker did, but none could for a moment have doubted his seriousness.

The speaker was introduced by Mrs. Ella P. Sweet of Denver. In introducing the speaker she said:—

We have assembled here to-night to listen to a lecture on Christian Science. Many who are here are members of this church and many have come to listen to the explanation of this Science of which so much has been said and written. You are all welcome. I take great pleasure in introducing to you Judge Joseph R. Clarkson of Omaha.

*Colorado Springs Gazette.*

### Lectures at Other Places.

Decatur, Ill.—William G. Ewing, Sunday, April 8.

### Goodness and Manhood.

The older I grow the more I revere goodness—just plain, every-day goodness—having nothing heroical nor spectacular in it, for I think this is the gift of which God has been least prodigal. Intelligence without goodness may mean nothing higher than a prize-fighter, but goodness with strength and intelligence makes a man as he was created to be, an image of the Godhead. The most symmetrical man of this century was Mr. Gladstone, and his moral nature was as sweet and wholesome as his intellect and body were strong. In mind, in heart, in soul, in everything but physique and inches, he was a giant. But the salient feature in Gladstone's character, and what lifts him above every contemporary, was his moral earnestness. He was a good man, and his religious convictions formed the warp and woof of his nature.

## Reading Rooms Opened.

### At Detroit, Mich.

The opening of rooms in the Chamber of Commerce, upon the doors of which is the legend, "Christian Science Institute Offices," has centralized the work and made matters easier for both healers and patients in Detroit.

The Christian Science offices include five handsomely appointed apartments, three being *en suite* and two separate.

As one steps into the main office, or reception room, the good taste and expensiveness of the appointments are at once apparent. The floor is covered with an unusually handsome rug, the pretty tables contain Science literature, the chairs are inviting, lace curtains fall over the two windows and sweep to the floor. Every available space on the walls is covered with pictures, mostly illustrating religious subjects. A large picture of Jesus at the age of twelve in soft brown tones, opposite a portrait of Mrs. Eddy, Founder of the faith; a steel engraving of The First Church of Christ, Scientist, in Boston; a heavy bevel-edge mirror, and other features appeal to the eye.

Opening off the room to the right is Mrs. Knott's private office, where she receives and treats patients. Inside this apartment the elegance seems to increase. The floor rug is beautiful; the sofa modern and handsome; the chairs of the luxurious kind; and the desk designed for Mrs. Knott's personal use is simply elegant, highly finished, accompanied by a desk chair handsomely carved. On the top of this desk rests a pretty gold frame surrounding the face of Mrs. Eddy, and a gold mounted clock. Here, too, pictures abound, and a bookcase is filled with volumes of appropriate text.

Opening off the main office at the left is the secretary's office. Across the hall are the two reading rooms, one for ladies and one for gentlemen. The former is open day and evening, the latter evenings only. The ladies' reading room is attended by twenty-eight lady students, who give their services gratuitously, and so divide the work that each gives two hours per week. The literature is entirely of a Christian Science nature, and includes all the magazines and other periodicals of the day pertaining to that subject.

The people who visit the handsome offices in the Chamber of Commerce for the purpose of receiving Christian Science treatment, are from all walks of life.

*Detroit News-Tribune.*

### At Howard, Kan.

The little band of Christian Scientists at Howard, Kan., had tried many times to find a hall or room in which to hold services, but was always met with the same answer, "We don't want to rent," or, "We have rented." Just about the time the By-law regarding reading rooms was published, we started up street to make another search for a room, and to our glad surprise we soon found one. We were not long in fitting up the room for use. When the *Sentinel* came with the By-law, we were in our reading room and rejoiced to know we had heard the call and obeyed.

As we could not get another place in which to hold Sunday services and Wednesday evening meetings, we decided to use our reading room. So we purchased a beautiful little church organ, and now we have a pleasant reading room and a place to hold our services. It all came through being obedient to the By-law. How thankful we are to the dear Mother for this demonstration. There are only three members of our church living in Howard, several having moved away, yet there are quite a number who attend our church and expect to unite with it. We are always found loyal to our Leader and beloved Mother, Mary Baker Eddy.—MRS. JOSIE F. OSBORN, First Reader.

### At Neligh, Neb.

*Editor Yeoman:*—Will you allow us space for a few words of greeting to our friends of Neligh and surrounding country. Our reading rooms in the Atlas Bank Building are now so far furnished that we will open them for use Thursday. They will be open each day, except Wednesday, from 2 to 5 and from 7 to 9 P.M., and we invite all to visit us there,—all who wish to learn somewhat of Christian Science, what it is, and what it can do for them. All the books of Rev. Mary Baker Eddy will be upon our tables, also the periodicals issued by The Christian Science Publishing Society, 95 Falmouth St., Boston, Mass.

I find there are many who think the difference between being a Christian Scientist, or not being one, is in the using of medicine, or not using it. This is only the beginning, and something to which we give little thought. Faith in God is not learned in a day, and to trust Him in time of trial often calls for courage until we learn somewhat of His omnipotence.

We shall endeavor to bring out more of the practical and beautiful as time goes on, but now say "Come" to what is prepared for you through the little church in your midst.

HARRIET E. WERNER, First Reader.

*The Yeoman.*

### At Bloomington, Ill.

The First Church of Christ, Scientist, of this city has opened a public reading room in No. 307 Griesheim Building.

The ease and promptness with which Christian Scientists meet their growing needs without resorting to the customary methods used for raising money, is a matter of general comment. When any need arises in this body of Christian workers which requires money, a simple statement of the fact to its members is all that is necessary, when the need is immediately met.

An instance illustrating this occurred at a recent Sunday service at the Christian Science Church in this city. At the close of their service it was announced that the opening of a reading room was desired and an opportunity was given to those desiring to contribute toward the same. The response together with the basket collection of that day amounted to more than two hundred dollars. The result is the opening of the reading room above mentioned, where all Christian Science literature may be found.

The room is open from 10 A.M. to 4 P.M. daily except Sunday, and all are welcome.

*Bloomington (Ill.) Commonwealth.*

### At Reading, Mass.

The By-law regarding reading rooms came to us with such an inspiration of love that we began at once to look for a room. God blessed our efforts, and in a few days we found a very pleasant room in a new block situated in the central part of the town. The following Sunday, notice was given from the desk that the next Sunday morning's collection would be given to defray the expenses of fitting and furnishing the Christian Science Reading Room, which would be about one hundred dollars. The amount received was more than adequate to the need. In just three weeks from the night we read the By-law, our room was complete, and opened on Thursday, January 25. The fruits of this first week are only another proof of the guidance of our dear Mother and Leader, for which we are very grateful.—MRS. JULIA E. PRESCOTT.

### Reading Rooms at Other Places.

Lincoln, Neb.—Rooms 74 and 75 Burr Block.

Pasadena, Cal.—Stowell Block.

Lawrence, Mass.—Church edifice, Green Street.

Fort Wayne, Ind.—Odd Fellows Hall, 19 West Berry Street.

## Among the Churches.

### The Work at Camden, Me.

First Church of Christ, Scientist, in Camden, Maine, was chartered December 23, 1899, with a membership of sixteen.

Since June 25, 1899, Christian Science services have been held in Camden, in the Universalist Church edifice, a Christian Science Society having been organized November 6, 1896. This society, at the time of its organization, consisted of three students' students, two other earnest seekers after Truth, and a brave and loyal pioneer of Christian Science from a neighboring city as First Reader.

Services were held at first at the several homes of the Scientists, but divine Love soon led the way to a higher demonstration, and a small room, centrally located in the town, was secured. Loving hearts and willing hands uniting in the joy of working for the Master soon made ready this room for occupancy, cosily furnishing it with chairs, desks, pictures, mottoes, light, heat, and an organ. For some time it seemed wise to hold our meetings on a week night only, so once a week the regular Sunday lesson from the *Quarterly* was read, and a testimonial service held after this reading.

By February, 1898, our attendance had increased to such an extent that we were obliged to repair to a larger and more convenient hall. In this hall, on April 2, 1899, was held our first Sunday service. It was with hearts filled with joy and with praise on our lips that we entered our little hall on this Easter Sunday, surely to us the brightest and best of the year, and it was with hearts filled with love, peace, and gratitude that we returned to our homes after this service. Every chair which the room contained was occupied, and not until chairs were loaned us by a courteous and kindly neighbor, a physician by the way, whose office was in the same building, was our entire congregation seated.

Our stay in this hall, however, was of short duration, for by the following June we found ourselves again seeking more commodious quarters. Again divine Love met the need. A church building which had been unoccupied for many years stood ready and waiting for us, and just two months from the time we held our first Sunday service we were settled in this snug little church.

Realizing that the hand of Love had led us, we joyfully took up our duties in our new home and are daily striving to demonstrate the meaning of the real church.

A Sunday School was early organized and a church building fund begun. Steps have recently been taken to open a reading room.

LEILA M. BUCKLIN, Camden, Me.

### Church Site Bought at St. Louis.

The trustees of the First Church of Christ, Scientist, closed a deal yesterday through the Mercantile Trust Company's real estate department for a site for a new church, for which they paid seventeen thousand dollars cash. The lot is on the south side of Lindell Boulevard, about midway of the block between Boyle and Newstead Avenues, and is 152x213 feet in dimensions. Ninety feet of the ground was sold for the account of Miss Daisy Powell and the remainder for Mrs. Ada A. Van Blarcom. The congregation now holds its services in a building on Pine Street, near Ewing Avenue, erected about four years ago. Mr. A. P. DeCamp, chairman of the Board of Trustees, states that the congregation has entirely outgrown the present location, and will erect a new church on the site purchased yesterday, using the present building as a branch or down-town church. Plans are being drawn now and work will be commenced on the church very soon.

*St. Louis Daily Globe-Democrat.*

## From Our Contributors.

### April.

BY JULIA MICHAEL.

A LITTLE crocus bud lifted its head
  Up from a bed of brown,
And the sun smiled through from a bit of blue
  And shone on its yellow gown.

The golden bud from its pale green cup
  Bent down to the kiss of the sun,
And its petals flushed and its heart-beats hushed,
  At the touch of that mighty one.

But a cloud swept over the bit of blue
  And a curtain of rain fell down,
And the patters each told on the petals of gold
  Of April's dark, menacing frown.

And down with the rain came a sheet of sleet
  And it twirled with an angry swirl,
While it lashed the bud with persistent thud
  And twisted its leaves in its whirl.

Then down from the north came a blast so cold
  That it froze the roots in their bed,
And frosted the sap, and tore off the wrap,
  And snapped at the low drooping head.

But the kiss of the sun still lay on its leaves
  And a warmth in its heart of gold,
Untouched by the sleet and the rain-drop's beat
  And safe from the clutch of the cold.

So the crocus bud waited and grew from within
  For many a weary hour,
Till at last the sun came and calling her name
  Laid open the leaves of a flower.

### True Possessions.

BY CARRIE GLOVER NEWMAN.

NOTHING we really possess can ever be lost.

Many times thoughts arise that would cause us to be blinded to the fact that every sweetness, tender word, or loving deed, reaches and blesses some heart-hungry one, and all unconsciously to that one—so quietly does it enter—is touching a long-silent chord in the heart.

These little dewdrops of love steal tenderly forth, and *do* water the very roots that were famishing for just such little drops. In Christian Science we term them *thoughts,* whose mission is one of healing.

How careful, then, we should be, lest the temptation of unbelief in their native activity as comforters should possess us, and our resistance hinder the free course of feeding and clothing the destitute.

Mrs. Eddy tells us, in "Science and Health with Key to the Scriptures," p. 19, "The florist will find his flower, before he beholds its seed."

These words come strongly to consciousness in connection with the outpouring of divine thoughts,—realizing them to be true harbingers of comfort and good cheer,—fashioning the pure flower, making it spring forth so that we look upon, and really possess it, yet we have not seen its seed.

How often the stern, cold suggestions—calling themselves thoughts—try to gain entrance and fill the mind, sending out poisonous darts which hold and fasten mortals more firmly in the depths of despair and desolation.

Digitized by Google

We suffer much from unwillingness or indifference in detecting our brother's need and supplying it. The arrogant mortal nature would pull its skirts away, and blindly believe itself superior to its fellow creatures, or else believe them superior to itself, which is equally false.

No man's life is, can be, blessed, save as he keeps the heart basking constantly in the sunlight of Love, and pours out to humanity this rare sweetness whose lightest touch is healing and saving.

Those whose lives seem darkest and continually beset by all manner of evil temptations, have much need of this love, long-continued, faithful, unwavering, ready at each fall to take the hand and lift the burdens, thus helping to regain the sure footing so sadly needed, and, to their consciousness, so far from being realized.

Drop by drop, a little here, a little there each moment, may bring to these little ones an opening door into the affections, awakening harmonies which the true thought quickly discerns, and labors faithfully to bring into expression.

Such ones need the simpler manifestations of Good, those which can be more readily comprehended by them, from their present standpoint, the kind, generous forgiveness, the tender word, cheerful patience, and when we truly *know* our own hearts, and *their* needs, we shall be more careful of our brothers' and supply them even as we would be supplied.

Looking over my experience since knowing of Christian Science, I can truly say my life has had, through its healing power, burden after burden of unrest, disease, anxiety, fear, at first lessened, then by degrees lifted altogether.

I would say to every struggling one, no matter what the trials, or how often the mistakes occur, or how severe the chastening, your God, divine Love, whom you need and desire, will not lose you. In darkest moments when every mortal prop shall fail, Love is by your side, giving you your true possessions, and saving you from yourself.

## What a Wicked World!

BY T. B. BEACH.

OUR daily papers are teeming with the miseries and sins of humanity. Murders and suicides; robberies and cruelties; war, poverty, and famine. So the cry goes out, "What a Wicked World!"

Man's inhumanity seemingly reigns supreme. Our courts are filled to overflowing with criminal cases and divorce suits. Our ministers are complaining of empty pews and lack of spirituality of members of the churches. Sin seems *so* real, on every hand that we are prone to exclaim, "What a wicked world!" Why is this? Surely God does not ordain it so to be. This earth was formed for man, but God created no sin. So the world is reaping the fruits sowed by mortal man. The world is just what mankind makes it. Then the question comes, "How can this state of affairs be changed?" The remedy is at hand and it will eventually do the work. The philosophy of Christian Science comes to the rescue. Were the teachings of this Science understood and followed universally, what a change! We could no longer say, "What a wicked world!" We want more of the Christ Principle, Truth, and less phariseeism, more understanding of this divine Principle and less selfishness. We want but one God; and love for each other.

Christian Science brings to humanity the cure-all. Christ stands at the door of every one's heart and knocks, but often the door is shut and locked by sin. Christian Science has the key to open the door and let Love in. O, for a flood of this Science, this Christ Principle! It would drown all error, all inharmony. The same hand that distributed the loaves and fishes would feed the famished. Christ draws *all* men unto himself. So if our churches had more of this Christ Principle, more of this Truth that casts out fear, there would be no empty pews.

If this Science were embraced by all, there would be no sin, sickness, poverty, heart-aches, nor heart-breaks. Yes, the teaching of Christian Science brings harmony, it shows us the Truth that makes us free.

This Science is now a mighty river flowing through the land and will eventually become an ocean, boundless and fathomless as eternity.

When our feet are planted on the Rock upon which Jesus said, "I will build my church," we shall no longer say, "What a wicked world!" for the Kingdom of Heaven will be found in individual consciousness. The new earth wherein dwelleth righteousness will have been established, and Christ's second coming will be realized.

## Idol Worship.

BY M. H. N.

THERE is a story of a Chinese fisherman who for three successive mornings, drew in his nets empty. His scant supply of food consisted of only two small fishes. The smaller of these, he cooked and ate; but the larger, he prepared with much more care, using his last fuel to do so. Then placing the carefully browned fish on his best dish, he carried it to the temple, and prostrating himself before the idols, he laid his offering before the God of Plenty. He believed, by so doing, this god would enable him to secure the necessaries of life.

Who but those who believe in this idol worship, will not see the uselessness of such offerings to graven images? Yet let us pause for a moment and see if it is possible to find idol worshipers among our own Christian people.

Paul said, "In him [Mind] we live, and move, and have our being." Matter cannot enter mind, therefore, according to Paul's words, man must be spiritual and not material, or he could not live and have his being in divine Mind.

When man is cast into the prison of human suffering, he will sacrifice any price, often home and his last cent, to be restored to health and harmony by means of drugs. How many of your friends are at this moment prostrated before this material image? Perhaps you have been yourself, and had all confidence that drugs and material means would restore you. Thus we turn from the true God, the *only* source of supply, to materiality (graven images) and apply it to our material bodies, believing it to have power to relieve us of the discord or dis-ease, which has filled our consciousness, and hidden from our view the "house not made with hands."

We bow before the belief that drugs heal sickness; the Chinaman bows before an idol, believing it will restore to him what he lacks. Where is the difference? The world calls the Chinaman a heathen, and says he does not know the true God, who alone can supply. But what shall be said of him who professes to know God and that he is God's child? We think we are worshiping aright; so does the Chinaman. By what means, then, are we to judge who is right? By results only can we judge. When we can look beyond the testimony of the material senses to that perfect Being, whom Jesus came to present to suffering humanity, and can know and understand that God (Love) will, and does, heal now, as He did eighteen centuries ago, and can prove this in our own experience, then, and then only, can we safely say, "I am worshiping God aright." "For to be carnally minded is death; but to be spiritually minded is life and peace. Because the carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be."

Digitized by Google

## The Difference.

BY CELIA F. OSGOOD PETERSON.

THE difference between the ignorance of Christian Science and the understanding of it, is like the difference between groping timidly along a dark road, with the purpose and the end of the journey utterly unknown, and that of walking fearlessly along an illuminated pathway, conscious of a glorious purpose and an nd which, if still unknown, can bring nothing but Love.

"Science and Health with Key to the Scriptures" comes to us like the rousing and ringing message of Paul to the Athenians, when he found an altar "to the unknown God," "whom therefore ye ignorantly worship, him declare I unto you." No longer are we building upon the shifting sand of mortal speculation, but upon the immovable rock of Truth, against which the waves of error beat in vain. We know, even while we seem to be under a cloud, that it is only a negative condition we are facing, not a positive. At night, we are conscious of darkness, but in the morning, where is it? Nowhere. It never was a reality, only the absence of light. Evil is utterly negative—an absence, to our sense, of Good, and its seeming power flees before the declaration of the positive Good, as the darkness before the sun.

How can we do aught but rejoice when living in harmony with Christian Science? How can we be less than happy in this absolute freedom and security?

## Parable of the Prodigal Son.

BY Y.

ARE we not apt to consider our small demonstrations of no account, and to long for greater? Yet are they not the welcome of divine Love, showing us that we are on the right road,—the Home road?

In the parable of the Prodigal Son we read, "When he was yet a *great way* off" the father saw him, came to him, and welcomed him. It also tells us that the Father ordered a great feast prepared *at home* for the son. He did not bring the feast out to him, but it was there for him when he should have traveled the road and arrived at home, and we may infer that after the loving welcome, no time was wasted in looking back or wandering into side paths. Also, from the parable, it would seem that after the welcome, the father walked by his side all the way.

Our small demonstrations are Love's welcome at the beginning of the road, and from these, we can know of the feast that awaits our home-coming—our perfect realization of the One Mind. With "Fear not, for I am with thee," ever by our side, we shall not wander into side paths, or turn back to the riotous living of mortal mind, but press toward the mark, for the prize of the high calling of God, in Truth.

## A Letter to Mrs. Eddy.

THE following letter was sent to Mrs. Eddy with a painting of an Indian mother carrying her papoose.

Salt Lake City, Utah, March 28, 1900.

*Dear Mrs. Eddy:*—When I read the letter to a First Reader, in the March *Journal,* where you called the little fishes sweet thoughts, I knew you would be glad to see the mother-love in this Indian's face. I can see that when all the wrong thoughts about Indians are destroyed, they will not be called savages any more. Mamma says that my healing ten years ago did much to establish the work here. I do not remember it, but I hope God will always use me for Christian Science, then you will always love me, and I shall always love you. I am eleven years old.

Yours lovingly,

FLORENCE KIMBALL.

## Testimonies.

### Healed by Reading Science and Health.

When Christian Science was presented to me I had just passed through a siege of material beliefs, under the charge of *materia medica.* I had the constant care of a trained nurse for a year and a half, under the supervision of one of the best allopathic physicians of the city in which I resided. He tried all the latest methods in his efforts to overcome the troubles which seemed to resist all his efforts. At length after a year and a half he advised my being taken to a medical institution, where he hoped for better results. There, under the best care, I gradually regained enough strength to be able to attend to my own wants. In about six months I returned home, not well, but able to take care of myself.

Some of the former symptoms returned, and my physician was called upon again. He said there was nothing more he could do for me. He had tried everything that *materia medica* offered, and I must just bear the pain and hope for it to wear out.

At that time I received a letter from a sister living in New York asking me to come there and try Christian Science. She told me of one of her friends who had been ill for a long time and who was suddenly and completely healed through Christian Science treatment. This brought the subject to my notice. I was told it was a method of healing without medicine. This appealed to me, as I had lost all faith in medicine. I was glad to hear there was such a system of healing.

I went to visit a friend who had passed through much sickness but was not healed by the treatment of physicians. When I saw her at this time there was a great change for the better in her condition. I was astonished, and asked her what she had been doing to produce this result. She said she had been reading a book "Science and Health with Key to the Scriptures," and using what had come to her from it. She loaned it to me and said, "You read it and see if you can be helped." I commenced to read that wonderful book, and while reading it I said, "One has to deny their senses to believe what is written here." Unconsciously I spoke the truth. I said, "I will try." I began to deny the sense of pain and weakness. One day soon after, my friend proposed to walk to her mother's, a distance of a mile. I was astonished at the proposal, as she had been accustomed to drive everywhere. I responded, "I can, of course, if you can." So we started, keeping in thought the statement in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 179. "Mind is the source of all movement, and there is no inertia to retard or check its perpetual and harmonious action." Also p. 513, "No exhaustion follows the action of this Mind, according to the apprehension of Divine Science." We walked to the house, had a most enjoyable visit, and when we returned home, we found the statement was true, for there was no re-action or fatigue.

This was my first demonstration of the power of Mind over the body.

I continued to apply the teachings of Science and Health, and found I was gaining strength. In three weeks I went home, and the family were surprised at the change in me. I told them it had been produced by reading Science and Health, and applying the rules given therein.

My mother said, "It is a good thing for you. Send for that book." I did so at once and never, from that time, have I taken a drop of medicine or used an application of any kind. That was more than twelve years ago.

I did not realize what Christian Science is, but by obeying the directions given in Science and Health, I received the blessing, and as I went on I desired to know more of Christian Science as the religion of Jesus Christ. My heart

Digitized by Google

was filled with gratitude to God, and I desired to know something of the one who had brought this revelation to humanity. I began to learn who it was, and what she had endured in bringing Christian Science to the apprehension of mortals. I at last saw and felt the blessing of her love as it flows out to all people, to aid them in escaping the bonds of sickness, sin, and death.

As I see what Christian Science accomplishes in relieving sickness, fear, anxiety, and sin, I am daily more grateful that divine Love caused me to listen and hear the words of Life. Its beauty grows more wonderful as the understanding increases which makes manifest the reality of Love.

I had always been familiar with the Bible, but through the darkness of my experience it had become a closed book. I found that "Science and Health with Key to the Scriptures" could unlock it, and I received a new light, opening to my understanding the mysteries of the wonderful life and works of Jesus as the Way-shower.

Christian Science has been proven to me to be not only the healer of the body, but of the mind, bringing to it the Truth which makes one free, and leading to a higher understanding of God, which is the way to heaven—harmony.—ALICE SEWARD BROWN, Boston, Mass.

### Two Cases of Healing.

Fort Smith, Ark., February 2, 1900.

*Dear L.*:—I think it was about two years ago, or perhaps longer, that some one told me you had been a sufferer from asthma and that you had been cured by the help of a Christian Science healer. This was a surprise to me and a very happy one, too, for I had been suffering the same way and seemingly growing worse for several years. I had tried Christian Science at that time, but the relief was not very marked, though I had concluded it was the *right* way (Christ's way) of getting relief.

I continued with more or less earnestness, gradually becoming more familiar with the Principle of Christian Science, and after so long a time I, too, am able to report that I am well and the master, through Christ-Truth, of the insidious disease.

Please write me and tell me what was the result of your investigation, and whether you are free now. . . .

Lovingly yours, B.

Cripple Creek, Col., February 4, 1900.

*Dear B.*:—When I got home from work this evening I was somewhat surprised as well as highly pleased to get your letter. So you have heard about my Christian Science experience.

I will tell you how it was. While in Kansas I took plenty of medicine, "sure cures," you know. At last I had just one string to hold to. That was to go to the mountains. I came to Colorado and for four months I was all right. Then the trouble came back as bad if not worse than ever. You can imagine how I felt. A lady told me about Christian Science. I decided to try it. It was about six weeks before I was healed, but then I was all right. This was in September of 1896. In the spring of 1897 I went to work in a wet mine. My clothes would freeze on me every night when coming home, but I suffered no ill effects. I have not even used vaseline, and my hands are always in a better condition than any of my batching partners.

Christian Science, to my mind, is all right. Although from the tone of your letter, I am afraid that you know more of, and live nearer to, the Science than I do.

Lovingly yours, L.

### A Child's Testimony.

I would like to relate a demonstration in school work, because it may help some other little child.

It was a demonstration over my drawing at school. In drawing my per cent was not very high, it was about fifty or sixty. Every day I had to stay after school for drawing.

After a while I began to work it out in Truth. I said over and over again, "The beautiful, good, and pure constitute his ancestry" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 273), and that I reflected the perfect Mind. My drawing was changed from being the poorest to some of the best in the room. The teacher took my drawing book for a model for the rest of the school.

Christian Science has kept my little brother, sister, and myself well all winter, while so many of my playmates have been sick.

I do love our dear Leader and Mother, who has shown us how to overcome all error.

I am always glad when the *Sentinel* and *Journal* come, so I can learn how other children demonstrate. I am eleven years old.—RICHARD N. ADAMS, Reading, Mass.

### An Ever-present Help.

Words fail me to tell of my blessings received in Christian Science, and I have every reason to know there are many others who have received like proofs of the power of God. We are told "All things are possible with God," and in the giving of these testimonies of wonderful healing, the power is invariably attributed to God "who healeth all our diseases." Nothing is denied where we have faith to receive. We have but to take our God at His word.

I find that the testimonies at our Wednesday evening meeting have oftentimes given me great encouragement and strengthened me to believe that nothing is either too great or too small for Truth to heal, if we are only willing that patience should have her perfect work.

My healing of a lifelong stomach trouble, as well as very serious malformation of the eyes, was instantaneous. Since that time, nearly four years ago, I have never appealed to Christian Science for help, that I did not find it, and I am convinced that to leave *everything* to God is the only safe way.—M. W. G., Detroit, Mich.

### Helped by Christian Science.

About three years ago our sixteen-year-old son fell from a freight car and broke his collar-bone. He went to a physician and had the bone set. He then came home and went to bed without saying anything. When I went down-stairs the next morning he told me about it. The physician came at nine o'clock and found he had to reset the bone.

The physician had not been gone very long when the boy requested me to remove the bandage. He said he was in so much pain he could not stand it. We removed the bandage and then bound it up as best we could. I then gave him a treatment. I knew that divine Love was equal to all things. He experienced no more trouble. In ten days he went to work and his work was unusually heavy.

MRS. ALICE KIDNEY, Dayton, O.

### An Effectual Remedy.

I hope always to retain, and to add to, the sense of gratitude which came to my consciousness this week as I witnessed all the severest symptoms of grip, which had with previous attacks lasted weeks, entirely destroyed in six hours, so that the patient awoke from a restful sleep, dripping with perspiration, but no longer a patient.

I witnessed another case a few weeks since which was destroyed in less time.

To-day I was told of another case of severe symptoms of grip having been destroyed so completely in an hour that the sufferer sang to her friends beautifully for the following two hours.—N. M. DUNN, Watertown, Mass.

## Religious Items.

This interesting anecdote, pointing a moral, is given in the *Independent:*—

"A workman in Cooper Institute, having occasion to ascend a ladder to do some repairing in one of the public rooms, called to an old man, whom he happened to see standing by watching him, 'Here, old fellow, hold the ladder for me, won't you?' The 'old fellow,' started forward and held the ladder for the workman, while he climbed up and did his work. That unpretentious and willing old man was Peter Cooper. It was just like him. Peter Cooper's aim in life, and in the beneficent institution founded by him might well be characterized by the words, Holding the Ladder. Thousands of rightly ambitious men and women owe the possibility of their advancement to Peter Cooper. He has held, and still holds, the ladder, and hundreds upon hundreds of successful and grateful climbers, as they rise, bless his memory. We cannot all build such piles as Cooper Union, but *we can hold the ladder somewhere, somehow, for somebody.*"

*The Standard* of Chicago, representing the Baptist denomination in the West, publishes the following "Recipe for Trouble:"—

If anxious and depressed read Psalm 23.

If there is a chilly sensation about the heart, Revelation 3.

If you do not know where to look for the next rent money, read Psalm 27.

If lonesome and unprotected, Psalm 97.

If losing confidence in men, 1 Corinthians 3.

If pelted with hard words, John 16 and Psalm 2.

If discouraged about your work, Psalm 12 and Galatians 6: 7-9.

If all out of sorts, read Hebrews 12.

In an editorial on the faulty morals of the legal systems of punishing crime, the *Universalist Leader* says: "Those who would apply the principle of retaliation to all cases of sin and crime are disregarding the Divine method of dealing with sinners and criminals as made known in the words and example of Jesus. . . . The wicked man is in darkness. To keep him in that state, and to cause him to suffer for the wrong done while in that condition, may be a protection to society for the time being, but when he is given his liberty he will most likely return to his former course of life."

The (Unitarian) *Christian Register* thus disposes of a statement often heard: "When a man says that Christianity has had its day and that its usefulness is passing, he seems to be saying something. If the statement is true one of two things must be true: something better has taken its place, or the world is the poorer for the passing of Christianity. Looked at in this way we see that the statement is without meaning; for the world has not lost what is good in Christianity, and no better thing has taken its place."

How sure we are of our own forgiveness from God. How certain we are that we are made in His image when we forgive heartily and out of hand one who has wronged us. Sentimentally we may feel and lightly we may say, "To err is human, to forgive divine," but we never taste the nobility and divinity of forgiving till we forgive and know the victory of forgiveness over our sense of being wronged, over mortified pride and wounded sensibilities.

*Forward.*

The (Unitarian) *Christian Register* says that "when complaint was made that the influential classes in England kept aloof from the temperance movement, Dr. Martineau made reply as follows: 'The blame is not all on one side. In reading the temperance periodicals, which must be regarded as the organs of the body, I have seen with pain a superstitious abhorrence manifested toward the substance alcohol instead of directing that abhorrence toward the moral vice in the mind of the drinker.' "

In the New York (Baptist) *Examiner* Amos R. Wells has an article explaining how to make the Bible an available help in the storms of life. Among other things he says: "Every Christian would do well to read the Bible clear through with this sole purpose: to discover, and mark with some readily distinguishable sign, all passages that will be helpful in any kind of trouble. . . . As you mark your Bible, read and re-read the marked passages, until you have made them your friends."

"What would the Bible be to us," says the *New Church Messenger*, "if we did not know that its letter is simply the cloud in which the Son of Man comes to us? What possble interest could we have in these records of war and bloodshed if we did not know that they are God's pictures of the soul's conflicts and triumphs? Let us draw aside the veil of the letter, and try to learn something of use from this portrayal of internal history."

Rev. Floyd W. Tomkins in one of a series of articles being published in the *Congregationalist*, says: "Nerves are strange things, even to physicians. As a minister I am free to say they can be controlled in many cases by a pure, healthy trust in God, and by an active, happy, determined life. A nervous religion is abnormal. A balanced religion places self-control as its first necessity, and asks God for it, and *takes* it as from Him."

"The Wrong Way that seems Right" is one of the subjects considered in one of the departments of the New York (Methodist) *Christian Advocate*. The concluding sentence of the article is this: "Let every way be tested by this: Does it lead upward, does it make those who walk in it better, does it bring in a higher spiritual life? If so it is of God. If it leads downward it is the way of the wicked one."

Prof. Francis R. Beattie, in an article on Bible study in the New York (Baptist) *Examiner*, says: "It is of the utmost importance for all who undertake to teach the Bible in a public way to be effective readers. Much is lost in public service if the Scriptures are not read in such a way as to bring out the sense. No one could hear Spurgeon read the Bible and not listen closely."

The (Baptist) *Watchman*, in a very liberal editorial on "What Constitutes a Christian," says: "Very likely most of us would be surprised if we knew how many there are in every community who, though not regarded as Christians because they do not respond to the conventional tests, are nevertheless seeking to live a Christian life."

The following short, sharp sentences are from an editorial in the (Episcopalian) *Church Standard:* "Selfishness is perdition; the selfish man is lost now. Salvation is deliverance from this. This is the salvation that God offers."

John Stuart Mill said, "The Bible and Shakespeare have done more than any other books for the English language, introducing into the soul of it such grand ideas expressed with such sublime simplicity."

Rev. William S. Jerome, in a sermon published in the *Homiletic Review* says: "Our temptations fit us to do the work given us. Because of his fall, Peter could strengthen his brethren as no one else could."

Bishop E. R. Hendrix in an article on Jacob in the (Baptist) *Watchman*, says: "The self-conquered man is God's prince. He is an Israel, an Israelite indeed, who prevails with God and men."

"The essentials of a religion are the essentials of all religions, which are the acknowledgment of God and a good life," says the *New Church Messenger*.

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa.*

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Literature for Distribution.

The April *Journal* devotes two pages to a list of publications all of which are suitable for distribution among those whom it is desirable to inform regarding Christian Science. The following notice also is given, "that pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature to do a wider work."

The prices now are, for pamphlets: One copy, or more, 6 cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets can be assorted as desired.

Notice is also given that some back numbers of the *Christian Science Journal* may be procured at five cents a copy. Address, The Christian Science Publishing Society.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The per capita tax for the year beginning June 1, 1899, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 675 pp. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen: $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science: 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents: Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.

SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

THE BUSWELL TRIAL. 24 pp.

THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.

HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

**One copy or more, each, 6 cents: 12 copies to one address, 60 cts. Twenty-five copies to one address $1.15; 50 copies to one address, $2.25.**

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

### Political Events.

Senator Hoar of Massachusetts, the "father of Congress," delivered what is said to have been the greatest speech of his life in the United States Senate, April 17, on the Philippine question. Mr. Hoar has opposed the policy of his party in dealing with the Filipinos at every stage of its development, and in his great speech he embodied his views fully, supporting them by an appeal to the official reports and the history of the country. The speech made a profound impression on the senators and other hearers, because of its strength and of the high character of the great man who spoke.

The Washington press dispatches state that the special sub-committee on trusts of the House judiciary committee has decided upon two measures for destroying trusts. One is a constitutional amendment giving Congress full power to deal with trusts, and the other is a new anti-trust law prohibiting the interstate traffic in trust-made goods, prohibiting the use of the mails to concerns and their officials proved to be trusts, and other prohibitive limitations.

Mrs. Dominis, otherwise known as Liliuokalani, the ex-queen of Hawaii, will sail from San Francisco May 15 for her home in Honolulu. It is said that she is bitterly disappointed by the failure of her pension claim, and says she will never again set foot in the country which has treated her so unjustly. She is said to have an income of twenty-five thousand dollars a year.

Owing to the failure of the Sultan of Turkey to pay claims amounting to about ninety thousand dollars arising out of outrages suffered by American missionaries, the United States minister to Turkey has returned to New York and has offered his resignation to the State Department. Minister Straus declares that the Sultan promised him on three occasions to pay the claims.

The Brooklyn Democratic Club gave a Jefferson dinner on April 18, which was intended to be an anti-Bryan affair. Ex-President Cleveland sent a letter which was read, and ex-Governor James E. Campbell of Ohio delivered a speech, both of which were appeals to the Democrats to stick to conservative policies.

The grand jury of Franklin County, Kentucky, has found an indictment against William S. Taylor, the Republican acting governor, as an accessory before the act to the murder of his rival, William Goebel. Minor Republican state officers were also indicted.

The famous Calaveras sequoia grove in California which was bought a few weeks ago by a Duluth lumberman for $100,000 is now wanted for a national park by the government, and the owner demands $250,000.

The United States Supreme Court has decided that the stamp tax on express bills of lading must be paid for by the patron and not by the carrier, reversing the decision of the Supreme Court of Michigan.

Charles H. Allen, who was appointed governor of Porto Rico by President McKinley, has definitely accepted the appointment and the Senate has confirmed it.

Secretary Hay has notified Spain that the United States cannot accede to its claim on Sibutu Island and Cagayan Sulu of the Philippine Archipelago.

### Foreign News.

On April 21, British reports from the seat of war indicated that Lord Roberts had succeeded in getting his immense army into condition to advance in force, and advices from the same source show that the Boers were still besieging Wepener in great force and seemed to be prepared to stand their ground.

The British government has furnished the press with the text of Lord Roberts' reports criticising Lord Buller, General Warren, and other officers for their part in the Spion Kop affair.

Canadian manufacturers and traders are trying to secure a government appropriation to hold an industrial and art exposition at Toronto at the time of the Buffalo exposition.

The butchers' monopoly in Havana, by which certain favored men were permitted to fix the price of meat to suit themselves, has been abolished.

Russia's Asiatic possessions are three times the size of England's, but have only 23,000,000 inhabitants as against 297,000,000 subjects of England.

A deputation of Boers supposed to be en route to the United States to ask the President to aid them in obtaining peace, arrived in Holland April 16.

The University of Edinburgh has conferred upon Joseph H. Choate, the United States ambassador to Great Britain, the degree of LL.D.

Japanese immigrants have been pouring into British Columbia recently by thousands.

### Industry and Commerce.

The gross earnings of the Pennsylvania railroad and its connecting lines in 1899 were $152,169,106; operating expenses, $106,506,988; net earnings, $45,662,118. Passengers carried, 76,643,548. A dividend of 5 per cent was declared on the capital stock of $129,000,000 amounting to $6,465,000.

Louis Dreyfus, in an experiment recently made in Thomas A. Edison's laboratory to show the advantage of a new process of combustion, produced a heat of 5,400 degrees Fahrenheit, which in less than ten seconds completely melted a steel bar six inches long and half an inch in diameter.

Tennessee has become the leading phosphate producer of America. There are 248 valuable mines in the state, and over twenty-one thousand men are employed in the business.

It is estimated that three hundred thousand men will be withdrawn from the various industries of Great Britain before there is any decrease in the demand for soldiers.

Press dispatches state that the Vanderbilts have acquired control of the Reading railroad, together with its extensive coal mines.

It is said that nearly all the towns in Siberia are having arc lights for street use and incandescent lights for the houses.

It is estimated that the total mineral production of the United States this year will reach a value of at least $1,000,000,000.

Farmers in North Carolina are making tests of Japan rice with a view to raising it.

### General News.

Andrew Carnegie has promised the trustees of the Carnegie Library and Institute of Pittsburg to become responsible for $3,000,000, the amount estimated as necessary for the proposed extension and enlargement of the already fine building at the entrance of Schenley Park. The new building will be nearly six times as large as the present one. It will be 500x700 feet in size, and cover between six and seven acres of ground.

Between 1862 and 1873 George Peabody gave $2,500,000 to the trustees of the Peabody Donation Fund, which builds model tenements for London workmen. Since that time there has been added to the fund from the rents and interest $3,956,000, making the whole $6,456,000. The net gain for 1899 was $175,920. The number of rooms provided for workmen is 11,367, divided into 5,121 separate dwellings, and occupied by 19,157 persons.

A dispatch from Oaxaca, Mexico, says that another ancient city, covering several hundred acres, has been discovered near the Indian village of Teocaltiche in that State. The ruins are almost completely covered with earth, but the excavations so far made show that the discovery is of great archæological importance.

Fisk University, the great school for the higher education of the colored youth, has kept a record of its graduates, and nineteen twentieths are in professional work, over two hundred being teachers. It is stated that ten thousand colored pupils are taught each year by those who received their education at Fisk.

Dr. E. Benjamin Andrews, superintendent of the Chicago public schools, who was lately offered the position of chancellor of the University of Nebraska, has decided to accept the place. He has presented his resignation as superintendent of schools to take effect May 1.

New York firms have bought ten thousand Mauser rifles and five million rounds of Mauser ammunition from the United States government for shipment to Holland and Belgium. These rifles are a part of the armament captured in the Spanish war.

The 125th anniversary of the first armed resistance to British aggression by the minute men of Concord and Lexington and neighboring Massachusetts farms and villages, was appropriately celebrated on April 19 at both Concord and Lexington.

An African kopje is described as the stump of a hill—what is left of it after ages of denudation. It is almost invariably covered with a breastwork of boulders, which furnish a natural defence.

It is said that the Princess of Wales has given orders that nothing need be submitted for her inspection, or that of her daughters, in which birds are used as trimming.

While dredging in the river at Savannah, Ga., recently, the wreck of an old-type English man-of-war was found and several old style cannon have been raised from it.

The supervisor of the public school census of Chicago estimates that his work this year will show that the city's population is above two million.

The week of August 11 to August 18 has been fixed upon as the Old Home Week for 1900 in New Hampshire.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

## Natives of Alaska.

### A Distinct Race with no American Indian Blood.

NOVELISTS, poets, historians, magazine writers, and newspaper scribes have for years rung the changes on the theme of the North American Indian, writes a contributor to the *Providence Journal*. He has been the most talked-about man on earth. This prodigality of Indian literature has been confined entirely to the Indian of the plains. The subject has been an interesting and picturesque one, but not more so than that of the Indian of Alaska, about whom almost nothing has been given to the world. Fully as interesting, fully as unique, his origin just as shrouded in mystery as that of the plains Indian, he has yet been passed by as unworthy of the pen of the humblest hack-writer. A cruise of five months along the Alaskan coast, during which nearly all the larger coast villages and settlements were visited, has afforded the writer unusual facilities for observing the native of southeastern Alaska and learning something of his character, customs, and history. It requires but a slight acquaintance with these natives, who, for want of a better term, are called Indians, to convince one that they are a distinct race without a drop of the blood of the true American Indian in their veins, unless this has come about through intermarriage. The natives of this part of Alaska are not, strictly speaking, Indians, but are undoubtedly of Asiatic origin, resembling in stature, physiognomy, and many personal characteristics the people of Corea.

Tribal relationship between the natives of Alaska is not very close. They are divided into clans, two or more clans living in the same village, each having its own chief, who is usually self-constituted and has no authority whatever. He is, however, very proud of his office and always has a number of large, grotesque paintings across the front of his house, and a painted sign over the door announcing his chieftainship. This sign is often in verse written by some waggish trader who attributes to the chief the possession of qualities that are anything but laudable; fortunately for the trader, the trusting chief is ignorant of its meaning and proudly points to it, thinking that it contains a catalogue of his virtues. Often a totem pole with the animal after which the tribe is named surmounts it. A very curious custom still rigidly adhered to among these natives is that which prohibits the marriage of two members of the same clan. For example, a member of the Bear family cannot marry another of that clan, but her husband must come from the Crow, or Eagle, or Whale clan. The wife then becomes a member of the husband's clan.

Although it cannot be denied that the Alaskan natives lack the fine physique and proud and noble bearing sometimes met with among the red men of our Western plains, it is equally certain that he excels the latter in industry. Another virtue is his willingness to do his share of family work. He recognizes his wife as an equal partner, imposes no heavy burdens upon her, takes her advice in business matters, and is often guided by her. He possesses no little natural intelligence, is apt in intuition, a keen and shrewd trader, and never forgets to ask a little more than the white man would for the same article. Many of them are engravers of wood, silver, and ivory ornaments that exhibit no little skill and artistic merit. From the wool of the mountain sheep the women, especially of the Chilcat tribe, weave blankets that are far better and more durable than the blankets of civilization. These blankets are not used on the beds, but are worn on the back, very much as the Indian of the plains wears his, and even in this way only on festal occasions like dances and "pot laches." They are often artistically worked with various colored wools in Indian hieroglyphics, and although a sealed book to the paleface, they convey much meaning to the Alaskan braves, who will rarely consent to part with a good blanket for less than $75 or $100, and as one represents six months' work for an industrious woman, this would not seem to be too high a price.

From the fibre of the spruce and from grasses the women make baskets handsomely decorated in various colors, and some of them so closely woven as to be impervious to water. The rapid spread of civilization is shown even in the character of the dyes the Indians now use for their baskets and blankets. Formerly coloring matter for these purposes was obtained from roots and herbs, but to-day as the tourist gazes upon the bright colors and wonderingly asks from what roots such brilliant colors came, he is told that the "untutored savage" has used "Diamond dyes."

From ivory, gold, and silver the Alaskan native makes bracelets, spoons, rings, and other articles prettily engraved. Indeed, in the Indian village near Sitka there is a "native jewelry store," as a sign over the door announces to the wondering tourist. Some of the natives of southeastern Alaska live in massive houses built of huge timbers hewn or split from the spruce or cedar. Others have built for themselves houses wholly modern in outward appearance, but consisting inside of only one huge room, the entire size of the house, often two stories high. They seem very reluctant to adopt the white man's idea of domestic comfort and health. The canoes of the natives of this part of Alaska are hewn out of single logs, and some of them are large enough to carry forty or fifty people. Their graceful lines and their wonderful speed are much admired by yachtsmen. The canoe is to the Indian what the locomotive is to the needs of commerce; in it he skims over the waters far and near to hunt, fish, and trade. On such expeditions he takes with him his entire family and most of his household goods, remaining away from home weeks at a time, and camping along the shore as fancy or interest dictates.

The strange superstitions that formerly prevailed among the Alaskan Indians have been very largely eradicated through the influence of missionaries and contact with the white man. Formerly the shaman (doctor) exercised a powerful and always evil influence over them. Added to his professed knowledge of bodily ills was the power of prophecy. All believed in his supernatural powers, by the help of which he could cure all bodily ills. In the event

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

of the failure of his grotesque rites and incantations to cure and the death of the patient, the wily shaman sought, and always successfully, to evade responsibility by imputing the death to the witchcraft of an enemy, the name of which he was willing to disclose for more blankets.

Ministers of the Evangelical churches and priests of the Greek Church have exerted such an influence over the natives that there is now no cruelty practised among them, and most of them are members of some Christian church. The government has never been called on to contribute a cent to the support of the natives of Alaska; they are provident and self-supporting, and, although importunate beggars, none of them are destitute.

Although the whites have taken the best fishing grounds, they have compensated for this by enlarging the Indians' field of labor, and in all the fish packing establishments he is paid as well as white labor of the same quality.

In their domestic life they furnish many examples that their white brother might do well to copy. The husbands are almost universally fond and affectionate husbands and fathers. The wife shares all her husband's joys and sorrows, rarely does he leave on a hunting or fishing trip without taking his wife, children, and the inevitable dog with him in his canoe. They have another great virtue not always possessed by their white brother of the same degree of intelligence; they are generally honest. Petty thievery is unknown among them. The white people of Killisnoo, Sitka, and other places in Alaska leave their houses unguarded and their doors unlocked, and their trust is never betrayed. With proper training the native of southeastern Alaska has in him the making of a law-abiding citizen, vastly superior in most respects to many of the people of foreign climes whom we welcome to our shores. The most striking example of what can be done toward civilizing the Alaskan Indian is found in the Indian town of Metlakahtla on Annette Island in southeastern Alaska. Here we have a town of eight hundred inhabitants, with its own sawmill, salmon cannery, stores, church, fire department, police department, council system of taxation, and all the machinery that goes to make up a thriving municipality, conducted entirely by Indians who, fifty years ago, were not only the fiercest and most bloodthirsty natives of this country, but were, in addition, cannibals. All the buildings, all the boats, including three steamers, were built by these natives and are managed and run by them. This marvelous metamorphosis in the life of these ex-cannibals was brought about through the agency of a single earnest man —William Duncan, a godly Scotchman.

### If the Bible was Our Law.

John Adams, afterwards president of the United States, wrote thus when a young man:—

"Suppose a nation in some distant region should take the Bible for their only law book, and every member should regulate his conduct by the precepts there exhibited! Every member would be obliged, in conscience, to temperance and frugality and industry; to justice and charity towards his fellow-men, and to piety, love, and reverence towards Almighty God. In this commonwealth no man would impair his health by gluttony, drunkenness, or lust; no man would sacrifice his most precious time to cards or any other trifling and mean amusement; no man would steal, or lie, or in any way defraud his neighbor, but would live in peace and good-will with all men; no man would blaspheme his Maker or profane His worship; but a rational, a manly, a sincere, and unaffected piety and devotion would reign in all hearts. What a Utopia, what a paradise would this region be!"—Works of JOHN ADAMS.

### Facts in the Case.

#### An Answer to Wm. A. Purrington's Attack on Christian Science.

*To the Editor of the People and Patriot:*—In your issue of April 3 appeared an attack upon Christian Science by William A. Purrington of New York City. Mr. Purrington accounts for the wonderful spread of Christian Science by saying that it is due to "false pretenses" to a divine power to heal disease. Christian Science has been before the enlightened American public for more than thirty years. Through its beneficent influence more than a million cures are recorded. During the year 1899 about one hundred new churches were organized, and during the past three months they have been organized at the rate of seven per month. In New York City more than half a million of dollars is being spent in building new churches. In Chicago three new churches are in process of construction, and throughout the denomination is to be found an era of church building. Is it reasonable or just to declare that in free or intelligent America such abundant harvests are ripened from the soil of "false pretenses"? Rather may not these fruits come from the good which Christian Science contains, but which Mr. Purrington has overlooked.

In this attack Mr. Purrington describes this great Christian movement by such words as "gross ignorance," "vulgarity," "absurdity," and "irreverence." Because Christian Science has healed all classes of people, individuals from all classes have accepted it. Among these have been college professors, judges, physicians, business men, and clergymen. Concord is annually visited by hundreds, I might honestly say thousands, of Christian Scientists from all lands. It is acquainted with the honored leader of this progressive movement, and with many of our citizens who have been healed and who crowd Christian Science Hall at the Sunday and Wednesday evening services. In the presence of this sincere company would a fair-minded man apply the words vulgarity, absurdity, ignorance, and irreverence?

In this attack upon a body of conscientious, thoughtful people it is said that the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, is full of sophistries. This text-book has been in the hands of a thoughtful public for nearly twenty-five years. It has passed through nearly two hundred editions of one thousand copies each, and to-day the calls for this text-book on the science of health are larger than at any time in its history. While this scientific work requires intelligence to understand it, those capable of passing a reliable opinion know that it contains a consistent, accurate, and exact statement of the fundamentals of Christian Science. Mr. Purrington shows that he does not understand the philosophy of Science and Health. Is he, then, capable of passing judgment upon it?

Mr. Purrington is again in error in stating that it is only necessary to buy a book in order to be successful as a Christian Science practitioner. On the other hand, long and careful study is required. A profound understanding of the system is demanded, and abundant proofs of ability successfully to demonstrate the system are called for before one is permitted to place his name in the directory of Christian Science practitioners.

Mr. Purrington attacked a member of the Christian Science Board of Lectureship, Mr. Carol Norton of New York, who has lectured in Concord. The hostile critic complains that Mr. Norton did not furnish the proof of cures which had been cited. Again Mr. Purrington is mistaken. Concerning this charge Mr. Norton says:—

I have no desire to enter into any controversy with Mr.

Digitized by Google

Purrington. I prefer to leave the honesty and integrity of my assertions to the impartial judgment of that type of public opinion which weighs the evidence on both sides of every question and builds final conviction upon the granite foundation of demonstrated evidence rather than upon superstition or ignorant sophistry. I beg to offer the following extract from the lecture to which Mr. Purrington refers:—

1. A case of locomotor ataxia, or progressive paralysis, attended with impaired vision and tonsilitis; had taken medicine for over three years, from one to ten doses a day, and had grown steadily worse; had had without successful results some of the best physicians in Chicago, Ill., and Buffalo, N. Y.; was entirely healed by Christian Science in a few weeks.

2. An instance of what had been pronounced an incurable cancer of the nose, pronounced such by a medical expert, treated by Christian Science and healed in three months, afterward examined by the same specialist, who admitted the complete cure, but affirmed his failure to master the *modus operandi* of the demonstration.

3. A little girl suffering from epileptic fits, having had the same from birth; at the time she began treatment was having forty spasms a day; entirely healed in less than six months.

4. A case of consumption of the lungs in the second stage of that disease, accompanied with great pain, lassitude, and other attendant symptoms of that disorder; healed in less than seven months.

5. A case of typhoid fever in an advanced stage when Christian Science treatment began. Treatment was carried on through the absent method—a common method among metaphysical practitioners. The patient was in Paris and the practitioner was in New York. Cables recording the progress of the case were exchanged, and in five days complete restoration took place.

6. The case of a boy seven years old who had been drowned. After the body had gone down the third time and was fast floating out to sea with the ebb-tide, drifting some seven feet beneath the surface of the bay, it was brought to the surface, and, without any attempt to restore artificial breathing or manipulate the body, complete restoration was effected through mental therapeutics. Life was made manifest in less than two minutes; the patient was out of danger in about fifteen minutes, and in thirty minutes was entirely restored through continuous treatment. The water left the stomach by natural vomiting some forty minutes after the first treatment was given.

7. A case of curvature of the spine and contraction of the cords of the feet, toes drawn under so that they could not be straightened, accompanied with intense suffering; in six weeks complete health and strength was established, the spine made straight, and contraction of cords entirely destroyed.

8. A case of a lady about forty years of age who had since her fifth year been under medical treatment for organic valvular disease of the heart. A number of physicians had pronounced the case incurable. At the time she consented to try Christian Science she was confined to her room and taking sixty drops of digitalis daily, with a liberal allowance of stimulants. In less than three months she was entirely cured and able to go anywhere and able to do any reasonable thing without any unnatural physical effect whatever.

Regular medical confirmation of cases Nos. 2, 3, 4, 5, and 8 will be furnished any honest sceptic. The principals in cases Nos. 1, 6, and 7 can be communicated with relating to the authenticity of all details cited.

**In order to prove that I have the confirmation that I offered to give the public in my possession, and with the offer to show the original autograph confirmations to any honest sceptic who desires to see the same, I beg to cite** the following confirmations of the eight cases of healing herein referred to:—

No. 1. Greely Price, Muncie, Ind. Name of person healed of locomotor ataxia.

Nos. 2 and 3. Alfred E. Baker, M.D. (homœopath), State Street, Concord, N. H.

No. 4. William S. Brooks, M.D. (allopath), San Antonio, Texas.

No. 5. Refer to Carol Norton, C.S.D., 170 Fifth Avenue, New York City.

No. 6. Witnesses to the resuscitation through Christian Science methods—C. B. Paine, L. Sabatas, Eastport, Me.

No. 7. Mrs. Anna Ellsworth, Mason, Mich. The person who was healed.

No. 8. R. T. Speakman, M.D. (homœopath), Boston, Mass.

Mr. Purrington was and is referred to these persons of professional standing, honesty, and unquestionable integrity for all details relating to these cases.

If Mr. Purrington is still unsatisfied he may visit Christian Science Hall in Concord any Sunday morning or Wednesday evening and meet a hundred or more of Concord's citizens who have been healed of chronic and acute diseases through Christian Science.

Mr. Purrington's attack contains this truthful statement to which thousands can testify: "To be healed it is only necessary to read her [Mrs. Eddy's] book." The name of this book is "Science and Health with Key to the Scriptures," and it can be had at the Concord Public Library. If any reader should fail to understand the book and so fail to receive the help desired, the Christian Scientists of Concord will be glad to help the beginner to understand this healing religion without money and without price.

REV. IRVING C. TOMLINSON, C.S.B.
*People and Patriot.*

## The Christian Scientist.

To the Christian Scientist the Scriptures are very sacred. His tribute of appreciation of the Bible is to live its precepts; his eulogy of the life of Jesus the Christ, is to walk in his footsteps, keeping his commandments. This is the only proof of love that our Saviour would accept. Keeping his commandments is loyalty, the noblest characteristic, "true to God and true to man."

The Biblical incidents, though in changed forms, are the practical experiences of each individual. Sacred Writ not only records the mighty works of our Master, but it speaks of a Judas who professed to love him, but failed to keep the commandments. To be untrue to him was disloyalty, that condition of mortal or human mind most to be condemned, for it led to the sorrowful experience in the garden of Gethsemane, to the betrayal, and on to the cross.

The Christian Scientist is endeavoring to live the Sermon on the Mount, bringing out that unostentatious condition of thought named humility, so commendable in the life of our Master who said,—

"Blessed are the meek: for they shall inherit the earth."

Loyalty and humility, accompanied with works of healing in contrast with disloyalty and self-exaltation without the "signs following," marked the distinction between the mere professor and the true follower of Jesus. If we had lived in the first century of the Christian era, we should no doubt have heard the devoted student ask many times when the people were professing his name, "Is this person loyal to Jesus of Nazareth?" And why should such inquiry be made? Is it not because we know that a person could not obtain the correct understanding of his teachings from one who was not loyal, from one who was not obedient to the rules he gave; from the plagiarist who borrowed from him without giving proper credit?

Digitized by Google

A careful comparison of the teachings of Christian Science with the Scriptures, by the unbiased thinker, will suffice as to their being in accord with Jesus' doctrine, therefore the very same religion.

We are sometimes confronted with this query, "How are we to distinguish between the loyal Christian Scientist and the disloyal?" We are confident that if we point out some of the traits of the loyal Scientist you will be able to distinguish between the two; the one not living in accord with the rules of Christian Science has no right to the name, therefore there is but one class of Christian Scientists, and they are loyal.

The loyal Christian Scientist recognizes the Bible as the basis of Christian Science; he recognizes that only in the way Jesus the Christ pointed out can he be saved from sin, sickness, and death; his literature is the works of Mary Baker G. Eddy and The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

The loyal Christian Scientist does not seek to exalt self; does not advertise through the press, endeavoring to push Christian Science like some mercantile business; does not endeavor to make the work of one appear greater than another, but meekly and humbly is striving to possess the Mind that was manifest in Christ, making known in a modest manner that he is ready to go to the bedside of the sick and suffering when called, and do all he can to help them in proportion to his understanding of Christian Science and in accordance with its rules. The Cause of Christian Science and the loyal Christian Scientist should not be censured because there are some who profess to be Scientists, but are not obedient, working directly opposite to its teachings. The attitude of the true Christian Scientist can be seen in the practice of the By-laws of the Mother Church in Boston, Mass.

The promise is to the meek that "they shall inherit the earth." Meekness is a quality of Truth and will abide forever. The striving to be meek is a constant hungering and thirsting after righteousness, and the Scripture saith, "they shall be filled."

"Blessed are the merciful: for they shall obtain mercy." Living in a humble, meek condition of thought, the Christian Scientist can more clearly see how to have mercy, that mercy which the sick and sorrowing are crying out for—freedom from suffering, freedom from vice, freedom from impurity and from mental anguish. The Christian Scientist has shown that Christ Science understood, is ever the merciful good Samaritan that is healing the sorrows and binding up the wounds of those who have fallen among thieves (the erroneous concept that life, truth, and intelligence are in matter) who have robbed them of their joy and their health. Tenderly and compassionately does he bind up their wounds by directing their thoughts from sickness to health; and he places them on his own beast when he shows them the relation they hold to God. He teaches them that God is Love and not the author of sin, sickness, and death, and thus they learn that God is merciful and not wrathful; that God is Good, and there is no abiding pleasure in evil, for evil can have no rightful place in the omnipresence of Good. Speaking of the good Samaritan, or the manifestation of merciful thoughts, Jesus said, "Go, and do thou likewise."

Meekness and mercifulness are allies of purity. Our Master said,—

"Blessed are the pure in heart: for they shall see God." It was the purity of life of the Discoverer and Founder of Christian Science that made it possible for God to reveal Himself in this age through her, giving to the world the revelation of Divine Science. Founded on purity Christian Science can have none other effect upon the lives of those who come under its beneficent influence, than to chasten the affections and purify the character.

Christian Science means not words but deeds. This was the course the good Samaritan pursued that won the praise of our Master. Were you to ask the loyal Christian Scientists as to the effect of Christian Science on their lives, they would tell you that they are better men and women, more honest, with higher morals and purer desires—a greater desire meekly and humbly to follow in our Master's steps. Would you then ask if Christian Science is Christian? Look at the fruit.

Christian Science teaches that it is perfectly natural to love purity even as it is to love Good or God. When Christian Science is accorded its proper place in our institutions of learning then purity (spiritual sense) which enables us to see God, will outshine intellectual attainments for these may lead to sensuality and materiality.

The loyal Christian Scientist is daily striving to be pure in heart, so that he may reflect that love which is a benediction to all mankind, bringing the calm, the sweet "peace be still," the joyful message of the peacemaker. Jesus said, "Blessed are the peacemakers: for they shall be called the children of God."

Happy indeed are the peacemakers, for they are the advocates of the one Mind, one Power, one God. Christian Science shows us that it is impossible to obtain peace or bring the message of peace, of good tidings, of health, to the sick by constantly talking or exhibiting a panoramic view of sickness and suffering before them. Would you attempt to console sorrow without joy? Would you attempt to remove impurity without purity? Can you overcome error without Truth, hatred without Love, death without the understanding of Life? Impossible. The Christian Scientist would bring peace by departure from evil (understanding its nothingness) and communion with God. In Genesis we read, "So God created man in his own image, in the image of God created he him." The children of God must be those who reflect God-like thoughts. The peacemakers "shall be called the children of God." The Christian Scientist knows that the only peace, or rest, or satisfaction, is for his thoughts to abide in God or Good, then they will ever reflect that peace that calms all error; ever abiding in Christ, expressing meekness, mercifulness, and purity.—*Dayton (O.) Evening Herald.*

## A Word in Favor of Christian Science.

To the Editor *Watertown Enterprise.*

*Dear Sir:*—Having read an editorial in the *Watertown Enterprise* of March 23, concerning the practice of Christain Science, I thought that you, in the spirit of fairness, might be willing to publish a few words explaining the attitude of Christian Scientists.

There are thousands of Christian Scientists in Boston and vicinity, and they are conceded by their fellow-citizens to be an intelligent, God-fearing, and law-abiding class of people, who are most earnest to promote the welfare of the communities in which they live.

They have no desire nor intention to break any existing laws, and have a loving spirit toward their fellow-men, including those who differ from them in opinion, and wish to do them good rather than harm.

Still they believe that in matters of such vital importance as the health and life of their loved ones, they should be as free to decide what system of healing they should employ as to choose to what system of religious belief they should subscribe; and feel that, in the rare cases where the treatment is not successful, they should be accorded the same loving sympathy which they give to those who are called upon to part with their dear ones because of the failure of other systems.

Christian Scientists endorse present sanitary systems, and consider it both wise and expedient for the general good to comply with their regulations.

Digitized by Google

If they are ever reluctant to comply with the letter of the law and submit to medical examination, it is because of the harsh and even brutal treatment to which they have sometimes been subjected, and to the newspaper notoriety which is given to one case of unsuccessful treatment by Christian Science, while the failures of other systems are passed by without notice, or are attributed to "the Providence of God."

The suggestion was made in the editorial that "a law regulating the authority of such practitioners should be at once adopted and put in force."

A hearing of three days' duration before a committee of the legislature was given to such a proposed bill two years ago, and such men as Rev. B. Fay Mills, William Lloyd Garrison, Ex-Senator Kittredge, and Professor James of Harvard Medical School, unsolicited, spoke eloquently in protest against such a bill being recommended, and the petitioners were given leave to withdraw.

Yours sincerely, M.

*Watertown (Mass.) Enterprise.*

## Set Free.

**Ye shall know the Truth, and the Truth shall make you free.**
*John*, 8: 32.

IT is nearly eight years since Christian Science was first presented to me by a very dear friend, and just when I most needed it. After being an invalid for a long time and under the care of one of the best physicians in Washington, D. C., a council was called of the most successful doctors in the country, some of whom were in attendance at the bedside of our martyred President Garfield. Then the case was taken before the world's Congress of Physicians, which was then in session at Washington, and the case was pronounced to be an incurable spinal disease, and that only with the best of care could I live four years. Then for nearly a year I was in Columbia Hospital, where a jacket was made for me, and with that after some time I could walk a little. After that we came to Grand Rapids, where this dear friend told me about Christian Science, which seemed very beautiful, although I did not expect to be healed by it, but as I began to read and understand our text-book, "Science and Health with Key to the Scriptures," the old errors began to drop away one by one. I then took up a case of heredity for my daughter, which had caused much annoyance and that, too, disappeared. Then came the thought: If all these can be healed, why not the greater one, and so it was, for in a little more than a year, through constant study and the application of what I read, I was entirely healed and still remain so, hence to me Science and Health, by our dear Leader and Mother, is priceless. F. W. L.

*Grand Rapids (Mich.) Herald.*

## No Sanitarium Wanted.

*The Industrial Student,* a spicy periodical published at Camp Hill, Alabama, thus facetiously refers to a suggestion to start a sanitarium in that place:—

"Recently, a friend suggested starting a sanitarium here. We did not question the motive but what need have we for sanitariums? We don't want sanitariums here. We want only well people and then to keep them well. Indeed, the work here is in the nature of a tonic and our college field, the sanitarium. Sanitariums should be where people have more nerves than they can manage, and large livers, and gout, and rheumatism. We have none of these things here and we do not care to go into the business. We had rather put up an iron foundry or a saw-mill."

## Easter Service at Concord, N. H.

THE Easter service at Christian Science Hall was impressive and beautiful. The sermon consisted of reading of selections from the Bible and the Christian Science textbook, "Science and Health with Key to the Scriptures." Subject, "Probation after Death." The Scriptural reading was from the twentieth chapter of John. Villa Whitney White sang "Angels ever Bright and Fair," two Easter carols, and "Angels Roll the Rock away," by C. Hawley. Mrs. Cora Straw played the following organ selections: Voluntary, March Celeste, R. G. Cole; offertory, Pregniera, Schubert; postlude, March Pontificale, Gounod. The hall was filled to overflowing and the many beautiful and rare flowers were from Pleasant View, the gift of Mrs. Eddy.

*Concord Evening Monitor.*

The display of flowers at Christian Science Hall on Easter day was the most magnificent ever made in a church in this city.—*People and Patriot.*

## Literary Genius Shifting.

NEW YORK, March 16, 1900.—Regarding what a diplomat might call the "sphere of influence" in literature, and a peculiar change which is coming over it, a member of the firm of Doubleday & McClure said to a representative of this paper, "Formerly, New England, and particularly Boston, was the source of supply for American literary work. It will, no doubt, surprise you to know that this is being rapidly changed.

"A generation ago North Carolina in the South and Indiana in the North were regarded as the least intellectual of our states. But the times change. North Carolina is preparing, and Indiana has already given us James Whitcomb Riley, Lew Wallace, and, among others of note, Booth Tarkington, whose book 'The Gentleman from Indiana,' is selling at the rate of a thousand a week. As Americans, we rejoice in the rising western authors. We publish the works of Frank Norris of 'Frisco, Markham, 'The Man with the Hoe,' of the same state, and William Allen White and William R. Lighton, Kansas-Nebraska men.

"So, you see, no particular section of our big country has a monopoly of literary talent. It is a gratifying symptom that the great West has already leisure for literary work."—*Boston Herald.*

### Passing Thoughts.

Every morning you stretch out your hands to God, and He gives you a new day to use and to give an account of. You are not to eat for a whole year on this day,—"Give us this day our daily bread." You are not to labor or suffer for a whole year, but only for the day,—"Sufficient unto the day is the evil thereof." You are only to make this day as perfect as possible. Grace and strength come day by day, just as bodily food comes. You cannot get grace enough to resist a year's temptation at once; you don't need to. You can and must gather it as the Israelites did the manna, the day's portion in his day. So life comes to us, its lessons not all to be learned at once, its temptations, work, joy, sufferings not all crowding upon us at once to overwhelm us, but only the day's portion in the day. We are responsible for to-day, to-morrow is God's. Don't walk a long journey all at once; take one step at a time. It wearies one to calculate the labor of hours in a minute. REV. J. H. BLISS.

### New Edition of the Manual.

The 16th edition of the Church Manual is now ready for distribution. Address all orders to The Christian Science Publishing Society, 95 Falmouth Street.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

## Church By-law.

BY MARY BAKER G. EDDY.

ONLY the Christian Science Board of Directors, and the First Reader of the Mother Church shall be present at meetings for the examination of complaints against Church members. Only the Board of Directors, and the First Reader shall confer, or vote on cases of complaints and church discipline. A complaint against a member of the Mother Church shall be laid before this Board; and within thirty days thereafter the clerk of the Church shall address a letter of inquiry to the member complained of, as to its validity. If the previous Christian character of the accused member is good, his reply to the clerk contradicting the accusations, or his confession thereof, and compliance with our Church Rules shall be sufficient on behalf of said member for the Board to dismiss the subject, and the clerk of the Church shall immediately so inform him. The complainant, on a second offence of this kind, shall be subject to discipline and dismissal from this Church. No cards shall be removed from our periodicals except by a majority vote of the Christian Science Board of Directors, and First Reader—at a meeting of the Mother Church held for this purpose—or for the examination of complaints. No Church discipline shall ensue until the requirements in Article XXVI., Section 6, of our Manual have been strictly obeyed.

## The Obstetric Course.

IN answer to inquiries we will say that the class in obstetrics to be held in June is open to all students of the Massachusetts Metaphysical College who have not taken the obstetric course. As the time is short no formal applications need be made out, but letters requesting the course may be addressed to the Board of Education, 95 Falmouth Street, Boston, or in case of long distances, telegrams may be sent as late as May 20. BOARD OF EDUCATION.

## Mr. Kimball's Lecture.

TUESDAY evening, April 24, 1900, witnessed an enlivening scene at Tremont Temple, Boston. It was the occasion of the lecture on the promises and fruits of Christian Science, by Edward A. Kimball, C.S.D., of Chicago. Mr. Kimball, although one of the original members of the Board of Lectureship, and although as such he had lectured all over the middle and far West, never before had appeared in Boston. He was invited by the Board of Directors of the Mother Church, The First Church of Christ, Scientist, of Boston, Mass, to deliver the semi-annual lecture under the auspices of this church, and kindly responded to the invitation. The magnificent audience chamber of the Temple was filled to its full capacity with an expectant assemblage, eager to hear Mr. Kimball's exposition of his great theme. All the seating room was exhausted and many stood. From the first utterance to the last, Mr. Kimball's words were listened to with an intensity of interest seldom to be witnessed on any public occasion. His fame as a lecturer had preceded him away beyond Christian Science circles, and much was expected of him from strangers and Scientists alike; nor were they disappointed. As a sound, practical, able, and convincing presentation of some of the leading phases of Christian Science, it would be difficult to conceive how Mr. Kimball's effort could have been improved upon. Calm and dispassionate, kindly in every reference to other sects and systems, yet strongly argumentative and replete with striking illustrations, was this lecture throughout. Of his manner the *Boston Globe* says:—

"He spoke in a simple, plain, forceful manner upon the promises and the fruits of Christian Science, and said that he owed his life to its system of healing."

Simplicity, coupled with force and deep earnestness, were truly characteristic of his manner. His treatment of Christian Science in its practical application to business men; his references to the help it had been to scores within the range of his personal acquaintance, who by reason of the clearer understanding of men and affairs it brought were able to meet and overcome difficulties which otherwise would have baffled their skill; their freedom from anxiety formerly weighing so heavily upon them; their improved or restored health, all this, as recited by the speaker, left deep conviction in the minds of his hearers.

His own restoration to perfect health through Christian Science after he had tried in vain all other means, gave especial weight to this part of his remarks.

The life and character of our beloved Leader, as the revelator of this great healing and saving Truth, her labors of self-sacrifice, and her beneficent achievements for the race and their mighty prophecies for the future, were forcefully but touchingly brought out.

The lecture as a whole gave convincing proof of the great work that is being wrought by this important arm of service.

Promptly at eight o'clock the Rev. William P. McKenzie called the assemblage to order, and in the following well-chosen words, introduced Mr. Kimball:—

*Ladies and Gentlemen:*—The First Church of Christ, Scientist, in Boston, Mass., gives you a cordial welcome, offering you with all good-will this opportunity to hear what is true concerning Christian Science from the lips of one who knows the truth.

Christian Science presents to men the Scientific mode of benevolent action to-day. As a system it is based on the premises that God is Good and omnipresent as Mind; that the action of this wholly good Intelligence is Love; that Christ Jesus revealed by his life and teaching, and by healing the sick and curing sin, illustrated the action of this divine Mind, and that man in his true estate is governed by that same "Mind which was also in Christ Jesus," and therefore, following the example of the Nazarene prophet, he in similar ways may go about doing good. The ideal for conduct is set forth in the concluding church tenet of our Mother Church which says, "We solemnly promise to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus, to love one another, and to be meek, merciful, just, and *pure*." The Rev. Mary Baker Eddy, author of the tenet just quoted, and Founder of this great spiritual movement, as well as Discoverer of Christian Science, is a Reformer whose work future ages will bless. But to-day, already, tens of thousands appreciate the results of her lone and patient labor for years, which has set forth the spiritual and practical ideal of Christianity wherby, as the world accepts it, the re-union of Christendom may be possible. For it means the re-establishment of primitive Christianity with demonstration and power.

Consequently among people who are intelligent regarding Christian Science, it makes its appeal to those of liberal

Digitized by Google

thought and benevolent purpose. Opposition that is simply unintelligent cannot eventually withstand such generous efforts to give enlightenment as the free public lectures now being given, the periodicals published, the regular Sunday services and testimonial meetings in many places, and the proof given by unnumbered cases of accomplished healing.

In meeting opposition that is unreasoning or prejudiced, the usual method is patient continuance in well-doing; as it is kindest for the sake of seeming foes to be sowing seeds of kindness for their reaping by-and-by.

The speaker of the evening has been such a continuer in well-doing that he may not know how widely the influence of his good work extends. It would take too long for me to relate how I have been blessed thereby. But much as might be said, a good man is ever beyond praise. Those who in all ages have presented to the world the true type of manhood have been named gentlemen; the highest title among these has been the Christian gentleman; but when Christian Science adds health, and power to do good wisely, to the already good-willing heart, you have the finest type of all.

The lecturer of the evening, Edward A. Kimball, C.S.D., of Chicago, is one who stands as a witness to the beneficent and restorative power of Christian Science. When at the head of large manufacturing interests, with time and attention completely occupied in the activities of successful business operations, he felt the pressure of over-burdening care and consequent illness forcing him slowly to the grave, but when other means availed not, out from the shadow of death Christian Science brought him, and of his restoration he will tell you to-night. He is but one among the thousands of clear-headed business men who have become identified with the movement because in their own experience they have found Christian Science to be a religion which gives practical results, not only in healing sickness but in elevating human life. He will assure you that the blessings he has enjoyed are not for one only, but for all. I have the honor to present to the audience Edward A. Kimball of Chicago, Christian Scientist.

## The Lectures.

### At Canon City, Col.

The address of Judge Clarkson of Omaha on Christian Science last Friday night (March 30) was listened to by an audience which nearly filled the Opera House. The exposition of the doctrines of Christian Science was very clear and forcible. What may be regarded as the fundamental principles of the belief—the unity of God and man, the consequent spirituality of man, and the control over disease according to the promise to all true believers—were dwelt upon at considerable length. The whole lecture was deeply interesting and will no doubt do much to dispel the misapprehension which has existed regarding the doctrine.—*Canon City Times.*

The lecturer was introduced by Judge M. S. Bailey of Canon City, Col., Judge of the District Court, who spoke as follows:—

*Ladies and Gentlemen:*—I have been invited to perform the pleasant duty of introducing the speaker of the evening. I esteem it a privilege to have an opportunity to address this splendid audience even in an incidental way, but I am especially gratified at the invitation tendered because otherwise it is possible I might have entirely missed an address from which I feel sure I shall derive great pleasure and profit, and it cannot be doubted that all of you who will listen will also derive like benefit and advantage therefrom.

Not being a professed Christian Scientist, it is not apparent why I should have been called upon to perform this agreeable service, except possibly from the fact that Judge Clarkson and myself both belong to the same honorable profession and have occupied precisely the same position of public trust at the hands of our respective people. While disclaiming any adoption of the faith of the Scientists, and confessing that there is much about it which I do not at all understand, I am ready to investigate and give to it the careful consideration which the infinite importance of the subject demands. The time has long since passed, and forever too, when any single sect, creed, denomination, or class can be regarded as the source of all truth. For my part, I believe in the absolute and unqualified dominion of mind over matter, not through any supernatural power, but because of an understanding and observance of the law, and when I refer to the law I speak of it in the highest and best sense, the spiritual law, God's law.

One matter of significance in connection with the gentleman who will presently address you and his relation to Christian Science suggests itself to me: Judge Clarkson began the practice of law at Omaha some twenty years ago and rose in the profession to the front rank, not only as a practitioner, but he gained as well a most enviable reputation as a judge upon the bench. At the time, some three years ago, when he embraced this faith, he was a member of one of the leading law firms of that great city, and enjoyed a lucrative practice. In spite of his desirable business connections and brilliant prospects, he surrendered all, and, as he says, came out of the darkness into the beautiful sunlight of Truth, and has dedicated his life to the work of spreading abroad the gospel of this Truth. Even a single example of faith such as this, of necessity must arrest the attention of all thinking persons to whose notice it may come, and will demand a thorough, complete, and careful investigation of the doctrines which command such devotion and singleness of purpose.

The fact that these doctrines have enjoyed a wide and rapid growth, almost unexampled in history, is another significant fact indicating that there must be indeed something of merit in them. Thousands and thousands of earnest and honest men and women, not alone in this country but throughout the civilized world, have embraced this faith and are, by their example and works, daily bearing witness to its worth. Also, personal experiences are recounted by the score, of such marvelous and startling demonstrations, that we naturally pause to inquire whether we have indeed at last found the Truth; and this is what we want, no matter whence it comes. If Christian Science is able to bring us the relief claimed for it, if it can heal from sickness, purify from sin, and bring peace of mind; if it is, in fact, the Truth, then we owe it, not only to ourselves but to humanity at large, to accept it as such and proclaim it to the world.

I have pleasure, my friends, in introducing to you the distinguished speaker of the evening, Judge Joseph R. Clarkson of Omaha.—*Correspondence.*

### At Florence, Col.

Judge Clarkson's lecture at the Opera House last night (Friday, April 6) was well attended by a representative class of our citizens. He is a good speaker and handled his subject in an eloquent and forcible manner, making all the points plain and impressive. The whole discourse was instructive and elevating, which will result, no doubt, in much good. Below is the address in full of our fellow-townsman, William R. Rathvon, introducing Judge Clarkson:—

*Ladies and Gentlemen:*—For the third time within two years you have been invited to listen to a lecture by an

Digitized by Google

accredited member of the Board of Lectureship of the Mother Church of Christian Science. The nature of these lectures is educational rather than argumentative; their purpose is to rectify wrong ideas and false conceptions of Christian Science, and to lift from its shoulders the burdens of misrepresentation, false accusation, and all that litter of mendacity which has been fathered by ignorance, malice, envy, and blind prejudice; to place Christian Science before the world in its true light, as a religion of love, good works, and Godliness.

That these lectures are accomplishing the educational purpose for which they were inaugurated is evidenced by the change in the attitude of the press and the public within the last few years. The world is slowly beginning to admit that Christian Science is a religion that makes men and women better, healthier as well as better, happier as well as healthier, hence it is rapidly passing beyond that stage of public opposition wherein it was said "there is no good in it."

A profound thinker has said that "Every great scientific truth goes through three stages. First, people say it conflicts with the Bible. Next, they say it has been discovered before. Lastly, they say they have always believed it." Christian Science, itself a great scientific truth, is experiencing these gradations of human belief, and the widespread interest that is being shown in its ethics and practice by people who think, is proof unquestionable that it is meeting a want which mankind keenly feels.

Christian Science has now been established in Florence for nearly three years, and in that time has brought the blessings of health and happiness and righteous living to many of your people. We have quietly kept within our own lines, seeking to do good rather than to attract attention; to help our brother rather than to condemn him, and to cultivate a kindly feeling for all, regardless of their attitude toward us.

It would be an ungracious act on our part not to seize this opportunity to express our appreciation of the fair treatment we have ever received at the hands of the citizens of Florence. It is true that we have been kept beyond the wall of orthodoxy by our brethren in the other churches, but we hold no ill will for that; and we yield place to none of them in honest, earnest, sincere desire to serve God—Good—every day, every hour, as we believe such service should be given.

Our lecturer to-night comes to us as one whose life has been passed among the great activities of the West. A lawyer by profession, he has been honored by a seat on the judicial bench; yet when an understanding of Christian Science came to him, he saw his way clearly blazed along the line of greater good and higher living than either the practice or administration of human laws could afford. Hence he laid down the practice of his beloved profession to take up that of Christian Science, to which he has devoted his best energies, capabilities, and talents, bringing to sin-sick, suffering humanity the "glad tidings of good cheer."

Ladies and gentlemen, I have the honor to introduce to you the speaker of the evening, Judge Joseph R. Clarkson of Omaha.—*Florence Daily Tribune.*

---

### At Eau Claire, Wis.

A representative audience listened to the lecture of Judge William G. Ewing on "Christian Science, the Religion of Jesus Christ," at the Opera House in this city Tuesday evening, April 10. The *Eau Claire Leader*, which contained a good report of the lecture the next day, published this comment:—

"The Christian Scientists are growing gradually in this city and are constantly adding to their number. There is some unseen power behind the throne that helps them along. Financial matters never appear to worry them. They pay their way with a free hand and seem neither to fear any one's frown nor court any man's smile. There may be more in their philosophy than we dream of. If this thing is of men it will come to naught, but if from God, then we had better be careful lest peradventure we be found fighting against God."

Judge Ewing was introduced by Colonel P. H. Swift of Rice Lake, who said:—

*Ladies and Gentlemen:*—The members of First Church of Christ, Scientist, of this city, through its committee, have requested that I perform the pleasing duty of introducing the speaker, which I have consented to do because I am in full sympathy and hearty accord with the Truth represented by them and the speaker, and am glad that so many have come to hear an exposition of the Truth as we understand and practise it, and as will be expressed in the address.

It is quite unnecessary for me to make extended remarks relative to the speaker, who for years wore the judicial ermine and was recognized as one of the leading jurists of the country, known and admired for his uprightness, legal attainments, and sturdy devotion to the right.

His health failing, and the physicians giving him no relief, he sought the Truth as taught in Christian Science and was healed, God having snatched him from the grave, and feeling that he had a higher mission, he left the bench to work for Christ,—Truth.

He is in touch with divine Principle, and his candor, charitableness, and sweetness of spirit in the presentation of this grand Truth, cannot but sooner or later find a response in every heart.

I now have the pleasure of introducing Judge William G. Ewing of Chicago, who will address you.

*Correspondence.*

---

### At Seattle, Wash.

The Hon. William G. Ewing lectured in this city before an interested audience on Tuesday, March 13. The lecturer was introduced by Allen H. Armstrong, First Reader of the Seattle church, who said in part:—

Centuries ago there came one crying in the wilderness and saying, "Repent ye: for the kingdom of heaven is at hand." And he pointed to a successor who should make plain to human understanding a way of escape from the suffering that flesh is heir to. But so little is the teaching and example of this one understood that human eyes are oftener dimmed with the tears of sorrow than brightened with the dews of divine grace, our ears are oftener assailed with the groans of suffering than gladdened with the story of God's love. But in our day there arises one with a heart so turned to God, even from childhood, that nothing can divert her from the search after Him; with a love so true and pure that no sacrifice demanded in that search is too great; with a mind so clear that no sham can escape detection, no sophistry befool. To such an one is fulfilled the promise "Ye shall seek me, and find me, when ye shall search for me with all your heart." This enables her to understand the mighty Nazarene, and to pour such a flood of light upon the inspired pages that the truths therein contained are to-day healing the sick and reforming the sinner as at no time since Jesus and his immediate disciples labored to achieve a happier and healthier, because a holier, humanity.

From various causes,—the ill-timed zeal of its friends as well as the statements of those at present opposed to Christian Science,—many misconceptions regarding its teachings have gained currency in the popular belief. It is with a view simply of correcting these that The First Church of Christ, Scientist, in Boston, has established a

Digitized by Google

Board of Lectureship. I have the pleasure of introducing to you to-night a member of this board, Hon. William G. Ewing.

The Judge held his audience, evidently deeply interested for an hour and a half. The press gave brief but fair and correct reports of the lecture.—*Correspondence.*

### At Walla Walla, Wash.

The Opera House was crowded last evening (Friday, March 16) by the best people of Walla Walla, who congregated at that place to hear the talented Christian Science orator, Judge Ewing. He proved an entertaining speaker and made hosts of friends for Christian Science. He was introduced to the audience by the Hon. Wellington Clark.—*Walla Walla Union.*

## Among the Churches.

### Larger Quarters at Cincinnati, O.

The Church of Christ, Scientist, in Cincinnati, O., held Sunday morning services in their new quarters, for the first time, Sunday morning, April 1, the occasion being marked by a good attendance, sweet music, cordial greetings, and happy faces.

For nearly seven years this church had occupied Hall D in the Odd Fellows Temple, but had felt for some time that their earnestness, growth, and success merited something larger and better; and in the mean time were in search of a building suitable for making such change, until they build a church of their own.

They recently secured the Lyceum in Music Hall Building on Elm Street, convenient to seven lines of street cars. This hall is well adapted for church purposes, being artistic, light, and roomy. It has a seating capacity four times larger than the one vacated, and is equipped with an excellent pipe organ, together with the convenience of two adjoining rooms suitable for holding children's Sabbath School. Again is God's protecting care verified.—R.

### The Work at Fitchburg, Mass.

Regular Sunday and Wednesday evening meetings were begun in Fitchburg, Mas ., February 21, at which from five to seventeen have been in attendance, and a constantly widening and increased interest, together with several demonstrations of the power of Truth to control the body harmoniously, have resulted.

Our combination auditorium, Christian Science Reading Room, and office, is centrally and pleasantly located. It is supplied with Christian Science literature; and though not materially inscribed on our door-posts, yet Love is the watchword of the movement, and we are already anticipating an overflowing house when our first authorized Christian Science lecture is given. Surely the whole of the meal is being leavened.—Dr. John W. Keyes.

### A Word from Ardmore, I. T.

September, 1899, we organized as First Church of Christ, Scientist. We have two pleasant rooms, nicely furnished. A friend bought and improved a cottage for our use, and also presented us with a lovely Mason and Hamlin organ. We have a small building fund, and as soon as the land question is settled we shall buy a lot and build a chapel.

We have organized a Sunday School, and last Sunday there were nineteen children present. It is a great pleasure to hear the little ones give expression to Truth in their own childish tongue; and oftentimes the questions they ask furnish food for thought,

Some are investigating Christian Science and we are very much encouraged.—J. M. Moore, Ardmore, I. T.

## From Our Contributors.

### Work by the Way.

BY EDWARD H. KEACH.

Christianity teaches that we should do good to one another; and when we have planned to aid a brother in any way, it is not much trouble to carry out our purpose and we enjoy giving the assistance needed. But what of the intervals between these times of planning to do good? What are we "doing by the way"?

Once Jesus was accosted by a ruler of the synagogue, Jairus by name, who requested Jesus to come to his house and heal his daughter. Jesus planned to go, and started at once. It is said, as he went, he was pressed on every side by the throng of people.

In this crowd, a woman, who had spent all her living upon physicians and could not be healed by any, pushed her way to where Jesus was, thinking if she could but touch the hem of his garment, she would be healed. She accomplished her purpose and immediately her "issue of blood stanched."

From a human standpoint, Jesus knew nothing of this woman or that he would meet with this case, and yet he healed her without planning for it,—involuntarily healed her—by the way. Jesus could do this because of his being "one with the Father"—because of his understanding of the allness of God (Good), and the spiritual life which he lived. While he was ever ready to go at the call of those about him, yet he was always ready to do good by the way when the opportunity was offered.

Undoubtedly there is a grand lesson here for us as Christian Scientists,—that we ever be on the alert to improve the opportunities that are thrust upon us. We plan to do good, but how many golden opportunities are lost while waiting for our plans to be carried out.

If we are demonstrating love and living in the Truth as we should, how easy it would be to speak a kind word to one in trouble, bestow a cheering smile or give a glad hand-shake to another, as we go by the way, from one of our plans to another. Let us ask ourselves, Are we doing this? When this woman touched Jesus, he said, "Who touched me?" The disciples thought it a very strange thing, that when he was pressed on all sides the Master should ask such a question, and told him as much. But he said, "Who touched me?" There was more in this question than the disciples could understand. He knew some one was yearning for salvation. We can readily see that the mere physical touching of the garment did not heal the woman, for perhaps many touched him on this occasion who were not healed.

Jesus said, "Thy faith hath made thee whole." However little understanding she may have had as to how Jesus would heal her, yet she had perfect confidence that he would do it, and she did her part by using all the understanding she had and putting forth every effort to reach him, and he did not fail her.

In the throng and press of life, we, as Christian Scientists, need to have this same yearning desire that characterized this woman, to touch the hem of the Christ garment, to come into a higher realization of the protecting power of divine Love which is the garment (covering) that shields us from the errors of mortal sense. This will not only enable us to be of service to those about us, but, during the lulls of active work, will give us the opportunity to examine our own condition, to set our own house (our consciousness of good) in order, for there is where we must first work, before we can be of real value to others. Being diligent in this particular, we shall always find "wayside work" which will lead us into a higher understanding of the fact that God (Good) is all, and there is none beside.

## Second Chapter of Titus.

BY S. W. BUNTING.

IN this chapter we find Paul impressing Titus with the great need of every age,—living in strict conformity with our professions.

We are first told, "But speak thou the things which become sound doctrine."

To be sound all things must have a firm foundation, they must be grounded upon the rock, which endures forever. This rock cannot be a material belief, for everything material has beginning and end, hence is not everlasting and will, in time, fail. But this rock must be spiritual Truth, which is without beginning and without end.

We must, then, preach, teach, and practise Truth, "That the aged men be sober, grave, temperate, sound in faith, in charity, in patience. The aged women likewise, that they be in behavior as becometh holiness, not false accusers, not given to much wine, teachers of good things."

A casual thought of the word "speak" gives the impression of simply preaching and talking the Truth, but we must delve deeper into this work, and as we look back into the history of the past, we find that the greatest sermons ever preached, the greatest lessons ever taught, were not words spoken, but lives in harmony with conviction. The greatest of the many great sermons is the life of Jesus of Nazareth, that loving, meek follower of Truth, whose love stood for supreme justice, whose meekness for divine strength. Then let our lives speak the things which are founded upon spiritual Truth.

Right here we are impressed with the great responsibility which rests upon our conduct. Paul does not particularly refer to those who are old in years as is counted from a material standpoint, but those who have been studying the Truth and are advanced in the knowledge of Life eternal. To bring it right home, those who have been studying the Truth as revealed in Christian Science, and to whom the world is now looking to see what it is doing for us, and seeing if we are pouring forth the sermon of Love, to teach those who are just starting in the path of Truth, as Paul puts it "the young men and women."

In the seventh verse we are forcibly brought face to face with the substance of the chapter, "In all things shewing thyself a pattern of good works."

Clearly this is the great work of the Christian Scientist as taught in our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy; and this is the loving exhortation which can be read in every line given us by our dear Mother. She has set the example in her own life, and everywhere about us, we see fruits of that silent sermon, which she has been preaching these many years.

Let us enter into this work more and more each day, spending not a moment in idleness, but showing forth by every word and deed, by every thought and action, that we are living the life of a true, loyal Christian Scientist. Then our light will so shine before men that they will see our good works, and glorify our Father which is in Heaven.

If we do this faithfully, we can look "for that blessed hope, and the glorious appearing of the great God and our Saviour Jesus Christ; who gave himself for us, that he might redeem us from all iniquity, and purify unto himself a peculiar people, zealous of good works."

## Progress.

BY EDWARD EVERETT NORWOOD.

IT is said that one climbing a mountain never knows just how near the top he is until he gets there. So we may not know how far, seemingly, we are from the Kingdom of Heaven, but we do know, by the obstacles that are being overcome in our pathway and the sins vanquished in our lives, that we are making some progress towards the celestial city.

It is chiefly by comparison that we can discern our growth. "To-day is yesterday understood," says a wise one; and our Leader, Mrs. Eddy, says in "Miscellaneous Writings," p. 339, "That to-morrow starts from to-day and is one day beyond it, robes the future with hope's rainbow hues." When we, as Christian Scientists, can see the problem which last month or yesterday confronted us as a veritable Giant Despair, to-day met with the calm assurance of its nothingness and God's allness, we may well thank God and take courage, and say, with Joshua, "Shout; for the Lord hath given you the city." So, when we go about the duties of our daily lives, investing each task with the highest motive possible, meeting every trial with a brave heart and courageous front, and above all, trusting God to deliver us, in due time we shall have our demonstration. Then we go higher, and this is logical, for it is following in the divine order.

We rise by the things overcome through self-denial and struggling with sins. Each victory over the enemy makes us as much stronger as we would have been weaker had we fallen. Thus we gain courage by success, and seeming failures only spur us to renewed endeavor and really make us stronger, for they compel us to examine and strengthen our weak places through which the enemy would enter. We then present an unbroken front to every attack. We lay fresh hold on Truth and Love which has hitherto sustained us, and advance more courageously to the battle. We learn to look up through the seen and temporal and discern the unseen and eternal. We see God everywhere because we see good everywhere, and God is the Principle of goodness. We become patient, loving, and pure, demonstrating by our lives our kinship to the Master, who learned obedience by the things he suffered. Then, putting these laws in our minds and writing them in our hearts, we shall know God, the Father, and be known of Him.

## Some Reasons Why.

BY J. O. SIMONDS.

I DID not accept Christian Science primarily on account of physicial healing, but because when I read "Science and Health with Key to the Scriptures" I found it to be the Truth; that it was what it declared itself to be, and that it furnished proofs of its statements. Two points I had not met elsewhere. It gave a new meaning to words and teachings that previously had little or no meaning, and it answered questions that I had never heard answered.

Years ago I discarded the beliefs that the mortal body contained an immortal soul, and that God sent sin and sickness on His people. Christian Science solved these problems of soul and body, sin and disease. It proved the unreality of evil by establishing the reality, the Allness, of God—Good. It explained the conflict between moral law and so-called natural law, solving the problem that confronted Paul when he wrote, "The good I would I do not: but the evil that I would not, that I do." It revealed God not as vague, theoretical, or intangible corporeality, but as the Principle of a demonstrable Truth, whose presence and power could be proven. It defined God as Love and Love as God. Love that has no respect of persons; that, like the quality of mercy, is not strained through a sense of personality; Love that fulfils and fills full the law of God.

Christian Science teaches a religion, not of the future, but of the living to-day: not of cliques or classes, but a religion that will heal and hold all humanity in one grand brotherhood, turning them towards the rising instead of the setting sun. Christian Science imparts the understand-

ing of that Mind which was also in Christ Jesus, and shows how the possession of that Mind will enable us to do the works that were done by him whose implicit obedience to the law of God brought health, harmony, and holiness to all men and revealed the kingdom of Heaven.

Christian Science brought to me a sense of safe-abiding, a sense of peace and harmony, that neither pen nor tongue can express. What this great Truth has done for me it has done for thousands of others, and what it has done for them it will do for the millions who are athirst in the desert of material things. Then shall they "enter into his gates with thanksgiving, and into his courts with praise."

## The Lord's Table.

BY JANET T. COLMAN.

RETURNING thanks unto God for all His mercies, I will give unto others somewhat of the good given to me. We see the table of the Lord covered with purity, laden with divine food for each and all, with a loving invitation to go forward and partake of the food Good has provided for us. This food, which is divine and not human, must be assimilated to nourish us on our journey heavenward. First presented to us are the luscious ripened fruits of benevolence. The bread cast upon the waters returning unto us again. Then appear "apples of gold," "A word fitly spoken is like apples of gold in pictures of silver," which means wisdom. After partaking of the fruits, then comes the meat, Obedience. Jesus said, "I have meat to eat ye know not of;" also "My meat is to do the will of him that sent me." This table is plentifully supplied with daily bread which cometh down from heaven. The staff of Life. "Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God." "The sincere milk of the word," to be given unto babes in understanding is there also. The water of Life flows freely at this table. "And the spirit and the bride say, come. And let him that heareth say, Come. And let him that is athirst come. And whosoever will let him take the water of life freely." Last but not least comes the wine, "the inspiration of Love" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 340). This is the wine Jesus asked all his followers to drink.

## Fog from Two Rivers.

BY METTA F. MILLER.

NEW YORK CITY was wrapped, for two days in January in a dense fog. Ferry boats plied slowly across the rivers and disconsolate passengers had no alternative but patiently to wait for transport. The fog from East River had rolled up and met the fog from North River, and the city was folded in a dripping cloud.

The blue sky and bright sunshine of the days before would have seemed like a dream, only we knew it was the fog that was temporal, the blue sky is always over us and the sun shines on always the same, so the fog must be dispersed and harmony and light and warmth be restored. But the fog would not have been so dense, so far-reaching, so much of an impediment to traffic, had it not risen from both rivers, each helping to darken the other.

So with our progress along the path out of error into Truth. Fogs will arise from the rivers of error about us, and if we meet them with an answering fog from a river of error within, dark indeed will seem the way, but if we keep our side clear, we can always catch a glimpse of a bit of blue sky, for error must grow less dense as it nears the thought of light, until the full force of the understanding of error's nothingness destroys all the gloom, for light and warmth and peace and harmony are with us alway.

## Testimonies.

### Three Important Lessons.

Some years ago, after attending the Sunday morning service in San Jose, I was taken suddenly with a severe chill. I treated myself, however, and it at once passed off and I thought no more about it until, late in the afternoon when I started to drive home (I was then living on my ranch eight miles out in the country), another severe attack came on. The day was bitterly cold, and before I had gone very far, every bone in my body was aching, and my head seemed to be on fire. I treated myself again, but in a very indifferent manner, thinking that when I got quietly in the house I would take the matter up properly. When I reached my destination I was suffering keenly, and the knowledge that the following day was to be a very busy and arduous one did not help matters. Being entirely alone I was prompted to go to bed at once, but resisted that temptation, and instead began to study Science and Health, and later, when I did retire, I felt almost well, and was sure after a good night's sleep I would awake thoroughly myself and ready for work.

My surprise was great, therefore, after sleeping soundly, and apparently restfully all night, to find I was so weak, that, when I attempted to stand up I fell over on the bed in a faint. When I regained consciousness I was completely nonplussed for a few moments, and could not understand it, it was a thing I had never done before. I had always been strong and healthy, even before coming into Science, and sickness and especially fainting was foreign to me. In a short time I recovered sufficiently to get dressed, and although the sense of weakness was very great, I managed to get breakfast ready, but I had no sooner seated myself at the table than I was amazed to find that I was once more losing consciousness. This time I was considerably alarmed, for being so alone I felt somewhat helpless so far as material aid was concerned.
